Battle of Jutland, May 31, 1916	1316
Battle of Tannenberg, August 1914	1322
Western Front, which changed little from 1914 to 1918	1333
Western Front after United States entry into the war, late 1917–November 11, 1918	1346
Disposition of American ships at Pearl Harbor, Hawaii, December 7, 1941	1364
Battle of the Coral Sea, May 4–8, 1942	1366
Guadalcanal and associated islands: scene of an epic Pacific campaign, 1942–1943	1367
Retaking the Philippines: the Battle of Leyte, October 17–December 25, 1944	1369
This U.S. plan for the invasion of Japan was rendered unnecessary by Japan's surrender after the atomic bombing of Hiroshima and Nagasaki on August 6 and 9, 1945.	1372

CONTRIBUTORS AND REVIEWERS

Alan Axelrod, Ph.D., University of Iowa, has served as consultant to numerous museums and cultural institutions, including the Margaret Woodbury Strong Museum (Rochester, New York), the Airman Memorial Museum (Suitland, Maryland), and the Henry Francis du Pont Winterthur Museum (Winterthur, Delaware). He has been a creative consultant for *The Wild West* television documentary series (Warner Bros., 1993), *Civil War Journal* (A&E Network, 1994), and The Discovery Channel (now The Science Channel). He is founder and president of The Ian Samuel Group, Inc., a creative services and book-packaging firm. He is the author or coauthor of some 60 books, including the *Encyclopedia of the American West*, *The Macmillan Dictionary of Military Biography*, *Dictators and Tyrants*, and *Encyclopedia of Historical Treaties and Alliances*.

John Childs, Ph.D., is professor of military history and director of the Centre of Military History at the University of Leeds, England. The author of numerous books on the military history of Great Britain and Europe during the 17th and 18th centuries, most notably a trilogy devoted to the social and political history of the British army under the later Stuarts, he has also edited, with André Corvisier, *A Dictionary of Military History*. One of his most recent books is a pioneering investigation of *The Military Use of Land: A History of the Defence Estate*. He has also published widely on the Glorious Revolution of 1688. John Childs is chairman of the Battlefields Panel of English Heritage, a trustee of the Royal Armouries, an associate editor of the *New Dictionary of National Biography*, and an occasional consultant to the Defence Evaluation and Research Agency (DERA).

Edward Countryman, Ph.D., Cornell University, is University Distinguished Professor in the Clements Department of History at Southern Methodist University. An expert on early British American history and American social history, his publications include *A People in Revolution: The American Revolution and Political Society in New York, 1760–1790*, for which he was awarded the Bancroft Prize, and *The American Revolution and Americans: A Collision of Histories*.

The late **John Erickson**, Ph.D., was the foremost scholar on the development of the Red Army and its role in World War II. His two-volume work *Stalin's War with Germany—The Road to Stalingrad* and *The Road to Berlin* was perhaps the only historical work about the Soviet Union that was accepted as a classic in

both the West and the East. He was professor of politics (defense studies) at Edinburgh from 1969 until 1988 and head of the Centre for Defence Studies. He was appointed a Fellow of the Royal Society of Edinburgh in 1982 and a Fellow of the British Academy in 1985.

Ian Gentles, Ph.D., University of London, is professor and chair of the department of history, Glendon College, York University, England. An authority on British history and on the revolution of the 17th century in particular, he has published, among other works, *The New Model Army in England, Ireland and Scotland, 1645–1653*.

John A. Lynn, Ph.D., University of California at Los Angeles, is professor of history at the University of Illinois. He specializes in the study of war, society, and culture. His interests include the history of Western and South Asian military institutions and warfare, with an emphasis on military change in early modern Europe, during the French Revolution, and during the era of European conquest in India, 1740–1805. His many publications include *Battle: A History of Combat and Culture*; *The Wars of Louis XIV, 1667–1714*; *Giant of the Grand Siècle: The French Army, 1610–1715*; *The Bayonets of the Republic: Motivation and Tactics in the Army of Revolutionary France, 1791–94*; and *Feeding Mars: Logistics in Western Warfare from the Middle Ages to the Present* (editor).

Allan R. Millett, Ph.D., Ohio State University, is Raymond E. Mason, Jr., Professor of Military History at Ohio State University. A specialist in the history of American military policy and institutions and the Korean War, his publications include *The Politics of Intervention: The Military Occupation of Cuba, 1906–1909* and *Their War for Korea*. He was president of the U.S. Commission of Military History (1999–2003). His most recent advisory appointments have been to the Smithsonian Institution National Museum of American History and the National D-Day Museum.

Geoffrey Parker, Ph.D., Cambridge University, is Andreas Dorpalen Professor of History at the Ohio State University and has taught at the University of St Andrews, Scotland; University of British Columbia, Canada; University of Illinois at Urbana-Champaign; and Yale University. He has published widely on the social, political, and military history of early modern Europe, authoring or editing more than 30 books, and his best-known book is probably *The Military Revolution: Military Innovation and the Rise of the West, 1500–1800*, winner of two book prizes. In 1984 he became a Fellow of the British Academy, and in 1992 the king of Spain made him a Knight Grand Cross of the Order of Isabella the Catholic in recognition of his work on Spanish history. In 1999 he won the Samuel Eliot Morison Prize from the Society of Military History in recognition of his work in military history.

Charles Phillips is president of the research and creative services firm Zenda, Inc. and the author, editor, and producer of numerous works of nonfiction. He has been editor in chief of several major historical reference works, including *Encyclopedia of the American West*, *Encyclopedia of Historical Treaties*, and Time-Life Books' 14-volume 40th anniversary edition of Shelby Foote's *The Civil War: A Narrative*. He writes the "Day to Remember" column for *American History Magazine* and is coauthor, with Alan Axelrod, of the highly acclaimed *What Every American Should Know About American History*. His *Count Me In*, a 90-minute video on Doolittle's Raid over Tokyo in World War II, which he cowrote and produced, aired on PBS and won an award for historical videos from the

xx Contributors and Reviewers

American Association of Museums. He has served as consultant to numerous museums and cultural institutions and as editor of many publications, including *History News*, *Higher Education and National Affairs*, and *Congressional Quarterly*.

Ian K. Steele, Ph.D., University of London, is professor emeritus of history at the University of Western Ontario. A specialist in the British Empire in North America, his numerous publications include *Warpaths: Invasions of North America 1513–1765* and *Betrayals: Fort William Henry and the “Massacre.”*

ACKNOWLEDGMENTS

Attempting a comprehensive catalog and commentary devoted to the wars of the world is, tragically enough, a labor that might consume several lifetimes. We took about 10 years, during which time we incurred a heavy debt to the authors whose works are listed in the bibliographies that accompany each entry in this encyclopedia. In addition to these books, which typically focus on a particular war, historical period, nation, or personality, we had the inestimable benefit of five masterpieces of military encyclopedia making. First and foremost was George Childs Kohn's *Dictionary of Wars* (revised edition, New York: Checkmark Books, 1999), which guided us in both our selection and coverage of many of the wars included here. Another indispensable guide was Micheal Clodfelter's *Warfare and Armed Conflicts: A Statistical Reference to Casualty and Other Figures, 1500–2000* (second edition, Jefferson, N.C.: McFarland and Company, 2002). In addition, like all military historians, we made frequent and extensive use of *The Harper Encyclopedia of Military History:*

From 3500 B.C. to the Present by R. Ernest Dupuy and Trevor N. Dupuy (fourth edition, New York: Harper-Collins, 1993); *The Oxford Companion to Military History*, edited by Richard Holmes (Oxford and New York: Oxford University Press, 2001); and *The Oxford Companion to American Military History*, edited by John Whiteclay Chambers II (Oxford and New York: Oxford University Press, 1999).

In the creation of this encyclopedia, we also worked directly with distinguished military historians, who contributed to this book as writers of individual articles or as readers on our editorial board. We acknowledge and offer our thanks to Edward Countryman, Allan R. Millett, Mark Parillo, John Childs, Ian Gentles, Geoffrey Parker, John Lynn, Ian K. Steele, and, in memorium, to John Erickson.

Finally, no book sees the light of day without an editor, and ours, Claudia Schaab of Facts On File, is one of the very best. She kept our focus on the details but never let us lose sight of the light at the end of the tunnel.

INTRODUCTION

General George S. Patton once observed that, next to war, all other human endeavors pale into puny insignificance. Leaving aside for a moment questions about the morality or desirability of warfare, Patton's statement rings with simple, if chilling, truth. For what other human endeavor is so costly in money, materials, effort, pain, and life, or so tasks the heart and mind, or encompasses such a range of undertakings, from squalid acts of darkest secrecy and utter despair to grand mobilizations of entire nations and peoples? The Swiss historian Jean-Jacques Babel has estimated that the 5,500 or so years of recorded history have witnessed a meager total of 292 years of peace, and few of those were ever so storied as the years of conflict. From such literary works as the *Epic of Gilgamesh* and Homer's *Illiad* to such movies as *Birth of a Nation* and *Saving Private Ryan*, authors and filmmakers have celebrated, even as historians have chronicled, the exploits of a band of warriors or a vast army of professional soldiers bent on shaping or reshaping their patch of earth or the entire world through the clash of arms.

Touching on every aspect of personal, social, political, and economic life, war is such a complex phenomenon that it cannot even be adequately defined, much less explained—though not from lack of trying. From Sun Tzu to Herodotus to Carl von Clausewitz to John Keegan, historians and military theorists have grappled with the essential nature and conduct of war, without arriving at an analysis sufficiently broad to cover all its philosophical, psychological, technological, and legal implications. In general, theories of war reflect their times and the circumstances, societies, and international systems in which they are formulated.

Wars have always arisen, and arise today, from territorial disputes, military rivalries, conflicts of ethnicity, and strivings for commercial and economic advantage, and they have always depended on, and depend on today, pride, prejudice, coercion, envy, cupidity, competitiveness, and a sense of injustice. But for much of the world before the 17th century, these “reasons” for war were explained

and justified, at least for the participants, by religion. Then, around the middle of the 17th century, Europeans began to conceive of war as a legitimate means of furthering the interests of individual sovereigns. Such wars, limited in their objectives and scope, gave rise to the kind of notions that Clausewitz would codify in his *On War*, which he began to write in 1819. Thus, war came to be viewed as a rational but limited instrument of national policy, which began with a declaration of intent, was conducted by rules that did not destroy the civilizations of those conducting the war, and ended with a victory on the battlefield for one side or the other, followed by an appropriate treaty settling for all time the issues under dispute.

By the time Clausewitz's masterpiece on the purposes, tactics, and strategy of war was published in the 1830s, it was already out of date, for the French Revolution had intervened to create conditions that would ultimately undermine all his assurances. The revolution increased the size of the armed forces for European states from small professional outfits to huge conscript armies, whose citizen-soldiers needed more than reasons of state to risk their lives and fortunes for their rulers. The objectives of warfare were broadened from the conquest of this or that sliver of a kingdom to the spread of revolutionary ideals, and through this ideological back door something like the fervor of religion slipped back into war along with the mass of conscripts. Once again wars needed to be in some sense “holy” or, in the more secular lexicon of the times, “just.”

Clausewitz had discussed the concept of “total war,” combat waged not just by one army against another but by armies against armies *and* civilian or noncombatant populations. The American Civil War of 1861–65 gave horrific body to that concept; it was a conflict fought by huge conscripted armies for what the North at least claimed was a purely just cause—that is, to destroy the social institution of slavery. As the chief practitioner of total war on American soil, William Tecumseh Sherman, Ulysses S. Grant's most important general, explained that the object of his

war had become not to defeat the enemy's army but to destroy the society that supported it. The Civil War was thus a truly modern war in the sense that it consisted of the mobilization of entire populations and economies for a prolonged period of time. Sherman's infamous March to the Sea gave the world a foretaste of just how destructive ideologically driven total warfare might become.

In America's Civil War, too, the world saw an early example of how the modern technology of combat could outstrip its manpower. The massive casualties of the Civil War battlefields were a harbinger of trench warfare in World War I. In that conflict mass mobilizations brought soldiers to die by the millions on the tiny strips of territory between trenches, "no man's land" desperately defended by machine guns and rapid-fire artillery no human army could withstand. The notion of war as a rational instrument of state policy vanished in the din of high explosives and the lung-corroding coruscations of mustard gas. Henceforth, in modern times war, if still considered an instrument of state policy, could only be undertaken (or, at least, sustained) if a nation were convinced (or terrified into accepting) that its most vital interests, involving its very survival, were at stake, which was, of course, precisely what happened in World War II.

There it was the rise of ideology to the level of religious fanaticism that sparked the conflict. The Allies billed their efforts not so much as a war to protect their countries against an expanding Germany, Japan, and Italy, but as a war to end the evils of Nazism and fascism and the horrors they visited upon the world. The technology developed in World War II made "total war" a nightmare reality, one that no rational nation would ever undertake merely to expand its territory.

As in the days of religious war, only overarching ideologies now justified conflict between nation-states and combinations of nation-states. However, World War II was ended with a weapon, the atomic bomb, clearly capable of being developed into a means to end civilization itself. As a result, after World War II those nations with the technology to destroy one another avoided direct and total war—World War III—fighting, instead, ideological wars full of clandestine operations, sabotage, and "covert" actions, breaking out into open conflict only among proxy states—small, local, border conflicts, often interminable, often held in check by the larger powers' unwillingness to see conflicts spread from their "clients" to themselves. For if the battle came to them, thermonuclear retaliation loomed as a universally self-defeating possibility.

By the end of the 20th century the cost of the sophisticated technology needed to maintain the ideological cold war between "communism" and "democracy" had helped mightily to bankrupt the communist "bloc," while the technology itself had made many of the old definitions of war somewhat more suspect. Early 21st-century warfare has been almost exclusively ideological, that is to say, reli-

gious, and almost always either clandestine or limited and "asymmetrical." When the United States went to war with Muslim countries in the Middle East or Africa, it fought with machines rather than men, suffering only minimal conflict casualties, while the smaller states, lacking the remote-controlled hardware, turned to "terror," sneak attacks, even suicidal attacks against enemy civilians in order to claim any kind of victory at all.

There have always been conflicts that did not fit the various definitions for wars between nation-states or coalitions of nation-states: civil wars between rival claimants for sovereignty in a state; struggles by ethnic, religious, or social enclaves for civil, political, or economic recognition or power coups; insurrections, revolts, rebellions, and uprisings that might, and sometimes did, lead to revolutions. And there have always been conquests and invasions, sieges and massacres, raids and riots with some of the aspects of larger wars and revolutions. In the post-cold war international scene, however, these took on added significance because they represented the more common kind of conflict, the kind with potential for spreading. Most dangerous of all were those conflicts between well-armed but middling powers—Iraq and Iran, Israel and the Palestinians, India and Pakistan—whose technologies were sophisticated enough to ignite a larger, perhaps even a world-consuming, war.

Whatever horrors recent events have visited upon the world—and, on September 11, 2001, upon the United States of America—these events have wreaked havoc on even the best attempts to define war. Modern historians have often tried to avoid the narrow and legal definitions prevalent in the 19th century, which limited the label of *war* to those conflicts formally declared between states (and thus, not altogether incidentally, turned a blind eye to colonial expansions and the suppression of native populations). These definitions frequently fail to include such conflicts as insurrections, banditry, or piracy, which are occasionally significant and often the only kinds of war the colonized or the politically suppressed can conduct. Most military historians also wish to understand war, even when defined broadly, as embracing armed conflict on a larger scale, and they typically exclude conflicts of fewer than 50,000 combatants. But this would exclude, for example, all the North American Indian wars with the United States during the 19th century.

Clearly, war is and has always been as much and more a social phenomenon as a military one. For this reason, this encyclopedia focuses not only on details of the fighting—discussions of causes of conflict, enumerations of battles, summaries of the outcomes—but also on the social and political contexts in which the wars occurred. Sometimes these are straightforward enough, sometimes they are more complicated, so the length of an entry is not always keyed to the size of the conflict or the number of casualties. We have tried to look at conflicts as sometimes

opening a window on a wider picture rather than always viewing the broader history merely as a context for the conflict. For wars are interesting to many not for what they say about strictly military history but for what they say about history in the broadest sense.

We do not ignore the formalities of war that are the bone and sinew of much military history. Each entry includes a handy summary, an at-a-glance look at the war in question, which contains many of the basics usually included in military histories: a list of the belligerents, a statement of the causes of the war, the date of its declaration (if any), the numbers (where known) of those under arms and the casualties they suffered, a summary of the outcome, and (where appropriate) the names and dates of the treaties or documents ending the conflict. (Unless otherwise noted, the numbers of personnel under arms represent the maximum strength of forces at their peak and are not cumulative numbers over time; casualty figures, however, represent cumulative totals for the duration of the conflict, except where otherwise specifically noted.) In each entry this summary is followed by a narrative discussion of the war, its social context, the major battles and events of the war, and its wider significance.

No work, even one of this size, can cover every conflict, but we aim at least for a fully exemplary representation of war throughout history. For example, the reader will find entries on classical and medieval times as well as on

the wars of modern Europe. Here are the Chinese dynastic wars as well as the Napoleonic Wars, the wars of the British colonial empire as well as the American Civil War, regional conflicts and the world wars of the 20th century, small wars and large, wars significant for their diplomacy and politics as well as those significant for their tactics and strategy. Given our imagined typical user—the American student of war—we have placed a slightly greater emphasis on North American conflicts. Some of the wars included are part of larger conflicts or related to other wars, past or present, and to emphasize these connections we have cross-referenced other relevant entries with SMALL CAPITAL LETTERS. Some wars are known by several different names. In these instances, we have used the name we judge most common and familiar and have included the alternates in parentheses after the title of each entry. If the alternate names are themselves sufficiently well known, or if we have grouped conflicts in a way different from more traditional texts, we cite the name and direct the reader to the appropriate entry or entries. Entries are followed by suggestions for further reading, and both a bibliography of major texts on war and a chronological list of the wars appear in the final volume of the encyclopedia. Finally, we have tried to create a readable work, one that might be perused for pleasure as well as consulted for specific information, one aimed at serving a general public as well as one especially useful to students and teachers of history at all levels.

Abbasid Rebellion (Abu Muslim's Revolt) (747–750)

PRINCIPAL COMBATANTS: The Muslim Arab Abbasids vs. Persia's ruling family, the Umayyads

PRINCIPAL THEATER(S): Khorasan, Persia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: At issue was who should rule the Muslim empire; the Abbasids wanted the throne; the Umayyads sought to prevent them from taking it.

OUTCOME: The last Umayyad caliph was deposed and murdered; Abu al-Abbas became the first Abbasid caliph, establishing a new dynasty.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: None

In 747 Muslim Arabs, claiming descent from Al-Abbas (d. 653), the uncle of the prophet Muhammad (570–632), revolted in Persia against the Umayyad dynasty, which then ruled the Arab world (most of today's Middle East, the African coast of the Mediterranean, and the Iberian Peninsula). These "Abbasids," were led by Abu Muslim (728–755), a man from obscure and lowly origins in Persia. Befriending the Abbasid imam in Persia, he became the agent of the family's ascension to power. Under Abu Muslim's black banners, the Abbasids stormed the Umayyad city of Merv in the northeastern province of Khorasan in 748. The Umayyad caliph, Marwan III (d. 750) attempted to crush the Abbasids, only to see his forces soundly defeated by them at the battles of Nishapur, Jurjan, Nehawand, and Kerbela. The revolt quickly spread

from Persia to other areas of the Muslim empire. Marwan rallied those faithful to him and led them personally to battle but was defeated again, this time decisively, at Mesopotamia's Great Zab River in 750. The caliph fled to Egypt and exile and, once there, was murdered. By then the general uprising in Persia and Mesopotamia had permitted Abu Muslim's confederate, Abu al-Abbas as-Saffan (722–754), to declare himself caliph at Kufa, a Mesopotamian city on the Euphrates River. Abul Abbas thus became the first ruler in Persia's Abbasid dynasty.

Abd el-Kader, First War of (1832–1834)

PRINCIPAL COMBATANTS: Muslim nationalists led by Amir Abd el-Kader vs. French colonial forces

PRINCIPAL THEATER(S): Oran and Mostaganem, Algeria

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Independence from French colonial rule

OUTCOME: The French conceded control of the interior of Oran to Abd el-Kader.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
3,200 French legionnaires; number of Muslim nationals: unknown

CASUALTIES: French casualties in Algeria from 1830 to 1847 were nearly 10,000 killed and 35,000 wounded.

4 Abd el-Kader, Second War of

Untold numbers of foreign legionnaires also died. Algerian casualties were in the tens of thousands.

TREATIES: Desmichels Treaty, 1834

In 1827 the dey of Algiers accosted the French consul with a fly-whisk, an act for which he refused to apologize, thereby giving the French a pretext for invading the North African country, which they did in 1830. Offering little resistance, the dey went into exile, and a loosely organized French colonial government was established. Lacking experience in ruling a Muslim society, the French were able to exercise control only in the coastal areas around Algiers, leaving considerable authority in the hands of provincial leaders in the hinterlands.

Among those leaders was Abd el-Kader (1808–83), a young Algerian nationalist who ruled Mascara. A brilliant military strategist and devout Muslim, Abd el-Kader organized a relentless campaign of harassment against the French that resulted in a 15-year series of wars.

The First War of Abd el-Kader lasted from 1832 to 1834 and was triggered by the violence with which the French attempted to impose their policies on the Algerians after King Louis-Philippe (1773–1850) created the French Foreign Legion on March 10, 1831, to battle colonial insurgency. Some 3,000 legionnaires, 2,196 of them German and 571 Italian, had arrived in Algeria by December 1, 1832. Abd el-Kader organized small bands of guerrillas to attack French troops around Oran and Mostaganem. Riding the growing tide of nationalism in Algeria, he was able to transform the guerrilla resistance movement into a full-fledged struggle for independence. The French, poorly organized, finally conceded to Abd el-Kader in 1834 by signing the Desmichels Treaty, which not only gave him the whole interior of Oran but also the title of Commander of the Believers. More importantly, the Desmichels Treaty secured Abd el-Kader's position as champion of Arab Algerian nationalism, a movement that would sweep aside the fragile peace of Desmichels within less than a year.

Abd el-Kader, Second War of (1835–1837)

PRINCIPAL COMBATANTS: Amir Abd el-Kader of Oran vs. competing tribes and French colonial forces

PRINCIPAL THEATER(S): Chelir, Miliana, Media, and Macta, Algeria

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Independence from French colonial rule

OUTCOME: The Amir was made master of the entire interior of Oran and the Titteri, reducing the French colonial realm to a few seaports only.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 30,000 French; 45,000 Algerians

CASUALTIES: French casualties in Algeria from 1830 to 1847 were nearly 10,000 killed and 35,000 wounded. Untold numbers of French legionnaires also died (some 110,000 in all French adventures during the 19th century). Algerian casualties, while in the tens of thousands, are not known.

TREATIES: Treaty of Tafna, 1837

The Treaty of Desmichels in 1834 between the French colonial government and Muslim nationalist leader Abd el-Kader (1808–83) gave the Algerian ruler control of the whole interior of Oran, where he organized an efficient government headquartered in the capital city of Mascara, trained and supplied an army of volunteers, and subsequently renewed his war of harassment against the French colonials in 1835. (See ABD EL-KADER, FIRST WAR OF.) His first objective, however, was to spread Algerian nationalism to the desert tribes around Mascara in order to unify his new territories. The Second War of Abd el-Kader, which lasted from 1835 to 1837, served the dual purposes of unification and resistance.

During the war Abd el-Kader imposed his rule on all the tribes of the Chelif into the Titteri. He then enlisted the desert tribes into his militia and proceeded to occupy the territory of Meliana and, eventually, Medea. At Macta Abd el-Kader defeated the French in a decisive battle, which forced the French commander, General Thomas-Robert Bugeaud (1784–1849), into negotiations. This was a humiliation for the French Foreign Legion, newly created by King Louis-Philippe (1773–1850) to combat Abd el-Kader and other rebels. The resulting Treaty of Tafna in 1837, signed by Bugeaud and Abd el-Kader, made the amir master of the entire interior of Oran and the Titteri, reducing the French colonial realm to a few seaports only and creating the basis for another war, the Third War of ABD EL-KADER, which was destined to last seven years.

Abd el-Kader, Third War of (1840–1847)

PRINCIPAL COMBATANTS: Forces of Amir Abd el-Kader of Algeria with some aid from Morocco vs. French colonial forces

PRINCIPAL THEATER(S): Algeria

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Algerian independence from French colonial rule

OUTCOME: Abd el-Kader's defeat and exile resulted in France's domination of Algeria.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 50,000 Algerians (Algerians and Moroccans); 100,000 French

CASUALTIES: French casualties in Algeria from 1830 to 1847 were nearly 10,000 killed and 35,000 wounded. Untold numbers of foreign legionnaires also died. Algerian casualties were in the tens of thousands.

TREATIES: Treaty of Tangier, September 10, 1844, ended Moroccan involvement.

When French expeditionary forces successfully invaded Algeria in July 1830, King Charles X (1757–1836) of France mistakenly believed that a foreign conquest would help silence the growing opposition at home to his increasingly reactionary government. By the end of the month, the agitation of Paris radicals had culminated in a revolution that forced his abdication. The subsequent transition from the absolute rule of Charles X to the constitutional monarchy of the new king, Louis-Philippe (1773–1850), left the “Algeria question” unresolved. In the absence of a firm policy and adequate support, French colonial forces were compelled to concede more and more to the Muslim nationalist Amir Abd el-Kader (1808–83), whose first two wars of harassment had confined the French presence in the North African country to just a few seaports. (See ABD EL-KADER, FIRST WAR OF; ABD EL-KADER, SECOND WAR OF.) By 1840 internal conditions in France had stabilized, and the repeated requests of colonial general Thomas-Robert Bugeaud (1784–1849) for support were finally answered, thereby triggering the seven-year conflict known as the Third War of Abd el-Kader.

The 1837 Treaty of Tafna between Abd el-Kader and the French colonial regime allowed the amir to create an efficient state around French holdings. He built a regular army of more than 2,000 men, stockpiled weapons, and sold surplus crops to the British to finance his regime. More important, the amir spread his message of independence and nationalism throughout Algeria, whose population broadcast anticolonial sentiment across the region. Therefore, when the French violated the terms of the Tafna agreement by crossing the Iron Gates of Oran in the late 1830s, Abd el-Kader was prepared for a long and bloody struggle.

Full-scale war broke out in 1840, after Abd el-Kader's forces (numbering at most 2,000 regulars and volunteers from desert tribes) had sacked the French settlement of Mitidja. General Bugeaud, who had reinforcements from the mainland, sent his mobile columns into the country-

side to punish the Algerian's followers. Using the unconventional tactic of surrounding individual villages, the French general sought to starve the Algerians into submission one settlement at a time. For his part, Abd el-Kader avoided large battles, preferring small-scale skirmishes and employing his cavalry hit-and-run style.

In 1841 the French destroyed Abd el-Kader's fortified sites in Algeria, whereupon the amir fled to Oran on the northwest coast. Another defeat at the northwestern town of Tlemcen the following year seemed at last to have crushed out the resistance movement, but Abd el-Kader managed to escape to Morocco, where the sultan Abdurrahman aided him by sending troops to the Algerian border. General Bugeaud defeated the Moroccans soundly at the Battle of Isly on August 14, opposing some 40,000 men of the two native leaders with his 8,000 infantrymen and superior artillery. Sultan Abdurrahman concluded the Treaty of Tangier on September 10, 1844, with the French, effectively ending Moroccan support for Abd el-Kader. Despite the setback, Abd el-Kader reentered Algeria and continued his program of resistance from the interior of the country, where he was able to evade the encroaching French columns.

By July 1846 the French had virtually wiped out Algerian resistance, and Abd el-Kader once again sought refuge in Morocco. This time, however, the sultan viewed Abd el-Kader as a liability and refused to admit him. Denied this last refuge and weary after some 15 years of resistance, Abd el-Kader surrendered in 1847 to Bugeaud's successor, Louis-Philippe's son, General Christophe de Lamoricière (1806–65). Sent to France, where he was imprisoned, Abd el-Kader was pardoned by Louis-Napoleon (1808–73) in 1852 and returned to Algeria a national hero.

Abenaki War, First (1675–1678)

PRINCIPAL COMBATANTS: Abenaki Indians vs. English settlers

PRINCIPAL THEATER(S): Maine frontier

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Abenakis' object was to counter English incursion into their lands.

OUTCOME: Although the English settlers remained in the region, colonial authorities promised annual tribute payments.

6 Abenaki War, Second

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Untitled treaty of 1678

The Abenaki (or Abnaki) Indians lived in the border region between New England and New France and were often staunch allies of the French against the English. The Abenakis were not a single tribe, but a loosely confederated collection of Algonquian tribes (including the Penobscots, Kennebecs, Wawenocks, and Androscoggins of New England's eastern frontier; the Pigwackets, Ossipees, and Winnepesaukes of the White Mountains; the Pennacooks of the Merrimack Valley; the Sokokis and Cowasucks in the upper Connecticut Valley; and the Missisquois and other groups in Vermont) broadcast throughout the region of present-day Maine, New Hampshire, Vermont, and southern Quebec. The English often referred to these tribes collectively as "the Eastern Indians."

While friendly relations were established with the French at first contact by Samuel de Champlain during 1604–05, enmity between the Indians and the English developed simultaneously after English colonists abducted five Abenakis and shipped them to England. From this time forward the Abenakis allied themselves with the French and periodically fought against the English.

Although some historians treat the First Abenaki War as part of KING PHILIP'S WAR, its action was sufficiently distant from the theater of that conflict to classify it separately. As English colonists made increasingly deeper incursions into Abenaki territory along the Maine border, the Abenakis conducted guerrilla warfare against outlying frontier settlements. In hit-and-run raids a number of settlers were taken captive and were either adopted into the tribe or sold to the French.

During the course of this conflict, the English defeated King Philip (d. 1676) and his geographically adjacent allies but failed to defeat the Abenakis. With outlying northern settlements terrorized and devastated, colonial authorities concluded a treaty with the Abenakis in 1678, pledging an annual tribute in return for permission to retain frontier settlements. The treaty brought no lasting peace, and the Abenaki War proved to be a prelude to other conflicts involving Abenaki warriors, who often fought under the command of French officers.

Abenaki War, Second *See* QUEEN ANNE'S WAR.

Abenaki War, Third (Dummer's War) (1722–1727)

PRINCIPAL COMBATANTS: Abenaki Indians vs. English settlers

PRINCIPAL THEATER(S): Maine frontier, New Hampshire White Mountain region, and Vermont Green Mountain region

DECLARATION: Declaration of Massachusetts Governor Samuel Shute, 1722

MAJOR ISSUES AND OBJECTIVES: The Abenakis' object was to counter increasing English incursion into their lands. The English declaration of war was based on the accusation that the Abenakis were "Robbers, Traitors and Enemies to his Majesty King George."

OUTCOME: Although the English settlers continued to occupy many frontier lands, Dummer's Treaty guaranteed Abenaki rights to exclusive ownership of certain lands, to maintain a priest of their religion (Catholicism), and to hunt and fish on lands occupied by the English.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Dummer's Treaty, 1727

The Third Abenaki War is also known as Dummer's War, Grey Lock's War, Father Rasles's War, and Lovewell's War. Officially, warfare between the English and the Abenakis had been ended by the Treaty of Portsmouth, which followed the Treaty of Utrecht, ending QUEEN ANNE'S WAR in 1713. In fact, neither the Portsmouth nor Utrecht treaties addressed the fundamental issues of the occupation of land that had triggered an enduring conflict between the Abenakis and the English (*see* ABENAKI WAR, FIRST). As the English colonial population continued to grow, the land issues only became more pressing and provocative. Additional treaties were concluded between colonists and Abenakis in 1717 and 1719, but the Indians continued to suffer abuse at the hands of unscrupulous and rapacious English traders and the incursion of settlers onto their lands. Especially galling was the erection of well-garrisoned English forts along the Abenaki frontier.

In the face of an increasing number of violent confrontations between Abenakis and English settlers, Governor Samuel Shute (1662–1742) of Massachusetts (Maine being then a part of that colony) formally declared war on the Indians in 1722, calling them "Robbers, Traitors and Enemies to his Majesty King George."

Earlier major conflicts with the Abenakis had been closely connected with international wars: KING WILLIAM'S WAR, Queen Anne's War, and KING PHILIP'S WAR. The Third Abenaki War, however, was a local conflict, with troops of Massachusetts and New Hampshire pitted against

the Abenakis. The New York colony and the powerful Iroquois Confederacy remained neutral observers of the action.

Most of the fighting was typical of white-Indian combat, a vicious but small-scale guerrilla routine of raid and counterraid. The English, however, also had a strategic objective in targeting the French Jesuit missionary Sebastian Rasles (1652–1724), who the English blamed for having incited the Abenakis to continual warfare. Militia captain Jeremiah Moulton assassinated Rasles in 1724, then destroyed his missionary village at Norridgewock. The killing of Rasles did demoralize the Abenakis, who were also discouraged by the defeat of their allies, the Pigwackets, the following spring. Militia captain John Lovewell (d. 1725) defeated Pigwacket warriors in the White Mountains then burned the major Indian town at Penobscot. Following the death of Rasles and the defeat of the Pigwackets, many Abenakis fled to Canada seeking refuge among the French missionaries there.

In the meantime, to the west, in the Green Mountains of present-day Vermont, the English were not prevailing. The war chief Grey Lock (fl. 1723–28) led his band of Missisquoi Abenakis from the Champlain Valley in a series of destructive raids along the Massachusetts frontier. To counter these attacks, the English built Fort Dummer near present-day Brattleboro, Vermont. This proved ineffective at neutralizing Grey Lock, who continued to harass the Vermont frontier even after the eastern Abenakis signed Dummer's Treaty of 1727, which officially ended the Third Abenaki War. This treaty granted the Abenakis the right to some lands they already had, the right to maintain a priest of their religion (Catholicism), and the right to hunt and fish even on English-occupied lands in the northern frontier region. The treaty has been the legal basis for a number of 20th-century court cases involving the rights of Maine Indians.

Achaean War (146 B.C.E.)

PRINCIPAL COMBATANTS: Rome vs. the Achaean League
PRINCIPAL THEATER(S): South-central Greece

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: For the Achaeans the issue was the strength of the Achaean League, which they hoped to force Sparta to join; for the Romans, the object was to maintain their protectorate over Sparta.

OUTCOME: The Achaean League was dissolved, and Rome gained hegemony over all of Greece.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In the shaky political environment of Greece in the second century B.C.E., many of the smaller city-states entered into regional military-political alliances as a security measure against the empires to the north, primarily Macedonia, and the larger Greek city-states, especially Sparta. Although Athens and Sparta stood alone because of their size, they occasionally joined the Aetolian League in northern Greece or the Achaean League—made up of city-states from the Peloponnese—in temporary alliances. Both leagues hoped to gain the two major powers as permanent members, but Athens was strong enough on its own, and Sparta was under Roman protection.

When Rome became preoccupied with the total destruction of Carthage in the Third PUNIC WAR of 149–146 B.C.E., the Achaeans, although poorly organized themselves, took advantage of Sparta's vulnerability and attacked, hoping to force the city-state to become a permanent member of the league. The Roman Senate quickly dispatched Consul Lucius Mummius Achaicus (fl. mid-100s) to Greece. There he promptly defeated the Achaean army, which mostly consisted of poorly trained slaves led by Critolaus (d. before 111) near Corinth. Lucius then sacked Corinth and burned it to the ground. The Achaean League was dissolved, and Rome subjugated all of Greece, ending the illusion of independence by rendering the Greeks slaves. Officially, Macedonia and Greece, under the collective name of Achaea, were annexed to Rome.

Achinese Rebellion (1953–1959)

PRINCIPAL COMBATANTS: Aceh's Muslim rebels vs. the Republic of Indonesia

PRINCIPAL THEATER(S): Northern Sumatra

DECLARATION: None

8 Achinese Sackings of Johore

MAJOR ISSUES AND OBJECTIVES: Indonesia, having finally won independence from the Dutch, sought to consolidate the republic by annexing Aceh; Aceh's Muslim majority, desiring a strict theocracy, fought to maintain autonomy from the republic.

OUTCOME: Aceh lost its independence but maintained autonomy in religious matters and over local customs and law.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Very limited

TREATIES: None

In the fall of 1953 Achmed Sukarno (1901–70), first president of the three-year-old Republic of Indonesia (see *INDONESIAN WAR OF INDEPENDENCE*), announced his plans to annex the small independent state of Aceh, or Achin (now Atjeh), which lay in northeastern Sumatra. Devoutly Muslim, the Achinese feared a loss of religious autonomy because Sukarno, although Muslim himself, was a strict secularist. Wanting to maintain a theocracy, they vehemently opposed the annexation. Led by Aceh's military governor, Tengku Daud Beureuh (1906–87), the fundamentalist Muslims rose in open revolt on September 20, 1953, attacking army bases and police stations in an attempt to garner enough additional firepower to stage a full-scale rebellion.

Failing to foment the general revolt they had planned, the Achinese waged intermittent guerrilla warfare for the next four years before a cease-fire was agreed to in March 1957. Sukarno declared Aceh a separate province, but this concession provoked other provinces to rebel, hoping for a similar limited sovereignty of their own (see *INDONESIAN WARS*). Recognizing that the Indonesian forces were now stretched thin, the Achinese rebels renewed hostilities. Sukarno was forced to the bargaining table in 1959, this time establishing Aceh as a "special district" of Indonesia with full autonomy in matters of religion and local law. This arrangement endured until 1989, when a Free Aceh Movement was formed and turned militant. For more than a decade, guerrilla violence was rampant, resulting in an estimated death toll of some 5,000 on both sides before the Aceh guerrillas concluded a cease-fire on June 2, 2000.

Further reading: Bernard Dahm, *Sukarno and the Struggle for Indonesian Independence* (Ithaca, N.Y.: Cornell University Press, 1983); C. L. M. Penders, *The Life and Times of Sukarno* (New York: Oxford University Press, 1974).

Achinese Sackings of Johore (1613–1615)

PRINCIPAL COMBATANTS: Aceh vs. Johore

PRINCIPAL THEATER(S): Johore and Perak in southern Malaysia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Aceh sought to take advantage of the Portuguese-Dutch colonial war in the East Indies to grab the mineral-rich Perak region. They thus hoped to preempt the Dutch from establishing an entrêpot at Johore, from whence they could both control the Spice Islands trade and easily threaten nearby Aceh.

OUTCOME: Aceh sacked and razed Johore and became a player in the Spice Islands trade; the Dutch set up Batavia as their entrêpot in Indonesia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Possibly 100,000 Achinese troops; Johore forces, unknown

CASUALTIES: Unknown

TREATIES: None

At the dawn of the 17th century, the Dutch and the Portuguese both claimed supremacy in Indonesia and thus over trading rights to the fecund Spice Islands of Malaysia. The Dutch had begun to challenge Portugal's naval superiority as far back as 1579, almost immediately after the Netherlands had wrung independence from Spain. Dutch ships launched incursions into all of Portugal's far-flung colonies, and for more than a quarter century the two European powers battled for control of trade routes in the South China Sea, the Java Sea, and the Indian Ocean. As Portuguese sea power waned and the Dutch navy suffered growing pains, a power vacuum appeared in Indonesia.

As the Portuguese chased the Dutch out of Malacca and the Dutch did the same to the Portuguese in east Indonesia, the sultan of Aceh (or Achin)—an independent province in northern Sumatra—rushed to fill the vacuum. Iskandar Shah (1583?–1636) quickly became leader of the most powerful military force in the region and expanded Achinese trade in the Spice Islands. Iskandar knew that the Netherlands was looking for a central entrêpot at which to locate its trading capital, and he guessed correctly that Johore, capital city of Perak (an area of southern Malaysia rich in mineral deposits), was a prime candidate. Iskandar's strategy in sending the Achinese army against Johore was twofold: He wanted first to establish his dominance over Perak before either the Dutch or the Portuguese had a chance to stop him. Second, he wanted to prevent a Dutch move into Achinese Sumatra, his immediate sphere of influence. In the event, Johore was no match for the powerful Achinese army, which mercilessly sacked the Perakian capital in 1613. Two years later the Achinese returned and completely razed Johore.

Although the colonial *PORTUGUESE-DUTCH WARS IN THE EAST INDIES*, which had begun in 1601, would not end until 1641, the Dutch actually began to exercise hegemony over the region as early as 1610. For the time being, at least, Aceh had succeeded in keeping the Dutch out of Johore. The Netherlands selected Batavia as the trading center for the Dutch United East India Company, and the

Dutch onslaught would not truly vanquish Aceh for nearly three centuries (*see* ACHINESE WAR.).

Further reading: Richard J. Wilkinson, *History of the Peninsular Malays, with Chapters on Perak and Selangor* (1923; reprint ed., New York: AMS Press, n.d.).

Achinese War (1873–1907)

PRINCIPAL COMBATANTS: The Netherlands vs. Aceh

PRINCIPAL THEATER(S): Northeastern Sumatra

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Dutch sought to quell piracy in the East Indies, subjugate the Achinese Muslims, and colonize all of Indonesia; the Achinese sought to maintain their independence and continue their lucrative raids against imperial trade.

OUTCOME: More than a quarter century of bitter guerrilla warfare culminated in Dutch control of Aceh.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Dutch, 10,500; Achinese, unknown

CASUALTIES: Dutch, 2,317 killed; Achinese, 11,187 killed

TREATIES: Treaty of 1903

By the mid-19th century Indonesia had long been colonized by both English and Dutch commercial interests, drawn by the lucrative spice and tobacco trades. With the advent of steam power and the opening of the Suez Canal in 1869, the trade grew even more profitable, enhancing the economic and political appeal of the Indonesian colonies. For centuries pirates from Aceh, or Achin (today called Atjeh), in northern Sumatra had raided both English and Dutch trading vessels with near impunity.

Though a problem for both Britain and the Netherlands, Indonesian pirates embarrassed the Dutch more, since they had for so long claimed that the Dutch East India Company controlled the island chain as one big colonial trading juggernaut. Such a claim had made them traditionally responsible for security in the region. With the opening of the Suez Canal, however, most of the East Indian commercial traffic was rerouted for efficiency through the Strait of Malacca, which was controlled by the British. The two colonial powers reached a *modus vivendi* in the East Indies: The British would allow the Dutch passage through the strait and turn a blind eye to their handling of the Achinese problem—if, in return, the Dutch abolished the higher rates they charged for non-Dutch shipping and permitted British-held Singapore to continue its trade with the regions of Sumatra that the Dutch had recently subjugated.

After the British recognized the Dutch interest in Aceh, the Netherlands in 1873 launched two armed expeditionary forces to conquer the rebellious Achinese Muslims, bring the pirate raids to an end, and establish Dutch dominance throughout all of Sumatra. Dutch forces

quickly seized the Achinese palace in the regional capital, Kutaradja. However, an epidemic of cholera struck the Dutch forces, and a long and ugly guerrilla war followed. For 20 years the Dutch tried to root the Achinese guerrillas out of the Sumatran jungles until the bitter war began to absorb Dutch Indonesia's annual trade surplus. With profits falling, the Dutch in 1893 made a concerted effort to win the hearts and minds of the natives who did not openly support the rebels by enlisting the aid of a local chief, to whom they offered a position of high rank in their proposed colonial government. The plan backfired two years later when the chief spurned the colonials and took all his followers with him to the rebels.

It took another decade for the Dutch to gain the upper hand. In 1903 Muhammad Daud, sultan of Aceh, sick of the fighting, concluded a treaty with the Netherlands, recognizing Dutch sovereignty and relinquishing his throne. Many of the Achinese rebels, however, refused to accept Dutch rule and took to the jungles again, continuing to wage guerrilla war. Caught in a quagmire in which they had already invested too much, the Dutch embarked on a "castle strategy," systematically building garrisons and fortifications for Dutch troops across the island. In 1907, with the Dutch treasury all but empty and the Dutch colonists universally despised throughout Indonesia, the Netherlands finally managed to crush the Achinese resistance. At long last, the Dutch ruled unchecked over the Spice Islands and dominated the spice and tobacco trade.

Acoma Revolt (1599)

PRINCIPAL COMBATANTS: Acoma Indians vs. Spanish Empire

PRINCIPAL THEATER(S): American Southwest

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Acoma were resisting Spanish conquest and enslavement; the Spanish wished to make an example of the Acoma.

OUTCOME: The Acoma were defeated and brutally punished.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Spain, 400; Indians, approximately 200–300

CASUALTIES: Spanish, fewer than 50 killed or wounded; Indians, 100–150 killed or wounded, approximately 80 intentionally maimed

TREATIES: None

The history of Spain in the New World is deeply colored by popular myth, and one of the most pervasive of those

myths paints the Spanish as unceasingly avaricious and aggressive in conquest. In truth, by the second half of the 16th century, Spain was so deeply embroiled in European wars that it largely neglected its New World interests. In 1579 the English seafarer Sir Francis Drake (1540[?]-96) entered a California bay and laid claim to a land he called "New Albion." Though nothing came of this singular act, it was enough to prompt the Spanish viceroy in Mexico City to warn the royal court in Madrid that the Spanish colonies might soon be imperiled. Even then the Crown did nothing to protect the northern frontier of its New World holdings for almost two decades.

It was not until 1598 that an expedition was dispatched north from Mexico. On April 30 Don Juan de Oñate (1550-1630) reached present-day El Paso, Texas, and laid claim to what he called "New Mexico," a province stretching from Texas to California. Oñate brought with him the seeds of a colony: 400 men, women, and children, 7,000 head of livestock, and some 80 wagons. With his meager forces, Oñate pressed farther north, aggressively colonizing the pueblo country.

The Indians of the pueblos were not traditionally warriors, and, therefore, Oñate met no resistance—except at Acoma, in western New Mexico. As he had in the case of the other pueblos, Oñate sent squads of conquistadores to inform the Indians that they were now subjects of the Spanish Crown and that they had to renounce their pagan religion and abide by Spanish law. Whereas the other pueblos had meekly consented, the people of Acoma responded by killing 13 soldiers of the advance party, including three officers of noble blood. Oñate could not let this resistance go unpunished, but, situated atop a steep-walled mesa, the Acoma pueblo was a very formidable objective. Nevertheless, in January 1599 Oñate's troops fought their way to the top of the mesa, stormed the pueblo, and killed most of Acoma's warriors.

The conquistadores took captive 500 women and children. About 80 noncombatant men over the age of 25 were sentenced to amputation of one foot and enslavement for a period of 20 years. Women as well as children over the age of 12 were not maimed but were likewise sentenced to long terms of slavery. Children under 12 were turned over to priests to be raised as Catholics. Oñate's men also seized two Hopis, basically innocent bystanders who had the misfortune to be visiting Acoma during the siege, and amputated their right hands. He sent them to their home pueblo in this condition as a warning about the consequences of rebellion.

In and of itself, the Acoma Revolt was short lived, but it had disproportionate historical consequences, creating a precedent of chronic hostility between whites and Indians in the Southwest. The Spanish Crown advanced much of its colonization effort by granting individuals the authority to possess and govern huge tracts of territory, provided that they financed the necessary military and commercial expeditions. Oñate, moved by visions of New World gold

and silver, invested his personal fortune in the pueblo country. Unfortunately for Oñate, and even more so for the Native Americans who fell under his jurisdiction, in the months and years following the Acoma Revolt, the country yielded neither gold nor silver, and it failed even to produce sufficient food for the colonists. Ever more desperate, Oñate worked "his" Indians harder and with greater cruelty. His brutal policies toward them were finally too much even for colonial authorities, who, 15 years after he had first marched into the province, called on him to face charges of brutality and poor governance. He was assessed heavy fines.

Aethelbald's Wars (733-750)

PRINCIPAL COMBATANTS: Mercia vs. Wessex and Northumbria

PRINCIPAL THEATER(S): England

DECLARATION: Not known; probably none

MAJOR ISSUES AND OBJECTIVES: The Mercian king Aethelbald and his cousin-successor, Offa, invaded Wessex and Northumbria with the purpose of establishing Mercian dominance of Anglo-Saxon England, thereby effecting the first real unification of England.

OUTCOME: Wessex was successfully invaded in 733 and Northumbria in 744, ultimately resulting in the unification of much of England under Aethelbald and his successor, Offa.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No surviving documents

Aethelbald (r. 716-757) was king of Mercia, the richest and most powerful kingdom of Anglo-Saxon England. He set out to parlay this advantage into out-and-out political supremacy among the kings and disparate kingdoms of Britain. His first step, in 733, was to invade Wessex in the south of England, seizing it from the Britons. He next invaded Northumbria in 744 and again in 749, causing great hardship and devastation in the region. During this period he also asserted dominance over kings of the regions bordering Wales by assisting them in defending against Welsh border incursions.

By the end of the 740s Aethelbald's conquests had earned him the title "king of Britain," and he was recognized as an equal by no less a figure than Charlemagne

(c. 742–814). Historians generally concede that he effected the first meaningful unification of England. Nevertheless, his reign following the conquest of Wessex and Northumbria was marked by an intense civil war, and Aethelbald himself was assassinated by his bodyguard in 757. His cousin Offa (r. 757–796), who had participated in Aethelbald's campaigns only to oppose him in the civil war, succeeded him to the Mercian throne.

Aethelfrith's Wars (593–616)

PRINCIPAL COMBATANTS: Northumbria vs. (in succession) the Dalriad Scots and the Britons

PRINCIPAL THEATER(S): Scotland, Wales, and Nottingham

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: Struggle for dominance among the Anglo-Saxon heptarchy (i.e., Kent, Sussex, Wessex, Essex, Northumbria, East Anglia, and Mercia).

OUTCOME: Aethelfrith achieved dominance in the heptarchy, only to be slain in battle by the ally of a rival.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None recorded

Although the 593–616 series of conflicts among the kings of the Anglo-Saxon heptarchy is collectively called the Aethelfrith's Wars, their culmination put Edwin (r. 616–632) on the throne as the first Christian king of Northumbria.

Aethelfrith (d. 616), king of the Anglian kingdom of Bernicia, married the princess of neighboring Deira in 588 or 590, thereby uniting the kingdoms as Northumbria and sending into exile Edwin, the heir apparent to the Deiran throne. Beginning in 593, Northumbria warred sporadically with the Britons. In 603 Aethelfrith faced a new threat from the north, but successfully defended his borders against the incursion of Scottish invaders from Dal Riata (the Dalriad Scots under King Aidan) and Britons of Strathclyde, defeating both at the battle of Daegsaston. This elevated Northumbria to preeminence among the kingdoms of the Anglo-Saxon heptarchy, making it the most formidable power below the Firth of Forth.

In about 616 Aethelfrith led his Northumbrians westward as far as the Dee River at Chester. Here Aethelfrith's forces confronted Britons under Selyf Sarffgatau, or Solomon (c. 586–616), king of the Welsh kingdom of Powys. Some 1,250 monks from the monastery at Bangor came to the fore to pray for Solomon's success. Aethelfrith

ordered his army against the unarmed monks, all but 50 of whom were slaughtered. This signaled the start of the general battle, in which the Northumbrians routed the Britons, killing Solomon in the course of battle. The Welsh peninsula was now completely cut off from the rest of Britain. In the meantime, however, the exiled Edwin had concluded an alliance with Raedwald, king of East Anglia. Raedwald attacked Aethelfrith at the Battle of the Idle (616), near modern Nottingham. He not only defeated the Northumbrian king, but killed him as well, thereby enabling Edwin to assume the Northumbrian throne as that region's first Christian king.

Edwin went on, later in 616, to defeat the Britons in north Wales and Anglesea, thereby assuring the continued supremacy of Northumbria. Edwin died in the Battle of Hatfield Chase (632) at the hands of Cadwallon, a north Welsh king. Nevertheless, Northumbria's dominance of the heptarchy continued through 641 under Edwin's successor, Oswald.

Afghan Civil War (1928–1929)

PRINCIPAL COMBATANTS: Initially, various Afghan tribes vs. the government of Emir Amanullah Khan in Kabul; then Pashtun rebels vs. the Tajik followers of the bandit usurper Habibullah Ghazi

PRINCIPAL THEATER(S): Kabul, Afghanistan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Initially, rebels sought to reverse the emir's modern reforms and protect their tribal and Muslim traditions; outlaw leader Habibullah Ghazi wanted to depose the emir and take his place as ruler of Afghanistan; the Pashtuns wished to overthrow the usurper and return the throne to a "legitimate" ruler from the Musabihan clan.

OUTCOME: Amanullah abdicated in favor of his brother, who in turn abdicated under threat of attack from Habibullah, who was in turn ousted and executed by the Musabihans, placing Nadir Shah on the throne and, with British help, reuniting the country.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Royal army, 15,000; rebel numbers unknown

CASUALTIES: Rebel casualties, 15,000 killed; royal casualties unknown

TREATIES: None

When Amanullah Khan (1892–1960) became emir of Afghanistan in 1919, he vowed to modernize his country and destroy the influence of foreign powers over its internal affairs. As he went about professionalizing his army,

streamlining the civil bureaucracy, and in general creating a modern administrative system, he alienated and offended many of those who had initially supported him. Then, on November 12, 1928, Shinwari tribesmen rose in revolt in Jalalabad because Amanullah's reforms had begun to erode traditional tribal life. Encouraged by religious leaders, who were also offended by modern reforms that challenged venerable Muslim theology, the Shinwari marched on the capital of Kabul. Amanullah was shocked to discover that his reforms lacked support even among his soldiers, the majority of whom, angered at the emir's rigid insistence on military professionalism, refused to answer his call to arms. Realizing that his opponents had successfully managed a full-scale revolt, desperate to preserve what he could of his progressive government, and anxious to maintain his family's rule of Afghanistan, Amanullah abdicated in mid-January 1929 in favor of his weaker older brother, Inyatollah, and fled to India.

The events in Kabul did not escape the notice of an outlaw leader and Tajik tribesman named Bacha-i-Saqao (d. 1929). Shrewdly assessing both the potential of the Shinwari uprising and the timidity of the new emir, Bacha led his strong band on his own march against the capital. Inyatollah had been emir of Afghanistan for three days when his fears of the Shinwari and Bacha's Tajiks got the better of him. He, too, abdicated, escaping to join his brother in exile in India, while Bacha—former army deserter, erstwhile bandit of the Khyber Pass—proclaimed himself emir under the name of Habibullah Khan. Amanullah, now desperate to reclaim his throne, returned to Kandahar, where he assembled an army and marched on Kabul in the spring of 1929. Habibullah attacked him en route, and the defeated Amanullah Khan fled the country for good.

Though Habibullah successfully defended his crown from other claimants throughout the summer, the new emir's rule quickly deteriorated, and much of his support vanished, not so much because of his checkered past as because he was a Tajik, the first "outsider" to rule Afghanistan since before the coming of the Greeks. Most Afghans were Pashtuns, a tribe that had initially supported Habibullah but was the first to turn on him. They demanded, of course, a Pashtun ruler. Among the Pashtuns the major pretenders to the throne were the Musabihans, a clan directly descended from the great 19th-century Afghan ruler Dost Muhammad (1793–1863).

The eldest of the Musabihan brothers, General Muhammad Nadir Khan (1880–1933), was Amanullah's cousin and had served as his minister of defense before resigning in protest over the former emir's military reforms. Just returned from Europe, Nadir Khan organized an army in the late summer of 1929 with plans to retake Kabul. He had originally hoped for direct support from the British, but when he sought their help, they refused him, calculating that if they were to back Nadir Khan and the Musabi-

han coup were to fail, the English would then be *personae non grata* in Kabul regardless of who sat on the throne. Instead, London cautiously offered tacit assistance and set up guidelines to follow in maintaining officially its neutrality. The British did allow Nadir Khan (and others) in the British-held North West Frontier Province (NWFP) to cross the border freely into Afghanistan, though they frowned on back and forth traffic and banned outright the use of the NWFP as a sanctuary or a recruiting ground for rebels. Since the British, however, made it fairly clear they would do little, if anything, to enforce these restrictions, Nadir Khan could safely ignore them.

At length, the Musabihans were able to gather enough men, most of them from the NWFP, to march confidently on Kabul. On October 10 Nadir Khan's forces took the city, and Habibullah fled. On October 16 Nadir Khan assumed the throne, renaming himself Nadir Shah. Scarcely a fortnight later Habibullah was captured and executed in the town of Kohistan on November 3, 1929. Once in power, Nadir Shah, with British help, instituted reforms, restored order, and placated those who remained loyal to his exiled cousin Amanullah. In 1932, a year before his death, Nadir Shah established a constitutional government in a unified Afghanistan.

Further reading: Michael Barthorp, *Afghan Wars and the North-West Frontier 1839–1947* (New York: Sterling, 2002); Edgar O'Ballance, *Afghan Wars, 1839–1992* (New York: Brassey's, 1993).

Afghan Civil War (1979–1992)

PRINCIPAL COMBATANTS: 1. Regime of Mohammed Daoud vs. leftist Afghan army and air force units. 2. Muslim mountain tribes vs. leftist government under Nur Mohammed Taraki, with Soviet alliance. 3. Soviet-backed government of Babrak Karmal, with Soviet alliance, vs. mujahideen (Afghan Muslim army of rebellion).

PRINCIPAL THEATER(S): Kabul, Afghanistan, and the mountainous region along the Afghanistan-Pakistan border

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The period of civil war began with a leftist coup against President Mohammed Daoud, then developed into a Muslim reaction against the leftist government, which brought modern reforms unwelcome to the Muslims. As the Soviet Union became more deeply involved in the war, more Afghans joined the rebellion against what they considered Soviet invaders. As for the USSR, it sought to maintain Afghanistan as a buffer state against Chinese-influenced Pakistan.

OUTCOME: The mujahideen waged a tenacious campaign against the Soviet forces, ultimately driving them out; once what had become the "common" enemy was gone, however, the rebels failed to create a viable government,

and Afghanistan split into a multitude of factions ruled by warlords.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: About 250,000 rebels, mainly mujahideen; Afghan army in 1978, 105,000, many deserting to the rebel cause; Soviet troops, 100,000

CASUALTIES: In the initial coup, some 3,000 were killed on both sides. During 1979, before massive Soviet intervention, 10,000 Afghan government troops were killed, and perhaps 20,000 rebels died. During the long period of Soviet intervention, 11,987 Soviet troops were killed and 51,367 wounded; rebel deaths are unknown, but it is estimated that land mines may have killed as many as 200,000 Afghan civilians.

TREATIES: Troop withdrawal agreement, 1987

Mohammed Daoud (1909–78) became president of Afghanistan after a coup that ousted King Mohammed Zahir Shah in 1973. On April 27, 1978, rebellious units of the Afghan military, mainly armor and air force, attacked Daoud's presidential palace in Kabul, which was defended by 2,000 Republican Guards and two loyalist Afghan army divisions. Nevertheless, after a 36-hour battle, the palace fell to the rebels. Daoud, along with his wife, brother, three sons, and several grandchildren, was killed. In his place the rebels proclaimed a new prime minister as head of state, Nur Mohammed Taraki (1917–79), leader of the Marxist-Leninist Khalq Party, also known as the People's Faction Party.

No sooner was the Taraki government proclaimed than opposition arose against it, primarily among the Muslim mountain tribes, who formed an army of rebellion, the mujahideen. The Soviet Union sent increasing amounts of military aid to the Taraki regime, but in April 1979 the city of Herat fell to the mujahideen rebels. Between 4,000 and 8,000 died in fighting in and around Herat.

On February 14, 1979, in Kabul, Adolph Dubs, the U.S. ambassador, was abducted and then killed in a shootout between rebel and government forces. A bloody guerrilla war developed, in which some 10,000 government troops were killed and some 20,000 rebels were slain during 1979. By the autumn of 1979 rebel forces controlled 22 of Afghanistan's 28 provinces.

In the meantime the Taraki government split into its own warring Marxist factions, and in September 1979 Taraki was overthrown and killed in a coup staged by his right-hand man, Hafizullah Amin (1929–79). A Marxist zealot, Amin began promulgating anti-Soviet rhetoric, stirring Afghanistan to the point of a Marxist revolution that had more in common with Maoist doctrine than with Soviet communism.

The Soviet Union invaded, the Kremlin ordering the 105th Guards Airborne Division from Tadzhik to the

Bagram Airbase in Kabul. On December 20 a Soviet armored division seized the Salang Tunnel, the major overland route between the Soviet Union and Afghanistan. On Christmas Eve 1979 the Soviets began a massive airlift into Kabul International Airport. Within 72 hours the Soviets had landed the airborne division and more than 5,000 special forces troops and seized strategic points in Kabul, while four motorized rifle divisions rolled across Afghanistan's northern border. In the early morning hours of December 28 Darulaman Palace had been seized, and the Soviets issued a communique stating that Amin had been sentenced to death by a revolutionary tribunal. Other sources believe he was killed in the initial palace battle. Also killed in the fighting was Lieutenant General Paputin, the Soviet Union's deputy minister of the interior.

Having executed Amin and replaced him with a hand-picked puppet, Babrak Karmal, long a foe of both Taraki and Amin, Soviet air and land forces—more than 100,000 troops—sought to crush resistance in a single stroke. What they encountered, however, was a widespread and grimly determined national resistance spearheaded by the mujahideen, who received aid from the United States as well as Pakistan. Despite the assistance, the mujahideen were poorly equipped, and yet they consistently prevailed against the vast Soviet forces. In fact, the Soviet situation in Afghanistan was repeatedly compared to that of the United States in the long Vietnam War, in which the technologically advanced forces of a modern imperialist power were stymied by comparatively primitive but absolutely committed indigenous opposition.

In 1986, as the war ground on, the demoralized Soviets withdrew support from Karmal, who resigned and was replaced by Sayid Mohammed Najibullah, former head of Afghanistan's much-feared secret police. In the meantime, in January 1987 an international Islamic conference petitioned the Soviet Union to withdraw its troops, and Najibullah simultaneously announced plans for a cease-fire. Seven mujahideen groups rejected the cease-fire, demanding direct negotiation with the USSR rather than its "puppet government." Militarily, the Soviet position continued to deteriorate, and in November 1987 Najibullah called a summit of tribal leaders, who approved a new constitution and elected Najibullah president. In April 1988 an international agreement was concluded for the withdrawal of Soviet troops, and half were withdrawn by August 15, 1988, and the remainder by February 15, 1989. Even so, many of the mujahideen continued to fight, and Najibullah declared a state of emergency from February 1989 to May 1990, when the constitution was amended to allow the formation of political parties. The reforms, however, did not stop the fighting, and in April 1992 mujahideen forces occupied Kabul, sending Najibullah into hiding and bringing about his resignation.

Afghan-Maratha War (1758–1761)

PRINCIPAL COMBATANTS: Afghani invaders of the Punjab vs. the Marathas of west-central India

PRINCIPAL THEATER(S): The Punjab, India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Marathas waged war to eject the Afghans from the Punjab.

OUTCOME: After initial Maratha victories, Ahmad Shah Duranni, the Afghani leader, decisively defeated the Marathas at the Battle of Panipat. Nevertheless, an insurrection of Sikhs prompted Ahmad to withdraw to Kabul.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: The largest Maratha force numbered 300,000 men; the Afghani force was much smaller.

CASUALTIES: Total casualties are not known. However, the Marathas are reported to have suffered 75,000 killed and 30,000 captured at the culminating battle of Panipat.

TREATIES: No formal treaty ended the war.

With the death of Nadir Shah in 1747, the Persian Empire broke apart (see PERSIAN CIVIL WAR [1747–1760]), and Afghanistan became an independent state under Ahmad Shah Duranni (c. 1722–73). Ahmad immediately sought control of the Punjab and upper Ganges region (collectively, western Hindustan). On March 11, 1748, he invaded the Punjab, but was repelled at the Battle of Manupar. He invaded again in 1751, and this time annexed the region. During 1756–57 Ahmad invaded and sacked Delhi but could not overthrow the Mogul emperor, Alamgir II (r. 1754–59), because he had to return to Kabul to put down a growing insurrection there.

With Ahmad absent from the region, the vizier at Delhi ordered Balaji Rao (also called Sedushao Rao Bhau, or, simply, Sadashiv) (r. 1740–61) to lead his people, the Marathas, proud warriors of the Deccan, in a war against the Afghani occupiers of the Punjab. Balaji Rao eagerly embraced his mission, rapidly defeated the Afghans, and took Lahore. In 1759, however, Ahmad Shah Durrani returned to India, recaptured Lahore, and once again occupied Delhi. Alamgir II was assassinated, presumably to prevent his supporting

Ahmad, but Ahmad refused the Mogul throne, choosing instead to install Shah Alam II (1728–1806) as the new Mogul emperor.

During December 1760 Ahmad's large army faced off against some 300,000 Marathas, with both armies hunkered down in fortified positions. Skirmishes occurred—at least one that amounted to an atrocity, as some 5,000 Afghans slaughtered 20,000 unarmed Maratha camp followers as they foraged for food.

At last, on January 14, 1761, the armies fought the culminating Battle of Panipat. Rao Bhau was killed—beheaded—and as many as 75,000 Marathas were slain (some sources report 20,000). Large numbers, perhaps as many as 30,000, were captured and subsequently ransomed.

Maratha expansion into northern India was halted; however, Ahmad did not remain in occupation of the Punjab. An insurrection among the Sikhs forced his withdrawal to Kabul, creating a power vacuum that threw the entire subcontinent into chaos and paved the way for British colonial expansion in India.

Afghan-Persian Wars See PERSIAN-AFGHAN WAR (1726–1738); PERSIAN-AFGHAN WAR (1798); PERSIAN-AFGHAN WAR (1816); PERSIAN-AFGHAN WAR (1836–1838); PERSIAN-AFGHAN WAR (1855–1857).

Afghan Rebellions (1709–1727)

PRINCIPAL COMBATANTS: Ghilzai and Abdali Afghans (with Uzbek participation) vs. Safavid Persian rulers of Afghanistan

PRINCIPAL THEATER(S): Afghanistan and Persia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Afghan forces sought independence from the Safavid Persians.

OUTCOME: An independent Afghan state was established, but much of Afghanistan remained under Persian rule until the PERSIAN-AFGHAN WAR (1726–1738).

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown; at the important battle of Herat (1719) the Persians fielded at least 30,000 men.

CASUALTIES: At Kandahar in 1709 the Persians lost 24,000; at Herat the Persians lost 10,000.

TREATIES: None

In 1709 the Ghilzai Afghans rebelled at Kandahar against their Persian overlords after the Persians attempted to impose Shiite religious doctrine on the mostly Sunni Ghilzai. Kandahar quickly fell to the Ghilzai, and all Persian attempts to retake the city during 1709–10 failed.

In 1711 Khusru Khan (d. 1711) led a new expedition against the city, setting up a siege. The Ghilzai defenders were on the verge of surrender when Afghan raiders menaced the attackers. Seeing that the Persians were vulnerable, the Ghilzai, led by Mir Vais (d. 1715) took the offensive, sallying out from the city and killing Khusru Khan and 24,000 of his 25,000-man force. Mir Vais then declared Afghanistan independent.

The example of the Ghilzai triumph at Kandahar inspired another Afghan people, the Abdali of Herat, to rise under the leadership of Asadullah Khan (fl. 1717–25) in 1717. After liberating their city, the Abdali joined forces with the Uzbeks and invaded the Persian province of Khorasan.

The Persians responded in 1719 with a 30,000-man army sent to retake Herat. Outnumbered two to one, Asadullah nevertheless defeated the invaders, inflicting some 10,000 casualties while suffering 3,000 killed and wounded.

In 1720 the Ghilzai invaded Persia, taking the city of Kurman. However, the invaders were driven back before the end of the year. War between Afghanistan and Persia settled into a series of border raids until January 1722, when the Ghilzai again took Kerman. From there they invaded Gulnabad, just 11 miles east of the Persian capital of Isfahan. A Persian army of 50,000 was sent against the invaders but was itself driven off, and the Ghilzai laid siege to Isfahan for the next six months. The city's garrison surrendered in October 1722, Shah Husain (1702–48) abdicated, and Mahmud Khan (d. 1725), son of Mir Vais, established an Afghan government in Isfahan.

As the Safavid Persian collapse became apparent, Russian and Turkish forces rushed into the country in an attempt to seize power (see RUSSO-PERSIAN WAR [1722–1723]). The Ghilzai Afghans, however, fought on, taking Tehran in 1725, then defeating the forces of the Ottoman Turks as well as the Russians. In the meantime, a new and powerful leader, Nadir Khan (1688–1747), rose among the Persians and delayed the final liberation of Afghanistan until mid-century.

Afghan Revolt (699–701)

PRINCIPAL COMBATANTS: Arabs vs. Afghans; then Arab governor of the eastern provinces vs. rebels led by Ibn al-Ash'ath

PRINCIPAL THEATER(S): Afghanistan and much of Mesopotamia (Iraq)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Afghans rebelled against Arab rule, then an Arab general rebelled against the Muslim governor of the eastern provinces of the Muslim caliphate.

OUTCOME: Both the Afghan rebellion and that of Ibn al-Ash'ath were put down.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The famous Peacock Army of al-Hajjaj ibn Yusef (661–714), the Muslim governor of the eastern provinces of the caliphate, set out in 699 to regain control of what is today southeast Afghanistan from Afghan rebels. Known for their colorful military garb—hence the name “Peacock”—the army under Kindah tribesman Ibn al-Ash'ath (d. 704) defeated the rebels and was posted to the region for an indefinite period of time. The Kindah military leader refused to obey this posting order from al-Hajjaj and took part of the army back to Mesopotamia. Having gathered support along the march, he clashed with troops of al-Hajjaj in January 701 at Tustar and defeated them. Ibn al-Ash'ath then set out for Basra and Kufa, where he won the Battle of Dayr at-Jamajim. He occupied the important port city of Basra. However, his run of successes on the battlefield ended at the Battle of Maskin on the Dujail River in 701, where al-Hajjaj, reinforced by Syrian troops provided by caliph Adb al-Malik (646/647–705), dealt a decisive blow against Ibn's rebel army. Basra returned to the control of the caliphate, and the rebellion collapsed.

Afghan War, First (1839–1842)

PRINCIPAL COMBATANTS: Britain vs. Afghans under Dost Muhammad

PRINCIPAL THEATER(S): Afghanistan and northern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Anxious to protect the northern approaches to colonial India, the British sought to check Russian influence in the region by replacing Dost Muhammad, an Afghan emir sympathetic to the Russians, with Shah Shuja, a ruler who favored the British.

OUTCOME: British losses were heavy, and although a punitive expedition prevailed against the Afghans, British forces (and commercial interests) withdrew from the country.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

The British fielded more than 30,000 men, including 6,000 Afghan levies; at Kandahar in 1842, Dost Muhammad fielded 20,000 Afghan troops.

CASUALTIES: More than 5,000 British dead; total Afghan losses are not known, but 1,500 were killed between 1839 and 1841.

TREATIES: None

In an attempt to protect the northern approaches to colonial India, the British sought to replace Dost Muhammad (1793–1863), the Afghan emir whose friendly relations with the Russians were perceived as a threat to British control, with former emir Shah Shuja (1780–1842), who was sympathetic to British interests. An Anglo-Indian army of 21,000 under General Sir John Keane occupied Kandahar in April 1839, successfully attacked Ghazni on July 21, and took Kabul on August 7. Keane captured Dost Muhammad and restored to power Shah Shuja. Leaving the superannuated major general William G. K. Elphinstone (d. 1842) with a 4,500-man garrison at Kabul to support two British diplomats there (Sir William Macnaghten [1793–1841] and Sir Alexander Burnes [1805–41]), Keane returned to India with his main force.

Kabul remained relatively quiet until November 1841, when Sher Ali Akbar Khan (1825–79), son of Dost Muhammad, led an uprising against the British presence in the Afghan capital. The two British diplomats were murdered, and Elphinstone's garrison was besieged. On January 6, 1842, Elphinstone surrendered to Akbar Khan in exchange for a grant of safe passage to India for his 4,500-man command and some 12,000 civilian refugees. On January 13, however, at the Khyber Pass, Akbar's troops violated the safe conduct and overwhelmed Elphinstone's already demoralized troops. Most were massacred, together with the civilian refugees. Of the small number taken prisoner, few survived captivity. A small British garrison at Ghazni also surrendered, but troops at Kandahar and Jalalabad resisted and held out.

In April 1842 Akbar's followers assassinated Shah Shuja, and that same month Sir George Pollock led an Anglo-Indian punitive expedition against the Khyber Pass. Successfully breaching it, he broke the siege of Jalalabad on April 16, then proceeded to Kabul. Here, on September 15, Pollock's expedition rescued 95 prisoners, all that remained of Elphinstone's garrison and its civilian charges.

Pollock now ordered severe reprisals against the Afghans, including the destruction of the citadel and great bazaar of Kabul. With victory achieved, the British East India Company, chief trading force in the region, decided that it was both too dangerous and insufficiently profitable to remain in Afghanistan. In December British forces and civilians evacuated the country, and Dost Muhammad was given British permission to resume his reign as emir. He ruled until his death in 1863.

Afghan War, Second (1878–1880)

PRINCIPAL COMBATANTS: Britain vs. Afghans under Sher Ali Akbar Khan

PRINCIPAL THEATER(S): Afghanistan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The British invaded Afghanistan in response to the pro-Russian stance of Sher Ali Akbar Khan, Afghan emir, which threatened the northern approaches to colonial India.

OUTCOME: Creation of a pro-British government under Abdur Rahman

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 35,300 Anglo-Indian troops; as many as 100,000 Afghans

CASUALTIES: British, 1,850 killed in action, and 8,000 dead from disease; Afghans, 8,900 killed in action

TREATIES: May 26, 1879, treaty with Emir Yakub Khan

When Sher Ali Akbar Khan (1825–79) succeeded his father, Dost Muhammad (1793–1863), as emir of Afghanistan, he made diplomatic overtures to the Russians yet refused to receive a British delegation. This provoked a British invasion on November 20, 1878. General Sir Frederick Roberts led Anglo-Indian troops from India and quickly took the frontier passes. Soon, 35,300 Anglo-Indian troops were in the country. When Roberts defeated an army under Sher Ali at Peiwar Kotal on December 2, the emir fled and was replaced by his son Yakub Khan (1849–?), who concluded a treaty of peace with Britain on May 26, 1879. A British diplomat, Sir Louis Cavagnari, was installed in Kabul.

On September 3, 1879, thousands of Afghans stormed the British residency in Kabul, killing Cavagnari and others. This provoked reprisal in the form of a force of 2,558 British regulars and 3,867 Sepoy troops, again under Sir Frederick Roberts, which defeated an 8,000-man Afghan army at the Battle of Charasia, southwest of Kabul, on October 6, 1879. Six days later the British marched on and occupied Kabul as well as its fortress, Bala Hissar, prompting the abdication of Yakub Khan; he sought British protection from insurgents who called for a holy war against the British. An estimated 100,000 Afghans took up arms against the occupiers of Kabul. Remarkably, however, the vastly outnumbered Roberts broke through the Afghan lines, outflanked the besiegers, and succeeded in dispersing the army. Troops under Sir Donald Stewart conducted mop-up operations that restored British control until June 1880, when Ayub Khan (1854–1914), brother of Yakub Khan, laid claim to the Afghan throne. With 15,000 men, Ayub marched on Kandahar. In response General G. R. S. Burroughs led a force of 2,467 Anglo-Indians to block Ayub Khan. The result was the Battle of Maiwand, fought on July 27, 1880. Ayub dealt the outnumbered Anglo-Indian force a severe blow, destroying half of it.

After defeating Burroughs, Ayub Khan continued his march on Kandahar. On August 9, 1880, however, Sir Frederick Roberts led 9,896 Anglo-Indian troops and a special transport corps on a lightning advance to Kandahar, where he planned to intercept Ayub Khan. Completing the 313-mile journey, much of it in mountainous terrain, in just 22

days, Roberts's force reached Kandahar on September 1 and immediately launched an attack. Stunned, Ayub's troops were routed, and Ayub Khan fled to Herat.

The Battle of Kandahar ended the Second Afghan War and brought about the establishment of a pro-British government under Amin Abdur Rhaman Khan (r. 1880–1901). The following year, after the British forces again withdrew from Afghanistan, Ayub Khan led a rebellion against Abdur Rhaman, who, however, rapidly crushed the insurgent movement. Ayub Khan fled to Persia, and Abdur Rhaman established a stable government.

Afghan War, Third (1919)

PRINCIPAL COMBATANTS: Afghanistan vs. Britain (Anglo-Indian forces)

PRINCIPAL THEATER(S): India (Bagh region) and Afghanistan

DECLARATION: May 1919, proclamation of jihad (holy war)

MAJOR ISSUES AND OBJECTIVES: Afghanistan sought independence from all foreign domination.

OUTCOME: Armistice and British recognition of Afghan independence

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Afghans, 10,000; Anglo-Indian forces, comparable

CASUALTIES: Afghan, unknown; Anglo-British, 236 killed, 615 wounded

TREATIES: Treaty of Rawalpindi, August 8, 1919

During WORLD WAR I Afghanistan successfully struggled to remain neutral. However, throughout the period 1914–18 Germany and its ally Turkey provoked anti-British religious agitation within the country. Britain tried to quell anti-British sentiment within the government by granting Afghanistan liberal subsidies. The funds were well spent, in that Afghanistan remained neutral for the duration of the Great War. Shortly after the Armistice, however, Amanullah Khan (1892–1960) ascended the Afghan throne as the nation's new emir following the assassination of his father, Habibullah (1872–1919). Amanullah was backed by the army and the radically nationalist Young Afghan Party, which, in 1919, gave him a mandate to declare independence, including freedom from all foreign influence, especially that of Russia and Britain.

As in previous conflicts with the country, British officials were concerned that an independence movement in Afghanistan would threaten Britain's colonial hold on India. Following British saber rattling, Amanullah proclaimed a jihad (holy war) against Britain and sent some 10,000 troops across the Indian border and into the province of Bagh, which was occupied on May 3, 1919. In

response, an Anglo-Indian force under General Reginald Dyer (1864–1927) was dispatched through the Khyber Pass to Landi Kotal and, from here, drove the invaders out of Bagh by May 11. Punitive air raids against Afghan cities were also ordered.

The Anglo-Indians then invaded Afghanistan as far as Dakka. In the meantime, the British air raids on Jalalabad and the Afghan capital city of Kabul were taking their toll. Amanullah sued for peace, and an armistice was concluded on May 31, followed by the Treaty of Rawalpindi on August 8, whereby Britain acknowledged Afghan independence in return for an Afghan pledge to cease harassment of the Afghan-Indian border.

The peace proved nominal at best, as Afghan guerrillas sporadically continued to open fire along the border. On November 22, 1921, the Treaty of Rawalpindi was reaffirmed, and the British discontinued their practice of subsidy payments.

Afghan War between Ghur and Ghazna (1148–1152)

PRINCIPAL COMBATANTS: Ghur (Ghor) vs. Ghazna (modern Ghazni)

PRINCIPAL THEATER(S): Present-day Afghanistan and Iran

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ghur fought for independence from Ghazna, which it also sought to displace.

OUTCOME: Ghur gained ascendancy over its former master.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Mahmud of Ghazna (971–1030) controlled Khorosan (in Iran) and Afghanistan by 999 and raided northern India, gaining wealth that financed his further conquests in Afghanistan. His death in 1030, however, brought about the gradual decline of once-powerful Ghazna (in east-central Afghanistan) and, in consequence, a loosening of its grip on the tributary state of Ghur, a mountain-enclosed region of central Afghanistan. Saif ud-din Suir (r. 1146–49) and Ala-ud-din (r. 1150–75) led a Ghurid uprising against Ghazna beginning in 1148 and culminating in the siege and sacking of the capital city of Ghazna (called Ghazna or Ghazni). The siege was protracted into 1152, by which time the last of the Ghaznavids had been driven into India.

Although sacked, the city of Ghazna was spared from total destruction. It served later as a secondary capital in the ascendent kingdom of Ghur.

Agathocles' War against Carthage

(c. 311–306 B.C.E.)

PRINCIPAL COMBATANTS: Syracuse vs. Carthage

PRINCIPAL THEATER(S): Syracuse and northern Africa

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Carthage sought to block Syracuse's territorial ambitions.

OUTCOME: Although triumphant in the war, Carthage limited its rule in Sicily to the region west of the Halycus River.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Treaty of 306 B.C.E. between Carthage and Syracuse

By means of a coup the oligarchical party of Syracuse established Agathocles (c. 360–289 B.C.E.) as tyrant of the Sicilian province in 317 B.C.E. A champion of Hellenism and an able military leader, Agathocles prosecuted a series of wars against the other Sicilian Greeks from about 316 to 313. These expanded his realm, giving him control of Messina and other Sicilian cities, but it also strained his formerly friendly relations with Carthage. Tension erupted into war in 311, when a group of Agathocles' enemies persuaded Carthage that the tyrant was a threat to their Sicilian holdings.

During the first months of the war, the Carthaginian leader Hamilcar Barca (d. 229/228 B.C.E.), who had been sent to Sicily with a large force, crushed Agathocles' troops at Economus and laid siege to the city of Syracuse itself. Against seemingly insurmountable odds, Agathocles staged a remarkable escape from the besiegers by breaking through their blockade. He then carried the war into Africa, where for two years he harassed outlying Carthaginian possessions. At one point his forces threatened Carthage itself. A revolt at home forced Agathocles to return to Sicily, and he was unable to continue his African offensive. Although Carthaginian forces finally defeated him in 307, his earlier achievements in Africa led a circumspect Carthage to conclude a favorable peace with the Syracusan tyrant in 306, which actually served to enhance the security of Syracuse by restricting the Carthaginian rule in Sicily to the region west of the Halycus River. In about 304 Agathocles adopted the title of king of Sicily.

Alaungpaya's Wars of Conquest (1752–1760)

PRINCIPAL COMBATANTS: Alaungpaya, a Burmese village headman vs. the Mon people, various other competing tribes, and French colonial interests

PRINCIPAL THEATER(S): Burma (Myanmar)

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: The unification, under Alaungpaya, of the Third Burmese Empire

OUTCOME: Unification of Burma under the Konbaung dynasty

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: No formal treaty

Until 1751, the history of Burma (Myanmar) was a patchwork quilt consisting of competing tribes, dynasties, and colonial powers. During the mid-18th century Alaungpaya (1714–60), a village headman from the upper Burmese province of Moksobomyo, united these conflicting elements in a series of conquests, which, beginning in 1752, forged the powerful dynasty known as the Third Empire. The unification movement, which started almost accidentally, thrust the provincial leader into the international arena and elevated Alaungpaya to a symbol of Burmese nationalism.

In 1751 Burma was essentially split in half. The middle and upper regions were ruled by the unpopular and declining Toungoo dynasty headquartered in Ava. The lower half was controlled chiefly by the Mons, based at Pegu, a dynasty backed by French colonial interests who had plans to invade the north. In 1752 the Mons, led by King Binnya Dala (d. 1774), began to carry out the invasion by taking Ava and capturing the Toungoo king, entirely unresisted. Flushed with this easy victory, Dala returned to Pegu in triumph, taking with him most of his army and leaving behind nothing more than a skeleton force and a military governor assigned the duty of obtain-

ing oaths of allegiance from the outlying provinces. Within the provinces was Alaungpaya's village of Moksobomyo. Confronted with the decision of whether to become a vassal of the Mons, Alaungpaya chose to organize a resistance movement, and a few days later, when the Mon detachment arrived at the village, he met them with bullets, not obedience. Thus began a long and bloody series of wars.

Dalaban, the Mon military governor, sent two regiments to take Moksobomyo in 1752, but by the end of the year Alaungpaya had defeated both. These victories, relatively minor in themselves, greatly fueled the resistance, and Alaungpaya capitalized on his triumphs to enlist supporters from all over the region. Invoking the spirit of nationalism and Burmese self-rule, Alaungpaya declared himself king of all Burma and renamed Moksobomyo Shwebo, making it the new capital of the empire. Fully aware that this and his earlier victories would result in a much larger Mon invasion, Alaungpaya dug in and prepared for their return.

It did not take long for Dalaban to receive reinforcements from Pegu and proceed to Shwebo, where he surrounded Alaungpaya's city, attacking it from all sides. For five days and nights the Mons bombarded the city, but Alaungpaya's forces held strong. Growing impatient, Dalaban selected 1,500 of his best men to storm the walls of the city and open the gates, but before they could carry out their orders, Alaungpaya's men decimated the elite force from their fortifications inside. After the battle Mon troops withdrew toward the Irrawaddy River. In response Alaungpaya unleashed a massive offensive, forcing the Mons to break rank and attempt to float down the river to Pegu. Hundreds drowned, and Dalaban retreated to Ava.

By the end of 1752, Alaungpaya had gained control of all of Upper Burma, including the Shan states, except for Ava. The following year he laid siege to Ava itself. Surprisingly, he was met with no resistance; the Mons had slipped out during the night. Alaungpaya left Ava to raise more support in the surrounding Shan provinces. On learning of his absence, the Mons returned, routed the small Burmese nationalist force left outside the gates, and laid siege to Ava. Alaungpaya, however, had anticipated the Mons' move and returned to Ava with a massive force. Trapped between two Burmese armies, the Mons were defeated, thus paving the way for Alaungpaya's conquest of Lower Burma.

Lower Burma posed many problems for the Burmese leader. First among them was the growing French presence in the region, which included an informal alliance between the local French military commander and the Mons. Second, the British East India Company, which was at odds with the French in India, had become a formidable presence in the Burmese territory of Negrais.

In 1755 Alaungpaya attacked the Mons in Lower Burma and forced them to retreat to the fortified cities of Pegu and Syriam. He then captured the port of Dagon,

renamed it Rangoon, and interned several French and English ships in the harbor. Hoping to receive arms from the ships' captains in exchange for their release, Alaungpaya was instead rebuffed by them. The colonial vessels managed to sail away at nightfall. Ill-equipped to storm Syriam and Pegu, Alaungpaya returned to Upper Burma to regroup.

In 1756 he returned to Rangoon and moved on Syriam. For eight months the Burmese laid siege to the fortified city. Then, fearing the arrival of French reinforcements from India, Alaungpaya decided it was time to attack. Choosing a mere 93 of his best men—later called "The Golden Company of Syriam"—Alaungpaya sent them to scale the walls of Syriam and open the gates. In contrast to Binnya Dala's fiasco at Shwebo, Alaungpaya's men succeeded in their mission, and the Burmese troops routed the city, whereupon French military leaders, including one Captain Bruno, who had concluded an alliance with the Mons, were executed.

Alaungpaya next proceeded to Myanaung to prepare for his conquest of Pegu. While there he concluded a treaty with the East India Company, through which, in return for acknowledging the British right to occupy Negrais, he received much-needed weapons and ammunition. In 1757 he successfully laid siege to Pegu, bringing about the abdication of Binnya Dala. Alaungpaya, already in firm control of Upper Burma, was now accepted as the ruler of Lower Burma as well. By 1759 British indifference to their own 1757 treaty prompted Alaungpaya to reclaim Negrais.

The frontier with Siam still posed a threat, and in 1760 Alaungpaya laid siege to the Siamese capital of Ayutthaya. During the siege he was wounded, and he died retreating to Burma. At age 46 Alaungpaya had just begun to reshape the course of Burmese history. His abbreviated reign brought unity to the fragmented empire and established the Konbaung dynasty, which would rule into the next century.

Albanian-Turkish Wars (1443–1478)

PRINCIPAL COMBATANTS: Albania vs. the Ottoman Empire

PRINCIPAL THEATER(S): Albania

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Ottomans sought to expand their empire and the influence of Islam, Albania to defend its sovereignty and protect the Christian faith against the infidel Turks.

OUTCOME: The Albanians repulsed 13 Turkish invasions before being defeated by Sultan Muhammad II, the Conqueror.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Albanian-Turkish truce of 1461

Under Sultan Murad II (1403[?]-51) the Ottoman Empire launched a series of brutal invasions into eastern Europe, hoping to seize Hungary, Serbia, and Albania. Unfortunately for Murad, in each region there appeared a talented military hero to frustrate Ottoman rapaciousness. In Hungary it was the legendary John Hunyadi (1387-1456) who repulsed the Turks (see HUNGARIAN-TURKISH WAR, [1441-1444]); in Serbia George Brankovitch (r. 1427-56) kept the Ottoman army at bay. In Albania the challenge fell to a far more unlikely prospect—George Castriota, better known as Skanderbeg (1405-68).

The son of an Albanian vassal prince, Castriota had been captured by the Ottomans at a young age and taken to the sultan's court, where he was raised and educated. There he lived the comfortable life of a courtier, becoming one of Murad's favorites. Those at court addressed him with the title *bey*, Persian for "lord," and at length the young hostage converted to Islam. Given the name Skanderbeg after serving in the Ottoman army, probably as a janissary, he could easily have lost himself in the luxuries and privileges of the Turkish harem. Instead, when Albania fell under the threat of attack by the Turks, he deserted the Ottoman army and returned to defend his homeland, renouncing Islam, reconvertng to Christianity, and forming a league of the traditionally disputatious Albanian nobility.

In fact, it was the very quarrelsomeness of the Albanian nobles, their internecine squabbling and disunity, that had made their country an attractive target for Ottoman aggression. United behind Skanderbeg, however, they were able to seize the purportedly impregnable Ottoman-held fortress of Krujë and launch, under Skanderbeg's brilliant supervision, a successful military campaign against the Turks in 1443. For two decades and more Albania repulsed every Ottoman advance, some 13 invasions in all between 1444 and 1466.

In hopes of ending the Turkish threat permanently as well as shoring up Albanian sovereignty, Skanderbeg in 1448 joined forces with Hungary's John Hunyadi in an alliance that also included Serbia and Bosnia. It marked the only time Skanderbeg took the offensive against the Turks, but his quadruple alliance was swiftly defeated by Murad in October 1448 at the Second Battle of Kosovo. The defeat left Serbian and Bosnian independence in jeopardy and devastated Hungary militarily, but Skanderbeg became the hero of the entire Western world when he broke Murad's siege of the stronghold at Krugë in 1451. Aid poured into Albania from every corner—Venice, Naples, Hungary, and the Vatican's Papal States.

That same year Murad died. He was succeeded by his son Sultan Muhammad II (1429-81), who soon became known as "Muhammad the Conqueror." Muhammad did

not, however, conquer either Hunyadi's Hungary or Skanderbeg's Albania, though not for want of trying. Holding the tenuous Albanian alliance together, often using guerilla tactics, Skanderbeg met with success after success. In 1461 he won a major victory against Muhammad that allowed him to impose a 10-year truce on the Porte, as the Ottoman government was called, only to violate the peace himself when the Pope, who called Skanderbeg "the Champion of Christ," asked him to launch a new crusade in 1463. Skanderbeg's troops raided Macedonia and defeated the Turks in 1464 and again in 1465. In 1466 Sultan Muhammad personally led an invasion of Albania, conducting another heavy siege of Krujë and devastating the country. The sultan's destructive campaign cost Skanderbeg his foreign allies, who deserted him by 1467. George Castriota, née Skanderbeg, aka Champion of Christ, died the following year. The Albanian nobles immediately resumed their bickering while conducting a desultory war against the Ottomans. When Krujë finally fell in 1471, Muhammad ordered all the inhabitants decapitated, a brutal harbinger of what the Albanians could expect when the Conqueror regained control of their country for the Ottomans, which he succeeded in doing by 1478.

Albanian Uprising, First (1910-1912)

PRINCIPAL COMBATANTS: Albania vs. Ottoman Empire

PRINCIPAL THEATER(S): Albania and Macedonia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Albanians sought self-government.

OUTCOME: The Ottomans crushed an Albanian bid for independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Albanian rebels, 20,000; Ottoman army, 40,000

CASUALTIES: Unknown

TREATIES: None

Long oppressed by the corrupt Ottoman Empire, Albania sought independence from Turkish domination. To this end, the Albanian independence movement aided the Young Turk movement in its effort to overthrow the old Ottoman regime and radically reform Turkish government. In return for this aid, the Albanians understood that they would be granted a significant measure of self-government and relief from Ottoman taxation. After achieving control of the Ottoman government in 1908, however, the Young Turks reneged on the promise made to the Albanians. Worse, the new Turkish government levied even more burdensome taxes on Albania. This prompted an organized, militant rebellion on the part of some 8,000 northern Albanians. Beginning in March 1910, the uprising

spread rapidly southward, to Korçë, Albania, and even into parts of Macedonia.

The first revolt broke out north of the Kosovo province in March 1910. Initially, the Turks could field no more than 16,000 men against some 20,000 rebels. By May 1910 reinforcements swelled the Turkish units to 40,000, and the rebellion was put down. Nevertheless, emboldened by the growing independence movement, Albanian leaders convened in Montenegro to draw up a demand for self-government, which they submitted to the Turks. In response the Turkish government dispatched a large army force, which quickly and savagely put down the rebellion during June 1910. The brutally established peace was short lived. In March 1911 some 4,000 rebels struck again in the north. Rebellion pushed southward until the Turks restored peace by making modest concessions to Albanian autonomy. The next year, however, more than 3,000 Albanians staged an uprising in May. Before the year was out rebel strength had reached about 20,000, and the Albanians took the city of Priština. At this point, however, the rebellion was swallowed up in the larger FIRST BALKAN WAR.

In the 1920s, before the rise of Nazi Germany, Benito Mussolini's fascist Italy was the preeminent aggressive power on the European continent. Italian foreign policy was a mixture of bombast and caution, like its preening and touchy leader. At the Lausanne Conference in the summer of 1923, Il Duce had dramatically stopped his train at a distance to force French premier Raymond Poincaré and Britain's Lord Curzon to come to him. Under Benito Mussolini (1883–1945), Italy was the first Great Power to offer a hand to the Bolsheviks with a trade agreement, and Mussolini was proud both of Italy's role in the League of Nations and as a guarantor of the Locarno Pact. Mussolini's main sphere of activity, however, was the Balkans.

When an Italian general surveying a border of one of Albania's Greek-speaking provinces was killed in 1923, Mussolini ordered his navy to bomb the Greek island of Corfu—and the League of Nations awarded Italy, not Greece, an indemnity for the incident. Italy annexed Fiume in January 1924, even though Woodrow Wilson (1856–1924) had insisted in 1919 at Versailles that Fiume be granted free-city status. Given these and other actions, Yugoslavia was suspicious of Italian ambitions, especially in Albania, despite Rome's attempts to regularize diplomatic relations with Belgrade. Later in 1924 the Yugoslavs backed a coup d'état in Albania that elevated the Muslim Ahmed Bey Zogu (1895–1961) to power. Once in control, however, Zogu turned to Italy for aid and protection. First Italy provided Albania economic relief in the Tirane Pact of 1927, then Mussolini and Zogu joined in a military alliance in 1927; ultimately, at a convention in July of 1928, Il Duce declared Albania a virtual protectorate, and Ahmed Zogu became King Zog I.

Thus, Zog came to power as part of the Italian diplomatic attempt to counter French influence in the successor states of the old Austro-Hungarian Empire, when Mussolini was first beginning to flex his foreign policy muscle and place Italy in the center of the interwar turmoil that plagued Europe. Zog, a dictator who ruled as autocratically as any leader in Europe, proved himself worthy of his fascist sponsor, and by the early 1930s he was facing strong opposition from liberal reformers and Marxist-oriented Muslim radicals who appealed directly to the country's Islamic majority. Insurrections occurred in 1932, 1935, and 1937, but they were relatively small, poorly planned affairs that Zog easily suppressed. Zog's hold on power, however, remained tenuous enough that his punishment of the rebels was surprisingly lenient—he executed only a few ringleaders—and he felt compelled to undertake minor social and administrative reforms as a show of good faith.

Meanwhile, the diplomatic brinkmanship of Adolf Hitler (1889–1945) had gained him control over much of Europe without a shot being fired by the Great Powers,

who were bent on appeasement of the saber-rattling Nazis. Benito Mussolini had been closely and enviously following Hitler's succession of brilliant diplomatic coups against what was quite evidently the enfeebled democracies of the West. In his rise from obscurity to absolute power in Germany, Hitler had admired Mussolini as a model fascist leader, and Mussolini liked to consider the German *führer* his younger protégé. Mussolini understood that Italy traditionally fared best when playing Germany off against France, and he feared Hitler's expansion into the Danube River basin. Moreover, when the Nazis had arranged for the murder of Austrian chancellor Engelbert Dollfuss (1892–1934)—whom Mussolini had supported on condition he establish an Italian-style fascist regime—Mussolini responded with the threat of force. In London and Paris the appeasers were beginning to see Il Duce as the one leader with the will to stand up to Hitler. As Hitler placed pressure on the coal- and iron-rich Saarland, Britain, France, and Italy met in the spring of 1935 at a conference in Stresa to reaffirm their joint opposition to German expansion.

However, Mussolini then decided to imitate his protégé and simply take the independent African empire of Abyssinia (Ethiopia) from Haile Selassie (1892–1975). France and Britain felt they could not merely wink at Mussolini's Ethiopian adventure, so they pushed mild economic sanctions against Italy through the League of Nations. However, the sanctions included neither an embargo on oil, which would have grounded Mussolini's air force, nor closure of the Suez Canal, which would have cut his supply line. Germany, no longer in the league, ignored the sanctions, thus healing the rift between the two dictators. In May of 1936 Italian troops entered Addis Ababa and completed the conquest of Abyssinia, smashing the Stresa Front and transforming the League of Nations, according to historian A. J. P. Taylor, in a single day from a powerful body imposing sanctions, seemingly more effective than ever before, to an empty sham. In June Mussolini appointed his son-in-law, Galeazzo Ciano, foreign minister, and in July Ciano acquiesced in Germany's annexation of Austria. In November came the announcement of a vague Rome-Berlin Axis, and a year later, in December of 1937, Italy, too, quit the League of Nations.

By 1939, however, Hitler was clearly the leader of the Axis, and he sometimes treated the preening Il Duce as the junior partner he in fact had become in fascist Europe. Increasingly, Mussolini felt he had something to prove in the face of Hitler's aggressive foreign diplomacy. Thus, on April 7 Italy annexed Albania and removed its erstwhile client King Zog. Now Mussolini was again a figure worthy of alliance with Hitler. It was ultimately Mussolini's deposing of Zog and annexing of Albania that persuaded Hitler to sign the 1939 "Pact of Steel" with Italy, turning the Italian-German "axis" into a true military alliance. Tellingly, the treaty began by acknowledging Italy's hegemony over Ethiopia and Albania, referring to Victor Emanuel III, titu-

lar head of the Italian government, as "King of Italy and Albania, Emperor of Ethiopia." Meanwhile, the former "king" of Albania was forced to flee into exile (see *WORLD WAR II: THE BALKANS*).

Albigensian Crusade (1209–1229)

PRINCIPAL COMBATANTS: Roman Catholic Church vs. the Albigensian heretics

PRINCIPAL THEATER(S): Southern France

DECLARATION: 1208, by Pope Innocent III

MAJOR ISSUES AND OBJECTIVES: Albigensian opposition to the Roman Catholic Church

OUTCOME: Nobles of southern France accepted Catholic French rule

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Meaux, 1229

The Albigensians were Christian heretics (mainly Catharists) concentrated in southern France (Languedoc) who formed an antisectoral party opposing the Roman church. Influenced by the multicultural makeup of the shipping ports in the region, the Albigensians were exposed to and adopted Catharism, a dualistic variation on more orthodox Christian belief that stressed eternal conflict between the forces of good and evil, and that held the material world to be evil. In 1208, after repeated attempts at the pacific conversion of the heretics, Pope Innocent III (1161–1216) declared a military crusade against them, offering papal fiefdoms in Toulouse to anyone who would participate. Catholic nobles from all over the north of France raced into action.

The crusade pitted the Catholic nobles of northern France, led by Simon IV de Montfort (c. 1160–1218), against the Catharist nobles of the south, commanded by the count of Toulouse, Raymond IV (1156–1222). A major battle at Muret in 1213 proved to be the turning point of the crusade. Albigensian forces, aided by Pedro II of Aragon (1174–1213), besieged Montfort's headquarters at Muret and appeared to have bottled him up there. However, Montfort managed to escape the tightening grip of the southern forces, redirect his troops, and accomplish the rout of the unsuspecting Albigensians in a bloody ambush. Pedro II was killed, a significant loss because his death completed the split between Aquitaine and Aragon. By this time, clearly, the conflict had become a political rather than a religious war; obviously, Pedro II had had no intention of defending heresy.

Montfort proceeded to Toulouse and in 1215 declared himself count of the former Albigensian stronghold. In 1218 Montfort was killed, but the inquisition he instituted against the heretics had already taken a heavy toll. The population was systematically persecuted and the countryside sacked and pillaged. The doors of southern France had been forcibly opened to Catholic France, and construction of churches and monasteries had already begun on a large scale. By 1229 the magnificent Provençal civilization created by the Albigensians was largely in ruins. That same year the crusade formally ended with the signing of the Treaty of Meaux, by which the independent kingdoms of the south accepted Catholic French rule. Thus, the French Crown emerged from the bitter “crusades” as the only real victor, having gained control over Languedoc. As for Catharism, it slowly eroded along with its social base.

Alemannic Invasion of Gaul (298)

PRINCIPAL COMBATANTS: Roman Gaul vs. the Alemannic tribes

PRINCIPAL THEATER(S): Gaul (modern-day France)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Alemanni sought plunder and hegemony over Gaul; the Romans fought to defend Gaul and expel the Alemanni beyond its frontier

OUTCOME: The Alemanni were routed and Gaul remained free of barbarian incursions

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

Gaul, a province of the Roman Empire for centuries, lay undefended from time to time, depending on the strength of the western emperor, and its occasional vulnerability encouraged raids by neighboring marauding tribes. In 298 the barbarian Alemanni, a nomadic people from the north, who first became known to history when the Romans attacked them in 213 and who, by 260, occupied the Agri Decumates, swept into Gaul and began ravaging the countryside.

In response to the invasion, the Roman Senate dispatched Flavius Valerius Constantius (c. 250–306), “Caesar” of the Western Roman Empire and commander of its armies. By the time Constantius was able to deploy his legions in the field, the Alemanni already controlled much

of Gaul and had destroyed a good portion of the countryside. Almost immediately Constantius met the Alemanni at the battle of Lingones, a small town in northeastern Gaul, which would prove a spectacular victory for the Romans. Beaten back earlier in the day, then trapped by the invaders against the walls of the city, Constantius called on his reserve to lower ropes down the city walls. A good portion of the army scrambled up to safety. That same day Constantius was able to call for reinforcements, and when he led his legions back into the field, he defeated and routed the Alemanni, who scattered into the scorched countryside.

The Alemanni regrouped at the town of Vindonissa and turned to meet Constantius's pursuit. The Roman general engaged in battle, without halting to rest his troops, but Roman discipline held and the Alemanni were totally defeated and driven from Gaul. Vindonissa brought an end to the barbarian incursions for the time being, at least while Constantius ruled Gaul with a firm hand.

Alexander's Advance into Central Asia

(329–328 B.C.E.)

PRINCIPAL COMBATANTS: Alexander's Macedonian forces vs. remnants of the Persian army, Bactrian forces under Bessus, and the Scythians of Sogdiana

PRINCIPAL THEATER(S): Central Asia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest of Persia and its allies

OUTCOME: The region was conquered, and Alexander used it as a springboard for his conquest of India.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In pursuit of Darius III (d. 330 B.C.E.), king of Persia, who he had defeated, Alexander the Great (356–323 B.C.E.), emperor of Macedon, approached Babylon. He ran Darius to ground, but about 60 Persian nobles, led by Bessus (d. c. 329 B.C.E.), satrap of Bactria, murdered Darius to keep him out of Alexander's hands. Alexander pursued the fleeing remnants of the Persian army. He struck such terror into the hearts of the enemy troops that Babylon fell to him without a fight in 331. From here, he rooted out rebels in the mountains, then destroyed Persepolis, the ancient capital of Persia, and pressed on in pursuit of the murderers of Darius. As he did this, he penetrated Central Asia and continually consolidated his conquests en route.

24 Alexander's Army, July Mutiny of

Alexander advanced relentlessly eastward through Parthia and into Bactria. Here he captured Bessus, who he executed, then turned north and crossed the Oxus, penetrating Sogdiana in Central Asia.

In Sogdiana his forces were repeatedly set upon by savage Scythian tribesmen, especially as his troops traversed the mountain passes south and west of the Jaxartes River. In more than one exchange, Alexander, always in the vanguard of his army, was wounded, once gravely. However, he effected a masterly crossing of the Jaxartes by improvising rafts made of tents stuffed with hay. As the masses of infantry crossed in this manner, other infantrymen covered their comrades, defending against the onslaught of Scythian bowmen along the river bank. Once landed on the opposite shore, Alexander's forces trounced the Scythians. After these tribesmen were neutralized, Alexander led his forces back to Sogdiana to crush a revolt led by Spitamenes (d. 328 B.C.E.), the deposed satrap of the province. The campaign against Spitamenes's rebels consumed nearly a year, but by 328, Sogdiana was firmly within the Macedonian fold, and Alexander launched out into India.

Alexander's Army, July Mutiny of

(326 B.C.E.)

PRINCIPAL COMBATANTS: Mutiny of Alexander III the Great's Macedonian army

PRINCIPAL THEATER(S): The mutiny took place in India.

DECLARATION: Appeal of the soldiers, July 326 B.C.E.

MAJOR ISSUES AND OBJECTIVES: The army, exhausted by ceaseless and far-ranging campaigning, wanted to return to Macedonia.

OUTCOME: Without violence, the troops prevailed, and Alexander broke off his Indian conquest.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Alexander's forces, 50,000–60,000 men at this time

CASUALTIES: None

TREATIES: None

ALEXANDER'S INVASION OF INDIA (328–326 B.C.E.) was ended not by opposition from the enemy, but by the failure of his soldiers to match the passion and endurance of their leader. By July of 326 B.C.E., Alexander had penetrated India as far as the Beas (Hyphasis) River. Here he paused, and his army staged one of the greatest military mutinies of ancient times. Although massive, the mutiny was essentially nonviolent and even respectful. Alexander III the Great understood that the force behind his conquests was the morale of his troops. Violence was not nec-

essary to persuade him to accede to their demand to break off the Indian campaign and return to Macedonia. He recognized that, as a force, they were spent. Alexander began the long march home.

Alexander's Campaigns of Consolidation

(335 B.C.E.)

PRINCIPAL COMBATANTS: Alexander the Great vs. rebels in Thrace and Greece, and the tribes of Illyria

PRINCIPAL THEATER(S): Greece and lands along the Danube River and the Adriatic Sea

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: After the assassination of Philip of Macedonia, the system of conquests and alliances he had pieced together threatened to unravel.

OUTCOME: Ascending the throne upon his father's death, Alexander the Great put down a rebellion in Thrace, conquered new lands in Illyria, and destroyed his rivals in Greece itself.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: In Thebes: 6,000 rebels killed, 20,000 sold into slavery

TREATIES: None

At the dawn of the 4th century B.C.E., 50 years before the birth of Alexander the Great (356–323 B.C.E.), the Aegean world was in disarray as a result of the Peloponnesian War (see PELOPONNESIAN WAR, FIRST; PELOPONNESIAN WAR, SECOND). Sparta, which had emerged the victor in a conflict that had pitted Greek against Greek, scourged cities, toppled governments, and devastated Greek economic life, would enjoy only a brief and bloody hegemony before its neighbors—Corinth, Thebes, Argos, and Athens—banded together to fight the Spartans in the CORINTHIAN WAR from 395 to 387 B.C.E. More than a decade of fighting saw Athens rise again as a power, backed by the confederacy called the Athenian League. Thebes, too, having invented a new kind of battle formation called the phalanx, was able to rout a full-scale Spartan attack in 371, only to turn in the eyes of the other Greek city-states from a champion of liberty into an alarming threat. In the coming years alliances would fracture, partners switch sides, and new wars rage from one end of Greece to the other. Athens, campaigning on several fronts, ultimately met with a string of reversals; Thebes again conquered Sparta; new treaties would be signed; but nothing was really solved, and exhaustion alone ended many of the hostilities.

Little wonder, then, that a number of post-Socratic Greek thinkers—Plato, Aristotle, Isocrates—would be pre-

occupied with a better way of governing or that the idea of a confederacy held together by a powerful leader would begin to gain currency. Few of those discussing such matters, however, would have recognized such a paragon in the young Philip II of Macedonia (382–336 B.C.E.), who was then gathering his strength in his backward, mountainous kingdom of rude and dour peasants and brawling, heavy-drinking landowning warriors, despite the claims of his house to be descended from Heracles. Even so, the Macedonian conquered Greece, established the Corinthian League, built a formidable army, and launched an invasion of Persia (see PHILIP OF MACEDONIA'S NORTHERN CONQUESTS). Philip was deprived of his victory in Persia when assassinated in a plot by his wife and jealous nobles, but the Greek expedition was carried to success by his son, Alexander. Alexander the Great would come as close as anyone could to being the kind of king the philosophers imagined might rule the ancient world.

Born in Pella, Macedonia, in 356, Alexander, a student of Aristotle, was by 18 commanding a wing of cavalry after Philip used an incident at Delphi as an excuse to invade central Greece (see SACRED WAR, THIRD). He was there when his father called an assembly of states at Corinth and announced the rules by which Greece would henceforth be governed. Philip had married Alexander's mother, Olympia, who was the sister of the king of Epirus, at least in part for political reasons. She was determined that her son should succeed Philip, and, after she had engineered Philip's death in 336 B.C.E., Alexander, then 20 years old, became king of Macedonia.

First he had to attend to matters of security at home, liquidate his rivals, and consolidate his political power. No sooner had Philip died than the fabric of conquests and alliances he had carefully woven together showed signs of unravelling. A revolt broke out in Thrace, and Alexander marched north to quell it. Since he was there, he led his phalanxes against the wild tribes of Illyria as well, extending Macedonia's empire to the Danube and west to the Adriatic. Meanwhile, rumors had begun spreading in Greece that Alexander had been killed in battle, and several members of the Corinthian League, led by Thebes, rose in rebellion against Macedonia. Alexander spun around and swept back into Greece, marching the 300 miles from Illyria in 12 days. Standing before the gates of Thebes, he demanded its surrender and, when the rebels refused, razed the city. A total of 6,000 Thebans were slaughtered outright, and 20,000 were sold into slavery. So draconian had been Thebes's punishment that Alexander was, perhaps for the first time in his life, troubled by conscience. After ascending to the throne he made a pilgrimage to Delphi to expiate his guilt, then visited Corinth to revive the Corinthian League and enlist support for the Asian crusade his father had been planning at his death (see ALEXANDER'S ADVANCE INTO CENTRAL ASIA).

Further reading: Flavius Arrianus, *The Campaigns of Alexander* (New York: Viking, 1976); Peter Green, *Alexander*

of Macedon, 356–323 B.C.E.: A Historical Biography (Berkeley: University of California Press, 1992).

Alexander's Invasion of India (327–325 B.C.E.)

PRINCIPAL COMBATANTS: Macedonian Greeks under Alexander the Great vs. various Indian peoples

PRINCIPAL THEATER(S): India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest of India

OUTCOME: Alexander conquered India as far as the Punjab.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Alexander's forces, 90,000; at the Battle of the Hydaspes (326 B.C.E.), Alexander had 20,000 men, Porus (of India), 35,000.

CASUALTIES: At the Battle of the Hydaspes, the Macedonia Greeks lost 1,000, Porus's army lost 12,000; 9,000 were taken prisoner, including Porus.

TREATIES: None

The forces of Alexander the Great (356–323 B.C.E.) invaded India from their winter camp in the Hindu Kush (the mountainous borderlands of modern Afghanistan and Pakistan), marching south to the Indus River, which they reached in the summer of 327. At the Khyber Pass, near Aornos, Alexander was resisted by rebel highland tribal warriors. They took up positions on a forbidding plateau reaching some 7,000 feet. These refuges seemed impregnable and certainly were to any conventional siege. Alexander quietly had an 800-foot-deep ravine filled, mounted his catapults on the fill, and also used it to access the north face of the plateau. By night, leading 30 men, Alexander scaled the cliff. He then stepped aside to give the men the "honor" of being the first to assault the rebel position. The rebels, however, killed all 30 men by showering them with boulders. Alexander let another night pass and then, when he heard the rebels' victory drums on the third night, he knew that the rebels assumed they had defeated him. He chose this moment to make a surprise attack, which was overwhelming. This victory achieved, Alexander continued down the Indus valley.

His next adversary was a powerful Punjab raja, Porus (fl. fourth century B.C.E.) with some 35,000 men. Alexander met him in battle at the Hydaspes River in May 326 B.C.E. Once again the natural obstacles seemed insurmountable. The river was in flood, raging, and Porus commanded some 200 fierce elephants. Alexander set up his camp defiantly across the river but in full view of the raja. He established a camp routine and deliberately avoided any signs of readying an attack. After some days Porus and his forces were lulled into lowering their guard. Alexander left most of his army in camp and slipped out with just 11,000 of his 20,000 men. He boldly crossed the flooding

river and in a spectacular two-pronged attack defeated Porus's chariots, then attacked the elephants with infantry, who wielded axes against the beasts. In defeat Porus so admired Alexander's skill that he became a friend and ally, willingly serving as his guide down the rest of the Indus.

After the battle, Alexander turned down the Beas River, a tributary of the Indus in northwestern India, eager to press on with his campaign of conquest. His army, however, long away from home, yearned to return to Greece and staged a mutiny in July (see ALEXANDER'S ARMY, THE JULY MUTINY OF). Alexander backtracked and on his way home subdued and conquered the Malli people.

Further reading: Flavius Arrianus, *The Campaigns of Alexander* (New York: Viking, 1976); Peter Green, *Alexander of Macedon, 356–323 B.C.E.: A Historical Biography* (Berkeley: University of California Press, 1992).

Alexander's Occupation of Egypt

(332–331 B.C.E.)

PRINCIPAL COMBATANTS: Macedonian forces of Alexander III the Great vs. Egypt

PRINCIPAL THEATER(S): Egypt

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: Alexander took and occupied Egypt with virtually no resistance.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Minimal

TREATIES: None, save for the recognition of the priests of the Temple of Zeus Ammon

After taking Tyre, Syria, and Palestine, pausing significantly only at the conquest of Gaza (see ALEXANDER'S SIEGE OF GAZA), Alexander III the Great entered Egypt. In the face of his overwhelming power, the Egyptians offered little opposition, and he quickly occupied the vast country during December 332 to March 331.

Warfare here was chiefly administrative. He established strong military garrisons in every major Egyptian city, then founded one of his own: Alexandria. It was destined to become the greatest city of the many that bore his name.

To secure sanction of his conquest of Egypt and hegemony over it, Alexander made a long and arduous journey to the Temple of Zeus Amon, at the oasis of Siwa, deep in the Libyan desert. There he was recognized and hailed by the priests as nothing less than the son of Zeus Amon.

Further reading: Flavius Arrianus, *The Campaigns of Alexander* (New York: Viking, 1976); Peter Green, *Alexander of Macedon, 356–323 B.C.E.: A Historical Biography* (Berkeley: University of California Press, 1992).

Alexander's Persian Campaign

(334–330 B.C.E.)

PRINCIPAL COMBATANTS: Greece vs. Persia

PRINCIPAL THEATER(S): Eastern Mediterranean and Asia Minor

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: After consolidating the Greek mainland, Alexander the Great launched an invasion of Persia to recapture Greek cities lost in past wars.

OUTCOME: Early victories against Persian emperor Darius III led Alexander to set as his goal the conquest of the entire Persian Empire; by the time of Darius's assassination, Alexander had taken control of roughly half the empire's dominions and styled himself the new "King of Kings," that is, the new emperor.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 300,000-plus Persians; initially 35,000 Macedonians

CASUALTIES: At the Battle of Issus Alexander lost 450, the Persians approximately 50,000; at Arbolla Alexander lost 500, the Persians, again, some 50,000.

TREATIES: None

Alexander the Great (356–323 B.C.E.) succeeded to the Macedonian throne in 336 B.C.E. after liquidating many of his rivals and consolidating his political power (see ALEXANDER'S CAMPAIGNS OF CONSOLIDATION) in the wake of his father's assassination. Once he had the rebellious Greeks under his control, he immediately turned to the Asian crusade that his father, Philip II (382–336 B.C.E.), had been planning almost from the moment Macedonia became the ruling house of the Hellenes.

The idea for an Asian campaign went back at least to the rhetorician Isocrates (436–338 B.C.E.), Plato's great philosophical rival, who had argued that not only should the Greek cities quit quarrelling among themselves and unite under a strong leader, but that they should also turn their combined energies to recapturing Greek cities lost in war to the Persians. Philip had recognized the value of such an expedition, and Alexander, as his son and a pupil of Aristotle, was just as keen on the advantages: punishing the Persians—as was his father's wish—for the GRECO-PERSIAN WARS from 500 to 448 B.C.E. and the Corinthian SOCIAL WAR OF 357 to 355 B.C.E. and uniting Greece against a common enemy, not to mention replenishing Macedonia's bare coffers.

Thus, in the spring of 334 Alexander began the military expeditions that would occupy the rest of his life. Determined to liberate the Greek cities in Asia, he marched out of Pella with 30,000 foot soldiers and 5,000 cavalry, a tiny force with which to assail a continent, but the supremely confident Alexander put his faith in speed and daring. At the Hellespont he left the crossing to his generals

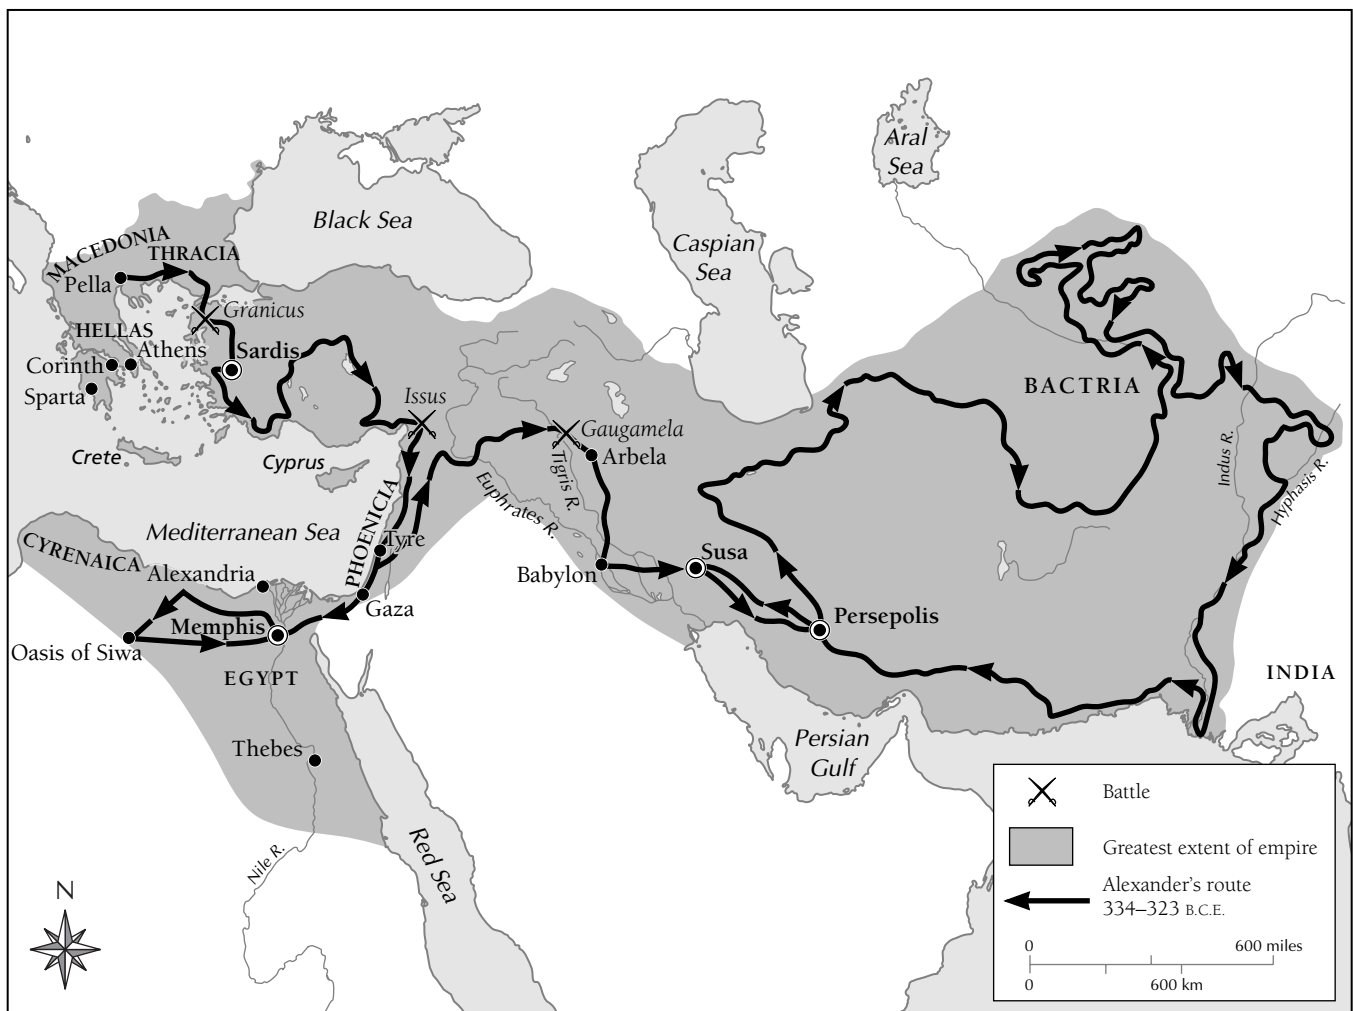

while he steered a course for Troy, there to place a wreath on the grave of Achilles and to take away an ancient Homeric shield, which he bore as a talisman of his prowess.

At the first true battle, in 334 B.C.E., he threw his cavalry against a Persian force equal to his own at the river Granicus, and the momentum of the charge carried the day. Alexander led the charge, and in the hand-to-hand combat that followed an enemy spear clanged against his breastplate and a battle-ax split his plumed helmet. However, he never suffered a cut, and the Persians fled, terrified by the sheer fury of the Macedonians. Alexander marched down the Ionian coast, becoming the liberator for whom its Greek-speaking population had prayed. City after city threw open its gates. Several, heavily garrisoned by the Persians, required more force. Miletus, a major Persian naval base, fell after a surprise attack and siege in 334 B.C.E.; Halicarnassus, an important port, also surrendered after a brief siege in 334 B.C.E.

As Alexander pushed east into Asia Minor, the Persian defenders of the narrow pass at the Tarsus Mountains fled

at the news of his approach. Alexander followed them out onto the Mediterranean coastal plain above Syria. The Persian emperor, Darius III (d. 330 B.C.E.)—at last aware there was a new threat coming from the west—had mobilized an army of perhaps as many as 300,000, including a number of Greek mercenaries, to check the 35,000 Macedonian troops.

At the Battle of Issus (333 B.C.E.) the Persians encountered a disciplined army that this time relied on superior tactics instead of the speed and boldness Alexander had employed at Granicus. Led by Darius himself, the Persians anchored their defense between the mountains and the sea, a cramped position that left little room for Darius to maneuver his superior numbers. In contrast, Alexander deployed his army to maximum effect, its flanks covered by his quick-moving cavalry and its center secured by its strong Greek phalanxes. As the armies engaged, Alexander spied a weak spot in Darius's line and lanced through it. Watching the battle from the rear in an ornate chariot, Darius saw his line waver, fall back, and then disintegrate.

Empire of Alexander the Great at the time of his death

Battle of Gaugamela (Arbela), 331 B.C.E.

With growing horror the Persian tyrant spied the Macedonian warrior-king astride his legendary horse, Bucephalus, galloping straight for him. Darius fled the field.

Alexander marched south down the coast, taking one Persian stronghold after another. For seven months he besieged the massively fortified city of Tyre, located on an island just offshore (see TYRE, SIEGE OF), finally storming the citadel in July 332. He occupied Palestine and Phoenicia (see ALEXANDER'S SIEGE OF GAZA), before turning toward Egypt, which he subdued between 332 and 331. There, he was declared a son of Amon, the Egyptians' supreme deity. He founded Alexandria (according to legend at a site based on a description from Homer) but did not linger in Egypt (see ALEXANDER'S OCCUPATION OF EGYPT). Returning to Tyre in 331, he then followed the arc of the fertile triangle eastward into Mesopotamia. Darius had seen enough and sent an envoy to sue for peace, offering his daughter in marriage, 10,000 gold talents, and a

third of his empire. Alexander, whose ambition had grown mightily since crossing the Hellespont, refused. His goal now was nothing less than the conquest of the entire Persian Empire, with its marvelous vistas of new lands, new cultures, and new riches.

Preparing to meet the Macedonian firebrand at a point east of the Tigris in 331 B.C.E., Darius once more mobilized a massive army, outnumbering Alexander's army perhaps five to one, though the Macedonian had swelled his own army with newly hired mercenaries. This time Darius chose his battle site more carefully. The plain at Gaugamela offered enough open ground to give full range to his greater numbers, and Darius improved the field by plowing it flat. He planned not only to avoid the bottleneck he had suffered at Issus but to use 50 highly mobile chariots specially designed with scythe blades attached to their wheels to grind up and scatter the Greek phalanx. When Alexander arrived at the site his generals urged a surprise night

attack to improve the odds. But their commander refused to “steal” a victory and retired to his tent for the night, there to plan a special assault that relied on the superior speed and discipline of his own men while also taking into account what he had come to learn about Darius's temperament.

As the battle commenced on the following morning, Alexander deployed his cavalry obliquely to the right in an effort to throw the enemy line off balance. The maneuver worked: Taken in by the ruse, Darius ordered his troops to follow. Many soon found themselves stumbling about in the rough terrain just beyond Darius's carefully prepared battlefield. Meanwhile, Darius had ordered his chariots forward against the Macedonian phalanxes advancing in the center. Suddenly, however, the flood of the Greek advance parted. The scythed chariots shot through the opening ranks of the phalanxes, thundering harmlessly to the Greek rear, where Alexander's waiting cavalry dealt with them. As the Greek historian Plutarch (46–after 119) described it, scarcely a Macedonian was killed or injured. Instead, Alexander, waiting for the moment he knew would come, charged through the Persian line when it momentarily thinned. Once again Alexander led the charge; once again he aimed directly for Darius's imperial chariot; once again Darius's nerve failed him; and—as at Issus—he turned tail and ran.

The utterly humiliated Darius retreated to Medina, his empire crumbling behind him, as Alexander drove forward from one Persian city to the next, meeting at best only scattered resistance. Babylon not only threw open its golden gates to him in 331, but staged a month-long festival in honor of the conqueror. Susa quickly capitulated the same year. When a local satrap attempted to hold his ground near Persepolis, Alexander not only overran the Persian troops but allowed his own soldiers a rare bout of pillaging. When Alexander captured Persepolis in 330 B.C.E. he took possession of the main treasury of the Persian Empire as well as its spiritual heart, the ceremonial seat where vassal lords assembled annually to pay tribute to the Basileus, the King of Kings. As he had with Troy at the Hellespont, Alexander paid tribute to Persia's great warrior tradition by visiting the tomb of Cyrus the Great (590/580–c. 529), founder of the empire, at Pasargade.

As Alexander remained some months in Persepolis, resting his troops and attending to state business, he began showing signs of Persian influence in his dress and leadership. His growing “orientalism” disturbed his troops, used to a close camaraderie with their commander and already upset with the mercenaries Alexander had hired, who the Macedonians felt were diluting the army's character. Alexander, on the other hand, was trying to put on the mantle of a great ruler of a world empire. By now he had been in Asia Minor for some four years, and at 26 he had conquered roughly half the Persian Empire. It would take him eight years to subdue the vast eastern expanses that

made up the rest (see ALEXANDER'S ADVANCE INTO CENTRAL ASIA). For now he concentrated on running Darius to ground, nearly capturing him by the Caspian Sea. But when Darius was murdered in 330 by Bessus, a rebellious Persian satrap and cousin of Darius, Alexander draped Darius's corpse with his own robe and ordered a royal funeral. A year later he would capture Bessus and crucify him. Meanwhile—much to the chagrin of his fellow Greeks—Alexander had *himself* declared King of Kings before going to winter quarters near the Hindu Kush.

Alexander's Siege of Gaza (332 B.C.E.)

PRINCIPAL COMBATANTS: Alexander III the Great vs. forces under Bah's, the Persian governor of Gaza

PRINCIPAL THEATER(S): Gaza, Palestine

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: Alexander conquered Gaza by means of titanic military engineering.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

In 332 B.C.E. Alexander III the Great laid siege to the Phoenician seaport of Tyre. While he apportioned his main force to this work, he sent a lesser army to seize the rest of Syria and Palestine. So overawed were the peoples of these regions that they capitulated without resistance—except in the case of Gaza.

In the face of fierce resistance at Gaza, Alexander personally led his main force there and began a new siege. The brief war against Gaza was marked by the construction of one of the greatest military siege projects of all time. Alexander transformed the landscape by raising a spectacular earthen mound 250 feet high with a circumference of a quarter mile at its base. On this artificial hill he mounted his ballistae and catapults. Thus, he did not *attain* the high ground, he *made* it, and within two months Gaza, under ceaseless bombardment, fell. His troops stormed the breached walls of Gaza and ruthlessly sacked it.

France pulled out of Morocco in 1956 and Algeria in 1962 (see ALGERIAN WAR OF INDEPENDENCE), leaving its two former colonies to contend with the problems of self-government and modernization in the 20th century. In the first flush of freedom both countries proclaimed a bond of unity, steeped in the ancient history of their Muslim pasts, in their common heritage as desert border kingdoms, and in their bloodsoaked struggles for independence from France. But because France had controlled the region for so long the 700 or so miles of uninhabited Maghrib Desert running southwest of Bechar all the way to Tindouf that served as a frontier between the two countries proved to be more a source of friction than of bonding. As master of both colonies, France never bothered to map accurately the desolate borderlands nor to appropriate it for one country or the other. In the separation from Algeria, France established the border between its former colonies without consulting either, and neither was happy with the result.

Almost immediately following independence in 1962, Algeria's president Ahmed Ben Bella (b. c. 1918) demanded the border be adjusted. Morocco ignored the demand and sent military forces to the disputed area to protect its claims. Algeria soon followed suit, and when its troops reached the Maghrib the vaunted North African unity disappeared. In its stead lay a vast ideological expanse between the conservative historical monarchy in Morocco

and the revolutionary socialists in Algeria. By the summer of 1963 the Moroccan government was accusing Algeria of engaging in a series of acts undiplomatic at best and at worst seriously provocative. The most serious of the charges imputed that Ben Bella's government had aided and abetted an attempted coup d'état against the monarchy. The botched coup was real enough, Algeria's role in it less certain. Ben Bella scoffed at the accusations, and Algeria prepared for war.

Hostilities broke out on October 13, 1963, sparking a bitter border war along the disputed frontier in the Atlas Mountains–Sahara Desert region. It remains unclear who fired the first shot or what overt act precipitated the fighting, but the war saw several sharp battles in the desert in which hundreds were killed. The war was a rather one-sided affair, with the Moroccans dominating the fighting at Hassi-Beida, Tindouf, and Figuig, although they were unable to seize and hold a clear advantage. Alarmed at the severity of the combat and the hatred with which the two countries were proceeding, the nascent Organization of African Unity (OAU), led by Ethiopian emperor Haile Selassie (1891–1975) and Mali's president Modibo Keita (1915–77), attempted to broker a peace settlement.

A cease-fire was arranged in February 1964, but the dispute was hardly settled, and a deep-seated enmity developed between the two countries. Not surprisingly, the border war flared again in 1967. When Spain pulled out of the Spanish Sahara in 1976 (see SPANISH SAHARAN WAR), both Morocco and Algeria developed designs on the newly independent state of Western Sahara, though neither seemed willing to fight especially hard for control of the desert nation. The decidedly low-key military dispute proved no more conclusive than the earlier border skirmishes, and both countries eventually abandoned their attempts to incorporate Western Sahara, at length agreeing to a treaty that divided the formerly disputed border regions between them.

Algerian War of Independence (1954–1962)**PRINCIPAL COMBATANTS:** France vs. Algerian nationalists**PRINCIPAL THEATER(S):** Algeria**DECLARATION:** None**MAJOR ISSUES AND OBJECTIVES:** Algerian rebels sought independence from France, which fought to defend its colonial hegemony.**OUTCOME:** Algeria won independence, and many French military leaders, especially in the army, were discredited.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

France, 500,000; Algeria, 40,000 troops, plus at least 21,000 guerrillas and terrorists

CASUALTIES: Approximately 1,000,000 total, including civilians

TREATIES: Treaty of Evian, March 18, 1962 (France and National Liberation Front) and cease-fire of May 19, 1962

A French colony since 1847 (*see* ABD EL-KADER, THIRD WAR OF) Algeria renewed its efforts toward independence as soon as World War II ended in 1945. By 1949 the demand turned violent, and in a skirmish between nationalists and French colonial troops at Oran more than 1,000 Algerians and 88 French were killed. Afterward, the Algerian nationalists splintered into factions, which organized political arms and sought to attract revolutionary leaders. One of the more charismatic and powerful of those leaders was Ahmed Ben Bella (b. c. 1918).

Ben Bella's underground revolutionary activities garnered him the attention of the French authorities, and he was forced to flee to Cairo in 1952. From there, and with the tacit support of Egyptian president Gamal Abdul Nasser (1918–70), Ben Bella formed the Revolutionary Committee of Unity and Action (CRUA), which immediately began preparing for armed insurrection in Algeria. Between March and October of 1954, it created an effective military organization by dividing the country into six military regions, which allowed CRUA to make better use of localized forces and gave a semblance of order and discipline that helped when seeking foreign support and military aid. In October CRUA changed its name to the National Liberation Front (FLN) and that of its military arm to the National Liberation Army (ALN). While the FLN, under the influence of Ben Bella and others, ran the revolutionary struggle politically from Cairo, the ALN fought the revolution on the ground in Algeria.

At dawn on November 1, 1954, FLN guerrillas raided French military installations, police stations, communications facilities, and public utilities throughout the country. From Cairo the FLN broadcast a message to the people of Algeria demanding a unified struggle against the French colonials. They sought, said the FLN, to restore the Algerian state to the social democratic framework of its past. The French response was swift and decisive. Minister of the Interior (later French prime minister) François Mitterrand (1916–96) declared “the only possible negotiation is war.” The French had not learned the painful lessons of Indochina, where they had suffered one of the worst military defeats in history at Dien Bien Phu (Dienbienphu) almost a year to the day before the Algerian uprising (*see* FRENCH INDOCHINA WAR [1946–1954]).

Within Algeria the FLN was now the predominant rebel faction, and as its power became more obvious almost

all the other revolutionary and nationalist groups courted its leaders and offered their support. The one exception was the National Algerian Movement (MNA), which opposed the FLN at every step, seeking to gain control of Algeria through its own campaign of violent revolutionary activity. The more experienced revolutionaries of the FLN quickly tracked down and destroyed the MNA guerrillas, which would have effectively closed down the MNA organization had it not gained a sizable following among Algerian workers in France. The Union of Algerian Workers became a potent terrorist arm of the MNA in France. To combat the MNA's growing influence over the Algerian struggle, the FLN organized its own Paris-based organization, resulting in the so-called cafe wars, during which the two factions battled each other on the streets of Paris.

In 1956, with the FLN now firmly in control of the revolution, its leadership began a violent liquidation of all those it considered potential traitors, which meant in effect any Algerian deemed acceptable to the French community. The escalation in terror caused French loyalists, known as “colons,” to form vigilante groups. With the passive cooperation of the local police, colon vigilantes launched operations in the countryside against suspected FLN strongholds. They demanded the declaration of a state of emergency from Paris and the imposition of capital punishment for politically motivated crimes. In 1956 the colons pressured the French government to replace Algeria's governor general, and Paris succumbed, bringing in Robert Lacoste (1898–1989). Lacoste attempted to rule by decree, granting the army exceedingly broad police powers, stepping up military action, and giving commanders an increasingly free hand, all measures not only of dubious legality but also ones that had failed to work in Indochina. What upset the colons, however, was Lacoste's proposed measures to limit Algeria's autonomy, which called for dividing the country into five districts, each governed by an elected territorial assembly. Although Algeria as a whole would remain a French colony controlled from Paris, the colons objected to what they judged a dangerous level of home rule.

France, meanwhile, began to take a hard line toward those outside Algeria supporting the FLN, particularly in Egypt. France joined Great Britain in the Suez Canal campaign of November 1956, aimed at deposing Nasser. Although the Anglo-French campaign failed, the intent was clear enough, and relations between France and Egypt were severely damaged by the exploit. A month earlier, in September, there had been yet another indication of the new French hard line and its effectiveness. Ben Bella and the other hard-core leaders of the FLN boarded a plane for Morocco where they would meet with Sultan Mohammed V and Tunisian premier Habib Bourguiba to solicit support for the FLN. En route the pilot turned the plane around and landed instead in Algiers, where it was surrounded by French troops. The FLN leaders were imprisoned for the rest of the war.

By 1957 the ALN had evolved from a small, ill-equipped, undermanned force into a disciplined, organized, strong army of about 40,000 troops. In 1956 and 1957 the ALN perfected the classic tactics of guerrilla warfare, striking small targets at night in ambushes or surprise raids. FLN terrorists also exercised a ruthless revenge on civilians suspected of collaborating with the French or those in the revolutionary movement whose zeal was insufficient or whose consciences were too strong to allow them to execute ritual killings and mutilations when so ordered. During the first two years of the war, more than 7,000 civilians were murdered. Although the majority of Algerians certainly feared the FLN, that fear did not always translate into support, even within the Muslim community, which was thoroughly committed to independence by whatever means necessary.

In an effort to take the fighting directly to the French merchants and the French-controlled government, the FLN began a systematic campaign of urban terrorism within Algeria that hit almost every large city in the country but was specifically aimed at the capital of Algiers. The so-called Battle of Algiers commenced in the summer of 1956 and continued for several months, averaging more than 800 terrorist attacks a month. While the Battle of Algiers raged, the FLN staged general strikes within the Muslim workforce to coincide with debates on Algeria in the United Nations General Assembly. To save Algerian cities from complete paralysis, the French launched a ruthless and indiscriminate crackdown, and their brutal methods brought many more Muslims into the FLN fold. At the same time they also caused French citizens at home to question their government's continued role in North Africa.

By 1956 the French could no longer credibly claim they were engaged in a campaign of pacification. France had deployed more than 400,000 troops—army, navy, and air force—to the region, and both the rest of the world and, more importantly, the French public saw the Algerian conflict as a full-scale colonial war. With the defeat of fascism in World War II and the subsequent breakup of the traditional European empires, colonialism had gone out of favor with the general public and was increasingly looked upon by average citizens as greedy and unconscionable. Now, more than a decade after fighting a war in Indochina that resulted in its having to be rescued by its powerful allies, France remained the only European power attempting to hold on to its imperial past. Worse yet, it was doing a frighteningly poor job of it.

Refusing to grant Algerian independence, Paris became determined to crush the revolution in any way possible. The French command, now led by General Raoul Salan (1899–1984), hoped to bring the FLN to its knees in the outlying areas, thereby robbing it of both political and material support. Late in 1957 Salan developed the system of *quadrillage*, whereby the country was divided into four

quadrants with large permanent garrisons stationed in each to keep track of FLN and ALN activity. The move was successful in dramatically suppressing rebel terrorism, but it tied up a significant portion of the army, so that many troops were now unavailable to pursue and destroy the rebels moving about the country out of range of the permanent garrisons. In addition, the French began their own program of coercion and harassment in the Algerian villages, brutally enforcing collective security in areas they believed friendly to the rebels. Those Algerians, mostly peasants, who failed to comply with the security arrangements were punished either by execution or by saturation bombing. France also instituted a program of relocation in instances in which the coercion and harassment were unsuccessful. From 1957 to 1960 more than 2 million Algerians were relocated by the French and hundreds of villages destroyed. It was all a grim harbinger of the United States's involvement in Vietnam (*see* VIETNAM WAR) in the following decades—and the parallels would continue.

The system of *quadrillage* obviously failing, Salan was replaced in the fall of 1958 by General Maurice Challe (1905–79). Challe's tactical plan was one of search and destroy; he would worry about the village people later. Though Challe appeared, at least initially, to be enjoying some success, others in the military had plans of their own. Many within the military hierarchy dreaded what might well become the fourth military disaster for the French army in the past half century—the others being the French military's performance against German invasions in WORLD WAR I and WORLD WAR II and against the communists in Vietnam. Wary that a precipitate troop pullout from the quadrants would only endanger the remaining forces, as at Dien Bien Phu, as well as sacrifice the already heavily damaged French honor and its sense of *élan*, the military hierarchy decided it would take matters into its own hands. On the night of May 13, 1958, the military staged a coup in Algeria and deposed the civil government, instituting the Committee on Public Safety (CPS) led by General Jacques Massu (1908–2002) and Salan. The CPS demanded that Charles de Gaulle (1890–1970) return to power in Paris and that he prevent the abandonment of Algeria.

In Paris, Premier Pierre Pflimlin (1907–2000) demanded that aid be cut to the military, but the National Assembly refused to act. The French people seemed enthralled with this show of patriotic nationalism, bringing back memories of what was popularly regarded as a more glorious past. De Gaulle was appointed president on June 1 and given *carte blanche* powers to deal with Algeria. He called on the FLN leadership to agree to a cease-fire so representatives could be elected to discuss Algeria's future. The FLN quickly rejected de Gaulle's offer, and for good reason. While Challe's new search and destroy policies may have allowed the French army to turn the military momentum against the insurgents, everyone realized that only a protracted and costly effort could completely

root out the guerrillas. And a long war was something that the French electorate would not tolerate and that France's elected officials could not afford.

External pressures were also beginning to mount against France, including demands from the United Nations for a resolution of the conflict. NATO allies resented having to assume France's NATO duties, because its military was committed to Algeria. In September 1959 de Gaulle abandoned his previous position and announced that he would give consideration to Algerian self-determination. However, it was not until January 1961 that de Gaulle called for a referendum to give him a free hand in dealing with the FLN. The referendum passed, but before official communication could open between de Gaulle and the FLN, a directorate of generals, led by Salan, Challe, and Edmond Jouhaud (1905–95), staged an insurrection in April known as “the General's Putsch.”

The putsch brought to public attention the existence of the well-armed Secret Army Organization (OAS), run by a cadre of army officers intent on hanging onto Algeria at any cost and who had been secretly coordinating colon activity. As rumors spread throughout France of a military takeover of the homeland itself, perhaps even a return to the monarchy, the French people and the government panicked. De Gaulle called up reservists and surrounded the National Assembly with tanks to defend it against an OAS attack. The fear was exaggerated, at least as far as France was concerned. Both the air force and the navy refused to cooperate with the OAS, and loyal French forces seized Salan in Algeria. The putsch failed, and within four days Challe was captured and sentenced to a lengthy prison term but escaped and continued to direct the OAS terrorist activities. As the French-OAS war continued, the Algerian rebel leaders and French officials sat down in May for talks that resulted in a French promise to end all offensive operations within Algeria. Eventually, the two sides agreed to a cease-fire set for March 19, 1962, and to a referendum for all Algerians to vote on independence. Before the referendum could take place, the OAS renewed its terrorist activities. Literally hundreds of bombings took place daily in Algiers, and thousands were killed in perhaps the most brutal chapter of the war. Challe and Jouhaud were finally captured, and the OAS ended operations in mid-June.

On July 1, 1962, more than 92 percent of the Algerian people voted in the referendum, and they voted overwhelmingly for independence. Two days later Charles de Gaulle proclaimed Algeria an independent country. The war had cost nearly a million lives, and almost a million and a half colons—having lost their citizenship—fled Algeria for France. Only a few of the colons had been born in the mother country and most had never even seen it.

Algerine War (1815)

PRINCIPAL COMBATANTS: United States vs. Algerian corsairs (pirates)

PRINCIPAL THEATER(S): Barbary Coast of Algiers

DECLARATION: Dey of Algiers declared war because he was not receiving enough tribute money from U.S. shipping interests.

MAJOR ISSUES AND OBJECTIVES: Piracy against U.S. shipping vessels in the Mediterranean

OUTCOME: The U.S. capture of an Algerian flagship forced Algerians to agree to release American prisoners, establish a neutral zone for shipping, and compensate U.S. shipping interests for losses incurred.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: U.S. sent 10 vessels

CASUALTIES: American, 4 killed, 10 wounded; Algerian corsairs, 53 killed, 500 taken prisoner

TREATIES: Treaty of Algiers, June 30, 1815

American trade in the Mediterranean in the 19th century was dependent on safe passage through the waters of Barbary states of Algiers, Morocco, Tripoli, and Tunis. Piracy against U.S. shipping had been a problem since President Thomas Jefferson's (1743–1826) TRIPOLITAN WAR, fought, in part, over the seizure of the American warship *Philadelphia* in 1804. That dispute was formally settled in 1805, but lingering anti-American sentiment remained, and in 1815 another war broke out between Algerian pirates and the United States.

The WAR OF 1812 monopolized the resources of the U.S. Navy, forcing merchant ships to sail the hostile Barbary seas without protection. Piracy and impressment escalated during the period of the war, and the navy, its hands full, was unable to respond. Immediately after the War of 1812, President James Madison (1751–1836) dispatched Commodore Stephen Decatur (1779–1820) with 10 vessels to the Barbary Coast for the purpose of once again securing safe passage for American vessels. In 1815 Decatur captured the Algerian flagship *Machuda*, which forced the Algerians to the bargaining table. A treaty was concluded that guaranteed the release of all American prisoners and established a neutral zone for shipping. The Algerians also agreed to compensation for losses incurred and to bring to an end the practice of collecting tribute.

Algonquian-Dutch War (1641–1645)

PRINCIPAL COMBATANTS: Dutch New Amsterdam vs. Algonquian (Mahican, Raritan, Wappinger) Indians of the northern Atlantic seacoast

PRINCIPAL THEATER(S): Vicinity of present-day New York, Staten Island, and Hackensack, New Jersey

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Dutch sought to tax, that is, demand tribute, from the Indian tribes living in the vicinity of their growing settlement of New Amsterdam, which the Indians refused to pay.

OUTCOME: An atrocity-filled four years ended with a Dutch-imposed peace.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: In 1644 Indian strength was estimated at 1,500; Dutch numbers unknown.

CASUALTIES: In 1645 Indian casualties reached approximately 1,600 killed; Dutch losses were fewer than 100.

TREATIES: Treaty of August 1645

The Indian policy of Dutch colonists in America vacillated between aggression and cruelty on the one hand and timid defensiveness on the other. Henry Hudson (c. 1565–1611), an Englishman sailing for the Dutch, discovered the river that bears his name in 1609. Five years later Fort Nassau, a trading post, was built on Castle Island near Albany, the country of the Mahican Indians, with whom the Dutch struck a trade agreement in 1618. Fort Nassau was flooded out and abandoned in 1617, but the Dutch West Indies Company, formed in 1621, built Fort Orange on the site of Albany in 1624. From here the Dutch conducted trade with the various Indian tribes in the region for decades, encouraging rivalries that spawned intertribal warfare, often made one-sided by the possession of Dutch firearms (see BEAVER WARS; MOHAWK-MAHICAN WAR). Despite the mutually profitable relations between them, the Dutch did not treat any of the Indian tribes well. In 1660, for example, Mohawk chiefs petitioned Fort Orange magistrates “to forbid the Dutch to molest the Indians as heretofore by kicking, beating, and assaulting them, in order that we may not break the old friendship which we have enjoyed for more than thirty years.” Even so, Indian relations with the Dutch were generally more peaceful than were those with the Spanish and English.

More serious crises developed whenever greater numbers of Dutch colonists began to turn from trade to farm-

ing as the stock of beaver, the Indians’ principal trade commodity, became depleted along the coast. Farming required the acquisition of Indian land, and by 1639, when Willem Kieft (1597–1647) replaced Wouter Van Twiller (fl. 1632–40) as governor of New Netherland, annexing territory became a high priority for the colony. Kieft imposed heavy taxes, which amounted to tribute, on the Algonquian tribes in the vicinity of New Amsterdam (Manhattan) and Long Island. Indian resentment was already high by 1641, when Dutch livestock destroyed Raritan Indian cornfields on Staten Island. The Raritans retaliated with raids, and Governor Kieft, in turn, offered a bounty on Raritan scalps.

The next year a wheelwright named Claes Rademaker was murdered by an Indian in revenge for the killing of the Indian’s uncle, who settlers had robbed of his pelts. Reacting to the killing, Kieft marched a small army through the villages near New Amsterdam, hoping that the show of force would intimidate the Indians. This mission failed because, marching at night, the small force soon lost its way.

Kieft, however, remained eager for action. His own council of patroons advised against engaging in hostilities because the colony was not large enough to carry on a war. Ignoring the council’s advice, Kieft determined to teach the Indians a lesson. In February 1643 the Mohawks—armed by their still active trading partners, the Dutch—terrorized the Wappinger Indians in an effort to extort tribute from them. The Wappingers fled to Pavonia (present-day Jersey City, New Jersey) and New Amsterdam. They pleaded with Kieft to grant them protection. Not only did the governor refuse to protect the Wappingers, he deliberately turned the Mohawks loose on them. Warriors killed some 70 Wappingers and enslaved others.

There was more to come. On February 24 Kieft announced that he intended “to wipe the mouths of the Indians.” During the night of February 25–26 the governor dispatched Dutch soldiers to Pavonia to finish off the Wappinger refugees, mostly women and children, who even the legendarily fierce Mohawks had refused to harm. The night of murder and atrocity that ensued would become infamous as the “Slaughter of the Innocents.” Troops returned to New Amsterdam bearing the severed heads of 80 Indians, which soldiers and citizens kicked, football-fashion, through the village streets. Also, 30 prisoners who were taken alive were publicly tortured to death.

The massive Indian retaliations that followed the massacre came as no surprise to anyone except Kieft. Outlying farms were hardest hit, but New Amsterdam was attacked as well, prompting Kieft to order the town’s northern boundary fortified with the wall from which Wall Street takes its name. In March 1643 a panic-stricken Kieft parleyed with the Indians, offering them presents, which were indignantly refused. On October 1, 1643, nine Indians came to a small fort at Pavonia, where three or four

soldiers were stationed to protect a local farmer. Pretending to be friendly, the Indians gained entry into the fort, then killed the soldiers and the farmer, taking the farmer's stepson as a captive. They next burned all the houses of Pavonia.

As the fires spread through Pavonia, so the general uprising spread to Indian tribes from Delaware Bay to the Connecticut River. Settlers fled from the outlying settlements of New Netherland to New Amsterdam, which effectively lay under siege for more than a year. Only the Mohawks, still hoping to enjoy trade, refrained from participating in the war.

Dutch authorities hired the English soldier John Underhill (d. 1672), who had distinguished himself in New England's PEQUOT WAR, to lead retaliatory raids against Indian villages. The combat degenerated into a war of attrition, and by 1644 the Indians had had enough. The siege of New Amsterdam was lifted, and the Dutch imposed a peace in August 1645.

Almohad Conquest of Muslim Spain (1146–1172)

PRINCIPAL COMBATANTS: Almohad Muslims vs. Almoravid Muslims

PRINCIPAL THEATER(S): Southern Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Almohads sought to achieve control of Muslim Spain.

OUTCOME: The Almohads defeated and displaced the powerful Almoravids.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Before the 11th century, northwest Africa was ruled by a wide variety of Berber chieftains. By mid-century, however, the Almoravid (also called the Murabit) sect of Muslim Berbers rose up in a campaign of conquest, seizing control of Morocco and much of Algeria, then proceeding north to conquer Muslim Spain as well as parts of central

Spain, which had been recently Christianized (see ALMORAVID CONQUEST OF MUSLIM SPAIN). In the meantime, in northwestern Africa a rival sect, the Almohads, increased in power, establishing a strong and highly militant religious confederation by 1125. Today, the Almohads might be described as a “fundamentalist” sect. They advocated a return to strict observance of the articles of the Muslim faith, a position that appealed to many Spanish Muslims, who felt that their Almoravid overlords had strayed from the true faith. Accordingly, the Almohads found strong support for their invasion of southern Spain in May 1146.

In quick succession Tarifa and Algeciras fell to the Almohads. From here Abd al-Mumin (c. 1094–1163) led the Almohads farther north and proclaimed himself ruler of Muslim Spain in 1146. He forced the Almoravids out of Seville in January 1147, then compelled the surrender of Córdoba and Jaén.

As Almohad influence grew stronger, Almohad Spanish forces were augmented by troops from Africa, and in 1153 Málaga fell to the Almohads, followed by Granada in 1154. Almería, to which Abd al-Mumin laid siege, also capitulated.

Throughout the 1150s Mohammad ibn-Mardanish (1147–72), who ruled Moorish Murcia, a kingdom of southern Spain, led resistance against the Almohad conquerors. Abd al-Mumin was compelled to attend to uprisings and rebellion in northern Africa in 1158–59 and left the continued subjugation of Spain to his sons, one of whom, Abu Yaqub Yusuf (r. 1163–1184), was destined to succeed his father. It was not until 1162 that they finally defeated ibn-Mardanish at Granada and, in 1165, near Murcia. These defeats compelled ibn-Mardanish's followers to sue for peace with the Almohads. When he died in 1172 ibn-Mardanish himself told his followers to accept Almohad rule. This signaled the successful conclusion of the Almohad conquest of Muslim Spain, modern Andalusia.

Almoravid Conquest of Muslim Spain (1086–1094)

PRINCIPAL COMBATANTS: Almoravid Muslims (originally allied with the emirs of Seville, Granada, Badajoz, and Málaga) vs. Castile and León

PRINCIPAL THEATER(S): Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Originally an alliance to oppose Castile and León, the action evolved into an Almoravid war of conquest.

OUTCOME: Southern Iberia fell under Almoravid domination.

36 Almoravid Conquest of West Africa

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

As Alfonso VI (1030–1109), king of Castile and León, grew strong in the late 11th century, the emirs of Seville, Granada, Málaga, and Badajoz forged an alliance with the Almoravids, a Muslim Berber sect based in North Africa. The alliance was a gamble, because it put the Almoravids in a position from which they might dominate their allies, but the emirs believed that the threat posed by Alfonso was even greater.

In June 1086 Almoravid forces under the leadership of Yusuf ibn-Tashfin (d. 1106) landed at Algeciras, Spain, where they rendezvoused with armies from Seville, Granada, and Málaga. From Algeciras the combined forces marched north toward Badajoz. At Zallaqa, near Badajoz, Alfonso (allied with Aragonese troops) engaged the Almoravid forces and their allies on October 23, 1088. The battle was one-sided because much-needed Aragonese reinforcements were delayed. For the moment, then, the Almoravids had triumphed, and Yusuf ibn-Tashfin, Almoravid leader, returned in triumph to North Africa.

Soon after this victory, however, the great military leader of Spanish Christians, El Cid (c. 1043–1099), successfully counterattacked the Muslim positions. Yusuf ibn-Tashfin returned to Spain in June 1089, but he was soon forced to retreat to Morocco. After regrouping and refitting his forces there, he returned again to Spain and scored victories in Málaga and Granada by 1091, this time against the emirs, his former allies. When Yusuf attacked Seville, the emirs called on *their* former enemy, Alfonso, for aid. He responded but failed to prevent the fall of Seville to the Almoravids in November 1091. Three years later Badajoz was conquered as well. Except for Valencia, where El Cid was triumphant, the Almoravids held all of southern Spain by 1094.

Almoravid Conquest of West Africa

(1054–1076)

PRINCIPAL COMBATANTS: Almoravids vs. West African peoples

PRINCIPAL THEATER(S): West Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Almoravids sought to conquer West Africa.

OUTCOME: The Almoravids overran West Africa and controlled it through the early 1100s; in the Ghana Empire, Almoravid control was clearly less than absolute.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

During 1054–1056, the Tuaregs, a Berber people of the Sahara, under the leadership of Yana ibn Omar (fl. 1050–1076), conquered most of the oases of the western Sahara. From this basis Omar established the Almoravid confederation of Berber tribes, including the Lamtūnan, Gudālah, and Massūfah. They were united in their militant adherence to Islam and a desire for stringent religious reform.

While best known for their conquest of Morocco and western Algeria, beginning in 1054 the Almoravids also invaded West Africa, subjugating one tribal group after another. The culminating conquest was the invasion, occupation, and sacking of Kumbi Saleh, the capital of the Ghana Empire, in 1076. Although Omar forced the conversion of the West African rulers to Islam during the period of his conquests, the Almoravids either never tried or never fully succeeded in totally subjugating the people of Ghana, who continued to worship their ancestors and traditional agricultural spirits. By 1076 the Almoravids controlled most of northwestern Africa and, apparently, even arrived at a *modus vivendi* with Ghana. However, Almoravid influence over Ghana waned during the early years of the 12th century. This was not accompanied by a rise in Ghanaian power, however, and, indeed, the Ghanaian influence throughout West Africa also began to diminish by the early 1100s.

American Civil War See UNITED STATES CIVIL WAR.

American-French Quasi-War (1798–1800)

PRINCIPAL COMBATANTS: United States vs. France

PRINCIPAL THEATER(S): Atlantic waters off New Jersey coast and the Caribbean

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The United States sought to defend its rights as a neutral in the war between France and Britain.

OUTCOME: Franco-American amity restored; U.S. freedom of navigation ensured

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

U.S. Navy, about 1,000; U.S. privateers, about 7,000; French strength unknown.

CASUALTIES: Official U.S. losses, 22 killed, 36 wounded; French, 113 killed, 169 wounded.

TREATIES: Convention between the French Republic and the United States of America, September 30, 1800

Friction between France and the United States, close allies during the AMERICAN REVOLUTION (1775–83), developed during the course of the peace negotiations ending the Revolution, as it became clear that France was more interested in opposing Britain and furthering the North American territorial ambitions of its ally Spain than in truly upholding the cause of U.S. independence. With the fall of the Bourbon monarchy in the FRENCH REVOLUTION and renewed warfare between France and Britain in 1793, relations deteriorated further as U.S. policy was perceived to favor the British over the French. In particular, the French now regarded Jay's Treaty of 1794, between the United States and Britain, as an outright betrayal of the 1778 treaty of alliance between the United States and France. Seeking to heal the growing rift, President John Adams (1735–1826) sent a special mission to Paris in 1797. French prime minister Talleyrand (1754–1838) responded by demanding a bribe before he would even grant the American commissioners an audience. It was an outrage that came to light as the infamous XYZ Affair and nearly brought France and the United States to outright war.

Already, French naval operations against the British in the West Indies had begun to interfere with American shipping, as French warships intercepted and turned back U.S. merchantmen. In response, Congress authorized the rapid completion of three great frigates, the *United States*, *Constellation*, and *Constitution*, as well as the arming and training of some 80,000 militiamen. Furthermore, Congress commissioned 1,000 privateers to capture or repel French vessels, George Washington (1732–99) was recalled to command the army, and, on May 3, 1798, a U.S. Navy department was created.

In July 1798 Stephen Decatur (1774–1820) on the sloop *Delaware* captured the French schooner *Croyable* off the New Jersey coast. Renamed the *Retaliation*, it was retaken by the French in November 1798 off Guadalupe. On February 9, 1799, the brand-new USS *Constellation* captured the French frigate *Insurgente*. Additional exchanges took place sporadically through 1800, mainly in the Caribbean. Of 10 important engagements, the French recapture of *Croyable* / *Retaliation* was the only American loss.

Despite the aggressiveness of the fledgling U.S. Navy and American support for the newly begun anti-French Haitian independence movement led by former slave Toussaint Louverture (1743–1803; see HAITIAN-FRENCH WAR), war between France and the United States was

never declared. When Napoleon Bonaparte (1769–1821) assumed the leadership of the French government by his coup d'état of November 9, 1799, he caused word to be sent that France sought reconciliation. The truth was that Napoleon needed the support of neutral Denmark and Sweden to lend legitimacy to his new government, and he was therefore eager to be seen as a supporter of the rights of neutrals. The result of the change in French attitude was the Convention between the French Republic and the United States of America of 1800, which officially brought an end to what had been an unofficial war. The treaty not only restored amity between the two former allies but secured France's guarantee to respect the rights of a neutral United States to sail the high seas.

American Revolution: Overview (1775–1783)

PRINCIPAL COMBATANTS: United States (Britain's North American colonies, aided by small numbers of Indians) and France vs. Britain (aided by German mercenary troops), American Loyalists ("Tories"), and substantial numbers of Indians. Indian combatants included the following U.S. allies: Oneida, Mahican, Tuscarora (factions), and Catawba. British-allied Indians included: Mohawk, Seneca, Cayuga, Onondaga, Algonquian, Abenaki, Ottawa, Shawnee, Wyandot, Mingo, Delaware, Miami, Kickapoo, Piankashaw, Huron, Tawa, Tuscarora (factions), Chippewa, Potawatomi, Menomini, Sac, Fox, Winnebago, Sioux, Cherokee, Creek, Choctaw, and Chickasaw.

PRINCIPAL THEATER(S): United States and Canada, with naval action on the coastal Atlantic, Caribbean, and off Scotland and Ireland

DECLARATION: Britain against the colonies, 1775

MAJOR ISSUES AND OBJECTIVES: Britain's North American colonies below Canada sought independence.

OUTCOME: Independence was achieved.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

United States Continental army, 231,771 men over eight years; 164,087 militiamen during the same period; probably no more than 20,000 men served at any one time. Britain, 42,000 troops available, somewhat more than half this number served at any one time; German mercenaries ("Hessians"), 29,875 over eight years; American Loyalists ("Tories"), about 50,000 over eight years; British-allied Indians numbered in the thousands.

CASUALTIES: United States, 4,435 battle deaths, 6,188 wounded; no British figures are available, but it can be safely assumed that they were similar to U.S. casualties.

TREATIES: Treaty of Alliance (U.S.-France), February 6, 1778; Treaty of Amity and Commerce (U.S.-France), February 6, 1778; Act Separate and Secret (U.S.-France), February 6, 1778—allowed for eventual entry of Spain into the war; Declaration for Suspension of Arms and Cessation of Hostilities (U.S.-Britain), January 20, 1783—armistice; Treaty of Paris (U.S.-Britain)—formal recognition of U.S. independence and end to the war. In addition, the United States concluded a number of treaties with Indian tribes that had been allied with the British, the most important of which were the Delaware Indian Treaty (September 17, 1778); Treaty of Fort Stanwix (with the Iroquois Confederation—Mohawk, Oneida, Onondaga, Cayuga, Seneca, and Tuscarora tribes—October 22, 1784); Treaty of Fort McIntosh (with the Wyandot, Chippewa, and Ottawa tribes, January 21, 1785); Treaty with Cherokee (November 28, 1785); Treaty with Choctaw (January 3, 1786); Treaty of Hopewell (with the Chickasaw, January 10, 1786); and Treaty with the Shawnee (January 21, 1786).

This entry discusses background of the American Revolution and provides a very brief overview of the war. Detailed discussion is provided in AMERICAN REVOLUTION: COASTAL THEATER and AMERICAN REVOLUTION: FRONTIER THEATER.

ORIGINS OF THE AMERICAN REVOLUTION

King George III (1738–1820) assumed the British throne in 1760, after his grandfather, George II (1683–1760), died. In 1764 George III approved the enforcement of a series of Navigation Acts (the first of which had been on the books since the mid-17th century), which restricted some colonial trade to dealing exclusively with the mother country and, in all other cases, ensured that the mother country would get a disproportionate share of trade profits. George III decided to use the acts as the basis for new taxes to help defray the costs of the recently ended FRENCH AND INDIAN WAR. While the colonists had always acknowledged that the mother country had the right to regulate trade, they objected that the British government was now attempting to do what no such government had done before: to tax Americans, even though they were not represented in Parliament.

While members of George's government disputed the justice of the new taxes, PONTIAC'S REBELLION (1763–66), coming hard on the heels of the French and Indian War, multiplied Britain's costs of governing its empire. Lord Grenville (1712–70), now prime minister, pushed through Parliament heavy import and export duties known as the Grenville Acts. This crystallized colonial discontent around the battle cry of "no taxation without representation."

The first colonial protest in response to the Grenville Acts was peaceful, a 1764 Non-Importation Agreement,

pledging to boycott a wide variety of English goods. Instead of yielding to the boycott, Grenville ushered the Stamp Act through Parliament, which was put into force on March 22, 1765. The Stamp Act taxed all kinds of printed matter, including newspapers, legal documents, and even dice and playing cards. Response to the Stamp Act was swift. Samuel Adams (1722–1803) of Boston organized one of the first of many colonial secret societies opposed to the Stamp Act. Adams's group, like the others that would quickly follow, called itself the Sons of Liberty, and members acted to intimidate the stamp agents, all of whom, under threat, resigned. In the meantime, in Virginia, passage of the Stamp Act motivated Patrick Henry (1736–99), member of that colony's House of Burgesses, to introduce the seven resolutions that became known as the *Virginia Resolves of 1765*. The most important of the resolves asserted that Virginia's colonial legislature had the sole right to tax Virginians and to legislate on purely Virginian issues, although it conceded that Parliament had the right to legislate on issues that concerned the empire as a whole. The resolves were passed on May 30, 1765.

At the same time the Stamp Act was legislated, Parliament passed the Mutiny Act of 1765, which included a provision for quartering troops in private houses. This was modified by the Quartering Act, which eliminated the provision requiring private homeowners to billet soldiers but required colonial authorities to furnish barracks and supplies for British troops—at the colony's expense. Colonial legislatures resisted the new acts by refusing to allocate funds for the support of troops. Most important, each protest brought the colonies another step closer to union, culminating in the Stamp Act Congress, convened at New York City from October 7 through October 25, 1765. Partially in response to the Stamp Act Congress, Parliament repealed the Stamp Act (March 18, 1766) but simultaneously passed the Declaratory Act, which asserted Parliament's authority to make laws binding on the American colonies.

In August 1766 Charles Townshend (1725–67) accepted the post of chancellor of the exchequer (the British secretary of the treasury) under Prime Minister William Pitt (1759–1806). When Pitt suffered a mental breakdown, Townshend took control of the cabinet and pushed through the so-called Townshend Acts, which imposed new taxes and usurped much legislative authority from the colonies. In response nonimportation was revived, bringing about a boycott of British goods so effective that the Townshend duties were repealed on April 12, 1770—save for the duty on tea. The Townshend Acts moved the Massachusetts General Court not only to oppose the acts, but to issue *The Massachusetts Circular Letter*, which called on the other colonies to prepare plans for united resistance.

Minor acts of rebellion were staged in frontier North Carolina (see REGULATORS' REVOLT) and in New York City,

but the most famous incident occurred in Boston. On March 5, 1770, with Boston in the throes of a depression and many colonists out of work, an off-duty British soldier sought work at Grey's Rope Walk. This touched off a riot, which soon spread. British officers attempted to calm the crowd and gain control of their own men, but the confrontation turned violent, a soldier fired into the crowd, and one Samuel Gray was mortally wounded. Another shot hit Crispus Attucks, a 40-year-old runaway slave from Framingham, Massachusetts. Attucks was the first man killed outright in the Boston Massacre. Traditionally, he has been viewed as the first Patriot to fall in the American Revolution. Before the Boston Massacre was over two more citizens were killed, and another fell with a wound that would prove mortal.

Despite the propagandizing of such radicals as Samuel Adams and Paul Revere (1735–1818), the Boston Massacre did not trigger a full-scale rebellion, but a new crisis ensued in June 1772, when the Royal Navy dispatched the schooner *Gaspée*, commanded by Lieutenant William Dudingston, to put an end to smuggling in Narragansett Bay off Rhode Island. This led to a confrontation between the local sheriff Abraham Whipple (1733–1819) and Dudingston. On June 9, after the *Gaspée* ran aground on a sandbar near Providence, Sheriff Whipple led a flotilla of small boats to surround the *Gaspée*, boarded the vessel, removed the skipper (who was wounded in the fray) and his crew, then put the vessel to the torch. The incident, a direct attack on an instrument essential to the enforcement of a hated tax, thrilled the colonies. Crown officials threatened to transport Whipple and others to London for trial on charges of the capital crime of piracy. In response Samuel Adams organized the first Committee of Correspondence, essentially a new incarnation of the Sons of Liberty, to disseminate information and coordinate action.

In the face of all these incidents, Parliament repealed most of the taxes on import commodities. The king stubbornly insisted, however, on retaining a tax on tea, less with the purpose of raising revenue than to assert and preserve Parliament's authority to tax the colonies. This led to the protest known as the Boston Tea Party.

When three tea ships landed at Boston Harbor, the Sons of Liberty prevented their being unloaded. But Massachusetts' royal governor, Thomas Hutchinson (1711–80), refused to issue permits to allow the ships to leave the harbor and return to London. It was a standoff. On December 16, 1773, 150 colonists, their faces painted to resemble Mohawks, climbed into boats and rowed out to the three tea ships tied up at Griffin's Wharf. They jettisoned into Boston Harbor 342 tea chests.

George III and Parliament reacted to the Boston Tea Party with unprecedented harshness. Parliament passed a series of Coercive Acts, which colonial activists dubbed the Intolerable Acts. The acts closed the port of Boston,

greatly curtailed Massachusetts colonial government, and provided that most local officials would be appointed by the royal governor. The acts outlawed most town meetings, the very heart of representative self-government in the colonies. The jurisdiction of colonial courts was likewise greatly abridged, with all capital cases to be sent for trial to England or to another colony. Finally, the hated Quartering Act was extended, making it possible that British troops would be permanently quartered in Boston. George III appointed General Thomas Gage (1719?–87) both commander in chief of British forces in America and royal governor of Massachusetts in April 1774. On June 1 Gage swiftly implemented the most odious of the Intolerable Acts, the Port Act, which closed Boston to overseas traffic as well as to seaborne shipments from other colonies. When the Massachusetts General Assembly defiantly convened in Salem, having been banished from Boston, Gage dissolved this body, but the delegates barred the doors against Gage's messenger. During this period the exiled and outlawed assembly voted a proposal to convene a Continental Congress, with delegates from all the colonies. Further exacerbating the incendiary situation, on June 22, 1774, George III signed into law the Quebec Act, by which the old borders of the Canadian province of Quebec were restored. Once again, as under French rule, the borders stretched down into the Ohio Valley and the Illinois country—the very West in which many Anglo-American colonists hoped to settle.

A total of 56 delegates from all of the colonies except Georgia heeded the call of the exiled Massachusetts Assembly for a Continental Congress, which convened at Carpenter's Hall, Philadelphia, on September 5, 1774. The congress endorsed the Suffolk Resolves, which pronounced the Intolerable Acts unconstitutional, urged Massachusetts to form an independent government and withhold taxes from the Crown until the acts were repealed, advised citizens to arm themselves, and recommended a general boycott of English goods. A Continental Association was created to organize a renewed boycott of trade with Great Britain.

COURSE OF THE WAR

As relations between the colonies and mother country grew increasingly strained, the colonies became both increasingly militant and increasingly unified—despite the fact that a large minority of colonists remained loyal to the Crown and would in the coming war play an important role in support of the English. The prospects for American success in fighting what was the most powerful empire in the world, with a large professional army and a navy second to none, were, on the face of it, poor. However, colonial leaders understood that their task would not be to defeat the British, but merely to maintain a state of rebellion that would persuade king and Parliament that the colonies were not worth holding on to. The only deviation

from an essentially defensive American strategy was the invasion of Canada early in the war, an operation that proved disastrous.

Some historians see the war as having been fought in two theaters, the North and the South. However, for study, a more useful division is between the eastern, or coastal, region and the frontier. Near the coast the war was largely conventional, characterized by important “set” battles between formally constituted armies. (Off the coast, at sea, warfare was less formal, the United States making extensive use of privateers [mercenary civilian raiders] to harass British shipping. Most Royal Navy operations were in support of troop landings and supply and to effect a blockade of colonial ports.) Inland, in the frontier regions, both sides made use of Indian allies and auxiliaries. The British had far more such allies than the Americans. On the frontier the American Revolution was a very different war than in the coastal regions. Formal battles were few. Indian raids followed by settler retaliation were the characteristic pattern. These took a terrible toll on the colonists. When formal British armies did venture into the frontier, however, they were generally at a disadvantage.

As the best American strategists had predicted, it was cost and war weariness that finally persuaded the British to conclude a favorable peace in 1783. While the Americans had scored some important victories, neutralizing two major British armies—at Saratoga (September–October 1777) and at Yorktown (October 1781)—they did not so much defeat the British army and navy as deny them victory. That was sufficient to empower the liberal wing of the British government, which favored American independence, to promote and carry its point of view.

American Revolution: Coastal Theater (1775–1783)

For combatant and statistical information, see AMERICAN REVOLUTION: OVERVIEW.

Amid the deteriorating relations between the British Crown and its American colonies outlined in AMERICAN REVOLUTION: OVERVIEW, the colonies became both increasingly united and increasingly militant. But while the colonies’ newly formed Continental Congress was forging a union among historically disparate colonies, General

Gage was gathering and consolidating his troops. On September 1, 1774, one of his Boston-based detachments seized cannons and powder from arsenals in nearby Cambridge and Charles Town. Defiantly, the Salem-based Provincial Congress appropriated £15,627 to buy new military supplies. It also authorized John Hancock to head a Committee of Safety and call out the militia, whose members were dubbed “minutemen,” because these citizen-soldiers pledged themselves to be armed, assembled, and prepared for battle on a minute’s notice.

PATRIOT MOBILIZATION

On December 14, 1774, Paul Revere, the silversmith who served as courier to the Boston Sons of Liberty, rode out to warn the Patriot commander John Sullivan (1740–95) of Gage’s plan to seize munitions stored at Fort William and Mary guarding Portsmouth Harbor, New Hampshire. Sullivan led a band of volunteers to the fort and so stunned the British guards that they surrendered without a fight. Sullivan carried off the guns and powder that had been stored at the fort. This incident might be counted the first Patriot victory in a war that had yet to be declared.

Events now unfolded with a speed that apparently befuddled Gage, whose troops were set upon by Patriot saboteurs as acts of rebellion broke out all over New England.

In the meantime, responding to the petitions sent them by the First Continental Congress, King George and Parliament proposed the Plan of Reconciliation, whereby Parliament would refrain from taxing the colonies if their assemblies voluntarily contributed toward some of the costs of imperial defense. Yet, even while offering this concession, the Crown continued to punish New England, this time by passing the Fishery Act, which restricted the trade of New England to Britain, Ireland, and the West Indies and banned the colony from fishing in Newfoundland’s rich waters. After passage of this act, Massachusetts revived the Provincial Congress, which promptly set about transforming the colony into an armed camp. Gage responded to these developments by imposing martial law on April 12, and summarily declaring all the residents of Massachusetts to be “in treason.”

On the night of April 18 Gage dispatched 600 to 800 troops under the command of Lieutenant Colonel Francis Smith (1723–91), assisted by Major John Pitcairn (1722–75) of the Royal Marines to seize a Patriot arms cache at Concord, Massachusetts. Paul Revere (1735–1818) and another Sons of Liberty courier, William Dawes, set out from Boston to alert the countryside. They were joined en route by another rider, Dr. Samuel Prescott (1751–c. 77).

BATTLE OF LEXINGTON

The village of Lexington lay in the line of march between Boston and Concord. There, on Lexington’s green, militia

captain Jonas Parker (1729–75) formed up the ranks of about 70 minutemen. Approaching the minutemen, Pitcairn ordered his troops to form their line of battle, then called to the militia to lay down arms and disperse. Parker ordered his men neither to surrender nor attack, but to disband, taking their weapons with them. At this, Pitcairn repeated his demand that they lay their weapons down. Shots were exchanged. Eight minutemen, including Parker, lay dead on Lexington green, with 10 more wounded. A single British soldier was slightly hurt. The Battle of Lexington, which most historians consider the true opening battle of the American Revolution, was over.

BATTLE OF CONCORD

From Lexington the British continued their march to Concord. Into this town militia companies came from the surrounding communities. Estimates of American strength at Concord run as high as 20,000, but the most reliable figure is 3,763. Probably no more than half this number was involved in the battle at any one time.

Entering Concord unopposed, the British commander, Lieutenant Colonel Francis Smith (1723–91), dined at a local tavern with his staff officers while the grenadiers began searching the town. Patriot Colonel James Barrett ordered the militia to march to the defense of Concord. A captain of British light infantry ordered his men to form the standard line of battle, but the maneuver miscarried, and the first British shots fell short. The Americans returned fire in a volley Ralph Waldo Emerson (“Hymn Sung at the Completion of the Concord Monument, April 19, 1836”) would dub “the shot heard round the world.” In the volley three British regular soldiers died, and nine more lay wounded. The redcoats retreated back into the town, and Barrett failed to give chase. At about 10 A.M. Smith collected his wounded and prepared to leave Concord to return to Boston. All the way back the British were harassed by Patriot fire. From the attacks 73 redcoats were confirmed dead, and another 26, missing, were presumed dead; 174 British soldiers were wounded. On the American side, 49 had died, 5 were reported missing, and 41 lay wounded.

BATTLE OF FORT TICONDEROGA

By 10 A.M. on April 19, just after the first American fell at Lexington, Committee of Safety couriers were riding for all points north and south. Within hours news of the battle had reached New York, Philadelphia, and most points in between. Within days it had traveled to Virginia and the rest of the South.

Connecticut authorities responded to the news of Lexington and Concord by sending Benedict Arnold (1741–1801) and Ethan Allen (1738–89) to capture Fort Ticonderoga, which controlled the main route connecting Canada and the upper Hudson Valley. On May 10, the pair led just 83 men in a stealthy attack that took the fort with-

out a shot. The Patriots thus gained a gateway to Canada and a base from which Allen launched a successful expedition against the nearby post of Crown Point. Together, the forts yielded 78 precious artillery pieces and ammunition, along with other materiel. The artillery would be put to effective use in the siege of Boston.

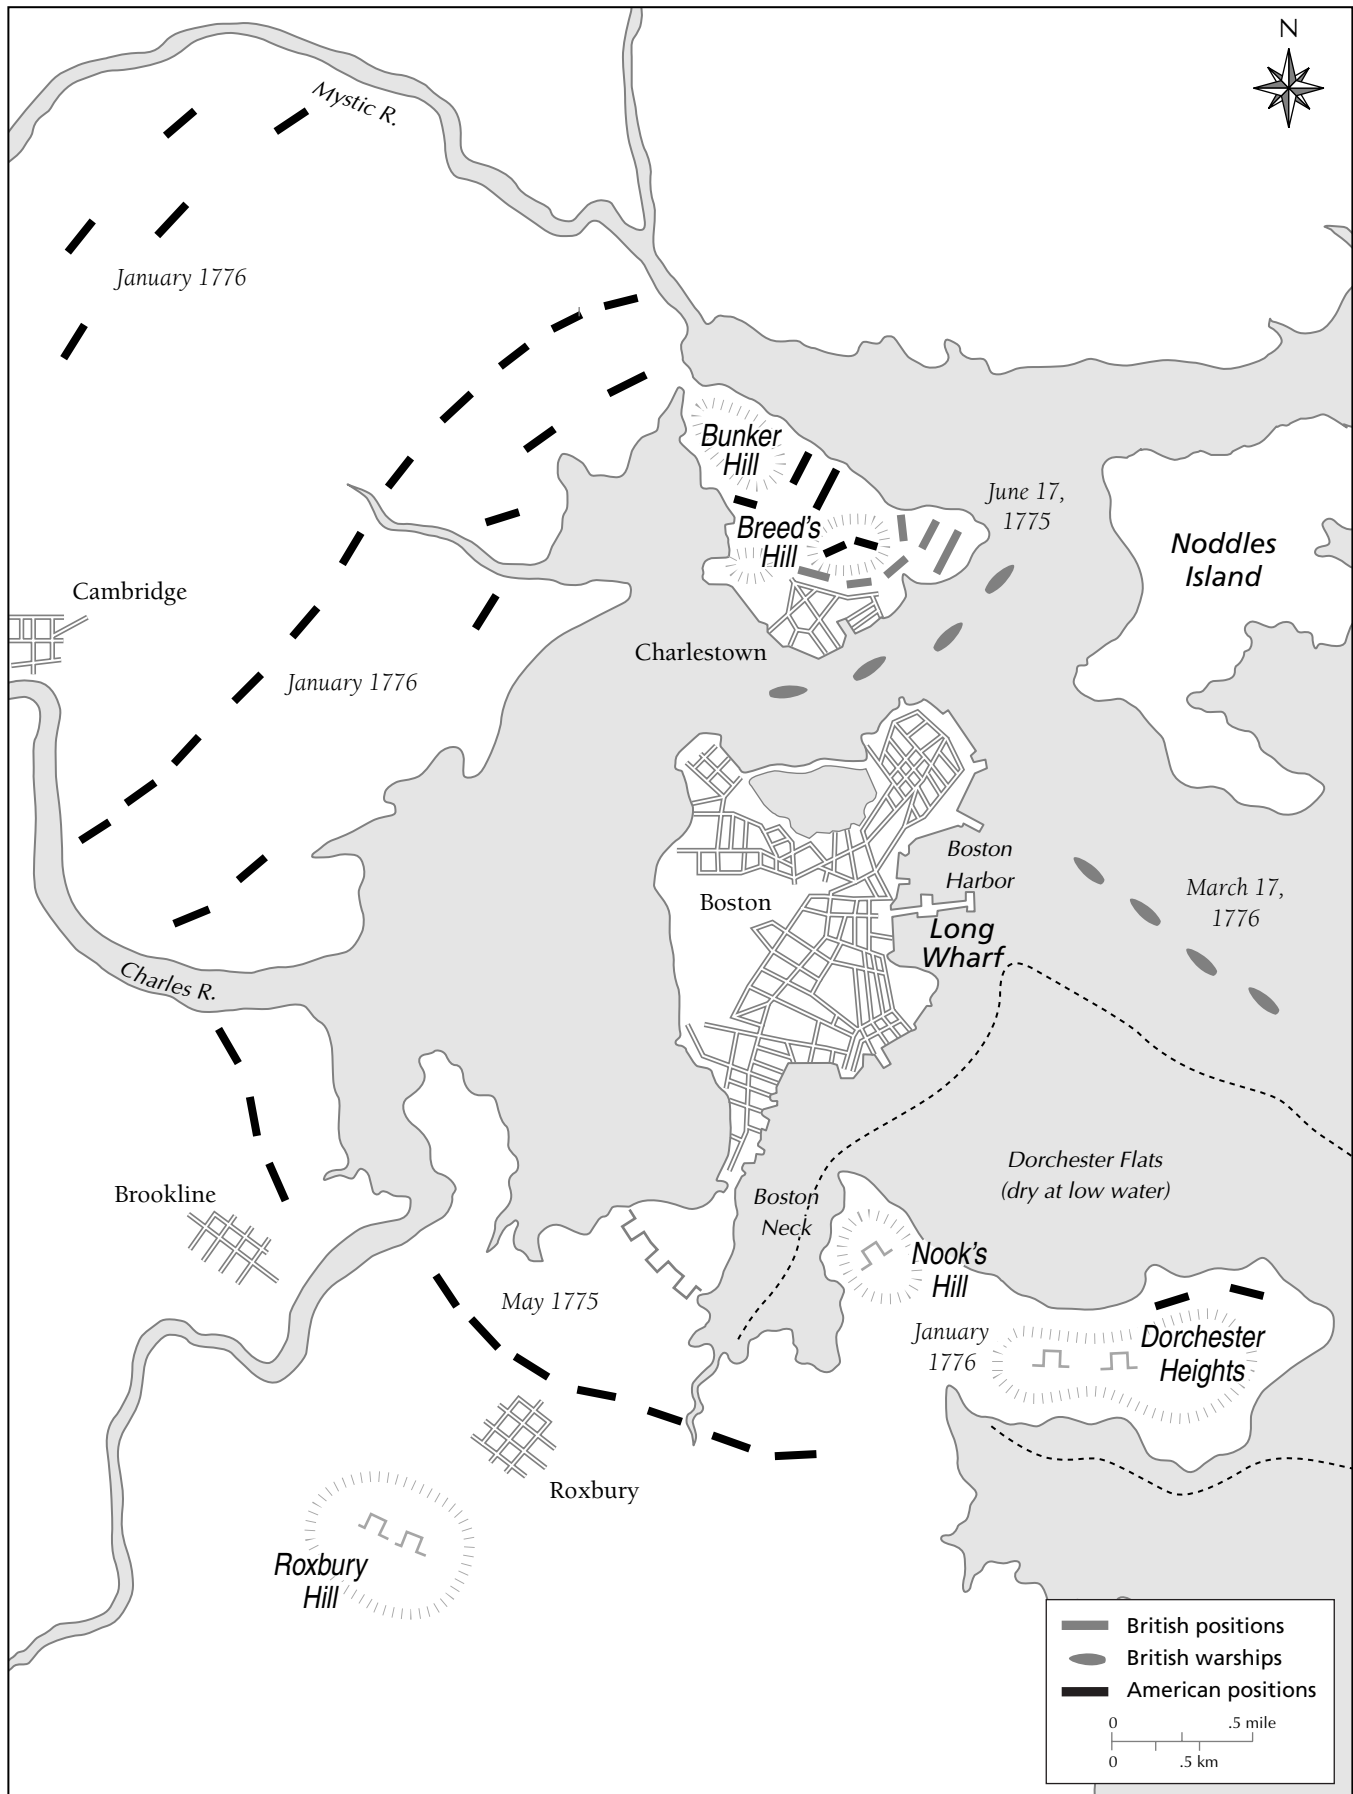

On the very day that Ethan Allen and Benedict Arnold took Fort Ticonderoga, the Second Continental Congress convened in Philadelphia and commenced creation of a Continental army, with George Washington (1732–99) in overall command. It also called on local militia forces throughout New England to march to Boston, with the intention of besieging the British forces headquartered there. By the end of 1775 Congress had 27,500 Continental soldiers on its payroll from all the colonies.

BATTLE OF BUNKER HILL

By the end of May 1775 some 10,000 colonial troops surrounded Boston and the troops of General Gage. In the meantime, on May 25 HMS *Cerberus* sailed into Boston Harbor bearing three major generals to assist Thomas Gage in crushing the rebellion: William Howe (1729–1814), the senior officer, John Burgoyne (1722–92), and Henry Clinton (1730–95). Gage lost no time in assigning Howe to crush the American army in a single blow. Howe decided on an amphibious landing at Dorchester Point, to the east of Cambridge, in coordination with Clinton’s landing at Willis Creek, to the west. This would secure the high ground at Charlestown, a place called Bunker’s or Bunker Hill. Covering these operations would be the big guns of the men o’ war riding at anchor in Boston Harbor. Once Bunker Hill was secured, the forces of Howe and Clinton could crush the American flanks in a pincers movement converging on Cambridge.

The Patriot network of spies quickly discovered what the British were about, and Boston’s Committee of Safety directed General Artemus Ward (1727–1800) to seize, occupy, and fortify Bunker Hill before Gage could attain it. Instead, Ward ordered General Israel Putnam (1718–90) to concentrate not on Bunker Hill, but on nearby Breed’s Hill, which was closer to Boston. Putnam and militia commander William Prescott (1726–95) would put some men in a fortified position on Bunker Hill to cover any retreat. Ward’s decision was a serious tactical error. Higher, steeper, and farther from the ships of the Royal Navy, Bunker Hill could have been made virtually impregnable, whereas Breed’s Hill, lower and less steep, was actually more exposed and vulnerable.

Nevertheless, Gage and Howe had to attack the Patriot positions three times before the American lines finally gave way. In the retreat the Americans suffered their heaviest casualties, about 450, with 140 killed. Although the British won the day, they had taken the heaviest losses. Of 2,400 redcoats actually engaged in combat, 1,054 had been shot, of whom 226 died.

Battle of Bunker (Breed's) Hill, June 17, 1775

THE AMERICANS' CANADIAN CAMPAIGN

At the start of the Revolution many Patriots believed that Canada would eagerly join in the rebellion, and the Continental Congress created a commission to invite Canada's alliance. When the Canadians rebuffed the overture, Congress on June 27, 1775, authorized an invasion to be led by Major General Philip Schuyler (1733–1804) with Richard Montgomery (1738–75), a former British regular in the French and Indian War, as his second in command.

The invasion did not get under way until September, by which time George Washington had authorized General Benedict Arnold to lead a simultaneous operation. The plan was for Arnold to take Quebec while Schuyler attacked Montreal. In the meantime Montgomery learned that a British expedition was preparing to recapture Fort Ticonderoga and Crown Point and, on his own initiative, marched out of Fort Ticonderoga and headed for Canada.

On September 4 General Schuyler caught up with Montgomery, and the two led the assault on St. Johns, the site of a British fort and barracks defended by about 200 regulars and a contingent of Indians. A siege was called for, during which Schuyler and about half the American troops fell ill. Montgomery, commanding the American forces in the absence of the ailing Schuyler, sent Ethan Allen to recruit rebellious Canadians. During this mission Allen, judging that Montreal was weakly defended, impulsively decided to use his new recruits to invade the town. But as quickly as the recruits had joined Allen, they drifted off, and Allen was forced to turn away from Montreal. After joining forces with another militia officer, John Brown (1744–80), Allen returned to Montreal with about 300 men. During the night of September 24–25 the assault failed, and Allen was captured with 20 of his men. (He was shipped back to England, where he narrowly avoided trial for treason. Returned to North America, he was paroled in New York City in October 1776.)

While Allen and Brown were attacking Montreal, Montgomery captured Chambly near St. Johns on October 18 and the fort at St. Johns on November 2, 1775. Despite this success, however, the invasion was bogging down as Montgomery's troops went hungry and lacked for supplies and warm clothing. Montgomery now marched into Montreal, where he awaited word from Benedict Arnold on his progress against Quebec.

Arnold had left with 1,100 volunteers from Cambridge, Massachusetts, on September 12. Catastrophe came when his fleet of *bateaux*, hastily built of green (uncured) wood, fell apart in the icy water of the Kennebec River. Arnold and his men were forced to wade in the frigid river for some 180 miles. Food was in short supply, and many men deserted. By November 9 only 600 of the original 1,100 reached the south bank of the St. Lawrence River. Even so, Arnold was confident that he could take the fortress town of Quebec. Delays allowed the British to reinforce the town, however, and Arnold was forced to retreat. On December 2 he joined forces with Montgomery and

attacked the town on December 31, during a blizzard. More than half the American invasion force ended as casualties: 48 dead, 34 wounded, 372 made captive. Although painfully wounded himself, Arnold refused to give up. For five months, from January to May 1776, he and his command lingered on the outskirts of Quebec. Reinforcements arrived but were inadequate, and the invasion of Canada collapsed.

Now the British began preparing a counteroffensive invasion *from* Canada. It was critical to gain control of the waterway straddling Canada and America, Lake Champlain, and both sides scrambled to cobble together shallow-draft fleets. Arnold left Crown Point with 10 craft on August 24, 1776, and anchored the boats off rocky Valcour Island. By the time of the battle, which began on October 11, Arnold was in command of 15 vessels. When he saw the size of the approaching British fleet—20 gunboats, 30 longboats, and several larger vessels—he hurriedly pulled back all his boats. But it was too late, and, over the next three days the two makeshift fleets slugged it out, with the outnumbered and outgunned American vessels getting the worst of it. By the morning of the 13th Arnold had two large vessels left, the *Congress* and the *Washington*, in which he made his escape, keeping up a running fight with the pursuing British fleet all the way to Buttonmould Bay on the Vermont shore of Lake Champlain. There he beached and burned the wrecks of his two ships and traveled overland to Crown Point. Realizing that he could not hold this position, he burned the buildings of Crown Point and retreated to Fort Ticonderoga, back to the point from which the Canadian venture had begun two years earlier.

The American losses at Valcour Island were impressive: 11 of the 15 vessels in Arnold's command and about 80 of 750 men killed or wounded. Of 17 to 20 British gunboats engaged and the two larger vessels, the *Carleton* and the *Inflexible*, none was even damaged. Yet this defeat gained something for the Americans and cost something for the British. By keeping British general Guy Carleton (1724–1808) occupied, Arnold took the momentum out of the British advance, and the approaching winter put an end to plans for Carleton's forces to invade the lower colonies and link up with William Howe. Such a move would have cut the colonies in two, severing the north from the south and quite possibly crushing the Revolution. By enduring a tactical defeat, Arnold had effectively achieved a strategic victory.

SIEGE OF BOSTON

The Battle of Bunker Hill on June 17 left General Thomas Gage dazed, demoralized, and intimidated. Had he acted quickly after the battle, costly as it was, he could have broken the American siege lines around Boston before they reformed. But he hesitated, and the Patriot siege that had begun on April 19, 1775, was reinforced following the battle. By June 1775 some 15,000 provincial troops were positioned just outside Boston, under the command of

General Artemus Ward. Gage's army, now bottled up in the city, numbered 6,500. On July 2, 1775, George Washington took over command of the so-called Boston Army and set about transforming it into a unified and disciplined Continental army. In the meantime General Henry Knox (1750–1806) transported the artillery captured at Fort Ticonderoga more than 300 miles to Cambridge, with the purpose of bombarding Boston in preparation for an attack on the British garrison.

Throughout the fall and winter the two armies stared at each other across Boston Neck and the Charlestown peninsula. On October 10, 1775, General William Howe replaced Thomas Gage, who returned to England. On January 27, 1776, Admiral Samuel Graves (1713–87), a lackadaisical officer, was replaced by the far more dynamic Admiral Richard Howe (1726–99), brother of the new commander in chief of the British army. By this time, too, reinforcements had swelled the Boston garrison between 7,000 and 8,000 men.

In a spectacular feat of military engineering, Washington's forces quietly fortified Dorchester Heights during February 1776, then placed there the guns Knox had brought from Fort Ti. Surrounded and outnumbered, General Howe abandoned Boston. From March 7 to March 17 the British ships were loaded with some 11,000 soldiers and sailors, in addition to a thousand Tories. The evacuation flotilla sailed all the way to Halifax, Nova Scotia.

COMMON SENSE AND THE DECLARATION OF INDEPENDENCE

On January 9, 1776, Thomas Paine (1737–1809), an English immigrant (he settled in Philadelphia in November 1774), published *Common Sense*, a 47-page pamphlet that made the argument for independence more simply, thoroughly, and persuasively than any document that had come before it. Swept by a wave of popular support for independence largely engendered by *Common Sense*, the Continental Congress on February 18 authorized privateers—merchant ships given permission to raid and capture British vessels. On February 26 it embargoed exports to Britain and the British West Indies. On March 3 Congress sent Silas Deane (1737–89) to France to negotiate for aid. On March 14 Congress moved against the Tories (loyalists), ordering that they be disarmed. On April 6 it opened all American ports to the trade of all nations save Britain. Now, one after the other, in some cases after intense but compact debate, all the colonies voted for independence, and a Declaration of Independence was adopted on July 4, 1776.

During this period the British revised their strategy. Rather than attempt now to attack the bastion of the revolution, Boston and New England, British military commanders shifted their focus to those places where the spirit of revolution was weakest and Tories outnumbered Patriots. Accordingly, after evacuating Boston and remov-

ing to headquarters in Halifax, the British command now turned its attention to two places where Tories abounded: New York and South Carolina.

ACTION IN NEW YORK

New York City was a strategically critical prize. Its harbor offered the anchorage the great British fleet required, and whoever controlled the city and its harbor also controlled the Hudson River, principal avenue into the American interior. Seize the Hudson, and the colonies, which had proved so surprisingly adept at communication and coordination of action, would be completely divided. Thus isolated, even staunchly rebellious New England could be defeated. With that, the rebellion would surely collapse.

The new British plan called for General Howe, currently in Halifax, to sail southward with a large army to take and occupy New York City. From this base he would spread his control of the Hudson River north to Albany, thereby isolating New England from the other colonies. From Canada a British force led by General Guy Carleton would join Howe at Albany. Together, the two were to defeat the remnants of rebellion in detail.

In January 1776 Washington detached from Boston siege duty the colorful, irascible, and ultimately unreliable Charles Lee (1731–82) to set up the defense of New York. Lee proposed to put 4,000 to 5,000 troops on Long Island, taking care to fortify Brooklyn Heights, which overlooked lower Manhattan. Uptown on the island of Manhattan he would place troops for the defense of Kings Bridge, which connected Manhattan with the Bronx on the mainland. Lee reasoned that given the naval superiority of the British, he could not hope to hold Manhattan as a fortress, but, from the surrounding high ground, he could effectively attack a British invasion force. It was a workable plan, but when Washington arrived to establish his headquarters in the city on April 13, he was shocked to discover that Lee had done nothing to put it into action. Washington himself set the army to the furious labor of digging up the island, throwing up great earthen works. Fortunately for the Americans, the British moved slowly, as usual, and it would be almost September before they were ready to attack Manhattan. Despite Lee's inaction, the 19,000 Continentals and militiamen gathered for the defense of the island had five months to dig and to build.

It was June 25, 1776, when William Howe landed off Sandy Hook, a spit of land projecting from New Jersey into Raritan Bay, opposite Staten Island. He had three ships, the vanguard of 130 vessels that would arrive on the 29th, carrying 9,300 troops. On July 12 Lord Richard Howe, William's admiral brother, arrived with 150 more ships and reinforcements from England. Soon, additional British troops and German mercenary forces followed, and on August 12 yet more soldiers arrived from the failed expedition against Charleston, South Carolina (covered later in this entry). By the last week of August, Howe had

mustered 31,625 troops, of whom 24,464 were fit for duty, to oppose some 20,000 Americans—the bulk of the American forces at the time. Lose them, and all would be lost. Admiral Howe was prepared to support the land forces with 30 combat ships, including 10 ships of the line and 20 frigates, together representing a total of perhaps 1,200 guns. Against these enormous forces, Washington had 6,500 troops on Long Island, many of which were concentrated on fortified Brooklyn Heights.

The British began to land on Long Island on the night of August 26, sending 10,000 troops in a broad movement to the northeast, so that the attack, when it was launched on the morning of the 27th, rushed in on General Sullivan's left flank. The attack came from exactly the opposite side from which it had been expected. While Generals Clinton, Charles Cornwallis (1738–1805), and Percy attacked from the northeast, 5,000 Hessians (German mercenary troops in the British service) pressed in due north from the Flatlands, and 7,000 Highlanders attacked from the west. The effect of an attack from three sides with 22,000 men overwhelmed the 3,100 Americans positioned before the Brooklyn Heights fortifications, who retreated behind the heavily fortified works. Instead of exploiting his current advantage, however, General Howe decided to dig in so that he could take his time in the assault on the Brooklyn Heights fortress.

Washington remained confident at first that Brooklyn could be held, and so he brought some of his Manhattan units into the fortifications at Brooklyn Heights. This was a tactical error, and by the 28th Washington realized that his position on Brooklyn was untenable. He now ordered preparations for evacuation to Manhattan, which Washington accomplished with great skill during the stormy and foggy night of August 29–30. He had saved the army.

Washington's army, now deployed solely in Manhattan, was poorly supplied and subject to the impending expiration of militia enlistments. The onset of fall weather was miserable, and perhaps a fourth of the 20,000 defenders lay ill. Brigadier General Nathanael Greene (1742–86), dashing youthfully Continental brigadier, advised Washington to burn and abandon New York, but Congress barred this. On September 15 the British fleet sailed up the Hudson and East Rivers, flanking Manhattan Island. British guns were now trained on Manhattan all along its length. Transport barges landed at Kip's Bay, where 34th Street today ends at FDR Drive. At 11 A.M. a brief naval barrage was ordered, and then troops were landed, unopposed, in 85 flatboats. Foolishly, the British proceeded at a leisurely pace, setting up headquarters in the Murray house (owned by a prominent Tory) in the neighborhood known today as Murray Hill. The bulk of the American army occupied the heights of Harlem, from which the troops could see, on September 15, a line of British soldiers advancing northward along the eastern road. By nightfall, Howe had established forward posts from McGowan's Pass

(at the northeast corner of Central Park today) southwest to the Hudson River (at about the location of 105th Street). Before dawn of the 16th Lieutenant Colonel Thomas Knowlton (1740–76) led 100 elite Connecticut Rangers down the so-called Hollow Way, a steep descent from the heights of Harlem to the Hudson. He ran into elements of the famed Black Watch Highland troops and engaged them fiercely but was forced to retreat as more Highlanders arrived. The British misinterpreted the retreat as the beginning of a general flight, and the advance elements of Howe's invading force now attacked in anticipation of triggering a rout. Instead, they got a full-scale fight that sent the Highlanders retreating across a buckwheat field fronting the Hudson (on the site of today's Barnard College).

To the American defenders this small victory was greatly heartening. To Howe, it was discouraging out of all proportion. With thousands of well-equipped troops and a mighty naval fleet at his disposal, he could have struck Washington's position from the flanks or the rear. Instead, he did nothing. By the middle of October Howe still had not moved against Fort Washington and Harlem Heights.

BATTLE OF WHITE PLAINS

Howe was not entirely idle during this period. Washington observed that Howe's barges were probing for Hudson landings in Westchester, preparing an encirclement. In view of this, Washington decided on October 16, to evacuate Manhattan. Slowly his troops crept northward to White Plains, in Westchester County. There Washington deployed his troops poorly, neglecting to fortify Chatterton Hill—the highest and therefore most important of the three hills on which his army encamped. Howe focused his attack against this weak position, sending the Americans into withdrawal farther north.

FORT WASHINGTON FALLS AND WASHINGTON RETREATS

Early in November, seeing that Howe had stopped moving north in pursuit of his main force and had turned back toward Manhattan, Washington concluded incorrectly that Howe's intention was now to invade New Jersey. When he had evacuated Manhattan, Washington had left a garrison of 2,000 men to hold Fort Washington. Reinforcements had raised this number to nearly 3,000. Howe took Fort Washington on November 16, and 2,818 American officers and men became prisoners of war. Four days later Fort Lee, across the Hudson in New Jersey, also fell. These losses were added to the fact that all of Manhattan and a substantial swath along the New Jersey bank of the Hudson were now in British hands. The American army was split into three branches. Charles Lee was in North Castle, Westchester County; General William Heath (1737–1814) was at Peekskill, up the Hudson from Manhattan; and Washington took the main body of troops on a long retreat by land through New Jersey.

WASHINGTON'S RETREAT

Casualties, the expiration of enlistment, and capture had reduced Washington's army to about 16,400 troops, divided and dispersed. Despite all the advantages he enjoyed, General Howe chose not to conduct a winter campaign and instead set up winter quarters at Amboy, New Brunswick, and Princeton on the eastern front and in Bordentown and at Trenton (the main post), on the Delaware River. He also dispatched General Henry Clinton from New York with some 6,000 men to occupy Newport, Rhode Island, preparatory to a spring campaign against New England. General Charles Cornwallis was sent to harass Washington and chase him beyond New Brunswick, just to give the British elbow room for their winter hibernation.

Cornwallis decided to interpret his assignment more broadly. Boasting that he would bag Washington as a hunter bags a fox, he drove his troops swiftly and unsparingly. He was closing in on Newark by November 29. Washington and his headquarters force of 4,000 fled to New Brunswick just steps ahead of Hessian advance guards. Leaving Alexander at Princeton to delay the British advance, Washington reached Trenton with his main force on December 3. His best hope was that Charles Lee would meet him there, but Lee was days distant. Washington, who had already prepared for an evacuation across the Delaware River into Pennsylvania, sent his troops across on December 7 and deployed them along some 25 miles of Pennsylvania riverfront. As a precaution he also sent troops to find and destroy every boat of any size for 75 miles up and down the lower Delaware. He meant to make it very difficult for the British to give chase. Cornwallis gave up. He secured permission from Howe to halt at the Delaware and to wait for spring, when he and Howe might finish off the American army at leisure.

BATTLE OF TRENTON

By the Christmas season Washington had available no more than 6,000 troops fit for duty. Nevertheless, he boldly decided on a counteroffensive.

For the British and Hessian troops lodged at Trenton, the approach of Christmas was welcomed with food and drink "liberated" from the citizens of New Jersey. On Christmas night the river roiled high, great sheets of broken ice whirling in the swift current. Nevertheless, Washington loaded 2,400 veteran troops and 18 cannons into the stout Durham boats he had hoarded to keep out of British hands, and, in the stormy night, crossed to New Jersey.

The Americans descended on Trenton at 7:30 on the morning of December 26. Washington's units closed in from the northwest, the north, the northeast, the south, and the southeast. Totally surprised, the elite Hessians encamped at Trenton were quickly forced to surrender; 918 Hessian prisoners as well as a wealth of equipment and stores fell to the Americans. Washington's forces had

suffered no more than four wounded. Some authorities believe no American soldier was killed, while others report two killed in action and two frozen to death. Of the 1,200 Hessians engaged, 106 were killed or wounded, 918 captured, and the remainder were unaccounted for (most likely they fled as deserters).

Washington now withdrew across the Delaware back into Pennsylvania. The triumph at Trenton was sufficient to lift American morale and persuade thousands of men to extend their enlistments by six weeks. Washington crossed his army into New Jersey once again on December 30, 1776, taking up a position at hard-won Trenton. Cornwallis rushed almost 8,000 fresh troops from Princeton to Trenton. Washington sent a covering force under General Edward Hand (1744–1802), who, with help from some miserable weather, managed to delay Cornwallis's advance.

BATTLE OF PRINCETON

Washington hurriedly erected defensive works along the Assumpink Creek just south of Trenton and left a small force of 400 there with orders to make noise and keep the fires lighted to decoy Cornwallis. Cornwallis reached Trenton on January 2. Although his officers urged an immediate attack, Cornwallis, convinced the din of men digging trenches and the flicker of campfires were in preparation for the arrival of Washington's entire army, decided to wait. In the meantime the main body of Washington's army slipped silently toward Princeton and New Brunswick. The Battle of Princeton was fought on January 3.

At first the American militiamen panicked, unable to load faster than the British could thrust with bayonets. Washington personally rallied the troops long enough to allow Henry Knox to position and fire his artillery into the British attackers. This sent the redcoats into full retreat.

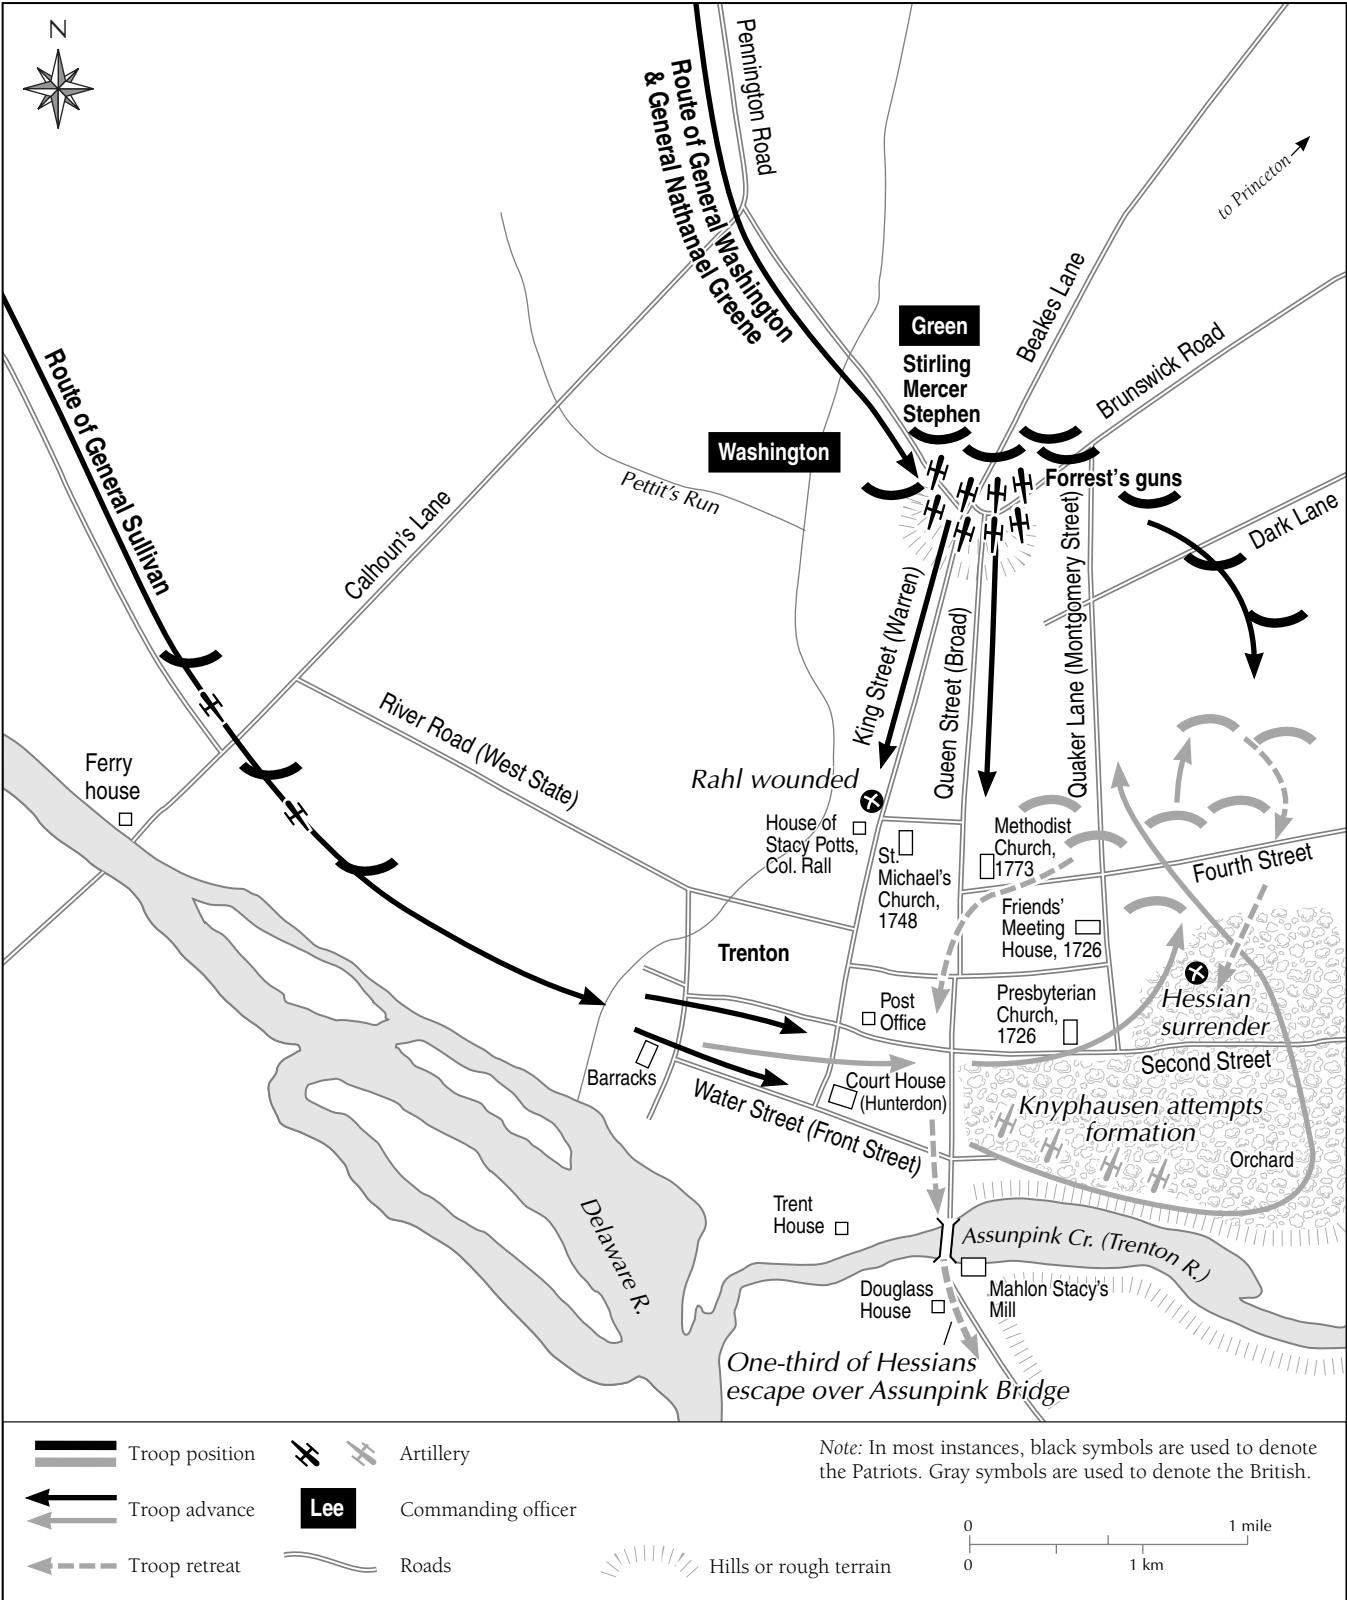

Washington resisted the impulse to pursue the fleeing attackers, for he knew they would lead him straight to the superior numbers of Cornwallis's main army. Instead, Washington advanced into Princeton and engaged the few British soldiers remaining there. He quickly took Princeton but could not afford to occupy it, knowing that Cornwallis would counterattack soon. However, he understood that the victories at Trenton and Princeton had saved the revolution, and he took his army to Morristown to make winter camp.

BURGOYNE'S CAMPAIGN

Early spring 1777 brought the American cause an influx of fresh troops and a willingness among many veterans to extend their enlistments. In Paris Benjamin Franklin and Silas Deane, congressional emissaries, were gradually persuading the French government to conclude a formal alliance with the United States. In June the marquis de Lafayette (1757–1834) arrived with a party of idealistic adventurers (including the baron de Kalb [1721–80]) eager to impart European military expertise to the officers and men of the Continental army.

Spring also brought fresh energy and resolve to the British. General John Burgoyne perfected the plan General Guy Carleton had attempted and failed to execute the pre-

vious year: the division of the state of New York along the Hudson, the consequent isolation of New England, and the effective decapitation of the Revolution. A principal

Battle of Trenton, December 26, 1776

force would advance south from Canada, down Lake Champlain and the upper Hudson. Simultaneously a smaller force would operate through the New York frontier country, from Oswego through the Mohawk Valley. These two operations would be coordinated with Howe, who would send another major force up the Hudson, meeting Burgoyne's principal force at Albany, thereby effecting a pincers movement that would amputate New England from the rest of the colonies.

King George III enthusiastically endorsed the plan, and George Sackville, lord Germain (1716–58), secretary of state for the American colonies, authorized Burgoyne to carry it out. Yet Germain simultaneously approved General Howe's plan for attacking Philadelphia, thereby

rendering Howe unavailable for Burgoyne's operation. The inept Germain had approved two mutually exclusive plans.

Burgoyne began his move south on June 17, 1777. He commanded a force of 7,000 infantrymen, British regulars as well as German mercenaries, in addition to a small force of English and German artillerymen, 400 Indian auxiliaries, and a few Canadian and Tory adventurers. The approach of this force prompted the Americans to abandon Fort Ticonderoga, and Burgoyne advanced past this to Albany, where he intended to link up with General Barry St. Leger (1737–89) and Howe in order to deliver a crushing blow to the rebels. On August 3, while camped near Fort Edward, however, waiting for his full forces to assemble,

Burgoyne's advance against Albany, June–September 1777

Burgoyne received a dispatch from Howe informing him of his intention to march on Philadelphia. Now it was unmistakably clear that Howe would not meet Burgoyne in Albany.

BATTLE OF ORISKANY

On August 4, 1777, General Barry St. Leger commenced artillery bombardment of Fort Stanwix, New York. The bombardment resulted in the death of only one man and the wounding of six and was far less effective than the work of Indian snipers, who calmly picked off soldiers as they desperately worked to cover the fort's interior roofs and parapets with sod.

On August 6 three messengers from Patriot militia General Nicholas Herkimer (1728–77) managed to penetrate the Indian lines surrounding the fort. Herkimer was at the Indian town of Oriskany, 10 miles southwest of Fort Stanwix, with 800 troops. He asked Colonel Peter Gansevoort (1749–1812) to join him in a combined assault on St. Leger's lines. The result was a desperate battle between militia and a combination of British regulars, Tory militiamen, and British-allied Indians. Herkimer himself was severely wounded, his leg shattered by a musket ball. Nevertheless, propped up against a saddle, he continued to direct the fight. Although one entire American regiment broke and ran, most of the Patriots fought fiercely, suffering as well as inflicting heavy casualties. A sudden thunderstorm brought a temporary halt to the battle, providing time for the forces to regroup on higher ground. The British-allied Indians, disheartened by their heavy losses, suddenly retreated when the battle resumed. With their desertion the Tories withdrew as well. The American forces were in no condition to give chase. Indeed, the Battle of Oriskany was a grim disaster for all concerned. Half the American forces were killed, wounded, or captured. The able militia commander Herkimer died of his wounds. The British lost 33, with 41 wounded, and the Indian losses were the heaviest of all: 17 Senecas killed, including their chief warriors, and 16 wounded with 60 to 80 Indians from other tribes also killed or wounded. A total of 23 war chiefs were killed or wounded.

Neither side could claim victory, but Oriskany did stop Herkimer's attempt to reinforce Fort Stanwix, and St. Leger again demanded the fort's surrender, threatening to turn loose his Indian warriors against the garrison as well as the women and children sheltered in the fort. Colonel Gansevoort once again indignantly refused to yield.

In the meantime General Philip Schuyler, encamped at Fort Dayton, 50 miles from Fort Stanwix, dispatched General Ebenezer Learned (1728–1801) and a Massachusetts brigade to the relief of the fort. En route, the Americans deceived British spies into believing their force was much larger than it really was; as a result, perhaps as many as 600 Indian warriors promptly deserted St. Leger, and the British general, himself alarmed by the fabulously inflated report of Patriot strength, hastily lifted the siege of

Fort Stanwix on August 22. While the Battle of Oriskany, then, was a bloody draw, its aftermath put the British forces at a distinct disadvantage.

BATTLE OF BENNINGTON

In addition to British regulars, Tory militia forces, and Indian auxiliaries, the British Crown employed some 30,000 mercenary troops against the Americans. They were men from various German states, misleadingly lumped together under the name of "Hessians." In the summer of 1777, Burgoyne detailed Hessian troops under Lieutenant Colonel Frederick Baum (d. 1782?) to take Bennington, Vermont. There, however, General John Stark (1728–1822), who had distinguished himself at the Battle of Bunker Hill, was gathering reinforcements. Hearing that Baum's Indian auxiliaries were looting and terrorizing the countryside, Stark dispatched 200 militiamen to drive the Indians off. However, the militiamen first encountered Baum's main column and were sent running. Battle was delayed by a rainstorm on August 15, a fortunate respite that gave Stark time to receive 400 reinforcements, the Vermont militia, led by Seth Warner (1743–84). Baum's men, in the meantime, were ordered to dig in.

On the 16th Stark and Warner waited for the rain to stop, then moved in for a preemptive attack, with an enveloping movement from the front, rear, and flanks. Baum saw the attackers, but because they were dressed in civilian clothing, he assumed they were local Tories. With all the Americans in place, the attack began. In the shock of the initial assault, the Indians, Tories, and Canadians panicked and fled. The Germans and the British, dug in on a hilltop, held their ground and were joined by some of their fleeing comrades. For two hours Stark and Warner kept up the pressure. With ammunition dwindling, Baum's troops finally began to flee, except for his faithful dragoons. Baum, determined to save the day, ordered his men to draw sabers and charge into the Americans. It was a gesture both futile and fatal. When Baum fell, mortally wounded, his dispirited men surrendered.

In the meantime, however, more German mercenaries arrived, led by Lieutenant Colonel Heinrich von Breyman (1723/4–?). They were met at the outskirts of Bennington by Stark's troops and by additional arrivals from the contingent of Vermont militiamen. Together, these troops counterattacked Breyman's forces. In the end, of the combined British and German forces, 207 lay dead and another 700 were taken prisoner. A total of 30 Americans fell in battle, and perhaps 40 more were wounded. It was a great Patriot victory. For Burgoyne the loss at Bennington spelled the end of his grand strategy for crushing the Revolution by splitting the American colonies in two.

HOWE'S PHILADELPHIA CAMPAIGN

As the home of the Continental Congress, Philadelphia was effectively the capital of the rebellion and, moreover, the leading metropolis of the North American continent,

center of colonial wealth and culture. Philadelphia was also a stronghold of Toryism. As General Howe saw it, taking Philadelphia might well deal a decapitating blow to the Revolution. Howe also concluded that Washington would sacrifice much for the defense of Philadelphia. Howe transported 15,000 troops from New York on an inordinately slow passage to Philadelphia. The long delays gave Washington plenty of time to assemble and move his army. On August 24 he paraded 11,000 Continental army troops through Philadelphia, marching southward to meet Howe, Cornwallis, and Wilhelm, baron von Knyphausen (1716–1800), the new commander in chief of the German mercenaries.

On September 11, early in the morning, British troops were sighted near Kennett Square, Pennsylvania. Washington dispatched his main forces to meet them, only to discover that they were merely a diversionary force. Washington had left many of the upstream fords across Brandywine Creek undefended, and across these fords Howe's main force now advanced, poised for a surprise attack against the Americans from the right rear. All along the placid Brandywine, the thin American line gave way. In great disarray by nightfall, Washington's army withdrew to Chester, Pennsylvania, where it regrouped and was still interposed between Howe and Philadelphia. Of some 11,000 American troops engaged at Brandywine, 1,200 to 1,300 were casualties, perhaps 400 of this number taken as prisoners, and 11 precious artillery pieces were captured. Howe, in overall command of 12,500 men, lost 577 killed and wounded, all but 40 of whom were British regulars.

From Chester, after resting the night, Washington fell back toward Philadelphia. Howe marched into Chester and occupied it. The British army was just 15 miles outside the revolutionary capital, and on September 18 the Continental Congress evacuated to Lancaster, Pennsylvania, and then to York. On September 16, at White Horse Tavern and at Malvern Hill—both west of Philadelphia—Washington briefly engaged Howe's Hessians, then dispatched forces under Generals Anthony Wayne and William Maxwell to fight in earnest, but a torrential storm soaked the combatants, bringing the battle to an abrupt halt. The Americans, whose ammunition was stored in jerry-built cartridge boxes, found that their powder had been drenched and was useless. The troops trudged through the mud to Reading Furnace, where they could be resupplied. But a detachment of Von Knyphausen's troops, foraging along the Schuylkill River just west of Philadelphia discovered Valley Forge on September 18, a completely unguarded Patriot supply depot. A large quantity of flour, horseshoes, tools, and other supplies were captured, and Howe established a post there.

Washington sent Wayne with 1,500 men and four cannons to Warren's Tavern, near the town of Paoli, to harass the British rear guard. British Major General Charles Grey (1729–1807) was sent to surprise Wayne's camp during the

night of September 20–21 using a silent, swift, and terrible bayonet attack. Howe claimed 500 killed, but Wayne counted 150 bodies so mangled by British bayonets that local residents dubbed the encounter the Paoli Massacre.

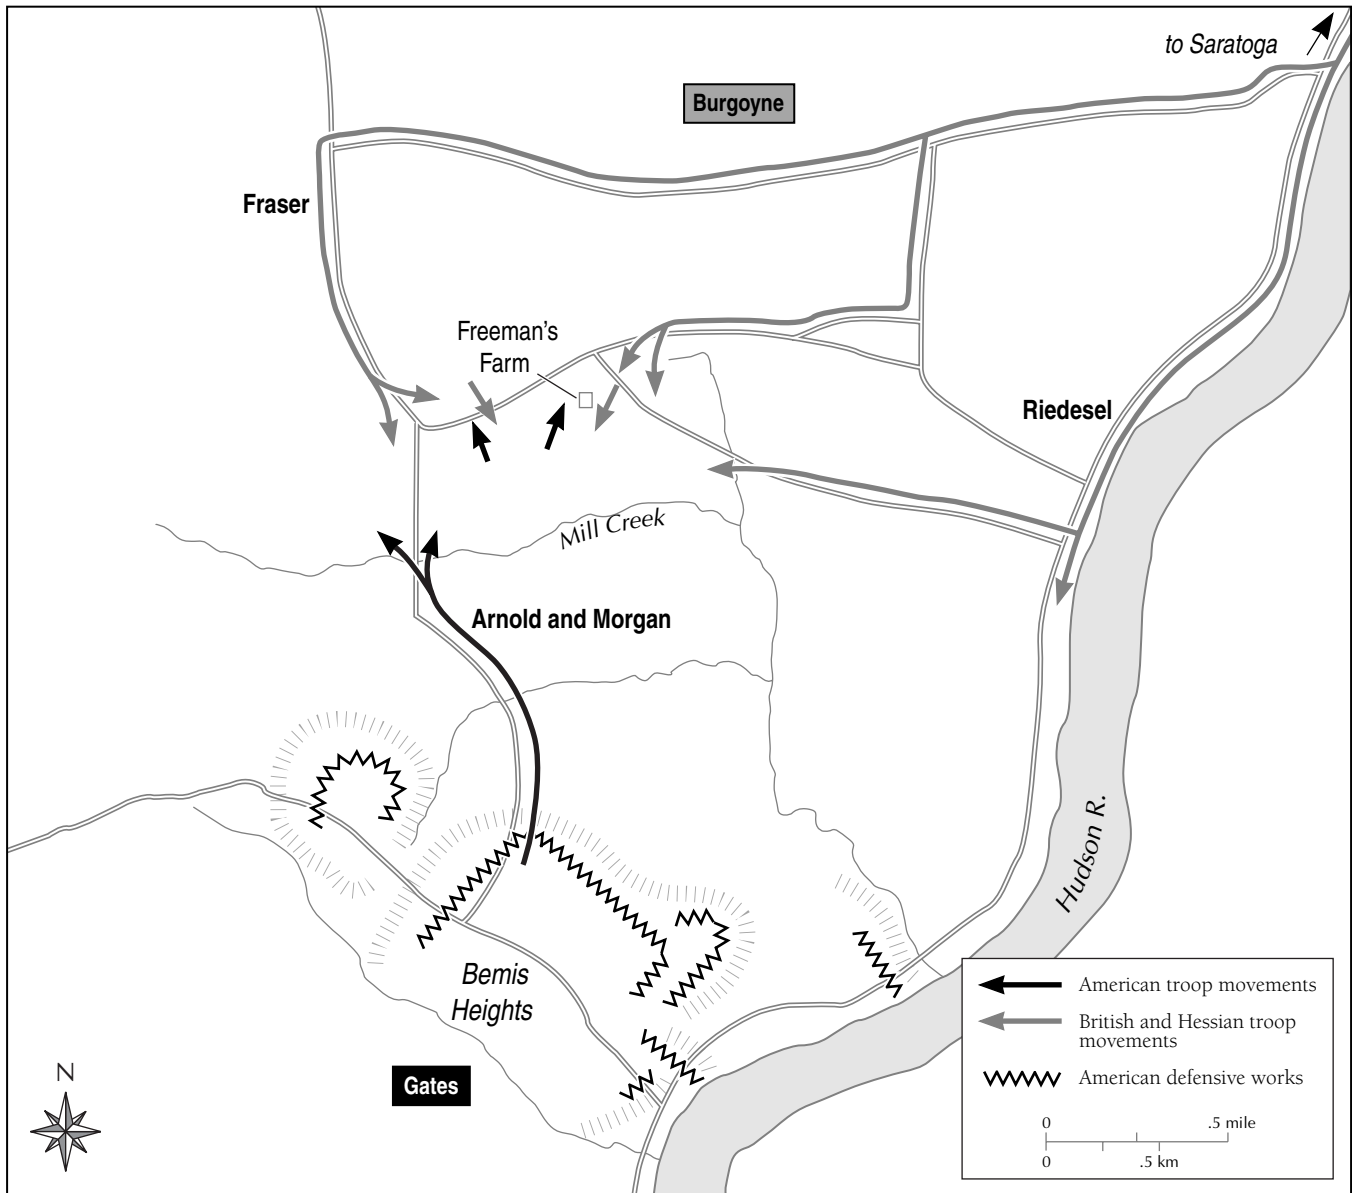

After the Paoli disaster Washington moved his troops to Pott's Grove (present-day Pottstown), Pennsylvania, whereupon Howe, changing direction, started his main body of troops across the Schuylkill River. On September 23 General Charles Cornwallis marched four British and two Hessian units into Philadelphia unopposed. After taking possession of the city, he bedded down his forces in Germantown, just north of the city.

Audaciously, Washington decided to counterattack precisely the position at which the British were strongest, Germantown, today a Philadelphia neighborhood, but in the 18th century a village just north of the city. Washington struck Howe's advance units at dawn on October 4 with a force of 8,000 Continentals and 3,000 militiamen against 9,000 British troops. The British advance troops, the 40th Regiment, retreated to the large house of Benjamin Chew, a formidable stone structure. From the cover it provided the British poured fire on General Sullivan's troops. Hearing the artillery, Continental general Adam Stephen rushed his men into the battle but, confused by the morning fog, ended up firing on and colliding with the rear of Anthony Wayne's column. The result was paralysis and panic, and Washington had no choice but to order all forces to withdraw.

From a military point of view, Germantown was a fiasco, with 152 American soldiers dead, 521 wounded, and 400 captured (Howe's casualties were 535 killed and wounded), but from a political and psychological point of view, Germantown was hardly a catastrophe. French observers were impressed by the fact that Washington, having lost Philadelphia, nevertheless made bold to attack. What they saw moved their government a step closer to outright alliance with the Patriots.

BATTLE OF FREEMAN'S FARM

As Washington was being battered in Pennsylvania, Burgoyne reeled from one blow after another in upstate New York and Vermont. The Hessians had been beaten at Bennington, Barry St. Leger had failed to take Fort Stanwix, and General Howe was too busy in Philadelphia to join him in Albany. Yet Burgoyne saw no alternative to marching into Albany. Along the way, on September 19, Burgoyne reached Freeman's Farm, little more than an unharvested wheat field along the Hudson. In his eagerness to provoke a battle, Burgoyne blundered by dividing his forces, assigning General Simon Fraser to lead 2,200 men along a path that led to Freeman's western fields while he took 1,100 men south and then west to meet up with Fraser on Freeman's Farm. He assigned the east column, another 1,100 men in three Brunswick regiments commanded by Baron von Riedesel, to move south down the river road. The

Saratoga, Battle of Freeman's Farm, initial attack, September 19, 1777

divided army, three columns, were out of sight of one another, their movements all but impossible to coordinate.

The American commander, Horatio Gates (1728–1806), observed all of this but failed to act. At last his subordinate, the boldly impetuous Benedict Arnold (1741–1801), succeeded in urging Gates to action. Gates ordered riflemen under the wily frontiersman Daniel Morgan (1736–1802) and light infantry led by Henry Dearborn (1751–1829) to make contact. Morgan fired from ambush, cutting down every British officer in the advance line. The riflemen then charged into Burgoyne's advance line, causing it to stampede in panic. Suddenly, however, Morgan's men collided with the main body of the British center column. Now the pursuers became the pursued, retreating to

the woods in complete disarray. Morgan rapidly re-formed his troops. As for the British, the encounter had so shaken and stunned them that as the advance-line survivors ran back toward the main body, many in the main body opened fire indiscriminately, wounding and killing their own men. Seeing the frenzied action, Burgoyne decided not to wait for a signal from Fraser's column but fired his own signal gun and moved the main body of his troops onto Freeman's Farm, forming battle lines along its northern edge.

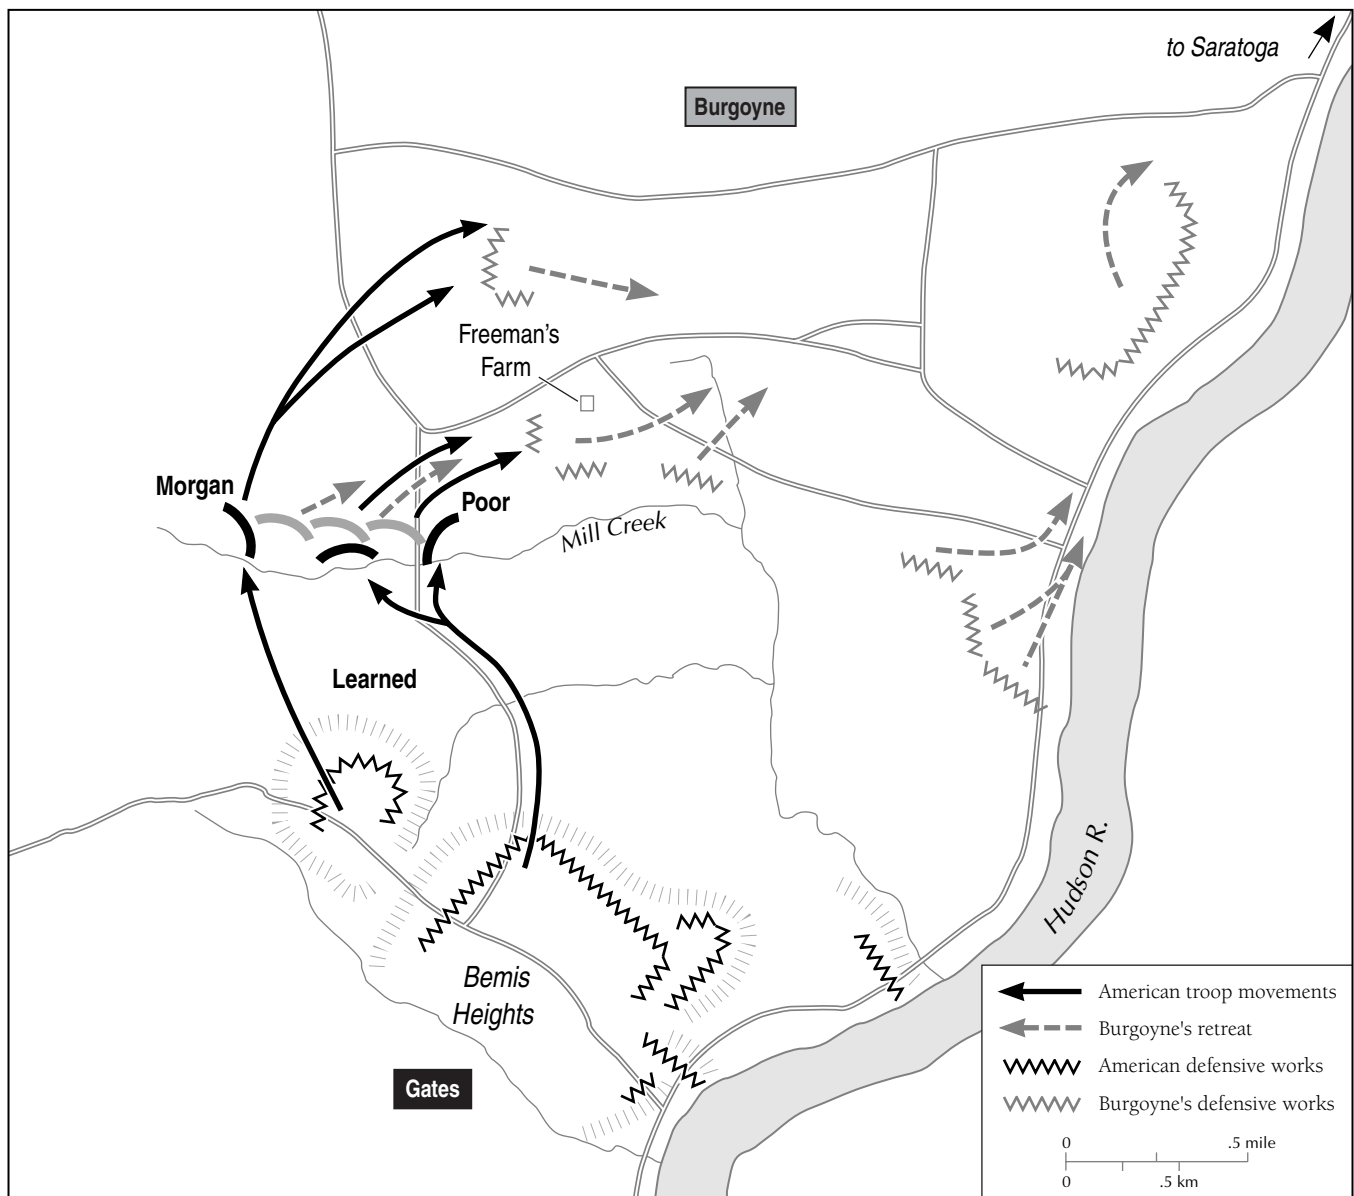

As for the American response, the evidence is that Benedict Arnold, not Horatio Gates, effectively assumed command of the next phase of the battle. With Burgoyne's ranks neatly formed, European style, in the clearing,

Morgan and Dearborn took positions along the southern edge of the clearing, and seven more American regiments were sent down from Bemis Heights, just south of the farm. For the next three or four hours a firefight pitted American wilderness tactics against the formal tactics of European soldiers. Firing from cover, the Americans cut through the ranks of the three British regiments standing shoulder to shoulder. The British suffered severe losses, but they retained their discipline and were able to return effective fire, augmented by artillery. Each time the Americans attempted to charge out of cover to take the battle to a conclusion, the British drove them back.

Burgoyne's objective was to hold out until Riedesel and Fraser arrived with reinforcements. The Americans

wanted to destroy the British forces in detail before the arrival of those fresh troops. At last, however, Riedesel broke through from the east and opened up on the Americans with cannons. Arnold had returned to Bemis Heights to get more troops and so was absent from the field when the Germans arrived. Simon Fraser did not reach the vicinity of the battle until it was nearly over. His men exchanged fire with an American brigade but contributed little. Essentially leaderless, therefore, the Americans held their ground for a time but fell back as darkness settled over Freeman's Farm.

By day's end Burgoyne had lost some 600 men. Of the 800 troops in the three regiments that absorbed the brunt of the combat, 350 had been killed, wounded, or cap-

Saratoga, Battle of Freeman's Farm, repulse and pursuit of Burgoyne, September 19, 1777

tured—a calamitous 44 percent casualty rate. American losses totaled 319, including 65 killed, 208 wounded, and 36 missing. For all this, Burgoyne could still claim a technical victory; he was in possession of Freeman's Farm.

BATTLE OF SARATOGA

The fighting next moved from Freeman's Farm to Bemis Heights. Gates had been reinforced by the arrival of troops under General Benjamin Lincoln (1733–1810). Some of Lincoln's forces were already harassing Burgoyne's rear positions. Burgoyne was now outnumbered 11,000 to 5,000. On October 7, feeling that he could no longer wait for reinforcements, Burgoyne decided to send a reconnaissance force of 1,650 men to determine just what he was facing. Gates dispatched Daniel Morgan to attack the right flank of the reconnaissance force and General Enoch Poor (1736–80) to attack the left. Morgan's men rushed wide around Burgoyne's troops to take up positions in the woods, from which they could fire on both flank and rear. Officially barred from headquarters by order of the irascible General Gates, Benedict Arnold nevertheless gathered up a detachment to attack the breastworks behind which some of Burgoyne's men had taken shelter. Next, seeing Continental troops under General Ebenezer Learned marching toward the British right, Arnold galloped directly across the line of fire to lead them away from the right and instead into a frontal assault against "Breyman's redoubt," an enforced position occupied by Hessians. Arnold's horse was shot from under him, and then he took a bullet in the leg. Unable to continue, he had to be carried from the field. On the British side, however, the officer corps fared far worse. Among the casualties was General Simon Fraser, one of the British army's most dashing and capable commanders, who fell mortally wounded while trying to cover the redcoat's retreat.

Without Arnold to lead it, the American charge quickly petered out, but the damage to Burgoyne's army had already been done. The British suffered 600 killed or wounded, whereas American casualties were fewer than 150. Burgoyne fell back on Saratoga with his survivors as Gates continually harassed him in pursuit. On October 12 Gates maneuvered around Burgoyne, cutting off all access to the Hudson and, therefore, any hope of withdrawal north to safety. The next day Burgoyne surrendered. The British and Hessian troops were permitted to avoid becoming prisoners of war by returning to England "on condition of not serving again in North America during the present contest."

BATTLES FOR THE DELAWARE RIVER FORTS

Having taken Philadelphia, Howe needed to secure a supply route to the occupied city. Without it he would find himself in the same position as Gage had been in in Boston, vulnerable to siege. The threat to Howe came from two Patriot forts on the Delaware River, Fort Mifflin on

the Pennsylvania side of the river and Fort Mercer on the Jersey side, which effectively prevented English ships from reaching Philadelphia. In costly assaults, the forts were captured by November 21.

THE FRENCH ALLIANCE IS FORMALIZED

The end of 1777 was a critical time for Washington and his army. Historical myth portrays the winter of 1777–78 as especially harsh. This was not true, but Washington had gone into winter quarters late, and there was a race against the elements to build adequate huts at winter quarters in Valley Forge, Pennsylvania. The troops' spirits were warmed as well by the news that on December 17, 1777, the French government of Louis XVI had declared its decision to recognize, openly and officially, American independence. Treaties of alliance were concluded, which were ratified by the Continental Congress on May 4, 1778. Nevertheless 2,500 men died of disease and exposure during the six months in camp at Valley Forge.

In February 1778 William Howe asked to be relieved of his duties as commander in chief, and on March 7 Sir Henry Clinton was chosen to replace him. The alliance between the Americans and the French suddenly shifted the focus of the war to France, and Germain ordered Clinton to send 5,000 men to the island of St. Lucia in the West Indies and another 3,000 to reinforce St. Augustine and Pensacola, Florida. The men in Philadelphia were to be transferred to New York City, and Philadelphia, so hard won, would be relinquished to the rebels.

BATTLE OF MONMOUTH COURTHOUSE

Before dawn on June 16, 1778, Clinton began removing artillery from the redoubts around Philadelphia. Noting this, Washington concluded that the British were preparing for some operation in New Jersey. By June 18 10,000 British regulars and 3,000 local Tories had left Philadelphia and moving toward Haddonfield, New Jersey. On June 28 an advance unit of New Jersey militiamen engaged some of Clinton's best regiments and was in desperate need of assistance. When the always troublesome General Charles Lee failed to respond, Washington ordered him to attack at once. The attack failed, and Lee ordered a retreat. Washington rode into the mass of Lee's retreating men, relieved Lee, assumed personal command, and, as Lafayette later remarked, stopped the retreat by his mere presence. But Lee's failures had caused the Americans to lose the initiative, and the two sides fought near Monmouth Courthouse in severe midsummer heat until both the Americans and the British withdrew, exhausted. The battle was a draw: 356 Americans were killed, wounded, or missing, and 358 British were killed or wounded (some historians believe that British losses were much higher). While the Americans held the field, the British kept their army intact and were able to complete the evacuation from Philadelphia. Court-martialed, Charles Lee was removed from service.

RHODE ISLAND OPERATIONS

After Monmouth Washington fruitlessly continued to pursue Clinton. As part of this effort, a Franco-American amphibious operation was launched against Newport, Rhode Island, spearheaded by Admiral Charles Hector Théodot, the comte d'Estaing (1729–94). Having sailed from Toulon on April 13, 1778, d'Estaing made a very slow crossing of 87 days, so that his arrival was too late to bottle up the British fleet in the Chesapeake. Subsequent attacks failed, and some 10,000 Americans under John Sullivan were stranded in Rhode Island at the end of July 1778. This force was saved from destruction by an African-American unit, which fought so fiercely in an August battle that Sullivan was able to withdraw.

BATTLE OF STONY POINT

Although the performance of America's French allies was hitherto disappointing, the entry of France had already produced a profound impact. Sir Henry Clinton's forces were greatly weakened not by Patriot action, but by London, which felt it necessary to meet the French threat in the West Indies. No longer possessing a great force to mount an invasion from Canada, Clinton decided to make use of the assets that remained in New York. On May 30, 1779, he moved about 6,000 troops in 70 sailing craft and 150 flatbottom boats up the Hudson. His objective was to seize West Point, by which control of the lower Hudson could be achieved, thereby cutting off the flow of men and material to and from New England. Washington responded by getting a spy inside the newly constructed British works at Stony Point. The spy furnished intelligence that allowed Anthony Wayne to capture Stony Point. Deciding after its capture that he could not spare the men to hold Stony Point, Washington tore down the fort and abandoned it.

BATTLE OF PAULUS HOOK

Allen McLane, the spy of Stony Point, next scouted Paulus Hook, a strategic British fortification located in present-day Jersey City, New Jersey, and determined that the British garrison there numbered a mere 200 men. On August 18, 1779, McLane guided General Henry "Light-horse Harry" Lee (1734–97) and his detachment of 400 troops to the fort. Paulus Hook fell within 30 minutes on the 19th.

THE SOUTHERN COASTAL THEATER

Early Phases

As noted earlier in this entry, during the early years of the Revolution fighting in the South constituted virtually a separate war from the struggle in the North. At first there was very little attempt on either side to coordinate the two theaters. As the British saw it, the South, in contrast to New England, harbored a large Tory population, and after the fall of Boston to the Patriots British military strategists turned to parts of the South where loyalism ran high.

First Assault on Charleston

British command soon determined that loyalism was stronger in South Carolina than in Virginia, so it was decided to attempt an early capture of the key port of Charleston. On June 4, 1776, 10 British warships and 30 troop transports dropped anchor off Charleston Bar. General Henry Clinton's plan was to close in on Sullivan's Island and bombard the Patriot fort there, which had been built of stout palmetto logs. During this bombardment the troop transports would unload onto Long Island (now Isle of Palms), a short distance from Sullivan's Island. The infantry would then march onto Sullivan's Island and take the fort. Once that was done, invading Charleston itself would be a simple matter. But Clinton made two errors. He failed, first, to understand the true sentiment in Charleston. Charlestonians resolved to resist invasion. Second, the body of water separating Long Island from Sullivan's Island, which at first looked inconsiderable, proved to be unfordable. Men were picked off one by one as they tried to cross.

In addition, the waterborne arm of the assault did not go as planned. In the treacherous shallows around the island British ships ran aground, and their cannon fire was largely ineffective against the palmetto walls of the fort, the tough wood, like some great sponge, simply absorbing the cannonball blows. From behind the palmetto stockade the Americans returned fire with devastating effect. The British ships, trying to navigate difficult waters, were completely vulnerable. Abandoning one frigate, which had run aground, Admiral Sir Peter Parker (1721–1811) withdrew his remaining ships, all of them badly damaged, although he had 100 guns versus only 21 in the fort. A total of 64 Royal Navy sailors died, and 131 were wounded, while American losses in the forts numbered 17 dead and 20 wounded. The invasion was cancelled, and years would pass before Charleston was attacked again.

Fall of Savannah

The disappointment at Charleston prompted the British largely to neglect the South for the next two years, but after the Franco-American alliance was concluded in 1778 British strategy once again changed. From the end of 1778 the South became a principal focus of the British war effort. Savannah was the first target in the renewed southern campaign.

On December 23, 1778, Lieutenant Colonel Archibald Campbell (1739–91) anchored off Tybee Island at the mouth of the Savannah River with 3,500 British troops. Defending Savannah were 900 Continental soldiers and a militia force of perhaps 150, all commanded by General Robert Howe (1732–96, no relation to the British Howe brothers). Worse for the Americans, General Augustine Prevost (1723–86) was marching north from Florida with his contingent of British troops to cooperate with Campbell in the capture of Savannah, but Campbell decided not

to wait for Prevost. He landed his men at Girardeau's Plantation, about two miles south of the town. Waiting for him in defensive positions just a half mile south of Savannah were 700 of Robert Howe's Continentals plus the 150 militiamen. Campbell proved equal to the challenge in the December 29 battle. Before his advance, the American units fell back in good order, and Campbell marched into Savannah.

On October 9, 1779, French admiral d'Estaing attempted to retake Savannah, but failed. Patriot general Benjamin Lincoln, in overall command of the American forces in the theater, wanted to give the attack a second try, but d'Estaing feared bad weather as well as the fleet of the enemy. He withdrew to Martinique in the Indies, and the British occupation of Savannah endured through July 1782.

Second Assault on Charleston

On March 19, 1779, General Henry Clinton laid siege to Charleston, which fell on May 12, 1780. Approximately 5,000 American soldiers instantly became prisoners of war, and 400 precious artillery pieces and some 6,000 muskets also fell to the enemy. All of South Carolina was thrown open to the British.

THE WAR AT SEA

Britain possessed the most powerful navy in the world. In 1775 it included 131 ships of the line, each mounting at least 64 guns and some more than 100, and 139 major craft of other classes, many of them highly maneuverable frigates. By the end of the Revolution, in 1783, the total number of vessels stood at 468. Against this, at the start of the war the United States had no navy at all. The first vessels acquired were a fleet of small craft brought together from various private sources during the siege of Boston. Congress authorized construction of 13 frigates, and by the end of the war the U.S. Navy had 53 ships. The "official" fleet was variously augmented by state navies and by privateers, armed commercial vessels authorized to prey upon enemy shipping.

On March 3–4, 1776, the newly created Continental navy carried out its first—and only—planned major naval operation in the war. Esek Hopkins (1718–1802), a Rhode Island farm boy turned sailor, was put in command of the first squadron of the new navy. He surprised British forces on Nassau (then called Providence or New Providence), Bahamas, by landing a force of U.S. Marines in their first action of the war, an assault on Fort Montagu. The raid not only took the fort but netted 100 cannons, a mortar, and the governor of the island, Monfort Browne (fl. 1774–80), who was taken captive. (Browne was later exchanged for an American officer and went on to command a unit of Tories.) Among the junior officers serving in Esek Hopkins's small fleet (eight vessels, the largest of which were two merchant ships converted into small frigates of 24 and 20 guns) was a young Scottish immi-

grant named John Paul Jones (1747–92), who would emerge from the Revolution as its greatest naval hero.

On April 10, 1778, Jones sailed from Brest, France, and, on April 27–28, 1778, raided Whitehaven on the Solway Firth in Scotland, spiking the guns of two forts and burning three British ships. He then crossed the Irish Sea to Carrickfergus, where he captured the British sloop *Drake* in a short, sharp action.

In the summer of 1779 the French, having now entered the war, prepared five naval vessels and two privateers for Jones to lead, using a refitted East Indiaman called the *Duras*, which Jones renamed *Bonhomme Richard*, in tribute to Benjamin Franklin's *Poor Richard's Almanac*. With this vessel, sailing clockwise around the British Isles, Jones captured 17 British ships.

On September 23, 1779, off Flamborough Head, along the York coast in the North Sea, Jones sighted two warships convoying 40 British merchant vessels. The warships were the 44-gun *Serapis* and the 20-gun *Countess of Scarborough*. Jones pursued *Serapis* while his three other vessels, *Vengeance*, *Pallas*, and *Alliance*, chased the *Countess*. In the opening moments of this moonlit battle, two of Jones's largest cannons exploded, so that he was critically outgunned, but Jones nevertheless outmaneuvered *Serapis* and rammed her stern. This put *Bonhomme Richard* in a position from which none of her guns could be brought to bear. When the captain of the *Serapis* called out: "Has your ship struck?"—meaning "struck colors" or surrendered—Jones replied with perhaps the single most famous utterance in American military history: "I have not yet begun to fight."

At this the vessels separated, and *Serapis* now collided with *Bonhomme Richard*. Jones lashed on, tying the British vessel to his, then pounding it at point-blank range with his cannons that were still functioning. After two hours of this beating, it was *Serapis* that struck colors.

VIRGINIA CULMINATION

After the British withdrawal from North Carolina (see AMERICAN REVOLUTION: FRONTIER THEATER), the focus of the southern theater shifted north to Virginia. Benedict Arnold, who had turned traitor in May 1779, offering to the British a scheme to surrender West Point, led a British raid into Virginia in December 1780. Departing from New York on the 20th with 1,600 men, including John Graves Simcoe (1752–1806) and his band of Tory Rangers, he arrived at Hampton Roads on December 30, his numbers having been reduced to 1,200. Encountering little resistance, Arnold captured American ships, sailed up the James, took the battery at Hood's Point (January 3, 1781), and then entered Richmond on January 5. Arnold burned as much of Richmond as he could, then traveled downriver.

General Friedrich Wilhelm von Steuben (1730–94), a German officer who had done so much to train the Continental army at Valley Forge, now commanded Patriot forces in Virginia. He attempted to ambush Arnold en

route to Westover but was deftly outmaneuvered. Arnold turned on Steuben's forces and neatly routed them. Arnold then encamped at Portsmouth for the winter.

Washington had dispatched Lafayette early in 1781 to fight Arnold in Virginia. Lafayette took three light infantry regiments from the ranks of New England and New Jersey Continental troops to rendezvous with a French fleet. Because of a British blockade of Newport, Rhode Island, however, the French fleet was delayed and overtaken by a British fleet under Admiral Marriot Arbuthnot. The Battle of Chesapeake Bay on March 16, 1781, was a narrow French victory, but it nevertheless prompted French admiral Charles René-Dominique Destouches (d. 1804) to abandon the plan to join the Virginia expedition. In the meantime the British commander in chief, Henry Clinton, was able to ship 2,000 reinforcements to Benedict Arnold, along with Arnold's command replacement, William Phillips (c. 1731–81).

The abortive failure of yet another Franco-American amphibious operation put the Patriot cause in grave peril. Steuben had only a handful of Continentals and a miscellany of militia troops to defend Virginia against the onslaught of 3,000 British regulars and Tory auxiliaries. Lafayette was at Head of Elk, on the Chesapeake, 150 miles from Richmond. As for Washington, he was facing the very real prospect of watching his main army disband for want of food. In the meantime Phillips and Arnold conducted a series of destructive raids throughout Virginia, and on April 30 Phillips and Arnold, with 2,500 men, were on the James River, poised to attack Richmond again. What stopped them was the arrival of Lafayette and 1,200 Continentals. With the failure of his countryman to meet him with the fleet, the young Frenchman had made a forced march to reach Richmond, prompting Phillips and Arnold to withdraw to Petersburg to join up with Cornwallis. Cornwallis was determined to destroy Lafayette and his small army. He consolidated a force of 7,200 men by late spring of 1781 and decided to throw all of these against whatever Continentals and militia troops Lafayette could muster—about 3,000 in all. At this time in Petersburg, General William Phillips suddenly succumbed to typhoid fever, and Cornwallis assumed direct command of all British and Tory forces in Virginia. Recognizing that he greatly outnumbered Lafayette, Cornwallis ordered an advance out of Petersburg and pursued Lafayette northward. The Frenchman repeatedly eluded the British commander, who finally gave up the chase.

Safe for the moment from Cornwallis, Lafayette received reinforcements: three Pennsylvania regiments under no less a commander than Anthony Wayne. With a total now of 4,500 men, Lafayette felt ready to make a decisive move. He turned upon Cornwallis's army, which was traveling down Virginia's York Peninsula. Cornwallis's main body encamped around Williamsburg, where the British commander pondered his next move. Suddenly, however, Henry Clinton sent an order to Cornwallis to

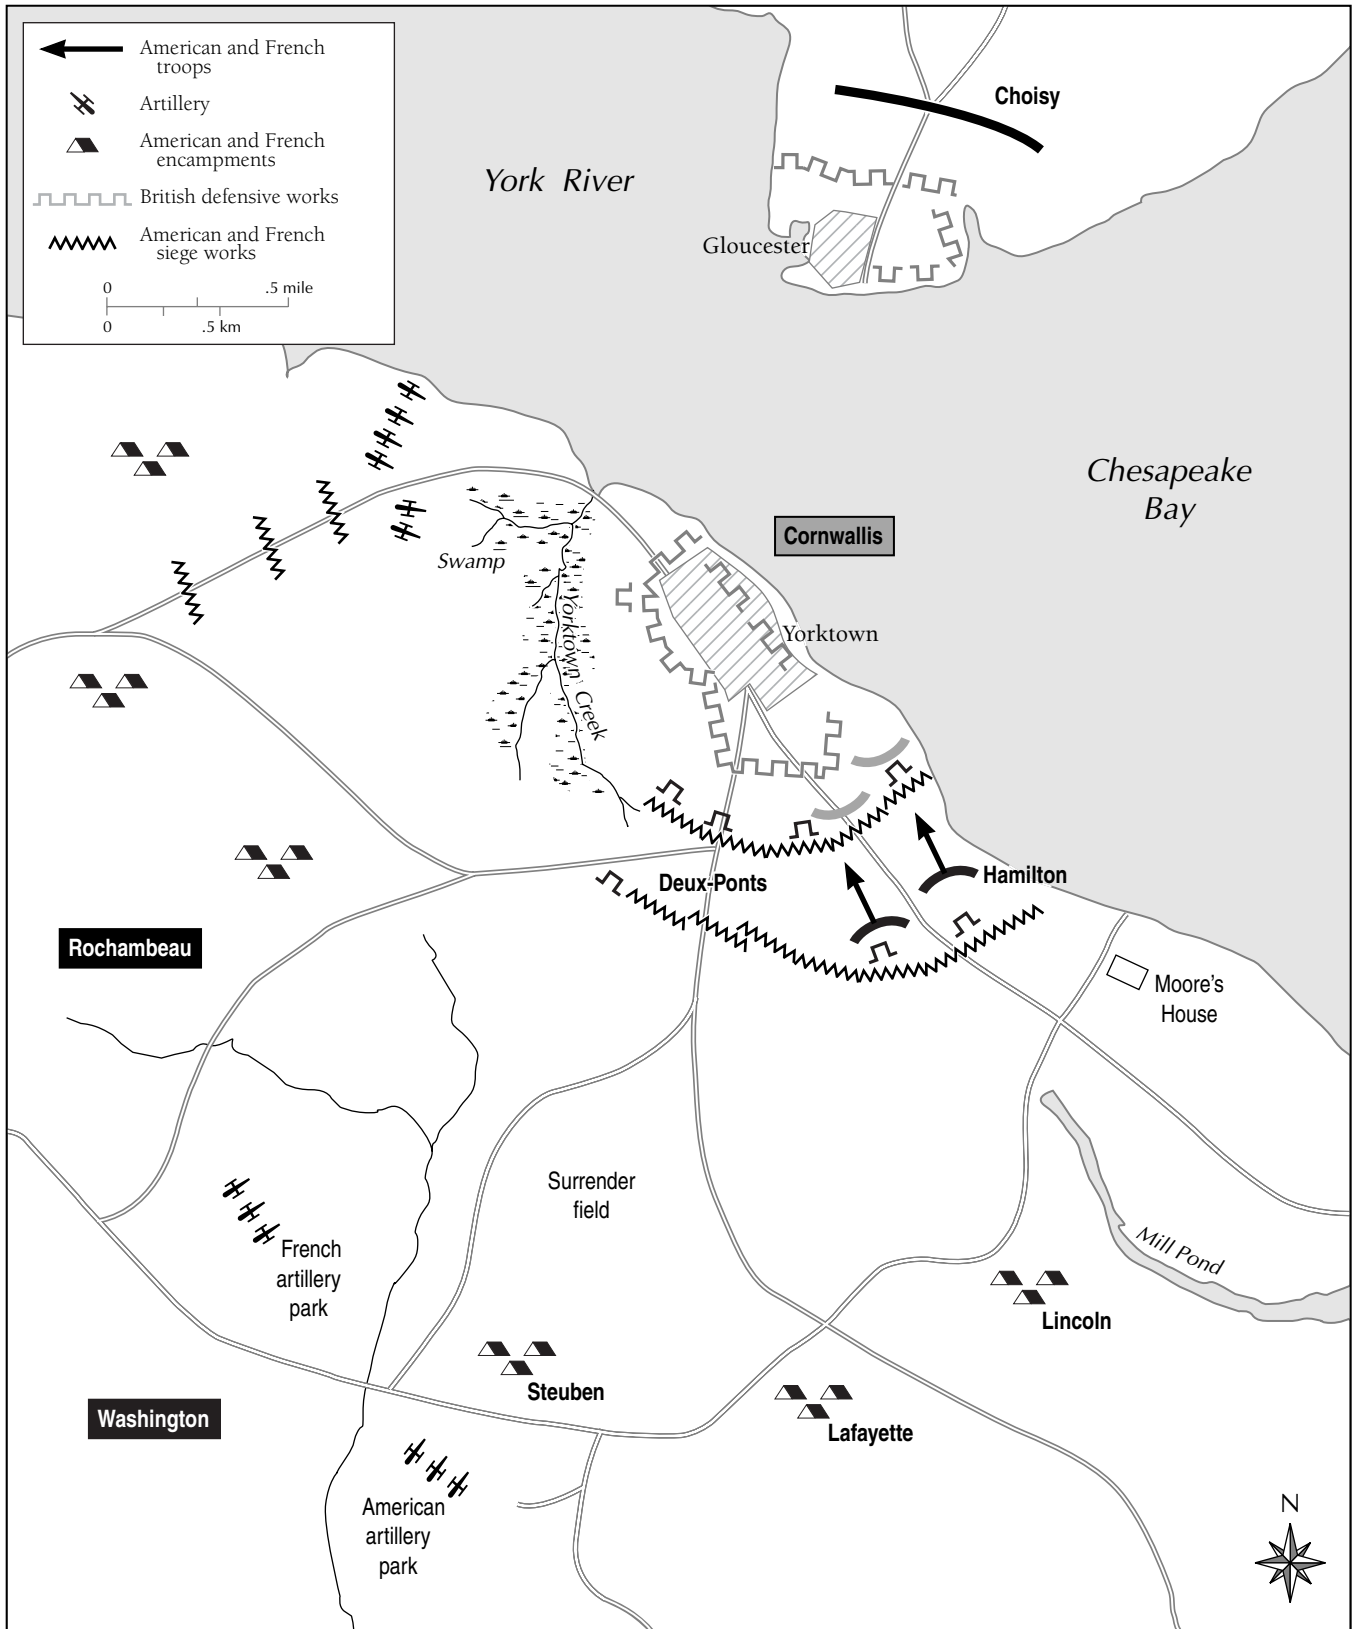

send 3,000 troops to him in New York. Instead of detaching the requisite number of troops, Cornwallis moved his entire army out of Williamsburg and to the north bank of the James River and the Jamestown Ford, the place at which the 3,000 troops demanded by his superior would have to cross in order to reach Portsmouth, from which ships would take them to New York. Cornwallis decided to make it appear as if he were, in fact, totally evacuating Virginia. He guessed that Lafayette and Wayne would attack when they believed he was most vulnerable, with his army in the process of crossing the James and therefore divided on either side of the river. Thus, having used part of his contingent to lure his prey, Cornwallis would attack from ambush and destroy the smaller American force.

On July 6, 1781, it did appear that both the 23-year-old Frenchman and the older, more seasoned Wayne had swallowed the bait. Wayne's men advanced on what they took to be Cornwallis's rearguard, not realizing that the great bulk of the British force was still lying in wait on the north bank. Had Cornwallis acted immediately, he could have swiftly crushed Wayne's 500-man attacking force. But he decided to wait for them before committing all his troops. Watching the action at the ford, Lafayette was about to commit the rest of his troops to the action, but then he became suspicious. Instead of sending in the entire army, he committed only a detachment to reinforce Wayne. This was enough to persuade Cornwallis that Lafayette was marching boldly into his trap. He ordered his massed troops to come out of hiding and move against what was now 900 Americans. Wayne, although outnumbered, ordered a counterattack. The boldness of this action unnerved the British, but they soon regained their lost momentum. At least Wayne had bought the time necessary to ensure an orderly retreat. It was a defeat for the Americans, but certainly not the decisive victory Cornwallis had counted on. Lafayette had preserved his army, and Wayne had saved his.

YORKTOWN CAMPAIGN

Cornwallis chose not to pursue the Americans. Instead, he pressed on to Portsmouth, apparently intending to follow Clinton's orders to send troops to New York, but in the interim Clinton changed Cornwallis's orders: He was to occupy and hold a position in Virginia. Cornwallis marched to Yorktown, a sleepy tobacco port on the York River. Yorktown gave Cornwallis access to support from the Royal Navy, but it also made him vulnerable to being cut off by an enemy naval force.

With General Jean Baptiste Donatien de Vimeur, comte de Rochambeau (1725–1807), Washington planned to reinforce Lafayette and Wayne against Cornwallis while French admiral de Grasse would cut off the British commander's seaborne sources of reinforcement, communication, and supply. De Grasse would also land three West Indian regiments for use in the campaign against Cornwallis. By August 21 the march to Virginia was on.

Campaign and siege of Yorktown, October 6–19, 1781

On September 1 British admirals Samuel Graves (1725?–1802) and Samuel Hood (1724–1816) set out from New York to intercept de Grasse's West Indian fleet and

a French supporting fleet under Admiral Jacques-Melchior Saint-Laurent, comte de Barras (c. 1719–93), which had left Newport, Rhode Island. For the first time in its North

American campaigns, the French fleet operated with brilliant efficiency. De Grasse beat the British to the Chesapeake, and French cruisers assumed positions in the James River to block Cornwallis, preventing his escape to the south. More French vessels blockaded the mouth of the York River, while the rest of de Grasse's fleet waited for the approach of the Royal Navy at the mouth of the Chesapeake.

For the present Cornwallis was bottled up at Yorktown and could only await the onslaught of Washington and Rochambeau. However, if Admiral Graves acted boldly he could still smash the French fleet and free Cornwallis. The two navies made contact on September 5, 1781, in Chesapeake Bay at the Battle of the Capes. After a mere two hours, Admirals Graves and Hood withdrew from the Chesapeake and returned to New York, leaving Cornwallis stranded at Yorktown.

By September 9 de Barras's fleet arrived to join de Grasse in Chesapeake Bay. With complete control of the bay now secured, de Grasse was able to land additional troops, so that when the allied forces were all assembled at Williamsburg, Virginia, they numbered 16,000 men. Cornwallis had some 6,000 troops: Tarleton's Legion was posted at Gloucester, while the main force was bottled up within the fortifications of Yorktown.

On September 17 Washington and Rochambeau met aboard the *Ville de Paris* to plan the investment of Yorktown. The plan was simple: While de Grasse maintained control of the sea, the allies would encircle Yorktown and bombard it using guns landed by de Grasse's ships. While this went on, allied engineers would dig trenches by which to approach the fortifications. With such an advantage of numbers, it was almost certain that the siege of Yorktown would succeed if the allies made no gross blunders.

On September 30, 1781, Cornwallis ordered the outer works of Yorktown to be abandoned. Determined to wait for relief from the sea, he wanted to conserve his resources. The allies advanced to occupy the abandoned works, placing artillery on them. Beginning on October 1, 1781, American batteries started pounding Yorktown from these fortifications. On October 6 Washington, with an uncharacteristically ceremonial flourish, personally broke ground for the first approach trench. Within three days more artillery was brought forward, and, again in the spirit of ritual, Washington fired the first shot. French and American artillery drove the last two remaining British frigates out of the river.

On October 14, Washington's aide de camp, Alexander Hamilton (1757–1804), and a French officer led a furious nighttime bayonet attack against defenders of two redoubts near the York River. These objectives secured, the approach trenches were now extended all the way to the river, completely cutting Cornwallis off. The British commander seized on a last hope: a nighttime breakout across the York River to Gloucester Point and then a forced march northward all the way to New York. A sud-

den storm, however, put an end to this. There would be no escape, and on October 17, 1781, Cornwallis asked for terms. The formal surrender took place the next day. Cornwallis's surrender did not immediately end the fighting in the Carolinas or in the West, but Yorktown did bring the British to the peace table. On October 1, 1782, United States envoys Benjamin Franklin (1706–90) and John Jay (1745–1829) began formal negotiations with Richard Oswald (1705–84), the designated British negotiator. By the 5th an agreement had been hammered out specifying United States boundaries, a program for the evacuation of British troops, access to the Newfoundland fisheries, and free trade and navigation of the Mississippi. In the meantime John Adams, having concluded a treaty of commerce and amity with the Netherlands (October 8), arrived in Paris (October 26) and concurred with Jay and Franklin that the treaty with the British should move ahead without the French. By November 5 all the commissioners—Henry Laurens (1724–92) having just arrived—reached agreement on a final draft of the articles of peace. On November 30, 1782, Franklin, Jay, Adams, and Laurens signed a provisional treaty, pending ratification by the governments. On September 3, 1783, the Treaty of Paris, having been duly ratified, was definitively signed. It recognized the independence of the United States and acknowledged its boundaries as excluding Canada but extending westward through the Great Lakes to the Mississippi, southward to the 31st parallel, and east to the Atlantic Ocean. In addition, Americans would have the right to fish off the banks of Newfoundland and Nova Scotia; legal debts would be honored by each country; no further penalties would be enacted against citizens of any country involved in the hostilities; all remaining British troops would evacuate; and the Mississippi River would be open to navigation by the United States as well as Britain.

American Revolution: Frontier Theater (1775–1783)

For combatant and statistical information, see AMERICAN REVOLUTION: OVERVIEW.

Along the Atlantic seaboard, the American Revolution was fought largely by conventional armies in a series of traditional, or “set,” battles (see AMERICAN REVOLUTION: COASTAL THEATER). Inland, however, the war was very different, both in tactics—largely those of guerrilla warfare—and in combatants: Patriot militia rather than “regular” (Continental army) forces vs. Loyalist militias (with Royal Army supervision), and with Indian allies and antagonists on both the Patriot and the Loyalist sides. From the point of view of the Indian combatants, the frontier war may even be regarded as something of an extension of the FRENCH AND INDIAN WAR.

In fighting the American Revolution, both the British and the Americans courted Indian allies. Most sided with

the British, because they saw a British victory as their only hope for containing white settlement.

THE NORTHERN FRONTIER

In October 1775, the British Crown's Indian Superintendent Guy Johnson (c. 1740–88) commissioned Loyalist militia colonel John Butler (1725–96) to recruit allies among the Senecas and other Indians of the lower Great Lakes while he himself went to Montreal to gather additional Indian allies. All told, by the late fall of 1775, the Crown had accumulated an auxiliary army of 3,280 warriors.

The pro-British Mohawk war chief Joseph Brant (1742–1807) had not waited for the gathering of these forces. On September 5, 1775, he led 100 Mohawks, together with a small body of soldiers under Captain Gilbert Tice, in an attack on the American army of Major General Philip Schuyler (1733–1804) near the Richelieu River as it was advancing on Montreal, Canada. Eight Americans were killed and another eight were wounded. Under bombardment from nearby Fort St. Johns, Schuyler was forced to retreat. Another assault on Montreal, led by Colonel Ethan Allen (1738–89) on October 24–25, 1775, also failed due to desertions and the botched coordination of forces. A detachment of 40 regulars and 200 Canadians and Indians under Brant captured Allen and his men just outside the stockaded city's gate.

By September 1776 the frontier populace of Pennsylvania and New York was in a state of panic. Throughout New York's Mohawk Valley various Tories, dispossessed by the rebels of houses and lands, disguised themselves as Indians and raided settlers. In Pennsylvania's Wyoming Valley the Continental Congress had authorized raising two companies of militia, each with 82 men. However, both companies were almost immediately summoned to fight elsewhere, leaving the valley more vulnerable than ever. This was also the case in the Cherry Valley of New York, 12 miles south of the Mohawk River, where troops were raised and then sent elsewhere. These frontier areas would endure repeated hit-and-run Indian raids.

Burgoyne's Plan

By June 1777 Joseph Brant and his followers were participating in Major General John Burgoyne's (1722–92) grand plan (as Burgoyne worded it) "for conducting the war from the side of Canada." The strategy called for splitting the rebel forces in two. After assembling his army at Montreal, Burgoyne would proceed up the Richelieu River and Lake Champlain, take Crown Point, Ticonderoga, and Skenesborough, then continue by boat down the Hudson River, pushing General Philip Schuyler's Northern Department of the rebel army before it. The final objective was Albany. Simultaneously, General Sir William Howe (1724–1814), supreme commander of the British forces in North America, would move up the Hudson from the south in order to catch Schuyler's force in a pincers. A

smaller third force under French and Indian War veteran Lieutenant Colonel Barry St. Leger (1737–89), was given a diversionary mission to the frontier. St. Leger would leave Montreal, proceed up the Saint Lawrence River to Lake Ontario and Fort Oswego. From the fort the force would move up the Oswego River to the headwaters of the Mohawk River, then progress down that river in order to destroy the forts of the Mohawk Valley before meeting up with Burgoyne at Albany.

Unfortunately for Burgoyne's plan, Howe felt that he had insufficient numbers of troops to allow him to detach an army for service up the Hudson. He suggested, however, that Loyalist sentiment would prove strong enough in upstate New York to supply aid and reinforcement to Burgoyne. In fact, as the details of Burgoyne's plan were leaked and then highly publicized, Loyalist residents of the Mohawk Valley, fearing peremptory attack from their rebel neighbors, defected to Canada. Officials in Tryon County, New York, issued orders for the arrest of Joseph Brant and Loyalist leaders. Even worse, the Canadians proved difficult to recruit; about 1,000 volunteers had been expected, but only 150 were finally mustered. In Burgoyne's force, the Indian "auxiliaries"—about 400 warriors—outnumbered the combined Canadians and American Loyalists (a complement of about 250). In addition, Burgoyne mustered 3,700 British regulars, 3,000 Hessians and Brunswickers, and 470 regular artillerymen. Additional Indian warriors were picked up on the shores of Lake Champlain. There Burgoyne met with chiefs and principal warriors of the Algonquian, Iroquois, Abenaki, and Ottawa tribes, inviting them to attack the Americans.

New York Frontier

In the meantime St. Leger had mustered 675 regulars and 700 to 900 Indians for his diversionary expedition into the frontier. As Loyalists were deserting the Mohawk Valley, potential Patriot settlers were leaving settlements in and around Oquaga, Unadilla, and Cherry Valley, along the Susquehanna, and seeking refuge to the north in the Mohawk Valley. Late in February 1777 New York militia colonel John Harper, commanding the fort at Schoharie, was directed by the New York Congress to investigate the activities of Joseph Brant. Harper interrogated Indians at Oquaga, accusing them of planning an invasion. They denied this, but on his way back from Oquaga Harper encountered 15 warriors who, Harper believed, were on their way to attack Johnstown. With 14 militiamen Harper sneaked up on the Indians as they lay sleeping in camp; he disarmed them and marched them off to Albany as prisoners. In response Brant led 80 warriors to Unadilla, a settlement of perhaps 20 or 30 houses, and complained that not only had 15 warriors been imprisoned without just cause, but the Rebels had appropriated provisions rightfully belonging to the Mohawks. Brant warned the settlers that Unadilla was now a dangerous place for anyone disloyal to

the king. His threat was sufficient to send two-thirds of the population packing for the Mohawk Valley.

Indian Combat in Cherry Valley and Wyoming Valley

Early in 1777 the Tory governor of New York, William Tryon (1729–88), urged the British ministry to use Indians to terrorize his colony's frontier, and by the end of 1777 hit-and-run raids were increasing in frequency throughout the New York as well as the Pennsylvania frontier, particularly in New York's Cherry Valley and Mohawk Valley and the Wyoming Valley of Pennsylvania. In March 1778 General Philip Schuyler warned Congress that the western frontiers were about to erupt, and by April 1778 a major buildup of Tory and Indian forces was well underway along the upper Susquehanna.

Colonel John Butler, commanding 400 Rangers and Tories, was joined at the Indian town of Tioga by some 900 Senecas and Cayugas, all led by two important Seneca war chiefs, Gu-cinge and Kayingwaurto. Their objective was the Wyoming Valley of northern Pennsylvania. While Butler and his Indian allies constructed boats for the trip down the Susquehanna, Gu-cinge took 400 warriors in advance to attack settlements on the West Branch of the river. In the meantime Joseph Brant, with 450 Indians and Tories, was planning an attack on New York's Cherry Valley at the headwaters of the Susquehanna.

While Cherry Valley had been suffering raids since 1776 and anticipated even more massive assaults, fortifications were crude and the militia garrison weak. Brant raided the region in the spring of 1778. Shortly after these raids, on June 28, 1778, Butler's Rangers—400 of them disguised as Indians—and 800 to 900 Delawares and Senecas descended on Wyoming Valley, burning a mill and capturing—and subsequently torturing to death—three prisoners.

The Wyoming Valley did have a collection of wilderness "forts"—nothing more, really, than fortified houses—including Wintermoot's (or Wintermot's), Forty Fort, Jenkins' Fort, Wilkes-Barre Fort, and Pittston Fort. The Wintermoots were Tory sympathizers who readily "surrendered" their fort to Butler and provisioned his men. The weakly defended Jenkins' Fort fell to the Tory-Indian force on July 2. The next day, under a flag of truce, John Butler proceeded to Forty Fort, garrisoned by 450 Continental troops and militiamen (including boys and old men) commanded by Colonel Zebulon Butler (1731–95; no relation to John), a Continental army officer, and Nathan Denison (c. 1740–1809), a colonel of militia. John Butler demanded the fort's surrender, but Denison and Zebulon Butler refused. The Tory commander decided on a ruse to lure the defenders out into the open. At five in the afternoon of July 3, he burned down Wintermoot's Fort in order to give the impression that he and his raiders were retreating. Zebulon Butler argued with Denison and the other militiamen in an attempt to dissuade them from

leaving the fort in pursuit of the apparently retreating enemy, but at last he was overruled. The entire garrison sallied forth and was promptly ambushed.

It would be immediately dubbed the Wyoming Valley Massacre. Of the 450 Americans involved, 300 died or were wounded. Of the 1,200 Tories and Indians, only 11 were lost.

To the northeast Joseph Brant again turned his attention to the Cherry Valley. He began on July 18 by raiding Andrustown, seven miles west of Cherry Valley. With 50 Indian warriors and a few Tories, he captured 14 settlers and killed 11 before burning the town. On September 12 Brant, commanding a much larger party of Indians, attacked German Flats on the Mohawk River. Most of the town's inhabitants had fled to refuge in nearby forts, so Brant destroyed a virtually deserted village. This, indeed, was the kind of fighting he preferred. Unlike his more bloodthirsty Indian brethren, and, for that matter, Tory counterparts, he concentrated his efforts on destroying property and hitting military objectives rather than murdering noncombatants. There are many stories of his efforts to spare women and children.

In September and October 1778 while Brant and some 600 warriors were attacking settlements in the valleys of the Neversink and Mamakating Rivers, Delaware tributaries in the area where New York, New Jersey, and Pennsylvania meet, the militias of New York and Pennsylvania—quite independently of one another—retaliated against principal Indian towns.

Pennsylvania's Colonel Thomas Hartley (who was subsequently joined by Colonel Zebulon Butler) set out on September 21 with 217 men and in the space of two weeks moved up the Susquehanna, destroying Sheshaquin, the village of the Seneca chief Eghobund, and Queen Esther's Town and Tioga, Seneca settlements that served as the so-called southern door of the Iroquois League and that also served Brant and John Butler as a staging area for their raids. The expedition continued up the Chemung River to the Indian village of Chemung, but it was stoutly resisted there and turned back. Nevertheless, the campaign had been successful: in the course of a 300-mile march, Hartley's force had recovered 50 head of cattle taken in raids, appropriated 28 canoes and other items of Indian property, killed 11 Indians, took 15 prisoners, and burned three major Indian towns. Hartley lost two men killed and two wounded.

Colonel William Butler (d. 1789) of New York (not to be confused with the Tory Butlers, to whom he was not related) left Fort Defiance at Schoharie with 260 men on October 2. They made a circuit up the Schoharie River, then to the west branch of the Delaware, then overland to the Susquehanna River and downstream to Joseph Brant's headquarters town of Oquaga, where they burned 40 wooden houses. They also destroyed five other small Indian towns nearby before burning a Tory village called

Scotch Settlement and a large Indian town, Conihunto. Then they burned the major Indian settlement of Unadilla. Only one of their party was wounded.

Doubtless, the sight of so much destruction when Brant and his party returned to their villages later in October stirred them to a particularly fierce retaliation against Cherry Valley, which was virtually destroyed on November 11, 1778, with every building outside the stockaded fort ablaze. The death toll reached 74, including 42 military men and 32 civilians.

Sullivan's Campaign

General George Washington (1732–99), commander in chief of the Continental army, responded to the Cherry Valley Massacre by authorizing a massive campaign of retaliation—even extermination—against the tribes of the Iroquois League. It was June 18, 1779, before Major General John Sullivan (1740–95), an officer notorious for his excessive caution, got his force of 2,500 men—three brigades, the New Jersey, New York, and New Hampshire—under way out of their rendezvous at Easton, Pennsylvania, and marching to the Susquehanna. Washington had laid out a three-pronged strategy: Sullivan would cut a swath through the valley of the Susquehanna up to the southern border of New York; General James Clinton (1733–1812), commanding 1,500 troops, would move through the Mohawk Valley to Lake Ostego and then proceed down the Susquehanna; and Colonel Daniel Brodhead (1736–1809) would lead 600 men from Fort Pitt (present-day Pittsburgh) up the Allegheny. At Tioga, Pennsylvania, Sullivan and Clinton would join forces, move north to Niagara, and meet Brodhead at Genesee.

Progress was slow, especially for Sullivan. Indeed, before Sullivan even got under way, Clinton had launched a six-day raid from his base of operations at Canajoharie on the Mohawk River. A total of 558 of Clinton's command, under Colonel Goose Van Schaik (1736–89), combined with 60 Oneidas led by Chief Hanyerry (d. 1779), left Fort Stanwix to attack Onondaga, the traditional capital of the Iroquois Confederacy. On April 21 12 Onondaga were killed, 34 captured, 50 houses destroyed, and food and supplies plundered. The longhouse, in which representatives of the six Iroquois nations met to debate the confederation's policy, was burned. The significance of the raid extended beyond the immediate destruction. A raid on an Iroquois place by an Iroquois tribe, it signalled the dissolution of the Iroquois League.

In the meantime, on July 22, 1779, Joseph Brant hit the Mohawk Valley town of Minisink, about 20 miles above the juncture of New York, New Jersey, and Pennsylvania. A few settlers were killed or taken prisoner but the attack spurred Colonel John Hathorn and Lieutenant Colonel Benjamin Tusten (or Tustin) to launch a retaliatory militia assault from nearby Goshen. Tusten mustered 149 men, and Hathorn joined him with an additional

detachment. Hathorn assumed command of the combined force and attempted to ambush Brant at the confluence of the Delaware and Lackawaxen Rivers, cutting off his line of retreat. Brant, however, perceived Hathorn's intention and maneuvered his force behind Hathorn, springing an ambush on him before he could ambush Brant. Out of 170 Americans, only 30 survived the attack by a combined Indian–Tory force of 87. Subsequently, 300 Indians and Tory Rangers led by Gu-cinge and Captain Robert McDonald attacked Forts Freeland and Sunbury on the West Branch of the Susquehanna. The 37-man garrison of Fort Freeland surrendered after a brief fight. Colonel Thaddeus Cook, commanding Fort Sunbury, dispatched Captain Hawkins Boon (d. 1779) with 80 men to the aid of Freeland. His force, however, was surrounded and overwhelmed, with the loss of 40 men, including Boon.

At last, on August 7 Sullivan's column entered Indian country. On the 9th he reached Newtychanning, a deserted Seneca village, and put its 28 buildings to the torch. Newtychanning was the first in a long line of towns Sullivan and Clinton destroyed. Clinton burned Otego on August 11; Unadilla on August 12; Conihunto and its cornfields on the 13th; Chemung on the 15th; the Tuscarora town of Shawhiangto on the 17th; Ingaren and the crops in its adjacent fields on the 18th; Otsiningo, with 20 hewn log houses, on the same day; two villages named Cohoconut on the 19th; and Owego on the evening of the same day. From all of these towns, as from the others that would fall, the occupants had fled.

Throughout September 1779 Sullivan devastated almost completely deserted Indian towns: Catherinetown, Kendaia, Canadasaga—capital of the Senecas—and Canandaigua. The main body of Sullivan's army proceeded to Gothsegwarohare on September 14, destroying it and Chenussio on the 15th. Next came Genesee, a town of 128 houses, ample fields, and large orchards, all of which the army destroyed. At the end of September the expedition was concluded. Destroyed were 50 Indian towns comprising some 1,200 houses, each of which sheltered two or three inhabitants, vast amounts of corn, 200,000 bushels of grain, and 10,000 fruit trees. Yet the Indians continued to raid.

Indian Raids Continue

Patriot settlers in upstate New York learned the bitter lesson that General Sullivan's massive campaign of destruction had served only to make the Indians desperate. Raiding was general throughout the spring and summer of 1780, and on May 21, 1780, Sir John Johnson (1742–1830) organized a massive assault on the forts and strong houses of the Mohawk Valley. With 400 Tories and 200 Indians, he burned Johnstown on May 23 while Joseph Brant hit Caughnawaga, killing five officers and 36 men and capturing 48 men and 12 officers out of a Patriot militia of 100.

American fortunes were at low ebb in New York when Colonel Marinus Willett (1740–1830) was assigned

command of the region. By this time only 2,000 settlers remained in and about the Mohawk Valley. Willett had at his disposal a mere 130 Continental troops and a vastly diminished pool of militia recruits. Willett made the most of his resources; where other commanders concentrated their men in one or two forts, he circulated them throughout the countryside. Shortly after Willett took up his new command, his scouts reported fires near Corey's Town. The commander dispatched men to investigate and extinguish the blazes while he mustered as large a militia as he could, about 170 men. With this force Willett attacked a combined detachment of 200 Indians and Tories under Donald McDonald (d. c. 1783), killing at least 40 of them while sustaining losses of only 5 killed and 9 wounded. This effectively quelled raiding in western New York for the balance of the summer of 1781. Willett pressed the attack in the fall, never defeating the Indians and Tories but greatly reducing the frequency and severity of the raids.

FRONTIER WARFARE IN THE OLD NORTHWEST AND KENTUCKY

While war raged in the borderlands of Pennsylvania and New York, terror also visited the thinly settled "Old Northwest"—the Ohio country—and Kentucky. By fall 1775 Shawnees began raiding Kentucky settlements, and by the end of January 1777 Indian depredations had driven large numbers of settlers from the country, so that only Harrodsburg and Boonesboro could muster a body of men, 103 of them, to oppose the Shawnee Chief Black Fish. The chief moved against Harrodsburg on March 18, 1777, but had to withdraw because of a severe snow, ice, and rain storm. After 10 days of inclement weather he returned on the 28th, just as the temperature began to plummet, again making an attack impossible. On April 24, however, Black Fish laid siege to Boonesboro, which was more thinly manned than Harrodsburg. During a four-day siege one settler was killed and seven wounded, including Daniel Boone (1734–1820). Yet the settlement endured, and Black Fish withdrew, though his warriors remained in the area through much of May, occasionally ambushing hunting and foraging parties. On May 23 he attacked the settlement yet again, broke off the engagement at nightfall, resumed the next day, and then withdrew from the vicinity of Boonesboro on May 25. Black Fish turned next against St. Asaph, weakest of the Kentucky forts in that it was held by only 11 men. On May 30 the Indians attacked a milking party of three women and four men, killing all. Nevertheless, the remaining settlers held out for two days until Black Fish finally withdrew.

At about this time, having persuaded Virginia authorities to make Kentucky a county of that state, and having been commissioned to raise and command a Kentucky militia, George Rogers Clark (1752–1818) laid out his plan to attack the British western forts—at Kaskaskia, Cahokia, and Vincennes, all deep in Ohio country—with the object finally of taking Detroit.

While Clark was formulating his plans and assembling his force, the Shawnees, in concert with Wyandots, Mingo, and Cherokees, raided the area of Wheeling, West Virginia, during midsummer 1777. This moved Congress to dispatch General Edward Hand (1744–1802) to recruit Pennsylvanians, Virginians, and Kentuckians for an attack on a British–Indian supply depot on the Cuyahoga River, near present-day Cleveland. Hearing of this plan, Cornstalk, under a flag of truce, went to Fort Randolph at Point Pleasant to warn the Americans that if Hand attacked, all the Shawnees and allied nations would retaliate. Despite the truce, Cornstalk, his son, and another warrior were taken hostage. On November 10, 1777, a party of white hunters, having heard that the chief was being held under light guard, decided to take vengeance on Cornstalk for depredations suffered. They shot, killed, and mutilated all three Shawnees.

The death of Cornstalk drove the Shawnee openly into the British camp. In February 1778 Hand, with 500 militiamen, began to march against the Cuyahoga supply depot but, ignorant of the country, failed to find the Cuyahoga and engaged no warriors. Hand's troops killed a small boy, two women, and one old man, and they captured two women before returning to Fort Pitt. For this reason Hand's campaign was christened the "Squaw War," and the general resigned as western commander to return to more conventional combat in the East.

While Hand was thrashing about in the wilderness, Black Fish, Black Hoof, and Blue Jacket, all Shawnee chiefs, were raiding the frontier. On February 8, 1778, Blue Jacket (d. c. 1804), with 102 warriors, captured a salt-making party of 27 at Blue Licks, Kentucky. Among the captives was Daniel Boone, who was adopted by Black Fish and who did not escape—or choose to leave—the Shawnee until May. He made it back to Boonesboro in time, however, to warn of an impending raid on the settlement and prepare for it. (That would come on September 8, 1778, when 444 warriors under Black Fish laid siege to the settlement for almost two weeks before finally giving up and returning to Chillicothe.) In May, too, Black Fish and 400 warriors laid siege to Fort Randolph, where Cornstalk had been imprisoned and killed. Both the siege of Boonesboro and Fort Randolph proved unsuccessful. Black Fish withdrew and divided his forces for scattered raids along the Kanawha River, east into Virginia, and into the Shenandoah Valley.

The Clark Expedition

By the end of May 1778 George Rogers Clark had managed to recruit only 175 men, rather than the 350 he had hoped for, to march against Kaskaskia and Cahokia. On June 26, 1778, Clark embarked from Corn Island in flatboats, shot the rapids, and reached the mouth of the Tennessee River in four days. Reaching Fort Massac, he and his men proceeded overland to Kaskaskia. With great stealth Clark captured a farm near the Kaskaskia River,

collected boats, and ferried his troops across the river. Dividing his band in two in order to give the impression of greater numbers, he surrounded and surprised the fort, which surrendered without a shot. From this new base Clark easily took Cahokia, also without combat.

Vincennes would be more difficult. But Clark realized that Lieutenant Colonel Henry Hamilton (d. 1796), the British commandant, would soon retaliate and easily overwhelm his diminutive army if he did not take the initiative and attack first. On February 5, 1779, Clark began the 150-mile march to Vincennes through a hostile wilderness in the dead of winter. He and his men reached Vincennes on February 23 and took a few prisoners in the settlement, from whom they learned that Fort Sackville (the British outpost at Vincennes) was now defended by only a few hundred men, Hamilton having released most of his Indian allies. Clark sent one of his prisoners back into town with a letter announcing his intention to take and occupy Vincennes and inviting those loyal to the king to repair to the fort, as no mercy would be shown them. To give the impression of greater numbers, Clark signed the letter with the names of several officers who were not, of course, present. He also paraded some of his men in the fading light with counterfeit regimental colors and generally deployed his troops to make it look as if there were far more of them. As soon as the attack began, many of the remaining British-allied Indians deserted Vincennes, and the Kickapoo and Piankashaw Indians, who had remained, ventured out to *help* Clark. With bluff confidence Clark pressed unconditional surrender terms on Hamilton, who, after a brief resistance, capitulated.

The fall of the British forts of the Old Northwest did, indeed, make life harder for the raiding Indians. At least one important Delaware clan, the Rabbits, led by Chief Running Fox, withdrew entirely from the Ohio country. The Shawnee nation split over the new incursion of Americans into their country. Like the Rabbit Delaware, some moved west; others remained to fight ever more desperately. Hostilities were far from over, and the early spring of 1780 was marked by frequent hit-and-run raids, especially in the vicinity of Lexington, a new and weak settlement.

In response to the Kentucky raids, Clark tabled his planned assault on Detroit and secured a militia of 1,000 mounted men, which he assembled at the mouth of the Licking River for an attack on local loyalists and their Indian allies, especially the Shawnees. On August 8, 1780, a combined force of Shawnees, Mingoes, Wyandots, and Delawares took a stand at Piqua Town, Ohio. The battle was hotly contested at first, but Rogers's men succeeded in outflanking the Indians, concentrating them, and pinning them down where he could bombard them with artillery. By the battle's end, 14 Americans had been killed and 13 wounded; Indian losses were about three times that number.

In view of his largely successful campaign against the Shawnees, Congress commissioned George Rogers Clark a

brigadier general and officially sent him on an expedition west of the Ohio and, ultimately, to Detroit. It was August 1781 before he had finally gathered 400 regulars and volunteers (he had hoped to muster 2,000 men) and started down the Ohio. The new brigadier was diverted from his objective, however, by a need to strengthen Vincennes and the surrounding frontier against an impending British attack. Indeed, bolstered by British claims that they were planning a grand offensive, the Shawnees had rebuilt Old Chillicothe and Piqua Town and began raiding Kentucky again. Virginia, its treasury strained, could no longer support the Kentucky militia. Militiamen deserted their frontier posts. By the time Patriot military discipline had utterly disintegrated, however, General Cornwallis had surrendered to General Washington at Yorktown, and the Revolution was headed toward its end.

War in the Ohio Country: Final Phase

The breakdown of military discipline among the Patriots in the western theater of the war contributed to the intensification of the war in the Ohio country. The most incendiary incident was the Gnaddenhutten Massacre.

On October 19, 1781, Joseph Brant, representing the Mohawks, and Pimoacan and Pipe, chiefs of the Delawares, met with Abraham, chief of the Moravian Indians—Delawares who had been christianized by Moravian missionaries. Brant and the others tried to persuade Abraham to unite with them in attacking the settlers of western Pennsylvania, but Abraham refused, arguing that the Americans would surely leave peaceful Christian Indians alone. Captain Matthew Elliott, in charge of British forces at Detroit, then ordered the Moravian Indians to leave western Pennsylvania "for their own safety." Accordingly, they set out for the banks of the Sandusky River in Ohio country. By early 1782, however, a harsh winter famine compelled the Moravian Indians to seek permission to move back temporarily to their western Pennsylvania mission towns on the Tuscarawas River. They arrived just after the Mohawks and Delawares had conducted a series of particularly brutal raids in the area. In February General Daniel Brodhead dispatched Colonel David Williamson to "punish" the hostiles. Tragically, Williamson's campaign coincided with the Moravian Indians' return. On March 8, 1782, Williamson and 100 men marched into Gnaddenhutten, where he announced to Abraham and the 48 men, women, and boys gathered there that he had been sent to take them back to the neighborhood of Fort Pitt, where they would be protected from all harm. At Williamson's request, Abraham sent runners to a neighboring missionary-Indian town, Salem, to fetch the Indians there and bring them back to Gnaddenhutten. No sooner was this done than Williamson had the wrists of each Indian bound behind him; when the 50 or so people from Salem arrived, he had them likewise bound. And so they were all confined until morning, when Williamson announced that they would be put to death as punishment for the depredations of the Delaware. During

the night each of the captives—96 men, women, and children—was killed by a mallet blow to the back of the head. Two boys managed to escape to tell the grisly tale.

Although the Gnaddenhutten Massacre was roundly condemned, even by the Pennsylvania legislature, Williamson was not punished. And when the massacre triggered acts of vengeance from the Delaware Indians, Colonel William Crawford (1732–82) was sent on May 25 to undertake what was called the Second Moravian Campaign—the destruction of the Moravian Indian, Delaware, and Wyandot towns along the Upper Sandusky River, including the principal village of Sandusky.

On June 5 near Sandusky, Shawnee and Delaware Indians encircled Crawford and his militiamen. At least 40 or 50 militiamen were killed or captured, and 28 were wounded. Among the captives was Colonel Crawford, who was slowly tortured to death.

Crawford's defeat touched off a new spate of Indian raids along the upper Ohio, and with the looming possibility of having to abandon the Kentucky frontier, General William Irvine (1741–1804) assembled 1,200 Continental soldiers and militiamen for an assault on Sandusky to burn the Shawnee, Wyandot, and Delaware towns there. George Rogers Clark in November 1782 assembled 1,050 Kentuckians on the Ohio shore opposite the mouth of the Licking River. His objectives were the rebuilt towns of Chillicothe and Piqua. Clark was on the move well before Irvine, but, as had been the case with Sullivan's campaign in western New York, the Indians eluded him. He burned Chillicothe and other Shawnee towns, and he destroyed 10,000 bushels of corn but killed only 10 Indians and captured another 10. This was at least sufficient to stave off additional Indian raids. In any case, by mid-April the preliminary articles of peace between the United States and Great Britain had been signed in Paris, and the British ceded the Old Northwest to the new nation. This hardly brought an end to Indian–white warfare in the area, but, for the time being, Clark was recalled—and Irvine never did get under way.

THE SOUTHERN FRONTIER

At the outbreak of the Revolution, Cherokees, acting on the encouragement of the Shawnees, launched a series of devastating raids on the frontiers of Georgia and South Carolina. In August 1776 General Andrew Williamson (c. 1730–86) led 1,800 troops, guided by Catawba scouts, against the Cherokees, wreaking havoc on their villages and cornfields. The next month Williamson was joined by North Carolina's general Griffith Rutherford (c. 1731–c. 1800) commanding 2,500 militiamen. Together they drove the Indians southeastward, toward Florida. An additional 2,000 Virginia and North Carolina militiamen under Colonel William Christian attacked from the Holston River. Overwhelmed and receiving no aid from the British or from their Creek allies, the Cherokees sued for peace

and from May to July 1777 ceded vast lands east of the Blue Ridge Mountains and north of the Nolichucky River.

The Creeks, initially reluctant to war against the Americans, were recruited to the British cause late in 1778 by John Stuart (d. 1779?), the Indian superintendent installed at Pensacola. Stuart's plan had been to use the Indians to support a British invasion of the South, but lack of coordination between him and the commander of the fleet that landed redcoats at Savannah rendered the alliance ineffective. Still, many of the Creeks were actively hostile toward Americans and, with a Cherokee splinter group that had moved to Chickamauga Creek, they conducted hit-and-run raids throughout the Revolution. Later, additional Cherokees joined their Chickamauga and Creek brethren in more extensive combat until October 7, 1780, when John Sevier and Andrew Pickens, having defeated the Tories at Kings Mountain, North Carolina, once again devastated the Indians' settlements.

Generally, the British badly mishandled their potential Indian "assets" in the South. The Cherokees, Creeks, Choctaws, and Chickasaws could have fielded some 10,000 warriors, by far the largest body of Indian allies on either side, who might well have turned the tide of the war. But, poorly paid and poorly supplied, they could not be relied upon. Nevertheless, 1780 also brought new Patriot defeats in the South. Lieutenant Colonel Banastre Tarleton (1754–1833) led British and Tory troops to victory at Monck's Corner, South Carolina (April 14, 1780) against General Isaac Huger (1743–97), who lost substantial numbers of men and supplies. Next came the Battle of Lenud's Ferry, South Carolina, on May 6, an action against survivors of the Monck's Corner battle and some fresh troops. A total of five American officers and 36 men were killed or wounded, and seven officers and 60 dragoons were captured.

The 3rd Virginia Continentals, about 300 men, were marching to reinforce Charleston during British general Henry Clinton's siege of that city (*see* AMERICAN REVOLUTION: COASTAL THEATER). The city fell before the Continentals reached it. Tarleton pursued the unit, attacking it at Waxhaw Creek on May 29. Tarleton then executed the men who had surrendered; 113 of Buford's men were killed in the bloodiest atrocity of the war in the South. Tarleton's action put South Carolina firmly in British hands.

General Horatio Gates (1728–1806) was given command of Patriot forces in the South late in 1779. In July 1780 he marched against Camden, South Carolina, held by 2,200 troops under the personal command of Lord Cornwallis. Along the way Gates acquired militia reinforcements to augment his Continentals, amassing a force of 4,100, which Gates overestimated at 7,000. Moreover, he ignored reports that so many men were sick with swamp-borne diseases that only about 2,000 were fit and ready to fight. Gates inadvertently exacerbated the illness rampant in his camp by distributing to his men a molasses

ration as a substitute for the rum ration that 18th-century officers believed indispensable to the smooth functioning of an army. This induced an urgent epidemic of dysentery among the ranks, so that by nightfall of August 15, 1780, Gates's men were (in the words of one officer) "much debilitated." Nevertheless, the general ordered a nighttime march to Camden. By coincidence, Cornwallis had ordered his troops out of that town to search for the Americans. The two armies met at about 2:30 on the morning of August 16, and the Patriots were routed. As many as 1,900 Americans died in the battle, and nearly 1,000 were taken prisoner. British losses, by comparison, were light: 68 killed, 350 wounded. Horatio Gates had fled the field after the collapse of his left wing.

Lord Cornwallis left Camden on September 8, 1780, having driven the American army from South Carolina. His objective now was North Carolina, and he moved northward in three columns. While he took the main force, Tarleton headed up the British Legion (a Tory unit) and the regular light infantry, and Major Patrick Ferguson (1744–80) led the Tory militia.

In North Carolina the British met stiff resistance from diehard Patriots, but nevertheless took Charlotte, North Carolina, on September 26, 1780. Having taken Charlotte, Cornwallis found it tough going to maintain communication with his base in Camden. His supply lines were continually subject to Patriot attack. In an effort to screen his main column from attack, Cornwallis assigned Ferguson to lead the Tories along the foothills. Observing this, Patriot militiamen attacked Ferguson, who retreated to the Catawba River and then up King's Mountain, on the border between North and South Carolina.

Here Ferguson took his stand on October 7 and was completely surrounded by the Patriot forces. Ferguson himself was slain even as he was in the act of killing an American officer. After the death of their leader, the Tory force surrendered, having lost 400 killed and wounded. The Patriots suffered 88 casualties. A total of 700 Tories became prisoners, a dozen of whom were summarily hanged in reprisal for British executions of Tory deserters who had taken up arms against their former comrades.

For the Americans King's Mountain was a great victory that was the more welcome for having come on the heels of a string of disasters. As a result of the battle, Cornwallis's advance was not only halted, but the British general pulled his troops back down into South Carolina. Even more important, the battle ended Tory influence in North Carolina once and for all.

In October 1780, the skilled and courageous General Nathanael Greene (1742–86) was assigned overall command of Patriot forces in the South. Arriving in the theater of operations in December, Greene recognized that Cornwallis outnumbered him three to two. He therefore concluded that it was best to continue to pursue the guerrilla tactics that had proven effective so far, and he dispatched

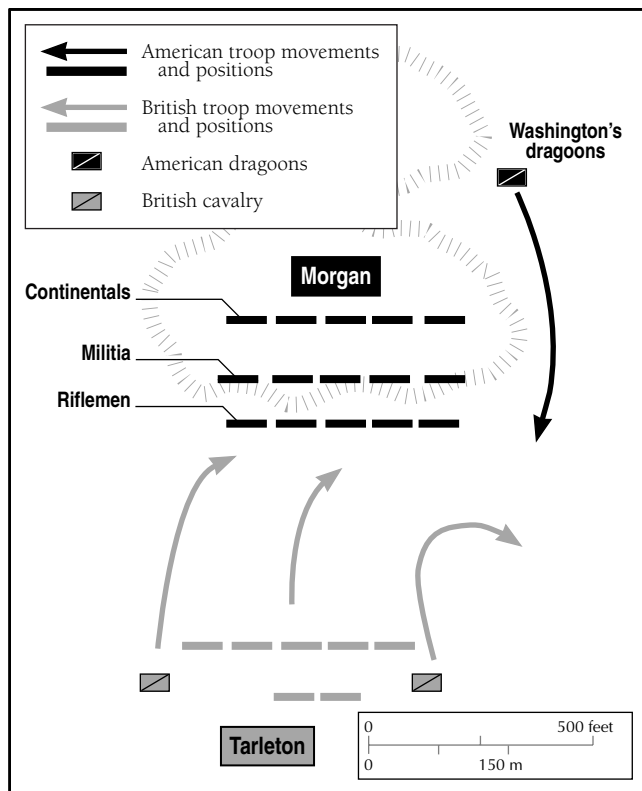

the best guerrilla leader he could find, Daniel Morgan (1736–1802), to harass British positions in the western wilderness of South Carolina while Greene himself supported the operation of partisans in the north-central portion of the state.

On January 16, 1781, Morgan, commanding 1,000 men, learned that Tarleton was nearby with 1,100 Tories and regulars. Understanding that retreat from the justly feared Tarleton would prompt his militia simply to disband and go home, Morgan decided both to fight it out and to arrange matters so that the militia could *not* run. Accordingly, Morgan decided to make a stand at the Cowpens, little more than a backwoods South Carolina cattle pasturage. In a bold gamble he purposely positioned his men so that the Broad River cut off any avenue of retreat. It would be do or die. In another unconventional move he put his rawest militiamen in the front line, backing them up with seasoned men from Virginia and his Continental troops. Farthest to the rear he held his cavalry—conventionally, front-line troops—in reserve.

For his part, Banastre Tarleton thought that Cowpens would be the perfect place for a bayonet charge, which had so terrified the provincial troops at Camden. But Tarleton had not counted on the tactical genius of Morgan, who instructed his men to fire only at the last possible minute. After firing in this manner, the American front line, the green recruits, sheared off to the left and around to the rear. Now the British, already badly cut up, moved against the second line, the seasoned men. Seeing that Tarleton's still-overconfident troops were attacking in poor order, Morgan ordered his green troops, who had returned to the American rear, to swing out and behind Tarleton's left while he put his cavalry into motion, around to the rear of Tarleton's right. It was a classic double envelopment. Deep in the southern wilderness, Morgan had emulated the tactics the great Carthaginian general Hannibal had used to defeat the Romans at Cannae (in southeast Italy) in 216 B.C.E (see PUNIC WAR, SECOND).

The Battle of the Cowpens saved half of Greene's army and cost Cornwallis 100 killed, 229 wounded (and captured), and 600 captured (unwounded). Particularly hard hit were the British officers: of 66 engaged, 39 died. American losses, in contrast, were 12 killed and 60 wounded. Moreover, Morgan's victory inspired the Americans. It was the turning point of the war in the South.

Some military historians have judged Daniel Morgan the only military genius of the American Revolution. He was, however, not the only effective guerrilla leader among the southern Patriots. The South Carolinian Francis Marion (c. 1732–95) was a veteran Indian fighter who became active in Patriot politics in 1775. Beginning in 1780 he earned the sobriquet "Swamp Fox" for his series of guerrilla victories, especially those at Tearcoat Swamp (South Carolina) on October 25, 1780, and at Halfway Swamp (also South Carolina) on December 12–13, 1780.

Battle of Cowpens, January 17, 1781

As for Cornwallis, despite defeat he took steps to improve his position after the disaster at Cowpens. He streamlined his army by jettisoning many supplies as excess baggage, then pushed the pursuit of Greene's army northward all the way to the Dan River, near the Virginia border. Once across this river, however, Greene simply took all the boats with him, so that Cornwallis now found himself on the near shore of the river desperately low on supplies, having sacrificed them in the name of speed. He returned to Hillsboro for resupply. In the meantime Greene assumed the initiative. He recrossed the Dan into North Carolina and harassed Cornwallis's lines of communication.

Greene was careful to avoid a major action until he had assembled enough men to outnumber Cornwallis. In the meantime operations against local Tories—including a massacre of 400 of them by General Andrew Pickens (1739–1817)—largely deprived the British general of his base of Loyalist support.

At last, on March 14, 1781, Greene picked his battle site: Guilford Courthouse, North Carolina. He aimed to duplicate the success of Daniel Morgan at the Cowpens, so he put his greenest troops up front, with the more seasoned veterans backing them up. The battle commenced the next day, with Greene ordering the frontline militia to fire two volleys before withdrawing to the rear. Unfortunately, the militia, having discharged its volleys, did not retire in an orderly fashion but rushed back chaotically. This prevented their getting into position to effect the

kind of envelopment that Morgan had pulled off at the Cowpens. Nevertheless, had Greene now launched his cavalry, running it around the rear of the British positions, he might have still forced the surrender of Cornwallis's army, but Greene lacked Morgan's willingness to go for broke. He did not want to risk his cavalry in a single bold stroke, and this reluctance gave Cornwallis an opportunity to retaliate. He raked the enemy with grapeshot, forcing Greene's withdrawal. Although Cornwallis held the field, the battle had cost him a fourth of his army. He decided to vacate the interior of North Carolina and made for Wilmington, on the Carolina coast. This move culminated in Cornwallis's eventual withdrawal to the Yorktown peninsula in Virginia and, ultimately, the battle that all but ended the American Revolution (see AMERICAN REVOLUTION: COASTAL THEATER).

CODA IN THE SOUTH

Victory at Yorktown did not bring an end to the fighting in the Carolinas. Nathanael Greene had been campaigning in the South since December 1780, and while the Yorktown operation was under way in Virginia, he fought the very able Francis Rawdon-Hastings (1754–1826) and, after Rawdon-Hastings fell ill, Alexander Stewart (c. 1741–94). While the British held on to Savannah and Charleston, Greene kept the backcountry in contested turmoil.

On September 8, 1781, Greene, reinforced to a total strength of 2,000 men, decided to go on the offensive. Stewart was camped with an equal number at Eutaw Springs, South Carolina, on the Santee River. Greene's forces fell upon a British foraging party and took captives. Next, a cavalry scouting party under Major John Coffin (1756–1838), a Tory from Boston, was ambushed, but Coffin escaped to alert Stewart to the approach of Greene's army.

The loss of the element of surprise was a severe blow. The British were able to form a line of battle in front of their camp, and although Greene's militiamen performed magnificently—it is said that they fired 17 volleys without so much as flinching—the British were able to break through the militia line. Behind this force, however, Continentals from Maryland and Virginia stood fast and, with bayonets, drove the British back into their camp. But then the American forces suffered a fatal lapse in discipline. Entering the British camp, they fell to plundering the soldiers' tents instead of pressing the attack. This provided time and opportunity for a British contingent under Major John Majoribanks (d. 1781) to counterattack. Although Majoribanks was himself cut down in the action, he managed to turn an almost certain American triumph into something like a British victory. Greene, with 500 casualties out of 2,000 men engaged, was forced to withdraw, but the British, who remained in possession of their camp, had suffered 693 killed, wounded, and missing, also out of a force of 2,000 or somewhat less. It was the highest rate of loss any army had suffered in the Revolutionary War, and Eutaw Springs was the last out-and-out battle of that war.

Battle of Guilford Courthouse, March 15, 1781

By December 9, 1781, the British had been confined exclusively to Savannah and Charleston. They evacuated from Savannah on July 11, 1782, and from Charleston on December 14, whereupon Greene moved into Charleston and remained there until August 1783, when news of the Treaty of Paris reached him.

Amphissean War *See* SACRED WAR, FOURTH.

Anabasis, The: Revolt of Cyrus (401 B.C.E.)

PRINCIPAL COMBATANTS: Cyrus, the Younger (backed by Greek mercenaries) vs. Artaxerxes II

PRINCIPAL THEATER(S): Cunaxa (near Babylon), Persia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Cyrus the Younger sought to seize the Persian throne from his brother, Artaxerxes II.

OUTCOME: Thanks to the Greek mercenaries, Artaxerxes was defeated. However, Cyrus was killed in battle.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Cyrus's army, 50,000, including 13,000 Greek mercenaries; Artaxerxes' forces, 100,000

CASUALTIES: In battle, Greek casualties were reported as one wounded; other casualties unknown.

TREATIES: None

The *Anabasis* or, in full, the *Anabasis Kyrrou*, in Greek, "Upcountry march," was a narrative written by Xenophon (c. 430–353 B.C.E.), the scion of a wealthy Athenian family, author, and philosopher. One of the upper-class youths and soldiers who made up the Socratic circle, Xenophon, on the dare of a friend, joined the 13,000 or so Greek mercenaries who fought for Cyrus the Younger (424–401 B.C.E.) in his attempt to usurp the Persian throne from his brother Artaxerxes II (d. 359 B.C.E.). Xenophon wrote the first part of the *Anabasis*, relating the revolt of Cyrus at Scillus, in the Greek Peloponnese, shortly after 386 B.C.E. The second part he composed about 377 B.C.E.

With the typical disregard of the ancient historians for statistical precision, Xenophon calls the Greek mercenaries, most of them veterans of the Second (Great) PELOPONNESIAN WAR, "The Ten Thousand." Whatever their number, they continued to serve under their Spartan general Clearchus (d. 401 B.C.E.) even as they marched with Cyrus's 50,000-man army.

The great battle of the revolt of Cyrus took place near Babylon, at Cunaxa. The Greeks, deployed on Cyrus's right and vastly outnumbered, defeated the left flank of Artaxerxes' army. However, on the Persian right the fight between Artaxerxes' army and Cyrus was far more difficult and protracted. Cyrus was killed, which sent the panic-

stricken rebels into retreat. Only the Greek mercenaries stood firm. With supple brilliance, Clearchus advanced against the much larger right wing of Artaxerxes' army and dealt it a decisive defeat.

According to Xenophon, only a single Greek hoplite became a casualty, and he was only wounded. However, after the victory the Greek senior officers foolishly accepted the invitation of defeated Persian commander Tissaphernes to a feast. There they were made prisoner. Clearchus was executed on the spot, while the others were transported to Artaxerxes, who ordered them beheaded.

Anabasis, The: March of the Ten Thousand (400 B.C.E.)

PRINCIPAL COMBATANTS: Greek mercenaries vs. Armenian hill tribes

PRINCIPAL THEATER(S): The route between Babylon and the Greek Black Sea colony of Trapezus, about 1,000 miles

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Return from the campaign of Cyrus the Younger against his brother, Artaxerxes II, for control of the Persian throne

OUTCOME: After an epic five-month journey, some 6,000 mercenaries returned to safety.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Greek mercenaries, 12,000 to 13,000

CASUALTIES: About half (6,000) died on the trek.

TREATIES: None

Xenophon's *Anabasis* includes an account of the march of the Greek mercenaries, known as "The Ten Thousand," although most historians believe the army consisted of 13,000, from a location near Babylon following the Battle of Cunaxa in 401 B.C.E. (*see* ANABASIS, THE: REVOLT OF CYRUS) to the Euxine (the Black Sea). The Greek mercenaries had supported Cyrus the Younger (424–401 B.C.E.) in his attempt to seize the Persian throne from his brother Artaxerxes II (d. 359 B.C.E.). The march took place after the Persians had treacherously murdered the Greek general Clearchus (d. 401 B.C.E.) and all the senior mercenary officers. The surviving junior officers, mostly Spartans and Athenians, assumed leadership of the mercenaries and undertook a 1,000-mile march to the nearest friendly territory, Trapezus, a Greek colony on the Euxine. The epic journey traversed the forbidding mountains of Armenia and required foraging for survival and fighting off assaults by wild hill people.

Xenophon, who traveled with the mercenaries in a private capacity, was one of the principal leaders of the trek.

By the time the mercenaries reached Trapezus, they had been fighting their way through the mountains for five months. A total of 6,000 survived the journey.

Anastasius II, Revolt of (720–721)

PRINCIPAL COMBATANTS: Anastasius II vs. Byzantine emperor Leo the Isaurian

PRINCIPAL THEATER(S): Constantinople

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Deposed as Byzantine emperor by Theodosius III, Anastasius II sought to regain the throne from Leo the Isaurian, himself the usurper of Theodosius; Leo sought to defend his position as emperor.

OUTCOME: Anastasius was captured and executed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Beset by corruption and poor leadership, the Byzantine Empire lay exposed to invasion. The year before, the frontier had collapsed, the Bulgars had been at the walls of Constantinople, and the Arabs had overrun Cilicia, then invaded Pontus to capture Amasya. Little wonder that in 713, the army, resentful of the weak emperor Philippicus (711–713), mutinied, overthrew Philippicus, and installed Anastasius II (d. 721) as emperor. The new sovereign immediately set about rebuilding Byzantium's fighting forces, but his reforms were harsher than the army cared to tolerate, and it deposed him in 715, replacing him with Theodosius III (d. after 717). After a brutal six-month siege of Constantinople, Theodosius entered the city and had Anastasius banished to a monastery.

When Theodosius failed to take action against a Muslim invasion in 716, his leading general, Leo the Isaurian (c. 680–741), supported the reinstatement of Anastasius. However, with Theodosius vulnerable and Anastasius still imprisoned in the monastery, Leo chose to seize the throne for himself; he marched on Constantinople, forcing Theodosius to abdicate. In 720 Anastasius was finally able to escape the monastery and incite a revolt in Sicily aimed at returning him to power. Leo, however, quickly sent imperial forces and crushed the rebellion. Anastasius was captured and executed in 721.

Anderson Raid, "Bloody Bill" See UNITED STATES CIVIL WAR: TRANS-MISSISSIPPI THEATER.

Anglian-Pictish War (685)

PRINCIPAL COMBATANTS: The Anglo-Saxon kingdoms of Northumbria vs. the native Picts of Scotland

PRINCIPAL THEATER(S): Scotland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Anglo-Saxon England's hegemony over Scotland was the issue, with the Anglo-Saxon Northumbrians wishing to reestablish that hegemony and the native Picts fighting for their independence.

OUTCOME: Northumbria was defeated, even losing territory to the Picts, who remained independent of their southern neighbors.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After Anglo-Saxon tribes from barbarian Europe had vanquished most of the native Briton and Roman-Briton peoples of southern England in the sixth century, they fell to fighting each other. The Anglo-Saxon kingdoms fought so constantly that none ever established itself as a dominant power, one that could fill the vacuum left by the vanquishing of the Britons.

Beginning in 593 the Northumbrian kingdoms of Bernicia and Deira were constantly at war, but they were so evenly matched that they more or less canceled each other's influence, and neither ever managed to assert absolute supremacy over the region. Instead, their internecine warfare paved the way for another Anglo-Saxon kingdom, Mercia, to rise to power in Northumbria, a position it cemented in 641 at Maserfield, when the Mercians soundly defeated all the Northumbrian clans.

Another disadvantage of the incessant Anglo-Saxon clan warfare, which lasted through the next century until the Viking invasions beginning in 789 (one of the bleaker periods in all military history), was that it kept the Anglo-Saxon kingdoms from developing any sense of joint needs—for shared security against foreign invaders, for example, or for alliances to achieve collective goals. All of

which helps explain England's inability to conquer and subdue Scotland, which, under the Briton had been considered a vassal state of England. Instead, Anglo-Saxon kingdoms would make various attempts to subdue the northern reaches of the island, and each would fail by dint of its overextension and the need to worry about its brother Anglo-Saxons at its rear. Meanwhile, within Scotland itself there was an ongoing struggle for local supremacy among the native Picts, the northern Welsh of Strathclyde, and the Scots (Irish) of Dal Riada.

The Picts were led by their king Brude (c. 670–695), an able ruler and excellent warrior, who had carried on a running battle with the Strathclyde Britons since 672. Now he attracted the attention of the Northumbrian ruler Egfrith (c. 671–685). In 685 the Northumbrians, who had since managed to defeat the Mercians and regain hegemony over their homeland, assembled a vast army under Egfrith precisely for the purpose of bringing down the rambunctious Brude and conquering his north-island domain. Marching north through Lothian and crossing the Tay River, Egfrith engaged the Pict forces under Brude at the Battle of Dunnichen Moss. Brude smashed the English forces and killed Egfrith. Egfrith's death much weakened Northumbria, which lost to the Picts all its territory beyond the Firth of Forth. The Battle of Dunnichen Moss thus ensured the independence of Scotland from Anglo-Saxon England.

Anglo-Burmese War, First (1824–1826)

PRINCIPAL COMBATANTS: Arakanese rebels vs. Burma (Myanmar); Burma vs. British Bengal; Great Britain vs. Burma

PRINCIPAL THEATER(S): Burma and northeastern India

DECLARATION: Britain declared war on Burma, March 5, 1824.

MAJOR ISSUES AND OBJECTIVES: The Arakanese sought to reclaim their homeland in western Burma; Burma sought to stop Arakanese raids from Bengal; Britain sought to stop the Burmese from violating the Bengal border.

OUTCOME: The defeated Burmese were forced to cede Assam, Manipur, Arakan, and the Tenasserim coast to the British.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Anglo-Indian forces, 43,000; Burma, 95,000

CASUALTIES: India, 15,000 dead; Britain, 3,115; Burma, unknown

TREATIES: Treaty of Yandabo, February 1826

After Burma defeated and annexed the kingdom of Arakan (in present-day western Myanmar) in the late 18th century, Arakanese refugees trundled northward into British-held territory in northeastern India. From their sanctuaries in Bengal, as most of northeast India and Bangladesh was then called, the Arakanese recruited and armed contingents that recrossed the border and attacked the Burmese garrison in their former homeland. At one point, in 1825, Arakanese patriots even recaptured the provincial capital of Mrohaung. It did not take long for the Burmese to retaliate. Almost immediately, Burmese forces marched into Bengal in search of the Arakanese guerrillas. When challenged by Bengal authorities, they quickly withdrew.

The Arakanese raids continued, and in 1823 the Burmese, infuriated with the British for harboring the raiders, once again breached the Bengal frontier. Burma's great general and the governor of Assam, Maha Bandula (d. 1825), planned a two-pronged attack on Bengal from Assam and Arakan. Burmese troops were soon threatening Chittagong in modern-day Bangladesh.

The British responded in force, declaring war on Burma on March 5, 1824, and in April sending a large seaborne expedition of 5,000 British and Indian regulars under Major General Sir Archibald Campbell (1769–1843), who seized Rangoon without a fight on May 10. But British hopes of persuading the Burmese to give up their border raids by holding the delta and threatening the Burmese capital, Ava, were dashed when Burma's resistance stiffened. British troops in Rangoon, ravaged by disease, soon found themselves ringed by the determined natives. Fighting around Rangoon continued savagely from June to July. In August, Bandula's army arrived from Arakan after a forced march across country flooded by Burma's powerful monsoons. British reinforcements began arriving in October, a rocket battery in tow. On December 1 Bandula launched his assault. The British repulsed the onslaught and two weeks later broke through the native cordon. Finding themselves no match for the disciplined British regulars, the Burmese retreated.

In mid-February 1825, a column of 2,500 British Indian troops under Campbell moved up the Irrawaddy

River, supported by a flotilla of 60 boats manned by British sailors and carrying 1,500 additional troops. At the same time the Imperial army also took control of coastal regions. On April 2 Bandula checked the British advance in a skirmish south of Ava, on the Irrawaddy, but Campbell's rockets saved him, breaking up the Burmese attack. A British counterattack swept the field. In what became known as the Battle of Danubyu, Bandula was killed and his army routed.

At the end of April Campbell went into quarters for the monsoon season, behind entrenchments at Prome, while the Burmese army, now led by Maha Nemyo (d. 1825), once more surrounded him with field fortifications. In the Battle of Prome, lasting from November 30 to December 2, 1825, Campbell, after having repulsed a Burmese attack on November 10, launched an offensive in two columns supported by the flotilla. The British ruptured and rolled up the line of Burmese fortifications, Nemyo was killed, and after three days of intense fighting the Burmese army disintegrated. Campbell continued his advance upriver to Yandabo, 70 miles north of Ava, where Burmese envoys under a flag of truce sought peace. The British had won, mainly because India's superior resources made it possible for them to sustain a campaign through two of Burma's wretched rainy seasons—and at the cost, one might add, of nearly 15,000 Indian fatalities.

The First Anglo-Burmese War formally ended with the Treaty of Yandabo in February 1826, under the terms of which the Burmese ceded Assam, Manipur, Arakan, and the Tenasserim coast to the British. It was but the first of three conflicts (see ANGLO-BURMESE WAR, SECOND; ANGLO-BURMESE WAR, THIRD) that collectively would leave Burma so vulnerable it would be forced to concede British hegemony over the Bay of Bengal.

Anglo-Burmese War, Second (1852–1853)

PRINCIPAL COMBATANTS: Burma (Myanmar) vs. Great Britain

PRINCIPAL THEATER(S): South Burma

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Britain claimed to be protecting its merchants from Burmese extortion. More likely, it sought an overland route from India to Singapore. Burma began by responding to British provocations and ended by fighting for its autonomy.

OUTCOME: The Burmese king, Pagan Min, was ousted by his half brother Mindon Min; Britain occupied lower Burma, and the British East India Company announced South Burma's annexation to the empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: British and Indian regulars, 8,100; Burma, unknown

CASUALTIES: Britain, 377; Burma, unknown

TREATIES: None

After some 25 years of peace between British-held India and Burma (see ANGLO-BURMESE WAR, FIRST), the British colonial government in India sent the British navy to Rangoon to investigate complaints from British merchants that the Burmese were practicing extortion. Behind the complaints lay a darker subtext, the merchants' desire—and Britain's—to secure an all-land route between the British colonies in India and Singapore. It hardly came as a surprise when the news reached London that the navy had seized a ship belonging to the Burmese king, Pagan Min (d. 1880), nor were the imperialists much chagrined when the seizure provoked Burma's angry sovereign to launch another war in 1852.

In response a British amphibious expedition of 8,100 under General Sir H. T. Godwin seized Rangoon on April 12, 1852, and the Burmese army retreated to the north. In May the British took Martaban at the mouth of the Salween River, then Bassein in the Irrawaddy delta, and by July they controlled all the ports of lower Burma. Stopping until October for the monsoon season, the British then began a march northward on the capital, Amarapura, near modern-day Mandalay, slowly but surely occupying the central teak forests along the way for the British East India Company. After a sharp engagement at Shwe-maw-daw Pagoda, Godwin took Prome on October 9. On December 10, 1852, the East India Company announced in the name of Great Britain the annexation of south Burma. Meanwhile, a revolt in Amarapura led to the ouster of King Pagan Min by his half brother Mindon Min (1814–78). In 1853 the new king asked the British to leave, but they refused. The British, on the other hand, were hesitant to extend their forces farther northward. The war had reached an impasse, and both sides simply quit fighting. The British occupied all of lower Burma with Mindon Min's tacit approval, but no formal peace treaty was signed, and the Burmese court did not officially recognize the British colonial government in Pegu.

Anglo-Burmese War, Third (1885)

PRINCIPAL COMBATANTS: Burma (Myanmar) vs. Great Britain

PRINCIPAL THEATER(S): Upper Burma

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Britain objected to Burma's courting of France, feeling that the relationship directly threatened its economic interests in British-occupied lower Burma; Burma sought to protect itself from further British

imperial encroachments and, ultimately, to maintain its independence.

OUTCOME: Britain annexed upper Burma to India and ousted the ruling dynasty.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Britain, 9,000 troops and 2,800 native auxiliaries; Burma, unknown

CASUALTIES: Britain, 24; Burma, 250

TREATIES: No actual treaty, but the war formally ended with Britain's announcement of annexation, on January 1, 1886.

The Second ANGL0-BURMESE WAR had ended in 1853 with a whimper, not a bang, when both sides simply stopped fighting. The British were content to occupy lower Burma, and Mindon Min (1814–78), the new Burmese king, who had deposed his brother to ascend the throne, simply pretended they had not taken control of a large part of his kingdom. Mindon tried, in fact, to reverse the thrust of Britain's imperialism. He imposed administrative reforms that made Burma more receptive to foreign investment, and, to offset British influence, he entertained envoys from France and sent Burmese emissaries to Paris. But it was those very moves that once again aroused British suspicions about Burma, a country it had been uncomfortable with at least since Burma had annexed Arakan in the late 18th century and seemed willing to ignore its borders with northeastern India. Anglo-Burmese relations were already worsening when Mindon Min died and his son Thibaw Min (1858–1916) assumed the throne in 1878.

King Thibaw, like his father, favored the French, but the British were less worried about French influence in upper Burma than they were about what Paris was plotting in Laos, Vietnam, and Yunnan. The Anglo-French tension, on the other hand, owed less to nefarious French designs than to Burmese initiatives. Internal order began to break down under Thibaw's inept rule, and a border dispute with Britain flared briefly in 1878 on the Manipur frontier. Thibaw then tried to follow his father's lead in diminishing British influence by currying favor with the French. The Burmese court wrote the French premier a letter suggesting a bilateral treaty, and Thibaw began negotiating with France to build a railroad from Mandalay to the Indian border. The treaty posed a direct threat to British teak monopolies in lower Burma. When Thibaw openly defied London by refusing to accept a British envoy, and even worse, ordered Burma's ministerial council to fine the Bombay Burmah Trading Corporation for underreporting its extraction of teak from Toungoo, the British had had enough.

On November 14, 1885, British general H. N. D. Prendergast (1834–1913) moved up the Irrawaddy in 55 steamers manned by the Royal Navy and transporting his amphibious force of some 9,000 troops and 2,800 native auxiliaries. As they approached Thibaw's capital at Ava (Mandalay) on November 27, the Burmese king surrendered. They seized Mandalay and upper Burma and

announced its annexation to India on January 1, 1886. Thibaw, deposed, was sent to India, but Burmese guerrilla forces fought British troops for four more years before they were pacified. Burma's Konbaung dynasty had come to an end, and so had Burmese independence.

Anglo-Dutch War in Java (1811)

PRINCIPAL COMBATANTS: Netherlands vs Great Britain

PRINCIPAL THEATER(S): Java

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Control over Southeast Asian colonies and their rich trade in spices, tobacco, teak, and other commodities

OUTCOME: The Dutch ceded Java, Sumatra, and Macassar to the British.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Capitulation of Semarang, September 17, 1811

By the end of the 17th century the Dutch had established both economic and political control over Indonesia, including Java. No serious challenge was brought against them until 1810, when Napoleon's (1769–1821) conquest of the Netherlands weakened Dutch colonial authority, and, in response, the British East India Company launched an impressive conquest of French and Dutch holdings.

Led by the governor general of India, Gilbert Elliot of Minto (1751–1814), the British fleet attacked Java at the port city of Batavia in August 1811. The Dutch governor general, Herman Willem Daendels (1762–1818), had anticipated the attack. He withstood the onslaught for more than a month but was finally forced to surrender on September 17 at Semarang. The defeat, recorded in the Capitulation of Semarang, resulted in the Dutch cession of Java, Sumatra, and Macassar to the British.

In 1816 Great Britain ceded Java back to the Netherlands in return for Dutch assistance at the Battle of Waterloo (*see* HUNDRED DAYS' WAR), which resulted in the final exile of Napoleon.

Anglo-Dutch War in West Africa (1664–1665)

PRINCIPAL COMBATANTS: Netherlands vs. England

PRINCIPAL THEATER(S): Gold Coast of West Africa

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: The British seized Dutch holdings on the coast of West Africa, looking to exploit Africa's resources—gold and slaves.

OUTCOME: England strengthened its hold on the African coast and increased its exportation of gold and slaves.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Breda, 1667

The Anglo-Dutch War in West Africa was the second in a series of conflicts between the two nations that would eventually establish English domination over the high seas and bring to an end the “Golden Age” of the Dutch Republic. The lucrative slave trade in the New World had prompted English king Charles II (1630–85) to renew the 1651 Navigation Act, which spurred British commercial settlement along Africa's Gold Coast and the British seizure of Dutch holdings in the coastal region in 1664.

Dutch admiral Michiel de Ruyter (1607–76) responded with his Mediterranean squadron and recaptured the West African bases, but his success was eclipsed by events in the New World. England captured New Amsterdam in 1664, renaming the colony New York, and challenged other Dutch colonies. The following year Ruyter captured the Gold Coast fort at Cormintine (Fort Amsterdam). His absence from Holland proved critical, however, because the Second DUTCH WAR erupted in 1665 in Europe. The Dutch were stronger in that conflict, but the Dutch Armada, without Ruyter to command it, was nevertheless crushed at Lowestoft. Forced to return to Holland to handle the crisis at home, Ruyter failed to challenge the British at Cape Coast. The strong British presence in West Africa, left unchallenged when the British and the Dutch finally came to terms at Breda in 1667, became the foundation from which Great Britain would rise as an awesome colonial power commanding a navy second to none.

Anglo-French War (1109–1113)

PRINCIPAL COMBATANTS: England vs. France

PRINCIPAL THEATER(S): Normandy

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Opposition to English presence in France

OUTCOME: An inconclusive truce ended warfare for a few years.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None formally recorded; a truce ended the fighting in 1113.

William the Conqueror's (1035–87) invasion of England in 1066 (see NORMAN CONQUEST) shook the European political landscape and touched off a five-century struggle between France and England. The first Anglo-French War was precipitated by a power struggle between William's two sons, Robert Curthose (c. 1054–1134), duke of Normandy, and England's king Henry I (1068–1135), and foretold the course of centuries to come: that the monarchs of France would never reconcile themselves to the existence of English possessions on French soil. More than a matter of territory, this animosity between the two nations was rooted in deep-seated cultural differences and nationalist passions on both sides.

By 1109 Louis VI's (1081–1137) calls for resistance to English authority fostered a resistance movement led by Robert's son, William Clito (c. 1101–28). England's King Henry at last took action. He dispatched troops to the Vexin, a rich province of Normandy, and after several years of raids and counterraids, the revolt was suppressed. With both sides exhausted, hostilities ended in 1113 with a precarious truce, but the seeds of chronic aggression had been sown, and by 1116 war would once again resume.

See also ANGLO-FRENCH WAR (1116–1119).

Anglo-French War (1116–1119)

PRINCIPAL COMBATANTS: England vs. France

PRINCIPAL THEATER(S): Normandy

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Louis VI of France attempted to annex English-held Maine and Brittany in northwestern France.

OUTCOME: French forces were defeated; England maintained its hold on its French possessions.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Fewer than 1,000 total (both French and English)

CASUALTIES: Few on either side

TREATIES: None

A trio of French leaders led by Capetian monarch Louis VI (1081–1137), William Clito (c. 1101–28)—the son of imprisoned Robert Curthose (c. 1054–1134) and nephew of Henry I (1068–1139)—and Fulk (1092–1143) of Anjou stepped up their harassment of the Anglo-Norman government. Although Louis VI's motivations were to divert

English attentions from his own interest in annexing the provinces of Maine and Brittany, Louis also had as his object ending the English presence on French soil.

During the early years of the war the French managed to repel all English advances, but on August 20, 1119, Henry's troops defeated the French at the Battle of Bermule. Fewer than 1,000 men were engaged, and there were only a few casualties, but the demonstration of the superiority of Henry's forces was sufficient to prompt Louis to sue for peace on Henry's terms. The war ended in 1119, with Louis accepting English suzerainty over Brittany and Maine, a concession that reaffirmed Henry's claim to Normandy and greatly diminished the Capetian influence in northern France. Nevertheless, the Capetians continued to exercise an unprecedented degree of control over most of France and would do so well into the 14th century, thereby laying the foundation of the French nation-state.

Anglo-French War (1123–1135)

PRINCIPAL COMBATANTS: England vs. France

PRINCIPAL THEATER(S): Normandy

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: English hegemony in Normandy

OUTCOME: Revolt in northern France ended by the time of Henry I's death in 1135.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Like his father, William the Conqueror (1035–87), Henry I (1068–1135) continued to consolidate English rule and extend his power over northern France at the expense of the Capetian dynasty. His politically motivated marriage to Eadgyth (later called Matilda), a direct descendent of Alfred the Great (849–99), bore him two children, Matilda (1102–67) and William (d. 1120). The marriage and the birth of an heir earned Henry much-needed acceptance by the Anglo-Saxon English, who had been suspicious of his Norman lineage. In 1120 young William, Henry's only male heir, drowned when his *White Ship* struck a rock during a storm. The French resistance movement in Normandy seized upon the sudden loss of William to stage a revolt in the province of Maine in the Anglo-Norman territories of northern France. The resulting war, which lasted from 1123

to 1135, was the last between the Capetian monarch Louis VI (1081–1137) and the English king Henry I.

In an attempt to tighten England's hold over the rebellious province, Henry I dispatched troops to the area in 1123. One of Henry's opponents was Fulk (1092–1143) of Anjou, an ally of Louis VI and a veteran in the previous ANGLO-FRENCH WAR (1116–1119), who fought Henry despite the proposed marriage of Henry's daughter Matilda to Fulk's son Geoffrey Plantagenet (1113–51). Fighting was sporadic, and the struggle soon degenerated into a war of attrition. In 1128 the planned marriage took place, thereby securing a new English heir. By 1135 the revolt in Maine had also been extinguished, but other difficulties persisted, and the Capetians remained strong.

The ambitions of Matilda's husband, Geoffrey, became apparent in 1134, when he asked to be recognized as the duke of Normandy. Henry refused, and Geoffrey prepared to fight. This threat alienated the English acceptance of Matilda as heir, and, upon Henry's death in 1135 (the result of gorging on a meal of lampreys following a hunt), England was thrust into two decades of civil war over the subject of succession.

Anglo-French War (1159–1189)

PRINCIPAL COMBATANTS: England vs. France

PRINCIPAL THEATER(S): France

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: More a chronic state of hostilities than a single war, the conflict resulted from King Louis VII's fears that his vassal Henry II of England was becoming too powerful. Subsequently, the conflict developed into rebellion against Henry among his French possessions and a rebellion fomented by Henry's sons, Richard (later Richard I the Lionheart) and John (later King John ["Lackland"]).

OUTCOME: Nothing definitive resulted from the phase of the conflict between Henry II and Louis VII; the rebellion of Henry's sons strengthened their position, but Richard did not become king until the death (from natural causes) of Henry II.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No formal treaties

The so-called Anglo-French War of 1159–89 was really a series of conflicts in a more or less chronic state of war.

After the 21-year-old Henry of Anjou became King Henry II (1133–89) of England, he instituted a series of reforms that not only rescued Britain from the chaos that followed the death of his grandfather, Henry I (1068–1135), but also consolidated Plantagenet lands into a coherent, well-governed empire so vast that his feudal overlord, King Louis VII (1120–80) of France, became alarmed. And with good reason, for Louis did not command sufficient forces to wage out-and-out war against Henry. Instead, Louis resorted to playing a game of diplomatic intrigue designed to keep Henry off balance. In 1159, when Henry resolved to march on Toulouse to assert his claim there, he invaded from Normandy, only to find himself checked by Louis's forces, who already occupied Toulouse. In the highly structured world of medieval Europe, Henry declined to attack his nominal overlord. This is precisely what Louis had counted on. However, Henry secretly swore and plotted revenge.

The animosity between Henry and Louis increased as the French monarch repeatedly worked to erode Henry's position, primarily through nurturing revolt in English-held territories throughout France. In 1173 Louis prompted Henry's sons to rebellion (*see* ANGLO-NORMAN REBELLION), even manipulating Henry's queen, Eleanor of Aquitaine (c. 1122–1204). Jealous of her husband's many and open love affairs, Eleanor readily consented to Louis's blandishments and urged her sons on in their revolt, which in the end led to her imprisonment for the rest of Henry's life. The death of the French monarch in 1180 brought a temporary end to hostilities.

In 1183 Henry's son Duke Richard (1157–99) of Aquitaine—destined to be remembered by history as King Richard I the Lionheart of England—put down a new rebellion against his father by his older brother Henry (d. 1183). In 1189, Richard, aided by his brother John (1167–1216), later King John (“Lackland”) of England, and by France's King Philip II (1165–1223)—launched his own war against Henry. It ended only with the death of the betrayed father in 1189, and Richard ascended to the English throne.

See also ANGLO-FRENCH WAR (1202–1204); HENRY II'S CAMPAIGNS IN WALES.

Further reading: Richard W. Barber, *The Devil's Crown: A History of Henry II and His Sons* (Conshohocken, Penn.: Combined Books, 1996); Frank Barlow, *The Feudal Kingdom of England, 1042–1216* (London: Longman, 1972); John Le Patourel, *The Norman Empire* (Oxford: Clarendon Press, 1976).

Anglo-French War (1202–1204)

PRINCIPAL COMBATANTS: England vs. France

PRINCIPAL THEATER(S): Normandy

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: England's possession of Normandy

OUTCOME: England lost its French possessions.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: No formal treaties

Possession of the territory of Normandy was the pretext for almost continuous warfare between France and England in the Middle Ages. Each new monarch inherited the animosity initiated by William the Conqueror (1035–87) in 1066, and with each succession the royal families became increasingly more complex and intertwined. The Anglo-French conflict that began in 1202 perpetuated the cyclic behavior of the two nations and also marked the shift from English to French rule over the disputed region.

The death of the English king Richard the Lionheart (b. 1157) in 1199 ended a six-year war with France's Philip II (1165–1223). The following year the Peace of Le Goulet (May 22) was signed between Richard's successor, John I (“Lackland”) (1167–1216), and Philip II. John, immediately challenged by his cousin (or nephew) Arthur of Brittany for the throne, made several key concessions to Philip in order to solidify his ascension. The concessions coupled with John's own blunders, which included renouncing his marriage to Isabella of Gloucester (?–1217) and a new marriage to the fiancée of a French nobleman from Poitou, quickly established him as one of the more unpopular monarchs in English history. John's refusal to answer to Philip II—technically, his feudal overlord—for his matrimonial misconduct provided the French king with a reason to renew hostilities. Philip II declared all English holdings in France void. A rebellion in Poitou followed, and in 1202 a full-scale war erupted between the two monarchs.

During the first months of the war, King John captured his rival, Arthur, and 200 of his conspirators at Poitiers in an impressive raid that covered 80 miles and lasted 48 hours. Most historians believe John then murdered his cousin in a drunken rage. However, John failed to exploit his advances in Poitiers, thereby allowing Philip II to gain the offensive in the surrounding Angevin territory. Enjoining the sympathy of the local anti-English populace, Philip II felt confident enough to lay siege on an English military fortress built by Richard I of England called Château Gaillard.

Located on the banks of the Seine at Les Andelys, Château Gaillard was key to defending English holdings in Normandy. In September 1203 Philip II's knights surrounded the fort, and by March of the following year this last major English bastion fell. The door lay open for Philip II to invade the Norman city of Rouen.

On June 24, 1204, Philip II's knights executed a surgical strike that captured the city. Once Rouen had capitulated, Philip drove the English out of the whole region north of the Loire River. Philip II conquered the English fiefs of Anjou, Brittany, Maine, Normandy, and Touraine.

Although John maintained Gascony and some regions south of the Loire, the overall result of the Anglo-French War from 1202 to 1204 was England's loss of its long-cherished Angevin territory.

The war had been relatively brief, but it was rife with profound consequences for military history. Philip II established for the first time in history a semipermanent royal army through a combination of mercenaries and indentured servants. Philip's use of such an army in his siege of Château Gaillard demonstrated how a wealthy monarch could overcome the drawbacks of the purely mercenary forces typical of the Middle Ages, including the expense involved and the individual soldier's lack of devotion to a cause. In broader historical terms the war created an all-but-permanent rift between France and England that would endure some 500 years.

Further reading: Frank Barlow, *The Feudal Kingdom of England, 1042–1216* (London: Longman, 1972); John Le Patourel, *The Norman Empire* (Oxford: Clarendon Press, 1976); W. J. Warren, *King John* (New York: W. W. Norton, 1961).

Anglo-French War (1213–1214)

PRINCIPAL COMBATANTS: England, Holy Roman Empire (Germany), and Flanders vs. France

PRINCIPAL THEATER(S): Poitou (west central France) and Flanders (a principality of the Low Countries)

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: A contest for possession of lands in France formerly held by John II of England

OUTCOME: England and its allies were roundly defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Total unknown; English ships engaged in the naval battle off the coast of Damme numbered 500 vessels.

CASUALTIES: Unknown

TREATIES: Truce of Chinon, September 18, 1214

The previous ANGLO-FRENCH WAR (1202–1204) resulted in England's losing its vassalage in northwestern France. Further troubles between English king John I ("Lackland") (1167–1216) and Pope Innocent III (c. 1160–1216) followed, culminating in excommunication in 1209 and a papal ban in 1213. To avoid backlash and rebellion at home, John did penance and paid homage to the pope, who lifted the ban and restored John to the church. He felt that his losses in Normandy and his forced obeisance to the pope seriously undermined his prestige, and he looked for a way to bolster his faltering power base. He therefore forged a grand coalition with his nephew, the Holy Roman Emperor Otto IV (c. 1174–1218), and Ferdinand (1186–

1233), count of Flanders, to regain the lost territories in northwestern France and defeat, once and for all, Philip II (1165–1223) of France.

In March 1213, following a request for aid from Ferdinand, who was being pummeled in Flanders by French forces under Philip II, an English fleet led by the earl of Salisbury surprised the French fleet off the coast of Damme. The English fleet, numbering some 500 vessels, burned or captured virtually all of Philip's navy.

By February of the following year, John successfully invaded the western French province of Poitou. His battle strategy was to draw Philip's army to him and away from Paris, so that Otto and Ferdinand could march into the capital. This plan failed because of Otto's inept leadership and repeated delays. Leaving his son Prince Louis (1187–1226) in command in the south, Philip rushed back to Paris in time to build up a formidable defense. Meanwhile, in May young Louis defeated the English at Poitou, forcing them to retreat to La Rochelle. The victory at Poitou effectively ended the two-front war and set up a showdown between Otto and Philip. On July 27 their two forces met at Bouvines, a plateau outside Lille, then a part of Flanders, and after two weeks of intense fighting the French emerged victorious.

On September 18, 1214, the Truce of Chinon was signed, ending an abbreviated war with serious consequences for both John and Otto. The former was forced to cede all English vassalage in France and return home, weakened in prestige, to face his own internal crisis—the revolt of the nobility that eventuated in the creation of the Magna Carta (1215). As for Otto, his loss resulted in the forfeiture of the imperial throne.

Further reading: Frank Barlow, *The Feudal Kingdom of England, 1042–1216* (London: Longman, 1972); John Le Patourel, *The Norman Empire* (Oxford: Clarendon Press, 1976); W. J. Warren, *King John* (New York: W. W. Norton, 1961).

Anglo-French War (1242–1243)

PRINCIPAL COMBATANTS: England vs. France

PRINCIPAL THEATER(S): Northwestern France

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: England attempted to regain lands King John I lost to France.

OUTCOME: English defeat; a truce was negotiated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the battle of Saintes, July 21, 1242, England, 700 crossbowmen; France, unknown

CASUALTIES: Unknown

TREATIES: Truce concluded at Bordeaux, 1243

A renewal of Anglo-French conflict began in 1242 when Henry III (1207–72) of England invaded France at Saintonge, on the Bay of Biscay, in an attempt to regain the Angevin lands lost by his father, King John I (“Lackland”) (1167–1216). Henry’s invasion was quickly repelled by French forces under King Louis IX (1214–70).

The major event of the war was the Battle of Saintes, fought on July 21, 1242. Having already been defeated at Taillebourg the previous day, Henry’s regiment of 700 crossbowmen was left in a precarious position on the banks of the Charente River when Louis’s cavalrymen crushed them at Saintes. Tactically, it was a minor battle, but the defeat forced Henry to realize the futility of further action, and he retreated into Gascony. The brief war concluded with a truce at Bordeaux and paved the way for the 1259 Treaty of Paris, by which Henry renounced English claims to northwestern France. Louis IX, who was in the process of organizing the Seventh CRUSADE, paid little attention to enforcing the truce, which was negotiated after Henry’s retreat. This diplomatic failure ensured that Anglo-French tensions would remain high.

Unknown

CASUALTIES: Unknown

TREATIES: Signed at Tournai, January 31, 1298

The war between Edward I (1239–1307) of England and Philip IV the Fair (1268–1314) of France broke out when Philip’s troops moved on English holdings in Gascony. In response Edward declared war on France in June 1294 but was faced with an alliance between the French and the ever-rebellious Scots. Edward managed to quell a Scottish revolt at home early in 1295, but doing so weakened his

position in France, and Philip’s forces penetrated farther into Gascony.

It was 1297 before Edward could mount an offensive designed to divert Franco-Scottish aggression from Gascony by taking the Norman territory of Furnes. This strategy failed when Edward was defeated by superior French cavalry, and the English monarch sued for peace. The truce, concluded in April 1297 at Vyve-Saint-Bavon, left Gascony in the hands of the French. The following year the war officially ended with a treaty signed on January 31, 1298, at Tournai. The agreement arranged for two intermarriages between the royal families of France and England in order to seal the peace. The marriage deprived Scotland’s William Wallace (c. 1270–1305) of his most important ally, greatly weakening the Scottish cause.

Anglo-French War (1300–1303)

PRINCIPAL COMBATANTS: England and Flanders vs. France

PRINCIPAL THEATER(S): Flanders

DECLARATION: Flemish revolt, known as the Matins of Bruges, on May 18, 1302

MAJOR ISSUES AND OBJECTIVES: The empire-building Edward I sought to reassert English claims in France by backing a revolt in Flanders; the French fought to maintain their control over Flanders.

OUTCOME: England regained hegemony in Gascony, and Edward’s empire building was strengthened.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Peace of Paris, 1303

Although a truce between England and France had followed the ANGLO-FRENCH WAR (1294–1298), an English-backed revolt in Flanders rekindled aggression in 1300. King Edward I (1239–1307) of England, since 1297 deeply involved in a war with rebellious Scotland known as WALLACE’S REVOLT, gave his approval and promised backing to his Flemish allies to take up arms against French king Philip IV the Fair (1268–1314). The extent of English involvement in the resulting struggle was limited to Edward’s support of Flemish actions, but the subsequent French defeat in 1302 gave Edward a strong position in the peace negotiations.

Since the war of 1294–98 Flanders had been at the mercy of Philip IV the Fair, who ruled the region harshly.

Several years of active resistance led to a full-scale revolt, the Matins of Bruges, in the west Flanders town of Courtrai on May 18, 1302. The Flemish, led by Guy de Dampierre (c. 1225–1305) and armed with heavy pikes and other weapons unconventional for the time, faced a formidable French armored cavalry led by Robert d'Artois (1250–1302). On July 11, 1307, the feudal army charged the “pike wielding” Flemish, which resulted in the utter rout of the stunned French forces, thousands of whom were slain, including Artois, as the pikemen emerged from their well-positioned cover along the waterways of Flanders. One of the most significant victories of infantry over armored cavalry in the Middle Ages, the Battle of the Spurs—named for the 700 pairs of gilt spurs removed from the slain knights and displayed as trophies in Courtrai Cathedral—forced the French to negotiate with England. The battle was a disaster for the knights, their horses all but useless in the prevailing mud. After the battle, the Peace of Paris in 1303 between France and England restored English hegemony over Gascony and greatly strengthened Edward's growing empire.

Anglo-French War (1475)

PRINCIPAL COMBATANTS: England vs. France

PRINCIPAL THEATER(S): France (despite invasion, no battles were fought)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: England's King Edward IV, of the house of Lancaster, took revenge on France for backing the house of York, Edward's opponents in the 40-year struggle for the English Crown.

OUTCOME: Inconclusive; Louis XI of France paid Edward to withdraw.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: None

TREATIES: Truce concluded at Picquigny, 1475

The end of the HUNDRED YEARS' WAR (1337–1457) between England and France gave way to a long civil war in England. Called the Wars of the ROSES (1455–1485), it pitted the rival houses of York and Lancaster in a struggle for possession of the English throne. Because the French supported Henry VI (1421–71) of the house of Lancaster during the war, Edward IV (1442–83) of the house of York, who twice deposed Henry, in 1461 and 1470, invaded France in 1475.

Although Edward's army crossed the English Channel and landed at Calais, no battles were fought. Edward's alliance with Charles the Bold (1433–77) of Burgundy,

rival to French king Louis XI (1423–83), greatly concerned the French monarch, who had made plans to invade Burgundy and did not wish to meet combined Burgundian and English resistance. Therefore, to forestall a coalition against him, Louis XI met with Edward at Picquigny, where they negotiated an end to the bloodless war. Louis XI's truce provided a large sum of money to Edward in return for the complete withdrawal of English forces. The truce had effects on both sides of the Channel. Using the French funds, Edward was able to secure his rule and leave a sizable trust to his sons, Edward V (1470–83) and Richard (1472–83), who shortly after their father's death in 1483, were placed in the Tower of London by their uncle, the duke of Gloucester, later King Richard III (1452–85). For his part, Louis XI invaded Burgundy in 1477 without English interference and killed Charles the Bold.

Anglo-French War (1542–1546)

PRINCIPAL COMBATANTS: England and the Holy Roman Empire vs. France

PRINCIPAL THEATER(S): Boulogne (France) and the Isle of Wight

DECLARATION: Holy Roman Emperor Charles V declared war on France on July 30, 1542.

MAJOR ISSUES AND OBJECTIVES: England retaliated when France allied with Scotland in its war against Henry VIII.

OUTCOME: France ceded Boulogne in exchange for 2 million French crowns.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: England, 40,000; France, 30,000

CASUALTIES: France, 800 killed; England, 700 killed

TREATIES: Treaty of Crépy-en-Laonnois, September 18, 1544, between the Holy Roman Empire and France; Treaty of Campe (or Ardres), June 7, 1546, between England and France

The Anglo-French War of 1542–46 between Henry VIII (1491–1547) of England and Francis I (1494–1547) of France started when Henry formed a precarious alliance with Holy Roman Emperor Charles V (1500–58), who had declared war on France on July 30, 1542. The necessity of suppressing rebellion in Scotland relegated Henry's role to that of a silent partner in the conflict, but a royal victory over the Scots at Solway in the fall freed Henry for greater involvement (see ANGLO-SCOTTISH WAR [1542–1549]). On December 31, 1543, Charles V and Henry VIII concluded a secret treaty, which called for a dual invasion of France.

Hostilities started in July 1544, when Henry commissioned Sir John Wallop (1490–1551) and his 5,000-man infantry to lay siege against Boulogne. Henry then redi-

rected Wallop and his men to aid Charles in his siege against the French region of Landrecies.

The provisions of the secret treaty called for a joint campaign to begin in June 1544, with the object of marching on Paris together. On July 3 Henry arrived in France to lead a force of 30,000 men. He took over the siege of Boulogne and captured the town on September 14, just four days before Charles, independently of Henry, came to terms with the French. The defeated garrison was allowed to withdraw in peace from Boulogne, and the Treaty of Crépy-en-Laonnois between the emperor and France ended the dual invasion. Henry returned to England, leaving behind a skeleton force of 3,300 men. Over the next year fighting resumed and was sporadic, limited to periodic raids and counterattacks, until the summer of 1545, when Francis I led a naval campaign in the English Channel, which burned the Isle of Wight and resulted in the accidental sinking of the English flagship *Mary Rose*. Wet weapons and poor strategic planning prevented the French from capitalizing on what they had gained, forcing them to withdraw to Havre.

Limited fighting continued until a final peace treaty could be agreed upon. Negotiations started as early as November 1545 but stalled because Henry VIII stubbornly demanded the restoration of English hegemony in Boulogne. In May 1546 the talks were moved to Campe, where they continued until June 7, 1546, when the Treaty of Campe (or Ardres) was concluded, whereby France ceded Boulogne to England for a period of eight years in return for a payment of 2 million French crowns.

Anglo-French War (1549–1550)

PRINCIPAL COMBATANTS: England and France

PRINCIPAL THEATER(S): France

DECLARATION: England declared war on August 9, 1549.

MAJOR ISSUES AND OBJECTIVES: France attempted to recapture Boulogne and environs, one of England's last possessions in France.

OUTCOME: Though French forces encircled the city, they could not capture it; France purchased it from a war-weary England.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Boulogne, March 24, 1550

The Treaty of Campe (1546), concluded between Henry VIII (1491–1547) of England and Francis I (1494–1547)

of France, ended the ANGLO-FRENCH WAR (1542–1546), but it failed to reconcile the deep-seated animosity between the two nations. Thus, within a few years of the deaths of the two principal signatories, a new generation of Anglo-French Wars began.

French king Henry II (1519–59), like his father, Francis, could not tolerate the existence of English possessions on French soil and was particularly offended by the terms of the Campe agreement, which annexed Boulogne to England. In 1548 he therefore initiated hostilities against the underage and ailing successor to Henry VIII, Edward VI (1537–53), who governed under the inept regency of his brother-in-law, Edward Seymour (c. 1500–52), duke of Somerset. This state of affairs invited French rebellion in the English possessions, and the French also supported rebellious Scots in the British Isles themselves.

Provoked by Henry II's continual harassment, England officially declared war on France on August 9, 1549. The French, counting on English civil unrest in Scotland to prevent a serious defense of Boulogne, mounted a large-scale offensive strike in the area around the city on August 14. By September Henry was able to lay siege to Boulogne itself. However, the small English contingent within the walls of Boulogne, led by Edward Fiennes (1512–85), managed to weather the siege. With the approach of winter both sides dug in, and the war became one of attrition. By January both sides were ready to negotiate.

The talks began on February 18, 1550. Representing the English monarch was the duke of Northumberland—Somerset had been deposed in January—and Henry II, himself represented the French. On March 24, 1550, the Treaty of Boulogne was signed. Since the French had been unable to take Boulogne, they agreed by treaty to purchase it for £400,000. Accepting this sum, the English abandoned one of the last of their French possessions in April 1550, and a shaky peace between the two nations endured for seven years.

Anglo-French War (1557–1560)

PRINCIPAL COMBATANTS: England and Spain vs. France and Pope Paul IV

PRINCIPAL THEATER(S): France

DECLARATION: England declared war on France on June 7, 1557.

MAJOR ISSUES AND OBJECTIVES: England's alliance with Spain, forged through royal marriage, drew English forces into war when Rome, allied with France, engaged Spain in war.

80 Anglo-French War (1627–1628)

OUTCOME: England lost Calais to France; the French withdrew from Scotland; and Elizabeth I was recognized as queen of England.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: At the Battle of Gravelines, France, 5,000 killed, 5,000 taken prisoner

TREATIES: Treaty of Cateau-Cambrésis, April 3, 1559, and Edinburgh Treaty, 1560

The 1554 marriage of Philip II (1527–98) of Spain to Mary I (1516–58) of England was the first link in the chain of circumstances that led to the Anglo-French War of 1557–60. In 1556 French king Henry II (1519–59) had joined Pope Paul IV (1476–1559) in a war against Spain. The alliance provoked England into joining the conflict in support of Spain's King Philip, and on June 7, 1557, England officially declared war on France. In England the war was popular with the military aristocracy but highly unpopular with the Protestant merchant classes, who objected to it on religious as well as commercial grounds and gave the effort little support. Indeed, the war would prove harmful to commerce, disrupting English trade routes in Crécy in France.

During the first months of the war England defeated the French at St. Quentin. In an ambush of the French constable Anne de Montmorency (1493–1567), English and Spanish troops captured more than 7,000 French troops around the perimeter of St. Quentin and laid siege to the city. St. Quentin fell on August 27 when 2,000 English troops stormed the walls. Although the quick victory boosted the English cause on the mainland, it proved insignificant in the long run. The French, humiliated over the loss of St. Quentin, reorganized and on January 1, 1558, captured the English fortress at Calais and the strategic harbor base of Rysbanck. Meanwhile, Philip, after suffering several setbacks, defeated the French at Gravelines during the summer, killing 5,000 French troops and taking 5,000 prisoners. Although the English were not involved in the battle, as they were reported to have been, Philip's victory led to the negotiations that ended the war.

Peace talks continued through 1558. For the English the main issue was the return of Calais. For Philip it was independence for the duchy of Savoy. As long as he was married to Mary, Philip felt obligated to push for the restoration of Calais, but her sudden death during 1558 freed him from this obligation. Thus, on April 3, 1559, the Treaty of Cateau-Cambrésis was signed between Spain, England, and France without the restoration of Calais to England. The Cateau-Cambrésis agreement inspired the signing of the Edinburgh Treaty in 1560 between England and Scotland, which provided for complete French withdrawal from Scotland and gained international recognition

of Elizabeth I (1533–1603), who succeeded Mary, as the legitimate queen of England.

Anglo-French War (1627–1628)

PRINCIPAL COMBATANTS: England and Huguenots vs. France

PRINCIPAL THEATER(S): La Rochelle, France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The English backed a Huguenot rebellion.

OUTCOME: Defeat of the Huguenots enabled French chief minister Cardinal Richelieu to consolidate Bourbon authority.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: English, 8,000 in 90 ships; French, 25,000 Huguenots, unknown

CASUALTIES: English, 4,000. French, unknown; Huguenots, 75,000 dead in fighting, 15,000 from starvation and disease

TREATIES: Peace of Alais, 1629

In 1627 the Huguenots (French Protestants), claiming violation of their right to military autonomy as promised in the Edict of Nantes (1598), staged a second revolt against the French Crown from their citadel at La Rochelle on the Bay of Biscay. French chief minister Cardinal Richelieu (1585–1642), deeming the Huguenots a threat to the Bourbon monarch Louis XIII (1601–43), responded to the uprising on August 10, 1627, by laying siege to the city.

Sympathetic to the Huguenot cause and seeing a chance to exploit the temporary instability of a rival nation, Charles I (1600–49) of England sent three naval fleets to aid the rebels, who stoutly withstood the siege. Nevertheless, each of the relief expeditions failed, and the 14-month-siege finally ended when the Huguenots capitulated on October 28, 1628.

During the conflict both Charles and Richelieu were involved in their own internal battles. Charles's struggle with Parliament over the funding for the expedition to aid the Huguenots culminated in August 1628 with the assassination of the duke of Buckingham, a champion of the effort to aid the Huguenots. Richelieu, hungry for power, power that was totally dependent on the absolute hegemony of the Bourbons, was able to exploit his victory over the Huguenots to implement his overall strategy of centralizing Bourbon rule. The Peace at Alais, signed in 1629, effectively ended Huguenot military power in France.

Anglo-Irish Civil War (1916–1921)

PRINCIPAL COMBATANTS: Irish nationalists vs. Great Britain

PRINCIPAL THEATER(S): Ireland

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Irish independence from Great Britain

OUTCOME: The Irish Free State was established incorporating all but six Irish counties in the Protestant north, laying the ground for continued civil unrest.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Britain, 100,000; Ireland, 3,000

CASUALTIES: Britain, 1,585; Irish Republican Army, 500; Easter Uprising, Britain, 529 killed and wounded; Ireland, 62 killed (Irish wounded unknown)

TREATIES: Anglo-Irish Treaty, December 6, 1921

The history of English involvement in Ireland dates back to 1171 when Henry II (1133–89) invaded the island and proclaimed himself overlord of the region. Yet organized resistance did not arise until the Protestant movement of the 1690s. By 1798 an Irish Protestant revolt led to the formation of the United Kingdom of Great Britain and Ireland on January 1, 1801. During the mid-19th century the Irish encountered a devastating famine, resulting in more than 1 million deaths and an equally large number of emigrants, most of whom fled to America. The crisis fueled anti-British sentiment in Ireland and increased the internal hostilities between the Protestants and the Catholics. An independence movement known as Fenianism emerged from the Irish plight, which threatened English hegemony through terrorist actions and subsequently forced Parliament to consider Irish autonomy.

Charles Stewart Parnell (1846–91) led the fight in Parliament for the compromise policy known as Home Rule (which promised Irish autonomy in internal affairs only) in the late 1800s. Parliament finally passed a Home Rule

bill in 1912. However, radical opposition and the outbreak of WORLD WAR I postponed implementation. In response to what the Irish felt was deliberate hedging on the Home Rule policy by the British Parliament, a group known as the Irish Republican Brotherhood (which in time would become the Irish Republican Army [IRA]), led by Sir Roger Casement (1864–1916), James Connolly (1870–1916), Patrick Pearse (1870–1916), and others, organized a rebellion to begin on Easter, April 24, 1916. On returning from a weapons procurement trip to Germany, Casement was captured and imprisoned, which scuttled plans for a national revolt. However, nearly 2,000 die-hards under Connolly and Pearse went ahead with the Dublin uprising scheduled for Easter Sunday. Within a week 20,000 British troops were in Ireland, and the rebellion had been crushed.

In the wake of the EASTER UPRISING, fifteen Irish Republican leaders were summarily executed, 2,000 rebels were just as summarily imprisoned, and the British began a campaign of persecution against the relatively tiny Sinn Féin, an Irish political society seeking independence from Britain, which the English assumed—incorrectly—had been the organization that planned the rebellion. Thousands of patriots rushed to the ranks of Sinn Féin, making it the most powerful nationalist organization in Ireland. Following the executions of Pearse on May 3 and Connolly on May 12, a surviving Irish Republican Brotherhood leader, Eamon de Valera (1882–1975), came to prominence and demanded a republican government.

The British made an attempt in 1917 to generate a consensus in Ireland by setting up the Irish National Convention, but then—with typical imperial heavyhandedness—destroyed whatever gains they had made by announcing a plan, never to be fulfilled, to draft Irishmen for the war in Europe. The Irish responded at the ballot box and in the streets.

Sinn Féin won 73 of the seats in the British Parliament assigned to Ireland, then, to a man, the elected refused to go to London. Instead, they set up an independent provisional government with its own assembly, the Dáil Éireann, elected by Irish members of the British Parliament. They also established an Irish court system and organized the Irish Republican Army (IRA) to resist British administration and secure official recognition for the republic. The British promptly arrested 36 of the Irish parliamentary delegates, but the remaining 37 ratified the Irish Republic proclaimed during the Easter Uprising.

Led by Michael Collins (1890–1922), the IRA was soon engaged in widespread ambushes and attacks on local barracks. The British retaliated with ruthless reprisals. Most of the Irish police force resigned. The British replaced it with a group of English recruits, known from the color of their temporary uniforms as the “Black and Tans.” Violence seemed hardly avoidable. The IRA and the Irish Volunteers launched into two and a half years of guerrilla warfare, which the Irish called “the Troubles,” a counter-

terrorist insurgency against the Royal Irish Constabulary of the Black and Tans.

As Ireland descended into something very much resembling civil war, the British bit by bit alienated Irish public opinion. They were soon forced—partly by Irish-American pressure, partly by Ireland's public support for the IRA, partly by such isolated heroic acts as the 1920 hunger strike of the Lord Mayor of Cork—to pass the Government of Ireland Act of 1920. With this act Britain continued its bungling by partitioning the island into two administrative regions, each with limited autonomy, which pleased none of various factions and laid the groundwork for future sectarian violence.

Outraged by the way the north had been divided to create a Protestant majority, the IRA stepped up its guerrilla war against the British. Britain retaliated by imposing martial law and setting loose the Black and Tans. The violence peaked on Bloody Sunday, November 21, 1920. In the morning the IRA assassinated in Dublin 11 men it suspected of being British intelligence agents. The Black and Tans struck back that afternoon, opening fire on a crowd watching a football match in a Dublin park. When the smoke cleared, 12 lay dead, 60 others wounded. Across Ireland hostility toward the British boiled over, and, as the terror continued, liberal British prime minister David Lloyd George (1863–1945) decided it was time to revisit the “Irish Question.” A truce was declared in July 1921 that led to an Anglo-Irish Treaty on December 6, 1921, granting the 26 counties of southern Ireland dominion within the commonwealth. However, the partition between these and the six Protestant counties in the north remained, pleasing neither Protestant Ulster nor Catholic Dublin. Nevertheless, Dublin accepted the partition and became capital of the Irish Free State.

The 1921 proposal that established the Free State ended the Anglo-Irish guerrilla war for the time being, but it wreaked havoc on Ireland's sense of identity. Free Staters accepted dominion as a step toward true independence; radical republicans considered it an insult. Then IRA mastermind Michael Collins signed Lloyd George's treaty and helped set up the new provisional government. Collins, a larger than life figure who would inspire the likes of Mao Zedong (Tse-tung) and Yitzhak Shamir (b. 1915), had just signed his own death warrant. Immediately after the treaty was put into effect, IRA diehards, vowing never to accept a separate Northern Ireland, ambushed and killed their former leader in his native County Cork on August 22, 1922. The IRA, born from the ashes of the Easter Uprising, would fight on—so said its members—until the whole island was both free and united.

Anglo-Norman Rebellion (1173–1174)

PRINCIPAL COMBATANTS: Forces of Henry II vs. rebels in Normandy and Brittany; also rebellious English barons allied with William I the Lion, king of Scotland

PRINCIPAL THEATER(S): Normandy, Brittany, and England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Faced with multiple rebellions, Henry II had to resist in order to maintain the full extent of his empire.

OUTCOME: Henry not only successfully crushed all the rebels, he achieved political dominance over Scotland.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The four sons of Henry II (1133–89), king of England, were each apportioned by the king a foreign land to rule over. This was Henry's method of keeping the rebellious young men in check, for although between them they held nominal sway over territory extending from the Pyrenees to Scotland, they enjoyed no truly sovereign power. Ultimately, three of the sons, Henry (1155–83), Richard (later Richard the Lionheart, 1157–99), and Geoffrey (1151–1212), proclaimed independence from their father and fled to France. Only John (“Lackland”) (1167–1216), the youngest, remained loyal.

The sons were egged on by their mother, Eleanor of Aquitaine (c. 1122–1204), in cahoots with the king of France Philip II Augustus (1165–1223). Encouraged and supported by Eleanor and the French monarch, the three sons began a revolt in Brittany and Normandy. Seeing an opportunity to exploit Henry's beleaguered state, William I the Lion (1143–1214), king of Scotland, leagued with a group of perpetually discontented English barons to mount a rebellion in England itself.

A highly skilled military leader, Henry parried the threats on both sides of the English Channel. He defeated the forces of his sons in France and the barons in England. Stability had returned to the Anglo-Norman empire by the

end of 1174, and all of those who had rebelled expressed their craving for Henry's royal pardon. Wisely, Henry refrained from exacting mere revenge. He pacified his sons with subsidies but steadfastly refused to relinquish to them any real power. The barons, pardoned, were nevertheless broken in rank. William I the Lion was made a prisoner, then freed on condition that he acknowledge Scotland a fief of England. What had begun as a desperate defensive war was brilliantly reversed to become a triumph of Henry the tactician.

Anglo-Persian War (1856–1857)

PRINCIPAL COMBATANTS: Britain vs. Persia

PRINCIPAL THEATER(S): Persia

DECLARATION: Britain declared war on Persia on November 1, 1856.

MAJOR ISSUES AND OBJECTIVES: Britain supported Afghanistan against Persian invasion.

OUTCOME: Britain prevailed; no Persian concessions were sought, except for Persian evacuation of Afghanistan and recognition of Afghan boundaries.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Anglo-Indian forces, approximately 21,000; Persia, 20,000 regulars supplemented by 150,000 irregular cavalry

CASUALTIES: Anglo-Indian, 500 killed; Persian, 1,500 killed

TREATIES: Treaty of Paris, April 1857

Persian forces invaded Afghanistan in 1855, occupying the strategically positioned city of Herat in 1856. Feeling its Indian frontier threatened, Britain declared war. Although Persia's regular army numbered on paper 86,700, only about 20,000 men were fit for duty. These regular forces were supplemented by 150,000 poorly trained and poorly equipped irregular cavalry troops. Against these forces the British mustered about 21,000 Anglo-Indian troops, of whom some 5,000 were dispatched to take the Bushire Peninsula on the Persian Gulf. An equal number of Persian troops were defeated on the peninsula within a month, and the campaign ended on November 1, 1856. It was followed late in January 1857 by an inland advance of 4,400 Anglo-Indian troops to confront a superior Persian force of 7,800 at Khoosh-ab, about 40 miles from the gulf coast. The battle took place on February 8, 1857, and was a humiliating defeat for the Persians, who lost some 700 immediately and several hundred more in the pursuit that followed. Anglo-Indian losses were just 19 killed and 64 wounded.

In March the Anglo-Indian forces began an assault against Mohammerah on the northern end of the Persian Gulf and at the confluence of the Tigris and Euphrates Rivers. The position was very strongly defended by artillery emplaced behind 18-foot earth berms. The Persian garrison was some 13,000 strong. The British strategy was to coordinate naval bombardment from the gulf with land operations by 4,000 Anglo-Indians under Sir James Outram (1803–63). This combination easily defeated the fortress, which fell on March 26. Persian losses totaled about 300, whereas the Anglo-Indian army lost 41 killed or wounded. The capture of Mohammerah came while peace negotiations were already in progress and resulted in the surrender of Shah Nasr ed-Din (1831–96), who agreed to evacuate Afghanistan and to respect its borders henceforth.

Anglo-Portuguese War (1612–1630)

PRINCIPAL COMBATANTS: Portugal vs. England

PRINCIPAL THEATER(S): Arabian Sea off western India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: English merchants wished to break into the East Indies spice trade; the Portuguese sought to maintain their control of trafficking in the Indian Ocean.

OUTCOME: With Portugal defeated at sea, England's East India Company set up shop in competition with the Dutch, and Portuguese influence in the area rapidly declined.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Hostilities ended with no formal treaty between nations, but in 1630 a trade agreement was concluded between the governors of Portuguese Goa and English Surat, both on the West Indian coast.

In 1600, when Queen Elizabeth I (1533–1603) chartered the English East India Company (only later would it be called the *British* East India Company, after England had incorporated Scotland and begun building its sea-borne empire), she had in mind muscling her way into the Spice Island trade, which she assumed meant going up against the Dutch monopoly of Indian Ocean traffic. Much to the surprise of East India Company merchants, however, when they actually arrived in the south seas it was not the Dutch but the Portuguese who controlled the Indian Ocean from their trading centers at Goa and elsewhere in western India.

84 Anglo-Scottish War (1079–1080)

Undaunted, the Englishmen established in 1611 a settlement at Masulpatam on India's east coast. Soon East India Company merchant vessels, armed to the teeth, set sail, determined to keep the Persian Gulf open to England's East Indies trade. Operating out of Surat, on India's western shore, the small English commercial-belligose squadron would meet and defeat a larger fleet of Portuguese men-of-war in two engagements off Jask in 1612 and 1614. The first victory allowed East India Company officials to acquire trading rights at Surat and set up a post there in 1612; the second gave England superiority in the Arabian Sea. With the trade routes now open, the English adopted a policy of harassment and subversion, interfering with Portuguese shipping, supporting rebellions in Portuguese colonies, and lavishly assisting countries chafing under Portugal to escape its control. At Portuguese expense both the English and the Dutch East India companies secured new trade rights along the Indian coast and began setting up trading post after trading post. England's entry into the Spice Island traffic proved too much for a Portugal that had long been battling tooth-and-nail with the Dutch in the region (see PORTUGUESE-DUTCH WARS IN THE EAST INDIES), and in 1630 the Portuguese governor of Goa and the English governor of Surat reached a trade agreement, bringing the hostilities to a halt and transferring Portugal's trading centers in India to other nations. As Portugal's trade presence in the East Indies declined, so did its once-powerful influence in the region.

Anglo-Scottish War (1079–1080)

PRINCIPAL COMBATANTS: Scotland vs. England
PRINCIPAL THEATER(S): Northumbria and Scotland
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: King Malcolm III Canmore of Scotland sought control of Northumbria.
OUTCOME: Malcolm was foiled, although warfare in the borderlands continued sporadically.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown
CASUALTIES: No figures available, but losses were slight
TREATIES: None

William I the Conqueror (1035?–87) ostensibly secured Scottish homage after his invasion of Scotland in 1072. Nevertheless, the Scottish king Malcolm III Canmore (d. 1093), son of Duncan (r. 1034–40) and the monarch who began the consolidation of royal power in Scotland, con-

tinued to harry the border region, north of the River Tees, despite his having acknowledged William's overlordship. In 1079 Malcolm at last mounted a full-scale invasion of English territory, overrunning Northumbria down to the Tyne River. In response William led an Anglo-Norman army into Scotland. The two forces clashed in numerous skirmishes, but no major battle developed, and King Malcolm pledged his renewed allegiance to William. William then withdrew, taking the precaution, however, of building a large defensive castle at Newcastle-on-Tyne. It proved a prudent step, for Malcolm continued to raid the border region until he was killed in 1093 by William's son and successor, William II Rufus (r. 1087–1100).

Anglo-Scottish War (1214–1216)

PRINCIPAL COMBATANTS: Scotland (with backing of English barons) vs. English forces of King John I
PRINCIPAL THEATER(S): The north of England
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: Scotland's King Alexander II invaded England at the behest of the English barons to pressure England's King John I into yielding more power to them.
OUTCOME: John's supporters in the north of England were suppressed.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown
CASUALTIES: No figures available, but losses were certainly very light.
TREATIES: None

Around the turn of the 12th century, the English barons were pressing England's king John I ("Lackland") (1167–1216) to grant them significantly expanded rights, and in 1214 they prevailed upon King Alexander II (1198–1249) of Scotland to invade northern England and harass King John's supporters there. This Alexander did, adding to the pressures that prompted King John in 1215 to conclude the Magna Carta, which ensured feudal rights and guaranteed that the king would not encroach upon baronial privileges. However, when the king persuaded Pope Innocent III (1160–1216) to nullify the Magna Carta, the barons continued to support Alexander's raids as part of their general revolt against John.

Although the war spanned two years, no major battles were fought, and the action was limited to raids in the north of England, near the Scottish border. Alexander succeeded in suppressing John's partisans in the border region and also eliminated there various contenders for his own throne. John's death in 1216 ended the hostilities, however, and Alexander established friendly relations with King John's successor, Henry III (1207–72), whose son-in-law he became.

Anglo-Scottish War (1482)

PRINCIPAL COMBATANTS: England vs. Scotland

PRINCIPAL THEATER(S): Scotland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: England's King Edward IV sought to put a friendly king on the Scottish throne.

OUTCOME: The Scottish king, James III, was effectively deposed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Truces concluded 1484, 1487, 1491

In the late 1470s, King Edward IV (1442–83) of England, always eager to see the rival kingdom of Scotland weakened, plotted with the brother of Scottish king James III (1452–88), Alexander Stuart, duke of Albany (c. 1454–85), to overthrow James. Shortly after this plot was hatched, nobleman Archibald “Red” Douglas (1449–1514), another enemy of the Scottish king, leagued with Albany. In 1479, however, Albany was arrested and imprisoned by James. Albany managed to escape, fleeing first to France and then to England. Here he gathered an army of invasion and then

allied himself with Douglas and others in a bold foray into Scotland. At Lauder Albany made James a captive.

Albany did not execute the Scottish king but did compel him to watch the execution of a number of his friends, favorites, and courtiers. Following this the now powerless James was sent packing to Edinburgh, and Albany took up the reins of government while the English army he had raised proceeded to retake Berwick, the English stronghold that had been lost to Scottish forces during the **SCOTTISH WAR (1314–1328)**.

Anglo-Scottish War (1513)

PRINCIPAL COMBATANTS: England vs. Scotland

PRINCIPAL THEATER(S): Northern England

DECLARATION: Scotland declared war on England, August 11, 1513.

MAJOR ISSUES AND OBJECTIVES: Continuation of ongoing power struggles between England and Scotland

OUTCOME: Ostensible English victory came at such cost that English forces withdrew, and border clashes between England and Scotland continued.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

England, approximately 15,000; Scotland, 30,000

CASUALTIES: At Flodden, the central battle of the war, 10,000 Scotsmen fell, together with a similar number of English.

TREATIES: None

Chronic warfare between England and Scotland prompted the Scottish king James IV (1473–1513)—known as “Rex Pacificator,” King Peacemaker—to seek peace with England. However, when England's Henry VIII (1491–1547) invaded France (see **ANGLO-FRENCH WAR [1542–1546]**), longtime ally of Scotland, James IV felt he had no choice but to declare war on England. This was followed by an invasion of England. Unfortunately for James, the invasion got under way slowly and proceeded with much delay, which gave England's Thomas Howard (1443–1524), earl of Surrey, sufficient time to gather a defensive force.

On September 9, 1513, the Scottish forces occupied the high ground at Flodden Edge, a position readily defended by Jones's 20,000 French-trained pikemen and 9,000 Highlanders, backed by 17 cannons. Surrey, who had 14,000 infantry and 23 field pieces, saw a weakness in the

Scots' position. James outnumbered him two-to-one, but Surrey's modern artillery and his full complement of archers gave him, he believed, an advantage. Quickly surrounding Flodden, marching around James's flank, he forced the Scots to face to the rear. This accomplished, Surrey bombarded James's army with artillery and volleys of arrows. Despite James's order to the contrary, this provoked the pikemen to leave the relative safety of their hilltop position and charge down the hill. It was a pitched battle that lasted from the afternoon until nightfall. Repeatedly, the smaller English force repelled attacks from the Scots, and gradually, the Scottish army dwindled. By the end of the battle, 10,000 Scots lay dead, including James and most of his noblemen: nine earls and 14 lords. The Scots peerage was, in a single battle, reduced by half. The cost to the English in this defensive battle was also very heavy.

Burdened with war against the French, Henry VIII could not afford to capitalize on this hard-won victory. In a fit of mean spiritedness, the English refused to yield the body of James IV, but the army of Surrey departed the field. Scotland was not invaded, and James V (1512–42), infant son of the slain king, ascended the Scottish throne. Border warfare would remain chronic through 1560.

Anglo-Scottish War (1542–1549)

PRINCIPAL COMBATANTS: England vs. Scotland

PRINCIPAL THEATER(S): Scotland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In continuation of long-term conflict, England's King Henry VIII attempted to assert suzerainty over Scotland.

OUTCOME: Temporary occupation of Edinburgh, but no permanent conquest

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: England, 16,000; Scotland, 23,000

CASUALTIES: At the culminating Battle of Pinkie, 6,500 Scottish were killed, wounded, or captured; the English suffered approximately 500 casualties.

TREATIES: None with Scotland; 1549 treaty between France and England brought a de facto end to hostilities in Scotland as well.

Henry VIII (1491–1547) of England attempted to arrange a marital union that would, at last, unite England and Scotland. These plans collapsed after Ireland offered its crown to Scotland. Thus provoked, Henry renewed war with Scotland by boldly declaring himself Scottish overlord. He backed up this illegal claim with an invasion of Cumberland, which culminated in the November 25, 1542, Battle of Solway Moss. Here a numerically superior Scottish force attempted to defend against English invaders. Poorly led and wracked by mutinies, the Scottish were routed by the English. Broken in health, King James V (1512–42) died very shortly after the disastrous defeat, and the Scottish crown passed to his only child, Mary (1542–87).

In the meantime, Henry VIII's army pressed on to Edinburgh, storming it in 1544 and, in what the Scottish called the "Rough Wooing," sacked the town. Despite the almost total destruction of Edinburgh, the Scottish refused to surrender.

Henry VIII next attempted to strike a deal with Scottish dissidents (1545), without success. A renewed invasion led by Edward Seymour (c. 1500–52), duke of Somerset, followed. Somerset's 16,000 men were met by a 23,000-man Scottish force led by Mary's regent, James Hamilton (1516–75), earl of Arran. The Battle of Pinkie was fought at the River Esk on the Firth of Forth on September 10, 1547. Although substantially outnumbered, Somerset's force possessed better cavalry and artillery in addition to a contingent of arquebusiers. Offshore, he was supported by an English fleet under the command of Lord Edward Clinton (1512–85). The result was a Scottish rout: while the English lost perhaps 500 men, the Scottish suffered 6,500 casualties, including dead and wounded, and 1,500 prisoners of war. Henry died four months later on January 28, 1547.

Although decisive, the English victory at Pinkie did not result in the subjugation of Scotland as, once again, the English lacked forces sufficient to occupy the country. Henry's son, Edward VI (1537–53), succeeded to the throne, but real power passed to the old king's brother-in-law, the duke of Somerset. As regent, Edward Seymour proved neither far-sighted nor shrewd, and his many enemies in the ruling elite blamed him, not Henry, for having embroiled the country in a war with Scotland as well as France (see **ANGLO-FRENCH WAR [1542–1546]**). He was arrested and stripped of office in an October 1549 palace coup, which effectively ended the hostilities for the moment with Scotland. Seymour was executed two and a half years later for treason.

Anglo-Scottish War (1559–1560)

PRINCIPAL COMBATANTS: England and Scottish Protestants vs. Scottish Catholics and French forces in Scotland

PRINCIPAL THEATER(S): Scotland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: During the ongoing conflict between Catholic and Protestant Scots, the Catholics appealed to France for aid and the Protestants to England.

OUTCOME: The French withdrew from Scotland, and the Presbyterian Church of Scotland (the Scottish Kirk) grew.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Negligible

TREATIES: Treaty of Edinburgh, July 6, 1560, among England, France, and Scotland; Treaty of Berwick, February 27, 1560, between England and Scotland.

Following after a decade the costly ANGLO-SCOTTISH WAR (1542–1549), the 1559–60 conflict between the Protestants and Catholics of Scotland was more a stand-off or showdown than it was a full-scale war. In the midst of the heated religious conflict, Mary of Guise (1515–60), French Catholic widow of King James V (1512–42) of Scotland, withdrew to Leith Castle and, fearing for her life, secured French troops to come to her aid. For their part, the Scottish Protestants appealed to England's queen Elizabeth I (1533–1603) for troops. Although Elizabeth, cognizant of the perilous economic health of her kingdom and the relative weakness of her army, did not wish to provoke hostilities with France—much less its ally, Spain—she felt it her duty to defend Protestantism when it was threatened at her borders. Accordingly, she sent an army as well as a fleet and laid siege against Leith for the better part of a year. There was no battle, but at last the French yielded to this pressure and concluded the Treaty of Edinburgh, by which all foreign troops were to withdraw from Scotland. Separately, England and Scotland drew up the Treaty of Berwick, a mutual defense pact.

Anglo-Siamese War (1687)

PRINCIPAL COMBATANTS: Siam (Thailand) and French mercenaries vs. England

PRINCIPAL THEATER(S): Siamese coast (Gulf of Thailand)

DECLARATION: England declared war in 1687.

MAJOR ISSUES AND OBJECTIVES: Siam sought to check primarily the Dutch but also the growing English influence in the region by currying favor with the French; England found Siamese diplomacy a threat to its economic interests and sought to punish the Siamese for closing an English factory.

OUTCOME: Siam reversed its policy of open trade and closed its ports for 150 years.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: French East India Company, 600 mercenaries; British sailors and Siamese troops, unknown

CASUALTIES: Unknown

TREATIES: None

At the age of 12 Constantine Phaulkon (1647–88), an adventurer destined to become one of the more audacious figures in the history of Europe's colonial relations with Southeast Asia, signed on with an English merchant ship docked in Greece soon to set sail for Siam (Thailand). Once there, Phaulkon, a polyglot, quickly added Thai to his growing repertoire of languages, eventually to include Portuguese, Malay, French, and English, in addition to his native Greek, all of which rendered him invaluable as an interpreter to the English (not yet "British") East India Company, which hired him in that capacity in 1670. During his eight years as a company factotum, Phaulkon met and befriended Siam's King Narai (1632–88), ultimately offering his services to the Thai court. Rising quickly to become acting minister of finance and foreign affairs, by 1684 he was virtually Siam's prime minister, taking a leading role in shaping Narai's foreign policy.

In collaboration with French Roman Catholic missionaries, principally the Jesuit Gui Tachard, the Greek soldier of fortune schemed to establish the French in Siam, persuading Narai that closer relations with Louis XIV (1638–1704) would help to balance the strong economic influence of the Dutch in the region. Siam and France exchanged envoys, and in 1685 a treaty was drafted granting Louis and the French East India Company numerous trading rights and allowing French troops to be stationed in the country. In the course of all the Franco-Thai diplomacy, Siam forced the English East India Company to close one of its factories. The English Crown responded in 1686 with a royal proclamation that withdrew the right of Englishmen to serve on foreign vessels and, to implement the decree and press for payment of damages for closing the factory, dispatched two English ships to Siam. Meanwhile, France had been adding fuel to the imperial fire Phaulkon and Tachard had lit under the Siamese king: Louis XIV made several additional and somewhat onerous demands of Narai and sent an armed expedition to Siam in 1687 to ensure he met them. Narai had, in fact, become suspicious of French designs, but Phaulkon reassured him by engaging 600 French East India Company garrison troops as mercenaries in the Siamese army to help man coastal forts.

The English ships arrived shortly after the French fleet, and the former sent the latter scurrying. Throughout the night Siam and French mercenary forces onshore shelled the English ships, sinking one, then killing a contingent of sailors who broached the beach before forcing the second ship to flee. Although the English soon afterward declared war, they did not pursue it, but under the threat of English attack, Narai had ratified the final treaty with France, incorporating all of Louis's demands.

In March 1688, King Narai fell seriously ill, and his brother Phetracta (Bedjara) took advantage of Phaulkon's consequent isolation to lead a coup by the anti-French faction at court. Phaulkon was executed and the French garrisons expelled. The effect of the Phaulkon affair was to reverse the policy of openness encouraged by former Thai rulers; Siam closed its ports to all foreigners for 150 years.

Anglo-Sikh Wars See SIKH WAR, FIRST; SIKH WAR, SECOND.

Anglo-Spanish War (1586–1604)

PRINCIPAL COMBATANTS: England vs. Spain

PRINCIPAL THEATER(S): At sea, off the Spanish coast, and in the English Channel; land action took place in

Normandy, St. Malo, and Rouen, France; and in Cádiz, Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Long-term power struggle between Protestant England and Catholic Spain; Spain's principal objective was to reclaim England for the Church of Rome.

OUTCOME: England successfully resisted Spanish domination.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Widely variable; the Spanish Armada consisted of 19,000 troops and 8,500 sailors in 20 great galleons, 44 armed merchantmen, 23 transports, and 43 lesser craft; England raised an army of approximately 60,000 to repel invasion.

CASUALTIES: Losses in the Spanish Armada were staggering; at least 63 of 130 ships were sunk; thousands of troops and sailors died. British losses throughout the years of conflict were slight.

TREATIES: Treaty of London, August 18, 1604

In 1585 England's queen Elizabeth I (1533–1603) reluctantly sent troops to aid the Dutch Protestants in an unsuccessful attempt to overthrow Spanish overlordship of the Netherlands. This brought deteriorating relations between Protestant England and Catholic Spain to a crisis, and in March 1586 Spanish admiral Marquis de Santa Cruz (1526–88) persuaded King Philip II (1527–98) of Spain to mount an invasion of England. The plan was for Alessandro Farnese (1545–92), duke of Parma, to take his Spanish troops out of the Netherlands and travel by convoy to invade England. Thus, the Spanish Armada was born.

As Spanish preparations got under way, Elizabeth commissioned the bold English "sea dog" Francis Drake (c. 1540–96) to harass Spanish shipping. On April 19, 1587, Drake, in command of a 23-ship flotilla, raided the Spanish port of Cádiz, where he destroyed 33 Spanish vessels and looted much Spanish treasure. During May and June Drake attacked Spanish ships off Cape St. Vincent, sacked Lisbon harbor, and captured a heavily laden Spanish treasure galleon in the Azores. This action set back Spanish preparations for the invasion, and before the Armada could be readied, Admiral Santa Cruz died on January 30, 1588. This was a great blow to Spanish sea power, since Santa Cruz's replacement, Alonso Pérez de Guzmán (1550–1619), duke of Medina Sidonia, lacked Santa Cruz's skill and experience as a seafarer, nor was he an experienced army commander.

Intelligence supplied by Drake gave Elizabeth plenty of advance notice to make preparations to repel the anticipated invasion. Naming Lord Howard of Effingham (1536–1624) to head her fleet, with Drake as his second in command, the queen overrode a recommendation for renewed sea raids, believing that it was more important at this point to keep the fleet close to home. With great vigor,

English fleet's initial engagement of the Spanish Armada, 1588

she saw to the raising of a large land army of 60,000 men, which was assembled by June 1588—in the nick of time, since the Armada got under way on July 12, 1588, and was sighted off Lizard Head, Cornwall, on July 19.

Against some 130 Spanish vessels, the English had Admiral Howard's 34 ships, another 34 under Drake's command, 30 more sailing out of London, and a 23-vessel squadron commanded by Lord Henry Seymour (1564–1632). Lesser vessels amounted to an additional 50. More important was the fact that the Spanish vessels mounted 2,431 guns, but including only 1,100 heavy pieces, versus 1,800 heavy, long-range British cannons. The Spanish,

therefore, were outgunned—and in the first engagement off Plymouth on July 21, 1588, were also outsailed. The Armada lost one ship in this battle and suffered severe damage to several others, which were hit by long-range cannon fire. Two days later, on July 23, off the Devon coast, the action was exhausting but inconclusive. Although both sides expended much ammunition, the British could replenish their magazines, whereas the Spanish could not. Thus, on July 25, off Dorset, the English fleet enjoyed an advantage and was able to foil the Spanish plan to land at the Isle of Wight. Instead, low on ammunition, Medina Sidonia set off for the friendly port of Calais, where he

hoped he could replenish his supplies. Off Calais, during July 26–27, the English fleet, which now outnumbered the Spanish, fired on the Armada from long range.

The next day, July 28, off the coast of Flanders, the English sent fire ships—blazing hulks—into the Spanish anchorage. This created great panic among the Spanish, scattering the Armada. With the Spanish fleet in disarray, the English closed in, easily outgunning the Spanish. Nevertheless, although a number of vessels were badly damaged, no Spanish ships had been sunk by the time an early evening squall brought an end to the battle.

The squall that gave the Spanish a reprieve now developed into unfavorable winds that kept the Armada bottled up on the Flanders coast. Medina Sidonia's plan had been to refit and resupply his ships here, but the weather turned so treacherous that he decided to abort the invasion and head back to Spain. The winds dictated a route northward via the North Sea and around the British Isles. On August 2, as the Armada, now better concentrated, passed the Firth of Forth, the pursuing English fleet, low on provisions, was forced to break off the chase.

As this point, however the English fleet was not the most formidable of Medina Sidonia's enemies. Storms pounded the Armada, which was dogged even more viciously by starvation and thirst. In the long trip around Britain, 63 Spanish ships were lost to the elements, 15 more were captured or sunk by the English, 19 ran aground on the Scottish or Irish coasts, and 33 other vessels remain unaccounted for by history. Some Spanish survivors were massacred in Ireland. Few managed to find their way back to Spanish ports. For all practical purposes the great Spanish Armada had been annihilated.

Action in the years following the Spanish Armada was mostly slight and inconclusive. During 1589–96 small English forces were sent to the Continent: 4,000 men under Lord Peregrine Bertie Willoughby to Normandy in aid of Henry of Navarre (1553–1610) in 1589; troops landed at St. Malo and Rouen in 1591; and Cádiz was raided in 1596.

If the fighting was sporadic, the hostility between the two countries remained constant, even after Philip died in 1598. In 1601 Spain made a major effort to back a revolt brewing in Ireland (*see* TYRONE'S REBELLION), sending a force of 4,000 men to assist the rebels. When the rebellion was crushed and the Spaniards captured, the Iberian threat to the Tudor-ruled world was at an end. This was yet another hallmark of England's "golden" Elizabethan Age, which came to a close with the queen's death in 1603.

On August 18, 1604, James I (1566–1625) and Philip III (1578–1621) of Spain signed the Treaty of London, agreeing to peace between their two countries and formally ending more than a decade and a half of war between England and Spain.

Anglo-Spanish War (1655–1659)

PRINCIPAL COMBATANTS: England (with French allies) vs. Spain

PRINCIPAL THEATER(S): West Indies, Canary Islands, Cádiz (Spain), and northern France

DECLARATION: Spain declared war on England in May 1655.

MAJOR ISSUES AND OBJECTIVES: England wanted to achieve dominance over Spain in matters of trade.

OUTCOME: Spain ceded much of the Netherlands and suffered other losses to its empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

England, approximately 21,000 troops, sometimes augmented by French forces; Spain, widely varying

CASUALTIES: No overall figures available; Spanish losses at the Battle of the Dunes were 1,000 killed, 5,000 taken as prisoner; English losses in this battle were 400.

TREATIES: Peace of the Pyrenees, November 7, 1659

When the Puritans, led by Oliver Cromwell (1599–1658), took control of England following the civil wars, they beheaded Charles I on January 30, 1649, thereby alienating the crowned heads of Europe. Knowing that the Commonwealth the Puritans established would have to fight for its survival, the Lord Protector of England ultimately made his nation into a potent military power. From the start he understood he would have to deal with France, which sheltered the Stuart pretender to the throne. And he knew as well he would have to deal with the Dutch, who were trade rivals in England's increasingly important North American colonies. But he hoped, at least in the beginning, to strengthen his fledgling government by forging an alliance with Spain, the enemy of his enemies. The problem was that Cromwell remained a Puritan as well as a lord protector. He took an unyieldingly hard line in negotiations with the world's premier Catholic power, demanding extravagant trade concessions from the Spanish. When Spain refused, negotiations quickly broke down, and Cromwell dispatched an expedition to attack the Spanish holdings in the West Indies. Admiral Sir William Penn (1621–70) and General Robert Venables (c. 1612–87) led 2,500 British troops in the seizure of Jamaica in May 1655, thereby provoking a Spanish declaration of war.

At this point Cromwell struck an alliance with France for joint attacks on Spanish holdings in the Netherlands and at Dunkirk. The Spanish-held Dutch town of Maardyck was captured in the fall of 1657, and Dunkirk fell after a siege during May–June 1658. This was the work of a joint attack by the French under Marshal Henri de la Tour d’Auvergne, vicomte de Turenne (1611–75) and the British commanded by General Sir William Lockhart (1621–75). The Spanish defenders of Dunkirk, a garrison of 3,000, were soon reinforced by a 15,000-man army, which included 2,000 English Jacobites—partisans of Charles II (1630–85), pretender to the English throne and bitter opponent of Cromwell. (The Jacobites were led by James [1633–1701], duke of York, who was destined to be crowned King James II of England in 1685.)

The culmination of the Dunkirk siege came with the great Battle of the Dunes on June 14, 1658. The army sent to relieve the Spanish garrison at Dunkirk established its camp on the dunes between the beach and pasturelands northeast of the town. Marshal Turenne attacked the encampment on the morning of June 14 with 9,000 cavalry and 6,000 infantry, including French and English troops. Turenne managed the battle brilliantly, coordinating his advance with the offshore tide and timed to allow Turenne to carry out a flanking maneuver with his cavalry in order to trap the Spanish land flank.

Starting at 8 A.M., the battle was over by noon. While Turenne lost 400 men, the Spanish lost 1,000 killed and 5,000 as prisoners of war. Turenne then pursued retreating Spanish forces. By the terms of the Anglo-French alliance, Dunkirk was ceded to England. (Charles II sold it to France’s Louis XIV [1638–1715] in 1662.)

In the meantime, on September 9, 1656, British Royal Navy captain Richard Stayner (d. 1662) seized the Spanish Treasure Fleet off Cádiz, and during 1656–57 British admiral Robert Blake (1599–1657) imposed a crippling blockade on the Spanish coast. Then, on April 20, 1657, he sailed his fleet into Santa Cruz harbor in Tenerife, Canary Islands, where he sunk six treasure transports and 10 escort vessels and destroyed six forts. (Blake died on the return voyage to England.)

Reeling from its losses in the Netherlands, the West Indies, and along its own coast, Spain sued for peace in 1659, concluding the Peace of the Pyrenees on November 7. Spain had lost much of Flanders and relinquished some of its West Indian holdings. Oliver Cromwell did not live to see this triumph. He died on September 3, 1658, and was succeeded as Lord Protector by his son Richard (1626–1712).

Anglo-Spanish War (1727–1729)

PRINCIPAL COMBATANTS: Principally Britain and France vs. Spain and Austria

PRINCIPAL THEATER(S): Gibraltar, West Indies, Isthmus of Panama, Spanish Main

DECLARATION: Spain declared war on England in February 1727.

MAJOR ISSUES AND OBJECTIVES: Spain wanted to force Britain to cede Gibraltar and Minorca.

OUTCOME: Spain recognized British control of Gibraltar and made trade concessions to Britain and France; in exchange Britain and France agreed to the succession of Charles (son of the Spanish king Philip V) to the duchies of Parma, Piacenza, and Tuscany in Italy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At Gibraltar, 3,000 British defended against 18,000 Spanish.

CASUALTIES: At Gibraltar, Britain lost 107 killed, 208 wounded; Spain lost 700 killed, 825 wounded; 4,000 British seamen succumbed to disease in the West Indies.

TREATIES: Treaty of Vienna, April 30, 1725: basis of Spanish-Austrian (Holy Roman Empire) alliance; Treaty of Hanover, September 3, 1725: basis of British, French, Dutch alliance (to which was later added Sweden, Denmark, and certain German states); armistice, May 1727; Treaty of Seville, November 9, 1729: formally ended the war; Treaty of Vienna, July 22, 1731: Holy Roman Empire agreed to peace terms

The 1725 Treaty of Vienna created an alliance between Spain’s King Philip V (1683–1746) and Charles VI (1685–1740), the Holy Roman Emperor. Backed by this alliance, Charles agreed to pressure Britain into ceding Gibraltar and Minorca to Spain. Instead of yielding to this pressure, however, Britain concluded the Treaty of Hanover (September 3, 1725), creating an alliance with France and Holland. (Subsequently, Sweden, Denmark, and certain German states joined the alliance as well.) The alliance was aimed at mutual defense and specifically targeted the destruction of the Ostend Company, a trading cartel operating from the Austrian Netherlands that competed with both the British East India Company and the Dutch East India Company. The conflict with Spain was further aggravated by the Spanish king’s demand that his son, Charles (1716–88) rule the duchies of Parma, Piacenza, and Tuscany, to which the Spanish asserted the right of succession by virtue of Philip’s marriage to Queen Elizabeth Farnese (1692–1766), niece of Antonio Farnese, duke of Parma. England and France opposed the succession.

Amid mounting tensions Spain declared war on Britain in February 1727 and laid siege to Gibraltar. To the Spaniards’ chagrin, however, Austria chose to remain neutral for fear of being dragged into a war with the entire Hanover Treaty alliance. For their part, the British retaliated

against Spain by attacking Spanish treasure fleets in the West Indies and by blockading Porto Bello in present-day Panama. Royal Navy vessels also cruised the coast of the Spanish Main harassing Spanish shipping there. The object was to prevent the transfer of Spanish treasure to Austria as inducement for its entry into the war.

Before the conflict could erupt into a full-scale war, an armistice was instigated by France and concluded in May 1727. A technical state of war continued, however, as Spain stubbornly refused to yield in negotiations with France and England. In 1729, however, Spain's Queen Elizabeth Farnese belatedly responded to Austria's refusal to honor the 1725 Treaty of Vienna and abruptly severed the Austro-Spanish alliance. This left Spain with little choice but to conclude a definitive peace treaty with the members of the Hanover Treaty alliance. Accordingly, by the Treaty of Seville (November 9, 1729) Spain recognized British control over Gibraltar and made liberal trade concessions to France and England. In return the Hanover alliance agreed to permit Charles's succession to the Italian duchies. A second Treaty of Vienna, July 22, 1731, secured the approval of Holy Roman Emperor Charles VI to the terms of the 1729 Treaty of Seville.

Angolan Civil War (1975–2002)

PRINCIPAL COMBATANTS: The Popular Movement for the Liberation of Angola (MPLA) vs. the National Movement for the Total Independence of Angola (UNITA) and National Front for the Liberation of Angola (FNLA)

PRINCIPAL THEATER(S): Angola

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: The UNITA sought to wrest control of the government from the Marxist Popular Movement for the Liberation of Angola (MPLA).

OUTCOME: UNITA and the government agreed to share power in 1991, but war broke out again in 1992.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: MPLA, 30,000; UNITA, 10,000; FNLA, 20,000; South Africa, 5,200; Cuba, 55,000

CASUALTIES: Angola, 340,000 soldiers and civilians; Cuba, 2,100

TREATIES: Several, but none lasting

After Portuguese West Africa secured its independence from Portugal on November 11, 1975, delegates from the

three liberation movements met in Alvor, Portugal, to attempt to create a unified government. The Movimento Popular de Libertação de Angola, or Popular Movement for the Liberation of Angola (MPLA), under Dr. Agostinho Neto (1922–79), the União Nacional para Independência de Angola, or National Union for the Total Independence of Angola (UNITA), under Jonas Savimbi (1934–2002), and the Frente de Libertação de Angola, or National Front for the Liberation of Angola (FNLA), under Holden Alvaro Roberto (b. 1923), agreed to form a coalition, but any unity they created was temporary. In March and April of 1975 Cuba began shipping arms and advisers to support Neto's MPLA, and civil war intensified. Later that year South Africa sent forces into Angola to battle the MPLA and its Cuban supporters, and at the Battle of Bridge 14 on December 12, 1975, the Cuban troops, despite their three-to-one advantage, were defeated by the South Africans. Two months later, however, Neto's MPLA and the Cubans took control of the FNLA stronghold at Huambo and forced many FNLA members to flee to Zambia. The South African government then withdrew from the war in April 1976 following an agreement with the MPLA guaranteeing protection of South African economic interests in Angola. That withdrawal cleared the way for Cuban troops to strike UNITA and force Savimbi's troops to withdraw from central Angola into the southeastern corner of the country. However, the new cold war aggressiveness of the United States under the administration of Ronald Reagan (1911–2004) in the early 1980s, with its no-strings-attached support for any kind of anti-Soviet movement, helped UNITA not only to continue its guerrilla warfare against the MPLA but to expand and strengthen its hold in the north, center, and south. Aided as well by South Africa's renewed effort to suppress the South West African People's Organization (SWAPO), which had bases in Angola, Savimbi had by the middle of the decade taken control of nearly one-third of the country.

But the MPLA acquitted itself well in the long Battle of Cuito Canavale, which lasted from March 1987 to March 1988. The loss of UNITA's military superiority, along with the dislike of South Africa's public, both white and black, for the war, soured the conflict for Pretoria. Talks resulted, leading to the December 1988 Angola-Namibia Accord and linking both Cuban and South African withdrawals from Angola to the independence of Namibia. Thus, the external actors, themselves about to enter a post-cold war era, now were urging negotiations on both sides of the Angola conflict.

UNITA soon broke the cease-fire, and in June 1989 it was almost destroyed by the MPLA's nine-month counteroffensive. This near defeat and the MPLA's carefully calculated decision to renounce Marxism-Leninism in favor of social democracy cleared the ground for the Bicesse and Estoril Agreements of April–May 1990. These talks specified a UN-orchestrated integration of the Angolan military

and set multiparty elections for September 1992. In May of 1991 Eduardo Dos Santos (b. 1942), who assumed leadership of the MPLA after Neto died in 1979, and Savimbi signed a peace agreement in Lisbon that resulted in a new multiparty constitution. Despite some backsliding the peace generally held until Dos Santos won the UN-certified election with 49.6 percent of the vote. Savimbi rejected the results and full-scale civil war resumed. UNITA captured Soyo, which produces one-third of Angola's oil. It launched a 55-day siege of Huambo, where 10,000 people died and after which 100,000 fled for the coast. But when peace negotiations sponsored by the United Nations in 1993 at Addis Ababa and Abidjan failed to yield results thanks mostly to Savimbi's intransigence, the United Nations imposed sanctions against UNITA and Washington recognized the MPLA. South African mercenaries now flocked to the MPLA military, which began to make significant advances. By November 1994 Savimbi was ready to sign new peace accords.

The Lusaka Protocol, ending the so-called Third War, was ratified in May 1995 when Dos Santos and Savimbi met to confirm their commitment to peace. Under the agreement Savimbi accepted Dos Santos as president in return for the vice-presidency once UNITA disbanded. Later that year the first of 7,000 UN peacekeepers arrived in the capital of Luanda. But low-level conflict simmered as mutual distrust prevented Savimbi from either disbanding his forces or joining the new Angola government. Dos Santos moved against UNITA strongholds, especially in the diamond-rich northeast. The Luanda government, anxious to shut down UNITA bases in Zaire, supported the ouster of UNITA-backed President Mobutu (1930–97) in May 1997. Then Luanda's successful replacement candidate, President Laurent-Desire Kabila (1939–2001), came under attack by rebel forces in the newly renamed Democratic Republic of Congo in August 1998. By autumn 1998 full-scale fighting had resumed in Angola, a UN plane had been shot down, and Angola had intervened in the Congo's civil war. In 1999 the United Nations, chased out of the country by UNITA, abandoned its peacekeeping mission, and there was no end to the fighting in sight.

Then in February 2002 Savimbi was killed by government troops, and in April the Luanda government and UNITA signed a new cease-fire agreement. By May UNITA's military commander reported that 85 percent of his troops had gathered at demobilization camps. Many officials, both within Angola and internationally, remained concerned that food shortages and starvation in the camps set up for the thousands of refugees returning home after the cease-fire could threaten the peace process. Poverty ruled the countryside, and not just refugees but villagers as well were under pressure from famine. In June 2002 the United Nations launched broad appeals for aid for refugees while the medical charity, Médecins sans Frontières (Doctors without Borders) estimated that half a million Angolans

were facing starvation as a legacy of the long-running civil war. Nevertheless, in August 2002 UNITA officially disbanded its army and Angola's defense minister proclaimed that the war had ended.

Angolan War for Independence (1961–1976)

PRINCIPAL COMBATANTS: Portuguese West Africa (Angola) vs. Portugal

PRINCIPAL THEATER(S): Portuguese West Africa (Angola)

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Portuguese West Africa sought independence from Portugal

OUTCOME: Angola became independent from Portugal

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Portugal, 55,000; Angola, unknown

CASUALTIES: Portugal, 4,000; Angola, 25,000 guerrillas and 50,000 civilians

TREATIES: No treaty until the Treaty of Bicesse, May 1, 1991

In 1960 the Belgian Congo became independent and renamed itself Zaire. Inspired by this change, Portuguese West Africa (Angola) was soon a hotbed of rebellion. In February 1961 the Movimento Popular Libertação de Angola (Popular Movement for the Liberation of Angola, MPLA), began a revolt against the colonial government of Portugal. Founded in 1956 with the help of the clandestine Portuguese Communist Party and led by Dr. Agostino Neto (1922–79), the MPLA drew support from the Soviet Union and was based at first in Brazzaville before moving to Zambia in 1965. From there it staged its raids into eastern Angola as the revolt spread. Meanwhile, another movement, founded in 1957 and headed by Holden Roberto (b. 1923) was leading the revolt in northern Angola. By 1966 it was called the Frente Nacional de Libertação de Angola (National Front for the Liberation of Angola, FNLA). It drew its support from the Bakongo and rural Mbundu, was based in Zaire, and was supported by both the United States and China. A third movement, the União Nacional para a Independência Total de Angola (National Union for the Total Independence of Angola, UNITA), led by Jonas Savimbi (1934–2002), was also established by 1966, although, outside some nominal aid from the Chinese, it lacked both foreign backing and bases of operation. Combating the three liberation movements in

Portuguese West Africa as well as those in Mozambique and Guinea-Bissau required more and more of Portugal's resources, and by the late 1960s approximately 50 percent of the country's annual budget was consumed by its military actions in Africa. In Angola, at least, Portugal achieved some success. The deep divisions among the three liberation movements led them to fight each other as well as the Portuguese, who had the upper hand by the early 1970s. By 1974 all three guerrilla groups had been chased out of the country.

Then, with public dissatisfaction over the brutal conduct of the war growing in Portugal, a group of worried army officers overthrew the national government of Antonio de Oliveira Salazar (1889–1970) in Lisbon on April 25, 1974, and created a government that was willing to abandon the fight to retain control of Portuguese West Africa. A condition of relinquishing the fight, however, was a plan for orderly governmental succession. The three liberation organizations formed a coalition on two different occasions, but neither attempt at reconciliation was long-lived. When the Portuguese withdrew in November 1975, the pro-Western UNITA and FNLA, supported by South Africa, were still engaged in a struggle against the MPLA, which received troops, technical support, and arms from Cuba and the Soviet Union. Representatives met in Alvor in March and April of 1975 and briefly formed a coalition government under the MPLA's Neto, before falling out again. By February 1976 the MPLA, under Dr. Agostinho Neto (1922–79), was in control of the government and had been recognized by the Organization of African Unity (OAU) as the legal government of an independent Angola.

An Lushan's Rebellion (755–763)

PRINCIPAL COMBATANTS: The renegade general An Lushan vs. China's Tang (T'ang) dynasty

PRINCIPAL THEATER(S): North China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Factions at court, vying for power and influence, prevented An Lushan from assuming the position of prime minister; the incensed An Lushan sought to topple the Tangs, declare a new

dynasty, and place himself on the throne; Loyalists fought to defend the Tang dynasty and restore its ousted emperor.

OUTCOME: An Lushan was murdered, the six-year rebellion was at length quelled, and the Tang returned to power. The revolt, however, signalled the decline of the Tang dynasty, not only highlighting the civil and military deficiencies of the dynasty but becoming an instrument in its decline.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rebels, est. 200,000; imperial troops, unknown

CASUALTIES: Unknown

TREATIES: None

In China during the middle of the eighth century, the Tang dynasty reached new heights during the long rule of Xuanzong (Hsuan-tsung) (685–762). Under his patronage China experienced an explosion of literature and the arts. The Middle Kingdom seemed truly the center of the universe, as the Chinese had always imagined it to be, and to the emperor's court in Changan there flocked not just Chinese historians, scholars, poets, dramatists, and entertainers, but foreign envoys, clerics, and traders offering tribute from countries all over Eurasia. For the first time in its history, China seemed to be truly opening itself to the outside world under the man the Chinese people had begun to call informally Ming Huang, "the Brilliant Emperor."

Opportunities abounded for the talented, the clever, and the ambitious, and not merely among the highborn. Neither were all foreign visitors to North China official dignitaries. Arab pearl divers, Mesopotamian adventurers, Turkish princes, Indian merchants, Japanese pilgrims, Malay pirates, and Tibetan youths all came to Tang China seeking glory or riches or freedom. Some found what they were looking for. A Sogdian merchant became the protector of Annam, then under Chinese hegemony. An Oman gem dealer returned home with a gold-lidded, black porcelain vase containing a single goldfish with ruby eyes that smelled of musk and brought him 50,000 dinar. And an obese Turkish soldier of fortune joined the Tang army as a mercenary, rose to the rank of general, and was made military governor of three important outposts in the northeast. His name was An Lushan (703–757), and it would one day soon be written in Chinese blood.

The relative openness of China at the time helps to explain how a Persian-born nomad raised in Mongolia could rise to military prominence in the provinces, but to understand how An Lushan suddenly vaulted to center stage in Tang history, one needs to know something about the inner workings of the Chinese government and the peculiar power enjoyed by its generals. When Xuanzong first became emperor, he appointed members of China's ancient northwestern aristocracy to be his close advisers, principally because he needed their support in order to

rule. But like the Tang emperors before him, he never trusted the arrogant nobles, and once he had consolidated his position he quickly reduced their numbers, relying instead on a corps of young, low-ranking scholars recruited directly through palace examinations to administer his government. The power struggles that ensued between the aristocrats and the examination graduates increasingly disrupted the civil functions of government.

The emperor did nothing to stop the disputes. Instead, he made matters worse by using eunuchs from his harem as personal agents to circumvent both the scholars and the nobles. As the day-to-day operation of the government deteriorated, a weary Xuanzong withdrew altogether from the affairs of empire, seeking solace in the pleasures of the harem and in mystic religious studies that he believed held the secret to earthly immortality. A few leading ministers ran the state, occasionally assuming dictatorial powers. To complicate the situation even further, various of the emperor's wives and concubines—the only ones who saw him with any frequency at all—began to meddle in public policy. The most persistent of them was Yang Guifei (Yang Kuei-fei; 703–757), who had been Xuanzong's son's concubine before the emperor took her for himself. And Yang Guifei looked to the emperor's soldiers for her allies.

A century before, when China had expanded into Central Asia, the Tang dynasts had reorganized their armed forces in order to deal more effectively with the hard-riding tribes of the steppes, creating a professional standing army and giving the field generals fighting distant battles the autonomy they needed to ensure victory. In the heady times of triumph, no one paid much attention when the generals recruited to their ranks nomads to help fight their former tribesmen, nor did Tang leaders stop to consider that the reforms would also give the generals tremendous personal power. In the eighth century the power of the field generals grew greater still as a result of the domestic disarray. The emperor had appointed as his official adviser Yang Guozhong (Yang Kuo-chung) (d. 757), a favorite cousin of his omnipresent concubine, Yang Guifei. To check the growing influence of the new adviser and his concubine cousin, the powerful Chinese prime minister, Li Linfu (d. 752), from the old northwestern aristocracy and then the dominant figure in the Chinese government, began to court favor with the generals of the northern armies, especially those of foreign descent, hoping they would prove more tractable than Chinese officers. One of those generals was An Lushan.

In 751 the Khitan Mongols invaded China. Chiefly through the efforts of An Lushan, the Tangs were able to repel the barbarians, thereby earning him notice at court and leading Li Linfu quickly to invite him to the capital. A capable enough soldier, An Lushan was, or pretended to be, something of a social buffoon. Corpulent and loud, he cut quite a figure in sophisticated Changan. A favorite of

both the emperor and his consort, Yang Guifei, who enjoyed his clowning, he was once, three days after his birthday, sneaked into the harem wrapped in an enormous baby diaper. Such hanky panky led to rumors that he and Yang were lovers, but it was hardly likely Xuanzong would have shared her, or that An Lushan would have risked the emperor's ire. Not that Yang was beyond intrigue, especially if she could have seduced An Lushan away from Li Linfu's influence. But whatever the nature of the intrigues she engaged in with the crude general, they came to an abrupt end when Li Linfu died. Immediately, An Lushan, the emperor's favorite general, and Yang Guozhong, Yang's cousin and the emperor's closest personal adviser, began a bitter fight for the vacated prime minister's post. The court seethed with subterfuge and dirty politics, while the aging emperor merely looked the other way.

Meanwhile, the country was falling apart. Onerous new taxes had been imposed to raise the enormous amounts of money needed to defend China's borders against the Turks, Tibetans, and other northern tribes who threatened the seriously overextended empire. But the taxes were hardly enough to defray defense spending, and the shortfall in public funds made the overheated bureaucratic conflicts even worse. Given the hothouse harem atmosphere and the absentee emperor, no one was sure who ran the country. That was the situation when Yang Guozhong won the palace battle for the prime minister's post, probably because An Lushan, whatever else he might have been, was still a foreigner. The enraged general launched a rebellion.

The fighting lasted more than seven years, from December 755 to January 763, and it tore China asunder. An Lushan first returned to his minions in the north, planning to raise forces and march on Loyang, Xuanzong's capital in the east, near present-day Beijing. Though Yang Guozhong could attack and undermine the general at court, Yang did not fare so well with members of the military. Many of them flocked to An Lushan's banner, especially after he claimed to have received a secret command from the emperor to get rid of the new prime minister. With 200,000 troops he quickly overran the Yellow River Valley and seized Loyang. An Lushan, seriously ill, perhaps with diabetes, remained in Loyang while his army marched on Changan, the imperial capital. The general in charge of defending Changan, Ko Shuhan, and prime minister Yang were bitter rivals, and fearing a coup, Yang goaded Ko into taking the field against the rebels. The Tang army was routed, and the way to the city lay wide open. After a six-month siege, Changan fell to the rebels in 756. Xuanzong had already fled with his entourage, escorted by a contingent of imperial guards. In a mutinous mood, the guards halted on the road and forced Xuanzong to execute both Yang Guifei, his concubine, and Yang Guozhong, her cousin the prime minister. Then, Xuanzong made his way to Chengdou (Ch'engku) in Sichuan (Szechwan) province, where he set up a court in exile. Back in Loyang, An

Lushan declared himself emperor of what he called the Greater Yen dynasty, and a number of prominent Tang officials rushed to offer their support.

In the spring of 757, the imperial army counterattacked, retaking the imperial capital. In Loyang the rebel general, now nearly blind and extremely irascible, so ranted and raved that his attendants feared for their lives. Soon thereafter he lay dead, murdered by a eunuch slave with the connivance of his own son, An Qingxu (An Chingsu), who took command of the rebellion. There followed a bewildering series of assassinations and successions, of resurgent loyalist attacks and rebel counterattacks, and of mayhem and pillage across the face of North China. At one point Tibetan raiders, emboldened by the Chinese chaos, swept into Changan and occupied the city for two weeks, looting and raping before they burned to the ground the former metropolitan center of Asia. It was a bitter civil war, one of the most violent in Chinese history and one whose outcome was in doubt almost to the end. Finally, government forces were able to subdue the rebels, and Xuanzong, nearing 80, exhausted, and wracked with grief over the loss of Yang Guifei, returned to Changan to die in 762 while his son Taizong (T'ai-tsung; 762–779), now emperor, struggled to rebuild an empire that existed in name only.

The struggle would go on for another century, during which the great generals who had helped crush the An Lushan rebellion would become warlords ruling over the provinces they had recovered and fighting constantly among themselves. The rebellion had permanently damaged the prestige of the Tangs, establishing for good the influence of strong military leaders, rather than scholars, at court. Though the Tangs would cling to the throne, their dynasty had begun its long decline, and their once rich, stable, far-flung empire had become a troubled, divided state spinning into decline.

Anson's Cruise (1740–1744)

PRINCIPAL COMBATANTS: Britain vs. Spain

PRINCIPAL THEATER(S): West coast of Spanish America and Manila, Philippines

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Britain hoped to launch a preemptive strike against Spain in anticipation of the War of the Austrian Succession in Europe by cutting off Spain's supply of wealth from the Americas.

OUTCOME: Britain failed to prevent Spain from entering the European war or to do much damage at all strategically,

though Commodore George Anson's diminished fleet did manage to harass Spain's West Coast outposts in America, to capture one treasure-laden Spanish galleon, and to pave the way for British expansion in the Pacific.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Britain, slightly in excess of 1,000; Spain, unknown

CASUALTIES: Britain, around 1,000 dead, mostly from illness and shipwreck

TREATIES: None

When the tangled web of European alliances appeared to be leading Britain into what would become the War of the AUSTRIAN SUCCESSION in 1740, the English Crown dispatched Commodore George Anson (1697–1762) to raid Spain's Pacific coast possessions—Chile, Peru, and Mexico—and to attack Spanish galleons on the high seas. Embroiled in the machinations of Prussia's Frederick the Great (1712–86) against the presumptive heir to the Austrian throne, Maria Theresa (1717–80), Britain's royal command hoped to avoid a head-to-head conflict with Spain on the Continent by cutting off its supply of income at the source, Spain's American colonies.

Given the commission in 1739, Anson was unable actually to begin his mission until mid-September of 1740 because of compounded delays in provisioning and in finding enough men—the mission, after all, required by its very nature that he circumnavigate the world. The tardy departure, however, cost Anson the element of surprise on which he had counted. Though the Spanish had become aware of British intentions and Spain's colonies had been warned to prepare for attack, Anson nevertheless set sail with a fleet of six warships—his flagship *Centurion*, plus *Gloucester*, *Severn*, *Pearl*, *Wager*, *Tyral*—and one supply vessel, *Anna Pink*. All were poorly manned, since the entire squadron boasted only 977 sailors, mostly untrained. There were some 200-plus marines among them, but they were fresh recruits with only minimal knowledge of the sea. Anson was lucky to have even them—an urgent request from Anson for more soldiers before shipping out had netted him a contingent of patients from a local hospital. Leading an ill-trained force in a late start against a ready enemy made many, including Anson himself, believe the mission was doomed from the start.

Once at sea, matters only grew worse. Another effect of starting in September was that Anson would have to approach Cape Horn in the autumn, when the westerlies were at their peak. By the time Anson's fleet began to be battered by gale-force winds, the ships' crews were all suffering from a severe outbreak of scurvy. Whipped about by storms and manned by sailors debilitated with scurvy, only three ships in Anson's fleet—*Centurion*, *Gloucester*, and *Tyral*—survived the passage round the Horn. Anson's fleet was cut in half, his fighting force, such as it was, reduced by some two-thirds, and his original mission

effectively dead in the water. But Anson was a capable and imaginative commander, and he simply redefined his objectives. He set sail for Acapulco, fighting his way up the coast and hoping to ambush the famed “Manila Galleon,” a Spanish treasure ship—the *Nuestra Señora de Cavadonga*—before it left the Mexican port homeward-bound to Manila. Anson missed the Spanish ship by two weeks, arriving at Acapulco in September 1741.

For two years after rounding the Horn, Anson ravaged the western shores of the Americas, working his way up the coast first to Mexico and then beyond. After he had lost two more ships, Anson, determined to continue around the globe, decided to make a north Pacific crossing to China. When he reached the Portuguese settlement of Macao (near modern-day Hong Kong) on November 13, 1742, he arrived only with his flagship and some 210 men. Nevertheless, the *Centurion* was the first British warship to sail into Chinese waters, and its arrival created an uproar. The Portuguese, worried about the precarious trade agreements and protocol arrangements they had made with Chinese leaders in Canton, initially refused Anson’s request for provisions and repairs despite pressure from Britain’s East India Company. After careful negotiations with the Chinese, Anson secured his provisions and—recruiting more men—set sail in the spring of 1743, once again hoping to intercept and capture the *Nuestra Señora de Cavadonga*.

Sailing with a reinforced crew fueled by dreams of immense wealth, Anson departed Macao heading south toward the Philippines. In the South China Sea Anson lay in wait for the Manila-bound treasure ship. Greatly outnumbered but with superior weaponry and a greedy crew hungry for loot, the *Centurion* captured the *Cavadonga* after a fierce battle on June 20, 1743. Victory was sweet for the beleaguered Englishman. The booty came to somewhat more than 1.3 million pieces of eight and some 35,000 ounces of silver, worth a total of about £400,000. Thus fortified, Anson and his crew continued on their voyage around the world, arriving in London in June 1744 to a conqueror’s welcome as the treasure they had captured was paraded through the streets in 32 wagons.

Anson may have failed at his mission, meeting none of the objectives set for him by the Royal Navy command, but his world cruise, highlighted by the sailing of the first British warship into Chinese waters and by the capture of the Manila galleon, became one of the more famous voyages in naval history. Despite the loss of all but one ship and more than 1,000 men, Anson returned a national hero, and his cruise sparked a wave of British expansion into the Pacific. Anson, a man of some imagination and initiative at a time when the Royal Navy was known for anything but the vision and pluck of its officers, not only became George, Lord Anson, the leading admiral of his day, but also went down in history as the “Father of the Modern British Navy.”

Pack, *Admiral Lord Anson: The Story of Anson’s Voyage and Naval Events of His Day* (London: Cassell, 1960); L. A. Wilcox, *Anson’s Voyage* (New York: St. Martin’s Press, 1970).

Antiochus III, Invasion of Parthia by (209–208 B.C.E.)

PRINCIPAL COMBATANTS: Syria vs. Parthia and Bactria

PRINCIPAL THEATER(S): Parthia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Antiochus III’s lust for conquest

OUTCOME: Antiochus was victorious, forcing Arsaces III, king of Parthia, to accept Seleucid suzerainty.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown, but apparently disastrous for Parthia and Bactria

TREATIES: No document exists

Antiochus III (c. 242–187 B.C.E.), known as Antiochus the Great, was the Seleucid king of the Hellenistic Syrian Empire from 223 to 187 B.C.E. His hunger for new territory was insatiable and led him to expand the empire in the east, but also brought defeat in the west as he failed in his challenge to Roman power. Among his greatest triumphs was the invasion of Parthia in 209 B.C.E. He defeated the forces of King Arsaces III (212–171 B.C.E.) and, after occupying Hecatom pylos, Arsaces’s capital southeast of the Caspian Sea, drove the Parthian king into a desperate alliance with Euthydemus (fl. late third century), king of Bactria. In 208 at the Arius River, Antiochus met the combined forces of Arsaces and Euthydemus. Severely wounded early in the battle, Antiochus nevertheless led his army to complete victory against the larger allied force. Both the Bactrians and the Parthians suffered heavy losses, but Arsaces III acknowledged the suzerainty of the Seleucids, and Antiochus allowed him to continue to rule.

Apache Uprising (1861–1865)

PRINCIPAL COMBATANTS: Apaches vs. United States and (separately) Confederate States of America

PRINCIPAL THEATER(S): Arizona and New Mexico

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The uprising began as a war of revenge, then became a general Apache resistance to American occupation when the Civil War depleted the western troops of the United States; the United States and the Confederate States of America fought to separately stop Indian raids.

OUTCOME: The Apaches were defeated, many of them sent to the Bosque Redondo Reservation, others escaping into the mountains to continue sporadic raids.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Apache and Yauapai, 2,000 warriors; United States, 4,000 soldiers; Confederate numbers unknown

CASUALTIES: Apache, 1,400-plus killed or wounded, 9,000 captured; United States, 224 soldiers killed or wounded, 142 noncombatants killed or wounded

TREATIES: None, but the United States dictated terms of surrender in 1865

In 1861 the United States found itself embroiled not only with Confederate rebels in the American West (*see* UNITED STATES CIVIL WAR: TRANS-MISSISSIPPI THEATER), but also in two major Indian wars, one with the Navajos, the other with the Apaches (*see* UNITED STATES' WAR WITH THE NAVAJOS AND JICARILLA APACHES). Trouble with the Apaches was actually the result of a disastrous incident that ignited a lasting conflict between Americans and Apaches.

Early in the war U.S. forces were withdrawn for service in the East, and as they departed the West they burned their military installations. The Indians, not understanding the “white men’s war,” assumed the evacuation was due to Indian pressure. That belief led to an increased aggressiveness on their part. Then in February 1861 the notorious “Bascom Incident” launched open warfare between the powerful central Chiricahuas and the Anglos. When U.S. soldiers, led by a second lieutenant named George N. Bascom, falsely accused Cochise (c. 1810–74), one of the most famous and charismatic of all Indian leaders, of kidnapping a white boy and tried to hold the Apache chief hostage until the boy was released, violence erupted. Casualties followed on both sides, and hostilities mounted in a pattern of escalating acts of violence perpetrated by one side against the other—a familiar scenario in Anglo–American Indian warfare. Now Cochise vowed to exterminate all Americans in Arizona. The escalation could not have come at a worse time for the Americans. With the nation involved in the Civil War and western garrisons about to be reduced as a result, warfare with the Apaches was bound to be costly to civilians. As it

turned out, the whites and Apaches would spill one another’s blood for the next quarter century.

The outbreak of civil war drained the army in the West, especially its officers. One-third of the army’s officer corps, 313 men, left primarily western commands to take up arms on the side of the Confederacy. At this time Confederate Lieutenant Colonel John Robert Baylor (1822–94) took advantage of the Union army’s weakness to sweep through the southern New Mexico Territory, from the Rio Grande to California, and proclaim the Confederate Territory of Arizona, which encompassed all of present-day Arizona as well as New Mexico south of the 34th parallel. Baylor appointed himself governor of this territory. There was not much the Union could do about it. Colonel Edward R. S. Canby (1817–73), commander of the Department of New Mexico, had his hands full with Navajo raids in New Mexico and unauthorized, highly provocative New Mexican counterraiders.

But the Indians aligned themselves with neither the North nor the South. During this period Baylor was having his own Indian problems. While an epidemic of smallpox ravaged his troops, Chiricahua and Mimbrenño Apaches, convinced that the Union soldiers had permanently withdrawn from the region, intensified their raids in the newly proclaimed Confederate territory. Confederate authorities organized a company of Arizona Rangers to punish the Indians, and the unit was soon augmented by a volunteer group calling itself the Arizona Guards. Neither was very effective, and the raiding continued unabated.

Meanwhile, Cochise had joined forces with an Apache leader of legendary stature, Mangas Coloradas (c. 1795–1863) (sometimes called “Red Sleeves” by the Americans), in war against the United States. There followed many small skirmishes in which some 150 whites were killed and half a dozen stage stations burned. The chiefs laid an ambush at Apache Pass to entrap an advance element of the 1,500-man California Column, en route to the Rio Grande to engage the Confederates and commanded by Brigadier General James H. Carleton (1814–73). The Battle of Apache Pass was a minor affair in which 10 Apache and several U.S. soldiers were killed; Mangas was wounded. The ambush was abandoned when light artillery routed the besiegers, but enmity remained.

In January 1863 Mangas surrendered to civilians who turned him over to the military. While a prisoner he was goaded unmercifully, and when he protested he was shot. An officer reported that he had been killed while trying to escape. His murder is still resented by Apaches.

Inclined toward extermination on principle, Carleton sent Colonel Christopher “Kit” Carson (1809–69) to Fort Stanton, New Mexico, with five companies under the appalling order that he was to kill all the men of the Mescalero tribe whenever and wherever he could find them. Carson believed in obeying orders, but he knew this directive was nonsense and ignored it. Eventually several

hundred Mescaleros were dispatched to Carleton's ill-conceived Bosque Redondo Navajo reserve, but they slipped away to their homeland at their earliest convenience.

In the immediate postwar period in Arizona, the U.S. military had to deal with numerous small Indian bands, thieving to survive, and the absence of any central enemy to fight. Several able military men assigned to the territory failed to pacify it. George Crook (1828–90), then a lieutenant colonel, was promised sufficient resources and authority to confront the problem decisively. He enlisted Apache scouts and several very able civilian chiefs of scouts to track down the troublemakers, and he also sent out numerous single-company columns under junior officers. Within a year or two he brought the situation under control. For that success he was promoted to brigadier general. He then turned his attention to the Apaches.

Meanwhile, Cochise and his Chiricahua retreated to the mountains, where for years they continued to organize and launch raids on those they saw, not without reason, as treacherous invaders.

Appenzell War (1403–1411)

PRINCIPAL COMBATANTS: The Swiss feudal district of Appenzell and the free town of St. Gall vs. the Abbey of St. Gall and Duke Frederick IV of Austria

PRINCIPAL THEATER(S): Modern-day Appenzell Canton, Switzerland

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: At issue were feudal obligations; the abbey and Duke Frederick wished to reimpose them, St. Gall and Appenzell to escape them entirely.

OUTCOME: Appenzell (and, by association, St. Gall) joined the Swiss Confederacy and became free of their former suzerain.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

As the feudal economic order in Europe grew increasingly obsolete around the end of the 14th century and the social structures of feudalism began to collapse, vassal states found themselves under heavy pressure from their suzerains. Appenzell, a Swiss feudal district containing several legal and political communities, had been placed under the suzerainty of the Abbot of St. Gall by imperial decree in 1345. By the early 15th century, however, the free town of St. Gall, which had been granted the status of an imperial corporation because of its extensive textile trade, was financially independent of the feudatory district. Now the abbey, illegally demanded that St. Gall return to its former feudatory status and pay the assessments due under their old relationship. The town appealed to Appenzell for help, and in January 1401 eight communities agreed to ally themselves with St. Gall.

The abbey immediately sought to punish both Appenzell and St. Gall, sending a monastic army against the alliance in 1403. At the defile of Speicher on May 15, 1403, the alliance, which had strengthened its position by welcoming numerous mountain peoples into the coalition, soundly defeated the forces of the abbey. The abbot appealed to Hapsburg duke Frederick IV of Austria (fl. 1380–1410), who gladly sent troops to repress the “uprising.” Frederick's troops and the abbey's forces attacked St. Gall and Appenzell simultaneously in 1405. The alliance, with the support of the count of Werdenberg-Heiligenberg, defeated the new attack just as handily as it had the previous, and in the flush of victory went on a violent spree against all feudal lords.

King Rupert of Germany (1352–1410), annoyed by the inability of Frederick to handle the situation and alarmed by the reign of terror in the countryside, without any authority whatsoever in the region, ordered the rebels once again to accept feudal control by the abbey. The alliance ignored Rupert's threats and in 1411 gained the support of the Swiss Confederacy. Under its protection the alliance was in no danger from either Rupert or Frederick, both of whom were powerless to act against the confederacy short of launching a full-scale war.

Aquitainian Rebellion (735)

PRINCIPAL COMBATANTS: The sons of Duke Eudo of Aquitaine vs. the French king Charles Martel

100 Arab Conquest of Carthage

PRINCIPAL THEATER(S): Southwestern France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: At issue was who should inherit the duke of Aquitaine's estate—his sons or the French Crown

OUTCOME: The rebellion was crushed, and Aquitaine went to Charles Martel.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After Eudo (Eudes), duke of Aquitaine (665–735), died, his estate was to revert to Charles Martel (c. 668–741), the son of King Pepin II (d. 714), as his rightful suzerain. However, Eudo's sons felt that Aquitaine was rightfully theirs, and they rose up in rebellion, sparking a larger revolt by a number of nobles at the very moment Charles was winning his smashing victory over the Muslims at Tours (Poitiers). The revolt was badly organized and poorly financed. Charles quickly returned to crush the rebellion before it gained any momentum. Eudo's sons were forced to pledge fealty to Charles, and they lost what they considered their patrimonial lands in Aquitaine to their sovereign.

Arab Conquest of Carthage (688–699)

PRINCIPAL COMBATANTS: Arab Muslims vs. Byzantine Empire

PRINCIPAL THEATER(S): North Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Arabs sought to conquer Byzantium and convert its peoples to Islam.

OUTCOME: The Arabs took Carthage, chased the Byzantines completely out of Africa, and began to menace the empire's control of the sea.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After 25 years of war with the Persians the Byzantine Empire was prostrate (see BYZANTINE-PERSIAN WAR [603–628]). Byzantine emperor Heraclius (c. 575–641) had lost some 200,000 men and had seen the almost unimaginable riches of the empire squandered or destroyed. As Heraclius and

his people began the long task of recovery, a troublesome new foe appeared on the eastern horizon—Arab Muslims, devotees of the religion of Islam founded by Muhammad (570–632) who were determined to convert the world by conquest. They swept out of Arabia to strike the Persian and Byzantine Empires, both totally exhausted by their long war. In the BYZANTINE-MUSLIM WAR (633–642), after overwhelming Persia, the Muslims quickly conquered Byzantium's eastern provinces, aided by the passive neutrality of the Syrians and the Egyptians. By the time Heraclius, infirm and unpopular, died of dropsy, all the empire east of Taurus had been lost to the religious warriors, though the Anatolian and Thracian heartland survived.

Heraclius's successors were faced with defending the empire's eastern boundaries against the Arab hordes, who launched numerous raids into Anatolia. They were able to maintain a frontier generally along the Taurus Mountains, but in the southwest the Muslims invaded the Byzantine Empire's North African lands in 688 (see BYZANTINE-MUSLIM WAR [668–679]). Their advance was ultimately halted by the use of Greek Fire, a volatile combination most probably consisting of quicklime, naphtha, sulfur, and sea water. There followed decades of sporadic hit-and-run warfare, during which both the Arabs and the Byzantines made raids on each other's cities and territories.

A more concentrated war broke out again in 698. Exploiting religious dissension between the empire's provinces and Constantinople, which resulted in widespread disunity, the Arabs assaulted and entirely destroyed the Byzantine-held city of Carthage. In 699 Arab forces drove the Byzantines from Utica, northwest of Carthage. The Arabs sacked Utica, and the Byzantines were thereby virtually eliminated from all of North Africa. This put the Arabs in a position to challenge seriously Byzantine control of the sea, which they began to do.

Mango, ed., *The Oxford History of Byzantium* (New York: Oxford University Press, 2003); Geoffrey Regan, *First Crusader: Byzantium's Holy Wars* (Stroud, U.K.: Sutton Publishing, 2001).

Arab Insurrection in Iraq (1920–1922)

PRINCIPAL COMBATANTS: Great Britain vs. Arab nationalists in Iraq

PRINCIPAL THEATER(S): Iraq (principally rural regions)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Arab nationalists sought independence for Iraq.

OUTCOME: Although the insurrection was put down, it prompted the British to look for honorable means of withdrawing from Iraq; withdrawal did not occur until 1936.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Britain and India, 60,000; Iraq, unknown

CASUALTIES: Britain and India, 2,269 killed, wounded, or missing; Iraq, 8,450 killed

TREATIES: Treaty of alliance between Britain and Iraq, October 10, 1922

Under the mandate system, instituted by the League of Nations following WORLD WAR I, the three disparate provinces of Mosul, Baghdad, and Basra were merged into a single political entity in an attempt to decree a nation out of very diverse peoples. The new country, Iraq, was placed under British control, but British statesmen were by no means agreed on what Britain's policies in and toward Iraq should be and just what kind of government should be set up. On the one hand, the Colonial Office proposed to exert direct control on Iraqi affairs in order to protect British interests in the Persian Gulf and in India. On the other hand, some British leaders thought it best to accommodate and conciliate Arab nationalists by means of a government of indirect control through an indigenous government under British supervision.

While British politicians debated this issue, events took a hand. Early in 1920 Emir Faisal (or Fay-al) I (1885–1933), son of Ali ibn Husayn, leader of the Arab Revolt (against the Turks) in 1916 (see WORLD WAR I: MESOPOTAMIA), created an Arab government in Damascus and was proclaimed king of Syria. In Damascus a group of Iraqi nationalists convened to proclaim Faisal's older brother, Emir 'Abd Allah, king of Iraq. This action triggered nationalist agitation in northern Iraq, which subsequently spread to tribal areas in the middle Euphrates region. By the summer of 1920 Iraq was in full-blown revolt against British rule, except in the major cities of Mosul, Baghdad, and Basra, where British military forces were garrisoned.

The British responded to the Arab nationalist revolt with force tempered by a degree of moderation, for even as British authorities acted against the nationalists, they looked more earnestly for a way to satisfy the growing public sentiment favoring withdrawal from Mesopotamia. To Arab demands for Iraqi independence, Britain responded in 1921 with an offer of the Iraqi throne to Faisal I, who would establish an Arab government, albeit under nominal British mandate. Faisal responded that he would accept the throne only if it were offered by the Iraqi people. This position gave him a nonaggressive means of suggesting to the British that the mandate be replaced by a firm treaty of alliance.

In March 1921 British colonial secretary Winston Churchill (1874–1965), advised by T. E. Lawrence (1888–1935) (a.k.a. "Lawrence of Arabia" for his touted deep affinity with the Arab cause), presided over a conference in Cairo to settle affairs in the Middle East once and for all. Sir Percy Cox (1864–1937), recently made high commissioner for Iraq, had already set up a provisional gov-

ernment when the Cairo Conference met. On July 11 the conference declared Faisal king of Iraq, provided that his government should be "constitutional, representative, and democratic," and directed Cox to conduct a plebiscite to that effect.

Faisal was crowned king on August 23, 1921. He signed a treaty of alliance with Great Britain on October 2, 1922.

In return for a promise to prepare Iraq for membership in the League of Nations "as soon as possible," the English had managed to reproduce most of the conditions of the old mandate without ever using the word itself. Not surprisingly, the treaty ran into strong opposition in the Iraqi Constituent Assembly but was finally ratified under pressure from the British on June 11, 1924. In July the assembly adopted a constitution, but it did not go into effect until King Faisal signed it on March 21, 1925.

Meanwhile, Iraqi nationalists, extremely dissatisfied with the British treaty, demanded immediate independence. It took five years, but ultimately the British capitulated, signing another treaty on June 30, 1930, which established a mere "close alliance" between the two countries and "frank" talk on matters of foreign policy affecting their "common interests." The new treaty was to go into effect after the now independent Iraq was admitted to the League of Nations on October 3, 1932.

Arab Invasion of Persia (262–264)

PRINCIPAL COMBATANTS: Palmyran Prince Odaenathus vs. Shapur I of Persia

PRINCIPAL THEATER(S): Persia, Armenia, Mesopotamia, and parts of Asia Minor

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: After routing Persian king Shapur I at the end of the Roman-Persian War of 257–261, the Arab firebrand Odaenathus, backed by Rome, invaded Persia itself.

OUTCOME: Odaenathus defeated Shapur and reclaimed Rome's lost provinces in the east.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

After Roman emperor Valerian died in captivity (c. 261) during the ROMAN-PERSIAN WAR (257–261), his captor, King Shapur I (d. 272), overran Syria, retook Antioch, and

raided throughout the Roman east. Returning home loaded with booty from Asia Minor, Shapur's Persian army ran into a small Roman-Arab force west of the Euphrates River. Shapur was surprised and routed by Septimius Odaenathus (d. c. 267), prince of Palmyra, a Romanized Arab who made himself so indispensable to the new caesar, Gallienus (218–268), that the latter made Odaenathus his virtual coruler in the east. Given the title "Dux Orientis" as a reward for attacking, defeating, and executing Quietus, one of the so-called Thirty Tyrants, Odaenathus invaded Persia itself in 262.

Reinforced with a substantial number of Roman legionnaires, courtesy of Emperor Gallienus, Odaenathus attacked first the lost Roman provinces east of the Euphrates. Although his army was still comparatively small, composed mainly of light foot archers, cataphracts, and lancers plus his irregular light Arabian cavalry, Odaenathus nevertheless managed to drive off the Persians investing Edessa and to recapture Nisbis and Carrahe. Accompanied and assisted by his beautiful and capable wife, Zenobia (d. after 274), the Palmyran prince harassed Armenia and raided far into Mesopotamia over the course of the next two years. He consistently defeated Shapur and his generals, twice capturing the Sassanid capital of Ctesiphon. By 264 Shapur had had enough and sued for peace, freeing Odaenathus for another assignment—a successful punitive expedition against the Goths who had recently begun to ravage Asia Minor.

In 266, at the conclusion of that adventure, Odaenathus was murdered. Although his son Vaballathus (d. c. 273), became the new prince of Palmyra, true power, and Rome's eastern dominions as well, lay in the hands of his widow.

Arab-Israeli War (1948–1949)

PRINCIPAL COMBATANTS: The newly formed state of Israel vs. the Arab countries of Egypt, Syria, Transjordan, Lebanon, and Iraq

PRINCIPAL THEATER(S): Israel

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: The Arab nations opposed the creation of Israel.

OUTCOME: Israel gained control of disputed areas in Palestine and began the development of a formidable standing army.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Israel, 45,000; Arab nations, 55,000

CASUALTIES: Israel, 21,000 soldiers and civilians; Arab nations, 40,000 soldiers and civilians

TREATIES: None

HISTORICAL BACKGROUND

The roots of Zionism are as old as the commencement of the Jewish Diaspora in the Babylonian Exile of the sixth century B.C.E., during which the Jews began longing for a return to Zion, or Jerusalem. But it was not until the emancipation of the Jews in 1791 during the FRENCH REVOLUTION that organized Zionist movements first appeared.

During the 19th century, largely in response to rising nationalist sentiment throughout Europe coupled with persecution of European Jews, especially in Russia, Jewish political activists worked to raise the national consciousness of ghetto Jewry. Jewish financiers such as Moses Montefiore (1784–1885), Eduard de Rothschild (1868–1949), and Maurice de Hirsch (1831–96) backed several plans for the return of Jews to the Middle East, the most important of them led by Theodor Herzl (1860–1904), the man historically considered the founder and foremost leader of the modern Zionist movement. In 1897 Herzl's World Zionist Congress, held at Basel, Switzerland, created a worldwide political movement.

After some 20 years of struggle, the Zionist Congress secured the so-called Balfour Declaration. Contained in a November 2, 1917, letter from the British Foreign Office's Lord Arthur James Balfour (1848–1930) to Lord Rothschild, it was a clear statement of the British policy toward Zionism during WORLD WAR I, endorsing the establishment of "a national home" for the Jewish people in Palestine.

Soon afterward, British general Sir Edmund Allenby (1861–1936) invaded Palestine, capturing Jerusalem in December. Following the war the League of Nations in 1922 approved a British "mandate" over Palestine and neighboring Transjordan, and the substance of the Balfour Declaration was written into the mandate.

The mandate was intended to encourage the development of self-government. Transjordan (modern Jordan) did indeed become autonomous in 1923 and was recognized as independent in 1928. However, in Palestine independence was withheld because of the apparently hopeless conflict between Arab and Jewish claims. Throughout the 1920s and 1930s Arab-Jewish violence was often intense, especially as more and more Jewish immigrants fled to Palestine from Nazi-dominated Europe, and the Jewish population of some 60,000 tripled by the end of the 1920s. Arab resentment against this mass immigration exploded into riots in 1929. Under the encouragement of the grand mufti of Jerusalem, an admirer of the Nazis, Arab rioting had become endemic by 1936. In response the Jews formed Haganah (Defense), and Palestine erupted into civil war.

By 1939 Haganah had grown from an underground militia to a semiprofessional army that served as a cobelligerent with the British during the war against Germany. But British diplomacy did not always reflect conditions in the combat zones. At the 1939 London Round Table Conference, the British government issued a “White Paper” promising the creation of an independent Palestine within a decade and limiting Jewish immigration to 1,500 individuals per month until 1944, when Jews would no longer be admitted at all. So Zionists turned from Great Britain to the United States for support, demanding in the May 1942 Biltmore Conference in New York the formation of an independent Jewish state—a demand that attracted much U.S. support.

The Nazi treatment of Jews spawned a sympathy for Zionism worldwide, and Franklin Delano Roosevelt (1882–1945) in his 1944 reelection campaign endorsed the founding of a “free and democratic Jewish Commonwealth.” This put the United States at odds with Britain, which at war’s end was seeking to maintain its hegemony in the Middle East through good relations with the Arabs. The more radical Jewish organizations—Menachem Begin’s (1913–92) terrorist Irgun and the Abraham Stern Group—had turned against the British occupation by 1944.

During WORLD WAR II there had always been a subtle tension between Roosevelt and his ally and friend British prime minister Winston Churchill (1874–1965). Roosevelt disapproved of British and French colonialism and had little patience with Churchill’s plans to shore up Britain’s waning colonial empire after the war, especially in the Middle East. This lack of patience would color the “special relationship” between the two powers after the war, a faint if persistent irritant in the background of American-British diplomacy that came closest to breaking out into the open in the Suez Canal crisis of 1956. (See ARAB-ISRAELI WAR [1956].)

Immediately after the war, however, the United States was generally content to let the British wield their influence in the Middle East to protect American COLD WAR interests against the Soviet Union so long as it was evident that Britain continued to divest itself directly of its colonial holdings. In keeping with this subtle pressure, Britain conducted a gallant balancing act, favoring the growth of Arab unity in the region but striving to ensure that Arab governments favorable to Britain would dominate any such alliance. Thus, during the war Britain had supported an Arab unity conference that met in Alexandria, Egypt, in October of 1944, and led to the formation of the Arab League.

The league’s founding members were Egypt, Iraq, Syria, Lebanon, Transjordan, Saudi Arabia, and Yemen. Rivalries and tensions among league members and clauses calling for unanimous votes weakened the body, headquartered in Cairo, and often made it impossible for the league to adopt common policies. Unable effectively to resist the growing Zionism in Palestine, the league came

increasingly under the dominance of an Egypt struggling to free itself of its French and British colonial past and thus did not become the ally for which Great Britain had hoped. Instead, Egypt used the league to develop a common Arab front against the continued British and French military presence in the Middle East as well as against Zionism.

If the Arab League was created first and foremost to prevent the birth of a Jewish state in Palestine, it was also formed in anticipation of liberation from the old colonial shackles. The Islamic nationalism that had been awakened during World War I by Allied promises of autonomy in exchange for Arab support in the conflict also finally reached fruition at the end of World War II. The first great wave of decolonization came when the British and the French, honoring their war-time promises, evacuated—then recognized the sovereignty of—Egypt and Syria in 1947 and Iraq in 1947. There was nothing magnanimous about the Allied support; it came in response to the strategic importance of the Middle East, deriving from its vast oil reserves, the Suez Canal, and its position along the south rim of the Soviet Union.

While the Arab kingdoms and republics, all Islamic, were not drawn to communist ideology, the USSR hoped nevertheless to expand its influence by keeping up the pressure on Turkey and Iran and insinuating itself in the many quarrels of the region. From the beginning the most intractable of these disputes was the Arab-Israeli conflict. The situation was further complicated by the fact that immediately following World War II large numbers of Holocaust survivors sought homes in Palestine. When the immigration met with British resistance, renewed violence erupted, and a war-weary Britain, under U.S. pressure, at last caved in, turning the entire problem over to the United Nations in 1947. On May 14, 1948, the eve of Britain’s evacuation, Palestine’s Jews, who had been waiting since the Balfour Declaration for the homeland the British had promised them, proclaimed the state of Israel.

THE WAR AND ITS OUTCOME

The immediate result was the first of several Arab-Israeli wars, as Arab armies invaded the former Palestine on the very day that the Jewish state of Israel was formally created. The Arab nations of Egypt, Syria, Transjordan, Lebanon, and Iraq sent forces into the new country and seized control of territory in southern and eastern Palestine. Although new, the Israeli army was determined to halt the Arab advance. Now the lack of unity and cooperation within the Arab League and its alienation from Great Britain and France (and thus the United States) took their toll, as the Israelis pushed back the invaders in 1949. The United Nations secured a four-week truce in June, but fighting was under way once again in July. Periods of truce and warfare alternated throughout the year, and ultimately the Israelis gained control of the Negev Desert, with the exception of the Gaza Strip. Israel started seeking

armistices with its Arab neighbors beginning in February 1949, and by July of that year agreements had been concluded with Egypt, Syria, and Transjordan. Israel ended the conflict with its territory increased by half and in control of most of the disputed areas of Palestine. Perhaps even more significantly, the Israeli troops had become a strong standing army. As more Jews immigrated into Israel, some 700,000 Arab Palestinians fled the territory into Transjordan, whereupon the Israelis confiscated their property. The Middle East “problem” had been born.

Arab-Israeli War (Suez War, Sinai War) (1956)

PRINCIPAL COMBATANTS: Egypt vs. Israel, Great Britain, and France

PRINCIPAL THEATER(S): Sinai Peninsula and the Suez Canal zone in the Middle East

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: When the new Egyptian president, Gamal Abdel Nasser, nationalized the Suez Canal, Britain and France, Egypt’s former imperial overlords who were dependent on the canal for oil, secretly conspired with Israel to take back control of Suez by force and depose Nasser.

OUTCOME: Shortly after 10 Israeli brigades invaded Egypt on October 29, 1956, and routed Nasser’s army, the two European nations on schedule and according to plan demanded that both Israel and Egypt withdraw from the canal zone and announced that they intended to intervene and enforce the cease-fire already called for by the United Nations. Under strong pressure from the United States, the French and the British, and then the Israelis, meekly abandoned their adventure. Nasser emerged from the crisis not merely a victor, but a national hero and leader of the so-called Third World of nonaligned nations.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Egypt, 150,000; Israel, 100,000; Anglo-French force, about 15,000

CASUALTIES: Israel, 189 killed, 899 wounded, 4 captured; Egypt (against Israel), 1,000 killed, 4,000 wounded, 6,000 captured; Egypt (against Anglo-French), 650 killed, 900 wounded, 185 captured; Great Britain, 16 killed, 96 wounded; France, 10 killed, 33 wounded.

TREATIES: None; ended with a UN-sponsored cease-fire between Egypt and Israel.

THE MAKING OF THE SUEZ CRISIS

Modern Egypt achieved nominal independence after centuries of foreign rule in 1922. Until Britain invaded and occupied the country in 1882, the land of the pharaohs had been—except for a brief period of occupation by Napoleon’s army—a self-governing province of the Ottoman Empire. In 1914, as Ottoman rule collapsed in the wake of a series of petty Balkan wars, Britain deposed the Turkish lackey of a viceroy (called the “khedive”) who ran Egypt and put his uncle, Husayn Kamil (1853–1917), in charge. Calling Kamil the “sultan,” the British imposed martial law to protect the strategically vital flow of oil from the Middle East for the duration of WORLD WAR I. Kamil died in 1917, and his ambitious and lascivious brother, Ahmad Fuad (1868–1936), became sultan at a time when, fueled by British wartime repression and war-spawned deprivations, Egyptian nationalism was reaching a fevered pitch. The Ottoman Empire disappeared during the war, and afterward Egypt proposed sending a nationalist delegation to London to petition His Majesty for autonomy. Not only did Britain reject the delegation out of hand, they arrested and threw its leader, the charismatic Zaghul Pasha (c. 1850–1927), in jail. When the nationalists in response launched industrial strikes against the British colonial government and terrorist attacks against its personnel, Lord Allenby (1861–1936)—the general who had defeated the Ottomans in Palestine—negotiated a settlement and declared Egypt independent “with reservations” in February 1922. The reservations were that Britain intended still to protect foreign interests, meaning the Suez Canal and the oil companies, and to supervise Egyptian defense. Sultan Fuad became King Fuad I and Egypt a constitutional monarchy, at least on paper, which, given that British troops remained in the country and Fuad remained the same old autocrat he had always been, did not mean much at all.

Gamal Abdel Nasser (1918–70) was four years old at the time, having been born in January 1918 in the village of Bani Morr in the Upper Egyptian province of Asyut to a middle-class family. Nasser began his rise to power in 1937, when he entered the military academy. During a short stint in the army as a second lieutenant, he met and befriended two other recent graduates, Zakaria Mohieddin (b. 1918) and Anwar al-Sadat (1918–81), who, with Nasser, would become prominent in the Nazi-backed Free Officers movement, which secretly campaigned against corruption and for the withdrawal of British troops. In 1941, he returned as an instructor to the academy, where he recruited members for the Free Officers Corps. During the 1940s and early 1950s, deep social unrest spread through Egypt under the rule of the sybaritic King Farouk (1920–65), Fuad’s son and successor. Land was concentrated in the hands of the rich, malnutrition and disease were rampant, and peasants fled the dismal rural areas for the cities, where prices and unemployment were driven

steadily higher. The time was ripe for action by the Free Officers. Led by 200 officers, 2,000 troops stormed army headquarters in Cairo during the night of July 22–23, 1952. By morning Farouk had abdicated, and a new political order was in place under Major General Mohammed Naguib (1900–84) as its head. Nasser remained in the background as the Revolutionary Command Council took control, but in the spring of 1954, in a reaction against left-wing radicalism, Naguib was deposed, and it was Nasser who emerged as the self-proclaimed prime minister.

Land reform was Nasser's first order of business, but he knew that land reform was not enough to shake Egypt out of its downward economic spiral. A special stimulus was needed as well, and Nasser seized on the construction of the massive Aswan Dam on the Nile as a vehicle for economic recovery. He first negotiated with Britain and the United States for financial backing for the project. Uneasy about Nasser's courting of Eastern bloc and Soviet support (he had signed an arms deal with Czechoslovakia in 1956), Britain, the United States, and the World Bank withdrew from the project. On July 26, 1956, an undaunted Nasser nationalized the Suez Canal, whose proceeds had previously gone to European bondholders, and stated that use fees would be dedicated to constructing the new dam, predicting they would pay for it in five years. Fearing that the unpredictable Nasser might close the canal and cut off oil to western Europe, Britain and France began making plans to get it back and, if possible, depose Nasser. When diplomatic efforts appeared unlikely to settle the crisis, they struck.

THE WAR CABAL

After Nasser's nationalization of the Suez Canal, the British government ordered General Sir Hugh Stockwell (1903–86) to come up with a plan for seizing the canal using a joint Anglo-French expeditionary force. Understanding the impatience of the U.S. administration under President Dwight David Eisenhower (1890–1969) with British and French colonialism, the two powers sought to avoid at least the public appearance of imperialist aggression by entering into secret negotiations with Israel, exploring the potential to mask their planned invasion as a renewal of Arab-Israeli conflict (*see* ARAB-ISRAELI WAR [1948–1949]).

Ultimately, the three countries came up with a modified version of such a plan: Israel would threaten the Suez Canal, and the Europeans would use that as an excuse to intervene. Britain and France would demand that both Israel and Egypt withdraw 10 miles from the canal. Counting on Egypt to refuse, the allies then planned to seize the canal. They code-named the operation "Musketier." Once agreement had been reached, the French and English had to delay their invasion two months, from early September to early November, in order to coordinate

their mobilization with Israel. For their part, the Israelis called the Sinai campaign "Operation Kadesh," and its stated objectives were to mount a military threat to the Suez Canal by occupying the high ground to its east and by capturing the Strait of Tiran. They hoped to create confusion in the ranks of the Egyptian army, thereby bringing about its collapse and the fall of President Nasser.

Nasser was aware that something was afoot, but he was ignorant of its extent. When he received reports of Anglo-French forces massing on Malta and Cypress, he promptly withdrew nearly half his Sinai garrison to the Canal Zone Delta, leaving behind only some 30,000 men under the Eastern Command of Major General Ali Amer (active 1940s–60s). Most of these were deployed in the northeast in static defense of the triangle formed by Rafah, Abu Ageila, and El Arish—easy targets for the Israeli juggernaut.

THE WAR AND ITS OUTCOME

As prearranged, on October 29, 1956, the Israelis attacked. They captured the Gaza Strip, Sharm el-Sheikh, and several other major spots before the British and the French—still according to plan—ordered both Israel and Egypt to cease fire and withdraw from the war zone. Following the script, Israel complied, and as expected the Egyptians refused, giving the allies their excuse. On November 5, 1956, Anglo-French paratroopers dropped near Port Said and attacked, killing Egyptian soldiers. There was little Nasser could do. The next day Egypt and Israel officially accepted a cease-fire arranged by the United Nations, which sent an emergency force (UNEF) to oversee the situation.

The fallout from the plan, however, was not what the English and French expected. The Soviet Union was not fooled by the ruse and threatened to intervene, and President Eisenhower, furious with Britain, France, and Israel, indicated that he would let the Russians bomb them to kingdom come if it came to that. As it had been the U.S. withdrawal of its promised aid to Egypt for the Aswan Dam project back in July that had led an angry Nasser to nationalize the Suez Canal in the first place, it was now pressure from the United States that forced the Anglo-French forces to back out. The imbroglia cost British prime minister Anthony Eden (1897–1977) his job, as he resigned under pressure. It took the United States another year and even more trenchant diplomatic pressure to make Israel give up the Gaza Strip and Sharm el-Sheikh, and even then the Israelis did not return the land to Egypt but turned it over to the UNEF.

Despite his military defeat, Nasser's reputation soared after the Suez crisis. He proceeded with the construction of the Aswan Dam, aided now by the Soviet Union, and he set out to realize yet another goal, the unification of Arab countries. In 1958 the government of Syria merged with Egypt to form the United Arab Republic. It was Nasser's goal to recruit all the other Arab countries into the fold.

The republic was short-lived, however. Not only did the other nations fail to join, but Syria withdrew in 1961. Nevertheless, Egypt became a haven for Arab radicals and anticolonial revolutionaries as Nasser welcomed political refugees from other Arab countries. Even as he embraced foreign radicals, he cracked down on civil freedom in his own country. The end seemed to come in 1967, when Nasser called for the withdrawal of United Nations Emergency Force troops from the Gaza Strip and instituted a blockade of Eilat, precipitating a preemptive war by Israel that destroyed Egypt's air force on the ground (see ARAB-ISRAELI WAR [1967]).

Arab-Israeli War (Six-Day War) (1967)

PRINCIPAL COMBATANTS: Israel vs. the Arab states of Egypt, Syria, Jordan, and Iraq

PRINCIPAL THEATER(S): The Sinai Peninsula, the Gaza Strip, Jordan's West Bank, and the Golan Heights in the Middle East

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Israel had previously warned that it would go to war under any one of the following circumstances: the closing of the Strait of Tiran; the sending of Iraqi troops to Jordan; the signing of an Egyptian-Jordanian defense pact; or the withdrawal of U.N. peacekeeping forces. By 1967, due mainly to Egyptian president Nasser's leadership, all those conditions existed, making war all but inevitable.

OUTCOME: Israel captured the Sinai Peninsula, the Gaza Strip, and the West Bank of the Jordan River. As Israel occupied the captured territory with intentions of turning them into a buffer zone, the outraged Arabs protested to a world startled by Israel's display of military prowess.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Israel, 230,000; Egypt, 200,000; Syria, 63,000; Jordan, 56,000; Iraq, 90,000.

CASUALTIES: Israel, 800 dead, 2,400 wounded, 18 missing; Egypt, 11,500 dead, 15,000 wounded, 5,500 missing; Syria, 700 dead, 3,500 wounded, 500 missing; Jordan, 2,000 dead, 5,000 wounded, 4,500 missing; Iraq, 100 dead, 300 wounded.

TREATIES: None, the war ended with an unsponsored cease-fire on June 10, 1967.

been in a chronic state of guerrilla warfare with neighboring Arab states ever since. Occasionally, as in the ARAB-ISRAELI WAR (1948–49), the guerrilla and terrorist action flared into outright war. After the 1956 Suez crisis (see ARAB-ISRAELI WAR [1956]), in an attempt to stabilize the region, the United Nations sent an emergency force (UNEF) to Egypt but withdrew it in May 1967 at the demand of Egypt's president general, Gamal Abdel Nasser (1918–70). Once Nasser had secured removal of the UNEF, he sought to strangle Israel by means of a shipping blockade of the Strait of Tiran, closing the principal Israeli port of Eilat on the Gulf of Aqaba. With the blockade in place, Egyptian and Syrian forces mobilized along the border created at the end of the last war, and Israel responded in kind.

It was an all-too-familiar scenario, as both sides apparently braced for another round of guerrilla attacks along the borders like those that had taken place frequently since the 1956 war. But this time Israel stunned the Arabs—and the world—by launching on June 5 a massive air attack (urged by Israeli chief of staff Itzhak Rabin [1922–95]) on some two dozen Arab airfields, destroying more than 400 Egyptian, Syrian, and Jordanian aircraft on the ground. It was the bulk of the Arab air forces. Simultaneously, under the direction of General Moshe Dayan (1915–81), a one-eyed veteran of the 1956 war, ground forces invaded the Sinai Peninsula, Jerusalem's Old City, Jordan's West Bank, the Gaza Strip, and the Golan Heights, seizing and occupying these areas when an unsponsored cease-fire was declared on June 10, 1967.

Although the guerrilla and terrorist activity continued, and another war would erupt on Yom Kippur, the holiest of Jewish holy days, in 1973 (see ARAB-ISRAELI WAR [1973]), the 1967 Six-Day War marked a turning point in Israel's relation to the Arab world and the world at large. For centuries—and in no century more than the 20th—Jews had been regarded as vulnerable, as eternal objects of persecution, and as perpetual victims. The brilliant performance of the Israeli armed forces in the Six-Day War, achieving the century's most complete military triumph in proportion to the forces engaged and the length of the engagement, convinced Arabs and others that the Jews were no longer willing to be trifled with. As for the United States, which had favored and supported Israel from its inception as a nation, the Jewish state was now perceived as a strong ally and a key bulwark in the containment of the Soviet-allied or Soviet-leaning Arab states, which controlled so much of the oil Americans needed to run their industries and their automobiles.

On the other hand, while the brief three-front campaign clearly demonstrated the combat effectiveness of the Israelis and their superiority over their more numerous enemies, it also led the Israelis to underestimate the Arabs. The scope and speed of the victory was much enhanced by the fatal orders of Egyptian field marshal Ali Amer (active 1940s–60s) for a general withdrawal on June 6, which turned what was probably an inevitable defeat into an

Israel, a homeland for the century's most ruthlessly persecuted minority, came to a difficult birth in 1948 and had

embarrassing and disastrous rout. Holding Ali Amer and other Egyptians in unwarranted contempt led the Israelis to miscalculate Egypt's military potential a few years later in the Yom Kippur War.

The more immediate effect of the war, however, had come on June 9, 1967, the day before the cease-fire. Gamal Abdel Nasser appeared on Egyptian television to announce his resignation. Hundreds of thousands of Egyptians took to the streets to demonstrate their demand that Nasser remain in power. While some of the demonstrations may have been engineered by Nasser himself, it is undeniable that some were indeed spontaneous. A hard-liner against Israel and the West, supremely repressive at home, Nasser—from his assumption of power in 1954 until his death from a heart attack on September 28, 1970—was the most popular and influential Arab leader in the world.

As a result of the war, Jordan suffered severe economic setbacks, while Palestinians became stateless refugees, subject to martial law on the West Bank. The stage was set for decades of unrest and violence, which, as of the early twenty-first century, showed no signs of abating.

Arab-Israeli War (Yom Kippur War, Ramadan War) (1973)

PRINCIPAL COMBATANTS: Israel (with U.S. matériel aid) vs. Egypt and Syria (with Soviet matériel aid)

PRINCIPAL THEATER(S): Israel, Egypt, and Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Egypt and Syria sought recovery of territory lost to Israel in the Arab-Israeli War of 1967.

OUTCOME: The war ended with a cease-fire; the Arab allies failed to regain the territory they sought; both sides declared victory.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Israel, 300,000; Arab forces, 539,000

CASUALTIES: Arab allies, 8,500 killed; Israel, 6,000 killed and wounded

TREATIES: U.N. Resolution 338 on October 22, 1973, and cease-fire of October 25, 1973; Peace agreement of 1974

The conflict is known alternatively as the Yom Kippur War and, less familiarly, as the Ramadan War. The fourth major military confrontation between Israel and the Arab

states since the establishment of Israel in 1948, the 1973 conflict pitted Israel against Egypt and Syria.

At issue was the failure to resolve territorial disputes arising from the ARAB-ISRAELI WAR (1967), including the return of the Sinai to Egypt and the return of the Golan Heights to Syria. Egyptian president Anwar Sadat (1918–81) offered a peace initiative in the form of his proposal to sign an agreement with Israel provided that the Israelis returned all occupied territories. Israel adamantly refused to withdraw to the pre-1967 armistice lines. Frustrated and anxious to retain his credibility at home, Sadat became persuaded that the issues would be resolved only by initiating a war with defined and limited objectives.

Another cause of war was the overconfidence of the Israeli general staff. The military persuaded the Israeli government that the nation was safe from Arab attack and that, therefore, no pressing reason existed for trading territory to obtain a guarantee of peace. This confidence became Israeli military and political doctrine and, as a result, the Israelis were uncharacteristically ill prepared for the October attack by Egypt and Syria. Israeli commanders even allowed themselves to misinterpret the buildup of Arab forces along the Suez Canal as merely a military exercise.

On October 6, 1973—Yom Kippur, the holiest day of the Jewish year—a surprise attack came on two fronts. Egypt rapidly crossed the Suez Canal and overran the Bar-Lev defensive line. Simultaneously, Syrian forces advanced into the Golan Heights and very nearly reached the 1967 border with Israel.

The situation looked desperate for Israel, which, in the north, was outnumbered by nearly 12 to one. On this front Israeli counterattacks during the first few days of the war repeatedly failed, and at a high cost, especially in aircraft (the Israelis lost 150 planes). However, on October 10 Israeli forces began to make significant headway against the Syrians, who were pushed back. Israeli troops kept advancing, invading Syria itself. This prompted the Soviet Union to airlift matériel to Damascus and Cairo. To counter this, the United States airlifted supplies to Israel on October 12 and 13. On October 21 the Israeli forces broke out to cross the Suez Canal. They then surrounded the Egyptian Third Army.

The peril of the Egyptian Third Army brought a plea from Sadat to the Soviet Union. The USSR responded by threatening to send troops to assist Egypt. In order to avoid a major international crisis, U.S. secretary of state Henry Kissinger (b. 1923) was dispatched to Moscow to negotiate a cease-fire. This came in the form of UN Resolution 338, which established an immediate cease-fire and reinstated UN Resolution 242, “aimed at establishing a just and durable peace in the Middle East.” When Israel violated the cease-fire, the Soviets again threatened to send troops, but the United States applied diplomatic pressure on Israel, which agreed to a second cease-fire on October 25, 1973. Both Israel and Egypt claimed victory.

A more formal peace agreement was concluded in 1974, which mandated a UN-controlled buffer zone between Syria and Israel.

The war cost Egypt and Syria some 8,500 soldiers killed. The economic loss to the two Arab nations was devastating: the equivalent of a year's gross national product. Perhaps even worse, the war compromised Arab autonomy by increasing dependence on the USSR. As for Israel, some 6,000 soldiers were killed or wounded. In economic terms Israel had suffered similarly to Egypt and Syria—roughly the equivalent of the annual gross national product (GNP). Moreover, the image of Israeli military invincibility was shattered, and Israel became increasingly dependent on U.S. military, diplomatic, and economic aid.

For the United States there were also consequences. The Organization of Petroleum Exporting Countries (OPEC) doubled its oil prices, creating a severe gasoline shortage in the United States and contributing to U.S. (and worldwide) stagflation, a combination of inflation and recession during 1974–75.

Arab Revolt (1936–1939)

PRINCIPAL COMBATANTS: Great Britain and Jewish Zionists vs. Palestinian Arabs

PRINCIPAL THEATER(S): Palestine (now Israel)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Zionists wished to establish a Jewish state in Palestine; Arabs wished to drive the Jews from the region; the British hoped to maintain peace and prosecute the world war they were fighting against Germany.

OUTCOME: The rebellion was quelled, but the British moved to limit Jewish immigration in the future and promised the Arabs an independent Palestine, which only fed the flames of unrest that ultimately led the Jews to declare a state of their own.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Totals unknown, but perhaps as many as 15,000 Arab terrorists were active.

CASUALTIES: Several thousand

TREATIES: London Roundtable Conference “White Paper,” 1939

From 1936 to 1939 Palestine erupted into civil war. The Arab Revolt was an expression of Arab opposition to the

partition of Palestine, and as a result the Arabs took control of the country outside the large cities and the Jewish settlements. The British suppressed the revolt after the loss of several thousand lives, and in 1939, the London Round Table Conference produced a “White Paper” promising the creation of an independent Palestine within a decade and limiting Jewish immigration to 1,500 individuals per month until 1944, when Jews would no longer be admitted to Palestine. In response Zionists in large measure turned from Britain to the United States for support, demanding in the May 1942 Biltmore Conference in New York the formation of an independent Jewish state, a demand that attracted U.S. backing. Following WORLD WAR II large numbers of Holocaust survivors sought homes in Palestine. By 1947 a war-weary Britain turned the entire problem over to the United Nations, which voted to partition Palestine into Arab and Jewish states. On May 14, 1948, the eve of Britain's evacuation, Palestine's Jews proclaimed on their own the state of Israel, which led to the ARAB-ISRAELI WAR (1948–1949).

Arab Uprising in German East Africa (1888–1890)

PRINCIPAL COMBATANTS: Arab followers of Abushiri ben Salim al-Harhi, with tribesmen of the Tanzanian hinterlands vs. German East African government

PRINCIPAL THEATER(S): German East Africa

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Arab rebellion against German colonial rule

OUTCOME: Rebellion was suppressed, and the region came under direct control of the German government.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

In November 1884 Carl Peters (1856–1918), head of the German East Africa Company (Deutsch-Ostafrikanische Gesellschaft, DOAG), obtained land rights for more than 140,000 square kilometers of land in East Africa from the local chiefs, thereby beginning German colonization in Africa. Peters convinced Kaiser Wilhelm I's (1797–1888) “Iron Chancellor,” Otto von Bismarck (1815–98), to declare the region a German protectorate in 1885. With

Germany's blessing the DOAG exploited the native labor and resources along the East African coast and even expanded beyond the negotiated realm, particularly into Zanzibar.

In 1887 indigenous Africans attacked two DOAG trading posts in Zanzibar. In April of the following year the company signed a treaty with the sultan of Zanzibar, Said Khalifa (1852–90), in effect bribing him in return for a 50-year lease of the Zanzibar coastline. The treaty, coupled with the increasing arrogance of the DOAG, touched off new hostilities. On September 4, 1888, an Arab landowner from Pangani, Abushiri ben Salim al-Harhi (fl. 1880s), organized an uprising. Together with black Africans from both the hinterlands and the coastal regions, Abushiri drove a number of DOAG representatives from the townships and took many others prisoner.

German cruisers, including the *Leipzig*, steamed in to protect the two key colonial posts of Bagamoyo and Dar es Salaam, where DOAG personnel remained until reinforcements arrived. On January 30, 1889, Bismarck approved a 2-million-mark loan to aid the German protectorate in East Africa. From this point on the region came under the direct control of the German Reich, which dispatched Captain Hermann Wissmann (1853–1905) as a military governor.

By the end of the year Abushiri was arrested and executed. Wissmann instituted a reign of terror throughout the region, murdering thousands of sympathizers and establishing harsh penalties for all transgressions against German authority. By 1890 the uprising had been crushed.

Arab War See MUSLIM CIVIL WAR (680–692).

Aragonese-Castilian War (1109–1112)

PRINCIPAL COMBATANTS: Aragon vs. Castile

PRINCIPAL THEATER(S): Castile, Spain

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: A failed dynastic marriage led the two expansive Christian powers into a competitive war for dominance.

OUTCOME: Aragon succeeded in dominating Castile briefly in an uneasy union and in expanding its influence below the Ebro River.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In the 12th century Christian Europe was engaged in the slow reconquest of lands taken by the Muslims on the Iberian Peninsula during the eighth century. Constant warfare along a shifting Muslim-Christian frontier only encouraged violent internal struggles on both sides of the varying border, and as a result there sprang into existence a number of all-but-independent principalities, kingdoms, city-states, and emirates, which were only sporadically subject to a central authority. Among those were Castile and Aragon, the former about to launch on a half-century of glorious expansion, the latter, smaller and obstinate, beginning to wend its way slowly toward becoming the dominant Mediterranean power in the century to follow. Meanwhile, they vied for position, and in 1109 a dynastic marriage was arranged between King Alfonso I “the Battler” (1073[?]-1134) of Aragon and Queen Urraca (1081–1126) of Castile. When the two monarchs fell to disputation, however, the prospective union of Aragon and Castile melted away. War erupted, and although Alfonso was victorious in the Battle of Sepulveda in 1111, fighting continued in a series of lesser clashes. The marriage between Alfonso and Urraca was dissolved in 1112, as was the tenuous union between their kingdoms. Alfonso returned to Aragon, which he vigorously expanded, capturing Saragossa from the Moors in 1118. This established Aragonese influence below the Ebro River and elevated the kingdom to dominance in the region.

Aragonese Civil War (1347–1348)

PRINCIPAL COMBATANTS: Pedro IV vs. rebel Aragonese barons

PRINCIPAL THEATER(S): Aragon, Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The barons fought to preserve rights granted them under charter by previous Aragonese rulers and to keep one of Pedro's daughters from assuming the throne after his death.

OUTCOME: Pedro quelled the rebellion and revoked the noble charters.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

During the 13th century expansionist Christian powers attacked the Iberian lands held by the Moors, ultimately confining them to a small enclave in southeastern Spain called Granada. Chief among these Christian kingdoms was Castile, which after a half century of glory began to

decline under mediocre rule. In the wake of that decline, the smaller Aragon grew steadily in influence on its way to becoming the most powerful state in the Mediterranean. Toward the close of the century, Pedro III (1239–85) of Aragon formed an alliance with the Byzantine Empire and fought the War of the SICILIAN VESPERS, during which he was excommunicated by the pope and successfully defended his throne against Rome-backed French pretenders (see ARAGONESE-FRENCH WAR [1284–1285]), consolidating his hold over Aragon and its prominent position on the peninsula.

In the course of his expansions, Pedro and his son Alfonso III (1265–91) granted Aragon's barons charter rights and privileges that would become the source of prolonged difficulties under their successors. After King Pedro IV (1319–87) proclaimed his daughter heir to the throne, his barons rebelled, triggering civil war in December 1347. At first the barons prevailed, and nominated an acceptable male successor. While Pedro was held hostage in Valencia, his supporters rallied. After he was released, Pedro led an army to victory at the Battle of Eppila on July 21, 1348. This enabled him to rescind the barons' charters and to assert absolute rule once again. His victory in the ARAGONESE-GENOESE WAR (1352–54), by which he retook Sardinia, cemented his authority.

Aragonese Conquest of Sardinia (1323–1326)

PRINCIPAL COMBATANTS: Aragon vs. Pisa and Genoa

PRINCIPAL THEATER(S): Corsica and Sardinia

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: The Aragonese were embarked on nearly a century of maritime expansion in the Mediterranean and sought to assert their control over Corsica and Sardinia, granted years before under the Treaty of Anagni.

OUTCOME: Aragon expelled the Pisans and Genoese from Sardinia but failed to take Corsica, which came under the full dominance of Genoa.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

During the 13th century, as expanding Christian powers fought back the Moors on the Iberian Peninsula, Aragon grew steadily in influence at the expense of the larger and at first more glorious kingdom of Castile. King Pedro III (1239–85) led Aragon on its march to become the most

powerful state in the Mediterranean, forming an alliance with the Byzantine Empire and launching the War of the SICILIAN VESPERS, a war that would last some 20 years, during which he was excommunicated by the pope and successfully defended his throne against Rome-backed French pretenders. His son and successor, Alfonso III (1265–91), and his successor, James II (c. 1260–1327), inherited not only the Aragon Crown but also the ongoing war. When it ended in 1295, James gave up Aragon's rights to Sicily in exchange for control of Sardinia and Corsica under the Treaty of Anagni.

Pisa and Genoa also eyed Corsica and Sardinia. Indeed, Sardinia already was dominated by Pisans in Cagliari and Iglesias. James understood that the conquest of Sardinia would require a substantial use of force. In 1323 he sent a fleet, under his son Alfonso (1299–1336), later King Alfonso IV, to pacify Pisa and Genoa. Within three years, both Iglesias and Cagliari had fallen to Aragon. Nevertheless, neither the Pisans nor the Genoese abandoned Sardinia. The struggle for control consumed 30 years and, even at the end of that period, a Pisan presence remained. It was not purged until 1421. As for Corsica, Aragon never dislodged the Genoese, who assumed complete control of the island by 1434.

Aragonese-French War (1209–1213)

PRINCIPAL COMBATANTS: Aragon vs. France

PRINCIPAL THEATER(S): Southern France

DECLARATION: Pope Innocent III called for a crusade against heretics in southern France (some of which was under the control of Aragon) in 1203.

MAJOR ISSUES AND OBJECTIVES: France's Philip II used the excuse of the Albigensian Crusade to establish hegemony over southern France; Aragon's King Pedro I joined the so-called "heretics" to protect his own feudal holdings in the area.

OUTCOME: Pedro was killed, and the crusade went on.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Spanish and heretics combined, 34,000; French (at that point), a few thousand

CASUALTIES: Unknown

TREATIES: None

One of the more important events of the early 13th century in Europe was a crusade launched against the Albigenses, a sect of religious reformers in southern France that had been branded heretical by the Roman Catholic Church. French kings used the crusade to greatly expand

their control and power over the south at the expense of local barons. As the crusade degenerated into a civil war between France's northern and southern nobility, Aragon's King Pedro II (1174–1213) became caught up in the partisan cause of his brother-in-law, Raymond VI (1156–1222), count of Toulouse, against Simon IV de Montfort (c. 1160–1218), leader of the northern French cause.

The centers of the religious reform movement were Toulouse and the stronghold at Albi, where the Catholic clergy's failure to convert the heretics led Pope Innocent III (1161–1216) to proclaim the ALBIGENSIAN CRUSADE. France's Philip II (1165–1223) did not engage in the crusade personally, but he strongly urged his factotum, the half-English Montfort, to raise a substantial force among the northern barons, who campaigned across western Languedoc, destroying most of the south's military, and capturing most of its strongholds. At Albi and other heretical towns Montfort ruthlessly slaughtered the inhabitants. By 1213 only the cities of Toulouse and Montaubin still held out, and the counts of Toulouse, Foix, and Comminges—all in the South—were the only nobles still daring to defy Simon. Other than Simon, most of the northern barons had returned home, leaving him to mop up the conquest and conversion.

Christian crusaders from the recently ended Fourth CRUSADE had helped Aragon's King Pedro destroy a Muslim kingdom at Valencia in 1209. Now they marched into Provence, an Aragonese holding in France, where heretic Albigensians were gaining a following, to join the Albigensian crusaders. Watching developments carefully, Pedro grew concerned over the increase in French royal power in southern France. Anxious to protect his own feudal holdings north of the Pyrenees and despite his own staunch Catholicism, he led a Spanish army into Languedoc to join the heretics and the followers of his brother-in-law. With a combined army of about 4,000 heavy cavalry and 30,000 foot soldiers, King Pedro and Count Raymond captured several of Montfort's fortified posts, then laid siege to Muret, one of the most important of Count Simon's strongholds, garrisoned by 700 men. Just as Pedro and Raymond arrived at Muret, Montfort and some 900 heavy cavalry joined the garrison.

Aware that Muret was low on supplies, and knowing that he could not expect timely relief from the north, Simon launched a daring if desperate plan. He enticed the besiegers to attack an apparently poorly defended gate on the city's southeast, and as the attackers rushed in Montfort and his cavalry ambushed them. Then, while all attention was turned to the slaughter at the gate, Montfort's cavalry suddenly dashed out into the open, leading the besieging generals to assume he was trying to escape. Instead, riding around low hills to the west, Montfort turned north, crossed the Longe River just north of Muret, dispersed a small force protecting the far bank, and surprised and smashed a much larger force under the Count of Foix. Pedro and his Aragonese were warned, but by the

time they could form a line of defense they were hit by a violent frontal charge from two-thirds of Simon's small force. Outnumbering the French 30 to one, the Aragonese quickly engulfed them, only to be charged from behind by Montfort and 300 of his cavalry, who had just completed a wide sweeping envelopment. The Spanish broke and fled, suffering many casualties, not the least being King Pedro himself. Montfort's brilliant strategy paid off; Raymond's forces, the only portion of the heretical army so far not engaged in the battle, were quickly overwhelmed and all but annihilated. The Aragonese-French War was over. The Albigensian Crusade would continue for more than a decade, as Simon, urged on from Paris, rounded up heretic after heretic.

Aragonese-French War (1284–1285)

PRINCIPAL COMBATANTS: Aragon vs. France

PRINCIPAL THEATER(S): Aragon, Spain

DECLARATION: Pope Martin IV excommunicated the Aragonese king Pedro III in 1282 and gave his title to a French pretender.

MAJOR ISSUES AND OBJECTIVES: French king Philip III was attempting to claim the Aragonese throne for his son, to whom it had been awarded by the pope; Pedro, who the pope opposed for his expansions into Sicily, fought to keep his throne and his conquests.

OUTCOME: Pedro repulsed the French, consolidating Aragon's position on the Iberian Peninsula and making it a power in the Mediterranean.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Among the all-but-independent, expansionist, and intensely competitive Christian powers attacking the Moors and each other on the Iberian Peninsula during the 13th century was Aragon, growing steadily in influence at the expense of archival and sometime ally Castile. On its way to becoming the most powerful state in the Mediterranean, Aragon was led by King Pedro III (1239–85), who toward the end of the century formed an alliance with the Byzantine Empire and, pretending to sail on a crusade to Africa, actually landed in Sicily, sparking what over the course of the next 20 years would be called the War of the SICILIAN VESPERS. Though ultimately aiding the Aragonese in their eastward maritime expansion, the initial result of

the war was to get Pedro III excommunicated. An angry Pope Martin IV (c. 1210–85) went on to declare that Pedro had forfeited his right to rule Aragon because of his conspiratorial intrusion into the affairs of Sicily, and he offered the crown of Aragon to Charles of Valois (1270–1325), third son of King Philip III (1245–85) of France, who thought the French had a long-standing claim to the throne in any case. Philip allied himself with his uncle Charles of Anjou (also called Charles the Lame, c. 1254–1309), and invaded Aragon, seeking to take what the pope had offered and make his son king of Aragon and Sicily. Though the French invaders won a victory at Gerona in 1284, the following year they were forced by Pedro to retreat. While the French army was in Aragon its ranks had been ravaged by disease, which claimed the life of Philip III on the long march home.

Aragonese-Genoese War (1352–1354)

PRINCIPAL COMBATANTS: Aragon (with Venice and Catalonia) vs. Genoa and Sardinian rebels

PRINCIPAL THEATER(S): Sardinia and Corsica

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Sardinia, taking advantage of troubles in Aragon, rebelled against Aragonese rule over the island; Genoa moved onto Sardinia to reclaim its former hegemony; Aragon fought to suppress the rebellion and reconquer Sardinia from Genoa.

OUTCOME: Aragon defeated the rebels, expelled the Genoese, and established a troubled hegemony over Sardinia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

During the 13th century Europe's efforts to reconquer the Iberian Peninsula from the Muslim Moors had led to the birth of a number of virtually autonomous principalities and kingdoms in present-day Spain. Among them was Aragon, which by the beginning of the 13th century was on its way to becoming a major power in the Mediterranean. After taking Sicily in the War of the SICILIAN VESPERS Aragon went on to capture Sardinia from Genoa and Pisa in 1324 (*see* ARAGONESE CONQUEST OF SARDINIA). Under King Pedro IV (1319–87) long-lasting trouble with the Aragonese nobles culminated in a violent civil war (*see* ARAGONESE CIVIL WAR). The Sardinians took the opportunity at that point to rise up against their local Aragonese

rulers, and the Genoese, who had formerly run the island state, moved in to recapture their lost lands. Pedro secured an alliance with Venice and Catalonia to aid in suppressing the revolt in Sardinia. To neutralize the Genoese, who had taken advantage of the internal disorders to recover Sardinia, Pedro prevailed on his allies to do battle at sea. The Genoese were defeated in a naval battle in 1352, but a storm dispersed the Venetian and Catalan attacking fleet, giving the Genoese an opportunity to regroup. Thus reformed, a Genoese naval force attacked positions on the Sardinian and Corsican coasts. Pedro's forces pulled back, and Genoa installed Mariano de Arborea (d. 1368) as king of Sardinia.

Undaunted, the allies mounted a new naval offensive and in 1353 defeated the Genoese off the coast of Sardinia at Alghero. This time, after so hard won a victory, Pedro personally led troops when, in 1354, renewed rebellion erupted in Sardinia. He had no intention of giving the Genoese a fresh opening. Although the rebellion was not entirely crushed, an advantageous, albeit informal, peace was established. Nevertheless, while Aragonese rule had been more than nominally restored, rebellion persisted sporadically into the next century.

Reilly, *The Medieval Spains* (New York: Cambridge University Press, 1993).

Aragonese-Neapolitan War (1435–1442)

PRINCIPAL COMBATANTS: Aragon vs. Naples

PRINCIPAL THEATER(S): Naples

DECLARATION: Aragon on Naples, 1435

MAJOR ISSUES AND OBJECTIVES: Alfonso IV, king of Aragon, fought a war of conquest when the crown, once promised him by Neapolitan queen Joanna, went instead to the duke of Anjou.

OUTCOME: Anjou was defeated and Alfonso became, with the pope's blessing, king of Naples as well as Aragon.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None identified

During the 15th century the small city-states of Italy fought almost incessantly in senseless wars of little consequence and almost no lasting results. The armies were filled with mercenary condottieri, soldiers who were for sale at any time to the highest bidder—even during the heat of battle—and no warrior, from private to general, felt safe going into a war, much less patriotic or glory-bound. They fought for personal profit, and they were not

eager to risk life or limb for those who were more their employers than their inspiration. Limited engagements became chess matches that were given up the moment it became clear one side or the other had gained an advantage. Heavy cavalrymen, bearing the brunt of battle, were so thoroughly armored they could hardly be seriously injured, and casualties were limited to prisoners of war or fools who for one reason or another decided to stand their ground. Central to the condottieris' business dealings during war was ransoming prisoners after a battle. As a result, for the next three centuries Italy would become a battleground for the great European powers and their more serious armies. On the Iberian Peninsula during the first half of the century, anarchy reigned except in Aragon, which—though it occasionally fell victim to internal disturbances—continued its reign as the major maritime power of the western Mediterranean.

Almost naturally, it seems, Aragon would attack the Italian seaport kingdom of Naples, especially after Alfonso IV (1396–1458), king of Aragon, who had been made heir to the throne in Naples by Neapolitan queen Joanna (1371–1435) in 1421, was disinherited by her two years later when he attempted to seize the crown prematurely. Joanna had turned to him in the first place for intervening on her behalf during the incessant conflicts—coached and refereed from Rome—that she engaged in with the Neapolitan nobility beginning in 1414. When she died in 1435, the throne went not to Alfonso but to René I (1409–80), duke of Anjou, and Aragon prepared to invade. The attack on Naples came the same year, but Anjou's forces defeated the Aragonese at the port of Gaeta, and a routed Alfonso was captured by the Genoese. Alfonso obtained the help of the duke of Milan (and his considerable purse), with whom he then made an alliance, inviting Milan to join the fight against Naples. In 1442 Alfonso defeated René in battle, took possession of Naples, and proclaimed himself king. In Rome the following year he was even recognized as such by Pope Eugene IV (1388–1431).

Arbogast and Eugenius, Revolt of (392–394)

PRINCIPAL COMBATANTS: Rome vs. Arbogast and Eugenius

PRINCIPAL THEATER(S): Northern Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A pagan general in the Roman army and his protégé attempted to take over the empire.

OUTCOME: Arbogast and Eugenius were defeated by Theodosius I, and Rome, East and West, was reunited for the remainder of Theodosius's life.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In the general disorder of the Western Empire during the late fourth century, the emperor of the East, Theodosius I the Great (347–395), commissioned Arbogast (d. 394), a Frankish general in the Roman service, to pacify the always rebellious Gaul. Having accomplished this, Arbogast now turned against Valentinian II (371–392), the emperor of the West, whose attempts to limit his authority in Gaul outraged him. It is likely that Arbogast instigated Valentinian's assassination in 392 so that he could appoint his own protégé, Eugenius (d. 394), as compliant emperor of the West.

With Eugenius installed, Arbogast conducted a pair of effective campaigns in Gaul, driving out Frankish invaders along the Rhine. Even with this victory, however, Theodosius refused to accept Arbogast and Eugenius as legitimate rulers of the West, and he led an army composed chiefly of Goths against the usurpers. They met in northeastern Italy at the Battle of Aquileia (also called the Battle of the Frigidus) on September 5–6, 394. Theodosius attempted to seize the initiative with a reckless attack against a position the more highly skilled Arbogast had carefully prepared. Theodosius was repulsed on the 5th, incurring heavy losses.

To his credit as a commander, Theodosius was able to regroup and rally his troops, and he renewed the attack on September 6. A violent windstorm seems to have aided his efforts, and this time he also made effective use of the brilliant Vandal general Flavius Stilicho (365–408), who achieved an overwhelming victory against Arbogast. Eugenius fell in battle, and Arbogast committed suicide two days later.

Arcadian War (c. 471–469 B.C.E.)

PRINCIPAL COMBATANTS: Sparta vs. the city-states of Arcadia

PRINCIPAL THEATER(S): The central Peloponnese in modern-day Greece

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In light of Athens' growing influence in the newly founded Delian League, Sparta sought to reassert its fading glory as the foremost land power in Greece.

OUTCOME: Sparta defeated the Arcadians and reasserted its hegemony in the Peloponnese.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In the fifth century B.C.E., as the Greek city-states began to work their way out from under the long shadow of the Persian Empire, the rivalry between Sparta and Athens came to dominate the history of the Hellenes. Especially after the Greek triumphs over Xerxes in 480 and 479 (*see* GRECO-PERSIAN WARS), Sparta, still the foremost land power in Greece, came to resent the new influence and respect enjoyed by Athens. Now preeminent at sea, Athens quickly moved to form a confederation of maritime states, a compact resembling the old Peloponnese League, and at Delos in 477 Athens joined with the city-states of Ionia and those of the Aegean islands to launch the Delian League. Ostensibly a compact aimed at keeping the Persians at bay in the Aegean and at freeing the Ionian states still under Persian control, the league was also a means, if not to Athenian hegemony, then at least to Athenian glory as the first among equals.

As a significant land power, Sparta sought to compete with and even overmatch the sea power of prosperous Athens by conquering the Peloponnese Peninsula. Of course, Sparta did not consult the lesser city-states of Arcadia in achieving this objective, and so conflict with those city-states was inevitable. Sparta sought to co-opt the chief Arcadian city-state, Tegea, by striking an alliance with it, but when Sparta failed to take control of Arcadia swiftly, Tegea turned against its ally. This signaled the lesser city-states of the region to unite in opposition to the invader, and, indeed, all of Arcadia, save Mantinea, allied against the Spartans.

Sparta always seemed to rise to meet military necessity precisely when circumstances were most adverse. Confronted by enemies everywhere, Sparta rallied, mobilized its full strength, and swept through Arcadia, forcing a major land battle at Dipaea in 470 B.C.E. The united Arcadian forces were badly defeated, so stunningly that mighty Tegea fell soon after the battle. Sparta now enjoyed domination over Arcadia and, with it, substantial control of the Peloponnese. Yet Athens's continued dominance of the sea prevented Sparta from definitively winning the contest between the two great rivals.

TREATIES: Peace of Nicias, 421 B.C.E.

In the fifth century B.C.E. the rivalry between Sparta and Athens came to dominate the history of the Hellenes, especially after the Greek triumphs over Xerxes in 480 and 479 (*see* GRECO-PERSIAN WARS). Sparta, still Greece's foremost land power, resented the new respect enjoyed by Athens, now preeminent at sea. Athens had formed a confederation of maritime states called the Delian League at Delos in 477 (*See* ARCADIAN WAR). Resembling the old Peloponnese League, the stated purpose of the compact between Athens, the city-states of Ionia, and those of the Aegean islands was to keep the Persians at bay in the Aegean and to free the Ionian states still under Persian control, but it fast became a means for Athens to expand its influence in the region. Sparta was not only jealous of Athens's growing power and prosperity, it also, like many Greek city-states, abhorred the Athenians' increasingly autocratic leadership of the Delian League. Athens, on the other hand, despised the military regimentation of Spartan life and found its brutal treatment of its war-slaves, the helots, distasteful. The great irony of the rivalry was that Athens, a democracy, tried to suppress the freedom of its allies, while Sparta, a military oligarchy, became the champion of self-determination among the city-states. When economic rivalry led Athens to attack Corinth in the First PELOPONNESE WAR, Sparta denounced her alliance with Attica and joined the Corinthians.

The war convinced Athenian leader Pericles (c. 495–429) of the folly of a policy of expansion in Greece proper because Athens simply lacked the manpower and the money to maintain both a large fleet and a large army. Clearly, the city's future glory and wealth lay in overseas trade and colonization, and Pericles built Athens's "Long Walls" to connect it with its seaport, Piraeus, as part of his strategy to create a self-contained and invulnerable metro-

polis free of mainland Greece and flourishing indefinitely by keeping command of its seaborne supply routes. By creating a defensive rather than an aggressive posture for Athens, Pericles hoped to remove the basis for conflict between his city and its neighbors. It did not work; Sparta remained jealous and, worse, saw the Long Walls as a threat. In 432 it declared war on Athens when the latter began economic reprisals against Corinth for its naval war on Corcyra, a Delian League ally.

The Spartan invasion of Attica led by the tyrant Archidamus (fl. 476–427) in 432 B.C.E. may be regarded as the opening phase of the Second (Great) PELOPONNESE WAR (431–404) or may be considered a war in its own right. As such, it is commonly referred to as the Archidamian War, and it proved initially destructive to Sparta. The Athenian leader Pericles, recognizing that Sparta's strength lay on land while Athens enjoyed dominance as a sea power, had all he could do to rein in his ground forces lest they be destroyed in fruitless battle. Instead, Pericles launched his fleet from Piraeus against Spartan positions on the Peloponnese coast. An effective naval blockade was created, which enabled a highly effective war of attrition against the Spartans.

At this point nature intervened in the form of a plague that swept Athens. Pericles succumbed, and Sparta seized the initiative. It launched a successful attack on Plataea, which fell in 427. Athens countered by capturing Sphacteria in 425, which elicited a peace offer from Sparta. Foolishly, the now poorly led Athenians spurned the offer, and Sparta responded by launching a series of spectacular land campaigns in northeastern Greece. Olynthus and other Athenian-held cities fell to Sparta. At the Battle of Amphipolis, in 442, the Spartans scored a signal victory, albeit with the loss of its brilliant general Brasidas (d. 422). Athens, however, lost its leader, Cleon (c. 422), successor to Pericles. Cleon had stubbornly resisted any accommodation with Sparta, and now his successor, Nicias (d. 413), leapt at the prospect of a cessation of ruinous war. He rushed into a hasty peace, which brought an end to the immediate hostilities, but failed utterly to resolve the deeper and broader conflict between the two great rival states. This paved the way to the far more momentous Second Peloponnesian War, which would prove far more destructive to Athens.

Archive War (1842)

PRINCIPAL COMBATANTS: Government of the Texas Republic vs. the citizens of Austin, Texas

PRINCIPAL THEATER(S): Austin, Texas

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: To prevent the transference of the capital from Austin to Houston, the citizens of Austin resisted the removal of official records to Houston.

OUTCOME: The archives remained in Austin, and Austin remained the capital of the Texas Republic.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: None

TREATIES: None

Texas declared itself a republic in 1836 and secured its independence from Mexico through victory in the TEXAN WAR OF INDEPENDENCE. The capital of the new republic was established in Houston, founded in 1836 and named in honor of the leader of the independence struggle, Samuel Houston (1793–1863). In 1839 the capital was moved to Austin. However, in 1845, the still-fledgling republic was threatened with an invasion by Mexicans and Indians. President Houston thought it prudent to move the capital back to Houston temporarily. Accordingly, he directed that the government archives be transferred there from Austin. This incited the citizens of Austin to resist. Fearful that moving the archives would ultimately result in the permanent relocation of the capital to Houston, they absconded with and hid all official records. President Houston responded by sending troops to recover the records. The result was not armed conflict, but a bewildering series of deals and secret agreements. Finally, at the end of the year, Houston's soldiers located the archives, exhumed them, and loaded them on wagons for the trip to Houston. This action prompted an enraged mob to pursue the wagons. They forced the soldiers to turn around and to return the records to Austin. Fearing that the real casualty of the "war" would be the archives he was attempting to protect, Houston agreed not to remove the records and to maintain the capital in Austin. That city remains the Texas state capital today.

Ardasher's War with Rome See ROMAN-PERSIAN WAR (230–233).

Ardoin's Revolt (1002)

PRINCIPAL COMBATANTS: Ardoin, marquis of Ivrea vs. Otto III, Holy Roman Emperor

PRINCIPAL THEATER(S): Lombardy in northern Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Otto III was seeking to renew the flagging fortunes of the Holy Roman Empire by establishing an ecclesiastical state centered in Rome; Ardoin led the Lombards in an uprising against the "outsider" Otto.

OUTCOME: Otto died, and Ardoin became king of the Lombards.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Otto III (980–1002) became the Holy Roman Emperor at the age of three, which left it up to his mother, Empress Theophano (c. 956–991), to suppress the civil wars that had plagued the reign of her husband, Otto II (955–983). Otto III reached his majority determined to restore the glory of the empire his grandfather, Otto I the Great (912–973), had virtually created anew from the ruins of Charlemagne's old domains. At 16, Otto led an expedition to Italy to appoint a new pope, Gregory V (972–999), who in turn officially crowned him emperor. In suppressing an antipapal revolt in 998, Otto, who had declared himself king of Lombardy, made clear his plans to create an "ecclesiastical empire" centered in Rome. That was when Ardoin (Arduin) (d. 1015), marquis of Ivrea, led the Lombards in northern Italy in a successful revolt against Otto's renewed Holy Roman Empire. Though opposed by Italian bishops, Ardoin won the support of the lay nobles. In February 1001 Ardoin's rebels laid siege to Otto's palace. The emperor withdrew to Pavenna, where he performed penance at the monastery of St. Apollinaris. Despite this, he was unable to wrest control of his palace and capital from the rebels. He sought aid from Henry of Bavaria (r. 995–1005), his cousin, but Otto died suddenly before help arrived. Ardoin was therefore proclaimed king of the Lombards at Pavia in February 1002.

Ardoin's Wars (1004–1014)

PRINCIPAL COMBATANTS: Ardoin of Lombardy vs. King Henry II of Germany

PRINCIPAL THEATER(S): Lombardy in northern Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Henry II, as the Holy Roman Emperor, wanted to cement his control over Lombardy.

OUTCOME: Ardoin's attempts to retain control of Lombardy were thwarted.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

As a result of action in ARDOIN'S REVOLT, the marquis of Ivrea, Ardoin (d. 1015), was proclaimed king of Lombardy in 1002, following the death of the Holy Roman Emperor, Otto III (982–1002) of Germany. Otto's successor to the German throne, Henry II (973–1024), also sought to reestablish his rights to Lombardy as part of the Holy Roman Empire. In 1004, therefore, he invaded northern Italy and quickly regained control there. Eager to affirm his hegemony, Henry caused his coronation as king of Lombardy, a rash act that provoked a revolt among the townsfolk of Pavia. The German army was overwhelmed and hastily withdrew with Henry, leaving behind a mob that ravaged the town.

Into this disorder Ardoin reentered, hoping to reclaim his rule over Lombardy. Recruiting the aid of Italian nobles, Ardoin led the overthrow of the powerful bishops who had supported Henry. In the meantime, despite his ignominious defeat in Pavia, Henry had succeeded in suppressing disorders in Rome, for which he was formally named Holy Roman Emperor on February 14, 1014, by Pope Benedict VIII. This did not overawe Ardoin, who was determined to assert his right to rule in Lombardy and even elsewhere in Italy. Accordingly, he mounted an attack on Henry's forces in Novara and Como. This time, however, Henry was in a much stronger position than he had been at Pavia, and Ardoin was repulsed. His army ruined, Ardoin withdrew to a monastery outside of Turin, where, broken in spirit, he died in 1015.

Argentine-Brazilian War (1825–1828)

PRINCIPAL COMBATANTS: Brazil vs. Argentina and Banda Oriental (Uruguay)

PRINCIPAL THEATER(S): Port of Buenos Aires and the Brazilian-Argentinian border

DECLARATION: Argentina declared support for Uruguayan independence, December 1, 1825.

MAJOR ISSUES AND OBJECTIVES: Argentina and Brazil fought over control of the Banda Oriental (Uruguay).

OUTCOME: Uruguay was created as an independent state.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Each nation fielded about 10,000 men.

CASUALTIES: At the Battle of Ituzaingó (February 20, 1827), Argentina lost 140 killed, 316 wounded; Brazil lost 170 killed, 92 wounded, 171 taken prisoner.

TREATIES: None

When Argentina elected to support the revolt of Banda Oriental (Uruguay) against Brazil on December 1, 1825, war-

fare between the rival nations erupted. Brazil had occupied Banda Oriental since the suppression of the URUGUAYAN REVOLT (1811–16). Now Argentina and its Uruguayan allies generally prevailed against Brazil both on land and at sea. On February 9, 1827, an Argentine naval squadron of five schooners and eight gunboats defeated a Brazilian force of 19 warships off Juncal on the Uruguay River. However, Brazil countered on April 9, 1827, when an 18-ship Brazilian squadron captured two Argentine brigs at Monte Santiago bank. This was followed by an Argentine victory at sea off Pozos on June 11, 1827. South of this position on March 7, 1828, a pair of Brazilian corvettes and two schooners attacked Argentine privateers in the Río Negro of Patagonia. The ill-considered attack cost Brazil a 20-gun corvette and both schooners.

On land the action began with an April 19, 1825, attack in the Banda Oriental by a small unit of revolutionaries. Within 17 days this rebel band of 33 Uruguayans had exploded into an army of 3,500, and on September 24, 1825, a rebel unit of 260 attacked 400 Brazilian troops at Rinçao das Galinhas, routing them.

On October 12 at Sarandi, 2,400 Uruguayans and Argentinians defeated 1,580 Brazilians, killing 200 and capturing 565. The attackers' losses were 35 killed and 90 wounded.

The largest battle was fought at Ituanguó on February 20, 1827. More than 8,000 Argentine troops fought 8,500 Brazilians, winning a victory, although at a cost that nearly matched the losses of the enemy: 140 Argentines killed in action and 316 wounded versus 170 killed among the Brazilians and 92 wounded, plus 171 taken as prisoners. A combination of consistent Argentine military success and Brazilian war weariness resulted in Uruguay's achieving independence on August 28, 1828.

Argentine Civil War (1851–1861)

PRINCIPAL COMBATANTS: Argentine rebels (with Brazilian aid) vs. Argentine government forces

PRINCIPAL THEATER(S): Argentina

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the Argentine government

OUTCOME: Buenos Aires became part of the Argentine Confederation.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Rebel forces, 28,189; government forces, 22,000

CASUALTIES: At the decisive Battle of Monte Caseros (February 3, 1852), the rebels lost 600 killed or wounded

and the government, 900 killed, 600 wounded, 7,000 prisoners.

TREATIES: None

On May 1, 1851, José de Urquiza (1800–70), governor of the Argentine province of Entre Rios, led a rebellion against Juan Manuel de Rosas (1793?–1877), governor and virtual dictator of Buenos Aires province. The neighboring province of Corrientes joined Urquiza, and Brazil, always eager to destabilize its rival, sent 3,000 infantry, a cavalry regiment, two artillery batteries, and a naval squadron to eliminate Rosas.

In July Urquiza led 5,000 troops from Entre Rios, who were joined by 1,500 from Corrientes (across the Uruguay River) against Rosas's forces, which had been maintaining a long siege against Montevideo. The siege was lifted, and by December 11, 1851, Urquiza's rebel forces numbered 28,189, including troops from Corrientes, Buenos Aires, other Argentine provinces, Uruguay, and dissident Brazilians. He led 24,000 into the major battle of Monte Caseros near Buenos Aires on February 3, 1852. He faced 22,000 government troops and, after four and a half hours of fighting, the army of the dictator Rosas collapsed. With this defeat Rosas was forced out of office. Government casualties included some 900 killed, 600 wounded, and 7,000 made prisoner. Urquiza's rebels lost 600 killed or wounded.

Urquiza now squared off against Buenos Aires-based dissidents known as the Centralist Porteños led by Bartolomé Mitre (1821–1906). The first major battle between the rivals came at Cepeda on October 22, 1859. Urquiza commanded a force of 14,000 (including a 32-gun artillery train) against 9,000 Porteños (and 24 guns) under Mitre. Mitre lost 2,000 of his men as POWs and had to abandon 20 of his valuable artillery pieces. However, on September 16, 1861, Mitre led 16,000 men and 38 guns against an equal number (plus 42 guns) under Urquiza at the Battle of Pavón. Superior generalship allowed Mitre to rout his rival, who lost 1,650 POWs and 37 guns. The Battle of Pavón put Mitre in control of all of Argentina except Entre Rios Province, which remained in Urquiza's hands until he was assassinated in 1871.

Argentine "Dirty War" (1969–1983)

PRINCIPAL COMBATANTS: The Argentine government and military junta vs. all political rivals, principally left-wing guerrillas

PRINCIPAL THEATER(S): Argentina

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the Argentine government

OUTCOME: Although the leftists were defeated, the extreme right-wing junta ultimately lost control, and on October 30, 1983, democratic elections were held.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Government forces, 154,000 (plus thousands of right-wing terrorists); guerrilla forces, about 3,000

CASUALTIES: About 18,000 killed or "disappeared," mostly leftists

TREATIES: None

The so-called Dirty War was fought by a variety of guerrilla groups against the ruling military dictatorship of Argentina. Among the welter of organizations involved, the two main guerrilla armies were the Montoneros, a leftist group favoring the return of populist leader Juan Perón (1895–1974), and the People's Revolutionary Army (ERP), a radical Marxist group, established on July 28, 1970, which had the goal of leading a mass uprising.

As its name suggests, the war was not fought in set battles by regular armies but was a long sequence of guerrilla and terrorist acts, the first of which was the abduction, on June 1, 1969, and execution of former president Pedro Aramburu (c. 1903–70), a leading anti-Perónist, by the Montoneros. This was followed by low-level terrorist warfare, which included the August 15, 1972, escape of 25 ERP political prisoners in Patagonia. A handful hijacked an airplane and escaped, but 16 were captured and summarily machine-gunned to death. This act gave the Marxists martyrs, around whom they rallied, and on June 20, 1973, an airport celebration to welcome Juan Perón from 18 years of Spanish exile erupted into a gun battle in which 30 died and 300 were wounded.

Shortly after his return to Argentina, Perón again became president of Argentina, with his second wife, Isabel (b. 1931), as vice president. This temporarily quelled national violence, but that was renewed as Perón leaned increasingly toward the right. His death on July 1, 1974, brought Isabel Perón into office and reignited violence on a large scale. The ERP and the Montoneros consisted of at most a few thousand troops, whereas the Argentine government commanded a military of 85,000 soldiers, 33,000 sailors and marines, 17,000 airmen, and 19,000 paramilitary police troops. In addition, right-wing militias consisted of several thousands.

As the general violence escalated, the ERP was reinforced by guerrilla exiles from Chile, Bolivia, and Uruguay. These groups incited rebellion in rural districts, while the Montoneros focused on the cities. The Argentine army launched a sweeping offensive against the ERP in Tucumán during February–April 1975. The government forces, 8,000 strong, reported killing some 350 guerrillas, and within the first eight months of 1975 that toll had risen to

800. However, rebels launched several attacks directly on the military, including a December 23, 1975, assault on the arsenal at Monte Chingolo, a suburb of Buenos Aires. Simultaneously with this attack, some 170 guerrillas struck military and police targets in the city proper. Government forces repulsed all the attacks. A total of 85 guerrillas died, as did seven government soldiers and 10 civilians.

The chronic violence, compounded by the widespread corruption of the Isabel Perón regime, prompted the military to mount a coup, which ousted Perón on March 24, 1976. A military junta under General Jorge Rafael Videla (b. 1925) took draconian measures against the leftists. Between March 1976 and March 1977 1,700 guerrillas and leftist "sympathizers" were killed at the cost of 124 deaths among military forces.

The Argentine military actively recruited the assistance of right-wing terror squads, which initiated a campaign against some 25,000 political exiles living in Argentina. The most prominent of these was the former leftist president of Bolivia, Juan José Torres (1947–76), murdered by rightists in June 1976.

Despite the forces mounted against them, leftist guerrillas continued to strike back. In June 1976 the Montoneros assassinated federal police chief General Cesario Cardozo and the next month detonated a bomb in the dining room of the Superintendency of Federal Security, killing 43 officers and wounding 100. In October Videla was the target of a bomb planted under a reviewing stand; he narrowly escaped death. But the July 1976 assassination of General Omar Carlos Actis by the guerrillas triggered massive retaliation from rightist terror squads, which assassinated some 50 prominent leftists, including the top members of the ERP.

The year 1976 was the bloodiest of the period of rightist repression, with a death toll of 1,480. In 1977, 677 died, and by 1978 the leftist guerrillas had been badly sapped, down to a few hundred hard-liners. By the end of the decade the guerrilla movement had been effectively crushed. About 9,000 leftists had lost their lives since 1970, and another 7,000 had simply vanished—disappeared—after arrest by the junta. The junta reported a total of 2,050 civilians killed by terrorists of the left as well as right during the period 1973–79. More objective observers attribute only about 700 deaths to leftist terrorism. The military government of Argentina also killed political refugees from neighboring nations. Pursuant to secret agreements with other right-wing South American dictatorships, "Operation Condor" killed 118 Uruguayan exiles, 57 Paraguayans, 49 Chileans, and nine Brazilians.

Between April 2 and June 14, 1982, the Argentine military was embroiled in war with Great Britain over control of the Falkland Islands (*see* FALKLAND ISLANDS WAR). After Argentina's initial success in overpowering the 84-man Royal Marine garrison at Port Stanley, the military leadership was discredited, and by June 14 the military governor

of the Falklands, General Mario Benjamín Menéndez (active 1970s–80s), surrendered to British major general Jeremy Moore (b. 1933). Three days later President Leopoldo Galtieri (1926–2003) resigned and was succeeded by Major General Reynaldo Bignone, who reconstituted the junta and began taking steps toward reinstating civilian rule. On October 30, 1983, Raúl Alfonsín (b. 1926) was elected president. Inaugurated on December 10, the new president quickly stated his intention to arrest the members of the military junta who had conducted the “dirty war” since 1976. He prosecuted members of the armed forces for human rights abuses, and a number of high-ranking government officials were tried, convicted, and sentenced to life imprisonment. Under pressure from the military, which threatened a new coup, Alfonsín pardoned most of those convicted before he left office in 1989.

Argentine Revolt (1951)

PRINCIPAL COMBATANTS: Military cabal vs. government of Juan Perón

PRINCIPAL THEATER(S): Argentina

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Bridling under the prospect of the election of Eva Perón as vice president (and therefore potentially commander in chief of the armed forces), a group of army generals staged a coup to overthrow both Peróns.

OUTCOME: The coup failed to overthrow Juan Perón, but it did prompt Eva Perón to withdraw her name from nomination as vice president.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The postwar economy of Argentina deteriorated precipitously under the regime of President Juan Perón (1895–1974), triggering in 1951 a rash of labor strikes, the most paralyzing of which was a general strike by rail workers. In response Perón imposed martial law, specifically targeting the striking rail workers by sending troops to break the strike. Perón justified this attack on his fellow countrymen by arguing that the strikes were the work of “foreign agitators.” This claim was met with widespread skepticism, whipped up in large part by the liberal newspaper *La Prensa*. While taking action against the railway strikers, Perón forced the shutdown of *La Prensa*. This action was

sufficient to touch off a spasm of national rioting. Perón then seized the paper. He was well aware, however, that the tide of national opinion had turned against him. Looking for a way to restore popular support for his regime, he nominated as his vice president his wife, Eva Perón (1919–52), an actress idolized by the Argentine public and affectionately known as Evita. Once again, however, Juan Perón had made a grave misjudgment. While Evita was popular with Argentines, the idea of putting a woman in a position from which she might succeed to the presidency—and to the position of military commander in chief—profoundly outraged the army high command. A cabal of generals staged a coup in September 1951. The attempt failed, however, and it proved the last gasp of the revolt against Perón. Although he remained in office, Evita prudently withdrew her name from nomination. Juan Perón stood for reelection on November 11, 1951, and was returned to office by a wide two-to-one margin.

Further reading: Robert D. Crassweller, *Peron and the Enigmas of Argentina* (New York: Norton, 1988); John Dechancie, *Juan Perón* (New York: Chelsea House, 1988); Frederick C. Turner, *Juan Perón and the Reshaping of Argentina* (Pittsburgh: University of Pittsburgh Press, 1983).

Argentine Revolt (1955)

PRINCIPAL COMBATANTS: Argentine military vs. the government of Juan Perón

PRINCIPAL THEATER(S): Argentina

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Perón alienated much of Argentine society, including the Catholic Church. Following his excommunication, elements of the military twice moved against Perón to force his resignation.

OUTCOME: The action of the Argentine military (primarily the navy) overthrew Perón and installed a military dictatorship.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 4,000 naval personnel successfully ousted Perón.

CASUALTIES: At least 400 deaths, mainly civilian noncombatants.

TREATIES: None

Juan Perón (1895–1974) became president of Argentina in 1946 in large part on the strength of his promise of economic justice for the disaffected working class, a political stance inspired to a great extent by his wife, Eva Perón (1919–52), an enormously popular actress who was idolized by the so-called *descamisados*, the “shirtless ones,” a vast underclass who saw her as a kind of intercessor with the powers that be. When “Evita” succumbed to cancer on July 26, 1952, the social heart of the Perón administration died as well. Not only did the people lose their faith in

Juan Perón's concern for them, but Perón himself moved toward the right and away from the concerns of the poor.

Beginning at the time of Evita's death, Perón's opponents, who included prominent merchants, the landed aristocracy, the military high command, and the Catholic Church, began to exploit the growing weakness of the dictator's support. The anti-Perón momentum gathered, and on June 16, 1955, after the Vatican excommunicated the dictator (for his record of anticlerical reforms), units of the Argentine navy and air force rose up against Perón. His residence, the Casa Rosada, or Pink Palace, was attacked from the air. The army, however, remained loyal to the dictator and moved against the Naval Ministry. Once that was captured, the revolt died down. Some 400 persons had been killed, mostly civilian victims of gunfire and aerial bombardment.

A new revolt broke out on September 16, 1955, engulfing Buenos Aires and inciting some 4,000 members of the navy, led by Admiral Isaac Rojas (1896–1956), to threaten an assault on the capital. Under threat of naval bombardment, Perón fled on September 20, making his way to Paraguay aboard a gunboat of the Paraguayan navy. He remained in exile for two decades, returning in 1973 (see ARGENTINE "DIRTY WAR").

See also ARGENTINE REVOLT (1951); ARGENTINE REVOLTS (1962–1963); PERONIST REVOLTS.

Further reading: Robert D. Crassweller, *Perón and the Enigmas of Argentina* (New York: Norton, 1988); John Dechancie, *Juan Perón* (New York: Chelsea House, 1988); Frederick C. Turner, *Juan Perón and the Reshaping of Argentina* (Pittsburgh: University of Pittsburgh Press, 1983).

Argentine Revolts (1962–1963)

PRINCIPAL COMBATANTS: The "Gorillas" (ultraconservative military officers) vs. Peronistas (supporters of exiled president Juan Perón)

PRINCIPAL THEATER(S): Argentina

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Gorillas sought to suppress the power of the Peronistas.

OUTCOME: General discontent with both sides led to the election of a moderate leftist president in 1963.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The overthrow of President Juan Perón (1895–1974) during the ARGENTINE REVOLT (1955) sent the former president into exile, but it did not purge Argentina of the Peronist political party, which continued to attempt to field candidates for political office. In 1962 the party's can-

didates were finally permitted on the ballot, and they enjoyed exceptional success, taking 45 of 86 seats in the Chamber of Deputies. Equally important, the Peronistas claimed nine of 14 governorships throughout the country.

Fearing a resurgence of Peronist government—and the eventual return of Juan Perón himself—ultraconservative anti-Peronist military leaders, known as the Gorillas, successfully blocked the elected Peronist candidates from assuming office. This action provoked a series of national labor strikes. Amid the political and economic chaos their own illegal action had created, the Gorillas turned the blame on the moderate government of Argentine president Arturo Frondizi (1908–95). His liberalism, they claimed, had opened the door to the Peronists, and they demanded his immediate resignation. Frondizi refused to step down, whereupon the Gorillas launched a successful bloodless coup d'état. Frondizi was exiled, and the Gorillas installed a military dictatorship administered by a junta.

The junta ruled in anticipation of elections to be held the following year, 1963. However, within the junta there was intense debate over whether to allow the elections at all or to continue a military dictatorship. In an act of extraordinary moral courage, General Juan Carlos Onganía (1914–95), one of the Gorillas, declared that the military should remove itself from government for the sake of the long-term well-being of Argentina. Onganía's recommendation was roundly ignored, however, and the Gorillas continued to govern. When elections were held in 1963, they saw to it that the Peronistas were barred from running. As they had done during the PERONIST REVOLTS of 1956–57, the Peronists cast blank ballots, but this peaceful form of protest was not the only form of agitation that accompanied the elections of 1963. Fighting broke out in the streets, and the nation seemed dangerously unstable. The result was the election as president of a compromise candidate, Arturo Umberto Illia (1900–83), who thoroughly pleased no faction. While the government was somewhat stabilized, it was essentially paralyzed, and Argentina's economy was subject to monumental inflation. The Peronista faction continued to loom as an alternative inviting to many.

Argentine War of Independence (1806–1816)

PRINCIPAL COMBATANTS: Argentine Royalists (including Spanish regulars) vs. Nationalists (with aid from Great Britain, and France) and Argentina

PRINCIPAL THEATER(S): Buenos Aires, Montevideo, and the Río de la Plata areas

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In the chaos created by the Napoleonic Wars in Europe, Great Britain, cut off from its customary trade in South America, invaded Spanish Argentina, which, led by liberal revolutionaries, broke from French-controlled Spain, which led in turn to much internal struggle.

OUTCOME: Argentina became independent of Spain in 1816.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Royalists, 7,500; Nationalists, 6,000

CASUALTIES: Royalists, 4,000 killed, wounded, or taken prisoner; Nationalists, 1,200 killed, wounded, or taken prisoner.

TREATIES: None

The impact of the NAPOLEONIC WARS was felt outside Europe most spectacularly in Latin America. Napoleon's 1808 invasion of Iberia led to a destabilization of the mother country that ultimately cost Spain all its holdings in the New World, for when Napoleon Bonaparte (1769–1821) placed his brother Joseph (1768–1844) on the Spanish throne, he dealt Spanish-speaking republicans in Central and South America a winning hand. All Creole society united in its opposition to the despised Joseph, and—at first shouting “Long Live King Ferdinand!”—mobs drove French emissaries out of capitals across the lower half of the Western Hemisphere. Then Spanish officialdom itself came under attack. For a year Spanish viceroys clung to power, but in 1810 Latin America's Creole population as a whole, acting in remarkable unanimity, arose in a huge spasm of republican anger and deposed their already powerless rulers. The rebellions struck almost every Latin province in the New World but Peru.

In Argentina rebellion began when Great Britain, cut off from its erstwhile trading partners by Napoleon's European boycott, in 1806 sent an expedition to the Río de la Plata between Argentina and Uruguay and attempted to grab pieces of the surrounding territory. The Spanish colony's militia took up arms and, under the command of Santiago de Liniers (1756–1810), repelled the British invaders from Buenos Aires. But before Liniers was able to force the British out of the Río de la Plata region, a larger expedition of some 8,000 arrived in 1807 to seize both Buenos Aires and Montevideo.

When news of Napoleon's advance into Spain (*see* PENINSULAR WAR) and his deposing of King Ferdinand VII (1784–1833) reached Buenos Aires, colonial liberals, encouraged by the British, removed the Spanish viceroy and replaced him with a provisional junta that included Cornelio Saavedra (1760–1828), Mariano Moreno (1778–1811), and Manuel Belgrano (1770–1820). Setting up the United Provinces of the Río de la Plata, they exiled royal

officials and eased trade restrictions, all the while feigning loyalty to the true Spanish Crown. Meanwhile, back in Europe the liberals in the Cortes, Spain's traditionally weak parliament, were playing much the same game, leading the resistance against the French in the old king's name and promulgating reforms during the political chaos created by Napoleon's invasion.

The Río de la Plata junta invited the former Spanish provinces under the same viceroyalty as themselves—Argentina, Uruguay, Paraguay, and Bolivia—to join their cause but had no success, and the revolutionaries fell to fighting internally. By September 1811 a triumvirate had replaced the junta. The following year Spain itself established a representative government under the liberal Spanish Constitution of 1812. Provincial legislatures and town councils cropped up everywhere in both the mother country and the empire.

Belgrano sought to capitalize on the increasing weakness of Spain's central authority by mounting an all-out campaign to drive the Spanish out of Argentina altogether. In 1812 he led 1,000 citizens of Buenos Aires together with some 800 gauchos in blocking a Royalist invasion from Peru. This accomplished, he won a substantial victory against some 3,000 Royalists at Tucumán on September 24, 1812. The Royalists lost 450 killed and 687 prisoners, whereas Belgrano's forces suffered the loss of 80 killed and 200 wounded. He fought next at Salta on February 20, 1813, killing 481 of the Royalist's 3,400-man force; 114 were wounded and a spectacular 2,776 were taken prisoner. Belgrano's losses were 103 killed and 433 wounded of 3,700 men engaged.

Unfortunately for Belgrano, his attempt later in 1813 to invade upper Peru ended in the rout of his army at Vilcapugio on October 1. Of 3,500 troops, a mere 500 escaped death, wounding, or capture. On November 26, 1813, Belgrano again suffered defeat, at Ayohuma, losing 300 killed, 200 wounded, and 600 captured of 2,832 men engaged. Nevertheless, the independence movement was firmly launched in Argentina, as in the rest of South America, and the Spanish presence was simply worn down by 1816, when an Argentine congress at Tucumán declared the country independent and adopted a constitution.

As the world witnessed the beginnings of the great Central and South American liberations led by such men as José de San Martín (1778–1850), Simón Bolívar (1783–1830), and Bernardo O'Higgins (1778–1842) (*see* COLOMBIAN WAR OF INDEPENDENCE; PERUVIAN WAR OF INDEPENDENCE; VENEZUELAN WAR OF INDEPENDENCE), Juan Martín de Pueyrredón (1776–1850) took power in Argentina as supreme dictator (July 9, 1816), heading up an Argentine legislature drawn from Buenos Aires and nearby provinces.

Argive War (494 B.C.E.)

PRINCIPAL COMBATANTS: Argos vs. Sparta

PRINCIPAL THEATER(S): Sepeia in the Peloponnese

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Sparta, a rising power in Greece, sought to destroy its major rival, Argos, after two centuries or intermittent conflict.

OUTCOME: The Spartans defeated the Argives at Sepeia and became the dominant power in the Peloponnese, setting up four decades of conflict with newly democratic Athens.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

By the fifth century B.C.E. Argos held sway on the Peloponnese, its only serious rival at this point Sparta. The Spartan king, Cleomenes I (d. 490 B.C.E.), presiding over a period of general Spartan expansion, decided to challenge Argive hegemony in the Peloponnese. In 494 Cleomenes mounted an attack in the mountainous region of Sepeia, employing an unspecified ruse that succeeded in achieving total surprise. The Argive troops were in camp dining when the attackers descended on them. The outcome was a complete rout of the Argive army, and King Cleomenes went on to take the city of Argos. The newly established dominance of Sparta in the Peloponnese brought that city-state into direct conflict with Athens and set the stage for the First PELOPONNESE WAR and the even more destructive Second (Great) PELOPONNESE WAR.

Arikara War (1823)

PRINCIPAL COMBATANTS: Arikara and Blackfeet vs. the U.S. Army, trappers working for the Rocky Mountain Fur Company, and Sioux

PRINCIPAL THEATER(S): Upper Missouri River in the Dakotas

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Arikara, worried by the erosion of their role in the fur trade and hostile over the protection white traders afforded the Sioux, attacked a group of traders after one of them had been caught and killed for slipping into the Arikara camp to visit a young Indian woman; Colonel Henry Leavenworth mounted a punitive expedition against the Arikara and the Blackfeet, who had meanwhile ambushed some trappers.

OUTCOME: Leavenworth's forces pounded the Arikara villages into submission, but the Indians then slipped

away and continued to raid, effectively closing the Upper Missouri to the fur trade.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

United States, 233 soldiers; 800 Sioux allies; 120

trappers. Arikara: Numbers unknown

CASUALTIES: 18 trappers, 11 soldiers, and 2 Sioux killed; Arikara losses unknown

TREATIES: None

In the spring of 1822, Andrew Henry (1775–1832), fur trader and lieutenant governor of Missouri, and his partner, William Ashley (1778–1838), built a fort at the mouth of the Yellowstone. On May 30 of the next year, the fur traders arrived at two Arikara Indian villages near the present-day North and South Dakota state line. The villages, which consisted of earthen houses contained within palisaded walls and ditches, were fortresses. Hostile for decades to white encroachment on their role in the fur trade, the tribe was especially incensed over recent protection afforded their ancient enemies, the Sioux, by white traders. Yet they were willing to sell badly needed horses to the Ashley party, and Jediah Strong Smith (1798–1831) was dispatched with a party of 40 men to camp near one of the villages and negotiate the purchases. The first day he was successful, buying some 20 mounts.

The night that followed was stormy, but despite the weather one of Smith's men ventured into one of the Arikara villages seeking female companionship. Somehow, this provoked the Arikaras to attack the traders on June 2, 1823. A total of 14 of Smith's men died, and nine were wounded, including the famed trapper Hugh Glass (d. 1833). The French Canadian in charge of Ashley's keelboat refused to risk a rescue attempt. Some men got away in smaller boats. Some swam for it.

Colonel Henry Leavenworth (1783–1834), commander of Fort Atkinson, retaliated on June 22, 1823, setting out with six companies of infantry and an artillery detachment: 223 soldiers, joined by some 800 Sioux allies and 120 trappers. When the column reached the Arikara villages, the Sioux engaged the Arikaras first, killing 13 (two Sioux died). Leavenworth positioned his forces around the villages but declined to attack until his artillery could be brought to bear. The colonel exhausted his ammunition on the earthen towns, delayed attacking with the balance of his forces, and was deserted by his Sioux allies—from whom he now feared attack from the rear. He therefore opened negotiations with the Arikaras, who promised to return horses they had stolen from Ashley and to fight no more. That night, the Arikaras slipped out of the two villages. They did not return the horses. In the first punitive expedition against a Plains Indian tribe, Leavenworth had not only been humiliated, but, by failing to control the Arikaras, had lost the traditional river routes into the wilderness.

Armageddon See MEGIDDO, SECOND BATTLE OF

Armagnac-Burgundian Civil War (1411–1413)

PRINCIPAL COMBATANTS: The House of Burgundy vs. the House of Orleans and the count of Armagnac

PRINCIPAL THEATER(S): Paris, France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: At issue was the control of France; Burgundy and Orléans, the latter led by the duke of Armagnac, vied for the regency of Charles VI when he intermittently fell mad.

OUTCOME: After years of feuding, Orléans gained the regency for itself.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

When Charles VI (1368–1422) ascended to the Capetian throne of France in 1380, he had yet to reach his majority and remained under the tutelage of his uncles, who created an administrative Council of Twelve to rule France. From 1382 until 1388, when Charles declared he would rule alone, the council was headed by the powerful duke of Burgundy, Philip the Bold (1342–1404). After 1388 the duke expected to continue as top adviser to the king, but Charles, displeased with Philip's conduct during his minority, rebuffed the duke and instead named his brother, Louis, duke of Orléans (1372–1407), to the post. The appointment ignited the smoldering feud between the Houses of Orléans and Burgundy. The feud suddenly became significant when Charles began to suffer from severe bouts of insanity.

After Charles became incapacitated for an extended period in 1392, Philip the Bold, still the regent by law of succession, replaced Louis of Orléans. Philip's regency would continue off and on for the next 12 years as Charles intermittently waxed lucid or waned mad, and Philip became virtual ruler of France. Philip died in 1404 and was succeeded as duke of Burgundy by John the Fearless (1371–1419). Feuding between the two families contin-

ued as an acid personal rivalry between John and Louis arose, each currying the favor of the queen, Isabella of Bavaria (1371–1435). When it seemed that Louis had won over the queen, John denounced both of them and appealed to the citizens of Paris, calling for reform and honest government. However, John secretly had other plans. On the evening of November 23, 1407, Louis was returning from a visit with the queen when he was set upon by a band of men and beaten to death. Within a few days John confessed to ordering Louis's assassination.

Louis was succeeded as duke of Orléans by Charles (1391–1465), the son-in-law of Bernard VII, count of Armagnac (d. 1418). As patriarch, Bernard assumed the leadership of the Orléans—now the Armagnac—faction. Hostilities lay just below the surface for several years until 1411, when the Burgundians began courting English support, which infuriated the Armagnacs. There followed in the course of the next two years what amounted to a bitter, unadjudicated fratricide. What had long been a series of minor conflicts flared into open warfare and culminated in a few pitched battles, in which each house vied for control of France. The Burgundians aligned themselves with the Cabochiens, members of a loose trade union seeking industrial reform, and their support initially turned the tide against the Armagnacs. However, when the CABOCHIEN REVOLT turned brutal and a reign of terror stalked the streets of Paris, public support turned sharply against the Burgundians. John lost all favor at court and was ousted in 1413, leaving Charles of Orléans and Bernard Armagnac in possession of the regency as Charles VI again became incapacitated.

Armenian Massacres (1894–1897)

PRINCIPAL COMBATANTS: Ottoman government vs. Armenian minority

PRINCIPAL THEATER(S): Armenia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Attempt to crush an Armenian nationalist movement.

OUTCOME: Tens of thousands were killed, and the nationalist movement was temporarily suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: 50,000–100,000 Armenians

TREATIES: None

Toward the end of the 19th century, the Armenians lived as subjects of the Ottoman Empire. As a Christian minority of some 2.5 million in the midst of an Islamic state, they were

routinely persecuted by their Ottoman overlords. In the 1880s a revolutionary socialist party, the Hunchak (“The Bell”), rose up among the Armenians, followed by an even more radical nationalist faction, the Dashnaktsutium (“Armenian Revolutionary Federation”). Fearing that he was losing his grip on the Armenians, Ottoman sultan Abdul Hamid II (1842–1918) launched a series of pogroms against the Armenians of the empire beginning in 1894.

The first action took place in Sasun, where Armenian protesters had assembled to demonstrate against oppressive taxation. Acting in concert with Kurdish tribesmen, Turkish police waded into the protestors and commenced a slaughter. This triggered a protest in the Ottoman capital of Istanbul, which resulted in a 10-day siege of terror against the Armenian quarter of the city. Hundreds were clubbed to death, and the violence soon spread throughout eastern Turkey. Trebizond and 13 other cities were swept with a wave of unprecedented violence in which more than 14,000 Armenians perished at the hands of the Turkish army acting with Islamic extremists.

In December 1895 at Urfa, the Turkish army held the Armenian quarter under siege for two months. When Armenians sought succor in a cathedral, the army stormed the sanctuary and killed 3,000. A total of 8,000 Armenians were killed in the siege of Urfa and its aftermath. Shortly after this in Zeitun (province of Cilicia), Armenian residents rose up against the Turks, taking some 400 prisoners. It was, however, the only significant resistance to the reign of terror.

The culmination of this first period of slaughter came in August 1896 in Istanbul. During two days an Islamic mob swept through the Armenian quarter, killing 6,000. At last, the Western European powers were sufficiently horrified to threaten intervention. This brought a halt to the rampage, although anti-Armenian violence continued sporadically through 1897. Estimates of the totals killed during the 1894–97 period vary from 50,000 to twice that number.

Armenian Massacres (1909)

PRINCIPAL COMBATANTS: Turkish mob and army vs. Armenian minority

PRINCIPAL THEATER(S): Present-day southern Turkey

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The suppression of rebellion by the Armenians against the Ottoman Empire

OUTCOME: Tens of thousands of Armenians were killed, and, once again, the nationalist movement was temporarily suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: 20,000 Armenians

TREATIES: None

The YOUNG TURKS’ REVOLT during July 1908–April 1909, which resulted in the overthrow of the Ottoman sultan Abdul Hamid II (1842–1918) and his replacement by Enver Bey (1881–1922) on April 25, 1909, created general disorder and turmoil. In this climate, Armenian revolutionaries rose up in Adana and other cities and towns of the province of Cilicia. The response among locals was mob violence. Aided and encouraged by the Turkish army, Islamic extremists slaughtered some 20,000 Armenians in the province.

See also ARMENIAN MASSACRES (1894–1897); ARMENIAN MASSACRES (1915).

Further reading: Vahakn N. Dadrian, *The History of the Armenian Genocide: Ethnic Conflict from the Balkans to Anatolia to the Caucasus* (New York: Berghahn Books, 1995).

Armenian Massacres (1915)

PRINCIPAL COMBATANTS: Ottoman government vs. Armenian minority

PRINCIPAL THEATER(S): Present-day southern Turkey

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The suppression of rebellion by the Armenians against the Ottoman Empire

OUTCOME: Armenian genocide

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: 500,000 Armenians were killed or succumbed to disease and privation.

TREATIES: None

The worst of the three periods of Armenian massacre at the hands of the Turks (see ARMENIAN MASSACRES [1894–1897] and ARMENIAN MASSACRES [1909]) came in 1915, during WORLD WAR I. The Ottoman government, which never had to look far for an excuse to persecute the Armenians within its realm, determined that the Armenians of eastern Anatolia presented an imminent risk of collaborating with the Russians against Turkey, which was allied with Germany. Summarily, the government ordered the deportation of 1 million Armenians.

The process of rounding up the deportees was brutal. During a three-day period, 24,000 were killed in and around Van. At Bitlis 4,500 Armenians were ordered to dig

their own graves and then were shot. At Kemakh Gorge in June 1915, as many as 10,000 Armenians were herded to the edge of the gorge and pushed to their deaths. Of those who were actually deported instead of summarily executed, as many as 500,000 died of starvation, disease, and deliberate mistreatment as they were marched to exile in Mesopotamia (modern Iraq) and Syria.

Aroostook War (1838–1839)

PRINCIPAL COMBATANTS: Farmers of the U.S. state of Maine vs. loggers of the British-Canadian province of New Brunswick

PRINCIPAL THEATER(S): Aroostook River valley on the United States-Canadian border

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: The 1783 Treaty of Paris failed to demarcate the United States-Canadian border, and thus both countries claimed the fertile, lumber-rich lands.

OUTCOME: After bloodless clashes and demonstrations of military bluster by both sides, the dispute was settled by negotiations.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: The state of Maine rallied 10,000 volunteers; the U.S. Congress voted 50,000 troops to the cause; totals for the British-Canadian forces are unknown.

CASUALTIES: None

TREATIES: Webster-Ashburton Treaty of 1842

Conflict between the American Colonies and Britain (see AMERICAN REVOLUTION: COASTAL THEATER and AMERICAN REVOLUTION: FRONTIER THEATER) ended with the Treaty of Paris in 1783. The terms of the treaty, however, failed to demarcate the exact location of the north-south boundary between the U.S. state of Maine and the British-Canadian province of New Brunswick. The lands in question incorporated the lush Aroostook River valley, ideal for agriculture and rich with timber. For 30 years following the American Revolution, United States and British officials attempted to negotiate a settlement, but neither side was satisfied with the results. In 1831 the matter was placed before the king of the Netherlands for mediation. His decision so angered the citizens of Maine that the U.S. Congress was forced to reject the king's solution.

As the officials sought a compromise for the dispute, New England farmers and Canadian loggers moved into the Aroostook valley. Each group challenged the other, and before long both were making arrests of "trespassers." In March 1839 British troops from Quebec marched into Madawaska in the American sector. The Maine legislature immediately voted to free \$800,000 in funds and called for 10,000 volunteers to defend the valley. The U.S. Congress appropriated \$10,000,000 and allocated 50,000 troops for the cause. U.S. president Martin Van Buren (1782–1862) sent General Winfield Scott (1786–1866) to Augusta, Maine, to keep the peace. Scott successfully negotiated a truce with Sir John Harvey (1778–1852) on March 21, 1839, and a joint occupation of the contested 12,000 square miles until a settlement could be reached. In 1842 the Webster-Ashburton Treaty fixed the border to the satisfaction of both sides.

Arrabal, Revolt of the (Revolt of the Suburb) (818)

PRINCIPAL COMBATANTS: Rebellious residents of a Córdoba *arrabal* vs. forces of Emir al-Hakam I

PRINCIPAL THEATER(S): Córdoba and environs, Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Residents of the Córdoba *arrabal* sought the overthrow of Emir al-Hakam I.

OUTCOME: The forces of Hakam I not only fended off an attack on the royal palace, but made extravagant reprisals against the Córdoba *arrabal*.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: In addition to the palace attackers, 300 residents of the Córdoba *arrabal* were killed; 60,000 residents were expelled from Spain.

TREATIES: None

Arrabal is the Spanish word for suburb, and this conflict is also known as the Revolt of the Suburb, the suburb in question being a settlement outside Córdoba, Spain. The origin of the revolt can be traced to 805, when the people of Córdoba rose against the Umayyad emir of the city, al-Hakam I (d. 822). Hakam quickly suppressed the uprising, then took steps to ensure that it would not be renewed. He levied heavy taxes on Córdoba in the belief that this would effectively hobble the people. Predictably, however, the oppressive taxes served only to revive popular sentiment against him. In 818 residents of one of the suburbs outside Córdoba proper stormed the palace of the emir. The attack proved tragically fruitless, as palace guards not only repulsed the mob but slaughtered it.

In what came next, it is not clear whether the emir gave the order or whether the palace guards acted on their own. The guards fanned out into the *arrabal* and arrested some 300 of the most prominent residents. These individuals were crucified and left to hang as an example to others. Next, the guards pillaged the *arrabal*, rounding up virtually all inhabitants, some 60,000 people. They were banished from Spain. (Most settled in North Africa and took up outlaw lives as pirates.)

Chejne, *Muslim Spain: Its History and Culture* (Minneapolis: University of Minnesota Press, 1974); Reinhart Dozy, *Spanish Islam: A History of the Moslems in Spain* (London: Frank Cass, 1972); W. Duncan Townson, *Muslim Spain* (Cambridge: Cambridge University Press, 1973).

Arundel's Rebellion (1549)

PRINCIPAL COMBATANTS: Humphrey Arundel vs. English Crown

PRINCIPAL THEATER(S): Cornwall, England

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Violent peasant protest against religious and economic policies enacted by King Henry VIII

OUTCOME: Rebellion was crushed and Arundel was executed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rebel forces, 6,000; Royal forces, 8,000

CASUALTIES: At Farrington Bridge (July 27, 1549) 300 killed (including rebels and Crown forces); at Exeter, 1,000 rebels killed; at Stamford Courtney, 700 rebels killed

TREATIES: None

Cornish land baron Humphrey Arundel (1513–50) was so outraged by the economic policies of King Henry VIII (1491–1547) that he joined—and soon became leader of—a peasant revolt against the Crown. On July 27, 1549, his Cornish rebel force attacked royal troops at Farrington Bridge. Casualties were heavy on both sides—some 300 died—and the rebels were forced to retreat.

Arundel regrouped and recruited more than 6,000 volunteers from the countryside. With this force he laid siege against the fortified town of Exeter. On August 4, Lord John Russell, earl of Bedfordshire (1486–1555) and his royal troops, en route to relieve Exeter, were ambushed by rebel forces at St. Mary's Clyst. However, Russell's men easily outmatched the poorly organized and untrained peasants. More than a thousand Cornish rebels died, and Arundel was forced to lift his siege.

On August 17 Arundel returned for a final confrontation with the royalists at the battle of Samford Courtney. Arundel suffered a defeat that crushed the peasant move-

ment: 700 Cornishmen died, including most of the rebellion's leaders. Arundel fled to Launceston, where he was promptly arrested and executed the next year.

Wilson, *In the Lion's Court: Power, Ambition, and Sudden Death in the Reign of Henry VIII* (New York: St. Martin's Press, 2002).

Aryan Invasions (c. 2000 B.C.E.)

PRINCIPAL COMBATANTS: Indo-Europeans vs. the Dravidians

PRINCIPAL THEATER(S): Indus River valley

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Territorial conquest by the expanding Indo-Europeans

OUTCOME: Indo-Europeans established domination in the region.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: No formal treaty

There is little known of the actual conflicts between the invading Aryans and the native Dravidians of the Indus River valley in today's Pakistan, but they are generally considered the beginning of military history in India/Pakistan and southern Asia. The Aryans, a name that meant "noble of birth and race," migrated from their ancestral home on the Eurasian steppes, crossing the Hindu Kush east of the Iranian Plateau. Travelling in tribal groups of varying sizes over a period of hundreds of years, they settled in the land they called "Sapta Sindhu," or the "land of the seven rivers," in which they found lush plains for their pastoral lifestyle. They conquered not by barbarity but by overwhelming the indigenous tribes with their sophisticated battle tactics and their swift, spoke-wheeled chariots, battle equipment never before used in the Indus valley.

At first the Aryans had no written language. They relied on the spoken word alone to preserve their elaborate system of spiritual ideas, transmitted in a body of poetry (later collected in the Rig Veda) that eventually defined the character of the subcontinent. Mingling their own oral traditions with ideas from the native populations, the fusion of the two produced Sanskrit, the enduring language of India. The Aryans' spiritual ideas blended with the beliefs of the indigenous people and evolved into Hinduism, a religion that has survived some 4,000 years.

Asens' Uprising (1185–1189)

PRINCIPAL COMBATANTS: Bulgars and Vlachs vs. the Byzantine Empire

PRINCIPAL THEATER(S): Thrace and Macedonia

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: The Bulgars sought independence from the Byzantine Empire.

OUTCOME: Bulgaria won its freedom in a tenuous independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: A truce was agreed to in 1189.

Late in the 12th century the Byzantine Empire controlled most of southeastern Europe, a situation many, trapped by the Byzantine juggernaut, found odious. In 1185 two brothers, lords from Turnovo, rose up in Bulgaria to throw off the Byzantine yoke and establish an independent state. After attracting a substantial following of both Bulgars and Vlachs, John (d. 1196) and Peter Asen (d. 1197) boldly declared Bulgaria independent, and John was crowned King John Asen I at Turnovo in the fall of 1185. The Byzantine emperor, Isaac II Angelus (d. 1204), quickly led his army into Bulgaria and crushed the rebels in 1186.

Thinking he had successfully stamped out the insurrection, Isaac returned to Constantinople. However, the Asens had fled to the Cumans, a clan of nomadic Turks, and successfully gained their support. With the aid of the Cumans, the Asens launched devastating guerrilla incursions into the border region of Thrace and Macedonia. Isaac led his army back into the field but was unable to stop, much less defeat, the raiders. Meanwhile, the Asens continued to curry support in Europe by appealing for help against the infidel to Frederick Barbarossa (c. 1123–90) and the other leaders of the Third CRUSADE. Their solicitations, however, yielded no results, and they continued to fight aided only by the Cumans.

Finally, Isaac was able to draw the Bulgars into open battle at Berrhoe in 1189—much to his regret, as it turned out. Isaac and the Byzantines were soundly defeated, and the ensuing truce granted limited autonomy to a Bulgarian state between the Balkan mountain range and the Danube River. Bulgarian independence remained tenuous, espe-

cially after Isaac again led an army into the region, this time successfully defeating the Bulgarians at the Battle of Arcadiopolis in 1194. When Isaac proved unable to consolidate his victory, however, the Bulgarians were able to hang on to their hard-won freedom.

Ashanti, Rise of the (1600–1800)

PRINCIPAL COMBATANTS: Ashantis vs. various other African kingdoms

PRINCIPAL THEATER(S): Southern Ghana

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In the 18th century the Ashantis established a West African empire.

OUTCOME: Maintaining its expansion through active slave trade and the mining of gold, the Ashanti state grew rich and powerful enough to threaten the interests of British colonizers.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Ashanti were part of the Akan peoples who, in various tribal groupings, migrated around 1600 from the region of modern Ghana to settle in the jungle region west of the Volta and form a loose confederation for defensive purposes. During the following century they gradually expanded and increased their power in the Volta basin and farther west, coming into contact inland with nomadic tribes and along the coast with Europeans. In the 18th century the Ashanti developed a highly efficient and resilient empire in West Africa around today's southern Ghana that endured four major struggles against European imperial forces, mostly British, in the 19th century, only to be annexed by the British in the early 20th century (*see* ASHANTI WAR, FIRST; ASHANTI WAR, SECOND; ASHANTI WAR, THIRD; ASHANTI WAR, FOURTH).

In the 17th century the slave trade began to ruin the traditional society and power structures of the coastal regions of West Africa. The tribes of the so-called Gold Coast grew fatally weak under the impact of European trade, but the inland peoples were less affected, although they, too, participated in the slave raiding and thus experienced the inherent instability the trade brought with it—interminable warfare, mismatches in arms and wealth, loss of traditional social mores, and the like. By mid-century not only were the inland tribes selling their captives to the

Portuguese and Dutch on the coast but also to Arab slave traders from across the Sahara. The Arabs brought with them the Islamic religion, and it generally spread along the territory bordering the desert on the southwest.

Before the late 1600s the Ashanti had been vassals of the state of Denkyera, but the last decade of the century saw the rise of a new Ashanti king. Osei Tutu was an able leader, skilled in war, who began a struggle that by 1697 led to his conquest of the suzerain state and its surrounding areas. Tutu created the Ashanti Confederacy, which he ruled until 1731. Tutu established the capital city at Kumasi where the *sika dwa* (golden stool), which came to symbolize the wealth of Ashanti, was displayed. Much of the Ashanti wealth came from an active slave trade with Portuguese and Dutch traders on the coast. In return for slaves, the Europeans gave the Ashanti weapons to support their expansion and to maintain the Ashanti's ownership of the area's gold mines.

Ultimately, Osei Tutu was defeated and killed by the neighboring Akim people, and a period of disarray swept through the kingdom. His death was soon avenged by Opoku Ware, who became Ashanti ruler in 1731 and restored the kingdom. Beginning in 1752, with the reign of a warrior leader named Osei Kojo, the Ashanti dominions expanded in all directions. Of all the many tribal groupings in the jungle region, the Ashanti continued to conquer until by the end of the century they had stretched their empire into the open uplands of the middle Volta region and farther west, also approaching the Ivory and Gold Coasts, where France and Britain had been engaging in raids and counterraids that reflected various European wars. The homegrown and the foreign empires were face-to-face at the turn of the 19th century.

Ashanti Uprising (1900)

PRINCIPAL COMBATANTS: The Ashanti vs. Great Britain

PRINCIPAL THEATER(S): Present-day Ghana

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: After two centuries of war and four defeats at the hands of British colonial forces, the Ashanti staged a final uprising and besieged their former capital of Kumasi.

OUTCOME: British troops crushed the rebellion and pacified the Ashanti.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Ashanti, 5,000; British regulars and native infantry, 2,956

CASUALTIES: Ashanti losses, unknown; Anglo-African losses, 150 killed, 800 wounded

TREATIES: None

At the turn of the 19th century during the height of the New Imperialism, Great Britain, France, Germany, Italy, and Portugal were engaged in almost continuous fighting with the peoples of Africa to stabilize, pacify, and enforce their colonial empires in Africa. Such operations were generally successful, since the Europeans were heavily arming themselves and beefing up their militaries for a major war they all knew was coming in Europe itself. One challenge came to the British from the Ashanti, who had once ruled a large empire in West Africa but whose confederacy had been bled dry and ultimately dissolved by four colonial wars stretching across the entire 19th century (see ASHANTI, RISE OF THE; ASHANTI WAR, FIRST; ASHANTI WAR, SECOND; ASHANTI WAR, THIRD; ASHANTI WAR, FOURTH). From March through November of 1900 the Ashanti, under the leadership of Queen Yaa Asantewa (d. 1921), besieged Kumasi, which had been the capital of their union before the British (having burned it to the ground in a previous war) occupied it at the end of the last Ashanti War, and demanded the return of their exiled leaders. The uprising was ultimately suppressed by British troops and the Ashanti finally pacified.

Ashanti War, First (1824–1831)

PRINCIPAL COMBATANTS: The Ashanti Union vs. Great Britain (with Fulani and other tribal allies)

PRINCIPAL THEATER(S): Gold Coast of Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Ashanti Union had expanded its dominion to the Gold Coast, where Ashanti raids threatened British outposts and coastal tribes under British protection.

OUTCOME: The Ashantis were defeated and gave up their claims to various portions of the Gold Coast.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Ashanti, 100,000; Britain and allies, 11,000

CASUALTIES: Ashanti, 5,000 killed; Britain and allies, 1,359 killed

TREATIES: Ashanti renounced the Gold Coast, 1831.

Armed with guns from Portuguese and Dutch slave traders, the Ashanti had established a large confederated kingdom in West Africa during the 17th century (see ASHANTI, RISE OF THE). In the early 1800s the confederation began expanding its territory again, moving toward the adjacent Gold Coast, one of the imperial enclaves of the British in Africa. In 1806 and 1807, under their king, Osei Bonsu (1780–1824), the Ashanti extended their dominions to the coast itself. Four years later, in 1811, Britain abolished the slave trade throughout its empire. But the slave trade had

helped make the Ashanti rich and powerful, and they continued their raids and their wars of conquest. Sir Charles M'Carthy (1770–1824), colonial governor of the British posts that dotted the Gold Coast, tried his best to defend the posts and to protect British settlers and coastal tribes from Ashanti war parties and slaving expeditions. When the colonial forces were defeated, and Governor M'Carthy killed in 1824, London sent reinforcements. In this way, the First Ashanti War began in earnest.

Most of the initial wave of reinforcements succumbed to disease, but a force of 11,000, mostly Fulani tribesmen under British command, defeated 10,000 Ashanti at the Battle of Katamanso on August 7, 1826. A total of 800 Fulani died, and 1,000 were wounded in the Afro-British unit, but 5,000 of the Ashanti fell, including 70 generals or princes. The defeat effectively ended Ashanti claims to suzerainty over the Gold Coast, although it was 1831 before the tribe formally renounced those claims.

Ashanti War, Second (1873–1874)

PRINCIPAL COMBATANTS: The Ashanti Union vs. Great Britain

PRINCIPAL THEATER(S): Gold Coast of Africa and southern Ghana

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: After a decade of raiding the British Gold Coast, the Ashanti invaded when the British continued to expand their empire in the region.

OUTCOME: The Ashanti were defeated, their capital was burned, and they were forced to pay a huge indemnity in return for British withdrawal from their homelands.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Ashanti: 60,000; Britain and native auxiliaries, 3,587

CASUALTIES: Ashanti, more than 3,000 killed; Anglo-African forces, 75 killed or died of disease

TREATIES: Treaty of Fomena, 1874

In January 1873 some 60,000 Ashanti warriors suddenly invaded the Gold Coast, suzerainty over which the Ashanti had renounced in 1831 after the First ASHANTI WAR. The invaders attacked a British coastal fortress at Elmina in October but were repulsed with the loss of about 1,000 warriors. Sir Garnet Wolseley (1833–1913), the British commander in the region, mounted a counteroffensive with 2,587 British troops and 1,000 African auxiliaries. He invaded Ashanti territory, forcing a battle at Amofo on January 31, 1874. A mere 1,500 British and 700 African troops

defeated 10,000 Ashanti there. Wolseley's losses were minimal—18 killed (another 55 succumbed to disease) and 394 wounded—whereas more than 1,000 Ashanti died or were wounded. King Kofi Kakari (r. 1867–74) agreed to the Treaty of Fomena in 1874, ending the war. In 1896 the Ashanti kingdom was annexed by the British.

Brackenbury, *Ashanti War, 1874* (London: Frank Cass, 2001); Joseph Emmanuel Condua-Harley, *Sagrenti War: An Illustrated History of the Ashanti Campaign, 1873–1874* (Privately printed, 1974); Robert B. Edgerton, *The Fall of the Asante Empire: The Hundred-Year War for Africa's Gold Coast* (New York: Free Press, 1995); Edward W. Said, *Culture and Imperialism* (New York: Vintage, 1994).

Ashanti War, Third (1893–1894)

PRINCIPAL COMBATANTS: The Ashanti Union vs. Great Britain

PRINCIPAL THEATER(S): Africa's Gold Coast (present-day Ghana)

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: When a new Ashanti leader renewed the raids on British holdings along Africa's Gold Coast, the British tried to force a protectorate on the Ashanti Union.

OUTCOME: After the Ashanti were defeated in the field, they were forced to pay an indemnity and accept the British protectorate.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Acceptance of British protectorate, 1894

About 20 years after the Second ASHANTI WAR, a new ruler, King Prempeh I (1871–1931), had taken power in the West African confederacy and began, once again, to send raiding parties into the British-controlled territory along Africa's Gold Coast. Bloody skirmishes took place between Prempeh's forces and British regulars beginning in 1893, the same year Prempeh refused to sign a new treaty the British tried to force on him, thus rejecting outright the proposed British protectorate over the Ashanti Union's tribal lands. As the tide of war turned against them in 1894, the Ashanti reluctantly accepted a British protectorate in the region and agreed to pay an indemnity for their raiding.

See also ASHANTI, RISE OF THE; ASHANTI UPRISING; ASHANTI WAR, FIRST; ASHANTI WAR, FOURTH.

Further reading: Robert B. Edgerton, *The Fall of the Asante Empire: The Hundred-Year War for Africa's Gold Coast* (New York: Free Press, 1995); Edward W. Said, *Culture and Imperialism* (New York: Vintage, 1994).

Ashanti War, Fourth (1895–1896)

PRINCIPAL COMBATANTS: The Ashanti Union vs. Great Britain

PRINCIPAL THEATER(S): Present-day Ghana

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: When the Ashanti refused to abide by the terms that ended the Third Ashanti War, war broke out with Great Britain once again.

OUTCOME: The Ashanti were defeated, their capital taken, their leaders exiled, and their union dissolved.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Nana Prempeh I (1871–1931), the Ashanti king, loathed the British protectorate imposed on the Ashanti Union after the Third ASHANTI WAR. He refused both to respect the rights of British colonials along the Gold Coast and to pay the indemnity the British had demanded at the close of the war. Within a year war had broken out again. This time, the British pushed inland and took Kumasi, the Ashanti capital they had captured and razed once before in 1874 during the Second ASHANTI WAR. They also captured and deported Prempeh and the other principal Ashanti leaders to the Seychelles Islands, dissolved the Ashanti Union, and firmly established their protectorate.

See also ASHANTI, RISE OF THE; ASHANTI UPRISING; ASHANTI WAR, FIRST.

Edgerton, *The Fall of the Asante Empire: The Hundred-Year War for Africa's Gold Coast* (New York: Free Press, 1995); Edward W. Said, *Culture and Imperialism* (New York: Vintage, 1994).

Assyria, Fall of (616–612 B.C.E.)

PRINCIPAL COMBATANTS: Babylonia, Media, and the Scythians vs. Assyria

PRINCIPAL THEATER(S): Most of the present-day Middle East

DECLARATION: None known

MAJOR ISSUES AND OBJECTIVES: The rebellions leading to the wars that destroyed Assyria began with a war for succession to the Assyrian throne between twin brothers; vassal states fought for their freedom from Assyrian rule, then to destroy Assyria itself; and Assyria fought at first to put down the revolts, then for its survival.

OUTCOME: The Assyrian Empire vanished.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Assyrian Empire, which began around 3000 B.C.E., had disappeared from history by 612 B.C.E. Once the most dominant and feared power in the Middle East, the empire self-destructed in a crippling civil war that prompted Assyria's adversaries to unite and destroy the weakened empire.

During the reign of Assyria's last great king, Ashurbanipal (668–627 B.C.E.), his twin sons, Ashur-etel-ilani and Sin-shar-ishkin, fought over succession. The struggle began as a low-key affair during Ashurbanipal's lifetime when he announced that Ashur-etel-ilani was the legitimate heir, but after Ashurbanipal's death, it erupted into the open with immediate and dire consequences.

Though Ashur-etel-ilani ascended to the throne in 625, his brother declared himself counter king and split the kingdom. Numerous Assyrian vassal states rebelled: In southern Babylonia, Nabopolassar (fl. 625–605), leader of the Chaldeans, took advantage of the situation and drove the Assyrians out of Uruk, proclaiming himself king of Babylon (see BABYLONIAN REVOLT) and launching the Neo-Babylonian Empire (626–539); Palestine seceded from the empire; the Phoenicians staged an uprising; and Media united under King Cyaxares (d. 585 B.C.E.) and broke free from Assyrian rule.

Within a year, Ashur-etel-ilani was dead, and Assyria was in rapid decay. His brother gained the throne, but he, too, was quickly deposed by Ashur-etel-ilani's son Sin-shar-ishkun. With Uruk, Media, Syria, and Palestine all lost, the Assyrians were placed on the defensive, fighting now not for empire but for survival. Nabopolassar and Sin-shar-ishkun fought several wars between 625 and 623, the net result of which was Assyria's expulsion from all of ancient Babylonia.

Around 616, Cyaxares of Media, like Nabopolassar trained by Assyrian generals, attacked the Assyrian capital of Nineveh. The Scythians, however, remained loyal to Assyria and prevented the Medes from destroying Nineveh. Nabopolassar, in alliance with Cyaxares, diverted Assyrian troops along the Euphrates and defeated them at Kabinu, and in 615 the Medes were able to conquer Arrapkha and, the following year, Ashur. Given their victories, Cyaxares and Nabopolassar managed to convince the Scythian leader to join their coalition, which proved fatal for Assyria.

In 612 the powerful coalition crushed the Assyrians at Nineveh and decimated the population. Sin-shar-ishkun was burned to death in his palace, and the Assyrian Empire collapsed. After 609 all record of the once-mighty Assyrian Empire and its people simply vanished.

Assyrian Conquest of Egypt (671–661 B.C.E.)

PRINCIPAL COMBATANTS: Assyria vs. Egypt

PRINCIPAL THEATER(S): Egypt

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Assyrian conquest of Egypt

OUTCOME: Assyria conquered Egypt and launched massive new building programs financed by tributes collected from the Egyptians.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

After the assassination of the Assyrian king Sennacherib (fl. 704–681) in 681—famed and feared for his destruction of Babylon in 689 B.C.E.—an imperial council appointed Essarhaddon (fl. 680–669 B.C.E.) his successor in 680. Essarhaddon commenced rebuilding Babylon and made peace with longstanding enemies in Elam and Aramaean, allowing him to focus on an invasion of Egypt.

About 674 Essarhaddon attacked the Egyptians but soon withdrew because of strategic blunders. He returned in 671, however, and conquered the capital city of Memphis, bringing about the fall of Egypt itself. The conquest brought vast quantities of tribute to Essarhaddon's coffers, collected by his agents and administrators who were spread across 22 provinces. With these funds Essarhaddon undertook massive building programs in both Babylonia and Assyria.

Egyptian resistance was never fully crushed, however, and Essarhaddon was killed in 669 as he led an attempt to quell an uprising. Essarhaddon's son Ashurbanipal (668–627) relinquished Assyrian control of Egypt in 656.

Further reading: Robert W. Rogers, *A History of Babylonia and Assyria* (Santa Clarita, Calif.: Books for Libraries, 1971); Nigel Tallis, *Assyria at War, 1000–610 B.C.* (London: Osprey, 2002).

Assyrian Conquest of Palestine and Syria

(c. 743–733 B.C.E.)

PRINCIPAL COMBATANTS: Assyria vs. Palestine and Syria

PRINCIPAL THEATER(S): Present-day Middle East

DECLARATION: None known

MAJOR ISSUES AND OBJECTIVES: Assyria was empire-building, seeking to make all other states in the region tribute-paying vassals.

OUTCOME: Palestine and Syria were thoroughly subjugated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

Up until the reign of Tiglath-pileser III (fl. c. 745–727), Assyria had repeatedly invaded Syria and Palestine but lacked the administrative organization to maintain control over the regions. Tiglath-pileser developed an efficient military state, overcoming Assyria's bureaucratic shortcomings and thus creating the conditions for his empire to dominate the Middle East.

In 743 Tiglath-pileser marched into Syria and defeated a Urartu army. Poised to capture the Syrian city of Arpad, Tiglath-pileser was met with heavy resistance. For three years he laid siege to the city. In 740 Arpad capitulated, and Tiglath-pileser decimated the population, killing virtually every inhabitant. Two years later a Syrian-backed coalition in the north attacked Assyria, meeting with equally disastrous results. By 735 Tiglath-pileser was master of all Syria, forcing tribute from every Syrian province from Damascus to Anatolia.

The following year, 734 B.C.E., the Assyrians conquered Palestine. The conquest gave Tiglath-pileser control of the important Gaza coastline, which proved a key link in obtaining tribute from the leaders of southern Arabia. Behind the emperor's back, his vassal states formed a secret alliance. The plot between Damascus and Israel against Assyria was revealed, however, when the leaders of Judah, refusing to join the alliance, approached Tiglath-pileser for protection. The Assyrian king responded by crushing Israel in 733. The next year the Assyrians marched on Damascus, executed the king, and replaced him with an Assyrian puppet. Both Syria and Palestine would remain in foreign hands for the next 27 centuries.

Further reading: Robert W. Rogers, *A History of Babylonia and Assyria* (Santa Clarita, Calif.: Books for Libraries, 1971); Nigel Tallis, *Assyria at War, 1000–610 B.C.* (London: Osprey, 2002).

Assyrian-Hurrian Wars (c. 1350–1245 B.C.E.)

PRINCIPAL COMBATANTS: Hurrian Mitanni vs. Assyria

PRINCIPAL THEATER(S): Present-day Middle East

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: The Hurrian peoples of Mitanni fought against Assyria, a vassal state of the Mitanni Empire that first won its independence then began to build an empire of its own.

OUTCOME: Ultimately, the Assyrians conquered the Hurrians and made Mitanni part of the Assyrian Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

The Hurrians, a nomadic people from eastern Anatolia, settled in Mesopotamia at the beginning of the second

millennium B.C.E. By the 15th century B.C.E. the Hurrians had been assimilated into the Mitanni Empire. At its peak, during the reign of Tushratta (fl. c. 1390–c. 1340), the Mitanni Empire stretched from the Mediterranean to the Zagros Mountains and into northern Syria. The capital city, Wassukkani, located along the banks of the Khabur River in Mesopotamia, served as a buffer between the Egyptians and the Hittites, both of whom coveted favorable relations with Mitanni rulers.

At the beginning of the 14th century B.C.E. Assyria was a semiautonomous kingdom within the Mitanni Empire, subject to Mitanni leaders, to whom Assyria paid tribute. Around 1350 the Assyrian king Ashur-uballit I (fl. c. 1365–c. 1330), with the aid of the Hittite leader Shubbiluliuma (fl. c. 1375–c. 1335), staged a revolt against his overlord Tushratta (r. 1300s). The Mitannis, caught off guard and already exhausted from war with the Hittites, were forced to acknowledge an independent Assyria and give up territory in northern Mesopotamia. The new kingdom, which Ashur-uballit named the land of Ashur, was the homeland from which Assyria's own empire was launched.

Shortly after losing Assyria, Tushratta was arrested and executed by his son Artatama. With the Hurrian-Mitanni kingdom now in disarray, Assyria and an allied neighboring state, Alshe, attacked, conquered, and divided between them the Mitanni Empire. The kingdom of Mitanni itself retained some of its autonomy for the time being owing to the relations between royal families.

Upon the death of the Assyrian king Ashur-uballit, his son Enlil-nirari (fl. c. 1328–c. 1320) began a series of wars against Babylonia and the Kassites. At Sugagi, located in the Tigris, Enlil-nirari's army met a Kassite force led by Kurigalzu (14th century B.C.E.) and crushed it, thus extending Assyrian borders even farther. Assyrian expansion, however, opened the door for trouble among the Mitanni. Mitanni king Artatama II (r. 1400s), who was friendly with the Assyrians, faced an internal coup made up of anti-Assyrian rebels. These rebels, mostly a people called the Harri, supported a pretender to the throne named Mattiuaza (fl. 1400s). Artatama persecuted the Harri, forcing them to flee to the Kassites for aid. The Kassites, still reeling from their defeat at Sugagi, were in no shape to anger Assyria and refused to come to the aid of the Harri. By then, however, the Hittite king Shubbiluliuma had seen an opportunity to establish a puppet regime in Mitanni; deciding to support the Harri rebels, he invaded Mitanni, placed Mattiuaza on the throne, and drove the Assyrians out of the kingdom.

The new Assyrian king, Arik-den-ili (fl. c. 1307–c. 1275), was too busy conquering the eastern territories of Niginti, Arnuni, and Kuti as well as the western Semitic tribes of the Sutu and Akhlamu to respond to Shubbiluliuma's gambit. It was not until his son Adad-nirari (fl. c. 1397–c. 1275) ascended to the throne that the Assyrians

confronted the Mitanni situation. After conquering the Kassite king Nazimaruttash II (1308–1282) at Kar-Ishtar, Adad-nirari avenged the loss of Mitanni by defeating both Mitanni king Shattuara I (fl. c. 1300) and his Hurrian successor Wasashatta (fl. c. 1300) around 1300, victories that consolidated Assyria's Mesopotamian conquests into an empire.

Adad-narari's son Shalmanser I (fl. c. 1274–c. 1245)—one of the first practitioners of psychological warfare (it was reported that he blinded his enemies in one eye)—expanded the Assyrian borders into southern Armenia by conquering the territory of Uruatru. Under Adad-nararith (1307–1275), the last of the Hurrian strongholds in Mitanni capitulated, and Assyria began its march toward becoming the dominant power in the Middle East.

Assyrian Wars (c. 1244–1200 B.C.E.)

PRINCIPAL COMBATANTS: Assyria vs. Babylonia and various other kingdoms

PRINCIPAL THEATER(S): Present-day Middle East

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: The Assyrian Old Kingdom embarked on wars of conquest following the decline of Egypt and the Hittites.

OUTCOME: The Old Kingdom conquered Babylonia and other powers in the region, only to fall itself to Babylon after being weakened by internal coups.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

The emergence of the Assyrian Old Kingdom in the 13th century B.C.E. was the result of a decline of the once-powerful Egyptian and Hittite kingdoms in the Middle East. The Egyptian Ramses II's (fl. 1292–1225) wars with the Hittite leader Hattushilish III (r. 1275–1250)—and subsequent treaty in 1271—weakened the areas of Syria and Palestine, allowing the Assyrians under the brutal Shalmaneser I (fl. c. 1274–c. 1245) to take control of the Babylonian-Hittite-backed Mitanni kingdom and set their sights on Armenia and southern Mesopotamia. The period from c. 1244 to c. 1200 was dominated by Shalmaneser's son Tukulti-ninurta (fl. c. 1244–c. 1208), whose wars of conquest defeated both the Hittites and the powerful Kassite dynasties in the region. He became known in Greek legend as Ninus and also established the Assyrian fourth capital city at Kar-Tukulti-Ninurta, or Nineveh.

Upon his father's death Tukulti-ninurta resumed the elder's northwest campaigns in Na'iri and Rapiku. In Na'iri the Assyrian army fought and defeated a coalition of 43 kings. In eastern Anatolia Tukulti-ninurta forced a migration of more than 20,000 residents across the Euphrates River. Tukulti-ninurta's most impressive campaigns occurred in Babylonia, where he defeated a succession of Babylonian kings culminating around 1240 with the capture and execution of King Kashtiliash (IV) and the subsequent Assyrian destruction of Babylon. For seven years Assyria incorporated Babylonia as a province until an internal revolt began in Assyria. The coup, led by Tukulti-ninurta's son Ashur-nadin (r. 1207–1203) and nobles from the hinterland, deposed the Assyrian leader and subsequently executed him.

After murdering his father, Ashur-nadin ascended to the throne. His rule marked a period of decline in Assyria. The Elamites forced him out of Babylon, and his successors, Ashur-nirari III (fl. 1203–1197) and Enlil-kudurusr (fl. 1197–1192) participated in a dual reign that was crushed by the Babylonians around 1200. The Assyrian Old Kingdom had come to an end.

Assyrian Wars (c. 1200–1032 B.C.E.)

PRINCIPAL COMBATANTS: Assyria vs. Armenia, Anatolia, Syria, and Babylonia

PRINCIPAL THEATER(S): Present-day Middle East

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Assyrian expansion and conquest

OUTCOME: Assyria asserted dominance in the Near East during the reign of Tiglath-pileser I.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

The enthronement of Tiglath-pileser I (r. c. 1116–1077 B.C.E.) dramatically reversed the long decline of the Assyrian Empire. Whereas Assyria had been losing territory since about 1213 B.C.E., Tiglath-pileser I revived its military traditions and began a modernization of the military, which would reach its apogee of development under Tiglath-pileser III (r. 744–727).

Tiglath-pileser I turned his attention to the south and took advantage of the decadence of the Kassites in Babylonia. That dynasty had been badly eroded by warfare with the Elamites, and by 1180 much of Babylonia was ripe for

the taking. Tiglath-pileser I led his forces against Muski (southern Armenia), using this as a stage from which he launched invasions into Anatolia (modern Turkey) and northern Syria. Once these regions had been conquered, Assyria was in a position to challenge Babylonia itself. About 1100 Tiglath-pileser I invaded Babylonian territory proper, and the kingdom soon fell to him.

By the time of the death of Tiglath-pileser I in 1077, the decline of Assyria had not only been arrested, the kingdom was now the preeminent power in the entire Middle East. Assyrian hegemony did not long survive, however, and it was up to Tiglath-pileser III to restore its former glory.

Assyrian Wars (c. 1032–c. 746 B.C.E.)

PRINCIPAL COMBATANTS: Assyria vs. Aramaean city-states, Armenia, Babylonia, Chaldea, and other kingdoms

PRINCIPAL THEATER(S): Present-day Middle East

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: After a period of decline, the Assyrian Empire began to assert itself once more in a series of wars of conquest.

OUTCOME: Assyria came to dominate the Middle East, its kingdom stretching from the Mediterranean to the Persian Gulf.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

The history of the Assyrians began around 3000 B.C.E., when a Semitic tribe settled at Ashur on the northern Tigris, but it was not until the 11th century, during the reign of Tiglath-pileser I (r. c. 1115–c. 1077), that Assyria truly became the dominant power in the Middle East (see ASSYRIAN WARS [1200–1032 B.C.E.]). Following Tiglath-pileser's death the Assyrian Empire diminished under the successive reigns of his three sons and his grandson, Ashurnasirpal I (c. 1050–c. 1032). At the close of the 10th century a rebirth of the Assyrian Empire occurred when a new generation of strong tyrants emerged. The wars that followed between around 1000 to around 746 were largely offensive and succeeded in expanding the ancient kingdom from the Mediterranean to the Persian Gulf.

The greatest threat to the Assyrians in the 10th century was the periodic invasions of the Aramaeans, whose nomadic disposition and strong rural ties kept the Assyrian

leadership from maintaining control of its own borders. Around 934, after about 100 years of Assyrian decline, Ashur-dan II (934–912) ascended to the throne. Under his leadership the Assyrian borders were secured and the Aramaean encroachment halted. Ashur-dan's successor, Adad-nirari II (c. 911–891), continued Assyria's aggressions against the nomads by leading six offensives along the borders of Arabia. Adad-nirari II used his superior forces to subdue Babylonia during two campaigns around 930–04. Relative peace followed Adad-nirari II's death in 891, until the rise of the great Assyrian military leader Ashurnasirpal II (c. 882–859).

Under Ashurnasirpal II the Assyrian forces became the most feared of invaders. Brutal and deliberate, they incited terror by impaling or skinning alive their enemies. Thanks to their connections with the Hittites, the Assyrians were the first Middle Eastern state to incorporate iron into their arsenal. With archers, sophisticated battering-rams—a priceless weapon in attacking fortified cities—and chariots, their highly efficient armies were unstoppable.

In 883 Ashurnasirpal led his first campaign along the northern Tigris and destroyed the city of Nishtun, in modern day Kurdistan. He then suppressed a Syrian-backed revolt in the city of Suru in 882 and followed that with a victory over the Aramaeans in the north. The Assyrians then pushed into Babylonia and captured Suhu in 878. As the empire expanded, Ashurnasirpal consolidated his command and developed a highly trained force capable of responding to revolts throughout the kingdom. In 875 he crossed the Orontes River and penetrated Phoenicia, where the Phoenician leaders wisely agreed to pay him tribute. In Ashurnasirpal's last battle he quelled a revolt of the Kashiari Hill tribes in northwest Assyria in 866.

Ashurnasirpal's son Shalmaneser III (858–824) succeeded him and continued the Assyrian expansion. First he struck out against Syria, where he added the northern territory to the empire. He was less successful in his siege of Damascus in 841. In southern Mesopotamia Ashurnasirpal also managed to extract tribute from the king of Israel, Jehu, in 841. His armies plundered Phoenicia and fought with mixed results against the Armenians, Cilicians, and Chaldeans.

Ashurnasirpal's successor, Shamsi-Adad V (823–811), rekindled the Assyrian feud with Babylonia from 818 to 812, a traditional rivalry that would last until the Assyrians completely destroyed Babylon in 693 (see BABYLON, FALL OF). Shamsi-Adad also engaged Armenia with little success and conquered Chaldea, an area south of Babylonia.

The reign of Adad-nirari III (810–783) marked the last years of Assyrian expansion for a time. In 804 Adad-nirari's armies marched to Gaza, but he could not penetrate Damascus. Border wars in the north and a rebellion in Babylonia were quelled, but it was evident Assyria was suffering from its tremendous expansion. Of the three successive kings, Shalmaneser IV (783–773), Ashur-dan III (772–755), and Ashur-hirari V (754–746), only Shalmaneser

IV was able to conquer territory (around Ararat). Yet he was defeated by the Syrians in 773, which sent Assyria into another period of decline.

Assyrian Wars (c. 746–609 B.C.E.)

PRINCIPAL COMBATANTS: Assyrians vs. numerous kingdoms of the Middle East

PRINCIPAL THEATER(S): Middle East

DECLARATION: No formal declaration recorded

MAJOR ISSUES AND OBJECTIVES: Assyrian dominance of the region

OUTCOME: Assyria built and maintained a vast empire over the course of about six centuries, although by the beginning of the sixth century B.C.E. the empire was clearly doomed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No formal treaties recorded

These were the years of the Assyrian Empire's greatest glory and its ultimate extinction. Despite the immense expansions achieved by Tiglath-pileser III (fl. c. 745–727 B.C.E.) and his three successors, Sargon II (fl. 722–705), Sennacherib (fl. 705–681), and Essarhaddon (fl. 680–669), the empire that had begun around 3000 B.C.E. would totally disappear by 609 (see ASSYRIA, FALL OF).

Descended from the Semites who migrated from the Eurasian steppes in the third millennium B.C.E. to the middle regions of the Tigris River valley, the Assyrians first assumed control over the fading Hittite world after 1200 B.C.E. At its height, some six centuries later, the Assyrian Empire stretched as a huge arc from the Persian Gulf westward across Syria to the Mediterranean and southward to include Palestine and Egypt.

A military coup around 745 B.C.E. brought the Assyrian general Pul to the throne. He declared himself Tiglath-pileser III and succeeded not only in reviving the declining empire's fortunes but also in taking it to its zenith. Before Tiglath-pileser the Assyrian kings lacked the administrative ability to control the new provinces they carved out of conquered territories, but the general-turned-emperor reorganized the state and centered it around a powerful standing army equipped with superior weapons—iron spears, chariots, and battering rams.

Tiglath-pileser's military strategy was three-pronged: quell the Aramaean revolt south of Babylonia, annex Syria,

and reclaim the northern borders around Urartu, north-east of the Tigris-Euphrates valleys. In 746 he marched to Babylonia, where he joined his vassal king Nabu-nasir (fl. 747–734) to fight successfully at Radhan in the south along the Tigris and to press across the river to the banks of the Uknū. Unlike his predecessors, Tiglath-pileser left his own men in charge of the conquered lands and also built a fort, Kar-Ashur, to prevent future upheavals. With his southern borders secured by about 744, Tiglath-pileser directed his conquests toward the east and the northern territories of Urartu.

In order to divert the massive Urartu army, Tiglath-pileser campaigned in Media (central Iran) before turning north. After pillaging the unprotected territories around Media, the Assyrian army marched to Syria and defeated a contingent from Urartu in 743. From there the stage was set for an Assyrian show-down with the Urartu general Sarduris II (760–730) and his coalition forces at Kishtan. The Assyrians routed the Urartu general and forced him to retreat over the border. For the next three years Tiglath-pileser laid siege to Arpad—a defiant Urartu-backed city in Syria—until it broke in 740. More than 70,000 prisoners were taken, and the city was demolished.

Until his death in 727 Tiglath-pileser III waged almost continuous warfare in the region. He defeated Hamah in 739, Damascus and Syria in 732, and southern Iraq in 731. He drove the trouble-making Chaldean prince Ukinzer (r. 732–29) from Babylon in 729. The Assyrian Empire now encompassed land from the Persian Gulf to the Armenian mountain ranges and south to Egypt.

The reign of Tiglath-pileser's son and successor, Shalmaneser V (726–722), was mostly uneventful except for a 724 conquest of Israel against a Jewish army led by Hoshea (reigned over Israel, c. 730–722), an anti-Assyrian leader in the region whose exploits are documented in the Old Testament.

In 721 Shalmaneser's successor, Sargon II, defeated the Elamites, an upstart tribe from the east who had conquered Israel the previous year and forced a migration of Israelites who would become known as the Ten Lost Tribes. Subsequently Israel became a province of Assyria, paying tribute in return for internal autonomy. Sargon II defeated Gaza in 717 and won a border struggle with the Egyptian army in 716. After he was killed in an ambush in 705 in northwestern Iran, Sargon II's son Sennacherib ascended to the Assyrian throne.

Sennacherib quelled a rebellion in Babylonia in 703. He then marched the Assyrian army into western Iran, attacking and defeating a coalition force of Egyptians, Syrians, and Palestinians in 701. Sennacherib's troops laid siege to a defiant Jerusalem, led by Hezekiah (late eighth–early seventh century B.C.E.). A plague, however, decimated Sennacherib's troops, and the siege was lifted. Nevertheless, by the end of Sennacherib's campaign of expansion, the Assyrian army had captured 46 fortified cities and obtained the surrender of more than 200,000 people.

A Babylonian uprising occurred again in 700. In response Sennacherib's navy sailed south of Babylonia and attacked Elam—a kingdom sympathetic to the Babylonian rebellion—by sea. The Elamites responded by taking Assyrian Babylonia and deposing the king, Merodach-Baladan II (r. 721–710 B.C.E. and 703). Not until 689 was Sennacherib able to launch a counteroffensive on Babylonia. The Assyrians destroyed Babylon. Sennacherib had the waters of the Arakhtu River diverted so that the city was flooded. In the process he levelled the great temples of Babylon (see BABYLON, FALL OF).

An internal coup in 681 was responsible for Sennacherib's assassination. His son and successor, Essarhaddon, rebuilt Babylon and led several expeditions against Egypt. In 671 the Assyrians conquered the Egyptian city of Memphis, but they could never really control the continuous rebellions launched by the city's Ethiopians. In fact, Essarhaddon died while trying to suppress a revolt in Memphis in 669, and despite his many successes in battle, a certain inertia had crept into the Assyrian Empire that led to its final decline.

Assyria under King Ashurbanipal (668–627) managed to quell the all-but-constant rebellion in Egypt, driving the Ethiopian king of Egypt, Taharqa (fl. 690–664), out in 668. Taharqa's nephew, Tanutamon (r. 664–653), renewed hostilities with Assyria in 664, but Ashurbanipal defeated the rebellion and forced Memphis to resume paying tribute. In 656 Egypt regained its independence when it drove out the Assyrian administration. Ashurbanipal failed to respond because of an Elamite uprising in southern Babylonia. Ashurbanipal crushed the state of Elam, seized the capital city of Susu, and killed the Elamite king, Shilhak-In-Shushinak (r. 680–653). In 652, out of fear of an imminent Assyrian invasion, the Babylonian king, Shamash-shuma-ukin (r. 667–648), formed a coalition against Assyria with Ashurbanipal's own brother, Shamash-shum-ukin. Ashurbanipal defeated the coalition in 648 after laying siege to Babylon for three years. Shamash-shuma-ukin died in what would prove to be the last of Assyria's major victories.

In 635 a civil war erupted in Assyria between Ashurbanipal's sons over the coming succession. As a result Assyria's enemies began to take advantage of the weakened state. Ashurbanipal himself died in 627, and the empire disintegrated rapidly. The following year the nomadic Chaldeans, led by King Nabopolassar (fl. 625–605), conquered Babylonia, and the Scythians claimed both Syria and Palestine. The Babylonians expelled the Assyrians in 623. In 616 the Medes, an old nemesis of the Assyrians, attacked the empire's capital city, Nineveh; it fell four years later. (See ASSYRIA, FALL OF.)

Although a skeleton Assyrian army led by King Ashurballit II (611–609) fought against the Babylonians and the Medes, the empire was clearly doomed.

Asturian Uprising (1934)

PRINCIPAL COMBATANTS: Socialist antigovernment strikers vs. Spanish government

PRINCIPAL THEATER(S): Asturias, Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Spanish left-wingers and Socialists objected to the involvement of the Catholic Church in affairs of state through right-wing, prochurch ruling parties; ultimately, the struggle was for control of the fledgling Spanish republic.

OUTCOME: The strikers were suppressed, and the right-wing military gained a crucial influence in Spanish politics.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

70,000 miners; unknown number of government troops

CASUALTIES: 1,051 strikers killed; 2,951 wounded; 30,000 taken prisoner; government troops, 284 killed, 486 wounded

TREATIES: None

After the more or less sudden dissolution of General Miguel Primo de Rivera's (1870–1930) dictatorship in Spain in 1930, leadership of the country floundered. King Alfonso XIII (1886–1941), who had engineered Primo's resignation, though nominally the country's leader, had been ruined in the eyes of politicians and the public by his earlier support of the dictatorship; he was subsequently overthrown and a republic established. Political parties struggled for consensus among business, church, and labor groups that controlled huge voting blocs in the face of the 1933 elections, which had been set when the Left Republicans and the Socialists had forced the provisional government to resign in their favor in 1931.

The first elections of the Second Republic polarized the interest groups, and the new government began on shaky enough ground even before uprisings occurred in both Seville and Barcelona. The conservative business interests sought a strong union with the Spanish Roman Catholic Church and urged the ultraconservative prochurch Confederación Española de Derechos Autónomos (CEDA) to join the government.

The opposition Socialist Party objected to the right-wing CEDA and planned a nationwide general strike for the fall of 1934, trying to force the government's hand on the issue of the church's involvement in affairs of state. In conjunction with the strike, the Socialists also called for simultaneous uprisings in both Madrid and Catalonia, site

of the earlier demonstration in Barcelona. On October 5 more than 70,000 strongly unionized miners, directed by the local revolutionary councils set up by the Socialists, walked off the job in the northwestern province of Asturias. They quickly moved from strike to rebellion and occupied the town of Oviedo, taking control of the radio station and other key communications within a few hours. They burned the Catholic churches and killed more than 40 people, 29 of whom were priests.

The conservative government in Madrid dispatched right-wing general Francisco Franco (1892–1975) and the Spanish Foreign Legion to deal with the insurrectionists. Franco ruthlessly crushed the revolt and set about exacting retribution on the miners. Amid a Madrid-mandated news blackout, there were reports of brutal atrocities on the part of Franco's men, but they could hardly be substantiated with no information going in or out of Asturias without Franco's approval. More than 1,000 rebels were killed, almost 3,000 were wounded, and more than 30,000 were captured, tortured, and tried for treason and other crimes. The rebels lost 90,000 rifles, 10,000 cases of explosives, and as many as 30,000 hand grenades. Government losses were 284 killed and 486 wounded. The government's actions further polarized the country and served as a harbinger to the SPANISH CIVIL WAR (1936–1939).

Athens's War with Corinth *See* PELOPONNESE WAR, FIRST.

Aurangzeb, Wars of (1636–1657)

PRINCIPAL COMBATANTS: Mogul leaders of northern India vs. the Persians and Uzbek Turks

PRINCIPAL THEATER(S): North India and Kandahar, Afghanistan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Mogul (Muslim) leaders of India attempted to spread their control over the region of present-day Afghanistan.

OUTCOME: Mogul leaders of India lost control of Kandahar, which remained under the control of Persia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Aurangzeb (1618–1707) was the second son of the Mogul shah Jahan (1592–1666) in India. In the period just prior to the wars named for him, Aurangzeb consolidated the

conquests of his father. He then set about ensuring that the great rivals of the Moguls, the Marathas, would remain confined to the western Deccan. Operating from bases in the sultanates of Bijapur and Golconda, Aurangzeb periodically invaded the Maratha borderlands, taking key forts and even pushing Mogul holdings into the Deccan.

Shah Jahan named his son governor of Gujarat in 1645 but quickly dispatched him to Balkh in Transoxiana. There he fought and defeated the Uzbek Turks. Five years later Aurangzeb led an army against Kandahar, with the object of seizing it from the Persians and Uzbek Turks. His first attempt failed—his force was outnumbered—but he recovered from the attempt with his army intact and returned in 1652 with a larger force. Aurangzeb fought near Kandahar for two months before personally withdrawing and handing command to his older brother, Dara Shikoh (1615–59). This commander likewise failed to take the city, and in 1653 Aurangzeb returned to the Deccan. Although he retook Golconda and Bijapur, Kandahar remained in Persian and Uzbek hands, and most of the Deccan was still dominated by Marathas under Sivaji (1630–80).

Aurelian's War against Tetricus (273–274)

PRINCIPAL COMBATANTS: Rome vs. Gaul

PRINCIPAL THEATER(S): Gaul (France), Britain, and Spain

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Rome sought to reestablish its control over Gaul.

OUTCOME: Gaul was reunited with the Roman Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

Lucius Domitius Aurelianus (c. 215–275), an Illyrian general of great ability, was proclaimed Emperor Aurelian in 270 and resolved to reverse the decline of the Roman Empire, especially its holdings in Gaul, Britain, and northern Spain. This region was now under the control of its own emperor, Gaius Pius Esuvius Tetricus (d. c. 276) and by 273 was the only major region of the Roman Empire in which dissidence was the leading note.

Aurelian understood that the grasp of Tetricus was, at the moment, weak. He had endured mutinies within his forces and was continually battered by Gothic invasions from the north. Determined to exploit the dissident emperor's vulnerability, Aurelian led his legions over the French Alps and into Gaul. In 273 at Châlons (Châlons-

sur-Marne), he met Tetricus in battle. Surprisingly, Tetricus offered only half-hearted resistance. His army quickly folded, and he himself fled the field, turned coat—on himself!—and defected to Aurelian. Together they defeated the remnants of what had been Tetricus's army.

With Tetricus out of the way, Aurelian stormed across the rest of Gaul and the other two territories, successfully rejoining them to the empire. Although Aurelian then returned to Rome with Tetricus in tow, a humbled prisoner forced to march in the emperor's triumph, Aurelian subsequently named him to govern southern Italy.

Aurelian's War against Zenobia (271–273)

PRINCIPAL COMBATANTS: Rome vs. Palmyra

PRINCIPAL THEATER(S): Syria, Egypt, and Mesopotamia

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: When Zenobia of Palmyra tried to establish her independence from Roman rule, Emperor Aurelian led the charge to bring her back into the empire.

OUTCOME: Zenobia was defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

In 259 Septimus Odaenathus (d. 266), prince of Palmyra, rose as a military strongman in the east after handily defeating the Persians and rebuking their raids upon his regions. Three years later Odaenathus attacked, defeated, and executed Quietus (d. 260), one of the so-called Thirty Tyrants vying for power in Rome. As a reward the emperor Gallienus (c. 218–268) named Odaenathus “governor of all the East” and “King of Kings” and gave him wide latitude in local matters as well as regional military arrangements. Odaenathus lived up to the responsibility by invading and retaking the lost Roman provinces east of the Euphrates. Accompanying Odaenathus was his capable wife, Zenobia (d. c. 274), who challenged Rome by naming herself empress after his death in 267. Although her son Vaballathus (d. c. 273) was crowned emperor, Zenobia assumed de facto control of most of the empire's eastern holdings.

Zenobia held Syria, Egypt, Mesopotamia, and the bulk of Asia Minor. Determined to wrest these prizes from her, Emperor Aurelian (c. 215–75) met her army at the Battle of Immae near Antioch in 271. After a hotly contested struggle Aurelian emerged the victor over Zenobia's leading general,

Zobdas (fl. third century). Although the Palmyran army withdrew intact, Aurelian gave them no quarter, pressing the pursuit and forcing them to a stand at Emesa in 272. There he defeated Zenobia's forces yet again.

In the face of defeat, Zenobia took flight to Palmyra, her capital in the desert. Aurelian set up a siege and resisted Persian harassment as well as attacks from nomadic tribespeople. In 272 Zenobia surrendered and received pardon from Aurelian, who entrusted Palmyra to her care. No sooner had he left, however, than Zenobia declared independence from the empire. Virtually turning on his heel, Aurelian returned and renewed the siege of her capital. This time Palmyra crumbled, and Aurelian let his legions loose upon the city. It was sacked, and although Zenobia attempted to escape, she was captured and carried back in triumph to Rome.

White, *Restorer of the World: The Roman Emperor Aurelian* (Stapelhurst, U.K.: Spellmount Publishers, 2004).

Australian Irish Convict Revolt (1804)

PRINCIPAL COMBATANTS: Irish convicts vs. British colonial authorities in Australia

PRINCIPAL THEATER(S): New South Wales

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The convicts, feeling unjustly imprisoned, rebelled, seeking to escape the penal colony.

OUTCOME: The rebellion was suppressed and its leader publicly executed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 266 convicts; 56 colonial troops

CASUALTIES: Convicts, 15 killed in combat, 8 executed; colonial troops, none

TREATIES: None

The history of the British penal colonization of New South Wales begins in 1788, when the first 730 convicts arrived at Botany Bay and settled at Port Jackson. Although there are different opinions as to what use the British had for the continent down under, the employment of penal colonies as a source of cheap labor in farming and development was certainly one of them, occupying a prominent place in Britain's colonial policy in the late 18th and early 19th centuries. Sydney Cove became the penal colonies' operations center for the British, and around it flourished smaller farming penal colonies.

In 1803, Lieutenant Colonel David Collins (served as Tasmanian governor, 1804–10) arrived in Port Phillip (near present-day Melbourne) from England with 308 prisoners. Because of the adverse conditions at Port Phillip, Collins petitioned the king for permission to relocate to Van Dieman's Land, the present-day island of Tasmania. Once granted, a penal colony was developed in Sullivan's Cove, the modern Hobart Town, Tasmania. The penal colony of Sullivan's Cove was made up of Irish criminals and political prisoners, many of whom had never been tried. Such injustices led to an uprising on March 4, 1804.

The Australian Irish Convict Revolt began at a penal farm outside Sydney called Castle Hill. Some 266 Irish convicts broke out, ransacked a nearby settlement, and, armed with farm tools and guns, rallied around their leader, Philip Cunningham (d. 1804). Cunningham had developed a plan to escape New South Wales by taking the town of Parramatta. That evening the British declared martial law and detached Brevet Major George Johnston and Lieutenant Colonel William Paterson with their troops to Parramatta. By the morning of March 5 they arrived, having marched 20 miles overnight. There ensued an unsuccessful round of negotiations, followed by gunshots. The revolt was quelled easily enough: 15 convicts were killed in the fighting and Cunningham was detained.

On March 6 the Irish rebel leader was hanged along with seven others. Nine convicts were transported to Newcastle after being flogged, and all Catholic worship was suspended in the colony. British authority had been fully restored in the region.

Shaw, *Convicts and Colonies: A Study of Penal Transportation from Great Britain and Ireland to Australia and Other Parts of the British Empire* (Melbourne, Australia: Melbourne University Press, 1977).

Australian Rum Rebellion (1808)

PRINCIPAL COMBATANTS: Australian liquor interests and their military supporters vs. colonial governor William Bligh

PRINCIPAL THEATER(S): Sydney, Australia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Bligh, with typical bluster, sought to rule Australia with an authoritarian hand; the local liquor interests and military commanders sought to deny his authority and have him removed from office.

OUTCOME: Bligh was court-martialed and acquitted; the Australian military leader of the rebellion was court-martialed and convicted.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown
TREATIES: None

In 1805, after a distinguished naval career, English sea captain William Bligh (1754–1817) was awarded the governorship of New South Wales. On instructions from the king to “clean up” the colony, Bligh departed Britain for the Pacific the following year. His arrival in Sydney was met with both approval from the residents and apprehension by profiteers and monopolists. Bligh immediately instituted monetary reforms and prohibited barter in liquor. He then began to question the legality of certain land leases and labor practices in the colony.

Bligh’s “high-handed” policies provoked considerable resistance among the Australians to their famously temperamental new governor, and in February 1807 two local leaders, John Macarthur and Captain Edward Abbott, challenged Bligh’s proclamations by purchasing or setting up stills. In response, Bligh tightened the government’s hold on the supply of rum in the colony and confiscated the stills. Macarthur, however, had many supporters; he sued the government for the return of his stills and won. Bligh responded by impounding Macarthur’s trading ship *Parramatta* at Port Jackson. On December 15, 1807, Bligh arrested Macarthur for sedition, claiming he had breached local naval regulations. A trial date was set for January 25, 1808.

Although Bligh succeeded in gaining the support of the settlers—he received a petition of gratitude signed by 900 settlers on January 1, 1808—he could not control the pro-liquor officers who had infiltrated his very administration. They were Macarthur’s trump card. The court consisted of six military officers and a judge-advocate named Richard Atkins. Atkins, a hard-drinking old gentleman, was one of Macarthur’s creditors. On the day of the trial Macarthur petitioned the court—Atkins and the six pro-liquor officers—to remove Atkins because of his obvious conflict of interest. The request was upheld over Atkins’s protest, and Macarthur was released on bail.

On January 26, 1808, the Rum Rebellion began. Atkins revoked Macarthur’s bail, arrested him, and reconvened the court with himself in charge. Atkins demanded the six officers be tried for treason. Bligh responded by summoning them to the Government House the following morning, but by that evening New South Wales corps commander George Johnston arrived and released Macarthur from jail. He then marched to the Government House and arrested Bligh, without incident, for unsubstantiated violations of royal authority. Martial law was declared, with Johnston the acting head of the colony.

Bligh was detained for more than a year because he refused to promise to return to England. Finally, in February 1809 he agreed, but once aboard the *Porpoise*, Bligh reneged, took control of the vessel, and sailed to Hobart,

where he hoped to gain the support of Lieutenant Colonel David Collins, in order to regain Sydney. Collins, however, was no more receptive to Bligh than anyone else in the colonial military had been, and Bligh waged an unproductive harassment campaign of Sydney from the surrounding waters. In 1809 the British government recalled Bligh, and he returned to London and a court martial. In the subsequent trial Bligh was acquitted of the charges brought against him and promoted to rear admiral in 1812. Lieutenant Colonel George Johnston then faced his own court martial for his role in the Rum Rebellion, and he was convicted and removed from office.

Austrian Netherlands Civil War (1477–1492)

PRINCIPAL COMBATANTS: Archduke Maximilian of Austria vs. the Netherlands

PRINCIPAL THEATER(S): The Netherlands

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Archduke Maximilian wanted to secure control of the Netherlands, which he had gained through his marriage to Anne of Burgundy.

OUTCOME: Maximilian secured control of the region.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Archduke Maximilian (1459–1519) of Austria assumed dominion over the Netherlands by virtue of his marriage to Mary of Burgundy (1457–82). The death of Mary in 1482 prompted Maximilian to declare himself regent over the Netherlands for his young son Philip (1478–1506). Parts of the Netherlands had chafed under Maximilian’s heavy-handed rule for years, and when he continued to assert control after the death of Mary, two cities, Ghent and Bruges, rebelled. Rejecting Maximilian’s claim to the regency, they took Philip prisoner. To make matters worse, both Ghent and Bruges also endorsed the Treaty of Arras (1482) between Austria and the Netherlands, which stipulated an end to Maximilian’s rule over Burgundy.

Driven by more than sufficient cause for war, Maximilian dispatched an army to Flanders to liberate his son. The boy was recovered in 1485, and once this had been

accomplished Maximilian imposed an oppressive military government on the Netherlands. He also intensified the FRANCO-AUSTRIAN WAR of 1477–93, which was extremely unpopular with the people of the Netherlands.

Heedless of the political climate he had created in the Netherlands, Maximilian personally traveled to Bruges to preside over the legislature in 1487. However, when citizens learned that he was approaching the city with German mercenary troops, they closed the city gates, attacked Maximilian's train, and made him a prisoner. The intervention of the Holy Roman Emperor, Maximilian's father, Frederick III (1415–93), secured his release in 1488, but the archduke was forced to agree to the promulgation of a new constitution limiting his authority.

Maximilian withdrew to Germany, only to return to the Netherlands in 1490 intent on abrogating all constitutional promises. The Low Countries were in general turmoil during this period, and Maximilian was obliged to crush rebellions in Ghent (1491) and throughout the country the following year. In 1492 he laid Sluys under siege, forcing the rebels to sue for peace. This at last secured the region for himself and his son. Maximilian's prestige regained, he was elevated to Holy Roman Emperor on the death of his father and ruled to his own death in 1519.

Austrian Revolution (1848–1849)

PRINCIPAL COMBATANTS: The Austrian people vs. Emperor Ferdinand I

PRINCIPAL THEATER(S): Austria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Uprising against conservative Hapsburg regime, especially foreign minister Prince Metternich

OUTCOME: Austria adopted a new constitution that called for national equality, an end to serfdom and feudalism, and a reformed court system.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rebel forces, unknown; government troops, about 10,000

CASUALTIES: Rebels, 3,000 killed; government forces, 219 killed, 1,047 wounded

TREATIES: None

The year 1848 was one of widespread revolution in Europe, with uprisings in France, Italy, Germany, Hungary, and Schleswig-Holstein, although only those in Italy and Hungary were protracted. The other uprisings were brief, albeit intense, and they were for the most part confined to urban centers.

Particularly hard hit during 1848 was the Hapsburg Empire, which embodied all the corrupt and bigoted conservatism that the young egalitarian zealots of Europe most despised. Hapsburg authorities had to put down uprisings in Italy and Hungary as well as one in the very heart of their empire.

On March 13, 1848, hordes of Viennese poured into the streets of the Hapsburg capital to protest the policies of Emperor Ferdinand I (1793–1875) and, even more, Prince Fürst von Metternich (1773–1859), the emperor's archconservative foreign minister. In response to the initial tumult, Ferdinand dismissed Metternich and promised a host of liberal reforms, including the promulgation of a new constitution. Some 30 Viennese died in the first wave of the uprising, which subsided after the departure of Metternich and the promises of the emperor—although not before sparking similar revolts in Cracow, Poland (then a part of the Hapsburg domain), on April 25–26 and Prague (now the capital of the Czech Republic, but at the time part of the Hapsburg Empire) on June 11–18. Hapsburg forces responded brutally in both cities, making extensive use of artillery against the rebels. Hundreds of citizens died in both cities.

In Vienna the uprising was renewed on October 6 in sympathy with an uprising in Hungary. The 10,000-man army that had crushed the rebellion in Prague was marched into Vienna on October 25, and by October 31 the new Viennese uprising had been quashed. Government losses were 247 killed and 1,047 wounded. The rebels manning the barricades lost at least 3,000 killed.

Although the Austrian uprising had been extinguished, Ferdinand I yielded to popular pressure and abdicated in favor of his nephew Franz Joseph (1830–1916) on December 2. Only 18 at the time of his rise to the throne, Franz Joseph would prove a long-lived emperor and would carry the faltering Hapsburg dynasty into the next century and the cataclysm of WORLD WAR I.

Austrian Succession, War of the (1740–1748)

PRINCIPAL COMBATANTS: Prussia, France, Spain, and Bavaria vs. the Quadruple Alliance of Austria, Saxony, Britain, and the Netherlands

PRINCIPAL THEATER(S): Silesia, Bohemia, Prussia, and the Austrian Netherlands

DECLARATION: Prussia on Austria, December 16, 1740

MAJOR ISSUES AND OBJECTIVES: Maria Theresa, following the death of her father, Holy Roman Emperor Charles VI, in 1740, found herself assailed by several claimants challenging the Pragmatic Sanction of 1713, which guaranteed her possession of Austria and the other Hapsburg domains. Some European powers were poised to carve up the loose empire, and Frederick II of Prussia actually invaded one province, Silesia, in 1740, starting the First Silesian War. France, Spain, Bavaria, and Saxony rallied to Frederick's cause. Great Britain, colonial competitor with both Spain and France in the New World, sided with Maria Theresa. More narrowly, Frederick II of Prussia fought to cement his hold on Silesia; France fought to gain control of the Austrian Netherlands; Maria Theresa fought to hang on to the Austrian throne and Austrian territory; and England fought to check the ambitions mainly of France, which meant checking those of Prussia as well.

OUTCOME: The War of the Austrian Succession and its associated conflicts in America and India were ended less on account of the powers involved having achieved their political and military objectives than from a general state of exhaustion on all sides. French ambitions were checked for the moment; Frederick retained the region of Silesia; and the Pragmatic Sanction was reaffirmed, and Maria Theresa gained recognition of her husband as Holy Roman Emperor, returning Europe basically to the status quo ante bellum.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Austria, 204,000; France, about 200,000; strength of other belligerents unknown

CASUALTIES: Austria, 120,000 killed or wounded; France, 140,000 killed or wounded; losses of other belligerents unknown

TREATIES: Treaty of Dresden, December 25, 1745; Treaty of Aix-la-Chapelle, October 8, 1748

HISTORICAL BACKGROUND

When Frederick II (1712–86) came to the throne of Prussia in 1740, the realm he inherited had been a kingdom for only two generations. A hundred years before, Germany had been a patchwork of several hundred supposedly independent principalities, fragmented states that had achieved their autonomy by challenging the authority of the House of Hapsburg's unwieldy Holy Roman Empire during the horrors of the THIRTY YEARS' WAR. Frederick's great grandfather, Frederick Wilhelm (1620–88), the Great Elector, was a Hohenzollern prince and elector of Brandenburg who ruled over a number of scattered territories in the north of the old empire.

Sometimes by war, sometime by diplomacy, more often by astute marriages, the House of Hohenzollern had brought together distant and disparate holdings. Berlin,

the old heartland of the electorate, lay some 400 miles from the Baltic province of East Prussia, from which it was cut off by a good-sized slab of Poland, while far to the west lay small counties such as Cleves, Mark, and Ravensburg, the last of these closer to Amsterdam than Berlin. Yet the Great Elector, by sheer will, somehow began to weld these scattered lands into a state ruled by a centralized government. For this kingdom Frederick Wilhelm's son was granted a crown by the Hapsburg emperor and began calling himself Frederick I (1657–1713), king *in* Prussia. (He could not style himself king *of* Prussia, since East Prussia was ruled by Poland; nor could he claim to be king of Brandenburg, since that would have given him the right to grant titles of nobility within the Holy Roman Empire, an enterprise profitable enough that the Hapsburgs wanted it for themselves.)

In 1713 Frederick William I (1688–1740) succeeded his father, Frederick I, and immediately abandoned the French manners and excessive ostentation of the first king in Prussia's court. He lived frugally, fostered what would become the famed Prussian military style, and continued the work of his grandfather and namesake—strengthening the state and expanding and improving his army. When he produced an heir, he tried to regulate his son's life just as he was regulating his army and his country, and when young Frederick II showed a liking for such unmanly pastimes as card games, flute playing, and novel reading in addition to his military drills, his father subjected the boy to a series of public humiliations. An aborted plot to escape to England and beg for asylum led to the court-martial and beheading of the young friend who helped Frederick II come up with the plan, and Frederick himself was tossed in jail. He gave up and formally submitted to his father, who left Frederick at his death a well-structured if puritanical military state and an army mustering 80,000 troops, equal to that of Austria, a country 10 times the size of Prussia. Despite his father the 28-year-old Frederick who acceded to his throne was an admirer of Voltaire and determined to create a Prussia embracing the best principles of the Enlightenment. On the other hand, thanks to his father Frederick was ready for military challenge when it came.

As with the War of the SPANISH SUCCESSION, once again the House of Hapsburg lay at the roots of a new instability in the European system. Emperor Charles VI (1685–1740), like the Spanish king 40 years before, was about to die without an heir, at least without a male heir. His plan had been to leave the rule of Austria, Hungary, Bohemia, and the southern Netherlands to his daughter, Maria Theresa (1717–80). Although her sex barred her from ruling in Germany as Holy Roman Emperor in her own right, she could share the crown with her husband if he were elected emperor. To these ends Charles secured a "Pragmatic Sanction" in 1713, guaranteeing Maria Theresa the succession to all the Hapsburg domains, and signed by

the major European states including Prussia. When she came to the throne the same year as Frederick, however, he seized the Austrian province of Silesia with relative ease for, as he said, the “reason of state.”

During the First SILESIAN WAR that ensued, Austria, Saxony, Britain, and the Netherlands formed the Quadruple Alliance against France, Bavaria, and Prussia. Maria Theresa, herself a mere 23 upon her ascension, had, like Frederick, abandoned her beloved youthful pursuits—riding, dancing, and playing music—to immerse herself in the affairs of state. Unschooled in politics, she was both stubborn and deeply religious, both of which helped her in the long run not only to secure her hereditary lands but also to reign over them effectively for four decades. Three claimants to the throne—Charles Albert (1697–1745) of Bavaria who became Holy Roman Emperor for a while, from 1742 to 1745; Philip V (1683–1746) of Spain; and Augustus III of Saxony (1696–1763)—disputed her succession, and since Bavaria, Spain, and France also wanted to plunder what they now perceived as an Austria grown weak, they fought on in Bohemia and in the Austrian Netherlands against the Quadruple Alliance. Thus did Frederick’s action spark the War of the Austrian Succession.

For eight years, from 1740 to 1748, Europe was engulfed in a conflict that also extended to North America (as KING GEORGE’S WAR) and colonial India (as the First and Second CARNATIC WARS). Thus, the War of the Austrian Succession might be considered a world war and was a drawn-out prelude to the SEVEN YEARS’ WAR of 1756–63 (called in America the FRENCH AND INDIAN WAR), the first truly global conflict.

FIRST SUCCESSES

After Maria Theresa’s forces lost their first large-scale encounter with Frederick in 1741 and Prague fell to the French and Bavarians that same year, the empress ceded Silesia to Prussia in 1742, hoping thereby to secure Frederick’s neutrality as she moved to retake Prague and to invade Bavaria. Her victories in Prague and Bavaria persuaded Saxony to re-ally itself with her, and Sardinia worked against the forces of Spain and Naples. Thus bolstered, Maria Theresa’s forces were able to push the French army toward the Rhine, where it was met in battle by British forces under the direction of George II (1683–1760), who scored a decisive victory at Dettingen, Bavaria, on June 27, 1743. Following this the French retreated west across the Rhine and turned their attention to Austria’s territories in the Netherlands. In the meantime, Frederick II reentered the conflict in 1744, prosecuting what has been called the Second SILESIAN WAR.

THE FONTENOY CAMPAIGN, 1745

In May 1745 Marshal Saxe (1696–1750) with about 70,000 French troops and accompanied by Louis XV (1710–74) and the Dauphin, invaded Tournai in Flanders.

William Augustus (1721–65), duke of Cumberland, led Maria Theresa’s allied army against the French. At the Battle of Fontenoy, Saxe positioned 52,000 men at Fontenoy to block the advance of Cumberland’s army. So ill with dropsy that he had to be carried to the field on a stretcher, Saxe refused to give up his command. The allies mounted a frontal attack after dawn on May 10, but the French defensive line thwarted their progress. Cumberland then drew up three lines totaling some 15,000 infantry to attempt to smash through the center of the French position. As the three lines approached the French position, Lieutenant Colonel Lord Charles Hay (d. 1760) walked out between the lines, pulled a flask from his pocket, toasted the French, saluted, led his troops in three cheers, and then scurried back to his own line. The French, returning the salute and cheers, were stunned when a huge volley was fired from the English line. Despite the advance of the allied army, the French king refused to flee, and Saxe arose from his litter, mounted his horse, and established a second line of defense, which soon ended the attack. After the victory at Fontenoy, Saxe went on to capture Tournai, Ghent, Bruges, Oudenarde, Ostend, and Brussels between May and September of 1745.

HOHENFRIEDBERG CAMPAIGN, 1745

Charles VII had ruled Bavaria as a puppet of the anti-Austrian coalition and was restored by Prussia and France to his Bavarian lands in 1744 but died just three months later, whereupon Austria turned on Bavaria and defeated its army at Amberg on January 7, 1745.

While the army of the Quadruple Alliance (Britain, Austria, Saxony, and the Netherlands) fought the French invested at Fontenoy and Tournai in Flanders, Austrian and Hungarian irregulars struck at the Prussian army in the very Silesia Frederick II had first taken over in 1740 after announcing his support of Maria Theresa’s succession to the Hapsburg throne. With pressure from the irregulars, he stationed 60,000 men at Frankenstein, while Charles of Lorraine (1712–80) marched toward the region with an army of 80,000 Austrians and Saxons, which he positioned at Landshut in the mountains of western Silesia. On June 3, 1745, Charles marched toward Breslau and set up camp near Hohenfriedberg. At dawn on the following day, his army awoke to face an attack by the Prussians. The fierce fighting resulted in 9,000 killed and wounded and 7,000 prisoners for the allies. Frederick’s total losses were about 1,000 men. The Austrian and Saxon survivors then fled into Bohemia. Frederick pursued them with about half his army, leaving the rest to handle the irregulars in the south.

For three months the opposing armies maneuvered inconclusively along the upper Elbe in northeastern Bohemia. Frederick then began to withdraw his army of 18,000 men to Silesia and halted at Sohr. Charles followed with his reinforced army of 39,000 men. At the Battle of

Sohr, which opened on September 30, 1745, Charles outmaneuvered the Prussian king by seizing the heights to the rear of the Prussian army and cutting off its line of retreat. Frederick ordered a right wheel, and in the ensuing movements the Prussians overwhelmed the Austrian left. The Austrians fled to the northwest, and Frederick once again had access to the passes into Silesia. In October and November Charles gathered reinforcements for his allied army. His army and another allied army under Marshal Rutowski (fl. 1700s) advanced toward Berlin. Frederick quickly moved from Silesia toward Dresden. On November 24 and 25 the Prussian army dealt two strong blows to the allies, and Charles was forced to withdraw to Bohemia. In the meantime another Prussian army under Leopold of Anhalt-Dessau (1700–51) marched up the Elbe and met Rutowski at his defensive position between Meissen and Dresden. At the Battle of Kesselsdorf Rutowski was overwhelmed, and his army withdrew in disorder.

Faced with a number of Prussian victories and the withdrawal of the English troops from the allied army, Maria Theresa sought immediate peace. With the Treaty of Dresden, signed December 25, 1745, Maria Theresa recognized Frederick's conquest of Silesia. In return he recognized the election of Maria Theresa's husband, Francis I (1708–65), as the Holy Roman Emperor.

NETHERLANDS CAMPAIGNS, 1746–1748

While the Treaty of Dresden brought the Hohenfriedberg Campaign of the War of the Austrian Succession to a close, the war itself was far from over. Marshal Saxe continued to push his French army against the major fortresses in the Austrian Netherlands. First, he took Antwerp and then cleared the region between Brussels and the Meuse. At the Battle of Raucoux, Charles of Lorraine's allied army was defeated near Liège on October 11, 1746, and the armies withdrew into winter quarters on opposite banks of the Meuse. The following year the prince of Orange (1711–51) and the duke of Cumberland (1721–65), who had withdrawn from the war to help settle the JACOBITE REBELLION (1745–1746) in Scotland, came to the aid of the allies, but in their first encounter with Saxe's French army—at the Battle of Lauffeld—they were defeated. Saxe sent a corps to besiege and capture Bergen-op-Zoom. In 1748 a large Russian army marched across Germany to join the allies in the Netherlands. Maastricht fell to an assault by Saxe on May 7. Meanwhile, Austria's ally, Britain, which was winning the war at sea and threatening France's rich West Indian colonies, figured it was time to bring hostilities to a close. The British warned Maria Theresa they would cut the subsidies to her and her army unless she would agree to peace negotiations. The resulting Treaty of Aix-la-Chapelle restored all conquests on both sides with few exceptions. Prussia retained control of Silesia, and the Pragmatic Sanction, which had outlined the line of succession after the death of Charles VI, was reaffirmed. While the 1748 treaty

recognized no changes in territory other than Prussia's taking possession of Silesia, it did signal the emergence of Brandenburg-Prussia under Frederick the Great as a major player among the European nations, one of the two German keys—the other, of course, being Austria—to a new balance of power on the continent.

THE IMPACT OF THE WAR

Britain became the maintainer of that new balance in the 1750s. The British saw it as essential that they preserve Prussia and use it as a counterweight to French power on the Continent, especially since France was now a threat to the Austrian Netherlands. At the bottom of much of these European maneuverings lay the struggle for empire going on between the French and the British, particularly in colonial North America. England's colonies were mostly gathered into compact settlements along the Atlantic seaboard, while the French, much fewer in number, had nevertheless been spreading down from Canada into the vast American interior and effectively expanding the French fur trade with the American Indians. A France fully occupied on the Continent was a France that could ill afford the expense and attention required to secure its hold on the Ohio and Mississippi valleys, a fact that instead would have to rely on the thin string of far-flung and weakly garrisoned forts and trading posts it had been establishing.

After the War of the Austrian Succession, Frederick the Great turned conservative, concentrating on holding Silesia. Meanwhile, Maria Theresa, determined to win it back, turned to yet another woman who had come to occupy a European throne. Empress Elizabeth (1709–62), daughter of Peter I the Great (1672–1725), had, with the support of the Imperial Guard, seized power in Russia in 1741. Now she and Maria Theresa entered into secret agreements that contemplated the near-dismemberment of Prussia. Thus it was that Britain rushed to Frederick's side, supplying Prussia with the vital British subsidies that had once sustained Austria.

By 1754 undeclared conflict had begun along the French and British frontiers in North America. And since the conflict between France's European and colonial interests were weakening its hand, France undertook a famous "reversal of alliances" in the so-called Diplomatic Revolution of 1756, in which the French agreed to support their old enemy, the House of Hapsburg, in its bid to reclaim Silesia in return for the cession to France of the long-coveted southern Netherlands. Thus, France, Austria, and Russia were linked against Britain and Prussia, and the stage was set for a major European conflict with ramifications in America and India.

In the long run the Treaty of Aix-La-Chapelle had been the product of exhaustion rather than genuine resolution, a mere truce, really. Although it restored the status quo in America, too, giving Louisbourg back to France, its very focus on that fort caught the attention of both

countries and made them aware of the increasing strength, and thus increasing importance, of England's American subjects. That awareness itself would spark a new, even more destructive, worldwide conflagration now smoldering in the American wilderness, where the locals would call it the French and Indian War. Back in Europe, where its roots lay, it would become known as the Seven Years' War.

Austro-Swiss War (1385–1388)

PRINCIPAL COMBATANTS: Austria vs. Switzerland

PRINCIPAL THEATER(S): Switzerland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Hapsburgs invaded Swiss Confederation lands, seeking additional territory.

OUTCOME: The Austrians suffered a series of defeats, resulting in a two-decades-long peace and strengthening the Swiss Confederation, thereby establishing the foundation of modern Switzerland.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At Battle of Sempach (July 9, 1386), the Swiss fielded 1,600 pikemen against 6,000 Austrians.

CASUALTIES: Unknown, but heavy among the Austrians

TREATIES: Zurich Treaty of 1388

Throughout most of the Middle Ages the cantons of Switzerland had existed in competition with one another, and there was virtually no sense of a Swiss nationality. However, in response to oppression from the Hapsburgs, the cantons and other Swiss communities, loosely constituted as they were, banded together for the purpose of defense. The most important of the cantons, Uri, Schwyz, and Unterwalden, created the Everlasting League in 1291, which led to the creation of a Swiss Confederation early in the 14th century.

In 1385 the confederation was put to the test when Duke Leopold III of Austria (1351–86) encroached on con-

federation territory. This brought a preemptory response from the confederation, which took the initiative by invading Hapsburg-controlled Rothenburg and Sempach. Provoked, Leopold launched a full-scale invasion of Swiss territory. On July 9, 1386, 6,000 Austrians attacked a mere 1,600 Swiss pikemen. Austria's heavy cavalry was not much use in the broken mountain fields and so fought dismounted. They were at first successful against the outnumbered Swiss but eventually fell victim to their own heavy armor. Exhausted in the difficult terrain, the Austrians allowed gaps to develop in their line of attack. The highly skilled Swiss were quick to exploit these openings. In a counterattack they readily penetrated the faulty Austrian lines and devastated the numerically superior army. Leopold III was killed in the final assault on the dismounted cavalymen.

Sempach was the decisive battle of the war. However, one more great battle was fought at Näfels in 1388. Again showing themselves masters of tactics suited to mountainous terrain, the Swiss set up an ambush in which they let loose an avalanche of boulders on the advancing Austrians. Thus, thrown into panic and disorder, the Austrians were handily defeated in detail and concluded a hasty truce, which was soon formalized as the Zurich Treaty of 1388. The victory greatly enhanced the prestige and power of the Swiss Federation, which, by the beginning of the 15th century, would include a total of eight member cantons.

Austro-Swiss War (1460)

PRINCIPAL COMBATANTS: Austria vs. Swiss Confederation

PRINCIPAL THEATER(S): Rhine region of Switzerland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Swiss Confederation wanted to push the Hapsburgs north of the Rhine.

OUTCOME: For the most part, the confederation was successful; the Hapsburgs retained a few small holdings south of the Rhine.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Constance, 1461

As a result of the OLD ZURICH WAR, the Hapsburg Austrians were driven out of the Aargau in 1450. Nevertheless, the Hapsburgs' presence continued to loom over the Swiss cantons. Hapsburg duke Sigismund (d. 1496) ruled the Tyrol, while Holy Roman Emperor Frederick III (1415–93), member of a rival branch of the Hapsburg family, walked a thin

line between asserting his imperial rights in Switzerland and maintaining his claims to Hapsburg power. Ultimately, his decision was to side with rival Hapsburgs against the Swiss Confederation.

Thanks to its success in the AUSTRO-SWISS WAR (1385–1388), the Swiss Confederation was both powerful and prestigious. Appreciating this, Frederick III made the mistake no effective leader can afford to make: He threatened war but repeatedly deferred action. Sensing weakness, the Swiss Confederation assumed the offensive. When Frederick's man in the Tyrol, Sigismund, was excommunicated in 1460 because of a dispute over papal succession, the confederation found its pretext for launching a war. Dispatching an army to the Rhineland, the confederation occupied Frauenfeld, then laid siege against Winterthur. The siege was soon broken, but the confederation did wrest the canton of Thurgau from the grasp of Sigismund. This gave the confederation a strong hand in negotiating a favorable peace at Constance in 1461. By the treaty hammered out there, the Hapsburgs relinquished many of their holdings in the Swiss territories.

Austro-Swiss War (Swiss-Swabian War) (1499)

PRINCIPAL COMBATANTS: Austria (and Holy Roman Empire allies) vs. Switzerland (and French allies)

PRINCIPAL THEATER(S): Switzerland

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: The Swiss sought independence from the Holy Roman Empire.

OUTCOME: Maximilian's Swabian troops were decisively defeated, and the Swiss achieved independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Basel, September 22, 1499

After the Hapsburgs were driven out of the Swiss Aargau in 1450 (see OLD ZÜRICH WAR), Holy Roman Emperor Maximilian I (1459–1519), a Hapsburg, sought revenge by asserting imperial control over and levying burdensome taxes on the eastern cantons of Switzerland, where the border with Austria was in hot contention. The Swiss Confederation secured an alliance with the French, stubbornly resisted the Holy Roman Empire, and thereby provoked open warfare.

Maximilian enjoyed the support of the cities of southern Germany and opened up fronts along the northern and eastern borders of the Swiss territory. In a period of a few

months, five battles were fought in succession: at Hard, Bruderholz, Schwaderloh, Frastenz, and Claven. None of these was decisive, although the Swiss generally prevailed.

The major battle of the war was fought on July 22 at Dornach and resulted in the defeat of an army led personally by Maximilian. Unable to recover from this reverse, Maximilian sued for peace and, by the Treaty of Basel (September 22, 1499), granted the Swiss cantons virtual independence from the Holy Roman Empire.

Austro-Turkish War (1529–1533)

PRINCIPAL COMBATANTS: Austria vs. Ottoman Turks

PRINCIPAL THEATER(S): Hungary

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Austrians wanted to recover the portion of Hungary lost to the Ottomans; the Ottomans wanted to take Vienna.

OUTCOME: Two-thirds of Hungary remained in Ottoman hands, but the assault on Vienna was twice repulsed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Austrians, 78,000; Ottoman Turks, 200,000

CASUALTIES: Austria, unknown; Ottoman Turks, several thousand (mostly victims of snowstorms and starvation)

TREATIES: A truce ended the war in 1533.

Ottoman victory in the HUNGARIAN-TURKISH WAR (1521–1526) gave the Ottoman Turks control of some two-thirds of Hungary. The Austrians, however, quickly acted against Ottoman Hungary, forcing John Zápolya (1487–1540), king of Ottoman Hungary, into Polish exile in 1527.

John called upon the Turks at Constantinople for help, and Sultan Süleyman I the Magnificent (1496–1566) swore to march on Vienna and take the city. The sultan rapidly mobilized some 80,000 to 120,000 men and invaded Hungary in May 1529. Joining him was the rebellious Zápolya with 6,000 cavalrymen.

Buda was the first objective, which fell on September 8. The German garrison there was slaughtered. On September 27 Süleyman's forces were outside Vienna and commenced bombardment of the city while Turkish engineers began undermining the walls. Süleyman did not count on the tenacity of the defenders, however, who fought from within the walls and also periodically sortied into the attackers with great effect. On October 6 some 8,000 Austrians surged out of the city and wreaked havoc among the Turks, killing 600 before withdrawing within

the city again. The Austrians knew that time was on their side. The sultan's army would be hard put to maintain the siege through winter, and on the night of October 14–15 Süleyman did finally withdraw.

The retreat of the Ottoman Turks was a logistical nightmare. Poorly supplied, continually harried by Austrian peasants, freezing, and starving, they plodded homeward. Thousands perished, and much valuable equipment was abandoned.

In 1531 Archduke Ferdinand (1503–64) launched a counteroffensive but was unable to retake Buda. In 1532 Süleyman also regrouped, assembling at Belgrade a vast invasion force at least 200,000 strong. The Turks were on the march by June, and they faced an army under Charles V (1500–58) of only 78,000, but these troops were so skillfully deployed that Süleyman was effectively held at bay. Chastened by the experience of his first invasion, the sultan repeatedly avoided a frontal attack. Instead, from August 9 to 28 the Turks attacked the fortress of Guns, a relatively minor outpost. Even this siege proved unsuccessful, and, at last, Süleyman gave up. After withdrawing down the Drava River, he concluded a truce in 1533. By that time, however, he had lost control of large numbers of his troops, who continued indiscriminate and highly destructive raids, triggering the AUSTRO-TURKISH WAR (1537–1547).

Austro-Turkish War (1537–1547)

PRINCIPAL COMBATANTS: Austria vs. Ottoman Turks

PRINCIPAL THEATER(S): Hungary

DECLARATION: 1537

MAJOR ISSUES AND OBJECTIVES: Possession of Hungary

OUTCOME: After suffering many defeats, Austria was allowed to retain its portion of Hungary in exchange for tribute payment.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Austria, 24,000; Ottoman numbers unknown

CASUALTIES: Austria, 20,000 killed; Ottoman losses unknown

TREATIES: Treaty of Adrianople, 1547

Following the truce that ended the AUSTRO-TURKISH WAR (1529–1533), two incidents provoked the Ottoman sultan Süleyman I the Magnificent (1496–1566) to start a new war against the Austrians at Vienna. In 1537 a force of 24,000 Austrians and Bohemians attacked the Ottoman fortress at Essek; they were repulsed. In that same year the Ottoman governor of Moldavia was suspected of conspiring with Vienna, which prompted Süleyman to occupy Moldavia the following year and install a new governor. To

head off war John Zápolya (1487–1540), king of Ottoman Hungary, concluded a pact with Austria's archduke Ferdinand (1503–1564), agreeing that each would retain what he presently controlled until Zápolya's death. If Zápolya died childless (at the time of the pact, he was as yet unmarried), his lands would devolve upon Ferdinand.

Unfortunately, John Zápolya did not secure Süleyman's consent to the pact. With great optimism, the Hungarian monarch married in 1539 but died the following year, though not before fathering a son, John II Sigismund (1540–71). Despite the infant heir, Ferdinand laid claim to Zápolya's lands and marched against the Hungarian capital of Buda.

Süleyman learned of the pact belatedly but mobilized quickly, sending a force to hold Buda in 1541. The neighboring city of Pest fell to him at this time as well. Although victorious, Süleyman sought a negotiated settlement. He demanded the return of territories seized after the death of Zápolya, but he offered payment for Austrian Hungary. Ferdinand made the mistake of failing to respond decisively, and Süleyman took the delay as a sign of weakness. He invaded from Belgrade during April–September 1543 and made quick work of the chain of Austrian fortresses defending the route to Buda. This persuaded Ferdinand to respond favorably to Süleyman's original terms. For his part, Süleyman was now pressed by the demands of the ongoing TURKO-PERSIAN WAR (1526–1555) and was therefore eager to settle with the Austrian archduke. A truce was called in 1545 followed two years later by the Treaty of Adrianople, by which it was Ferdinand who retained Austrian Hungary in return for a tribute paid to the Ottomans.

The treaty specified a five-year peace; however, this was broken by the outbreak in 1551 of the AUSTRO-TURKISH WAR (1551–1553).

Austro-Turkish War (1551–1553)

PRINCIPAL COMBATANTS: Austria vs. Ottoman Turks (with French alliance)

PRINCIPAL THEATER(S): Hungary

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Possession of Hungary

OUTCOME: The war was inconclusive but resulted in the three-way division of Hungary among Austria, the Ottoman Empire, and Transylvania, making the area a powderkeg.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Although fighting ceased in 1553, the Treaty of Constantinople was not concluded until 1563.

The Peace of Adrianople, which ended the AUSTRO-TURKISH WAR (1537–1547), was slated to hold for five years. But Austria's signatory, Archduke Ferdinand (1503–64), broke the treaty in 1551 because Buda, now in the hands of the Ottomans, separated Austrian Hungary from Transylvania. Ferdinand invaded Transylvania, laying siege to Lippa, the Transylvanian capital. The Ottomans launched a counteroffensive. In 1551 Ottoman amphibious forces captured Tripoli, which had been held by the Knights of St. John. While Ottoman and French ships raided the Mediterranean—capturing Bastia on Corsica in 1553—Ottoman land forces concentrated on Hungary. In 1551 three key fortresses fell to the Ottomans, leading to the collapse of Temesvár, which became an Ottoman province. An Ottoman attack on the fortress city of Erlau failed in 1552, prompting the Ottomans to sue for peace. It was a proposal the beleaguered Austrians quickly accepted.

Both sides sought to exploit the armistice. The Ottomans were able to turn full attention to the TURKO-PERSIAN WAR (1526–1555), and the Austrians used the interval of peace to attempt the consummation of the annexation of Hungary. In the end a treaty of 1563 created the worst possible scenario with regard to Hungary. It was trisected into three hostile regions, one controlled by Transylvania, one by Austria, and the third by the Ottomans. The stage was set for a long series of wars: AUSTRO-TURKISH WAR (1566), AUSTRO-TURKISH WAR (1591–1606), AUSTRO-TURKISH WAR

(1663–1664), AUSTRO-TURKISH WAR (1683–1699), and AUSTRO-TURKISH WAR (1716–1718).

Austro-Turkish War (1566)

PRINCIPAL COMBATANTS: Austria vs. Ottoman Empire

PRINCIPAL THEATER(S): Modern Croatia (at the time part of Austria-Hungary)

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: The Turks marched against Austria on the pretext that the Austrian emperor had failed to pay an already established tribute and for Austrian attacks on Transylvania; actually, the Ottoman sultan sought to vindicate himself for former defeats.

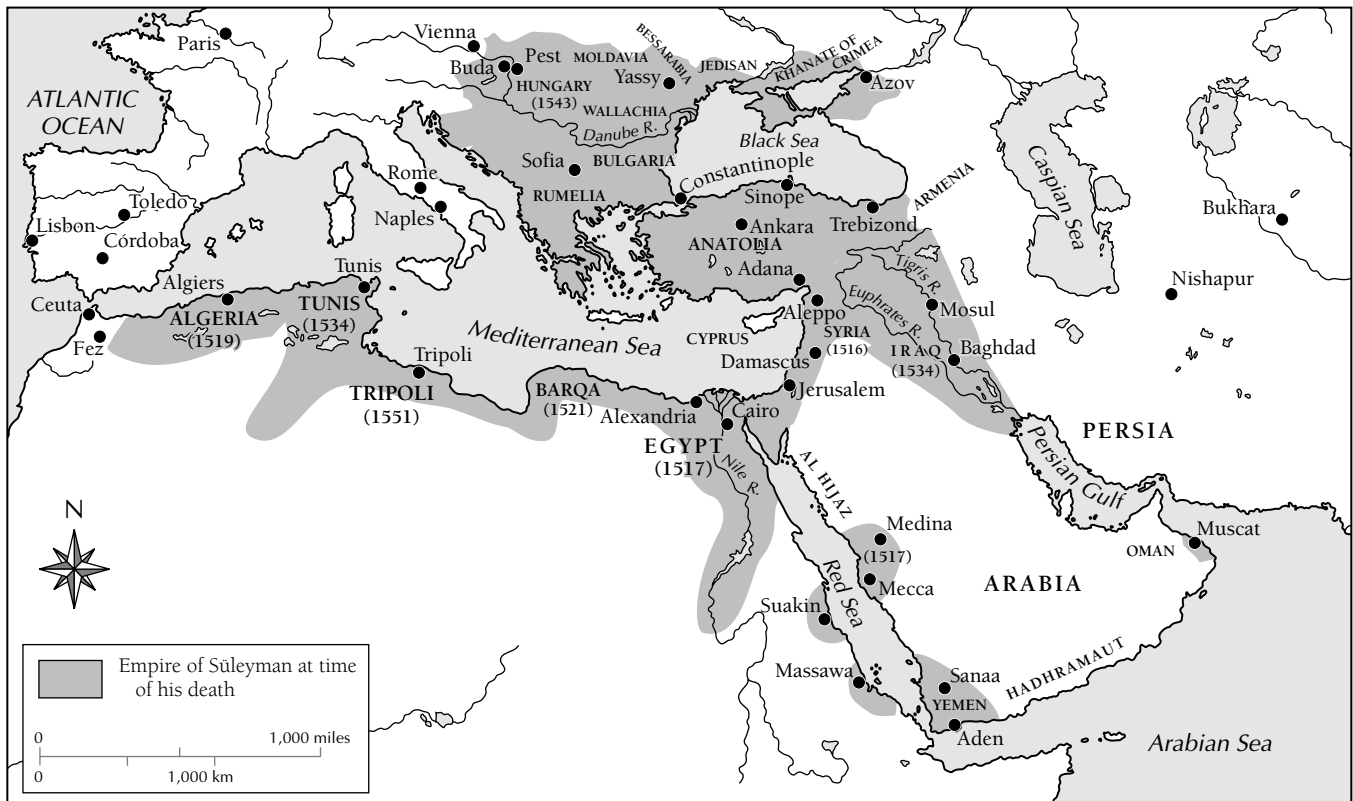

OUTCOME: A Pyrrhic victory for the Turks

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Ottomans, 100,000; Austro-Hungarians, 2,300

CASUALTIES: Ottomans, 3,000 killed or wounded; Austro-Hungarians, 2,300 killed

TREATIES: Treaty of Adrianople, 1568

Ottoman Empire at the conclusion of the war and on the death of Süleyman the Magnificent

In May 1565 Süleyman I the Magnificent (1496–1566) attacked Malta, failed, and resolved to make an assault on the Hapsburgs at another location. When the new emperor of Austria (and Austrian Hungary), Maximilian II (1527–76) refused to pay the Ottomans the tribute due them for continued possession of Austrian Hungary, Süleyman had an amply justifiable cause for war.

In July 1566 the aged Süleyman invaded Austria with 100,000 troops and laid siege against Szigeth on August 5. That fortress town was defended by the Croatian count Miklós Zrinyi (1508–66) with a mere 2,300 troops. However, the town was well fortified, and Zrinyi's men were able to repulse three assaults along the narrow causeways leading into Szigeth. Nevertheless, by September 8 the count had a mere 600 troops fit for action. Deciding to make a last stand, he set charges to detonate his powder magazines, and he led a suicidal sortie from the town. Virtually all of the forces, including Count Zrinyi, were killed. The Ottomans rushed into the town's citadel and were caught by the explosion of the magazines. A total of 3,000 Ottoman troops were killed or wounded. As for Süleyman, he, too, was dead, having succumbed to dysentery two days before the collapse of Szigeth.

The taking of Szigeth was a Pyrrhic victory. The Ottoman forces did not remain in Hungary but withdrew to Constantinople. During the entire march back those around Süleyman maintained the fiction that he was still alive. His body was carried concealed from view, in a closed litter. His successor, Selim II (1524–74), concluded the Treaty of Adrianople in February 1568, making peace with Emperor Maximilian.

Austro-Turkish War (Fifteen Years' War, "Long War") (1591–1606)

PRINCIPAL COMBATANTS: Austria vs. Ottoman Empire

PRINCIPAL THEATER(S): Hungary and the Balkans

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: Possession of Hungary and the Balkan territories

OUTCOME: Despite many gains and losses during the war, the Ottomans ultimately won only two minor fortresses; most importantly, the war signaled the end of Ottoman expansion into Europe.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Austro-Hungary, 40,000; Ottoman Empire, 100,000

CASUALTIES: Austro-Hungary, 23,000 killed; Ottoman Empire, about 20,000 killed or wounded

TREATIES: Treaty of Zsitva-Torok, November 11, 1606

When Holy Roman Emperor Rudolf II (1552–1612) unilaterally terminated tribute payments to the Ottoman Empire for possession of Austrian Hungary in 1591, threats were issued and skirmishing broke out, but the Ottomans actually lost ground in central Hungary and Romania. War began in earnest in 1594 when Grand Vizier Sinan Pasha (d. 1596) led 100,000 troops into northern Hungary. The following year on October 28, 1595, Sigismund Báthory (1557–1606), prince of Transylvania, led Austro-Hungarian forces against the invaders at Guirgevo. Sinan was defeated.

In September 1596 the new sultan, Mohammed III (d. 1603), renewed the invasion, again with 100,000 men. They targeted the fortress town of Erlau. The massive force succeeded in taking the town, whereupon a force of 40,000, including Austrians, Germans, Transylvanians, and Hungarians, advanced to regain it. Twice the Ottomans sent forces to intercept the advance, and twice, on October 24 and October 26, 1596, they were repulsed. Then the Hapsburg forces counterattacked, penetrating the camp of the sultan and capturing some 50 artillery pieces. However, the Ottomans replied with a devastating surprise cavalry attack on the German-Hungarian flank. This was sufficient to create panic in the entire force, and the Hapsburgs lost some 23,000 men. Ottoman losses were also heavy—probably 20,000 killed or wounded—and the army was in such a state of exhaustion that it did not capitalize on its victory. The result was that warfare within the Ottoman-Hungarian borderlands continued sporadically until 1606, when, on November 11, the Treaty of Zsitva-Torok ended hostilities.

Further reading: Rhoads Murphey, *Ottoman Warfare: 1500–1700* (New Brunswick, N.J.: Rutgers University Press, 1999); V. J. Parry and M. J. Kitch, *Hapsburg and Ottoman Empires* (London: Sussex Publications, 1982).

Austro-Turkish War (1663–1664)

PRINCIPAL COMBATANTS: Austria (with French and German mercenaries) vs. Ottoman Empire

PRINCIPAL THEATER(S): Hungary and Transylvania

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A continuation of the Transylvanian-Turkish War of 1657–62, this war was fought over possession of portions of Hungary.

OUTCOME: Turkey was confirmed in its suzerainty over Transylvania, but Transylvania and part of Hungary were demilitarized for a period of 20 years.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Austria, 60,000; Ottoman Empire, 120,000

CASUALTIES: Austria (and mercenaries), 9,000 killed; Ottoman Empire, 8,000 killed

TREATIES: The Treaty of Vasvar, 1664

Ottoman victory in the TRANSYLVANIAN-TURKISH WAR of 1657–62 emboldened the Ottomans to invade Hungary with some 120,000 men under Grand Vizier Ahmen Koprulu Pasha (1635–76) in 1663. Ultimately, the Ottomans had as their objective the taking of Vienna itself. However, an Austro-Hungarian force under Adam Forgach (1643–63) successfully blocked the advance of the invaders at Neuhausel, and the advance did not resume until spring 1664, now with an army reduced to about 80,000 men.

The Ottoman force was met in battle by some 60,000 Austrians (augmented by French and German mercenaries) at the convent of St. Gotthard on the Raab River on August 1, 1664. Prince Charles of Lorraine (1604–75) engaged in single combat with an unidentified Ottoman artillery officer. Charles killed his opponent, which thereby neutralized Ottoman artillery. In the meantime, Austrian cavalry and mercenary infantry prevailed against the numerically superior Ottoman force.

Losses were very heavy: perhaps 9,000 Austrians and mercenaries killed and 8,000 Ottoman troops killed. Both sides were eager for peace and on August 11 concluded the Treaty of Vasvar, calling for 20 years of peace.

Further reading: Rhoads Murphey, *Ottoman Warfare: 1500–1700* (New Brunswick, N.J.: Rutgers University Press, 1999); V. J. Parry and M. J. Kitch, *Hapsburg and Ottoman Empires* (London: Sussex Publications, 1982).

Austro-Turkish War (1683–1699)

PRINCIPAL COMBATANTS: Austria (with a Holy League consisting of the Holy Roman Empire, Venice, Poland, and, after 1686, Moscow) vs. Ottoman Empire

PRINCIPAL THEATER(S): Hungary and the Balkans

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: Primarily, the possession of Hungary

OUTCOME: The Ottomans, badly defeated, were driven out of Hungary.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Holy League, 142,343; Ottoman Empire, 200,000

CASUALTIES: Holy League, 49,200 killed or wounded; Ottoman Empire, 156,000 killed or wounded

TREATIES: The Treaty of Karlowitz, January 26, 1699

On March 3, 1683, an Ottoman army of 200,000, allied with a Transylvanian force, invaded Hungary from Adrianople. Austria and Poland united to defend against the invaders, 150,000 of whom commenced a siege of Vienna on July 17, 1683 (see VIENNA, SIEGE OF). Vienna's garrison consisted of about 11,000 regular troops and 6,000 volunteers. However, the defenders possessed superb artillery, which held off the Ottomans until September 12, 1683, when an Austro-Polish force of more than 60,000 arrived. By this point the Viennese garrison had lost 5,000 regulars and 1,700 volunteers, although the Ottomans had suffered losses amounting to some 40,000 killed or wounded, so that when the Austro-Polish force attacked from the heights of Kahlenberg, they faced a reduced Ottoman-Transylvanian force of about 138,000. Immediately seizing the initiative, the Austro-Polish army made a devastating attack that cost the Ottomans 15,000 killed and as many as 25,000 wounded. The Austro-Polish relief force lost 1,800 killed and 3,200 wounded.

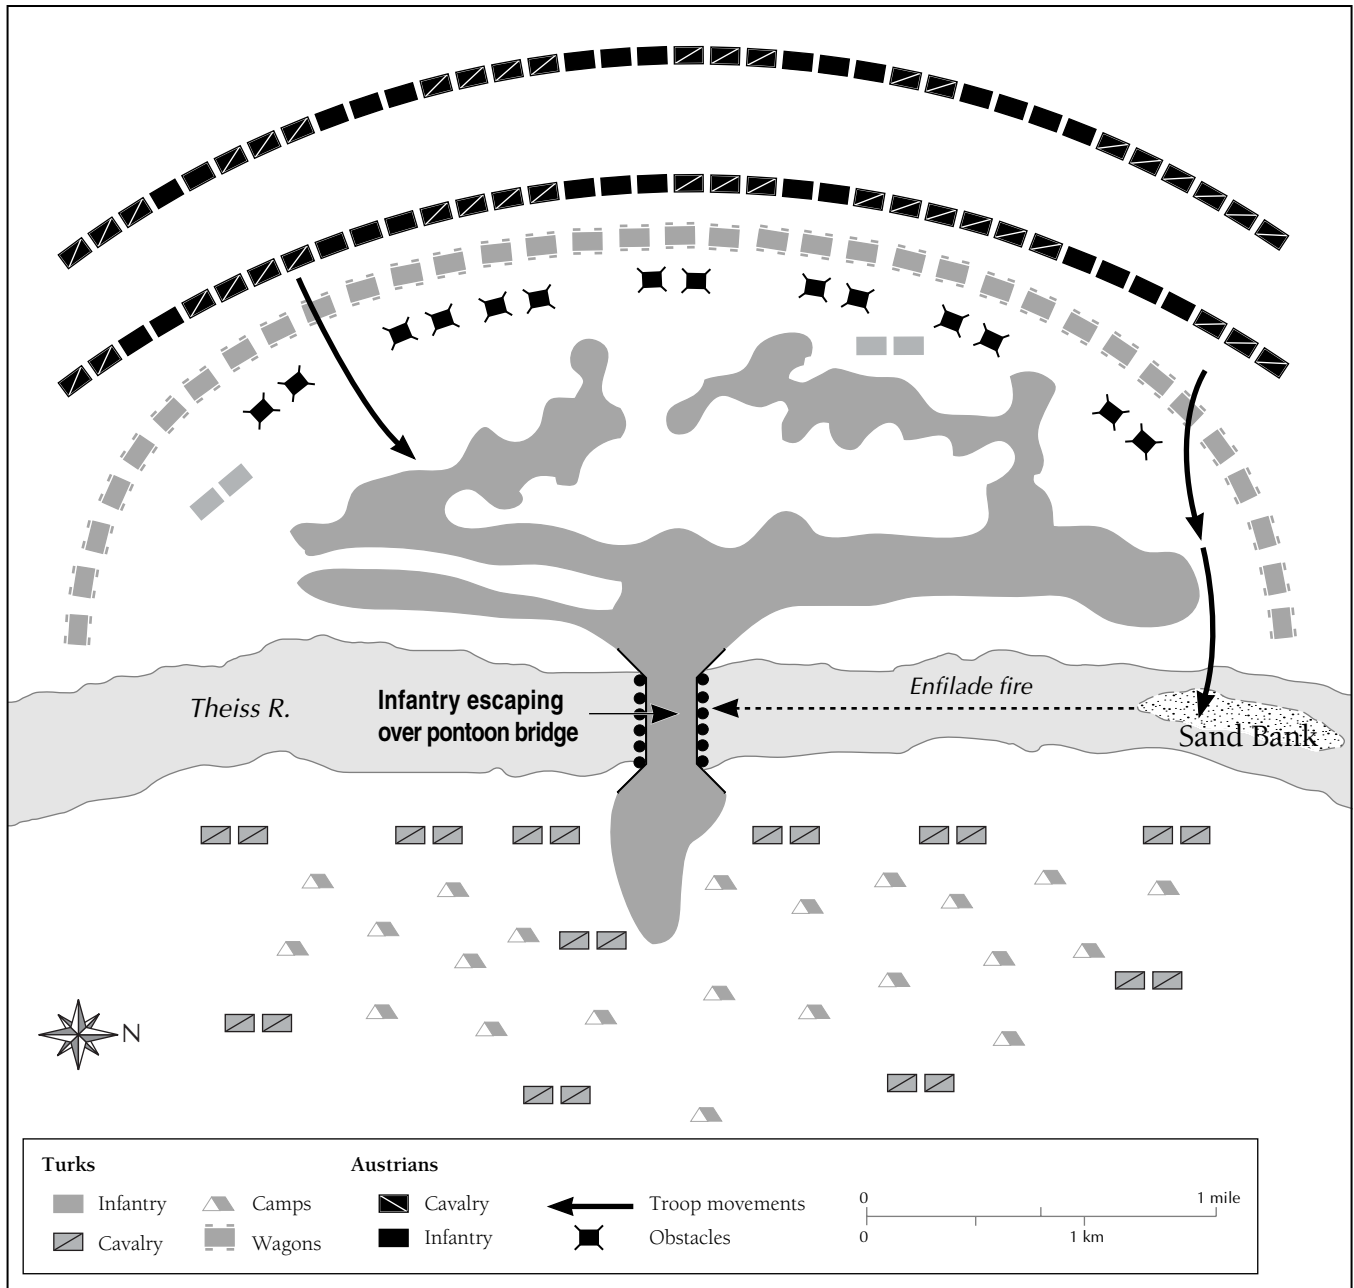

As the Ottoman force retreated the Austro-Polish army pursued. The Ottoman column crossed the Danube on a boat bridge, which collapsed, adding another 7,000 fatalities to the Ottoman toll.

The victory at the Siege of Vienna brought an end to the Ottoman threat against Europe. However, the war continued, albeit with many lulls. In 1684 Charles of Lorraine (1604–75) attempted to take Buda, which the Ottomans had held for 145 years. Charles failed, and half of his 34,000-man army perished. A second siege resulted in victory, however, on September 2, 1686, although Austrian losses in this campaign amounted to some 20,000 killed or wounded.

On August 12, 1687, Charles defeated the Ottomans at the Battle of Harkány, inflicting some 20,000 casualties. This victory liberated Croatia from the Ottoman Empire.

In 1687 Sultan Mohammed IV (1648–87) was overthrown, and the new sultan, Süleyman II, renewed the struggle against the Austrians and their allies. Holy League forces were defeated at Zernyest, Transylvania, in August 1690, allowing the Ottomans to capture most of Serbia by October. Belgrade fell to the Turks on October 8. In response Louis of Baden (1655–1707) led Holy League forces in a counteroffensive and defeated a combined Ottoman-Transylvanian force at the Battle of Szalánkemén on August 19, 1691, inflicting some 20,000 casualties on the 80,000-man army. With this Transylvania became a Hapsburg possession.

The war continued in desultory fashion until Sultan Mustafa II (r. 1695–1703) invaded Hungary with 50,000 troops in 1697. At the Battle of Zenta on September 11

Battle of Zenta, September 11, 1697

Mustafa's force was met by 31,343 Holy League troops under Eugene of Savoy (1663–1736). Eugene attacked when the Ottoman army was divided on either side of the River Theiss and was in the process of crossing a bridge. Eugene destroyed the bridge, then drove the invaders into the river, killing perhaps as many as 29,000 while suffering no more than 50 casualties himself, killed and wounded.

Zenta was one of the worst defeats suffered by the Ottoman Empire, and it prompted the Treaty of Karlowitz, concluded on January 26, 1699. Austria received most of Hungary and Transylvania, and the Hapsburgs thereby

supplanted the Ottomans as the major power in southeastern Europe.

Further reading: Rhoads Murphey, *Ottoman Warfare: 1500–1700* (New Brunswick, N.J.: Rutgers University Press, 1999); V. J. Parry and M. J. Kitch, *Hapsburg and Ottoman Empires* (London: Sussex Publications, 1982).

Austro-Turkish War (1716–1718)

PRINCIPAL COMBATANTS: Austria (with Venice) vs. Ottoman Empire

PRINCIPAL THEATER(S): Hungary and the Balkans

DECLARATION: Austria declared war on the Ottomans, in 1716.

MAJOR ISSUES AND OBJECTIVES: Possession of Hungary and the Balkans

OUTCOME: The Ottomans were decisively defeated, relinquishing to Austria Hungary and most of the Balkans.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Austria, 123,000 men; Ottoman Empire, approximately 310,000 men

CASUALTIES: Austria, 40,000 killed and wounded; Ottoman Empire, more than 80,000 killed and wounded

TREATIES: Treaty of Passarowitz, July 21, 1718

At the opening of 1716, Austria's emperor Charles VI (1685–1740) joined in an alliance with Venice against the Ottoman Empire. While the Venetians fought the Ottomans chiefly at sea (*see* VENETIAN-TURKISH WAR [1714–1718]), Austria bore the brunt of the land war. When 110,000 Ottoman troops advanced northward from Belgrade, Prince Eugene of Savoy (1663–1736) intercepted with 63,000 soldiers at Peterwardein. Despite Ottoman superiority of numbers, the Austrians prevailed, killing 6,000 Ottoman troops and wounding as many as 14,000 while suffering losses of 3,000 killed and 2,000 wounded.

From Peterwardein, Eugene laid siege to the Ottoman stronghold at Temesvár. After five weeks, on October 14, 1716, Temesvár fell. It was the last Ottoman fortress in Hungary.

During the summer of 1717, Eugene besieged Belgrade, most formidable of the Ottoman's European fortress cities. Eugene had 60,000 men against the Ottoman garrison of 30,000, but an Ottoman relief force of 180,000 men advanced against Eugene. Taking the initiative, Eugene led 40,000 against this vast force, winning a remarkable victory on August 16, 1717. Ottoman losses at this battle were 20,000 dead or wounded. The Austrians suffered 5,400 killed or wounded. The relief force having withdrawn from the field, Belgrade surrendered to Eugene on August 21, 1717.

The fall of Belgrade laid open Serbia, Wallachia, and the Banat to the Austrian army, and the Ottoman losses continued to mount. The Ottomans sued for peace, and on July 21, 1718, the Treaty of Passarowitz was concluded, giving Austria Temesvár and Belgrade as well as part of Wallachia, while Venice garnered Dalmatia and a portion of Albania. In all, Austria had suffered 40,000 casualties, killed or wounded, but had inflicted almost precisely twice this number of casualties on the Ottoman forces.

Avar Wars for Empire (562–601)

PRINCIPAL COMBATANTS: Avars vs. Franks, Bulgars, Slavs, and Romans

PRINCIPAL THEATER(S): Germany, Italy, and the Baltic Peninsula

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Chased from Central Asia, the Avars were determined to conquer an empire in the West.

OUTCOME: Decades of conquest left the Avars with an empire stretching east from the Julian Alps to the Volga and south from the Danube River valley to the Baltic Sea.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None recorded

Native to the steppes that lay between the Volga, Kama, and Ural Rivers, the Avars, akin to the Huns and Tartars, were driven from their homeland by the Turks around 555. Relocating to the northern Caucasus, the Avars, under the leadership of their great chief, Baian (fl. sixth century), were determined to conquer central Europe and dominate the region as they once had Central Asia. In 562 the Avars invaded westward into Germany, but, during the course of several large battles in Thuringia, they were repulsed by the counterattacking Franks, led by the sons of Clotaire I (d. 561). The Avars then looked to the east and made raids into the eastern Roman Empire in 564 before concluding an alliance with the Germanic Lombards in their war against the Gepidae in Italy. In exchange for Avar support, the Lombards agreed to give the Avars 10 percent of their livestock and any conquered Gepidae territory.

In a classic pincer movement the Avars invaded from the northeast while the Lombards attacked from the northwest, converging in the Danube River valley and

crushing the Gepidae. Alboin (d. 572), king of the Lombards, personally slew the Gepidae king and then took his reluctant daughter as a bride. The Avars and the Lombards followed their victory with a campaign that decimated the Gepidae lands. Seeing the ferocity with which the Avars waged war, Alboin realized that they—having annexed all Gepidae lands—were now potentially his most dangerous enemy. He quickly concluded a new alliance with them and migrated south across the Alps and into northern Italy, leaving Pannonia and Noricum to the Avars but putting enough distance behind him to create a buffer zone between the two people.

In the east Justinian (b. 483), who had managed to hold the Roman Empire together through sheer force of will and his tremendous personal influence, died in 565. Several years later Baian recognized that the empire lay vulnerable, and he fully intended to take advantage of the situation. The king of the Avars turned his attention especially to the city of Sirmium. The Romans had occupied the city during the joint Avar-Lombard attack on the Gepidae, but Baian reasoned that it was rightly his, since it had been a Gepidaen city, and—as everyone knew, per his agreement with Alboin—all Gepidae now belonged to him. When the Romans refused to hand Sirmium over, Baian laid siege to the city and at the same time offered generous terms. All he wanted, he said, was a silver plate, some gold, and a ceremonial toga; he would gladly break off the siege, since he had fighting to do elsewhere, but to come away with nothing would be disgraceful before his allies. Sirmium's city elders had no authority to accept terms but passed them on to Rome, recommending their acceptance. While he was waiting for a reply, Baian sent 10,000 Huns into Dalmatia to ravage the countryside as a show of force. The emperor Justin II (d. 578), and later Tiberius (d. 582), refused to accept either the terms or the surrender of Sirmium and hastily prepared for war. The subsequent Roman offensives were ill-advised and never successful. In 580 the Avars took Sirmium for good.

After securing Sirmium, Baian swept south against the Slavs and marched through the Balkans undefeated, reaching the Aegean Sea in 591 and again in 597. The southward expansion would mark the zenith of Avar supremacy. For more than a quarter century Baian and the Avars were essentially without military peer in central Europe. Save for the early defeat at the hands of the Franks, Baian was never defeated in the field. His luck would end, however, with the ascension of the emperor Maurice (582–602). Although Tiberius died in 582, Maurice was not able to consolidate his power and sufficiently gain control of the army for another decade. But beginning in 595 Maurice and his general, Priscus (fl. sixth century), engaged in a series of decisive campaigns ranging from the Black Sea to the Theiss River, successfully gaining the upper hand against the Avars. In 601 Priscus soundly defeated Baian on the south bank of the Danube at the Battle of Vimi-

nacium. Although Baian's defeat at Viminacium ended the Avars' unchecked dominance in the region, Baian maintained suzerainty over an empire that stretched east from the Julian Alps to the Volga and south from the Danube River valley to the Baltic Sea.

Avar-Xiongnu War (c. 380)

PRINCIPAL COMBATANTS: Avars vs. Xiongnu (Hsiung-nu) Huns

PRINCIPAL THEATER(S): Northern China

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Expansion of the Avar dynasty

OUTCOME: The Xiongnu peoples were defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

The Avars, a Mongol people from the steppe regions of inner Asia, began a clanlike existence around the middle of the fourth century. Within their ranks arose a powerful leader named Toulon (fl. fourth century), who pushed his people to move south. Around 380 the Avars, led by Toulon, defeated the Hun band known as the Xiongnu. The Avars pushed the Xiongnu to the south and west and apparently exacted tribute from them. Following his triumph Toulon took the title of khan. With the defeat of the Xiongnu, the Avars continued their migration. During the 6th and 7th centuries they would wage war on the Northern Wei Empire, amassing a powerful empire themselves (*see* AVAR WARS FOR EMPIRE).

Axe, War of the (1846–1847)

PRINCIPAL COMBATANTS: British colonists of South Africa vs. the Xhosa tribes

PRINCIPAL THEATER(S): Vicinity of the Great Kei River in South Africa

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Part of a century-long conflict between the Xhosa people and white settlers

OUTCOME: The Xhosa were driven from their homelands when the English Crown annexed contested lands.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

As British colonists and Dutch Boers settled more and more of South Africa, they began to encroach on the Xhosa people, who were increasingly hard pressed by unremitting famine and drought. The Xhosa responded by harassing the colonists, principally by cattle theft and raids on trading posts.

In 1846 British authorities dispatched a small number of troops to patrol “Kaffirland”—the Xhosa were derisively called Kaffirs by the British—after a Xhosa tribesman had escaped from detention at Fort Beaufort. He was being held for having allegedly stolen an axe. The troops demanded that the Xhosa give up the escaped detainee, and when they refused a war erupted. For just under two years, the Xhosa harried the frontier of British and Boer settlement. There were no formal “set” battles in the War of the Axe, but British troops unrelentingly policed the region until the Xhosa were driven not only from the frontier but out of their homeland entirely. The region vacated was annexed by the British Crown.

Aztec Wars of Expansion (c. 1428–1502)

PRINCIPAL COMBATANTS: Aztecs vs. rival tribes; during a brief civil war, the rival Aztec cities of Tenochtitlán and Tlatelolco fought.

PRINCIPAL THEATER(S): Mexico

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Imperial expansion

OUTCOME: The Aztecs conquered and subjugated most rival tribes, primarily to the south of their capital at Tenochtitlán (modern Mexico City).

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the Battle of Zamacuyahuac the Aztecs fielded 24,000 men.

CASUALTIES: At the Battle of Zamacuyahuac the Aztecs lost 20,000 men.

TREATIES: No documents have been identified.

The Aztecs first appeared as a nomadic warrior tribe who settled on two islands in Mexico's Lake Texcoco, Tenochtitlán and Tlatelolco, about 1325. These island locations were natural fortresses from which the Aztecs waged a series of expansionist wars against lesser tribes.

During the reign of the “Black Serpent,” Emperor Itzcoatl (1428–40), the Aztecs fought the Tepanaca tribe, who lived on the western shore of Lake Texcoco. This tribe, correctly fearing Aztec aggression, attempted to blockade Tenochtitlán and Tlatelolco, effectively holding the Aztecs under siege and cutting off all supplies, including water. Itzcoatl led an expedition against the Tepanaca in 1428. It developed into a prolonged war, but by 1430 the Aztecs had gained the initiative and laid siege to the rival tribe in its own capital. With the Tepanaca crushed, Itzcoatl took the war to its ally, the people of the city of Xochimilco, which fell in 1433, bringing the first phase of Aztec aggression to an end.

Under Montezuma I (also called Moctezuma I, or Ilhuicamina, “One Who Frowns Like a Lord”), the Aztecs undertook an even more aggressive campaign of expansion. From 1440 to 1468, the span of this emperor's reign, the Aztec Empire was pushed far to the south of Tenochtitlán. Montezuma I established the Aztecs as a powerful trading people, and the empire flourished.

Montezuma I was succeeded by Axayactl, who pressed the Aztec program of expansion eastward all the way to the Gulf of Mexico. At the same time he further enlarged the Aztec sphere of influence to the southwest, stopping only at the Pacific coast.

In 1473 a civil war (sometimes called the War of Defilement) broke out between Tenochtitlán and Tlatelolco. Tlatelolco struck alliances with other Aztec cities opposed to the power of Tenochtitlán. However, Tlatelolco unwisely provoked war prematurely, before any of its allies could be brought to bear on the conflict, and Tenochtitlán acted swiftly to crush its rival.

The next recorded Aztec war came five years later, in 1478. Tenochtitlán at this point had become the central city of a three-city league, which included Tlacopán and Texcoco. The league launched a war against the Tarascans, a traditional mutual enemy. Under Axayactl's inept command, however, the army of the league was deployed in a piecemeal and divided fashion. This violation of a timeless tactical principle—never divide your forces in the face of the enemy—brought on disaster at the Battle of Zamacuyahuac. On the first day of the battle, the Aztec forces were defeated in detail. Axayactl regrouped on the second

day and led a make-or-break charge against the Tarascans. The result was an even worse defeat. Of 24,000 league forces deployed, all but 4,000 fell in battle.

By 1481 the Aztecs had fully recovered from the disaster at Zamacuyahuac, and in the six-year reign of Emperor Tizoc, from 1481 to 1486, they pushed the frontier of their empire to the southeast. On balance, the Aztecs gained significant territory, although the war of expansion was by no means an unqualified success. The era of true imperial triumph came under the reign of Ahuitzotol, from 1486 to 1502, when Aztec forces made an extensive sweep, primar-

ily far to the south. These southern acquisitions spanned both coasts.

B

Babur's Conquest of Bihar and Bengal (1528–1529)

PRINCIPAL COMBATANTS: Mughal Empire vs. Afghan forces of the former sultan of Delhi

PRINCIPAL THEATER(S): Northern and eastern India

DECLARATION: No known declarations

MAJOR ISSUES AND OBJECTIVES: Babur's continued conquest of India

OUTCOME: Babur consolidated northern and eastern India under the Mughal dynasty.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

About 25,000

CASUALTIES: Unknown

TREATIES: Unknown

In 1528 Babur (1483–1530), founder of India's Mughal dynasty, having descended from both Genghis Khan (c. 1167–1227) and Tamerlane (1336–1405), was already a military adventurer of some distinction, an accomplished writer, and an able statesman, but it was his conquests of Bihar and Bengal that firmly established his military genius, giving him near-total control of northern and eastern India. Beginning with Babur's first movements into the Punjab in 1515 (see *BABUR'S RAIDS ON THE PUNJAB*), he was almost constantly at war, and although one campaign flowed from the next, each of his four campaigns into India is viewed by most historians as a separate military action. Once he had taken the Punjab as his base of operations, Babur was forced to deal with individual chieftains who opposed him and with the remnants of the Lodi sultanate. Although Babur and his 10,000 troops, armed with artillery, had defeated

and killed the sultan of Delhi, Ibrahim Lodi (fl. 1517–26), and his 40,000 troops at the Battle of Panipat in 1526 (see *BABUR'S INVASION OF NORTH INDIA*), the sultan's brother, Mahmud Lodi (r. 1516–17), who succeeded as sultan, concentrated all the sultanate's remaining resources on expelling the invader from northern India. As part of his attempt to do so, the new sultan organized a Rajput confederacy of Indian-Afghan chieftains, led by Rana Sanga (fl. 16th century) of Chitor. However, Babur easily defeated the confederacy at the Battle of Khanua in March 1527.

Babur was now free to deal with the Lodi sultanate and conquer the eastern provinces of Bihar and Bengal. The early part of the campaign was almost anticlimactic compared to his earlier adventures. He used the same tactics he had used in the several battles at Panipat: defensive fortifications, coordinated attacks, and wheeling cavalry charges. Only two regions remained in defiance of him, the fortress at Chanderi, which he captured in January 1528, and the east, where the sultan waited for him. In May 1529, after crossing the Ganges River, Babur met the sultan's forces at Patna, where the Ganges and the Gogra Rivers meet. Again Babur enticed his opponent to attack, and after three brutal days of combat the Battle of the Gogra ended on May 6, 1529, with Babur in sole possession of northern and eastern India. Although he would die a year later and his grandson, Akbar the Great (1543–1605), would be the one to consolidate the vast Mughal Empire, Babur most certainly must be considered its father.

Babur's Invasion of North India (1525–1526)

PRINCIPAL COMBATANTS: Babur's Afghan Turks vs. troops of the Delhi sultan

PRINCIPAL THEATER(S): Northern India

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Babur's attempt to unify India

OUTCOME: Babur conquered northern India.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

At the Battle of Panipat: Babur, estimates of 10,000;

Ibrahim, 40,000

CASUALTIES: Babur, unknown; Ibrahim, 15,000

TREATIES: Unknown

The invasion of northern India was an overt and calculated move by Babur (1483–1530) to supplant the sultan of Delhi as master of the region and establish the Mughal Empire. Beginning with Babur's first movements into the Punjab in 1515 (see *BABUR'S RAIDS ON THE PUNJAB*), he was at near-constant war. Most historians identify Babur's incursions into India as four separate campaigns, although one campaign flowed into the next.

With the death of the governor of the Punjab (see *BABUR'S LAHORE CAMPAIGN*), Babur was in sole possession of Lahore and established it as a base of operations for his upcoming campaign against the sultan, Ibrahim Lodi (fl. 1517–26). Starting from Lahore in 1525, Babur marched on Panipat, approximately 30 miles north of Delhi, with 10,000 men and the first firearms in use outside the Ottoman Empire.

Arriving at Panipat on April 13, 1526, Babur settled in for a defensive war and prepared solid fortifications. Moving his cavalry and artillery (some dispute whether he actually had artillery) back, Babur put out a forward defense of some 700 baggage carts tied together. The only gaps in the line were where he positioned his artillery. When word spread that a great army was opposing the sultan, several thousand Hindu and Muslim troops flocked to Babur as reinforcements. That still gave him fewer than 15,000 troops versus the sultan's approximately 40,000 men. The two armies were idle for eight days until Ibrahim ordered an attack on April 21, 1526, beginning the Battle of Panipat.

The Delhi troops were stalled at the first line of carts when Babur's firepower opened up on them. In succession Babur ordered his infantry up and then ordered a cavalry charge on both flanks. The Mughals quickly routed the sultan's forces and inflicted about 15,000 casualties, including the death of Ibrahim. Moving with lightning speed, Babur occupied Delhi within three days and proclaimed the Mughal Empire. After dealing with various local chieftains along the Ganges River valley, Babur's position in northern India was relatively secure, although his new subjects by no means rushed to embrace him.

Further reading: Wheeler M. Thackston, ed. *The Baburnama: Memoirs of Babur, Prince and Emperor* (New York: Modern Library, 2002); University of Dacca History of Bengal Publication Committee, *History of Bengal: Hindu Period* (New Delhi: Orient Book Distributors, 1974).

Babur's Lahore Campaign (1524)

PRINCIPAL COMBATANTS: Babur's Afghan Turks vs. troops of the Delhi sultan and governor of the Punjab

PRINCIPAL THEATER(S): Lahore, India

DECLARATION: No declarations

MAJOR ISSUES AND OBJECTIVES: Conflict resulted from Babur's alliance with the governor of Punjab who was in a contest with his own brother, the sultan of Delhi for autonomy from the sultanate. Babur invaded Lahore in support of the governor of the Punjab.

OUTCOME: Babur, after defeating the Sultan of Delhi, claimed Lahore for himself.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The first conquest of Babur (1483–1530) that would be incorporated into the Mughal Empire, Lahore was in itself only a precursor to greater campaigns. *BABUR'S RAIDS ON THE PUNJAB* in 1515 started nearly 15 years of continual war, although each of his four campaigns into India is viewed as a separate military action. Prior to Babur's movements into the Punjab, his aid was sought by the governor of the Punjab, Dawlat Khan Lodi (fl. 16th century), against his own brother, the sultan of Delhi, Ibrahim Lodi (fl. 1517–26). Dawlat Lodi sought autonomy in the Punjab. Babur gladly lent support, as he had plans of his own to conquer the region, just as his forefather Tamerlane (1336–1405) had done more than a century before. Babur marched his force south and attacked the imperial army at Lahore in 1524, easily defeating the sultan's forces.

The defeat of the sultan caused an uproar in Lahore, and Babur seized control of the region. However, when the governor attempted to make a union with Babur, he quickly learned that Babur had no intention of giving up Lahore. Alliances forsaken, Dawlat Lodi then attacked Babur and temporarily drove him from Lahore that same year. The death of Dawlat Lodi soon thereafter brought Babur's return. He easily defeated all usurpers and awaited the much bigger showdown with the sultan for dominance in the region.

Further reading: Wheeler M. Thackston, ed. *The Baburnama: Memoirs of Babur, Prince and Emperor* (New York: Modern Library, 2002); University of Dacca History of Bengal Publication Committee, *History of Bengal: Hindu Period* (New Delhi: Orient Book Distributors, 1974).

Babur's Raids on the Punjab (1515–1523)

PRINCIPAL COMBATANTS: Babur's Afghan Turks vs. various Indian forces

PRINCIPAL THEATER(S): Punjab, India

DECLARATION: No declarations

MAJOR ISSUES AND OBJECTIVES: The beginnings of Babur's conquest of the region, in which he attempted to emulate his ancestor, Tamerlane, in unifying India

OUTCOME: Indecisive until Babur's 1524 attack on the Punjab. His 1515–23 campaigns were more reconnaissance than conquest.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Essentially a series of forceful reconnaissances, Babur's (1483–1530) raids on the Punjab served as a military coming-out for a young tactical genius who would soon establish a vast empire in the region. Beginning with Babur's first movements into the Punjab in 1515, he was at nearly continual war. Although one campaign seemed to flow into the next, each of his four campaigns into India are viewed as separate military actions. The direct descendant of both Tamerlane (1336–1405) and Genghis Khan (c. 1167–1227), Babur, after a series of initial failures to regain his ancestral homeland of Samarkand in modern-day Afghanistan, set his sights on conquering India, as his forefather Tamerlane had done more than a century before (see TAMERLANE'S INVASION OF INDIA). Babur viewed India as rightfully and historically his.

Babur made four raids on the Punjab between 1519 and 1524, partly to conquer, partly to announce his presence and familiarize himself with the territory and political climate in anticipation of a later invasion. It was clear to him that the sultanate was torn with dissension and ripe for an overthrow.

In 1524 the governor of the Punjab, Dawlat Khan Lodi (fl. 16th century), sought Babur's aid in ruling Kabul against the governor's brother, the sultan of Delhi, Ibrahim Lodi (r. 1517–25). Dawlat Lodi resented the sultan's attempts to usurp any local authority he might retain and sought to teach the sultan a lesson by essentially hiring a mercenary, Babur. Babur's offensive against the sultan is dealt with in BABUR'S LAHORE CAMPAIGN.

Thackston, ed. *The Baburnama: Memoirs of Babur, Prince and Emperor* (New York: Modern Library, 2002); University of Dacca History of Bengal Publication Committee, *History of Bengal: Hindu Period* (New Delhi: Orient Book Distributors, 1974).

Babylon, Fall of (689 B.C.E.)

PRINCIPAL COMBATANTS: Assyria vs. Babylon, Aramas, and Elam

PRINCIPAL THEATER(S): Babylon

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Hegemony in Babylonia

OUTCOME: Destruction of the city of Babylon

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

In 705 B.C.E. the Assyrian king Sargon II (fl. c. 721–705 B.C.E.)—known in Babylonia as The Liberator—died, and his son Sennacherib (fl. 705–681) became king. Sennacherib was an able and aggressive ruler whose reign would be marked by his struggles over Babylon. In 703 Prince Marduk (r. 703–702 B.C.E.), with the help of forces from Elam, reclaimed the crown of Babylonia and forged alliances with Assyria's enemies in the hope of destroying Sennacherib's empire. However, Sennacherib defeated the coalition army of Babylonians, Aramaeans, and Elamites in 702 and forced Marduk again to abdicate.

Preoccupied with an insurrection in Syria and Palestine and the siege he was waging on Jerusalem (see ASSYRIAN WARS [c. 746–609 B.C.E.]), Sennacherib placed Bel-ibni (r. 702–700 B.C.E.), an Assyrian, on the Babylonian throne. In 700 Bel-ibni rebelled and proclaimed independence from Assyria. In response Sennacherib deposed the traitor and replaced him with his son Ashurnadin-shum (r. 700–694).

In the meantime the Assyrian leader prepared for a major offensive against Elam. While the Assyrians attacked Elam by sea, the Elamites captured Babylonia by land, placing their own king on the throne. Although he made impressive advances in the south, Sennacherib was now faced with a northern invasion.

In 691 at the Battle of Halule on the Diyala River, the Assyrians defeated the combined forces of Elamites and Chaldeans, which opened the door for Sennacherib's 689 siege of Babylon. For nine months he blockaded the city until it fell. Once inside, the Assyrians completely destroyed the city. They leveled the temples and diverted

water from the Arakhtu Canal so that it flowed over the ruins. For the next eight years the once glorious city lay wasted.

Babylonian Captivity of Jerusalem

(601–538 B.C.E.)

PRINCIPAL COMBATANTS: Egypt and Judah vs. Babylon

PRINCIPAL THEATER(S): Jerusalem

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest of Judah and its principal city, Jerusalem

OUTCOME: Babylon captured and sacked Jerusalem

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

In 601 B.C.E., Judah struck an alliance with its former enemy, Egypt, in the hope of defeating Babylon and gaining independence from Babylonian vassalage. Three years later, in 598, a Babylonian army invaded Judah and occupied Jerusalem, its principal city. Babylon enthroned a new vassal king, Zedekiah (early sixth century), who, however, proved not to be the puppet Babylonian leaders had intended. He renewed the 601 alliance with Egypt, thereby triggering a larger Babylonian invasion of Judah in 589. Zedekiah responded by leading a general uprising against the occupiers, and in 588 a Babylonian army laid Jerusalem under 18 months of siege. In 587 the city's walls were breached, and the Babylonian hordes stormed Jerusalem.

King Zedekiah and many of his followers made a strategic retreat, hoping that by fleeing the city and avoiding capture they might be able to secure Egyptian aid for a counterattack. This hope collapsed when the Egyptians refused to join the fight, and Zedekiah and many of his fellow rebels were captured. The king was blinded, and most of the others executed.

The Babylonians reserved their greatest vengeance for Jerusalem itself. The city was burned and then leveled. The people, dispossessed, were exiled to Babylon. It was not until 538 that the Babylonian captivity of Jerusalem ended, thanks to the Persian emperor Cyrus the Great (c. 600–529), who defeated the armies of Babylonia, liberated the Jews, and gave them leave to return to Judah and Jerusalem.

Babylonian Revolt (626 B.C.E.)

PRINCIPAL COMBATANTS: Chaldea and Media vs. Assyria

PRINCIPAL THEATER(S): Uruk, a region of Babylonia (in present-day Iraq)

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Possession of the Uruk

OUTCOME: Assyria lost control of Uruk.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Unknown

As the ancient Assyrian Empire declined (*see* ASSYRIA, FALL OF), numerous alliances were struck aimed at splitting up the vast holdings of the once unshakable empire. One of these, formed in 626 B.C.E. between Nabopolassar (fl. c. 625–605), ruler of the Persian Gulf kingdom of Chaldea, and Cyaxares (d. 585) of Media, mounted a revolt that drove the Assyrians out of Uruk. Nabopolassar then proclaimed himself king of Babylonia. His son Nebuchadnezzar (fl. 605–562), of Old Testament renown, restored Babylonia to its grandeur.

Bacon's Rebellion (1676)

PRINCIPAL COMBATANTS: Rebel frontier settlers under Nathaniel Bacon vs. the Tidewater government of Virginia

PRINCIPAL THEATER(S): Colonial Virginia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Bacon sought glory at the head of settlers disgruntled with the Tidewater establishment for evincing more concern over their trade relations with the local Indians than with the security of the frontier.

OUTCOME: Bacon's forces were defeated and the Virginia government was restored.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Bacon, 500; Virginia, fewer than 200

CASUALTIES: About 100 colonists and 200 Indians were killed.

TREATIES: None

In the summer of 1675 a detachment of the Virginia militia seeking to avenge the death of three local farmers at the hands of the Nanticoke Indians mistakenly killed a group of friendly Susquehannocks (see MARYLAND AND VIRGINIA'S WAR WITH THE SUSQUEHANNOCKS). When Virginia's governor, Sir William Berkeley (1606–77), sought to control the all-too-familiar cycle of violence sparked by the killing, he found himself facing an outright rebellion led by Nathaniel Bacon (1647–76), a rebellion that in many ways foreshadowed the AMERICAN REVOLUTION a century later.

After the Virginia militia killed the wrong Indians, the Nanticoke, Susquehannocks, and allied tribes in both Maryland and Virginia fell to vengeance raiding, and frontier settlers began to desert their homes.

It was at this juncture that Nathaniel Bacon, cousin to Lady Berkeley—wife of Virginia governor William Berkeley—arrived in the colony. He bought two plantations on the James River, and Berkeley appointed him to the House of Burgesses. The fiery Bacon learned that a group of frontiersmen who had had enough of Berkeley's cautious Indian policies were preparing to take matters into their own hands. Bacon assumed leadership of the group and, enlisting the Occaneechi Indians as allies, he attacked the Susquehannocks and captured a stock of fur, then fell to arguing with the Occaneechi over the spoils and attacked them in turn. Though Bacon returned to the English settlements a hero, Berkeley posted him as a traitor on May 26, 1676, and arrested him when he entered Jamestown to take his seat in the House of Burgesses.

Bacon admitted his guilt, and Berkeley pardoned him on June 5. Bacon immediately raised an army of 500 men in Henrico County, Virginia, led it to Jamestown on June 23, and demanded that the Burgesses commission him commander of all forces fighting the Indians. The terrified assembly granted the commission, and Bacon set out on another campaign—again against friendly Indians, the Pamunkeys of eastern Virginia. In the meantime, on July 29, Berkeley managed to repeal Bacon's commission and again proclaimed him a traitor but failed to raise an army willing to move against him. The rebellion spread, and within a week a number of Virginia's most substantial planters took an oath to support Bacon and his "rabble." He continued his indiscriminate war until September 13, when he returned to Jamestown, seized the wives of burgesses loyal to the governor, and used them as shields while his men constructed siege lines. By September 18 Bacon had pushed Berkeley and his meager forces into exile on the Eastern Shore, then put Jamestown to the torch.

At this point New York's powerful royal governor, Edmund Andros (1637–1714) intervened, threatening to

take the Susquehannocks permanently under his colony's jurisdiction. In response to this threat, Bacon's support eroded. Berkeley rallied a force against him and retook Jamestown, forcing Bacon to a stand in mid-October at Yorktown, where he was cut down not by Berkeley's musket balls but by dysentery.

Bactrian-Hellenic Invasion of India

(c. 200–c. 175 B.C.E.)

PRINCIPAL COMBATANTS: Bactria vs. natives of the Punjab and the Indus Valley

PRINCIPAL THEATER(S): Northeastern Afghanistan and India

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Attempts to secure the eastern outposts of the Seleucid Empire

OUTCOME: Bactrian forces advanced to and controlled the Indus Valley.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

Bactria, located in present-day Afghanistan and Russia, temporarily won its independence from the Seleucid Empire, the Hellenic regime in Persia, in 256 B.C.E., but Antiochus III (242–187), the Seleucid emperor, defeated Euthydemus (fl. late third century), the ruler of Bactria, in 208. Euthydemus was allowed to keep his title and his independence, and his kingdom continued to serve as the guardian of the eastern outpost of the Seleucid Empire (see BACTRIAN-SYRIAN WAR).

To protect that outpost and give a buffer zone to the Hellenic region, Euthydemus embarked on a campaign against India. He first marched southeastward into Gandhara, modern-day northeastern Afghanistan, and pushed into the Punjab by 195. Euthydemus died the same year he reached the Punjab, but his son Demetrius (c. 200–167) continued the Bactrian advances into India. Demetrius advanced as far as the northern edge of the Indus Valley sometime around 175. This penetration marked the height of Bactrian-Hellenic power and influence. Demetrius was assassinated in 167 (see BACTRIAN-PARTHIAN WAR), and the Bactrian influence diminished.

Hackett Publishing Co., 1993); H. Sidky, *The Greek Kingdom of Bactria: From Alexander to Eucratides the Great* (Lanham, Md.: University Press of America, 2000).

Bactrian-Parthian War (167–160 B.C.E.)

PRINCIPAL COMBATANTS: Bactria vs. Seleucid Empire and Bactria vs. Parthia

PRINCIPAL THEATER(S): Eastern Afghanistan

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: The Seleucid Empire and Parthia vied for control of Bactria and its lucrative trade with China.

OUTCOME: Status quo ante bellum

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None recorded

Alexander the Great's body was scarcely cold before his officers began quarrelling over control of the empire. When asked on his deathbed to name a successor, Alexander (356–323 B.C.E.) is supposed to have mumbled "the strongest," and the struggle to claim that distinction lasted two generations. During the course of the struggle, the empire broke apart. The eastern possessions in India and Afghanistan were the first to go, most reverting to their local leaders. The Greek city-states soon fell into their old disputatious routine, most eventually sorting themselves into two new groupings, the Aetolian and Achean Leagues. The remainder of the empire was portioned out among Alexander's top generals, the bulk of it going to the descendents of Seleucus I Nicator (c. 358–280), the "Seleucids." Bactria, an ancient country lying between the mountains of the Hindu Kush and the Oxus River in what is now part of Afghanistan and Tajikistan, had long served as a crossroads for the overland trade between East and West. Originally part of Seleucus's Alexandrian patrimony, Bactria—thanks to its prosperous economy based on its well-established trade with China and to its excellently trained military—grew into a powerful province, becoming independent in 256.

But Bactria's trade had also long been the envy of other kingdoms, some more powerful. For nearly a century Parthia, just then the major enemy of the aging Seleucid Empire to which Bactria had once belonged, had been developing ravenous designs on the country; now the Seleucids, too, were considering reconquest, in no small part because of Bactria's profitable Far Eastern trade.

In 167 the Seleucids invaded Bactria with an army led by Eucratides (d. 159). They were met by Demetrius (200–167), the Greek-descended ruler of Bactria, who was unable to turn back the invaders. Demetrius was killed in action, and the Bactrians were routed. Eucratides assumed

the throne of Bactria in the name of the Seleucid Empire, but the travails of Demetrius led to much disorder, a fact that Mithradates I (r. 171–138) of Parthia took advantage of by invading Bactria's border regions around 167 and raiding Eucratides' army. The nearly decade-long war that followed between Seleucid Bactria and Parthia proved inconclusive, save for some small gains by Parthia in the Turanian border region, and ended status quo ante bellum.

Bactrian-Syrian War (208–206 B.C.E.)

PRINCIPAL COMBATANTS: Bactria and Parthia vs. Syria (Seleucid Empire)

PRINCIPAL THEATER(S): Bactria

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Seleucid conquest of Bactria

OUTCOME: Bactria acknowledged Seleucid suzerainty.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: No surviving documents

Bactria was a kingdom in north-central Asia that had won its independence from Persia. A rich kingdom, it lured the Seleucid king Antiochus III the Great (242–187), who was intent on rebuilding the Hellenistic Empire of his ancestors and annexing it to his Syrian Empire. Fearing that this annexation would extend the Seleucid realm to the border of Persia, the Parthian king Arsaces III (212–171) led an army to block Antiochus's advance. When Arsaces was defeated, he turned to the king of Bactria, Euthydemus (fl. late third century), and proposed an alliance. The allies met the Syrians at the Battle of the Arius River in 208 but were soundly defeated. At this Arsaces capitulated to Antiochus and accepted Seleucid suzerainty. Euthydemus did not surrender, however, but withdrew his army in good order to Bactria, his capital city. Syrian forces followed him, winning a number of minor battles along the way, then laid siege to Bactria for the next two years. Remarkably, the Bactrians withstood the siege. Unable to conquer Bactria, Antiochus offered generous peace terms to Euthydemus. In exchange for nominal recognition of Seleucid suzerainty, Euthydemus was permitted to maintain direct governance of Bactria.

Bahmani Civil War (c. 1490–1512)

PRINCIPAL COMBATANTS: Bahmani's Sunni sultan vs. Shi'ite nobles and provincial governors

PRINCIPAL THEATER(S): India's Deccan region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Under pressure from Hindu enemy states, Bahmani lost control of its Shi'ite rebels, who sought to break away from the much weakened Delhi sultanate.

OUTCOME: The Bahmani sultanate collapsed into smaller independent successor states—Bijapur, Berar, Bidar, Golconda, and Ahmadnager—all vulnerable to resurgent Hindu states in the region.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

In the wake of TAMERLANE'S INVASION OF INDIA, the sultanate of Delhi collapsed completely, hopelessly fragmenting north India. As a consequence, the history of the Deccan in the 15th century continued to be dominated by the struggle between the Muslim sultans of Bahmani—a splinter of the foundering Delhi sultanate, now nominally subject to the Timurids of Persia—and the Hindu kings of Vijayanagar. For most of the century Bahmani was also engaged in frequent conflicts with its Muslim neighbors to the north and northwest, Malwa and Gujarat, and Hindu Orissa to the northeast. By the last decade of the century, attacks by resurgent Vijayanagar and Orissa had devastated Bahmani.

Under pressure from the encroaching Hindu kingdoms, the sultan had imported new blood into his administration, Timurids from Afghanistan and Persia. But these newcomers were Shi'ites, and they grew increasingly hostile to the traditionally Sunni nobility. By the end of the century, Shi'ite officials had gone from surly resentment of the Turkish old guard to arrogant disobedience of the sultan himself. Soon the sultan lost all control over his minions, as the old Sunni nobility broke away and began establishing kingdoms of their own within the quickly collapsing sultanate. Inevitably one of the Shi'ite governors, Qutub-ul-Mutlik (fl. early 1500s) also seceded from the Delhi sultanate, and in 1512 declared Golconda independent. The sultan could offer only token resistance to this, the establishment of the first Shi'ite dynasty in the Deccan. There was little of the old sultanate left to defend in any case, and Bahmani simply disappeared upon the sultan's death. As a result, the frontiers of the two Hindu

states met along the Frishna River, setting the stage for Vijayanagar to expand at Muslim expense in the Deccan.

Bahmani-Delhi Sultanate War (1346–1347)

PRINCIPAL COMBATANTS: Bahmani sultanate vs. Delhi sultanate

PRINCIPAL THEATER(S): Western Deccan, India

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: The Delhi Sultanate tried to consolidate Muslim control over the Deccan region of India by relocating Muslims from Delhi to the Hindu area; the Deccan Muslims revolted.

OUTCOME: The Deccan Muslims formed their own sultanate.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Virtually none

TREATIES: None

By the beginning of the 13th century the Muslim conquest of Hindustan was complete (*see* MUHAMMAD OF GHUR, CONQUESTS OF). After a period of some turmoil, Muslim rule became perpetual under the so-called Slave dynasty of the sultanate of Delhi that had conquered the Deccan at the turn of the century (*see* DELHI SULTANATE RAIDS IN SOUTH INDIA). For 100 years, North India experienced periods of relative stability punctuated by anarchy—dynastic changes, Mongol raids, Hindu uprisings, and persistent civil warfare among the dynasty's Turkish nobility.

The reign of the second Tughluk sultan of Delhi, Muhammad (fl. 1325–51), proved to be the apex of the sultanate and marked the beginning of its decline. A ruthless and impractical intellectual, he had defeated a Mongol invasion early in his reign only to turn to plans for conquering Persia, plans whose logistical requirements proved too much for him. At one point the sultan sent a large army into the mountains between India and Tibet in order to force the relatively insignificant hill tribes to accept his suzerainty, a task he accomplished at the cost of 100,000 men. Meanwhile, his dominions in the Deccan tried to break away.

The sultan had already turned his back on the traditional policy of controlling the south through vassal rulers and brought the three remaining Hindu states under direct Muslim control. Then, in an effort to settle additional Muslim nobles in the south and, at the same time, to keep them under his thumb, he had established a second capital at Daulatābād (Devagiri). In 1327 he forced an emigration from Delhi and then moved there himself. Not only did the move give him effective control over the fecund

and rich Deccan and Gujarāt, it also allowed him access to India's western and southern ports, the keys to the subcontinent's fabulously profitable overseas trade with the Middle East, Africa, and East and Southeast Asia.

No sooner had the sultan set up court in the south than trouble broke out every place else—in north India, along the western border, and in Bengal. Muhammad ibn Tughluk moved back to Delhi to crush his rebelling aristocracy and to fend off a Mongol invasion that had reached the gates of the original capital. Having lost full command over the north, he found himself now losing authority over those he had settled in the south. While he was quelling a revolt in Lahore, the Muslim governor of Ma'bar declared his independence. The Hindu chiefs also dared to revolt, forming several new states, the most important being Vijayanagar. By 1346 he had put down rebellions in virtually every Indian province and lost control of many of the rest of his southern possessions—Gulbaraga in 1339, Warangal in 1345–46.

The revolt in Daulatābād was led by Hasan Gangu, who founded the Bahmani dynasty as Alaud-Din Bahman Shah (fl. until 1358). The sultan sent an army to suppress Gangu's revolt, but it never reached the Deccan. He changed his mind and recalled his forces because another revolt had broken out in Gujarāt, which he spent the last five years of his life trying to suppress. Alaud-Din outlived the ham-handed Muhammad bin Tughluk by seven years, consolidated Muslim control of the western Deccan region, made Warangal a feudal state, and launched 175 years of war with the region's Hindu kingdoms, especially the powerful realm of Vijayanagar.

Baldwin of Flanders, Revolt of (1006–1007)

PRINCIPAL COMBATANTS: Count Baldwin IV of Flanders vs. Henry II, king of Germany

PRINCIPAL THEATER(S): Western Belgium and western Germany

DECLARATION: None recorded

MAJOR ISSUES AND OBJECTIVES: Power and loyalty were the issues, territorial expansion the objective. Baldwin, vassal to the duke of Burgundy, felt no loyalty toward the German king and Holy Roman Emperor Henry and sought to expand Flanders at German expense. Also expanding his holdings, Henry sought to bring both Burgundy and Flanders to task, clipping the power of the former and assuming sovereignty over the latter.

OUTCOME: Henry regained the German land lost to Flanders; Baldwin became Henry's vassal but maintained control over Ghent.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Baldwin's pledge of fealty to Henry II

After the death of Otto III (980–1002), nominal king of Germany and Holy Roman Emperor, his third cousin Henry II (973–1024) “the Saint” took the German throne and the designation of emperor. However, Henry was, in fact, but one of many German rulers, some equally powerful, some more powerful than he, and the princes and their various vassal states felt little goodwill toward the new king, much less any sense of fealty to the new Holy Roman Emperor. To consolidate, and even to expand, the kingdom he inherited from Otto, Henry frequently went to war with neighboring principalities. He particularly enraged the Franks and the powerful duchy of Burgundy. One Burgundian, Count Baldwin IV (988–1035), from the vassal state of Flanders, was himself expanding his holdings, mostly against the Capetian king of France, Robert II (c. 970–1031). In the closed world of medieval European warfare, Henry and Baldwin were bound to clash.

In 1006 Baldwin marched his army east and occupied the town of Ghent. From there Baldwin advanced to the Scheldt River, where he violated German soil by crossing and seizing the town of Valenciennes in the late spring. Henry, meanwhile, marched into the Burgundian village of Basle, a move that would signal the end of Burgundian independence from the empire. At Basle Henry made an alliance in June 1006 with Baldwin's overlord, Robert (c. 970–1031) the Pious of Burgundy. The two agreed on a joint expedition to retake Valenciennes. The alliance, of course, made enemies of lord and vassal, Robert and Baldwin, and it did neither Robert nor Henry much good—Baldwin turned both their armies back.

In the summer of 1007 Henry decided to try again, to discipline Baldwin and retake Valenciennes, this time alone. He led a large army across the Scheldt, laid waste to the countryside, and forced Baldwin to surrender Valenciennes and accept terms. Henry forgave Baldwin's insolence in return for an oath of fealty, and he granted his new vassal control of Ghent. Although Baldwin was defeated, his acceptance of Henry as his new lord won for Flanders its first foothold beyond the Scheldt. Thus did Flanders become a feudatory possession of both France and Germany. In France the Flemish lands were called “Crown Flanders,” in Germany, “Imperial Flanders.”

Balkan War, First (1912–1913)

PRINCIPAL COMBATANTS: Bulgaria, Serbia, Greece (Balkan League), and Montenegro vs. Turkey

PRINCIPAL THEATER(S): Balkans, principally Macedonia, Albania, Thrace, Salonika, and Constantinople

DECLARATION: October 8, 1912, Montenegro declared war on Turkey; October 17, 1912, Balkan League declared war on Turkey.

MAJOR ISSUES AND OBJECTIVES: By the late 19th and early 20th centuries, the Ottoman Empire was in steep decline, its government so corrupt and feeble that it was popularly called “the sick man of Europe.” In 1911 Italy declared war on Turkey, primarily to wrest Libya from Ottoman control. The chief Balkan states, Bulgaria, Serbia, and Greece, determined to capitalize not only on Turkey’s general weakness but also on its preoccupation with the Italian war, formed a military alliance, the Balkan League, in 1912. Montenegro unofficially allied itself with the league as well. The allies now seized on Ottoman misrule in Macedonia as a pretext for a war by which the Balkan states hoped to eliminate Turkish influence in their region and make substantial territorial gains.

OUTCOME: Turkey lost all its European possessions except for the Chatalja and Gallipoli peninsulas; members of the Balkan League disputed the division of Macedonia; and Montenegro was forced to relinquish its conquest, Scutari, to Albania, a nation created by the Treaty of London.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Bulgaria, 180,000; Serbia, 80,000; Greece, 50,000; Montenegro, 30,000; Turkey, 240,000. Figures are for regular forces; the belligerents (except for Montenegro) also drew on additional reserves.

CASUALTIES: Turkey, 30,000 deaths from battle and disease; Balkan allies, 55,000 deaths from battle and disease

TREATIES: Treaty of London, May 30, 1913

HISTORICAL BACKGROUND

The Hapsburg Empire was the multinational heir of the Holy Roman Empire’s universal approach to European government. Not as technologically retrograde as Russia, Austria-Hungary—the “Dual Monarchy”—remained nevertheless, like Russia, a vastly agricultural land. But the Austrian Germans and the Hungarian Magyars did not enjoy the kind of dominance over their ethnic minorities that the Great Russians exercised over the czar’s subject peoples (with the important exception of the Russian Poles). The House of Hapsburg sat precariously at the head of some 5 million Czechs and Slovaks, 3 million Serbs and Croats, an almost equal number of Romanians, 2.5 million Poles, and 1 million or so Slovenes, all longing to be free.

Thus, the basic problem of Austria-Hungary’s emperor Franz Joseph (1830–1916) was how to accommodate an

ardent ethnic nationalism without sparking the dissolution of his empire. And the emperor could expand only at the expense of his ancient enemy, Ottoman Turkey, where he was hemmed in by Europe’s elaborate alliance system.

Established six centuries earlier, the Ottoman Empire had at its height controlled most of central and eastern Europe, western Asia, and North Africa. For the past 300 years the Ottomans had steadily been losing ground, a process rapidly accelerated in the past quarter century. All but bankrupted by constant warfare and corrupt rulers, the Turks nevertheless still played an important political role in the European balance of power established by Otto von Bismarck (1815–98)—Germany’s Iron Chancellor and the man who had all but built contemporary Europe with its complicated system of interlocking alliances.

The Turks were well aware that all three of the great powers of central and eastern Europe, Germany, Austria, and Russia, longed for various Ottoman holdings, especially in the Balkans, but since no one in Europe could agree on how to carve them up, it became essential to European peace that no single major player stake a claim. Thus, the nations of Europe, including Britain and France, made sure the Turkish Empire did not fall to pieces precisely in order to check the potential growth of their competitors. Indeed, since the Congress of Vienna in 1814–15, which had settled Europe’s affairs after the NAPOLEONIC WARS, Austria-Hungary owed its continued status as a great power chiefly to its uncertain symbiosis with the Ottomans. In fact, Bismarck, unwilling to see Russia expand into the Balkans, had declared Austria-Hungary “a European necessity” in light of the Ottoman decline.

But as the various Balkan peoples shucked the cultural and political yoke of Istanbul (or, as they called it, Constantinople), they and their ethnic brethren just over the line in Austria-Hungary clamored for true freedom from Vienna as well, which kept Austria-Hungary in seemingly permanent crisis. If Germany considered the Dual Monarchy a bulwark against czarist ambition and the keystone to Europe’s balance of power, the other players—Britain, France, and Russia—increasingly found the Hapsburgs hopelessly out of step with the times and thought their empire close to moribund. By the time the Berlin agreement ran out in 1907, the Hapsburgs ruled the most despised country in Europe after Turkey, and the Great Powers, now realigned, were no longer willing to carry Austria-Hungary the way they had the declining Ottoman Empire for most of a century.

Meanwhile, after Russia’s embarrassing defeat in the RUSSO-JAPANESE WAR of 1905, Moscow aimed its expansionist ambitions back to the west, and the Great Russian Bear loomed once again over the Balkans. The Turks still controlled Macedonia, but it was ringed by “independent” Greece, Montenegro, Serbia, and Bulgaria, all vulnerable to Russia’s seductive support. Together they would become the Balkan League in 1912, hoping to benefit by the interplay between empires. Serbia posed the biggest threat to

Vienna because it had ethnic ties to Serbs and Croats inside Austria-Hungary. In years past Franz Joseph had bribed Serbia's ruling dynasty to keep its people in line, but in 1903 a bloody coup d'état had brought to power a violently anti-Hapsburg clan, and now Russia was egging on the Balkan League nations it supported to action. Ironically, then, the Balkan League, which would soon attack the Ottomans, was formed originally to limit Austria's increasing power in the region at the expense of Turkey.

Britain and France were disinclined to discourage the czar; they even (if unofficially) sympathized with the nationalist ambitions of Austria-Hungary's ethnic minorities. Heedless of undermining the Hapsburg dynasty, such policies—official *and* unspoken—pushed the emperor and his ministers toward a mortal choice: die fighting or die by slow diplomatic dismemberment, the way Turkish Europe was dying. At the same time Austria's only reliable ally, Germany, had—for internal reasons, and because of the international machinations of Britain, France, and Russia—come to accept the inevitability of war. The “keystone” of Europe's balance of power, which provided the precarious stability that allowed other powers to follow their imperial dreams, was being worked loose. Once Austria-Hungary was in effect yanked out from under the protections of the overall alliance system, the entire diplomatic edifice would collapse. No one in Europe was unaware of what was happening. Even Bismarck had predicted years before that the next war would come because of “some damn fool thing in the Balkans.” Indeed, all the powers had been building up mass armies just in case.

Then, on July 3, 1908, the Ottoman Empire's Third Army Corps in Macedonia launched a revolt against the provincial authorities in Resna that quickly led to rebellion throughout the empire and brought into positions of power and authority the “Young Turks,” European-influenced revolutionaries intent on modernizing Turkey (*see* YOUNG TURKS REVOLT). Although eventually they would succeed internally in reforming the government and fostering Turkish nationalism, their revolt shook the already seriously destabilized Balkans and led directly to WORLD WAR I, during which their ham-handed handling of foreign affairs resulted in the final dissolution of the Ottoman state.

Late in the 19th century, the empire's current ruler, Sultan Abdulhamid II (1842–1918), had revoked the constitution governing its polyglot provinces and unleashed a vicious secret police force. The sultan's state terror horrified the empire's intelligentsia, but it was his massacre of tens of thousands of Armenians in the 1890s (*see* ARMENIAN MASSACRES OF 1894–1897) that made him an international pariah. Beset by a tide of rising nationalism among its subject peoples and Balkan neighbors, twisted hither and yon by the ambitions and demands of the Great Powers, Ottoman rule verged ever closer to total collapse. The Young Turks wanted to save the ailing empire, not destroy it. When young officers from the Third Army

Corps stationed in Macedonia's Salonika (now Thessalonika, Greece), frustrated by irregular pay and rotten equipment, formed the Ottoman Liberty Society and began conspiring with Turkey's exiled intellectuals, the stage was set. First came a series of mutinies, then the uprising in Macedonia. Then the deep-seeded ideological differences among the Young Turks resurfaced, preventing them from taking effective control of the government, and over the next two years the sultan staged a destabilizing counterrevolution. Not until 1913 did the Young Turks set themselves up as the arbiters of Ottoman politics. Meanwhile, the old empire had fallen apart in the Balkans.

Turkish Bulgaria promptly took advantage of the chaos to declare its independence in 1908, and that same year Austria-Hungary quickly annexed Bosnia and Herzegovina. Turkish Crete proclaimed its union with Greece, though threats from Istanbul kept Greece from immediately acting on the declaration. In 1911 Italy invaded and overran Tripoli (today's Libya) in the ITALO-TURKISH WAR. Even while this conflict still raged, the small Christian states of the Balkans—Serbia, Montenegro, Greece, and Bulgaria—formed the Balkan League, ostensibly to check Austro-Hungarian ambitions on the peninsula. Their ambitions stirred by the Italians' successes, they now suddenly attacked European Turkey, with Montenegro first declaring war on Turkey on October 8, 1912, only to be quickly followed by the others. The Young Turks almost immediately came to terms with Italy, but it did not help to prevent the First Balkan War.

COURSE OF THE WAR

Turkish forces in the Balkans included 140,000 troops in Macedonia, Epirus, and Albania, plus about 100,000 in Thrace. The Balkan League mustered 180,000 Bulgarians, 80,000 Serbs, and 50,000 Greeks, all regular army forces. If reserves were mobilized, each nation could double its available forces. Montenegro had a tiny force of 30,000 who, however, were highly capable guerrilla fighters. Potentially, the Ottomans could bring even larger numbers into the fray. However, the Greeks controlled the Aegean, which would effectively block, at least for some time, reinforcement. An even bigger disadvantage for the Turks was the generally poor level of the officer corps. The Ottoman Empire had made extensive use of German military advisers to modernize the imperial armies, but while the German influence was profoundly felt in organization, equipment, and the training of enlisted men, much of the old-line officer corps refused instruction.

The Balkan League allies invaded Turkey's eastern provinces during October 17–20, 1912. General Radko Dimitriev (fl. 1912–17) led three Bulgarian armies into Thrace, advancing on Adrianople. General Radomir Putnik (1847–1917) led three Serbian armies into Turkish provinces from the north while Crown Prince Constantine (1868–1923) led Greek forces from the south. These two forces planned to converge on the Vardar Valley, where,

pincers-fashion, they could close in on Turkish units in the region. Constantine detached a small force to invade Epirus while he led the main army relentlessly into the Vardar Valley. At the Battle of Elasson (October 23, 1912), Constantine defeated the Turks, forcing them to fall back on Monastir. Ideally, Constantine would have given chase and attacked the retreating force from the rear. However, the Bulgarians broke with the agreed-on strategy by sending a division toward Salonika. Constantine realized that the Bulgarians were attempting to grab this region and turned east to intercept their advance. On his way to Salonika, Constantine met heavy Turkish resistance at Venije Vardar during November 2–3. After a fierce battle, which included ancillary Greek losses at Kastoria and Banitsa, Constantine regained the initiative and defeated the Turks on November 5. From Venije Vardar, he continued toward Salonika as remaining Turkish forces in the region withdrew to Yannina.

While the Greeks advanced from the south, the Serbs descended from the north, defeating a small Turkish detachment at Kumanovo on October 24 but encountering stauncher Turkish resistance in the Babuna Pass, near Prilep. Here the Serbs were stalled, but skillful tactical leadership threatened the Turks with double envelopment and forced them to evacuate Skopje and fall back on Monastir.

At Monastir the reinforced Turks, 40,000 strong, offered battle on November 5. A first bold Serbian thrust at the Turks' left in an attempt to gain the high ground exposed the Serbs to a strong counterattack. The Turks rapidly transferred men from the center to reinforce the left for the counterattack; this enabled them to regain the high ground and to inflict heavy casualties on the Serbs, but it so weakened the Turk center that a Serb thrust broke right through. With the Greeks now approaching from the south, Turkish resistance crumbled, and the Battle of Monastir turned disastrous for them. Half the force at Monastir, 20,000 Turks, were killed, wounded, or captured. The remainder retreated in bad order to the fortress at Yannina, where they were instantly laid under siege by the Greeks, who pinned them down until March 3, 1913, when the fortress finally fell. Just four days after the Monastir debacle, on November 9, the 20,000-man Turkish garrison holding Salonika surrendered to the Greek forces about to storm the city. Thus, Constantine was able to beat the Bulgarians to Salonika, occupying this prize just one day in advance of the arrival of the Bulgarian army.

While the Greeks, Serbs, and elements of the Bulgarian forces were operating in Macedonia, the main Bulgarian forces—the First, Second, Third Armies—advanced into Thrace from October 22 to December 3, 1912. In sharp fighting at Seliolu and Kirk Kilissa during October 22–25, Turkish forces under Abdalla Pasha (b. 1860) were defeated but regrouped intact. He established a 35-mile front from Lülé Burgas to Bunar Hisar. While the Bulgarian Second Army laid siege to Adrianople, the First and

Third Armies turned to the east to attack the Turks along the Lülé Burgas–Bunar Hisar line. The Battle of Lülé Burgas began on October 28 with a poorly coordinated Bulgarian attack on the north end of the Turkish line. The Turks readily repulsed this first thrust, but their line was too thin to withstand the attacks that now spread along it. They withdrew to the fortified Chatalja Line, where they concentrated between the Black Sea and the Sea of Marmora to block access to Constantinople. Laying siege to that city, the Bulgarians repeatedly attempted to breach the Chatalja Line but were repulsed during November 17–18 with heavy losses. The two armies were stalemated and stopped fighting on December 3.

Just six weeks earlier, no one could have imagined that by November 3, 1912, Balkan troops would be standing before the walls of Constantinople, or that five days later the Greeks would enter Salonika, or that by the end of November the Serbs would have taken the port of Durazzo on the Adriatic, giving landlocked Serbia a link to the sea. In short, the Turkish army, much to everybody's surprise, virtually collapsed in the face of the invasion. On December 5 the Turkish government begged the Balkan belligerents for an armistice until peace talks could be arranged.

LONDON PEACE CONFERENCE

If the Balkan victory shocked the three Great Powers of central Europe, the Ottoman rout dismayed them. Germany had been husbanding new relations with the Young Turks while it constructed its Berlin-to-Baghdad Railway. Austria, expecting the Turks to make short work of the Serbs, was instead treated to the sight of them triumphant on the Adriatic. The day Serbian troops marched into Durazzo, the Hapsburg emperor mobilized nearly 1 million men and demanded the Balkan state withdraw from the seaport. But Russia endorsed the Balkan League and promised to defend its Turkish conquests. The message was clear: If Austria moved against Serbia, Russia would respond, and a general European war would surely follow. At the same time, Russia was not exactly thrilled by Bulgaria's success, since the czar had always intended that Russian troops should occupy Constantinople, not the Bulgarian army.

Recognizing that the actions of the Balkan League had the potential to badly destabilize an already potentially explosive Europe, England's foreign secretary Sir Edward Grey (1862–1933) sought to contain the conflict by proposing a conference of the Great Powers, who agreed to meet in London beginning on December 10, 1912. Even while Grey set about his mission, Greece and Montenegro, ignoring the armistice, continued to fight. Attended by the belligerents as well as by the Great Powers of western Europe, the London Peace Conference got under way on December 17, 1912, but after less than a month of negotiation, the conference dissolved on January 13, 1913. The armistice, such as it was, remained in force until the January 23 coup d'état at Constantinople. Turkish nationalists

of the Young Turk movement, under the leadership of Enver Bey (1880–1922), overthrew the Ottoman regime and denounced the armistice. Fighting resumed on February 3, but the war continued to go badly for the Turks. The fortress at Yannina fell on March 3, 1913, with the surrender of 30,000 Turkish troops to Crown Prince Constantine. Shortly after this, on March 26, Adrianople fell to a joint Bulgarian-Serb siege. It took the Bulgarian-Serb forces two days to storm the city's defenses, and losses were heavy—9,500 killed or wounded—but they persevered. Shukri Pasha (fl. 1912) surrendered the city's 60,000-man garrison. The following month Serbs came to the assistance of Montenegrin guerrillas who had laid siege to Scutari. The two allies fell to disputing, and the Serbs withdrew on April 16. Despite this, the Turks surrendered to the Montenegrins on April 22.

The Turks returned in haste to the peace table, ready now for the Great Powers to impose a settlement. On May 30, 1913, the Treaty of London was signed, bringing the First Balkan War to an uneasy close. The short treaty, primarily the work of the Great Powers, was subscribed to by the weary belligerents but failed to specify just how the territorial gains would be distributed among the Balkan allies. For certain, Turkey lost all of its European possessions except for the Chatalja and Gallipoli peninsulas, but Montenegro, whose guerrillas had fought hard to gain Scutari, were forced to relinquish this conquest to Albania, which was granted independence, a nation newly created by the Treaty of London. Crete went to Greece, but Macedonia—so said the Great Powers in faraway London—was somehow to be partitioned among the Balkan states. As the members of the Balkan League argued over the division of Macedonia, landlocked Serbia continued to bid for additional territory there, hoping, even in the face of Russian opposition, to hang on to a seaport. Bulgarians squared off against Greeks and Serbs, and Bulgaria, traditionally a bitter rival of Serbia in any case, responded by attacking both it and Greece. It had taken about a month for the Balkan League to crumble and the SECOND BALKAN WAR to begin.

Balkan War, Second (1913)

PRINCIPAL COMBATANTS: Bulgaria vs. Serbia, Greece, Romania, and Turkey

PRINCIPAL THEATER(S): The Balkans

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: As the Great Powers met in London to hammer out the Treaty of London, Bulgaria,

already at odds with the rest of the Balkan League over plans for dismembering Macedonia, attacked former ally Serbia in June 1913, kicking off a second Balkan war.

OUTCOME: Under the peace imposed by the Great Powers, Bulgaria was forced to cede Salonika to Greece, northern Dobruja to Romania, much of Macedonia to Serbia, and most of Thrace back to Turkey. The Ottomans retained Adrianople but lost almost all their holdings in Europe. All this left the Balkans politically unstable.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Greece, 121,544; Bulgaria, unknown; Other combatants, unknown

CASUALTIES: Bulgaria, 20,000; Greece, 2,500; Turkey, 2,000; Romania, 1,500; Serbia, 18,500

TREATIES: Treaty of Bucharest, August 10, 1913; and Treaty of Constantinople, September 29, 1913

The Treaty of London, which concluded the FIRST BALKAN WAR earlier in the year and by which the Balkan League acquired Turkey's Balkan possessions, left questions of just to which victor should go the spoils. While the conference of Great Powers (Britain, France, Germany, Austria-Hungary, and Russia) continued to meet in London to hammer out the remaining problems, Bulgaria precipitously challenged Greek and Serbian claims to Macedonia. On June 29, 1913, scarcely a month after signing the treaty, Bulgaria, swollen with hubris over its earlier conquests from Turkey, attacked its former allies Serbia and Greece, seized Salonika, and crushed the ill-prepared Serbian army. Bulgaria's hasty action backfired, however, when Romania, neutral in the last conflict, fell on the Bulgars' unprotected rear. Romania's army crossed the Danube and threatened Sofia. Meanwhile, Turkey, too, allied with Greece and Serbia against Bulgaria, swiftly recaptured Adrianople on July 10, 1913. When the kaiser backed King Carol I (1881–1914) of Romania and the Russian czar refused to come to the aid of Bulgaria, its own maverick prince Ferdinand (1861–1948) quickly sued for an armistice. The Great Powers once again intervened with a blend of threats, coercion, and compensatory bribes to impose peace in the Treaty of Bucharest.

The treaty, signed on August 10, 1913, compelled Bulgaria to cede Salonika to Greece, northern Dobruja to Romania, and much of Macedonia to Serbia. In a separate 1913 Treaty of Constantinople, Bulgaria returned most of Thrace to Turkey. This time, the Sublime Porte, as the Ottoman government called itself, retained Adrianople, but overall the Ottoman Empire had lost more than 80 percent of its Balkan territory and more than 70 percent of its European population.

Nobody was foolish enough to think matters in the Balkans had been truly settled. Already, the term *Balkanize* had been coined for any collapse into petty factions. For the Great Powers, meeting in London, it did not matter so

much who was stabbing who in the back, or which little country got which piece of real estate. What mattered was that they keep talking until they were sure that small wars would not spread naturally through the entangling alliances into general war. But, as Otto von Bismarck (1815–98), chancellor of Germany, had warned, without the Ottomans to keep in line, the Hapsburgs seemed to have lost their purpose in the European scheme. And since the Great Powers no longer planned to organize the Balkans around the arthritic needs of Austria-Hungary's Dual Monarchy, nobody could seem to agree on the safest way to handle the Turks' former holdings in Europe.

Both Balkan Wars and the long London conference left Hapsburg hopes in tatters, too. What to do about the rise of ethnic nationalism, debated by Austrian statesmen for half a century, was a question they could hardly dodge any longer. Most of Europe's diplomats had come to the opinion that some form of federalism, which allowed for political autonomy, was best, but such measures, even when the Austrians suggested them, had always been vetoed by the Hungarians, who—since the reforms carved up their half of the empire—stood to lose their equal standing in the Dual Monarchy. Conrad Franz (1852–1925), count von Hötzen-dorf, Austria's chief of the general staff, joined the growing chorus in Germany that favored a preventive war. The heir apparent, Francis Ferdinand (1863–1914), archduke of Austria, however, took the longer, more liberal view, saying that he would live and die a federalist, since federalism was the only thing that could save the monarchy.

For the moment, the Great Powers in London congratulated themselves on maintaining peace in a volatile region during precarious times, and 10 days after the signing of the treaty disbanded their conference. But peace was hardly the word for what they had wrought. Although all the Balkan allies—including Bulgaria—had gained territory at the expense of the Ottomans, Bulgaria refused to become reconciled to its defeat, and the other Balkan states, too, remained restless for yet more land. As Croats and Slovenes, who had long been under Austrian Hapsburg rule, eyed the growth of Serbia, they dreamed of joining the Serbs in a union of South Slavs (“Yugoslavia”). Secret societies, many of them workshops for terror, formed in Serbia and began agitation and assassinations across the border. The instability of the Balkans in general was especially dangerous because of the complex alliances with Russia and the powers of central and western Europe. Within a year a Serb national would kill the moderate heir apparent to the Austrian throne, and the world would erupt into WORLD WAR I.

Bannockburn, Campaign of (1314)

PRINCIPAL COMBATANTS: England vs. Scotland

PRINCIPAL THEATER(S): Bannockburn, Scotland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Scottish independence from England, which the Scots fought to secure, the English to deny

OUTCOME: Edward II suffered perhaps the worst defeat in English history, giving Scotland de facto independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Scotland, 8,000; England, 24,000

CASUALTIES: Scotland, fewer than 5,000; England, 15,000 or more

TREATIES: None

Driven by personal ambition, Robert the Bruce (1274–1329) had courted both sides in William Wallace's (c. 1272–1305) revolt (*see* WALLACE'S REVOLT) against Edward I (1239–1307), king of England. Robert had murdered a rival baron while in Edward's employ, then assumed leadership of the rebellion after Wallace had fallen, and had himself crowned king of Scotland at Scone. Forced into exile in Ireland shortly thereafter by Edward's 1306 invasion of Scotland, Bruce returned the following year to launch another revolt (*see* BRUCE'S REVOLT), intending to clear the English out of Scotland for good. The Scots rallied to his cause, and by 1313 only Stirling, Dunbar, and Berwick remained under English control. Bruce laid siege to the English garrison at Stirling Castle in 1313. Edward I had died during the first year of Bruce's revolt, at the very beginning of a new campaign to rid his kingdom again of the troublesome and treacherous Scot, and thereafter his son, Edward II (1284–1327), had abandoned for a number of years his father's fixation on Bruce. Now King Edward II responded differently, assembling a large army, equipping it lavishly, and leading his vastly superior force—he outnumbered Bruce three to one—on a determined march north to Stirling.

Before the English arrived Robert arranged his 8,000 men in a 2,000-foot front outside Stirling at Bannockburn on high ground overlooking a marsh. To his left lay thick woods, to his right a brook. Hiding his left flank among the trees, Bruce had his right flank deployed at a bend in the stream, where the Scots had built defense entrenchments and set numerous booby traps. Edward had no choice but to charge up the hill, crossing the bog to get there. On June 24, 1314, Edward ordered his troops to advance, and the heavily armored knights splashed ahead, sinking into the bog as Scottish spears and arrows showered down on them. Mercilessly cut down, many never cleared the marsh. The English center became so crowded and confused that English archers attempting to shoot

over the melee struck their own troops. Scottish spearmen then drove the archers back.

When Edward attempted a flanking movement through the woods, he was crushed by the Scots' reserve force who then faked a flanking movement of their own. Edward panicked and fled the field, and those left among his troops followed him. The Scots attacked in pursuit down the hill and slaughtered thousands of trapped and retreating Englishmen. In a battle considered by many to be the greatest defeat ever inflicted on the English army, Edward suffered losses of 15,000 or more while the Scots lost less than a third of that total. Although Edward refused to acknowledge Scotland's independence, Bannockburn essentially guaranteed the Scots freedom from the English.

Bannock War (1878–1879)

PRINCIPAL COMBATANTS: Bannocks and Northern Paiute Indians vs. United States

PRINCIPAL THEATER(S): Idaho and Oregon

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Resistance to white incursions and white violations of treaty agreements

OUTCOME: Indians returned to the reservation.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Varied, 200 Indian warriors attacked civilians, May 30–June 8, 1878; at battle of Silver Creek (June 23, 1878), Indians, 450; United States, 1,000 in both battles

CASUALTIES: United States, 9 killed, 24 wounded; Indians, at least 78 killed, 66 wounded, 731 prisoners taken; civilians, 31 killed

TREATIES: None

Buffalo Horn (d. 1878), an important chief among the Bannock of Idaho, had served the U.S. Army as a scout during the NEZ PERCÉ WAR of 1877. Now Buffalo Horn gathered about him a significant following among the Bannocks and their neighbors, the Northern Paiutes (whose own best-known leader was Winnemucca [d. 1882]). The expansion of white settlement was depleting game and even camas roots, a staple food that the Indians dug on Camas Prairie, 90 miles southeast of Boise, Idaho. The right to dig for these roots was guaranteed by a solemn treaty, but settlers' hogs were destroying the roots. The reservation system, inept and corrupt, failed to supply sufficient rations to make up for the shortage of food. Indeed, asked what had caused the Bannock War, one army official replied: "Hunger. Nothing but hunger."

On May 30, 1878, a Bannock shot and wounded two whites. The Bannocks, Shoshonis, and Sheepstealers who lived on the Lemhi Reservation (and who were collectively called the Lemhis) and many of the 600 Bannocks who lived at the Ross Fork, or Fort Hall, Agency in southeastern Idaho submissively reported to their agencies. Buffalo Horn, however, who commanded a following of about 200 warriors, including Northern Paiute and Umatilla in addition to Bannock, launched a raid in southern Idaho, killing 10 whites. The attacks continued until June 8, when civilian volunteers killed Buffalo Horn in a skirmish near Silver City.

Without their leader Buffalo Horn's warriors rode to Steens Mountain, in Oregon, where they found Northern Paiute followers of a militant medicine man named Oytes and a rebellious chief known as Egan, who had led them off the Malheur Reservation on June 5. They made an alliance, pitting about 450 warriors against a slightly larger number of soldiers led by General O. O. Howard (1830–1909).

Howard pursued the Indians vigorously after an attempt at a negotiated settlement failed. He chased the forces of Oytes and Egan off Steens Mountain and, on June 23, engaged them at Silver Creek. After a daylong, indecisive battle, the Indians fled.

Howard mustered an additional 480 troops and resumed the pursuit, seeking to prevent the Bannock-Paiute force from combining with other Indians. From the end of June through the first week of July, the hostiles evaded Howard, laying waste to whatever ranches lay in their path.

On July 8 one of Howard's commanders discovered the Indian position on high bluffs along Birch Creek near Pilot Butte, Idaho. Climbing the steep bluffs, the cavalry attacked, but the Indians were able to make their escape.

After the Battle of Birch Creek, Oytes and Egan moved their followers south, apparently to seek refuge and allies among the Nez Percé. When Howard dispatched troops to block them, they moved north again, toward the Umatillas Reservation. Captain Evan Miles arrived at the reservation on July 12 with infantry, artillery, and cavalry reinforcements. To his relieved surprise, the Umatillas chose not to join forces with the Bannocks and Paiutes but set themselves up only to observe the battle.

The battle began on July 13. By July 15 the Umatilla decided to participate—on the side of the U.S. Army. A party of Umatillas approached the Bannocks and Paiutes on pretense of joining them. They tricked Chief Egan into coming away from his warriors and killed him.

Additional troops arrived, and on July 20 the augmented forces pursued the fleeing Bannock-Paiute band, which now split up into small, disorganized, but highly destructive raiding parties. General Howard divided and fanned out elements of his command along a vast front extending from Nevada to Idaho. The tactic proved successful, and by August the Paiutes began returning to the reservations. On August 12 Oytes himself surrendered. By September most of the Bannocks gave up, fighting a final battle in Wyoming on September 12, 1879.

Like most western Indian wars of this period, the struggle was supremely exhausting yet did not result in heavy casualties. Nine troopers died, 24 were wounded, and at least 78 Indians slain.

Bar Cocheba's Revolt (132–135)

PRINCIPAL COMBATANTS: Jewish rebels vs. Imperial Rome

PRINCIPAL THEATER(S): Judea

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Reacting to the emperor Hadrian's anti-Jewish policies, aimed evidently at suppressing their religion and destroying their temple in Jerusalem, the Jews rose up in anger against the empire.

OUTCOME: The Jews were crushed and scattered throughout the world.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At least 35,000 Romans; unknown number of Jews

CASUALTIES: Unknown number of Romans; 580,000 Jewish dead

TREATIES: None

The Roman emperor Hadrian (76–139) came to power at the height of the empire's great Pax Romana between 1 and 200, and he spent most of his reign traveling to every corner of his empire, which most historians agree he ruled on the whole wisely and well. Concentrating on consolidation and control, Hadrian immediately upon assuming the throne made peace with the Parthians, abandoning Trajan's (53–117) ill-starred conquests east of the Euphrates but holding on to Armenia. Back in Rome, he put down a conspiracy of discontented generals; in Britain he supervised the construction of the great northern wall that today bears his name; and in Mauretania he personally put down an insurrection before hastening east to meet with the Parthian ruler Osroes (c. 130) to avoid threats of a new war.

But for all the subtlety of his foreign policy and the sureness of his military actions, Hadrian blundered in his handling of the Jews of Palestine. There on his tour of the Eastern Empire, the emperor concluded that he needed to

integrate the troublesome Jews more fully into Roman civilization and proscribed circumcision and public instruction in Jewish law, founded a Roman colony in Jerusalem, and erected a shrine to Jupiter Capitolinus, the supreme Roman god, on the ruins of the old Jewish Temple.

The outraged Jews, led by Simon Bar Cocheba (Simeon Bar Kokhba) (d. 135), rebelled in 132. Reputed to be descended from the House of David, this aggressive and hot-tempered leader was hailed by the most respected rabbi in Jerusalem as the Messiah. Bar Cocheba called himself *nasi* ("prince") and issued his own coins whose legend proclaimed "Year 1 of the liberty of Jerusalem." Not surprisingly, members of the fast-growing Jewish sect the Romans called "Christian" refused to join what had turned into a major revolt as the followers of this newest christ stormed Aelia and severely damaged the Egyptian Legion. By the summer of 134, the rebellion had grown serious enough to force Hadrian himself to leave Rome and visit the battlefield. There he summoned the governor of Britain, Sextus Julius Severus (gov. c. 131–134), who arrived with 35,000 men and turned the tide of the war.

The Romans reoccupied Jerusalem, and General Severus steadily wore down the rebels. Vanquishing some 985 Palestinian settlements, he caught up with Bar Cocheba at his stronghold of Bethar, where the rebel messiah was slain defending the town. The rest of the Jewish resistance was easily crushed, and the casualties were truly stunning, even by Roman standards: 580,000 died, not including those who perished of starvation or disease.

As Hadrian now harshly suppressed Judaism altogether, ancient Judaea was desolated, and the Jews as a people were all but destroyed. The Romans barred the remnant Jewish population from Jerusalem, forcing the dispersal of the Jews throughout the world. So costly, however, did Hadrian find the victory that he expressly refused a triumphal entry back in Rome when he reported on the war to the Senate.

Barcelona Radical Uprising (1933)

PRINCIPAL COMBATANTS: Spanish government troops vs. Barcelona republican and Catalan radicals

PRINCIPAL THEATER(S): Barcelona and other major Spanish cities

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Defending the new republic against the reactionary forces of monarchism

OUTCOME: The uprising was suppressed, but the unrest culminated in the Spanish civil war of 1936–1939.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** None

In 1930 the quasi-dictator of Spain, Miguel Primo de Rivera (1870–1930), stepped down and was replaced as premier by the irascible and unpopular army general Dámaso Berenguer (1873–1953). By the end of the year the military garrison at Jaca mutinied and demanded the ouster of Berenguer, the overthrow of the king, Alfonso XIII (1886–1941), and creation of a republic. Although the mutiny of December 12–13, 1930, was quickly suppressed and its leaders executed, revolt ran wild within the Spanish military, and on April 14, 1931, Niceto Alcalá Zamora (1877–1949) successfully led a republican coup against Alfonso XIII, who was, for the most part, peacefully deposed.

By the summer of the following year, Spanish reactionaries revolted against the new republic at Seville. The country rapidly splintered into many sharply opposed parties, right and left. Feeding off the energy of this political situation, the Catalan radicals of Barcelona rose up against the republic.

Since the beginning of the century, Barcelona had emerged as an economic powerhouse on the Iberian Peninsula. This newfound strength and influence reawakened the dormant urge for Catalan self-rule. Indeed, Barcelona had been given semiautonomous status in 1913 and had maintained itself in this way until 1923. In 1931 Barcelona radicals declared a Catalan republic, and, rather than resist, the Spanish government granted the city an even greater degree of self-government. This made Barcelona the de facto focus of the general republican movement in Spain, and on January 8, 1933, republican radicals joined those who advocated complete Catalan independence in an uprising. Inspired by the Barcelona revolt, other cities rose up in support of the new republic and in opposition to the reactionary monarchists and counterrevolutionaries. Government troops were dispatched to Barcelona and elsewhere to restore order.

Unrest continued to ebb and flow in Spain, culminating in the SPANISH CIVIL WAR (1936–1939).

Barons' War (1263–1265)

PRINCIPAL COMBATANTS: English barons under Simon de Montfort and his son vs. King Henry III and his loyalists

PRINCIPAL THEATER(S): Wales and central England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The barons rebelled against Henry III after he abrogated the Magna Carta; they sought to assert their rights and end his misrule.

OUTCOME: Ultimately, the royalists prevailed. However, Prince Edward was elevated to the position of real power behind Henry III's throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the Severn River, barons, 40,000; royalists, 20,000

CASUALTIES: Unknown

TREATIES: None

On June 19, 1215, the English barons compelled King John I (1167–1216) to sign the Magna Carta, establishing the supremacy of law over Crown and, in the process, guaranteeing broad rights to the feudal barons. The following year the inept Henry III (1207–72) ascended the throne and immediately abrogated the Magna Carta by ruling imperiously and capriciously. In response to the king's mismanagement, a group of barons, led by Simon de Montfort (c. 1208–65), earl of Leicester, established a commission of reform in 1259 in an effort to redress the king's errors. Like the king, however, the commission governed poorly. Henry reasserted his royal prerogatives and opposed Montfort's reform party, which prompted Montfort to lead the barons in rebellion.

The first major battle of the rebellion took place at Lewes on May 14, 1264. Montfort laid siege to Rochester when Henry, fresh from having successfully taken Northampton, arrived at the head of a relief column. Montfort, with great tactical skill, fought a cavalry battle that resulted in the decisive defeat of Henry's forces. The only bright spot for the king was the performance of his son, Prince Edward (1239–1307) (who would later rule as Edward I), who managed to drive a portion of the barons' army from the field. Henry, however, was taken prisoner and secured his release only by agreeing to broad concessions that made Simon de Montfort the greatest power in England. Nevertheless, many royalists remained in the field, and Montfort made an alliance with Llywelyn Ap Grufudd (d. 1282), the prince of Wales, to fight them. Montfort enjoyed little success, and on July 8, 1265, Prince Edward led a large army against Montfort at Newport. Outnumbered, Montfort was soundly beaten and quickly retreated to the safety of Wales. Repeatedly he attempted to break out to return to central England, but Edward defended the Severn River, checking each attempt.

In July 1265 Simon de Montfort the younger, son of the rebellious baron, led a large army of 30,000 men out of London to march to his father's relief along the Severn.

Edward, commanding an army of 20,000, was now caught between the armies of Montfort, father and son. Outnumbered two-to-one, Edward made a forced march from Worcester east. This put him in position on August 2 to surprise the army of the younger Montfort at the Battle of Kenilworth. Swift and terrible, the battle nearly wiped out the young rebel's forces. However, Edward's move freed up the army of the senior Montfort, who now crossed the Severn from Wales into England. He pressed swiftly toward Stratford by way of Evesham to join his son. In response to the senior Montfort's break out, Edward drove his thoroughly exhausted army on a night march to the southwest during August 3–4. His object was to trap the senior Montfort before his army of 7,000 could unite with the remainder of his son's forces. Reaching the Stratford-Evesham road at dawn on August 4 with two-thirds of his forces, Edward attacked Montfort, whose army was trapped in a cul-de-sac formed by a bend in the Avon River. Desperate, Montfort charged Edward's center. At the brink of exhaustion, Edward's men nevertheless fought vigorously, virtually wiping out Montfort's army. Among the tactics Edward employed was positioning his forces so that Montfort's men had to approach over a narrow bridge. This slowed their onslaught and made many of them easy targets. Among the slain was Simon de Montfort.

The culmination of a brilliant combination of strategy and tactics, the Battle of Evesham elevated Prince Edward to a position of power behind the throne. From this point forward his father ruled in name only. With the Barons' War effectively over after the Battle of Evesham, Edward's armies mopped up the vestiges of rebellion at the battles of Axholme (1265), Chesterfield (1266), and Ely (1267).

Basque War for Independence (1959–ongoing)

PRINCIPAL COMBATANTS: Basque separatists vs. Spain

PRINCIPAL THEATER(S): Spain

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: People of the Basque regions of Spain desired autonomy from the Spanish government. Spain, on the other hand, wished to keep prosperous industrial and agricultural regions of the Basque provinces within Spanish control.

OUTCOME: In 1980 the Basque provinces received some measure of autonomy, although the reforms did not satisfy the most extreme Basque nationalists, who sought complete independence from Spanish rule.

Including a brutal terrorist campaign that would nearly topple the established government in Madrid, the Basque War highlighted the historical political instability in Spain. Within the Iberian Peninsula there are some regions that cannot be classified as simply Hispanic, chief among them the Moorish descendant states of Valencia, the Catalans in Barcelona, and the seven-province region (four in Spain, three in France) in the western Pyrenees known as the Basque country. In an attempt to promote harmony among the various nationalities and languages that diversify Spanish history, the Bourbon monarchy granted some of the regions limited autonomy in the early 18th century in the form of unique tax structures, separate military arms, and limited local legislative authority.

The regional autonomy, however, did not last. It was revoked in 1876 after the Second CARLIST WAR, in which the Basques and Catalonians threw their support to Don Carlos III (1848–1909), the Carlist pretender to the Spanish throne. After a brutal civil war and a long siege of the Basque stronghold of Pamplona, the Carlist-Basque alliance collapsed, and Don Carlos fled. When the Bourbon monarchy was reestablished, Alfonso XII (1857–85) was not as conciliatory as his ancestors. He revoked the Basque *flueros* or *fors*, the traditional Basque laws, though he allowed the Basques' popular assemblies some small measure of autonomy. In July 1876 the Spanish parliament, the Cortes, codified the centrality of the Spanish government in the Constitution of 1876, thereby ending all hopes of Basque independence under the restored monarchy.

Basque hopes for autonomy were renewed in 1931 when the Bourbon government of Alfonso XIII (1886–1941) was toppled and a provisional republic was declared. Basque hopes were short-lived, however, as the SPANISH CIVIL WAR (1936–1939) broke out and the republic all but collapsed under the unrelenting force of Generalissimo Francisco Franco (1892–1975). In opposition to Franco, the Popular Front Government was established to restore the republic in early September 1936, immediately granting Catalan autonomy, but only doing likewise for the Basques after they pledged support for the republican Loyalists. The Statute of Guernica allowed bilingualism within the region, a local representative body, and local administrative responsibilities, while leaving foreign policy and defense to the national government.

Franco quickly garnered fascist support from Italy and Germany. Italy sent aircraft, ground troops, artillery, and tanks. Adolf Hitler (1889–1945) was delighted to test his burgeoning Nazi war machine, sending Panzer divisions as well as the 6,000 men and 100 planes of the Condor Legion. Against Franco's well-supplied forces, the Loyalists

received support from the Soviet Union and, eventually, from volunteer forces from France, Britain, and the United States.

On April 26, 1937, the Basque market town of Guernica was bombarded by German aircraft—nine waves of them, unloading their destruction in 20-minute intervals. The town of 7,000 had no defenses. By the end of the attack, 70 percent of the town had been destroyed, 1,600 were dead, and another 900 were wounded.

For the following four decades, Guernica became a powerful rallying cry for the Basque people and an inspiration in their quest for a separate nation. For the rest of the world, it signaled a horrifying new era in warfare. The powerful tools of modern warfare hardly distinguished between trained soldier and civilian or between strategic objective and quiet village square. War, in the 20th century, was everywhere.

Franco's war, however, continued, and the Loyalists could not match the generalissimo's firepower. By early spring 1939 the war was over. Franco immediately set up tribunals to search out Loyalists and other possible opponents to his nascent regime. Chief among his targets were the Basques, thousands of whom were executed in the postwar witch hunt. Many Basques fled to Paris, where they kept quiet and kept alive through the Basque Nationalist Party (Partido Nacionalista Vasco, or PNV), an organization founded in 1894 to promote the Basque cause.

At first Franco's policies opposed the renewal of autonomy for the Basque country. He ended all economic privileges, something that had been retained even after the Second Carlist War, and he outlawed the Basque flag and language. By the late 1950s, however, factions of the Basque people again organized to promote separation from Spanish rule.

In 1959 youthful members of the Basque Nationalist Party formed the Basque Homeland and Freedom Party (Euzkadi ta Azkatasuna, or ETA) in frustration over the PNV's unwillingness to engage in armed struggle for the cause of Basque separatism. At first espousing revolutionary socialism as its goal, the ETA allied itself with liberation groups of similar causes and tactics—the Irish Republican Army, Palestinian liberation groups, and the Red Brigade of Italy. The ETA's members trained in South Yemen, Algeria, and Libya, learning the tactics of public sabotage and, later, assassination.

Organized as a network of cells under the control of an eight- to 10-member directorate, the ETA began a systematic campaign of guerrilla terrorism aimed at the Franco regime, particularly wealthy industrialists of the Spanish oligarchy. By the mid-1960s the group had split into two factions: One sought the traditional goal of Basque autonomy, and the more radical faction favored a Marxist-Leninist brand of Basque independence and the use of violent means to achieve its goals. At first the ETA's

targets were regional; its acts of violence, in large part, went unnoticed beyond Spain's borders.

Franco fought back. His regime's retaliation and repression in the Basque provinces were severe. The police arbitrarily used arrests, beatings, and torture to suppress the group. From the ETA's inception in 1959 to Franco's death in 1975, the generalissimo declared a state of military emergency six times in the two most militant Basque provinces. Also during the first years of the ETA's struggle, the majority of political prisoners in Spanish jails were Basques, even though they accounted for about 5 percent of the Spanish population. By 1970 all the leaders of the ETA had been arrested for murder and tried in the city of Burgos. In the eyes of the world, the subsequent execution of five ETA members only enhanced Franco's image as a repressive, brutal ruler.

Still, the ETA's attacks continued. The ETA assassinated Franco's prime minister, Luis Carrero Blanco, in December 1973. Carrero Blanco, a hard-line Francoist, had reveled in the suppression of the Basques, and his assassination threw the Franco government into crisis. Franco, though in bad health, restored order within the government and made way for his succession.

With Franco's death in 1975, Juan Carlos (b. 1938) as king oversaw Spain's peaceful transition to democracy. Juan Carlos, like his predecessor, refused to grant autonomy to the Basques, and the terrorist activities increased in both frequency and ferocity, even as the ETA founded a political wing called "Herri Batasuna" in 1978. In 1979 a bomb was planted at the Madrid airport, killing scores of civilians. Spanish military officers now became targets, too. But 1980 proved even bloodier, ETA's bloodiest to date, with 118 people killed by terrorist attack.

In October 1980 Juan Carlos finally offered a home-rule bill that equalled the 1936 Guernica Statute. The bill was approved by Basque voters but rejected by the ETA, who demanded total independence. The ETA vowed to fight on; in February 1981 the chief engineer of the Lemniz nuclear power plant was kidnapped and subsequently murdered. In response to the murder, government troops were deployed to the region in March, but this only heightened the violence. Moreover, the government received a setback in 1984 when the Spanish courts overruled a plan to ban the ETA.

The ETA became a renegade outfit, now opposed by both the Madrid government and the new Basque government created as a result of the 1980 referendum. Finally bowing to pressure to halt the terrorist activity, the ETA approved a legislative pact in January 1985 between the newly elected president of the Basque Country and the national government granting autonomous authority to the region in exchange for a joint offensive against terrorism. Basque Country was still a part of Spain although it had its own representative body and in some cases existed outside national statutes. Small, hard-core factions of the

ETA continued the violent activity, but the organization became increasingly difficult for the government to deal with; it became so fractured that it was impossible to decide what was a legitimate ETA action and what was a renegade criminal act.

The ETA, however, hardly had a monopoly on criminal acts. The new socialist government of Felipe González (b. 1942) attempted to combat the ETA's violence by setting up antiterrorist "liberation" groups, who were accused of operating as death squads and who were responsible for the murders of 28 suspected ETA members. Nevertheless, secret talks between the ETA and the government were held in 1992 in Algeria but failed to bring an end to the conflict, after which Spain's politics took a turn to the right with the rise of the right-wing opposition Popular Party. Many, especially those in the ETA, saw the party as the political heir of General Franco, and in 1995 the ETA attempted to assassinate its leader, José María Aznar (b. 1953) with a car bomb.

In March 1996 the Popular Party won the general election, and Aznar became prime minister. The crack-down on the ETA many expected from the new government never materialized, but in 1997 the ETA launched a new campaign against local Popular Party politicians, kidnapping and killing young Basque councilor Miguel Angel Blanco (1968–97) in July. The brutal murder sparked national outrage, and some 6 million took to the streets to condemn ETA violence.

Aznar's government then adopted a hard line against the ETA and in December 1997 sentenced all 23 leaders of Herri Batasuna to jail for seven years for collaborating with the terrorist group. The case centered on a video featuring armed and masked ETA guerrillas, which the party tried to show during the general election campaign, and it was the first time any members of the party had been jailed for cooperating with the ETA. As a consequence in February 1998 Herri Batasuna elected a new provisional leadership, and in March 1998 Spain's main political parties engaged in talks to end violence in the Basque region without involving the government. It was just about this time as well that a peace agreement was reached in Northern Ireland and signed in April 1998. Traditionally close to the Irish Republicans, with its political wing, Herri Batasuna, modeled after Sinn Féin and schooled in negotiation by its politicians, the ETA was heavily influenced by the Irish peace process. Thus, when public disapproval was only renewed in June 1998 by the latest car bombing, which killed Popular Party councillor Manuel Zamarreno (1956–98), the ETA changed tactics. In September 1998 it announced its first indefinite cease-fire in its 30-year campaign of violence. Effective from September 18, the cease-fire was intended to set the stage for talks between Herri Batasuna and the Spanish government. In May 1999 there occurred the first meeting between the ETA and the Spanish government in Zurich, Switzerland.

At length, however, the Spanish government dismissed the cease-fire as a stalling tactic to allow the ETA to rebuild in order to return to the armed struggle, and certainly during the truce the ETA did raid several arms depots and munitions factories, although there were no major terror attacks while the cease-fire was in effect. Still, the almost daily attacks in the Basque region itself against property belonging to local politicians or against post office vehicles and banks, which were seen as symbols of Spanish sovereignty, continued unabated regardless of who talked to whom or promised what. By August Prime Minister Aznar was accusing the ETA of being scared of peace and challenging the organization to prove its commitment to ending the violence. Instead, the ETA severed all contact with Madrid and in November 1999 announced an end to its 14-month cease-fire, citing as reasons the lack of progress in the talks with the Spanish government, certain repressive measures taken by that government, and the failure of mainstream Basque nationalists to work together on the creation of an independent Basque state. In both January and February 2000 came the explosion of new car bombs in Madrid and in the Basque capital, Vitoria, their booms heralding a return to the decades-long, violent separatist campaign.

Violence in the form of terror attacks continued in 2001, and Spain was swept by a series of car-bomb attacks during 2002. On March 17, 2003, Spain's Supreme Court upheld a government ruling that outlawed Batasuna as a terrorist organization. Despite the ruling, the Basque situation remained unstable as of 2004. Indeed, the detonation of 10 terrorist bombs in commuter trains and stations in Madrid on March 11, 2004, was widely attributed to Basque separatists of the ETA; subsequent investigation, however, pointed to al-Qaeda terrorists (see UNITED STATES'S WAR ON TERRORISM). As of fall 2004, Madrid and the Basque Autonomous Community government continued to negotiate the nature and degree of Basque autonomy.

Basuto Gun War (1880–1881)

PRINCIPAL COMBATANTS: The Basuto vs. British colonial authorities

PRINCIPAL THEATER(S): Sotho, southern Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Basuto resisted British efforts to disarm them.

OUTCOME: Arbitration called for the Basuto to keep but register their arms and pay an indemnity; the terms of the arbitration seem never to have been carried out or enforced.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** Arbitration agreement, 1881

This brief outburst of violence between the Basuto of Sotho, southern Africa, and the British began when the British attempted to disarm the Basuto in the years following the death of all powerful king Moshoeshe (d. 1870). The Basuto had requested British protection against the Boers (Dutch-descended farmer-colonists in southern Africa), but they found British demands to relinquish all sovereignty and self-direction distasteful. When the Basuto set about arming themselves, the British, wishing to assert control, sent in troops to begin disarming the Basuto. This incited a rebellion. Both sides, however, quickly agreed to accept the arbitration of the British high commissioner, Sir Hercules Robinson (1824–97), who ordered that the Basuto might retain their weapons provided that they license them. He further ordered the Basuto to pay a modest indemnity to the British for harm done in the short-lived rebellion. While the Basuto agreed to accept these terms, the British troops withdrew from Basuto territory, and the provisions of the arbitration were never enforced or carried out.

Basuto War (1858–1868)

PRINCIPAL COMBATANTS: The Basuto vs. Boers of the Orange Free State

PRINCIPAL THEATER(S): Basutoland, South Africa

DECLARATION: King Moshweshwe declared war on Boer settlers in 1858.

MAJOR ISSUES AND OBJECTIVES: Possession of South African territories

OUTCOME: To prevent Boer expansion, Great Britain annexed Basutoland to its South African colony.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** Treaty of Thaba Bosiu (1866)

In 1854 the British government recognized the Boers, descendants of the original Dutch colonists in South Africa (“Boer” is Dutch for “farmer”) of the Vaal-Orange River area as an independent state, which later became

known as the Orange Free State. Once independent of the British Empire's officially more moderate policy toward indigenous Africans, the Boers—slaveholders who considered themselves native to the subcontinent—were free to express even more openly their traditional hostility toward blacks. They launched a series of range wars against local tribes.

The territory of Basutoland (present-day Lesotho), ruled by King Moshweshwe (c. 1786–1870), stoutly resisted Boer expansion, and in 1858 Moshweshwe declared war on the settlers. The Basutos initially were successful in defending their land, but by 1865 the increasing number of Boer settlements in the Orange River basin provoked new hostilities. This time the Boers gained the advantage and annexed large portions of Basutoland.

Moshweshwe appealed to the British, who arranged mediation talks that resulted in the 1866 Treaty of Thaba Bosiu, a treaty much favoring the Boers. The discovery of diamonds and gold the following year in South Africa touched off a frenzy of colonial activity, which hardened British anti-Boer sentiments. On the brink of extinction as a tribal “nation” by 1867, Basutoland made one last appeal to the British, who this time took action on their behalf by cutting off key ammunition routes to the Boers. With a typical lack of finesse, the empire provocatively annexed Basutoland for itself in the name of protecting black Africans and checking Boer excesses, thus setting the stage for the Transvaal Revolt, sometimes called the First BOER WAR.

Batavian Revolt (69–71)

PRINCIPAL COMBATANTS: Rebel Roman legions in Batavia and Gaul vs. the Roman Empire

PRINCIPAL THEATER(S): The Rhine River valley

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Independence of Gaul and the German provinces in the Rhine River valley, spurred by the political chaos created when four rival generals sought to claim the throne of the Roman Empire following Nero's suicide.

OUTCOME: Vespasian became emperor, crushed the revolt, and disbanded the rebel legions.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** None

Following the death of the Roman emperor Nero (37–68), there ensued a mad power struggle among Servius Sulpicius Galba (3 B.C.E.–69 C.E.), legate in Spain, who was declared emperor by his troops and who was also so

acclaimed by the Roman Senate after he had been recognized by the emperor's elite bodyguard, the Praetorian Guard; Marius Salvius Otho (32–69), legate in Portugal (then called Lusitania), who had Galba murdered by the Praetorians after they had switched their allegiance to him; Aulus Vitellius (15–69), legate of Lower Germany, who also had been proclaimed emperor by his legions and who marched to Rome to defeat and kill Otho; and Titus Flavius Vespasian (9–79), a competent commander in Judaea, who had been proclaimed emperor by his troops as well and who had the backing of the legates in Syria and Egypt. As Vitellius and Vespasian vied for support throughout the empire, the power struggle upset the delicate imperial balance in the Rhine River valley and in the province of Gaul, where Rome had always moved cautiously to make sure that more than a mere river kept the Gauls from joining their tribal cousins the Germans on the opposite shore.

On the Lower Rhine the Batavians had been loosely confederated with Rome in its campaigns against other German tribes and had provided soldiers for the auxiliary. The Batavian auxiliary legion was commanded by Claudius Civilis (d. 71), who was ordered by Vespasian's chief supporter, Antonius Primus (fl. 60), to detain any forces being sent to Vitellius in Italy, where a civil war between the two generals had broken out (*see* ROMAN CIVIL WAR [68–69 C.E.]). Civilis followed his orders, hoping to assert Batavian and Gallic independence in the process. He quickly overwhelmed the small garrison in the area and garnered support from the other Batavian legions as well as several German tribes. His hopes of mounting a joint Gallic-Batavian insurrection were quickly squelched when his envoys to Gaul were not well received. In fact, Roman reinforcements were already on their way to Gaul, determined to prevent Civilis from subverting the Gallic tribes to his—or, as they thought, Vespasian's—cause.

Civilis moved to attack legion headquarters in *Castra Vetera* at the mouth of the Lippe River. After an unsuccessful attempt to storm the camp, the rebels resorted to a siege. *Vetera* was saved only when Vitellius's reinforcement garrison arrived in early 70 to relieve the besieged camp. By then, however, back in Italy Vitellius himself had been defeated. When Vespasian was crowned emperor, Civilis's ruse of fighting to support Vespasian came to an end. Although *Vetera* had been saved, the rebels were as strong as ever. The majority of the reserve troops at *Vetera* were sent out to pursue Civilis. By mid 70 the revolt had spread to Upper Germany, and Mainz was besieged. Again a reserve force relieved the city, but again it was unable to weaken the rebels. Given the initial successes of the rebellion and the strength of the rebel army, many of the Gallic tribes now rushed to join the insurrection.

Swelled by the new recruits, the rebel army again laid siege to *Vetera*. This time the rebels overran the garrison, massacring the inhabitants and burning the fortress to the ground. It would prove to be the high-water mark of the

rebellion. Tribal rivalries on both sides of the river soon caused any goodwill created by shared triumphs to disintegrate. Vespasian dispatched Quintus Petillius Cerialis (governor of Roman Britain, 71–74) to deal with the insurrection, and he met Civilis's forces at Treves in 71. Cerialis smashed the rebellion and immediately put Civilis to death, then disbanded the four legions that had taken up arms against Rome.

Batetelan Uprisings (1895–1900)

PRINCIPAL COMBATANTS: Batetelan rebels vs. Congo Free State

PRINCIPAL THEATER(S): Eastern Congo (Democratic Republic of the Congo)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Batetelas rose up against the incredibly harsh treatment given them by the minions of King Leopold II.

OUTCOME: The Batetelas were crushed, but Leopold's nearly genocidal cruelty in the Congo was exposed, which eventually led to his loss of the area as a royal preserve.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In the latter half of the 19th century, the European powers launched a bargain-basement rush on what they collectively called the “Dark Continent,” each trying to carve out a colonial parcel of Africa for its own exploitation and profit. In Equatorial Africa's Congo region (modern-day Democratic Republic of the Congo), the Belgians quickly came to dominate, chiefly because the Belgian king, Leopold II (1835–1909), took a deep personal interest in the area. In 1876 he founded the Association Internationale du Congo to explore the Congo River and its surroundings, with Sir Henry Morton Stanley (1841–1904) as his main agent. When Anglo-Portuguese forces arrived in the Congo basin in 1884 to lay claim to all they could, Leopold defeated their attempts at conquest and gained recognition by the United States and the leading European powers as the sovereign of the *État Indépendent du Congo* (Congo Free State) in 1885.

Wild rubber, the Congo's major cash crop, came especially into demand after 1891, giving birth to the region's chief extractive industry. By then it was abundantly clear that King Leopold considered the vast area—80 times the size of Belgium—his personal property. His minions soon had a reputation among the native peoples of East and Central Africa as especially cruel, even bloodthirsty, taskmasters. In 1895 the Batetelas, one of the more combative

of the warlike tribes of the Congo basin, rose up against the greedy and grim Belgian imperialists. Leopold, even as he basked in the European spotlight for his humanitarian efforts on the “Dark Continent,” brutally crushed the uprising. Two years later the determined Batetelas struck again, this time taking control of a large span of the eastern Congo. For three years they fought off the Belgians, whose forces were commanded by Baron François Dhanis (1861–1909). Eventually Leopold’s colonial army prevailed, however, killing off the more stubborn Batetela leadership and brutally subjugating the remaining population. But the damage was done. In 1904 international exposure of Leopold’s mistreatment of Africans—some estimates put the genocidal slaughter at 11 million—especially in the rubber industry, marked the onset of the decline of Leopold’s personal rule. Great Britain, with backing from the United States, pressured Belgium to annex the Congo Free State to redress the “rubber atrocities,” and it did so by parliamentary act in 1908, thus forming the Belgian Congo.

Bavarian Succession, War of the (1778–1779)

PRINCIPAL COMBATANTS: Prussia vs. Austria

PRINCIPAL THEATER(S): Bohemia

DECLARATION: Prussia declared war on Austria, 1778.

MAJOR ISSUES AND OBJECTIVES: Prussia invaded Bohemia to prevent Austria from gaining a part of Bavaria in a dispute over succession to the Bavarian throne.

OUTCOME: By treaty Prussia gained the Franconian principalities of Bavaria, while Austria retained a portion of Lower Bavaria; Charles Theodore was confirmed as elector of Bavaria.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Austria, 128,000; Prussia 152,000

CASUALTIES: Austria, 3,265 killed, wounded, or taken prisoner; Prussia, 3,431 killed, wounded, or taken prisoner

TREATIES: Treaty of Teschen, May 13, 1779

Derisively called the “Potato War” because it was more memorable for the sight of poorly supplied and underfed soldiers foraging for food than for any battle, this compar-

atively minor conflict between Austria and Prussia was the result of Prussian king Frederick II the Great’s (1712–86) desire to prevent Austria from gaining a part of Bavaria. When Bavarian elector Maximilian III Joseph (1727–77) died without an heir, rule over the Bavarian duchy passed to the Palatinate elector, Charles Theodore (1724–99). He in turn agreed to cede Lower Bavaria to Austria. Frederick II the Great sought to block this cession by invading Hapsburg Bohemia in 1778. Yet the war that resulted produced almost no military contact between the belligerents thanks to Austria’s Maria Theresa (1717–80), who approached Frederick II directly and persuaded him to conclude the Treaty of Teschen between Austria and Prussia. The treaty awarded Prussia the Franconian principalities of Bavaria, while Austria retained a portion of Lower Bavaria, both relatively minor territorial adjustments. The treaty settled the underlying question of the Bavarian succession by confirming the sovereignty of Charles Theodore.

Bavarian War (War of the Landshut Succession) (1503–1504)

PRINCIPAL COMBATANTS: The Palatine under Rupert vs. the Holy Roman Empire and Wittelsbach family allies

PRINCIPAL THEATER(S): Bavaria

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: The death of the baron of Bavaria-Landshut precipitated a struggle between his son-in-law, Rupert (also son of the elector of Palatine), and other members of the baron’s family allied with Maximilian I of the Holy Roman Empire for control of the baron’s lands.

OUTCOME: The death of Rupert and his wife ended the fighting; the lands in contest were amicably divided among the Holy Roman Empire, the Palatine, and the duke of Bavaria-Munich.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Totals unknown; 18 defenders of Kufstein were executed by imperial forces.

TREATIES: None

For centuries Bavarian lands had been divided among the ruling Wittelsbach family as three separate duchies, connected by alliances and family relationships. With the death of George the Rich, baron of Bavaria-Landshut, on December 1, 1503, the baron’s lands came into dispute.

Prior to his death, George had made a succession agreement with his two cousins, Dukes Albert (1467–1508) and Wolfgang (b. c. 1482) of Bavaria-Munich, assuring them control of the Landshut holdings after his death. However, when his will was read, it became apparent that George had bequeathed his territory to his daughter Elizabeth (1478–1504) and her husband, Rupert (d. 1504), son of the elector of neighboring Palatine.

In league with Albert and Wolfgang, Holy Roman Emperor Maximilian I (1459–1519) presided over an imperial hearing at Augsburg to determine the legitimacy of each side's claims. Finding fault with both claims, Maximilian proposed the partitioning of the Landshut lands. Before his ruling could be implemented, however, young Rupert seized the town of Landshut and attempted to negate the partitioning order. Maximilian, faced with a direct challenge to his authority, swiftly decreed Rupert banned from the empire on April 23, 1504, and called for imperial forces to defeat the rebel. The Swabian League and other traditional enemies of the Palatine quickly heeded the emperor's call and went to war, devastating southern Germany. Through skillful diplomatic maneuvering Maximilian was able to isolate the Palatine by keeping France out of the fray.

The superior imperial forces proved too much for Rupert, and by the fall of 1504 the rebel forces found themselves on the brink of disaster. At the Battle of Regensburg on September 12 Rupert, commanding mostly Bohemian mercenaries, was heavily defeated. After Regensburg only Kufstein held out for Rupert, and Maximilian quickly laid siege to the town. After three weeks the town surrendered, and 18 defenders, including the garrison commander, were executed.

Victory was complete for Maximilian when both Rupert and Elizabeth suddenly died in late 1504, leaving nearly everyone happy. The emperor now had control of the region around his dominions in Tirol, the elector of the Palatine was content with the portions he received, and Albert and Wolfgang, with their portions, were able to unite almost all of Bavaria.

Bay of Islands War (First Maori War, Hone Heke's War) (1844–1847)

PRINCIPAL COMBATANTS: Maori peoples of New Zealand vs. British settlers

PRINCIPAL THEATER(S): North Island, New Zealand

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Maori, resentful of Europeans' encroachments on their lands, the subjugation of their chiefs to British authority, and the ill effects of British settlement upon their culture, attacked a British garrison on North Island.

OUTCOME: Fighting ended with the defeat of the Maori warriors, and peace continued for most of the following 15 years.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Maori, 700 warriors; Britain, 1,500

CASUALTIES: Maori, 260; British, 57

TREATIES: None

Since Captain James Cook's (1728–79) explorations of New Zealand in 1769–70, European whalers, sealers, and traders insinuated a capitalist system that tied New Zealand's inhabitants to Europe's economy. Soon settlers followed sailors and traders, and they brought with them a hunger for native Maori lands. Britain annexed New Zealand in 1838 and established means, initially acceptable to the Maori, for European land purchases in exchange for Maori protection. But by means legal and not, the Europeans, too quickly to suit the Maori, appropriated lands and thus threatened Maori culture. The tension between New Zealanders and Europeans exploded into the WAIRAU AFFRAY in 1843 over contested land purchases illegally made by the New Zealand Land Company. A settlement favorable to the Maori satisfied them but did not solve the ongoing contest for land.

A local Maori chief, Hone Heke (dates unknown), marched on the British garrison of Russell, or Kororareka, on July 8, 1844, and cut down the British flagpole, a symbolic act of his resentment toward the European presence. The following January he did it twice more. The British had had enough and, after re-erecting the pole, built a blockhouse around it. Undaunted, Hone Heke, with another chief, Kawiti, and 700 warriors, marched on Kororareka on March 11, seizing the blockhouse and cutting the pole down for the fourth time. The chief was not finished. The Maori warriors then advanced on the town and sacked it, forcing both the townspeople and the undermanned garrison to flee.

The governor general, Captain Robert FitzRoy (1805–65), ordered a punitive expedition into the field against the rebels, but Heke and Kawiti quickly annihilated the force in two short engagements. FitzRoy was recalled and replaced by Captain George Grey (1812–98). Grey quickly sent a large force into the field and attacked the heart of traditional Maori warfare, the *pa*. A *pa* is the base of operations for Maori warfare both spiritually and tactically. It is also a fortification. The force first attacked Kawiti's *pa* in January and defeated it without much struggle. Grey's troops then attacked Hone Heke's *pa* at

Ruapekapeka on January 11, 1846, and quickly overran it. Heke did not acknowledge defeat but vowed not to take the field against the British again. Although indiscriminate skirmishes continued for the next year, the fighting was essentially over, but the land disputes would resume with a vengeance in the FIRST TARANAKI WAR (Second Maori War) of 1860.

Bay of Pigs Invasion (1961)

PRINCIPAL COMBATANTS: CIA-backed anti-Castro guerrillas vs. Cuban government forces

PRINCIPAL THEATER(S): Bay of Pigs, southern Cuba

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A CIA-backed attempt to topple the communist regime of Fidel Castro

OUTCOME: The invasion failed completely—a humiliating defeat for the administration of President John F. Kennedy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Anti-Castro Cuban exile invaders, 1,500; far outnumbered by Cuban defense forces

CASUALTIES: Invaders, 150 killed, 1,250 captured; Cuba, 54 killed

TREATIES: None

The United States supported Fulgencio Batista y Zaldívar (1901–13) since he had come to power as Cuban dictator in 1952. Batista, however, was corrupt and repressive, and very soon a revolutionary movement crystallized under Fidel Castro (b. 1926/27) and other leaders. In 1959 Castro led a successful rebellion against Batista and became the new premier of Cuba. He was at first cordial to the United States, but, beginning in 1960, he aligned Cuba increasingly with the Soviet Union and seized American oil refineries, sugar mills, and electric utilities on the island.

As early as 1959, when Castro became premier, the U.S. Central Intelligence Agency (CIA) began planning an invasion near Guantánamo Bay, the U.S. naval and marine base in southern Cuba, at a place called the Bay of Pigs. Although planning began during the administration of Dwight D. Eisenhower (1890–1969), the invasion stepped off on April 15, 1961, with the bombing of Cuba by what appeared to be defecting Cuban air force pilots (they were, in fact, exiles supported by the CIA). This was during the early months of the new administration of John F. Kennedy (1917–63). Three Cuban military bases were bombed, and

the airfields at Camp Libertad and San Antonio de los Baños and Antonio Maceo airport at Santiago de Cuba were fired upon. (Seven people were killed at Libertad and 47 elsewhere.) Two of the B-26 bombers involved in the attack flew to Miami, apparently to defect to the United States.

The invasion proper began at 2 A.M. on April 17 at the Bay of Pigs. Two battalions came ashore but soon found themselves bogged down in a swampy marsh. For their part, Cuban forces were quick to react. Castro's air force was small, but he ordered it into action against the slow-moving, bogged-down invaders and their command and control ship and supply vessel offshore. Both ships, the command vessel *Mariposa* and the supply ship *Houston*, were attacked. *Mariposa* was sunk and *Houston* beached. The loss of these vessels destroyed the coordination as well as the logistics of the invading forces. The invaders were cut off.

On April 18 Castro's air force shot down 10 of the 12 aircraft of the invaders, and over the next 72 hours Cuban ground forces pounded the 1,500 men of the invasion forces using howitzer, cannons, and tank fire. Ultimately surrounded, the invaders began to surrender. Some fled into the hills. The death toll among the invaders was 114; 36 subsequently died in Cuban prisons. Some other prisoners were incarcerated for up to 20 years. Many of the surviving invaders were released during 1962–65 after private donors paid what amounted to a ransom of \$53 million in food and medicines for Cuba.

Bear Flag Rebellion (1846)

PRINCIPAL COMBATANTS: American settlers vs. Mexican Californians (Californios)

PRINCIPAL THEATER(S): California

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: American adventurers in California, seeking to take advantage of the deteriorating relations between Mexico and the United States and fearful of repression from California's Mexican authorities, launched a revolt.

OUTCOME: The Americans proclaimed the independent "Bear Flag" Republic; shortly afterward American forces arrived to claim the territory for the United States.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

United States, 2,858 troops plus 5 ships; Californios, 500

CASUALTIES: United States, 59 killed or wounded; Californios, 44 killed or wounded

TREATIES: American sovereignty was recognized under the Treaty of Cahuenga signed on January 13, 1847; California was ceded to the United States under the Treaty of Guadalupe Hidalgo signed on February 2, 1848.

U.S. president James K. Polk (1795–1849), owed his election in 1844 to the powerful and growing expansionist lobby in the Democratic Party, and he would never forget it. Thus, Polk is often depicted as a war-mongering imperialist who in 1846 provoked the UNITED STATES–MEXICAN WAR in order to grab the American Southwest and California from a poor and overmatched neighbor. Expansionist he certainly was, and that war he would surely fight, but he negotiated his way into control over the Pacific Northwest territories of present-day Oregon and Washington, and when he wanted California, he was willing first to make a cash offer: \$40 million.

He sent John Slidell (1793–1871) to Mexico to negotiate the purchase, but Mexican president José Joaquín Herrera (1792–1854)—like most Mexican leaders, determined to keep the United States out of his country—refused to see the envoy. Thereupon Polk commissioned the U.S. consul at Monterey, Thomas O. Larkin (1802–58), to organize, albeit quietly, into a separatist movement sympathetic to annexation, à la Texas (see TEXAN WAR OF INDEPENDENCE). Larkin might have succeeded in this had Polk given him sufficient time, but the president had heard rumors that the British vice consul in San Francisco was successfully wooing Southern California's governor, Pío Pico (1801–94), over to the notion of a British protectorate, and Polk, who always played his hand close to his chest, grew impatient.

Meanwhile, John Charles Frémont (1813–90), the western explorer and adventurer who was just then busy surveying potential transcontinental railroad routes for the U.S. Bureau of Topographical Engineers, happened to camp with 60 armed men near the fort John A. Sutter had built in what one day would be the city of Sacramento. Their presence sufficiently disturbed José Castro (1810–60), governor of Northern California, that he ordered them to leave the province. Frémont responded by moving his men to a hilltop, Hawk's Peak, and raising the Stars and Stripes. Before Castro could dispatch a military force to counter this act of defiance, Thomas Larkin intervened and defused the situation. Frémont and his band retired to the lower Sacramento Valley and then started for Oregon.

En route they were met by a messenger, Lieutenant Archibald Gillespie (1812–73), who brought letters from Frémont's father-in-law, U.S. senator from Missouri Thomas Hart Benton (1782–1858), as well as news that war between the United States and Mexico was imminent, that the U.S. warship *Portsmouth* was anchored in San Francisco Bay, that the rest of the Pacific fleet was anchored off Mazatlán, primed for attack, and that U.S. and Mexican troops faced each other across the Texas border. According to Frémont's later account, Gillespie delivered one addi-

tional item: secret orders from Polk authorizing him to take action to bring about rebellion in California.

Most historians do not believe Frémont. He turned back to California, they say, on his own, and on his own he assumed command of the Bear Flag Revolt.

Frémont's camp was set up close to the American settlements near Sutter's Fort. Many of the settlers, fired up by rumors of an impending Mexican attack, gathered at the camp for protection and to formulate a plan of action. But settlers were not the only Anglos attracted to Frémont's enclave. A motley crew of hunters, trappers, and ship-jumping sailors, all under the loose leadership of one Ezekiel Merritt, came to Frémont with rumors that a herd of horses was being driven to the Mexican militia for use in a campaign against the settlers.

With Frémont's blessing Merritt and his crew intercepted the horses and diverted them to the Anglo camp. Having committed this act, Merritt anticipated Mexican reprisals and therefore determined to continue the offensive. In company with another Anglo-Californian leader, William B. Ide (1796–1852), Merritt took 30 followers to Sonoma on June 14, 1846, intent on capturing this, the chief settlement in the area. The party surrounded the home of Mariano G. Vallejo (1808–90), a retired Mexican army colonel and the town's leading citizen, and informed him that he was a prisoner of war. The colonel was, in fact, a staunch supporter of annexation to the United States, and his reaction to "capture" was to invite three of Merritt's party inside to negotiate "surrender" terms while the remainder of the band was provided with breakfast in the form of a freshly killed bull.

When the three negotiators failed after some time to emerge from the house, another man was sent in. He, too, disappeared. At this point, Ide ventured inside himself—and found the original three negotiators snoring in a drunken stupor while the fourth struggled with consciousness and the unfinished instrument of surrender. Yet the die was cast. Ide completed the surrender document, which Vallejo signed, after which he was sent to Fort Sutter, the rebellion's first prisoner. In Sonoma 25 men remained as a garrison, Ide's followers named him president of the California Republic, and a flag emblazoned with the image of a grizzly bear was raised over the town plaza on June 15.

On June 24, in an engagement known as the Battle of Olompali, Ide drove off the small force Governor Castro had mounted against the Bear Flaggers. Two American lives were lost. Meanwhile, by receiving Vallejo as a prisoner, Frémont had dropped any pretense of neutrality in the California rebellion. On June 25 he marched his small force into Sonoma, high handedly and summarily took over command from Ide, and set out with 134 men to avenge the two deaths suffered at Olompali. Three Mexicans encountered along Frémont's march south were made to expiate the American casualties, while the body of Castro's army simply fled before Frémont's approach. On July 1 Frémont captured the Presidio at San Francisco, an easy victory in as

much as the fortress had been without garrison for many years. He took the precaution of spiking a Spanish cannon there—but, then, it had not been fired in half a century.

Two weeks later, on July 7, 1846, an American squadron under Commodore John D. Sloat (1781–1867) landed at Monterey, California's capital, took the harbor and the town without firing a shot, hoisted the Stars and Stripes, and proclaimed California American territory: The Bear Flag Rebellion had just been superseded by the United States–Mexican War. When General Stephen W. Kearny (1794–1848) arrived, he discovered California already under U.S. control. Sloat retired from the U.S. Navy and was replaced by Commodore Robert F. Stockton (1795–1866); he and Frémont were very much in charge of the situation. Kearny vied for command with Stockton, and Frémont backed the commodore while the U.S. government stood by the general. As a result Frémont was afterward court-martialed for insubordination, but meanwhile he was in charge of defending Northern California. Lieutenant Archibald Gillespie, with a force of 50, saw to Southern California.

In the fall of 1846, there was an insurgency against the American occupation by some poorer Californios and Mexicanized Indians, many of them *vaqueros*, or Mexican “cowboys,” led by José María Flores, who chased Gillespie north to Monterey and retook Santa Barbara, Los Angeles, and San Diego. In December, 80 of them defeated Kearny's force of 100 dragoons reinforced by 38 of Gillespie's troopers at San Pasqual. At that point Commodore Stockton intervened, landing 400 of his sailors at San Diego and retaking Los Angeles, where he was joined by another 400 or so reinforcements from Frémont.

The Americans treated the insurgents generously under the Treaty of Cahuenga, and resistance to American sovereignty disappeared. California was formally ceded by Mexico in 1848 as part of the United States–Mexican War's peace settlement. That same year the world was to receive the news that gold had been discovered near Sutter's Fort on the American River, which kicked off a gold rush that populated the new territory with Anglos more quickly than anyone had imagined and greatly exacerbated the regional conflicts that were already threatening to tear the American union apart.

Bear River Campaign (Shoshoni War) (1863)

PRINCIPAL COMBATANTS: Shoshoni Indians and allied tribes vs. United States

PRINCIPAL THEATER(S): Utah

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Taking advantage of the U.S. Army's manpower shortage during the Civil War, the Shoshoni and others raided emigrant and mail trains; the U.S. Army fought to contain the raids.

OUTCOME: Inconclusive; though the United States enjoyed a few victories in battle, the army failed to contain the Indian raids.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: United States, 300; Indians, 300

CASUALTIES: Indians, 224 killed, 160 women and children captured; United States, 14 killed, 49 wounded

TREATIES: “Treaty of Peace and Friendship,” October 1, 1863

During the Civil War the United States was faced with a number of campaigns against Native Americans at the very time it was fighting disunion. The Minnesota (Santee) Sioux outbreak (*see* UNITED STATES–SIOUX WAR [1862–1864]), in which the major actions were quickly resolved and which was far away from the battlefields of the War between the States, was less serious than the NAVAJO WAR of 1861–63 and the APACHE UPRISING of 1861–63, both of which involved more extensive raiding on the part of the Indians in the areas where Yankees and Rebels were themselves fighting (*see* UNITED STATES CIVIL WAR: TRANS-MISSISSIPPI THEATER). The major problem was really one of manpower: The outbreak of civil war drained the army of the West, especially of its officers. One-third of the army's officer corps, 313 men, left primarily western commands to take up arms on the side of the Confederacy. Most of the western tribes were aware that the whites were fighting each other, and many were encouraged if not to launch major resistance efforts, as the Santee, Navajo, and Apache did, then at least to step up their raiding of Anglo-American settlements. The American Civil War, in short, seemed to the Indians to increase the odds in their favor.

By 1863 the Shoshoni and Ute Indians of the Great Basin were routinely attacking immigrant and mail routes west and south of Fort Laramie, Wyoming. Brigadier General James Craig (1817–88), operating out of Fort Laramie and Fort Halleck, had fewer than 500 troops to patrol thousands of miles of trail. Fortunately for him, Colonel (later Brigadier General) Patrick Connor's (1820–91) California troops—the 3rd California Infantry and a portion of the 2nd California Cavalry, a total of 1,000 men—had arrived to garrison the forts of Utah and Nevada late in 1862.

In Utah the Shoshoni, Bannocks, and Utes were hitting the mail and telegraph route as well as killing prospectors on their way to the Montana mines. In January 1863 Connor took 300 men, chiefly cavalry, from Fort Douglas, Utah, and set out after the Shoshoni chief Bear Hunter (d. 1863). Connor's command reached Bear Hunter's village on the Bear River, near present-day Preston, Idaho, on January 27. There they confronted about 300 warriors, who hand-

ily repulsed an initial frontal attack that was led by one of Connor's subordinates. After this defeat Connor took command of a flanking attack, by which he managed to trap Bear Hunter and his warriors, catching them in a murderous crossfire. A total of 224 Shoshonis, including Bear Hunter, lay dead the next morning, 160 women and children were taken prisoner, and substantial stores were destroyed. A total of 14 of Connor's men had been killed and 49 wounded. The battle was the principal encounter and climax of the Bear River Campaign and prompted most of the Shoshonis and Bannocks to seek peace.

It did not necessarily do much to stop the Indian raiding, however. Connor also dealt harshly with the Utes and Gosiutes, who harassed travelers between Salt Lake City and Fort Ruby. During the summer and fall of 1863, Connor and superintendent of Indian Affairs James D. Doty (1799–1865) concluded a number of treaties with the Indians of Utah. During this period, too, Major Charles McDermit (d. 1880) had his hands full patrolling Paiute country in Nevada. Farther north, in Washington and Oregon, the Nez Percé signed a treaty in June 1863 and withdrew to their reservation, while the Western Shoshoni continued to harass immigrants plying the Oregon Trail through southern Idaho. Colonel Reuben F. Maury led elements of the 1st Oregon Cavalry in patrols aimed at keeping the trail open. Maury's patrols, together with operations by the 1st Washington Territorial Infantry, mainly succeeded in policing the Western Shoshonis. The Northern Paiutes, better known as the Snakes, were less easy to deal with. They rarely offered full-scale, formal resistance, and their raiding parties were so small and so perfectly on the alert that pursuit was often useless. The 1st Oregon Cavalry and elements of Colonel McDermit's command pursued the Snakes nonetheless, but to little avail. It would not be until the end of the Civil War, when the United States again turned its eyes toward westward expansion and the U.S. Army became once more mainly a frontier force, that a more concentrated period of warfare against the Indians would commence (see SNAKE WAR). Nevertheless, the temporary advantage enjoyed by the Indian guerrillas frustrated the authorities.

Utley, *Frontiersmen in Blue: The U.S. Army and the Indian, 1848–65* (New York: Macmillan, 1967); Paul J. Wellman, *The Indian Wars of the West* (Garden City, N.Y.: Doubleday, 1934).

Béarnese Revolt, First (1621–1622)

PRINCIPAL COMBATANTS: The French Crown vs. the Huguenots

PRINCIPAL THEATER(S): Southwestern France

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: For the Huguenots, freedom of religion and their military and political autonomy; for the French Crown, the reestablishment of Catholicism as the state religion and the reclamation of property and land previously lost to the Huguenots
OUTCOME: The Huguenots lost most of the strongholds granted them under the Edict of Nantes but retained control of the port city of La Rochelle, while France itself witnessed the rise to power of Cardinal Richelieu.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: The Peace of Montpellier, October 1622

With the enactment of the Edict of Nantes in 1598, which granted limited religious freedom to French Protestants (known as Huguenots) following the Ninth War of Religion (see RELIGION, NINTH WAR OF), Henry IV (1553–1610)—himself a former Protestant—had hoped to put an end to the destructiveness of religious unrest in France. However, his son and heir, Louis XIII (1601–43), proved not so tolerant. Attempting to reestablish Catholic dominance over the Huguenots and to reclaim property and land his father had lost to them, Louis promulgated the Union of Béarn and Navarre in 1620, which essentially revoked any privileges the Huguenots enjoyed under the Edict of Nantes.

Mostly concentrated in the southwestern region of France, the Huguenots were led by Henri, duc de Rohan (1579–1638), from the province of Béarn. Under Henri, they rose against Louis, resisting by force of arms his schemes to seize their land and property.

In response to the rebellion, Louis dispatched his most trusted adviser, Charles de Luynes (1578–1621), to lay siege to the Huguenot city of Montauban. De Luynes died of purple fever before he could subjugate the city, but Louis was successful in having the town of Saint-Jean-d'Angely razed in June 1621. There the French king took a perverse pleasure in making the Huguenots beg for mercy after he had refused to discuss terms with them. With de Luynes dead the post of chief adviser fell to Armand du Plessis, duc de Richelieu (1585–1642), named a cardinal in 1622 and destined to dominate French affairs for the next two decades.

Mostly due to Richelieu's influence with Louis, the Peace of Montpellier was signed in October 1622, which essentially codified Louis's harsh terms for the Huguenots without specifically revoking the Edict of Nantes. At length Louis's troops managed to recapture most of the strongholds accorded to the Huguenots at Nantes, but they remained in control of the province of Béarn, Montauban, and, perhaps most important, the port city of La Rochelle.

See also BÉARNESE REVOLT, SECOND; BÉARNESE REVOLT, THIRD.

Further reading: Mack P. Holt, *French Wars of Religion, 1562–1629* (Cambridge and New York: Cambridge University Press, 1996); Raymond A. Mentzer and Andrew Spicer, eds. *Society and Culture in the Huguenot World, 1559–1685* (Cambridge and New York: Cambridge University Press, 2002).

Béarnese Revolt, Second (1625–1626)

PRINCIPAL COMBATANTS: The French Crown vs. the Huguenots

PRINCIPAL THEATER(S): Bay of Biscay off La Rochelle in southwestern France

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: For the Huguenots, freedom of religion and military and political autonomy; for the French Crown, the reestablishment of Catholicism as the state religion and the suppression of a Protestant revolt

OUTCOME: After a naval defeat at La Rochelle and the French imposition of a partial naval blockade, the revolt ended status quo ante bellum.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 1625 the French Protestant Huguenots—still seeking the toleration granted them under the Edict of Nantes in 1598 by former Protestant turned Catholic Henry IV (1553–1610); still chafing under the attempt by his son Louis XIII (1601–43) to reestablish Catholicism as the one true religion; and still angered by the loss of most of their strongholds under the Peace of Montpellier imposed by Cardinal Richelieu (1585–1642) after their defeat in the First BÉARNESE REVOLT—rose in open revolt for the second time in four years against the French Crown. Led once again by Henri, duc de Rohan (1579–1638), and this time also by his brother, Benjamin, duc de Soubise (1583–1642), the Huguenots launched an offensive against Louis from their port city stronghold at La Rochelle in 1625.

Although the Protestants scored several early naval victories from their La Rochelle base, the Crown's forces, led by Henri, duc de Montmorency (1595–1632), high admiral of France, defeated the Huguenot fleet under Soubise off La Rochelle in September 1625. Montmorency then began a partial naval blockade of the city that essentially shut down any further Protestant operations for the moment, ending the Second Béarnese Revolt status quo ante bellum in February 1626.

Further reading: Mack P. Holt, *French Wars of Religion, 1562–1629* (Cambridge and New York: Cambridge University Press, 1996); Raymond A. Mentzer and Andrew

Spicer, eds. *Society and Culture in the Huguenot World, 1559–1685* (Cambridge and New York: Cambridge University Press, 2002).

Béarnese Revolt, Third (1627–1629)

PRINCIPAL COMBATANTS: The French Crown vs. the Huguenots

PRINCIPAL THEATER(S): Bay of Biscay off La Rochelle, the Isle of Re, and southwestern France

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: For the Huguenots, freedom of religion and military and political autonomy; for the French Crown, the reestablishment of Catholicism as the state religion and the destruction of the Huguenot substate; the British encouraged Huguenot rebellion to aid in the Anglo-French War of 1627–28.

OUTCOME: Britain's invasionary force was crushed; La Rochelle was besieged and captured; and the Huguenots were destroyed as an autonomous military and political force in France.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Royal troops, 25,000; Huguenots, unknown

CASUALTIES: Royal troops, unknown; Huguenots, 75,000 died in fighting, 15,000 from starvation and disease

TREATIES: Peace of Alais, June 1629

Under the 1598 Edict of Nantes the French Protestant Huguenots were granted limited religious freedom, precious to them however tenuous it may have been. When Louis XIII (1601–43) ascended the throne in 1610, it became immediately clear he had no intention of following the policies of his father, Henry IV (1553–1610), a former Protestant rebel turned Catholic monarch. Fearing correctly that Louis would seek to reimpose the dominance of Catholicism, the Huguenots quickly established themselves in ways not anticipated by the Edict of Nantes—they set up a general assembly, organized a military, and even introduced a civil bureaucracy, all of which, while carrying no weight with the official government, created a Protestant substate within France. Twice before in the past half decade, the Huguenots had rebelled against the French Crown to protect their lands, their semi-independence, and their modicum of religious freedom; twice before they had been defeated. French victories in the First BÉARNESE REVOLT and the partial naval blockade imposed on La Rochelle at the close of the Second BÉARNESE REVOLT had debilitated the Huguenots' military without destroying their political or civil organizations. Louis XIII was not the man to accept a dual government within France any more than he could accept an alternative religion. It was only a matter of time before the French king and his chief adviser, Cardinal Richelieu (1585–1642), would move decisively against the Huguenots.

Centered at the port city of La Rochelle, the Huguenot resistance seemed destined to tear France apart, as had the religious wars of the previous century. From La Rochelle the Huguenots could maintain contact with the English and the Dutch. Britain, hoping to gain an advantage in the ANGLO-FRENCH WAR (1627–1628), incited the Huguenots to rise up again and in early 1627 launched a fleet under Georges Villiers, duke of Buckingham (1592–1628), to the Isle of Re, near La Rochelle, in support of the revolt. Underfunded and divided in purpose, the expedition would prove a fiasco, but it was more than enough provocation for Louis and Richelieu, who moved swiftly to crush the Protestant revolt. In September they attacked the English at Re, and in November they defeated them in what became for Buckingham a disastrous campaign. Afterward the French settled into a 14-month siege of La Rochelle under the personal supervision of Richelieu. Richelieu ordered a ground offensive, led vigorously by Henri, duc de Montmorency (1595–1632), at the same time that Henri II de Lorraine, duc de Guise (1614–64), enacted a stiff naval blockade of La Rochelle. The French built stone dikes near the port, and by spring the dikes and the hulks of sunken ships blocked the channel. The city virtually choked.

In May and September 1628 the English made two separate attempts to relieve La Rochelle but were beaten back by the royal fleet under Henri II both times. After a heroic resistance the garrison finally capitulated on October 29, and La Rochelle lost all its former privileges. Then came the defeat of the lone Protestant army in the field under Henri, duc de Rohan (1579–1638), by Montmorency in Languedoc the following year. Rohan made a last ditch effort to conclude an alliance with Philip IV (1605–65), the king of Spain, in May 1629, but it was too late. The Huguenots had been crushed as a major autonomous political and military force in France.

With the Peace of Alais in June, the revolt ended. Although Richelieu, canny enough not to jeopardize the Protestant economic contribution to the throne, actually reaffirmed the Edict of Nantes formally, he made sure that the Protestant strongholds and fortresses were razed and that the entire Huguenot organization was disbanded. France's Protestant substate ceased to exist.

Beaver Wars (Iroquoian Beaver Wars) (1638–1684)

PRINCIPAL COMBATANTS: Iroquois League vs. Huron and other Indian tribes

PRINCIPAL THEATER(S): Great Lakes country

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Iroquois territorial and trade expansion

OUTCOME: The Iroquois failed to dominate trade in the long term.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Varied; many conflicts involved small warring parties; 1638 encounter between Iroquois and Hurons involved 100 Iroquois, 300 Huron.

CASUALTIES: Unknown

TREATIES: Mohawk-Huron peace treaty, 1653

The Beaver Wars were fought by member tribes of the Iroquois League—the so-called Five Nations—against the Huron, Tobacco (also called the Petun or Tionontati), Neutral, Erie (or Cat People), Ottawa, Mahican, Illinois, Miami, Susquehannock, Nipissing, Potawatomi, Delaware, and Sokoki Indians during the period from 1638 to 1684.

The Iroquois League (or Confederacy or Confederation) consisted of the Mohawk, Oneida, Onondaga, Cayuga, and Seneca tribes, whose territory extended from the Hudson Valley in the east to the shores of Lake Ontario in the west. (In the early 18th century the Tuscaroras left North Carolina, migrated north, and were adopted by the Oneidas, becoming part of the Iroquois League in 1722, thereby making the Five Nations the Six Nations.)

The Iroquois League was aimed at establishing what the Iroquois called the “Great Peace,” a covenant among tribes that pledged mutual support and harmonious relations, which had been the basis of the original peace among the five Iroquois tribes that allowed them to form their mutual defense league in the first place. The confederation sought to impose the covenant on tribes outside the Five Nations, if necessary by conquest.

This policy of conquest was born in part from competition for trade with European colonists. In the early 17th century the Iroquois tribes aligned themselves with the Dutch as trading partners. When the English displaced the Dutch in New Amsterdam in 1664, they inherited the alliance. To the west the Hurons (and several other western tribes) associated themselves with the French. As the century wore on the western hunting grounds remained rich in beaver, the Indians' chief article of trade, and Huron-French commerce flourished. However, in the east beaver was being hunted to extinction, and the Iroquois trade with the Dutch and later the English suffered. The solution, as the Iroquois saw it, was conquest of the western tribes.

The first known battle in the so-called Beaver Wars took place in 1638, when a war party of 100 Iroquois met some 300 Hurons and Algonquins. All but four or five of the Iroquois warriors were killed or captured, including the war chief Ononkwaya, who was roasted alive, scalped, mutilated, and finally decapitated.

Throughout the 1640s Huron and Iroquois met in guerrilla-style engagements and full-scale raids. In the

summer of 1645, the Iroquois attacked the fortified Huron trading town of St. Joseph (north of Lake Ontario). Less than a month later the Hurons retaliated against the Seneca's principal town near modern-day Buffalo, New York.

By the spring of 1647, the Hurons sought aid from the Susquehannocks, who lived along the Susquehanna River in New York, Pennsylvania, and Maryland. The Susquehannocks attempted to negotiate a diplomatic, trade-based resolution to the war, which, however, ultimately proved unsuccessful.

By the end of the 1640s, the Five Nations were strongly unified in the conduct of the war, although the Mohawks, the easternmost of the tribes, were always the most aggressive, and the Senecas, the westernmost people, were the least inclined to fight. On April 7, 1648, the Dutch West India Company decided to supply the Mohawks some 400 rifles, effectively arming them against the Hurons, who were backed by the French.

The Iroquois, especially the Mohawks, launched a series of devastating raids against the Jesuit Huron mission villages and on the smaller neighboring settlements surrounding them. By the close of the 1640s, the Hurons were fleeing farther west, seeking refuge among the Tobacco Indians west of Lake Ontario and among the Neutrals, who lived on the northern shores of Lake Erie. Still others voluntarily sought adoption into the Iroquois tribes. In essence, the Iroquois had destroyed the Huron nation.

In November and December of 1649, the Mohawks and Senecas moved against the Tobaccos, devastating the mission town of St. Jean on December 17. The Tobacco who survived the raid moved westward and eventually mingled with surviving Hurons to become the Wyandots of Detroit and Sandusky, Ohio, country.

Late in the fall of 1650, the Iroquois launched a furious campaign against the Neutral nation, who, as their French-bestowed name implies, attempted to remain neutral in the combat between Iroquois and Huron. In the initial attack a great town of some 3,000 or 4,000 persons was destroyed, and an assault on another town in the spring of 1651 prompted the Neutrals to abandon all of their settlements and disperse. Many—perhaps most—were adopted by the Senecas. The magnitude of this conquest can be appreciated by noting that the Neutrals had numbered about 10,000 at the beginning of the 17th century; by 1653 no more than 800 could be found.

Between 1651 and 1653 the Iroquois harried the French and their Indian allies until all of the Iroquois nations except for the Mohawks concluded a peace treaty at Montreal late in 1653. The peace was short-lived. In the spring of 1654, an Erie who was a member of a treaty delegation visiting a Seneca town quarreled with a Seneca and killed him. In retaliation the Senecas killed all 30 members of the delegation, touching off a series of reprisals and counterreprisals that escalated into war between the Eries and all the Iroquois. Though brief, the war spelled the end of the Erie nation by 1656.

At this point the Five Nations held sway from the Ottawa River in the north, the Cumberland in the south, into Maine in the east, and as far as Lake Erie in the west, but warfare nevertheless continued. During 1651–52 the Mohawks had attacked a people known as the Atrakwaeronons, which may have been another name for the Susquehannocks or may have denoted a tribe closely allied with the Susquehannocks. In either case the result was a quarter century of sporadic warfare between the Susquehannocks and the Iroquois.

In the spring of 1663, 800 Senecas, Cayugas, and Onondagas moved against the Susquehannocks' principal fort (in present-day Pennsylvania), discovering, to their dismay, that the defenders had been well armed by the colonists of New Sweden and were aided by Delaware Indian allies. The Iroquois were forced to withdraw. The Five Nations also were unable to evict the Mahicans from the upper Hudson Valley or the Sokokis from the upper Connecticut.

In what was the Far West of the 17th century, the Beaver Wars also failed to give the Iroquois the absolute trade monopoly they sought. Campaigns against the French-allied Indians living along the Illinois and Mississippi Rivers ultimately resulted in Iroquois losses after some initial victories. By the 1680s Iroquois forces had also failed in confrontations with the Miamis, in the present-day states of Wisconsin and Michigan.

For a brief period, roughly 1649 to 1655, the Iroquoian Beaver Wars secured the dominance of the Five Nations throughout a vast territory, but absolute domination of trade over the long term eluded them. In the long run, the Beaver Wars drained the resources of all the Native American peoples involved in them and, if anything, aided the powers of Europe in their conquest and colonization of North America.

"Beer Hall Putsch" (1923)

PRINCIPAL COMBATANTS: Nazi Party S.A. storm troopers vs. Bavarian political leaders and the German army

PRINCIPAL THEATER(S): Munich, Bavaria

DECLARATION: Call to renounce the Weimar government, November 8, 1923

MAJOR ISSUES AND OBJECTIVES: Adolf Hitler sought revolution and control of the German government.

OUTCOME: The putsch failed, but it garnered national attention for Hitler.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: S.A. storm troopers, 15,000, a small fraction of whom participated in the putsch

CASUALTIES: Minimal injuries

TREATIES: None

The "Beer Hall Putsch" was the first, bold if hasty and ill-conceived attempt at social revolution in Germany by the Nazi Party, and its timing, execution, and failure could all be laid at the feet of its new leader, a decorated WORLD WAR I veteran named Adolf Hitler (1889–1945). Before the Great War Hitler was a young social misfit who had avoided military service in his native Austria, even moving from prewar Vienna—where his virulent anti-Semitism had taken root—to Munich to avoid being drafted into the Austro-Hungarian army. But with the outbreak of the war, he rushed to enlist—in the German army—and seemed to thrive on the combat, during which he served on the front lines as a runner. Although he achieved nothing higher than the rank of corporal, he was decorated four times for bravery and was seriously wounded twice, a record that would serve him well in the postwar Weimar Republic. After the war Hitler remained with his regiment until April 1920, serving as one of the army's secret political agents and dutifully joining the German Workers' Party in Munich in September 1919.

When he left the army in April 1920, it was to work full time for the party on which he had been spying. In an era of ferment and crisis in Germany, Hitler was inspired by a hatred of the Treaty of Versailles, which had ended the war but left Germany internally adrift to struggle against economic disaster and the threat of both communist and right-wing revolution. Blaming the treaty rather than military defeat as the source of Germany's general postwar humiliation and demoralization, Hitler became instrumental in transforming the German Workers' Party by August 1920 into the Nationalsozialistische Deutsche Arbeiterpartei, commonly shortened to NSDAP, or the Nazi Party. After associating with Ernst Röhm (1887–1934), an army staff officer, Hitler rose to president of the party in July 1921 and became an increasingly effective and popular street-corner orator, lashing his audiences into frenzies of nationalistic fervor laced with vitriolic anticommunism and anti-Semitism.

Conditions in the troubled Weimar Republic favored the burgeoning party. The economy collapsed under the burden of reparation payments demanded by the Allied victors in the war, and in January 1923 France occupied the Ruhr, Germany's great industrial heartland. Weimar responded by backing a general strike and freely printing ever more money, which kicked off a massive inflation

that wiped out the savings of the middle class and made the pay of the proletariat worthless.

As the much-reviled republic seemed to be imploding, many in right-wing Bavaria were ready to back an armed uprising, including the illustrious World War I commander General Erich Ludendorff (1865–1937), who had retired to Munich and was in contact with Hitler. Despite warnings from other sympathetic military leaders that the time was not yet ripe for revolution, the Nazi Führer—backed, he thought, at least tacitly by Ludendorff—was determined to seize the day, take control of the local army, the police, and the government, and use Bavaria as a staging ground to take power nationwide.

As it happened, on November 8, 1923, a group of provincial officials, military leaders, and civil servants were gathering at the Bürgerbräukeller, a big beer hall in Munich, to listen to a lecture from the Bavarian state commissioner on the moral beauty of dictatorship, when two dozen armed Nazi stormtroopers broke down the doors to the place. A much-excited Hitler, who had been inconspicuously if anxiously awaiting their arrival hidden behind one of the beer hall's posts, fired a shot into the ceiling and shouted that the national revolution had begun.

The Nazis rounded up the senior officials and trundled them off into a backroom, after which Hitler returned to address his truly captive audience. He announced to the befuddled crowd that he was forming a national government with the help of Field Marshal Ludendorff. The marshal himself, when someone was sent to fetch him, proved to have no inkling of such grand plans but upon hearing them went amiably along to back his Nazi comrades. He arrived at the beer hall in time to hear Hitler give one of his inflamed speeches, which roused both the by-now quite drunk crowd and the hostage officials to cheers. Basking in the applause, Hitler let his hostages go free.

It was a mistake. Come morning, when he and Ludendorff led more than 2,000 fervid followers through the streets toward the Bavarian War Ministry, the police were waiting. Instead of having the city fall to him as expected, Hitler was barred by an armed force. Probably the Nazis fired first, but in any case shots rang out, 16 Nazis fell dead, Hitler hit the ground to avoid being killed, and Ludendorff never flinched. Eventually, those who survived the fiasco were arrested, though Ludendorff was released. Hitler, Röhm, and several others were tried for treason.

Hitler made the most of the trial, using it as an opportunity to broadcast his message and broaden his base. Appearing before a not unsympathetic judiciary, he was given a light sentence, which he served in the relative comfort of Landsberg fortress. Of his five-year term, Hitler served only nine months before being given his freedom by a regime that had no desire to make a martyr of him. During his incarceration, Hitler wrote his autobiographical political manifesto, *Mein Kampf* (*My Struggle*), which became the bible of the Nazi movement.

In immediate terms, the putsch was a complete failure, but instead of causing Hitler humiliation, it elevated him to national prominence. In a Germany brought to its knees by the harshly punitive Treaty of Versailles that had ended World War I, Hitler appeared as a strongman and, ultimately, was seen by many as the savior of the “Fatherland.”

Bengalese-British War (1686)

PRINCIPAL COMBATANTS: Bengal (under Mogul rule) vs. British East India Company

PRINCIPAL THEATER(S): Bengal region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Bengalese forces responded to British raids, which were aimed at ending Bengalese taxation of British trade.

OUTCOME: The British temporarily left the trading town of Hooghly and moved trading operations to Calcutta.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Dutch traders arrived in India as early as 1601, bringing to an end the Portuguese monopoly on Indian trade. In 1608 the English embarked on the trade as well, and soon the Dutch East India Company and the British East India Company became rivals. Later they cooperated against their mutual rival, the Portuguese. The French entered the trading picture late, in 1667. The following year the British established what would become a major trading post on the island of Bombay.

To secure its interests against those of its European competitors as well as against indigenous enemies, the British East India Company set about fortifying the Hooghly (Hugli) in the Bengal region of northeastern India. From Hooghly British soldiers had been raiding Bengalese forts in an effort to compel local customs officials to cease attempts to collect exorbitant tolls from traders. In response to the raids, the Mogul emperor, Aurangzeb (1618–1707), sent troops to sack Hooghly in October 1686. The British left the town and traveled down the Hooghly River where, at the site of modern-day Calcutta, they erected Fort William.

The British raids and the Mogul destruction of Hooghly notwithstanding, the Bengalese-British conflict of 1686 was more a desultory spasm of violence than a genuine war. However, low-level hostilities remained chronic

until 1690, when the British finally agreed to pay customs duties for the privilege of trading in Bengal.

Bengalese-British War (1756–1757)

PRINCIPAL COMBATANTS: Britain (primarily British East India Company forces) vs. Bengalese forces (with French allies)

PRINCIPAL THEATER(S): Calcutta and the Bengal region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Calcutta, East India Company's primary trading headquarters

OUTCOME: Bengal came under British control, a key step in the creation of the Anglo-Indian Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Bengal, 50,000; Britain, 3,100

CASUALTIES: Unknown

TREATIES: Treaty of Alinagar, February 9, 1757

Robert Clive (1725–74), a young clerk in the employ of the British East India Company, became a soldier in the service of that company in 1751 when he led 500 men in the spectacular capture of Arcot, capital of the powerful Chanda Sahib (d. 1752). Clive's successful resistance to the attempt to retake Arcot later that year, an assault of 10,000 men under Chanda's son Raja Sahib (1748–82), was even more spectacular and established Clive as the foremost British captain in India.

On June 20, 1756, Suraja Dowla (1732–57), the nawab of Bengal, laid siege to Calcutta, the nexus of British trade in Bengal. After four days the town surrendered, and those Europeans who had been unable to flee were cast into an underground dungeon that would become infamous as the Black Hole of Calcutta. Although no documentation exists, contemporary sources claim that 123 of the 146 crowded into the Black Hole died of heat and suffocation overnight.

Calcutta remained under Suraja Dowla's control until January 2, 1757, when Clive and Admiral Charles Watson (1714–57), leading a joint expedition from Madras, retook the trading town. The Treaty of Alinagar, concluded on February 9, 1757, formally restored Calcutta to the British East India Company. By permitting British fortification of the town and the right to coin money, the treaty paved the way to the British conquest of all Bengal. From Calcutta Clive went on to capture Chandernagore, a French outpost. With France and England embroiled in the SEVEN YEARS' WAR, French colonial forces were as big a threat to

the British in India as were hostile indigenous leaders. With Chandernagore now in British hands, Clive could continue to advance inland in pursuit of Suraja Dowla without fear of losing his line of communication back to Calcutta.

On June 23, 1757, Clive located Suraja Dowla and his forces dug in near the village of Plassey along the banks of the Bhagirathi River. Suraja commanded an army of 50,000 with 53 guns, whereas Clive had only 1,100 European troops, 2,000 Indian troops, and 10 artillery pieces. Outnumbered as he was, Clive crossed the Bhagirathi and concentrated his troops in a mango grove. As Clive had hoped, Suraja moved his army out of their entrenchments and into the open to surround Clive's army. Suraja's artillery, massed on his right flank, was under French command. As the battle commenced, however, a heavy rainstorm soaked Suraja's gunpowder, silencing his guns. At this point he unleashed a cavalry charge, apparently assuming that Clive's powder had likewise been soaked. Clive's men, however, had taken the precaution of covering their powder, and his artillery now fired into the cavalry, repulsing the charge and inflicting heavy losses. Clive next trained his guns on Suraja's entrenchments, fought off another cavalry sortie, then attacked the French gunners. Whereas the Indian troops quickly lost their stomach for the fight, the French gunners fought virtually to the last man, but the struggle was hopeless.

The overwhelming defeat of Suraja Dowla at the Battle of Plassey ended the war and determined the fate of Bengal, putting it firmly under British control. Shortly after the battle Suraja Dowla was assassinated, and Clive installed Mir Jafar (1691–1765), his personal ally and an ally to the British interests in India, as the new nawab of Bengal.

Bengalese-British War (1763–1765)

PRINCIPAL COMBATANTS: Bengalese forces vs. Britain (primarily forces of the British East India Company)

PRINCIPAL THEATER(S): Patna and Buxar, a Bengal region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: British East India Company's opposition to taxes and duties imposed by Mir Qasim, nawab of Bengal

OUTCOME: British victory deposed Mir Qasim and installed a puppet nawab; the British East India Company effectively gained control of much of Bengal.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

At Patna, Bengal, 30,200; Britain, 300 plus 2,500 loyal sepoy. At Buxar, Bengal, 50,000; Britain, 857 plus 5,317 sepoy and 900 Indian cavalrymen

CASUALTIES: At Patna, Bengal, 2,000 killed or wounded; Britain, 382 killed or wounded. At Buxar, Bengal, 4,000 killed or wounded; Britain, 1,170 killed or wounded

TREATIES: Treaty of Allahabad, February 20, 1765

Robert Clive's (1725–74) remarkable victories in the BENGAL-INDIA WAR (1756–1757) put the British East India Company in a position to install a Bengalese nawab friendly to British commercial interests in the region named Mir Jafar (1691–1765). East India Company merchants, long on the job and far from home, focused on getting rich quick. Finding themselves suddenly in effective if ill-defined control over an entire ancient and very wealthy domain, they so brutally exploited the opportunity that the governor, Henry Vansittart (served 1760–64), completely lost control of the situation. As a first step in reasserting British authority and quelling the destructive greed of the East India Company men, the colonial government deposed Mir Jafar on the grounds of incompetence and old age and replaced him with the more assertive Mir Qasim (d. 1777), who immediately reimposed on British Indian trade the kinds of duties and tolls that had sparked the 1756–57 war. Qasim incited a mutiny of the East India Company's native-manned Bengal army near Patna, the location of a company factory, and a number of British personnel were massacred. This uprising was soon squelched, however, and Qasim was pushed into retreat to Avadh. British forces laid siege to this village after fighting and winning the Battle of Buxar on October 23, 1764. Major Hector Munro rounded up 24 Bengalese identified as ringleaders of the Patna uprising, loaded them, live, into cannons, and fired them. Despite this brutal example, Qasim managed to rally aid from various factions in western India, but, ultimately, he was unable to hold Avadh. Defeated, Qasim was deposed, and Clive replaced him with a pair of puppet nawabs directly under the control of the British resident of Bengal and entirely dependent on the East India Company for finance.

Bengalese-Marathan War (1742)

PRINCIPAL COMBATANTS: Moguls, Marathas, Bengals (with British trading interests)

PRINCIPAL THEATER(S): Deccan region of India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Marathas and the Bengals (with British participation) fought with each other to wrest control of the Deccan from the declining Mogul Empire.

OUTCOME: The Maratha threat to Bengal was temporarily neutralized; most important, the British presence in Calcutta and its alliance with the Bengal ruler were strengthened.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The great Mogul Empire of India fell into rapid decline beginning early in the 18th century as the Marathas, a Hindu people centered in the Deccan, became more powerful and expanded into northern India. When the Persian ruler Nadir Shah (1688–1747) invaded India in 1739 (see PERSIAN INVASION OF MOGUL INDIA) and sacked the Mogul capital of Delhi, the Mogul Empire, already pressured by the Marathas, all but collapsed. Ali Vardi Khan (1676–1756), hitherto a subordinate official in charge of the administration of Bihar, seized opportunity in the chaos of the collapsing empire to lead the successful overthrow of Sarfaraz Khan, viceroy of the three provinces of Bihar as well as Bengal and Orissa. Ali Vardi Khan effectively made the entire region independent of the Mogul Empire. He established personally lucrative trade relations with Portuguese interests along the Hooghly (Hugli) River and with the British East India Company in and around its Calcutta headquarters.

Fearing nothing from the weakened Moguls, Ali Vardi Khan understood that the only real threat to his hegemony came from the Marathas, who were rapidly moving eastward and had already taken Bundelkhand in central India and were menacing Orissa. Balaji Rao (fl. 1740–61), the Maratha peshwa—effectively, prime minister—had only the loosest control over his military forces. One of his generals, Raghunath Bhonsle (fl. 1740s), made an unauthorized invasion of Orissa in 1741, then attacked the British at Calcutta. British authorities secured permission from Ali Vardi Khan to dig a great defensive entrenchment in the northern and eastern part of Calcutta, creating a broad and deep moat on the land side, the famed Maratha Ditch, which exists to this day. This defensive fortification arrested Raghunath Bhonsle's progress against Calcutta, but he continued to pillage Orissa. Balaji Rao now demanded that his general deliver a part of the Orissa spoils to him. Raghunath Bhonsle defiantly refused, where-

upon the Maratha peshwa concluded a hasty alliance with Ali Vardi Khan. Together they opposed Raghunath Bhonsle with a large army, which pushed the renegade general all the way back to Nagpur, almost halfway across the subcontinent, ending the 1742 war.

The war did not bring an end to all Bengalese-Maratha conflict, however. Despite the alliance with Balaji Rao, other Maratha factions continued to harry Bengal, but the powerful Ali Vardi Khan maintained his control of the region. After his death in 1756, Suraja Dowla (1732–57) became nawab of Bengal and seized Calcutta. Robert Clive's (1725–74) spectacular victory over Suraja Dowla at the Battle of Plassey (June 23, 1757) ensured that Bengal would never again be under Mogul control (see BENGALESE-BRITISH WAR [1756–1757]).

Berenice, War of See SYRIAN-EGYPTIAN WAR, THIRD.

Bhutan War (1865)

PRINCIPAL COMBATANTS: British colonial (Anglo-Indian) forces vs. Bhutan

PRINCIPAL THEATER(S): Bhutan's border with India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Bhutan objected to British annexation of Bhutan's Indian frontier region.

OUTCOME: Britain agreed to pay an annual subsidy in return for its occupation of Bhutan's southern frontier.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Anglo-Indian forces, 7,000; Bhutanese numbers unknown

CASUALTIES: Bhutan lost hundreds killed; Anglo-Indian losses were negligible

TREATIES: Treaty of Sinchula, November 11, 1865

In 1826 British colonial forces occupied Assam, on India's frontier with Bhutan, a country settled by Tibetans in the ninth century and ruled by Buddhist monks. Now, Great Britain incorporated the area into British India. The Bhutanese protested, and a simmering border dispute developed. At last, during the early 1860s, the Bhutanese captured and occupied *duars*, mountain passes, in Assam. British authorities were willing to allow Bhutanese occupation of these passes provided that tribute money was paid. When the Bhutanese ignored these British demands, a small force of 2,000 Anglo-Indian troops was sent into Bhutan in January 1865. A garrison was established at Dewangiri, as the Dewangiri stockade, which a Bhutanese force readily overwhelmed and forced out of the country. In response Sir Henry Tombs (1824–74) led a larger puni-

tive expedition, the Bhutan Field Force, into Bhutan. Consisting of two sepoy regiments and five artillery batteries, the Bhutan Field Force intimidated the Bhutanese defenders. An advance detachment of 1,000 stormed the Dewangiri Stockade, retaking it, then slaughtering the Bhutanese garrison of 120 men. Thoroughly demoralized, on November 11, 1865, Bhutanese officials signed the Treaty of Sinchula, by which Britain agreed to pay an annual subsidy in return for its occupation of Kalimpong and Doors in the country's southern frontier.

Biafran-Nigerian War See NIGERIAN-BIAFRAN WAR.

Bishops' War, First (1639)

PRINCIPAL COMBATANTS: Scotland (the Covenanters) vs. England

PRINCIPAL THEATER(S): Edinburgh and Berwick, Scotland

DECLARATION: No official declaration

MAJOR ISSUES AND OBJECTIVES: King Charles I of England attempted to impose Anglican liturgy throughout Scotland; it was resisted.

OUTCOME: Charles I accepted the Pacification of Dunse, a compromise that yielded certain religious authority in Scotland to the Scots Presbyterian Church.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

England, 21,000; Scotland, 20,000

CASUALTIES: No more than 200 on both sides

TREATIES: Pacification of Dunse, June 18, 1639

In the 10 years after England's king Charles I (1600–49) dissolved a troublesome Parliament in 1629, British civil society grew relatively tranquil, given that the king ruled over three kingdoms (the other two being Ireland and Scotland) with different customs, laws, and religions. But meanwhile Charles had been drawn to the teachings of Dutch theologian Jacobus Arminius (1560–1609), which emphasized the doctrines of free will and the importance of good works as well as faith for the salvation of the soul. In 1633 he made one of the better known Arminians, William Laud (1573–1645), archbishop of Canterbury. When Laud began decorating his churches and separating the Communion table from the congregation, making official Anglicanism even more reminiscent of Roman Catholicism, Charles's mostly Calvinist subjects grew yet again deeply suspicious and hostile toward the Stuart monarchy.

The covert discontent flared into open rebellion in always restive Scotland when the king and the archbishop

of Canterbury attempted to impose an Anglican liturgy, the *Book of Common Prayer*, on the Scots Presbyterian Church. In February 1638 the Scots church drew up and adopted a "National Covenant," a defiant declaration of the Scots' intention to maintain their traditional Presbyterian religion and resist all attempts at Anglican invasion and modification. In November 1638 the general assembly of the Scots church abolished the episcopate, the chief governing body of the Anglican Church, and refused to yield to Charles's demand that the general assembly dissolve itself. Rioting erupted, and insurgents seized Edinburgh Castle. At this, in 1639 Charles led an army to Berwick, where he found the forces of the so-called Covenanters not only numerous but well armed and highly skilled, many having fought in the service of the militaristic Swedish king Gustavus II Adolphus (1594–1632). In contrast, Charles's army was weak, inexperienced, and poorly funded by an increasingly hostile Parliament. Accordingly, on June 18, 1639, without offering battle, Charles accepted the Pacification of Dunse, a compromise that permitted the Scots church to form a new general assembly.

Bishops' War, Second (1640)

PRINCIPAL COMBATANTS: Scotland (the Covenanters) vs. England

PRINCIPAL THEATER(S): Scotland and northern England

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: As in the First Bishops' War (1639) King Charles I of England attempted to impose Anglican liturgy throughout Scotland; it was resisted.

OUTCOME: Charles I, defeated, was compelled to pay tribute money to avoid Scottish occupation of England; as a result, Parliament acquired increasing power, which hastened the coming of the First English Civil War (1642–46).

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Scotland, 22,500; England, 4,500

CASUALTIES: A few hundred on both sides

TREATIES: Treaty of Ripon, November 1640

The peace brought by the Pacification of Dunse (*see* BISHOPS' WAR, FIRST) was fleeting, as England's Charles I (1600–49) persevered in his attempts to impose the Anglican liturgy on Scots Presbyterian worship. Charles

convened the Short Parliament of April–May 1640 in an attempt to secure funding for an army to enforce his religious authority in recalcitrant Scotland. The Parliament refused, whereupon Charles angrily dissolved the body. Without an adequate army, Charles was quickly and badly defeated at the Battle of Newburn on August 28. Worse, the Scots now brought the war into England, penetrating Northumberland and taking the town of Durham. Humiliated militarily and politically, Charles, at York, signed the Treaty of Ripon, by which he agreed to pay the Covenanter Army (as the Scots forces were called) £850 per day to keep the Scots from invading England while the Parliament drafted final, acceptable peace terms.

The demands of the Treaty of Ripon forced Charles to reconvene Parliament not only to hammer out a permanent treaty with the Scots but also to fund his own army as well as the Covenanters' £850 per day. This resulted in the Long Parliament of 1640–60, the greatly enhanced authority of the House of Commons, and the power struggle that culminated in the First ENGLISH CIVIL WAR.

"Black and Tans" War See ANGLO-IRISH CIVIL WAR.

Black Hawk's War (1832)

PRINCIPAL COMBATANTS: Sac and Fox Indians vs. United States

PRINCIPAL THEATER(S): Illinois, Iowa, and Wisconsin

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Chief Black Hawk was angered by American miners and settlers who had invaded his village, destroyed its crops, and beaten and raped its occupants; the United States, assuming Black Hawk had agreed to remove himself west of the Mississippi, aimed to punish Black Hawk and remove the Fox from Illinois.

OUTCOME: Black Hawk conceded about 6 million acres of land along the Mississippi River, and his followers, known as the British Band, agreed to remove to lands west of the Mississippi River forever.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

United States, 3,000-plus militia, 1,200 regulars, 6 companies of rangers; Black Hawk's British Band, 2,000 men, women, and children with Winnebago allies

CASUALTIES: At Stillman's Run, 52 U.S. troops killed; many settlers on the Illinois frontier. At junction of Bad Axe and Mississippi Rivers, 23 British Band killed, 200 captured or killed by Sioux Indians allied with the United States, others killed by guns of the steamboat *Warrior*.

TREATIES: Treaty of Fort Armstrong, September 19, 1832

In the early 19th century the U.S. government began to "remove" American Indians living east of the Mississippi to the trans-Mississippi West. Black Hawk's War in 1832 was an important resistance to this official policy, one of the last and better known of these major Indian resistance movements.

Black Hawk (1767–1838) was a war chief of the Sacs (Sauks) and Foxes (Mesquakies), two closely related tribes chased by the fur-trading French and their Indian allies in centuries past into the Mississippi Valley, where they occupied parts of western Illinois and eastern Wisconsin and Iowa, becoming implacable foes of the Americans and quite friendly with the British. Black Hawk's band fought alongside the British-backed Tecumseh (1768–1813) during his 1811 uprising that in part led to the WAR OF 1812. In 1831, after Andrew Jackson (1767–1845) had begun forcing the Indians of the Old Northwest as well as those of the Southeast to resettle in the West, Black Hawk returned with his warriors from the winter hunt west of the Mississippi to discover Saukenuk, the tribe's main village at the mouth of the Rock River near Rock Island, Illinois, overrun by American squatters; he threatened war.

A spurious treaty signed a quarter century before and either never understood or never recognized by Black Hawk had ceded all the Sac and Fox lands in Illinois to the United States. As a matter of expediency, territorial governor William Henry Harrison (1773–1841) had allowed the tribe to remain on those lands until the area was needed for settlement. Around 1830 a rush of miners to the Galena lead fields had brought "illegal" farmers—squatters—in its wake, and they destroyed or appropriated the Indians' homes, harvested for themselves the Indian corn, ripped down fences, trampled unused crops, and beat those Sac and Fox in the village who protested. Quick action in 1831 by government officials helped avert violence that summer and fall, and Black Hawk reluctantly returned to Iowa for the winter hunt, which went badly. In April 1832 he led his starving, homeless "British Band"—some 400 warriors and their families, 2,000 in all—back across the Mississippi looking for food. Territorial authorities panicked, marching troops off to engage the Indians and calling to arms an excessive number of militia.

Black Hawk won the first encounter, the result more or less of the Americans blundering into conflict, but his victory only incensed the settlers along the frontier. In the long run he was betrayed by his allies, the British and the

Winnebago Indians, both of whom had promised aid and shelter but failed to deliver. And he was also betrayed by a member of his own tribe, an ambitious young chief named Keokuk (c. 1790–c. 1848), who urged a substantial number of Sacs and Foxes to do nothing, thus establishing himself with the Americans as a “peaceful” tribal leader. The band was relentlessly hunted down as they fled north along the Rock River into Wisconsin; many were massacred even as they tried to re-cross the Mississippi into Iowa. Black Hawk survived to face arrest, trial, and conviction. After his execution was stayed, the U.S. government put him on display, packing him off on a tour of the United States. Greeted in some towns and cities with hatred, treated in others as a celebrity, Black Hawk also served as an example to those Indians still fighting removal to the trans-Mississippi west of the hopelessness of armed resistance. Black Hawk died of natural causes in 1838.

Black Hundreds, Raids of the (1906–1911)

PRINCIPAL COMBATANTS: Right-wing anti-Semitic militia vs. left-wing organizations and Jews

PRINCIPAL THEATER(S): Widespread throughout Russia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Primarily anti-Semitism and suppression of left-wing activity and reform following the Russian Revolution of 1905.

OUTCOME: Reforms promised after the Russian Revolution of 1905 were delayed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: During October–November 1905, 4,000 Jews were killed and 10,000 maimed; total casualties for the period are unknown.

TREATIES: None

The Chernosotentsy—Black Hundreds—were a set of reactionary, violently anti-Semitic organizations formed during and immediately after the RUSSIAN REVOLUTION (1905). The Black Hundreds organizations included the League of the Russian People, League of the Archangel Michael, and the Council of United Nobility. These organized mobs of landowners, well-to-do peasants, bureaucrats, merchants,

police officials, and Russian Orthodox clergy raided revolutionary cells and groups and conducted pogroms against Jews. The latter activity was particularly intense, vicious, and widespread. With unofficial czarist approval, Black Hundreds forces carried out pogroms in at least 100 Russian cities during 1906–11. The Russian Revolution of 1905 had forced the czarist government to consider and even adopt a broad program of liberal reform, including a new constitution. The depredations of the Black Hundreds delayed enactment of that constitution.

Black Prince's Navarrette Campaign (1367)

PRINCIPAL COMBATANTS: England vs. France and Castilian Spain

PRINCIPAL THEATER(S): Northern Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Edward sought the restoration of Peter the Cruel to the throne of Castile.

OUTCOME: Edward prevailed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: French and Castilian forces, 37,500 men; Edward the Black Prince, 20,000 men

CASUALTIES: French and Castilian losses were catastrophic, 13,000 killed and almost as many wounded; Edward's losses were minor, perhaps 100 killed and a few hundred wounded.

TREATIES: None

Edward the Black Prince (1330–76) had already won his fame during the HUNDRED YEARS' WAR—at the Battle of Crécy in 1346 and especially the Battle of Poitiers in 1356—when he left England in 1362 to take up his duties as the new ruler of Aquitaine. However, the local French populace, suffering under his tax policies, treated his extravagant court at Bordeaux as that of a foreign conqueror, and he remained on unfriendly terms with most of France's bishops and many among its greater nobility. Perhaps not surprisingly, then, in February 1367 he undertook the adventure of restoring Peter the Cruel (1334–69) to the throne of Castile. Peter had been overthrown in 1365 by French mercenaries in the pay of the French king Charles V (1338–80), Pope Urban V (1310–70), and the Aragonese king, Pedro IV (1319–87), whose kingdom Peter had usurped.

Edward masterfully outgeneraled the leaders of the French and Castilian forces arrayed against him, which

sought to block his movement through the Roncesvalle Pass into the Ebro Valley. Edward led a forced march around the Castilians, then crossed the Ebro River, thereby forcing Henry of Trastámara (d. 1379) (leader of the Castilian contingent) and Bertrand du Guesclin (c. 1320–80) (commanding the French) to retreat south of the river.

The forces opposing Edward consisted of some 2,000 French heavy cavalry, 5,500 Castilian heavy cavalry, 4,000 light cavalry, 6,000 crossbowmen, and 20,000 poorly trained infantrymen. Edward the Black Prince commanded 10,000 heavy and light cavalry combined and another 10,000 infantry mercenaries (which included archers, crossbowmen, and javelin men).

The opposing forces met on April 3 at Navarette (modern Nájera), just south of the Ebro. Adhering to the tactical conventions of the day, the armies formed themselves in three lines and advanced toward one another. Du Guesclin personally led dismounted French cavalry in advance of the Castilian main body. Edward's English archers took a severe toll on the Castilian cavalry but barely harmed the French heavy cavalry. However, as their Castilian allies crumbled away, the French, no matter how gallantly they fought, could not prevail alone.

After a titanic battle that killed some 13,000 Castilians and Frenchmen and wounded almost as many, du Guesclin surrendered to a triumphant Edward, who had lost at most 100 killed and a few hundred wounded.

Black War (1804–1830)

PRINCIPAL COMBATANTS: British settlers of Van Diemen's Land vs. the aborigines

PRINCIPAL THEATER(S): Van Diemen's Land (Tasmania), Australia

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: In exploiting the natural resources of the island, white settlers of Tasmania at first encroached on the aborigines' lands and later engaged in a plan of exterminating and relocating the native peoples.

OUTCOME: Through violence and disease, the aborigines were eliminated within seven decades of contact.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown; most action was a series of violent raids and counterraided undertaken by European bushrangers acting individually and by small groups of aborigines; the Black Line operation required all white males and four army regiments against 147 aborigines.

CASUALTIES: White settlers, unknown; native peoples were all but eliminated by the end of the conflict.

TREATIES: No formal treaty

With the founding of the British penal colony of Australia in 1788, the government was faced with the problem of dealing with the local inhabitants, or aborigines. In 1804 the colonists first landed on the small island off the southeastern coast of Australia called Van Diemen's Land, or Tasmania. Clashes between the two cultures began almost immediately when colonial troops massacred and then mutilated several hundred unarmed and peaceful aborigines in early May 1804 at Risdon Cove. So began a series of conflicts in which hundreds of aborigines were sold into slavery, mutilated, or killed.

Sheep caused the conflict to escalate quickly. Within 10 years the sheep population doubled to nearly 1 million, and with the rise in numbers came an increased need for grazing land. The aborigines, however, fought back. What followed was a pattern of violence that decimated the aboriginal population and sent the white settlers into a panic. The violence reduced the aboriginal population to less than half its 1804 total. Worse yet, the violence convinced whites that their safety required the extermination of the native peoples. Packs of lawless bushrangers scoured the lands hunting aborigines. The colonial governor, Colonel George Arthur (1784–1854), hoped to push the aborigines to the Tasman Peninsula, where there were no settlers and sufficient resources on which the aborigines could live.

The operation to relocate the aborigines was called the "Black Line." In 1830 Arthur gathered every white male in Van Diemen's Land, and they along with four army regiments formed a line that stretched for miles to flush out the aborigines and drive them to the peninsula. When the Black Line converged at the other end of the island, it netted exactly one boy and his mother. Although it appeared to be a colossal failure, the Black Line did succeed in subduing the bushrangers.

Even though the Black Line operation ended the large-scale brutalities and killings, intermittent violence continued. In 1835 the remaining 147 aborigines were relocated to Flinders Island under the supervision of a missionary. In 1847 they were allowed to return to Van Diemen's Land. In 1877 the last of the Tasmanian aborigines died.

Boer Uprising (1914–1915)

PRINCIPAL COMBATANTS: Former Boer War commandos vs. Union of South Africa

PRINCIPAL THEATER(S): South Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Boer support of Germany in World War I led many of them to oppose the invasion of German South-West Africa (present-day Namibia) planned by South Africa, an ally of Great Britain.

OUTCOME: South Africa suppressed the revolt, then freed the rebels.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Boer rebels, 13,000; South Africa, 30,000

CASUALTIES: Boer rebels, 540 killed or wounded; South Africa, 374 killed or wounded

TREATIES: None

After the SECOND BOER WAR of 1899–1902, the defeated Boers—descendants of the original Dutch colonizers of the African Cape who spoke a variant of Dutch known as Afrikaans (*boer* is a Dutch-Afrikaans word for “farmer”)—under the lenient terms of the Treaty of Vereeniging kept their language, their land, and their culture; within a few short years they would come to dominate British South Africa politically as well. In 1909 Great Britain passed the South Africa Act, unifying the British colonies of the Cape, Natal, Transvaal, and Orange River, establishing the nation of South Africa, and enfranchising only a small white minority. South Africa’s constitution, based on the Australian constitution of 1900, was mostly the work of Jan Smuts (1870–1950). The union was inaugurated on May 31, 1910, with Louis Botha (1862–1919), an Afrikaaner, as the first prime minister.

The Union of South Africa entered WORLD WAR I on the side of the Allies in 1914, and Prime Minister Botha made preparations to invade neighboring German South West Africa (present-day Namibia). But many of his fellow Boers balked, owing to their historical dislike of the British and feelings of cultural kinship with the Germans.

Former Boer War army commandos—chief among them Christiaan De Wet (1854–1922)—led a Boer uprising, and by the end of 1914 some 13,000 rebels were once again up in arms in the Orange Free State and the Transvaal. Although the rebel Boers were former supporters and comrades-in-arms of Botha’s during the Boer War, he did not hesitate to oppose them. Aided by another Boer War veteran, Jan Smuts, Botha took command of the South African Army in its two major campaigns, defeating the rebels in October 1914 in the Transvaal and in December 1914 in the Orange Free State. In a third encounter the Union of South Africa crushed the uprising completely when it defeated the last rebel force in 1915. Botha’s close ethnic and personal ties to the rebellious Boers was evident nowhere more clearly than in his treatment of them after

their defeat. Showing unusual clemency for a head of state toward subversives during wartime, Botha had by 1917 set all of them free.

Boer War, First (Transvaal Revolt) (1880–1881)

PRINCIPAL COMBATANTS: The Boers of the Transvaal Republic and the Orange Free State vs. British imperial forces in southern Africa

PRINCIPAL THEATER(S): The frontiers of the Boer settlements lying between the Orange and Limpopo Rivers in South Africa

DECLARATION: On December 30, 1880, the Boers declared their settlements to be a new Republic of South Africa, tantamount to a declaration of war since the English claimed they were part of the British Empire.

MAJOR ISSUES AND OBJECTIVES: Britain fought to maintain its sovereignty over the Boer lands in southern Africa, which the empire had annexed in 1877; the Boers fought for independence of the states they had originally colonized.

OUTCOME: Handing British troops a surprising and humiliating defeat, the Boers won not full independence but autonomy within the British Empire, which meant that the Boers controlled internal affairs in their settlements, while foreign policy was subject to Britain’s approval.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Boers, 3,000; Britain, 2,000.

CASUALTIES: Boers, 101; Britain, 800 killed or wounded.

TREATIES: Treaty of Pretoria, April 5, 1881

During the Great Trek of 1836–43, 12,000 Boers, unhappy with British rule over the Cape Colony in South Africa, which the empire had acquired during the NAPOLEONIC WARS, and especially with Britain’s empirewide ban on slavery, packed up belongings and left. These descendants of the cape’s original Dutch colonizers, mostly cattlemen (“boer,” in the dialect of Dutch they spoke called Afrikaans, means “farmer”), rumbled across the veldt for 1,000 miles, stopping only when they reached a stretch of rolling hills between the Vaal and the Orange Rivers. There the Boers set up two small independent states.

First came the Transvaal in 1838, with Andries W. J. Pretorius (1798–1853) as president. There followed considerable frontier friction: The Boers fought the Zulus (see BOER-ZULU WAR) and won from them sovereignty over southern Natal, then lost it when they took on the British at Durban. Britain occupied Natal and annexed it to the empire in 1843. The unrest and some fighting continued for nearly a decade, especially near the Great Kei River and in the lands between the Orange and Vaal Rivers. Finally, in

1852, in part owing to domestic politics, London renounced its claim to some of the region and recognized the Transvaal as independent. Two years later Britain also recognized the independence of the settlements in the Vaal-Orange Rivers range, which became the Orange Free State.

Acquisitive and disputatious, the Boers continued to fight border wars with the Zulus and wars of expansion with the Basuto (*see* BASUTO WAR; BASUTO GUN WAR), then in 1862 fell to killing each other. With the help of S. J. Paul Kruger (1825–1904), who had been all of 10 years old when he came to the Transvaal during the Great Trek, Pretorius after two years finally suppressed the insurgency, which by 1864 had grown into a civil war.

Such men, who for centuries had considered themselves natives of South Africa, did not take it kindly when British prime minister Benjamin Disraeli (1804–81) in 1877 reversed the course of imperial policy and annexed the Boer states Britain had formerly recognized as independent. Announcing the decision as part of his effort to bring about the federation of all of South Africa, Disraeli ordered troops to Pretoria to hoist the Union Jack. Immediately the Boers began to hatch subversive plots, and three years later they revolted.

Joined by Petrus Jacobus Joubert (1831–1900), Pretorius and Kruger led the Boers to take up arms and on December 30, 1880, declared the independent Republic of South Africa, with Kruger as president. They quickly cut up and dispersed the small bodies of British troops occupying the area. A month later, on January 28, 1882, Joubert took 2,000 Boers and invaded Natal. From Capetown British general Sir George Colley (1835–81) rushed inland to meet the upstarts, who he completely underestimated, with only 1,400 British regulars under his command. Twice, at Laing's Nek and at Ingogo in the Drakensberg Mountains, he was summarily repulsed. He then ensconced himself and a portion of his troops, 550 men, at Majuba Hill overlooking the principal pass through the mountains. On February 27, 1881, Boer riflemen overwhelmed the British troops occupying the hill, killing Colley and 91 others, wounding 134, and capturing 59 while suffering few, if any, casualties of their own.

A weary William Gladstone (1809–98), who had replaced Disraeli as the head of an embarrassed British government, had had enough. He offered the Boers autonomy within the British Empire, a South African republic independent as far as its internal affairs were concerned but subject to an ambiguous British suzerainty that gave Her Majesty's government final say in foreign affairs. Following the Treaty of Pretoria (April 5, 1881), the Boers signed Gladstone's proposed constitution with much ill temper, and on April 16, 1883, the grim Paul Kruger became the first president of the semi-independent republic. Such an arrangement would no doubt sooner or later have created problems, but the discovery of vast new riches—diamonds and gold—in the Transvaal all but insured its collapse.

Boer War, Second (Great) (South African War) (1899–1902)

PRINCIPAL COMBATANTS: Boer republics vs. British imperial forces in Southern Africa

PRINCIPAL THEATER(S): In and around modern South Africa—Natal, the Transvaal, and the Orange Free State

DECLARATION: The Boers declared war on Great Britain in October 1899.

MAJOR ISSUES AND OBJECTIVES: The Boers' distrust of Britain's imperial designs led them to declare war. Ultimately, their objective was to be independent of the British Empire. Britain, on the other hand, considered the Boer states, rich in gold and diamonds, a priceless possession and had long wished to integrate all of South Africa into one British union. In fighting the Second Boer War, Britain was putting down a rebellion, one it could no more allow the upstart Boers to win than it could anti-British subjects in any other of its colonies. The object was to defeat the Boers, destroy their autonomy, and annex their states.

OUTCOME: What at first had seemed a quick victory turned out to be a long and costly war that disturbed Britain's domestic tranquility, called into question the efficacy of its military doctrine concerning empire, and reduced it to using inhuman and barbaric means in order to win the war. Though Britain succeeded in annexing the Boer republics as new colonies, the Second Boer War undermined the confidence of Edwardian England in the kind of grandiose imperial schemes common among the high Victorians.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Boers, 87,365, all nominally under arms, though no more than 40,000 were in the field at any one time during the war; Britain, 448,435 regulars and militia.

CASUALTIES: Boer republics, 6,650 killed, 10,000 wounded, and 2,150 died of disease and other causes, and approximately 40,000 captured (in addition, there were 117,000 civilian and rebel internees in British concentration camps, of which number perhaps as many as 28,000 died); Britain, 7,582 killed, 22,829 wounded, and 13,139 died of disease

TREATIES: Treaty of Vereeniging (May 31, 1902).

Ever since Great Britain had conquered South Africa during the NAPOLEONIC WARS, there had been tension between British officialdom and the descendants of the

original Dutch and Huguenot colonizers. Speaking a version of Dutch called Afrikaans and considering themselves natives, the Boers (Afrikaans for “farmers”) had abandoned the Cape Colony in the 1830s to escape Britain’s empirewide ban on slavery and trekked into the interior, establishing two colonies of their own first beyond the Vaal and then beyond the Orange Rivers, the Transvaal Republic and the Orange Free State.

Twice in the late 19th century the hard-bitten, even grim frontiersmen of the Boer settlements had handed the mighty British Empire embarrassing defeats. In the First BOER WAR of 1880–81, Boers resentful of Britain’s high-handed annexation of the Transvaal took up arms and won for themselves partial autonomy within the empire, running their own Republic of South Africa internally, but answering to the Crown concerning foreign affairs. Then the discovery of immense gold fields in an area of southern Transvaal called the Witwatersrand sparked the imperial lusts of the nearby Cape Colony’s prime minister, Cecil John Rhodes (1853–1902). Rhodes, who planned an uprising that was to begin with a raid by his private army, headed by his friend Leander Starr Jameson (1853–1917). The JAMESON RAID of 1895–96 proved a fiasco, and the uprising never materialized, but when the Boers turned Jameson over to the British government for trial, he was given a sentence that amounted to nothing more than a slap on the wrist. The outraged Boers never trusted the British again.

For three years tensions ran high before the Boers issued an ultimatum demanding that imperial troops protecting British mining interests in the Transvaal be withdrawn. When the English ignored the demand and, instead, increased the strength of their troops in the Cape Colony, the Boers declared war on Great Britain in October 1899 and attacked.

Boer military organization was sketchy at best. The Boer force was based on local militia, organized in groups the Boers used a new word to describe—“commandos.”

Individual Boer soldiers lacked discipline, and Boer leaders had only the vaguest, if any, conception of tactics or strategy. On the other hand, every commando was a sharpshooter, a hunter almost from birth, quite accustomed to taking advantage of natural cover and terrain. All of them were mounted and excellent riders. All of them were armed with modern repeating rifles. In addition, the Boers had a few pieces of modern French and German field artillery, which they learned to use well. Attacking in lightning-quick mounted raids or laying down irregular fire from concealed positions, they could devastate the ranks of close-order formations, then disappear into thin air when threatened.

THE COURSE OF THE WAR

At first the fast moving, well-armed Boers, advancing in columns both east and west, scored a string of successes. Led by the Transvaal Revolt veteran General Piet Jouberg (1831–1900), the 15,000-strong Boer main force pushed

through General Sir George White’s (1835–1912) Natal Defense Force (of comparable strength) at Laing’s Nek on October 12 and, after a series of brushes, bottled up White’s troops in Ladysmith on November 2. Meanwhile, Transvaal general Piet Conje (c. 1840–1910) had taken Mafeking on October 13, despite Colonel Robert Baden-Powell’s (1857–1941) valiant defense, and Free State forces besieged Kimberly two days later. Back in the Cape Colony General Sir Redvres Buller (1857–1915), deciding to check the Boers everywhere at once, made the mistake of dividing the British relief effort, sending Lord (Paul S.) Methuen (1845–1932) with 10,000 men and 16 guns to relieve Kimberly and rushing off with 21,000 men of his own to save White at Ladysmith.

Conje and Jacobus H. De La Rey (1847–1914), with a force of 7,000 Boers, contested Lord Methuen’s November advance every inch of the way in a series of delaying actions. When he finally managed to break through to the Modder River, he had lost 72 men killed and 396 wounded, and his troops were so exhausted that he was forced to pause, awaiting reinforcements. The Boers, suffering negligible losses, were reinforced as they went along, and Conje, now 8,000 strong, entrenched himself at Magersfontein on a hill overlooking the river. At dawn on a rainy December 10, 1899, Methuen attacked the hill frontally en masse and was cut to pieces. After 210 of his men had been killed, 675 had been wounded, and 63 had gone missing, he accepted defeat on December 11. Again, few, if any, Boers suffered casualties. There would be no relief for Kimberly.

Buller was to fare no better. By mid-December he had reached the Tugela River, where he ran into 6,000 Boers entrenched at Colenso under Free State general Louis Botha (1862–1919). Crossing the river on December 15, Buller attempted to turn Botha’s left flank only to find his troops entangled in the tough terrain and at the mercy of the Boer small-arms fire. British batteries, unlimbering to support the frontal assault, suddenly found themselves being cut to ribbons by Boers hiding in the bush. The Boers drove back the British relentlessly, killing 143 of Buller’s men, wounding 756 others, taking 220 more prisoner, and seizing 11 guns. Perhaps 50 Boers died during what, back in London, the press would call Britain’s “Black Week.” Buller was so beaten he advocated outright surrender of Ladysmith.

London had had enough. Buller was immediately relieved of supreme command and replaced by Field Marshal Lord Frederick Roberts (1832–1914), who steamed into Cape Town in January 1900 with reinforcements and his chief of staff, General Lord Horatio Kitchener (1850–1916). The fate of the Boers was sealed. Roberts realized instantly that mobility was the keystone of Boer success. Against the conventional wisdom of Britain’s conservative militarists, Roberts decided that the only way to match the Boers’ rapid fire and quick maneuvering was to build up a mounted infantry around the existing militia units.

By January 10 he had reorganized British forces, and he launched two small brigades of cavalry under General John D. P. French (1852–1925) directly at Kimberly while he took 30,000 men on a march around Conje's entrenched forces above the Modder River. French kept up a spirited campaign against De La Rey, reaching Kimberly on February 15 and bringing the Boer siege to an end. That same day Roberts bypassed Magersfontein on Conje's left flank, threatening the Boer leader's communications.

Conje began a slow retreat across the Modder only to find the way blocked on February 18 by French, rushing back from Kimberly. Conje was trapped. As the main British army approached, he fortified his troops by circling their laager (wagon train) and prepared for the worst. Then Roberts fell ill, and Kitchener took command, launching an ill-conceived and hasty frontal piecemeal attack. Hidden behind their wagons, the Boer marksmen shot down more than 1,200 Englishmen, killing 320 and wounding 942. Roberts quickly resumed command on February 19 and slowly, carefully, systematically encircled and bombarded the Boer laager. For eight days the Siege of Paardeberg continued until Conje—who could well have broken free with his 4,000 horsemen, but who (ever the Boer) mulishly refused to abandon his wounded and his wagons—was starved into surrender.

The next day, February 28, Buller finally reached Ladysmith. Twice since "Black Week" he had tried and failed to break through Botha's defensive line on the Tugela: at Spion Kop on January 23 and at Vaal Kranz on February 5. Both times a small force of Boer marksmen had repulsed his attacks. Buller's losses were substantial: 408 killed, 1,390 wounded, 311 missing. The Boers had lost 40 men killed and 50 wounded. His third attack, which was successful, had come during February 17–18. Now, as he was advancing on Ladysmith, the besiegers fled, and Buller's relief forces joined arms with the garrison forces.

The tide of the war had turned. Heavily reinforced, the British advanced on all fronts. Roberts marched into the Orange Free State and seized its capital, Bloemfontein, on March 13, 1900, soon occupying the rest of the country. During May 17–18 Major General Bryan T. Mahon, at the head of a flying column of cavalry and mounted infantry, relieved the garrison at Mafeking, which had been under siege for seven months. In May, too, the British invaded the Transvaal, capturing Johannesburg on May 31 and then Pretoria on June 5, effectively crushing all Boer resistance on the battlefield. Britain annexed the Orange Free State on May 24, 1900, and the Transvaal Republic of South Africa on September 3. S. J. Paul Kruger (1825–1904), the republic's president, had long since fled for protection to Africa's Portuguese and Dutch settlements. As far as Lord Roberts was concerned, the war was over. He put Kitchener in charge and sailed for home in December 1900.

THE GUERRILLA WAR

Britain's ruling Union Party, while admitting there were still a few marauders left to be rounded up, claimed victory along with Lord Roberts. The claim soon proved to be a hollow one, even something of a home-front delusion. The Union Jack may have waved in Johannesburg and Pretoria, but there were Boers still fighting. No longer organized into anything like regiments 10,000 to 15,000 strong, they assembled in secret as guerrilla commandos and planned their constant and quick raids. Small bands of horsemen would suddenly strike the slow moving British infantry and its supply columns, then vanish into the veldt. By the time a force of British or imperial cavalry arrived to take up the chase, there were no guerrillas to be found—only peaceful, god-fearing Afrikaaner farmers, happily plowing away in the same baggy work clothes they had been wearing a few days before when they slaughtered themselves an Englishman or two. Their weapons were hidden away and their swift mounts turned into work ponies grazing in their fields.

Horatio Kitchener addressed the guerrilla problem with a brutal and bloodless logic. If he was unable to run to ground 20,000 Boer horsemen with the 250,000 British troops he had on hand, he could at least use those troops to reduce the Boers' ability to maneuver, then perhaps eliminate the commando units one at a time. He built some 8,000 corrugated iron and stone blockhouses, stretching them first along the railway lines, and then across the veldt itself. In time the entire Boer countryside was littered with blockhouse forts, linked by barbed wire and within rifle shot of one another. But the elusive Boer raiders seemed to plunge at will though Kitchener's cordon of defense.

Taking a leaf from the Spanish, Kitchener copied tactics they had used in Cuba, sweeping through the now compartmentalized Boer nations with flying columns of mounted infantry. As the army moved, it also "sanitized" its rear, burning all crops and every farm the enemy might use for food or shelter. Kitchener considered every Boer an enemy; there were no civilians in his war. Every rural inhabitant he caught in his net—mostly women and children—he uprooted and carted off to one of his newly constructed concentration camps, 24 of them built and administered by the army. Some 117,000 were marched off to the camps. Perhaps as many as 28,000 died.

Britain learned about these horrors from the testimony of an impassioned middle-aged woman named Emily Hobhouse (1860–1926). Hobhouse toured the camps and returned to England to tell her tale, looking for somebody, anybody, who would listen. Liberal Party leader Sir Henry Campbell-Bannerman (1836–1908) sat quietly as she described the wholesale burning of farms, the deportations, the scorched earth, the convoys of prisoners deprived of clothes, the semistarvation in the camps, the fever-ridden children lying on the bare earth, and the appalling numbers

of dead. When he spoke out a week later about the nature of the war, calling Kitchener's tactics the "methods of barbarism," he found himself in the midst of a hurricane of abuse. He was denounced in the popular press, excoriated in private clubs, and excluded from polite society for defaming the British army. Soon anyone taking up the cause of the Boers was being accused of treason. But the average British citizen heard the tales and was appalled.

Meanwhile, the Boer commandos—led by Botha, De La Rey, Christiaan De Wet (1854–1922), and Jan Smuts (1870–1950)—continued their raids, many of them deep into the Crown's Cape Colony. Smuts got within 50 miles of Cape Town, but that was as far as he got: Slowly, Kitchener's drastic and brutal "methods of barbarism" paid off, wearing down Boer morale and systematically destroying commando units.

The Boers first sued for peace in March 1901, but Kitchener ignored them. In May of 1902, heartsick and with much ill will, they capitulated. By the Treaty of Vereeniging, the Boers on May 31, 1902, at last accepted British sovereignty. But in return the British agreed to very lenient terms. No Boer lost his property. No Boer had to pay special taxes to compensate for war losses. Indeed, Britain agreed to pay the Boers £3 million to compensate them for their destroyed farms. Boers could teach both English and Afrikaans in their schools. Bowing to the Boers' special sensitivities concerning the social order, Britain postponed settling the issue of nonwhite suffrage. In short, the Boers kept their land, their language, and their culture.

As for Great Britain itself, it had taken the mighty empire almost three years to subdue the tiny Boer nations. Britain had started the war with 25,000 troops, but before it was over some half a million men were serving in South Africa—drained from British armies stationed around the world. The Boers probably had 87,000 males of fighting age but never fielded more than 40,000. A total of 7,582 Britons had died fighting the Boer War, and another 22,829 were wounded. Approximately 10,000 Boers were wounded, and an estimated 6,650 were killed. Clearly, the Boers lost, and Britain won, but for the first time since the WAR OF 1812, the British army had fought hostile mounted riflemen and faced murderous small-arms fire, and what it had discovered was that the 85 years' worth of experience it had gained since then fighting formal little wars in Europe and throughout the world was useless. To fight another such war as this, the empire needed new thinking about tactics and battlefield techniques. Otherwise, it was left with Kitchener's "methods of barbarism." For the British military as well as the British public, the horrors of the Boer War had taken some of the Victorian bloom off imperial adventures.

Boer-Zulu War (1838–1840)

PRINCIPAL COMBATANTS: Zulu nation vs. Boer colonizers

PRINCIPAL THEATER(S): Present-day South Africa—Natal province

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: The Zulus objected to Boer colonization of Zulu territory; they sought to stop the Boer migration and exterminate those already settled. The Boers reacted to what they considered Zulu treachery and sought revenge as well as the right to settle in Natal and the Transvaal.

OUTCOME: The Zulus lost control of southern Natal; the Boers were able to continue the Great Trek without resistance from the Zulus.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At Durban, Boers, 67 commandos plus 30 servants; Zulus, 3,000. At Blood River, Boers, 464; Zulus, 12,000

CASUALTIES: At Durban, Boers, 97 killed. At Weenen, Boers, 282 men, women, and children killed. At Blood River, Boers, 4 wounded; Zulus, 3,000 killed

TREATIES: None

During the NAPOLEONIC WARS the British navy gobbled up the Dutch colony located on the southern tip of the huge African continent. Dutch-descended settlers remained the majority among whites, however, and many of them chafed under the rule of the British imperialists. After all, their families—along with those of a few Huguenots—had been in South Africa since 1650, when the Dutch East India Company first established a colony at the Cape of Good Hope. Over the course of two and a half centuries, about half the Dutch settlers took up a pastoral life, calling themselves *trekboeren* (Dutch for "wandering farmers") or *boers* ("husbandmen" or "farmers") for short. They came to consider themselves natives of Africa, spoke a variation of the Dutch language called Afrikaans, and developed a hostility not merely toward the aboriginal inhabitants, with whom in their wanderings they fought frequent range wars, but also toward the government of the Cape, which tried to restrain their treks and limit their trade. From the beginning the Dutch were deeply involved in the African slave trade, and their contentious progeny had become as ideologically dedicated to black slavery as had the scions of

Britain born in the American South. The Boers in particular much resented the English Parliament's ending of slavery throughout the British Empire in 1834. Boer slave owners, mostly cattle ranchers, gathered up their belongings, including African slaves, and set out from the Cape heading north to escape the reach of British law.

Some, under A. H. Potgeiter (1792–1852), headed north, toward the Vaal River; others followed Piet Retief (1780–1838) northeastward toward Natal and Zululand. It was merely the first stage of what South Africans would come to call the Great Trek, a mass migration that would continue until around 1843 and result in the founding of two independent Boer republics, the Transvaal Republic and the Orange Free State. From the beginning the Great Trek brought the Boers into conflict with Africans already living in the region. Potgeiter and his people came up against the Matabele Bantu tribe. After a fierce struggle they defeated the Bantu in 1837 and Potgeiter settled down. The Boers under Retief ultimately fell afoul of the great Zulu nation.

When the Boers first arrived in Zulu territory, Retief asked for a grant of land from the Zulu king, Dingaan (d. 1840). Dingaan replied that he would fill the request if the Boers would retrieve for him some cattle stolen by a rival. Retief led a band and reclaimed Dingaan's cattle, but when he brought them back, the Zulu leader turned on the Boers. Instead of giving them land, he slaughtered Retief and his entire party on February 6, 1838, near Durban and then led his warriors on an attack against a Boer settlement in Natal. At Weenen—"the place of weeping"—the Zulus massacred 282 men, women, and children. Swearing that Dingaan's treachery would not go unpunished, the Boers, now led by Andries W. J. Pretorius (1798–1853), organized an army and in April 1838 headed out on a retaliatory campaign against the Zulus.

The Zulus set up an ambush, lured the Boers into the trap, and decimated the force, though a few shot their way clear and escaped. The Boers were not the only Europeans Dingaan was fighting at the time. While the Boer-Zulu conflict had been heating up, British imperial troops were approaching Natal from the east. The Zulus led them, too, into ambush. The British, finding themselves surround by some 7,000 Zulus, three times managed to repel Zulu charges, but Dingaan's fourth attack split the British force in two. Half the British fled along the Tugela River, but only a handful managed to escape. The other half remained completely encircled by the Zulus, who launched one charge after another. Dingaan's warriors did not break off the attacks until they had slain each and every invader.

The Boers, meanwhile, had organized another army, but in the wake of the Zulu slaughter of the British, they sued Dingaan for peace. When, instead of taking up negotiations as they had requested, he dispatched an army of 12,000 warriors, the Boers had no choice but to continue fighting. At the Battle of Blood River on December 16, 1838, Andries Pretorius decisively defeated Dingaan as

Boer sharpshooters mowed down wave after wave of Zulu warriors. Dingaan now found his leadership being questioned, and the Zulus, beset by internal discord, offered no further resistance to the mass migration of the Boers. In fact, the following year Dingaan's brother, Mpande (d. 1872), turned to the Boers for aid when he and his supporters conspired to seize the Zulu throne. The Boers were happy to help, and as the internecine struggle developed throughout 1839, Pretorius boldly declared a Boer Republic of Natal.

At the Battle of Magango in January 1840, a combined Boer-Zulu rebel force confronted and defeated Dingaan's army. As the Zulu leader fled north to Swaziland (where he was later murdered), Mpande assumed the throne and grandly bestowed all of southern Natal on the Boers, giving substance to the Boer state Pretorius had proclaimed into existence. It would, however, prove to be a short-lived republic. Britain occupied the republic in 1843 and annexed it to the empire (see BOER WAR, FIRST).

Bogomils' Revolt (1086–1091)

PRINCIPAL COMBATANTS: Bogomils (Bulgarian rebels) and their nomadic allies vs. the Byzantine Empire

PRINCIPAL THEATER(S): Bulgaria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A Bulgarian nationalist religious sect, the Bogomils, took advantage of nomadic raids on the Byzantine Empire to launch a revolt in search of independence.

OUTCOME: Byzantium bribed the Bogomils into switching sides and crushed the tribal raiders.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

CASUALTIES: Unknown

TREATIES: None

In 1081, Alexius I Comnenus (1048–1118), one of the sharper diplomats and more resourceful rulers in history, became emperor of Byzantium. Faced with an empire falling apart from internal dissension and external threats, Alexius mustered his meager resources and weathered many defeats and setbacks to return the Byzantine Empire

to something approaching its former glory. He was especially adept at turning his enemies—both inside and outside the empire—against one another, a skill that proved particularly useful as the Turks hammered on the Asiatic gates of Constantinople, the Pechenegs (Patzinaks) and the Cumans (Kumans) raided south of the Danube, and the Bulgarians broke out in open revolt.

The Bogomils, named after their founding priest, were members of a dualistic religious sect that arose in Bulgaria beginning in the 10th century. The Bogomils fused the neo-Manichean doctrines that they imported mostly from the Paulicans (*see* PAULICAN WAR) of Armenia and Asia Minor with the local evangelical teachings of those intent on reforming the Bulgarian Orthodox Church. By the 11th century they were spreading over many of the European and Asian provinces of Byzantium, allying themselves with the Pecheneg and Cuman nomads. After this mixed group of invaders breached the empire's borders, Alexius sent a Byzantine force against them at what is now Silistra, Bulgaria, in 1086.

Although the barbarians quickly and soundly defeated Alexius's army, intertribal discord, mostly over the division of spoils, gave the Byzantines the wedge they needed to promote the collapse of the alliance between the nomads and the Bogomils. In typical Byzantine fashion, Alexius bought off the Bogomils when the Cumans moved north, hiring the former as mercenaries to fight alongside Byzantium against the Pechenegs, who had besieged the Byzantine capital, Constantinople. With the help of the Bogomils, the Byzantines weathered the siege and forced the Pechenegs to turn and flee. The Byzantines pursued the retreating Pechenegs, caught them, and virtually destroyed them as a fighting force at the battle of Leburion in 1091, then drove the stragglers north across the Danube River.

The Bogomils remained behind in Constantinople, where they so flourished that around 1100 the Byzantines felt the need to suppress them. The emperor threw the city's more prominent Bogomils into prison and held a public burning of the Bogomilian leader, Basil, all of which did little to stop the spread of the sect westward throughout the empire in the 12th century.

Bohemian Civil War (1390–1419)

PRINCIPAL COMBATANTS: Holy Roman Emperor Wenceslaus (also king of Germany and Bohemia) vs. rebellious Bohemian nobles

PRINCIPAL THEATER(S): Bohemia, especially Moravia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Bohemia

OUTCOME: Wenceslaus lost and then regained the Bohemian throne, but his power was weakened, leading to the elevation of his half brother Sigismund.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

As the Holy Roman Empire declined toward the end of the 14th century, Wenceslaus (1361–1419), king of Germany and Bohemia and the Holy Roman Emperor, was confronted with myriad wars among disparate powers in Germany, including towns and cities as well as individual nobles and church interests (*see* "TOWN WAR"). In 1389 Wenceslaus brokered an uneasy peace, which favored the nobles. Having pacified the situation in Germany, Wenceslaus found himself embroiled in a civil war with Bohemian nobles led by his own cousin Jobst (1351–1411), margrave of Moravia. Jobst's faction imprisoned Wenceslaus during 1393–94, long enough for the faction to set up a council that usurped much of the king's authority in Bohemia. Seeking to bolster his crumbling power, Wenceslaus threw his support behind the popular religious leader John Huss (1369–1415). But his support of the Hussites served only to turn the established clergy, led by the archbishop of Prague, against Wenceslaus. In 1400 the electors of the various German states deposed Wenceslaus as their king, and from 1402 to 1403 the Bohemian nobles again imprisoned him, this time at the instigation of Wenceslaus's half brother Sigismund (1368–1437).

Upon his imprisonment the tide of civil disturbance now turned in favor of Wenceslaus, who thereby regained the Bohemian throne, at least nominally, but he continued to wrangle with the nobles, who fought him over each appointment he made to civil and church offices. Amid religious upheaval, which would culminate in the HUSSITE WARS (1419–1436), the embattled Wenceslaus died. Sigismund, having already become king of Germany in 1411, assumed the Bohemian throne.

Bohemian Civil War (1448–1451)

PRINCIPAL COMBATANTS: Hussite partisans of George of Podebrad (or Podebrady) vs. Hapsburg rulers of Bohemia

PRINCIPAL THEATER(S): Bohemia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: George of Podebrad's Utraquist party opposed the Hapsburg party's candidate for the Bohemian throne, Ladislav V ("Posthumous").

OUTCOME: Although Ladislav V became nominal king of Bohemia, George of Podebrad governed as the true power behind the throne; upon the untimely death of Ladislav in 1457, George was elevated to the throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No formal treaty

Before he ascended the Bohemian throne on the death of Wenceslaus (1361–1419), Sigismund (1368–1437) was elected king of Germany in 1411. Seeing an opportunity to become famous as the savior of church unity, he forced the convocation of the Council of Constance, which tried the Protestant religious reformer John Huss (1369–1415). Found guilty of heresy, Huss was burned at the stake, thereby triggering the HUSSITE WARS (1419–1436). The Hussites remained a powerful force in Bohemia during the 15th century and played a key role in establishing the succession when Sigismund failed to produce an heir. The Bohemian nobility split over the issue, with the conservatives accepting Sigismund's son-in-law, Albert II of Austria (1397–1439), while the Hussites demanded a Polish candidate. Albert's death ushered in an interregnum during which an assembly established provincial administration for Bohemia as its leaders debated the best course to follow.

The problem of succession grew more urgent when Albert's widow gave birth to a boy called Ladislav, and several foreign princes suddenly showed interest in the throne. In 1443 the Hussite majority opted to recognize the child's claims, even though he resided at the Hapsburg court of German king Frederick III (1415–93). He was to become Ladislav V (called "Ladislav Posthumous") (1440–57) and rule under a Hapsburg regency.

Meanwhile, George Podebrad (or Podebrady) (1420–71) emerged as one of the most important Hussite leaders. Born to a baronial family in central Bohemia, George became head of the Utraquist party, a moderate Hussite faction, which opposed Ladislav for the Bohemian throne.

George rallied his followers against the introduction of German rule in Bohemia and in the cause of Bohemian nationalism. In 1448 he captured Prague, capital of Bohemia, without bloodshed and successfully held it against immense political pressure from the Hapsburgs and their Bohemian champions. By 1451 the Hapsburgs effectively gave up their claims by allowing George of Podebrad to govern. The Bohemian diet in 1451 elected George regent governor, and although Ladislav V became nominal king of Bohemia in 1453, George of Podebrad

was the true power behind the throne. When the youthful Ladislav suddenly died in 1457, George was elevated to the Bohemian throne.

Bohemian Civil War (1465–1471)

PRINCIPAL COMBATANTS: Bohemian king George of Podebrad vs. the Catholic nobles

PRINCIPAL THEATER(S): Bohemia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: King George of Podebrad wished to make Utraquist Hussite the official religion of Bohemia.

OUTCOME: The national party grew to a position of dominance in Bohemia, and King Ladislav II, the son of King Casimir of Poland, became king of Bohemia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Olomouc, December 7, 1478

Before the HUSSITE WARS (1419–1436) followers of Protestant renegade John Huss (1369–1415) had been much persecuted in Bohemia. But after George of Podebrad (1420–71), leader of the Utraquist faction of the Hussites, seized power and declared himself regent in the BOHEMIAN CIVIL WAR (1448–1551), he rose to become king in 1459. An ardent nationalist, George sought to make the sect's beliefs, as outlined in the 1420 Four Articles of Prague (i.e., the word of God should be preached freely; communion should be administered in both kinds to clerics and to laymen; the worldly possessions of the clerics should be abolished; and public sins should be exposed and punished), the bedrock of his country's official religion. At the Council of Basel in 1431, Catholic and Utraquist emissaries had reached a compromise under which the Roman church agreed to accept watered-down versions of the Four Articles. It was these "compacts" that George was now hoping would hold Rome at bay while he basically imposed Hussite Protestantism on Bohemia.

To give him his due, George was subtle and also truly wished to rule as a king of "two peoples." Anxious to be

crowned according to the Catholic rites first prescribed by Charles IV (originally called Wenceslaus) (1361–1419), he took extraordinary measures to accommodate the adherents of Rome in Bohemia. He welcomed an envoy of two bishops from his son-in-law, King Matthias Corvinus of Hungary (1440–90), and took a secret oath in their presence to defend the true faith and lead his people from error. He felt free to do so because the compacts were not specifically mentioned. George's coronation was held in Protestant Prague, but he asked papal envoys to help him acquire recognition from Catholic Breslau in Silesia.

Nevertheless, George knew that eventually he could achieve lasting peace only by actually resolving once and for all his country's religious issues, and toward that end, after having so carefully enhanced his prestige at home and abroad, he attempted to have Pope Pius II (1405–64) sanction the compacts in 1462. Instead, the pope declared them null and void. George responded by calling an assembly in Prague and affirming his devotion to the Four Articles. Neither man seemed ready to back down, despite the best efforts of several princes, including Holy Roman Emperor Frederick III (1415–93). Matters only grew worse when the new pope, Paul II (1417–71), elected in 1464, adopted an even more aggressive stance, openly encouraging George's foes, especially in Breslau.

Bohemia's Roman Catholic nobles then rose against George at Zelena Hora in 1465. Paul II excommunicated George and other Hussites in 1466 and released George's Catholic subjects from their oath of allegiance to the king. In spring 1467 George launched an attack on rebel castles throughout Bohemia and on their strongholds at Breslau and other Catholic centers. Although desultory, his campaign was showing signs of success before the rebels rallied aid from Hungary's King Matthias (*see* BOHEMIAN HUNGARIAN WAR [1468–1478]). At first the Hungarian king was unsuccessful during his invasions of Bohemia, but on May 3, 1469, the Bohemian nobles elected Matthias king of Bohemia. To save his throne, George made a deal with King Casimir IV (1429–92) of Poland and relinquished his sons' rights of succession. In 1471, after George's death, Casimir's son, Prince Uladislav II (or Ladislav) (1456–1516) was selected king of Bohemia. The war waged by King Matthias ended with the Treaty of Olomouc, which recognized Uladislav as king of Bohemia and secured Moravia, Silesia, and Licesia (Lusatia) for Matthias.

In the 13th century, under Ottokar II the Great (c. 1230–78), Bohemia briefly became the most powerful nation of central Europe. In 1255 Ottokar joined the Teutonic Knights in a successful campaign against the Prussians, which only encouraged the expansion-minded autocrat. Already he had turned his attentions toward Austria and a duchy called Styria that had once been the possession of the powerful Austrian Badenbergs. When the House of Badenbergs' male line became extinct in 1246, a number of local princes cast covetous eyes on the duchy, including (in addition to Ottokar) Hungary's king Bela IV (1206–70). After several clashes between Hungary and Bohemia, the two concluded the Treaty of Ofen in 1254, which gave Styria to Bela and Austria to Ottokar. Six years later the rebellious Styrian nobility turned to Ottokar for aid, and he was only too happy to become their lord. At the Battle of Kressenbrunn in 1260, Ottokar defeated the Hungarians who opposed his assuming the throne of Styria.

Ottokar continued his energetic expansion by force and by diplomacy, having both the money and the bravery he needed to meet mostly with success, though he never managed to establish dominion over Poland and Lithuania. Taking advantage of the interregnum in Germany, during which the Holy Roman Empire virtually collapsed into anarchy, Ottokar annexed Carinthia, Carniola, and Istria before his opponents could combine to stop him. His expansion roused the ire of Hungarian kings and the resentment of many Austrian nobles. To King Bela's dying day, he fought vainly to check the advancing Bohemian empire, which by 1270 stretched from Silesia to the Adriatic. Not until Ottokar came up against Rudolph I of Hapsburg (1218–91) in 1274 would he at last meet his match.

Bohemian-Hungarian War (1468–1478)**PRINCIPAL COMBATANTS:** Bohemia vs. Hungary**PRINCIPAL THEATER(S):** Bohemia**DECLARATION:** Hungary declared war on Bohemia at the urging of Pope Paul II in 1468.**MAJOR ISSUES AND OBJECTIVES:** After the nationalistically minded Hussites came to power in Bohemia, the pope excommunicated all of them in a call for a pro-Catholic uprising within Bohemia and a pro-Hapsburg invasion to return Bohemia to the Holy Roman Empire, a call that both Bohemia's Catholic nobles and Hungary's Catholic king quickly heeded.**OUTCOME:** The nationalists retained control in Bohemia, but at the cost of three provinces that went to Hungary, a much weakened monarchy, and an increasingly powerful nobility.**APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:** Unknown**CASUALTIES:** Unknown**TREATIES:** Peace of Olomouc, December 7, 1478

Throughout the 14th century, Bohemia was racked by turmoil and civil war, most of the troubles stemming from the persecution of the religious followers of John Huss (1369–1415), who the majority of Bohemia's Catholic population considered heretics. The BOHEMIAN CIVIL WAR (1390–1419) was hardly over before the long HUSSITE WARS began, and not until 1436, when all factions were united under King Sigismund (1368–1437), after most of the Hussites accepted a Catholic compromise on doctrine, did Bohemia know peace. Civil war broke out once again in 1448, when George of Podebrad (1420–71), representing the Utraquist faction of the Hussite religion, seized power and declared himself regent over the minor Ladislav V “Posthumous” (1440–57), the Hapsburg candidate for the Bohemian throne (see BOHEMIAN CIVIL WAR [1448–1451]). George's ascendancy made the Hussite heresy the official religion of Bohemia, and when he became king upon the death of Ladislav, he was naturally the leader of Bohemia's growing nationalism. All of which, just as naturally, earned him the enmity of the pro-Hapsburg Romanists, especially the Roman Catholic nobles, who allied against him.

In 1465 Pope Paul II (1417–71) excommunicated George and all Hussites as heretics and officially freed the Bohemian Catholics from their duty of allegiance to the king. When George seemed to be successfully quelling the Catholic rebels (see BOHEMIAN CIVIL WAR [1465–1471]), the ambitious King Matthias Corvinus (1443–90) of Hungary attacked Bohemia with the pope's blessings in 1468. In their first encounters George defeated the invading Hungarians, but by tying down a major portion of the royal army, Matthias fed rebel success in other parts of Bohemia. Thus, on May 3, 1459, when Hungarian troops seized the Moravian capital of Brno, the disloyal opposi-

tion was quick to proclaim Matthias king of Bohemia. Buoyed by the advance into Hungary of Bohemian troops led by George's son, supporters rallied to their beleaguered king in 1470, but George was unable to consolidate his successes because of his rapidly deteriorating health. On March 22, 1471, he died and was much mourned by Protestant Utraquists and loyal Catholics alike.

Prince Uladislav II (1456–1516), a strong supporter of Bohemia's Hussite nationalists, succeeded George on May 27, 1471. Now the Utraquist Hussites grew even stronger, absolutely dominating the country's political life. Uladislav carried on the war against the Hungarians and their Romanist supporters without much success. When Moravia, Silesia, and Lusatia fell to the Hungarian troops, Bohemia sued for peace. The treaty signed at Olomouc on December 7, 1478, awarded the rule of Bohemia to Uladislav and that of Moravia, Silesia, and Lusatia to Matthias, though under the terms of the treaty the three provinces would revert to Bohemia on the death of the Hungarian. During the remainder of Uladislav's reign, the mostly Catholic Bohemian nobility grew ever more powerful at the expense of the weak king's authority.

Bohemian-Palatine War (1618–1623)**PRINCIPAL COMBATANTS:** Bohemian Protestants vs. forces of the Catholic League and the Holy Roman Empire**PRINCIPAL THEATER(S):** Bohemia**DECLARATION:** None**MAJOR ISSUES AND OBJECTIVES:** Bohemians revolted against the Hapsburg emperor Ferdinand II, principally over issues of religion.**OUTCOME:** The Hapsburgs were established in Bohemia and the duke of Bavaria became elector of the Palatinate.**APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:** Catholic League, 30,000; Bohemian Protestants, 14,000 (at Wimpfen)**CASUALTIES:** At White Mountain, Catholic League, 250 killed; Bohemian Protestants, 5,000 killed or captured. At Wimpfen, Protestants, 2,000 killed or wounded.**TREATIES:** None

The Bohemian-Palatine War may be seen as a conflict in and of itself or as the opening phase of the THIRTY YEARS' WAR. In 1617 Roman Catholic authorities in Bohemia closed Protestant churches under construction by citizens

of Broumov and Hrob. This violated guarantees of religious liberty that had been promulgated in the Majestätsbrief of Emperor Rudolf II (1552–1612) in 1609. That document had created a body of “defensors,” who were responsible for safeguarding Protestant rights. The defensors now convened a Protestant assembly in Prague to try the imperial regents, William Slavata and Jaroslav Martinic, for violation of the Majestätsbrief. Found guilty, the regents, with their secretary, Fabricius, were seized and thrown from the windows of the council room of Hradcany (Prague Castle) on May 23, 1618. This so-called Defenestration of Prague was symbolic: It did not injure the men, but it signaled the commencement of a Bohemian revolt against the Hapsburg emperor Ferdinand II (1578–1637), which was the beginning of the Bohemian-Palatine War and an early phase of the Thirty Years’ War.

In 1618 the Bohemians elevated to the Bohemian throne the Protestant elector Frederick V (1596–1632) of Palatine instead of the Catholic Holy Roman Emperor Ferdinand II. Now Ferdinand’s only hope of recovering his Bohemian lands lay in concerted military action. En route to Frankfurt on the day of the imperial election, he had consulted with Duke Maximilian of Bavaria (1573–1651) on preparations for an invasion of Bohemia. After the election Ferdinand consulted the German electors at Frankfurt. It was agreed that the Catholic League would raise a large army. On October 8, 1619, Ferdinand and the powerful Maximilian of Bavaria agreed to support the league. Maximilian’s Bavaria supplied 7,000 men to the confederate army, which by July 1620 totaled some 30,000 men. The Bohemian forces numbered only about 10,000.

Under the brilliant general Johan Tserclaes (1559–1632), count of Tilly, the forces of the Catholic League and Holy Roman Empire invaded Bohemia. On November 8, 1620, at the Battle of White Mountain, Tilly led his forces to a decisive victory against a Bohemian army led by Prince Christian of Anhalt-Bernberg (1568–1630). This put the imperial forces into position to seize Prague, which resulted in the reimposition of Catholicism and the rendering of the Bohemian monarchy a Hapsburg right of inheritance. Frederick V, the Protestant elector, was stripped of his Palatine title, and Maximilian of Bavaria was elevated to head of the Catholic League and elector of the Palatinate. Frederick responded militarily in a bid to regain what he had lost, but Tilly led Catholic League forces plus a Spanish contingent against Frederick at the Battle of Wimpfen on May 6, 1622. In September Tilly took Heidelberg, and, with that, Frederick was formally deposed.

Bolivian Guerrilla War (1966–1967)

PRINCIPAL COMBATANTS: Bolivian Communists vs. Bolivian government forces

PRINCIPAL THEATER(S): Bolivia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Communist insurgents, led by Cuba’s Ernesto “Che” Guevara, attempted to topple the government.

OUTCOME: With aid from the United States, Bolivian government forces neutralized the guerrillas and killed Guevara.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Guerrillas, variable strength, but far smaller than the government forces, which numbered about 20,000.

CASUALTIES: No figures available

TREATIES: None

On November 3–4, 1964, Bolivian army general Alfredo Ovando Candía (1918–82) and air force general René Barrientos Ortuño (1919–69) led a military coup against the government of President Víctor Paz Estenssoro (1907–2001). Ovando soon stepped down, leaving Barrientos in control of the military junta that led the country. Barrientos curried favor among the peasants, even as he treated labor interests harshly, authorizing a brutal repression against striking tin miners. The unstable situation in Bolivia attracted the interest of Ernesto “Che” Guevara (1928–67), a leading figure in the communist government of Fidel Castro’s (b. 1926/27) Cuba and an exponent of Castro’s policy of exporting communism throughout Latin America. Guevara resolved to go to Bolivia to foment and lead a Cuban-style communist revolution there.

Ernesto Guevara had been born in Rosario, Argentina, in 1928 to a middle-class family. As a young man Guevara was profoundly influenced by the works of the French philosopher Jean-Paul Sartre (1905–80), the Argentine poet Pablo Neruda (1904–73), and Karl Marx (1818–83). Guevara graduated from the University of Buenos Aires in 1953 with a medical degree and an intense interest in radical politics. He became increasingly critical of the expanding economic influence of the United States in Latin America. In 1954 he witnessed for himself the effects of American intervention in Guatemala and became convinced that violent revolution was the only viable means of change in Latin America. Guevara joined Fidel Castro’s movement to overthrow the government of the pro-American Fulgencio Batista (1901–73) in Cuba. Guevara was with Castro when he led a band of insurgents

in the landing near Cabo Cruz, Cuba, that started the CUBAN REVOLUTION on December 2, 1956. With Castro, Guevara operated from a rugged base in the mountains of Sierra Maestra, attacking garrisons and recruiting peasants into the revolutionary army. In the areas that fell under insurgent control, Guevara started the land reform and socializing process. A charismatic figure, courageous and violent though frail in health (he suffered from severe asthma), Guevara earned the respect and admiration of peasants and guerrillas alike, who nicknamed him Che—Argentine slang for “friend,” a word Guevara used liberally. While fighting the guerrilla war Guevara wrote revolutionary articles and attracted worldwide media attention. Rising to the rank of major in Castro’s army, he led one of the forces that invaded central Cuba in late 1958. Then, firmly established in the new communist regime, he made speeches arguing for moral versus material work incentives, for centralized planning, and for the necessity of creating a “new socialist man.”

From 1961 to 1965 Guevara served as minister for industries and director of the national bank. He traveled widely in Russia, India, and Africa making high-profile contact with the likes of Indian prime minister Jawaharlal Nehru (1889–1904) and Soviet premier Nikita Khrushchev (1894–1971) and urging Castro to form close ties with the Soviet Union. Then, suddenly, Guevara resigned from the government, published two manuals of guerrilla warfare (*Guerrilla Warfare*, 1961, and *Guerrilla Warfare: A Method*, 1963), and formulated a provocative theory of revolution. He declared that revolution required no particular precondition; guerrilla warfare in and of itself was sufficient to foment a revolution. Deciding to test his method and theory in the field, Guevara spent time in Africa organizing the Lumumba Battalion, which took part in the CONGOLESE CIVIL WAR. Then in 1966, sometime between the second week of September and the first of November, he entered Bolivia with a forged Uruguayan passport to organize and lead a communist guerrilla movement.

Che chose Bolivia in part because he believed that of all Latin American nations, it was of comparatively little interest to the United States, which would, therefore, be less likely to intervene to stop a guerrilla insurgency. Moreover, Bolivia’s social conditions and poverty made it susceptible to revolutionary ideology, and the fact that the nation shared borders with five other countries put it in an ideal position to be the nucleus of Latin American revolution.

Starting with a cadre of 15 followers, Guevara established a guerrilla base at remote Nancahuazu. From March to August of 1967, he and his guerrillas struck frequently at Bolivian armed forces. The guerrillas did suffer serious setbacks. Their controller-treasurer absconded with much of their funding, and their food and other supplies dwindled. When factional disputes within the Bolivian Communist Party developed, organized support for the guerrillas

faltered. As the government became increasingly aware of the guerrillas, more troops were committed to the area. It was, however, to little avail. Although the strength of Guevara’s band was extremely variable—it was certainly far inferior to the 20,000-man government force sent against it—over a six-month period the guerrillas inflicted 30 government casualties for every man they lost.

On April 28, 1967, General Ovando, commanding the Bolivian armed forces, signed a “Memorandum of Understanding” defining terms of United States-Bolivian cooperation in the “activation, organization, and training” of anti-insurgent forces. During this period U.S. Special Forces—the Green Berets—also became actively involved in field operations. Of particular interest to the United States was Che Guevara himself. He had been reported dead, but U.S. Central Intelligence Agency (CIA) sources now confirmed that Guevara was not only alive but leading the guerrilla movement. Cuban-American CIA agent Félix Rodríguez (using the cover name Félix Ramos Medina) and an operative known as Eduardo González were assigned to assist the Bolivians in tracking down and capturing Che Guevara and his band. They arrived in La Paz on August 2, 1967, where they were joined by another anti-Castro Cuban-American operative, Gustavo Villoldo.

In the meantime, on April 26, 1967, the Bolivian army captured two French and Argentine couriers whose mission was to announce to the world the activities of Guevara in order to generate widespread support for the guerrilla movement. The government officials now used these captives to stir support among Bolivians to resist what the government called a “foreign invasion.” From this point on Guevara’s popular power base began to crumble, and on August 31, 1967, the Bolivian army scored its first major victory in the guerrilla war, killing almost one-third of Guevara’s men and capturing Guevara’s chief lieutenant, José Castillo Chávez, called Paco. The guerrillas withdrew, and Guevara’s always precarious health deteriorated. In the meantime, the CIA operatives began to interrogate Paco, and the government (September 15) air-dropped leaflets offering a \$4,200 reward for the capture of Che Guevara.

Now relentlessly hunted, Guevara and his men holed up at Loma Larga, a ranch close to Alto Seco. On September 26 they moved to the village of La Higuera, which was deserted. Instead of supporting Guevara and his guerrillas, the Bolivian peasants now fled from him. By afternoon government forces fired on the guerrillas, killing three important leaders. Guevara and others managed to evade capture. At the urging of CIA operative Rodríguez, a U.S.-trained Bolivian Ranger Battalion under the command of Juan José Torres (1929–76) was deployed along the San Antonio River to apprehend escaping guerrillas. They captured another of Guevara’s lieutenants, and the Ranger Battalion, reinforced by an additional 650 U.S.-trained

Bolivian troops, ran to ground Guevara and his band on September 30, trapping them in a jungle canyon in Valle Serrano, south of the Grande River. In an exchange of gunfire on October 8, Guevara was wounded in the lower calf, and the next day government forces closed in on a village called Quebrada del Yuro. In a sharp battle Guevara was wounded several times. Shot in the leg and arm, he was taken prisoner.

The army issued false reports that Guevara had been killed. CIA operative Félix Rodríguez was brought in to interrogate Guevara on October 9. However, Bolivian officials, concluding that the prosecution and trial of Guevara would only generate sympathetic propaganda for the cause of revolution and for communist Cuba, decided to execute him immediately—despite CIA instructions that he be kept alive. With Guevara's summary execution (the world was told that he died of his wounds), the Bolivian Guerrilla War came to an end.

Bolivian National Revolution (1952)

PRINCIPAL COMBATANTS: Movimiento Nacionalista Revolucionario (MNR), or National Revolutionary Movement, vs. the forces of a government-sanctioned military junta

PRINCIPAL THEATER(S): Bolivia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The MNR sought to overthrow a government-supported military junta and assume leadership of the nation.

OUTCOME: The MNR came to power.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: No figures available

TREATIES: None

For six years after the fascist military- and peasant-backed Movimiento Nacionalista Revolucionario (MNR) fell from power in postwar Bolivia (see BOLIVIAN REVOLT [1946]), the Marxist Partido de la Izquierda Revolucionaria (PIR) tried to rule the country by establishing coalition governments with older parties. Not only did the PIR ultimately fail, it cleared the way for the rise in 1950 of the more radical Bolivian Communist Party, which dissolved and replaced the PIR and alarmed the country's right-wingers.

Meanwhile, the still-outlawed MNR remained a powerful force in Bolivian politics, advocating land reform and the nationalization of the tin mining industry.

When the MNR's presidential candidate, Victor Paz Estenssoro (1907–2001), founder and leader of the party, now in Argentine exile, won a plurality victory in the 1951 Bolivian elections, the military intervened directly and formed a 10-man military junta led by General Hugo Ballivián. The denial of Estenssoro's victory and the installation of the junta triggered a popular revolt during April 8–11, 1952.

Disassociating itself from its fascist wing, the MNR sought an alliance with a small Trotskyite party with important miners' union support. Now supported by armed workers, peasants, and the national police, all led by Hernán Siles Zuazo (1914–96), the MNR overthrew the junta and recalled Estenssoro from exile. He was proclaimed president on April 16. With this, the brief Bolivian National Revolution—one of Latin America's more important social revolutions—was installed. Estenssoro set about his radical reforms: The tin industry was summarily nationalized, and miners' wages were raised; the great landowners were dispossessed and their holdings distributed to the Indians; and voting was reformed, with universal suffrage guaranteed. Not only were Bolivia's Indian peasants enfranchised, they had become a major, if mostly mute, political force that all subsequent governments had to court.

On the negative side, Estenssoro made no attempt to reconcile with those in the opposition but, rather, moved ruthlessly and even brutally against the "enemies of the revolution." The result was a decade of instability and abortive revolts among civilian as well as military groups, culminating in the BOLIVIAN GUERRILLA WAR.

Bolivian Revolt (1946)

PRINCIPAL COMBATANTS: Liberal partisans vs. the forces of military dictator Gualberto Villaroel

PRINCIPAL THEATER(S): La Paz, Bolivia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In a climate of economic depression, rebellious soldiers, students, and workers sought the overthrow of the nation's military dictatorship and the installation of a liberal, reformist government.

OUTCOME: In a brief spasm of civil insurrection, Villaroel was deposed and killed and a provisional liberal government installed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** None

Since 1936, when young army officers seized power, Bolivia had been ruled by socialist-minded military men who had confiscated the holdings of Standard Oil, created an important labor code, and in 1938 written a liberal, socially aware constitution. By the early 1940s, however, dissidents on both the left and right had formed strong nationwide opposition parties. The most important party for the right-wing-leaning middle class was the avowedly fascist *Movimiento Nacionalista Revolucionario* (Nationalist Revolutionary Party) (MNR), while the working class and the revolutionary left flocked to the Marxist *Partido de la Izquierda Revolucionaria* (PIR), which was pro-Soviet and thus soon pro-Allied during WORLD WAR II.

Both groups sent large numbers of representatives to the national congress of 1940–44. In 1943 a secret military group called *Radepa* (for *Razón de Patria*, or “Reason of the Fatherland”), which was closely allied with the MNR, staged a coup against civilian president Enrique Peñaranda (1892–1970), bringing to power Colonel Gualberto Villaroel (1907–46). The United States refused to recognize the new fascist-style government until it pledged to cooperate in the Allied cause. Vehemently opposed by all those on the left and most of those on the right, the Villaroel government nevertheless survived for the rest of the war, principally because the country’s economy boomed due to World War II’s seemingly insatiable call for tin, a big industry in Bolivia.

The end of the war saw the demand for ore collapse, and postwar Bolivia was plagued by unemployment and inflation, which rapidly destabilized the Villaroel regime. During July 17–21, 1946, a popular uprising swept the capital city of La Paz. Workers and students as well as many troops rebelled. The army withheld its support from Villaroel, who was seized by a mob and summarily hanged from a lamppost in front of the presidential palace. With that, the revolt ended and the PIR tried to rule for the next six years in a series of unstable alliances with many of Bolivia’s older and smaller parties. As more radical governments came to the fore, the MNR enjoyed a resurgence, once again seizing power in 1952 (see *BOLIVIAN NATIONAL REVOLUTION*).

See also *BOLIVIAN GUERRILLA WAR*; *BOLIVIAN REVOLT* (1971).

Bolivian Revolt (1971)

PRINCIPAL COMBATANTS: Leftist partisans of President Juan José Torres vs. elements of the army and conservative upper classes

PRINCIPAL THEATER(S): Principally Santa Cruz and Cochabamba, Bolivia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rightist rebels staged a revolt to “keep the country from falling into the hands of communism.”

OUTCOME: Torres was ousted, and a military-civilian coalition government was installed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Highly variable

CASUALTIES: No figures available**TREATIES:** None

On April 27, 1969, Bolivian president René Barrientos Ortuño (1919–69) was killed in a helicopter crash and was succeeded by Vice President Adolfo Siles Salinas (b. 1925). Salinas, however, could not long maintain control of the chronically unstable Bolivian government, and he was ousted in a bloodless military coup led on September 26, 1969, by General Alfredo Ovando Candía (1918–82), leader of a military revolt in 1964. Ovando named himself president but was soon forced out of office by right-wing officers during a coup on October 6–7, 1970. Remarkably, however, in the political confusion of this coup, General Juan José Torres (1929–76), the anticommunist but strongly socialist officer who had tracked down Che Guevara (1928–67) (see *BOLIVIAN GUERRILLA WAR*), seized power, and proclaimed himself president. This triggered a series of right-wing protests, including a demonstration organized in the summer of 1971 in the town of Santa Cruz. Torres responded to the demonstration by arresting 30 of its leaders, an action that set off a general revolt from August 19 to 22. The struggle pitted the supporters of liberal Torres—mainly tin miners, students, peasants, and air force personnel—against those of Colonel Hugo Banzer Suárez (1924–2002), including most of the army and the conservative middle and right-wing upper classes. Torres defended the arrest of the demonstration leaders as a move to curtail a “fascist conspiracy.” The rightists, on the other hand, raised the banner of anticommunism. Nevertheless, of the numerous military regimes that governed Bolivia in the 1960s and 1970s, Torres’s was clearly the most radical. At one point he replaced Bolivia’s congress with a workers’ soviet. So it was hardly surprising that when Banzer’s partisans wrested control of Santa Cruz and Cochabamba on August 20–21, the air force switched allegiance from Torres and quickly took the Bolivian capital, La Paz, on August 22. At this, Torres fled for his life to Peru and subsequently to Chile, which granted him political asylum. Banzer then

presided over the creation of a military-civilian coalition government, with himself as president.

Klein, *Concise History of Bolivia* (Cambridge and New York: Cambridge University Press, 2002).

Bolshevik Revolution (1917)

PRINCIPAL COMBATANTS: The Bolshevik Party and its sympathizers vs. the provisional government of Aleksander Kerensky

PRINCIPAL THEATER(S): Russia's urban areas, especially Petrograd (St. Petersburg) and Moscow

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The radically communist Bolshevik Party sought to take control of the revolutionary upheaval created by the collapse of the czarist regime in the face of the immense destruction visited on Russia's armed services and civil society by World War I.

OUTCOME: The first Bolshevik government was officially formed on November 7, 1917, after the overthrow of the provisional government that had replaced the government of the czars. Vladimir Illich Lenin was proclaimed its leader. Russia withdrew from World War I and fell victim to a brutal civil war, which the Bolsheviks won.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: 174 killed; 1,300 injured—civilians and military personnel

TREATIES: None for the revolution, but the Bolshevik government signed a separate peace with Germany under the draconian Treaty of Brest-Litovsk.

BIRTH OF BOLSHEVISM (MARXIST-LENINISM)

The Bolshevik Revolution's leader, Lenin (1870–1924), was born Vladimir Ilich Ulyanov on April 22, in Simbirsk (later renamed Ulyanovsk after him) to prosperous middle-class parents (both were teachers by profession), from whom he learned to care about the plight of the impoverished Russian masses. Lenin's older brother Aleksandr became an active revolutionary first and in 1887 was hanged for plotting against the czar. A profoundly shaken Vladimir Illich immersed himself in the works of Karl Marx (1818–83) and other radical political philosophers, but he did not turn immediately to revolutionary activity. After graduating from secondary school, he enrolled at the University of Kazan, from which he was expelled because

of his growing radicalism. Despite his expulsion Ulyanov earned a law degree from the University of St. Petersburg in 1891 and started a law practice in Samara (present-day Kuibyshev).

By 1893 Lenin abandoned the law for the full-time pursuit of revolutionary activity. Intensely intellectual, he methodically reshaped Marxist theory to fit the conditions he perceived in czarist Russia. Marx had theorized that the seeds of the radical transformation of government lay in emerging industrial capitalism, that industrial workers—unlike agricultural peasants—would spontaneously and inevitably develop a radical group consciousness that would energize a popular political movement. Lenin agreed with Marx that the key to revolution was the radical consciousness of the industrial proletariat, but he observed that the requisite radical consciousness was failing to develop in Russian workers, who acted still, in his view, as ignorant peasants. The essence of what came to be called Leninism, Lenin's reformulation of Marxist theory, was the creation of political programs through which radical consciousness might be deliberately cultivated among workers. This required the creation of a thoroughly organized revolutionary party, which would inform, persuade, generally agitate, and then direct the proletariat.

The revolutionary thinker adopted the pseudonym (or underground nom de guerre) "Lenin" (meaning "man of iron"), but the name did not save him from arrest and Siberian exile in 1895. Five years later he left the country and joined a group of Russian emigrés who, led by Georgy Valentinovich Plekhanov (1856–1918), had in 1898 founded the Union of Russian Socialist Democrats Abroad. With Plekhanov Lenin published an underground newspaper called *Iskra* ("The Spark"). In its pages he argued for an extreme radicalism that spurned common cause with moderates, liberals, or other members of what he identified as the bourgeoisie, who (Lenin argued) would ultimately attempt to assert dominance over workers and peasants. He also developed and promulgated the conviction that the basis for individual liberty would be found not in mere political democracy, but in a social democracy that rendered society entirely classless. In 1902 he expressed these ideas in their final form in his seminal pamphlet *What Is To Be Done?*. In 1903, when Lenin's followers earned a temporary majority on the party's central committee and the editorial board of *Iskra*, he created within the renamed Russian Social Democratic Labor Party its radical Bolshevik wing.

From the Bolsheviks Lenin sought to create a revolutionary vanguard, which he forged over the long period from 1903 to the revolutionary year of 1917. He returned to Russia during 1905, in the social upheaval following the RUSSO-JAPANESE WAR, and stayed until 1907, but his most intense revolutionary activity was conducted in exile in London, Paris, Geneva, and other European cities as he ruthlessly condemned the Social Democratic revolutionaries

who did not share his radicalism. He called them the minority (“Mensheviks”) in contrast to his own majority (“Bolshevik”) faction, even though the Mensheviks actually outnumbered the Bolsheviks. The two factions participated together in the 1905 revolution (see RUSSIAN REVOLUTION [1905]) and went through periods of reconciliation (in 1906 and 1910), but the Bolsheviks continued to insist on a highly centralized, disciplined, and professional party. While many Mensheviks held radical ideas akin to Lenin’s, they feared that his Bolshevism would result not in equality for the masses but in a dictatorship of the revolutionary elite, and their differences increased. The Bolsheviks boycotted the elections to the First State Duma, or parliament, which reformers had foisted on the war-weakened czar in 1906, and the Bolsheviks refused to cooperate with the government and other political parties in subsequent Dumas. They had a reputation for lawlessness, and Mensheviks and other non-Russian Social Democrats disapproved of their methods for raising funds, which included bank robbery and extortion. The postwar revolution sputtered, and Lenin again went into exile.

In 1912 Lenin forced the factional issue by leading a very small minority out of the Russian Social Democratic Labor Party to form a distinct Bolshevik organization. He had decisively, if not formally, split the party and in the process had alienated even his Bolshevik colleagues, some of whom wished to undertake nonrevolutionary activities, disagreed with Lenin on political tactics, or questioned the infallibility of orthodox Marxism. None of the better-known or highly respected Russian Social Democrats joined Lenin’s splinter group, which in May 1912 published the first issue of *Pravda* (“Truth”). Meanwhile, Lenin bided his time in exile and awaited the right moment to act.

BACKGROUND OF THE 1917 SOCIAL UPHEAVAL

In July 1914 the working class of St. Petersburg went on strike. Russia was soon to lead the rest of Europe headlong into war by feverishly—and probably unnecessarily—mobilizing along the Austro-Hungarian border in the wake of the assassination of Archduke Franz Ferdinand (1863–1914), heir to the Austro-Hungarian throne, in Sarajevo. In fact, Raymond Poincaré (1860–1934) and René Viviani (1863–1925), president and prime minister, respectively, of France, were paying Czar Nicholas II (1868–1918) a state visit in St. Petersburg just as the city’s workers began throwing up their barricades. President Poincaré assured Nicholas behind the scenes that France would stand by its alliance commitments. Massive demonstrations, clashes between strikers and police, large-scale arrests of socialist agitators all formed the backdrop as the czar and his ministers discussed what to do about this latest Balkan crisis.

Perhaps it was understandable, then, that when news of Vienna’s ultimatum to Belgrade reached Russia just after the French leaders left for home on July 23, the czar’s for-

eign minister, Sergey Dmitriyevich Sazonov (1860–1927), erupted in anger at the anti-Serbian terms of the ultimatum—a shutting down of the Serb’s secret societies, an end to anti-Austrian agitation, direct Austrian participation in the Serbian investigation of the Sarajevo crime, and an immediate response from Serbia within 48 hours. Since Russia backed the Serbs, its prestige was at stake, too. Indeed, the Balkans was the only place left in the world where St. Petersburg felt it could effectively throw its weight around. Encouraged by the French ambassador, Sazonov announced that Russia would immediately begin mobilizing.

A few days after the strike had begun, everything in Russia itself was quiet again. On July 28 the Austro-Hungarian Empire declared war on Serbia, and on August 1 Germany declared war on Russia and its ally, France. When Nicholas and his family appeared that day on the steps of the Winter Palace, 10,000 people serenaded the czar with the national anthem, dropping to their patriotic knees. Overnight the city was rechristened Petrograd because St. Petersburg sounded too German. But the war euphoria would not last. WORLD WAR I opened with a spectacular August 1914 German push to the west, toward Paris. But when the German armies failed to reach the French capital, the war settled into a long, grinding stasis as trench-bound forces killed one another without achieving any major strategic objectives. With the approach of 1917, all of the belligerents were nearing exhaustion. Britain, France, Germany, Austria-Hungary, and Turkey, however, would survive their 1917 crises; Romanov Russia would not. Just as the disastrous Russo-Japanese War of 1905 had precipitated an abortive revolution at home, so the even greater disasters of World War I were to spark the revolutions of 1917.

From the beginning the war had gone badly for Russia. Its army was enormous—Russia had mobilized roughly 10 percent of its population, putting in excess of 15 million citizens under arms. But they were poorly equipped and even more poorly led. By 1917 the Russian army had been “turned over” three times, its losses estimated at nearly 8 million men, half of those mobilized. Morale was so bad that officers refused to lead their troops into battle for fear of being shot in the back. Desertions assumed overwhelming proportions, and whole regiments, often on orders from their officers, surrendered en masse to the Germans.

The man in charge of the disaster, Nicholas II, announced he was leaving his government in the hands of his wife, the emotionally distraught Empress Alexandra (1872–1918), to go to the front and direct the fighting himself. Alexandra turned the reins of power over to the “debauched monk” Rasputin (c. 1872–1916), who wrecked what little chance the czarist regime had of surviving, much less winning, the war before he was assassinated by Grand Duke Dmitry Pavlovich, Nicholas’s cousin, and Prince

Feliks Yusupov (1887–1967), the husband of the czar's niece. Meanwhile, industrial mobilization had thrown the economy into disarray: Farmers could not export their produce and refused to sell food on the open market; the ruble was nearly worthless, and there was precious little room for barter; the railway system had collapsed, and what few supplies existed could get through neither to the front nor to the towns; and Russia's industrial cities, including Petrograd, were threatened by famine.

It was no accident, as the Marxists would say, that 1917 became the year the great Russian Empire heaved one final huge sigh and vanished. But during the February Revolution, when workers poured spontaneously onto the boulevards from every factory in Petrograd and Moscow, no one seemed to understand what was going on, not the czar at the front, not the liberal and aristocratic cadets who had been agitating for reform, and not the revolutionary leaders exiled in Siberia. Only Lenin, the acerbic leader of the Bolshevik splinter party from Russia's Marxist revolutionaries, seemed to notice that power lay in the frozen streets of Petrograd that winter, just waiting for somebody to pick it up. And he said so, doing everything in his power to book passage for the Finland station. On February 22, 1917, there were mass demonstrations in Petrograd. Two days later the leaderless workers of the city went out on general strike, fighting bloody battles in the streets with the czar's police. By February 27 the army had gone over to the proletariat, and the powerful Petrograd Soviet of Workers' and Soldiers' Deputies was formed. A day later Moscow created its own soviet. Even Nicholas II realized the matter was hopeless. He had personally led his armies to defeat, humiliation, and massive loss; at home he had allowed the government to drift; and he abdicated—officially—on March 3.

Nicholas attempted to hand the crown to his brother Michael, who, exercising the better part of valor, refused it. Meanwhile, leaders of the Duma (the parliament established after the 1905 revolution) had been demanding that Nicholas transfer power to a parliamentary government. On March 15 the Duma formed a provisional government. Prince Georgy Yevgenyevich Lvov (1861–1925) was appointed prime minister, but the two leading figures in the new ruling coalition were Aleksandr Kerensky (1881–1970) and Pavel Milyukov (1859–1943).

They immediately instituted welcome reforms, including broad civil liberties, new wage agreements, and an eight-hour workday. But Russia was torn by two centers of power: the provisional government and the Petrograd Soviet. For the bourgeoisie, the gentry, and the professional classes, the March Revolution (*see* FEBRUARY [MARCH] REVOLUTION) meant a fresh start toward achieving victory over Germany and for transforming backward Russia into a leading European liberal democracy. They regarded the provisional government as the sole legitimate authority. Lenin, however, realized that this was not the

agenda of the proletariat and peasants. He published *Imperialism, The Highest Stage of Capitalism*, analyzing World War I as a fight among the imperialist powers for control of the markets, raw materials, and cheap labor of the underdeveloped world. He wrote that none of the combatant nations offered any benefit to the working classes, and he therefore enjoined all socialists to withhold support from the war effort. Following publication of Lenin's book, the Russian Bolsheviks withdrew support for the war, and workers and peasants looked to the Petrograd Soviet and other soviets springing up around the country to represent their interests. They supported the provisional government only provisionally.

As political liberals, Kerensky and Milyukov valued Russia's ties to Britain and France, and—Russia having been promised Constantinople by the Allies as an enticement to continue fighting—they looked forward to capturing the Turkish capital and thus to legitimizing their regime. Kerensky reassured the Entente powers in mid-March that his government would fight “unswervingly and indefatigably” until victory was achieved. The words bitterly disappointed German foreign service officers, who had long dabbled in various revolutionary intrigues, hoping to shatter Russia from within and force it out of the conflict. Now, so it appeared, although the czar's regime had indeed shattered, Russia was to remain a belligerent.

Germany did not give up. Since 1914 the foreign office had both collaborated with nationalist agitators among Russia's Baltic, Finnish, Georgian, Polish, and Ukrainian peoples and supported the conspiracies of Russian social revolutionaries. One of these was Lenin. Living in Krakow when the war erupted, he was immediately arrested. But then an Austrian Social Democrat named Victor Adler (1852–1918) persuaded Austria's minister of the interior that Lenin, as leader of the most militant of the Russian Marxists, could be an asset in the fight against the Romanov Empire. The minister saw to Lenin's release and deportation to Switzerland, where he continued his insurrectionary correspondence with the Bolshevik underground back home. Meanwhile, in Constantinople, another Russian émigré Socialist, Alexander Helphand (1867–1924), had caught the eye of Germany's ambassador to Turkey. Impressed with Helphand's revolutionary credentials and connections, the ambassador had him shipped off to Berlin to brief the foreign office.

In March 1915 the foreign office set aside 2 million marks to spend on subversion in Russia. By 1917 the amount had swelled to 41 million marks, much of it going to Helphand's seditious organization, which sowed revolutionary and pacifist ideas among Russian soldiers, workers, and peasants. Then came the fall of the czar's government and Kerensky's declaration of support for the Allied war effort, and the German foreign office figured it needed more radical help than Helphand could offer. Germany decided to facilitate Lenin's return to Russia. On

April 9, 1917, the Germans placed Lenin and his comrades, Leon Trotsky (1879–1940) among them, on a sealed train in Zurich and cleared the tracks for a night run across Germany. A boat waited in Sweden to whisk the group to the Finland Station in Petrograd.

THE OCTOBER REVOLUTION

Once landed, Lenin lost no time. He began pushing the Bolsheviks steadily toward a takeover from his very first speech, which called for all power to be given to the soviets and for social revolution. He was enthusiastically greeted in Petrograd on April 16, 1917, and published the so-called April Theses in *Pravda*, the Bolshevik newspaper, denouncing the liberal provisional government and calling again for all power to go to the soviets and for a full-scale socialist revolution. The Germans loathed Lenin's ultimate goal—he wanted to transform the European war of nations into an international class war—but they loved his current program for a revolutionary Russia—an immediate armistice, an end to secret diplomacy, and the negotiation of a peace involving, so his slogan said, “no annexations, no indemnities.” Such brilliant sloganeering—“Peace, Bread, and Land” was another Bolshevik cry—caught the imagination of the masses, the common soldiers, urban workers, and poor peasants to whom the Bolsheviks pitched their message. Scarcely a month after Lenin's arrival, Prince Lvov was forced to accept as official Russian foreign policy the revolutionary no-annexation, no-indemnities formula. On May 15 Milyukov, in disgust, resigned as foreign minister; in short order, Prince Lvov's government collapsed.

The Petrograd Soviet called for the abolition of the officer corps, and the new Provisional Government abolished courts-martial and issued a Declaration of Soldier's Rights. Nevertheless, this government, too, failed. Indeed, throughout the spring and summer and on into autumn, no fewer than four more governments, all with Kerensky's backing, would form and fall, at the rate of nearly one a month. The hungry and toiling masses moved further and further left, further left than Lenin, who warned them against anarchy. They demanded food and freedom from want, a living wage, and an eight-hour workday, but most often and most loudly they called for an end to the senseless slaughter of World War I. And because it was the one demand Kerensky would not accept, everything seemed up for grabs that summer. As Bolshevik propaganda penetrated deep into the ranks of the ordinary soldiers, the Russian high command came to consider its own army a huge, weary, shabby, and ill-fed mob of angry men.

Suddenly, Russian politics swung to the right after the Bolsheviks failed to take charge of the country during violent antigovernment demonstrations on July 3 and 4. In reaction a coalition government was formed that banned the party, sent Lenin into hiding under threat of arrest, threw Trotsky in jail, and appointed right-wing general

Lavr Kornilov (1870–1918) commander in chief of the Russian army. Kornilov had been urging a number of reforms to restore the army to fighting trim. Kerensky was sympathetic, but the old general was surrounded by conspirators who wanted to make him military dictator. Reactionary skullduggery abounded, and Kerensky, aware of the danger of a coup, outlawed troop movements in the capital. When Kornilov attempted to lead an army into town to institute his reforms, the troops simply walked off the job behind his ramrod back (see *KORNILOV'S REVOLT*). Kerensky had Kornilov arrested, and the counterrevolution, if that's what it was, fizzled. Yet another government had collapsed, and the Duma seemed bereft of both will and authority. On September 24 Kerensky formed one last coalition. Figuring he could beat the Bolsheviks at the ballot box, he hoped to hold out until the elections for a constituent assembly scheduled in December. But that September Lenin sent a widely publicized letter to the Bolshevik central committee calling for armed insurrection against the provisional government. By October the Bolsheviks had majorities in the Petrograd and Moscow Soviets, and a month after Kerensky formed his last provisional government the Bolsheviks took control of Russia in a bloodless coup masterminded by Trotsky.

In late October 1917 soviets all over Russia voted to form a revolutionary government to end the war and establish worker-run industries and farms. (According to the “New Style”—Gregorian—calendar used by most of the world, this was during the first week of November; by Russia's “Old Style”—Julian—calendar, the revolution took place at the end of October.) Trotsky took control of the Petrograd Soviet's military revolutionary committee, and throughout the city troops voted to obey only the committee's orders. A blustering Kerensky demanded a recision of the vote and sent his own troops to shut down the Bolshevik's Petrograd press on October 24 (N.S., November 6, 1917). In response Bolshevik leaders, the working class's Red Guard, and sympathetic government soldiers marched through the city taking over government buildings and public utilities. Then they stormed the Winter Palace.

Kerensky was still trying to gather his forces to oust the Bolsheviks when his ministers at the palace surrendered to the mob's onslaught. Kerensky quickly sent his troops to Gatchina, a suburb of Petrograd, where the pro-Kerensky Committee of Public Safety ordered Russian military school cadets to arrest the members of Trotsky's military revolutionary committee and to attack the city's Bolshevik-held buildings. The Bolsheviks withstood their assault and took charge of the military schools. Then Trotsky moved on Gatchina, defeated the government forces in two days of fighting, and forced Kerensky to flee abroad.

Lenin ventured back into Russia as the second Congress of Soviets, purged of its peasant deputies, approved the action in the streets and formally took control of the

government. When this first Bolshevik government was officially formed on November 7, Lenin became president of the Council of Commissars, as the party called the new government. The Bolsheviks soon took Moscow after bloody street fighting, and within the month they controlled the country. Not only Russia, but the entire world was transformed.

The Bolsheviks themselves doubted they would last long. On October 25 prominent party member Grigori Evseyevich Zinoviev (1883–1936)—admittedly a notorious pessimist—gave the new regime two weeks because of the Bolsheviks' incompetence and the strength of their enemies. The Bolsheviks refused to share power with other revolutionary groups except for the Left Socialist Revolutionaries (eventually, they would suppress all rival political organizations). On October 28 Lenin declared a state of siege in Petrograd. Antirevolutionary (or at least anti-Bolshevik) "Whites" had taken the Kremlin, and the RUSSIAN CIVIL WAR (1917–1922) was under way. Come November, nothing much was settled—power and peace still lay in the balance; the Bolshevik Party was deeply divided; civil servants engaged in systematic sabotage; bankers kept their doors locked to the new government; municipal services ground to a halt; and the White Army was on its way from the countryside. Clearly, Lenin needed to be free of the world war in order to consolidate Bolshevik power.

On December 15 the regime signed an armistice with the Central Powers. That same month Lenin created the All-Russian Extraordinary Commission for the Struggle Against Sabotage and Counterrevolution. Arrests began immediately, even as Trotsky headed off to the peace conference convening on December 22 at Brest-Litovsk. But it took several months for the terror to get into full swing and for the commission's acronym, CHEKA, to send chills down the spine of anyone with a bank account, not coincidentally about the same amount of time it took Trotsky to give away half of European Russia to the Germans.

Immediately at the peace conference, the German imperialists and the Russian totalitarians began to bicker about the definition of "national self-determination," an understandably touchy point since Lenin, Trotsky, and Karl Radek (1885–1939), another prominent revolutionary, had in the first days of Bolshevik power organized the apparatus to spread revolution abroad. Although the expected uprisings had nowhere occurred when Trotsky sat down across the table from the Germans, Lenin continued to fear that the Bolshevik Revolution would not survive without them, and Trotsky believed in the necessity of international revolution until his dying day. Recognizing how far apart the two sides were, Trotsky promptly asked for an adjournment in hopes that the tide of revolution might yet sweep throughout central Europe. A mutiny did flare up in the Austrian fleet, and a general strike erupted in Berlin. But both outbreaks were quickly suppressed, and the Russians

returned to the talks on January 7, 1918, the month Lenin dissolved the freely elected, socialist-dominated national assembly, ending Russia's first attempt at Western-style parliamentary democracy.

As Trotsky saw it, the Bolsheviks faced three choices, all bad. They could continue to defy the Germans, risking the almost certain conquest of Russian lands and the overthrow of their government; they could relent and cede to the Germans virtually all of Russia's western territories; or they could pursue what Trotsky called "neither war nor peace" while awaiting the revolution in Germany. The Germans suspected Trotsky of using the peace talks themselves to do just that, although he was more likely dragging out the proceedings to avoid any question that he was working in collusion with the German military. Such caution was wise given the means by which he and Lenin had arrived back in Russia from their foreign exile. The Bolsheviks were always a suspicious lot, shrewd and ruthless, none more so than the head of the CHEKA, Feliks Dzerzhinsky (1877–1926), perhaps at the time the most ruthless of them all. It was folly to give such a man, searching for subversives and seeing sedition everywhere, the slightest cause for doubt.

Meanwhile, as Trotsky bided his time, the Germans and Austrians concluded the *Brotfrieden*, or "bread peace," with representatives of the Ukraine, a hot-bed of White Army activity. When the Red Army fought its way into the region, the German high command, weary in any case of Trotsky's long-winded rhetoric, broke off the conference and resumed hostilities against Russia on February 18, 1918. The French ambassador immediately offered the Bolsheviks all the aid they could use if they would fight the Germans. But Lenin—his country's economy in tatters, his party menaced by factionalism, and his people engaged in civil war—ordered an immediate capitulation. The Germans now pressed even harsher terms on the Bolsheviks, and Lenin's government yielded to the new demands. On March 3 the Bolsheviks signed. That same month the Bolsheviks changed their name to the Russian Communist Party.

CONSOLIDATION OF THE REVOLUTION

With Russia out of the war, the Central Powers were no longer fighting on two fronts, and Germany was free to concentrate all its forces in the west. Both the economic gains in the east realized by the treaty and the new maneuverability it afforded cheered the Germans to believe they might achieve victory before the Americans arrived on the continent in force. But in the end the Germans did not take full advantage of Brest-Litovsk. They left roughly 1 million men, some 60 divisions, in the east in order to intimidate the Ukrainians into relinquishing foodstuffs, to pursue the German political agenda in the Baltic, and to make sure the Bolsheviks complied with the agreement. Still, Brest-Litovsk almost certainly would have changed

the outcome of the war had the United States not become an “associated” power of the Allies and spent so freely of its money, material, and men. And as it was, the treaty enabled Germany to unleash a massive offensive during 1918, which put American forces in the thick of some of the most savage fighting of the war.

If the Germans did not trust the Bolsheviks, neither did Russia’s former allies. Not a few on the left in London, Paris, and Washington sympathized with the Bolshevik cause or believed, at least compared to the czar, Lenin would bring some efficiency to his troubled country. There was talk among the French and the British of supporting various of the factions forming within the party. Then the German advance into Russia in February (after it had called off the conference with Trotsky) caused the Allied diplomatic missions to panic and flee Petrograd for remote Vologda. There they awaited to see which direction Lenin and Trotsky would take, and Brest-Litovsk gave them their answer. News of Brest-Litovsk was received as an unparalleled disaster by the beleaguered Allies, who felt they now had to consider intervention in Russia. If they could hook up with the White nationalists, they reasoned, they might be able to reopen the Eastern Front and thus save their own disgruntled troops the full wrath of the German army in the west. In addition, there was all the Allied materiel stacked up in Russian ports—nearly 20 tons of supplies in Archangel alone—just waiting for seizure by the Germans or the Bolsheviks. The Allied plans were to take those supplies and distribute them to any Russians they could find still willing to fight Germans.

In short, when Bolshevik Russia signed a separate peace with Germany at Brest-Litovsk, the Allies sent troops to invade Russia from the east in support of the Whites. In March, the month the treaty was signed, an Anglo-French expedition docked at Murmansk. In April the Japanese, seeking an imperial foothold on the Asian mainland, used the treaty as an excuse to seize and occupy Vladivostok. In June an American cruiser and 150 marines joined the English and French forces at Murmansk. In August another Anglo-French expeditionary force occupied Archangel, this one also to be joined by the Americans, 5,000 of them under British command arriving in September. Hitherto, Comrade Lenin had gone out of his way to check—and even punish—Dzerzhinsky-inspired excesses. That did not mean there was no CHEKA brutality, and no summary executions, but as of Brest-Litovsk the Bolshevik tribunals had yet to deliver a death sentence. That changed with the Allied invasions.

On June 18, 1918, the Bolsheviks handed down their first death sentence. A month later to the day, the local soviet in Ekaterinburg took the czar, his empress, and his heirs down into a dingy basement and shot them dead. That same month, July, the CHEKA arrested 200 British and French residents of Moscow, stormed their consulates, and murdered the British naval attaché. In Paris and in

London the Bolsheviks were now considered thugs, or bandits, or German agents, but in the Balkans their revolution had become an inspiration.

Meanwhile, Lenin had to cope with splinter groups and the spreading civil war, which raged from the Black Sea to the Caspian. The bitter and destructive war lasted until 1922, when the Whites were finally defeated, leaving the Russian economy in shambles and prompting Lenin to retreat from Marxist absolutism by granting economic concessions to foreign capitalists and reinstating some private enterprise. Lenin’s invitation would have been welcomed by the capitalist countries had Lenin not remained committed to extending the communist revolution to the rest of the world. Pushed especially by U.S. president Woodrow Wilson (1856–1924) at the Versailles Peace Conference, much of the world turned against Soviet Russia, which helped to establish the battle lines of one of the basic ideological struggles that would dominate the 20th century at least through the 1980s (*see* COLD WAR).

By the end of the Russian Civil War, Lenin was installed as absolute dictator of the Soviet Union, but his control of the Communist Party was torn by rivalries and disputes. Lenin’s health deteriorated after he was wounded by an assassin’s bullet in 1918, and he suffered a severe stroke on May 25, 1922. Weakened and partially paralyzed, he never fully recovered, and he died on January 21, 1924, at which time control of the party passed to Joseph Stalin (1879–1953), who brutally crushed dissent of any kind, even within the Bolshevik Party.

Bosnia, War in (1992–1995)

PRINCIPAL COMBATANTS: Bosnian Catholic Croats and Muslim Slavs vs. Bosnian Orthodox Serbs; after 1994 Croats and Slavs vs. Serbs

PRINCIPAL THEATER(S): Bosnia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: After Croatia quit the Yugoslav federation in 1991, Bosnian Catholic Croats and Muslim Slavs approved referenda (February 29, 1992) calling for the creation of an independent, multinational republic; the Bosnian Orthodox Serbs, however, refused to secede from Yugoslavia, which was now dominated by Serbia. This initiated a long, bitter civil war.

OUTCOME: The war was ended by the U.S.-brokered Dayton Accords, which created a federalized Bosnia and Herzegovina, divided between a Bosnian-Muslim–Bosnian-Croat federation and a Bosnian-Serb republic; the accords also guaranteed human rights and minority rights.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

About 150,000 Serb regulars vs. 50,000 Croat militia; other forces, variable

CASUALTIES: Military and civilian dead: 140,000 Bosnians, 97,300 Serbs, 28,400 Croats; 1.37 million displaced

TREATIES: Dayton Peace Accords, November 21, 1995

The modern nation of Yugoslavia came into being following the dissolution of the Austro-Hungarian Empire at the end of WORLD WAR I. But until WORLD WAR II, Yugoslavia was not so much a single nation as it was a collection of strongly nationalistic, ethnically diverse, and ethnically irreconcilable factions. They were briefly united in opposition to the German-Italian invasion of World War II, the resistance led by Josip Broz (known as Tito) (1892–1980), a communist who, after expelling the invaders, instituted a Marxist regime by the end of the war. Tito's government was unique in Eastern Europe in that it was maintained independently of Soviet military and economic support and even provoked Joseph Stalin (1879–1955) to expel Yugoslavia from the Communist bloc in 1948.

Remaining true to his vision of communism, Tito opened up reasonably cordial relations with the West and forged Yugoslavia into a genuinely unified nation. That ended with Tito's death in 1980, as if to prove that Yugoslavia had been held together by the force of its leader's personality. The Croats and Slovenes, the largest nationalist groups in the country, developed separatist movements. During 1989–90, with the end of the COLD WAR and the general collapse of communism throughout eastern Europe, Bosnia-Herzegovina, formerly a part of Yugoslavia, was caught up in a tide of nationalism that swept the region. In January 1990 the Communist Party voted to relinquish its constitutional monopoly on power in Yugoslavia, but this did not satisfy the Slovenes, who walked out of the conference. In 1991 both Slovenia and Croatia unilaterally declared their independence from Yugoslavia and proposed a new, decentralized union. After Croatia quit the Yugoslav federation, Bosnian Catholic Croats and Muslim Slavs approved referenda (February 29, 1992) calling for just such an independent, multinational republic. But Bosnia's Orthodox Serbs refused to secede from Yugoslavia, which was now dominated by Serbia. In January the United Nations had imposed a truce between the increasingly hostile groups in anticipation of the vote, but it proved short-lived as Bosnia went ahead with its plans and seceded from Yugoslavia in March 1992 and its Serb population took to the streets. The three ethnic and religious groups who had formerly lived peaceably side by side in communist Yugoslavia were now engaged in a bitter civil war.

The flames of the conflict were fanned by the Serbian president, Slobodan Milošević (b. 1941), who, claiming that he had a duty to protect the Serb minority in Bosnia,

sent arms and other support to the Bosnian Serbs. The civil war soon lost all sense as a political struggle and emerged instead as outright ethnic warfare among the Orthodox Serbs, the Catholic Croats, and the Muslim Slavs. Bosnia was reduced to anarchy, and the capital city of Sarajevo was under continual siege and bombardment. Although the United States and the European Union made some attempts, usually through the United Nations, to negotiate a settlement, they were unwilling in the end to commit troops to stopping the struggle. Thus, as the fighting grew worse, they stood by for the most part, deliberating what action was truly proper in what seemed so hopelessly murky an eruption of human passion.

The Bosnian federal army, dominated by Serbs, shelled Croat and Muslim quarters in the Bosnian capital city of Sarajevo. Under the command of Radovan Karadžić (b. 1945), atrocities and the deliberate targeting of civilian populations were carried out on a scale not seen in central Europe since Germany's invasion of the region during World War II. Karadžić had been born on June 19, 1945, in a mountain village in the Yugoslav republic of Montenegro. His father had been a member of the Chetniks, the Serbs who fought both the Nazis (along with their Croatian collaborators) and the Partisans, the communist guerrillas led by Tito. At age 15 Karadžić moved to Sarajevo, where he studied medicine, became a physician and psychiatrist, and wrote poetry and childrens' books. Imprisoned for nearly a year in the mid-1980s for embezzling state funds, he was one of the founders of the Serbian Democratic Party, of which he became president in 1990. Two years later, when the Bosnian Serbs declared their independence, he became president of the self-proclaimed Republika Srpska and allied himself with Yugoslavia.

Backed by Slobodan Milošević and with the support of General Ratko Mladić (b. 1944), another Bosnian Serb military leader who, like Karadžić, would be indicted for war crimes, Karadžić took control of parts of Bosnia and began his series of purges in the name of "ethnic cleansing," the Serbs' euphemism for the systematic expulsion of Muslims and Croats from Serb-controlled areas, and included the mass murder of many of them. It was an agenda worthy of Adolf Hitler (1889–1945), and by late 1993 ethnic cleansing had created some 700,000 refugees, who clogged western Europe. (Although most of the human rights abuses were perpetrated by the Bosnian Serbs with the support of Milošević's Serbia, the Croats and the Muslims also carried out brutal retaliatory raids and even engaged in ethnic cleansing in the areas they controlled.) The international community responded to the atrocities—and the televised pictures of starving Muslim and Croat prisoners, looking for all the world like concentration camp victims—by imposing a variety of economic sanctions against Serbia in an effort to curtail its ability to supply Bosnian Serbs with weapons and other materiel. The sanctions, however, did not prevent Bosnian Serb

guerrillas from carrying out their brutal campaigns of “ethnic cleansing,” and attempts by the international community to send relief workers into the region were often met by gunfire. By July 1992 millions of Bosnians had become refugees.

From 1992 to 1995 Milošević swung back and forth, depending on the pressure asserted by the United States and western Europe, between ruthless military action and public expressions of an interest in peace initiatives being advanced by Western leaders. An arms embargo imposed by the United States and the western European powers did little to stop the war. Indeed, it may have served only to deprive the Muslims and Croats of badly needed arms, putting them at even more disadvantage against the Serbs. Early in 1994 the Muslims and Croats of Bosnia made a truce with each other and formed a confederation to oppose the Serbs. In August the confederation agreed to a plan formulated by the United States, Russia, Britain, France, and Germany by which Bosnia would be divided 51 versus 49 percent, with the Serbs getting the smaller percentage. But although the Muslims and Croats agreed on the plan, the Serbs kept fighting.

Beginning in April 1994 NATO at last launched air strikes against the Serb positions, and still the Bosnian Serbs fought on, blocking all attempts at humanitarian aid and even holding a 24,000-man UN peacekeeping mission under detainment. In 1994 and 1995 Bosnian Serb forces conducted mass killings in Sarajevo, Srebrenica, and other, smaller towns that the United Nations had declared safe havens for Muslim civilians. Yet the Muslim-Croat alliance had been making military progress against the Bosnian Serbs. By September 1995 the alliance had reduced Serb-held territory in Bosnia to less than half of the country, precisely the percentage specified in the peace plan endorsed by the Muslims and Croats. With the reduction of their territory an accomplished fact, the Bosnian Serbs finally came to the peace table in a series of conferences brokered largely by the United States and held at Wright-Patterson Air Force Base, outside of Dayton, Ohio. Late in 1995 Milošević—under intense international pressure as progress was made in the Dayton talks—closed the borders with Bosnia and appeared to be abandoning the Bosnian Serbs. Worried by the desertion of his ethnic ally and fearful of repercussions, Karadžić gave in to Western demands and agreed to abide by the Dayton Peace Accords reached on December 14, 1995, among Muslim, Croatian, and other Bosnian Serb leaders.

The major provision of the Dayton Accords was the creation of a federalized Bosnia and Herzegovina, divided between a Bosnian-Muslim–Bosnian-Croat federation, and a Bosnian-Serb republic. In addition, the accords guaranteed that refugees would be allowed to return to their homes, that people would be permitted to move freely throughout Bosnia, and that the human rights “of every Bosnian citizen” would be monitored by an independent commission and an internationally trained civilian police

force. The accords also provided for the prosecution of individuals found guilty of war crimes. A “strong international force” was provided to supervise the separation of military groups within Bosnia and to ensure that each side would live up to the agreements made.

On July 25 and again on November 16, 1995, the United Nations International Criminal Tribunal for the Former Yugoslavia, held in The Hague, indicted Karadžić for war crimes including genocide, murder, and rape of civilians. Because the Dayton Accords disallowed anyone indicted for war crimes, from participating in the elections set for September 14, 1996, Karadžić had to relinquish both his government and his place in his party. On July 19, 1996, he announced he would step down as president of Republika Srpska and as head of the Serbian Democratic Party of Bosnia and Herzegovina. But men who shared his political views replaced him, and no one could be quite sure—even though he was forbidden from appearing in public or in the media—if he was truly deposed. The NATO troops who arrived in Bosnia to enforce the Dayton Accords had orders to arrest him, but they did not do so, either because they could not find him or they were fearful of reprisals: the story varied. In any case, Karadžić continued to live openly enough in Pale, the Bosnian Serb headquarters.

The war in Bosnia and Herzegovina formally ended with the signing of the Dayton Accords, and approximately 250,000 people—most of them from Germany—had resettled in their former homeland by mid-1997. The return of these ethnic minorities, however, created problems. The United Nations attempted to meet the challenge presented by the repopulation by displaced persons and refugees of the so-called minority areas by launching an “Open Cities” program under which towns could declare their readiness to accept former Yugoslavians, regardless of whether they were from Bosnia or Herzegovina, or whether they were Serb, Croat, or Muslim. But significant progress was slow. Few returned to Croatia despite commitments of support from Croatia and the United Nations. Given the trouble Milošević was yet to wreak on the region, their hesitation proved prescient.

Bosnian-Turkish War (1459–1463)

PRINCIPAL COMBATANTS: Ottoman Turks and Hungarians

PRINCIPAL THEATER(S): Bosnia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In the 1400s the Ottomans resumed their conquest of southern Europe but met strong opposition from the Hungarians.

OUTCOME: Bosnia was annexed in 1463 but not fully subjugated for another 20 years.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

In the 15th century the Ottomans resumed the Turkish conquest of southern Europe that had been interrupted by the Tartar invasion, but their advance was brought to an abrupt halt by a stubborn and vigorous Hungarian resistance. During the middle of the century the Turks and the Hungarians battled intensely over Serbia, but in 1459 Sultan Muhammad II (c. 1429–81) at last managed to annex the region and turn longing eyes westward toward Bosnia. Bosnian king Stojan Tomaš (1441–61) called on the people to resist and took the opportunity to impose religious unity in the country, under Catholicism, to ensure a unified spiritual front against Islam. Bloody battles ensued between the Turks and the Hungarians before this region too came under Ottoman control in 1463. The Bosnians remained rebellious, however, refusing to yield to the invaders. In spots throughout the region, revolts were endemic. Not until the HUNGARIAN-TURKISH WAR (1463–1483) would Bosnia (as well as Serbia and Herzegovina) be fully subjugated.

Boudicca's Revolt (60–61)

PRINCIPAL COMBATANTS: Iceni tribe (with the Trinovantes) vs. Romans (with Briton allies)

PRINCIPAL THEATER(S): England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Iceni rebellion against Roman domination

OUTCOME: The rebellion was crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: According to Tacitus, the Romans and their Briton allies lost 70,000 men; no estimate exists of Iceni losses.

TREATIES: None

Suetonius Paulinus (d. after 69) was appointed Roman governor of Britain in 59. The following year he annexed the lands of the Iceni tribe, Druids living in what is today Norfolk and Suffolk, after the death of their king, Prasutagus (d. 60). Because Prasutagus had died without a male

heir, his wife, Boudicca (also known as Boadicea, d. 61) assumed the throne. When the forces of Paulinus marched northward to capture the island of Mona (Anglesey, Wales) in 60, she led a rebellion against them, which turned the Roman army back to its southeastern strongholds.

During the remainder of 60 and into 61, Boudicca's act of resistance triggered a widespread anti-Roman rebellion. Boudicca's Iceni forces were joined by those of the Trinovantes tribe, who lived in the region of modern Essex. The conflict quickly spread throughout East Anglia. Rebel forces overran and sacked the Roman strongholds of Camulodunum (Colchester), Verulamium (St. Albans), and Londinium (London). After much effort, however, Paulinus mustered a sufficient force to crush the rebellion in a single decisive battle at Towcester in 61. The Roman historian Tacitus (c. 56–c. 120) estimated the cost to the Roman legions and its Briton allies at 70,000 dead. Rebel casualties are unknown, but it is certain that Boudicca was among them. Most authorities believe that she committed suicide, although some contemporary sources report that she was killed by Romans or simply died of shock and heartbreak.

Boxer Rebellion (1899–1901)

PRINCIPAL COMBATANTS: Rebellious Chinese "Boxers" and anti-foreign supporters vs. representatives of foreign powers and Christian missionaries

PRINCIPAL THEATER(S): North China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Resentment over foreign interests in China and its virtually complete economic subjugation to the West allowed a radical group to gain favor in Beijing (Peking) and launch a rebellion aimed at expelling the foreigners.

OUTCOME: The Boxers were crushed, and the ruling Qing (Ch'ing) dynasty was brought even more firmly under the thumb of the West.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Boxers and Imperial troops, unknown; combined Western powers and Christian auxiliaries, around 22,000

CASUALTIES: Western troops, 700–1,000 killed, Western civilians and Chinese Christians, 650 known plus untold numbers of others; Boxer rebels and imperial troops, unknown

TREATIES: The Boxer Protocol of September 7, 1901

At the turn of the 20th century China was convulsed by an antiforeign uprising known as the Boxer Rebellion. After

quelling the revolt the European great powers—including a fledgling newcomer to the colonial game, the United States—imposed an indemnity on China, effectively forcing it to yield to European imperialism, the beginning of the end for the last of China's great dynasties. Having come late into the game of imperialism that European nations had long played, the United States, by the end of the 19th century, advocated an "Open Door Policy" with regard to China. The policy was actually first proposed by a British customs official, Alfred E. Hoppisley (1849–1939), but U.S. secretary of state John Hay (1838–1905) took it up enthusiastically as a policy under which all nations would have equal trading and development rights in China. In 1899 Secretary Hay communicated his endorsement of the policy to France, Germany, Great Britain, Italy, Japan, and Russia. The Japanese challenged the policy, but the European powers replied that they would comply—if the others did. This was enough for Hay, who announced in March 1900 that the Open Door Policy had been agreed to and approved.

Actually, none of the nations involved ever intended to adhere unconditionally to the policy, and the interests of China itself were largely neglected in arriving at it. All the foreign meddling had so far resulted in an uprising spearheaded by militia units in the north called Yihetuom (I-ho Ch'uan)—the "Righteous Harmony Fists"—a name that yielded the label *Boxers* in the foreign press. Ending in the virtual partitioning of China, the Boxer Rebellion highlighted the intense distrust of the West in China. As far back as the early 1700s, a fringe religious group preached that through shadowboxing and other forms of calisthenic rituals, its followers would achieve supernatural powers, most notably imperviousness to gunfire. A mixture of Confucianism, Zen Buddhism, and Tao, the Righteous and Harmonious Fists were a descendant of the Eight Trigrams Society that had sought to bring down the Qing dynasty (1644–1911) throughout the 18th and early 19th centuries by raising several rebellions. The Boxers added to that the further goal of expelling the numerous foreign interests in China.

China at the end of the 19th century was fractured and weak, suffering from economic, diplomatic, and military pressures both external and internal. With its defeat in the First OPIUM WAR in 1842, China was forced to enter into the Treaty of Nanjing (Nanking), which provided for the virtual economic rape of the country. Ports were forced open to Western trade, others were seized outright, the British were given Hong Kong, the import-export rate was set and not to be changed except by mutual consent, and the Chinese were forced to pay heavy reparations. The Treaty of Nanjing ended China's economic dominance in the region. Following Nanjing, China was forced into several humiliating agreements with Western powers, some of which impaired its sovereignty: a most-favored-nation clause in a supplement to Nanjing; another one deprived Chinese courts of the right to try foreign citizens, but

rather turned suspected criminals over to their own justice systems for trial; and yet another allowed the French to force Catholic, and later Protestant, recognition by the Buddhist state. Such "agreements" created a nearly universal and vehement dislike for foreigners in China, particularly those from the West who had been involved in the Opium War. Along with economic intervention in China, the West also engaged in a more humiliating form of meddling, that of the Christian missions. Following the Opium War thousands of Christian missionaries flocked to China and began converting as many Chinese as they could. Christianity was exceptionally offensive to Chinese traditionalists because it seemed contrary to the teaching of Confucius, Buddha, and the Tao. The military, too, suffered under Western meddling, and the Chinese army would become a shadow of its former self. Still suffering from its total defeat in the Opium War, the imperial Manchu army was completely smashed by Japan in the SINO-JAPANESE WAR (1894–1895). The Japanese forced China to recognize Korean independence and took Taiwan and other territories.

Domestically, China verged on chaos. The increasing number of Christian converts caused a fissure within the common Chinese society, which had remained virtually unchanged for centuries. Also, local officials grew exceedingly vocal in their opposition to the government in Beijing and its continued bungling of affairs with the West and during the Sino-Japanese War. Such rifts further divided the country into regional camps either in favor of or in opposition to Beijing. Adding to the turmoil, the rainy seasons in 1898 and 1899 brought horrendous flooding, wiping out crops and causing subsequent famine.

Thus, the ground was fertile for the Boxers' insurgency, especially in the northern provinces of Shandong (Shantung), Chihli, and Shanxi (Shansi). Chinese xenophobes were well established at the court of the dowager empress Cixi (T'zu Hsi) (1834–1908), and they suggested to the Boxers that they could gain the favor of Cixi if the insurgents would change their tactics toward the Qing dynasty (which was sometimes called the Manchu dynasty because its elite originated in Manchuria, leading most Chinese—like the Boxers—to consider the Qing itself an occupying "foreign" power). Nevertheless, the Boxers' slogan now changed from "Sweep away the Qing, destroy the foreigners!" to "Support the Qing, destroy the foreigners!" A union of the Manchu conservatives and the radical Boxers took place, quickly yielding the governorship of Shaanxi (Shensi) for the Boxer Yu Xian (Yu Hsien; d. 1901). Cixi now secretly approved of the Boxer harangues against the foreigners, and when armed bands began terrorizing foreigners and Christian converts, she covertly supported them while outwardly claiming there was nothing that could be done about the rogues.

By the end of 1899, it was unsafe for any foreigners to leave the immediate area of their settlements. Any known

Chinese Christian was at risk. By May 1900 Boxer bands roamed throughout northern China, essentially controlling Beijing. After repeated diplomatic attempts to relieve the pressure on its citizens, foreign powers, including Russia, Japan, France, Great Britain, and the United States, sent a small expeditionary force of 2,100 troops under British admiral E. H. Seymour (1840–1929). Landing on June 10, the expeditionary force attempted to make its way to Tianjin (Tientsin) and Beijing to evacuate the various legations. The expedition sailed to Tianjin and offered an ultimatum to the harbor forts to surrender or be destroyed; the forts responded by opening fire on the ships. The ships returned fire and after landing troops took the forts on June 17. The foreigners then marched troops toward Beijing, but Cixi sent Manchu forces to oppose them; the foreigners were harshly repulsed at Tang Ts'u on June 26, suffering heavy casualties of some 300.

In response to the taking of the forts, Cixi ordered that all foreigners be killed on sight. Boxers roamed Beijing, massacring more than 250 foreigners and countless Chinese Christians. On June 14 they laid siege to the foreign legations in Tianjin and on June 20 began their famous siege of Legation Street in Beijing. The German minister, Baron Klemens von Kettler (d. 1900), was brutally murdered as were many other members of the diplomatic legations in Beijing. The expeditionary force, now realizing that they were dealing with the full imperial Manchu army, doubled their force to 5,000 and made a concerted effort to take the city of Tianjin. On July 23 the allies stormed the city, led by the U.S. Ninth Infantry Regiment, which sustained heavy losses, including its regimental colonel, E. H. Liscum (d. 1900). The city was taken, however, and the legations were freed.

Noting the ferocity of the fighting at Tianjin, the allies again beefed up their forces, which eventually totaled 18,700 troops, including Russians, British, U.S., and French contingents. The situation in Beijing was grim for the residents of Legation Street as the allies began their assault on August 4. Meeting heavy Manchu resistance at Yang Cun (Yang T'sun), the allies forced back 10,000 imperial troops, reaching Beijing's outer walls on August 13. The Russians hastily launched an uncoordinated offensive against the Dong Bien (Tung Pien) Gate but were bloodily repulsed. After a Japanese attack was turned away at the Qi Hua (Ch'i Hua) Gate the following day, the Americans joined the Russians at Dong Bien and took the city. By the end of the siege, more than 80 civilian and legation guards were dead and an estimated 400 Chinese Christians had been killed. The foreign troops now moved through Beijing and northern China, suppressing any residual Boxer activity while looting and raping the population in the process.

The dowager empress fled Beijing for Xi'an (Sian), leaving the government in the hands of Li Hongzhang (Li Hung-chang; 1823–1901) and other advisers, who by December had reorganized the government and come to a

settlement with the allies. The agreement was formally signed on September 7, 1901, and the Boxer Protocol made for the virtual partitioning of China. The harsh terms called for the execution of 10 high Chinese officials, including the Boxer Yu Xian, a permanent garrison in the legation quarter, the destruction of 25 Chinese forts and outposts, and an indemnity totaling \$739 million after interest. Only the intervention of the United States kept the allies from actually carving up China. John Hay, wary of the dynastic politics of Europe, worried that any perceived slight to some duke or earl would touch off frosty relations among the Western powers and raise tariffs or close ports in response, leaving the "uninvolved and uninterested" United States locked out. More immediately, he understood that the foreign powers wanted to use the Boxer uprising as a pretext to abrogate the Open Door policy and carve up China; instead, Hay used the Boxer Protocol to reaffirm the policy. Hay issued a circular letter on July 3 stating it was the policy of the United States "to seek a solution which may bring about permanent safety and peace to China, preserve Chinese territorial and administrative entity, protect all rights guaranteed to friendly powers by treaty and international law, and safeguard for the world the principle of equal and impartial trade with all parts of the Chinese Empire." Essentially, he was guaranteeing the continued pseudosovereignty of China for trade purposes rather than face a partition that would leave the various powers to pursue whatever trade and tariff policies they desired in their spheres of influence. The dowager empress agreed to the protocol, with its harsh punitive indemnity, of which \$24,500,000 was to go to the United States. China also was compelled to allow the stationing of troops in Beijing at the legations and along the route to the sea.

The door opened onto China at the beginning of the century took little account of the good or sovereignty of the Chinese people. That imperialism sat uneasily on the shoulders of the United States was clear, both from Hay's circular letter and from the fact that the United States reduced its indemnity to \$12 million and in 1924 forgave the unpaid balance on the reduced amount. Yet the United States repeatedly acquiesced to violations of the Open Door policy that invited further incursion into China's sovereignty. The Taft-Katsura memorandum of 1905, between the United States and Japan, laid the foundation for a Japanese protectorate in Korea. The United States also acknowledged Japan's "special interests" in China by means of the Lansing-Ishii agreement of 1917, setting the stage for the 1932 Japanese invasion of Manchuria, which was one of the opening notes in the long overture to World War II.

More important, the entire Boxer affair signaled the last gasp of imperial China, the end of the Qing, or Manchu, dynasty, founded in 1644 when warriors had swept down from Manchuria and conquered China. The

stage was set for a revolution that would establish a short-lived republic (see CHINESE REVOLUTION) fraught with internal chaos and aggrieved by outside imperialism.

Boyars' Revolt (1564)

PRINCIPAL COMBATANTS: Boyars vs. the forces of Czar Ivan IV

PRINCIPAL THEATER(S): Muscovy, Russia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Boyars wanted to restore their traditional power; Ivan IV wanted to consolidate his rule as the first “czar of all the Russias.”

OUTCOME: The Boyars' Revolt was crushed and Ivan's absolute power established.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Ivan IV (1530–84), known as “The Terrible,” was the first Russian ruler to be crowned czar (emperor) of all the Russias. At the time of his birth Russia was not a single kingdom, but a collection of disparate principalities and fiefdoms loosely governed by a class of noblemen called the boyars, of which Ivan's father, the Muscovite Vasili III (1505–33), was one. When Vasili died in 1533, the three-year-old Ivan nominally ascended the Muscovite throne. The real power was wielded by Ivan's mother, Helen (d. 1538), and a junta of boyars, who continually waged brutal war on one another. After Helen's death (possibly by poisoning) in 1538, Ivan was subjected to sadistic abuse by his boyar mentors and advisers. This made him all the more determined to free himself from boyar domination. In January 1547 he was crowned czar of all the Russias. The word is a Russian derivation of the Latin *caesar* (emperor), and, indeed, under the tutelage of Macarius (c. 1482–1563), metropolitan of the Orthodox Church, Ivan developed the doctrine of “Moscow—the Third Rome.” He intended to become the absolute ruler of a unified and greatly expanded Russian empire, with Moscow at its center, much as the city of Rome had served as the nucleus of the vast Roman Empire.

From 1547 to 1564 Ivan set about subjugating the boyars. Shortly after he became czar, a fire of mysterious origin destroyed much of Moscow. Rivals of the Glinkys—the family of which Ivan's mother had been a member—blamed the fire on them and incited a mob against the family. Their elimination was a mortal wound to the

boyar aristocracy, and Ivan systematically appointed in place of the boyars a selected council of nonaristocrats whose advice he followed. Ivan initiated a program of reforms that centralized Russian government in Moscow even as the territories of Muscovy expanded. Suddenly, in 1560, fearing treason, Ivan dissolved the selected council. It was from this point that Ivan embarked upon a regime of political terror that would become the subject of legend, literature, art, opera, and film. Thousands were tortured and killed at his behest. The czar kept a list of his victims—the documents that survive include 4,000 names—and piously donated money to churches and monasteries to pray for their souls.

In 1564 Prince Andrei Kurbsky (1528–83), Ivan's closest military adviser—and a boyar—defected to Lithuania. This incited other boyars to open rebellion, and it further exacerbated Ivan's ruthlessness. However, Ivan was keenly aware that his persecution of the boyars had earned him the loyalty of the Russian people. He now manipulated that loyalty by leaving Moscow to settle in nearby Aleksandrovskaia Sloboda. Here he announced his intention to abdicate. The people of Muscovy, vastly preferring the rule of a “mad” czar to that of the boyars, begged Ivan to remain on the throne. He agreed in exchange for the payment to him of a large indemnity and, more important, for the metropolitan's explicit permission to eliminate the principal boyars within an *oprichnina*, a royal domain that would be under his direct and exclusive control. The permission secured, Ivan appointed a band of *oprichniki*, a secret police force charged with clearing his realm of all the landed aristocracy. The boyars' revolt was utterly and permanently crushed. By the time Ivan abolished the *oprichnina* and the *oprichniki*, the influence and power of the boyars had been vastly diminished.

Bozeman Trail, War for the (Red Cloud's War) (1866–1868)

PRINCIPAL COMBATANTS: Oglala Sioux vs. United States

PRINCIPAL THEATER(S): Vicinity of the Bozeman Trail in Montana and Wyoming

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Oglala chief Red Cloud resisted encroachment by white emigrants.

OUTCOME: Red Cloud's forces prevailed; whites receded from the trail.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Fetterman Massacre: Indians, 1,500; U.S. Army, 80; other

conflicts involved varying numbers of Indians and army troops.

CASUALTIES: 80 U.S. Army troops killed in the Fetterman Massacre (December 21, 1866); other conflicts, totals unknown; Indian casualties, about 300 killed or wounded.

TREATIES: Medicine Lodge Creek (1867) and Fort Laramie (1868)

By the end of 1866, the Teton Sioux had agreed to withdraw from the vital Bozeman Trail—a route from northeast Colorado through central Wyoming, then north to the southwestern Montana gold fields near Virginia City—and allowed westering whites free passage on it. However, the Oglala chief Red Cloud (c. 1822–1909) feared that the Bozeman Trail was an avenue of invasion, and he refused not only to sell the trail and withdraw from it, but warned army officials that he would not allow whites even to use it.

Faced with this threat, Colonel Henry B. Carrington (1824–1912) was dispatched from Fort Laramie on June 17, 1866, to garrison three forts along the Bozeman Trail. Fort Reno was at the forks of the Powder River, and Fort Phil Kearny (his headquarters) was sited at the forks of Piney Creek. Leaving Wyoming and crossing into Montana, two companies under Captain Nathaniel C. Kinney (1814–81) established Fort C. F. Smith near the Bighorn River. Carrington, a plodding and methodical officer, lavished much time and attention on construction, in the meantime ignoring the proximity of hostile Indians. Red Cloud did not wait for the forts to be completed before he began harassing them. Urged by his subordinates to take the offensive, Carrington continued to work on the forts and insisted on maintaining a defensive posture only.

At length, one of his officers, Captain William J. Fetterman (c. 1833–66), began boasting that with a mere 80 men he could ride through the entire Sioux nation. As a bitter winter closed in on Fort Phil Kearny, fuel wood became a matter of high priority, and wood-gathering parties were regularly dispatched. On December 6, 1866, Red Cloud's warriors attacked a wagon train hauling wood to the fort. Carrington chose his boastful captain and another officer, Lieutenant Horatio S. Bingham (1838–67), to lead 30 cavalrymen in an effort to drive the Sioux west while he himself, with 25 mounted infantrymen, would cut them off from behind. Poor coordination and inexperienced personnel caused the operation to fail.

Emboldened, the Indians, more than 1,500 warriors strong, attacked another wood train on December 21. Again, Carrington sent Fetterman to relieve the besieged train, warning him to maintain a defensive posture. Fetterman hand picked a force of 49 experienced infantrymen. Lieutenant George W. Grummond (c. 1835–67) followed him out of the stockade with another 27 cavalrymen. Fetterman disobeyed his orders and launched an

offensive against the raiding party, an action that resulted in his death and the loss of his entire command, including the men under Grummond.

The FETTERMAN MASSACRE, brilliantly accomplished by a daring young Oglala Sioux warrior named Crazy Horse (c. 1842–77), was a stunning defeat and a bitter humiliation for the army. However, the Oglalas failed to repeat their triumph on August 1, when they attacked a group of hay cutters near another post of Carrington's command, Fort C. F. Smith, in the so-called Hayfield Fight. The next day, August 2, they again attacked woodcutters near Fort Phil Kearny in what became celebrated as the Wagon Box Fight (called this because the soldiers took refuge behind a makeshift breastwork of wagon bodies, or "boxes"). The soldiers who fought these engagements were equipped with modern breach-loading rifles, not the cumbersome muzzle-loaded weapons Fetterman's men had carried. As a result, the attackers were stunned by the rapidity of the soldiers' fire and suffered heavy casualties. Red Cloud did not, however, sue for peace.

For its part, the army did not want peace, either. Outraged by the Fetterman Massacre, General William Tecumseh Sherman (1820–91), commander of all forces in the West, ordered a campaign of Sioux extermination. Constrained by congressional misgivings over the military treatment of the Indians, Sherman in the end restricted action to a punitive campaign against the tribes of the central and southern Plains, the Southern Cheyenne, the Southern Arapaho, Kiowa, and Oglala and Southern Brule Sioux. He dispatched General Winfield Scott Hancock (1824–86) to carry out the assignment.

The costly campaign that would be called Hancock's War (see HANCOCK'S CAMPAIGN) failed and prompted a congressionally mandated "peace offensive" on the southern and central Plains to complement the peace activities in the north. Two sets of treaties were negotiated, at Medicine Lodge Creek, Kansas, in 1867, and at Fort Laramie the next year. The Fort Laramie treaties gave to Red Cloud most of what he had fought for, including the designation of the Powder River country as "unceded Indian territory," the establishment of a Great Sioux Reservation in all of present-day South Dakota west of the Missouri, hunting privileges outside the reservation, and a pledge that the whites would abandon the Bozeman Trail. This, of course, seemed an admission of defeat in the War for the Bozeman Trail, but by 1868 the transcontinental railroad was rapidly pushing west, and it was clear that the Bozeman Trail, on the verge of obsolescence, was no longer worth fighting for.

Brabant Revolution (1789–1790)

PRINCIPAL COMBATANTS: Brabant (Flemish duchy) vs. Austria (with Prussian aid)

PRINCIPAL THEATER(S): Brabant (portion of present-day Belgium and Netherlands)

DECLARATION: Declaration of independence, 1789

MAJOR ISSUES AND OBJECTIVES: Spurred by religious issues, Brabant declared independence from the Austrian Netherlands.

OUTCOME: Internal dissension weakened the independence movement, and Austria reasserted control of the duchy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Brabant troops, 7,000; Austro-Prussian forces, 24,000

CASUALTIES: Brabant, 3,599 killed or wounded; Austria and Prussia, 603 killed or wounded

TREATIES: None

The Flemish duchy of Brabant, today part of Belgium and the Netherlands, was part of the Austrian Netherlands and under the control of the Austrian Hapsburg emperor Joseph II (1741–90), who was also Holy Roman Emperor. In 1789 he introduced broad changes in local administration and in the church. These reforms infringed on civil rights in the region, including those guaranteed by medieval charters. The most famous right trampled was the “Joyeuse Entrée” (Joyous Entry), a veritable model for the charter of all low country provinces. Moreover, the reforms trespassed on the teaching and policy of the region’s conservative Catholic church. Backed by local church leaders, the Patriot Party declared Brabant independent and Henry van der Noot (1731–1827) led a popular revolt in the duchy, beating back invading Austrian troops at the Battle of Turnhout. This victory spurred the creation of a constitution early in 1790, but internal disputes soon rocked the independence movement. The two principal leaders, Henri van der Noot and Jean-François Vonck (1743–92), represented opposite agendas. Noot’s followers were conservatives opposed to representative government, whereas Vonck’s constituents, the Vonckists, favored democracy. In the meantime, Joseph II, who was more liberal than most other Hapsburg monarchs, agreed to restore the former privileges of the Austrian Netherlands. However, Joseph was dead before the end of 1790, and the new Holy Roman Emperor, Leopold II (1747–92), repealed Joseph’s concessions and forcibly reasserted full Hapsburg authority in Brabant and the rest of the Austrian Netherlands. Hapsburg hegemony did not last long. Swept by the tide of the FRENCH REVOLUTION (1789–1799) and its aftermath, resistance to Hapsburg rule continued, and Belgium declared independence from the Netherlands in 1830.

Brasidas’s Invasion (424–423 B.C.E.)

PRINCIPAL COMBATANTS: Chalcidice, other cities formerly allied with Athens, and Sparta vs. Athens

PRINCIPAL THEATER(S): Thrace

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Overtaxed client cities of Athens sought relief through rebellion and alliance with Sparta.

OUTCOME: Nondecisive, ending in a truce between Athens and Sparta, but not governing all of their allies

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Brasidas’s army, 2,000; size of opposing forces unknown, but certainly much greater

CASUALTIES: Unknown

TREATIES: Peace of Nicias concluded in 423 B.C.E.

Brasidas’s (d. 422 B.C.E.) invasion of Thrace may be considered part of the Second (Great) PELOPONNESE WAR (431–404 B.C.E.) or may be treated as a separate conflict related to the larger war. It was the crippling debt Athens incurred in prosecuting the Second Peloponnesian War that prompted Cleon (d. 422) of Athens to triple the levy of taxes on Athens’s allies in 424. Thus burdened, Chalcidice and other Athenian-allied cities rebelled. In this action they sought the help of Sparta. The *ephors* (Spartan ruling magistrates) commissioned Brasidas to lead fewer than 2,000 soldiers, including helot hoplites as well as mercenary troops, to invade Thrace.

Brasidas, a great general, swiftly advanced northward through Thessaly, twice engaging and twice defeating Athenian armies along the way. These victories enabled him to recruit the aid of the rebellious cities, which stood Brasidas in good stead when he attacked Amphipolis, the chief Athenian colony on the Chalcidice Peninsula in eastern Macedonia. Because the Athenian fleet under Thucydides (c. 460–c. 400) failed to act, Brasidas and his small army took the city. Cleon responded first by exiling Thucydides (who would subsequently gain enduring fame as the great chronicler of the war) then in 423 by personally leading an attack against the captured city. Brasidas sortied out of from behind the city’s walls to meet the Athenians in battle. He hit the Athenian left flank hard, causing its collapse. Although the center and right counterattacked, the troops, disheartened, soon became disorganized, then broke and fled.

In the course of the battle, both Cleon and Brasidas were killed, a fact that induced Sparta and Athens to conclude the Peace of Nicias (after the leader of the Athenian council). The terms of this long truce were 50 years of

peace, and while this ended direct conflict between Sparta and Athens, its terms did not govern the allies of both sides, who continued to fight.

Brazilian Revolt (1893–1895)

PRINCIPAL COMBATANTS: Insurgents vs. dictatorial government forces

PRINCIPAL THEATER(S): Principally southern Brazil

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Overthrow of a harsh military dictatorship

OUTCOME: Despite numerous rebel successes, factionalism within the rebel forces undermined the revolutionary movement; the government remained in power.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Insurgents under Mello, 6,000+; government forces, 32,110

CASUALTIES: Insurgents, 700 killed or wounded (including 300 executed); government forces, 540 killed or wounded (including 300 executed)

TREATIES: None

On November 15, 1889, General Manuel Deodoro da Fonseca (1827–92) led a military junta in a bloodless coup that removed Emperor Dom Pedro II (1825–91) from the Brazilian throne and brought to an end the Empire of Brazil. The deposed monarch was exiled to Portugal, and Fonséca oversaw the creation of a provisional government. Shortly after this, the provisional government proclaimed the United States of Brazil, a republic. The institution of the new regime did not end the unrest throughout the country, however. In 1891 Floriano Peixoto (1839–95), Brazil's first vice president, replaced Fonséca, who had been elected the nation's first president. The popular hope was that Peixoto would be an improvement on Fonséca, who had ruled as a brutal dictator. In fact, Peixoto, like Fonséca a general, proved just as dictatorial, defending his harsh regime with a claim that the nation needed a military dictator to sweep out the vestiges of a corrupt empire. Fearful that Brazil would be unable to escape from the iron grip of Peixoto, on September 7, 1893, Admiral Custodio de Mello (1845?–1962), commanding most of the Brazilian navy—several vessels riding in the harbor of Rio de

Janeiro—called for Peixoto's resignation. When Peixoto refused, Mello bombarded Rio, an action that prompted foreign ministers in the city to mediate the conflict and thereby avert extensive destruction.

Despite the bombardment, only one of the forts defending Rio went over to the rebels. Much of the navy and all of the marines and army remained loyal to the Peixoto government. After six months of inconclusive skirmishing, Mello put the rebel naval forces under the command of Admiral Luis Saldanha da Gama (d. 1895) and joined the rebel forces known as Maragatos, who were led by Gumercindo Saraiva (1852–94). With these forces Mello participated in the capture of 1,000 government troops at Rio Negro on November 24, 1893. Of these, 300 were summarily executed, provoking the government to retaliate by executing 300 rebels at Boi Preto during April 1894.

In the meantime, Saldanha da Gama attacked the government arsenal at Niteroi on February 9, 1894, and was badly beaten. He surrendered most of the rebel fleet on March 13, 1894, but continued to fight.

The biggest land battle of the revolt came on June 29, 1894, at Paso Fundo, in which the rebels were defeated, with the loss of some 400 killed and wounded. Government losses were little more than half that number. Then, on June 24, 1895, Saldanha da Gama was killed at the (land) Battle of Pedro Osorio. This destroyed the final vestige of the revolt. By this time Peixoto was no longer president of Brazil. Having been defeated in the elections of 1894, he peacefully resigned his office.

Brazilian Revolt (1964)

PRINCIPAL COMBATANTS: Elements of the Brazilian military vs. backers of the civilian government under President João Goulart

PRINCIPAL THEATER(S): Primarily Rio de Janeiro

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conflict of militarists and rightists vs. liberal civilian government

OUTCOME: Military coup, with suppression of the civilian government and the left wing generally

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Extremely variable; most of the military sided with the right-wing insurgents.

CASUALTIES: Minimal

TREATIES: None

The liberal, leftist president of Brazil, João Goulart (1918–76), alienated most of the military with his response to a March 25, 1964, action by dissident sailors and marines. About 1,400 dissidents protesting the arrest of the president of the Sailors and Marines Association seized a trades union building. The minister of the navy demanded their surrender; the protesters refused. When army troops confronted them two days later, they surrendered and were immediately pardoned. Military leaders were outraged both by Goulart's initial failure to take action to arrest the protesters and by his subsequent support of the amnesty. Goulart agreed to revisit the issue of amnesty, but, unpersuaded of Goulart's loyalty to the military, the Fourth Military Region mounted a revolt on March 31, 1964. Other branches of the military joined what amounted to a full-scale military revolution.

Goulart had a small cadre of troops loyal to him. They attacked the garrison occupying Rio de Janeiro but were defeated. With that, the military had control of the city. In a last-ditch effort to defeat the coup, the General Confederation of Workers called a strike that effectively brought normal business to a halt. Despite this, the military carried out the coup, and Goulart fled to Uruguay. With Goulart out of the way, the new regime carried out mass arrests of leftists and suspected communists. This was followed by a general purge of members of congress and other government officials who had been affiliated with Goulart's Labor Party. Despite the oppressive acts of the coup leaders, many remained hopeful that the military takeover was no more than a glitch in Brazil's postwar democracy. In fact, the new military dictatorship lasted more than two decades and created much bitterness throughout their very large country.

Brazilian Revolution (Gaucho Revolution) (1930)

PRINCIPAL COMBATANTS: Conservative elements (mostly from São Paulo) vs. Liberal elements (mostly from Minas Gerais)

PRINCIPAL THEATER(S): Brazil

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A disputed election and economic crisis triggered a revolution culminating in a coup.

OUTCOME: A coup in which the liberal candidate replaced the conservative president

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Fewer than 100, mostly in the northeast

TREATIES: None

Because of the involvement of partisans of Getúlio Dornelles Vargas (1883–1954), governor of the state of Rio Grande do Sol, whose citizens are popularly known as *gauchos*, this bloodless conflict is often called the Gaucho Revolution. Brazil, like most of the world's countries, was hit hard by the Great Depression. The collapse of the nation's agricultural markets, especially coffee, created much voter discontent as the elections of 1930 drew near. Barred by law from another term, the incumbent Washington Luiz Pereira Souza (1869–1957) designated Julio Prestes (1898–1946) as the conservative candidate to stand for election. Like Luiz, Prestes was a native of São Paulo, and anointing him violated the informal tradition of allowing candidates from the two Brazilian states of São Paulo and Minas Gerais to alternate in selecting presidential candidates. Accordingly, in the election leaders in Minas Gerais threw their support behind Vargas. Prestes was declared the winner of the March 1930 election, a result that touched off the revolution.

The first step was a survey of army units carried out by one of Vargas's aides. It was determined that widespread support for Vargas existed among the military, a support force that was reinforced by the hard-pressed civilian working class. Armed with this intelligence, Vargas in October 1930 called for a rebellion. Assembling a body of troops, he boarded a train for Rio. Disembarking, he and his followers, mostly young military officers, encountered no opposition throughout most of the country. In the northeast, however, street fighting was sharp, although casualties were fewer than 100. Vargas not only forced Luiz to step down, he sent Prestes into flight. (Prestes found refuge with the British legation). Pledging a program of liberal economic and political reforms, Vargas assumed the presidency and would dominate Brazilian politics for the next 25 years.

Brazilian War of Independence (1822–1825)

PRINCIPAL COMBATANTS: Brazil (under Dom Pedro) vs. Portugal (under John VI)

PRINCIPAL THEATER(S): Brazil and its coastal waters

DECLARATION: The Grito y Ypiranga (Declaration of Independence), 1822

MAJOR ISSUES AND OBJECTIVES: Dom Pedro, son of Portugal's King John VI, wished to rule Brazil as a kingdom in its own right, independent of Portugal.

OUTCOME: Brazil won independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Fewer than 10,000 men on each side.

CASUALTIES: Very light; at most a few hundred killed or wounded.

TREATIES: None

In 1807 the Portuguese royal family fled Portugal as Napoleon Bonaparte (1769–1821) invaded the country. They settled in Rio de Janeiro, Brazil, which became the seat of Portuguese government in exile. During his residence in Brazil, John VI (1769–1826) of Portugal instituted a series of progressive reforms, including the removal of trade restrictions and other measures that essentially put Brazil on an equal footing with the mother country, Portugal. Despite John's positive steps, the wave of revolution that was sweeping South America touched Brazil and created unrest. In 1821 John VI returned to Portugal, leaving his son Dom Pedro (1798–1834) to rule as prince regent. Once he was back in Portugal, John VI began rolling back his reforms, reducing Brazil to its former inferior colonial status. In response, Dom Pedro issued the *Grito y Ypiranga* of 1822, a proclamation of Brazilian independence. He followed this by crowning himself Pedro I, emperor of Brazil, on December 1, 1822.

Resistance to Emperor Pedro I was surprisingly light. Indeed, although Brazil was the biggest of the South American nations, its war of independence would prove minimally violent. Only the Portuguese garrisons stationed at the seaports of the north offered a serious challenge. On February 19, 1822, Portuguese forces secured Bahia (then called Salvador). Each side suffered about 100 casualties. In August the independence army, with about 8,000 men, repeatedly attempted to retake Bahia, but without success.

On November 8 Portuguese forces attempted to lift a siege of Piraja but were repulsed with the loss of 80 men. In a second attack, on November 19, 50 runaway slaves serving with the Portuguese were captured and summarily executed.

Recognizing that the land war was not prevailing against the Portuguese, Pedro commissioned British admiral Thomas Cochrane (1775–1860) to take command of the Brazilian fleet. Cochrane had a half-dozen ships to oppose the Portuguese fleet of 13. Despite this disparity, Cochrane sailed for Bahia on April 3, 1823. He fought an indecisive battle on May 4 but then blockaded the port of Bahia. Cochrane did prevent the Bahia garrison from leaving, but he was unable to defeat the Portuguese fleet in a head-on fight. In a stroke of great brilliance, he outran the Portuguese fleet and sailed to Maranhão, defended by a small Portuguese garrison. Mainly through sheer bluff, Cochrane persuaded the Portuguese to surrender the town on July 26. This was followed by the surrender of Pará

without a fight. The Portuguese fleet reached Maranhão to find itself facing Brazilian guns. With this, the fleet set sail for Portugal, leaving Brazil independent. The Brazilian frigate *Niteroi*, under British command, pursued the fleeing fleet all the way to Portugal and inflicted considerable damage.

As for Brazil, some anarchists revolted against the new regime, but this rebellion was quickly extinguished. Cochrane was pressed into service in September 1824 to crush a secessionist movement in Pernambuco, and 16 secessionist ringleaders were executed.

Breton Succession, War of the (1341–1365)

PRINCIPAL COMBATANTS: England vs. France

PRINCIPAL THEATER(S): Primarily Brittany

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conflict over the succession to the Breton throne

OUTCOME: France was compelled to recognize the claim to the Breton throne of John de Montfort, England's candidate for succession.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Truce of Malestroit, 1342; agreement between Charles V and John de Montfort, recognizing Montfort's claim to the Breton throne, 1365.

This conflict over the succession to the Breton throne may be viewed as a phase of the HUNDRED YEARS' WAR or as a separate war. It followed on the death in 1341 of John III (1312–41), duke of Brittany, who left no heir. The duke's half brother, John de Montfort (d. 1345), and nephew-in-law, Charles de Blois (c. 1319–64), pressed rival claims, John de Montfort seeking the support of England's Edward III (1312–77) and Charles de Blois the backing of Philip IV (1293–1350) of France.

England and France both invaded Brittany, fighting inconclusive engagements at Rennes, Nantes, and Vannes in 1342. Pope Clement VI (1291–1352) intervened to broker the Truce of Malestroit, a shaky peace that was broken in 1345 when the English attacked and besieged French outposts along the border of Brittany. English forces attacked elsewhere in southern France as well. Fighting continued sporadically and without definitive result until 1347, when the English captured Charles de Blois near

Roche-Darien. Although Charles was imprisoned in the Tower of London for the next nine years, the fighting in Brittany continued under the direction of Charles's wife, Jeanne de Penthièvre (1319–84). Hostilities were punctuated by frequent, brief truces.

One of these truces was broken by the celebrated Battle of the Thirty, known in French as the Combat des Trentes, on March 27, 1351. An English commander, John Bramborough (d. 1351), persisted in ravaging the district of Josselin in Brittany, whereupon the French commander, Jean de Beaumanoir (d. 1366), challenged Bramborough to special combat. Each side chose 30 champions, knights, and squires, who fought with lances, swords, daggers, and maces. The French champions prevailed, although all the combatants were either dead (among these was Bramborough) or seriously wounded. This battle halted the English depredations in Josselin, but the French suffered a serious defeat at Mauron the following year, which nearly stopped the war.

In 1364 John de Montfort sent a force commanded by John Chandos (d. 1370) to lay siege to Auray. Charles de Blois was released from the Tower in 1356, and, with his best general, Bertrand du Guesclin (1320–80), led an army to relieve Auray. They attacked the siege lines on September 29, 1364, only to suffer a stiff counterattack that sent their army into retreat. Chandos pursued and hit the French flank, routing the army and prompting Auray to surrender to the English. Charles was killed in the battle and Guesclin captured (though subsequently ransomed). The Battle of Auray proved decisive concerning the Breton succession. In 1365 Charles V (1338–80) of France recognized John de Montfort's claim to the throne. If the French king had expected to purchase a new ally by his recognition, he was mistaken. John carefully maintained the neutrality of Brittany with regard to the conflicts of England and France.

Bruce's Revolt (1306–1314)

PRINCIPAL COMBATANTS: Forces of England's Edward I vs. forces of Scotland's Robert Bruce

PRINCIPAL THEATER(S): Scotland and northern England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Bruce led a Scottish rebellion against English rule.

OUTCOME: Partial eviction of the English from Scotland

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Variable, but Bruce was consistently outnumbered; he may have had 10,000 men at most.

CASUALTIES: Unknown

TREATIES: None

Robert Bruce (1274–1329) was the grandson of an earlier claimant to the throne of Scotland. He had fought on the side of the Scots rebel William Wallace (1272?–1305) (see WALLACE'S REVOLT) but shifted allegiance to England's Edward I (1239–1307) by 1302. Wallace was executed in 1305, and the following year, although still nominally in the service of Edward I, Bruce defiantly crowned himself king of Scotland at Scone. At this, an enraged Edward invaded Scotland and engaged Bruce's forces at the Battle of Methven, northwest of Perth, on June 19, 1306. Edward easily routed Bruce's outnumbered rebels, and Bruce, after a second defeat at Dalry (August 11), fled to remote Rathlin Island off the coast of Ireland. It is said that during his exile Bruce observed a spider weave its web with infinite patience. Somehow inspired by this example, he returned to Scotland in 1307 and quickly found an eager band of followers. He led them against English cavalry at the Battle of Loudoun Hill at Ayr, southwestern Scotland, in May 1307. With arrogant recklessness, English knights charged Bruce's pikemen and were duly decimated. The defeat at Loudoun Hill outraged the aged and infirm Edward I, who, sick as he was with a wasting disease, personally led a campaign into Scotland. However, on July 7, 1307, he died at Burgh-by-Sands, near the Solway Firth. Edward I's son, Edward II (1284–1327), made a half-hearted foray into Scotland in 1310 but soon withdrew. Bruce used the interlude of peace to mend fences with enemies and to consolidate his forces for operations to clear the remaining English out of Scotland. Often he ventured into northern England on hit-and-run raids.

In 1311 Bruce attacked Durham and Hartlepool, evicting the English from these places, and by 1314 only Stirling, Dunbar, and Berwick remained under English control. By this time Bruce had secured recognition from France and had the backing of the Scots clergy. At this point most historians mark the conclusion of Bruce's

Revolt and the commencement of the SCOTTISH WAR (1314–1328).

See also ANGLO-SCOTTISH WAR (1214–1216).

Buckingham's Revolt (1483)

PRINCIPAL COMBATANTS: The House of York vs. the House of Lancaster

PRINCIPAL THEATER(S): England

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: An episode in the continuing struggle, called the War of the Roses, between the House of York and the House of Lancaster, two families of English royalty battling for the throne

OUTCOME: The throne passed to Henry VII.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Totals unknown; contemporary correspondence mentions 20,000 led by Richard converging on London.

CASUALTIES: Totals unknown. Little fighting occurred.

TREATIES: No formal treaties

The WARS OF THE ROSES (1455–1485) that gripped England for three decades were a sanguinary affair between the Yorkists and the Lancastrians that saw the crown pass back and forth between the two houses. The final phase of the war began in 1483 with the death of Edward IV (1442–83) and preparations for the ascension of his 12-year-old son, Edward V (1470–83) in April. Two months later a rebellion of nobles, led by Richard of Gloucester (1452–85), the brother of Edward IV and uncle of Edward V, and Henry Stafford (c. 1452–83), duke of Buckingham, placed Richard of Gloucester on the throne as Richard III.

For his support Buckingham was handsomely rewarded, but for some unknown reason he suddenly switched his loyalty. The earl of Richmond, Henry Tudor (r. 1485–1509), a Lancastrian supporter, conspired with Buckingham to rise against Richard in a coordinated rebellion in several regions of England. In October Buckingham led Lancastrian forces in Brecknock and Kent, but autumn rains kept him from uniting with supporters in the south. The rebellion quickly fell apart, and Buckingham went into hiding. He was betrayed and on November 2 arrested and executed in Salisbury for treason a short time later. Nevertheless, Henry was able to maintain Lancastrian support and two years later defeated Richard at the Battle of Bosworth, ending the Wars of the Roses and placing Henry on the throne as Henry VII.

Buckshot War (1838)

PRINCIPAL COMBATANTS: Democratic Party members vs. Whig and anti-Masonic party members

PRINCIPAL THEATER(S): Harrisburg, Pennsylvania

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The disputed state election of 1838; factions vied for subsequent control of the state legislature.

OUTCOME: Democrats took control of the legislature by peaceful means.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: None

TREATIES: None

In the Pennsylvania state election of 1838, both the Democrats and their Whig and anti-Masonic opposition claimed victory and control of the Pennsylvania House of Representatives. Both factions gathered at the state house and elected speakers, and chaos threatened to interrupt the legislative session. The Whigs and anti-Masonics were led by future Radical Republican Thaddeus Stevens (1792–1868), who attempted to purge the Democrats by refusing to seat them. Supporters of the Democrats gathered from Philadelphia and encircled the state house, threatening violence. Stevens, along with other members of the Whigs and anti-Masonics, were forced to flee out a senate chamber window.

Pennsylvania governor Joseph Ritner (1780–1869), wary of bloodshed in his own backyard, requested President Andrew Jackson (1767–1845) to send federal troops. When Jackson refused, Ritner called out the state militia and supplied them with buckshot cartridges for riot control. The display of force, along with three Whigs voting with the Democrats, gave the Democrats the majority they needed to gain control of the house. The rest of the house members were seated, and order was restored without any bloodshed.

Bukhara, Fall of (1220)

PRINCIPAL COMBATANTS: Mongols under Genghis Khan vs. Khwarizm Empire under Shah Mohammad

PRINCIPAL THEATER(S): Bukhara and environs

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Pursuit of Shah Mohammad after his defeat at the Battle of Khojend

OUTCOME: Bukhara was destroyed, but Shah Mohammad escaped Genghis Khan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Mongols, 100,000; Bukhara defenders, about 50,000

CASUALTIES: Described as “staggering,” mostly the civilian inhabitants of Bukhara

TREATIES: None

Genghis Khan’s destruction of Bukhara may be considered a phase of the First MONGOL-PERSIAN WAR, but, by virtue of its vast scale, many historians treat it as an independent conflict. Mohammad (fl. 1220), shah of the Khwarizm Empire (embracing modern-day Iran, Afghanistan, Turkmenistan, and portions of northern India), suffered defeat at the Battle of Khojend in the First Mongol-Persian War (1218–21) and was pursued by Genghis Khan to a position near Bukhara in central Uzbekistan. Here Mohammad set up a strong defensive line along the Jaxartes River. In February 1220 Genghis Khan attacked with massive forces deployed with the skill of a great military genius. He divided 10 cavalry divisions into four columns, sending three in a converging movement against Mohammad’s right flank (near Samarkand) and personally leading the fourth—40,000 troops—against Bukhara from the west, the rear of Mohammad’s army. Confronted by the precisely coordinated movement of more than 100,000 attackers, Mohammad focused all his attention on the three units attacking his right and pulled most of his men out of Bukhara. Thus, Genghis Khan was able to take the city after a brief siege. His troops sacked Bukhara, which was then accidentally burned. The loss of life was staggering: reports hold that every one of the city’s inhabitants perished.

After destroying Bukhara, Genghis Khan and the other three columns continued on to Samarkand, which fell after a five-day siege. The city was heavily damaged but escaped complete destruction. As for Mohammad, he escaped and was hotly pursued by the armies of the khan.

Bulgar and Slav Raids (530–600)

PRINCIPAL COMBATANTS: Bulgars and Slavs vs. the Roman Empire

PRINCIPAL THEATER(S): The Balkan Peninsula, south to Greece and east to Constantinople

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The trans-Danubian southward migration of the Bulgars and Slavs in the sixth century disturbed the frontiers of the Roman Empire.

OUTCOME: The raids, resulting from the migration, led to the permanent settlement of the Bulgars and Slavs, brought a mixture of the nomadic East and the sedentary Indo-Europeans into the trans-Danubian south, and established homelands that still exist today.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

In the early part of the sixth century, the Avars began to migrate south into the regions north of the Danube River, pushing the Bulgars—nomadic Asian descendants of the Huns and Avars who had resided north of the Caspian Sea—across the Danube and into southeastern Europe. The Slavs, an Indo-European people ethnically similar to the Germans, likewise were pushed south of the Danube. In fleeing the Avar hordes, the Bulgars and the Slavs were trying to make the best of their situation. Rather than push back to the north against a superior and more fierce enemy, especially after 534, they chose instead to brave the Carpathian Mountains and take to the traditional invasion routes into the Roman Empire along and across the Danube River valley.

Their raids were initially more social reconnaissance than military expeditions, but they soon became fueled by the allures of the Roman Empire in the east. The “barbarians” saw the wealth and stability of the empire and sought to incorporate themselves into such a world, while at the same time maintaining their autonomy. As the barbarian incursions grew ever more militant, the empire began garrisoning larger numbers of troops on the frontier in an effort to halt the migrations, but to no avail. The Bulgar-Huns invaded and secured Scythia and Moesia in 538 and Thrace, Illyricum, and Greece as far south as Corinth by 540. In 547 the Slavs, unopposed by the empire, overran Illyricum, which had only recently been retaken by the empire, and devastated the region. These incursions, however, were but a precursor of what was to come.

In 550 only the brilliance of the Roman general Germanus (fl. sixth century) saved the imperial legions against the Slavs at the Battle of Sardica. In 551 a force of more than 3,000 Slavs marched through Thrace and Illyricum and advanced as far south as the Aegean Sea. The following year they moved on Thessalonica and actually began to develop settlements there.

The Bulgars, for their part, were equally active in the trans-Danube. Beginning in 558 they pushed through Thrace and Illyricum, although they turned east, one army taking Thermopylae, the other moving toward Constantinople, threatening the very capital of the eastern

empire. By 559 the Bulgars, under the leadership of Zabergan (fl. 550s–560s), had reached the outer defenses of the city, which lay vulnerable because all its regular forces were in the field against the Persians on the one hand or against other barbarian raiders on the other.

The emperor Justinian (483–565), in a panic, called for his famed general Belisarius (505–565) to come out of retirement to defeat the barbarians. With a force of little more than 300 veteran cavalry troops and a few thousand recently inducted conscripts, Belisarius met the Bulgars outside the city walls at the Battle of Melanthius. After repulsing the Bulgar advance, Belisarius counterattacked and drove the barbarians away, saving Constantinople.

But they kept coming back. By 580 the barbarians had made permanent inroads into Thrace, Illyricum, and other parts of the Balkan peninsula. One final brutal invasion awaited, however, to cement their control of the region. In 582, while the Roman legions were desperately trying to stave off the siege of Sirmium by the Avars, the Slavs rushed into Thrace and Thessaly, ravaging the region and causing many to call it the darkest hour for the Eastern Empire.

The Bulgars, under the leadership of Isperrich (fl. sixth century), then gained supremacy in the region over the Slavs and carved out an independent kingdom between the Balkan Mountains and the lower Danube, extending north into Wallachia, Moldavia, and Bessarabia. (Ironically, through intermingling over the centuries, Bulgaria would be essentially Slavonic by the dawn of the second millennium). After 582 incursions continued, but by that point the trans-Danubian south was firmly in the hands of the Bulgars and Slavs, both of whom established permanent kingdoms of their own, albeit now outside the empire itself.

Bulgarian-Byzantine War (755–772)

PRINCIPAL COMBATANTS: Bulgarians vs. the Byzantine Empire

PRINCIPAL THEATER(S): Thrace (southeastern Balkans)

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Bulgarian belligerency in the border regions of the Byzantine Empire

OUTCOME: Bulgarian forces were defeated but essentially gave up no territory.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Total Unknown, but Telets, leader of the Bulgars, was killed by his own men after they suffered heavy losses.

TREATIES: Bulgars signed a peace treaty with Constantine in 767, although war erupted five years later.

As the first of several ferocious conflicts between the nascent first Bulgarian kingdom and the Byzantines, the war established Thrace as the near-perpetual battleground between these two adversaries. Most often the Byzantine Empire dominated the conflicts.

Following the southward migrations of the Slavs and the Bulgars—a Turkish-speaking people of skilled warriors on horseback from north of the Black Sea—in the late sixth and early seventh centuries, the Bulgars were able to dominate the trans-Danubian region of the Balkans and establish the first Bulgarian kingdom in the eighth century. Almost all the migratory invasions of the barbarians in the previous centuries had passed through Thrace, a region of the southeastern Balkans dominated by the Bulgars, so much so that the Byzantine Empire had all but lost control of the territory. But none of the invading tribes could gain solid control, leaving Thrace a hotly contested area. The Byzantines, however, struggled to maintain as much a military presence in the overrun areas as possible.

Some years after the establishment of the Bulgarian kingdom around 681, the Bulgarian general Telets (731–764), who would become khan in 761, demanded tribute from Constantinople for the presence of a Byzantine garrison in Thrace. When Emperor Constantine V (718–775) refused, Telets led a Bulgarian invasion of Byzantium in 755 but was repulsed by Constantine that same year. In successive victories at the Battles of Marcellae in 759 and Anchialus in 763, the Byzantines handed the Bulgarian forces heavy losses, and Telets was subsequently executed by his own troops. Leaderless and beaten, the Bulgarians came to the bargaining table, where they signed a peace agreement with Constantine in 767.

Relative peace prevailed in the border regions that had remained status quo. When the Byzantines learned of an impending Bulgarian invasion in 772, however, Constantine launched a preemptive offensive and scored a decisive victory against the Bulgarians. It is not known, however, where the battle actually took place. The new Bulgarian khan, Telerig (r. 772–777), continued the war for three more years but quit the field in 775 shortly before Constantine's death.

Bulgarian-Byzantine War (780–783)

PRINCIPAL COMBATANTS: Bulgaria vs. the Byzantine Empire

PRINCIPAL THEATER(S): Thrace

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Frequent Bulgarian invasions of Thrace in an attempt to wrestle the province back from the Byzantine empire

OUTCOME: Bulgars did not regain Thrace but did extract an annual payment from the empire in exchange for agreeing not to invade.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Nonaggression pact, 783

The second Bulgarian-Byzantine War was part of the continued efforts of the Byzantine Empire to subdue the nascent Bulgarian kingdom and to reconquer lost territory. Since the establishment of Bulgarian autonomy in 681, the two states had been at near-constant war. Throughout the conflicts the Byzantines gained dominance. After losing Thrace and a substantial amount of border territory along the eastern Balkan Peninsula following the first war (see BULGARIAN-BYZANTINE WAR [755–772]), the Bulgarian's very existence seemed threatened.

Beginning in 780 Kardam (r. 773–803)—a general, or khan—staged a series of offensives into Thrace in an attempt to wrest that region from the Byzantines. Although the incursions were not a complete military success, they did have the effect of placing a heavy strain on Byzantine military resources as well as on the government. Following the death of Leo IV (r. 775–780) in 780, he was succeeded by his 10-year-old son, Constantine VI (770–c. 797). Leo's wife, Irene (752–803), became regent for Constantine, and her hold on the government was tenuous. The Bulgarian invasions exacerbated the situation and forced Irene to grant annual monetary concessions to Kardam and the Bulgarians in exchange for a nonaggression pact, which was concluded in 783.

Bulgarian-Byzantine War (808–817)

PRINCIPAL COMBATANTS: Bulgaria vs. the Byzantine Empire

PRINCIPAL THEATER(S): Bulgarian-Byzantine border provinces

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The ongoing struggle between the two states for dominance in the region

OUTCOME: Though the war was destructive to both sides, at its end Bulgaria and the Byzantine Empire lived harmoniously for several decades.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Total unknown; a 6,000-man Byzantine garrison was killed at Serdica in 809; the Byzantine army was annihilated at Verbitza Pass in 817; civilian casualties were also high at Pliska in 809, and in 817 after the Battle of Mesembria all 10,000 inhabitants at Adrianople were enslaved or slaughtered by Krum in 813.

TREATIES: None

Although ending in eventual defeat for the Bulgarians, their third war with the Byzantine Empire produced a formidable Bulgar leader. His name was Krum (d. 814), and little is known of him other than that he had an ability to make others put aside their own squabbles and unite under him. In 807 or 808 Krum seized the khanate of Bulgaria and united the Bulgarians of the Danube River valley with those living across the Carpathian Mountains in Pannonia and Transylvania—the only time such a union occurred in Bulgarian history. With his forces Krum completely annihilated the Avars. In the fall of 808 Krum marched his troops across the Balkan Mountains to the mouth of the Strymon River, where a large Byzantine army was encamped. Krum took to the field when the snows melted and attacked Serdica (Sofia) in spring of 809, slaughtering the entire 6,000-man Byzantine garrison.

Emperor Nicephorus I (d. 811) personally led his troops against Krum to avenge Serdica. Reaching the Bulgarian capital of Pliska by Easter morning of 809, Nicephorus found the city virtually undefended. The Byzantines fell upon it without mercy. Nicephorus then marched on Serdica to rebuild the garrison there, but his troops mutinied and he was forced to abandon the project. Krum's forces, however, were not inhibited.

Nicephorus next joined his Asian allies to the cause. An immense force marched to destroy the Bulgarians, again devastating Pliska. Krum's suit for peace was rejected, and the conflict continued.

On July 24, 811, the Byzantine army entered the Verbitza Pass in the Balkan Mountains, not realizing they were being observed by the Bulgarian forces. When darkness came the Bulgarians blockaded both ends of the gorge with heavy wooden palisades, trapping the Byzantines. At dawn Nicephorus expected an onslaught, but the Bulgarians held off during the day. When night fell the Bulgarians engaged the Byzantines through the night and into the next day. The majority of the Byzantine forces were slaughtered in the fighting. Survivors were burnt to death when the Bulgarians fired the palisades, or they were crushed under Bulgarian-induced landslides.

Only a few cavalry troops survived, and they were quickly tracked down and forced to flee over a great defile, plunging to their deaths in the gorge below. Nicephorus's body was recovered, and Krum lined his skull with silver and used it as a drinking vessel. The Verbitza Pass battle was one of the most thorough defeats in military history.

Nicephorus's son-in-law, Michael I Rhangabe (d. c. 843), became emperor and continued to battle the Bulgarians. Rhangabe was no match for Krum. The Bulgar leader drew the numerically superior Byzantine forces northeast of Adrianople and crushed them on June 21, 813, at the Battle of Versinikia. The defeat, however, must be laid at the feet of Leo the Armenian (d. 820), who withdrew his Anatolian forces from the field to protest Rhangabe's handling of the army. The Byzantine defeat cleared the route to Constantinople, and by June 17 the Bulgars were at the walls of the city. Leo was crowned emperor as Leo V, and he hoped to defeat Krum once and for all.

Leo called a meeting to discuss peace, but when Krum appeared Leo attempted to capture him. An indignant Krum exacted his revenge the following day. Unable to pierce the city walls, the Bulgarians waged a bloody campaign against the areas beyond the walls. Although vast amounts of territory and power lay at stake in the war, the struggle had devolved into a personal vendetta between the two leaders. Krum had brought the empire to its knees except for capturing Constantinople, but Leo still refused to accept terms.

Krum died suddenly, apparently of a stroke, in 814; three years later, in fall of 817 Leo took the Bulgar army by surprise at Messembria. Most Bulgarians were massacred before they awoke. Not satisfied, Leo ravaged the Bulgarian countryside, leaving the adults untouched but killing the children. Although the Bulgarians had not been completely defeated, Leo forced a 30-year peace upon them.

Bulgarian-Byzantine War (889–897)

PRINCIPAL COMBATANTS: Bulgaria vs. the Byzantine Empire

PRINCIPAL THEATER(S): Thrace

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Beginning as a trade war, the fourth Bulgarian-Byzantine clash quickly developed into a continuation of the long rivalry for control of the region.

OUTCOME: Status quo ante bellum

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: 897

After the conversion of Bulgaria's king Boris (d. 902) around 866, the Byzantines had hoped to live in peace with their new Christian neighbors. And so they did for the most part over the next three decades.

In 889, Boris abdicated and retired to a monastery near Preslav, leaving his kingdom to his eldest son and recent co-ruler, Vladimir (r. 883–893). But Vladimir, in a violent reaction to his father's policies, allied himself with the formerly powerful boyar aristocracy, who to a man detested Christianity. As the boyars assumed their old privileges and Bulgaria returned to its pagan ways, Boris burst forth in a rage from his monastery, took control of the country once more without much trouble, and deposed—and blinded—Vladimir. Summoning a great conference, he called on those assembled from throughout Bulgaria to declare his younger son, Symeon (858–927), their new king. They promptly did so, and he returned to the Preslav monastery for good.

Probably in his late twenties when he became king, Symeon had been educated in Constantinople. Though he had become a monk on his return to Bulgaria, he was both aggressive and ambitious, and he responded with enthusiasm and speed to his father's call. The misguided Byzantines, thinking him one of their own, were relieved by his ascension.

All went well for a year, before the Byzantine trade monopoly for Bulgaria was awarded to two protégés of the finance minister in Constantinople in 889. They immediately raised dramatically the import rates for Bulgarian goods and moved the entry point from Constantinople to Thessalonica, a destination all but unreachable for Bulgarian merchants. These changes crippled Bulgarian trade, and Symeon sent an embassy to Byzantium in protest, but it was ignored.

Incensed by both the Byzantine trade policies and lack of response, Symeon invaded Thrace in early 894 unopposed by the empire, which was engaged in war with Italy. The Byzantines' best general, Nicephorus Phocas (912–969) was able to steal away and hold the Bulgarians at bay while Emperor Leo VI (r. 775–780) attempted to garner assistance from the Magyars, who resided north of the Danube. The Magyars agreed to make war on the Bulgarians, but to answer this threat, the Bulgarians solicited the aid of the Pechenegs of the Russian steppes. After dealing with the Magyars (see BULGAR-MAGYAR WAR), Symeon turned his attention to Byzantium and crushed the imperial forces at the Battle of Bulgarophyon in 896. Symeon's victory essentially ended the war and resulted in the Byzantines paying an annual tribute to Symeon and a return to the

230 Bulgarian-Byzantine War (913–927)

status quo ante bellum trade conditions, including the return of trading to Constantinople.

Bulgarian-Byzantine War (913–927)

PRINCIPAL COMBATANTS: Bulgaria vs. Byzantine Empire

PRINCIPAL THEATER(S): The majority of the Byzantine Empire

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Bulgarian czar Symeon's efforts to seize the Byzantine throne for himself after diplomatic efforts failed

OUTCOME: Repeated attacks on the Byzantine Empire failed to earn Symeon the imperial throne

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Marking the most significant territorial advances by the Bulgarian kingdom, the fifth Bulgarian-Byzantine war ended with Bulgaria still unable to breach the walls of Constantinople.

Emperor Constantine VII (905–959) ascended the Byzantine throne at the age of seven in 912, sparking a fierce struggle for power between his regent, Romanus Lecapenus (d. 948), and other members of the royal family interested in seizing power for themselves. Bulgarian king Symeon (864/865–927) quickly took advantage of the situation and invaded the empire, laying siege to Constantinople in 913. After negotiations with Romanus, Symeon agreed to withdraw his forces in exchange for an indemnity and Romanus's pledge that the young emperor would marry one of Symeon's daughters.

Symeon's plans were thrown aside the following year, however, when Constantine's mother, Zoë (fl. 906–920), seized the regency from Romanus and intimated that she had no interest in marrying her son to Symeon's offspring. Furious at having withdrawn his earlier attack on the Byzantine capital, Symeon launched another offensive against Constantinople in 914. In the process the Bulgarians captured Macedonia, Albania, and Adrianople that same year before again reaching the walls of Constantinople. Turned away, he made three more invasions, seizing the majority of the Balkan Peninsula in 916 and Thessaly, northern Greece, and Anchialus, winning a stirring battle

there in 917. All told, Symeon would advance on the Byzantine capital four times by 927, each time gaining some concession but never breaching the city walls or gaining the throne for himself as he wished. That year the campaign came to an end with the 69-year-old Symeon's death.

Bulgarian-Byzantine War (981–1018)

PRINCIPAL COMBATANTS: Bulgaria vs. the Byzantine Empire

PRINCIPAL THEATER(S): Bulgaria and the western Byzantine Empire

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Primarily, the war was caused by the Bulgarian invasion of Thessaly five years earlier; however, it was also due to continuing belligerency between these two centuries-old rivals.

OUTCOME: Bulgarians submitted to Byzantine domination on the Balkan Peninsula.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Total unknown; at the Battle of Balathista 15,000 Bulgar prisoners were blinded

TREATIES: None

Marking the arrival of Basil II (c. 958–1025), known as “Basil the Bulgar-Slayer,” the sixth Bulgarian-Byzantine conflict began with a moderate Bulgarian victory, but Basil established himself as a military master and routed the enemy. From obscure origins, the new Bulgarian czar, Samuel (d. 1014), was not secure enough on the throne before 980 to make his presence felt beyond his own borders. But the following year, he took advantage of Constantinople's preoccupation with numerous revolts (see BYZANTINE REVOLTS [976–989]) and war with the Greeks and barbarians north of the Black Sea to raid the empire unopposed. Hardly a summer went by without a Bulgarian invasion of Byzantine Thessaly in eastern Greece, and never a response from Constantinople. Then, in 986 Samuel laid serious siege to the Thessalonian city of Larissa, selling off its entire population save for one quisling family into slavery, an outrage that at last stirred the new Byzantine emperor to action.

In hopes of dominating the Bulgarians and establishing his authority in the region, Basil II personally assumed supreme command of the Byzantine army, and he launched an invasion of Bulgaria in order to lay siege to Serdica. For

some reason, Basil—after making his way through the mountains surrounding Serdicia at Trajan's Gate—stopped just short of the town, allowing Samuel and his forces to hurry up from Thessaly and occupy the high ground. When the Byzantines finally launched their siege in July, they were almost as short of food as the besieged, and imperial foraging parties were constantly harassed by Samuel's forces. Morale was low among Basil's hot and hungry troops, and he called off the attack after three weeks and headed for home. On the way back through Trajan's Pass, the Byzantines were ambushed in the mountains and cut to shreds by the Bulgarians.

Basil, however, remained supremely confident in his abilities, and eventually he was able to change the momentum of the war. Beginning in the summer of 998, Basil embarked on a brilliant campaign, establishing a fortified base of operations at Philippopolis (Plovdiv) and progressing from his headquarters, fortifying garrisons along the way and always remaining within the reach of his interior lines of communication and supply. In hard fighting, he took the Bulgarian capital, Ochrida, in 996 and won a tough campaign at Spercheios later that year. In 999 the Byzantines recaptured Serdica, and in spring 1001 recaptured Berea and Serbia in one offensive and Thessaly and Macedonia in another. Basil crushed a Bulgarian attempt to retake Serbia the same year and sacked Adrianople in 1003. By 1004 the Bulgarians had lost the entire eastern half of the Balkan Peninsula, ranging from Thessalonica north to the Danube River.

Basil's successes continued. In 1014 the Bulgars, aware of their limited offensive capabilities, attempted to block the path of the Byzantine forces at the narrow defile of Cibalongus by laying heavy wooden palisades down rather than attempt an ambush. One of Basil's generals suggested leading a small force around the defile and flanking the Bulgars. The strategy worked; the Bulgars were trapped at the Battle of Balathista. Basil captured almost 15,000 Bulgarian troops and rather than slaughter them all, he blinded them, leaving every 100th man with one eye to lead the others back. When these 15,000 made it back to the Bulgarian capital, Samuel was overcome by the pathetic spectacle and died of shock, or so the story goes. Although the war would rage on for another four years, it was essentially over. The Bulgarians, leaderless after Samuel's death, were totally consumed, acceding to complete Byzantine authority over the entire Balkan Peninsula.

Bulgarian-Byzantine War (1261–1265)

PRINCIPAL COMBATANTS: Bulgaria vs. the Byzantine Empire

PRINCIPAL THEATER(S): Thrace

DECLARATION: No formal declaration known

MAJOR ISSUES AND OBJECTIVES: Byzantine attempts to regain Bulgaria as part of the empire.

OUTCOME: Byzantine Empire took portions of Macedonia and the Bulgarian port towns of Anchialus and Mesembria.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

With the rise of the second Bulgarian empire in 1185, a Constantinople weakened by Muslim expansion and Byzantium's debilitating involvement in three Christian Crusades had been forced to grant autonomy to the Bulgars after more than 160 years of suzerainty. But the Byzantines never relinquished hope of regaining their hold over the Balkans, and, in the middle of the 13th century, a new emperor came to the throne determined to recapture some of the old Byzantine glory. Under Michael VIII (1224–82), Byzantium launched an attack on the chief Bulgarian ports in 1261, taking Anchialus and Mesembria. Michael then ordered an offensive west of the Balkan Mountains in 1265. Macedonia was retaken, and the campaign was successful.

Before the campaign could be completed, Michael was recalled to Constantinople. On his way, however, his detail was ambushed and captured by Bulgarian forces. The Bulgarians ransomed the emperor for the promise of the return of the ports at Anchialus and Mesembria. Michael agreed and recalled his troops from west of the Balkans, thus ending the war. Michael reneged on his agreement, however, and the ports were not returned as promised. The Bulgarians invaded the empire in 1272 to force their return but were defeated. Bulgaria never regained the ports.

Bulgarian Revolt (1040–1041)

PRINCIPAL COMBATANTS: Bulgars vs. the Byzantine Empire

PRINCIPAL THEATER(S): Balkan Peninsula

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Byzantine Empire's excessive taxation and other grievances precipitated a movement toward reasserting Bulgarian independence.

OUTCOME: The revolt was crushed following dissension among its leaders.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** Unknown

Under Symeon I (864/865–927), the Bulgarian Empire flourished, only to disintegrate under his successors. It soon fell to Byzantine domination, and was formally annexed in 1018. A revolt arose in an attempt to regain autonomy, but it was quickly crushed.

After the loss of independence in 1018, the Bulgarians were subject to harsh taxation, most notably taxes due in cash, and second-class treatment within the empire of their Byzantine conquerors. By 1040 the situation had reached the boiling point, and the grandson of Czar Samuel (d. 1014), Peter Deljan (r. 1040–41), rose in revolt, mostly in opposition to Byzantine policies toward Bulgaria but with an eye toward possibly reasserting Bulgarian autonomy. Gaining a significant following, Deljan was proclaimed czar in Belgrade that same year, and he shared the job of ruling the Bulgars with Prince Alusianus (fl. 1040), a holdover member of Bulgaria's former ruling family.

The Bulgar army was led by both Deljan and Alusianus, and they drove the Byzantine garrisons from western Bulgaria and then swept into northern Greece. In 1041 the rebel forces laid siege to Thessalonica, but their lack of discipline did them in. At the same time, a rift between Deljan and Alusianus occurred, and the latter set upon Deljan with a knife, carving up his face and removing his eyes and nose. The Byzantine forces at Thessalonica quickly defeated the fractious rebels, and the rising was crushed. Bulgaria would remain under the Byzantine yoke for more than a century and a half.

Bulgarian Revolt (1875)

PRINCIPAL COMBATANTS: Bulgar nationalists vs. the Ottoman Empire

PRINCIPAL THEATER(S): Bulgaria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Bulgarians quest for independence from the Ottoman Empire

OUTCOME: Inconclusive; although the revolt was crushed, Bulgarian nationalists attacked the empire again a few months later.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** None

Bulgarians suffered under the “Turkish yoke,” the rule of the Ottoman Empire from the late 14th century. During Ottoman dominance, the Bulgarian nobility was destroyed, as was church and national independence. Bulgarian peasants were enslaved to Turkish masters, and the “blood tax” forced the young male children of Greek Orthodox Bulgarians to convert to Islam and to serve in the Ottoman army. The Bulgarian Revolt of 1875 failed but lit the fire for a later, more successful revolt (see BULGARIAN REVOLT [1876]). As the Ottoman Empire began to slip further into decline in the 19th century, earning its nickname of “The Sick Man of Europe,” it became less effective in administering its holdings, particularly those opposed to imperial hegemony. Nowhere was this more evident than in Bulgaria, a region that had once won its independence from the Byzantine Empire only to be harshly reconquered (see BULGARIAN REVOLT [1040–1041]).

Following the successful GREEK WAR FOR INDEPENDENCE in 1832, the Ottomans questioned the loyalty of many Greeks remaining within the empire and warily viewed Greeks holding positions of importance. Under the direction of the sultan's chief adviser, Midhat Pasa (1822–83), Greek officeholders were replaced with Bulgarians as a concession to greater Bulgarian autonomy. This, along with the Ottoman policy of selling lands to peasants in Bulgaria, considerably raised the prestige and standard of living in Bulgaria. Also, in 1870 under mounting resistance to the Greek Orthodox Church, Constantinople created the Bulgarian Exarchate, giving Bulgaria theological autonomy.

The gains only served to incite the Bulgarians rather than appease them. As Slavic nationalism grew to a fever pitch in the Balkan region, the empire was faced with near-total revolt in Serbia, Bosnia, Montenegro, and Bulgaria. In September 1875 Bulgarian nationalists organized an uprising in an attempt to gain total independence. However, Midhat Pasa still wielded considerable control in the region, and the revolt was quickly and brutally put down the same month. The harshness of the Ottoman suppression helped bring about another revolt only seven months later.

Bulgarian Revolt (1876)

PRINCIPAL COMBATANTS: Bulgarian nationalists vs. the Ottoman Empire

PRINCIPAL THEATER(S): Bulgaria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Bulgarian independence

OUTCOME: The revolt, brutally suppressed, led to European intervention, a Russo-Turkish war, and ultimately independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: More than 15,000 Bulgarian men, women, and children died.**TREATIES:** None

Despite the dismal failure of the BULGARIAN REVOLT (1875) only seven months earlier, the revolt of 1876 marked the beginning of the end for Ottoman control of Bulgaria. Both the 1875 and 1876 uprisings grew from the rising nationalist expectations with no meaningful concessions from the Turks. Although the Bulgarians had managed to create already a separate Bulgarian state church within the framework of the Greek Orthodox religion, they still faced hostility from their Muslim overlords in Constantinople. Even as the Ottoman Empire was fast slipping into oblivion, it savagely lashed out at any threat to its tottering hegemony. Not only in Bulgaria, but in Greece and throughout the Balkans, the Ottomans harshly suppressed uprisings that would all eventually lead to independence and the collapse of their empire.

Their wounds were, literally, still fresh from the previous revolt, when the Bulgarian nationalists began fomenting revolt in the villages in April 1876. Given the bitterness of the earlier suppression, the new uprising spread quickly through the countryside and into Sofia. When the sultan's chief adviser in the region, Midhat Pasha (1822–83), was unable to bring the revolt under control, he solicited the aid of Turkish irregulars. Essentially native soldiers of fortune who relished the idea of brutalizing the Christian infidels, these irregulars became known as “the Bulgarian Horrors.” Midhat Pasha turned them loose at the end of July 1876.

The revolt was not so much suppressed as exterminated. The Bulgarian Horrors did not seek to find and destroy active members of the revolutionary movement but instead slaughtered anyone and everyone they felt were a threat to the empire. By the time the Horrors were recalled in September, the insurrection was over, and thousands of Bulgarians had been murdered. The brutality of the Ottomans led directly to European intervention and the RUSSO-TURKISH WAR OF 1877–78. That war ended with the Treaty of San Stefano in 1878, which recognized Bulgarian independence.

Bulgar-Magyar War (895)

PRINCIPAL COMBATANTS: Bulgars and Pechenegs vs. Magyars**PRINCIPAL THEATER(S):** Balkan Peninsula**DECLARATION:** No formal declaration**MAJOR ISSUES AND OBJECTIVES:** When Bulgarian czar Symeon I attacked the Byzantine Empire, Emperor Leo VI

called on the nomadic Magyars to help him repel the invasion; the Bulgars, allied with the Pechenegs, retaliated.

OUTCOME: Symeon and his allies forced Magyars to move from their Volga River base to the plains of the Danube.**APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:**

Unknown

CASUALTIES: Unknown**TREATIES:** Symeon accepted an armistice after the Magyars overran his northern provinces, 895.

Altering the map of central Europe, the Bulgar-Magyar War drove a permanent wedge between northern and southern Slavs. In hostilities between the Bulgars and the Byzantine Empire, the two combatants made alliances necessary to defeat the other. After a major Bulgarian assault in 894 under the leadership of Czar Symeon I (c. 864/865–927), the Byzantines launched a retaliatory offensive. Symeon held the Byzantines to a draw, and the offensive stalled. Byzantine emperor Leo VI (862–912) (“Leo the Wise”) engaged the support of the Magyars, a nomadic Hungarian people nestled between the Danube and the Dnieper Rivers and the Bulgar's neighbors to the north, to help defeat them.

The Magyars marched across the Danube into Bulgaria in 895, led by their chief, Arpad (c. 840–907). At the same time Byzantine troops moved into southern Bulgaria and ordered a naval blockade of the mouth of the Danube. Symeon, realizing he had been out-manuevered, quickly concluded an armistice and plotted revenge on both the Byzantines and the Magyars.

To the north of the Magyars were their bitter enemies the Pechenegs of the Russian steppes. Symeon brought the Pechenegs into the fray. At Symeon's behest the Pechenegs swept out of the steppes and into the Danube and Dnieper valleys while the Magyar forces were still in Bulgaria. When the Magyars attempted to return, they found the Pechenegs blocking their way. To the south Symeon and the Bulgars began a new offensive against the Magyars, forcing them to abandon their homeland and cross the Danube. There the Magyars battled with the Slavs for the south side of the Danube and settled, establishing what is now Hungary.

Burgundian-Frankish War (500)

PRINCIPAL COMBATANTS: Rivals for the throne of Burgundy, Gundobar vs. Godegsil (allied with the Franks)**PRINCIPAL THEATER(S):** France

234 Burgundian-Frankish War (523–534)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Struggle for the throne of Burgundy

OUTCOME: Gundobar defeated Godegisil after Clovis, king of the Franks, struck a bargain with Gundobar and deserted Godegisil.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown; Godegisil fell in battle.

TREATIES: None

King Gundobar (also known as Gundobad, d. 516) fell into dispute with his brother Godegisil (d. 500) over the throne of Burgundy. Clovis I (c. 466–511), king of the Franks, intervened on the side of Godegisil. An extraordinary monarch who would become the first great architect of the Frankish empire, Clovis I led Frankish troops against Gundobar's forces at the River Ouche defeating them. Not satisfied with a mere rout, Clovis advanced down the valleys of the Saône and Rhone to Avignon in pursuit of Gundobar's retreating forces. In retreat, Gundobar put up stiff resistance, much to the astonishment of Clovis. Gundobar finally took a stand at Avignon. Unable to take that city by siege, Clovis decided against further military action and offered to make peace without conquest, provided that Gundobar agree to a relationship of nominal vassalage to the Franks. This agreement concluded, Gundobar attacked Godegisil's forces in the Burgundian stronghold capital of Vienne. Not wanting to reignite Burgundian loyalties, Clovis abstained from this battle and allowed Gundobar to defeat his brother's army. Godegisil fell in battle.

Burgundian-Frankish War (523–534)

PRINCIPAL COMBATANTS: Burgundy vs. the Franks

PRINCIPAL THEATER(S): Burgundy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Frankish conquest of Burgundy

OUTCOME: Burgundy was conquered and annexed to the Frankish kingdom.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Between 511, the year in which King Clovis I (c. 466–511) of the Franks died, and 600 the Franks expanded rapidly and broadly through Gaul and Germany. Clovis I had

forged the Franks into a great empire, but this realm was divided on his death among his four sons, Theodoric I (d. 534), Clodomer (d. 524), Childebert (d. 558), and Clotaire (d. 561). Each of the brothers sought to expand the empire so that he might rule a larger portion. Thus, they set aside their covetousness of each other's territory and, at least in the military aspects of a campaign of expansion, the brothers cooperated. In 523 they advanced into Burgundy, where they captured King Sigismund (d. 524), whom they killed in 524. That same year Clodomer died, prompting Clotaire and Childebert to divide his domain between themselves. To forestall counterclaims, they conspired in the murder of their late brother's children. Also in 524, however, Sigismund's brother Gundimar (d. 532) defeated the Franks at the Battle of Vérerance. This forced the Frankish army to withdraw and allowed Burgundy to maintain its independence until a renewed Frankish invasion in 532. Gundimar was killed in battle in 532, and Clotaire and Childebert campaigned vigorously throughout Burgundy. By 534, the leaderless realm fell to them. The death of Theodoric I, also in 534, meant that the Franks' Burgundian acquisition would now be split only two ways. The conquest spelled the end of the royal dynasty of Burgundy, and the consolidation of Frankish rule over a vast territory under only two monarchs.

Burgundian-Swiss War (1339)

PRINCIPAL COMBATANTS: Burgundy vs. the Free City of Bern and the "Everlasting League" of the Swiss Forest cantons

PRINCIPAL THEATER(S): Laupen (Switzerland)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Wishing to curb Bern's expansion, Burgundy attempted to capture Laupen, an outlying possession of Bern.

OUTCOME: Acting in concert with the Everlasting League, Bern defeated the Burgundians and emerged preeminent among the Swiss towns and cantons.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Burgundy, 15,000; Swiss defenders of Laupen, 5,000

CASUALTIES: Unknown

TREATIES: None

The war consisted of the siege and relief of the Swiss town of Laupen. When Bern, a free city within the Holy Roman

Empire, began expanding by seizing neighboring territory, a Burgundian army of 15,000 infantry and cavalry troops, commanded by Count Gerard of Vallangin (fl. 1300s), laid siege to Laupen, which was a possession of Bern—the city was 10 miles away—and which was also allied with the so-called Everlasting League of the Swiss Forest cantons, Uri, Schwyz, and Unterwalden. The Burgundian object was to take the town as a means of curbing Swiss expansion.

The Burgundians outnumbered the Swiss defenders three-to-one. Part of this defender force consisted of a relief column under Rudolph von Erlach (fl. 1300s), who took up a position on a commanding slope and, from here, attacked Vallangin. In concert with the relief column, the Laupen garrison, Swiss pikemen and archers, sallied out of their fortified positions and, in a pincers action, routed the Burgundians, even as Vallangin concentrated on dislodging the Swiss relief column.

Despite defeat, the Burgundians rallied and made a strong counterattack on June 21 with their heavy cavalry, once again focusing on the forces deployed along the slope. Taking full advantage of their high-ground position, however, the Swiss withstood the counterattack, wheeling about and then seizing the initiative by attacking the Burgundian flank. This at last drove the Burgundians from the field and forced them to lift the siege.

Far from curbing Swiss ambition, the Battle of Laupen conferred instantly legendary status on Swiss prowess in combat. Bern, more powerful and influential than ever, was now recognized as predominant among the Swiss towns and cantons. In strictly military terms, the battle demonstrated the effectiveness of well-trained and well-led infantry against mounted knights. The era of the knight was coming to a close.

Burgundian-Swiss War (1474–1477)

PRINCIPAL COMBATANTS: Burgundy vs. the Swiss cantons and their allies (cities of south Germany and the Hapsburg Austrians)

PRINCIPAL THEATER(S): Principally Swiss-Burgundian borderlands

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Burgundy's Charles the Bold, seeking territorial expansion, invaded the Swiss cantons.

OUTCOME: The invasion of Swiss lands was repelled, and Burgundy was in turn invaded.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Burgundy, 25,000; Swiss cantons and allies, 26,000

CASUALTIES: Burgundian losses, 7,000–10,000 (including Charles the Bold) in war's culminating battle; Swiss losses were comparatively light

TREATIES: None

Burgundy's Charles the Bold (1433–77) earned his sobriquet by carrying out a program of aggressive expansion, which included penetration across the Swiss borderlands. Fortunately for the Swiss, Charles's ambition had also earned him enemies, who joined an alliance with Switzerland. The cities of south Germany and the Hapsburg Austrians aided the Swiss in repulsing Charles at the Battle of Héricourt on November 12, 1474. The Swiss and their allies not only pushed Charles out of Swiss territory but were able to occupy Burgundian land along the Swiss borders and in Alsace.

In February 1476 Charles retaliated by retaking the town of Granson (Grandson) and summarily hanging the Swiss garrison there. This provoked a swift Swiss response. On March 2, 1476, an 18,000-man Swiss army attacked Charles's 15,000-man force at Granson. The Swiss had eschewed artillery to gain speed and mobility. The attack, when it came, was without preliminaries or preparation. Rather, the soldiers, advancing in three columns, moved instantly into combat, hitting the Burgundians so hard and so fast that they had little time to employ their artillery. Desperately, Charles rushed to attempt a double envelopment of the first of the Swiss columns, hoping to defeat it before the others arrived. But just as Charles's troops were maneuvering into position for the attack, they saw the rapid approach of the other two Swiss columns and panicked. The Burgundians broke and ran. The Swiss retook Granson with the loss of about 200 men. Burgundian losses were in excess of 1,000.

Charles moved vigorously to regroup his army with the object of driving the Swiss out of Burgundian territory. He deployed some 20,000 men to lay siege to the town of Morat, near Bern and Fribourg. Although Charles took great care to dig defensive trenches and erect high palisades to provide cover for the besiegers, he blundered in failing to establish outposts or at least deploy advance patrols. Worse, the rainy weather kept most of the Burgundians out of the trenches and in camps to the rear. Seeing this situation, the Swiss moved with their customary speed to exploit the Burgundian weakness. On June 22 25,000 Swiss infantrymen and an additional 1,000 Hapsburg and German cavalry advanced on the entrenchments. As at Granson, they marched directly into combat without pausing to deploy. The entrenched Burgundians, perhaps no more than 3,000 troops, were completely overwhelmed and fled from their defensive positions in complete panic and disarray. Roused from their encampment, the balance of the Burgundian forces rushed to the defense of the trenches, only to collide with their fleeing compatriots.

The Swiss continued to advance on the confused mass of Charles's troops and slaughtered them. Estimates of Charles's losses vary from 7,000 to as many as 10,000. The Swiss lost very few men.

From Morat the Swiss and their allies penetrated more deeply into Burgundy. Yet again Charles was able to reorganize his army, and he met the invaders at Nancy on January 5, 1477. With customary vigor and violence, the Swiss rapidly enveloped the Burgundian left flank while the mass of the infantry pounded against the Burgundian center. The result was yet another defeat for Charles, who fell in battle as he desperately led a rearguard action in an attempt to cover the retreat of his army.

Burmese-Anglo Wars *See* ANGLO-BURMESE WAR, FIRST; ANGLO-BURMESE WAR, SECOND; ANGLO-BURMESE WAR, THIRD.

Burmese-Chinese War (1438–1446)

PRINCIPAL COMBATANTS: Burma vs. China

PRINCIPAL THEATER(S): Upper Burma

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: First, Chinese incursions into Upper Burma for control of the Irrawaddy River as a trade route to the west; second, the Maw Shan chieftain, Thonganbwa, was attempting to restore the old Nanchao Empire in opposition to the Ming dynasty

OUTCOME: Chinese asserted control over the Shans and Avaneses.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

In the 15th century Burma witnessed constant warfare among the several Burmese states and between the Burmese states and China. In Burma the kingdoms of Ava and Pegu were continual rivals, and they frequently warred with the Shan tribes of northeast Burma. It was the Shans who controlled the Irrawaddy River as it entered Upper Burma and ran south to the Green Sea. Border skirmishes between the Chinese and the Shans began in 1438, but neither side launched a major offensive. However, in

1441 the Chinese appointed Wang Ji (Wang Chi; d. 1445) to lead an invasion force into northeast Burma and subdue the Shans under the leadership of Thonganbwa (d. 1446).

Initial engagements went well for the Chinese. At the Battle of Luchuan, Wang Ji defeated the Shan and split their force, driving a small portion to Hsenwi while the rest, under Thonganbwa, crossed the Irrawaddy. There, Thonganbwa was captured by the Burmese force of Narapati (r. 1443–69), emperor of Ava. When news of Thonganbwa's capture reached Wang Ji, he immediately marched on Ava but was mauled by the Burmese in 1445 at Tagaung, where Wang Ji was killed. The Chinese regrouped and invaded again the following year, laying siege to Ava and demanding the surrender of Thonganbwa. Narapati was forced to concede, but before the Chan chieftain could be turned over, Thonganbwa committed suicide, leaving the Burmese nothing to surrender but themselves and a dead body. Ava was taken by the Chinese relatively calmly, and Narapati was forced to accept Ming suzerainty; the Shan stronghold of Pagan was stormed and leveled. However, the Chinese imposed mild terms on Narapati and, in fact, helped to restore order to Upper Burma, leaving Ava as the strongest Burmese kingdom.

Burmese-Chinese War (1658–1661)

PRINCIPAL COMBATANTS: Burma and the Ming dynasty vs. the Ch'ing dynasty

PRINCIPAL THEATER(S): Upper Burma

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: When the Qing (Ch'ing) forces defeated the Mings in 1658, the Ming prince fled to Burma for asylum, where he was pursued by Qing forces. **OUTCOME:** The Ming people of Burma were crushed and their Burmese allies were forced to make concessions to the Qing.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Qing forces included 20,000 Manchu warriors; totals unknown.

CASUALTIES: Unknown

TREATIES: Unknown

In the mid-17th century the balance of power in China shifted with the demise of the Ming dynasty and the rise of the Qing dynasty in its place. The Ming decline came about in spite of fierce opposition to Qing aggression. The last Ming emperor, Yongli (Yung Li; d. 1662), fled Yunnan province with 700 loyal followers and sought refuge in the Upper Burmese kingdom of Ava. The Burmese king, Pin-

dale (d. 1661), freely granted protection, disarmed the group, and settled them across the Irrawaddy River at Sagaing. The Manchu forces of the Ch'ing, fearing a revival of the Ming and a powerful alliance with Burma, invaded Upper Burma in 1658 to exterminate the remaining vestiges of the Ming forces. For his part, Pindale had no intention of allowing a revival of the powerful Ming, and after disarming Yongli and his followers intended to keep them at Sagaing indefinitely.

The few remaining Ming followers left in Yunnan invaded southward as well, hoping to free Yongli and to defeat the Manchus in the process. Qing forces led by the Manchu warriors quickly laid siege to Ava, but before the city could be breached, Pindale was murdered and was succeeded by his brother, Pye Min (d. 1672). The Burmese situation looked bleak, and the Manchu governor of Yunnan offered Ava a choice: release Yongli or face the complete liquidation of the city by more than 20,000 Manchu warriors. Pye Min, faced with incursions by the Mons and the Shans from the south and north, respectively, had no choice but to surrender Yongli. The young prince was then publicly executed in Ava's market square.

Further reading: Arthur P. Phayre, *History of Burma* (Bangkok: White Orchid, 2002).

Burmese-Chinese War (1765–1769)

PRINCIPAL COMBATANTS: Burma vs. China

PRINCIPAL THEATER(S): Burma

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Burmese made numerous military incursions into Chinese border regions.

OUTCOME: A resounding victory for the numerically inferior Burmese forces

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

China, 60,000; Burma totals unknown, but larger

CASUALTIES: Totals for Burmese forces unknown; Chinese forces lost 20,000 killed.

TREATIES: The Chinese sued for peace in 1769.

In an attempt to win concessions from the Chinese or perhaps in a bid for territorial acquisition, Burma's king Hsinbyushin (d. 1776) ordered a series of military forays into China's southwestern border regions. Alarmed by the brazenness with which Burmese troops raided the regions, Emperor Qianlong (Ch'ien Lung; 1711–99) launched a massive invasion of Burma in 1765, the first of four. The emperor further justified the war with claims that Chinese nationals were being mistreated in Burma. The Chinese quickly swept through eastern Burma and rolled up the

Burmese army, seizing almost everything from Bhamo south to Lashio and west to the Irrawaddy and Singaung. The Burmese, however, refused to concede, and the early fighting marked the end of conventional warfare. Guerilla warfare followed, the Burmese brilliantly using the precepts of the Chinese tactician Sun Tzu (Sun Tsu; fl. fourth century B.C.E.). The Burmese conducted a brutal and dogged campaign that made extensive use of jungle fortifications, refusing to engage the Chinese regulars in open combat. They savaged the Chinese lines of communication and went about dividing the enemy and isolating them in remote sections in north-central Burma. The Chinese, meanwhile, were unable to find any concentrated Burmese force to attack and were essentially cut off from any resupply or reinforcements. The jungle also took its toll, causing heavy losses from disease.

A campaign that had started successfully for the Chinese quickly degenerated into an outright military defeat. China was forced to ask for peace terms in 1769. The Burmese general Maha Thihathura (fl. 18th century), realizing that China, although beaten, could continue to send men and supplies south seemingly forever, quickly granted terms. When the Chinese retreated northward, they left behind more than 20,000 dead, thousands of tons of wrecked munitions, and the remnants of their navy in the Burmese river regions. It was considered the greatest moment in Burmese military history and the nadir of Chinese arms in the 18th century. The defeat, however, was less the result of Burmese prowess than it was due to the failure of Chinese logistics in a difficult jungle environment.

Burmese Civil War (1368–1408)

PRINCIPAL COMBATANTS: Ava vs. Pegu vs. Toungoo vs. the Maw Shans

PRINCIPAL THEATER(S): Upper and Lower Burma

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Traditionally intense rivalries that erupted in violence among the several states of Burma

OUTCOME: Avaneses forces were subdued and lost southern lands

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown; residents of the three forts protecting Nawin were massacred by Avaneses forces.

TREATIES: Avaneses king Minhkaung was forced to make peace in 1408.

Between the time of the decline of the Mongols and before the rise of the Ming dynasty in China, Burma was relatively free from intervention from Beijing. This not only allowed the Burmese states to concentrate solely on competing against each other, but to do so savagely and at length. Burmese political geography late in the 14th century had the kingdom of Ava in control of most of Upper Burma and its chief rival, the Mon kingdom of Pegu, ruling Lower Burma; the Toungoo kingdom existed on the undemarcated frontier between them, while the Maw Shan tribes ranged in the northeast of Upper Burma. These four, along with the Arakans on the west coast, waged nearly constant warfare with each other for centuries; indeed, several conflicts overlapped, and little was needed for provocation.

Unrest in Ava ended in 1368 when a military coup was crushed and Minkiswasawki (1331–1401) was installed as king. The new leader began an aggressive campaign of retaliation against the Shans, who had been raiding northern Ava for years. He also wanted to begin an immediate offensive against the Mons to the south, traditional vassals of Ava who of late had become more independent. However, Minkiswasawki refrained from action because Pegu and Toungoo had become allies, and he did not wish to be engaged on three nearly encircling fronts. He deftly arranged a conference with Pegu's king, Binnya U, in 1371, and the two delimited the frontier and agreed on the previously questioned borders of Toungoo.

Meanwhile, the Shans continued their belligerent activity by raiding the northern frontier. By the end of the century, the last Mongol resistance was stamped out in Yunnan, and the Ming dynasty was firmly in place. Minkiswasawki appealed to the Chinese for help in dealing with the Shans and then, with their new Chinese allies, the Avanese forces, under the leadership of the king's brother-in-law, Thilawa (fl. 1393), inflicted a brutal defeat on the Shan in 1393. With the defeat of the Shans and the temporary alliance between Ava and the Chinese, Minkiswasawki now controlled the upper Irrawaddy River. His only obstacle to controlling it all the way to the sea was Pegu.

In 1385 Razadarit (d. 1423) succeeded Binnya U (1353–85) as king of Pegu, freeing Minkiswasawki of any previous concessions made to the former king. Even better for Minkiswasawki, Razadarit's uncle sent an emissary to Ava offering Razadarit's murder and the subsequent vassalage of Pegu in return for personal assurances. This intrigue failed, but widescale warfare broke out between the two kingdoms. The Avanese made repeated offensives into Lower Burma, capturing Prome and savagely beating the Mons, but they were unable to take Pegu. The Shans again raided from the north, and Minkiswasawki was engaged on two fronts. The two-front war began to wear down the Avanese, and in 1391 the Mons captured the Avanese fort of Myaungmya but were unable to bring Ava to the peace table.

The four-way struggle continued, indecisively, for several years until Minkiswasawki's death in 1401, which touched off a harsh struggle for succession. Razadarit seized upon the confusion and launched a series of new offensives into Upper Burma, sailing up the Irrawaddy in a waterborne attack in 1406. The river offensive, after initial defeats enroute, finally reached the walls of Sagaing, where the Pegu laid siege to the city just across the river from Ava. Concessions were made to the Mons and Razadarit withdrew, but Avanese forces to the south captured his daughter in Prome. When Razadarit laid siege to that town, Minkiswasawki's successor, Minhkaung (d. 1422) quickly launched a new attack to relieve the city. At Nawin the Avanese forces seized the three forts that protected that city and massacred all its residents. In response the Mons launched another offensive up the Irrawaddy, sending some 300 war canoes to attack any towns along the river. Minhkaung, faced with the decimation of his kingdom and his army, was forced to come to the peace table, forfeiting Prome by reestablishing the border between the two kingdoms in 1408.

Burmese Civil War (1408–1417)

PRINCIPAL COMBATANTS: Ava and Toungoo vs. Pegu, Arakan, and the Maw Shans

PRINCIPAL THEATER(S): Burma

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Continuing rivalries that had existed for centuries in Burma erupted again in 1408, largely due to lingering animosity from the civil war of 1368–1408

OUTCOME: Indecisive; when the fighting ended, nothing had changed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

In the course of centuries of chronic warfare in Burma, the civil war of 1408–17 was distinguishable only as an intensification of ongoing hostilities that flared up in the BURMESE CIVIL WAR (1368–1407). Neither war accomplished much in terms of definitively establishing any hegemony in the land and even less toward creating any lasting peace. Burma for years had been divided among rival kingdoms, the strongest being Pegu in the south and Ava in Upper Burma. Prior to the cessation of hostilities in the previous civil war, Pegu's King Razadarit (d. 1423) placed a puppet on the throne of Arakan, a small kingdom on Burma's western

coast secluded by coastal mountain ranges. In an effort to establish Mon dominance in the region over its bitter historical rival, Ava, Razadarit persuaded the Maw Shan states of the north to join him in an offensive against the Avanese Burmese. At the same time, Ava's king Minhkaung (d. 1422) was planning a joint invasion of Pegu and Arakan in an attempt to remove the latter from Mon influence.

Razadarit was able to mobilize the Shan sooner, however, and Upper Burma was embroiled in war again. While the Shan battled Minhkaung's troops to the north, Razadarit attacked Prome, an Avanese vassal located to the south, on the Irrawaddy River. Minhkaung quickly retreated from the Shan and fled south to defend Prome, repulsing the siege by the Mon.

Launching an offensive in 1410, Minhkaung directed his son, Crown Prince Minrekyawswa (d. 1416), to invade Arakan and dethrone Razadarit's puppet king. However, Minrekyawswa was badly defeated in the Irrawaddy delta and forced to retreat. With the Avanese repulsed, Razadarit again launched an attack on Prome in 1412 and was on the verge of success until the Avanese launched a two-pronged attack, sending one army up the Irrawaddy and another overland, meeting the Mon in a classic pincer movement and nearly annihilating them. However, Shan reinforcements from Hsenwi arrived—their purpose had been to ravage Ava in revenge for the brutal defeat of Mohnyin in 1406. However, now they acted to stave off certain Mon defeat. Not only was the Mon force saved, it continued to hold the field.

After aiding their Mon allies, the Shan continued with their original mission and succeeded in driving the Avanese to Wetwin by 1413. The Avanese then turned, however, and gave battle, defeating the Shans and driving them from the south.

Before Razadarit was able to rally the demoralized Shan to renewed attacks, Minrekyawswa launched a major Avanese offensive in the late fall of 1414, driving the Mon as far south as Martaban. This left only Pegu and Martaban in Mon hands, so that the Mon kingdom was on the verge of collapse at the beginning of 1415. Razadarit, desperate to create a diversion, persuaded the Hsenwi to invade the south again, this time in concert with other Shan tribes, the Mawke and the Mawdon. While the latter two attacked the Avanese town of Myedu, the Hsenwi moved against Ava itself. Although they were all driven out of Avanese territory, it was enough to relieve the pressure on Razadarit at Martaban, and Minrekyawswa's chance to obliterate the Mon slipped from his grasp. He would launch another campaign the following year but was killed in the process, nearly ending the war.

With the death of Ava's most capable general, Razadarit attempted to gain something out of the conflict by in 1416 attacking the kingdom of Toungoo, which lay between Ava and Pegu. Ava quickly came to Toungoo's aid and repulsed the Mon, in turn launching a final offensive

of its own against Pegu but the Mon received aid from Arakan and defeated Ava, ending the war status quo ante bellum. Given the amount of effort and treasure expended, as well as the extent of the diplomacy practiced, it is remarkable that no substantive changes were effected by this futile war.

Burmese Civil War (1426–1440)

PRINCIPAL COMBATANTS: Maw Shans vs. Ava (in Upper Burma)

PRINCIPAL THEATER(S): Burma

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: The ancient belligerency between the two powers of Upper Burma

OUTCOME: The Shans took control of both Upper and Lower Burma.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

As the BURMESE CIVIL WAR (1368–1408) and the BURMESE CIVIL WAR (1408–1417) demonstrated, the competing powers within this jungle realm were quite willing to prosecute futile warfare at great length. Similarly, instigated by little and settling even less, the Burmese Civil War of 1426–40 was yet another costly and indecisive conflict in centuries of continual warfare in this region of Southeast Asia. However, the bitter conflict would result in change, establishing, tentatively, Shan dominance of Upper and Lower Burma.

In Ava, the dominant kingdom of Upper Burma, Hsinbyushin Thihathu (d. 1426) succeeded his powerful father, Minhkaung (d. 1422), as king in 1422, vowing to continue Minhkaung's attacks on the neighboring Maw Shans to the north. In an offensive against the Shans in 1426, however, Hsinbyushin was betrayed by his wife, a Shan by birth, and treacherously murdered. This touched off widescale unrest in Upper Burma. Always on the lookout for instability to exploit, the Shans were able to take advantage of the situation and siphon away some of Ava's power.

The new Avanese king, Moynynthado (d. 1440), managed to slow the Shan attacks on Ava itself but was unable to stop the Shan efforts to aid Ava's vassal states to the south. Under the Shan warrior Saolu (d. 1437), the kingdom of Toungoo became semiautonomous, and other vassal kingdoms benefited as well from the Shan campaign. Around 1430 Toungoo, in an effort to solidify its

autonomous position, allied itself with Pegu in Lower Burma for an assault against Pye, another Avanese vassal. Before the alliance succeeded in its purpose, however, Saolu died, and Pegu's king placed his son, Naramekhla (fl. early 15th century) on the Toungoo throne. This left the Shans in control of both Upper and Lower Burma.

Burmese Civil War (1507–1527)

PRINCIPAL COMBATANTS: Ava vs. Mohnyin

PRINCIPAL THEATER(S): Upper Burma

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A conflict of dominance over the Ava Kingdom

OUTCOME: The Shan of Mohnyin conquered Ava and maintained domination over the kingdom for nearly 30 years.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown; Ava's king was killed in the capital city.

TREATIES: Unknown

Like the conflicts of the past centuries among kingdoms within Burma, the Burmese Civil War of 1507–27 was provoked by little other than ancient rivalries. However, as with the BURMESE CIVIL WAR (1426–40), this new conflict produced substantial change, extending Shan control into the Burmese kingdom of Ava.

After a nearly unprecedented century of relative peace in Burma, the Maw Shan border state of Mohnyin grew tired of its vassal status under China and the Qing (Ch'ing) dynasty to the north and its virtual subjugation at the hands of the kingdom of Ava, its traditional rival, to the south. At the turn of the 16th century, Mohnyin began making border raids into upper Ava and was regularly defeating the armies sent to oppose them. When the Avanese attempted to sue for peace in 1507, the Shans simply ignored them and stepped up the incursions.

Ava desperately solicited support from Toungoo, a kingdom to the south, but was rebuffed and left to stand alone against the Shans. Toungoo saw little to be gained from opposing the audacious and powerful Shans. By 1524, then, the Shans had completely overrun Ava's border outposts and had seized control of the Irrawaddy River basin where the river entered Upper Burma. The path to the capital city of Ava now lay totally exposed. In 1527 the Shan launched their final offensive against Ava, soundly defeating the Avanese forces and overrunning the city. The Avanese king was executed, and the city was

completely sacked. The citizens who were not killed fled south to Toungoo seeking refuge, while the Shan installed Thonanbwa (d. 1543) as king. Although reluctant to anger the Shans by sheltering Avanese refugees, simple humanity seems to have prevailed, and Toungoo became a haven for exiles.

The Shan then embarked on a savage campaign of dominance in northern and central Burma, looting Buddhist temples, immolating Buddhist monks, and destroying all vestiges of the Avanese civilization. Although the Shan would only hold the city until 1555, the kingdom of Ava ceased to exist, at least for a time. This was the first truly profound alteration in Burma's political climate in centuries.

Burmese Civil War (1535–1546)

PRINCIPAL COMBATANTS: Toungoo vs. Pegu and the Shan

PRINCIPAL THEATER(S): Burma

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Toungoo's efforts to unify Burma

OUTCOME: Toungoo united with Pegu but failed to conquer Arakan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown; Burmese forces were augmented by Portuguese mercenaries.

CASUALTIES: Totals unknown; the attack on the city of Martaban was particularly vicious.

TREATIES: None

In some respects more civil than past internecine conflicts and in other respects more brutal, the Burmese Civil War of 1535–46 was successful in uniting the majority of Burma for the first time in more than a century. The predominant Burmese kingdom in the early half of the 16th century switched from Ava—which had been savagely overrun and sacked by the Mohnyin Shan—to Toungoo, led by King Tabinshwehti (1512–50). Tabinshwehti attempted to unify the Burmese and Mon kingdoms and at the same time expel the Shan from Ava, if not all of Upper Burma, beginning in 1535.

Tabinshwehti did not expect to unify Burma and expel the Shan at one stroke; rather, he planned a series of military campaigns designed to make steady progress based on alliances.

Beginning his first campaign after the wet season of 1535, Tabinshwehti moved north from his base at Toungoo

into the Kyaukse granary area south of the just-captured Ava. There, retreating Avaneses fleeing from the Shan joined his forces and helped keep the Shan from destroying the expedition before it accomplished anything. After securing the Irrawaddy River delta and its key towns of Bassein and Myaungmya in the fall, Tabinshwehti set his sights on the Mon kingdom of Pegu. However, once the Burmese advanced on Pegu, they found it heavily defended and were forced to retreat. In successive campaigns over the next four years, Tabinshwehti pounded Pegu until it finally succumbed in 1539. The Mon king, Takayutpi (fl. early 15th century), fled north to Prome and fended off the Burmese advances there with the aid of Shan reinforcements.

Before Tabinshwehti could lay siege to Prome, Takayutpi died and left the Mon without a ruler. Realizing that Tabinshwehti was the only leader on the scene capable of giving order to the region and expelling the Shan, the Mon nobles considered giving their allegiance to him. Rather than sack Pegu and humiliate the Mon nobles, Tabinshwehti left Pegu untouched and respected all local traditions and customs. In doing so he was able to win the allegiance and vassalage of the Mon princes.

In 1541 Tabinshwehti began his next campaign toward the south and west, one that would give him control of Lower Burma. With a combined Burmese-Mon force supplemented by Portuguese mercenaries, Tabinshwehti advanced on the port town of Martaban. Martaban resisted fiercely, and after a brutal campaign that finally ended in the storming of the city, Tabinshwehti was not as conciliatory as he was with Pegu. He ordered Martaban sacked without mercy, civilians were indiscriminately raped and murdered, and the Burmese king made no offers to their pagodas. Farther up the Irrawaddy, however, lay Tabinshwehti's next objective, the town of Moulmein, whose denizens were sufficiently humbled by the treatment of Martaban to surrender immediately. This now left all of Lower Burma, to the Siamese town of Tavoy, unified and in the hands of Tabinshwehti.

Returning his attention to Prome, the Burmese leader simply starved the town into submission, and it fell in five months. Tabinshwehti showed it the same treatment he showed Martaban, and now central Burma lay open. The Shan, realizing somewhat tardily their fate, began a concerted attempt to defeat Tabinshwehti before he became unstoppable. In 1544 six Shan tribes raised an offensive against Prome but were defeated by the joint Mon-Burmese forces and the help of the Portuguese mercenaries and their guns. Tabinshwehti next moved up the Irrawaddy and captured Pagan, where he was crowned "King of all Burma." However, he made a crucial error in not attacking Ava when he had the Shan on the run. Instead, he returned his attention to the southwest, where he attempted to take the coastal kingdom of Arakan. Its coastal defenses were excellent, however, and it proved impregnable from both the river and overland. When

news of Siamese raids on Tavoy reached the king, he gladly used it as an excuse to forsake the Arakan campaign and deal with Siam. This essentially ended Tabinshwehti's plan to unify all of Burma; before he was able to deal with the Shan, he was assassinated in 1550.

Burmese Civil War (1551–1559)

PRINCIPAL COMBATANTS: Toungoo vs. Pegu, the Shan, Siam, and Laos

PRINCIPAL THEATER(S): Upper Burma and Siam

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The decline of Burmese unification after the death of Tabinshwehti

OUTCOME: Tabinshwehti's brother-in-law, Bayinnaung, held Burma together for 30 years.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

The BURMESE CIVIL WAR (1535–1546) established Toungoo hegemony throughout the kingdom and did so with great brutality against the once-triumphant Mon people. Despite the apparent finality of the conflict, war erupted again in 1551 and quickly undermined the gains achieved under the Toungoo king Tabinshwehti (1512–50). A near-unification of Burma had occurred under the Toungoo leader in the 1540s, but after his assassination in 1550, Burma was again a land of separate belligerent kingdoms. Mon nationalists had begun to take issue with Tabinshwehti's rule and helped bring about his murder. At the announcement of his death, the Mon kingdoms of Pegu, Martaban, and Prome rejoiced and put forth Mon kings to succeed him. His brother-in-law, Bayinnaung (1515–81), proclaimed himself king in Tabinshwehti's place and sought to reunify Burma.

Bayinnaung attacked his home of Toungoo with the help of Portuguese mercenaries to wrest it from the Mon in 1551. Moving to stabilize central Burma and give himself a buffer against the Shan states to the north, Bayinnaung reconquered Pagan and thought of launching an offensive against the Shans before deciding to deal with the Mons first.

Marching south to Pegu, he was met outside the city walls by the Mon leader Smim Htaw (d. 1551). A joint force of Burmese and Mon holdovers from Tabinshwehti as well as the Portuguese defeated Smim Htaw, and Bayinnaung took Pegu. Smim Htaw fled to the delta region and

managed to escape to Martaban but was hunted down in the hills and brutally executed. After being crowned in Pegu, Bayinnaung looked again to the north.

In 1553 Bayinnaung sent a reconnaissance mission up the Irrawaddy River to scout the Mon position. The spies' movements only served to tip off the Mon chieftains, and they put aside their centuries-old rivalries to deal with the coming fury. In late 1554 Bayinnaung gathered his forces and launched a two-pronged offensive against Ava, one army from Toungoo and the other from Pagan. The fighting at Ava was horrific, but Bayinnaung was victorious in March 1555, taking Ava and extending his dominions even farther north than the Shans had claimed. He continued his campaign against the Shan in the north, capturing Hsipaw and Mone in 1556 on his way to Chiengmai, a Siamese kingdom ruled by the Shans after the Laotians were expelled. Chiengmai surrendered without a fight and caused the remaining Shans to pay homage to the conqueror.

However, as soon as the Burmese army withdrew from Chiengmai, the Laotians, led by Setthathirat (1534–71), moved in and retook the province. Bayinnaung returned and deposed Setthathirat, who, in an attempt to regain what he felt was rightfully his, organized a coalition of Shan states to defeat Bayinnaung. The coalition, however, soon fell apart, and Bayinnaung crushed the Laotians in the BURMESE-LAOTIAN WAR (1558). Bayinnaung held sway over what was to appearances a unified Burma; however, great bitterness seethed below the surface and would erupt in the BURMESE CIVIL WAR (1599).

Burmese Civil War (1599)

PRINCIPAL COMBATANTS: Pegu vs. Ava, Toungoo, Prome, Arakan, and Siam

PRINCIPAL THEATER(S): Burma

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: An attempt by the governors of Ava, Pye, and Toungoo to overthrow the central government at Pegu, in the control of their brother, Kanda Bayin

OUTCOME: Kanda Bayin was assassinated and the unity of the Toungoo dynasty disintegrated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown; the city of Pegu was burned to the ground, and its citizens were dispersed.

TREATIES: None

Bringing about the total disunion of Burma, the Burmese Civil War of 1599 also brought about the temporary overthrow of the Toungoo dynasty. The ongoing SIAMESE-BURMESE WAR (1593–1600) had resulted in the invasion of Pegu by the Siamese in 1595. Opposition to Nanda Bayin's (d. 1599) rule of the Toungoo dynasty—in particular his incessant warring with Siam, Laos, China, Arakan, and the Shans, as well as his harsh cruelty—had been swelling for some time. However, with the invasion of Pegu a power struggle occurred within the family to depose Nanda Bayin. The king's brothers governed the provinces of Ava, Toungoo, and Prome, and all were interested in ruling the kingdom themselves.

When the Toungoo governor attempted to aid Nanda Bayin in repulsing the Siamese at Pegu, the Prome governor—his brother—took advantage of his absence and attacked Toungoo. A civil war broke out, which the king was helpless to stop because he still had the Siamese on his doorstep. The Toungoo governor solicited the aid of the Arakanese of Burma's western coast, and their fleet captured the port of Syriam, just south of Pegu in 1599, leaving the capital city vulnerable. Arakan also sent an army overland to join the Toungoo forces already laying siege to Pegu. The city fell soon after, and Nanda Bayin was taken prisoner. The invaders dispersed the residents of Pegu and burned the city to the ground.

The Siamese king, Naresuen (1555–1605), attempted to join in on the destruction of Pegu but was too late, arriving only to find the ashes of the city. Naresuen, however, wanted Nanda Bayin, marched north to Toungoo, and attacked the city. He was repulsed, and was forced back to Siam. Nanda Bayin was executed shortly thereafter. The Arakanese retained Syriam, which they gave to the Portuguese mercenary Philip de Brito y Nicote (d. 1614) in 1602, eventually leading to the BURMESE-PORTUGUESE WAR of 1611–13. With the overthrow of Nanda Bayin, all semblance of centralized order in Burma disappeared, and the region was thrown into chaos.

Burmese Civil War (1740–1752)

PRINCIPAL COMBATANTS: Mon (with French aid) vs. the Toungoo dynasty

PRINCIPAL THEATER(S): Burma

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Mon attempt to replace the Toungoo dynasty

OUTCOME: The Toungoo dynasty was destroyed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** Unknown

Signalling the end of the Toungoo dynasty, the Mon uprising that became the Burmese Civil War of 1740–52 racked the country with violence and utterly destroyed Toungoo authority. The BURMESE-MANIPURIAN WAR (1714–49) had nearly consumed the Toungoo ruler and all his resources. In protest of the constant warring, the Mon of Pegu rose against their Burmese governor and killed him. In his place the Mon elevated Smim Htaw Buddhaketi (r. 1740–47), a Shan Buddhist monk. The Mon then proceeded to seize the Lower Burmese port cities of Syriam and Martaban in a bloody rebellion.

Launching a northern offensive in the spring of 1743, the Mon marched on Prome and Toungoo, capturing both that same year. The Burmese retaliated by recapturing Syriam, but the Mon quickly expelled them and retook the town. Buddhaketi was deposed, and Binnya Dala (d. 1774) was named king. Under Binnya Dala the Mon began a systematic conquest of Upper Burma in 1751, laying siege to the royal capital of Ava. In 1752, aided by French artillery, the Mon stormed Ava and seized the city. With this, the last Toungoo ruler was deposed, and Toungoo hegemony in Burma came to an end. The rise of a village chieftain name Alaungpaya (1714–60) beginning in 1753 would, however, ensure that Mon rule would be short-lived.

Burmese Civil War (1753–1757)

PRINCIPAL COMBATANTS: Burmese underground movement vs. the Mon (with French aid)

PRINCIPAL THEATER(S): Burma

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Leftover hostilities from the previous civil war, which saw the Burmese Toungoo dynasty destroyed and supplanted by the Mons

OUTCOME: The Mons' dynasty was destroyed, to be replaced by the Alaungpaya or Konbaung dynasty.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** None

Continuing the violent rivalry between the Burmese and the Mon, the Burmese Civil War of 1753–57 gave rise to perhaps Burma's most able military commander. After the

Mons had captured Ava in 1752, they eradicated the Toungoo dynasty and established Binnya Dala (d. 1774) as king of the new Mon dynasty.

However, the Burmese still in residence in Ava and other Burmese settlements in Upper Burma continued to resent the Mon, as they had for centuries. An underground nationalist movement began, led by a village chieftain named Alaungpaya (1714–60). As soon as Ava fell to Binnya Dala and the Mon, Alaungpaya fortified his village of Moksobomyo (Shwebo) and used it as a base for guerrilla operations against the Mons, organizing the surrounding villages into his underground resistance movement.

Under pressure from Alaungpaya's forces, the Mon abandoned the city of Ava in 1753. The village chieftain established strong defenses for the city and repelled a Mon attempt to recapture the city in 1754. Pursuing the Mon in their southern retreat, Alaungpaya stormed through Lower Burma, capturing in succession Prome and Rangoon in 1755.

The following year Alaungpaya's forces destroyed the port of Syriam, captured two French warships, and executed French officers allied with the Mons. To defend against French retribution, Alaungpaya sought an alliance with Britain, concluding an agreement that granted the British generous trade concessions without creating a formal military alliance. The rebel leader continued his assault on the Mons, and in 1757 captured and destroyed the Mon capital city of Pegu. His imprisonment of Binnya Dala signaled the beginning of the Konbaung dynasty, which would rule Burma for 100 years.

CASUALTIES: Unknown**TREATIES:** None

Burma had succumbed to British imperial rule in 1885 and remained a colony of Great Britain until it was occupied by the Japanese during WORLD WAR II. With Japan's defeat, Burma returned briefly to British rule but sought its independence in the war's aftermath. Gaining such independence in 1948, the newly established nation was immediately threatened by an ongoing guerrilla war that seemed likely to break up the country into warring ethnic camps similar to those in the series of civil wars that plagued Burma 300 years earlier (see BURMESE CIVIL WAR entries).

During World II, Burmese forces under General Aung San (1915–47) were ordered by Japan to assist its troops in defending Burma against a 1945 British invasion. General San, disillusioned with the Japanese and doubting they could win the war, secretly negotiated with the British. When ordered to leave Burma's capital city, Rangoon, on March 28, 1945, San's National Army revolted against the Japanese. Though their engagements with the imperial army were not decisive, the Burmese troops did hamper Japan's defense of its colonial conquests.

Armed, battle-tested, and united by the revolt, the Burmese began pressing the British government for independence when the Japanese occupation came to an end. But Britain held out against such pressure, hoping to restore its Pacific empire. It soon became apparent, however, that the other Allies, under the influence of the United States, espoused the notion that imperialism—at least as it had been understood throughout the 19th century—was an antiquated European policy. (It was not lost on the British, of course, that the United States, more so than any European ally, maintained an important postwar presence in the Pacific, which, if not technically imperial, was nevertheless politically formidable.) After a brief guerrilla war between uncoordinated bandits and British forces, Britain announced plans for Burmese independence. On January 4, 1948, the Union of Burma was proclaimed.

As soon as the governing Constituent Assembly met to discuss autonomy for the various indigenous tribes in Burma, demonstrations broke out in opposition to assembly proposals. Not only were the traditional clans of Karens, Shans, and Mons clamoring for greater autonomy than the assembly imagined, but also the Communists attracted a firm underground following and the radical Muslim mujahadin attempted to create an Islamic state in the northern Arakanese region bordering what is now Bangladesh. Charging that the constitutional agreement between Great Britain and Burma had excluded the majority of the Burmese and created a “sham independence,” the Communist underground, led by Thakin Tan Tun (1911–68), organized a campaign of civil disobedience in March 1948. When the government withheld recognition from the Communists, the Thakin Tan Tun faction left Rangoon for central Burma to spread the incipient revolt, which soon engulfed the entire Irrawaddy River delta

region. The Burmese government called out the First and Third Burma Rifles Division, under General U Ne Win (1911–2002), in an effort to suppress what was now clearly a communist uprising.

Meanwhile, the ethnic Karens protested the establishment of autonomous states for the Shan, Kachin, and Karenni tribes, while their clan was essentially left out of the new nation altogether. Taking advantage of the Communist insurgency, the Karens, too, revolted in August 1948, demanding autonomous statehood. By January 1949, after reluctantly cooperating with the Communists, the Karens had taken control of the cities of Bassein, Prome, and Toungoo. A Karen offensive cut the Rangoon-Mandalay rail line, and Karen forces were within artillery range of Rangoon by February. By the end of April, parts of Rangoon had been conceded to the rebels. The Karens proclaimed independence on June 14, 1949, with Toungoo as their capital. The Communists were given Prome by the Karens for their aid during the revolt, and the city became the base for Thakin Tan Tun's operations. In 1950, U Ne Win launched a spring counteroffensive and began to push the Karens back. On March 19, Burmese forces retook Toungoo, and, on May 19, Prome (although Communist forces continued to operate from that area). The Karen revolt ended in 1951 when the Constituent Assembly voted to establish a Karen state at Kawthule.

Long before then, however, a new threat to Rangoon had appeared when the CHINESE CIVIL WAR (1945–49) spilled over into Burma. In 1949, when China's southern Yunnan province fell to the Communists, China's Nationalist (Guomindang or Kuomintang) army began to use the Shan State as its base of operation against the forces of Mao Zedong (Mao Tse-tung; 1893–1976). Once entrenched in the Shan State, Guomindang leaders discovered the lucrative opium trade and extended warlord-like control over most of the region. Repeated Burmese attempts to dislodge the Chinese Nationalists were wholly unsuccessful, and the traffic in opium remained a major problem for Rangoon. After the defeat of the Guomindang later in 1949, thousands of Chinese Nationalist refugees retreated to northeastern Burma in flight from the Chinese Communists. The Burmese government ordered them to withdraw, but the Nationalists, many by now not much more than bandits, refused. Burma then requested relief from the United Nations. After heavy pressure was applied by the United States, the United Nations evacuated some 6,500 Chinese Nationalists to Formosa (Taiwan). But the Burmese complained that some 6,000 still remained in the jungle, deeply entrenched in the opium trade.

It appeared as if Burma's hour of crisis had passed by the mid-1950s. U Ne Win had secured most of the country, and the Communists were but a small rebel force without a permanent region of support. The military, however, was stronger than the civil government. In the elections of 1956, Burma's dominant political party began to fracture

and lost several key seats in the Assembly. In an attempt to unify the party, several leaders stepped forth to claim control, which only further divided its members. Eventually, the party split into factions, and armed struggles broke out in nearly every village over which faction would control the government-sponsored village defense forces—defense forces organized initially to guard against rebel insurgents. The Communists and other rebel groups, losing ground since 1950, benefited immensely from the disorder, and soon they were threatening to launch new offensives.

Fearful of renewed Communist aggression, Prime Minister U Nu (1907–95) proposed to the Assembly's Chamber of Deputies in October 1958 that General U Ne Win be offered control of a caretaker government long enough to reestablish order in the rural regions. The deputies accepted the proposal, and U Ne Win began his work. He launched a swift campaign to root out disloyal elements within the government itself, arresting hundreds of politicians and executing thousands of rebels in the countryside. His government reorganized the villages and, by autocratic decree, put the economy in order. Within 16 months, U Ne Win declared he had accomplished what had been asked of him and, in February 1960, publicly returned control of the government to civilian leadership.

The parliamentary honeymoon was short-lived. Tribal agitation against the government began anew, and the economy collapsed when Burma announced it would nationalize all foreign trade. This time, General U Ne Win seized power without being invited and established a true dictatorship in March 1962. The 1947 constitution was suspended; the Chamber of Deputies was dissolved; and a socialist economy was proclaimed. Reaction to the coup was mostly negative at home and abroad, and demonstrations broke out, many of them staged by students. In July 1962, 15 students were killed by government troops at Rangoon University. Opposition to the government continued at all levels. Renewed guerrilla activities, particularly Communist-led insurrections, increased. In general, the country was in much the state it had been immediately after World War II.

U Ne Win's followers pressed ahead, however, and in 1969 Burma was proclaimed a socialist republic. A worker's constitution was drafted in 1973, and U Ne Win was officially elected president in 1974 and again in 1978. The Karen, the Mon, and the Shan were all given autonomous states under the new constitution. Still, the Burmese government was unable to quell the disorder. In December 1975, severe riots broke out over the perceived lack of respect shown by the government to the funeral rights of U.N. Secretary General U Thant (1904–74). U Ne Win declared martial law, and nine students were killed in putting down the riots. In the north, the Communists, aided by China, continued to be the biggest threat to the government, constantly launching ever more brutal guerrilla attacks.

In July 1988, in the wake of another violent student riot, President U Ne Win agreed to resign and, once again, relinquish control to a democratic civilian government. But in September 1988, pro-U Ne Win forces staged another coup to return military dictatorship to Rangoon; thousands were killed in the fighting. In May 1990, pro-democracy forces won an election held under pressure from outside Myanmar, as U Ne Win's movement had redubbed the country, but two months later, in July, a ruthless crackdown by the autocratic government dashed any hope of reinstalling a parliamentary system as the ruling military junta refused to convene the Assembly. At the end of the 20th century, Myanmar remained under the thumb of the military, insurrection seethed in the countryside, and opium war lords operated brazenly out of the "Golden Triangle," which included northern Burma.

Burmese-Laotian War (1558)

PRINCIPAL COMBATANTS: Burma vs. Laos

PRINCIPAL THEATER(S): Siam (Thailand)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Laotian-instigated uprisings in Upper Burma

OUTCOME: Control of the contested Chiengmai Province see-sawed between Laos and Burma; at war's end the province was regained by Laos.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Beginning 35 years of Burma's near-continual dominance of Laos, the first Burmese-Laotian War did little more than prove Laos incapable of protecting its holdings in Siam. In the middle of the 16th century, Burma had conquered the strategic northwestern Siamese (Thai) province of Chiengmai, although after the army withdrew the neighboring Laotians quickly moved in and retook it. In hopes of keeping the Burmese at bay and consolidating their own position in Chiengmai, Laotian agents in Chiengmai sent people across the border in early 1556 into Upper Burma to incite the Maw Shan states against the Toungoo dynasty then ruling Burma. Burma's king Bayinnaung (1515–81), wary of the fierce Shan tribesmen and furious that Chiengmai had been retaken so quickly, ordered a full-scale invasion of Chiengmai in April, quickly seizing the province.

Laos, under the leadership of its king, Setthathirat (1534–71), launched a counterattack against the Burmese

in Chiengmai. At the head of a combined Laotian and Shan force, Setthathirat advanced to Chiengsen, where Bayinnaung's forces were waiting. The battle was brief but decisive, the Laotians and Shan were quickly defeated, and the way to the Chiengmai capital lay open. The Burmese were careful not to destroy the capital city. Instead, they installed a puppet ruler in an effort to hold the province for Burma. As before, however, when the Burmese forces retreated, the Laotians again administered Chiengmai.

Burmese-Laotian War (1564–1565)

PRINCIPAL COMBATANTS: Burma vs. Laos

PRINCIPAL THEATER(S): Laos

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A Burmese invasion into Laotian territory in an attempt to regain Chiengmai and punish Laos for its insolence

OUTCOME: Essentially a stalemate; although Burmese forces were victorious over the Laotian regular army, harassment by Laotian guerrillas forced the Burmese to abandon Chiengmai Province.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Exposing the dangers of organized armies in the field against concerted guerrilla warfare, the second Burmese-Laotian War ended in a stalemate, essentially a Laotian victory. Following the withdrawal of Burmese forces from Chiengmai at the end of the first BURMESE-LAOTIAN WAR (1558), Laos again took over the administration of the northwestern Siamese province. Meanwhile, the great Burmese king Bayinnaung (1515–81) was attempting to expand Burma as far as natural boundaries would allow and subdue any power that might oppose such expansion. Temporarily neglecting Chiengmai, Bayinnaung instead invaded Ayutthaya, or Siam, in 1563.

The Ayutthayan king, Mahachakrabarti (d. 1569), called on neighboring Laos for assistance, and King Setthathirat (1534–71) quickly replied, seeing an opportunity to defeat the Burmese and consolidate Laos's position in Chiengmai. After defeating the Ayutthayans in February 1564, Bayinnaung quickly ordered his forces east into Chiengmai and retook the province before the year was out. He did not stop there, however, as he had six years

ago. Instead, he ordered a full invasion of Laos, laying siege to the newly designated capital city of Vientiane and leaving his son in charge of operations while he returned to Toungoo to deal with a Mon uprising. Although the regular Laotian army had been overrun at Chiengmai and was unable to stop the Burmese advance on Vientiane, Laotian guerrillas began a fierce campaign against the invaders.

Finally, with the aid of the Burmese river flotilla, Bayinnaung's eldest son, Nandanaung (r. 1581–99), captured Vientiane despite sharp resistance. The Burmese attempt to track down the fleeing Setthathirat and the crown prince only served to heighten guerrilla resistance. So intense was the harassment that the Burmese were forced to give up their pursuit and evacuate Laos, leaving Vientiane to the Laotians. Although the Burmese were victorious in their efforts against Ayutthaya and in retaking Chiengmai, their vulnerability to guerrilla operations left a black mark on the campaign.

Burmese-Laotian War (1571–1575)

PRINCIPAL COMBATANTS: Burma vs. Laos

PRINCIPAL THEATER(S): Laos

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Burma's continued attempts to gain total and lasting control of Laos

OUTCOME: Burma conquered the Laotian kingdom.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Signalling the highwater mark for the Toungoo dynasty, Burma's conquest of Laos came shortly before Burma was thrown into chaos. Although Burma had had relative success in its conflicts against Laos in the past 13 years, the Burmese were never able to bring Laos completely under submission, thanks in large part to the able leadership of Laos's king Setthathirat (1534–71). However, Setthathirat died in 1571, leaving Laos vulnerable to Burma again. The Burmese king, Bayinnaung (1515–81), who had made the conquest of Laos his personal goal, now saw an opportunity to take control of Laos for good. In the previous war with Laos (*see* BURMESE-LAOTIAN WAR [1564–1565]), the Burmese had captured Setthathirat's brother,

Oupahat, and held him prisoner for 10 years. Upon the death of Setthathirat, Bayinnaung attempted to place his brother on the Laotian throne.

The Burmese king sent envoys to the Laotian capital of Vientiane to negotiate Oupahat's return as king. However, the Laotians, mindful of the fierce Burmese campaigns of the past, had no intention of listening to any Burmese plans. The Laotians murdered the Burmese envoys when they arrived and refused all attempts to have Oupahat return as king. Bayinnaung ordered an invasion of Laos in 1573, but it was repulsed. An enraged Bayinnaung either ordered that his commanding general be executed, or he forced the general into exile, where he shortly died. When the dry season of 1574 arrived, Bayinnaung led an army into Laos and crushed the Laotian forces. In 1575 he captured Vientiane, driving the regent, General Sene Soulinta (r. 1571–75 and 1580–82), into exile and placing Oupahat on the throne. Bayinnaung then ordered the countryside ravaged, and the Burmese forces complied. Burma would not conquer Laos in such a manner again. Bayinnaung would be dead in six years, and Burma would be rent with opposition from all the provinces that Bayinnaung had once controlled.

Burmese-Laotian War (1581–1592)

PRINCIPAL COMBATANTS: Burma vs. Laos

PRINCIPAL THEATER(S): Laos and Burma

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Laos attempted to regain its independence from Burma.

OUTCOME: Laos established its independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Throwing off the yoke of Burmese suzerainty and 35 years of armed conflict, Laos seized on Burma's decline and declared its independence. Remembering the harsh Burmese invasions that began in earnest in 1558, Laotians were wary of another rising against Burma. However, Laos's nemesis, King Bayinnaung (b. 1515), died in 1581, leaving his inexperienced son, Nanda Bayin (r. 1581–99), as king of Burma. At the time of his ascension, an independence movement raged throughout Siam, and Nanda Bayin's mil-

itary forces were engaged in quelling the rebellion (*see* SIAMESE-BURMESE WAR [1584–1592]).

Laotian guerrillas began making raids into Burma and harassing the outposts along the Irrawaddy River in 1581 and 1582. As Burma's commitment in Siam grew deeper and deeper, the Laotian guerrillas stepped up their assaults. By 1590 Burma was completely immersed in both conflicts, and the border regions were aflame with guerrilla activity. The skeletal Burmese garrisons in Laos were inadequate to maintain order, and Nanda Bayin was forced to release the Laotian crown prince, who had been held in Burma since 1575. Nanda Bayin had hoped that conciliation and concessions might pacify Laos, but as soon as Prince Nokeo Koumane (d. 1596) returned to Vientiane, the capital of Luang, he proclaimed Laotian independence. Nanda Bayin could do nothing but watch.

Burmese-Manipurian War (1714–1749)

PRINCIPAL COMBATANTS: Burma vs. Manipur

PRINCIPAL THEATER(S): Upper Burma

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Manipurian cavalry raided into Upper Burma.

OUTCOME: After years of allowing the raids to continue, the Burmese army regrouped and repulsed further Manipurian attacks

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Two-thirds of the Burmese army was destroyed.

TREATIES: No official treaty; Raja Gharib Newaz offered his daughter to the Burmese as a tribute of peace.

At the dawn of the 18th century, Burma lay weak and exposed following more than a century of bitter, destructive, continual warfare. Much of the Burmese military establishment had been destroyed, and the civil bureaucracy was inept and unprepared to deal with a country in decline. In light of these conditions, Raja Gharib Newaz (fl. 18th century) of neighboring Manipur, a small state in northeastern India, hoped to keep his powerful neighbor down a little longer while boosting the wealth and prestige of Manipur. In 1714 Newaz ordered several large-scale cavalry raids into Upper Burma. Initially claiming their intent was to convert Burmese Buddhists to Hinduism, the

Manipurians instead went on a rampage, capturing, raping, and murdering thousands of Burmese.

The Manipurian cavalry operations essentially went unchecked for more than two decades because the Burmese military was too weak to stop them. What remained to pass itself off as a military force was so woefully inadequate that it was beaten at nearly every engagement. By 1737 fully two-thirds of the Burmese Royal Army had been killed in action. The following year the Manipurians launched a major offensive that threatened the Burmese capital of Ava. The Manipurians had made several attempts to seize Ava before, but the 1738 campaign was the most devastating. Amazingly, the Burmese were able to stave off the Manipurians, and it proved to be a turning point in the war.

While the Manipurians regrouped their forces and retreated to the border regions they now controlled, the Burmese army began a reorganization that enabled them to put a competent force in the field for the first time since the war began. By 1740 the Burmese had begun to push the outnumbered Manipurians back out of the border regions. By 1749 the Manipurians were decisively defeated in Upper Burma. Newaz gave his 12-year-old daughter to the Burmese king as a peace settlement.

Burmese-Manipurian War (1755–1758)

PRINCIPAL COMBATANTS: Burma vs. Manipur

PRINCIPAL THEATER(S): Manipur

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Retaliatory violence on the part of the Burmese against the Manipurians for the brutal war of 1714–49

OUTCOME: The Burmese conquered Manipur and extracted tribute.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

Following the war with Manipur that ended in 1749 (*see* BURMESE-MANIPURIAN WAR [1714–1749]), there occurred in Burma a bureaucratic renewal in which a new dynasty was ruled by Alaungpaya (1714–60), the founder of modern Burma. Alaungpaya also reinforced the military, becoming one of the ablest generals in Burmese military

history. He sought to restore not only Burmese military efficiency but its pride as well. To that end he hoped to exact retribution from the Manipurians for the harsh campaigns of 1714–49, and in particular for the Ava offensive of 1738 that left the Burmese capital in ruins.

In 1755 Alaungpaya ordered an invasion of the northeastern India state and set up garrisons there to maintain order and exact tribute. When the Manipurians revolted against the occupation, Alaungpaya swiftly led a punitive expedition into Manipur. He was able to recruit many of the skilled Manipurian cavalry troops and devastated hundreds of villages, murdering or relocating thousands. By 1758 all resistance was stamped out.

Burmese-Manipurian War (1764)

PRINCIPAL COMBATANTS: Burma vs. Manipur

PRINCIPAL THEATER(S): Manipur

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Burmese territorial expansion

OUTCOME: Burmese forces overran Manipur and enslaved its people

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Under the Konbaung dynasty founded by Alaungpaya (1714–60), Burma enjoyed a significant renewal, which included the establishment of military dominance in the region. In 1763 Hsinbyushin (d. 1776), the third ruler of the dynasty, sought to expand Burma's borders at the expense of its traditional rival, the Manipurians, a neighboring province in northeastern India. Using the ancient tactic of invasion and relocation, Hsinbyushin launched an offensive westward into Manipur in 1764. This was an essay in total warfare. Its object was not the enemy's army, but the people themselves. The Burmese Royal Army captured thousands of Manipurians, mostly civilians, whom they enslaved. After destroying their villages the army sent them back in chains to Burma, where they were either sold on the open slave market or sent to work in the Konbaung civil bureaucracy in the capital of Ava. By the end of 1764, most of the Manipurian population had been carried off into slavery. This work done, Hsinbyushin moved

to annex Manipur and use it as a base of operations for a subsequent invasion of British India. In this way a prosperous kingdom was subdued and transformed into an armed camp.

Burmese-Manipurian War (1770)

PRINCIPAL COMBATANTS: Burma vs. Manipur

PRINCIPAL THEATER(S): Manipur

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Using a minor revolt in Manipur as justification, a Burmese general attempted to save face with an easy victory.

OUTCOME: The Manipurian revolt was squelched in three days of fighting.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Of little geopolitical significance, the Burmese-Manipurian War of 1770 served only the interests of the commanding Burmese general. Following the Burmese defeat of the Chinese in the BURMESE-CHINESE WAR (1765–1769), Burma's commanding general, Maha Thihathura (fl. 1770s), feared that King Hsinbyushin (d. 1776) would be displeased that he had so quickly granted generous terms to the Chinese. Maha Thihathura believed that Hsinbyushin would order his humiliation or, worse, his death. Therefore, in an effort to distract the king and add another military victory to his credit, Thihathura pounced on the current instability in Manipur, a traditional enemy kingdom in northeastern India.

The local prince had renounced Burmese suzerainty and declared Manipur autonomous. Still suffering from the last devastating war with Burma (*see* BURMESE-MANIPURIAN WAR [1764]), a conflict in which the majority of Manipurians were enslaved, the Manipurian army was hardly able to offer serious battle. In three days, the Manipurian forces were soundly defeated, and the prince fled. After placing his own candidate on the Manipurian throne, Thihathura hoped to return to Burma in triumph. To the general's chagrin, the king was unimpressed by what he considered an inconsequential conquest. He disgraced Thihathura as punishment for his conduct with the Chinese, the only matter that concerned the king.

See also BURMESE-MANIPURIAN WAR (1714–1749); BURMESE-MANIPURIAN WAR (1755–1758); BURMESE-MANIPURIAN WAR (1764).

Burmese-Portuguese War (1611–1613)

PRINCIPAL COMBATANTS: Burma vs. Portugal

PRINCIPAL THEATER(S): Lower Burma

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Portuguese incursions into Burmese society

OUTCOME: The Burmese forces defeated the Portuguese.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Although not a major conflict in comparison to Europe's wars, the Burmese-Portuguese War was the first against a European power for Burma, and her victory gave her international recognition. The Portuguese had been in Burma for almost a century, originally interested in the region for its trading potential; Kings Tabinshwehti (1512–55) and Bayinnaung (1515–81) used Portuguese mercenaries in their fights against the Shans, Laos, and Siam. In 1602 a Portuguese adventurer and mercenary, Philip de Brito y Nicote (d. 1614), working among the Arakanese of the western coastal region of Burma, established a base at Syriam in Lower Burma. At Syriam de Brito was in charge of the customs house for the Arakanese and of the Portuguese living in the region under Portuguese law.

Along with de Brito at Syriam were two Jesuit missionaries intent on converting the locals. When the locals steadfastly resisted accepting Christ, the missionaries began forcing conversions, and the Portuguese troops under de Brito looted and sacked the Buddhist temples. Around 1609 de Brito, with the help of a Portuguese officer, Salvador Ribeyro (fl. early 17th century), converted the customs base into a fort and proclaimed it in the name of the Portuguese king. After soliciting military support from the viceroy of Goa, de Brito began to carve out a kingdom in Lower Burma for himself in the name of Portugal.

In 1610 de Brito captured King Natshinnaung of Toun-goo (d. 1614), a vassal of the king of Burma, Anaukpetlun (d. 1628), and held him captive for his trickery in making alliances both with himself and Anaukpetlun. This was an open challenge to Anaukpetlun's sovereignty in the region, and failure to meet it would likely have resulted in

Anaukpetlun's downfall. Burmese forces invaded Syriam and laid siege to the fort. Using standard siege tactics that served as a diversion, the Burmese forces tunneled into the fort and captured it in 1613. Anaukpetlun ordered de Brito and Natshinnaung executed and the Portuguese inhabitants exiled to Upper Burma as slaves.

Burundian Civil War (1972)

PRINCIPAL COMBATANTS: The Tutsi tribe vs. the Hutu tribe

PRINCIPAL THEATER(S): Burundi, Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The socioeconomically oppressed Hutu majority rebelled against the ruling Tutsi minority in newly independent Burundi.

OUTCOME: Michael Micombero, a Tutsi, was established as president; many Hutus were killed or became refugees.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Hundreds of thousands, principally civilians

CASUALTIES: Tutsi dead, 10,000; Hutu dead, 90,000

TREATIES: None

After WORLD WAR I Burundi, a former colony of Germany, became a mandate and then trusteeship territory of Belgium. On July 1, 1962, it became an independent kingdom under Mwami (King) Mwambutsa IV (1912–77), a leader of the Tutsi (also called Watusi) tribe. Traditionally, the Watusi had been the dominant tribe in the region since their early conquest of the Hutu (also known as Bahutu) people. In socioeconomic terms this meant that the Tutsi became a quasiaristocratic ruling minority, while the Hutu lived in varying degrees of subjugation. As a result of tensions created by this social arrangement, the early years of Burundian independence were highly unstable. On July 8, 1966, Prince Charles Ndizeye (1947–72) overthrew his father, Mwami Mwambutsa IV in a coup and proclaimed himself Mwami Ntare V on September 1, 1966. On November 28 of that same year, Ndizeye was himself ousted by his prime minister, Michel Micombero (1940–83), who named himself president, making Burundi a republic. Then, in 1970 Hutu army officers aided by some Tutsi soldiers and

police officers staged a coup attempt during October 19–20 with the goal of restoring Mwami Mwambutsa IV.

The 1970 coup attempt triggered a general revolt among the Hutu tribespeople, who massacred several thousand Tutsis. In response the Tutsis perpetrated mass killings of their own and thoroughly purged the government and military of Hutus. This led to a full-scale civil war, which was fought from April 29 to July 31, 1972. Hutu tribesmen, in collaboration with a small number of Tutsi monarchists, attempted to restore Mwami Ntare V, but government forces crushed the effort and killed Ntare, touching off armed Hutu revolts throughout Burundi. There were no set battles, but, rather, spasms of Hutu violence against Tutsis followed by far bloodier Tutsi reprisals. In a two-month period more than 100,000 Burundians died, all but approximately 10,000 of them Hutu, victims of government troops as well as unofficial Tutsi bands. The civil war put Burundi firmly into the hands of President Micombero, and when renewed fighting broke out briefly in 1973, Tutsi forces drove thousands of Hutu out of the country to neighboring Zaire (Democratic Republic of the Congo), Tanzania, and Rwanda.

Burundian Civil War (1993–ongoing)

PRINCIPAL COMBATANTS: The Hutu tribe vs. the Tutsi tribe

PRINCIPAL THEATER(S): Burundi

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The assassination by Tutsi military officers of the nation's first Hutu president triggered civil war.

OUTCOME: Fighting continues.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Hundreds of thousands

CASUALTIES: Hundreds of thousands, including approximately 1 million refugees

TREATIES: None

The roots of the war lay in the BURUNDIAN CIVIL WAR (1972), a conflict during which some 90,000 Hutu people were killed in reprisals by the forces of the dominant Tutsi tribe and in which the government was purged of all Hutu representation. In June 1993, under intense pressure from the international community, the Tutsi-led government held presidential elections open to all Burundians. Because the Hutu, who constitute 85 percent of the Burundian population, outnumbered the Tutsi, the election was a foregone conclusion: Melchior Ndadaye (1953–93), the Hutu candidate, emerged victorious as the first democratically

elected leader of the nation since it became independent from Belgium in 1962. Tragically, perhaps inevitably, Tutsi army officers assassinated Ndadaye in October 1993, immediately touching off a civil war, which consisted of revenge and reprisal. By mid-1994 at least 50,000 Burundians had been killed, and throughout 1994–96 some 250,000 Burundian refugees—mostly Hutus—poured across the borders into Zaire (Democratic Republic of the Congo) and Tanzania, compounding the poverty in those nations. (Tanzania was already reeling from the influx of as many as 2 million refugees from the RWANDAN CIVIL WAR [1990–1994].)

During the height of fighting, in 1994, international pressure was again brought to bear, resulting in the formation of a Tutsi-Hutu coalition government; however, the new Hutu president, Cyprien Ntaryamira (1955–94), was killed in April 1994 when his plane was shot down by Hutu fanatics; the president of Rwanda, Juvénal Habyarimana (1937–94), also perished in the attack. After this the fighting became increasingly intense. In 1995 northwestern Burundi became the nation's hot spot when Hutu guerrillas infiltrated from Zairean (Congolese) refugee camps to do battle with Tutsi government forces. When the desperate coalition government appealed to the international community for military aid in providing security for political negotiations, the Tutsi-led Burundian military staged a coup on July 25, 1996. Soldiers surrounded the government compound in the capital city of Bujumbura, forcing Hutu president Sylvestre Ntibantunganya (b. 1956) to seek refuge in the residence of the U.S. ambassador. With Ntibantunganya out of the way, the military installed Pierre Buyoya (b. 1949), a Tutsi, as president. This wrecked any possibility of an enduring coalition and galvanized the resolve of Hutu rebels. Despite peace talks sponsored by the Organization of African Unity in June, July, and October 1998, the civil war ground on. By 1999 Bujumbura became the focus of rebel attacks, to which the government responded by clearing out the area around the capital and herding people from this region into concentration camps. Those who refused to accept confinement were subject to being shot on sight if they ventured into the killing zone that had been decreed around Bujumbura. Within the overcrowded and undersupplied camps, however, the death rate has been estimated at five per day. By the end of 2000 hundreds of thousands had died in the fighting and at least 1 million persons had been displaced from their homes. In December of 2001 the rebels again stepped up their attacks on Bujumbura. The Burundi government responded by a counterattack against a rebel stronghold, killing 500. Though some progress toward peace seemed to be promised by the 2001 election of a transitional national assembly, in July 2002 the fighting between Hutu rebels and the Burundi government again escalated. Finally, in December 2002 the two sides agreed to cease-fire during talks in Tanzania, which ultimately pro-

duced an agreement incorporating the Hutus into the new national army.

Though fighting again broke out again briefly in January 2003, by spring both sides were pulling back. In April Domitien Ndayizeye (b. 1953) became the new president. Summer saw sporadic fighting in 16 of Burundi's 17 provinces. Looting and armed banditry accompanied the violence, and on July 7 rebels began attacking Bujumbura. Then, at Dar es Salaam on 16 November 2003, President Ndayizeye signed a peace accord with the rebels (though at least one rebel group held out and was given three months to open talks or face the consequences). Under the agreement, the main rebel faction, the Forces for the Defense of Democracy, was to become a political party with representation in Burundi's government and rebel Hutu fighters were to be integrated into Burundi's armed forces. Other provisions granted temporary immunity to both sides from prosecution.

In his 2003 New Year's Day speech, President Ndayizeye announced that by January 7th, 40 percent of the army's officer corps would be made up of former FDD rebels. The FDD welcomed the move as a crucial step for the beginnings of a new army. Theoretically, at least, rebels who were once diehard enemies of government soldiers would now be fighting side-by-side with them. But those rebels who had remained absent from the negotiations were continuing to attack the capital as of this writing, certainly an ill omen for predicting true peace and an end to the conflict.

Bushiri's Uprising (Abushiri Revolt) (1888–1890)

PRINCIPAL COMBATANTS: Arab slave traders (led by Bushiri bin Salim) vs. German colonial forces

PRINCIPAL THEATER(S): German East Africa (modern Tanzania)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Local Arab slave traders rebelled against the harsh rule and restrictions of German colonial administrators.

OUTCOME: The rebellion was put down, and Bushiri bin Salim was hanged.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Neither side had more than 1,000 men under arms at any time.

CASUALTIES: Unknown

TREATIES: None

German East Africa was an area of about 370,000 square miles colonized by Germany after explorer Carl Peters (1856–1918) negotiated a series of treaties over parts of the territory in 1884. The following year Germany proclaimed a protectorate over the region that is now part of Tanzania. The German government organized the German East Africa Company to administer the colony. German East Africa was expanded in 1888, when the sultan of Zanzibar relinquished coastal areas, but the local Arab slave traders in these areas bristled under the harsh rule and restrictions of the German administrators. Bushiri bin Salam (d. 1889), a prominent warlord-trader, led a revolt of the traders, who attacked German-owned plantations and other interests. In response the German East Africa Company appointed Hermann von Wissmann (1853–1905), a veteran explorer, as commissioner of German East Africa, with full authority to put down the revolt by any means necessary. Operating independently of the German government throughout 1889, Wissmann led 600 mercenary Sudanese troops against pockets of rebel resistance. Finally, in December he led an attack on the central rebel stronghold of Bagamoyo. He captured Bushiri bin Salam and summarily hanged him. In a simultaneous action German naval authorities cooperated with the British admiralty in instituting a coastal blockade to choke off the slave trade and to prevent the importation of weapons. This strategy eliminated rebel resistance by 1890. It is significant that this war was fought by a private army sanctioned not by a government, but by a business enterprise. The German kaiser connived in this, but, at least technically, kept his hands clean.

Byzantine-Avar War (595–602)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Avars

PRINCIPAL THEATER(S): Danube region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Byzantines wanted to push invading Avars out of the Balkans.

OUTCOME: The Byzantines drove the Avars across the Danube River.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Mongolian Avars, who lived in the Volga River region, invaded the Byzantine-held Balkan Peninsula at the open-

ing of the seventh century. Byzantine emperor Maurice (c. 539–602), the outstanding military commander and political leader who transformed the fragmented Roman Empire into the medieval Byzantine Empire, sent an army against the invaders. In contrast to his earlier brilliant and rapid successes, Maurice found the Avar campaign very slow going. After years of slogging, he was able to maneuver the Avars into a vulnerable position, which his finest general, Priscus (fl. early seventh century), was quick to exploit. In 601 at the Battle of Viminacium, just south of the Danube River, Priscus met the Avars, sent them into retreat, then gave chase. Priscus was able to send the invaders back across the Danube, and Maurice wanted nothing more than to press the pursuit and wipe the enemy out entirely. However, the costs of campaigning were staggering, forcing Maurice to levy high taxes to replenish the drained treasury. This not only created widespread discontent among the Byzantine nobility, it stirred mutinous unrest within the army itself. Under these pressures and with the onset of winter, Priscus was ordered to call off the pursuit and to retire his army to winter quarters.

Treadgold, *Byzantium and Its Army, 284–1081* (Palo Alto, Calif.: Stanford University Press, 1995); Mark Whittow, *The Making of Byzantium, 600–1021* (Berkeley: University of California Press, 1996).

Byzantine-Avar War (603–626)

PRINCIPAL COMBATANTS: Byzantines vs. Avars (with Slav, Bulgar, German, and Persian allies)

PRINCIPAL THEATER(S): Macedonia, Thrace, the Balkan Peninsula, and Constantinople

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Avars wanted to conquer the Byzantine Empire and take Constantinople.

OUTCOME: Constantinople was successfully defended.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

In 626, 80,000 Avars and allies; 12,000 Byzantine cavalry defending the walls of Constantinople.

CASUALTIES: Unknown

TREATIES: None

The general discontent fueled by the exorbitant costs of the BYZANTINE-AVAR WAR (595–602) ignited PHOCAS'S MUTINY, which tore apart the Byzantine army beginning in 603. This prompted the Mongolian Avars, defeated in the BYZANTINE-AVAR WAR of 595–602, to invade Byzantine-held Macedonia, Thrace, and the Balkan Peninsula. Phocas (d. 610), who had led a military and popular revolt to overthrow Emperor Maurice (c. 539–602), made himself Byzantine emperor.

Now he bought time by bribing the Avars with a heavy tribute in 604. Yet the tribes continued to advance, fighting a low-level war against the Byzantine civilian population until 617, when they reached the walls of Constantinople itself. During the next three years they waged a full-scale terror campaign of raids against the Byzantine capital city.

Although the Byzantines were also at this time menaced by Persians looming in the east, they managed to assemble a sufficient force to drive Avars into retreat and lift the siege of Constantinople. This proved but a respite. In 626 a massive Avar army augmented by Slavs, Bulgars, and Germans once again attacked Constantinople. A Persian fleet aided the land assault, which continued at maximum effort from July 1 through 10, 626. Remarkably, the hardened defenders outlasted their attackers, who were forced to break off the assault because of lack of food and other logistical problems. The Avars, essentially a nomadic people, were never skilled at managing a protracted siege. For their part, the Persians had not counted on the strength of the Byzantine navy and were unable to land reinforcements at Constantinople. The massed forces of the attackers withdrew from the field, and the Byzantines reveled in having achieved one of history's great defenses.

Byzantine Civil War (1094)

PRINCIPAL COMBATANTS: Emperor Alexius I Comnenus vs. Constantine Diogenes and the Cumans (Kumans)

PRINCIPAL THEATER(S): Thrace

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Constantine Diogenes, a pretender to the Byzantine throne, sought to overthrow Emperor Alexius I Comnenus.

OUTCOME: Constantine Diogenes was defeated and the empire preserved under Alexius I Comnenus.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

During the BYZANTINE-SELJUK TURK WAR (1064–1081) and the NORMAN-BYZANTINE WARS, the Byzantine Empire under Emperor Alexius I Comnenus (1048–1118) had been subjected to repeated invasions, all of which were turned back. However, Emperor Alexius had been compelled to make many concessions to the landed gentry in return for their support in keeping the empire intact. This encouraged one of them, Constantine Diogenes (c. 1050–c. 94), to lay claim to the throne in 1094. He enlisted the aid of the Cumans (Kumans), nomadic Turks from Russia, to stage a revolt against Alexius. Leading a Cuman army across the Danube, he besieged Adrianople (Edirne) in Thrace, only to suffer defeat at the Battle of Taurocomon. It is presumed that Constantine Diogenes perished in the battle. Following the war, Alexius built up his forces and more vigorously asserted his imperial power over the nobility in an effort to forestall further threats to the empire's integrity.

Byzantine Civil War (1222–1241)

PRINCIPAL COMBATANTS: Nicaea vs. Epirus

PRINCIPAL THEATER(S): Thrace, Constantinople, and Epirus

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Nicaea and Epirus contended for dominance of Asia Minor.

OUTCOME: Epirus accepted domination by Nicaea.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Greek state of Nicaea was founded in 1204 by Theodore I Lascaris (c. 1175–1222) as an independent principality. It vied with Epirus as well as with the Latin Empire of Constantinople to become the focal point of an attempt to restore the Byzantine Empire during the Second LATIN EMPIRE–BYZANTINE EMPIRE WAR. John III Vatatzes (d. 1254) defeated the two brothers of Theodore I Lascaris to become emperor of Nicaea in 1222, then defeated the Latin forces to become ruler of most of Asia Minor by 1225. That same year, however, Theodore Ducas Angelus (fl. 1220–30), despot of Epirus—also founded, as a despotate, in 1204—proclaimed himself Byzantine emperor. John III sent forces against him, but these were defeated at Adrianople (Edirne) in Thrace. However, in 1230 John III regrouped and his forces prevailed against Theodore at the Battle of

Klokotnitsa. John III's Bulgarian ally, John Asen II (d. 1241) captured Theodore, who accepted a combination of Nicaean and Bulgarian suzerainty. The death of John II Asen in 1241 put Epirus entirely under Nicaean control. Then, in concert with the Bulgarians led by Ivan II (d. 1241), John besieged Constantinople (Istanbul) in 1235. Like most other aspiring conquerors, he failed to take the city.

Turning from Constantinople and following the death of Ivan II, John annexed a vast portion of Bulgaria, then returned to attack Epirus in 1212. Theodore Ducas Angelus accepted Nicaean suzerainty.

Byzantine Civil War (1259–1264)

PRINCIPAL COMBATANTS: Nicaea vs. Epirus

PRINCIPAL THEATER(S): Thessalonica, Constantinople, and vicinity

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Nicaea and Epirus both vied for dominance of the old Byzantine Empire.

OUTCOME: The Byzantine Empire was reunified under the control of Nicaea.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Following the BYZANTINE CIVIL WAR (1222–1242), Epirus was a greatly reduced realm. However, Michael II (r. 1236–71), emperor of Epirus, soon sought to regain lost territory and invaded Thessalonica, which Nicaea had captured in 1246. In the meantime, Michael VIII Palaeologus (1225–82), regent for the rightful heir to the Nicaean throne, John IV Lascaris (1250[?]-1300[?]), seized the reins of Nicaean government by proclaiming himself emperor in 1259. His first act as emperor was to rush to the defense of Thessalonica.

As his forces fought in Thessalonica, Michael VIII Palaeologus attempted to negotiate a general settlement with Epirus in order to end the discord that was deeply dividing the Byzantine Empire. When this failed the Nicaean forces met those of Epirus at the Battle of Pelagonia (1259) in Macedonia. The Nicaeans defeated the Epirotes, and Michael VIII Palaeologus went on to capture Constantinople (Istanbul). This set into motion the

reunification of the Byzantine Empire. Michael II recognized the suzerainty of Michael VIII Palaeologus in 1264.

Byzantine Civil War (1321–1328)

PRINCIPAL COMBATANTS: Forces of Andronicus II Palaeologus vs. those of Andronicus III Palaeologus

PRINCIPAL THEATER(S): Byzantine Empire

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The younger Andronicus sought to secure his claim to the Byzantine throne.

OUTCOME: Andronicus II abdicated in favor of his grandson Andronicus III; a weakened Byzantine Empire was invaded by the Ottoman Turks.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The origin of this civil conflict lay in a family tragedy. Andronicus III Palaeologus (1296–1341), the unruly and rebellious grandson of Byzantine emperor Andronicus II Palaeologus (1260–1332), accidentally caused the death of his brother. Following this, Andronicus II disinherited his grandson and denied him the throne. An affable and popular figure, Andronicus III found many supporters, including a host of Byzantine nobles who were alienated by the heavy taxes Andronicus II had imposed. Thus bolstered, beginning in 1321 the younger Andronicus led a rebellion among these and other nobles, successfully battling the forces of the emperor in repeated small engagements. By 1325 Andronicus II backed down and conceded his grandson the post of co-emperor of the Byzantine Empire and sole ruler of the provinces of Thrace and Macedonia.

But there was to be no great familial reconciliation. Despite the concession, Andronicus III continued to oppose his grandfather. As often happened when the empire was torn internally, it became ripe for invasion. Ottoman forces struck in 1329, igniting the BYZANTINE-OTTOMAN TURK WAR (1329–1338). Some scholars believe that Andronicus III and the younger generations of nobles who supported him deliberately invited the invasion, believing it would weaken the reign of the old guard and

thereby strengthen their own cause. Whatever the motives, amid the threat of Ottoman invasion, Andronicus III was able to force his grandfather to abdicate, and he became sole emperor in 1328. Despite the approaching conflict with the Ottomans, this change reinvigorated the Byzantine Empire by bringing to power a cadre of young, ambitious, and energetic nobles.

Further reading: Donald M. Nicol, *The Last Centuries of Byzantium, 1261–1453*, 2nd ed. (New York: Cambridge University Press, 1993); John Julius Norwich, *Byzantium: The Decline and Fall*, vol. 3 (Knopf, 1996).

Byzantine Civil War (1341–1347)

PRINCIPAL COMBATANTS: Partisans of John VI Cantacuzene and Turkish and Serb allies vs. partisans of John V Palaeologus

PRINCIPAL THEATER(S): Byzantine Empire in the region of Constantinople

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: John VI Cantacuzene usurped the throne from John V Palaeologus.

OUTCOME: John VI Cantacuzene assumed the throne, ruling from 1347 to 1355.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

When Byzantine general John Cantacuzene (1292–1383) became regent to the nine-year-old emperor John V Paleologus (1332–91) upon the death of his father, Andronicus III Paleologus (1296–1341), the battle-tested old soldier had evidently no intention of usurping the Byzantine throne. But while Cantacuzene was off meeting the triple threat that often loomed over Byzantium—a new offensive by the Serbs on Thessalonica, the Bulgars massing on the northern borders, and the Turks plundering the coast of Thrace—a cabal grew up, led by young John's mother, Empress Anne, and aimed at displacing the absent regent. When the plot was unmasked upon his return, the army threw in its lot with its general and, in the time-tested tradition of the Roman Empire, declared him the new emperor, John VI, in October. The patriarch of the Eastern Orthodox Church lined up behind John V and immediately excommunicated John VI. The Turks, who had so recently come to terms with the general, backed his cause, while the Serbs, as was their wont, played a double game, promising support for the general in the field but sending

word secretly to the Byzantine court, safe behind the walls of Constantinople, of their support for the boy.

The civil war that resulted was exacerbated by a nascent class conflict. Byzantine aristocrats, among whose number John Cantacuzene was certainly counted, backed the general. Constantinople's proletariat, whose numbers had swelled in recent years due to the number of refugees flooding into the city from conquered lands, had grown ever poorer and more desperate as rich landowners, who seldom paid their taxes, took full advantage of the corruption that had become endemic throughout Byzantium. The majority of the population, in fact, felt much resentment of the almost obscenely wealthy few; unlike in the West, no flourishing bourgeoisie of merchants and craftsmen buffered the rich from the poor. The young emperor's cabal fed the resentments and egged on revolts against John VI and his ilk throughout the empire. On the day he was declared emperor, John Cantacuzene's palace was raided, looted, and burned by a Constantinople mob. When news of his investiture reached Adrianople on the following day, it ignited a like revolt, surging through the streets in an orgy of riot and ruin. In Thessalonica, a political party known as the Zealots seized control and launched a reign of terror against all those opposed to their esoteric beliefs, running the Theme (as Byzantine provinces were called) for the next seven years as a virtually independent republic, despite the titular governor sent by John VI.

With the help of his Turkish allies, John VI succeeded in capturing Constantinople in 1347 and ruled as emperor until 1355. However, the great dissension caused by John VI's takeover fragmented an already shaky Byzantine Empire.

Further reading: Donald M. Nicol, *The Last Centuries of Byzantium, 1261–1453*, 2nd ed. (New York: Cambridge University Press, 1993); John Julius Norwich, *Byzantium: The Decline and Fall*, vol. 3 (Knopf, 1996).

Byzantine Civil War (1352–1355)

PRINCIPAL COMBATANTS: Forces of John VI Cantacuzene and Turkish allies vs. forces of John V Palaeologus

PRINCIPAL THEATER(S): Byzantine Empire

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Having been deposed by John VI Cantacuzene in his youth, John V Palaeologus sought to regain the throne.

OUTCOME: Although initially defeated in conventional battle, John V Palaeologus waged a guerrilla war that ultimately succeeded in regaining for him the Byzantine throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown
TREATIES: None

After Emperor Andronicus III Palaeologus (1296–1341) died in 1341, the ambitious and highly capable John VI Cantacuzene (1292–1383) expected to be appointed regent to the nine-year-old John V Palaeologus (1332–91). When this failed to happen, the BYZANTINE CIVIL WAR (1341–1347) was ignited. John VI Cantacuzene was crowned emperor in Thrace in 1346, and although the civil war ended the following year, the empire was shattered.

Emperor John VI planned to reunify Byzantium by dispatching members of his family to rule over the disparate territories. The weakened empire was, however, prey to invasion by the Ottoman Turks, and John VI was obliged to meet the invaders at Thrace and Macedonia. With John VI thus occupied, the disinherited John V Palaeologus saw an opportunity to redeem his birthright. He attacked John VI's divided forces at Adrianople (Edirne) in Thrace in 1352. Desperate, John VI enlisted the aid of certain Ottoman elements in beating back John V's attack. This gave the Ottoman Empire a new foothold in Byzantium, but, in the short run, it succeeded in dispersing John V's forces. It did not, however, put an end to the young man's resurgence. Gathering his partisans about him, John V conducted a skillful guerrilla war against the usurper through 1354, confounding John VI as well as his Turkish allies. At last, in 1354, John V's guerrillas successfully stormed Constantinople, driving John VI from the throne. By 1355 the restored Palaeologus emperor removed John VI Cantacuzene's family members from their positions of authority throughout the Byzantine territories. This action was supported by the people of Thrace and Macedonia, who were dissatisfied with the corruption of the previous regime.

Byzantine Invasions of Hungary (1151–1153, 1155–1168)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Hungary
PRINCIPAL THEATER(S): Hungary and the region of the former Yugoslavia
DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest
OUTCOME: The Byzantines ultimately prevailed against the Hungarians, who ceded Dalmatia and other territories to the Byzantine Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown
TREATIES: None

In 1143 Manuel Comnenus (r. 1143–80) assumed the Byzantine throne on the death of his father, John II Comnenus (r. 1118–43). Manuel took up without interruption his father's ongoing campaign against the Seljuks in Syria. Achieving success here, he went on to wage a successful war against Roger of Sicily during 1147–58, and he put down a rebellion among the Serbs during 1150–52.

In coordination with these campaigns, Manuel repeatedly invaded Hungary. He invaded several times during 1151–53, then did not return again until 1155, the beginning of a long period of repeated raids and incursions. It was not until 1168 that Manuel forced a full-scale battle, at Semlin (Zemun, in the northeastern portion of the former Yugoslavia). This finally broke Hungarian resistance and brought a negotiation, which netted Manuel Dalmatia, among other territories.

Byzantine-Muslim War (633–642)

PRINCIPAL COMBATANTS: Muslims vs. the Byzantine Empire
PRINCIPAL THEATER(S): Middle East: region of present-day Israel and Jordan; Syria, Mesopotamia, and Egypt
DECLARATION: Jihad proclaimed in 633

MAJOR ISSUES AND OBJECTIVES: For the Muslims, this was a holy war to drive the Byzantine Christians out of the Middle East.

OUTCOME: The forces of the Byzantine Empire withdrew from all theaters.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At Yarmuk River (636), 50,000 Byzantines faced 25,000 Muslims.

CASUALTIES: At Yarmuk 4,000 Muslims died, while Byzantine losses were much greater.

TREATIES: None

In 633 Khalid ibn al-Walid (d. 642) initiated a jihad (holy war) against the Byzantine Empire with the intention of forcing the Christians out of the Middle East. The war was marked by a series of brilliant Muslim victories. In 634

Khalid defeated the Byzantine armies of Emperor Heraclius (575–641) in what is now Israel, and the following year he pushed those forces out of western Jordan. Next, Khalid took Damascus in southern Syria (635). In 636 Heraclius sent two armies into Syria to throw back the Muslim Arab forces invading there. A total of 50,000 Byzantine troops faced a small Muslim army under Khalid at the Yarmuk River. Khalid withdrew—a feint—received reinforcements, and, with 25,000 men, counterattacked. Unrelenting Muslim cavalry charges during August 20, 636, were at first repulsed, but took a toll. At last, the Byzantine lines caved in, and Khalid was able to flank his enemy, driving the superior Byzantine army from the field.

Khalid's victory at the Battle of the Yarmuk River forced the Byzantine Empire to cede all of Syria, and that same year Jerusalem also fell to the Muslims. By 639 Mesopotamia likewise collapsed.

Demoralized and reeling, the Byzantine Empire rejoiced in the death of Khalid in 642, but Amr ibn el-Ass (d. 664), who succeeded Khalid, pursued the retreating Byzantine armies, forcing them next to abandon Alexandria in Egypt. The empire was now vastly contracted.

Byzantine-Muslim War (645–656)

PRINCIPAL COMBATANTS: Muslims vs. Byzantine Empire

PRINCIPAL THEATER(S): Egypt, Cyprus, and Armenia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Byzantine Empire wanted to retake Alexandria from the Muslims. After defeating this attempt, the Muslims penetrated the Byzantine Empire proper with the intention of taking Constantinople.

OUTCOME: Byzantine forces failed to recapture Alexandria. Muslim forces advanced on Constantinople, capturing territory in Cyprus and Armenia, but called a truce before reaching their objective.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Truce of 656

The BYZANTINE-MUSLIM WAR (633–642) had been disastrous for the Byzantine Empire, which lost its Middle Eastern territories to the Muslims. In 645 Byzantine emperor Constans II (630–668) launched a campaign to recapture Alexandria in Egypt. He exploited the recent removal of Alexandria's extremely able governor, Amr ibn el-Ass (d. 664), a brilliant military commander, by Caliph Uthman ibn Affan (d. 656), a bureaucratic nonentity. Constans II laid siege to the city, and it looked as if Alexandria would, indeed, be returned to the Byzantines. Caliph Uthman ibn Affan responded to the crisis by wisely returning Amr to office. The popular governor rallied his forces, and under his leadership the Muslims of Alexandria withstood a 14-month siege. After frequent sallies against the siege army, each of which took its toll on the Byzantines. Amr mounted a full-out counterattack. Hungry and dispirited, the Byzantine ranks were badly eroded by frequent Muslim sallies, the Byzantine siege collapsed, and the army ran for its life. The Muslims pursued and advanced into the Byzantine Empire proper. In 653 Cyprus and Byzantine Armenia fell to Muslim forces.

Buoyed by the Muslim victories, Mu'awiyah (c. 602–680), the governor of Syria, conceived a plan to capture Constantinople itself. He assembled the first-ever Muslim naval fleet consisting of swift galleys called *dromons*. With these vessels Mu'awiyah met the Byzantine fleet off the coast of Lycia in 655. Stunningly, the inexperienced Muslim mariners defeated the Byzantine old salts. Constantinople was in great jeopardy. However, at this juncture, Mu'awiyah was faced with an internal dispute. He wanted to block the ascension of Ali ibn Abi Talib (c. 600–661) to the caliphate—an action that would result in the MUSLIM CIVIL WAR (657–666). Therefore, he halted his advance against Constantinople, secured a truce, which Constans was more than eager to grant, and returned to Syria.

Rosser, *Historical Dictionary of Byzantium* (New York: Rowman and Littlefield, 2001); Warren T. Treadgold, *Byzantium and Its Army, 284–1081* (Palo Alto, Calif.: Stanford University Press, 1995).

Byzantine-Muslim War (668–679)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Muslims
PRINCIPAL THEATER(S): Constantinople, surrounding area and Asia Minor
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: The Muslims invaded the Byzantine Empire in order to take Constantinople.
OUTCOME: Despite initial victories, the Muslims failed to take Constantinople and suffered subsequent defeats, including the destruction of their naval fleet. The Muslims sued for peace, agreeing to make annual tribute payments to the Byzantine Empire.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown
CASUALTIES: Unknown
TREATIES: War ended by a tribute pledge in 679.

Mu'awiyah (c. 602–680), then governor of Syria, had been forced to suspend his advance on Constantinople—despite a brilliant and unexpected naval victory that put him on the capital's doorstep—during the BYZANTINE-MUSLIM WAR (645–656) in order to block the ascension of a rival to the Muslim caliphate in the MUSLIM CIVIL WAR (657–666). Having succeeded in this, Caliph Mu'awiyah was free to invade the Byzantine Empire again.

He began in 668 by seizing the Byzantine city of Chalcedon on the Bosphorus Strait, directly opposite Constantinople. This was transformed into a staging area for a full-scale invasion. In 669 Muslim forces stepped off and attacked the empire's capital but were driven back by the Byzantines, who made extensive use of a new and terrible weapon, “Greek fire.” A solution of quick-lime, naphtha, sulfur, and sea water, Greek fire exploded when it was rapidly oxidized. An earthen or glass vessel filled with the solution served as an incendiary hand grenade. Greek fire was, in essence, the world's first “unconventional” weapon, a weapon of terror.

Seeing that the use of Greek fire had had a devastating shock effect, the Byzantines went on the offensive, vigorously attacking an Arab army at the Battle of Amorium and defeating it. Next, in 672 the Arab fleet, which had won its first naval contest with the Byzantines, was not so fortunate. It was defeated at the Battle of Cyzicus on the Sea of Marmara, the Byzantines making use of projectiles filled with Greek fire. These proved highly effective against wooden ships. Between 673 and 677 the Muslims repeatedly returned to besiege Constantinople, each time suffering from the effects of Greek fire, against which they could formulate no defense. The decisive moment came in 679, when the Byzantines annihilated the Arab fleet off Syl-laeum in southern Asia Minor. Mu'awiyah sued for peace and settled by agreeing to pay an annual tribute of money, soldiers, and horses to the Byzantines.

Byzantine-Muslim War (698–718)

PRINCIPAL COMBATANTS: Byzantine Empire (with Bulgar allies) vs. Muslims
PRINCIPAL THEATER(S): North Africa, vicinity of Constantinople, and Asia Minor
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: The Muslims attempted to capture Constantinople, capital city of the Byzantine Empire.
OUTCOME: The Muslims suffered a series of devastating defeats, culminating in the loss of many troops when the vessels evacuating them were lost in a storm.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Byzantine numbers unknown, but certainly much smaller than the 210,000 the Muslims fielded.
CASUALTIES: Unknown
TREATIES: None

Internecine strife prompted the Muslims to suspend their invasion of the Byzantine Empire during the BYZANTINE-MUSLIM WAR (668–679), but skirmishing between the Byzantines and Arabs continued on a chronic basis. With tensions high a major war erupted in 698, when a Saracen army raided and annihilated the Byzantine-held North African city of Carthage. The following year the Byzantines were driven from Utica, northwest of Carthage, and the Arabs razed the abandoned city. With that, the Byzantines were entirely routed from North Africa, and that gave the Muslims a staging area from which to penetrate the Byzantine Empire proper.

The first region to be overrun was Cilicia, in southeastern Asia Minor, during 711, followed the next year by Pontus to the north. In the face of these raids, Byzantine civil and military leadership weakened, and the demoralized Byzantine army mutinied several times, causing the

overthrow of three emperors between 713 and 717. In 717 Leo the Isaurian (c. 680–741), general in chief of the Byzantine armies, assumed the throne as Leo III. It was a particularly critical period because a massive Muslim army was advancing against Constantinople.

A total of 80,000 Muslim troops marched from Pergamum (Bergama)—which had fallen to the Muslims by 716—crossed the Hellespont (the Dardanelles), and besieged the Byzantine capital. As had happened during the BYZANTINE-MUSLIM WAR (668–679), the Byzantine defenders of Constantinople kept the Muslims at bay with “Greek fire,” an incendiary solution of sulfur, naphtha, quicklime, and sea water. When the initial assault failed, Caliph Süleyman (674–717) arrived with reinforcements: 2,000 warships with an additional 80,000 men. Leo III drove this force back, and the Muslims camped for the winter. With the coming of spring 718, an additional 50,000 Muslim reinforcements arrived, and the attack was renewed. Once again, however, Leo’s land and sea forces prevailed.

Following the Byzantine victories, Bulgars under King Terbelis (fl. 710–720) joined in the fight against the Arabs. They advanced into Thrace, badly defeating Muslim forces near Adrianople. By August 718 the Muslim army had begun retreating through Asia Minor, with Leo’s forces in pursuit. Arab troops swarmed aboard the vessels of the Muslim fleet, which was almost entirely sunk in a storm. The defeat was important. The Saracens would continue raiding Byzantine Anatolia throughout Leo’s reign; however, they never afterward chanced a siege of Constantinople itself and, therefore, never again managed to put the very survival of the empire at risk.

Byzantine-Muslim War (739)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Muslims under Caliph Hisham ibn Abd al-Malik

PRINCIPAL THEATER(S): Phrygia (in Asia Minor)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The caliph’s forces invaded the Byzantine Empire in order to expand the caliphate.

OUTCOME: After a single major battle Byzantine emperor Leo III forced the Muslims to withdraw.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Seeking to expand their dominion, Muslims under Caliph Hisham ibn Abd al-Malik (691–743) invaded the Byzantine Empire during the late 730s. They were met in 739 by Byzantine forces commanded by Emperor Leo III (c. 680–741) (see BYZANTINE-MUSLIM WAR [698–718]) at the Battle of Akroinon, or Acroinum, in Phrygia, the single major encounter of this brief war. In a great battle Leo managed to push the caliph’s forces back toward Damascus, Syria. This major check in Asia Minor was accompanied by a general blunting of other Muslim jabs at the empire. Thus, Byzantium’s realm in Asia Minor was secure from threat of Muslim conquest. Though Leo left behind a Byzantium secure for a time against its Arab enemies, he also—as one of the great Iconoclasts (Byzantine puritans who abhorred the Eastern Orthodox Church’s addiction to religious icons)—left behind an empire as deeply divided as it had ever been.

Rosser, *Historical Dictionary of Byzantium* (New York: Rowman and Littlefield, 2001); Warren T. Treadgold, *Byzantium and Its Army, 284–1081* (Palo Alto, Calif.: Stanford University Press, 1995).

Byzantine-Muslim War (741–752)

PRINCIPAL COMBATANTS: Byzantines vs. Muslims

PRINCIPAL THEATER(S): Cyprus and Armenia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Byzantine emperor Constantine V sought to retake lands lost to the Muslims.

OUTCOME: The Byzantines prevailed, recapturing Cyprus and Armenia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: None

An Iconoclast like his father, Leo III (c. 680–741), Constantine V Copronymus (718–775) assumed the Byzantine throne in 741. He had been nominal ruler since infancy, and now as sole emperor was determined to regain lands lost to the Muslims in previous conflicts. Learning in 741 that the Muslim realms were torn by internal strife, he led an army into Syria, where he quickly retook certain border areas. But Constantine V was soon forced to return home because of internal problems: the religious revolt of the Second ICONOCLASTIC WAR. Once the rebellion was put down, he invaded Syria again, this time taking even more land. Constantine's fleet met that of the Arabs near Cyprus and defeated it. Following this the Muslims fled the island in 746.

By 752 Constantine had managed to retake all of Armenia after defeating the Muslims—weakened by the MUSLIM CIVIL WAR (743–747)—in a series of engagements in that region. Constantine V was as much a general as he was an emperor, and as a Byzantine commander he amassed a record of great military successes.

Byzantine-Muslim War (778–783)

PRINCIPAL COMBATANTS: Byzantines vs. Muslims (including Mesopotamians, Syrians, and Khorasanians)

PRINCIPAL THEATER(S): Anatolia and the region of the Bosphorus

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In the first phase of the war the Muslim forces sought to conquer Anatolia; in

the second phase they sought revenge for the slaughter of the Battle of Germanicopolis.

OUTCOME: After a devastating defeat at the Battle of Germanicopolis, the augmented Muslim forces reinvaded the Byzantine Empire, defeated its army, and exacted tribute.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: Truce and tribute agreement

Following the death of Constantine V Copronymus (718–775), the long rivalry between the Byzantines and the Muslims revived, and the Muslims resumed their annual raids into the Byzantine Empire. At last, in 778, the Arabs made a full-scale invasion into Anatolia (most of modern Turkey), but were defeated at the Battle of Germanicopolis in 779. During the battle and in its aftermath, Emperor Leo IV (749–780), the Byzantine commander in chief, ordered the slaughter of thousands of Muslims. His goal was nothing less than genocide.

In 780 Caliph Muhammad al-Mahdi (742–786) vowed revenge and for that purpose assembled a formidable army consisting of Mesopotamians, Syrians, and Khorasanians, diverse peoples united only by their Islamic opposition to Christian Byzantium. By this time, however, Leo IV had died, leaving as his successor Constantine VI (771–c. 797), who was a boy of nine. His mother, Irene (752–803), acting as regent, responded decisively by dispatching her armies to meet and destroy the Muslims. They failed. Under the command of the caliph's son Harun al-Rashid (766–809), the Arab forces won victory after victory, pushing the Byzantines before them as they advanced westward. By 783 the Muslim army had reached the Bosphorus and there dealt the Byzantines a decisive blow at the Battle of Nicomedia. A much abashed Irene had no choice but to sue for peace. The terms granted called for a truce of three years, during which period the Byzantine Empire would pay the Muslims annual tribute.

Byzantine-Muslim War (797–798)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Muslims under Harun al-Rashid

PRINCIPAL THEATER(S): Vicinity of the cities of Ephesus and Ancyra (Ankara)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Muslims invaded the Byzantine Empire to exact tribute money.

OUTCOME: Empress Irene, realizing that her forces were no match for those of the caliph, agreed to resume the tribute payments that had accompanied the truce ending the Byzantine-Muslim War of 778–83.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Resumption of the truce ending the 778–83 war.

Following the BYZANTINE-MUSLIM WAR (778–783), the Byzantine empress Irene (752–803) had agreed for a period to pay the Muslim victors an annual tribute. In the meantime, she also greatly reduced the strength of her armies in order to forestall the possibility of a military coup in the chronically unstable Byzantine Empire. This, of course, left the empire vulnerable to attack, and, after the tribute period expired and Irene halted payment, the stage was set for yet another Muslim invasion.

Harun al-Rashid (766–809) became Muslim caliph in 786. He set about rebuilding Tarsus, a venerable city razed by the Arabs in about 600. He fortified Tarsus as well as the city of Hadath, intending to use both as staging areas for an invasion of the Byzantine Empire. Finally, in 797 al-Rashid's armies began their advance into the empire, quickly taking the important cities of Ephesus and Ancyra (Ankara). Faced with the prospect of further invasion and with a greatly reduced army, Irene agreed to resume the tribute payments that had accompanied the end of the 778–783 war. She counted this less a military defeat than an alternative to creating a Byzantine army sufficiently powerful to overthrow her. Forced to choose between her own generals and the Ottoman Turks, Irene cast her lot with the latter.

H. Rosser, *Historical Dictionary of Byzantium* (New York: Rowman and Littlefield, 2001); Warren T. Treadgold, *Byzantium and Its Army, 284–1081* (Palo Alto, Calif.: Stanford University Press, 1995).

Byzantine-Muslim War (803–809)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Muslims

PRINCIPAL THEATER(S): Anatolia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Byzantine emperor Nicephorus I repeatedly broke the truce Empress Irene had concluded with Caliph Harun al-Rashid.

OUTCOME: After disastrous early defeats followed by short-lived truces, Nicephorus mounted a successful counteroffensive that restored peace.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: An enduring truce was concluded in 809.

In order to conclude the disastrous BYZANTINE-MUSLIM WAR (797–798), Empress Irene (752–803) purchased a truce in exchange for annual tribute payments. It was less an act of desperation than a calculated move to limit the power of the Byzantine military, which always threatened a coup. Her successor, Emperor Nicephorus I (d. 811), having built up the Byzantine army that Irene had reduced, was confident of victory against the Muslims. Accordingly, he not only called a halt to the payment of tribute, but deliberately provoked war by writing an insulting letter to Caliph Harun al-Rashid (766–809).

The letter proved effective. The caliph led an army of invasion across the Taurus Mountains of Anatolia in 803, quickly capturing the Byzantine city of Heracles Cybistra (Eregli). When this occurred Nicephorus suddenly repented of his rashness and sued for peace. A treaty was drawn up, but almost instantly, Nicephorus broke the truce, and Al-Rashid invaded again—this time with redoubled vigor, raiding and razing the towns of Anatolia as he pushed northward. Reeling from this devastating juggernaut, Nicephorus again sued for peace—and again, he broke it. In response the Muslims took Tyana and Ancyra (Ankara) in 806 and over the course of 805–807 laid waste to Rhodes and Cyprus.

At last, during 807–09, with key imperial possessions in Ottoman lands, Nicephorus was able to mount an effective counteroffensive. This, combined with the intensifying demands of the KHORASAN REBELLION in 806–809, forced the caliph to break off the war and to relinquish captured Byzantine territory. An enduring truce was concluded in 809.

Byzantine-Muslim War (830–841)

PRINCIPAL COMBATANTS: Byzantines vs. Muslims

PRINCIPAL THEATER(S): Anatolia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In the first phase of the conflict, a desire for plunder motivated the Muslims; in the second phase revenge for Byzantine victories was the principal motivation.

OUTCOME: A truce restored the status quo ante bellum.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: A truce was concluded in 841.

The truce concluded between the Muslims and the Byzantines in 809 (see BYZANTINE-MUSLIM WAR [803–809]) was broken not by the Byzantines (who had violated many prior truces), but by Caliph al-Ma'mun (785–833), who annually raided Byzantine lands during 830, 831, and 832. Emperor Theophilus (d. 842) sued for peace, but the caliph persisted in his aggressive course. The caliph's death from disease in 833 cut short his program of aggression, even as he led an assault against the Byzantine fortress of Amorium and then Constantinople, after capturing the town of Tyana.

The caliph's death brought an uneasy de facto truce. Now it was Theophilus's turn to violate the peace. In 837 he aided the Khurramite rebel Babak al-Khorrami (d. 838) during the KHURRAMITES' REVOLT. Babak's object, which Theophilus endorsed, was nothing less than to suppress the expansion of Islam. Theophilus led his Byzantine armies as far as the Euphrates River in northeastern Syria, devastating the Muslim towns of Samosata and Zibatra. In response al-Ma'mun's successor, Abu Ishak al-Mu'tasim (r. 833–842), assembled a vast Muslim army—the greatest ever formed under a single caliph—consisting of Turkish slaves as well

as Arab warriors. He marched into Anatolia (much of present-day Turkey), where he crushed Theophilus's army at the Battle of Dazimon on the Halys River in July 838. Capitalizing on this triumph, the caliph laid siege to Ancyra (Ankara) and Amorium, capturing both.

As with so many would-be conquerors, Muslim and otherwise, Al-Mu'tasim's grand design was to take Constantinople. However, nature intervened in the form of a great storm, which swamped the Arab fleet in 839. This accident gave Theophilus time to regroup his shattered forces, and he was able to push the invaders back to the frontier. The caliph and the emperor concluded a truce in 841.

Byzantine-Muslim War (851–863)

PRINCIPAL COMBATANTS: Byzantines vs. Muslims

PRINCIPAL THEATER(S): Anatolia and Egypt

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Byzantines sought to bring an end to Muslim raids on their territory.

OUTCOME: With the defeat of the Muslims in Anatolia and the death of the Abbasid commander Omar, Muslim expansion came to a temporary halt.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Generally unknown, although it is recorded that 10,000 Arab prisoners were taken at Amida (Diyarbakir) in 854.

TREATIES: None

In medieval government, so-called sovereigns rarely exercised absolute control or authority over their subjects. Truces and treaties were made, but the actions of groups and individuals often violated their terms. So it was in 851. Despite the truce concluded between the Muslims and Byzantines following the BYZANTINE-MUSLIM WAR

(830–841), Muslim raiders continued to harry the Byzantine Empire, prompting, in 851, a Byzantine response in the form of a massive offensive. The offensive swept the raiders out of Byzantine-held lands and culminated in 853 with an amphibious invasion of Egypt. Byzantine forces destroyed the city of Damietta (Dumyat), while in Muslim-held Anatolia (most of modern Turkey) Byzantine forces defeated the Muslims at Amida (Diyarbakir), where 10,000 Arab prisoners were taken.

From 853 to 860 Arab forces were on the run. Then, late in 860 the Muslims rallied and, securing military aid from the Paulicans, a heretical Christian sect persecuted by the Byzantines, defeated the forces of Byzantine emperor Michael III (836–867) in a battle on the Euphrates River in northern Syria.

The Euphrates clash was the last major battle until 863. The combat cooled into a grim succession of skirmishes, raids, and counterraiders. The result of these was a general war weariness that produced a truce and an exchange of prisoners. Briefly, this reinvigorated the war's major phase. In 863 a large Muslim army led by the Abbasid commander Omar (d. 863) invaded Anatolia, sacked the Black Sea port of Amisus (Samsun), and pillaged the regions of Paphlagonia and Galatia.

The Byzantines responded by attacking Omar's army, which withdrew to the Anti-Taurus Mountains. With uncharacteristic vigor, Byzantine forces pursued the Arabs into the mountains and virtually annihilated the army. Omar himself fell in battle. With this Byzantine victory the expansion of the Muslim realm came to a temporary halt.

Byzantine-Muslim War (871–885)

PRINCIPAL COMBATANTS: Byzantines vs. Muslims

PRINCIPAL THEATER(S): Upper Euphrates region, Italy, and Sicily

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Byzantines sought to expand their eastern frontiers.

OUTCOME: Weakened by internal strife, the Muslims suffered a series of defeats and were driven out of parts of Italy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The hard-fought BYZANTINE-MUSLIM WAR (851–863) had brought an end to Muslim raiding and invasion of Byzantine territories. Byzantine emperor Basil I (c. 813–886), however, was not content with allowing this relatively peaceful state of affairs to endure. His bellicosity resulted from a combination of religious zeal, tradition, and a very real fear that unless the Arabs were totally defeated, war would resume on Muslim terms and at the peril of the empire.

Thus, when Basil saw that the Muslim caliphate was torn and weakened by the MUSLIM CIVIL WAR (861–870), he resolved to capitalize on the turmoil by extending the eastern frontier of his empire. He led an army to the upper Euphrates River at Samosata (Samsat) and there met and defeated the sorely depleted Muslim forces in 873. Next, Basil embarked on an expedition to push Muslim invaders out of Sicily and southern Italy. Allying himself with Holy Roman Emperor Louis II (d. 875), Basil laid siege to Muslim-held Bari, which fell in 875.

Ultimately, Basil did not succeed in driving the Muslims out of Sicily. As usual, logistics was the problem. Limited supplies prompted his withdrawal. Nevertheless, Basil was able to reclaim all Tarentum (Taranto) in 880 and Calabria in 885. Tarentum served as a permanent refuge for Christians driven out of Sicily by the Muslims. Significant though these gains were, Basil had hardly succeeded in his objective of annihilating the Muslim armies, vulnerable as they were at the time.

Byzantine-Muslim War (960–976)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Hamdanid and Fatimid Muslims

PRINCIPAL THEATER(S): Anatolia and Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The war began as a Byzantine counteroffensive to drive the Muslims out of Anatolia but developed into an invasion of Muslim territories as far as Jerusalem.

OUTCOME: The Muslims were pushed out of Anatolia, and several key cities in Syria fell to the Byzantines, who were finally stopped at Jerusalem.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Forces of the Hamdanids, a Muslim dynasty of northern Iraq and Syria, repeatedly raided Anatolia (most of modern Turkey) during the late 950s and early 960s. In response the Byzantine emperor Nicephorus II (d. 969) launched a counteroffensive, seizing the province of Cilicia and capturing Adana and Tarsus in 965. Next, Nicephorus marched into Syria and northern Mesopotamia, occupying Antioch and in 969 Aleppo. In the wake of these losses, the Hamdanid leader Sa'd ad-Dalwah (r. 967–971), sued for peace. Nicephorus was apparently quite willing to come to terms, but in 969 he was assassinated by John Tzimiscēs (925–976), who then became the Byzantine co-emperor. Aggressive by nature, John spurned the Hamdanid olive branch and resumed the invasion of Syria, capturing Damascus in 974.

The Byzantine advance was finally stopped in 976 at Jerusalem by another Muslim dynasty, the Fatimids. This, combined with the death of Tzimiscēs later in the year, brought the war to a close.

Byzantine-Muslim War (995–999)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Fatimid and Hamdanid Muslims

PRINCIPAL THEATER(S): Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ostensibly, the Byzantine objective was to aid the Hamdanids in resisting Fatimid invasion. However, the Byzantines also sought to forestall an anticipated Hamdanid invasion of the empire.

OUTCOME: The Fatimid invasion was pushed back, and Byzantine dominance over the Hamdanids was likewise reinforced.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: A 10-year truce was concluded between the Byzantine Empire and the Fatimids of Egypt.

Warfare was chronic between the Christian Byzantines and the Muslims of the Middle East during the early medieval period. Rarely was either side able to achieve decisive victory, and so each side watched the other for signs of internal weakness, which could be exploited. Byzantine emperor Basil II (c. 958–1025) was keenly interested when in 995 the Hamdanids, a Muslim dynasty living in Byzantine-occupied Syria, appealed to him for help in defending against the invading Fatimids, a rival Muslim dynasty from Egypt. Basil allied himself with the Hamdanids to push back the Fatimids but soon turned on his allies by attacking the Hamdanid city of Homs in Syria. Basil justified his treachery on two grounds: He believed the Hamdanids were planning to invade the Byzantine Empire, and he believed it his Christian mission to oppose Islam at every opportunity.

The attack completed, the Byzantine emperor led his troops through northern Syria during 999, continuing to push the Fatimids before him until, exhausted, the Fatimids negotiated a 10-year truce on terms highly favorable to the Byzantines. In this way Basil had subdued two major Islamic dynasties.

Byzantine-Muslim War (1030–1035)

PRINCIPAL COMBATANTS: Byzantine Empire, Ragusa, and Viking mercenaries vs. Dalmatian Muslim pirates

PRINCIPAL THEATER(S): Adriatic Sea and Mediterranean Ocean, with some activity on the North African coast

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Byzantine Empire sought to destroy the Muslim pirates of Dalmatia.

OUTCOME: The pirates were eliminated from the Adriatic and Mediterranean.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Unlike the earlier conflicts between the Byzantine Christians and their Muslim neighbors, this was a dispute over neither religion nor territory, but rather over piracy. Although the Muslim pirates of the Dalmatian coast had been driven from their bases of operations, Curzola and Lagosta, thanks to the ruthless persistence of the 10th-century Venetian privateers, they persisted in terrorizing the Adriatic well into the 11th century. Pirate raids became so costly to the city-state of Ragusa (Dubrovnik) that it eagerly joined the Byzantine Empire in return for protection against this single menace.

Byzantine empress Zoë (980–1050) and her husband Emperor Romanus III Argyrus (c. 968–1034) launched a vigorous series of naval campaigns against the pirates. In 1032 Byzantine and Ragusan vessels systematically operated against and eliminated the pirates in the Adriatic. This accomplished, Byzantine ships manned by mercenary Viking crews patrolled the Mediterranean, acting as decoys to draw the pirates out, then attacking them. This decoy operation was accompanied by strictly punitive action against the Muslim cities and towns along the North African coast.

Byzantine Naval Wars against the Muslim Pirates See BYZANTINE-MUSLIM WAR (1030–1035).

Byzantine–Ottoman Turk War (1302–1326)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Ottoman Turks; the Catalan Company, in service to the Byzantines, fought the Ottomans, then rebelled against the Byzantines.

PRINCIPAL THEATER(S): Western Asia Minor, Thrace, and Macedonia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: To expel Ottoman invaders, the Byzantines hired the mercenary Catalan Company; subsequently, protesting insufficient payment, the Catalan Company rebelled against the Byzantines.

OUTCOME: Although the Catalan Company scored an important victory against the Ottomans, they proved a scourge to the Byzantines, whose major cities were also besieged by the Ottomans. Ultimately, Bursa was lost to the Ottomans.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 6,500 Catalan mercenaries; unknown Byzantines and Turks

CASUALTIES: Unknown

TREATIES: None

When the Mongol hordes drove them out of western Asia, the Ottoman Turks moved south into territory controlled by the Byzantine Empire. Under Osman I (1258–1326) they overcame Byzantine resistance to their invasion, defeating Byzantine forces at Nicomedia near the Bosphorus Strait in 1302.

Unfortunately for the Byzantines, Emperor Andronicus II Palaeologus (1260–1332) had drastically reduced the imperial army in order to save money. To defend the empire he now hired the Catalan Company, consisting of some 6,500 Spanish mercenaries led by a former pirate named Roger de Flor (d. 1305). The Catalans met and defeated the Turks at Philadelphia in western Asia Minor in 1304. Within two years, de Flor was married into Byzantium's royal family and dreamed of his own independent

kingdom carved out of the empire. Victories in the East fed his hopes. When the emperor, chronically short of cash, proved unable to pay the mercenaries, de Flor actually besieged Constantinople during the subsequent Catalan unrest. The siege failed, but the revolt resulted in an agreement in which Andronicus granted de Flor's demand for the whole of Byzantine Anatolia in fief.

In the spring of 1305 Roger de Flor visited with members of the Byzantine court at Adrianople, hoping to smooth over misunderstandings with his wife's family. As he departed, the emperor had him assassinated, an act that triggered an orgy of revenge by the Catalan Company throughout Thrace and Macedonia. The empire would not be rid of the Catalans until 1311, when the last of the mercenaries left for Greece, where they established a duchy at Athens, which was to last another 77 years.

After the Catalans turned against them, the Byzantines were plagued by a chronic state of Ottoman siege. The Turks established a chain of forts around such major Byzantine cities as Bursa and Nicomedia. Bursa suffered the worst. It was besieged for nine years before the inhabitants, on the verge of starvation, finally surrendered to the Turks in 1326. The captured city became the capital of the Ottoman Empire, serving as such until Adrianople fell to the Ottoman Turks in 1413.

Byzantine–Ottoman Turk War (1329–1338)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Ottoman Turks

PRINCIPAL THEATER(S): Western Asia Minor

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Capitalizing on the weakness of the Byzantines, who were torn by civil war, the Turks sought territory.

OUTCOME: After suffering repeated defeat, the Byzantines agreed to a truce and anti-Serb alliance with the Turks.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Truce and anti-Serb alliance

Orkhan (1288–1360) succeeded his father, Osman I (1258–1326), as leader of the Ottoman Turks. As only the second Ottoman ruler, Orkhan was anxious to expand the holdings of the dynasty and therefore settled his people on the Gallipoli Peninsula, between the Aegean Sea and the Dardanelles, during the later 1320s. This gave him a strategic base from which he could launch invasions into Byzantine Thrace and Macedonia at will. Orkhan exploited Byzantine weakness, brought on by the long and draining BYZANTINE CIVIL WAR (1321–1328) and attacked beginning in 1329. At the battle of Pelekanus came the first personal encounter between a Byzantine emperor and an Ottoman emir. Unable to repulse Turkish invaders—who captured Nicaea in 1331 and Nicomedia in 1337, finally seizing the whole of western Asia Minor by 1338—Byzantine emperor Andronicus III Palaeologus (1296–1341) accepted a truce that offered alliance with the empire against a new threat, the Serbs—under their ambitious leader Stephen Dushan (c. 1308–55).

Byzantine–Ottoman Turk War (1359–1399)

PRINCIPAL COMBATANTS: Byzantine Empire (with aid from Serbs, Bulgars, Bosnians, Albanians, and others in 1389) vs. Ottoman Turks

PRINCIPAL THEATER(S): Most of the Byzantine Empire

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Ottomans sought to conquer the Byzantine Empire.

OUTCOME: While most of the Byzantine Empire fell to the Ottomans, the last vestige, the city of Constantinople, stubbornly resisted.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

John V Palaeologus (1332–91) wrested the Byzantine throne from John VI Cantacuzene (1292–1383) in 1354, then pleaded for military aid from the principalities at the

fringes of the empire to fight against Ottoman Turk invaders. His pleas were in vain, and by 1359 the Turks, always prepared to exploit evidence of Byzantine vulnerability, surrounded Constantinople. The fact was that by this time most of the Byzantine territories had fallen to the Ottomans.

While his forces continued to defend Constantinople, John V Palaeologus traveled to Rome in 1369 to secure help. It was a desperate journey, during which the Turks fought on, defeating Serb forces, which sought to carve a portion of the ailing empire for themselves. By 1371 all of Macedonia was in Ottoman hands.

John V Palaeologus finally managed to raise a Christian army of Serbs, Bulgars, Bosnians, Albanians, and others. But it was too little too late. So thoroughly established were the Ottomans that, at the Battle of Kosovo in 1389, they quickly crushed their opposition. With the Byzantine Empire tottering, the Ottomans laid full siege to Constantinople for an entire decade. Still, the city resisted, and in 1399 an army of mercenaries forced the exhausted and frustrated Ottomans to lift the siege and withdraw.

Byzantine–Ottoman Turk War (1422)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Ottoman Turks

PRINCIPAL THEATER(S): Outside Constantinople

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Murad II wanted to capture Constantinople.

OUTCOME: Internal strife and the strength of Constantinople's defenses compelled Murad to break off his siege.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

This brief conflict was ignited when Byzantine emperor John VIII Palaeologus (1391–1448) sought to destabilize

the Ottomans. This was an old and long-familiar game. Unable to triumph over the Turks, the Byzantines repeatedly looked to exploit any sign of internal Ottoman weakness. Provoking dissension at the highest levels of government, John encouraged a pretender to usurp the throne from the ascending sultan, Murad II (1403–51). The new sultan discovered the plot and easily checked it in 1421. Enraged, he broke the truce that had concluded the BYZANTINE–OTTOMAN TURK WAR (1359–1399) by attacking Constantinople in 1422. As in the past, the city's geographic situation and the strength of its walls and other defenses withstood the siege. Moreover, Murad found himself threatened by yet another pretender, also probably encouraged by the Byzantines. He broke off the siege and returned home, the war having come to nothing.

Byzantine–Ottoman Turk War (1453–1461)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Ottoman Turks

PRINCIPAL THEATER(S): Constantinople, Anatolia, and the Balkans

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Sultan Muhammad II the Conqueror wished to conquer the tottering Byzantine Empire and to take Constantinople as a prize.

OUTCOME: The Byzantine Empire and its possessions fell to the Turks, as did Constantinople, which, however, had been largely despoiled by the conquerors.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 10,000 Byzantines vs. 80,000 Ottoman Turks

CASUALTIES: Unknown

TREATIES: None

In the opening year of the war, the Ottoman Turks under Sultan Muhammad II (1429–81) invaded what remained of the Byzantine Empire and closed in on Constantinople. On April 6, 1453, the 80,000-man Ottoman army laid siege to Constantinople, which was defended by Byzantine emperor Constantine XI Palaeologus (1404–53), who had only 10,000 men at his command. The Ottomans set up a

naval blockade and successfully fought off the Venetian fleet, which had come to the city's aid. The defenders in Constantinople also included a Genoese contingent, some from the nearby trading post at Galata, others from the city of Genoa itself. There was a Spanish grandee and a small party of Catalans, most of whom were permanent residents but a few of whom were sailors. But theirs was merely a forlorn hope against the forces of the sultan, who personally watched every movement of the battle from the shore. The Turks pounded the capital's walls with cannon fire, creating a breach sufficient to admit them on May 29. Constantine was killed in the final phase of the battle.

Muhammad had wanted to preserve the city as the glorious prize that had eluded his predecessors. He had promised his soldiers the three days of looting allowed by Islamic tradition. But so violent was the subsequent attack on the Byzantine population and so grand the plundering of the city, that he brought the sack to a sudden halt on the same day it started without protest from his troops, who had by then little left to steal and few to rape and slaughter.

Following the fall of Constantinople the Byzantines desperately tried to retain the few vestiges of empire remaining to them, but the Turks readily overwhelmed the Greek, Latin, and Slavic lands in the Balkans and Anatolia (Turkey). Belgrade put up a stout resistance. It did not become an Ottoman possession until 1456. In Greece Athens and the principality of Morea (Peloponnese) also fell in 1456. Trebizond, on the Black Sea, stood as the final Greek successor state of the Byzantine Empire until 1461, when its emperor, David Comnenus (d. c. 1462), surrendered to Muhammad II.

Byzantine-Persian War (603–628)

PRINCIPAL COMBATANTS: Byzantine Empire (with Khazar Turk allies) vs. the Persian Empire (with Slav allies)

PRINCIPAL THEATER(S): Byzantine Empire and Persia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Persians wanted to conquer the Byzantine Empire; the Byzantines, having lost much territory, fought to regain it.

OUTCOME: In the early phases of the war, the Persians overran the Byzantines, conquering huge territories; in the later phases of the war, the Byzantines recovered the lost territory and invaded Persia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Byzantine Empire, 50,000; Persia, 40,000.

CASUALTIES: Unknown

TREATIES: None

PHOCAS MUTINY, HERACLIUS'S REVOLT AND PERSIAN CONQUESTS, 603–620

In 602 a Byzantine centurion named Phocas (d. 610) led a mutinous army to Constantinople, where he forced the Byzantine emperor, Maurice (c. 539–602), to abdicate and then murdered him. Heraclius the Elder, the exarch of Africa, had been a loyal subject of Maurice, and he refused to accept Phocas as ruler of the Byzantine (or eastern Roman) Empire. Heraclius sent a fleet from Carthage to Constantinople under the command of his son, also named Heraclius (c. 575–641). The city's citizens rose in rebellion and aided Heraclius in his overthrow of Phocas, who was killed by a mob. The young Heraclius then was given the throne by popular demand.

Persia, locked in a permanent state of enmity with Byzantium, took advantage of the turmoil to engage in full-scale war. Chosroes II (fl. 590–628), with visions of expanding his kingdom, had attacked the empire's frontiers in 603 and 605, taking the Palestine port city of Caesarea. Heraclius responded and succeeded in pushing the Persians out of Caesarea in 611, then took the offensive and laid siege to the Persian city of Antioch in 613. However, that same year saw a series of Byzantine defeats as, one by one, the Byzantine provinces of Syria, Tarsus, and Armenia were lost to the Persians. Jerusalem fell in 614, the same year Chosroes began an all-out effort to conquer Anatolia. By 616 Persian general Sharen had captured Chalcedon on the Bosphorus. For the next 10 years the Persian forces remained within a mile of Constantinople, and they continued to make other gains, capturing Ancyra and Rhodes in 620. Meanwhile, in 616 Chosroes had turned toward Egypt. He defeated Byzantine garrisons in the Nile valley and marched across the Libyan desert to Cyrene, thereby cutting off trade routes between Egypt and Constantinople. In 619 all of Egypt fell.

THE ISSUS CAMPAIGN, 622–623

Having lost control of Syria, Anatolia, and Egypt and facing the Persian enemy across the Bosphorus, Emperor Heraclius was in despair. He was in the midst of making plans to sail for his homeland of Africa when the patriarch of Constantinople, Sergius (d. 638), sparked a patriotic resurgence in the city. Sergius made Heraclius promise never to abandon the capital and promised all the resources

of the church to aid the emperor in defense of Constantinople. Heraclius increased the size of his army, in part by recruiting monks from monasteries, and seized church property. He also made peace with the Avar chieftain whose raiders threatened the walls of Constantinople. Heraclius was then ready to turn his army against the Persians. In April 622 he set sail from Constantinople and landed near Alexandretta and ancient Issus. Immediately he seized control of the three passes by which the coastal plain of Issus is accessible. He also successfully repulsed the probes made by Persians under General Shahr Baraz. By October 622 Heraclius was ready for his main attack. Pretending to march through the Amanic Gates leading toward Armenia, he lured the Persians into battle on the heights above Issus. Heraclius then feigned retreat, drawing the Persians toward the plain. Meanwhile, the main body of his army pushed eastward through another pass. The rear guard repulsed Persian attacks, and the main body of the army left General Shahr Baraz behind. After a few days of countermarching, Shahr Baraz sent his men into Pontus in search of Heraclius's army. By year's end the two armies faced each other in the Anti-Taurus Mountains along the upper Halys River. There Heraclius annihilated an entire Persian unit, and the main body of the Persian army fled in disorder.

HERACLIUS'S INVASION OF PERSIA, 623–625

In 623 Heraclius left his son Constantine III (612–641) in command of the city's defenses and set sail with 5,000 men. Joining his main army in Trapezus, Heraclius raised even more recruits in Pontus. At last he was ready to make his move. Heraclius and his mighty army pushed through the mountains of Armenia to northern Media (northwest Persia) and sped toward the capital, Tabriz (Tauris).

Chosroes hastened to defend Media, but with his army outnumbered by as many as 10,000 men, he withdrew from the battlefield. Heraclius was then in control of the capital city. He then moved on to Thebarma and captured the birthplace of Zoroaster. At the end of this campaign, he withdrew his army to winter quarters in the Araxes valley of Albania.

After wintering in Albania, Heraclius set his sights on Persia proper. He and his army moved along the shores of the Caspian Sea and then pushed through the Hyrcanian Mountains into Persia. Chosroes ordered his troops from Chalcedon to central Persia, where he divided his forces into three great armies. Heraclius maneuvered successfully along the interior lines of the three Persian armies before withdrawing his forces to winter in Media. The Persian armies then went into winter quarters nearby.

Heraclius, however, had certainly not finished fighting. Early in the spring of 625, he marched his army through the mountains of Corcuene (Kurdistan) and crossed the Tigris River. The Persians, surprised by the

speed with which the Byzantines traveled, were unable to stop Heraclius from recapturing the towns of Amida and Martyropolis. The Persian army then withdrew across the Euphrates River, while Heraclius moved forward into Cilicia. There he faced Persian general Shahr Bazar along the Sarus River. Heraclius won the battle there, and Shahr Bazar was forced to withdraw under pursuit by the Byzantines.

HERACLIUS'S INVASION OF ASSYRIA, 627

After the success of the Byzantine army in Corduene and Mesopotamia and the victory at the Battle of the Sarus, Persia allied itself with the Avars, who had been threatening the walls of Constantinople off and on for more than two decades. Heraclius raced back to the capital to organize the city's defenses. The Persians and Avars attacked the city throughout the summer of 626 without success. The defenses held, and the allies withdrew. In spring 627 Heraclius was again ready to go on the offensive.

Having made his own alliance with Ziebel, khan of the Khazars, for an invasion of Persia, Heraclius marched through Syria, Mesopotamia, and southern Armenia. Along the way he regained control of most of the Byzantine fortresses that had fallen to the Persians 10 to 15 years before. Heraclius then marched to the upper Tigris and turned southward toward Assyria. In December 627 the armies, evenly matched in strength, squared off on the Assyrian plain.

By nightfall the Persian army was routed in this decisive battle. Though wounded in battle, Heraclius refused to withdraw, and he pursued the retreating Persians into Assyria. Rather than assault the Persian capital, he withdrew to the northeast to recuperate and rest his army and sent an offer of peace to Chosroes II. When the Persian king refused to accept the terms offered by Heraclius, his countrymen rose against him and installed his son Kavadh II as king. The Persians relinquished all their conquests and surrendered their battle trophies, including the relic of the True Cross. Heraclius then returned to Constantinople having defeated the Persians in this last war between the east Roman and Sassanid Empires.

Byzantine Revolts (976–989)

PRINCIPAL COMBATANTS: In the first revolt, elements loyal to Emperor Basil II vs. forces of the pretender Bardas Skleros; in the second revolt, Basil II vs. combined forces of Bardas Skleros and Bardas Phocus

PRINCIPAL THEATER(S): Asia Minor and Byzantine Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Byzantine general Bardas Skleros wanted to seize the throne from Basil II.

OUTCOME: The first revolt resulted in the defeat of Bardas Skleros; the second resulted in the defeat of Skleros and his collaborator, Bardas Phocus.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

After the death of Byzantine emperor John Tzimisces (925–976), his two sons, Romanus II and Basil II (c. 958–1025), ascended jointly to the throne. Basil, aged 19, took charge of the vast empire. Bardas Skleros (915–991) was a Byzantine aristocrat and landowner, a popular and powerful general and the brother-in-law of former emperor Tzimisces. Opposed to Basil's plan for land reform within the empire, which called for the confiscation of some privately owned lands in order to return them to the peasantry, Skleros immediately launched a revolt against the teenaged ruler. During his three-year march through Asia Minor and Byzantine Syria, Skleros seized vast tracts of territory. He was proclaimed emperor by his own troops and won recognition as the legitimate sovereign of Byzantium from the Melitene Arabs.

Basil assembled his army under the at least nominally loyal general Bardas Phocus (d. 989). Bardas Phocus had, in fact, rebelled against Basil's father and failed, before joining a monastery—as disgraced or retired public figures often did in Byzantium. Now he flung off his habit, swore a soon-to-be-violated oath of loyalty to the emperor, secretly made his way back to his old power base at Caesara, raised an army and launched into battle, defeating Skleros's forces in March 979 at the Battle of Pankalia. The rebel general found refuge with the caliph of Baghdad.

Nine years after Bardas Phocus quelled the revolts, he himself turned against Basil and conspired with Skleros to seize the throne at Constantinople. For a period Constantinople appeared to be in danger of falling to the generals, but Basil received a contingent of mercenaries from his brother-in-law, Vladimir (960–1015), prince of Kiev, which successfully overran the rebels at the Battle of Chrysopolis in 988 and crushed them at the Battle of Abydos the following year. During the rebellion Phocus succumbed to a heart attack, and with his death the rebellion

too died. Skleros fled but subsequently returned and submitted to Basil.

Byzantine-Russian Invasion of Bulgaria

See RUSSIAN-BULGARIAN WAR (969–972); BYZANTINE-RUSSIAN WAR (970–972).

Byzantine-Russian War (970–972)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Kievan Russians

PRINCIPAL THEATER(S): Bulgaria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Russians, called on by the Byzantines to suppress Bulgar rebels, attempted to seize Bulgaria for themselves.

OUTCOME: The Russians were ejected from Bulgaria, and the Bulgars were suppressed; Bulgaria became part of the Byzantine Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The Kievan Russians, like many other nominal allies of the Byzantines, had a history of turning against the empire when the occasion seemed opportune. For example, Russian forces moved against Byzantine-held Bithynia in 911 and against Byzantine possessions in the Danube River valley in 943. Returning to the Byzantine alliance after this latter conquest, Russia fought the RUSSIAN-BULGARIAN WAR at the behest of the Byzantines, who wanted to suppress the rebellious Bulgars in its client state. Victory won, however, the Kievan prince Sviatoslav (d. 972) decided simply to seize this Byzantine realm as a western frontier for his own realm.

In 971 Byzantines under Emperor John Tzimisces (925–976) attacked the turncoat Russians as well as the Bulgars, taking captive the Bulgar puppet czar Sviatoslav had set up at Preslav. After victory at the Battle of Preslav, Tzimisces besieged the Danubian city of Silistria, forcing Sviatoslav himself to surrender. After this the Russians broke off their conquest of Bulgaria, and the rebellion

there likewise ended. Bulgaria, hitherto a semi-independent client of the Byzantine Empire, became wholly a Byzantine possession, and the Kievan Russians did not attempt a new attack on their erstwhile ally.

Byzantine–Seljuk Turk War (1048–1049)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Seljuk Turks

PRINCIPAL THEATER(S): Armenia and eastern Turkey

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Seljuks invaded the eastern provinces of the Byzantine Empire; the empire forced their withdrawal.

OUTCOME: The Seljuks withdrew from Armenia and eastern Turkey.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

This brief conflict began when a band of Seljuk Turks invaded the eastern provinces of the Byzantine Empire. They attacked Kars, a fortified city in Armenia, defeating the defenders. Emperor Constantine IX Monomachus (c. 1000–55) owed his elevation to the throne to the empress Zoë, who took him as her third husband. To all appearances he was quite unfit to rule, spending vast sums on luxury while neglecting the military. Astoundingly, however, he dispatched Byzantine armed forces to the area west of Lake Van (in eastern Turkey), where the Seljuks had settled. Poorly equipped and indifferently led, the Byzantines nevertheless forced the Turks to withdraw after a few minor battles.

Byzantine–Seljuk Turk War (1064–1081)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Seljuk Turks

PRINCIPAL THEATER(S): Armenia and eastern Anatolia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Seljuks sought territorial expansion into the Byzantine Empire.

OUTCOME: Although the Byzantines ultimately checked the Seljuk advance, the peace settlement gave the Seljuks all the territory they had conquered.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Byzantine Empire, 40,000; Seljuk forces, 70,000

CASUALTIES: Unknown

TREATIES: No document survives, but a formal settlement ceded conquered territories to the Seljuks in return for peace.

The Seljuk Turks had briefly occupied Armenia and eastern Anatolia (eastern Turkey) during the BYZANTINE–SELJUK TURK WAR (1048–1049) but were expelled with surprising ease. However, over the years many other Turkish groups invaded the Byzantine Empire. Their weakness was in their disunity. While individual commanders might succeed in capturing an objective, the Seljuks were rarely able to retain much territory. In 1064, however, the strong Seljuk leader Alp Arslan (1029–72) led an army into Anatolia, taking the city of Ani and then ravaging Armenia.

Alp Arslan brought to Seljuk warfare a degree of coordination and follow-through hitherto unknown. Over the course of the next three years, Alp Arslan's Seljuk forces penetrated deep into Anatolia, and the Byzantine emperor, Romanus IV Diogenes (d. 1072), launched a vigorous counteroffensive. Successful at first, Romanus pushed the Seljuks back from their position in Heraclea to Aleppo. There, however, they regrouped and mounted a new invasion in 1070, defeating the Byzantines at Sebastia. In Armenia at the village of Manzikert during August 1071, the Seljuks won a great battle against the whole of the 40,000-man Byzantine army. Alp Arslan offered Romanus terms, but, despite being vastly outnumbered by the 70,000 Turks assembled, Romanus refused. Alp Arslan enveloped his forces and crushed them, taking Romanus himself prisoner. Romanus died in captivity the following year.

Following this victory the Seljuks overran much of Anatolia, inflicting heavy civilian casualties. With their army in tatters the Byzantines recruited European mercenaries. These forces proved troublesome, but they nevertheless

succeeded in halting the advance of the Seljuk hordes. Aware that he lacked the strength to deliver a decisive blow against the Turks, Alexius I Comnenus (1048–1118), who had become Byzantine emperor in 1080, concluded a peace with the Seljuks in 1081. They were formally ceded the territory they had captured.

Byzantine–Seljuk Turk War (1110–1117)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Seljuk Turks

PRINCIPAL THEATER(S): Anatolia (Turkey)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Seljuks sought to conquer and hold Anatolia.

OUTCOME: Despite large early advances, internal dissension brought disunity and defeat, forcing the Seljuks to accept a truce that divided Anatolia between them and the Byzantines.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No document survives, but a formal division of Anatolian territory was made.

As they had in the previous century, the Seljuks—at the time the dominant group among the various Turk tribes—invaded the Byzantine Empire, staging raids deep into Anatolia (Turkey) and reaching as far as the Bosphorus. The invasion was stopped less by action of the Byzantines than by the effects of dissent among the Turkish generals and other leaders after the death of strongman Kilij Arslan I in 1108. Lacking unity, the Seljuks suffered a series of military reversals and finally withdrew back across Anatolia. Taking advantage of the situation, the Byzantine emperor, Alexius I Comnenus (1048–1118), gave chase with his largely mercenary army, routing the Turks at the Battle of Philomelion (Akshehr) in 1116. Remarkably, the Byzantine cavalry soundly defeated the mounted Turkish archers—a stunning reversal of the trend of military history. By this period the era of the mounted knight was receding. By the following year the Turks agreed to a set-

tlement whereby the Byzantines recovered all of coastal Anatolia, whereas the Seljuks created the sultanate of Rum in eastern Anatolia. In effect, Byzantium was west of a line running north-south through Sinope, Ankara, and Philomelion, while the Seljuk realm lay to the east.

Byzantine–Seljuk Turk War (1158–1176)

PRINCIPAL COMBATANTS: Byzantine Empire vs. Seljuk Turks

PRINCIPAL THEATER(S): Anatolia (Turkey)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Seljuks sought to conquer Anatolia.

OUTCOME: Anatolia fell to the Seljuks, thereby signaling the beginning of the dissolution of the Byzantine Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No document survives, but a formal truce ceded all of Anatolia to the Seljuks.

Seeking to appease the Seljuk Turk leader Kilij Arslan II (d. 1192) in order to forestall his annexation by Byzantine-held Anatolia, the Byzantine emperor Manuel I Comnenus (c. 1120–80) consented to Kilij's request for military aid in the Seljuks' ongoing warfare with rival Turkish groups. Manuel hoped that his help would eliminate potential invaders of Anatolia, leaving a single Turkish group, weakened from intertribal war, to fight for possession of Anatolia.

The strategy backfired. Manuel had underestimated the strength and determination of the Seljuks under Kilij. Using the Byzantines' aid, he crushed his rivals, then went on to expand his territory. At last, Manuel organized a large Byzantine army to expel the Seljuks. The Byzantines and the Seljuks met on the field at Myriocephalum in September 1176. When it became apparent to Manuel that his situation was hopeless, he called for a truce. The price

was Anatolia, and its loss to the Seljuks signaled the collapse of the Byzantine Empire in Asia.

Byzantine-Syrian War (995–996)

PRINCIPAL COMBATANTS: Byzantine Empire vs. the Fatimid caliphate

PRINCIPAL THEATER(S): Syria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Syria

OUTCOME: Basil II defeated the Fatimid caliphate to extend Byzantine control to all Syria.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 17,000 Byzantines; many fewer Fatimids

CASUALTIES: Unknown

TREATIES: None

Basil II (c. 958–1025), infant co-emperor of the Byzantine Empire beginning in 963 and emperor in his own right from 985 (when he seized power from his regent, Basil Paracoemomenus [d. 985]), carried on the war against the Fatimid caliphate that had been started by John Tzimiskes (925–976) in 973. John had seized all Muslim holdings west of the middle Euphrates and had extended Byzantine rule into Syria. By 976 his expansion into Syria was halted by stout Fatimid resistance. In 994 the emir of Aleppo, now a Byzantine protectorate, appealed to the emperor concerning Fatimid encroachments in those Syrian lands his father had come to control. Although a cautious, often slow-moving emperor, Basil acted with some dispatch to reinforce the empire's stronghold at Antioch. But Antioch's governor, an old warrior named Michael Bourtzes (fl. 10th

century), proved no match for the Fatimids, who all but destroyed his reinforced army on the banks of the Orontes on September 15.

The emir sent a second appeal to Constantinople, this time emphasizing the danger not just to Aleppo but to Antioch as well. Basil quickly outfitted an expedition and personally marched his 40,000-strong army off to Syria as fast as he could, leaving those troops who fell behind to fend for themselves as he kept a grueling pace. In April 995, he and 17,000 of his men drew up beneath the walls of Aleppo, catching unawares the now hopelessly outnumbered Fatimids, who were engaged in a heavy siege of the city. The Fatimids fled south toward Damascus, followed by Basil. He sacked Emesa and sowed devastation down to Tripoli before he turned back to Antioch, placed Bourtzes under house arrest, and installed a new, younger governor. By the end of the campaign in 996, all of Syria was under Byzantine control.

Byzantine War (1207–1211)

PRINCIPAL COMBATANTS: Rival Byzantine states of Nicaea, Trebizond, and Epirus, plus Crusaders and the Seljuk Turks, who were allied with exiled Byzantine emperor Alexius III Angelus

PRINCIPAL THEATER(S): Nicaea

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rivals sought dominance of the Byzantine state of Nicaea after the empire divided following the Fourth Crusade.

OUTCOME: The integrity of Nicaea remained intact.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

During the FOURTH CRUSADE Constantinople was sacked in 1204, and the Crusaders created the so-called Latin Empire of Constantinople. The rest of the Byzantine Empire then disintegrated, fragmenting into three independent rivals: Trebizond, on the Black Sea; Epirus, in

western Greece; and Nicaea, in Asia Minor. The Byzantine emperor Alexius III Angelus (d. 1211) was exiled and secured asylum among the Seljuk Turks, traditional enemies of the empire. Alexius incited his Seljuk hosts to invade Nicaea in 1208 in order to force its ruler, Theodore I Lascaris (1175–1222)—who had usurped the title of Byzantine emperor—to abdicate. However, Theodore mounted a strong defense and repulsed the Seljuk advance, even as he fought a defensive campaign to keep the forces of Trebizond and the Crusaders out of Nicaea.

In 1211 Alexius and the Seljuks once again invaded Nicaea while Trebizond and Epirus also contested for rule there. Theodore defeated the Seljuks on this occasion and

took Alexius prisoner, sending him to the isolation of a monastery in Nicaea, where he soon died. The Byzantine War was at an end, but the once expansive empire remained chronically imperiled and severely reduced.

Cabochien Revolt (1413)

PRINCIPAL COMBATANTS: Cabochiens (Parisian tradesmen), with Burgundian backing, vs. French royal authorities

PRINCIPAL THEATER(S): Paris

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Cabochiens sought to force social and economic reform in France.

OUTCOME: Initially successful, the Cabochiens were suppressed by Charles, duc d'Orléans.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Organized Cabochiens, 500; strength of opposing forces, highly variable

CASUALTIES: Unknown

TREATIES: None

The Cabochien Revolt took place against the backdrop of the HUNDRED YEARS' WAR and the climate of general unrest it created in France. Early in the 15th century the new king of England, Henry IV (1387–1422), aimed to recover some of the English rights in France lost during the previous course of that intermittent but continuous conflict.

When the ARMANAC-BURGUNDIAN CIVIL WAR broke out in 1411, both sides hoped to garner English support, but John the Fearless (1371–1419), duke of Burgundy, also shored up his faction in the civil conflict by calling for reforms and seeking the support of the Paris mob. This encouraged Simon Le Coustellier (fl. early 15th century), a skinner by trade who called himself Simon Caboche, to lead an impromptu “army” of some 500 fellow Parisian tradesmen (mostly members of the butchers' and skinner's guilds) in a spasm of violent rioting that amounted to a revolt against royal corruption and extrava-

gance. The French court and much of Paris were terrorized by Cabochien activity.

The Cabochiens stormed the Bastille in April 1413. They seized the royal fortress-prison in an act that forced Charles VI (1371–1422) to issue the Ordonnance cabochienne, which promulgated a list of liberal reforms. Despite this, however, Cabochiens persisted in rioting. This activity alienated the Parisian middle class, which supported Charles (1391–1465), duc d'Orléans, rival of John the Fearless, to lead a force against the Cabochiens. By 1414 the rebels had been suppressed and the Ordonnance cabochienne repealed.

An angry and defeated duke of Burgundy then took a very dangerous step indeed. He encouraged young Henry V to claim the French throne for himself, which Henry did, invading with an army of 9,000 in 1415. He defeated a huge 30,000-strong French force at the famous battle of Agincourt on October 15 and reclaimed all of Normandy for England.

Cade's Rebellion (1450)

PRINCIPAL COMBATANTS: John Cade and an army of petty merchants and small property owners, mostly from Kent and Sussex, vs. England's Henry VI

PRINCIPAL THEATER(S): London

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Corruption, heavy taxes, and the exile of Richard, duke of York, all of which the rebels wanted brought to an end

OUTCOME: The rebellion was quelled, the rebels pardoned, Cade executed, Crown authority diminished, and Richard returned from exile.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
30,000 rebels

CASUALTIES: Unknown

TREATIES: None, but the king's amnesty more or less ended the fight.

By the middle of the 15th century, the glory of the HUNDRED YEARS' WAR had begun to wear thin with the English public. The stress of nearly constant conflict, the heavy burden of war taxes, the ever mounting casualties, and, in short, a century and more of brutal warfare had taken their toll, particularly on the urban middle classes, small shopkeepers, and small landowners. In 1450 Jack Cade (d. 1450), an ex-soldier, assumed the historically significant name John Mortimer, claimed to be the cousin of Richard, duke of York (1411–60), and mounted a well-organized rebellion by inciting the small property owners of Kent and Sussex to demand fairer treatment from Henry VI (1421–71). Cade called for Richard, King Henry's rival, to be returned from exile in Ireland, demanded lower taxes and prices, denounced royal corruption, and insisted on the dismissal of many high-ranking advisers to the king.

In June Cade gathered some 30,000 men and led them off to London. When the king's forces attempted to intercept the rebels, they were ambushed at the Battle of Seven Oaks on June 18, 1450. The royalists were soundly defeated, and the rebels marched on London unopposed. They generally savaged the city and captured the lord treasurer, James Fiennes, Lord Say and Sele, charged him with being responsible for England's numerous defeats at the hands of the French, and executed him for treason. Royal forces from the Tower of London in concert with local militiamen engaged the rebels and successfully drove them from the city on July 6, 1450. Henry, wary of creating martyrs, quickly pardoned the insurrectionists, deflating Cade's support. Cade continued to fight for the return of Richard, however, until he was injured and captured a few weeks later, then himself executed for treason. The rebellion damaged royal authority and helped pave the way for the duke of York's return from his Irish exile.

Cadiz Mutiny (1820)

PRINCIPAL COMBATANTS: The Spanish army led by Colonel Riego vs. forces of King Ferdinand VII.

PRINCIPAL THEATER(S): Spain

DECLARATION: Colonel Rafael del Riego y Nuñez of the Spanish army issued a *pronunciamento* on January 1, 1820.

MAJOR ISSUES AND OBJECTIVES: The restoration of the liberal Constitution of 1812

OUTCOME: Although able to sustain a constitutional government for three years, the liberals were defeated when French forces helped Ferdinand VII restore the monarchy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: None

Signalling the beginning of a liberal movement and an end to the influence of Metternich in Europe, the Cadiz Mutiny was a blow to dynastic Europe. The Spanish Bourbons had been forced off the throne by Napoleon Bonaparte (1769–1821) in 1807, when he installed his brother Joseph Bonaparte (1768–1844) as king of Spain. Spaniards reacted with intense opposition to the French and the development of a fractious pseudolegislativ movement in Spain. Underground legislatures to the French government in Madrid sprang up in several regions of Spain; however, their only unifying factor was the desire to defeat the French. Coups occurred frequently, and little was accomplished in the way of securing legitimate government for the Spanish. Napoleon's hold on Spain weakened, however, as his army suffered at the hands of the continental allies. Eventually, a consensus was reached in Spain, and a singular representative body—the Cortes—convened at Cadiz in 1810. Although many in Spain saw the Cortes as the end of the monarchy, others saw it only as a temporary solution until the monarchy could be restored.

At Cadiz the liberals outnumbered the conservatives, and they were able to promulgate a constitution in 1812 based loosely on the ideals of the FRENCH REVOLUTION (1789–1799): equality before the law, centralized government, equitable taxation, and the championing of property rights. It provided for limited constitutional monarchy and especially safeguarded against any form of concerted despotism. However, once Napoleon was defeated, other European monarchies, wary of the dangerous antidynastic precedent in Spain, focused their efforts on restoring Ferdinand VII (1784–1833) to the throne. These efforts were led by Austrian minister Klemens von Metternich (1773–1859), the leading proponent of conservatism and of the preservation of the political status quo in Europe in the early half of the 19th century. Due to his efforts Ferdinand was restored in 1814.

The king rejected the 1812 Constitution and attempted to rule as the Spanish Bourbons had before the French Revolution. Once more, Ferdinand tried to retake the Spanish colonies in Latin America that had declared inde-

pendence during Joseph's reign. Ferdinand's actions ruffled the army, and in 1820 a coup was launched from Cadiz, embarkation point for the troops waiting to leave for Latin America. On January 1, 1820, Colonel Rafael del Riego y Nuñez (1785–1823) issued a *pronunciamento*, or declaration of principle, to the troops stationed at Cadiz that denounced the monarchy and called for the adoption of the 1812 Constitution. Support for Riego quickly spread from garrison to garrison, and he took his troops around the neighboring countryside to gather support for the movement, which failed to materialize. The revolt appeared to decline into a showdown between the army and the king, with the general populace playing the part of spectator. Finally, near the end of February, uprisings began in Corunna, Pamplona, Barcelona, and Saragossa, and the rebel troops seized San Fernando and prepared to march on Madrid.

Ferdinand was forced to adopt the 1812 Constitution in March, but it was too late. Liberal revolutionary forces stormed the palace in Madrid and held the king under house arrest for the next three years. Just as quickly as things appeared to fall into place for the liberals, the tenuous consensus broke down, and counter-uprisings broke out in Castile, Toledo, and Andalusia. The victorious powers in the NAPOLEONIC WARS—the so-called Big Five of Russia, Prussia, Austria, Great Britain, and France—met at the Congress of Verona in 1822, dominated by Metternich, and agreed to send in French forces to restore Ferdinand. The French invaded in 1823, captured Madrid from the liberals, and drove the revolutionaries south to Cadiz and Seville. Ironically ending where they began, the rebels were routed at Cadiz on August 31, 1823. Ferdinand ruthlessly suppressed the rebels, revoked the 1812 Constitution, and returned Spain to despotic rule.

Caesar's War in Pontus (47 B.C.E.)

PRINCIPAL COMBATANTS: Bosphorus Cimmerius, under King Pharnaces II, vs. the Roman Legions, under Julius Caesar
PRINCIPAL THEATER(S): Pontus (southern coast of the Black Sea in Asia Minor)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Pharnaces II attempted to re-create the kingdom of Pontus, which his father, Mithradates VI, had lost to the Romans.

OUTCOME: Caesar defeated Pharnaces II.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Romans, 31,500 (seven legions); Pharnaces's forces significantly outnumbered the legions

CASUALTIES: Unknown

TREATIES: None

With the ROMAN CIVIL WAR of 43–31 B.C.E. raging, Pharnaces II (fl. 63–47), king of Bosphorus Cimmerius (the Crimea), saw an opportunity to re-create the kingdom of Pontus, which his father, Mithradates VI (c. 132–63), had ruled along the southern coast of the Black Sea until he suffered defeat at the hands of Rome's Pompey (106–48) in 66 B.C.E. While the Romans were occupied with their internecine struggle, Pharnaces extended his holdings along the northern coast of Asia Minor. After defeating Domitius Calvinus (fl. 53–40), a lieutenant of Julius Caesar (100–44), at the Battle of Nicopolis in October 48, he pushed into Cappadocia. Caesar responded during April–May 47 by mounting an expedition that left from Alexandria and stopped in Syria to add reinforcements from the Roman garrison. From here, the reinforced army—seven legions—marched overland through Asia Minor.

Caesar paused at Zela (Zile) in north-central Turkey and began making camp on August 2. The forces of Pharnaces suddenly descended on his legions, which, though taken by surprise, quickly formed into devastatingly effective battle groups that overwhelmed the attackers. It was an instance of highly trained and thoroughly disciplined troops acting against an ill-prepared mob. Following the Battle of Zela Caesar was able to dispatch to Rome perhaps the most famous military message in history: “*Veni, vidi, vici*” (I came, I saw, I conquered). He then quickly set about the task of reorganizing the eastern dominions of Rome, giving to his ally Mithradates of Pergamum (not to be confused with Mithradates VI—Mithradates of Pontus) governance of Pharnaces's realm, subject to Roman dictation.

Cambodian Civil War (1970–1975)

PRINCIPAL COMBATANTS: Government forces of Prince Norodom Sihanouk vs. the Khmer Rouge, in alliance with Viet Cong forces; subsequently, government forces under Prime Minister Lon Nol (with U.S. and South Vietnamese aid) vs. the Khmer Rouge and Viet Cong
PRINCIPAL THEATER(S): Cambodia (Kampuchea)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Norodom Sihanouk, Cambodian head of state, had allied himself with Communist forces, only to find his forces under attack by them. This destabilized his government, and he was overthrown in a coup. Civil war, complicated by communist insurgency from Vietnam, ensued.

OUTCOME: Cambodian monarchy was ended and the short-lived Khmer Republic founded, which was soon overrun by the forces of the Khmer Rouge.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Government forces, 75,000; Khmer Rouge, 60,000

CASUALTIES: Government forces, 50,000 killed, 200,000 wounded. Estimated total casualties for civilians and communist forces, 250,000

TREATIES: None

Of all the nations of 20th-century Indochina, Cambodia in many ways suffered the most during the VIETNAM WAR and its aftermath, more so even than Vietnam itself. Recognized officially as a “neutral” independent nation since the 1954 Geneva accords that had divided its fellow former French colony, Vietnam, north and south, Cambodia remained relatively free of the Southeast Asian conflict until 1969, thanks to the balancing act performed by its sovereign prince, Norodom Sihanouk (b. 1922). But on March 18, 1969, U.S. president Richard Nixon (1913–94), at what would prove to be great political cost at home, began a massive 14-month bombing campaign against North Vietnamese Army (NVA) and Viet Cong (VC: South Vietnam rebel forces) strongholds along the Vietnamese-Cambodian border. Despite the presence of some 40,000 communist troops and the 108,823 tons of American bombs dropped, Sihanouk showed every intention of preserving his country’s neutrality and, thus, the relative internal peace he had maintained since 1954 (with the single exception of a quickly suppressed 1967 left-wing peasant uprising).

Then, in 1970, while Sihanouk was out of the country on a face-saving tour of Europe and China, he was deposed by his own prime minister (and the royal army’s commander) General Lon Nol (1913–85). Lon Nol’s new puppet government ordered the North Vietnamese Army and the Viet Cong out of their Cambodian bases and issued inflammatory anti-Viet Cong proclamations that sparked a pogrom against all the Vietnamese residing in Cambodia, hardened rebel and hapless peasant alike.

As the new government dumped hundreds of the slain Vietnamese into the Mekong River, a pro-Sihanouk opposition quickly arose, but these demonstrations were brutally suppressed. Sihanouk himself set up a government-in-exile in Beijing, and a communist guerrilla movement called the Khmer Rouge began to flourish. Having begun as a small, low-level insurgency in the hills of the northeast on January 18, 1968, the Khmer Rouge was now gathering steam,

attracting many new recruits and sending them off for training in North Vietnam. Meanwhile, the U.S. Air Force stepped up its air raids along the Cambodian border, and in late April 1970 a combined U.S.–Army of the Republic of Vietnam (ARVN) force invaded Cambodia.

While the allied attacks did disrupt some VC sanctuaries inside the Cambodian borders, in the long run they only succeeded in driving the Viet Cong deeper into the country’s interior. American ground forces withdrew in June, but the U.S. bombing continued unabated. With Sihanouk in exile and Cambodia subject to invasion and laid open to communist insurgency, General Lon Nol proclaimed the Khmer Republic on November 1, thus ending some 2,000 years of Cambodian monarchy (even if sovereignty had for many years ultimately rested with the French colonial office).

The military position of the Khmer Republic did not much improve in 1971. It took the intervention of some 6,000 ARVN troops to keep open such strategic roads as Route 1 across the Mekong and Route 4 connecting the capital, Phnom Penh, with the key southern port Kompong Som (formerly Sihanoukville). Throughout the year the communist guerrillas chipped away at the new government, forcing it into ever narrower confines as the rebels struck oil refineries (Kompong Som) and airports (Phnom Penh), cut off strategic roads from the capital to the north (Route 6), and besieged government garrisons (Rumlong).

By the time Lon Nol dispensed with puppet rulers and himself took open control of the government as president on March 10, 1972, the Khmer Rouge was in the process of choking off Phnom Penh from its sources of supply. The situation was made more desperate by the city’s burgeoning population of refugees, fleeing both the U.S. bombing and the communist revolution that were together chewing up the Cambodian countryside. On March 21, 1972, the Khmer Rouge bombarded Phnom Penh with artillery and rockets, inflicting many civilian casualties. In December the Khmer Rouge began a regular program of artillery and rocket assaults against the capital that continued sporadically until the end of the war in 1975. During March–April 1973 the Khmer Rouge imposed a blockade of the capital, essentially laying the city under siege. On March 17 the Presidential Palace was bombed, prompting Lon Nol to declare a state of emergency. With its inhabitants in danger of starvation and its small garrison hard pressed, the siege was broken in the nick of time on April 8–9 by heavily defended Mekong River convoys. Troops also opened the port of Kampong, enabling the off-loading of supply vessels by April 11.

Despite its reprieve and a U.S. airlift, American involvement in Southeast Asia was precipitously winding down as the American public increasingly protested the Vietnam War. The U.S. Air Force made its last bombing run over Cambodia on August 14, 1973, and on January 1, 1975, the Khmer Rouge rebels began a major drive against

Phnom Penh. In concert with North Vietnamese and Viet Cong forces, the Khmer Rouge attacked the capital along three fronts, pushing to within two miles of the city and totally cutting off all land routes. The United States contracted with civilian carriers to organize a major airlift. At the same time, commencing on January 1, 1975, Neak Luong, a Mekong River town commanding the river approach to Phnom Penh, was laid under siege. The rebels successfully blocked two riverborne convoys on January 17, but another, from South Vietnam, made it through to Phnom Penh on January 23. Early the following month U.S.-sponsored airlifts were increased from 10 planes a day to more than 20. U.S. president Gerald Ford (b. 1913) requested a large amount of "supplemental aid" to Cambodia on February 25, but it was increasingly clear that Congress was eager to disengage the United States from the Cambodian cause.

On April 1, 1975, Lon Nol left Cambodia as communist insurgents captured Neak Luong. The collective Lon Nol left behind surrendered to the Khmer Rouge on April 16, 1975.

The civil war was ended, but the killing had barely begun. Proclaiming Cambodia Democratic Kampuchea, the Khmer Rouge leader Pol Pot (1925–98) spearheaded a reign of terror that resulted in the extermination of more than 1 million Cambodians.

Cambodian Rebellion (1811–1812)

PRINCIPAL COMBATANTS: Rebel Ang Snguon, allied with Siam (Thailand) vs. his brother, Emperor Ang Chan II, backed by Vietnam

PRINCIPAL THEATER(S): Cambodia (Kampuchea)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: As Cambodia became a bone of contention between Siam and Vietnam, the two more powerful nations constantly meddled in their weak neighbor's internal affairs. Forced to pay tribute to two more powerful suzerains just to keep the peace, the rule of Ang Chan weakened, and his brother was tempted—with Siamese help—to seize the throne.

OUTCOME: The rebellion was suppressed with aid from Vietnam, which then became the predominant power in Cambodia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Throughout the first quarter of the 19th century, Siam (Thailand) continued to be—at least nominally—at war with Burma, as it had been actually at war in the last decade of the 18th century. But because Burma was more seriously occupied in the west—the fighting between the two traditional rival powers in Southeast Asia was now confined mostly to frontier raids and occasional clashes in northern Malaya or on the Kra isthmus. Though Siam kept a wary eye on its most dangerous neighbor, it turned its attention southward toward Malaya, which it coveted, or northeastward where it sought to strengthen its control over most of Laos, or to the east, where Siam struggled with Vietnam for hegemony in Cambodia, a weak nation that became a football between the two.

In 1802 Siam and Vietnam had set up a joint protectorate over Cambodia, whose king, Ang Chan II (1791–1835), sought to bring peace to his country by acknowledging both Siamese and Vietnamese suzerainty and by paying tribute to both. In 1811 Ang Chan's brother, Ang Snguon, revolted, turning to the Siamese for help in his attempt to usurp the throne. King Rama II (1768–1824) obliged, sending in an army that quickly overran the country and helped to oust Ang Chan. The latter fled to southern Vietnam in hope of finding his own foreign backing to regain the throne. Vietnam's emperor, Gia Long (1762–1820), immediately sent a large army to restore Ang Chan, and its intimidating presence in the country caused the Siamese to withdraw without engaging in a single battle. Ang Chan once again sat on the throne, and the Vietnamese had become predominant in Cambodia.

Camisards' Rebellion (1702–1710)

PRINCIPAL COMBATANTS: French Protestants known as Camisards vs. forces of Louis XIV

PRINCIPAL THEATER(S): Southern France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Continued religious persecution in the wake of Louis XIV's revocation of the Edict of Nantes

OUTCOME: Protestants of France were effectively crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Camisards, 1,500 working in small bands; Louis XIV's forces, 25,000

CASUALTIES: 400,000 Protestants fled France; 300

Huguenot children executed in the town of Uzès; total persecutions unknown; extensive destruction of Protestant villages in southern France, 1704–1710; total Catholic casualties unknown

TREATIES: None

Typical of Europe's vitriolic religious confrontations, the Camisards' Rebellion demonstrated that political maneuvering would never vanquish religious fanaticism. In an attempt to calm France's hostile religious climate between the majority Catholics and the minority Protestants, known as Huguenots, King Henry IV (1553–1610) issued the Edict of Nantes in 1598, granting the Huguenots freedom from persecution. Although the edict drew fire from the Catholics, most notably the pope, it served to stabilize the religious fervor of both Protestants and Catholics and to bring a modicum of peace within France's borders. However, with the ascension of Henry's fiercely Catholic grandson, Louis XIV (1638–1717), the Huguenots were in danger again.

Invoking the divine right of kings and the fact that the House of Bourbon was a Catholic house (with the exception of Henry IV), Louis felt that France must be a Catholic state administered by a Catholic house chosen by God. Louis began a harshly systematic persecution of the Huguenots, specifically in the southern regions of Languedoc, Béarn, and Cévennes, where they were concentrated. The persecutions were but a precursor to Louis's revocation of the Edict of Nantes in 1685. This not only touched off even more persecutions but sparked reprisals on the part of the Protestants as well. Initially, some 400,000 Huguenots fled France and the persecutions. Left behind was a militant, fanatical group that would conduct some of the most savage guerrilla warfare western Europe had ever seen.

Following the revocation, violence was employed by both the king's forces and the Camisards—Protestants from the Cévennes and Languedoc regions, so-called because they wore white shirts, *camisas*, during night raids. Protestant ministers and leaders of the faith had long been driven out or murdered, leaving—by the turn of the 18th century—only visionaries, self-proclaimed prophets, and lay people to give leadership and spiritual guidance to the Camisards. These prophets and visionaries instilled in the French Protestants the comforting belief that the Protestant powers of the War of the League of Augsburg (see GRAND ALLIANCE, WAR OF THE, 1688–1697), whose recent victories over Louis XIV had forced him to begin secret peace negotiations, would not leave them unprotected in the ensuing Treaty of Ryswick.

Their faith was ill-placed, as Britain and the Netherlands included no provisions in the peace settlement for the protection of the Huguenots. Completely abandoned and without any trained spiritual guidance, the Camisards were won over by theological extremists. Prophets proclaimed that the end of persecution was near and that it was time for the Huguenots to rise up and kill the Catholics. In 1701 more than 300 children walked from village to village reciting biblical prophecies. They were arrested, charged with “fanaticism,” and executed in the town of Uzès by order of Lamoignon de Baville, a radical and cold-blooded Catholic who took part in the administration of the persecutions.

The bloodshed began in earnest on the night of July 24, 1702, when a group of Camisard rebels attacked the Catholic mission at Cévennes in search of Abbé du Chaybla, the ruthless head of the persecutions in the Cévennes province. All the priests were murdered, and du Chaybla was stabbed by every Camisard who took part in the raid, 52 times in all. In response to the Cévennes massacre, the government rounded up suspected Huguenots, whether they were affiliated with the Camisards or not, and executed them, mostly by publicly burning them alive. The violence was perhaps only comparable to that which would rage in the streets of Paris 87 years later (see FRENCH REVOLUTION[1789–1799]). The Camisards began a campaign to execute every Catholic priest they could lay their hands on. In turn, Louis embarked on a campaign of total extermination, ordering mass executions. Hundreds of villages were burned, including many that had not been evacuated beforehand. Languedoc and Cévennes were reduced to mere smoldering ruins.

The Camisards were led by Jean Cavalier (c. 1681–1740), a charismatic 18-year-old, and Roland Laporte (1675–1704), a religious fanatic. Under their direction the Camisards, never more than 1,500 men, melted into the mountains and forests of southern France, engaging and generally defeating Louis's army of more than 25,000 troops. So successful were the Camisards that Cavalier was invited to negotiate, but the government was willing to grant only amnesty, not to restore the Edict of Nantes. However, Laporte was captured and executed in 1704, and Cavalier was tricked into fruitless negotiations that same year and lost all credibility with the movement. Although the Camisards would continue to battle for the next six years, the rebellion was essentially over. In the end Louis's campaign of extermination proved quite successful, and there were hardly any Protestants left in southern France.

Canadian Rebellion See MACKENZIE'S REBELLION; PAPINEAU'S REBELLION.

Candian War (1645–1669)

PRINCIPAL COMBATANTS: Venice vs. the Ottoman Empire
PRINCIPAL THEATER(S): Candia (Crete) and the Dardanelles
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: At issue was possession of Crete.
OUTCOME: After a long and costly war the Ottomans wrested possession of Crete from Venice.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Ottomans, 50,000; variable numbers of Venetian and mercenary forces, plus 7,000 French troops
CASUALTIES: Direct war casualties unknown; collateral casualties included at least 50,000 killed.
TREATIES: None

The Venetians called Crete as well as its principal city, Iráklion, Candia. Ibrahim I (1615–48) began his reign as Ottoman sultan in 1640. In 1645 Maltese corsairs operating out of Venetian ports on Candia captured Ibrahim's wives. In response Ibrahim dispatched an army of 50,000 men, who, aided by anti-Venetian Greeks on Candia, captured it in August 1645 and Retino the next year. This was followed during 1648–69 by an epic siege of Iráklion. The Venetian fleet far outclassed anything the sultan had, which meant that his supply lines were continually under attack while the besieged Venetians had relatively little difficulty keeping Candia not only supplied but reinforced as well.

In the meantime, while the Turks besieged Candia, the Venetians maintained a naval blockade of Constantinople, the Ottoman capital, which in 1648 triggered a revolt by the famine-stricken inhabitants. Ibrahim was overthrown and killed. His seven-year-old son Muhammad IV (1641–91) was put on the throne, but the real power was Kösem Sultan (c. 1585–1651), mother of Ibrahim I. In 1649 she directed the Turkish fleet in an assault on the Venetian blockade at the Dardanelles but was quickly defeated. In 1651 Turhan Sultan, Ibrahim's widow and the mother of young Muhammad IV, arranged for the assassination (by strangulation) of Kösem Sultan. Now serving as regent, Turhan Sultan appointed Muhammad Koprulu (c. 1575–1661), an Albanian pasha, grand vizier. She gave him free rein to reform the declining Ottoman Empire. Energetic where the sultans had been indolent, and wise where they had been short-sighted, Muhammad Koprulu strengthened the civil government as well as the military. When a second naval battle was fought—and lost—at the Dardanelles in 1656, Koprulu set about rebuilding the entire outmoded Turkish fleet. From this time through 1661 he reformed

the government with ever more vigor and ruthlessness. When those who had been disenfranchised or deprived of spoils in the new scheme of things rebelled, Koprulu acted swiftly to end their lives. He was responsible for the execution of at least 50,000 “rebels.”

In 1657 a third naval battle was fought at the Dardanelles. The Ottomans' new ships proved a decisive factor, and this time the Turks were victorious. After defeating the Venetian fleet here, Turkish forces were landed to retake Tenedos and Lemnos. By 1658 other Venetian islands in the Aegean had also fallen to the Turks, and the Aegean was now firmly under Ottoman control. This accomplished, Koprulu directed all his forces to Candia. On his death in 1661, his son Fazil Ahmed Pasa Koprulu (1635–76) continued to direct the long siege, assuming personal command of operations on Crete from 1666 to 1669.

During this period from about 1664 to 1669, French naval forces were operating against the Barbary pirates—state-sanctioned Islamic pirates who preyed on the commercial fleets of Christian nations, seizing vessels and crews and extorting ransom and/or tribute money for their return. Venice appealed to France to aid it in the defense of Candia against the Islamic Ottomans as well. In 1669 Louis XIV (1638–1717) sent a fleet and 7,000 troops to Candia, but by the autumn of 1669, believing the situation hopeless, the French withdrew. On September 6, 1669, Venetian general Francesco Morosini (1618–94), who had brilliantly defended Candia for 22 years, surrendered. Venice now ceded to the Ottoman Empire all of Crete except for three small seaports. Most of the Aegean was relinquished to the Turks as well, together with the greater part of Dalmatia.

Carlist War, First (1834–1839)

PRINCIPAL COMBATANTS: The Cristinos (backed by Portugal, France, and Great Britain) vs. the Carlists
PRINCIPAL THEATER(S): Spain
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: Spain's Ferdinand VII died, having designated as his successor his infant daughter, Isabella, under the regency of his widow, Maria Christina. This deprived his brother, Don Carlos, of his right to the throne under traditional Salic law, which prohibited women from succeeding to the throne. The resulting succession dispute pitted supporters of Isabella and Maria Christina, the Cristinos, against those who supported Don Carlos, the Carlists.

OUTCOME: The Carlist cause was defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Cristinos, 100,000; Carlists, 35,000 in 1834; 30,000 in 1838; British Legion, 9,600; French Foreign Legion, 6,432

CASUALTIES: Cristinos, 65,000 killed; Carlists, 60,000 killed

TREATIES: Treaty of Vergara, August 31, 1839

Carlism was a Spanish political movement responsible for three uprisings (see CARLIST WAR, SECOND; CARLIST WAR, THIRD), originating in the 1820s in the *apostolico* (Spain's fanatically traditional clerical party), mobilized in 1827 as the paramilitary Royalist Volunteers, and by the 1830s coming to center around the pretensions of the king's younger brother, Don Carlos (1788–1855). Ferdinand VII (1784–1833), before his death on September 29, 1833, ignored the hopes of the Carlists and used the 1789 Pragmatic Sanction of Charles IV (1748–1819) to justify designating his infant daughter, Isabella (1830–1904), as his successor, under the regency of his widow, Maria Christina (1806–78).

Don Carlos, soon to be count of Molina, challenged the succession and the sanction—a decree promulgated to ensure that the Hapsburg kingdoms and lands descended without division—by invoking the traditional Salic law, derived from the Salian Franks, which prohibited women from succeeding to the throne. The succession issue divided Spain, pitting those who supported Isabella and Maria Christina, the Cristinos, against the Carlists, whose Apostolic Party of political conservatives and the clergy made up the majority in northern Spain (the Basque country, Catalonia, Aragon, and Navarre), and who had declared Don Carlos King Charles V. A revolt quickly crystallized around Don Carlos. To oppose it, Maria Christina, supported by Spain's liberals, formed on April 22, 1834, the Quadruple Alliance with Portugal, France, and Britain. England's Sir George de Lacy Evans (1787–1870) led the Spanish Legion, a band of 9,600 English mercenaries, and France rented to Maria Christina its entire Foreign Legion.

The dynastic war between Isabella and Carlos, then, was also a civil war between urban liberalism and rural reaction—and it was savage. Isabella's army was underpaid and ill-equipped to fight the guerrilla-like forces of the Carlists. And though the Carlists were strong in the north, they would fail to break out of the region to capture a single major city.

The first battles, in the north, went to the Carlists, led brilliantly by General Tomás Zumalacárregui (1788–1835). His career, however, was cut short by a fatal leg wound received at the failed siege of Bilbao. From this point on the advantage was all to the Cristinos, led by General Baldomero Espartero (1792–1879). At the Battle of Terapegui (April 26, 1836) and again at the Battle of Huesca (March 24, 1837), the French Foreign Legion

played an even more important role than Espartero's loyalists, acquitting itself with great gallantry in decisive and brutal combat. By the time the legionnaires left Spain on January 17, 1839, after the revolt was suppressed, their strength had been reduced through casualties by 50 percent.

After the defeats at Terapegui and Huesca, Don Carlos withdrew from Madrid. After another year and a half of guerrilla resistance, the Carlists' principal general, Maroto (1785–1847), without consulting Don Carlos, signed the Treaty of Vergara on August 31, 1839. By this document the Carlist forces agreed to join the Cristinos in return for amnesty and independence for the Basque and Navarre provinces. Don Carlos fled to Bourges, France, leaving those diehards who refused to accept the Treaty of Vergara to fight on under Father Ramón Cabrera (1806–77). Espartero finished these off in Catalonia during July 1840.

Carlist War, Second (1846–1849)

PRINCIPAL COMBATANTS: The Carlists vs. loyalists

PRINCIPAL THEATER(S): Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Carlists wished to place Don Carlos's son, Don Carlos II, on the Spanish throne.

OUTCOME: They failed, and Isabella II remained queen.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Carlists, 10,000 Basques, Aragonese, Catalans; Loyalists, 50,000

CASUALTIES: 10,000 dead, many of them civilians

TREATIES: None

In the FIRST CARLIST WAR the forces of urban liberalism triumphed over the rural traditionalism and the religious bigotry of Don Carlos (1788–1855) and his circle. But these Carlists, whose strength lay in the north (in Navarre, Catalonia, Aragon, and especially among the Basques) were hardly finished.

When they were unsuccessful in attempts to arrange a marriage between Isabella II (1830–1901) and Don Carlos's son Don Carlos II (1818–61), count of Montemolin, before Isabella was declared of an age to rule without a regent in 1843, they once again launched a dynastic challenge. This time the melange of reactionaries and religious fanatics backed Don Carlos II, who styled himself "Charles

VI" after his father, "Charles V" (i.e., Don Carlos) "abdicated" in his son's favor.

The Carlist guerrillas took the field in October 1846, but no major fighting occurred until June 1848, when Father Ramón Cabrera (1806–77) breached the Pyrenees to recruit an army 10,000-strong of Basques, Aragonese, and Catalans. The count of Montemolin attempted to join the rebellion personally, but he was detained by French police at the frontier.

Without a flesh-and-blood Carlist pretender at their head, the rebels under Cabrera could generate little public support. Moreover, the good father's gruesome terrorism only brought him and the Carlist crusade into widespread disrepute. Cabrera, the so-called Tiger of Maestrazgo, gave up the cause in April 1849 and absconded to England. There, as his compatriots buried 10,000 or so of their brothers left dead on the battlefields of northern Spain, he married a rich young heiress and settled into the comfort of an English country life.

Carlist War, Third (1873–1876)

PRINCIPAL COMBATANTS: The Carlists (conservative supporters of Don Carlos III) vs. the forces of the First Spanish Republic

PRINCIPAL THEATER(S): Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conservative monarchists opposed the creation of a Spanish republic.

OUTCOME: The republic fell, but the Carlists were also defeated. Alfonso XII, Isabella's son, was placed on the throne of what had now become a constitutional monarchy. The Basque provinces relinquished much autonomy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Carlists, 100,000; loyalists, 150,000

CASUALTIES: At least 50,000 Spaniards were killed.

TREATIES: None

A Third Carlist War broke out in 1873, resulting in a civil conflict of greater destructiveness and brutality than either the First or the Second CARLIST WAR.

Queen Isabella II (1830–1904) was deposed in the SPANISH REVOLUTION (1868), after which the Cortes (parliament) elected Duke Amadeus (1845–90) of Aosta to the throne in 1870. Not only did the other contenders oppose the ascension of Amadeus, the Spanish people also rose up in protest. Following attempts on his life, Amadeus abdi-

cated in 1873 just as the Cortes, now dominated by radicals, proclaimed the First Spanish Republic. This incited the most conservative faction in Spanish politics, the Carlists, to rise in rebellion. They called not only for the restoration of monarchy, but the ascension to the throne of Don Carlos III (1848–1909). As in the earlier wars, the Basques helped the Carlists take control of much territory. In southern Spain Alcoy, Seville, Cadiz, and Valencia fell to the Carlists as did a number of lesser towns. Cartagena held out against Carlist forces for four months before capitulating. Nevertheless, the Carlists failed to achieve definitive victory, and Spain was plunged into a chaos that brought down the republic. It was replaced in January 1874 by a military dictatorship under General Francisco Serrano y Domínguez (1810–85). His forces lifted the Carlist siege of Bilbao but could not stem the Carlist victories at Estella and Cuenca.

Despite repeated Carlist victories—most of the Spanish officer corps was Carlist—Serrano y Domínguez and his subordinates restored the Spanish Bourbon monarchy at the end of 1874 by placing Alfonso XII (1857–85), Isabella's son, on the throne. This restoration brought a degree of unity to those opposing the Carlists, and in 1875 Alfonso's troops suppressed the Carlist rebellion in Catalonia and Aragon. In February 1876 the Carlist-allied Basque stronghold of Pamplona fell after a protracted siege. This prompted Don Carlos III to abandon the struggle and flee to France, and 10,000 Carlist adherents were banished. For the Basques, who had achieved a degree of independence after the earlier Carlist wars, defeat in the Third Carlist War was costly. The Basque provinces were compelled to renounce their distinctive systems of taxation and military service.

With the rebellion suppressed, a newly elected Cortes drafted and ratified a new constitution in July 1876. Alfonso would rule as a constitutional monarch.

Carmathian Revolt See KARMATHIAN REVOLT.

Carnatic War, First (1747–1748)

PRINCIPAL COMBATANTS: France (with Indian allies) vs. Britain (with Indian allies)

PRINCIPAL THEATER(S): Carnatic region, India

DECLARATION: No official declaration, but may be considered coincident with the War of the Austrian Succession

MAJOR ISSUES AND OBJECTIVES: Control of Indian trade
OUTCOME: The Treaty of Aix-la-Chapelle, ending the war, restored Madras to England but resolved no other issues of colonial trade and, therefore, failed to create a lasting peace.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
 French and French-allied forces, 1,200 French regulars, in addition to naval and native personnel; British forces, a small body of British regulars and naval personnel, in addition to 10,000 native troops

CASUALTIES: Unknown

TREATIES: Treaty of Aix-la-Chapelle, October 18, 1748

When word of the outbreak of the War of the AUSTRIAN SUCCESSION reached India, the French governor general there, Marquis Joseph François Dupleix (1696–1763), tried to arrange neutrality between the French and the British East India Company. However, after Commodore Curtis Barnett led the British fleet to clear Indian waters of French shipping, Dupleix called on Admiral Bertrand-François Mahé, comte de la Bourdonnais (1699–1753), to bring a French fleet from Mauritius. Bourdonnais arrived at Pondichéry, the seat of French government in India, in June 1746 with eight ships of the line and a contingent of 1,200 troops. He engaged the British fleet, now under Commodore Edward Peyton (who had succeeded in command after the death of Barnett), at the Battle of Negapatam on July 25, 1746. Outsailed, Peyton was forced to make for Hooghly. The naval engagement was followed during September 2–10 by the siege of Madras. While Bourdonnais blockaded the city, Dupleix invaded it, accepting its surrender on September 10. On September 21 Nawab Anwar-ud-din, allied with the British, approached Madras. Rather than await the nawab's attack, the French forces sortied out from Madras and made short work of his army. This victory was followed on November 3 by the Battle of St. Thomé, in which a force of 230 French regulars and 730 native sepoys made a surprise assault on 10,000 of the nawab's troops, completely routing them. After this Dupleix laid siege to Fort St. George, a key British base near Madras. The operation extended to April 1748, when Dupleix was forced to withdraw upon the arrival of a new British fleet carrying reinforcements. Edward Boscawen (1711–61), the admiral in command of the new fleet, conducted combined land and naval operations against Pondichéry during August–October 1748. Dupleix held the British off until the onset of the monsoon season forced the British fleet to withdraw and the siege to be raised. Shortly after this the British and French in India received word of the Treaty of Aix-la-Chapelle, signed on October 18, 1748, ending the War of the Austrian Succession and, therefore, the First Carnatic War as well. With regard to the Indian situation, the treaty restored Madras to Britain. However, the treaty resolved no other issues of

colonial trade and, therefore, failed to create a lasting peace, and the First Carnatic War was followed within a year by the SECOND CARNATIC WAR.

Further reading: M. S. Anderson, *The War of the Austrian Succession 1740–1748* (London and New York: Longman, 1995); H. V. Bowen, Nigel Rigby, and Margarette Lincoln, eds., *The Worlds of the East India Company* (London: Boydell and Brewer, 2004).

Carnatic War, Second (1749–1754)

PRINCIPAL COMBATANTS: France (with Indian allies) vs. Britain (with Indian allies)

PRINCIPAL THEATER(S): Carnatic region, India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Trade competition between the French and British East India Companies; the two commercial interests backed opposing Muslim candidates for nawab (viceroy) of the Carnatic region and nizam of Hyderabad.

OUTCOME: The British East India Company became the dominant European force in India.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
 French and Indian allies, more than 10,000 deployed; British and sepoy troops, fewer than 1,000 deployed

CASUALTIES: Disproportionate among the French-allied Indian troops. At Trichinopoly, British and Indian losses were 180 of 500 engaged. French-allied Indian losses were far heavier; in a single hour at Trichinopoly 400 were killed out of a force of 10,000.

TREATIES: None

The Treaty of Aix-la-Chapelle, signed on October 18, 1748, ended the War of the AUSTRIAN SUCCESSION and its Indian phase, the FIRST CARNATIC WAR. However, hostilities between the French and British East India Companies quickly resumed. The two commercial interests backed opposing Muslim candidates for nawab (viceroy) of the Carnatic region and nizam of Hyderabad. The British East India Company, led by Thomas Saunders, supported Anwar-ud-din as nawab and Nasir Jang as nizam, whereas the French, under Governor General Marquis Joseph François Dupleix (1696–1763), threw their support behind the upstart Chanda Sahib as nawab and Muzaffar Jang (Nasir Jang's son) as nizam. In 1749 Chanda, Muzaffar, and the French, led by Marquis Charles de Bussy, defeated the forces of Anwar-ud-din at the Battle of Ambur. Anwar-ud-din himself fell in battle, whereupon Chanda was proclaimed nawab of the Carnatic. He became a puppet of Dupleix. For their part, however, the British supported Muhammad Ali, who retained control of Trichinopoly even after the accession of Chanda. Clinging to this foothold, the British also supported Nasir Jang's invasion

of the Carnatic during 1749–50. Although Nasir Jang was partially successful in reestablishing Hyderabad control of the Carnatic, he was assassinated in December 1750 with the complicity of his son Muzaffar Jang. Upon his father's death Muzaffar became nizam, and Dupleix also proclaimed him subahdar of the Deccan. In turn Muzaffar named Dupleix governor of all former Mogul lands in the eastern Deccan. Dupleix now put his army at the disposal of Muzaffar, and the French controlled much of southern India.

During September–October 1751, while Chanda besieged the British garrison at Trichinopoly, Robert Clive (1725–74), an East India Company clerk-turned-military commander, led 500 men out of Madras in an assault on Arcot, Chanda's capital. This was a diversionary operation to draw Chanda's forces from Trichinopoly, which Clive relieved on September 12. However, Chanda's son, Raja Sahib, led a force of 10,000 to resume the investment of Trichinopoly. Clive held out for 53 days, his strength reduced to 120 British regulars and 200 sepoys, when Raja Sahib stormed the garrison. Unfortunately for Raja Sahib, the herd of elephants he drove to batter down the gates stampeded wildly when they were fired on. A second attempt to storm across the moat failed, and the attackers withdrew after an hour, having lost 400 men to deadly British fire. Clive's spectacular defense of Trichinopoly drove a stake into the heart of the French-Indian campaign. Native forces now saw the British as the dominant power. Governor Dupleix was recalled to Paris in 1754, and French fortunes in India, once so promising, were immediately reversed. From the mid-18th century on, British control over India would rapidly expand.

Carthaginian Civil War (Revolt of the Mercenaries) (241–237 B.C.E.)

PRINCIPAL COMBATANTS: Carthage vs. its unpaid mercenaries

PRINCIPAL THEATER(S): Carthage

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Carthage's defeat in the First Punic War led to unrest among its mercenaries.

OUTCOME: The rebellion was suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Mercenaries: 25,000 under Matho plus others scattered

throughout North Africa; Carthage, unknown but including 10,000 reserves from the city

CASUALTIES: Tens of thousands

TREATIES: Unknown

Creating an opportunity for Hamilcar Barca (c. 285–229 B.C.E.) to take control of Carthage, the civil war of 241–37 also began the demise of Carthage's control of North Africa. Carthaginians suffered a series of military setbacks in the third century B.C.E., the worst of which was defeat at the hands of the Romans in the First PUNIC WAR (264–241 B.C.E.). Carthage lost Sicily, lost its navy, and was forced to pay a heavy indemnity to the Romans.

At the same time mercenaries employed by Carthage during the First Punic War began to rebel, in part because of their general Hanno's (fl. third century B.C.E.) ineptitude in the African campaigns, but also because they had never been paid for their services. The rebels rallied behind Matho (d. 237), a rival of both Hamilcar and Hanno.

The rebellion gave Hamilcar an opportunity to seize control of the city and defeat the insurrectionists. Matho's troops stood at some 25,000, and they laid siege to the city in 238. By a stroke of sheer military genius, Hamilcar was able to evacuate 10,000 loyal troops and give battle to the rebels, meeting them at the Battle of Utica. Matho's forces were almost totally destroyed, and Carthage was removed from immediate danger. However, a second rebel army was still at large and plundering North Africa in an effort to regain what the rebels felt was rightfully theirs. Hamilcar laid an ambush for them at Tunis and defeated them, effectively ending the rebellion.

Meanwhile, Rome took advantage of the rebellion, marching its legions into Corsica and Sardinia. As Rome suppressed the uprisings of Carthage's mercenaries, it maintained control of the islands and then leveled another heavy fine on Carthage for forcing the Romans to intervene. Although Carthage now was literally at the mercy of Rome, the civil war left Hamilcar firmly in control of the city.

Further reading: Adrian Goldsworthy, *The Fall of Carthage: The Punic Wars 265–146 B.C.* (London: Cassell, 2004); Serge Lancel, *Carthage: A History* (Oxford and Cambridge, Mass.: Blackwell, 1995).

Carthaginian-Syracusan War (481–480 B.C.E.)

PRINCIPAL COMBATANTS: Carthage vs. Syracuse

PRINCIPAL THEATER(S): Syracuse

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Carthage's efforts to impose hegemony over southern Italy and the western Mediterranean

OUTCOME: Carthage's forces were defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Hamilcar Barca of Carthage killed himself after his army's defeat and enslavement; the Carthaginian navy was destroyed; totals for Syracuse forces unknown.

TREATIES: Formal treaty unknown. Carthage was forced to pay an indemnity to Syracuse.

By the dawn of the fifth century B.C.E., Carthage had established itself as the predominant power in the Mediterranean. Situated in North Africa, Carthage controlled all of southern mainland Italy as well as the western Mediterranean. Carthage's hopes for total hegemony in the region lay in conquering the island of Sicily. If the Carthaginians had designs on domination in the Mediterranean, so Persia, under Xerxes (c. 519–465), had designs on Greece. Xerxes persuaded the Carthaginians to launch an invasion against Sicily, and, more important Syracuse, the powerful city-state on the island, thus keeping the powerful Greek colony occupied while Xerxes launched his colossal invasion against Greece itself. The Carthaginians readily agreed, as it was their intention to invade anyway.

In 481 a massive Carthaginian force under Hamilcar Barca (d. 480) embarked for Sicily while Xerxes launched his offensive of some 200,000 troops, perhaps the greatest force yet assembled in the world. The Carthaginians landed at Palermo and marched to the Syracusan city of Himera, laying siege to the city with a combined force of Libyans, Campanians, Sikels, Iberians, and even a few Greeks. However, Gelon (c. 540–478), the king of Syracuse and an evil tyrant, intercepted a Carthaginian communiqué to some mercenary cavalry and sent his own troops in disguise. This left Hamilcar's flank completely exposed. The Syracusans crushed Hamilcar's forces at Himera and then torched the Carthaginian fleet in Himera's harbor. Hamilcar, who had conducted sacrifices to the gods throughout the battle, allegedly made himself the last sacrifice by self-immolation.

The Carthaginian defeat at Himera was a major disaster. The entire fleet lay at the bottom of Himera harbor, thousands of troops were taken into slavery, and the Carthaginian economy suffered a severe blow as it watched massive amounts of silver, paid as indemnity, fuel an economic renaissance in Sicily. Syracuse stood at the height of its power and maintained its position of dominance for 70 years before the Carthaginians exacted a harsh revenge under the legendary general Hannibal (d. 406) (*see HANNIBAL'S DESTRUCTION OF HIMERA* [409 B.C.E.]).

Carthaginian War against Pyrrhus of Epirus (278–276 B.C.E.)

PRINCIPAL COMBATANTS: Carthage vs. Epirus

PRINCIPAL THEATER(S): Sicily

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Syracusans' inability to deal with Carthage on their own caused them to solicit aid from Pyrrhus.

OUTCOME: Carthage lost the majority of its territory and became a minor power in the Mediterranean.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Unknown

The first in a series of wars that would begin the downfall of Carthage, the conflict with Pyrrhus can best be considered a draw. Tarentum, a semiautonomous Spartan colony in Apulia, had parried with the Romans for several years over its economic autonomy and was forced to solicit aid from Epirus, led by its king, Pyrrhus (319–272 B.C.E.). Pyrrhus had a reputation for defeating the Romans. He had done so in 280 at Heraclea and in 279 at Ausculum, but at terrible cost to his own forces, hence the term *Pyrrhic victory*. When Roman ships moved into Tarentum's gulf, Epirus had them sunk.

With the increased military presence in the region, Carthage, fresh from her resounding defeat in the FIRST PUNIC WAR (264–241), grew wary of being overwhelmed in the Mediterranean. In the hope of securing its position, Carthage unnecessarily threw its support to Rome, offering financial resources and its navy. In so doing Carthage provoked Epirus into assuming it was now a belligerent threat. On the island of Sicily, Carthage was again harassing Syracuse and maintained control over the majority of the region. Hoping to alleviate Carthaginian pressure and perhaps destroy Carthage for good, Syracuse called on Epirus to rout the Carthaginians out of Sicily.

In the ensuing campaign the Carthaginians could do little right; they quickly lost most of their territory, retaining only their stronghold of Lilybaeum (Marsala) in western Sicily. The Carthaginian defeat left it firmly in the position of the minority power in the Mediterranean region, a condition that would last until the rise of Hamilcar Barca (d. 480) 35 years later.

Carthaginian Wars of Expansion (650–500 B.C.E.)

PRINCIPAL COMBATANTS: Carthage vs. Greece

PRINCIPAL THEATER(S): North Africa and the Mediterranean seacoast

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: Carthage's expansion in the region to protect Phoenician colonies at a time when Greek city-states were also expanding in the Mediterranean

OUTCOME: Carthage expanded in Corsica and Sardinia but was repelled in Gaul.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

Phoenicia, weakened by foreign invaders around 650 B.C.E., could no longer defend its trade routes in the Mediterranean Sea. Carthage, a colony on the north coast of Africa founded in the ninth century B.C.E. by Phoenicians from the city of Tyre, stepped up to protect Phoenician colonies that constituted a network of well-developed and prosperous commerce. In addition the colony began establishing colonies of its own in North Africa, the Iberian Peninsula, western Sicily, and other islands in the Mediterranean Sea.

At the same time Greek city-states embarked on their own period of colonization and expansion along the north rim of the Mediterranean. The similar goals of the two powers brought obvious conflict, and soon the two engaged in bloody clashes in Sicily, Corsica, Sardinia, southern Gaul, and the eastern Iberian Peninsula.

Carthage's campaign of expansion drew to an abrupt halt around 500 with the founding of Syracuse on the island of Sicily. Syracuse's rise issued a major challenge to Carthaginian dominance in the region, and at first Carthage was unable to meet that challenge, effectively ending any further significant expansion.

Castilian Civil War (1065–1072)

PRINCIPAL COMBATANTS: The sons of Ferdinand I of Castile and León, Sancho II, Alfonso VI, and García

PRINCIPAL THEATER(S): Castile, León, and Galicia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The brothers contended for dominance of Spain.

OUTCOME: While Sancho initially gained the upper hand, his death elevated Alfonso to dominance over Castile, León, and Galicia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Upon the death in 1065 of King Ferdinand I (c. 1016–65) of Castile and León, his kingdom was apportioned among his sons. To his youngest son, García (c. 1042–90), went Galicia; to his second, Alfonso IV (1030–1109), he left León together with the tribute paid by the Muslim kingdom of Toledo; and he made his eldest, Sancho II (c. 1038–72), king of Castile, which came with the tribute of Saragossa. Subsequently, Sancho tried in vain to unify Spain under his rule, first waging the War of the THREE SANCHOS against his cousins, then fighting his brothers.

Alfonso was defeated in 1068 at the Battle of Liantada but nevertheless managed to retain his kingdom. However, Sancho did succeed in driving García from Galicia in 1071 and then renewed the offensive against Alfonso, defeating him at Golpejera in 1072. Taken prisoner, Alfonso was banished from León and found refuge at the Moorish court of his vassalage in Toledo. Soon, his sister, Urraca (c. 1077–1126), initiated a revolt in León in support of his return, which led some modern historians to speculate they enjoyed an incestuous relationship. In any case Sancho responded by laying siege to her forces holed up in the fortified city of Zamora. During this onslaught, however, Sancho was killed by a turncoat knight, whereupon his army dissolved. Alfonso quickly returned from exile in 1072 to take control of Castile as well as León.

These developments emboldened García as well, who hoped to retake Galicia. However, Alfonso imprisoned him in 1073 and made himself ruler of Castile, León, and Galicia.

Castilian Civil War (1214–1218)

PRINCIPAL COMBATANTS: The heirs of Alfonso VIII and Eleanor of Castile vs. a noble Castilian faction

PRINCIPAL THEATER(S): Castile

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Castile and subsequently Castile and León

OUTCOME: Ferdinand III, grandson of Alfonso VIII, became king of Castile and later of a united Castile and León.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: An agreement between Ferdinand III and his father, Alfonso IX, confirmed Ferdinand's occupation of the Castilian throne. Upon Alfonso's death Ferdinand fell heir to León as well.

The ill-timed deaths of both Castile's King Alfonso VIII (1155–1214) and Queen Eleanor within the same year left their 11-year-old son, Henry I (1203–17), heir to the throne but under the guardianship of his sister Berengaria (Berenguela) (1171–1246). More troublesome to the Castilian nobility than the new king's youth was his sister's marriage to Alfonso IX (1171–1230), king of the rival Iberian province of León. An aristocratic cabal forced Berengaria to agree to hand over the guardianship of her brother to one of their number, but it then proved so autocratic and arrogant as to bring Castile to the brink of revolt. When Henry's untimely accidental death in 1217 left the throne again vacant, Berengaria swiftly installed her own son, who was crowned King Ferdinand III (1199–1252) of Castile on August 31, 1217. Though he moved quickly to suppress the Castilian aristocrats, Ferdinand soon faced trouble from a quarter he (and his mother) had perhaps not fully anticipated—his father. Like most Leónese, Alfonso opposed the union of the two kingdoms in one house (which they feared in fact meant domination by Castile), and he went to war with his son. Now under attack from León, Ferdinand found himself fully supported by the kingdom's aristocracy. The thwarted Alfonso retreated and concluded a peace with his son in August 1218. Still, the father tried to stave off the inevitable by disinheriting his son in his will, but after his death the will was set aside. León and Castile were permanently united under Ferdinand in 1230.

Castilian Civil War (1474–1479)

PRINCIPAL COMBATANTS: Ferdinand and Isabella of Castile and Aragon vs. Juana la Beltraneja and King Alfonso V of Portugal

PRINCIPAL THEATER(S): Castile

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Castile and Aragon

OUTCOME: Ferdinand and Isabella defeated Juana and Alfonso, thereby confirming their possession of the joint throne of Castile and Aragon.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Trujillo, 1479

During the 20-year reign of Henry IV (1425–74), beginning in 1454 the Spanish nobility engaged in an intense power struggle, seeking influence on—and even ascendancy over—the throne. As these barons vied among themselves for real power, the question of succession came to loom large. The nobles alleged that Henry was impotent and refused to accept the legitimacy of the infanta Joan (1462–1539), who they claimed was fathered by a favored courtier and derided as La Beltraneja. Instead, they favored Henry's sister, Isabella (1451–1504), who they believed—incorrectly—they could control. They forced Henry to declare her his legitimate heir in 1468.

When Isabella married Prince Ferdinand (1452–1516) of Aragon the following year without seeking her brother's permission, both the barons and her brother turned against her. Henry denounced Isabella and declared Joan, now backed by most of the nobles, the true heir. Nevertheless, upon Henry's death in 1474 Isabella managed to have herself proclaimed queen and, hence, Ferdinand king, after the two had come to terms with a powerful group of high-born clergy. Meanwhile, the barons had quickly arranged a proxy marriage between Joan and her uncle, King Alfonso V (1432–81) of Portugal, thereby ensuring that she would have a strong ally.

Alfonso sent Portuguese troops against the fortress of Zamora in León in 1575, but Castilian forces moved against the barons' lands and persuaded the towns subject to these barons to return to the Castilian fold. This accomplished, Zamora was retaken, and Ferdinand led an army to victory at the Battle of Toro in March 1476, which sent the Portuguese forces packing.

Madrid, stronghold of Joan, surrendered to Ferdinand and Isabella. Desperately, Alfonso sought aid from the French but was rebuffed. Following this he concluded the Treaty of Trujillo on September 14, 1479, acknowledging Ferdinand and Isabella as joint sovereigns. Alfonso also relinquished claim to the Castilian throne and annulled his marriage to Joan. He gave up his Spanish holdings in Extremadura and the Canary Islands in return for Ferdinand and Isabella's recognition of Portugal's African conquests. As for Joan, offered a marriage to Ferdinand and Isabella's one-year-old son, she chose to retire to a Portuguese convent instead.

Castilian Conquest of Toledo (1085)

PRINCIPAL COMBATANTS: Castile vs. the Muslims of Toledo

PRINCIPAL THEATER(S): Toledo, Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A Christian attempt to conquer Muslim Spain

OUTCOME: Toledo fell, but its fall prompted an influx of Almoravid troops, which led to the Almoravid Conquest of Muslim Spain from 1086 to 1094.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Alfonso VI (1030–1109) assumed the throne of Castile in 1072 and immediately embarked on a series of wars against the Muslims in Spain. He put his mostly triumphant armies under General Rodrigo Díaz (c. 1040–99), known to the Muslims as *sidi* (lord) and to the Spaniards (and posterity) as El Cid. Although Alfonso VI, jealous of El Cid's growing fame, ordered him into exile in 1081—thereby turning him against Christian Spain—his victories had put Alfonso in an excellent position from which to conquer Toledo.

That conquest came swiftly in 1085, prompting the Islamic emir of Seville, Muhammad al-Mutamid (1040–95), to seek military aid from the Almoravids of Morocco. This resulted in an influx of Moorish troops under the leadership of Yusuf ibn Tashfin (d. 1106) and, ultimately, the ALMORAVID CONQUEST OF MUSLIM SPAIN.

Castilian War See CASTILIAN CIVIL WAR (1065–1072).

Catalan Company Raids (1302–1311)

PRINCIPAL COMBATANTS: Catalan Company mercenaries vs. Ottoman forces invading the Byzantine Empire; the Catalan Company vs. the Byzantine Empire

PRINCIPAL THEATER(S): Primarily Anatolia, Byzantine Nicaea, Thrace, and the Athens region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Byzantine Empire hired Catalan Company mercenaries to repel an invasion by the Ottoman Turks; later, claiming nonpayment, the Catalan Company raided Byzantine territory and attacked Constantinople.

OUTCOME: The Catalan Company raided throughout the Byzantine Empire and ultimately seized control of Athens.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Catalan Company, 6,500; Alans, 1,000; Turkic cavalry, 3,000. These opposed varying numbers of Ottoman and Byzantine troops.

CASUALTIES: Unknown

TREATIES: None

The Catalan Company of Spanish mercenaries was originally raised in 1281 in the War of the SICILIAN VESPER. At the end of this two-decade-long conflict, the Catalan Company consisted of about 6,500 mercenaries led by Rutger von Blum (d. 1305), better known as Roger de Flor, a colorful soldier of fortune who had been a Templar sergeant, a smuggler of fugitives, and a pirate. With the conclusion of the Sicilian Vespers in 1302, de Flor sold the services of the Catalan Company to the Byzantine emperor, Andronikos II Palaeologus (1260–1332), who needed mercenaries to fight invading Ottoman Turks under Osman I (1258–1326). Previously, Andronikos had greatly reduced the empire's standing army in an effort to reduce ruinous expenses.

De Flor and the Catalan Company arrived at Constantinople in September 1303 and were soon transported to Anatolia to reinforce Philadelphia, a Byzantine city that had been invested by Turkish forces for years. Accompanying the Catalan Company was an Alan cavalry force. A violent dispute between the Catalans and the Alans resulted in some 300 Alan casualties. All but 1,000 of the Alans left after the skirmish. Those who remained assisted the Catalans in their raiding campaign against the Turks who occupied Byzantine Nicaea. The Catalan-Alan force landed at Cyzicus in 1303, then struck south to Philadelphia, passing through Sardis, Magnesia, and Ephesus before recrossing the Bosphorus to land at Neapolis in Gallipoli. At this point de Flor had recruited nearly 3,000 Turkish cavalry to augment his ranks. These were not disciplined mercenaries but outlaws and freebooters, whose presence on Byzantine territory greatly disturbed Andronikos. Indeed, de Flor himself seems to have succumbed to overweening ambition. His military successes led him to marry into the imperial family and to plan the establishment of an empire of his own within Anatolia. In 1304, claiming that his Catalan Company had not been properly paid, he led an attack on Constantinople but was repulsed. In 1305, after leaving Adrianople, where he was trying to ingratiate himself with his imperial kin, de Flor was ambushed by Alan warriors and assassinated, certainly at the behest of the Byzantine emperor. Byzantine troops then attacked and killed as many of the Catalan Company as they could reach.

Following the murder of de Flor, command of the Catalan Company fell to Ramon Muntaner (1265–1336). He led his men in losing battles with the Genoese, but, soon after this, the Catalan Company was joined by Aragonese reinforcements and a number of disaffected Turkish and Turkopouli deserters from the Byzantine army. Thus augmented, the Catalan Company raided widely and brutally throughout the Byzantine Empire. Andronikos sent an army after them but was defeated in the 1305 Battle of Apros when the Alans deserted the Byzantine forces in the field. After this victory the Catalans advanced to Rhaidestos, which became a center of operations for an ineffectual blockade of Constantinople and renewed raiding throughout Thrace during 1306–07.

Sometime in 1308 internal dissension within the Catalan Company ranks, as well as dogged Byzantine resistance to their raids, forced the Catalans to move from Rhaidestos in Gallipoli to Salonica in Thessaly, northern Greece. From Salonica they raided northern Greece and robbed the rich Eastern Orthodox monasteries at Mt. Athos. Then, in 1310 Walter de Brienne (d. 1353), duke of Athens and one of the leaders of the Romanian Frankish “Latin Empire,” hired the Catalan Company to expand his holdings. In service to Walter, the Catalans captured more than 30 castles. At the end of their service, however, in 1311 Walter attempted to dismiss them without pay. In response the Catalans turned against him. At Kephissos the Catalan troops arrayed themselves for battle behind a freshly flooded field. Walter led his Frankish knights in a charge that was soon mired in mud, transforming moving targets into stationary ones. The Catalans slaughtered Walter and many of his knights. This left the Catalan Company in control of the Latin Empire. The mercenaries asked the royal House of Catalonia-Aragon to provide them with a duke to serve as a figurehead ruler. Over the next 80 years the Catalan Company, nominally ruled by a succession of eight absentee dukes, held sway over Athens and the surrounding region.

Catalan Revolt (1461–1472)

PRINCIPAL COMBATANTS: Catalan revolutionaries vs. Ferdinand I of Naples and John II of Aragon

PRINCIPAL THEATER(S): Catalonia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Catalonians rejected unpopular rulers.

OUTCOME: Rioting brought Catalonia an acceptable ruler in John of Calabria.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

One of Rome’s earliest possessions in Spain, Catalonia fell to the Goths during the fifth century, then to the Moors in 712, and finally, at the end of the eighth century, to Charlemagne (742–814). Though the great Frankish king incorporated this northeastern region of Spain into his realm, calling it the Spanish March, and though it was nominally ruled by a Frankish count, Catalonia developed a strong nationalist tradition and completely rejected French hegemony during the reign of Count Borrell (d. 991). From 1137, when Count Ramon Berenguer IV (c. 1113–62) of Barcelona married Petronila (Peronella), queen of Aragon, Catalonia and Aragon were united, though Catalan interests dominated the union and monopolized trade in the western Mediterranean throughout the 13th and 14th centuries. Then, in 1410, when the male line of the counts of Barcelona became extinct, Catalonia balked at Aragonese rule, especially that of the new Trastámara dynasty beginning in 1412. By 1461 their dissatisfaction had blossomed into full-scale revolt. The Catalans not only declared a Republic of Catalonia, they attacked Gerona, seat of King Ferdinand I (1423–94) of Naples, named by the French the ruler of a Catalonia unwilling to live under the hegemony of King John II (1397–1479) of Aragon, Navarre, and Sicily.

At this juncture, with the Catalans in open rebellion, King Louis XI (1423–83) of France threw his support to John II as monarch of Catalonia, whereupon leaders of the Catalan national movement offered the throne to a series of other rulers: Henry IV (1425–74) of Castile, Portuguese constable Pedro (d. 1466), and Rene I (1409–80) of Anjou. At last, Rene dispatched his son John (d. 1470) of Calabria to Barcelona, Catalonia’s capital city, to rule. Peace ensued, and after John’s death the region came under the governance of Aragon’s King John.

Following the marriage in 1469 of John’s son Ferdinand (1452–1516) to Isabella (1451–1504) of Castile, Catalonia became less central to Spanish affairs, and the Catalan bid for independence died out following the union of Aragon and Castile in 1479.

Catalan Revolt (1640–1659)

PRINCIPAL COMBATANTS: Catalonia (with French allies) vs. Spain

PRINCIPAL THEATER(S): Catalonia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Catalonia wanted independence from Spain.

OUTCOME: A Catalan republic proved abortive, but for 16 years the region voluntarily put itself under French rule.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Treaty of St. Jean-de-Luz, 1659

In 1626, when Philip IV (1605–65) became king of Spain at age 16, he fell under the control of a group of powerful neoimperialists led by the count of Olivares (1587–1645), who became his chief minister. Seeking to centralize all government in Castile, Olivares pushed reforms and passed taxes that greatly irritated Catalonia—after Portugal, traditionally Iberia’s most autonomous state. Famous for its local blood feuds, Catalonia had a form of government as medieval as the day in 1486 that the province was “settled” by Aragon’s Ferdinand II (“the Catholic”) (1479–1516) (also Ferdinand V of Castile from 1474). It shared a long border with France that ran through a region swarming with smugglers and bandits. Whereas, at the Cortes (congress) summoned by Philip in 1626, Aragon and Valencia reluctantly voted to provide the Crown with money but no conscripts, Catalonia refused to pay a penny. And when Olivares, regardless of the Catalan resistance, published a royal decree dictating a “Union of Arms,” relations between Madrid and Catalonia spiraled downward.

The ongoing THIRTY YEARS’ WAR only made matters worse. As the cost of warfare shot up, Madrid became obsessed with what it considered Catalonia’s perfidy in demanding immunity from taxation. In fact, Olivares’s 1639 campaign against southern France was clearly engineered to force Catalonia into the war, since—as he reasoned—the Catalans would have to support the Spanish army in order to defend their own country. He could not have been more wrong. Not only did the Catalan peasants, urged on by their priests, refuse to accept the empire’s army, they also broke out into riots and then open rebellion when Castilian troops were billeted in Catalonia. In response to this coercive quartering, the so-called Corpus of Blood revolt broke out in June 1640. Catalan rebels stormed Barcelona, rampaging through the streets and slaughtering Castilian governmental officials as well as the Spanish viceroy. Cardinal Richelieu (1585–1642), prime minister of France, dispatched troops to Roussillon and occupied the region bordering Catalonia in 1642.

In the meantime the Catalan rebels established an independent republic and appealed to the French for aid.

King Louis XIII (1601–43) demurred, whereupon, anticipating an overwhelming onslaught of Spanish government troops, the rebels dissolved the republic and proclaimed Louis count of Barcelona. At this, a force of 5,000 French soldiers invaded Spain and laid siege to the Spanish royal stronghold at Tarragona, Catalonia. Shortly afterward Louis personally led additional troops into the region, and an indecisive war began, which was fought in a desultory manner through 1659, when the Catalans decided to rejoin Spain. A treaty was signed that year at St. Jean-de-Luz whereby France returned Catalonia to Spain but retained adjacent Roussillon as a French possession.

Catalan Revolt (1934)

PRINCIPAL COMBATANTS: Catalan separatists vs. Spanish government

PRINCIPAL THEATER(S): Catalonia

DECLARATION: Independence declared October 6, 1934.

MAJOR ISSUES AND OBJECTIVES: Independence of Catalonia

OUTCOME: The rebellion was swiftly crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

With the SPANISH CIVIL WAR (1936–1939) brewing, the Catalans, the people of the chronically rebellious Catalan region of Spain, found the nation’s growing fascist movement unpalatable. The central government had overturned an agrarian law enacted by the Catalan Generalidad (local assembly) and dragged its feet on implementing a promised statute of autonomy for Catalonia. In protest leftist leaders united with Communists in a general strike on October 5, 1934. The government called out the fascist Catalan police forces, which stormed the strikers. Instead of quelling the strike, the police action touched off widespread rebellion in the region.

On October 6, 1934, Spain’s president Niceto Alcalá Zamora y Torres (1877–1949) imposed martial law throughout Spain. In response a defiant Luis Companys (1883–1940), president of the Generalidad, declared Catalonia independent. At this, Spanish government troops invaded the region, killing all the rebels they found and quickly crushing the separatist movement. The entire Catalan government, including Companys, was rounded up and cast into prison.

Catherine the Great's First War with the Turks (1768–1774)

PRINCIPAL COMBATANTS: Russia vs. the Ottoman Empire

PRINCIPAL THEATER(S): Ukraine, Caucasus, Kabardia, Georgia, the Balkans, Moldavia, Wallachia, Egypt, Greece, and Crimea

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Turks responded to a Russian incursion into their territory.

OUTCOME: Russia made substantial territorial gains and reserved the right to defend Christians in areas controlled by the Ottomans.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Russia, 280,000 (including 92,000 garrisoned troops) plus 15,000 Albanians under Ali Bey; Turks, 170,000

CASUALTIES: Disproportionately heavy for the Turks, on the order of a few thousand for the Russians vs. nearly 60,000 killed and wounded for the Turks.

TREATIES: Treaty of Kuchuk Kainarji, July 16, 1774

In 1768 Catherine II (the Great; 1729–96) sent troops to Poland in support of the pro-Russian government there and pursued dissident Polish forces into Turkish territory, sacking the Turkish town of Balta. Although poorly prepared for war, the Turks felt they had no choice but to declare war against Russia in October. Immediately the Crimean Tartars invaded the Ukraine. With Austrian support the Turks engaged Russian forces invading the Caucasus. The Turks were defeated in Kabardia and Georgia during 1769, then also yielded to a Russian force led by Count Peter Rumiantsev (1725–96), who won victories in the Balkans, along the Dniester River, at Jassy, and in Moldavia and Wallachia, both of which fell to the Russians. A Russian invading force took and occupied Bucharest.

While the Turkish military was occupied with the Russians, Ali Bey (1728–73), governor of Ottoman-controlled Egypt, rebelled during 1769–73. Russia sent troops in support of his rebellion. In 1770 the Russians also helped to incite an anti-Turkish rebellion in Greece. Russian admiral Aleksei G. Orlov (1737–1808) sailed the Russian Baltic Fleet into the Mediterranean and captured Navarino in April 1770 and other towns in the Morea. The Turks were able to assemble a large force, however, drawing mainly on Albanians, to suppress the rebellious Greeks and by June drive the Russian fleet away. This proved a rare bright spot for the Turks. On July 6, 1770, Admiral Orlov's subordinate, Admiral Samuel Greig (1735–88), a Scot in the Rus-

ian service, defeated the Turkish fleet near Chios, off the Anatolian coast. This was followed in August by the Battle of Karkal, in which a mixed force of Turks and Tartars attacked the Russians in an attempt to drive them out of Moldavia. A vigorous Russian counterattack sent the Turks and Tartars into retreat behind the Danube. After this the Russians were able to capture the Turkish fortresses now exposed along the Danube and the Pruth.

The Crimea was next to fall. In 1771 a Russian army under Prince Yury Vladimirovich Dolgoruky (1740–1830) descended on the Isthmus of Perekop and from here conquered the Crimea. This helped bring about a truce accompanied by protracted peace negotiations. In fact, the Turks negotiated in bad faith and merely used the truce to refit and reorganize their battered army. In 1773 the fighting resumed with operations on the Danube. Russian forces progressed southward along the river, closing in on the main Turkish army. The Turks steadily retreated, fighting a series of rearguard actions and finally falling back on Shumla. Here they were held under siege, even as Russian forces also invested the Turkish fortresses of Varna and Silistria. Once again desperate, the Turks reopened peace talks. By this time the Russians were also hard pressed by a Cossack and peasant revolt in southeast Russia. Both sides were motivated to make peace, but it took one more Russian victory, the defeat of a large part of the Turkish army at the Battle of Kozludzha in June 1774, to move the Turks to sign the definitive Treaty of Kuchuk Kainarji on July 16, 1774. By this document the Russians returned to Turkish control Wallachia, Moldavia, and Bessarabia but were granted the right in perpetuity to defend and protect Christians living within the Ottoman Empire. Moreover, the Turks would not be allowed an entirely free hand in Wallachia and Moldavia; the treaty provided for Russian intervention in the case of Turkish misrule or abuse in these territories. As for the Crimea, it was given its independence, except that the sultan was permitted to continue to reign there as religious leader of the Muslim Tartars. Russia gained significant territories, including Kabardia in the Caucasus, sovereignty over the port of Azov, and possession of part of Kuban near Azov. The Kerch Peninsula in the Crimea fell to Russia, as did the land between the Bug and Dnieper Rivers as well as territory at the mouth of the Dnieper. Moreover, Turkey agreed to permit Russian trading vessels free passage through the Dardanelles. With the acquisitions along the Dnieper and permission to navigate the Dardanelles, Russia now had access to the Black Sea, previously the exclusive domain of the Turks. Russia withdrew its troops to positions north of the Danube.

The Treaty of Kuchuk Kainarji did not address the situation in Egypt. An Egyptian force under Abu'l Dhahab invaded Syria and took Damascus. However, Abu'l negotiated a secret agreement with the Turks by which he switched allegiance. After evacuating Syria he attacked Egyptian forces in Egypt. The result was a chaotic situa-

tion during 1772–73 as Abu'l essentially recovered Egypt for the Turks while Ali Bey advanced on Syria to retake it from the Turks. Along the way Ali consolidated his control of Palestine. However, at the Battle of Salihia (April 19–21, 1773) he was defeated and captured. Syria remained in Turkish hands, and Egypt was returned entirely to Turkish control, with Abu'l as governor.

Catherine the Great's Second War with the Turks (Russo-Turkish War) (1787–1792)

PRINCIPAL COMBATANTS: Russia (with Austria as ally) vs. the Ottoman Empire

PRINCIPAL THEATER(S): Crimea and Balkans

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Turks sought to block Russian territorial ambitions.

OUTCOME: Russia made important territorial gains, taking all Ottoman territory east of the Dniester River, including the important warm seaport of Ochakov.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Ottoman Empire, unknown; Russia, 354,000; Austria, 245,000

CASUALTIES: Ottoman Empire, 76,000 killed, wounded, or died of disease; Russians and Austrians, 70,000 killed, wounded, or died of disease

TREATIES: Treaty of Sistova (Ottoman Empire and Austria), August 4, 1791; Treaty of Jassy, January 9, 1792

The territorial ambitions of Catherine II (the Great; 1729–96) renewed war with Turkey in 1787. The czarina had annexed the Crimea in 1783 and had demanded that Turkey recognize a Russian protectorate over Georgia. The Turks even feared that Catherine's plan was ultimately to absorb all of the Ottoman Empire. For its part Turkey intrigued with the Crimean Tartars to foment a rebellion against Russia. At the same time Russia forged a secret alliance with Austria. Independently, Prince Peter I (c. 1747–1830) of Montenegro led an uprising against the Ottomans in 1788.

In 1788 Russian marshal Alexander Suvarov (1729–1800) beat back a Turkish attempt to retake the Crimea. On June 17 and 27, 1778, the naval hero of the American Revolution, John Paul Jones (1747–92), having entered Catherine's service as a mercenary, led the Russian Black

Sea fleet against the Turkish flotilla of Hasan el Ghasi in the two Battles of the Liman, fought on lagoons at the mouth of the Dnieper River. The first battle began poorly for the Russian fleet when Charles H. N. O. Nassau-Siegen—like Jones, a soldier of fortune in the Russian service—mishandled the ships. Jones asserted command, however, and saved the day, prompting the Turkish vessels to withdraw. Jones was in full command of the second battle from the beginning and in a spectacular victory sunk 15 Turkish ships, which went down with 3,000 men. Another 1,600 Turkish seamen were taken prisoner. Jones's losses were one Russian frigate, 18 sailors killed, and 67 wounded.

Against Russia's Austrian ally Turkey was more successful. During 1788 Turkish forces faced an Austrian army personally led by the Austrian emperor Joseph II (1741–90). He failed consistently in Transylvania and Serbia, but Austrian forces under the highly capable general Gideon E. von Laudon (1717–90) in 1789 managed to capture Belgrade after repulsing a Turkish invasion of Bosnia. This victory was insufficient to offset earlier Austrian losses, however. More pressingly, threats of Prussian invasion, deteriorating relations with the Russians, and general unrest within the empire itself prompted Joseph and his successor, Leopold II (1747–92), to negotiate a separate peace with Turkey following an armistice during July–September 1789. A definitive treaty, the Treaty of Sistova, was signed on August 4, 1791, by which Austria restored Belgrade to Turkey in return for a portion of northern Bosnia.

During 1789 the Russians invaded Moldavia from the north while the Austrians moved in from the west. The Turkish army, reinforced, resisted more vigorously than ever before. Nevertheless, at the Battle of Foscani on August 1 and the Battle of Rimnik on September 22, Suvarov and his Austrian counterpart, Prince Friedrich Saxe-Coburg (1724–1802), pushed the Turks back to the Danube.

The Russians were also aided in 1790 by the outbreak of an anti-Ottoman revolt in Greece, which drew off significant portions of the Turkish forces, and in December Suvarov captured the key Turkish fortress of Ismail after a protracted siege. By this point the Russians clearly had the upper hand, yet Catherine had become increasingly anxious to conclude a peace because of threats posed by Prussia in Poland. Negotiations were opened in 1791, and on January 9, 1792, the Treaty of Jassy was concluded, whereby Russia restored Moldavia and Bessarabia to Turkey while retaining all of the territory taken from Turkey east of the Dniester River, including the important warm seaport of Ochakov.

Catiline Insurrection (63–62 B.C.E.)

PRINCIPAL COMBATANTS: Rebels led by Lucius Sergius Catiline vs. Rome

PRINCIPAL THEATER(S): Rome and Pistoia, Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Repeatedly defeated in his bid to become a Roman consul, Lucius Sergius Catiline incited and briefly led an insurrection intended to topple Rome itself.

OUTCOME: The insurrection was defeated in a single armed confrontation.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Lucius Sergius Catiline (c. 108–62 B.C.E.) served in the SOCIAL WAR of 91–88 B.C.E., during which he acquired a reputation as a fanatical participant in the ruthless proscriptions of the Roman commander Lucius Cornelius Sulla (138–78). At Sulla's behest Catiline killed his own brother-in-law. Catiline was tried on charges of fornication with a Vestal virgin in 73 but was acquitted. In 68 he became praetor, then in 67–66 governor of the province of Africa. He wanted to stand for the consular elections in 65, but he could not because he was under indictment for extortion. Acquitted, he nevertheless failed to win election as consul in 64 and again in 63. This last defeat prompted Catiline to dispatch agents to recruit an army in Etruria for an armed insurrection. Simultaneously, Catiline drew up plans to burn Rome itself and to arm the slaves for an insurrection.

Catiline was dangerous in and of himself, but he was even more dangerous because of his appeal to the masses. He proposed widespread cancellation of debt and the proscription of wealthy citizens. He presented himself always as the champion of the underclasses. At the same time Catiline appealed to the very victims of the leader he had supported so zealously during the Social War, Sulla. Those who Sulla had dispossessed of their property as well as others disappointed by Sulla's policies were drawn to Catiline.

Marcus Tullius Cicero (106–43), who had repeatedly defeated Catiline in his bid for consulship, learned of the growing Catiline conspiracy through a network of spies and informers. He stayed his hand for some time, however, feeling that Catiline was too popular to confront. On October 21 Cicero finally made his move, denouncing Catiline to the Senate as a traitor in a speech celebrated for its passion and eloquence. Cicero obtained from the Senate the "ultimate decree"—essentially a proclamation of martial law. Catiline fled Rome on November 8 and joined his army of the dispossessed and discontented at Faesulae

in Etruria. Despite Cicero's oration and Catiline's flight, many in the Senate were not fully persuaded of the danger Catiline posed. This situation changed on December 3, when envoys of the Gallic tribe of the Allobroges, whose support had been solicited by certain Catiline conspirators in Rome, turned over to Cicero signed documents that irrefutably proved the existence of the conspiracy. Now panic-stricken, the Senate ordered the arrest of the conspirators who were still in Rome. They were executed on December 5 by senatorial decree and without trial. The Senate also immediately mobilized the armies of the republic to take the field against Catiline's forces. In a single battle at Pistoia in January 62, Catiline's army was destroyed and he himself killed.

Cavite Mutiny (1872)

PRINCIPAL COMBATANTS: Filipino soldiers vs. Spanish colonial authorities

PRINCIPAL THEATER(S): Cavite, Philippines

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ultimately, Philippine independence from Spain

OUTCOME: The mutiny was quickly crushed. In its wake, trials and executions provided the Philippine independence movement with martyrs.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Filipino rebels, 200; two Spanish regiments

CASUALTIES: Most of the rebels were killed.

TREATIES: None

Amid growing demands for Philippine independence from Spain, 200 Filipino soldiers mutinied on January 20, 1872, in Fort San Felipe, in the Cavite province south of the Philippine capital of Manila. The mutiny proved short-lived. Rounded up, tried, and severely punished, the mutineers were readily neutralized. However, the Spanish authorities in the Philippines seized upon the mutiny as evidence of incipient revolution. They assumed emergency powers and detained, arrested, and tortured various intellectuals and others known to advocate independence or government reform. A swift series of show trials resulted in treason verdicts and a round of executions, including the executions of three Catholic priests. Thus, Spain succeeded only in fanning the flames of rebellion by providing the movement with martyrs.

Cayuse War (1848–1855)

PRINCIPAL COMBATANTS: Cayuse and related tribes vs. United States

PRINCIPAL THEATER(S): Southeastern Washington and northeastern Oregon

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Cayuses were fighting a war of resistance against white settlement of their homelands.

OUTCOME: The Cayuses were defeated, their lands confiscated, and the remnants of the tribe confined to a reservation.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 1848 the Cayuse Indians of the Pacific Northwest killed 14 white settlers and missionaries and held 53 others captive for ransom. What settlers called the WHITMAN MASSACRE set off a chain of events that would, over the course of nearly a decade, come to be known as the Cayuse War. Almost immediately after the massacre, about 500 settlers took up arms and went on a rampage through Cayuse territory (southeast Washington and northeast Oregon). After the Cayuses responded to the settlers' demands for the surrender of those warriors responsible for the crimes at the Whitman mission with more raids on white settlements, the U.S. government called in federal troops and militia stationed in the Oregon Territory to suppress those Indians who refused to make peace. The federal troops captured five of the Cayuses accused of participating in the raid, and they were tried and convicted, then hanged on June 3, 1850. However, the Cayuses refused to make peace, and bloodshed continued in the area. It was hardly surprising, then, that the Cayuses—and the closely related Walla Wallas—were numbered among those various tribes that responded with violence to Isaac Stevens (1818–62), governor of the Washington Territory in 1855, when he negotiated a treaty calling for all the region's Indians to be removed to reservations.

As federal forces reluctantly became engaged on the side of the settlers in the YAKAMA WAR and the ROGUE RIVER WAR, what should be considered the last stage of the ongoing Cayuse War got under way. In 1855 the U.S.

Army attacked the Walla Walla homelands along the Walla Walla and Touchet Rivers, encountering along the way a Walla Walla chief named Peo-Peo-Mox-Mox of the Umattillas (a tribe closely related to and allied with the Cayuses), who had just burned the abandoned Hudson's Bay Company Fort Walla Walla. An aborted parley between the army and the Indians led to the brutal slaughter of Peo-Peo-Mox-Mox and six other chiefs, which in turn enraged the Walla Wallas and Cayuses throughout the region. They raided outlying white settlements. On February 23 raids along the lower Rogue destroyed more than 60 homes and left 31 settlers dead and 130 survivors of the raids took refuge near Gold Beach, where they were besieged for almost a month. Rescue efforts by ships were repeatedly foiled by a heavy surf that prevented landing. Eventually, however, the Indians withdrew.

The Walla Wallas and Cayuses had become part of the more general uprising of the Yakama War. As the United States began to gain the upper hand against the Yakamas and to hear talk of peace, in 1856 a force of volunteers engaged the Walla Wallas and Cayuses in the Grande Ronde Valley, soundly defeating them. They, too, sued for peace. Like the Yakamas, the Cayuses were herded off to reservations, their numbers greatly reduced by the long, sporadic war, and much of their tribal homelands confiscated and turned over to settlement by westering whites.

Celtiberian Wars (154–133 B.C.E.)

PRINCIPAL COMBATANTS: Celtiberians and Lusitanians vs. the Roman Empire

PRINCIPAL THEATER(S): Iberian Peninsula

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Tribes of the Iberian Peninsula allied to throw off imperial Roman control of the region.

OUTCOME: Celtiberians were eventually subdued.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Romans against the forces of the Lusitanian leader Kaisaros, 9,000; otherwise, totals unknown

TREATIES: The Peace of 152 B.C.E. was disrupted five years later when the Celtiberians revolted while Rome engaged in the Third Punic War; Pompeius Quinus offered peace c. 145 but reneged after receiving reparations from the Numantians.

Eventually ending in Roman victory, the Celtiberian Wars served as an unsuccessful challenge to imperial Roman authority. In 153 B.C.E., the Belli, a tribe in Nearer Celtiberia, was ordered to seize a fortress at Segeda. The Romans invaded Celtiberia, the mountainous regions of north-central Spain and northeastern Portugal, the same year. Also at roughly the same time, the Lusitanians of central Portugal and western Spain revolted against the empire in a purely piratical manner, seeking only to seize wealth, not to challenge the status quo. After a stunning Lusitanian victory over the Roman general Mummius (fl. mid-second century B.C.E.) in which the imperial legions suffered 9,000 casualties, the Lusitanian leader Kaisaros sent the captured Roman standards to the Celtiberians in an effort to unite the two against the Roman invaders.

In 152 the Roman consul Marcus Fulvius Nobilior (second century B.C.E.) began his offensive against the Segeda fortification by marching up the Jalon valley. The unfinished Segeda fortress fell without a fight, and its inhabitants fled to the Arevaci in Further Celtiberia, gaining the support of the Celtiberians and expanding the war. When Nobilior sought to pursue and destroy the Celtiberian forces, he was trapped in a narrow defile near Almazan. The Romans were crushed, suffering more than 50 percent casualties. However, the Arevaci also suffered, including the loss of their general, Karos. With Karos's death the Celtiberians were momentarily weakened, and Nobilior was able to take Gran Atalaya Mountain and establish a fortified base camp.

After failing to subdue the Celtiberians, Nobilior was replaced in 152 by Claudius Marcellus (d. 148). He quickly subdued the Jalon valley and the majority of Celtiberian tribes with it by promising peace in the valley and no Roman reprisals—provided the Arevaci would cease hostilities. The Jalon and Douro tribes sent emissaries to Rome, but the negotiations fell through when the Arevaci refused to submit. Marcellus made peace with the Numantia and defeated the Lusitanians; the other tribes quietly retired from the field without further aggression. There was peace in Celtiberia for the following five years, but hostilities began anew in 147, when the Lusitanians again roused the Celtiberians to action. The two decided to take advantage of the Roman preoccupation with the THIRD PUNIC WAR, 149–146, and revolted against the occupying Roman legions, inflicting heavy casualties.

The consul Quintus Caecilius Metellus (d. 115) was sent to deal with the insurrection. After two years he was able to bring only the Jalon valley under his control; the rest of the region was still aflame with revolt. When his successor, Pompeius Quinus (as consul, c. 144–131) attempted to take Numantia by storm, he was heavily defeated, though his forces outnumbered the defenders by almost four to one. He also failed to take the city by siege before finally offering peace in exchange for a large reparation in silver. After receiving the payment Pompeius

declared the treaty void because it had not been ratified by the Roman Senate. But he kept the silver. His successors fared no better in reducing Numantia and the Celtiberian-Lusitanian alliance.

The alliance, however, fell apart in 139 when the powerful Lusitanian leader Viriathus died, leaving the Celtiberians to fend for themselves. Successive Roman campaigns simply ignored Numantia and only attacked other tribes in Nearer and Further Celtiberia. By 135, however, it became evident that Numantia must be subdued if the Romans were to maintain any hegemony in the Iberian Peninsula. Rome sent the great general Scipio Aemilianus (c. 184–129) to lead the campaign. Within six months Scipio had defeated the Numantians through careful planning and well-fortified siege lines. The city fell in 133, ending Celtiberian resistance.

Central American Federation Civil Wars

(1826–1829, 1838–1840)

PRINCIPAL COMBATANTS: Conservative vs. liberal constituents of the Central American Federation

PRINCIPAL THEATER(S): Guatemala and El Salvador

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the Central American Federation

OUTCOME: Breakup of the Central American Federation, with conservative domination of the constituent nations

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Between 1826 and 1846, battle deaths for the countries involved were: Guatemala, 2,291; El Salvador, 2,546; Honduras, 682; Nicaragua, 1,203; Costa Rica, 144

TREATIES: None

In Spanish colonial times Costa Rica, Guatemala, Honduras, Nicaragua, and El Salvador were united under a captaincy general (until they gained independence in 1821, after which they were briefly annexed to the Mexican empire) formed by Agustín de Iturbide (1783–1824). In 1825, independent, these nations decided to join in a loose federal state, the Central American Federation or Central American Union, which ultimately failed to rise above the political jealousies and ideological differences

that had emerged during the region's late colonial history. The federation's first election indicated clearly that the seeds had already been sown for the dissolution of the tentative new union when the liberal Salvadoran army officer Manuel José Arce (c. 1783–1847) defeated the moderate Honduran José Cecilio del Valle (1777–1834), despite the fact that the latter appeared to have won the popular vote. The suspicious victory angered both conservatives, who backed del Valle as the lesser of two evils, and liberals, who believed Arce had sold out his principles to attract moderate and right-wing votes. At the first federation congress in Guatemala City in 1826, violent disputes broke out, and Arce began quarreling with his own liberal party, which refused to enact his legislation. At this, Arce did indeed ally himself with the conservatives and assumed dictatorial powers, which incited many of his erstwhile allies in the Salvadoran Liberal Party to attempt a coup in Guatemala City. Forces loyal to Arce defeated the insurgent liberals, which, paradoxically, won for Arce the support of the conservatives, who seized Guatemala City. Allied now with the conservatives, Arce replaced Guatemala's liberal governor with a staunch conservative, which touched off an all-out civil war.

With the federation capital in conservative hands, Arce led an army against San Salvador and laid it under siege. In response, Francisco Morazán (1792–1842), a Honduran liberal, led a force against Arce at San Salvador and lifted the siege in 1829. He then marched on Guatemala City, where he routed the conservative garrison. Having retaken the city, he replaced Arce as federation president in 1830.

Morazán moved the federation capital to San Salvador, but he could not resolve the ongoing friction between liberals and conservatives. As conservative power and influence grew, the congress voted in 1838 to dissolve the federation, the constituent states having become fearful that they would lose any semblance of independence and sovereignty. On the extreme fringe of the conservative faction was Rafael Carrera (1814–65), who led a rebellion that took control of Guatemala City in 1838. Morazán led forces against Carrera in an effort to recover the city, but his army was defeated in March 1840. Morazán fled into exile, returning in 1842 with a Costa Rican army hoping to resurrect the federation. He failed, and Carrera remained in power as an arch-conservative dictator of Guatemala. Although the Central American states would now remain independent of one another, Carrera applied a strong hand in setting up similarly conservative governments throughout Central America. Thus, the bloody struggle established what would become the standard struggle between liberals and conservatives, lasting well beyond the brief life of the federation.

Centralia (Missouri) Raid See UNITED STATES CIVIL WAR: TRANSMISSISSIPPI THEATER.

Ceylonese Rebellion (1971)

PRINCIPAL COMBATANTS: The People's Liberation Front (PLF) vs. Ceylonese government forces

PRINCIPAL THEATER(S): Ceylon (Sri Lanka)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Radical leftists opposed the moderately leftist government in a dispute also rooted in a long-standing conflict between Tamil and Sinhalese ethnic factions.

OUTCOME: The government prevailed but, in creating Sri Lanka from Ceylon, incorporated reform elements desired by the PLF and its adherents.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Ceylon (Sri Lanka) achieved independence from Great Britain in 1948 and experienced considerable instability, culminating in the Ceylonese Rebellion—the rebellion of the People's Liberation Front (PLF)—in 1971. During August 12–19, 1953, the new nation was plagued by waves of communist terrorism, and between 1956 and 1961 it was periodically swept by “Language Riots.” (The Tamil minority agitated, sometimes violently, to gain acceptance of their language as an alternative to Sinhalese, the nation's official tongue.) These disturbances were quelled on August 5, 1961, by legislation granting limited official status to Tamil. However, early in 1962 Ceylon weathered an attempted coup.

The ongoing conflict between the Buddhist Sinhalese majority and the Hindu Tamil minority resulted in the assassination in 1959 of Prime Minister S. W. R. D. Bandaranaike (1899–1959), a Sinhalese member of the Sri Lanka Freedom Party. His leadership of the party was succeeded by his widow, Sirimavo Bandaranaike (1916–2000), who became prime minister in 1960. The government she created was far to the left and was opposed by the Tamil minority as well as by more moderate Sinhalese. The elections of 1965 replaced Mrs. Bandaranaike with a moderate socialist. Sirimavo Bandaranaike did not disappear from the picture, however, and she regained the prime minister's office in 1970, forming a coalition government made up of the Sri Lanka Freedom Party and Marxist socialist parties.

The program of political and economic reform the coalition proposed was insufficiently radical to appease the nation's most extreme leftists, the PLF. On April 5, 1971, the PLF attempted to seize Colombo, Ceylon's capital, and assassinate Mrs. Bandaranaike. Both attempts failed, and by April 13 the government had regained control of Colombo and the other cities. Fierce guerrilla resistance continued in rural and jungle areas, however. Prime Minister Bandaranaike appealed to the Soviet Union, India, and Pakistan for military aid in suppressing the rebellion. The Soviets supplied fighter aircraft and combat pilot training, whereas India and Pakistan furnished helicopters and crews. Great Britain also provided support in the form of ammunition and weapons. On June 9, 1971, the prime minister declared that the rebellion had been suppressed. A little less than a year later, on May 22, 1972, Prime Minister Bandaranaike proclaimed the Republic of Sri Lanka, which included a new, reformist constitution. The name that had replaced Ceylon, however, is a Sinhalese word (meaning "resplendent land"), and it underscores the ongoing friction between the Sinhalese majority and Tamil minority, which had been expressed in the earlier Language Riots.

Chaco War (1932–1935)

PRINCIPAL COMBATANTS: Bolivia vs. Paraguay

PRINCIPAL THEATER(S): Gran Chaco, disputed land west of the Paraguay River and north of Río Pilcomayo

DECLARATION: May 10, 1933, Paraguay on Bolivia

MAJOR ISSUES AND OBJECTIVES: Bolivia wanted possession of the Gran Chaco, chiefly as a source of oil and as an outlet to the Atlantic via the Paraguay and Paraná Rivers.

OUTCOME: Paraguay acquired or retained most of the Gran Chaco but agreed to provide landlocked Bolivia Atlantic access via the Paraguay and Paraná Rivers.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Bolivia, 48,000; Paraguay, 30,000

CASUALTIES: 30,000 Bolivians were taken prisoner in the capture of Fort Ballivián, the major battle of the war.

Total losses for Paraguay were 12,000 killed in battle, 24,000 died of disease; for Bolivia, 25,000 killed in battle, 27,000 died of disease.

TREATIES: Treaty of Buenos Aires, July 21, 1938

The Gran Chaco, or Chaco Boreal, is 100,000 square miles of barren land west of the Paraguay River and north of Río

Pilcomayo. As early as 1825, the region had been a subject of dispute between Bolivia and Paraguay, but the situation heated up in the 1920s, when it was thought that the Gran Chaco contained rich oil deposits. As a result of the War of the Pacific between Bolivia and Chile, Bolivia lost its seacoast. Now the Gran Chaco loomed not only as a source of oil but as a shipping route for it via the Paraguay and Paraná Rivers to the Atlantic.

In the 1920s increasing numbers of Bolivian colonists and troops occupied the Gran Chaco, often clashing with the Paraguayans already settled there. In 1928 military forces from the two nations clashed, but a pan-American conference was called to intervene and attempt peaceful arbitration of the dispute. The conference soon broke down, and sporadic armed exchanges continued, then intensified. Paraguay asserted de facto control over the region because its settlers were there in greater numbers. However, the Bolivian government responded by enlisting Hans von Kundt (1869–1939), a German general, to train and lead an army of occupation and to establish military outposts in the Gran Chaco. On June 15, 1932, Kundt captured Fort Lopez (Fort Boquerón), at Pitiantuta, central Chaco, thereby gaining military control of the Paraguay River route to the ocean.

The capture of Fort Lopez prompted a massive military effort from Paraguay. In mid-July 1932 Paraguayan frontier troops retook Fort Lopez, even as the Paraguayan military underwent a prodigious expansion from 3,000 to 60,000 men. On May 10, 1933, Paraguay formally declared war on Bolivia and launched a major offensive under Colonel José Félix Estigarribia (1888–1940). The operation had been under preparation since 1932, with the establishment of a supply line into the Chaco via Puerto Casado. During 1933–34 Estigarribia systematically retook most of the disputed region. Kundt was relieved as Bolivian commander in chief by General Enrique Penaranda (1892–1970), but to little avail. On November 17, 1934, Estigarribia captured Fort Ballivián, the headquarters of the Bolivian army in the Gran Chaco, taking more than 30,000 prisoners in the course of the campaign.

From Fort Ballivián Estigarribia invaded Bolivia proper but, yielding to counterattacks, withdrew in 1935. Through the intervention of the United States and a coalition of five South American nations, a truce was brokered and a cease-fire concluded on June 12, 1935. The subsequent Treaty of Buenos Aires, signed on July 21, 1938, formally ended the Chaco War by awarding most of the Gran Chaco to Paraguay but providing landlocked Bolivia Atlantic access via the Paraguay and Paraná Rivers. Puerto Casado was designated a free port and made available to Bolivian shipping.

Chad, French Conquest of *See* FRENCH CONQUEST OF CHAD.

Chadian Civil War (1965–1996)

PRINCIPAL COMBATANTS: The nation's northern vs. southern residents with intervention by France, Libya, Nigeria, and Zaire (Democratic Republic of the Congo)

PRINCIPAL THEATER(S): Chad

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Southern domination of the government provoked increasingly violent opposition from the north.

OUTCOME: An uneasy reconciliation between the north and south amid continued violent factionalism

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Extremely variable; in total, between 1965 and 1990, Chad government, 50,000; Chad rebel groups, 50,000; France, 5,000; Libya, 73,000; Nigeria, 94,000; Zaire (Democratic Republic of the Congo), 48,000

CASUALTIES: Between 1966 and 1990, 50,000 Chadians were killed.

TREATIES: None

In 1965 the nation of Chad was roughly divided, north and south, into two major groups: nomadic Arab Muslims in the north and Bantu Christian and pagan farmers in the south. The Chadian government was dominated by southerners, a situation that provoked violent protest from the north, which soon ripened into a chronic, low-level civil war. The first phase of this war culminated in the military coup of April 13–15, 1975, led by General Noel Odingar. The coup overthrew President N'garta Tombalbaye (1918–75), who was killed, and elevated a Bantu, General Félix Malloum (b. 1932), to the head of the Military Council, effectively making him head of state. Opposed to the new regime was the Chadian National Liberation Front (FROLINAT), a Muslim rebel guerrilla movement led by Hissen Habré (b. 1942) and backed by Libya. On September 27, 1975, learning that France had been negotiating with the FROLINAT to secure the release of French nationals held hostage, Malloum summarily ordered all French troops out of the country. The withdrawal during October 13–27 ended a French military presence that had been continuous since the end of the 19th century. With the French gone, FROLINAT guerrillas made an attempt on the life of General Malloum, but the coup failed. After this Colonel Muammar Qaddafi (b. 1943), Libya's dictator, annexed 37,000 square miles of northern Chad on September 9, 1977, and sent military aid to the FROLINAT rebels in the region during 1976–77. The Malloum government, which had earlier expelled the French military from the country, now requested French aid. French trans-

port aircraft airlifted government troops to the northern front and sent a small contingent of military advisers. Despite this, a strong FROLINAT offensive that began February 1, 1978, seized control of as much as 80 percent of Chad by February 7. Malloum felt that he had little choice but to agree to a cease-fire on February 20, and on February 24 he met with leaders from Libya, Niger, and Sudan in an effort to negotiate a permanent peace.

It did not last long. On April 15 FROLINAT launched a new offensive, which prompted Malloum to request the intervention of the French Foreign Legion. About 500 legion troops arrived on April 26, 1978, and joined 1,500 government soldiers. The offensive was stopped by June 6, and 2,000 additional Foreign Legionnaires landed in Chad.

In August Malloum seized an opportunity when guerrilla leader Hissen Habré split with FROLINAT. On August 29 Malloum named Habré premier. It was, to say the least, an uneasy coalition. During February 12–17, 1979, Habré attempted to oust Malloum by means of a coup, which had to be put down by the French troops. Defeated, Habré fled north into guerrilla country. Despite this, during March 16–23, 1979, Malloum, Habré's FROLINAT faction, and the rival faction of FROLINAT (headed by Goukouni Oueddi [b. 1944]) hammered out an agreement to end the civil war by forming a three-way coalition government. At the request of the coalition, the French agreed to a phased withdrawal, and on March 23, 1979, Oueddi assumed leadership of the new government.

This did not bring peace to Chad. Almost immediately after the coalition government went into operation, Libyan troops on April 20 invaded Chad, claiming that they were assisting the rebels of the north. Chadian government troops and French Foreign Legionnaires quickly forced the Libyans into retreat. But amid continued unrest, a force of Congolese peacekeepers, acting under the auspices of the Organization of African Unity, was dispatched to Chad on January 18, 1980. Despite the presence of this body, the civil war was renewed on March 22, 1980, when partisans loyal to Habré revolted in the capital city of Ndjamena after Oueddi, already premier, succeeded Malloum as president. Oueddi asked for the assistance of Libyan troops to quell the revolt, and Habré fled to Cameroon. From this point forward Oueddi moved the government of Chad closer to the Libya of Muammar Qaddafi. On January 7, 1981, with the approval of Oueddi, Qaddafi proclaimed the "unity" of Chad and Libya, and 6,000 Libyan troops were admitted across the border as an occupying force, only to be withdrawn again on October 31, 1981, at Oueddi's request. The Organization for African Unity furnished a smaller peacekeeping force to replace the Libyan contingent. But once the Libyan withdrawal had been completed, Habré returned from exile to renew his attempt to overthrow Oueddi. Civil war fighting resumed on March 21, 1982, and ended, briefly, with the defeat and ouster of Oueddi on June 8. Calling on Libya for military assistance, Oueddi

reentered Chad and during June and July 1983 retook the northern half of the country. On July 30 Ouédidi's rebels seized the Faya-Largeau oasis. Habré's troops fought bitterly to recapture the oasis and succeeded in forcing Ouédidi's troops out. However, on August 3 Libya launched a massive air campaign against the position, and by August 10 Ouédidi was back in control of the oasis.

Seeking to stabilize the situation, 1,000 French paratroopers landed in the capital city of Ndjamena, then marched north to Salaland Arada, the limit of Ouédidi's territorial control. A stalemate developed during which the rival Chadian factions and the French agreed to a cease-fire (August 17, 1983). A year later France and Libya negotiated a mutual withdrawal of troops. While the French troops evacuated the country in early 1984, Libya maintained a military presence along the Aouzou Strip, on the Chadian-Libyan border. This became the base from which Libya would renew its incursions into Chad during February–March 1986. Chadian government forces, with French assistance, hit the Libyans hard during March. A year later Chadian government troops mounted a concerted counteroffensive against the Libyan presence in the Aouzou Strip. The Libyans, routed, abandoned a wealth of heavy equipment and agreed to a cease-fire in September 1987.

Habré was faced with a new coup attempt in April 1989, but his loyalist guard successfully fended it off, killing one leader, Hassan Djamous, and sending the other, General Idriss Deby (the country's former defense minister), fleeing to Sudan. From Sudan Deby mounted several guerrilla assaults. Unfortunately for Habré, this victory was only a reprieve. It became clear that his support from the northern tribal coalition was falling apart, and by April 1990 Deby's Sudan-based raids were becoming increasingly successful. On November 10, 1990, Deby led troops of his Popular Salvation Movement across the Sudan-Chad border and captured the town of Abéché on November 29. Habré fled to Cameroon on December 1, and Deby took the capital in short order, suspended parliament, and on December 4 declared himself president of Chad. Although he was quick to pledge a democratic government open to a multiplicity of parties, the United States, mindful of Deby's ties to Libya, airlifted some 400 Libyan prisoners released by Deby to Nigeria on December 6. The idea was to remove this Libyan presence from the country as soon as possible.

In 1993 Deby fended off two coup attempts, including one led by Habré, and by 1994 Deby found his government under continual challenge by some 40 opposition movements and six full-fledged rebel movements. The long Chadian Civil War ended in 1996 after peace agreements were signed by a welter of rebel groups in the north as well as the south.

Chalukya Dynasty, Wars of the (550–655)

PRINCIPAL COMBATANTS: Chalukyas vs. Pallavas

PRINCIPAL THEATER(S): Deccan region of southern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Possession of southern India, including key trading routes

OUTCOME: The Chalukya came to dominate the region.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Chalukya describes several dynasties that ruled in the Deccan of southern India and that claimed descent from Pulakesin I, who reigned from 543 to 566. By the middle of the sixth century, the early Chalukyas held sway in the northern Carnatic and were rivals to the Pallava.

Pulakesin was no more than a chieftain who, despite claiming Rajput lineage, was an outsider. During the period immediately following the fall of the Gupta dynasty, India descended into confusion in which the small states of the Deccan plateau vied with one another for dominance over the region. About 550 (some authorities put this at 543) Pulakesin captured the hilltop fort at Vatapi (Badami). Once in possession of this strong point, he was able to capture the territory between the western Deccan and the western Ghats, defeating the Vakataka lords who held it.

Pulakesin I died in 566, and his son Kirtivarman I (fl. 566–97) continued the expansion of the dynasty's holdings by pushing northward and taking the Konkan coast (Bombay) by 597. Pulakesin I's grandson, Pulakesin II (fl. c. 610–42), acquired by conquest portions of Gujarat (the Kathiawar Peninsula) and Malwa. His successful prosecution of the CHALUKYAN WAR AGAINST HARSHA pushed the southern boundary of the Chalukyan empire to the Marmada River. By the end of the first quarter of the seventh century, Pulakesin II had brought the Chalukyan dynasty to its height by conquering the lands of the Andhra dynasty, thereby extending Chalukyan eastern holdings south to the Kistna River. In 624 he conquered Vengi, an east coast kingdom of the Visnukindin. Here he founded the eastern Chalukyan dynasty, centered at Pishtapura on the Bay of Bengal. In 630 Kubja, the brother of Pulakesin II and now the viceroy of Vengi, rebelled against his brother and established an independent Eastern Chalukyan Dynasty, which was destined to last well into the 11th century.

Thanks to Pulakesin II, the Chalukyan dynasty now held territories on both coasts of India and therefore controlled the east Asian trade. The Chalukyas also enjoyed a broad buffer against the warlike and often avaricious kingdoms of southern India. From 625 to 630 Pulakesin II established his supremacy in the south by repeatedly defeating the Pallava dynasty. Parthians who had ventured

from the Ganges region to become the first genuine emperors of southern India, the Pallava began a resurgence in 630 under King Narasimharvarman I. From 641 to 647 the Pallava raided the Deccan, and in the battle to conquer Vatapi in 642 Narasimharvarman killed Pulakesin. This did not end the contest between the Chalukya and the Pallava, however. Vikramaditya I (fl. 655–80), son of Pulakesin II, defeated the Chola and Pandya kingdoms, which gained the Chalukya sufficient power to retake Vatapi from the Pallava.

Chalukyan-Cholan Wars (990–1070)

PRINCIPAL COMBATANTS: Chalukya vs. Chola

PRINCIPAL THEATER(S): Deccan region of southern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Domination of the Deccan region, including its key trading routes

OUTCOME: Marriage between Chalukyan and Cholan royalty united the two dynasties in domination of the Deccan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The empire the Chalukya acquired under Pulakesin II (fl. c. 610–642) during the wars of the Chalukya dynasty had collapsed by the middle of the eighth century, whereupon the Chalukyas' ancient rivals, the Pallava, recaptured some of their former territory and power on the east coast of the Deccan. The Cholas generally rose in power and influence during the first half of the ninth century. However, the Rashtrakuta king Krishna III campaigned vigorously against the Cholas in the south; in 953 Krishna defeated the Chola in battle, killing their king, Parantaka I (fl. 907–953). Just 20 years later, Taila II (fl. 973–997), leader of the cluster of minor principalities to which the Chalukya dynasty had been reduced, led a resurgence of his people and in 973 spearheaded a revolt against the Rashtrakuta that resulted in its overthrow and replacement by the Later Chalukya dynasty, or the Chalukyas of Kalyani.

The Chalukyan defeat of the Rashtrakuta opened the way for the Cholas to rise again, under Rajarata I, as the dominant power in southern India. However, this created a power struggle with the resurgent Chalukyas and triggered a long series of conflicts roughly between 990 and 1070. At first the Cholas assumed the offensive, repeatedly

invading the Chalukyan lands of the southern and western Deccan from about 990 to 1021. At this point it was the Chalukyas, under Somesvara I (fl. 1043–68), leader of the dynasty's eastern empire, who seized the initiative. The principal prize was control of Vengi, which, in turn, conferred control of east Asian trade.

Somesvara I was principal leader of a coalition of Hindu princes arrayed against the Cholas. Their first major triumph came at the Battle of Koppan in 1052, at which the Cholan king, Raajaadahira I, was killed. In 1062 Virarajendra of Chola scored a major victory against the Chalukyas and thereby reestablished Cholan supremacy in south India. Throughout the rest of Virarajendra's reign, warfare between the Chalukyas and Cholas was chronic. But in 1070, with the end of his reign and the marriage of the eastern Chalukya prince Rajendra Chola Kullotunga to Virarajendra's daughter, the Chalukya and Chola dynasties were united in their control of the eastern and southern Deccan, and warfare between them ceased.

Chalukyan Civil War (1156–1181)

PRINCIPAL COMBATANTS: Kalacuris vs. Chalukyas

PRINCIPAL THEATER(S): Deccan region of southern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Kalacuri dynasty, subordinate to the Chalukyas, chose to rebel rather than pay tribute and taxes levied.

OUTCOME: Internal dissension within the Kalacuris weakened the dynasty, creating an opportunity for Somesvara IV, the last significant ruler of the western Chalukya, to retake the central throne of the Deccan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Historians refer to the armed internecine conflict in the Deccan region of India during this period as a civil war. This, however, is open to some interpretation because the territory over which the Chalukyan dynasty held nominal sway was in no sense a unified state or even an empire. Rather, it was a loosely constituted feudatory kingdom that owed taxes and the services of military troops to the central power but in other respects conducted its affairs autonomously. From time to time a subordinate or client kingdom

resisted payment of taxes or the furnishing of troops or might even rise up in full-scale revolt in an effort to gain dominance. Beginning about 1156 Bijjala (fl. 1156–67), ruling patriarch of the Kalacuri dynasty, and subordinate to the Chalukyas, rebelled and even displaced the Chalukyas for a brief period. Despite temporary success against the Chalukyas, internal dissension within the Kalacuri weakened the dynasty, creating an opportunity for Somesvara IV (fl. 1181–89), the last significant ruler of the western Chalukyas, to retake the central throne of the Deccan by 1181. For background on the Chalukyan dynasty, see Wars of the CHALUKYA DYNASTY and CHALUKYAN-CHOLAN Wars.

Chalukyan Civil War (1180–1189)

PRINCIPAL COMBATANTS: The western Chalukyan dynasty vs. the feudal kingdoms of the Hoysala, Yadava, and Kakatiya families

PRINCIPAL THEATER(S): The southern region of India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of coastal trade in India's Deccan region

OUTCOME: The three feudal kingdoms were able to wrest control of the Deccan region from the once powerful Chalukyas.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In the late 12th century the western Chalukyan dynasty was in control of territory stretching from Kathiawar to the Krishna River in southern India. To the east the dynasty's land bordered that of the eastern Chalukyas, and to the south it bordered on the kingdom of the Cholas. From 1156 to 1180 the Chalukyas had engaged in civil war, which resulted in the ousting of the Kalacuri family who had earlier, under the leadership of Bijjala (fl. 1156–67), wrested control of the territory. In 1180 civil war broke out again. This war pitted the Chalukyans against the feudal kingdoms of the Hoysala, Yadava, and Kakatiya families. The Chalukyas were unable to defend their position, and in 1189 the Hoysalas captured the southern territories; the Yadavas ruled the region south of the Narmada River. The Chalukyas then found themselves encircled by the three

families that had once been feudatories. It was not until the 14th century that the Deccan region was united under the Delhi sultanate.

Chalukyan-Pallavan Wars (670–975)

PRINCIPAL COMBATANTS: The Chalukya vs. the Pallava dynasties of southern India

PRINCIPAL THEATER(S): Southern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of India's prosperous eastern coast

OUTCOME: After more than 300 years of nearly constant warfare, the Chalukyans rose again under Taila II and utterly destroyed the Pallavan dynasty.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After the collapse of the Gupta dynasty in India, the Pallavas, under Narasimharvarman I, defeated the western Chalukyas in 642. Over the following years, however, the western Chalukyas barred the Pallavas from the Deccan region, and the eastern Chalukyas confined the Pallavas to a narrow strip of land along the coast near modern-day Madras. The Chalukyas reestablished the temple-fort of Vastapi in 655. In addition, they captured and partially destroyed the Pallavan capital at Kanchipuram in 670. The Pallavas, however, were persistent, and over the rest of the ninth century and three-quarters of the 10th century, warfare between the two dynasties was constant. The warring caused the decline of the Pallavan dynasty, which was eventually overpowered by the Cholas. The Chalukyas declined as well. In 752 the Rashtrakutas, formerly Chalukyan feudatories, overthrew and killed the western Chalukyan king Kirtivarman II and seized Vatapi. In 975, however, under Taila II (fl. 973–997), the western Chalukyas completely destroyed the Rashtrakutas. With the Rashtrakutas destroyed, the Cholas once again rose to power in the Deccan under Rajaraja I.

Chalukyan-Rashtrakuta Wars (752, 973–975)

PRINCIPAL COMBATANTS: The Chalukya vs. Rashtrakuta dynasties of southern India

PRINCIPAL THEATER(S): Southern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of India's Deccan region

OUTCOME: The Rashtrakutas ultimately lost their hold on southern India and the powerful Chola dynasty arose.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

In 752 Dantidurga (fl. 752–760) led the Rashtrakutas in an uprising against the Chalukya dynasty, which had grown weak from constant warfare with the Pallavas in southern India. The Rashtrakutas seized Vatapi and killed the western Chalukyan king Kirtivarman II (d. 752). After taking control of most of the Deccan region, the Rashtrakutas attempted to spread their power to trade routes in the Ganges valley in northern India. Between 793 and 814 Govinda III conquered Malwa and Gujarat and defeated the Pallava. Rashtrakuta supremacy in the region was not long-lived. In 973 under Taila II (fl. 973–997), the western Chalukyas rose against the Rashtrakutas and completely destroyed the dynasty.

Chalukyan War against Harsha (620)

PRINCIPAL COMBATANTS: Harsha Vardhana (unifier of northern India) vs. the Chalukya dynasty in the south

PRINCIPAL THEATER(S): Deccan region of southern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Harsha's ambition was to unite India under his rule.

OUTCOME: In his contest with the Chalukyans, Harsha ultimately failed to draw the Deccan into his scheme of uniting all of India under a single ruler.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

As Pulakesin II (fl. 610–642) was the dominant figure in the Deccan region of India during the first half of the seventh century (see CHALUKYA DYNASTY, WARS OF THE), so Harsha Vardhana (c. 590–c. 647) rose to dominate the north of India during this period. Harsha was the second son of Prabhakaravardhana, king of Thaneswar-Sthanvisvara, in the Punjab. Harsha succeeded his elder brother Rajayavardhana to the throne in 606 after the latter was assassinated by Sasanka, king of Bengal. At this time as well Grahavarman, the husband of Harsha's sister Rajyasri, was defeated and killed in battle by the king of Malwa, prompting Rajyasri to flee to parts unknown. One of Harsha's first acts, therefore, was to locate and recover his sister and to form an alliance with King Kumara Bhaskarvarman of Karmarupa in order to send an army against Sasanka. Harsha failed to unseat Sasanka, but he waged incessant war against him from 606 to 612, conquering what the Chinese pilgrim Hsuang-tsang called the "five Indies": probably Valabhi, Magadha, Kashmir, Gujarat, and Sind.

Having amassed a great northern empire, Harsha attempted to conquer the region west of the Indus River, which would give him passage to the northwest. When this failed, he turned instead to the south-central Deccan plateau in 620. What he encountered was fierce Chalukyan resistance led by Pulakesin II. Little is known of the details of Harsha's defeat at the hands of Pulakesin, but the outcome of the 620 war was a treaty fixing the Narmada (Narbada) River as the southern boundary of Harsha's realm. This demarcation survives as the traditional separation between southern and northern India.

Harsha's object in his northern wars as well as his attempt to take the Deccan had been to unite India under himself. A ruthless military conqueror, he nevertheless allowed the rulers he conquered to remain on their thrones in return for tribute and homage. Although Harsha failed to draw the Deccan into his grand scheme, he did go further than any previous ruler in uniting northern India. Yet he left no enduring political legacy. When he died about 647, his realm dissolved into anarchic and warring factionalism, whereas the Deccan remained relatively stable under the Chalukya dynasty.

Cham Civil War (1150–1160)

PRINCIPAL COMBATANTS: Jaya Harivarman vs. rebels

PRINCIPAL THEATER(S): Champa (central Vietnam)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Suppression of rebellions

OUTCOME: After a long struggle, the rebellions were crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

After triumphing over the Khmers in the KHMER-CHAM WAR (1144–1150), Jaya Harivarman I (d. 1166–67), monarch of Champa (central Vietnam) continually fended off assaults on his reign. The most serious challenge came from his brother-in-law, Vamsaraja (d. c. 1150), who rebelled with the support of the Cham hill tribes.

After suffering a serious defeat in 1150, Vamsaraja found an ally in the ruler of Dai Viet, or Annam (northern Vietnam). He dispatched some 5,000 troops to aid Vamsaraja. In response Jaya Harivarman led forces from his capital city of Vijaya (Binh Dinh) to the plains of Dalva and Lavang, where he met and defeated the rebel forces and their Dai Viet allies. He went on to conduct a campaign throughout the rebellious Cham regions of Amara-vati (Quang Nam) in 1151. Subduing this region consumed five years, after which Jaya Harivarman went on to the conquest of Panduranga in 1160.

Charlemagne's Conquests (771–814)

PRINCIPAL COMBATANTS: Frankish Empire vs. Germanic and Italian adversaries, as well as internal rebels

PRINCIPAL THEATER(S): Britain, France, Italy, Germany, Bohemia, and Byzantium

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Expansion of the Frankish Empire, creation of the Holy Roman Empire

Europe at the time of Charlemagne's death

OUTCOME: Charlemagne created an empire of great extent and, in effect, nearly revived the bygone greatness of Rome.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Extremely varied

CASUALTIES: Unknown

TREATIES: None applicable to these conflicts

The origins of the Franks lay in the Meuse-Moselle borderlands of modern France, Germany, Belgium, and the Netherlands. Early in the eighth century their king, Pepin III (the Short) (c. 714–768), founded the Carolingian dynasty that would eventually be named after his more famous eldest son, Charles (742–814).

As Charles grew to manhood, Pepin was busy assuming sovereignty over all the Frankish tribes. He originally

ruled the Frankish government jointly with his older brother Carolman I as major domus (“palace mayor”) to the by now largely ceremonial ruling house, the Merovingians. After Carolman retired to a monastery, Pepin dethroned the Merovingians, a move quickly sanctioned by Rome. Indeed, when Pope Stephen II arrived in the Frankish kingdom during the winter of 753–754 to seek help against the aggression of the Lombards, he annointed not only Pepin as king, but also Charles (who had come out to meet him) and Charles’s younger brother, Carolman II (751–768), thus sanctioning not only the overthrow of the old ruling house but also the founding of a new one.

Upon Pepin’s death the kingdom, following old Frankish custom, was evenly divided between his two sons. Charles took command of the western Franks (Neustria) and Carolman of those in the east (Austrasia).

Not surprisingly, the two developed a strong rivalry and fought frequently, and when Carolman died in 771, Charles became king of all the Franks.

Charles embarked upon a program of military conquest and expanded the Frankish kingdom into a great empire. He imposed sweeping ecclesiastical, judicial, and political reforms, which ultimately earned him elevation to the throne of the Holy Roman Empire and his proclamation as Charles the Great: Charlemagne.

In 772 Desiderius (fl. 756–774), duke of Tuscany, attacked the Franks in response to what he saw as Charlemagne's seizure of Carloman II's territory. Charlemagne, in turn, invaded Lombardy in 773 and defeated Desiderius there (see CHARLEMAGNE'S DEFEAT OF DESIDERIUS). Simultaneously with his swift operations against Lombardy, Charlemagne prepared to wage a protracted campaign against the Saxons, a war that spanned 32 years, from 772 through 804 (see CHARLEMAGNE'S WAR AGAINST THE SAXONS).

Although Charlemagne fought to expand his empire, he was also continually engaged in putting down rebellions, the most important of which was in Lombardy in 776. While unsuccessfully campaigning in Spain (see CHARLEMAGNE'S INVASION OF NORTHERN SPAIN), he invaded Lombardy a third time in 780. This resulted in the enthronement of his two young sons as Lombard king and the reinforcement of the power of the papacy there. Spread thin, Charlemagne suffered a defeat at the hands of the Saxons, which he avenged in 782.

During most of his reign, Charlemagne repeatedly invaded Saxony between the rivers Elbe and Em. He ravaged Brittany in 786, and he campaigned successfully to take charge in Bavaria during 787–788. Beginning in 791 he fought the Avars (see FRANKISH-AVARIAN WAR) and then launched a bloodless invasion of Italy in 800, which culminated in his coronation as Holy Roman Emperor.

In 801 Charlemagne launched a campaign against rebellious leaders in Beneventum, a papal territory, and fought the Byzantine Empire, largely to augment papal power. (See FRANKISH-BYZANTINE WAR.) A breakthrough against the Saxons came in 804, when Saxon forces were neutralized, and this triumph was followed in 805 by a hard-won victory against the Bohemians. In 806 the Slavic Wends were brought to heel. This permitted Charlemagne to turn his attention to the Danes, who had allied with a diehard remnant of Saxons, in a war that spanned 808 to 810. Still, Charlemagne's external expansion would not advance substantially beyond the borders he had achieved by about 800, and even then his resources were stretched too thin to hold and defend all he had conquered. In 806, just as had his father and grandfather, he planned to divide his empire between his two eldest sons, but when they died early he crowned the younger Louis I of Aquitaine (778–840) his co-emperor and sole successor a few months before his own death in 814.

Charlemagne's Defeat of Desiderius (773–774)

PRINCIPAL COMBATANTS: Franks vs. Lombards

PRINCIPAL THEATER(S): Lombardy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Charlemagne wanted to conquer Lombardy, nominally a Frankish and papal vassal, but ruled by Desiderius, who sought independence.

OUTCOME: Charlemagne was victorious, Desiderius was deposed, and Charlemagne assumed the title of king of the Franks and Lombards.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Led by Pepin the Short (c. 714–768), the Franks defended Rome against a Lombard invasion during 754 and again two years later. Pepin then ceded to the pope a portion of Lombard territory. This would later be expanded into the Papal States. After Pepin's death his kingdom was, by Frankish custom, divided evenly between his two sons—Charlemagne (742–814) and Carolman II (751–771)—who soon fell to fighting. Helped by his mother, Charlemagne concluded an alliance with Desiderius (fl. 756–774), duke of Tuscany and king of Lombardy, who gave his daughter in marriage to his feudal overlord. After Carolman's death Charlemagne pushed aside his nephews to become sole ruler of the Franks, and Carolman's wife and children and their few remaining supports fled to Lombardy and the protection of Desiderius, who had decided to seek independence for Lombardy, both from the Franks and from the papacy. Outraged, Charlemagne responded by divorcing Desiderius's daughter and taking over the territories that had been ruled by his (Charlemagne's) brother.

In 771 Desiderius attacked Rome and other papal possessions, putting pressure on the Holy See to recognize Carolman's sons as Frankish kings. This prompted Pope Adrian I (d. 795) to call on Charlemagne for military aid. Charlemagne led his troops over the Italian Alps in 773, attacked and overran Verona, and seized Carolman's wife and children; Carolman's sons simply disappeared. From Verona, Charlemagne marched on Pavia, the capital of Lombardy, and took Desiderius prisoner. The Lombard king was consigned to a distant monastery

near Liège, and Charlemagne proclaimed himself king of the Franks and Lombards.

Charlemagne's Invasion of Northern Spain (777–801)

PRINCIPAL COMBATANTS: Franks vs. Moors and Basques

PRINCIPAL THEATER(S): Northern Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Charlemagne wanted to extend his empire and conquer Moorish Spain for the Christian church.

OUTCOME: Charlemagne's attack on Saragossa was aborted, and a devastating assault on Pamplona proved a tragic error; Charlemagne's army was hounded out of Spain.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The reign of the great Frankish king and first Holy Roman Emperor, Charlemagne (742–814), was marked by the twin forces of legal and political reform and unremitting wars of conquest. After subduing the Saxons (see CHARLEMAGNE'S WAR AGAINST THE SAXONS), Charlemagne decided to exploit the civil disorder and dissent in Spain by embarking on a campaign of conquest there. Spain had come to Charlemagne's notice in 777, when Abbasid emissaries arrived at the diet he held in Paderborn to settle the fate of a Saxony seeking his aid against the Umayyad emir of Cordoba. Instead of the ally of one group of Arabs against another, Charlemagne arrived as the champion of Christianity, his ambition not only to expand his Frankish empire but to impose his religion on all Islamic (Moorish) Spain.

During 777–778 Charlemagne led a large force over the Pyrenees and advanced on Saragossa, where two Muslim dynasties were vying heatedly for power. When he failed to breach the defenses of Saragossa, Charlemagne lashed out at the surrounding towns and countryside, causing great destruction.

Charlemagne's campaign of terror was interrupted by news of reversals in Saxony. On his way back to Saxony, he attacked Pamplona, Spain, believing it to be in Moorish hands. In fact, it was held by Christian Basques, the proud Gascons of Navarre, who, enraged by Charlemagne's devastating attack, joined forces with the Muslims to make a

surprise attack on Charlemagne's rear guard. That unit was led by Charlemagne's nephew Roland (d. 778), who made a heroic stand at the Battle of Roncesvalles on August 15, 778. Roland was killed along with all of the rear guard, but their action did save the main body of Charlemagne's army and entered the realm of courtly literature and legend, primarily through the great *Chanson de Roland* (Song of Roland).

After Charlemagne's tragic blunder in attacking Pamplona, he left Spain forever and never mounted another campaign against the Moors. Nevertheless, low-level warfare persisted between the forces of Aquitaine and the Moors and between an alliance of Basques and Moors and the Franks. In 800–801 the Franks laid siege to Barcelona, which fell and was incorporated into the so-called Spanish March, a Frankish province that encompassed northeastern Spain and that constituted a kind of cordon sanitaire for purposes of holding the Moors in abeyance.

The defeat marked the end of Charlemagne's early period of vigorous expansion of Frankish holdings. Not long afterward the Saxons would rise again against the empire, costing Charlemagne dearly to defend those regions he had already conquered.

Charlemagne's War against the Saxons (772–804)

PRINCIPAL COMBATANTS: Franks vs. Saxons

PRINCIPAL THEATER(S): Saxony

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Charlemagne sought to subdue the Saxons, convert them to Christianity, acquire new territory, and put an end to Saxon raiding against his empire.

OUTCOME: After a very long and difficult war consisting of 14 major expeditions into Saxony, the Saxons surrendered, having been converted, at least nominally, to Christianity.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Totals unknown; 45,000 Saxons executed at Verdun

CASUALTIES: Unknown

TREATIES: None

As the great enemies of Rome in its decline were the Germanic tribes of the north, so Charlemagne's (742–814) chief adversary during his long reign was the Saxons, stubborn, heathen, and independent. They were a continual threat to

outlying portions of the Frankish empire, and they habitually staged raids into Austrasia, the eastern territory of the Franks. From about 772 to 804 Charlemagne conducted 14 invasions into Saxony, between the Em and the Elbe Rivers, in an effort to conquer them once and for all.

The first major raid was pure reprisal for Saxon raids against Austrasia. Charlemagne attacked the symbol of Saxon pagan religion, the Column of Irminsul, representation of the great mythic tree that had engendered the universe. Charlemagne's army not only destroyed the monument but appropriated the treasure associated with it. If Charlemagne thought that by this single symbolic act he could subdue the Saxons, he was mistaken. The raids continued unabated into Frankish territory.

Charlemagne assembled a much larger army in 775 and mounted a full-scale invasion. Through skillful deployment of smaller forces—and an unconquerable will to resist—the Saxons held out, and Charlemagne resigned himself to an understanding that this people could not be conquered with one blow. Accordingly, he embarked on a strategy of limited conquest. Gradually annexing one Saxon parcel after another, he judiciously fortified each acquisition. Once the region was controlled militarily, he sent in missionaries to begin the process of converting the pagans to Christianity. At a diet held in 777 in Paderborn, Charlemagne seemingly sealed the submission of the Saxons. Also attending the diet were some Arab emissaries from northern Spain who sought his aid in their uprising against the Umayyad emir of Córdoba.

Charlemagne's patient if piecemeal military and cultural conquest of the Saxons might have worked had it not been for the rise of a new Saxon leader, Widukind (d. 807), a Westphalian. Widukind concluded alliances with the Danes and Slavs to mount an ongoing resistance against the Franks even as Charlemagne advanced into Spain (see CHARLEMAGNE'S INVASION OF NORTHERN SPAIN). But it was not until that campaign failed that the Saxons' uprising proved enough a threat to again command Charlemagne's attention. The renewed war against these newly baptised former pagans became the longest and most cruel the Franks ever fought. In Charlemagne's eyes the Christianized Saxons, having signed a treaty of allegiance, were both traitors and apostates. So when Widukind scored a major victory in 782 against a Frankish force that attacked a Saxon camp, Charlemagne responded with ruthless terror. At the Battle of Verden (782) he captured 4,500 Saxon prisoners—and summarily massacred them.

Still, the Saxon resistance continued. In 785 Widukind gave up and submitted to baptism in 786. Even this was not sufficient to halt the momentum of resistance. Charlemagne, increasingly frustrated, became increasingly ruthless, conducting a campaign that appalled even many Franks. The result was not the suppression of the Saxons, however, but an increase in their level of desperation. In 792, the Saxons mounted a general rebellion, which was

put down at great cost. From that point forward Charlemagne conducted yearly invasions, and he began systematically to expel Saxons from areas that came under his control. After each expulsion Charlemagne settled Franks in the vacated land.

By 804, with the Saxon surrender of Nordalbingia (Holstein), the Saxon resistance had at last come to an end. Saxony was Christianized—although a nominal pagan tribal identity remained—and the Saxons no longer raided the Franks.

Cherokee Uprising (1759–1762)

PRINCIPAL COMBATANTS: The Cherokees vs. English settlers

PRINCIPAL THEATER(S): Southern frontier region, principally the Virginia and Carolina backcountry

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Cherokee resistance to white usurpation of their lands

OUTCOME: Faced with famine, the Cherokees capitulated in the winter of 1762, ceding much of their eastern land and agreeing to a boundary separating them from the English settlers.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Totals unknown; English regular army numbers, approximately 1,500

CASUALTIES: Unknown; battle casualties from individual encounters were light.

TREATIES: The Cherokee land cession was probably formalized by treaty, but no document survives.

This conflict may be considered an aspect of the FRENCH AND INDIAN WAR but was sufficiently self-contained to be

treated as an independent, albeit related, war. The Cherokees had been English allies since South Carolina governor Charles Craven (in office from 1711–16) had concluded a treaty with them, by which they supplied warriors in exchange for a commitment from the colonials to defend, in their absence, their families against the Creeks and Choctaws. Pursuant to the treaty, Craven directed the building of several frontier forts and outposts. Their appearance was soon perceived not as a means of defense but as evidence of English encroachment on Cherokee land. As the Indians saw it, the sequence of events was all too familiar: Forts were built, settlers followed, and the Indians were dispossessed.

In 1758 a group of Cherokee warriors, slowly making their long journey home after abandoning General John Forbes's (1710–59) interminable campaign against Fort Duquesne (Pittsburgh, Pennsylvania), seized some wild horses. A group of Virginia frontiersmen encountered the Indians, claimed ownership of the horses, and attacked the party, killing 12 Cherokees. Following this the frontiersmen sold the horses and collected bounties on the Cherokee scalps, claiming that they had been taken from hostile Indians. Predictably, the act triggered a vengeance raid. Cherokee warriors killed 20–30 settlers. This, in turn, was sufficient provocation to ignite a full-scale war along the southern frontier. It would require two armies and two years to put down.

Lieutenant Colonel Archibald Montgomery (d. 1796) and his Scottish Highlanders conducted the first campaign, which met with heavy and highly effective guerrilla resistance led by the Cherokee war chief Oconostota. By early April 1760 General Geoffrey Amherst (1717–97) was building more forts on the Virginia frontier, but these proved insufficient to neutralize guerrilla activity. Oconostota expelled some 1,500 Highlanders from his territory and laid siege to Fort Loudoun on the Little Tennessee River. The garrison surrendered, and many were killed as they fled Fort Loudoun for Fort Prince George.

After the failure of the first campaign, a larger army consisting of Carolina Rangers, British light infantry units, Royal Scots, and Indian allies swept through Cherokee country, bringing total war to warriors as well as their families. The colonial forces concentrated on destroying Cherokee villages and burning crop fields. Faced with famine, the Cherokees capitulated in the winter of 1762, ceding much of their eastern land and agreeing to a boundary separating them from the English settlers. The boundary would not endure for long, however, as settlers relentlessly moved westward.

Cheyenne and Arapaho War (1864–1865)

PRINCIPAL COMBATANTS: Cheyenne, Arapaho, and various Sioux Indian factions vs. United States

PRINCIPAL THEATER(S): Colorado Territory

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Territorial governor's attempt to usurp mineral-rich Indian lands

OUTCOME: Indecisive, U.S. Congress cut military appropriations.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: United States, from 700 at Sand Creek Massacre (November 28, 1864) to 3,000, (summer 1865); Indians, 1,000 to 3,000 (July 26, 1865) at North Platte River crossing

CASUALTIES: At Sand Creek by some reports, 163 killed, 110 of whom were women and children; other reports, 42 of 46 Arapaho and 137 Cheyenne killed, 111 of whom were women and children; totals unknown

TREATIES: None

In 1864, when Colorado's territorial governor John Evans (1814–97) failed to acquire the mineral-rich Cheyenne and Arapaho hunting grounds he wanted, offering reservations in exchange for them, he called upon U.S. Army colonel John M. Chivington (1821–94), military commander of the territory and already known for his hatred of Native Americans, to sweep the Indians out. Neither the Cheyenne nor the Arapaho had given cause for a fight, and indeed most Cheyennes wanted peace. But a militant minority of young warriors known as the Hotamitanio (Dog Soldier Society) were sufficiently provocative for Chivington to claim that all the Cheyenne were at war. The colonel launched a number of assaults, which provoked an Indian response and created a war where none had existed before. To meet the growing hostility they had created, Evans and Chivington formed the Third Colorado Cavalry, consisting of volunteers from local mining camps.

Still, the vast majority of Cheyennes refused to fight. During the winter Chief Black Kettle (c. 1804–68) appealed to Major Edward Wynkoop, commander of Fort Lyon, to communicate his peaceful intentions to Governor Evans. Evans and Chivington did meet with the Cheyenne and Arapaho, ordering them to lay down their arms at a local fort. The Indians left the meeting and marched to Sand Creek, about 40 miles northeast of Fort Lyon, where they planned to talk with the sympathetic Major Wynkoop, whom they trusted. The army, however, acted quickly to remove Wynkoop and replace him with one of Chivington's officers. He cut the Indians' rations and provocatively fired on a group of unarmed Arapahos who had approached the fort to trade buffalo hides for food.

Still Black Kettle and his people, encamped at Sand Creek, believed they were at peace. Despite protests from some of his own officers, on November 28, 1864,

Chivington deployed a 700-man force around Sand Creek. Disturbed by the presence of the army, on November 29 Black Kettle hoisted an American flag and white flag of truce over his tepee. At this, the troops opened fire and charged, killing unarmed warriors, old men, women, and children and committing gross atrocities of cruelty and mutilation (see SAND CREEK MASSACRE).

Black Kettle escaped, and, astoundingly, persisted in seeking peace. But the Southern Sioux, Northern Arapaho, and Cheyenne united in a campaign of raiding throughout the territory during late 1864 and early 1865, cutting a swath of destruction north along the Powder, Tongue, Republican, and Yellowstone Rivers. A few costly but indecisive skirmishes were fought, but, for the most part, the army pursued fruitlessly.

Plans were drawn up for a grand offensive using cavalry to carry out vigorous offensive operations while infantry regiments guarded and patrolled the mail and emigration trails, but bad weather prevented execution of the strategy. Worse, an arrogant and outspoken man, John Pope (1822–92), who had organized the Powder River Campaign and reorganized his command into the Department of the Missouri, had run afoul of Congress. Disgusted by Sand Creek, Congress was in the throes of a peace offensive. Facing obstacles natural and political, Pope's grand offensive came to little.

Government negotiators tried to hammer out a peace with the Comanches and Arapahos against a background of Indian raiding and fitful military response. Finally, on July 26, 1865, 1,000 to 3,000 warriors massed against a cavalry unit guarding the Oregon-California Trail North Platte River crossing. Miraculously, army casualties were light, but the attack provoked a sharp response from General Patrick E. Connor (1820–91), who sent a force of 3,000 troops into the Powder River country, destroying one Arapaho village and engaging the Sioux.

Like previous offensives, however, Connor's campaign was cut short by premature winter storms that forced his withdrawal by the end of September 1865. In the lull, Congress—realizing that Chivington's action at Sand Creek had provoked a senseless \$20 million war during the waning months of the vast Civil War—acted to cut troop numbers and military appropriations drastically. The Cheyenne-Arapaho War ended without formal treaty or declaration.

Cheyenne War, First (1856–1858)

PRINCIPAL COMBATANTS: Cheyenne Indians vs. United States

PRINCIPAL THEATER(S): Nebraska and western Kansas

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Cheyenne disruption of an “emigrant road”

OUTCOME: Inconclusive; after fighting petered out Cheyennes sued for peace in summer 1858.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Various, most Indian raids conducted by small groups; confrontation of General Edwin V. Sumner troops and Cheyenne along the Solomon River (July 29, 1857), Indians, about 300; United States, about 300.

CASUALTIES: Unknown

TREATIES: None

Unlike the Apache, Navajo, and the Sioux, the Cheyenne through the early 1850s were essentially peaceful toward the United States. As was often the case, however, friction increased with the frequency of Euro-American–Indian contact. In 1851 Cheyenne representatives had signed a treaty agreeing to refrain from raiding their traditional enemies, the Pawnee in the vicinity of Fort Kearny, Nebraska, but by the mid 1850s young Cheyenne warriors began doing just that, thereby posing a danger to the immigrant road Fort Kearny was assigned to defend.

In 1856 U.S. Army general William S. Harney (1800–89) threatened the Cheyenne as well as Arapahos with an all-out war, if they did not stop the raids, but, at the time, his forces were too preoccupied with pre-Civil War violence between pro-slavery and abolitionist factions to carry out such a threat. In April some Cheyenne fell into an argument with whites over the ownership of a horse. In the following scuffle, one Indian was killed, and the other two were taken to prison. Local Cheyenne, fearing this was the start of a war against them, fled toward the Black Hills, killing a trapper along the way. Two months later Cheyenne in pursuit of Pawnee killed a white immigrant near Fort Kearny. In August another Cheyenne party, also in search of Pawnees, stopped a mail coach to beg for tobacco. The driver, panicked, drew his revolver but took an arrow in the arm before he could shoot.

Fort Kearny's commander dispatched a company and a half of the First Cavalry to find the Cheyenne. The troopers attacked the first encampment they encountered, killing 10 Cheyennes, wounding another 10, and “appropriating” an assortment of goods and livestock. Retaliatory raids followed from the Indians all along the Platte Road, and Secretary of War Jefferson Davis (1808–89) authorized a punitive campaign.

During late May and June 1857 General Edwin V. (“Bull-head”) Sumner (1797–1862) scoured the Cheyenne country of Nebraska and western Kansas but found no Indians to fight. On July 29, 1857, scouts reported a band of 300 Cheyenne along the Solomon River. Sumner's forces and the Indians were equally matched, and because Sumner knew that Indians rarely engaged in battle unless they enjoyed superior numbers, he expected them to scatter.

But these warriors, it seems, had washed their hands in what they believed was a magic lake whose waters conferred absolute protection from white bullets. They stood their ground.

Unfortunately for the warriors, Sumner took the unusual step of ordering his men to sling their carbines and charge instead of using drawn sabers. Seeing this, the Cheyenne panicked, broke, and ran, with Sumner in hot pursuit.

As was often the case during the Indian Wars, the First Cheyenne War did not so much conclude as simply peter out. In September 1857 Sumner was ordered to break off the Cheyenne campaign to join an expedition to Utah. With the pressure relieved, the Indians launched a few raids, but they were, for the most part, exhausted, and following a quiet interlude, most of the Cheyenne sued for peace during the summer of 1858.

Grimell, *The Fighting Cheyennes* (Norman: University of Oklahoma Press, 1982); John H. Moore, *The Cheyenne* (Cambridge, Mass.: Blackwell, 1996).

Chickasaw Resistance (1720–1724)

PRINCIPAL COMBATANTS: The English-allied Chickasaw vs. the French-allied Choctaws and French settlers

PRINCIPAL THEATER(S): Southern Mississippi River region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Allying themselves with the English, the Chickasaws resisted domination by the French.

OUTCOME: Inconclusive

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Armistice of 1724; no treaty

By the mid-17th century the rivalry between French and English colonial interests in America had become intense and violent. Both sides recruited allies from among the Indians. Typically, those Indian tribes that traded with the French allied themselves with the French, whereas those that traded primarily with the English allied themselves with the English. The Chickasaws, who lived along the southern Mississippi River in French-controlled territory during the early 18th century, became allied with the English and warred against the French and the French-allied Creeks and Choctaws. The most concentrated violence came between 1720 and 1724 and is called by historians the Chickasaw Resistance.

In 1720 the tribe defied French authority by openly maintaining trade relations with the English and by allowing English traders to “invade” territory claimed by France

along the Mississippi River. In an attempt to reassert control, the French incited their Choctaw allies to raid Chickasaw settlements. In turn, the Chickasaw retaliated with raids of their own, not only against Choctaw villages but against French shipping on the Mississippi, operating vigorously enough to create an effective trade blockade. In the face of this economic crisis, the French redoubled their recruitment efforts among the Choctaw, offering them a bounty on Chickasaw scalps and freely supplying firearms and ammunition. For the next four years the Chickasaw and Choctaw engaged in an ongoing exchange of destructive but ultimately inconclusive raids that were suspended by an armistice concluded in 1724.

Chief Joseph's Uprising *See* NEZ PERCÉ WAR.

Children's Crusade (1212)

PRINCIPAL COMBATANTS: French and German children intending to fight Islamic forces in a crusade to the Holy Land

PRINCIPAL THEATER(S): The “crusaders” failed to reach the Holy Land, the intended theater of operations.

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Popular response to the disgraced Fourth Crusade

OUTCOME: The children failed to reach the Holy Land; most died in the attempt.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

French children, as many as 30,000 reported; German children, as many as 20,000 reported; actual numbers probably lower

CASUALTIES: Thousands died or suffered enslavement and other abuse; 1,400 alone were killed in shipwrecks.

TREATIES: None

The so-called Children's Crusade, uncounted among the official series of European crusades to the Holy Land, had its origin in the collective shame surrounding the notorious Fourth CRUSADE, authorized in 1202 by Pope Innocent III (c. 1160–1216). The organizers of the Fourth Crusade contracted with Venice for transportation, then failed to pay for it. Under pressure from the Venetians, the Crusaders agreed to pay in service. That service was the sacking of Zara, a leading maritime rival of Venice—and, not incidentally, a Christian city. In 1204 the Crusaders sacked and looted the Byzantine capital of Constantinople so that Baldwin of Flanders (1172–1205) could be installed as the

first ruler of the Latin Empire. These Crusader atrocities against Christian cities and people sent shock waves throughout Europe and brought shame not only upon the crusaders but the papacy as well. Moreover, the sacking of Constantinople greatly widened the already formidable gulf separating the Christian churches of the East and West.

As Europe still reeled from the humiliation of the Fourth Crusade, a new crusade developed in France in 1212 around Stephen, a shepherd boy from Cloyes, near Vendôme. Stephen claimed he had received a message from Jesus ordering him to crush the infidels. Stephen's preaching, which appealed to the innocent and the pure of heart, seemed to purge the guilt of the Fourth Crusade. Some estimates have as many as 30,000 unarmed children, most under the age of 12, heeding the word of Stephen to join his crusade to recover the Holy Sepulchre from the Muslims. Adults apparently approved of and actively encouraged the popular movement.

Simultaneously, Nicholas, a German peasant boy, made a similar appeal. Estimates reach 20,000 children for his crusade, though most historians believe the number was closer to 7,000—still considerable. Nicholas claimed his inspiration had come from a cross of light in the sky.

The two Children's Crusades got under way, only to meet with disaster. Thousands of French children, led by Stephen, died of hunger and disease during their march. Thousands of German children, Nicholas's contingent, froze to death in the Alps or plunged to their deaths while traversing the mountains.

The survivors of the French group reached Marseilles, where they expected the Mediterranean to part, as Stephen had promised it would. When it did not, local merchants furnished ships to carry the children to the Holy Land. Two ships were wrecked in a storm, with the loss of perhaps 1,400 children. Others reached the shores of Egypt, not Palestine, and were sold into slavery by the sailors with whom they had traveled. Forced to convert to Islam, those who refused were martyred. The German survivors, upon reaching Genoa, found no transportation at all. Many were killed or raped on their long journey back to Germany.

Chile, Spanish Conquest of See SPANISH CONQUEST OF CHILE.

Chilean Civil War (1829–1830)

PRINCIPAL COMBATANTS: Conservative vs. liberal factions
PRINCIPAL THEATER(S): Chile

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conservatives sought the overthrow of a liberal reformist regime.

OUTCOME: A reactionary dictatorship was installed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown, but forces were relatively small.

CASUALTIES: Unknown

TREATIES: None

Although the people, and especially the army, rallied behind the man who "liberated" Chile from Spain and made Bernardo O'Higgins (1778–1842) their supreme dictator, he did not win over the Chilean landowning oligarchy. These conservative aristocrats supported him, however, out of necessity while Spain continued to hold on to parts of Peru and loyalist guerrillas stalked the badlands of Chile.

By 1822 the Chilean-Argentine army had not only expelled Spain from its last stronghold in Peru but had driven its remaining supporters from Chile as well, and O'Higgins, who had long been in favor of reducing the privileges of the landowners, was now forced by means of a new constitution to concede a larger political role to the aristocrats. It did not work. The unappeased oligarchy, suffering failing harvests and a growing and general unrest, forced him to abdicate in 1823, leaving a power vacuum in Chile.

Amid near anarchic instability, the moneyed landowning elite and the reactionary clergy blocked all efforts at liberal reform, which was favored by the lower classes and the army, who wanted agrarian reform, redistribution of land, and radical curtailment of the power of the clergy. For the next seven years this internal political split between the oligarchy and the army would lead to 30 successive governments and a variety of political experiments. In 1828 a reformist constitution was promulgated for Chile, triggering renewed civil unrest and by 1829 outright civil war.

The champion of the conservative cause was General Joaquín Prieto (1786–1854), who commanded the army garrison at Concepción. He was opposed by a ragtag liberal army led by General Ramón Freire (1787–1851). The only significant battle of the war took place on April 17, 1830, at Lircay, where the conservative forces won a decisive victory. This single triumph gained Prieto the presidency, although it was his appointee, Diego Portales (1793–1837), a cabinet minister, who became the real power in Chile, assuming dictatorial authority over the conservative regime.

Chilean Civil War (1891)

PRINCIPAL COMBATANTS: The conservative forces of Chile's congress vs. the liberal forces of Chile's president

PRINCIPAL THEATER(S): Chile

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A conservative congress responded militarily to what it perceived to be the excessive reforms of President José Manuel Balmaceda.

OUTCOME: Balmaceda was deposed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Congressional forces, 9,000, including naval vessels; presidential forces, 10,000

CASUALTIES: Very light because the presidential forces capitulated upon confrontation.

TREATIES: None

In 1886 Chileans elected a liberal reformer, José Manuel Balmaceda (1840–91), to the presidency. He embarked on an ambitious program of public works, free public education, and public health care, all of which strained the Chilean treasury—already depleted by the WAR OF THE PACIFIC (1879–1883)—beyond its capacity to pay for the reforms.

When the government tried to claim the revenues from Chile's saltpeter mines, the Chilean oligarchy, looking for a weaker, rather than a stronger central power, turned up the pressure on the president's political enemies in the Chilean congress. In 1890 the congress attempted to check Balmaceda by voting down his budget. In early 1891 the president responded with a pledge that he would implement his programs with or without the congress. This prompted congress to depose Balmaceda and appoint in his place a conservative naval officer, Jorge Montt (1845–1922), as acting or provisional president. The appointment split Chile's military. The navy backed Montt, whereas Balmaceda retained the loyalty of the army. Thus, Balmaceda refused to step down and, indeed, exercised dictatorial powers, at least within the capital city, Santiago.

In August 1891 naval vessels transported 9,000 congressional troops to the vicinity of Valparaíso, where 10,000 of Balmaceda's troops were stationed. Confronted by the congressional forces, most of Balmaceda's soldiers refused to fight, and the city was easily taken. From Valparaíso the congressional troops advanced on Santiago, which quickly capitulated. Balmaceda fled the presidential palace and found asylum with the Argentine legation in Santiago. He remained at the legation until the end of his term, September 19, 1891, and on that day took his own life.

Chilean Revolt (1973)

PRINCIPAL COMBATANTS: A group of U.S.-backed Chilean generals vs. the Marxist government of Salvador Allende

PRINCIPAL THEATER(S): Santiago, Chile

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Allende's radical reform of Chilean society and its political and economic life plus U.S. efforts to block foreign loans and destabilize the government resulted in social turmoil verging on civil war. A group of right-wing generals, probably funded and trained by the CIA, staged a coup to "save" the country from communism.

OUTCOME: Allende committed suicide while under attack by the military, and a military junta was installed that rolled back the radical reforms.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Chilean military, 77,000

CASUALTIES: Official Chilean records list 2,095 Chileans killed during the coup and 1,102 missing.

TREATIES: None

On September 11, 1973, in the midst of a U.S.-backed coup staged by the Chilean military, Marxist president Salvador Allende Gossens (1908–73) shot himself in the presidential palace, bringing to a close a brief and precarious revolution in many ways typical of the volatile nature of South American politics in the 20th century. For most of that century the diverse and culturally rich South American continent lived in the shadow of its powerful and jealous neighbor to the north. Occasionally, as with the rise to power in Argentina of the populist demagogue Juan Perón (1895–1974) (*see* ARGENTINE REVOLT [1951], ARGENTINE REVOLT [1954], ARGENTINE REVOLT [1962–1963]) or the coming to office of Allende in Chile, South America seemed poised to break free of U.S. influence, but in the end the United States maintained its hegemony over the Western Hemisphere.

Allende, a scion of Chile's upper middle class who held a medical degree from the University of Chile, was one of the founders of Chile's Socialist Party. Elected to the chamber of deputies in 1937, he served in the left-leaning coalition of President Pedro Aguirre Cerda (fl. 1938–41) in the late 1930s and 1940s before running for the Senate in 1945. During his four successive terms as a Chilean senator, Allende would enter the presidential race twice before finally becoming Chile's chief executive on November 3, 1970. Though Allende was never as openly anti-U.S. as Argentina's Juan Perón, he also did not turn his back on the left once he gained power, as Perón did. An avowed Marxist, Allende immediately began to restructure Chilean society along socialist lines. Allende soon expropriated the U.S.-owned copper companies in Chile, which put him at odds with the hemisphere's major power and shook foreign investors' confidence in his government.

Determined to be independent of U.S. influence, Allende established diplomatic relations with Cuba and China, both at the time arch-foes of the United States during the COLD WAR. He began purchasing privately owned businesses, took over large agricultural estates and turned them into peasant cooperatives, authorized huge wage increases, and froze prices, all in an attempt to redistribute the wealth of the country. He paid for his structural changes by printing currency to cover the huge deficits created by his spending policies. Soon Chile faced stagnant production, a fall-off in exports, a loss of private-sector investments, exhausted financial reserves, widespread strikes, rising inflation, food shortages, domestic unrest, and foreign intrigue. The United States ensured that Chile was cut off from international lines of credit, and Allende's own inability to control his radical left-wing supporters exposed him to the hostility of the Chilean middle class from which he had sprung. More important perhaps, he incurred the wrath of the right-wing parties dominated by the Chilean military.

But through it all, Allende retained the support of most workers and peasants, and his electoral coalition won 44 percent of the vote in the March 1973 congressional elections. As the economy continued to worsen over the summer, street fighting, sabotage, congressional infighting and a crippling anti-nationalization became daily events. A two-month long strike in the trucking industry brought Chile to the verge of civil war. Alarmed by these events, a group of U.S.-trained Chilean generals, reportedly financed by the Central Intelligence Agency (CIA), staged a successful coup on September 11, 1973. Chile came under the brutal rule of a four-man military junta, with General Augusto Pinochet Ugarte (b. 1915) as its leader. Though Allende shot himself in the head during the military's concerted attack on the presidential palace, the new Chile did not publicly acknowledge that the rumors of suicide were true. They remained unconfirmed until his body was exhumed from an unmarked grave in 1990 and given a public burial. Meanwhile, the junta had fallen, and Allende had become a hero of the Latin American left.

Chilean War of Independence (1810–1818)

PRINCIPAL COMBATANTS: Chilean revolutionaries vs. Spain

PRINCIPAL THEATER(S): Chile

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A popular revolt triggered by Spain's defeat at the hands of Napoleon

OUTCOME: Independence was won, but a dictator was installed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Chilean rebels, 6,600; royalist troops, 9,000

CASUALTIES: Chilean rebels, 2,640 killed; royalists, 1,700 killed

TREATIES: Independence formally proclaimed February 12, 1818

Napoleon Bonaparte's (1769–1821) conquests in Europe during the early 19th century (see NAPOLEONIC WARS), especially his defeat of Spain during the PENINSULAR WAR, sparked a wave of liberation movements against the aging empire in Central and South America, including a popular revolt in Chile. In 1810 at a *cabildo abierto* (open town meeting) in Santiago, wealthy Chileans replaced the official colonial government with an elected junta composed of local worthies. While professing loyalty to the ousted Spanish king, Ferdinand VII (1784–1833), as opposed to the French interlopers, Chilean patriots nevertheless removed royal colonial officials from office. They opened Chile's ports—which had been restricted to commerce with the mother country—to free trade. They took steps toward abolishing slavery, promoted general education, and set up a newspaper to publicize the patriot cause.

Unfortunately, however, the revolutionary movement itself was torn by dissension. During 1811–14 the radicals, rallying behind José Miguel Carrera (1785–1821), fought with the moderates, led by Bernardo O'Higgins (1778–1842), undermining and greatly weakening the revolution. Thus, when Napoleon was finally defeated, and the Spanish throne decided to reassert its empire, Spanish royalist forces were able to defeat the revolutionary armies at the Battle of Rancagua in 1814. Royal authority was then reestablished in Santiago.

Defeat, however, had moved Carrera and O'Higgins to pool their surviving forces and then to unite with José de San Martín (1778–1850), a military leader who had been preparing, training, and organizing an army based at Mendoza in neighboring Argentina. San Martín's object was not the liberation of Chile, but of Peru. To get there, however, he would have to march through Chile. San Martín was persuaded that defeating the Spanish in Chile would be a great aid to the eventual liberation of Peru. Although he fell out with Carrera, who he accused of sedition (for which he was subsequently exiled), San Martín pressed ahead with the liberation of Chile, preparatory to the liberation of Peru.

Early in 1817 he led 5,000 rebel troops across the Andes—something no army had ever before attempted, let alone accomplished—and engaged the royalists at the Battle of Chacabuco on February 12, 1817. From here San Martín continued on to Santiago, which fell to him. Early in 1818 San Martín declared the independence of Chile. This declaration was validated by a final engagement with the royalist forces at the Battle of the Maipo River on April

5. In the meantime, Lord Thomas Cochrane (1775–1860), a Britisher hired to command the small Chilean navy, bombarded Spanish coastal forts and daringly seized a number of Spanish warships between 1818 and 1820. Defeated on the ground and with its command of Chilean waters broken, Spain conceded defeat. Chile was free. However, Bernardo O'Higgins, a moderate during the revolution, assumed the presidency and embarked on a course of dictatorial rule.

Chilean War with Peruvian-Bolivian Confederation

See PERUVIAN-BOLIVIAN CONFEDERATION, WAR OF THE.

Chindit War (Burma Campaign) (1943–1945)

PRINCIPAL COMBATANTS: The Chindits vs. Japanese army

PRINCIPAL THEATER(S): Burma (Myanmar)

DECLARATION: See World War II: Pacific

MAJOR ISSUES AND OBJECTIVES: Control of the Burma Road, principal communications and supply artery to China

OUTCOME: The Allies ultimately attained their objective.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Allied forces, 27 divisions, Japanese forces, 10 divisions and two brigades

CASUALTIES: British Empire and Commonwealth, 74,909 casualties; United States, 6,070; Chinese, unknown; Japanese, an estimated 100,000

TREATIES: See World War II: Pacific (1941–1945)

The Chindit War may be considered a phase of World War II, but action here was so concentrated and remote from the principal theaters of that war that it is typically regarded as a separate conflict. In their sweep of Asia and the Pacific, the Japanese conquered and occupied Burma (Myanmar) early in 1942. The demands of the other Pacific theaters of World War II left Allied planners scant resources to devote to what came to be called the China-Burma-India Theater (see WORLD WAR II: CHINA-BURMA-INDIA THEATER (1941–1945)). Nevertheless, whoever controlled Burma controlled the Burma Road, the only supply route from northern Burma into China, and whoever controlled the Burma Road went a long way toward controlling China. To leverage their scarce resources, the two leading Allied generals in the theater, Britain's Orde Charles Wingate (1903–44) and the United States's Joseph "Vinegar Joe" Stilwell (1883–1946), developed indigenous troops. Wingate trained a mixed

band of British, Gurkha, and Burmese soldiers in jungle and ranger warfare. Called Wingate's Raiders—or Chindits—these troops waged guerrilla warfare against Japanese military installations, especially airfields and communications outposts. Simultaneously, General Stilwell trained two Chinese armies, one in India and the other in China, in the more conventional methods of Western warfare.

While Wingate harried the Japanese with his Chindits, Stilwell in December 1943 led a mixed force of U.S. and Chinese troops on an expedition to retake Burma. Traveling from the north, Stilwell's army fought its way over mountain passes and through nearly impenetrable jungle. These were obstacles formidable enough, but the force also had to fight jungle-hardened Japanese troops along the way. In February 1944 an elite cadre of 3,000 specially trained U.S. troops led by Colonel Frank D. Merrill (1903–55) and dubbed Merrill's Marauders, was attached to Stilwell's army. The Marauders served as the advance guard, working deep behind enemy lines in the jungle to clear the way for the main body of troops.

In a fight during May 17–18, 1944, Stilwell's forces took the Japanese airfield outside of Myitkyina, northern Burma. This gave the Allies a vital foothold in the region, allowing the resupply and reinforcement of Allied positions in Burma. Nevertheless, it was August 3 before the city of Myitkyina fell to the Allies.

With the Myitkyina airfield available, the U.S.-trained Chinese Expeditionary Force was able to make headway against the Japanese at Lun-ling, an outpost controlling a critical pass along the Burma Road. The so-called Battle for the Road extended into early 1945, as the Japanese yielded territory almost on a yard-by-yard basis. After liberating 400 villages along the Burma-China artery, the Burma Road was reopened to Allied traffic on January 27, 1945.

Chinese-Annamese War (907–939)

PRINCIPAL COMBATANTS: Annam (northern and central Vietnam) vs. Cantonese China

PRINCIPAL THEATER(S): Annamese-Chinese borderlands

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Annam fought for independence from China.

OUTCOME: Annamese independence was achieved.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The once mighty Tang dynasty gradually declined in China over the course of the ninth century. As the Tang's central authority grew weaker, the power of semiautonomous war lords increased. Early in the 10th century the Tang were overthrown by a war lord, General Zhu Wen (Chu Wen), who seized control of the country in 907 and murdered the last Tang emperor. As always in China when a dynasty fell, a period of anarchy and chaos followed the end of Tang rule, and during that period China's vassal state in Southeast Asia, Annam, began a struggle for its independence.

Chinese influence had been evident in Tonkin and northern Annam since at least the ninth century B.C.E. Late in the third century B.C.E. the area was conquered by the Chinese general Zhao Tuo (Chao T'o) and included in the rebellious regime he established in South China. The name Nam Viet was first applied to Zhao Tuo's entire Cantonese kingdom, of which Annam was the "pacified south," a term the natives much resented. Though Nam Viet was soon limited to the Tonkin and northern Annam provinces, the whole area was still considered Annam, a pacified southern region of China proper that stretched south of Hue until the Chams established an independent pirate kingdom, Champa, below the 17th parallel around 200 C.E.

Even before the fall of the Tang, the Annamese had obtained the right to choose their own mandarin governor, and shortly afterward—following the emperor's murder—all government officials. Soon they were skirmishing with the Cantonese Chinese just to their north. By 931 they had completely evicted the Chinese from Annam.

Following the eviction of the Chinese, Annam itself was beset by rebellion. In 939 a rebel army officer killed the leader of Annam, whereupon the leader's kinsman, Ngo Quyen (897–944), organized an army against the forces of the rebel officer. He appealed to China for aid, which unleashed an invasion. Ngo and his troops killed the officer, then advanced to the Bach Dang River to repel the Chinese invaders. The Bach Dang is a tidal river, and Ngo booby-trapped it by driving great iron spikes into the riverbed at low tide. These were submerged at high tide, and when the ships of the Chinese invaders sailed up the river, they found themselves impaled as the tide went out. This allowed Ngo to attack and destroy the invaders and their fleet. The victory was so absolutely decisive that except for a brief period of Chinese reoccupation during 1407–28, Annam remained independent until the French conquered and colonized it in the 19th century.

Chinese-Annamese War (1057–1061)

PRINCIPAL COMBATANTS: China vs. Annam (Dai Viet, northern Vietnam)

PRINCIPAL THEATER(S): Dai Viet (northern and central Vietnam)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Chinese reconquest of Annam (or its "Pacified South")

OUTCOME: The Dai Viet pushed the Chinese out of their territory.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 1057 Chinese troops invaded Dai Viet (central and northern Vietnam) in an effort to reconquer what had been, from 111 B.C.E. to 939, the Chinese province of Annam ("Pacified South"). Annamese (or Dai Viet) troops engaged the invaders along the Red River, fighting a war that lasted four years before the Chinese were driven back into their own territory.

While the Dai Viet forces were engaged against the Chinese, the Chams and the Khmers, people neighboring the Dai Viet, invaded in an attempt to seize territory. After defeating the Chinese in the north by 1061, the Dai Viet armies confronted the Chams and Khmers by invading Champa. This pushed the Dai Viet border southward, below the 17th parallel. A band of Dai Viet soldier-peasants then settled along the coastal region, gradually pushing out the original Cham residents. This action may be seen as a phase of the VIETNAMESE-CHAM WAR (1000–1044).

For the background of Annam and Annamese independence from China, see CHINESE-ANNAMESE WAR (907–939).

Further reading: Terry Cannon, *Vietnam: A Thousand Years of Struggle* (San Francisco: Propus Press, 1969); Oscar Chapius, *A History of Vietnam* (Westport, Conn.: Greenwood Press, 1995); Nguyen Khac Vien, *Vietnam: A Long History*, rev. ed. (Hanoi: Gioi Publishers, 1993).

Chinese-Annamese War (1075–1079)

PRINCIPAL COMBATANTS: Chinese with Cham and Khmer allies vs. Dai Viet (formerly the Chinese province of Annam)

PRINCIPAL THEATER(S): Dai Viet (modern northern and central Vietnam)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Chinese reconquest of a portion of Dai Viet

OUTCOME: Dai Viet ceded five border provinces to China.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Relevant document is a 1084 treaty, which fixed the border between Dai Viet and China.

The Chinese under the Song (Sung) Dynasty allied with the Chams and Khmers to attack Dai Viet (formerly Annam) in 1075. These combined forces overwhelmed Dai Viet, which ceded five border provinces to China in exchange for the withdrawal of the invading army. The provinces were returned by a treaty of 1084, which fixed the border between Dai Viet and China.

For the background of Annam and Annamese independence from China, see CHINESE-ANNAMESE WAR (907–939). Also see CHINESE-ANNAMESE WAR (1057–1061); VIETNAMESE-CHINESE WAR (1405–1407); VIETNAMESE-CHINESE WAR (1418–1428).

Chinese-Cham War (431–446)

PRINCIPAL COMBATANTS: China vs. Champa (central Vietnam)

PRINCIPAL THEATER(S): Northern and central Vietnam

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Taking advantage of the ongoing chaos in China during its “Dark Ages” of the “Six Dynasties,” Cham adventurers looted Chinese possessions in Southeast Asia, finally provoking China to retaliate.

OUTCOME: Champa’s major cities were sacked, and the country fell under the control of China’s client state, Tonkin.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

During the fifth century China suffered through the near anarchy of what Chinese historians would call the “Six Dynasties,” China’s “Dark Ages,” which had begun with the collapse of the ancient Han Empire in 220. Throughout the century China would remain divided into two major regions—one mostly north, the other south of the Yangtze (Chang) River—that fought incessantly with each other even as both suffered from internal strife. In 420 the Eastern Jin (Chin) dynasty was overthrown by a warlord named Liu Yuan, who would establish the “Former” Song (Sung) dynasty, only to be overthrown in turn within a few decades.

While China suffered through such chaos, neighboring powers took risks they would otherwise have avoided. Sometime around 200 an Indonesian people known as the Chams established an independent and piratical kingdom, Champa, south of Hue in southern Annam (central Vietnam), and during China’s troubled fifth century they began to make numerous and bold raids into Chinese-ruled Nam Viet to the north of Champa. One of the leading Cham warriors and rulers to conduct such pirate raids was Ling Bhadravarman (c. 400), and he was followed around 405 and 406 by King Fan Hu-ta (d. c. 414). In 413 he led an invasion north of Jih-nan from which he never returned. Later in 431 the new Cham king Yang Mah II (c. 402–447) launched more than 100 boats on a plundering expedition along Jih-nan’s coast in Chinese-held Tonkin (northern Vietnam). However, the Chinese struck back while the king was out of the country. They besieged Ch’u-su until bad weather forced them to break off. Meanwhile, Yang Mah tried unsuccessfully to obtain the aid of Funan soldiers while fighting in Tonkin. Sporadic Chinese-Cham skirmishing continued until 446, when the new governor of Tonkin, Tan Ho-chu, denounced his ongoing peace negotiations with Champa, launched an overland punitive expedition, and besieged Ch’u-su. The city fell in 446, laying its rich booty before him. Emboldened, he marched on and captured and sacked the Cham capital near Hue. Tan’s successes apparently much reduced the Chams’ taste for raiding into Nam Viet, and in effect Tan had taken temporary control of Champa.

Chinese-Cham War (605)

PRINCIPAL COMBATANTS: Champa (central and southern coastal Vietnam) vs. China

PRINCIPAL THEATER(S): Champa

318 Chinese Civil War (1398–1402)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Chams took advantage of internal Chinese instability to make an abortive play for independence.

OUTCOME: Champa failed to achieve independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

As frequently happened, the ruler of a region subject to Chinese domination took advantage of dynastic instability to attempt rebellion. During the late sixth century the Chinese Sui dynasty suffered internal upheaval, prompting Sambhuvarman (d. 629), king of the Chams, to attempt to free Champa (central and southern coastal Vietnam) from Chinese domination. When the Sui dynasty was reinvigorated, however, Sambhuvarman called off the rebellion and resumed tribute payments due the Chinese overlords. This was not sufficient for the Chinese, however, who invaded the region of modern-day Vietnam, quelling ongoing rebellions in Tonkin and Annam, both Chinese provinces, then advanced south into Champa. Here the Chinese forces neutralized Sambhuvarman's army, captured and occupied the city of Ch'ü-su, then sacked the Cham capital city, Tra-kieu. After swiftly visiting much devastation on Champa, the Chinese withdrew just as swiftly, allowing Sambhuvarman to resume leadership of his kingdom, albeit in strict subjugation to China.

Upon the death of Zhu Yuanzhang (Chu Yüan-chang) (1328–58), founder of the Ming dynasty (*see* MONGOL-CHINESE WAR [1356–1368]), the throne passed to Jianwen (1337–1440), Zhu Yuanzhang's grandson, and not to any

of Zhu Yuanzhang's six sons. Anxious to avoid a relapse into the chaos that characterized the fall of Mongol rule over China and well aware that, at 16 his own rule was in jeopardy, Jianwen quickly moved to neutralize his uncles' power. He reduced three from royal status to that of mere citizens. Another uncle withdrew to a monastery, and a fifth committed suicide. This provoked the only remaining uncle, Zhu Di (Chu Ti) (1359–1424), prince of Yen, into a rebellion against Jianwen. Chu Ti soon enlarged his own realm, and by 1398 he dominated all China's northern provinces. In 1402 he advanced on Nanjing, the imperial capital, and laid siege to it. In part because the royal court was rife with traitors and defectors, the city quickly capitulated. Zhu Di assumed the throne as Yongle (Yung Lo), third emperor of the Ming dynasty. Jianwen disappeared. Some say he perished when his palace was set ablaze, but most historians today believe he escaped in the disguise of a Buddhist monk. Yongle meanwhile stabilized Ming rule and greatly expanded the dynasty's holdings, commanding tribute from kingdoms as far away as Africa. He returned the capital to Ta-tu and renamed it Beijing. For the next century Ming China would enjoy both prosperity and tranquillity.

The great Ming dynasty (*see* MONGOL-CHINESE WAR) reeled under attack from the Manchus (*see* entries relating to the MANCHU CONQUEST OF CHINA), the devastation of which was compounded by a series of natural disasters, including widespread famine and flood. Attempts to shore up the crumbling Ming dynasty through a vigorous program of heavy taxation served only further to erode popular

support for the government. Rebellion became commonplace throughout China as individual warlords vied for dominance, using armies recruited from the hordes of the dispossessed and starving.

By the 1630s Li Zicheng (c. 1605–45) had emerged as one of the most powerful of the warlords. In 1637 he mounted an assault against the provincial capital of Sichuan (Szechwan). When this failed he regrouped and invaded Shaanxi, then in 1640 advanced into Henan Province. Within two years he had conquered both Shaanxi and Henan, then marched into Shanxi, which he took in 1643. With this conquest he declared himself emperor of China.

Li Zicheng now controlled a vast army of at least 300,000 men, which in 1644 he led into Beijing, the imperial capital. The Ming military was in such disarray that the two armies sent to intercept the forces of Li Zicheng fragmented, the rival commanders refusing to coordinate the defense with one another. Li Zicheng easily defeated the defenders in detail, then marched triumphantly into the capital. Chong Zhen (Ch'ung-chen; 1611–44), the last Ming emperor, did not flee but hanged himself, and Li Zicheng assumed the throne of China, but he was destined to hold it only briefly. For when the Ming generals turned to the Manchus for help in punishing Li Zicheng and restoring the dynasty, the Manchus seized the throne for themselves.

Chinese Civil War (1674–1681) *See* THREE FEUDATORIES, REVOLT OF THE.

Chinese Civil War (1927–1937)

PRINCIPAL COMBATANTS: Chinese Communists vs. Chinese Nationalists

PRINCIPAL THEATER(S): China

MAJOR ISSUES AND OBJECTIVES: After joining forces to subdue the chaos that followed the Chinese Revolution of 1911–12, the Kuomintang (pinyin: Guomindang), China's Nationalist Party, and the Chinese Communist Party fell to fighting each other for dominance in China.

OUTCOME: Although the Nationalists appeared victorious initially, the Communists proved resilient, and their influence steadily grew. When the Japanese attacked China, the two joined forces once more, this time to repel the invaders, only to fall out again at the end of World War II.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Red Army (1928–30), 70,000; (1930–37), 200,000+; Nationalists, 800,000 to 1 million deployed at high point

CASUALTIES: Between 400,000 and 1.5 million battle deaths total for both sides

TREATIES: None

The road toward a communist state on the Chinese mainland began in and around the port city of Shanghai, a lawless wide-open city that housed White Russian refugees from the Soviet Union, American soldiers of fortune, Japanese and Bolshevik spies, British diplomats and empire-builders, and masses of desperately poor Chinese washed up from years of brutal civil warfare among China's cut-throat warlords. In and around Shanghai during the summer of 1921, a number of radical Chinese students held a series of clandestine meetings that culminated in weeks of sessions aboard a boat moored on a lake outside the city. It was the only place that the delegates to what was being called the First Party Congress felt safe from the surveillance of Shanghai's corrupt police. From such humble beginnings would grow the 20th century's largest, most powerful, and longest lasting communist party.

Five years earlier, in 1916, China's first republic (*see* CHINESE REVOLUTION), founded by Sun Yat-sen (Sun Yixian or Sun I'hsien; 1866–1925), had fallen prey to the ambitions of a number of regionally powerful warlords, and the vast country had reverted to a particularly bloody form of feudalism. The warlords, many of them not much more than land pirates, constantly fought among themselves, forming a bewildering series of alliances, always supposedly in the name of a united republic, but always collapsing into another round of bitter feuds. Many Chinese had developed a passion for revolution, none more than the students who had made up a majority of Sun Yat-sen's early supporters and who had, therefore, enjoyed the heady years of China's nationalist revolution against the aged and creaking Manchu dynasty under the boy-king Puyi (P'u-yi; 1906–67), China's last emperor.

Loath to let go of the fragile victories in modernization gained under Sun Yat-sen, the students filled the void left in Chinese leadership with radical talk inspired by the success of the Bolsheviks (*see* BOLSHEVIK REVOLUTION), who the young radicals wished to emulate. Recognizing an opportunity, Vladimir I. Lenin (1870–1924) sent envoys from the Comintern, the communists' vehicle for world revolution set up by the Russians, to help China organize the country's disparate socialist groups into a coherent Marxist party.

Arriving in China flush with advice from the Comintern, Chen Duxiu (Ch'en Tu-hsiu; 1879–1942)—cofounder of the Chinese Communist Party (CCP)—led the effort to recruit new members and set up schools to train Chinese radicals in the fine art of revolution. A new generation of young Chinese radicals sprang up. In Hunan a 27-year-old schoolteacher named Mao Zedong (Mao Tse-tung; 1893–1976) started a communist cell in his home province; in Paris a 16-year-old student named

Deng Xiaoping (Teng Hsiao-p'ing; 1904–97) joined the French Communist Party; Zhou Enlai (Chou En-lai) (1898–1976), 22 and also living in Paris, founded a branch of the CCP. In Shanghai they all came together and focused their thinking and their goals.

First they allied with Chiang Kai-shek (pinyin: Jiang Jieshi; 1886–1975), who had taken over China's Nationalist Party, the Kuomintang (or Guomindang, KMT), after the death of Sun Yat-sen. The KMT was China's bourgeois revolutionary party, and for those with eyes to see, Chiang—as generalissimo of his large national liberation army—was himself not much more than a warlord, already evidencing hints of the gangsterlike thinking that characterized China's generals as a group and in the future would more clearly characterize the slippery Chiang as well. But he had an army, he had been with Sun Yat-sen, and with his help the Chinese communists organized their own Red Army, which they used to pay back the Bolsheviks by joining their fight against the White Russians, who had been occupying Mongolia for almost a year, and helping the Soviets to win the RUSSIAN CIVIL WAR (1917–1922).

Like all his fellow CCP members, Mao Zedong had joined the Kuomintang in 1923, and he was chosen as an alternate member of the KMT's Changai Executive Committee in 1924. But Mao was not to get along with the imperious Chiang.

Born in Henan (Honan) in 1893 the son of a land-owning and prosperous peasant family, Mao had received a classical Confucian education before he left school in 1911 to serve briefly with the revolutionary forces of Sun Yat-sen. Mao's father compelled the young man to leave the army and enroll in a commercial school during 1912–13, and from 1913 to 1918 he lived in the provincial capital of Changsha, where he attended the local normal school. He moved to Beijing (Peking) for one year, from 1918 to 1919, and worked in the library of Beijing University. He returned to Henan in 1919 as a teacher at the Changsha Normal School before heading off to the First Party Congress in Shanghai. Shortly after entering the ranks of the KMT he suffered a bout of illness, then set about organizing unions of laborers and peasants. In 1925 he fled to Canton to avoid arrest for his radical activities, and it was in Canton, protected by the Nationalist army, that he moved into Chiang Kai-shek's inner circle as head of the propaganda section of the KMT. Almost immediately, Mao and Chiang fell to arguing, and Chiang fired the young radical from his propaganda post in 1926. Mao immediately joined the Peasant Movement Training Institute, a far-left CCP cell.

In March 1927 the CCP organized a strike in Shanghai, which paralyzed the city, leaving it open to Chiang Kai-shek and his revolutionary army. Chiang swept into Shanghai and took the city without firing a shot. The Kuomintang and the CCP now controlled most of the country, the long period of Chinese civil upheaval seemed to be drawing to a close, and the Communists were getting

most of the credit. Only Manchuria, ruled by the warlord Zhang Zoulin (Chang Tso-lin), remained outside Chiang's and the Communists' sphere of influence.

In Russia the new Communist Party leader, Joseph Stalin (1879–1953), locked in a bitter dispute with Leon Trotsky (1879–1940) over the future direction of the Bolshevik government, was beside himself. Moscow interpreted the Communist success during these turbulent times as a victory for Stalin, who was already dreaming of the things he could do with the world's most populous country in his camp.

Chiang had other ideas. In April, a month after taking Shanghai, Chiang betrayed his radical young allies. He moved his troops against the trade unions in Shanghai, purged the Kuomintang of Communists, outlawed the CCP, proclaimed a Nationalist Republic of China, and named himself president. Moscow broke off diplomatic relations, and as Chiang's anticommunist rhetoric heated up, Comintern agents fled for the Russian border. Stalin quickly engaged in some unseemly revisionism, claiming through tight lips that the former hero Chiang was, like Trotsky, a traitor, and that communism was stronger for knowing Chiang's true colors. Chiang himself turned his attention to Manchuria, launching a campaign against Zhang Zoulin. A year later the warlord lay dead, assassinated by his son and successor, who made peace with Chiang. China once again was unified, under Chiang Kai-shek and his Kuomintang.

Meanwhile, Chinese Communists rallied for a rebellion led by Zhu De (Chu Teh; 1886–1976), and others expelled from their ranks members of the old Hankou (Hankow) left wing of the Kuomintang. On August 1, 1927, 20,000 Communists stormed the 10,000-strong Nationalist garrison in the city of Nanchang and inflicted some 800 casualties. Though they held the city briefly, they were forced to evacuate on August 8, and the defeated Zhu De retreated with a force of nearly 20,000 into temporary refuge in Hunan Province.

When the purge had come in Shanghai back in April, Mao, too, had retreated. Going into the always healthy Chinese underworld, he had worked independently of the now-outlawed CCP structure and organized a revolutionary army in August, 2,000 Communists in four regiments, which he led in the Autumn Harvest Uprising in a region of Hunan west of Nanch'ang from September 8 to 19. When the uprising collapsed, Mao was expelled from the CCP. He responded by gathering his remaining forces of 1,200, retreating to the mountains, and allying himself with that other outcast, Zhu De (Chu Teh), to form a peasant army called the Mass Line in 1928. Mao and Zhu established their own renegade CCP republic, the Jiangxi (Kiangsi) Soviet.

Although Kuomintang forces harassed the Chinese Communists in the countryside and the mountains, they were diverted from all-out war by a series of rebellions within their own ranks. Then, in 1930 a major misstep by

the Communists captured Chiang Kai-shek's full attention. The political leader of the CCP, Li Li-san (1896–1967)—Mao's major rival for power within the party from 1928 to 1930—argued persuasively to military commanders that China's cities were ripe for revolution. They launched an offensive. It failed to inspire fervent urban uprising of the masses in support of the Red Army and was an abject failure militarily. Not only were Communist casualties heavy, but Chiang was now determined to launch what he called Extermination Campaigns against the Marxist insurgents in Jiangxi Province.

The First Extermination Campaign opened in October 1930. The Communists had maintained their forces for years by following Mao's four golden rules of guerrilla warfare—when the enemy advanced, they retreated; when the enemy halted, they harassed; when the enemy avoided them, they attacked; when the enemy retreated, they followed. Now, Zhu—attacked by the Nationalists from three directions—gave ground when necessary, then with great tactical skill concentrated his forces against isolated divisions of the Nationalist army. In the single battle of Lungkiang December 27–January 1, the Red Army destroyed the entire KMT 18th Division, capturing more than 8,000 rifles and 9,000 POWs. By the end of January 1931 Chiang's first campaign had failed. Zhu De's forces had suffered no more than 3,000 killed and wounded.

One of those many executed outright by the KMT, however, was Yang Kaihui (K'ai-hui), Mao's first wife. But it was not only Chiang Kai-shek killing Communists. In the midst of the First Extermination Campaign, Mao led his Communist Front Committee in a purge of some 6,000 comrades in the Fut'ien Incident. Accusing his internal opponents of conspiring with the KMT's Anti-Bolshevik League, Mao had some 4,000 imprisoned and 2,000 executed, far exceeding Zhu De's casualties.

The Second Extermination Campaign came in May 1931, when a 150,000-strong KMT force once again invaded Jiangxi, only to be once again tied in knots by Chu's 20,000 rebels. The Nationalists suffered almost that many casualties, while the Communists lost about 4,000. In the Third Extermination Campaign, launched two months later in July, Chiang himself took command of about 300,000 against Zhu De's 30,000 (his forces were, however, growing). This time the KMT fared better, inflicting nearly 10,000 casualties before the campaign was aborted by the Mukden Incident (when the Japanese seized the Manchurian city of Mukden). As Chiang fought off the invasion of Manchuria that followed, some 20,000 soldiers in the KMT's Twenty-sixth Army deserted en masse to join the Communists. The Fourth Extermination Campaign had to await a lull in the fighting of the Japanese in Manchuria and Shanghai, and that came in June 1932. Once again, the Communist forces, now numbering 30,000 in the First Front Army of the Jiangxi Soviet, 20,000 in the Ouywan Soviet's Fourth Front Army, and

10,000 in the Hunan Soviet's Second Front Army, more than held their own, capturing 20,000 KMT POWs in Jiangxi alone.

By now the Jiangxi Soviet spoke for some 15 million people, and Zhu De and Mao Zedong were defying not only Chiang Kai-shek's KMT but also the Russian-dominated international Communist Party, which had backed Li Li-san and ordered would-be communist revolutionaries to concentrate on capturing cities. This was not their only break with Marxist orthodoxy, for Mao and Zhu turned their revolutionary attention not to the urban proletariat, as Marx prescribed, but to the rural peasantry.

The Fifth Extermination Campaign was a different kind of effort, one much more effective than the previous four. This time Chiang employed German general Hans von Seeckt (1866–1936) to advise KMT commanders. Von Seeckt argued for a strategy of attrition. The Nationalists should surround Communist-held territory with a ring of blockhouses and fortified lines, then clear one belt of ground after another, steadily shrinking their enclaves until each could be totally surrounded and destroyed. It would be a costly strategy and require unrelenting discipline, von Seeckt admitted, but if the pressure were sure and steady it should work. Chiang agreed and in October 1933 threw 500,000 troops at the Jiangxi Soviet, defended by about 200,000 men, only half of them armed. Another 300,000 KMT troops began to tighten the belt around the Oyuwan Soviet. In November Chiang's Nineteenth Army rebelled and offered to join the Communists, but Mao refused, leaving the army to its fate at the hands of the KMT, which by February 1934 had utterly destroyed the disloyal force. In April the Communists brought the Nationalists to a standstill in the fiercely fought battle of Guangqiang (Kuangchi'ang), which cost both sides some 16,000 men, but for the most part and in the long run the KMT's pressure was unrelenting.

By summer the noose was growing very tight around both the Jiangxi and the Oyuwan Soviets. Zhu De had lost 60,000 killed or wounded, and the casualties at Oyuwan were even worse. More than 1 million peasants living in the battle zones had died collateral deaths, and the CCP hierarchy was ready to admit defeat. With Mao they decided to evacuate the Soviets and try to link up with Xu the Peasant and his 13,000-strong Red Army far to the north in Shaanxi Province. Come the fall of 1934, Mao set off on the famed Long March out of Jiangxi, leading some 86,000 men and women in a 6,000-mile mass evacuation to Shaanxi.

Zhu De launched the breakout on October 16, 1934, using nearly 90,000 troops (a third of them raw recruits) and 30,000 civilians against a KMT wall made up of 300,000 troops in 100 regiments. A remnant of 25,000 stayed behind to continue Communist operations in the south, and Zhu took 10,000 casualties in fighting through the ring of blockhouses and 15,000 more just to cross the Xiang River. He lost another 15,000 in November fighting

his way through Hunan. He would hook up with the 50,000 who had fought free of the Oyuwan Soviet and, while Mao kept on going to Shaanxi with some 30,000 troops, Zhu would lead 55,000 to seek refuge in Xinjiang (Sinkiang) province (losing some 10,000 more on the way).

In October 1935, a year after the march began, Mao led some 8,000 survivors into the North Shaanxi Soviet. At Yen-an, Mao established a new party headquarters. The fighting went on for another year. Zhu De left Xinjiang in 1936, now with a force of 80,000, to join his comrades in Shaanxi, only to lose 15,000 of them to a combined Nationalist and Muslim cavalry while trying to cross the Yellow River in August. In all, against the 200,000 KMT forces, he lost 20,000 to battle or disease and 10,000 to desertion before reaching Mao in Shaanxi. Thus, the Long March was in truth a series of marches by separate columns. It cost the Communists about 100,000 casualties, and they recruited about 50,000—mostly peasants—along the way, leaving another 40,000 of their number behind to form cadres and establish soviets. By 1936 they had maybe 100,000 men in the Shaanxi Soviet, half of them armed. So Mao had not been wiped out. He emerged instead from the epic ordeal of the Long March more determined than ever to impose his brand of communism on China.

Meanwhile, Chiang Kai-shek was trying to persuade satellite Manchurian warlord Zhang Xueliang (Chang Hsuh-liang; b. 1898), called the “Young Marshal,” to deploy his 150,000 men against the Shaanxi Soviet (Chiang called it “bandit suppression” for his Western audiences), but the Young Marshal was more worried about the Japanese, who he knew would one day soon be attacking China proper. When Chiang tried to force the issue by calling a war conference in Xi’an in December 1936, the Young Marshal arrested the generalissimo and forced him to open negotiations with the communists. Marxist diplomat Zhou Enlai helped broker a deal that saw the war against the Communists suspended in return for help fighting the invaders.

Thus, on July 7, 1937, when the Japanese attacked China, the CCP and KMT again joined forces. Mao launched the Hundred Regiments offensive against the Japanese during August 20–November 30, 1940, but mainly used the war years to strengthen the CCP position in northern China and further consolidate his own leadership of the party. Mao worked vigorously to organize peasants, and he also directed a ruthless program of purges through which he secured in April 1945 election as permanent chairman of the party’s central committee. The CCP had begun the war years in 1937 with 40,000 members. It emerged in 1945 with 1.2 million.

Chinese Civil War (1945–1949)

PRINCIPAL COMBATANTS: Chinese Communists vs. Chinese Nationalists

DECLARATION: None

PRINCIPAL THEATER(S): China

MAJOR ISSUES AND OBJECTIVES: In the wake of World War II and Japan’s withdrawal from China, the Chinese Communists and Nationalists once again took up the decade-old civil war they had abandoned after the Japanese invaded the Chinese mainland in 1936.

OUTCOME: Late in 1949, after forcing Chiang Kai-shek’s Nationalist army to flee to the island of Taiwan, Mao Zedong (Mao Tse-tung) and his fellow Communists declared China’s vast mainland to be the People’s Republic of China.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Communist forces, nearly 4 million by the spring of 1949; Nationalist forces, 5.7 million starting out in 1946.

CASUALTIES: Communists, 1.5 million killed or wounded, Nationalists, 571,670 killed or wounded between June 1948 and December 1949. More than 4.5 million Nationalists were captured during the war. Battle deaths for both sides totaled 1.2 million.

TREATIES: None

The conclusion of WORLD WAR II also ended the truce between the Chinese Communist Party (CCP) and the Kuomintang (Guomintang, KMT) that concluded the last CHINESE CIVIL WAR (1927–1937), and a bitter full-scale civil war erupted anew. With the expulsion of Japan from the mainland, both Mao’s Communists in the north and Chiang’s Nationalists in the south rushed to seize the areas formally occupied by Japanese troops. Backing the Koumintang, the U.S. Air Force airlifted thousands of Chiang’s troops on American planes to Shanghai, Nanjing, and other Chinese cities. The U.S. government sent its World War II army chief of staff, General George Marshall (1880–1959), to try to negotiate a peace between the two old enemies. But Chiang proved unwilling to bargain, despite Marshall’s warning that China’s ailing economy would utterly collapse if the negotiations did not succeed.

Returning home in 1947, Marshall declared his mission a failure, and President Harry Truman (1884–1972) withdrew American troops, though he continued American military and economic aid, mostly to Chiang, throughout the growing crisis. Meanwhile, whole divisions of the Koumintang were jumping ship and joining the Communists. Chiang’s commanders, never the best of officers,

corrupt to a man, and hardly fond of actually fighting, quarreled among themselves and refused to take the field. Just as Marshall warned, rampant inflation ruined the economy, which along with the Koumintang's always flagrant corruption destroyed what was left of its credibility and popularity. Tellingly, in October 1948 300,000 Nationalist troops threw down their guns in Manchuria and surrendered to the Communists.

Two months later Mao's men surrounded and captured 66 Nationalist divisions in north-central China, at least those among them who had not yet deserted. Mao's forces repeatedly defeated the armies of Chiang Kai-shek from 1946 to 1948. In April the Communists crossed the Yangtze (Chang) and swept through the south. Shanghai fell in May, Guangzhou in October, and Chongqing in November. In December Chiang, his minions, and the Nationalist government itself were forced at last to flee to the small island of Formosa (later Taiwan), where Chiang set up a government in exile, which he grandiosely dubbed the Republic of China. Millions had died, millions more were ruined and starved, and U.S. aid to the high-living officers of the Koumintang had fostered a bitter anti-Americanism among much of China's population and certainly among all its new Communist leaders. Late in 1949 Mao and his fellow Communists declared the creation of the People's Republic of China on the vast mainland.

The most populous nation on the planet was now committed to communism. The event was viewed in the capitalist West as a major defeat in the rapidly developing COLD WAR, a view that led U.S. politicians to overestimate the cohesion of the so-called communist bloc for some three decades and stubbornly to deny recognition of a government that, for the first time since the fall of the ancient Qing (Ch'ing) dynasty at the beginning of the 20th century, had truly united the massive Chinese population.

What happened instead was that when the United States rejected Mao's overtures to establish diplomatic relations, he allied his country with a Soviet Union now firmly under the yoke of Stalin. It was an uneasy alliance. Mao, every bit the dictator in China that Stalin was in Russia, found it no easier to share the limelight with "Uncle Joe" than he had formerly with Generalissimo Chiang. But the West, particularly the United States, was too busy blaming—and purging—the China experts in its State Department for the "loss" of the mainland to notice. As far as the West was concerned, China and Russia had formed a communist bloc implacably opposed to what the United States and its western European allies were now calling the Free World.

Chinese Conquest of Nam Viet (111 B.C.E.)

PRINCIPAL COMBATANTS: Chinese Han dynasty vs. the Viets

PRINCIPAL THEATER(S): Southeast Asia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the region around present-day Vietnam

OUTCOME: The Chinese Han dynasty gained control of present-day Vietnam.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Beginning in about 500 B.C.E., Chinese traders ventured into present-day northern Vietnam. A renegade Chinese general named Chao T'o or Trieu Da (d. after 208 B.C.E.) conquered the region and established a kingdom known as Nan Yueh or Nam Viet around 208 B.C.E. As the Han dynasty in China grew more powerful, war broke out between the Hans and the Viets in about 181. By 111, the Han forces had captured the entire region. Wu Ti (157–87), the Han emperor, incorporated Nam Viet into the Chinese empire as the province of Giao Chi (later known as Giao Chau). The Chinese colonized the region, known as Annam, or "Pacified South" to the Chinese, by establishing nine military administrative units and by installing peasant-soldiers to build forts and villages.

Chinese Cultural Revolution (1966–1969)

PRINCIPAL COMBATANTS: Mao Zedong's (Mao Tse-tung) young Red Guards vs. thousands of Chinese citizens labelled anti-Mao, intellectuals, or elitists

PRINCIPAL THEATER(S): China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In 1966 Mao Zedong and his third wife, Jiang Qing (Chiang Ch'ing), launched what they called the Great Proletarian "Cultural

Revolution,” and until roughly 1969 they effectively maintained China in a state of perpetual revolution toward the end of creating a pure Marxist society.

OUTCOME: The Red Guard's fervor came close to creating anarchy in China before Mao called off the revolution and turned to his army to restore order. Following Mao's death the “Gang of Four” briefly renewed this Cultural Revolution.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Not applicable

CASUALTIES: 25–35 million killed

TREATIES: None

By way of ousting Liu Shaoqi (Liu Shao-ch'i; 1898–1969), Mao Zedong (1893–1976) and Jiang Qing (c. 1914–91) engaged the Chinese nation in a frenzied debate on its political future. Once Mao regained his post as party chairman and head of state, he embarked on a headlong program to expunge every trace of traditional Chinese government and culture. The so-called Cultural Revolution created a mass army of radical Maoist students known as the Red Guards, who brought perpetual revolution to China and sought to re-create the experience and fervor of the Red Army's LONG MARCH of 1934–35. Receiving free rail passes, hundreds of thousands of militant young men and women flooded Beijing and paraded through Tiananmen Square. They competed for the fervor with which they denounced Mao's enemies, destroyed works of art and historical relics, abused intellectuals, burned books, and attacked elitists. They closed schools and universities, packing teachers off to be reeducated, and came close to shutting down the economy. The Red Guards even fought one another over doctrinal differences, and in the provinces various Chinese factions, especially in the south, took up arms one against the other. When the activities of the Red Guards assumed the dimensions of anarchy, Mao turned to the military, led by Lin Biao (Lin Piao; 1907–71), whose support he recruited by arranging to have him named his successor in the 1969 constitution of the Chinese Communist Party. By 1971 Lin Biao had effectively pacified the Red Guards but soon afterward was reported killed in a plane crash after having plotted to assassinate Mao.

In the spring of 1969, schools reopened, but the universities remained shuttered till the fall of 1970. With the Red Guards in their place and Lin Biao dead, Mao Zedong was again in control of China, but the experience had taught him the value of moderation. The same leader who had wanted to eliminate Chinese tradition on the one hand and Western influences on the other now made overtures to the United States in hopes of reestablishing diplomatic and economic relations. Mao even received President Richard M. Nixon (1913–94) in Beijing in 1972. They were important overtures, but the aging chairman failed to carry through on them when his health deteriorated rapidly during the early 1970s. He died in Beijing on September 9, 1976.

With Mao died also—for a time—the trend toward moderation. Mao's third wife, Jiang Qing, and her circle of intimates, derisively called the Gang of Four, leaders of the Cultural Revolution, attempted to seize power from Mao's immediate successor, Zhou Enlai (Chou Enlai; 1898–1976). The four were arrested and accused of the terrorist excesses of the Cultural Revolution. Tried in 1980 on charges that included attempting to overthrow the state, two “gang” members—Mao's widow and Zhang Chunqiao (Chang Ch'un-ch'iao; 1917–c. 91)—protested that they had only done Mao's bidding. Nevertheless, in January 1981 all four were found guilty. In the meantime, the man Mao had designated to succeed him, Hua Guofeng (Hua Kuo-Feng; b. 1921), also had been ousted from the government, and China came under control of genuine moderates.

The Cultural Revolution had been an astounding amalgam of contradictions. Like the Hundred Flowers Movement, its founding principles were constructive criticism and questioning of those in authority, but it produced an almost hypnotic mass personality cult, and the image of Mao Zedong was everywhere in places public and private, whereas his “little red book”—a collection called *Quotations from Chairman Mao*—was read, studied, and pored over by virtually every man, woman, and child in China. The book, the perpetual revolution (an idea with unacknowledged roots in the writings of Leon Trotsky [1879–1940]), and Mao's celebrity (recognized by that most astute student of celebrity, Andy Warhol [c. 1928–87], in a famous series of prints) had an impact on left-wing movements worldwide, especially in France and the United States, where posters of Mao became de rigueur for student radicals and appeared ubiquitously at public protests.

Chinese Revolts (1865–1881)

PRINCIPAL COMBATANTS: Anti-Western, bandit, and anti-Manchu rebels vs. the Manchu military

PRINCIPAL THEATER(S): China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Opposition to Manchu control

OUTCOME: The Manchu dynasty was at last able to suppress the rebellions by 1881.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Manchu forces in Xinjiang (Sinkiang), 100,000

CASUALTIES: Unknown, but half the Muslim population of Sinkiang was reportedly slain.

TREATIES: None

At the close of the first phase of the TAIPING REBELLION, widespread insurrections plagued the Manchu dynasty of China. Nian Fei, a bandit group, operated in Anhui (Anhui), northern Jiangsu (Kiangsu), and Shandong (Shantung). A Muslim regime, opposed to Western and Christian influences in China, captured control at Tali in Yunnan.

In Xingiang, a Muslim tribal leader named Yakub Beg (1820–77) began ousting the Manchus in the mid-1860s. The Manchus dispatched an army of 100,000, which captured the Muslim capital of Urumchi on November 16, 1876, and a major Muslim stronghold at Turfan on May 16, 1877. After this, Yakub Beg surrendered, and the Siankiang rebellion was put down.

The Miao tribe uprising that began in Guizhou (Kweichow) in 1855 lasted until 1881, when it, like the other rebellions, was crushed by the Manchu military. The cost to the Manchus was great and could be ill afforded by a dynasty that needed to devote its resources to defeating the Taiping rebel regime in southern China and reuniting the empire.

Fairbank, eds., *The Cambridge History of China* (New York: Cambridge University Press, 1978).

Chinese Revolution (1911–1912)

PRINCIPAL COMBATANTS: Chinese revolutionaries vs. the Qing (Ch'ing) dynasty

PRINCIPAL THEATER(S): South and central China

DECLARATION: None, though the nationalists declared a republic in December, 1911.

MAJOR ISSUES AND OBJECTIVES: The Chinese viewed the Manchu lords of the corrupt Qing dynasty as an army of occupation that had sold out their country to Western foreigners, and they fought to establish a nationalist Chinese republic.

OUTCOME: The Qing dynasty was ousted and a weak republic established that quickly led to feuding between powerful warlords.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: The last emperor's (Puyi, P'u-yi) declaration of abdication on February 12, 1912

In 1911 Dr. Sun Yat-sen (Sun Yixian or Sun Hsien; 1866–1925), who would become known as the father of modern China, returned from his 16-year exile to take charge of a growing mutiny in the imperial army of the last Manchu ruler in the Qing dynasty (1644–1911) and to turn it into a full-fledged revolution. The first Chinese republic in history, which closed the book on 2,000 years of imperial rule, itself proved to be much shorter-lived, disintegrating into a chaos from which China would not truly emerge until the communists took charge of the mainland in 1949.

In 1907, four years before the Chinese Revolution, Sun, leader-in-exile of the Revolutionary Alliance, outlined his democratic program to a meeting of 5,000 revolution-minded students in Tokyo. Sun wanted a national China in which all citizens enjoyed freedom and equality; he called for a popular sovereignty under which the Chinese would garner the right of self-government; and he introduced what he called the doctrine of livelihood, a call for land and capital to be equitably distributed among China's masses. China's revolutionary elite greeted Sun Yat-sen's plans with guarded support, but students by the thousands rushed to join his Revolutionary Alliance.

The corrupt and tottering Qing dynasty's elite were called Manchus because they originally came from Manchuria, and—despite nearly two and a half centuries of rule in China—they were still considered by many Chinese to be aliens. Chinese radicals despised the dynasty supported by its army of occupation, which in reality had become a corps of inefficient pensionaries, and blamed the Manchus for selling their country out to the major European powers. Over the course of the 19th century, the West had taken control of China's seaports and gained concessions to build its railroads, roads, and mines. Meanwhile, the Manchus continued their lives of comparative idleness. To the Chinese suffering under the social dislocations of a forced economic development (*see* BOXER REBELLION), it appeared that the Western powers had not merely stolen their country but had destroyed their ancient culture with drugs and money (*see* OPIUM WARS). At the same time, new public and private schools, some missionary-spawned, introduced students to Western ideas and produced graduates who demanded political freedom and economic improvement for themselves and their fellows. Seething with political unrest and social turmoil, China in the first decade of the 20th century was fertile

ground for revolution, secret societies sprang up everywhere calling for a nationalist revolt, and Chinese radicals living in Japan and the United States sent money home to finance reform, resistance, and rebellion.

The Qing elite were not totally impervious to the turmoil; they tried a few reforms. But the aging and isolated dowager empress, Cixi (Tz'u Hsi; 1834–1908), totally out of touch with quotidian life in China, abruptly canceled them. When she died the dynasty had lost its last able leader and fell into the weak hands of a defenseless boy-emperor named Puyi (1906–67). His advisers made a last ditch effort to save the dynasty by introducing constitutional reforms, but given the determination of Sun Yat-sen and the other Chinese radicals to bring down the government, the move was too little too late.

On April 5, 1911, a group of foreign bankers representing four Western powers signed an agreement on a loan for the construction of rail lines on the Hukwang Railroad in central China. The Beijing government decided to take over from a local company the operation of a line through Sichuan (Szechwan), on which construction had barely begun, and to apply part of the foreign bank loan to its completion. The sum Beijing offered did not meet the demands of stockholders, and in September 1911 dissatisfaction with this latest Manchu racket boiled over into open revolt. The nationalist Revolutionary Alliance made its presence known when an explosion rocked the city of Hankou on October 10. The Manchus immediately arrested and executed the leaders of the plot. Across the river in Wuchang, a city in the central China province of Wuhan, dissident army soldiers who knew about the plot and feared they would be implicated seized the mint and arsenal on October 10, which would become celebrated in China as the day of the “Double Ten.” They persuaded a brigade commander, Li Yuanhong (Li Yuan-hung; 1864–1928), to lead a rebellion, sacked the governor’s residence, and took control of the city.

Li’s sudden shift of allegiance from the Manchus to the rebels fed the mutiny, sparking uprisings all over China as city after city declared against the Manchus. Given the alienation of the Qing royal court from much of Chinese society, it was difficult for the Manchus to raise an army to put down the mutineers. A panic-stricken regent recalled the Assembly, an advisory body of appointed and elected leaders, which immediately demanded the adoption of a constitution and turned to the retired general and former vice-regent Yuan Shikai (Yuan Shih-kai; 1859–1916) to save the dynasty. In November he was elected premier.

Had Yuan acted quickly and decisively he might indeed have suppressed the uprising and rescued the dynasty by at least delaying the inevitable. Instead, he dallied in the north, building his army and making sure of his support among imperial commanders. Meanwhile, archradical Sun Yat-sen had hurried home from a lecture and fund-raising trip to America to take command of what he was now calling a revolution. By the end of the year, 14 provinces, mostly in

south and central China, had declared against the Qing. In several cities the revolutionaries had massacred Manchu garrisons, and they had forced the prince-regent out of office. In December 1911 the revolutionaries convened a congress at Nanjing and elected Sun president of the new republic in South China declared by the convention.

Sun recognized that Yuan, who retained the loyalty of most of the army’s officers in North China, who had retaken several cities from the revolutionaries, and who had ordered that the revolution should stop, was a powerful force to be reckoned with. Casting a cold eye on the frailty of his divided nation, the head of the provisional government on January 1, 1912, offered the presidency to the general on the condition that he force the boy emperor to abdicate and dissolve the dynasty. Yuan, the organizer of China’s “modern” army who had no deep love for the Manchus and was happy to run the country himself, immediately agreed. He marched into the Forbidden City, intimidated the hapless Puyi, and demanded that the last emperor step down. On February 12, 1912, Puyi formally resigned, issuing a proclamation that transferred the government to the people’s representatives, declared that the constitution should henceforth be republican, and gave Yuan full powers to organize a provisional government. In return the Nanjing leaders agreed that Puyi was to retain his title of emperor for life and receive a large pension. The next day Sun Yat-sen stepped aside; Yuan Shikai was now president of the whole of China. The revolutionary general Li became his vice president. By March 1912 the Nanjing parliament had promulgated a provisional constitution, and in April the government was moved to Beijing.

For many Chinese it all had seemed to happen very fast and with comparative ease, but almost instantly the general betrayed Sun Yat-sen. When Sun’s Nationalist Party, the Kuomintang (KMT; Guomindang), won a breathtaking majority in China’s first parliamentary elections, Yuan balked. Attempting to seize unilateral control of the government, the general outlawed the KMT, forced Sun yet again into Japanese exile, and dissolved parliament. But Yuan had a fight on his hands against the Kuomintang nationalists. In 1915, when Yuan announced his plan to reestablish the empire with himself on the throne, rebellion broke out in Yunnan and spread throughout China. By early 1916 Sun Yat-sen had mounted an armed revolt, backed by the Japanese government, against the self-declared dictator. Sun encouraged restive warlords to declare the provinces under their control independent of Yuan’s republic, and many did. Then in March 1916 civilian as well as military interests refused to support him, and the aging general, exhausted and disenchanted, succumbed to illness two months later.

Sun Yat-sen found it more difficult than he had imagined to control the warlords he had unleashed. In the absence of a strong constitutional tradition, Sun could not regain the presidency, and he replaced Yuan with Li Yuanhong. But, dissatisfied with Li’s parliamentary government,

the northern military governors (*tuchuns*) revolted and established a rival government at Tianjin (Tientsin) in the summer of 1917. One of them, Zhang Xun (Chang Hsun; fl. 1917), pretending to mediate with Li, overthrew the Beijing government and briefly reinstated the Manchu dynasty from July 1–12, 1917. His military colleagues, however, turned on him, occupied Beijing, overthrew the “empire” yet again, forced Li to resign, and installed Feng Guozhang (Feng Kuo-chang; d. 1920) as the new president. Over the next decade the *tuchuns* and various Chinese generals became almost completely independent of nominal central authority. They executed a series of complicated internecine struggles while the republic grew weaker and weaker. The nation plunged into a chaos of feuding warlords fighting for control of a China that would spend the next 33 years searching for true political stability.

Chinese-Tibetan War *See* SINO-TIBETAN WAR (641).

Chinese (Tong) Wars (mid-1850s)

PRINCIPAL COMBATANTS: Rival Chinese workers under the control of Chinese district companies or “benevolent” societies

PRINCIPAL THEATER(S): The California gold field region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Rivalry for jobs controlled by different companies and, sometimes, long-standing Chinese clan or village rivalries

OUTCOME: The formation of the Six Companies to control Chinese working life in the American West

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 2,500

CASUALTIES: Fewer than 100

TREATIES: None

In the mid-1850s California newspapers coined the phrase *Chinese wars* (sometimes called the “Chinese Tong Wars” or “Tong Wars”) to describe the pitched battles of the Chinese district companies fighting for control of Chinese immigrants. The companies consisted of merchants who paid for the immigrants’ passage from China

and acted as controlling benevolent institutions once the immigrants arrived in America. They provided some of the structure of home in a hostile, foreign setting, and regimented the immigrant-debtors to ensure they worked for their merchant-creditors.

In any work camp of the mining regions, the overseer of a district company faced hostility from white miners and fierce rivalry from competing district companies for the places vacated by white miners. When compromises failed, battles erupted. At times those fights continued as traditional clan (*tong*) and village rivalries. Few white outsiders understood the hostilities; some regarded them as extensions of the campaigns between Taiping rebels and imperial armies (*see* TAIPING REBELLION).

Various lengthy preparations usually preceded the battles in the gold fields. Most Trinity County blacksmiths spent the summer of 1854 forging weapons for the first war at Weaverville. In other skirmishes rifles, revolvers, and knives substituted for traditional armament. Campaigns of intimidation raised the martial spirit and morale of competing district companies.

In the mining areas armies consisted of about 200 men, but in May 1854 a proposed battle at Jackson in Calaveras County attracted 2,000 Chinese before the sheriff arrested the leaders and prevented bloodshed. Near Kentucky Ranch in Tuolumne County in October 1856, 2,500 fighters of competing district companies clashed. Skirmishes in Nevada City, Sacramento, and San Francisco seldom involved more than 200 participants, with the exception of a great melee on Sacramento’s I Street in September 1854, which involved 600 fighters.

No account lists more than 21 killed in any of the Chinese wars. After the first war at Weaverville in July 1854, one newspaper reported 10 dead and 12 severely wounded; another counted 21 dead. In the second war in Weaverville in April 1857, eight died; in the third in April 1858, one died. At the beginning of the 1860s, a coordinating council that dealt with the general affairs of the district companies gained prominence. Administered by the headmen of each company, the organization became known to Americans as the Chinese Six Companies. Until the 1960s the companies controlled to a considerable degree life and labor in the Chinatowns of the United States.

Chinese Wars with the Eastern Turks (629–641)

PRINCIPAL COMBATANTS: The Chinese Tang dynasty vs. the Eastern Turks of the present-day Inner Mongolia region

PRINCIPAL THEATER(S): Northern China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In an attempt to defeat the northern barbarians, the new ruler of the Tang dynasty, Taizong (T'ai Tsung), supported the revolt of various tribes in the Eastern Turkish kingdom.

OUTCOME: Taizong crushed the Eastern Turks.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

When Taizong (r. 627–649) succeeded his father Gaozu (Kao Tsu; r. 618–627) as emperor of China, he was faced with almost constant threats to his power. To the north the Eastern Turks had been growing more powerful and were threatening the border with China. Before undertaking an all-out strike against the Eastern Turks, Taizong reorganized his military operations. He strengthened his militia units and ordered them to receive periodic training and serve rotating stints with the imperial guard. When discontented tribes in the Eastern Turk region rose against Hie-li, the Turkish king, Taizong sent his powerful army to the north in support of the rebels. Over the course of 10 years of punitive expeditions, Taizong destroyed the khanate. Many of the defeated Turkish troops were incorporated into the Chinese army. China was the unrivaled power in northern, central, and eastern Asia by the middle of the seventh century.

Chinese War with Koxinga *See* MANCHU

CONQUEST OF CHINA: MANCHU-MING PIRATE WAR (1652–1662).

Chinese War with Nanchao (751–774)

PRINCIPAL COMBATANTS: The Shan vs. the Chinese

PRINCIPAL THEATER(S): Present-day Yunnan and southern Sichuan (Szechwan) in southern China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Shan king declared his independence from China.

OUTCOME: The Chinese emperor was unable to put down the Shan rebellion and recognized Shan as an independent state.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

During the eighth century the Shan, a Thai racial group, occupied the area of present-day Yunnan and southern Sichuan in southern China and acknowledged the suzerainty of China. In 733 a Shan prince, Pi-lo-ko (P'i-Lo-Ko; fl. eighth century), declared himself king of Nanzhao (Nanchao). The emperor Xuanzong (Hsuan-tsung; r. 713–755) acknowledged his title and accepted tribute from the king. The succeeding king of Nanzhao, however, denied his kingdom's dependence on China. Emperor Suzong (Su Tsung; r. 756–762) sent his army to the area but did not succeed in quelling the rebellion. China recognized Nanzhao as an independent state in 774.

Fairbank, eds., *The Cambridge History of China* (New York: Cambridge University Press, 1978).

Chinese War with the Khitans (979–1004)

PRINCIPAL COMBATANTS: Song (Sung) dynasty (Chinese) vs. the Khitans (Liao dynasty)

PRINCIPAL THEATER(S): Northeastern China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Song sought to regain the northeastern territories from the Khitans.

OUTCOME: The long war saw gradual Song gains; ultimately, the Song recovered a substantial portion of the northeast.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Shanyuan, 1004

By 950 the Mongol tribe known as the Khitans overran and occupied most of China as far south as the Huang Ho (Yellow) River and set up the Liao dynasty. In 960 Zhao Kuangyin (Chao K'uang-yin; r. 960–975) founded the Song dynasty as Emperor Taizu (T'ai-tsu; r. 960–975), and, beginning in 979, successive Song rulers campaigned

to regain the northeastern territories that had been lost to the Liao, or Khitans. Specifically, the Song targeted Zhili (Chili) and Shanxi (Shansi) Provinces for recovery.

The Song attacked Beijing in 979 but failed to take the city. It was not until 986 that the Song reconquered a portion of southern Zhili and most of northern Shanxi. After this gain, however, the war continued in desultory fashion, first one side gaining the upper hand, then the other. On balance, the Song made gradual gains, so that by 1004 much of northeastern China had been retaken. The Khitans agreed to the Treaty of Shanyuan in 1004, evacuating southern Zhili in exchange for possession of the northern portion of Shanxi and a tribute of 100,000 ounces of silver and 200,000 rolls of silk annually.

Fairbank, eds., *The Cambridge History of China* (New York: Cambridge University Press, 1978).

Chinese War with the Tanguts, First (990–1003)

PRINCIPAL COMBATANTS: Song (Sung) dynasty of China vs. the Tanguts

PRINCIPAL THEATER(S): Northern China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Tanguts declared their independence from China and created a kingdom known as the Xixia (Hsi-Hsia) or Western Xia.

OUTCOME: The Chinese were unable to put down the Tangut rebellion, and an uneasy peace ensued.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 990, 30 years after the founding of the Song dynasty in China, a people known as the Tanguts declared their independence from the dynasty's rule. A seminomadic people, the Tanguts occupied the area north of the Great Wall. They named their kingdom Xixia or Western Xia. Acknowledged by the Khitans, a Mongol people occupying most of northeastern China, the Tanguts maintained an uneasy peace with the Chinese until 1040, at the outbreak of the Second CHINESE WAR WITH THE TANGUTS.

Further reading: John King Fairbank and Merle Goldman, *China: A New History* (Cambridge, Mass.: Harvard University Press, 1998); David Andrew Graff, *Medieval Chinese Warfare, 300–900* (New York: Routledge, 2002); Valerie

Hansen, *History of Early China to 1600: The Open Empire* (New York: Norton, 2000); Kurt A. Raafflaub and Nathan S. Rosenstein, eds., *War and Society in the Ancient and Medieval Worlds: Asia, the Mediterranean, Europe, and MesoAmerica* (Cambridge, Mass.: Harvard University Press, 2000); Denis Twitchett and John K. Fairbank, eds., *The Cambridge History of China* (New York: Cambridge University Press, 1978).

Chinese War with the Tanguts, Second (1040–1043)

PRINCIPAL COMBATANTS: The Chinese vs. the Tanguts of Xixia (Hsi-Hsia)

PRINCIPAL THEATER(S): Northern China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Tanguts of Xixia invaded the Song (Sung) dynasty in an attempt to conquer the entire region.

OUTCOME: The Song army pushed the Tanguts back across the northern border and maintained peace through payment of an annual tribute.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Having won independence from the Song dynasty of China in the First CHINESE WAR WITH THE TANGUTS (990–1003), the Tanguts of Xixia invaded China in an attempt to conquer the entire empire. With help from the Uighars of Xinjiang (Sinkiang), the Song army pushed the Tanguts back to the north. The Chinese emperor Zhao Zhen (Chao Chen; r. 1023–63) agreed to pay an annual tribute to the Xixia ruler Li Yuanhao (1003–48) in exchange for nominal vassalage in China.

Further reading: John King Fairbank and Merle Goldman, *China: A New History* (Cambridge, Mass.: Harvard University Press, 1998); Valerie Hansen, *History of Early China to 1600: The Open Empire* (New York: Norton, 2000); Kurt A. Raafflaub and Nathan S. Rosenstein, eds., *War and Society in the Ancient and Medieval Worlds: Asia, the Mediterranean, Europe, and MesoAmerica* (Cambridge, Mass.: Harvard University Press, 2000); Denis Twitchett and John K. Fairbank, eds., *The Cambridge History of China* (New York: Cambridge University Press, 1978).

Chinese War with the Western Turks, First (641–648)

PRINCIPAL COMBATANTS: The Chinese Tang dynasty vs. the Western Turks

PRINCIPAL THEATER(S): Central Asia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Emperor Taizong (T'ai-tsung) wanted to protect the trade routes connecting China to the West from marauding Western Turks.

OUTCOME: Taizong drove the Western Turks from their positions in Central Asia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

After Taizong (r. 627–49) subdued the Eastern Turks in present-day Inner Mongolia, he turned his attention to the Western Turks of Central Asia. The Western Turks had gained control of the Oxus region and parts of Khorasan in about 622. Using much the same tactics he had used with the Eastern Turks—stirring up dissent among the various tribes—he sent his powerful and fearsome cavalry to Central Asia and drove the Western Turks out of the region. His goal was to protect trade routes connecting China to the West, and to do so he enlisted the aid of the Uighur tribes.

Raaffaub and Nathan S. Rosenstein, eds., *War and Society in the Ancient and Medieval Worlds: Asia, the Mediterranean, Europe, and MesoAmerica* (Cambridge, Mass.: Harvard University Press, 2000); Denis Twitchett and John K. Fairbank, eds., *The Cambridge History of China* (New York: Cambridge University Press, 1978).

Chinese War with the Western Turks, Second (657–659)

PRINCIPAL COMBATANTS: The Chinese Tang dynasty vs. the Western Turks

PRINCIPAL THEATER(S): Central Asia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Emperor Gaozong (Kao-tsung) sought to confirm his control over Central Asia by subduing the Western Turks.

OUTCOME: Gaozong's forces captured the khan and crushed the Western Turks.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

When Gaozong (628–83) came to power as the third emperor of the Tang dynasty, he continued to expand his reach. One of the first problems he had to deal with was a revolt among the Western Turks, whom Taizong (T'ai-tsung; 600–49) had subdued in 641. Fought in the steppes of Central Asia, this war involved nomad militia and cavalry loyal to the Chinese, particularly the Uighur tribes. These forces pushed the Western Turks beyond the Pamirs region and from present-day Afghanistan. The Tang dynasty then had strong control over the Oxus valley region, but this control lasted only until the Tibetan revolts of 663 to 683, when the Chinese met with military failures and the Western and Eastern Turks freed themselves from Chinese domination.

Chioggia, War of (1378–1381)

PRINCIPAL COMBATANTS: Venice vs. Genoa (in alliance with Hungary and Padua)

PRINCIPAL THEATER(S): Chioggia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Venice's trade rivals, especially arch enemy Genoa, wished to temper the city's aggression and diminish its influence while aggrandizing their own.

OUTCOME: Venice endured as a great maritime trading power.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Turin, 1381

Venice and Genoa were ruthless and determined rivals in trade, having fought the VENETIAN-GENOESE WAR (1350–1355) over trade issues and now renewing the conflict in the War of Chioggia. The Genoese mustered a formidable roster of allies. The king of Hungary, who had already won control of Dalmatia from Venice, agreed to

shelter and support the Genoese fleet. In 1379 Hungarian troops also presented a threat to Venice by land from the north. Padua was another ally. Its army severed Venice's communications to the west. Beset by Hungary and Padua in addition to Genoa, the ever-aggressive Venetians had made the mistake of sending one of their large fleets to raid and prey upon Genoese shipping and ports in the eastern Mediterranean. This left Venice with a significantly weakened fleet for home defense—a fact that did not go unnoticed. In the summer of 1379, the Genoese fleet made a surprise appearance and moved quickly to blockade the entrances to the Venetian lagoon. By mid-August the Genoese forces had been joined by those of Hungary and Padua, so that Venice was encircled.

Now the Genoese fleet attacked swiftly at the south end of the lagoon, bringing its fleet into the channels of the lagoon, then with its allies attacking Chioggia, which soon fell. From here the capture and destruction of Venice seemed an inevitable next step. However, on December 22, 1379, the Venetians launched a diversionary attack on Chioggia, then, while the Genoese were occupied in resisting this apparent attempt to retake the settlement, they used the cover of darkness to submerge obstructions, closing off every channel the Genoese fleet could use to escape from the cul-de-sac at Chioggia. When the Venetian galley fleet, which had been on the raiding expedition in the Mediterranean, returned to Venice on January 1, 1380, it was an easy matter to encircle the trapped Genoese. Over the next several months the two sides skirmished as the Genoese attempted to clear a channel of escape. The Venetians impeded this activity by continually firing on the Genoese. Finally, in June 1380 the entire Genoese fleet, effectively held under siege and now on the verge of starvation, surrendered, and 4,000 Genoese sailors were taken prisoner.

The spectacular turn-about Venetian victory at Chioggia prompted the signing of the Peace of Turin in 1381. The treaty gained no territory from Genoa or any of its allies, but it did put an end to Genoa's challenge against Venetian maritime superiority. If Venice did not ultimately triumph over Genoa, it at least earned the right to survive and to continue as a great Mediterranean trading power.

Chitral Campaign (1895)

PRINCIPAL COMBATANTS: Chitrali tribespeople vs. Great Britain

PRINCIPAL THEATER(S): Chitral (northern Pakistan area)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Chitralis resisted British colonial domination.

OUTCOME: Chitral was formally annexed to British India.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Britain, 16,000; Chitral, 12,000

CASUALTIES: Chitrali losses, about 600 killed or wounded; British losses negligible

TREATIES: None

On March 3, 1895, a small military detachment (100 men of the 14th Sikhs and 300 Kashmiris under a half-dozen British officers) was attacked by hostile mountain tribesmen while it was en route to Chitral, a British fort on India's Northwest Frontier. On March 4 Chitral itself fell under siege by some 10,000 tribesmen. The Chitral garrison consisted of 543 people, including 343 effective troops, of whom 83 were Sikhs. When word of the siege reached the British government at Peshawar, a relief force of 15,000 men was sent on the march. The force reached the Malakand Pass on April 3, where it sent some 12,000 Chitralis into disorganized retreat. In this engagement about 500 Chitralis were killed or wounded, while the Anglo-Indian relief column sustained 69 killed or wounded.

On April 7 the Anglo-Indian forces engaged about 4,500 tribesmen at Chakdara, while a smaller force of 383 Sikh Pioneers, 34 Kashmiri sappers, 100 Kashmiri infantry, 100 Hunza militiamen, and two seven-pounder cannons fought mountain tribesmen and closed in on Chitral. On April 20 this force built a bridge across a deep gorge, marched over it, then fought through 220 miles in 28 days to relieve Chitral.

Chmielnicki's Revolt (1648–1654)

PRINCIPAL COMBATANTS: Ukrainian rebels under Hetman Bogdan Chmielnicki vs. Polish overlords of the Ukraine

PRINCIPAL THEATER(S): Ukraine and Poland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Chmielnicki sought Ukrainian independence from Poland.

OUTCOME: Despite early successes, a strong Polish counteroffensive suppressed the rebellion and drove the Cossacks into the Russian camp, thereby precipitating the Russo-Polish War of 1654–1656.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Poland, 150,000 (some authorities put it at 100,000); Chmielnicki's forces, 200,000 (some authorities say 300,000) mixed Cossacks and Tartars

CASUALTIES: Unknown

TREATIES: Provisional treaty of 1649; Russo-Cossack treaty of 1654

King Ladislas IV (r. 1632–48) of Poland ruled the Ukraine with an iron fist, which led to the festering hatred of the Poles by the local peasantry and the Cossacks. When the Cossacks raided and rebelled, Ladislas established a chain of fortresses in the Ukraine. He used these facilities to enforce an even more brutal and repressive reign, taking many captives, then slaughtering them, and repealing virtually all measures of autonomy in the region. Eventually, Ladislas stationed so many Polish troops in the Ukraine that the once-proud Cossacks were reduced to a state of virtual serfdom.

Out of this situation arose Hetman Bogdan Chmielnicki (1595–1657), a wealthy Ukrainian landowner, who, like many of his fellows, suffered Polish usurpation of many of his holdings. When he protested to the Polish governor, he was rebuffed and insulted, and his family was threatened. Outraged and desperate, Chmielnicki recruited rebels from among the Cossacks and led them in revolt. This proved the match that touched off a general explosion. Throughout the Ukraine peasants, Cossacks, and gentrymen rose up against the Polish overlord. Chmielnicki soon found himself at the head of an army of Tartars, peasants, and skilled Cossack warriors. They swept through the ranks and fortresses of the Polish invaders, then advanced into Poland itself, penetrating as far as Lvov during 1648–49.

During the height of the revolt, in 1648, Ladislas IV died and was succeeded by John II Casimir (1609–72), who wisely sued for peace. However, his offers to negotiate inspired a revolt among the Polish nobility. This threw Poland into sufficient chaos that Chmielnicki's army was able to advance beyond Lvov and lay siege to the town of Zborow. Chmielnicki's greatest victory came at Pilawce in 1649, when he resisted a Polish army of 36,000. Later that year, a provisional treaty was concluded between Chmielnicki's forces and Poland. The Poles acknowledged Chmielnicki hetman (chief) of the Cossacks, and the Polish king further agreed to guarantee certain Ukrainian rights and liberties. However, when Chmielnicki moved to install his son as ruler of Moldavia, the Poles renewed the war in a major way.

In 1651 John II Casimir led an army of 34,000 men against a larger force of Tartars, Cossacks, Wallachians, and Lithuanians (200,000–300,000 men) under the command of Chmielnicki. At the Battle of Beresteczko in July 1651, despite his superiority of numbers, Chmielnicki lost heavily. The Cossack faction of his army immediately sued for peace. Chmielnicki himself and a loyal core of followers were determined to carry on the fight for independence from Poland and made an alliance with Russia. Ultimately, in 1654, a Russo-Cossack treaty was con-

cluded, by which the Ukrainians—rather than admit defeat to the hated Poles—accepted czarist rule over the country in preference to Polish sovereignty. This transformed the Ukrainian revolt against Poland into the RUSSO-POLISH WAR (1654–1656).

Cholan-Pandyan War (c. 910)

PRINCIPAL COMBATANTS: Chola vs. Pandya

PRINCIPAL THEATER(S): Southern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Contest over territories Chola had seized from the Pallava dynasty

OUTCOME: Chola pushed the Pandyas out of the former Pallavan lands.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Chola was established in southern India by Vijayalaya, who captured Tanjore in 850. Under King Parantaka I (fl. 907–953) the Cholan Empire was enlarged northward at the expense of the Pallava dynasty, whose territories Parantaka seized. These lands were also targeted by rulers of the Pandya dynasty, based in southern India and allied to the central Indian Ganga dynasty. Cholan forces had little difficulty pushing the Pandyas out of the former Pallavan lands. This conquest put Chola in a position to gain hegemony over most of the southern tip of India. Having acquired an extensive coastline, Chola departed from the customarily insular orientation of most Indian dynasties and adopted a maritime policy, which led later to the conquest of Sri Lanka and the Maldives. The conquest of southern India was essentially accomplished during 926–942, but the height of Chola power was not achieved until the reigns of Rajaraja during 985–1014 and his son Rajendra I, who reigned from 1014 to 1044.

Chremonidean War (266–262 B.C.E.)

PRINCIPAL COMBATANTS: Sparta and Athens (with Egyptian and Epirote support) vs. Macedonia

PRINCIPAL THEATER(S): Peloponnese

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The liberation of Greece from domination by Macedonia

OUTCOME: Macedonia remained dominant over Greece.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: None

Antigonus II Gonatus (c. 319–239 B.C.E.), king of Macedonia, rebuilt his kingdom's power and through a series of conquests gained hegemony over Greece. The death of King Pyrrhus (c. 318–272 B.C.E.) of Epirus at Argos in 272 left Antigonus in absolute control over Macedonia. A master diplomat, Antigonus also gained control of the Thesalian League and established friendly relations with neighboring Illyria and Thrace. In Greece he maintained control by occupying Corinth, Chalcis on Euboea, and Demetrias in Thessaly. He also threw his support behind pro-Macedonian factions in several cities in the Peloponnese, and he fostered the rise to power of compliant tyrants in Sicyon, Argos, Elis, and Megalopolis. However, Antigonus realized that to keep Greece in complete subjugation, he needed to control the Aegean Sea. Recognizing the danger such control represented, King Areus (r. 309–265) of Sparta and Chremonides of Athens declared war against Macedonia for the liberation of Greece. Their alliance had been urged and promoted by Ptolemy II (c. 285–246) of Egypt, who supplied Sparta and Athens with money and grain to support the anti-Macedonian coalition in Greece. Epirus also figured in the alliance.

Chremonides declared war in 267. Although Antigonus II did not want to fight, he realized that preemptive action would be most effective, and instead of mounting a defense, he struck first, before the allies could organize a simultaneous attack on him. He invaded Attica in 266, then defeated the Spartans in 265. In 264 Epirus mounted an invasion of Macedonia, which Antigonus withstood and ultimately expelled. Macedonia also weathered a maritime blockade by the Egyptian fleet. Ptolemy abandoned this in 263, whereupon Antigonus led an attack on Athens, which surrendered in 262. With this, the Spartan-Athenian-Epirote-Egyptian alliance was broken, and Macedonia was again dominant in Greece. The region was at peace for a decade, although Antigonus did retaliate against Egypt by supporting the Syrian-based Seleucids in their wars against the Ptolemies.

Cid's Conquest of Valencia, The (1089–1094)

PRINCIPAL COMBATANTS: The Christian-Moorish army of El Cid (the Cid) Campeador vs. the independent kingdom of Valencia

PRINCIPAL THEATER(S): Valencia, Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Cid Campeador sought to gain control of the kingdom of Valencia.

OUTCOME: The Cid was successful in conquering Valencia, which remained under his control until his death in 1099.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: None

During the 11th century Spain continued its slow process of Christian reconquest. Internal strife and the constant changing of hands from Christian to Muslim control brought about the creation of independent kingdoms, principalities, and emirates. One such kingdom was Valencia, upon which Rodrigo Díaz de Vivar, better known as El Cid Campeador (c. 1040–99), set his sights. Having been banished by King Alfonso VI (1030–1109) of Castile, who grew jealous of his popularity, the Cid joined up with the Moorish emir of Saragossa and defeated the Christian rulers of Barcelona and Aragon. After Alfonso's defeat in 1088 at the hands of the Almoravids of Morocco, he pardoned the Cid and called him back to restore his military forces. This reunion lasted only a short time, and the Cid was once again banished in 1089. Wanting to gain control of Valencia, the Cid raised a private army made up of both Christians and Muslims. With the aid of the Almoravids, the Valencians rebelled against their ruler, al-Kadir (d. 1092). The Cid invested the city immediately to keep the Almoravids from taking control. After a 20-month siege the Valencians surrendered on June 17, 1094, and the Cid became the kingdom's new ruler. He remained in power until his death in 1099. The Almoravids reconquered Valencia in 1102.

Cimmerian Invasion of Phrygia (696–695 B.C.E.)

PRINCIPAL COMBATANTS: The Cimmerians vs. the kingdom of Phrygia in Anatolia

PRINCIPAL THEATER(S): Anatolia (Turkey)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Cimmerians, originally of the Caucasus region, were searching for a homeland, having been driven from their territory by the Scythians.

OUTCOME: The Cimmerians destroyed the capital of Phrygia and took control of the region.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Having been driven from the Caucasus region by the advance of the Scythians, the Cimmerians were pushed into Anatolia, or Turkey, in the eighth century B.C.E. In search of a homeland, the Cimmerians invaded the kingdom of Phrygia in central Anatolia, destroyed its capital of Gordium, and caused its king, Midas (c. 736–c. 696 B.C.E.), to commit suicide. The kingdom of Phrygia ceased to exist as a political entity. Eventually the Scythians again drove the Cimmerians out of their territory, this time into Cappadocia.

Ciompi, Revolt of the (1378)

PRINCIPAL COMBATANTS: *Ciompi* and other radical factions vs. Florentine ruling class

PRINCIPAL THEATER(S): Florence

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Effort to organize and give voice to lower-class workers of Florence

OUTCOME: The *ciompi* established a short-lived reform government, which soon collapsed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Variable

CASUALTIES: Unknown, but light

TREATIES: None

Ciompi is the Italian word for wool carders, who in 14th-century Florence were the most radical among the poor who staged a revolt against the repressive rule of the conservative, privileged classes of Florence. Florentine commerce—and, in large measure, government—was regulated by the various ruling trade guilds. When the impoverished wool carders were denied permission to organize a guild of their own, they called upon lower-class, unorganized workers to rebel. The action began in late June and continued through July. During this period the *ciompi* and others petitioned the Signoria, the executive council of Florence, for the establishment of a more equitable fiscal policy as well as the right to establish guilds. The Signoria proving unresponsive, the rebellious

lower classes seized the government by force in a coup of July 22, 1378. They elevated to the key office of *gonfaloniere* of justice a carder named Michele di Lando (1343–1401). Thus, a new government controlled by the minor guilds and unorganized lower-class workers was established. The *ciompi* and others were raised to guild status.

Both the new government and the popular euphoria surrounding it were short-lived. The political upheaval brought economic disaster, and the lot of the *ciompi* and their allies, desperately poor to begin with, now worsened. The new government was powerless to help. Among the minor guilds and the *ciompi* dissension increased, and the minor guilds united with the major guilds against the *ciompi*. On August 31 forces of the minor and major guilds attacked *ciompi* gathered in the Piazza della Signoria. The *ciompi* were routed in an event that heralded their end. The *ciompi* guild was abolished, and amid sporadic rioting the dominance of the major guilds was gradually reestablished by 1382.

Civil War of (Portuguese) Succession

See SPANISH-PORTUGUESE WAR (1580–1589).

Claiborne's Rebellion (1644–1646)

PRINCIPAL COMBATANTS: Virginia vs. Maryland

PRINCIPAL THEATER(S): Maryland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Dispute over possession of Kent Island

OUTCOME: Supported by Virginia, Claiborne led a two-year takeover of Maryland.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Minimal

TREATIES: None; order of Oliver Cromwell issued in 1657 officially restoring Calvert government to Maryland

Claiborne's Rebellion was really a series of disturbances sparked when William Claiborne (d. 1677 or 1678), a Virginia fur trader and political official (he was twice secretary of state for Virginia), refused to yield to the authority of Leonard Calvert (1606–47), the governor of Maryland, in disputes over certain Crown grants of land. Claiborne had come to Virginia from England in 1621 and commenced exploration of the Chesapeake Bay. He established

himself in 1631 on Kent Island, where he set up a lucrative fur trading operation. Although Kent Island was part of the 1609 land patent granted to Virginia, a charter issued to the Calvert family in 1632 designated Kent Island as lying within the boundaries of Maryland. Hostilities between Maryland and Virginia, intermittent over the issue, culminated in Maryland's seizure of Kent Island in 1637, and Claiborne was forced to leave the island. In 1644, however, he organized some Puritan Marylanders and other anti-Catholics in a revolt against Governor Calvert, forcing him out of Maryland and into Virginia. Claiborne held Maryland from 1644 to 1646, when the Crown reassigned the disputed land. It was not until 1657 that Oliver Cromwell (1599–1658) ordered the full restoration of the Calvert government in Maryland. Claiborne then returned to Virginia, where he figured prominently in the affairs of that colony until his death in 1677 or 1678.

Coalition, War of the First (1792–1797)

PRINCIPAL COMBATANTS: France vs. Austria, Prussia and (from 1793) Britain, Russia, the Netherlands, Spain, Sardinia, Kingdom of the Two Sicilies, Portugal, Baden, Hesse-Kassel, Hesse-Darmstadt, and Hanover. Spain withdrew from the coalition in 1795 and joined the French to oppose Britain in 1796.

PRINCIPAL THEATER(S): France, the Low Countries, the Rhineland and western Germany, the Pyrenees, and Italy

DECLARATION: First coalition against France April 2, 1792

MAJOR ISSUES AND OBJECTIVES: First the preservation on the French Revolution, later French expansion beyond her borders

OUTCOME: French victories and allied dissension drove the allies out of the coalition one by one. Prussia, the Netherlands, and Spain all left the coalition in 1795. Defeated in northern Italy by Bonaparte, the Austrians concluded peace with France in 1797. By this peace France gained the Austrian Netherlands, roughly today's Belgium. France also picked up the left bank of the Rhine and other areas, such as Savoy, through earlier treaties. By the end of 1797 only Britain continued an armed resistance to the French. However, war did not end with the defeat of the First Coalition, for in 1798 Britain forged a new alliance against the French, the Second Coalition, to continue the struggle.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

At the height of the action in summer 1794, the French claimed a paper strength of 1,000,000 men, with perhaps only 750,000 actually present under arms. The allies never concentrated their full numerical strength against

the French because during the critical years, 1792–95, Austria, Prussia, and Russia devoted much of their attention to the partitions of Poland in 1792 and 1795.

CASUALTIES: The best figures list 663,000 battle deaths as a total for the wars of the First and Second Coalitions, 1792–1802.

TREATIES: Treaty of Basel (April 5, 1795), Treaty of the Hague (May 16, 1795), Treaty of Campo Formio (October 17, 1797)

The War of the First Coalition set off an era of more than 20 years of armed conflict summed up as the FRENCH REVOLUTIONARY WARS and NAPOLEONIC WARS. Only with some difficulty and distortion can historical surgery separate the War of the First Coalition from this larger period of turmoil.

Moreover, to try to isolate the impact of the War of the First Coalition is, to a large degree, to stop a process in mid-course. Still, this conflict settled some key issues and introduced fundamental changes to warfare by 1797. Although the survival of the new French state and the social revolution that gave it birth were at risk when war started in 1792, they were essentially secure by 1797. Nationalism, which would become a dominant force in warfare for succeeding centuries, appeared first on European battlefields at this time, although its full force would not be felt until the imperial conquests of Napoleon and the resistance that they spurred. Moreover, the French had begun a revolution in military institutions and the conduct of war that would again progress under Napoleon and leave warfare forever changed. French victories had already planted Jacobin seeds in western Germany, northern Italy, and what is today Belgium by 1797, but it was still uncertain how those seeds would sprout. The prewar borders of Europe appeared different by 1797, but they would remain in nearly constant flux until stabilized by the Congress of Vienna (1814–15). That assembly also enshrined a new and far more stable international system, but this prospect was at best faintly seen by 1797. In hindsight, there is no question that the War of the First Coalition constituted a watershed in the history of war and international relations, but that was not entirely clear at the time.

CAUSES

Revolution drove the French to war in 1792, but they did not fight simply to protect their democratic gains against the hostile monarchies of Europe. The French Revolution symbolized by the storming of the Bastille on July 14, 1789, promised a new world as defined by the Declaration of the Rights of Man and the Citizen. The remnants of feudalism disappeared in the countryside, freeing the peasant majority from shackles that had bound it for many centuries, and urban rebellions established new elected governments to replace traditional oligarchies. The new

National Assembly regarded the institutional church as an enemy and stripped it of its land and power.

For the first two years the vacillating king, Louis XVI (1754–93), showed himself alternately hostile and tolerant of the Revolution, but he finally announced his opposition by trying unsuccessfully to flee France in June 1791. His flight and the blustering of European conservatives convinced the French that European monarchs were linked in a conspiracy to smother the Revolution at its birth and that the French must prepare for war. In fact, war did not come until spring 1792, and when it did it was not the result of monarchical aggression from outside French borders but of political struggles from within. Convinced that war was inevitable in any case, revolutionary radicals believed that war would reveal the king as a traitor and clear the way for a republic. Moderates such as the marquis de Lafayette (1757–1834) hoped that victory would strengthen the king and restore a healthy constitutional monarchy without jeopardizing the democratic gains of the Revolution. Conservatives believed that a war would result in the defeat of the revolutionaries, and that, once triumphant, the crowned heads of Europe would eradicate the Revolution and restore Louis XVI to his rightful powers. Confident of different results, the parties of France united to declare war on April 2, 1792, because war met their internal political needs. Significantly, the French declared war only against their traditional enemy, the Austrian Hapsburgs, hoping to isolate the conflict to manageable proportions, but war, once unleashed, got out of hand.

TRANSFORMATION OF THE ART OF WAR

The War of the First Coalition was not war as usual, because revolutionary France fought for higher stakes with a new spirit and a transformed army. Perhaps the most important aspect of this conflict was the introduction of a radically new style of warfare.

The revolutionary army benefited from a military reform movement precipitated by French defeat in the SEVEN YEARS' WAR (1756–63). This movement brought key technical improvements and planted seeds of tactical change. Most important among technical innovations, the Gribeauval artillery system, adopted in 1774, altered the very manufacture of field guns: Rather than casting cannons with a hollow bore, the French now cast barrels solid and then bored them out on massive frames. This much more exact technique allowed the production of shorter and lighter barrels. Mounted on improved carriages, French artillery became the most mobile and the best served in Europe.

The reform era also witnessed debate over infantry. On the one hand, soldiers battled over the merits of different formations for close-order infantry, as advocates of the traditional line contended with champions of the more mobile column. Supporters of deep column formations,

the *ordre profond*, argued that the French were naturally suited to the attack. Those who preferred the line, or *ordre linéaire*, pointed to its greater fire power. Controversy finally produced the drill manual of August 1791, which presented a variety of tactical options to the soldiers of the Revolution. On the other hand, the French also experimented with light infantry, eventually adding a light infantry company to every battalion and creating 12 entire battalions of light *chasseurs à pied*.

Despite their real contribution, however, it would not be fair to credit the success of the new armies of revolutionary France simply to reforms that took root before 1789, for the changes wrought by the French Revolution were far more fundamental and potent. Whatever its desire for improvement, the prerevolutionary reform movement could not transform the social givens of the army. The rank and file of the army of the old regime came from the castoffs of society, men who their officers regarded as untrustworthy rabble. But the new soldiers were the best young men that France had to offer, men whose patriotic enthusiasm and personal initiative could be marshaled on the battlefield. When the army geared up for war after June 1791, the government not only beefed up the regular army but called for volunteers from the citizen militia, the National Guard, and these stepped forward as the Volunteers of 1791 and 1792. When army numbers needed to be increased in 1793, however, the revolutionary government resorted to conscription. After an attempt to conscript 300,000 men in February 1793 produced disappointing results, the people's representatives declared the *levée en masse* on August 23. This decree mobilized the entire French population for the war effort:

Young men will go to battle; married men will forge arms and transport supplies; women will make tents, uniforms, and serve in the hospitals; children will pick rags; old men will have themselves carried to public squares, to inspire the courage of the warriors, and to preach the hatred of kings and the unity of the Republic.

By mid-1794 the flood of volunteers conscripted though this great levy boosted the French army to the unprecedented size of a million men, a paper figure usually discounted to 750,000 men present under arms. This force was truly representative of French society in its social composition and in its aspirations; it was, in short, the nation in arms.

This revolutionary army was led by a revolutionary officer corps. Aristocrats had composed about 85 percent of the officers in the old army, but by the summer of 1794, they made up only 2–3 percent of the commanders. Understandably out of sympathy with the Revolution, aristocratic officers emigrated from France or simply retired to their homes, whereas the government drove others from command. Many sergeants rose into the commissioned ranks, and volunteer battalions elected their own,

usually middle-class, officers. The principle of “careers open to talent,” tempered by seniority, guided promotion and staffed an officer corps of capable men who understood the potentials promised by the new soldiery.

The army of the French Revolution outstripped its opponents in the field both in terms of tactics and mobility. Combining the line for defense and firepower, the column for maneuver and attack, and dispersed order for skirmishing, French infantry possessed a tactical system far more flexible than any they faced. Superior French artillery more than compensated for the army’s shortcomings in cavalry. The army also enjoyed a more supple organization, as its battalions were grouped into combat divisions, an organizational innovation of the Revolution. French soldiers who served out of revolutionary fervor, patriotic sentiment, or civic responsibility could be expected to do without or to fend for themselves when logistics broke down. Earlier armies had dissolved when not regularly supplied, but the French did not. Early revolutionary commanders took but partial advantage of this potential; only Napoleon Bonaparte (1769–1821) would fully exploit the rapidity of movement made possible by troops who could be expected to live off the country without destroying unit integrity.

THE REVOLUTION IS SAVED, APRIL 1792–JUNE 1793

Although the revolutionary army would soon win many victories, it began the war with a series of defeats. Soon after the assembly declared war in April 1792, it ordered troops stationed along the frontier to mount several attacks into the Austrian Netherlands. Partially trained French battalions neither advanced boldly nor stood resolutely in the face of enemy resistance. Instead, French soldiers panicked and streamed to the rear crying “We have been betrayed!” and “Every man for himself!” The situation was little improved by several changes of command as the French sought a winning combination. Eventually, trial and error brought talented men to the top: Notably Charles Dumouriez (1739–1823) took over the Army of the North, while François Kellermann (1770–1835) assumed command of the Army of the Center.

By mid-summer the Prussians, who had allied with the Austrians to oppose the French, prepared to invade France from the Rhineland and drive on Paris. The renowned Frederick William, duke of Brunswick (1771–1815), commanded the Prussian invasion, which moved slowly from Coblenz and crossed the French frontier at Longwy on August 19. The Parisians reacted to Brunswick’s invasion by taking to the streets, arresting Louis XVI, and declaring a republic. Dumouriez rushed south and blocked Brunswick’s path at the Ardennes. Although Brunswick succeeded in crossing this barrier, he had to turn and offer battle. By then Kellermann had marched his Army of the Center to join Dumouriez, and it was the

Center that stood against the Prussians at Valmy on September 20, 1792. Brunswick could not afford a costly battle and still continue his march on Paris; his only hope of success lay in routing the French with little damage to his own army. However, French troops who had run in the spring had become seasoned by the fall, and they held the ridge through a furious cannonade. When French artillery threatened to shred tentative Prussian assaults, Brunswick called off his battalions. After 10 days of pointless parleys, Brunswick began to retrace his steps, and in their retreat the Prussians suffered heavy casualties from disease and exposure. Valmy had turned backed the dreaded invasion and may have saved the Revolution.

While the Prussians limped back into Germany, Dumouriez rushed north to continue the momentum of French victory by invading the Austrian Netherlands. On November 6 his large army defeated outnumbered Austrians at Jemappes, clearing the way for him to occupy the Austrian Netherlands that winter. Meanwhile, Adam Custine (1740–93) led the French Army of the Moselle into the Rhineland.

French fortunes would soon turn for the worse, however. Relieved that the new republic was seemingly secure, volunteers left the army and headed for home. The exodus proved so large that the army dwindled in size. Meanwhile, the allies marshaled their forces to expel the French. Defeat at Neerwinden on March 18, 1793, lost France the Austrian Netherlands, and setbacks also drove the republicans from the Rhineland. Only the fortress line crafted by Vauban stood between Paris and the allied forces. Luckily for the revolutionaries, the allies stopped to besiege fortresses rather than advancing on the French capital.

In fact, the powers allied in the First Coalition never concentrated on defeating France and instead regarded one another with suspicion. Rivals in eastern Europe, where they each had a great deal at stake, Austria, Prussia, and Russia could not act with a single purpose in western Europe. Of the main powers only Austria did its best to defeat the French, but even Austria could not look exclusively to the west, since the partition of Poland demanded its attention. Prussia and Russia cared much more about maximizing their gains in Poland than about reestablishing the Bourbons on the French throne. In fact, Prussia actually dragged its feet along the Rhine precisely to keep its Austrian rival from doing too well against the French. The British, who joined the fight against France in 1793, committed only modest land forces, as was their habit, and as a whole their performance left a good deal to be desired. The best that can be said for the British is that in defeat they tempered future victorious commanders, such as Arthur Wellesley, duke of Wellington (1769–1852), and that they gained the impetus for military reform.

Spring defeat sent another shock of panic through France. At this point the revolutionary assembly, now styled the National Convention, concentrated executive

power in the hands of a body of 12 men, the Committee of Public Safety, which accrued dictatorial power over the course of the next year. The Reign of Terror had begun. Summer brought the *levée en masse* as troops already at the front trained and skirmished with the allies. Among the members of the Committee of Public Safety, Lazare Carnot (1753–1823), a military engineer by training, stood out for his great ability as a military administrator. He drove arms production and supply and more than any other individual shaped French strategy in 1793 and 1794. A grateful nation would dub him the “Organizer of Victory.”

While the revolution stiffened its resistance on the borders, internal war tore at its center. In resistance to the conscription law of February 1793, conservative areas of western France took to arms in open rebellion against Paris and the Revolution. This Vendée revolt became the most brutal of the fights waged by the republic. Whereas French soldiers regarded their uniformed opponents along the frontiers as “slaves” who could be freed and educated, republican troops regarded the peasants of the Vendée as traitors to be exterminated. The Vendée revolt must be discussed within the context of the War of the First Coalition because the Vendée drew men and matériel away from the frontiers and because the British tried to exploit the Vendée as a second front. The worst fighting occurred in 1793, but revolt would flare periodically through the west into the reign of Napoleon.

REPUBLICAN VICTORY, JULY 1793–DECEMBER 1795

During summer 1793 French forces rebuilt and trained anew, and by the fall the course of the war began to shift back in their favor. The Army of the North under Jean-Nicolas Houchard (1739–93) bludgeoned an Anglo-Hanoverian army at Hondschoote on September 8, but Houchard failed to exploit his victory and paid for that timidity with his neck. His successor, Jean-Baptiste Jourdan (1762–1833), defeated the Austrians at Wattignies on October 17. Hoche, at the head of the Army of the Moselle, received a check at Kaiserslautern on November 28–30 but rebounded to relieve Landau and take Speyer. Meanwhile, Kellermann drove the enemy from Savoy, and the Spanish retreated along the Pyrenees. The French had not crushed their enemies, but they had stopped them and taken the initiative.

Republican forces also triumphed within French borders. While the Vendée rose in revolt, key cities, notably Bordeaux, Lyon, and Toulon, also declared their independence from Paris. But Bordeaux and Lyon fell to republican forces in October. Toulon, which had admitted the British fleet to assist in their resistance, held out until December 19. There, a young Bonaparte first showed his metal by driving the fleet from the harbor with his cannons. In the Vendée a republican army smashed the main

rebel force at Le Mans and Savenay in December. An undercurrent of guerrilla warfare and brutal repression continued, but the major threat had passed.

Throughout the winter of 1793–94 the conscripts of the *levée en masse* arrived at the front and trained as best they could. Surrounded by seasoned veterans, the new men learned with surprising rapidity. Spring brought some initial reverses, but on May 17–18 the Army of the North won an important victory at Tourcoing against an allied army that outnumbered it. French victory in May seemed to take the heart out of the Austrian commander, Francis, duke of Saxe-Coburg (1750–1806). Next, an army of 75,000 troops from the North and the Moselle and placed under the command of Jourdan completely defeated 52,000 Austrians under Saxe-Coburg at Fleurus on June 26. After this defeat the Austrians abandoned the southern Netherlands. French troops eventually crossed into the Dutch Netherlands and imposed the Treaty of the Hague in May of the following year. By its terms not only did the Dutch withdraw from the coalition, they also ceded land to France and allied with her. The tide of French victory had already swept the Prussians from the war in April, when they signed the Treaty of Basel with the new republic. Spain also left the alliance in July 1795 and joined France in war against the British a year later, in August 1796. Russia was of very little weight in the coalition, and although Catherine II (1729–96) kept Russia in the war until her death in 1796, she never contributed much more than a few ships and some money to the alliance. By the end of 1795 the only serious contenders to the French were the Austrians and the British.

WAR AT SEA

It comes as little surprise that the British triumphed at sea during the War of the First Coalition. Although the revolution had created a large and potent army filled with spirited troops, the French fleet degenerated after 1789. Experienced sergeants and talented amateurs rose to fill the places of officers who fled the army, but skilled officers lost to the navy could not be so easily replaced. Command at sea required years of training. Moreover, difficult and dangerous life at sea required discipline and authority inconsistent with revolutionary principles. At the same time, the British were entering their most illustrious period of naval victory.

The British suffered no major defeats at sea, although they were not always able to capitalize on their naval victories. Admiral Richard Howe (1726–99) triumphed in the first important naval action of the war, the “Glorious First of June,” May 29–June 1, 1794. There he defeated a French escort fleet, although he allowed the merchant vessels they accompanied to reach port safely. In June 1795 the British used their naval preeminence to land a force of 3,000 French émigrés in Brittany with hopes of raising western France into massive revolt once again. There

5,000 local rebels joined the émigrés, but the republicans rallied with an army of 10,000 under General Louis Lazarel Hoche (1768–97) to defeat and capture the majority of the rebel force at Quiberon from July 16–20. In 1796 the French tried and failed to land 13,000 troops at Bantry Bay in Ireland to foment rebellion in that unhappy land. Bad weather played a greater role in French defeat there than did British fleet action. In 1797 the British clashed with French allies. On February 14, 1797, Admiral John Jervis (1725–1823), with Horatio Nelson (1758–1805) as one of his captains, defeated a Spanish fleet at Cape St. Vincent. During this battle Jervis abandoned the standard line-ahead tactics to break the enemy fleet and fight a *mêlée* action, as would his famous subordinate at Trafalgar. Later in the year another British fleet defeated the Dutch at the Battle of Camperdown, October 11.

STALEMATE ALONG THE RHINE, 1795–1796

Although 1795 brought diplomatic triumphs and the French army did well in the Dutch Netherlands, the French stalled along the Rhine. Jourdan led the Army of the Sambre and the Meuse in an invasion of Germany, but after initial success he was driven back by Austrian forces under Clerfayt. Here French defeat can be attributed to Pichegru, commander of the Army of the Rhine and Moselle, who joined a royalist plot and betrayed French plans to the enemy.

French frustration along the Rhine continued in 1796. Jourdan and Moreau were to coordinate in an invasion of Bavaria, but the young and extremely able Archduke Charles (1771–1847) employed interior lines to parry both thrusts. Jourdan crossed the Rhine in June and advanced on Wetzlar, but there the archduke defeated him and forced the French back across the river. Archduke Charles next marched to counter Moreau along the Danube. Checked at Malsch, Charles marched north again to defeat Jourdan at Amberg on August 24, but in his absence Moreau won a battle at Friedberg. Charles pursued Jourdan and defeated him again at Würzburg on September 3. Jourdan now agreed to an armistice, freeing Charles to turn south, but Moreau, hearing of Jourdan's defeat, retired to the Rhine.

French forces failed not only because of treachery or improved enemy command, but because French forces shrank after the great manpower bounty of the *levée en masse*, for the revolutionary government failed to establish regular conscription for several years. The great *levée* proved to be more a revolutionary spasm than a system, and comparatively few men joined the ranks from 1795 until the creation of the Jourdan Law that regularized conscription in 1798. The army, which could claim 750,000 men present under arms in 1794, fell to 480,000 a year later and still further, to 400,000, in 1796. This was not much larger than the armies that served Louis XIV in his great wars a century before.

Not only was the army smaller, but it was becoming the stepchild of the revolutionary government. After victory at Fleurus the Reign of Terror came to an end when the National Convention arrested Maximilian Robespierre (1758–94) and other radicals on the Committee of Public Safety. Many had good cause to celebrate the end of radical revolution, but the radicals always supported the army as best they could. The new government, the Directory, which came to power in 1795, was more moderate but also more selfish and corrupt, and it left the army to fend for itself on the frontiers. This meant that republican troops who arrived outside French borders as liberators stayed as thieves, because soldiers left unpaid and poorly fed had to supply themselves by looting. Pillage turned occupied populations against revolutionary France.

BONAPARTE'S ITALIAN CAMPAIGN, 1796–1797

Although the French met frustration and defeat along the Rhine in 1796, they scored great victories south of the Alps, where 26-year-old general Napoleon Bonaparte took command of the Army of Italy on March 27. This army, clothed in rags and poorly supplied, clung to the Mediterranean shore from the border of France to Genoa. Bonaparte appealed more to its needs and avarice than to its revolutionary principles:

Soldiers! You are hungry and naked; the government owes you much but can give you nothing. The patience and courage which you have displayed among these rocks are admirable; but they bring you no glory—not a glimmer falls upon you. I will lead you into the most fertile plains on earth. Rich provinces, opulent towns, all shall be at your disposal; there you will find honor, glory and riches. Soldiers of Italy! Will you be lacking in courage or endurance?

Bonaparte began this extraordinary campaign by wedging between the Piedmontese forces and the Austrians. Driving off the Austrians under Jean Pierre Beaulieu (1725–1819) at the Battles of Dego and Monenotte, Bonaparte then defeated the Piedmontese at Mondovi on April 21 and pursued the shattered army so relentlessly that they sued for an armistice on April 23, and a few days later Piedmont withdrew from the war. Now Bonaparte concentrated against the Austrians, who he soon drove from Lombardy; he entered Milan on May 15, although the Austrian garrison held on for several weeks. By June only the fortress of Mantua denied his conquest of north Italy.

Bonaparte invested Mantua on June 4, but here he would not win another lightning victory, because the Austrians marshaled army after army to relieve the fortress and defeat the French. In a series of brilliant marches and battles Bonaparte and his generals, notably Pierre Augereau (1757–1816) and André Masséna (1758–1817), employed interior lines to beat back one Austrian column after another. Count Dagobert Wurmser (1724–97) led a first

attempt to relieve Mantua but was defeated at Castiglione on August 5. In a second attempt Wurmser's army was roughly handled by the French at Bassano, although Wurmser was able to break through to the city with some troops who swelled the garrison but did little more. Josef Alvintzy (1735–1810) led further Austrian forces in a third attempt to relieve Mantua but met defeat once more at Arcola, November 15–17. The fourth and final attempt took place in January 1797, when Alvinzy once again marched south, but Bonaparte concentrated his forces, defeated Alvintzy at Rivoli on January 14, and then pursued the retreating Austrians. Mantua finally capitulated on February 2.

After the fall of Mantua, the French invaded Austria. Archduke Charles opposed him, but the able Charles was unable to check the French advance. However, armed risings in northern Italy compromised Bonaparte's rear, so when he reached Leoben, 95 miles from Vienna, he concluded the preliminary Peace of Leoben with the Austrians. Bonaparte dictated the terms of Leoben without consulting the Directory, which later negotiated a formal peace agreement with Austria, the Treaty of Campo Formio. By it the Austrians ceded the southern Netherlands, today's Belgium, to France and recognized the creation of a new "Cisalpine Republic" in north Italy. Austria received the Republic of Venice in compensation for lands lost to the new Cisalpine Republic. If the campaign of 1792 guaranteed the survival of the revolution and the campaign of 1794 ensured the expansion of the republic, that of 1796–97 presaged the coming of the empire, for it gave revolutionary France a great and ambitious general just at a time when the government in Paris seemed particularly inept and corrupt.

With the Treaty of Campo Formio, Great Britain alone remained of the great powers who had formed the First Coalition, yet war continued. Bonaparte received command of the Army of England intended to cross the channel and invade the British Isles. However, he advocated an invasion not of England but of Egypt. While Bonaparte pursued this will-o-the-wisp, the British and Austrians cobbled together another alliance against France in 1798's War of the Second COALITION.

Coalition, War of the Second (1798–1801)

PRINCIPAL COMBATANTS: Second Coalition (Austria, Britain, Russia, Portugal, Naples, and the Ottoman Empire) vs. France

PRINCIPAL THEATER(S): Italy and Switzerland

DECLARATION: Second Coalition against France, 1798

MAJOR ISSUES AND OBJECTIVES: Threatened by French revolutionary aggression, the conservative coalition attempted to block French sponsorship of Italian and Swiss republics.

OUTCOME: Despite initial victories, the coalition was defeated in two major battles, and revolutionary France maintained its gains, greatly aiding in the rise of Napoleon.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Coalition forces, 360,000; French forces, 200,000

CASUALTIES: At Marengo: Austria, 9,400 killed and wounded; France, 5,900 killed and wounded; at Hohenlinden: Austria, 7,000 killed and wounded, another 12,000 taken prisoner. Total Coalition losses estimated at 200,000 killed or wounded, and total French losses, 370,000 killed, wounded, or taken prisoner.

TREATIES: Peace of Lunéville, February 9, 1801

The FRENCH REVOLUTION had already triggered the War of the First COALITION in 1792, and the nation's ongoing aggression drove the pope out of the Vatican and inspired the creation of Roman, Helvetic, Cisalpine, and Ligurian Republics. These developments prompted Austria, Britain, Russia, Portugal, Naples, and the Ottoman Empire to form a second coalition against France.

The first hostilities took place in Italy, where French forces overran the Piedmont in November and December 1798. In southern Italy Neapolitan forces, led by the Austrian general Karl Mack von Leiberich (1752–1828), invaded the Roman Republic and took Rome itself on November 29. This prompted a French counterattack, which drove the Neapolitans out of Rome by December 15. The major battle in this early phase of the war was at Civita Castellana on December 4, in which 10,000 French troops trounced 26,000 Neapolitans. Neapolitan losses were some 2,500 casualties versus 500 killed or wounded on the French side. The major campaigns of the war began in 1799.

ITALIAN CAMPAIGN OF 1799

After his Neapolitan troops mutinied following their defeat, General Mack defected to the French, and Naples soon dropped out of the war, becoming the Parthenopean Republic, a French satellite. However, in June 1799 some 17,000 Neapolitan royalists, in concert with a British fleet under Admiral Horatio Nelson (1758–1805) and with the aid of the Lazzaroni, a Neapolitan mob, ousted the

French occupiers from Naples. King Ferdinand (1751–1825) was restored to the Neapolitan throne, and, backed by the British fleet, Neapolitan troops retook Rome on September 29.

In the meantime, in northern Italy a French army of 53,000 moved into position in March 1799 to attack some 52,000 Austrians along the Adige River near Verona. The French objective was to defeat this force before it could be joined by Russian troops marching from the east. A French repulse at Magnano on April 5 bought sufficient time for the arrival of Russian forces, which boosted coalition strength here to 90,000. On April 27 the Russians defeated some 30,000 French troops at Cassano, between Milan and Brescia. On April 28 Milan and Turin fell to the Russians. However, coalition commanders then blundered by dividing their forces to lay siege to remaining French garrisons. Seizing on this mistake, French general Jacques Macdonald (1765–1840) rushed 35,000 French troops from the south to join other French troops at Genoa. The resulting Battle of Trebbia, from June 17–19, resulted in a severe defeat for the French. The Russians went on to another victory at Novi on August 15, and the French retreated across the Apennines.

Most of the Russian army was sent into Switzerland at this point, and some 60,000 Austrians were left to continue fighting against the remaining French in Italy. By the end of the year, the Italian gains Napoleon Bonaparte (1769–1821) had made in the War of the First Coalition had been all but completely wiped out.

RHINE AND SWISS CAMPAIGNS OF 1799

In March French forces under General André Masséna (1758–1817) surprised Austrian troops at Vorarlberg and Grisons and scored a series of hard-won victories. In the meantime, along the Rhine French general Jean-Baptiste Jourdan (1762–1833) led his 40,000-man Army of Mayence against some 80,000 Austrians. Despite some successes, Jourdan was defeated, and command was turned over to Masséna. He made a fighting retreat to Zurich, then on June 7 withdrew to the west from that city. Regrouping in August, he resumed the offensive but was repulsed outside of Zurich during August 13–16.

Having apparently dealt with the French, Archduke Charles (1771–1847) pulled more than half his troops out of Switzerland to fight in the Netherlands. Only some 40,000 coalition troops were left in Switzerland under Russian general Alexander Korsakov (1753–1840)—although more Russians were on their way from Italy. Masséna exploited the present coalition weakness, and on September 25 at the Third Battle of Zurich, he routed Korsakov. In the meantime, General Alexander Vasilievich Suvorov (1729–1800) led 20,000 Russians up from Italy on an epic fighting march through the Alps, but he was relieved of command by order of the czar before he was able to reinforce Korsakov.

NETHERLANDS CAMPAIGN OF 1799

In August 1799 Frederick Augustus, duke of York (1763–1827) landed a force of 27,000 British troops at Groet-Keeten, quickly defeating Dutch forces, then joining with Russian troops to create a coalition army of 35,000. This force engaged French and Dutch (Batavian Republic) troops at Bergen on September 16 but suffered a defeat. Undaunted, York regrouped in October and renewed his offensive, which resulted in the inconclusive Second Battle of Bergen on October 2. York then fought the Franco-Dutch army at Kastrikum on the North Sea coast on October 6. A breakdown in communications between the British and Russians contributed to a stunning coalition defeat in which 3,439 of 20,900 troops were lost; Franco-Dutch losses were 1,398 of 17,300 troops engaged.

York withdrew. Despite his setbacks, he had succeeded in neutralizing the Dutch fleet, and with the signing of the Convention of Alkmaar later in the year, the Netherlands was out of the war.

ITALIAN CAMPAIGN OF 1800

The War of the Second Coalition saw the meteoric rise of Napoleon, who overthrew the weak government of the French Directory on November 9, 1799, and became first consul—effectively dictator of the French Republic. Also at this time Czar Paul I (1754–1801) precipitously withdrew Russia from the Second Coalition. This left France in a hopeful position. Although Italy was lost, France held on to all other fronts. Nevertheless, French losses were considerably more than 300,000, and Napoleon understood that he had to end the hemorrhage through decisive counteroffensives in Italy and Germany. His plan was to invade Italy via Switzerland. As Masséna reeled under attack from the Austrians at Genoa, Napoleon led 51,400 troops via the St. Bernard Pass (with detachments also crossing at the St. Gotthard and Simplon Passes) into Italy. Arriving on the Lombard plain on May 24, Napoleon took Milan and Pavia and then marched to the relief of Masséna at Genoa. However, with his forces greatly reduced, Masséna surrendered Genoa to the Austrian army on June 4, before Napoleon reached him.

In the meantime, the Austrians concentrated 31,500 men, their main force, at Alessandria, bracing for the arrival of Napoleon. He encountered 29,000 Austrians under Michael Melas (1729–1806) just east of Alessandria, at Marengo, on June 14. The resulting battle was one of Napoleon's signal victories. The Austrian army was routed, with 9,402 casualties, and Austria sued for peace.

GERMAN CAMPAIGN OF 1800

During the spring French general Jean Moreau (1763–1813) defeated the Austrians at Stockach (May 3), Moskirch (May 5), and Biberach (May 9), driving them into Bavaria. The armistice concluded after Marengo

applied to Germany as well, but on November 13 hostilities revived there as a 136,000-man Austrian army confronted Moreau's 119,000-troop Army of the Rhine. After several minor battles the two forces met at the Bavarian town of Hohenlinden on December 3. Because the Austrian forces were committed to the battle in piecemeal fashion, Moreau scored a significant victory and harried the retreating Austrians as they fell back toward Vienna. Simultaneously, other French forces renewed the battle in Italy, and Austria soon sought terms. The Treaty of Lunéville was concluded on February 9, 1801, ending the major phases of the War of the Second Coalition. Britain continued to fight on its own for another year, however, until the signing of the Treaty of Amiens on March 27, 1802.

France emerged from the war with its many gains intact. However, the nation was severely depleted and war weary. It would be up to Napoleon, initially as first consul, then consul for life, and, finally, emperor, to rally the nation to the remainder of its military destiny.

Coalition, War of the Third (1805–1807)

PRINCIPAL COMBATANTS: France vs. the Third Coalition (Great Britain, Austria, Russia, Sweden, Naples, and, later, Prussia)

PRINCIPAL THEATER(S): Middle Europe and the Mediterranean

DECLARATION: Third Coalition formed by British during April 11–August 9, 1805

MAJOR ISSUES AND OBJECTIVES: Napoleon made plans to invade Britain in order to secure his rule in Europe; Britain formed the Third Coalition to oppose him.

OUTCOME: France soundly defeated Austria and broke up the Holy Roman Empire, giving Napoleon hegemony over much of the continent, but Britain's great victory at Trafalgar served as a turning point in world history, giving Great Britain rule over the oceans.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

France: 225,000; Coalition: Austria, 166,000; Russia, 98,000; Prussia, 254,000; Others, including British naval forces, 144,000

CASUALTIES: Coalition: 75,000-plus killed or wounded in the major battles, with many 10s of thousands more taken prisoner (at Austerlitz the Austro-Russian army lost 32 percent of its fighting force, at Jena, the Prussian army, 47 percent of its); French losses in the same battles were around 43,000 killed or wounded.

TREATIES: Treaty of Pressburg, December 25, 1805; Treaty of Tilsit, July 7 and 9, 1807

The FRENCH REVOLUTIONARY WARS evolved, like the FRENCH REVOLUTION itself, into a prosecution of Napoleon Bonaparte's personal ambitions. Emerging from those wars as first consul for life, Napoleon was determined to recover Saint-Domingue, which had rebelled and renamed itself Hispaniola, to occupy Louisiana, which had been ceded to France by Spain in 1800, and perhaps to reconquer Egypt. In any case, it was clear he intended to extend French influence in both the Mediterranean Sea and the Indian Ocean, and he was advancing France beyond what the rest of Europe considered its natural frontiers—incorporating the Piedmont into his revolutionary republic, imposing a democratic and French-friendly government on the Swiss Confederation, and compensating dispossessed German princes for their former Rhine territories with shares in the ecclesiastical states he had secularized. The British were upset by all this, by France's peacetime expansions, and especially by the First Consul's attempt to reserve half of Europe as a market for French goods without lowering customs duties (*see* NAPOLEONIC WARS).

In the midst of a maritime commercial explosion of its own, Great Britain could barely tolerate the fact that one state and one man should command the coast of the Continent from Genoa to Antwerp, and over Malta the English dug in their heels. The British had taken Malta when the French occupation collapsed during the last stage of the Revolutionary Wars. By the Treaty of Amiens, they were supposed to give it back to the Knights Hospitallers, from whom Napoleon had seized it. Using the excuse that the French had not yet evacuated certain Neapolitan ports, they refused to leave the island. As French-British relations grew strained over Britain's defiance of the precarious peace terms, the British used the brouhaha as the pretext for declaring a new war in 1803.

Bonaparte raised a large army, but he could not hold back the British as they seized French colonial possessions one after the other. Although for now he was fighting Great Britain alone, Napoleon realized that his only hope for victory lay in landing his Grande Armée (Grand Army) on the British Isles. The British, in turn, knew that, ultimately, they could defeat the French only by forming another continental coalition against him. Bonaparte concentrated his troops

at Boulogne and gathered nearly 2,000 ships between Brest and Antwerp, but his problem remained the same as it had always been: To cross the channel, he needed control of the seas, and the French fleet was still far inferior to the Royal Navy. Even when he induced Spain to declare war against Britain in December 1804, the combined fleets were no match for anything more than a squadron of British ships. Napoleon decided that if he massed the French-Spanish armada in the Antilles, he could lure a British squadron into these waters and defeat it, which in turn would give him rough parity with Britain at sea.

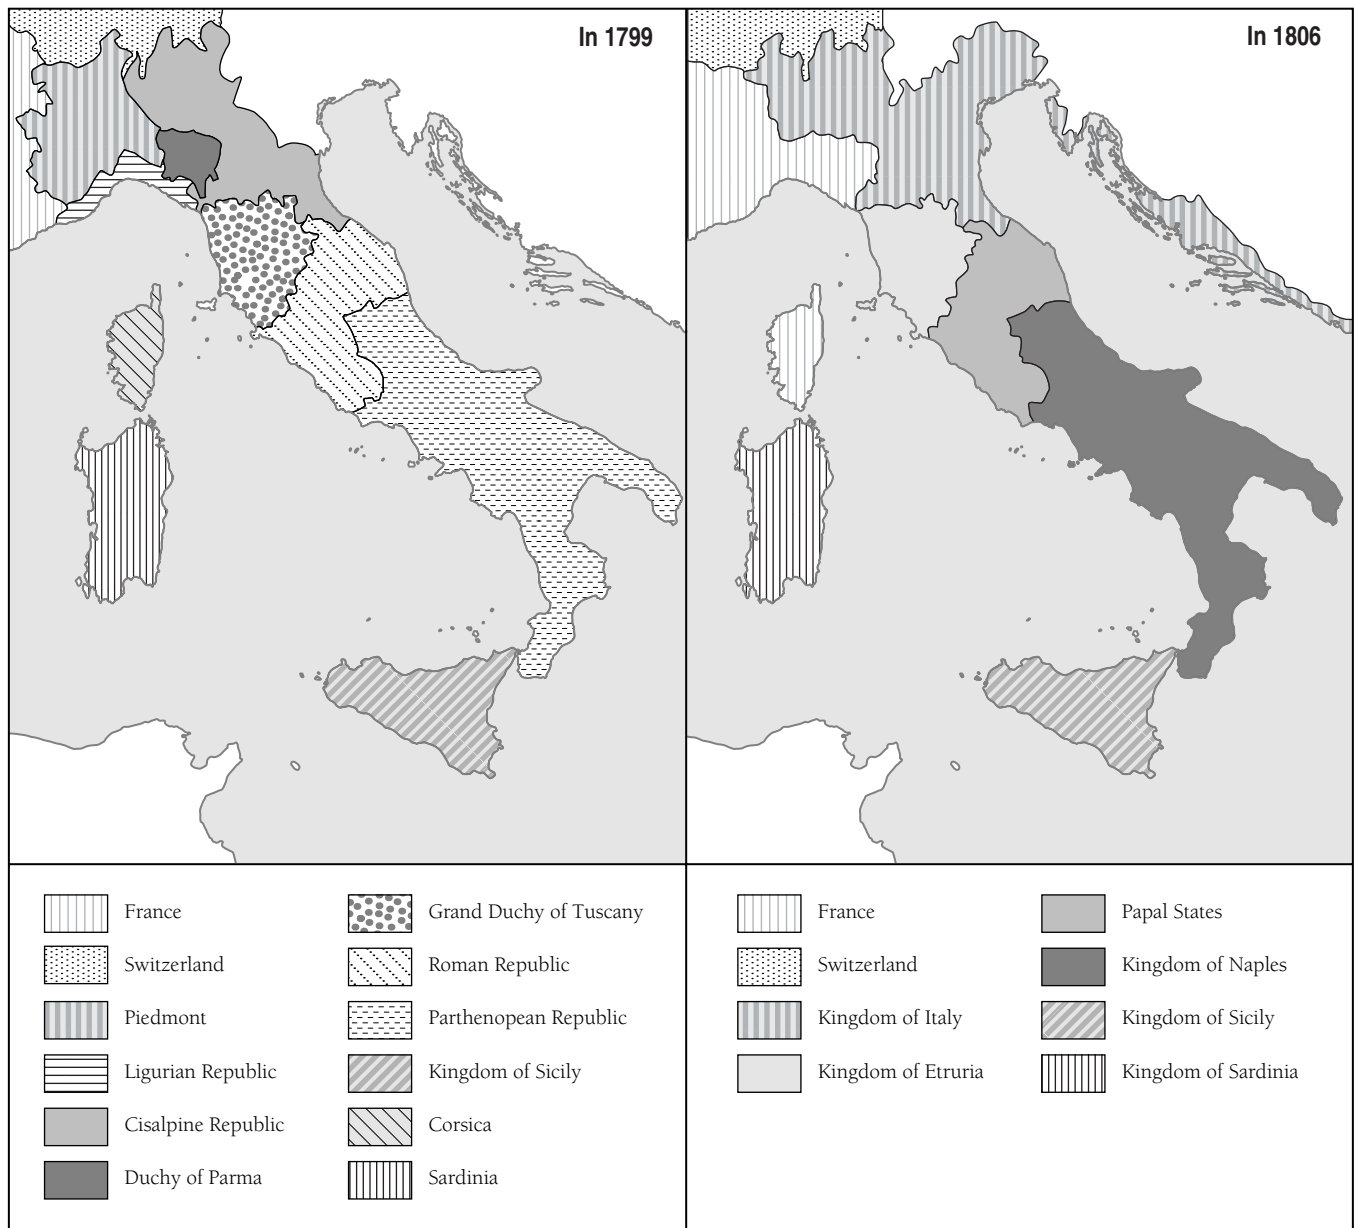

Meanwhile, Napoleon—now acclaimed emperor of France—annexed Genoa and crowned himself king of Italy, an act that gave the British all they needed to succeed in organizing a new anti-French coalition, the Third Coalition, consisting of Austria, Russia, Sweden, and Naples. Abandoning his plans for the moment to invade England, the emperor sent his Grande Armée against the Austrians at Ulm, winning an overwhelming victory there in October 1805. That same month his scheme for defeating Britain at sea came a cropper. France's Mediterranean squadron under Admiral Pierre de Villeneuve (1763–1806) had ear-

lier in the summer arrived in the Antilles to find no Spanish fleet awaiting. Alone, pursued by Britain's great admiral Horatio Nelson (1758–1805), and not daring to attack him, Villeneuve turned sail toward Europe and took refuge off the Spanish coast at Cádiz in July 1805. The English threw up a blockade, and there Villeneuve remained until October, when, goaded by accusations of cowardice from his emperor, he decided to run the blockade with the help of a Spanish squadron. Off Cape Trafalgar on October 21, 1805, Lord Nelson attacked the Franco-Spanish fleet and utterly destroyed it, losing his own life in the battle. A decisive victory, Trafalgar eliminated any danger of invasion and gave Great Britain rule of the high seas.

Less concerned with the long-term implications than he might otherwise have been, Napoleon remained occupied with the war he was fighting inland. In mid-November he occupied Vienna and routed the Russians and Austrians at the Battle of Austerlitz on December 2, 1805, eliminating the Austrians from the coalition and evicting them from Italy under the ensuing Treaty of Pressburg. Napoleon's celebrated victory at Austerlitz allowed him not only to force Austria to renounce all influence in Italy

Battle of Austerlitz, December 2, 1805

Italy before and after it was “reorganized” by Napoleon

and cede Venetia and Dalmatia but also to turn over vast territories in Germany to his protégés in Bavaria, Württemberg, and Baden. After Austerlitz Napoleon dethroned the Bourbons in Naples and bestowed that kingdom on his brother Joseph. He created a French-controlled federation that embraced all western Germany and established a veritable French imperium in central Europe.

As a direct result of Austerlitz and the Treaty of Pressburg, the Holy Roman Empire was dissolved (on August 6, 1806), most of the smaller German states disappeared, and the larger ones were grouped together as the Confederation of the Rhine, with Napoleon as protector. Finally, Austerlitz and the Treaty of Pressburg heralded the ulti-

mate collapse of the Third Coalition against Napoleon, but the treaty could hardly offset Trafalgar. Pressburg would have a long-term impact on European history mostly because, like other treaty settlements by Napoleon, it lit the fire of union in German hearths; the implications of Trafalgar were both more immediate and even more wide ranging. It was one of those battles that changed the world, making possible the ascendancy of the British Empire in the 19th century and giving England a freedom of movement on the seas that would not be effectively challenged for another hundred years.

Nevertheless, while Napoleon’s defeat of Austria at Austerlitz and the resulting Treaty of Pressburg heralded

the collapse of the Third Coalition, the fighting continued for a while beyond the Hapsburgs' withdrawal from the allied cause. Just a month before, in September 1806, Prussia had joined the coalition only now to be promptly defeated at Jena and Auerstadt. Russia acquitted itself better in the inconclusive fighting at Eylau in February 1807, briefly checking the French advance on the Russian frontier. Come summer, however, the French emperor was ready to push on, crushing Russian resistance. Napoleon's defeat of the Russians at the very hard fought Battle of Friedland (June 14, 1807) brought the War of the Third Coalition to an end. While the Russian czar, Alexander I, might well have continued the struggle, he was weary of his alliance with the British and chose instead to negotiate with Napoleon. The talks between the two autocrats commenced on June 25 on a raft in the Neman River near the east Prussian town of Tilsit; subsequently, King Frederick Wilhelm III of Prussia also took part in the discussions.

The negotiations resulted in two documents collectively known as the Treaty of Tilsit, signed on July 7 and bringing peace between France and Russia. Czar Alexander I recognized Napoleon's European conquests and—by secret articles within the treaty—agreed to mediate between France and Britain and to ally Russia with the French if mediation failed. The terms Napoleon planned to propose to England were harsh. The English nation would abandon its colonial conquests since 1803 and would rescind the Orders in Council, which prohibited neutral trade with France and its allies. By the document of July 9, Frederick William III ceded most of Prussia's territory west of the Elbe River to the French-controlled Kingdom of Westphalia. Prussia's Polish provinces were ceded to the newly created Duchy of Warsaw. Moreover, Prussia agreed to reduce the size of its army and to allow for the garrisoning of French troops within its borders. Finally, Prussia joined the "Continental System," Napoleon's latest scheme against the stubborn English, a grand, worldwide economic embargo of trade with Great Britain.

On a raft anchored in the middle of the Neman River, the emperor of the French and the czar of all the Russias had forced Prussia to give up half her territory and, in effect, divide up the control of Europe, Napoleon taking the west and Alexander the east. As the negotiations drew to a close, Alexander promised vaguely to make an attack on British possessions in India.

The British, after Tilsit, once again found themselves dangerously isolated. Nevertheless, they moved quickly and used their superb navy to seize the Danish and Portuguese fleets before Napoleon could secure them. The two powers blockaded each other's ports. To be sure, the Continental System created economic hardship in Britain but in no way approaching the degree Napoleon had hoped for. Smuggling was common, and Britannia, courtesy of Trafalgar, continued to rule the waves and to trade actively and openly with its colonies. Moreover, the Conti-

ental System caused drastic shortages of goods throughout Europe and greatly inflated prices on many commodities, creating much discontent, especially in the Netherlands and northern Germany.

Coeur d'Alene War (Spokane War) (1857–1858)

PRINCIPAL COMBATANTS: Coeur d'Alene and Spokane Indians vs. United States

PRINCIPAL THEATER(S): Washington Territory

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Indians fought to prevent further white "incursions," especially the new Missouri-to-Columbia road; the United States fought to "punish" the Indians for raiding and to remove them to reservations.

OUTCOME: The Indians were defeated, leaders of the Indian "revolt" were hanged, and the tribes were moved to reservations.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Indians, 1,000; United States, 1,500

CASUALTIES: Unknown

TREATIES: None; the Indians were forced to abide by the earlier Stevens Treaty of 1855.

When the YAKAMA WAR drew to its inconclusive close, the Indians' leader, Kamiakan (fl. 1850s), escaped capture or engagement by the reluctantly involved U.S. Army and moved east of the Columbia River, where he continued to agitate the native populations against the policy of Washington Territory's governor, Issac Stevens (1818–62), who wished to remove the Indians to reservations and grab their lands for white settlement. During 1857 and 1858 Kamiakan worked to foment a general uprising against settlers and gold seekers who were overrunning the country.

The Coeur d'Alene and Spokane Indians were a ready audience for Kamiakin's exhortations as word spread among them that a white man's road—the Missouri-to-Columbia Road—was to be built through their lands. The whites had not even bothered to inform the Indians, let alone negotiate a treaty to allow passage of the road. They were ready for a fight, and the resulting convulsion of violence would be called the Coeur d'Alene (or Spokane) War.

Late in 1857, beset by sporadic raiding, a number of prospectors at Colville petitioned for the protection of U.S. troops. In May 1858 158 regulars out of Fort Walla Walla under the command of Lieutenant Colonel Edward J. Steptoe (1816–65) were marching to the gold camp of Colville with the intention of impressing the Palouse, Spokane, and Coeur d'Alene Indians with the prowess of the U.S. Army. Steptoe, who was unaware of the Indians' rage over the proposed Missouri-to-Columbia road, thought he was marching out principally to satisfy a handful of distressed miners. The regulars carried inferior and obsolescent arms and were so poorly provided with pack animals that ammunition boxes were discarded to make room for baggage.

More than 1,000 warriors intercepted the column about 20 miles south of the present-day city of Spokane. They told the troops to go home, and although Steptoe had been foolish enough to march out poorly prepared, he was not a complete idiot. He agreed to turn back. Through the day and into the next, the warriors followed the regulars, taunting them with jeers. On May 17 the Indians suddenly attacked the column, killing two officers. Steptoe made for a defensible hilltop position, arranging the burdensome baggage as breastworks and allotting from the niggardly supply only three rounds of ammunition per man. Steptoe brought his only major asset to bear, some howitzers, and managed to hold the warriors at bay during the remainder of the day. By nightfall it was clear to the regulars that they were in a bad way. In desperation Steptoe resolved to fight to the finish, to go down in honor and a blaze of glory. His officers were less than enthusiastic about their colonel's plan and successfully argued for escape. Leaving their artillery and other supplies behind, the regulars crept in darkness down the hill, circled behind the dozing Indian camp, and crept back to the safety of Fort Walla Walla.

Outraged by this humiliation, army commanders ordered a vigorous campaign against the hostiles. In a rare act of overconfident stupidity, the Indians gave Colonel George Wright (1803–65) a perfect opportunity to carry out his orders. About 600 warriors met Wright's force (which was augmented by friendly Nez Percés) not guerilla-style, but in the open on two battlefields—Spokane Plain (September 1, 1858) and Four Lakes (September 5)—suited to the kind of conventional warfare the army had been trained to fight. Wright not only commanded a superior force, but a better-armed one; each man had been

issued brand-new long-range repeating rifles. In both battles the Indians suffered decisive defeats.

Deeming his victories insufficient “punishment,” Wright sent one of his officers, a Major Garnett, and a detachment of men from Indian camp to Indian camp to demand delivery of those who had led the attack on Steptoe and his men. A total of 15 Indians were hanged, and others were made prisoner. Chief Kamiakin, although he had been injured by artillery fire in the Battle of Spokane Plain, escaped to British Canada. The chief's brother-in-law, Owhi (d. 1858), approached Wright to make peace, was seized, and was forced to summon his son, the war leader Qualchin (d. 1858). Wright summarily hanged the young man in the presence of his father. In a subsequent escape attempt, Owhi was shot and killed. Thoroughly dispirited, the tribes of the Columbia Basin made no more war but resignedly marched to the reservations prescribed by Governor Stevens in an earlier treaty, which the U.S. Senate hurriedly ratified on March 8, 1859.

Cold War (1946–early 1990s)

PRINCIPAL COMBATANTS: The United States and its capitalist allies and proxies vs. the Soviet Union and its communist allies and proxies

PRINCIPAL THEATER(S): Virtually every “hot” spot on the globe

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Two of the major victors—the United States and the Soviet Union—in World War II became superpowers that divided the world into two heavily armed and irreconcilable camps. The tension and constant fear of Armageddon, which for so many characterized this metaphorical war, however, was mostly the result of both countries' technological success in producing weapons of mass destruction. Otherwise, the cold war was not merely a war—a series of related conflicts of various extent stemming from the same conditions—but also a system of alliances not unlike—at least in function—the system of alliances Otto von Bismarck had put together to preserve a general European peace in the previous century. From this point of view, the superpowers simply replaced the Great Powers as the brokers of international relations. Moreover, the decades of the cold war, although certainly decades of fear and failure, also represented a creative period in which the world experienced the closest thing to a general peace since Bismarck created modern Europe. For nearly half a century, from the late 1940s to the early 1990s, the

boundaries, institutions, and relationships fashioned at the beginning of the period—with the sole exception of the Sino-Soviet split—were still shaping world politics right up to the cold war's sudden end.

OUTCOME: The Communist bloc imploded, and the United States emerged as the world's sole superpower, with little sense of direction and little notion of where its real interests lay.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Not applicable

CASUALTIES: Not applicable

TREATIES: Virtually every diplomatic agreement for nearly five decades following World War II

THE COMING OF THE COLD WAR

It had happened before, at the end of WORLD WAR I, and it was happening again at the end of WORLD WAR II—the next conflict began smoldering in the ashes of a world ruined by the near total devastation of modern war. Among the powers occupying the ruins of Nazi Germany and Nazi-dominated eastern Europe, as suspicions of each others' postwar intentions flared, that conflict sometimes threatened to burst into flame. But at the end of World War I, a grand round of treaty-making, dictated by the victors, which was intended to dampen the enmities created by the war by finding a “just” resolution to its causes and conduct, had only fanned the hatreds to burn brighter. In contrast, after World War II the victors simply moved into the burned over area with their armed forces, set up camp, and began bickering with each other.

At first their animosity was held in check by the sheer scale of the devastation from what had been the greatest conflict in the history of the planet. Europe looked as people imagined the surface of the moon would look. All the great cities of central and eastern Europe, much of London, and western Russia were pitted remnants standing jagged against the horizon. Transportation networks had been ripped to shreds, farmland turned into scorched earth, and industrial production brought to a complete standstill. Japan was just as blighted, its cities flattened by fire-bombing and two nuclear blasts, its industry and shipping destroyed. China, under occupation for 14 years, was facing a decade of civil war almost as destructive as the war itself. In Europe 45 million people were homeless, half of them in places such as Poland, the Ukraine, and western Russia that had been burned to the ground three times during the fighting. Indeed, the war loosed on the earth a vast army of refugees. A total of 27 million had fled the Nazis or were forced out by them, and nearly 5 million more had been seized and made into slaves. Huge numbers, too, fled the coming of the Russians, many of them ethnic Germans or collaborators who feared, accurately, an especially brutal reprisal. All told, experts estimated 60

million people from 27 countries and 55 ethnic groups were uprooted by the war. And then there were the prisoners of war—7 million taken by the Allies during the war and 8 million more liberated from Axis camps. Finally, there were the 670,000 survivors of the death camps, who left behind some 6 million Jews and 3 million Slavs, gypsies, and other “social undesirables” who the Nazis had exterminated.

Nobody wished to risk a renewed conflict that could wreak this kind of damage, but everybody feared that this kind of damage could be wreaked on them if they were not careful. There in the battle-spawned ruins of central and eastern Europe, the liberal democracies and Communist Russia, erstwhile Allies, became suspicious of each other, worried about the next step, eager to get a jump on the other. In one sense what was happening was nothing new. In the past, long before either World War I or World War II, grand wartime coalitions had invariably broken up once the common fight gave way to diplomatic sparring over the division of the spoils. Indeed, the Versailles peace negotiations could be—and were—viewed as one huge debate about reparations and revenge, couched in the grandiose language of a hollow idealism. This time, however, the postwar diplomats became the midwives of something new. The result of their work would hardly be recognizable as a peace, but it would not appear to be a war either.

The birth of this new condition gestated in diplomatic disputes over such matters as what to do with the utterly defeated Germany, who would exercise hegemony over eastern Europe, and how the world would handle the spectacular scientific revolution in weapons of mass destruction showcased in the levelling of two Japanese cities. Some, maybe even most, of these disputes might have been avoided. The feuding victors after the wars of Louis XIV (1638–1715) and Napoleon Bonaparte (1769–1821) or World War I at least managed to negotiate treaties, and the rancor among them had been leavened by the passage of time or the worry that the enemy they had so recently vanquished might yet rise again. That did not happen after 1945. No one called a grand peace conference. No one worried about a Germany or a Japan—or for that matter, an Italy—rising anew to pose a threat. These defeated nations were bombed-out, blasted almost to oblivion, and none of the old Axis powers held the ultimate postwar ace-in-the-hole, the atomic bomb.

Thus, distrust, miscommunications, and the incompatible goals of the Allies became not the mere squabbling among victors familiar from the past, but swelled into irreconcilable quarrels between countries, which developed year by year into ever more rigid political positions and became so hide-bound that they caused the world to split into two ideological, armed camps. This smoldering conflict that no one could put out but no one wanted to stir up into a third worldwide conflagration would be dubbed—by U.S. presidential adviser Bernard Baruch

(1870–1965) and press pundit Walter Lippmann (1889–1974)—the cold war.

THE NATURE OF THE CONFLICT

The fact that every major industrial region of the world but North America had been laid waste by the war in many ways determined the nature of the conflict. On a stunned globe, the United States now accounted for nearly half the gross annual product. It enjoyed a technological lead lately symbolized by, but hardly limited to, its nuclear franchise. Yet the United States, for the most part, just wanted to go home after the war and get back to business. Matters were otherwise in the Soviet Union, where Stalin—who had done no small amount of mass murder himself and who feared nothing so much as a personal loss of power—took heart in the fact that, though his country, too, might be in ruins, his armies occupied much of Europe, and puppet communist parties were agitating for control of the rest. When the war ended on the Continent, Stalin had been justified in feeling safe at last; it appeared as if the Allies were going to allow him to build a buffer zone around the new Soviet empire that would keep both his borders and his people safe from Western encroachments. Then Harry S. Truman (1884–1972) dropped the bomb on Hiroshima, and Stalin felt the need—as Winston Churchill (1874–1965) would say in a Missouri speech—to drop an “iron curtain” in Europe (address at Westminster College, Fulton, Missouri, March 5, 1946).

Posing “asymmetrical” threats (meaning threats unsuited to the other’s potential response) to each other, the United States and the Soviet Union began a postwar struggle in 1945 over treatment of occupied Germany and the composition of the Polish government. It spread in 1946 as Russia communized the lands under its occupation and the former allies failed to finalize a plan for the control of atomic energy. From 1947 to 1950 Washington and Moscow reacted to threats, real or perceived, from each other, and the temporary division of Europe calcified two blocs, followed by the same process in much of the rest of the world as this conflict became universalized, institutionalized, and militarized. The reason there was no Treaty of Versailles after World War II to set up a peace from which could grow the next conflict was that the next conflict was already underway. There was merely the end of combat proper and a series of treaties—some establishing defense alliances, some creating commercial unions, some that launched new states—but all that over time reconstructed the postwar world.

At the same time the cold war magnified and distorted historical trends established or fed by the two world wars in the first half of the 20th century—Asian nationalism and the breakup of the old colonial empires; the continuation of the three-decades-long Chinese Revolution and its denouement in a communist takeover; the movement in western Europe toward diplomatic and economic integra-

tion; and the bursting forth of two “superpowers” onto the world’s diplomatic stage. These trends led to a new round of alliances that reflected in one way or another the ideological rendering of the world. The irony was that for all this turmoil and the danger of world annihilation, the cold war also gave birth to a stable world order unmatched since Bismarck’s alliance system had immolated itself in 1914.

THE TRUMAN DOCTRINE

Hoping to avoid the mistakes of Versailles, America’s first impulse toward postwar Europe was a generous one. George C. Marshall (1880–1959), secretary of state under President Truman and former army chief of staff during World War II, announced (in a commencement address at Harvard University on June 5, 1947) a bold plan of economic assistance to rebuild war-ravaged Europe. A brilliant military leader whose energies had so recently been focused on destroying the might of Germany and Japan, Marshall developed a sweeping plan for rebuilding what the war had devastated. To France, Britain, and central Europe, economically crippled by the war, Marshall—fearing they might thus fall prey to the siren call of communism—promulgated a policy of economic aid on an unprecedented scale to restore “normal economic health in the world, without which there can be no political stability and no assured peace.”

Great Britain and France spearheaded the formation of a Committee for European Economic Cooperation, made up of delegates from 16 nations, and the committee officially requested \$22.4 billion from the United States. Congress appropriated more than \$13 billion in funds to be disbursed through the Marshall Plan, and it also authorized a Displaced Persons Plan, through which nearly 300,000 Europeans, including many survivors of the Holocaust, became U.S. citizens. As a direct result of the Marshall Plan, Western Europe was able to get back on its feet. Key to that recovery was the formation of a West German republic—the Federal Democratic Republic—out of the western sector of divided Germany after 1947 and its rapid economic growth under the plan. From the beginning, however—and despite Marshall’s pronouncement at Harvard that the policy of aid was not aimed “against any country or doctrine but against hunger, poverty, desperation, and chaos”—the Marshall Plan occasioned the drawing of the battlelines along which the long, tense, and debilitating cold war would be fought, dominating world politics for four decades.

The reality of the communist threat was underscored in September 1947, when the Soviet Union tested its first atomic bomb, a weapon the United States had been smug enough to think it alone in the world had the capacity to develop. The communist provocations in Eastern Europe and the Balkans continued as Greece became embroiled in a civil war sparked by communists, and Turkey came

under Russian pressure to provide bases and naval passage through the Dardanelles. Truman announced a new “get-tough” doctrine to accompany the rehabilitation of Europe under the Marshall Plan. Not truly understanding Stalin and his aggression (few did), Truman based his new policy on a “long memorandum” he had received from Moscow in 1946 written by diplomat George Kennan (b. 1904). In 1947, writing under the pseudonym of “Mr. X” to ensure anonymity and allow him to express his personal, unofficial opinion. Kennan developed the ideas contained in his memo and published a highly influential article in the journal *Foreign Affairs*, presenting the idea of “containment” of Soviet communism “by the adroit and vigilant application of counter-force at a series of constantly shifting geographic points.”

Following Kennan’s lead, Truman called for combatting communism by containing its spread, using all means necessary, including military force. In effect, the “Truman Doctrine” meant that the United States was put on a footing of perpetual preparedness, and such a degree of preparedness required permanent and continual sources of information about foreign governments, hostile and potentially hostile, as well as the capability for “covert action”—foreign policy initiatives to be kept hidden from the American public. In the chill climate of the cold war, the Central Intelligence Agency (CIA)—an outgrowth of the U.S. World War II espionage organization, the Office of Strategic Services (OSS)—came into being and expanded rapidly in size and power, to the point of becoming a kind of shadow government (similar if not quite on the scale or power of the Russians’ own new security apparatus, the KGB) and exploiting statutes granting the agency great leeway and ensuring the secrecy of its operations. In addition to the CIA, Truman’s new “national security” measures included the establishment of permanent chiefs of staff, making the air force independent of the army and beefing up its Strategic Air Command, under whose bailiwick would fall the responsibility for deployment of nuclear weapons, and the negotiation of a string of regional alliances on the borders of the Communist bloc that would serve as firewalls against Soviet mischief.

There was mischief enough to come. In February 1948 the Communists, backed by Stalin and the Red Army, overran Czechoslovakia, which led Britain, France, and the Benelux countries (Belgium, Netherlands, Luxembourg) to speed up their mutual defense agreement, the Treaty of Brussels. In response the Soviets, who still occupied the eastern sector of Germany, withdrew from the Allied Control Council overseeing the occupation and blockaded the city of Berlin (in the eastern sector, but divided into western and eastern zones) in June 1948. During the blockade the United States airlifted supplies for nearly a year to residents of West Berlin, and the Truman administration began implementing the containment policy. The North Atlantic Treaty Organization (NATO), formed in 1949, joined the

United States to Canada and 10 Western European nations in a military alliance. An attack on any member nation would be deemed an attack on all of them. NATO became the model for the military alliances the United States would organize with Mediterranean nations in the Central Treaty Organization (CENTO), and with the nations of Southeast Asia in SEATO. By the 1950s the United States had a string of allies around the world that all but enclosed the Soviet Union and its satellite nations.

Of course the Soviet Union countered. When a rearmed West Germany joined NATO in 1955, Nikita Khrushchev (1894–1971), the Soviet Union’s new premier, responded with the Warsaw Pact, an alliance of his East European satellites. Khrushchev made alliances with India and other neutral nations. He used tanks in 1956 to ensure Soviet control over Hungary and Poland. In 1961 he built a wall—symbolic to the Western world of the harshness and hopelessness of communist oppression—separating the Soviet sector of Berlin from the rest of the city. And when Fidel Castro (b. c. 1926/27) gained power in Cuba, the Soviet Union placed its nuclear missiles a scant 90 miles away from U.S. shores. The Cuban missile crisis of October 1962, perhaps more than any other event in the cold war, made the U.S. public realize that the world, divided into two camps both armed to the teeth with weapons of unimaginable destruction, stayed ready through the postwar years to touch off a war not to “end all wars” but to end the world itself.

Indeed, by then the potential for conflict had escalated almost beyond imagination. In October 1949 the United States had commenced a program to step up production of uranium and plutonium, a necessary first step in the creation of the “H-bomb,” which used a nuclear detonation to set off a far more powerful thermonuclear explosion. On November 1, 1952, the first hydrogen bomb—code named “Mike”—was detonated at Eniwetok Atoll in the Pacific. The test was so secret that it was not reported to the public until February 2, 1954, when President Dwight David Eisenhower (1890–1969) made a statement. On March 24 of that year a hydrogen bomb test in the Marshall Islands exceeded all estimates of its power. The U.S. monopoly on the hydrogen bomb was, however, even briefer than what it had enjoyed with the atomic bomb. The Soviets tested an H-bomb on November 23, 1955. As the nuclear arms race turned into a thermonuclear arms race it reached “critical mass” and became self-sustaining. With the United States and Soviet Union matching one another “device for device,” soon it was the delivery systems for these bombs—intercontinental missiles developed by former German scientists recruited by both ideological camps—that took center stage.

THE THIRD WORLD

Not only had the cold war escalated, it had spread to every corner of the globe, connecting events in Africa, Asia, and

Latin America to events in Europe in ways that the Continent's old imperial nations of the 18th, 19th, and early 20th centuries would never have imagined. Late in 1949, after forcing the Chinese Nationalist army under Chiang Kai-shek (Jiang Jieshi; 1887–1975) to flee to the small island of Taiwan, Mao Zedong (Mao Tse-tung; 1893–1976) and his fellow Communists declared China's vast mainland to be the People's Republic of China, an event viewed in the capitalist West as a major "defeat" in the rapidly developing cold war. When the United States rejected Mao's overtures to establish diplomatic relations, he allied his country with the Soviet Union, but it was an uneasy alliance, as Mao had many ideological differences with Stalin. The West, particularly the United States, failed to acknowledge these differences and treated China and Russia as a united front and a single foe. This led U.S. politicians to overestimate the cohesion of the so-called communist bloc for some three decades and stubbornly to deny recognition of the legitimate government of one of the world's major nations.

This misunderstanding greatly inflated the importance of the first of a series of brush wars—the Communists called them "wars of national liberation"—in what would become known as the third world. On June 27, 1950, after communist-backed forces crossed the 38th parallel dividing North from South Korea, President Truman, concluding—incorrectly—that the Soviet Union had directed the assault, committed U.S. military supplies to South Korea and moved the U.S. Seventh Fleet into the Formosa Strait, a show of force meant to intimidate a China Truman assumed to be a Soviet puppet. Truman acted with neither a declaration of war nor the advice and consent of the Senate. Instead, the United States called for United Nations sanctions against the North, an action that committed America to a war the U.S. government officially, if euphemistically, called a "police action."

Before it was over, the KOREAN WAR was immensely unpopular with the American public. The casualty list in and of itself had a great impact on the United States, still weary from World War II then only five years in the past. The Korean conflict also had a major effect on U.S. armed forces, bringing a popular president, Truman, into direct conflict with a popular war hero, General Douglas MacArthur (1880–1964), who the president relieved of command after MacArthur proposed bombing bridges over the Yalu River, which would have meant attacking Red China directly. In addition, the war cost the Democratic Party the White House, and Eisenhower was elected in 1952 promising that he personally would go to Korea to end the fighting, which he did, signing an armistice in 1953. The Korean War heightened the anticommunist hysteria of the McCarthy era and reshaped international politics by prompting the United States to demand greater contributions from its European allies to NATO and to form SEATO. In the face of such U.S. demands, two European cabinets—in France and Britain—fell from power, West

Germany joined NATO, and the Soviets responded by creating the Warsaw Pact. Finally, Korea occasioned the first U.S. military buildup in South Vietnam, another step in the American cold war policy of containing communism.

Even parts of the globe not obviously subject to a direct communist "threat" were affected by the cold war. After World War II the British, faced with continual conflict between Arabs and Jews in Palestine, which they had occupied since 1917, withdrew from the country and turned it—and the Jewish-Arab conflict—over to the United Nations, which responded by partitioning Palestine into Jewish and Arab sectors. Over Arab protests the Jews established the state of Israel in 1948. Not a decade later, on July 26, 1956, the new Egyptian president, Gamal Abdel Nasser (1918–70), nationalized the Suez Canal, which touched off a crisis that changed Middle Eastern diplomacy forever. Great Britain and France, their influence already waning, could no longer serve as U.S. surrogates in the region, which put pressure on American diplomats to "solve" the Mideast's nearly unsolvable problems. Israel, which had—under a secret arrangement with Britain and France—invaded Egypt to take back the canal and depose, if possible, Nasser, was established as a power to be reckoned with in the region, even if it did meekly withdraw its troops at the demand of an angry President Eisenhower. The Arab states, in response to what they considered British and French treachery, followed Nasser's lead, turning to the Soviets for aid and support. Nasser emerged as a leader in the third world, which—like the Arab states—grew warmer toward the Soviet bloc.

Sometimes anticommunism served to mask economic colonialism in the third world, just as wars of national liberation masked Soviet influence-peddling. Such was the case, for example, in Iran in 1954. Responding to a liberalized Iranian parliament's announcement that it intended to nationalize the country's vast oil deposits, the intelligence agencies of the British and American governments began plotting the ouster of Iran's highest elected official, Dr. Mohammed Mossadegh (1920–53), via covert action. They later justified the policy with claims that he was backed by communist elements, which he was, though not critically so. Operation Ajax restored the monarchy of Reza Shah Pahlavi (1919–80), who was exceedingly "friendly" to the free world powers, but it also initiated a series of cloak-and-dagger meddlings in the affairs of other countries that undermined indigenous democratic movements, often influenced by Marxist economic programs, in favor of repressive oligarchies—including many in Latin America, such as Guatemala, Chile, Argentina, Nicaragua, and El Salvador, to name a few. These covert actions, which came to characterize the CIA created by Allen Dulles (1893–1969), undermined the credibility of U.S. foreign policy abroad and hurt its standing with such third world groups as the Organization of American States (OAS), which it had played a major role in founding.

On the other hand, in Africa Marxist governments with Soviet-friendly policies often accompanied postwar decolonization. In 1960 British prime minister Harold Macmillan (1894–1986), who had come to office in the wake of a crisis that had resulted in Britain granting Ghana its independence in 1957, spoke to the parliament of white-ruled South Africa about the new realities in Africa, announcing that a “wind of change” was sweeping the continent. Macmillan’s phrase was not merely political hyperbole, since by 1960 17 new nations had emerged from the old African colonial states, and from 1960 to 1965 another 11 were to follow, which led to the formation of the Organization of African Unity (OAU), and left only the white-settler nations in the south as the last outposts of Africa’s European-dominated past. None of these Marxist-inspired “liberations” ignited brush wars in Africa on the scale of Korea or Vietnam, or important ideological standoffs such as those in Berlin or against Cuba, in part because major portions of the emerging third world remained vaguely defined in the East-vs.-West political geography of the cold war.

COUNTERINSURGENCY

In the late 1950s and the 1960s there were indications that Eastern Europe was itself not especially overjoyed to be a part of the Communist bloc. On October 24, 1956, Hungary’s prime minister, Imre Nagy (1896–1958), defied the USSR by announcing an end to one-party rule, thereby igniting the movement to remove itself from the Soviet sphere of influence established in Eastern Europe at the end of World War II, a movement the West came to call the HUNGARIAN REVOLT. Regardless of the United States’s continued commitment to the Truman Doctrine, Eisenhower declined to intervene in the anti-Soviet revolt, and—much to the shock of the Hungarians—announced that the United States would offer no aid to the new government. Accordingly, the Soviets attacked on November 4, and despite impassioned radio pleas to America, no help was forthcoming. Within weeks the revolt was liquidated, and Hungary, barely recovered from the devastation of the world war, was in shambles. The Soviets had killed tens of thousands and had imprisoned more. Almost a quarter-million Hungarians fled the country. Eisenhower, a frugal and careful commander, had as an economy measure cut back spending on the U.S. armed forces and increased America’s reliance on its airborne nuclear threat to deter communist aggression. Insisting on his right to reply with “massive retaliatory power” at places of his own choosing, he was apparently unwilling to risk thermonuclear war for a country already considered part of the Soviet sphere.

If the arrival of the missile age and its promise of instant destruction had made Eisenhower more cautious in his execution of the cold war, it led his successor, John F. Kennedy (1917–63) to be more vigorous in his responses

to perceived communist aggression around the globe and especially in the third world. Kennedy called his technique “counterinsurgency.” Overtly, Kennedy launched the Peace Corps, the Latin American Alliance for Progress, and NASA’s race to the moon, to name a few new programs aimed at “paying any price” to compete successfully with the Communists anywhere in the world and out of it. Covertly, Kennedy unleashed the CIA on such “trouble spots” as Cuba and Southeast Asia, resulting in the Bay of Pigs fiasco and in the assassination of South Vietnamese president Ngo Dinh Diem (1901–63). These in turn led, respectively, to the Cuban missile crisis and, after his own assassination, to the VIETNAM WAR.

Cuba had, of course, been one of those third world countries that Eisenhower “lost” to the Soviets when Fidel Castro came to power in 1959 after overthrowing a typically corrupt U.S. “strongman” client, Fulgencio Batista (1901–73). On October 22, 1962, Kennedy appeared on national television to make a startling announcement: The Soviet Union was building bomber and nuclear missile bases in Cuba, and he intended to stop them. When Khrushchev refused to back down, the world rushed to the brink of nuclear war. Back-channel negotiations between Kennedy and Khrushchev ultimately resolved the crisis, but not before contradictions between official diplomatic responses and the secret talks threatened to make the situation spin out of control. So close had the world come to Armageddon that both Kennedy and Khrushchev immediately agreed to disarmament talks, during which a special “hot line” was established as a direct communications link between the White House and the Kremlin to avoid any misunderstandings in the future that might accidentally spark a nuclear conflagration. The very existence of the hot line underscored the failure of the cold war policy of diplomatic brinkmanship, and the very same meeting of the Disarmament Committee that created the hot line also produced a limited nuclear test ban treaty. Clearly some kind of major disarmament agreement was in the cards as John Kennedy, sobered by the experience, looked toward a second term as president.

However, Kennedy’s assassination brought to the White House Lyndon Johnson (1908–73), as determined to hold the line against communist influence in Vietnam as Kennedy himself had been in Cuba. Although Johnson would follow up on Kennedy’s initiatives to sign a treaty on the nonproliferation of nuclear weapons, his Vietnam policies would serve to intensify and prolong the cold war. On August 7, 1964, in response to an apparent attack on a U.S. destroyer conducting espionage activities in the Gulf of Tonkin off the coast of North Vietnam, the U.S. Senate passed the Gulf of Tonkin Resolution, giving President Johnson a free hand to prevent further “aggression” by North Vietnam and providing broad congressional support for expanding the war in Southeast Asia. Even as the resolution was being passed, Johnson assured the American public

that its sons would not die fighting an Asian war. However scarcely was the 1964 presidential election over when Johnson—faced with withdrawing from or escalating the conflict—chose to commit 22,000 troops. By 1965 75,000 Americans were fighting in Vietnam; by 1966, 375,000; by the next election, more than half a million. Earlier in the conflict both Kennedy and then Johnson had referred to the troops as “military advisers.” By 1966 there was no way to denominate them as anything other than combat troops. As draft calls increased by 100 percent in 1965, young men flooded American colleges to avoid conscription and service in that “little green country.” Starting in February of that year, the United States bombed the North, then stopped to see communist leader Ho Chi Minh’s (1890–1969) response, which was invariably to send yet more leaders, more weapons, and more troops to help the insurgent Viet Cong. Over the next eight years the U.S. Army in Vietnam would grow to a peak of 542,000 troops, and the economic costs of the war would bleed Johnson’s cherished domestic reforms—his Great Society—dry.

By then, too, opposition to the war was mounting in America, as some of its business leaders began to question the astronomical costs of the war, and many of its draft-age students its morality. An obsessed Johnson and military leaders, acting almost as if they were independent of the publicly stated American policy, no longer bothered to consult citizens or senators while they turned Vietnam into the fourth bloodiest conflict in American history. Johnson’s own secretary of defense, Robert McNamara (b. 1916), admitted in 1967 that the bombing had not stopped North Vietnam’s infiltration. In 1968, as if to prove McNamara’s point, came the stunning massive and coordinated attack of the Viet Cong in the January Tet Offensive. Whether the Viet Cong “won” the Tet Offensive or not, it was certainly successful in putting to the lie Lyndon Johnson’s public claims about the war. As 350,000 refugees abandoned their hamlets en masse and poured into the recently besieged towns, the United States began to strong-arm its puppet regime in South Vietnam toward the peace table. On May 10, 1968, talks with the North opened in Paris that would, years later, lead to a settlement of the war.

DÉTENTE

The talks came too late, however, for the Johnson presidency. Widely criticized in the media, the center of ever growing campus protests, and challenged by prominent members of his own party, such as Eugene McCarthy (b. 1916) and Robert Kennedy (1925–68), Johnson declined to run for reelection. Robert Kennedy’s assassination on June 6, 1968, following his sound victory in the California presidential primary, destroyed the potential for the election to become a public referendum on Vietnam. The murder turned a disorienting, violent, and chaotic year into a brutally incomprehensible one, virtually ensur-

ing that the United States would be politically incapable of avoiding profound, dangerous divisions in the body politic more serious than any since the Civil War. A politically revived Richard Nixon (1913–94) made plans to continue the grim policy, legalized by the Gulf of Tonkin Resolution, of bombing a small country into oblivion to satisfy the ideological needs of the cold war once he finally arrived at the Oval Office. After much domestic turmoil and a brutal escalation of the bombing over the next three years, Nixon—faced himself with reelection—engineered a peace that abandoned the corrupt leadership of South Vietnam and brought U.S. involvement in the war to an inglorious close.

But Nixon, heading for a second term, had a broader agenda on his mind than the quagmire that, in retrospect, became a symbol of the lunatic quality of cold war foreign policy. As Vietnam had made evident, the Kennedy-Johnson counterinsurgency fervor of the 1960s, far from establishing U.S. hegemony, had instead wrought a diffusion of world power and an erosion of the rigid separation of the globe into superpower blocs. Western Europe and Japan, now recovered from World War II’s devastation, had experienced dynamic growth that was leading to a certain independence in foreign as well as domestic policy. The Sino-Soviet split had become more evident behind the smokescreen of Vietnam. The third world, too, was showing more resistance to superpower coercion as the United States squandered its capital, its good name, and its domestic tranquillity in Southeast Asia. The Soviets, having achieved something close to parity with the United States in their nuclear arsenal, were increasingly obsessed with a potentially hostile China; the Americans, exhausted and divided, wanted to scale back their global commitments. In these circumstances, Nixon became the first U.S. president to visit both Beijing and Moscow, laying the ground for official recognition by the United States for the People’s Republic of China and détente with the Soviet Union.

Détente, French for a release of tension, entered the U.S. vocabulary in 1971 and was heard frequently in the spring of 1972. With some justification, cynics said Nixon’s trip to Moscow on May 22, 1972, like his earlier trip to China, was an election-year political tactic to deflect criticism of his conservative domestic policies and his continued prosecution of the war in Vietnam. More kindly put, Nixon had realized that the war itself was an impediment to these broader international possibilities and used the ending of the conflict as a wedge into the triangulation of foreign affairs he was seeking to establish. Whatever his motivation, the results, especially of his meetings with Soviet premier Leonid Brezhnev (1906–82), whose cold warrior credentials—like Nixon’s—were well-established, proved historic and profound. Seven agreements were signed, including one aimed at preventing nuclear war and others covering unprecedented cooperation in scientific research, particularly in space explo-

ration, and expanded trade. When Brezhnev returned Nixon's visit in June 1973, coming to the United States for a second summit, the two signed a joint resolution defining the essence of their *détente*.

The Watergate scandal—itsself a struggle over the “imperial” presidency created in no small measure by the developments of the cold war—would cut short Nixon's diplomatic efforts before they reached fruition. *Détente* did not end the cold war and hardly lasted beyond Nixon's removal from office, but it raised the possibility of the truly peaceful coexistence Khrushchev and Kennedy had first begun working toward in the wake of the Cuban missile crisis. The Nixon-Brezhnev *détente* was the first beacon of a new era in international relations. After much confusion, that era would come to witness the collapse of the ideological dispute that had plagued diplomacy since the end of World War I.

THE END OF THE COLD WAR

By the mid-1970s the respite in the cold war indicated by *détente* seemed to be crashing to an end. The Watergate scandal had derailed Richard Nixon's presidency and, with it, his apparent rapport with fellow cold warrior Leonid Brezhnev. Not long after the United States extricated itself from Vietnam, the Soviets would find themselves bogged down in their own version of that conflict in Afghanistan—and U.S. diplomacy, it seemed, required free-world support of the Afghani rebels. Meanwhile, the sudden increase in the price of oil imposed on the world by the Organization of Petroleum Exporting Countries (OPEC) had kicked off a spiraling inflation that undermined the peaceful coexistence policy that diplomats had been seeking since 1960.

The inflation and the end of *détente* also destabilized an already volatile Middle East. With the fall of the shah in Iran, a fundamentalist Islamic regime came to power and took U.S. diplomats, covert agents, press reporters, and businesspeople hostage. U.S. policymakers suddenly discovered there was no one in Iran willing to talk to them, much less negotiate the release of the hostages, and the resulting diplomatic crisis doomed the presidency of Jimmy Carter (b. 1924) and undermined U.S. prestige and foreign policy. Even before then, the outbreak of the Yom Kippur War between Egypt and Israel had emphasized the apparently intractable problems of the region, whereas unrest in Africa (such as the Soviet- and Cuban-supported military junta's overthrow of Haile Selassie [1892–1975] in Ethiopia) and in Latin America (such as the U.S.-backed military coup in Chile against left-wing president Salvador Allende [1908–73] and the rise of the Marxist Sandinistas in Nicaragua) gave proof that, certainly in the third world, the cold war was not only still active but was spinning out of control. Adding to the sense of general malaise was the marked increase in ideologically fueled terrorism, beginning with the Palestine

Liberation Organization's (PLO) Black Septemberists' taking hostage Israeli athletes at the Olympic Games in 1972. By the early 1980s even the staid British had become more bellicose, as Prime Minister Margaret Thatcher (b. 1925) ordered the British navy to invade the Falklands. The decade or so stretching from the early 1970s to the early 1980s certainly put paid to any notion that the “global village,” which media pundits and diplomats alike had begun talking about in the 1960s, was a friendly place.

Then something like a miracle occurred. In the Middle East Israel and Egypt suddenly appeared ready to “give peace a chance,” and they began by meeting on U.S. soil and signing the Camp David accords. In Europe popular uprisings in the Soviet bloc—always brutally suppressed in the past—went not only unchallenged but seemed also to be encouraged by new leadership in the Kremlin. Czechoslovakians freely demonstrated against the current communist regime on the anniversary of the 1968 Soviet invasion. In Poland a workers' union called Solidarity demanded democratic reforms, and the Sejm—the parliament—legalized the return of confiscated property to the Catholic Church while Soviet-puppet president Wojciech Jaruzelski (b. 1923), to the shock of all, approved free elections for June 1989—the first in 40 years—during which Solidarity won all the available seats. Meanwhile, on May 2, 1989, Hungary unraveled the barbed wire along its borders with Austria, the first real breach in the iron curtain. In the fall the citizens of Berlin began to tear down the Berlin Wall, consummate symbol of the cold war. Within three months the unthinkable had happened—all of Eastern Europe had broken free of Soviet domination, and East and West Germany were discussing reunification. And the changes were not only limited to Europe and the Mideast. Almost as unthinkable as the fall of the Berlin Wall was the fact that the United States had given back the Panama Canal to the Panamanians in a new Panama Canal Treaty. And in China the repressive Maoist “Gang of Four” had been replaced by new leaders who talked of economic reforms and joining the world market.

Late in 1989 the Conference on Security and Cooperation in Europe met with NATO and the Soviets to proclaim that the cold war had ended. As if to prove the point, the various Soviet republics began declaring themselves sovereign or independent, and two years after the Paris conference an aborted military coup in Russia by conservative Communists led to the dissolution of the Communist Party and the collapse of the Soviet Union. Suddenly, the reckless national security system engendered by cold war diplomacy, in which two superpowers armed with weapons capable of destroying the planet many times over divided the world into hostile camps, vied for influence over unaligned third world countries, and held each other in check at tremendous costs to their own people in dollars and freedom, seemed superfluous. In the wake of the cold war, a United States that felt it had

“won” was, in fact, no longer quite sure of its place in a world in which the threat of massive retaliation was a hollow boast, and its foreign policy began to drift.

Many wished to take credit for bringing the cold war to a close. U.S. historians staked out claims for the effect of the hard-line anti-Soviet ascendancy of Ronald Reagan (1911–2004) and George H. W. Bush (b. 1924), the last of a breed formed by the experiences of World War II and its aftermath, who came into office talking about what Reagan called the “Evil Empire” of the USSR, invaded a few helpless third world countries such as Granada and Panama, and left following the defeat of Saddam Hussein in the Gulf War with vague homilies about a “New World Order.” The rest of the world gave more credit to Mikhail Gorbachev (b. 1931), whose attempts to reform both the Russian economy and the political culture of the Communist Party led him to divest the Soviets of their European “empire” and garnered him a Nobel Peace Prize. Some credit should have been given to brave men like Anwar Sadat (1918–81) and Menachem Begin (1913–92), who also shared a Nobel for their efforts to find a way out of the impasse in the Middle East and who paid a price—Sadat was assassinated as a result—at home for doing so. Others gave credit to the new Polish pope John Paul II (b. 1920), or such men as Lech Walesa (b. 1943), or even Deng Xiaoping (1905–97).

But the truth of the matter is that Reagan’s and Bush’s third world raids, outside the Gulf War, earned the United States the condemnation of the foreign policy community, and Reagan’s plan to spend the USSR into defeat cost him dearly at the nuclear bargaining table, when the Russians walked out of the START talks, as well as saddling the United States with a massive deficit that preoccupied domestic and foreign policy for a generation. By the time of the Gulf War, Bush could hardly afford any longer to act unilaterally, and without the scrim of UN backing, his own Congress would have derailed his Middle East strategy. Indeed, the New World Order of which he talked was evolving not from high-handed U.S. superpower diplomacy. Indeed, both he and his successor, Bill Clinton (b. 1946), wavered when it came to dealing with such post-cold war problems as the ethnic violence in Africa and Bosnia, and the Dayton Accords that brought the genocide in the former Yugoslavia to a close (*see BOSNIA, WAR IN*) was a testament not so much to U.S. pressure as to the combined pressure of Europe and Russia through an increasingly confident United Nations. Neither did Bush nor Clinton seem particularly adept at dealing with the persistent problem of terrorism by Islamic fundamentalists (such as Hamas), which continued to threaten the on-again, off-again Middle East peace process. Rather than leaving the world’s only remaining superpower a clear legacy to follow in foreign policy, Reagan and Bush, the last of the cold warriors to hold power in the United States, left a defense establishment with a huge budget it

did not need, a powerful national security apparatus it did not know what to do with, and a U.S. foreign policy community ambivalent at best about the direction world diplomacy had taken and should take.

Not that any of the other statesmen instrumental in ending the cold war fared much better. From the mid-1970s the Russians had achieved basic parity with the U.S. nuclear arsenal, so it was not Reagan’s attempts to increase the costs of maintaining that arsenal, but the imbroglio in Afghanistan, that brought the Soviets to the edge of political and economic bankruptcy. The kinds of agreements the Soviets seemed anxious to reach with the United States had more to do with providing Gorbachev cover for pulling out of the war and finishing his domestic reforms than with shaving the Russian defense budget. In any case, Gorbachev was replaced soon after the fall of the Soviet Union by Boris Yeltsin (b. 1931), who had little foreign policy experience and who, necessarily, concentrated on his own crumbling country. Pope John Paul II was an arresting world figure, but the actual influence of the Roman Catholic Church on contemporary diplomacy was not measurably increased. Walesa never wielded influence outside Poland, whereas Deng—for all his skill in working his way to the top of the byzantine Chinese political world—only ensured the alienation of China from most of the world’s diplomatic stage with his crackdown on the prodemocracy movement demonstrators in Beijing’s Tiananmen Square in 1989.

In retrospect, the cold war seems to have been cyclical, with both the United States and the Soviet Union alternating between periods of assertion and relaxation. In the long run, it was not individual leaders who engineered its close, but the tremendous costs for both sides in energy and money and—more important—the rise of other players in an increasingly global marketplace. By the time George H. W. Bush left office, policy wags were joking that the cold war was over, and Japan had won. Certainly, the rise of Japan and the Pacific rim countries as a trading bloc was essential to the new directions in diplomacy, but as the United States learned, these directions were resistant to the old style of bilateral trade agreements. On the contrary, it was the success of the European Common Market in unifying Europe—commercially and culturally—that became the model for U.S. free-traders in shaping the North American Free Trade Agreement (NAFTA). Contrary to the pundits, the arrival of a global village did not put an end to the cold war and its hostilities. Instead, the end of the cold war cleared the way for the real emergence of the global market.

In the long run the cold war might well be missed, looked back upon with a certain nostalgia as a time when everything at least was clear and countries knew where they stood. Turmoil in the poorer nations of the world and the world’s growing ethnic and religious divisions threatened to make the global village a chimera and the future more like the chaotic world after the collapse of the

Roman or Byzantine Empires. It may be that the world has entered one of those periods of history following a long period of diplomatic consensus—Europe, for example, under Bismarck's alliance system—that will yield to another round of great wars and the rise of new powers. The nature of such wide-ranging military, diplomatic, and political “settlements” as the cold war makes those living under such systems blind to other arrangements, which is why its close came as such a shock to so many.

Colombian Civil War (1861)

PRINCIPAL COMBATANTS: Conservative vs. liberal factions

PRINCIPAL THEATER(S): Colombia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The conservative government's attempts to regulate local militias and elections triggered civil war.

OUTCOME: A coup ousted the conservative president and ushered in the Colombian Epoch of Civil Wars.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Under Spanish colonial rule Colombia was long a part of New Granada, a vast territory comprising what is now Colombia as well as Venezuela, Ecuador, and Panama. In 1819 the great liberator of Venezuela, Simón Bolívar (1783–1830), liberated Colombia as well, and for the next decade Colombia was part of a tenuous confederation with Venezuela and Ecuador called Gran Colombia. Gran Colombia fell victim to regional differences among its constituents, which broke apart into separate nations. Within Colombia by 1849, two political parties, each dominated by Creole elites, were established: the conservatives, who favored a powerful central government tied to the church, and the liberals, who were federalists desiring separation of church and state. The opposed positions of the parties increasingly polarized Colombia. When the liberals came to power in 1849, reform came quickly. Slavery was abol-

ished, church and state were separated, and the entire government was reorganized on federalist principles, so that local governments were rendered virtually autonomous.

Although the spirit of the reforms was laudable, their implementation increased the nation's fragmentation and political chaos. In this climate the liberals were discredited, and in 1857 a conservative president was elected. However, Mariano Ospina (1805–85) took significant measures to placate the liberal minority, promulgating a new, more conservative constitution that nevertheless retained many features of federalism. The Granadian Confederation, as the nation under Ospina was called, failed to coalesce as a single national entity, and, once again, the individual states within the confederation became increasingly autonomous and competitive.

At last, in 1860 the Ospina government attempted to institute uniform controls in local elections and to assume command over local militias. This triggered civil war, as General Tomás Cipriano de Mosquera (1796–1883), governor of the state of Cauca, declared his state independent then led an army into Bogotá, the Colombian capital. In a successful coup, Mosquera removed Ospina from office and on July 18, 1861, declared himself president. His assumption of office hardly brought stability to Colombia. Indeed, it heralded the COLOMBIAN EPOCH OF CIVIL WARS from 1863 to 1880.

Conservatives who desired a strong central government and liberals who preferred the states to have more authority were constantly at odds in the early years of Colombia's

national history. During the COLOMBIAN CIVIL WAR of 1861, General Tomas Cipriano de Mosquera (1796–1883), governor of the state of Cauca, marched his army to Bogotá and deposed the country's conservative president, Mariano Ospina (1805–85). Mosquera then declared himself provisional president of Colombia on July 18, 1861. Two years later, in 1863, the country adopted a new federal constitution, which created a union of seven sovereign states as the United States of Colombia. Intent on keeping the powers of the central government weak, the constitution proclaimed that presidential terms would be only two years and that no president could be reelected. Despite this prohibition, Mosquera was reelected to the presidency in 1865. He assumed dictatorial powers and clashed with the Liberal Party and congress. In 1867 he was deposed and imprisoned. Over the next several years a succession of liberal presidents was elected, and more than 40 armed conflicts broke out among factions contending for power in the individual states. An armed revolt in Cauca and several other states erupted in 1876 in opposition to the liberal president. Rafael Núñez (1825–94) was elected president in 1880 with support from both liberals and conservatives. He strengthened the central government and thereby ended the constant revolts among the states.

Colombian Guerrilla War (1976–ongoing)

PRINCIPAL COMBATANTS: Colombian government vs. leftist guerrilla groups

PRINCIPAL THEATER(S): Colombia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Left-wing political groups sought governmental reforms.

OUTCOME:

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

After left-wing guerrilla groups in Colombia instigated civil war in the country, the government fought back in a protracted state of siege. In 1978 the government adopted a “security statute” that restricted individual civil liberties. The press and liberals objected to the document, and on January 1, 1979, the Movement of April 19 (also known as M-19) attacked the arsenal at Bogotá and seized more than 5,000 weapons. The movement, named for the date in 1970 on which its hero, Gustavo Rojas Pinilla (1900–75),

lost the presidential election, suffered many losses during and after the arsenal attack. The Colombian government arrested hundreds of rebels, and reports of torture surfaced. In 1980 M-19 members seized 15 diplomats in a raid at the Dominican Republic embassy in Bogotá. Calling for the release of 311 political prisoners and demanding a \$50 million ransom payment, the rebels held their hostages for 61 days. Once a settlement was reached, the guerrillas escaped to Havana, Cuba, where they released the remaining 12 hostages under their control. The following year hostilities continued, and on March 18, 1981, Colombian troops killed many M-19 guerrillas in a violent shoot-out. M-19 and other left-wing groups (including the Colombian Revolutionary Armed Forces, or FARC) and the National Liberation Army (ELN) continued their guerrilla activities despite reprisals by right-wing paramilitary groups and death squads. The government, eager to end the bloodshed, offered amnesty to the guerrillas, but the violence, although abated somewhat, continued. In 1984 Betancur Cuarteres (b. 1923) was elected president, and he directed his government to improve the squalid living conditions of Colombia's poor, to adopt new fiscal measures designed to reduce inflation, and to gain control over the leftist groups by offering them a place in the political process. On November 6, 1985, claiming that promises for reforms had not been kept, members of M-19 seized the Palace of Justice and took 300 hostages. Police stormed the building, and in the ensuing battle 95 people were killed, including 11 Supreme Court justices. Violence in the country continued throughout the 1980s and 1990s, and increasingly the activities of drug traffickers became mingled with those of the left-wing guerrillas.

These connections only grew worse in the mid- to late 1990s, when Colombia's ruling Liberal Party was exposed for being in the pay of Colombia's drug cartels. U.S.-backed efforts to root out the drug lords, which resulted in the death of the Medellín cartel's overlord, Pablo Escobar (1949–93) at the end of 1993, only allowed the Cali cartel to grow more powerful as the Medellín foundered. And it was the Cali cartel from which Colombian president Ernesto Samper Pizano (b. 1950) was accused of taking money to assist in his election in June 1994. As the scandal spread, brave prosecutors arrested the Liberal Party campaign treasurer, who implicated the minister of defense. But ultimately the trials merely led to a wave of violence and kidnappings as the scandal worked its way up the political totem pole. Then Samper declared a state of emergency in 1995 following the assassination of a prominent critic of the government, and prosecutors prudently decided not to investigate the president himself. Though Samper was “cleared” of all charges in June 1996 by the Colombian congress, polls revealed that most Colombians nevertheless believed him guilty. It was a belief shared by the U.S. government, which revoked his entry visa.

Nevertheless, under mounting pressure from the United States, efforts to eradicate the coca and poppy plantations had continued, as the Colombian army launched operations against the jungle airfields and village entrepôts used by the cartels (and the rebels). The left-wing guerrilla movement thrived amid the scandals and confusion, and the level of violence and kidnapping in the country remained very high. Both FARC and the ELN were active in many parts of the country, damaging power lines and oil pipelines and attacking police and military installations. The army reacted strongly, especially, to FARC and ELN bombings, which in turn substantially added to the high number of violent deaths. President Samper fired General Alvaro Velandia Hurtado after a trial found the commander of Colombia's Third Army guilty of human rights violations. Samper left office in 1998.

Through it all, the U.S. Congress continued to insist that U.S. security assistance for Colombia should be restricted to combating the drug trade rather than fighting the long-standing civil war against the guerrillas, in part because of human rights concerns, in part as a result of its post-Vietnam aversion to such entanglements. Recently declassified U.S. documents, however, reveal that despite the legal limits and repeated public assurances by government officials, U.S. aid repeatedly blurred the lines between counterdrug and counterinsurgency. By 2000, the United States was so deeply involved in Colombia's seemingly intractable civil conflict that it was on the brink of direct confrontation with the guerrillas. The new administration of President George W. Bush, in keeping with its notions about the UNITED STATES'S WAR ON TERRORISM, began pressing to lift all restrictions and allow present and future aid to be used in operations against guerrilla forces—or “narco-terrorists” as the United States was now calling them. Bush's proposed aid figure for Colombia in fiscal year 2003 included nearly \$500 million in military and police aid alone.

Meanwhile, the kidnappings, killings, drug trafficking, and pervasive corruption continued to plague Colombia.

Colombian Revolt (1948–1962)

PRINCIPAL COMBATANTS: Liberals vs. conservatives in Colombia

PRINCIPAL THEATER(S): Colombia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The liberals and conservatives engaged in a political feud, and the ensuing lawlessness created a climate for the takeover by Army Chief of Staff Gustavo Rojas Pinilla.

OUTCOME: Democracy was reinstated with the formation of a coalition government, the National Front, in 1958.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Riot conditions

CASUALTIES: 2,585 total killed in 1948; by 1962 at least 180,000 had died.

TREATIES: None

Colombia, plagued by social unrest and economic ills, had been embroiled in a political struggle between the country's two political parties, the liberals and the conservatives, that stretched back to the 1830s. Despite the meddling of the U.S. government, which had cost Colombia the Panama Canal (see PANAMANIAN REVOLUTION), and the economic impact of U.S. corporations, which had helped to make the country a quintessential “banana republic” (although it was coffee and not bananas that Colombia exported), the political feud between these two ruling parties had little to do with class conflict, foreign ideologies, or other matters extraneous to the Colombian landscape.

By the time the United States held the Pan-American Conference in Bogotá, Colombia's capital city, that created the Organization of American States, the conservatives had been back in power for two years. This followed 16 years of liberal rule, which had seen a series of land reforms (called the “Revolution on the March”) favoring peasant squatters against big plantation owners. Then, on April 9, 1948, during the middle of the international conference, a popular left-wing liberal leader, Jorge Eliecer Gaitan (1902–48), was assassinated in broad daylight in downtown Bogotá, which not only embarrassed the government but also led immediately to riots and vandalism throughout the country (but which became known as the *bogotazo*.)

For 10 years and more the country was thrown into chaos, a state of constant insurrection and political and criminal violence that cost some 200,000 lives and \$1 billion in property damages. La Violencia, as the Colombians called the period, increased under the regime of Laurencio Eleuterio Gomez (1889–1965), who between 1950 and 1953 attempted to introduce a fascist state. His downfall was engineered by Colombia's first military coup of the 20th century, led by General Gustavo Rojas Pinilla (1900–75), whose corrupt, brutal regime was deposed by a military junta supported by both liberals and conservatives after the country's coffee crop failed disastrously in 1957. A year later the two parties formed a coalition government (the National Front) under newly elected president Alberto Lleras Camargo (1906–90). He slowly stabilized the country's devastated economy and instituted agrarian reforms that brought La Violencia to a close. But, because of his (and subsequent regimes') dependence on the U.S.-dominated Alliance for Progress, Colombia's dependence on the United States increased. By 1962,

though the violence was over, the country's economic growth had come to a virtual standstill.

Colombian War of Independence (1810–1819)

PRINCIPAL COMBATANTS: Popular revolt vs. Spain

PRINCIPAL THEATER(S): Colombia

DECLARATION: Independence declared July 20, 1810

MAJOR ISSUES AND OBJECTIVES: During Spain's preoccupation with Napoleon during the Peninsular War, Colombia, like Spain's other South American colonies, made a bid for independence.

OUTCOME: Independence was achieved.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Bolívar's principal force, 3,500; royalist principal force, 2,400

CASUALTIES: At Battle of Boyaca, the culminating battle, Bolívar inflicted 100 royalist casualties and took 1,600 prisoners.

TREATIES: None

Under Spanish colonial rule Colombia was long a part of New Granada, a vast territory comprising what is now Colombia as well as Venezuela, Ecuador, and Panama. When Spain's king, Ferdinand VII (1784–1833), was deposed as a result of Napoleon I's (1769–1821) victory in the PENINSULAR WAR (1810–14), many Spanish colonies made bids for independence. The town council of Bogotá, colonial capital of New Granada, initially voted a declaration of loyalty to Ferdinand, but then in 1810 moved to expel all royal officials and replace them with a locally constituted junta. Most of the major cities throughout New Granada followed the example of Bogotá, ousting Spanish royal officials and even writing local constitutions. Yet a genuine revolutionary movement failed to coalesce because the local rebels refused to unite against the Spanish military. Instead, factionalism shattered the rebel movement.

Venezuela's great military and political leader, Simón Bolívar (1783–1830), led the most effective defense against the forces of the royalists but suffered a severe setback at the Battle of Santa Mara in 1815 at the hands of a royalist army led by Pablo Morillo (1778–1837). As a result of this defeat, the royalists regained Bogotá and control over all New Granada. Bolívar fled for his life to Jamaica and then to Haiti.

Bolívar regrouped, returned to Venezuela in December 1816, and established his headquarters at Angostura,

Venezuela. After winning an important victory near Barcelona on February 16, 1817, Bolívar earned recognition as the central commander of Venezuela's patriot forces. He was, however, defeated by General Morillo at the Battle of La Puerta, March 15, 1818, suffering a total rout. Undaunted by this severe blow, Bolívar decided to hold in abeyance the war of independence in Venezuela and instead to drive the Spanish out of New Granada. To this end he mounted a daring expedition of 3,500 men to march across all of Venezuela and over the Andes to make a surprise attack on Bogotá. En route, during June–July 1819, Bolívar was joined by an army under the leadership of Francisco de Paula Santander (1792–1840) as well as a body of volunteer freedom fighters from Europe, paramountly the British Legion. After crossing the Andes he fought the Battle of Boyaca against 2,000 royalist infantry and 400 cavalry led by a Colonel Barreiro. Boyaca was a critical position that defended the approaches to Bogotá, and Bolívar positioned his attack with great tactical skill. He deployed his troops between Barreiro and Bogotá. With his right flank he hit Barreiro's left, while he sent the British Legion—his best troops—against Barreiro's cavalry. The result was the total defeat of the Spanish forces. Barreiro lost 100 killed and 1,600 prisoners, along with artillery and other heavy equipment.

On August 10, 1819, Bolívar entered Bogotá in triumph, having not only liberated New Granada—he established the Republic of Colombia, with himself as president—but having achieved victory in what proved to be the decisive battle of the revolutions throughout northern South America. Spanish rule crumbled.

Comuneros' Uprising in New Granada (1781)

PRINCIPAL COMBATANTS: *Comuneros* vs. Spanish colonial authorities

PRINCIPAL THEATER(S): New Granada (Colombia)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The *comuneros* sought liberal political and social reform, including tax relief.

OUTCOME: The *comuneros* were defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Rebels, 20,000; Spanish loyalists, 500

CASUALTIES: Unknown

TREATIES: None

The *comuneros* were citizens of New Granada (a Spanish colony encompassing modern-day Colombia, Panama, Venezuela, and Ecuador) who sought democratic political and social reforms. Their name came from the *comuneros* of old Spain (see **COMUNEROS' UPRISING IN SPAIN**), and their leaders were three Creoles, Juan Francisco Berbeo (d. 1782), José Antonio Galán (1740–82), and Ambrosio Pisco (d. 1793). A colonywide uprising was triggered by the Spanish government's raising taxes on tobacco and liquor and its attempt to collect, by force, back taxes. The locus of the uprising was at Socorro, where riots broke out in March 1781, then spread throughout the colony, as local *comunero* groups attacked and overthrew royal officials, especially targeting tax collectors.

The uprising rapidly escalated, and when it became clear that Berbeo was preparing to lead an army of followers against Bogotá, the colonial capital, Spanish authorities hastily opened negotiations with the *comuneros*. The result was an agreement to end the new taxes and open the government monopolies on trade. With this, the *comunero* forces dispersed. At this point, however, Manuel Flores (r. 1776–82), the Spanish viceroy at New Granada, received a large contingent of royal troops from Spain. Despite having effectively capitulated to the *comuneros*, he led his troops into the interior of New Granada and engaged *comunero* bands wherever he found them, as well as their Indian allies. The now largely disorganized *comuneros* were readily defeated, and the viceroy also captured all three principal leaders. Berbeo and Galán were summarily executed, and Pisco was sentenced to a long prison term, as were many of his lieutenants and other followers.

Further reading: David Bushnell, *Making of Modern Colombia: A Nation in Spite of Itself* (Berkeley: University of California Press, 2001); Jesus Maria Henao and Gerardo Arrubla, *History of Colombia* (Port Washington, N.Y.: Kennikat Press, 1972).

Comuneros' Uprising in Paraguay (1723–1735)

PRINCIPAL COMBATANTS: *Comuneros* vs. the royal government of Paraguay (with Indian auxiliaries)

PRINCIPAL THEATER(S): Paraguay

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Liberal opposition to the repressive and autocratic regime of the Spanish royal governor

OUTCOME: The revolt was ultimately crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Comuneros, 3,000+; royalists, 150; Indian auxiliaries, 6,000

CASUALTIES: Totals unknown; the *comunero* leader, José de Antequera y Castro, was executed.

TREATIES: None

The *comuneros* were Paraguayan citizens opposed to the repressive and autocratic regime of the colonial Spanish government and favoring the institution of democratic rights. José de Antequera y Castro (1690–1731), a prominent Creole and an attorney by profession, led a *comunero* coup at Asunción in which the governor was deposed and imprisoned. Antequera then assumed the office of governor and asserted the supremacy of the rights of the people over the prerogative of the king.

From Peru the viceroy there sent several military expeditions against Antequera, all of which failed. At last, in 1726 the governor of Buenos Aires led a royal army in an invasion of Paraguay and occupied Asunción. Antequera was taken prisoner and removed to Lima, Peru, where he was held for five years before he was executed on July 5, 1731. In prison Antequera recruited another political prisoner, Fernando de Mompox (fl. 1731–35), to continue the *comunero* struggle in Paraguay. Upon his release Mompox assumed leadership of the *comuneros* and proclaimed Paraguay an independent republic. Repeatedly, royal authorities sent military expeditions against Mompox and the *comuneros*, but it was not until 1735 that Bruno Mauricio de Zabala (1682–1736) led a force of sufficient strength, which included a large Indian contingent, to overthrow the *comunero* regime and reestablish royal government at Asunción.

Comuneros' Uprising in Spain (1520–1523)

PRINCIPAL COMBATANTS: *Comuneros* vs. the forces of Emperor Charles V

PRINCIPAL THEATER(S): Castile, Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: *Comuneros* sought constitutional government.

OUTCOME: *Comunero* movement was crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Royal troops, 800; *comunero* strength unknown

CASUALTIES: Unknown

TREATIES: None

The *comuneros* were citizens of the *comunidades*, the autonomous cities of Castile, who rose up in rebellion

against the repressive autocracy of Emperor Charles V (1500–58). The *comuneros* believed in the institution of a constitutional government that included at least some elements of democratic representation; beyond this common ground, however, they were a diverse group that included certain nobles, the bourgeoisie, and out-and-out political radicals. After an initial burst of energy, what little unity existed among the *comuneros* quickly dissolved, and the nobility deserted the cause, suddenly reaffirming their loyalty to Charles.

The biggest battle in the *comuneros*' uprising was fought at Villalar on April 23, 1521. Royalist forces defeated the *comuneros* and quickly arrested the leaders of the uprising. These individuals were summarily tried and executed. With that, the Crown's control of Spain was firmly reestablished, and in a conservative backlash against the *comuneros* movement the emperor was accorded more power than ever before.

Although the Battle of Villalar ended the major phase of the uprising and resulted in the execution of the *comunero* leader, Juan de Padilla (d. 1521), the uprising spread to Valencia and Majorca. In Valencia Vicente Peres (d. 1522) led the revolt but was defeated and killed in March 1522. The following March Spanish authorities dispatched 800 troops and four galleys to Majorca. This force laid siege to Palma de Majorca, which soon capitulated.

Congolese Civil War (1960–1968)

PRINCIPAL COMBATANTS: Various tribes in Congo, plus mercenary troops and Belgian paratroops

PRINCIPAL THEATER(S): Democratic Republic of the Congo (Zaire)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Katanga and Kivu provinces sought independence from Congo, as the government of Congo sought to gain control of the warring tribal factions.

OUTCOME: President Mobutu returned to power in November 1965, drove out white mercenaries, and gradually gained stability in Congo.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Tribal numbers unknown; mercenary forces and Belgian paratroops, fewer than 1,000

CASUALTIES: About 18,000 killed on all sides, the majority civilians

TREATIES: None

On June 30, 1960, the Congo was granted independence from Belgium. Problems of unifying members of more than

200 tribes plagued the new government led by President Joseph Kasavubu (1910?–69) and Premier Patrice Lumumba (1925–61). The various tribes began fighting each other, and portions of the army mutinied. Only weeks after independence, Katanga Province and South Kasai Province announced their secession. The president and premier asked the United Nations to provide a peacekeeping force, and Lumumba also appealed to the Soviet Union for aid. Charged with being a communist, Lumumba was forced to resign on September 5, 1960. He was later arrested and murdered in prison. Colonel Joseph Mobutu (Mobutu Sese Seko, 1930–97), army chief of staff, then seized virtual control of the government. Over the next few years fighting between the various factions continued, and Katanga remained independent of the Congo. In 1963 the United Nations persuaded Katanga to rejoin the Congo, and Katangan leader Moise Tshombe (1919–69) went into exile. UN forces began leaving the Congo in 1963 and continued to do so in 1964 due to a lack of funds to support them. Nine days after the departure of the last UN troops, Tshombe returned from exile and was named premier. He attempted to make peace with the rebel groups and hired white mercenary troops and officers to train the Congolese army. Tshombe was unable to bring peace to the Congo and met with criticism from other African nations for his use of white mercenaries. The rebels, with aid from communists, Sudan, Uganda, and U.A.R., continued to gain strength. They seized 2,000 white hostages and held them at Stanleyville. On November 25–27, 1964, U.S. airplanes brought Belgian paratroopers to the region. They seized Stanleyville and secured the release of 1,650 white hostages. Several hundred hostages were killed, however, when the Belgian troops withdrew in response to criticism from anti-Tshombe Africans and the communist bloc. The following year Tshombe fell from power, and President Kasavubu took control. His administration lasted only a little more than one month. Mobutu deposed Kasavubu in a bloodless coup and named himself president of a military government. Rebels continued to threaten peace in the country as Belgian and French mercenaries attempted to seize Katanga and Kivu and Kantangan rebels captured Bukavu, the capital of Kivu Province. By November 1967 the Congolese army chased about 2,000 rebels and mercenaries out of the Congo into Rwanda, and stability returned to the war-torn country. On October 27, 1971, President Mobutu renamed the country Zaire.

Though he brought stability to the Congo, Mobutu quickly squandered Zaire's mineral-rich resources, and by the 1990s, 30 years of economic mismanagement and corruption had destroyed its infrastructure and given Zaire one of the world's lowest standards of living. Forced to share power in a multiparty system beginning in 1991, Mobutu would soon lose control of his country completely. In October 1996, Laurent Desire Kabila (1939–2001), a leading member of the armed opposition to Mobutu's Zaire who had dropped out of sight for nearly a decade,

reemerged as the head of a recently formed Alliance of Democratic Forces for the Liberation of Congo-Zaire. Riding the crest of the wave of inter-tribal violence sweeping across central Africa between the Hutu and the Tutsi (see BURUNDIAN CIVIL WAR [1993–ongoing]), Kabila rallied his mostly Tutsi force from eastern Zaire and installed himself as head of state on May 17, 1997. Fleeing to Morocco, Mobutu died there in September. Meanwhile, Kabila had rejected the name *Zaire* for his Congo and reverted officially to the title of Democratic Republic of the Congo.

Corinthian-Corcyrean War (435–433 B.C.E.)

PRINCIPAL COMBATANTS: Corinth vs. Corcyra (Corfu)
PRINCIPAL THEATER(S): Mainland colony of Epidamnus
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: Contest for control of the jointly ruled colony
OUTCOME: Corcyra triumphed.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Corinth, 75 warships; Corcyra, 80 warships
CASUALTIES: Unknown
TREATIES: None

Corcyra (Corfu) rebelled against Corinth, its mother city-state, when Corinth attempted to wrest from it total control of Epidamnus, a mainland colony jointly possessed by Corcyra and Corinth. In 435 Corcyrean forces laid siege to Epidamnus. Corinth dispatched a fleet of 75 vessels to the relief of Epidamnus, but the ships were met in battle in the Gulf of Ambracia by 80 ships of the Corcyrean navy. The Corinthian fleet was soundly defeated.

While Corinth went about the construction of a larger fleet, Corcyra sought military aid from Athens. In 433 at the Battle of Sybota, the new Corinthian fleet mauled the Corcyrean vessels until the arrival of Athenian warships tipped the balance against the Corinthians. Once again Corinth found itself on the losing side of a naval battle.

Resentment over the alliance between Athens and Corcyra would figure as one of the precipitating factors of the Second (Great) PELOPONNESE WAR.

Further reading: Terry Wick, ed., *The Peloponnesian War by Thucydides* (New York: McGraw-Hill, 1982).

Corinthian War (395–387 B.C.E.)

PRINCIPAL COMBATANTS: Thebes, Athens, Corinth, and Argos (initially with financial aid from Persia) vs. Sparta (with later Persian alliance)
PRINCIPAL THEATER(S): Cnidus and Boeotia
DECLARATION: None
MAJOR ISSUES AND OBJECTIVES: Rebellion against the tyranny of Sparta
OUTCOME: Sparta prevailed, but at the cost of many concessions to Persia.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown
CASUALTIES: Unknown
TREATIES: No documents survive

The Second (Great) PELOPONNESE WAR from 431 to 404 B.C.E. created a situation in which Sparta tyrannized its recent allies. Thebes responded by striking an alliance late in the war with its enemy, Athens, and the two powers formed a coalition with Corinth and Argos to fight Sparta. Sparta's involvement in war with Persia also brought Persian financial aid to the coalition.

Using Persian money Athens built a fleet, refortified its port, and, by defeating the Spartan fleet at Cnidus in 394, recovered from Sparta the islands of Lemnos, Scyros, and Imbros. For its part, Thebes successfully repelled a Spartan invasion of Boeotia. Generally, however, the coalition was far less successful on land than at sea. The Spartan victory at the Battle of Nemea in 394 B.C.E. recovered Coronea and put Sparta in a position to blockade Corinth. Antalcidas, the Spartan agent in Persia, negotiated peace with Persia, a halt to Persian support of the coalition states, and ultimately an alliance. In 387 the Persian fleet cut off Athens's fleet in the Dardanelles. Once this occurred Athens had no choice but to agree to the King's Peace (the Peace of Antalcidas) of 386, by which Cyprus and the Greek city-states in Asia Minor were returned to Persia and the Athenians were forced to give up their conquests, except for Lemnos, Imbros, and Scyros. Thebes relinquished control of the Boeotian cities, and Argos evacuated Corinth. The Greek city-states, except those in Asia Minor, which were now controlled by Persia, were to be entirely independent and were barred from forming alliances, combinations, and coalitions. Thus, Sparta achieved much of what it wanted in the Corinthian War, except that its triumph came at the price of yielding much power and authority to Persia, for it was the Persian king,

Artaxerxes II (fl. late fifth and early fourth century B.C.E.) who held the whip hand.

Further reading: Terry Wick, ed., *The Peloponnesian War by Thucydides* (New York: McGraw-Hill, 1982).

Corsican Revolts (1729–1769)

PRINCIPAL COMBATANTS: Corsica vs. Genoa (and later France)

PRINCIPAL THEATER(S): Corsica

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Corsican struggle for independence from Genoa

OUTCOME: Corsica prevailed against Genoa, but the independence movement was crushed by French forces after France acquired the island from Genoa.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: In 1768, 12,000 rebels; 30,000 French

CASUALTIES: In 1768, French—4,000 died in combat, 6,000 from wounds and sickness. Rebel casualties uncounted but presumably higher than the French.

TREATIES: None

Corsica chafed under the brutal and repressive control of Genoa and in 1729 rose in revolt. The movement was led by the foremost citizens of Corsica, who gradually took the struggle into the island's interior and made significant gains. Baron Theodor Neuhof (1694–1756), a German soldier of fortune, cast his lot with the Corsican rebels and led well-organized military operations against Genoese forces. In 1736 the Corsicans proclaimed Neuhof King Theodor I of Corsica, but his reign proved brief indeed. Later in the year he suffered a harsh defeat at the hands of the Genoese and fled the island, leaving Corsica to fight a low-level civil war. Twice more Neuhof returned to Corsica, in 1738 and 1743, but was soundly defeated both times by Genoese forces, which were now allied with the French. In 1743, Neuhof fled to England, never to return.

By the mid-1700s the sporadic insurgency in Corsica had almost ceased when a new leader emerged to spark new revolts. Pasquale Paoli (1725–1807) was the son of a Corsican rebel leader whose allegiance to Neuhof had gotten the Paolis exiled along with the German soldier of fortune. In 1755 Pasquale suddenly returned, and this time the new revolt he led against Genoese rule succeeded. The Corsicans quickly drafted a republican constitution and elected Paoli president. Genoa struck back, but despite repeated efforts and some additional help from the French, they repeatedly failed to overturn Paoli and his liberal democratic government. At last, in 1768 Genoa, abandoning hope of ever subjugating Corsica, sold the island to Louis XV (1710–74), who was thus motivated to mount a major invasion. Led by the Comte de Vaux, 30,000 French troops invaded. At Borgo in November they suffered a

major setback, losing 600 killed, 1,000 wounded, and 600 captured. Nevertheless, they soon secured the coasts and marched inland. Paoli, having raised 12,000 men, met them in May 1769 at Ponte-Nuovo and was defeated. He fled, and the Corsican cause failed. Paoli found refuge in England, and France formally annexed the island.

Costa Rican Civil War (1948)

PRINCIPAL COMBATANTS: Supporters of Otilio Ulate vs. supporters of Rafael Calderón Guardia

PRINCIPAL THEATER(S): Costa Rica

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ulate's supporters began the war after the election of Ulate to the Costa Rican presidency was nullified by congress.

OUTCOME: Ulate was reinstated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Ulate's forces claimed to have lost only 67 killed; Calderonista losses, 1,500 killed.

TREATIES: None

On March 1, 1948, the Costa Rican congress, citing voting fraud voided the election of the right-wing candidate Otilio Ulate (1891–1973) as president of the nation. This immediately triggered a civil war between Ulate's partisans and those supporting his rival, Rafael Calderón Guardia (1900–70). Ulate's armed supporters, dubbed the Caribbean Legion, were led by Colonel José "Pepe" Figueres Ferrer (1906–90), and those who supported Calderón were called the Calderonistas. This force, which included government troops as well as communists, received military aid from President Anastasio Somoza (1896–1956) of Nicaragua and President Tiburcio Carías Andino (1876–1969) of Honduras. Despite this outside aid the Caribbean Legion consistently prevailed in engagements and marched into the capital city of San José on April 28, 1948. Figueres ousted the sitting government and on May 8 put in place a military junta. Immediately the junta made sweeping reforms, disbanding the Costa Rican army, outlawing the Communist Party, and nationalizing the banks. The corrupt patronage system was summarily abolished and civil service reform instituted.

Calderonistas, who had fled to Nicaragua, mounted an invasion of Costa Rica on December 10 but were successfully repulsed by Figueres's Caribbean Legion. After intervention by the Organization of American States, which condemned Somoza's involvement in the civil war and the subsequent invasion attempt, the Costa Rican situation sta-

bilized, and early in 1949 a constitutional assembly was convened to draft a reformed and revised constitution for Costa Rica. By the end of the year, on November 8, 1949, Figueres dissolved the junta and turned the nation's government over to Ulate. But Figueres himself, who had proven to be a progressive politician, would remain the dominant figure in Costa Rica for another 20 years.

Costa Rican Rebellion (1955)

PRINCIPAL COMBATANTS: The moderate Costa Rican government vs. forces of Rafael Calderón Guardia, supported by Nicaragua

PRINCIPAL THEATER(S): Costa Rica–Nicaragua border region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Nicaraguan president Anastasio Somoza supported rebels under failed Costa Rican presidential candidate Rafael Calderón Guardia; Costa Rican government forces resisted.

OUTCOME: The rebels were suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Anastasio Somoza (1896–1956) believed that the Caribbean Legion (*see* COSTA RICAN CIVIL WAR), which had supported the election of José “Pepe” Figueres Ferrer (1906–90) as president of Costa Rica, was implicated in a plot to assassinate him. Acting on this belief, Somoza aided rebels led by Rafael Calderón Guardia (1900–70), who had lost his presidential bid against Figueres in 1953. Calderón used Nicaragua as a base for his forces, with which he invaded Costa Rica on January 11, 1955, occupying the border town of Villa Quesada, located on the important Pan-American Highway. The Costa Rican government responded to the invasion by appealing to the Organization of American States for an investigation. As soon as it announced its findings, identifying Nicaragua’s role in aiding and abetting the rebels, Somoza withdrew his support for them, and Costa Rican government forces, supplied with U.S. military hardware, including four fighter planes, readily pushed the rebels back into Nicaragua. Despite some sharp fighting in several border towns, casualties were limited. Publicly, Costa Rica and Nicaragua announced their agreement to cooperate in surveillance and patrol of the border region.

Costa Rican Revolution (1917)

PRINCIPAL COMBATANTS: Conservative military forces vs. liberal government supporters

PRINCIPAL THEATER(S): Costa Rica

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conservative military coup in opposition to liberal democratic reforms

OUTCOME: Liberal democratic president Alfredo González Flores was overthrown by General Federico Tinoco Granados, who set up a short-lived dictatorship.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Light

TREATIES: None

In 1913 Alfredo González Flores (1877–after 1967) was elected president of Costa Rica on a platform of liberal democratic reform. These measures were opposed by conservative General Federico Tinoco Granados (1870–1931), who early in 1917 organized a military coup against González, toppling his government on January 27, 1917. Immediately, Tinoco set up a dictatorship, which provoked widespread insurrection. Although the United States did not actively support the insurrections, it pointedly refused to acknowledge the legitimacy of the Tinoco regime and repeatedly threatened to intervene. Under continued pressure from the United States, Tinoco stepped down in May 1919, and in June a contingent of U.S. Marines arrived to protect U.S. interests in the country. A democratically elected president, Julio Acosta García (1872–1954), took office in 1920.

Count's War (1533–1536)

PRINCIPAL COMBATANTS: The Danish peasantry and middle class (and their Swedish allies) vs. the Danish nobility

PRINCIPAL THEATER(S): Denmark, Sweden, Jutland, and Holstein

DECLARATION: No formal declaration

MAJOR ISSUES AND OBJECTIVES: The war resulted from a social, economic, and religious conflict between the predominantly Lutheran middle class and peasantry of Denmark and the predominantly Catholic ruling class; war was triggered by a dispute over royal succession.

OUTCOME: Christian III became king of Denmark and established the Lutheran church as the state religion. The Hanseatic League suffered great diminishment of power and influence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

The Danish Rigsraad, or state council, dominated by Catholic nobles, refused to name a successor to Frederick I (1471–1533) on his death in 1533 because the leading candidate was a Lutheran. The decision to govern without a king incited civil war as Lutheran rebels, led by Christopher, count of Oldenburg (1504–66)—hence the name “Count’s War”—sought to force the restoration of Christian II (1481–1559), imprisoned as a result of the KALMAR CIVIL WAR 10 years earlier. The Count’s army also sought to unite Copenhagen and Malmö with the other powerful Baltic members of the Hanseatic League. Opposed to the count was another Christian, the duke of Holstein (1503–59), son of Frederick I.

In the course of battle Count Christopher invaded Holstein, then blockaded and subsequently captured Copenhagen. Zealand, Malmö, and Skåne also fell to the count’s forces. Despite this, in 1524 the Rigsraad elected the duke of Holstein, Christian III, king of Denmark. Thus validated, he led forces in retaliation against Count Christopher. With Swedish allies Christian III pushed the count’s army out of much of the territory it had taken, ultimately bottling up his main forces at Ålborg, northern Jutland. Once contained there, the count’s army made an easy target for Christian III, who decimated the forces in 1535. In the meantime, Swedish forces laid siege to Malmö, Landskrona, and Zealand while Christian III blockaded Copenhagen. These actions forced the count’s remaining forces to surrender by late July 1536.

Following his victory Christian III assumed the Danish throne, not as a Catholic, however, but as a Lutheran, and he imposed the faith not only on his realm but on Norway as well. The political and economic power of the Hanseatic League, which had sided with Count Christopher, had been greatly diminished by the war. As for Christopher himself, he was permanently banished from Denmark and departed for his home in Oldenburg, Germany.

Covenanters' Rebellion (1666)

PRINCIPAL COMBATANTS: Scots Covenanters vs. the forces of Charles II

PRINCIPAL THEATER(S): Vicinity of Edinburgh

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Covenanters resisted Charles II’s attempts to suppress Presbyterian practice in Scotland.

OUTCOME: The Covenanters did not prevail militarily but continued to resist nevertheless.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In his all-out effort to secure his restoration to the throne, Charles II (1630–85) signed the Solemn League and Covenant, first proposed in 1643, pledging to support a civil and religious union of England, Scotland, and Ireland under a Presbyterian-parliamentary system. In truth Charles II had no intention of honoring the covenant, and after his restoration in 1660 he governed Scotland at arm’s length through a pair of puppets, John Maitland (1616–82), duke of Lauderdale, and James Sharp (1613–79), archbishop of St. Andrews. Both of these men were in favor of restoring the Anglican bishops to Scotland. This, of course, enraged the Covenanters, who felt—and, indeed, had been—betrayed. After Charles II pushed through Parliament a rescissory act formally abolishing all agreements made during the interregnum—the period of Oliver Cromwell’s (1599–1658) rule—the Covenanters were pushed to open rebellion. They defied a panoply of legislation, decrees, and restrictions, including a ban on Presbyterian religious services and fines for religious observances. On November 28, 1666, armed rebellion broke out at the Battle of Pentland Hills, which resulted in defeat for the Covenanters. Despite losing the battle, they continued to resist Charles II’s anti-Presbyterian decrees.

See also COVENANTERS’ REBELLION (1679); COVENANTERS’ REBELLION (1685).

Covenanters' Rebellion (1679)

PRINCIPAL COMBATANTS: Scots Covenanters vs. the forces of Charles II

PRINCIPAL THEATER(S): Scotland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Covenanters continued to resist Charles II’s suppression of Presbyterian practice

in Scotland after the Covenanters' Rebellion of 1666; the war commenced with the assassination of the archbishop of St. Andrews.

OUTCOME: After initial success the Covenanters were defeated, then treated mercilessly; this served only to incite further rebellion.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Covenanters, 5,000; Royal forces, 5,000

CASUALTIES: Covenanters, 700 killed, 1,400 taken prisoner, 300 exiled (of whom 200+ were killed in a storm at sea).

TREATIES: None

After the COVENANTERS' REBELLION (1666), Charles II's (1630–85) chief minister in Scotland was John Maitland (1616–82), duke of Lauderdale, who was responsible for administering and enforcing the king's repressive measures, especially those banning the observance of Presbyterian religious practices. At length the Covenanters rose up against James Sharp (1613–79), the archbishop of St. Andrews, head of the Church of England in Scotland. The assassination of Sharp signaled a new rebellion of the Covenanters, who engaged a royalist force at the Battle of Drumclog on June 1, 1679. After the Covenanters prevailed Charles II authorized a much larger royal army under the command of his bastard son, James Scot (1649–85), duke of Monmouth. At Bothwell Bridge on June 22, 1679, the Covenanters were decisively defeated with heavy casualties, including 700 killed and 1,400 taken prisoner. Of this number, 300 were exiled to America. However, a storm at sea resulted in the drowning of more than 200. Far from suppressing the Covenanters, the aftermath of the rebellion of 1679 incited further rebellion and violence, which was chronic through the first half of the 1680s, the so-called killing time, which culminated in the COVENANTERS' REBELLION (1685).

Covenanters' Rebellion (1685)

PRINCIPAL COMBATANTS: Scots Covenanters vs. the royal forces of James II

PRINCIPAL THEATER(S): Scotland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: A continuation of the religious wars of rebellion—the Covenanters' Rebellion of 1666 and the Covenanters' Rebellion of 1679—between Scots Presbyterians and the English government

OUTCOME: The rebellions of this period proved abortive; the succession of William of Orange to the British throne resolved, for most Scots, the Covenanters' issues.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Variable

CASUALTIES: Light; however, the ninth earl of Argyll was executed.

TREATIES: None

Twice during the reign of Charles II (1630–85) of England, Scotland, and Ireland—in the COVENANTERS' REBELLION (1666) and the COVENANTERS' REBELLION (1679)—Scots Presbyterians had rebelled against the Crown's attempts to suppress their religion. Upon Charles's death in 1685, he was succeeded by James II (1633–1701). A Catholic, James attempted to introduce general religious toleration throughout his realm, but this was generally interpreted as an attempt to pave the way for the forced reintroduction of Catholicism not only in England but Scotland as well. Having resisted the imposition of Anglicanism under Charles II, the Scots Covenanters were not about to accept Catholicism. Archibald Campbell (1651?–1703), ninth earl of Argyll, had opposed the suppression of the Covenanters and for this was sentenced to death in 1681. He escaped to Holland, where he became leader of a Covenanter rebellion and returned to Scotland. He was captured and executed, his rebellion dying with him (see MONMOUTH'S REBELLION).

James II's religious policies were well received nowhere in his realm, and his reign lasted a mere three years before William of Orange (1650–1702) displaced him with his GLORIOUS REVOLUTION in 1688. Under William not only was the Protestant cause secured, but the suppression of the Scots church came to an end. Only the Jacobites—the minority who remained loyal to James II—chafed under the new monarch (see JACOBITE REBELLION [1689–1690]).

Cracow Insurrection (1846)

PRINCIPAL COMBATANTS: Polish revolutionaries vs. Austrian overlords

PRINCIPAL THEATER(S): Cracow and Galicia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Polish revolutionaries in the free city of Cracow wanted to spread the cause of liberty beyond the free city.

OUTCOME: The attempt to foment a general revolt against the Austrian overlords of Poland was suppressed, and in the process Cracow lost its status as a free city.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

At the conclusion of the NAPOLEONIC WARS, the Congress of Vienna created the Republic of Cracow, consisting primarily of the city of Cracow and its immediate environs. The rest of Poland had been divided among Russia, Austria, and Prussia. The POLISH REBELLION (1830–1831) had cost perhaps 20,000 Polish lives but had not crushed the independence movement. During February–March 1846 Polish revolutionaries living in Cracow, led by Jan Tyssowski (1811–57), attempted to spread the cause of Polish independence beyond the free city of Cracow. Throughout Poland and especially in Galicia (Austrian Poland), many landlords were strong nationalists. It was among this group that Tyssowski and others operated to foment a major uprising. Unfortunately, the landlords' tenants, the great Polish peasantry, were principally loyal to Austria. This loyalty was encouraged by means of a bounty of 10 florins payable to anyone who captured or killed a rebellious landlord. Thus coopted, the insurrection quickly collapsed. Its failure was hastened by the intervention of Russian and Austrian troops, who soon occupied Cracow. The city's independent status was ended when Austria unilaterally annexed Cracow to Galicia.

Creek War (1813–1814)

PRINCIPAL COMBATANTS: United States, Cherokees, and "White Stick Creeks" vs. "Red Stick Creeks"

PRINCIPAL THEATER(S): Tennessee, Mississippi Territory, Georgia, Alabama, and Florida

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Pro-British Red Stick Creeks attacked American settlers during the War of 1812
OUTCOME: Red Sticks were defeated; Red Sticks and White Sticks—the latter allied to the United States in the war—gave up two-thirds of their lands to white settlers.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Varied: Andrew Jackson assembled 5,000 Tennessee militia, 19 companies of allied Cherokees, and 200 Lower Creeks in response to the massacre at Fort Mims August 30, 1813.

CASUALTIES: At Fort Mims, 400 white settlers; Jackson's November 1813 offensive killed 186 Red Sticks at Tallahatchee and nearly 300 at Talladega; 15 U.S. troops killed, 85 wounded; at Horsebend, Red Stick Creeks,

Battle of Horseshoe Bend, March 27, 1814

750 of 900 killed; U.S. forces, 32 killed, 99 wounded; Cherokees, 18 killed, 36 wounded; White Stick Creeks, 5 killed, 11 wounded

TREATIES: Treaty of Horseshoe Bend, 1814

During the WAR OF 1812 the Creek Indians of Georgia, Tennessee, and the Mississippi Territory were engaged in their own intratribal war between those who advocated cooperation with the whites and those bent on driving the whites out of their land. The former sided with the Americans during the War of 1812, whereas the latter tended to side with the British, who had promised to drive the Americans off Indian lands. Little Warrior (d. 1813), one of a pro-British faction known as the Upper Creeks, or Red Sticks, fought against the Americans in the War of 1812. The Creek peace faction—the Lower Creeks, or White Sticks—led by Big Warrior (fl. early 1800s), arrested and executed Little Warrior, thereby widening the gulf between the two tribal factions.

Supplied by Spanish interests in Florida, the Red Sticks, led by a half-breed, Peter McQueen (d. 1818), attacked settlers in present-day Alabama. On August 30, 1813, William Weatherford (also known as Red Eagle, c. 1780–1824), a half-breed adherent of Tecumseh (c. 1768–1813), attacked Fort Mims, on the lower Alabama River, killing more than 400 settlers in what was to be the last Indian attack on a settlement east of the Mississippi River.

The assault on Fort Mims provoked a massive vengeance. The Tennessee legislature dispatched Andrew Jackson (1767–1845) with 5,000 Tennessee militiamen, 19 companies of friendly Cherokee warriors, and 200 Lower Creeks into Red Stick country. Early in November 1813 a detachment of volunteer cavalry under Colonel John Coffee (1772–1833)—which counted Davy Crockett (1786–1836) among its number—surprised a large party of Red Sticks at Tallahatchee, killing 186 of them. Later that month Jackson lifted the Red Stick siege of Talladega, a White Stick fort, killing almost 300 Red Sticks in the process and losing 15 of his own troops, with another 85 wounded.

Jackson and Louisiana governor William Claiborne (1775–1817) pursued Red Eagle fruitlessly for the next two months, as Jackson's militiamen began to desert him. In January 1814 Jackson received reinforcements—800 new troops—and launched a second offensive, fighting at Emuckfaw and at Enotachopco Creek as well as burning every Red Stick settlement he encountered. In March his militiamen were augmented by 600 regulars from the U.S. 39th Infantry. With this combined force Jackson fought the Battle of Horseshoe Bend on a peninsula on the Tallapoosa River. The daylong battle on March 27, 1814, killed 750 of the 900 Red Stick warriors engaged. Jackson lost 32 killed and 99 wounded; the Cherokees, 18 killed, 36 wounded; the White Stick Creeks, five dead, 11 wounded.

William Weatherford—Red Eagle—voluntarily appeared in Jackson's camp a few days after the battle and formally surrendered. Jackson regarded him as a military adversary and allowed him to depart. In many ways the general's White Stick and Cherokee allies were treated less generously. Tennessee militiamen stole their horses and took their food. Moreover, the Treaty of Horseshoe Bend, which formally ended the Creek War, extorted 23 million acres of Indian land—not from the Red Sticks alone, but also from the friendly White Stick Creeks. In sum, the Red Stick and White Stick Creeks ceded about two-thirds of their tribal lands, thereby pushing the tide of white American settlement from the Tennessee River to the Gulf of Mexico.

Further reading: Thomas Perkins Anthony, *The Formative Period in Alabama, 1815–1828* (Tuscaloosa: University of Alabama Press, 1965); Alan Axelrod, *Chronicle of the Indian Wars: From Colonial Times to Wounded Knee* (New York: Macmillan General Reference, 1993); Duane King, *The Cherokee Indian Nation: A Troubled History* (Knoxville: University of Tennessee Press, 1979).

Cresap's War (1774)

PRINCIPAL COMBATANTS: Virginia surveyors vs. Mingo chief John Logan and Shawnee allies

PRINCIPAL THEATER(S): Ohio valley

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: White incursion into Indian lands

OUTCOME: No settlement; conflict became wrapped up in Lord Dunmore's War (1774).

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Colonial, 13; Mingos, 13 women and children, including Logan's family

TREATIES: None

In 1773 the colonial governor of Virginia, John Murray (1732–1809), fourth earl of Dunmore, commissioned a survey of his colony's western territory, which he intended to open to British settlement despite the existence of a 1768 treaty guaranteeing Shawnee possession of the land. The survey party was led by Captain Michael Cresap (1742–75) and John Floyd. On April 30, 1774, one of Cresap's men, Daniel Greathouse (fl. late 18th century), leading a small party of surveyors, happened upon the village of a Mingo chief named John Logan (Tah-gah-jute; c. 1725–89). Greathouse and his men murdered 13 women and children in the village, including Logan's family. In retaliation Logan and eight Mingo and Shawnee warriors killed 13 Virginians, prompting Lord Dunmore to declare war on the Shawnees, Mingos, and other tribes on June 10, 1774. The so-called Cresap's War thus dissolved into LORD DUNMORE'S WAR.

Further reading: Alan Axelrod, *Chronicle of the Indian Wars: From Colonial Times to Wounded Knee* (New York: Prentice Hall General Reference, 1993); T. Harry Williams, *History of American Wars: From Colonial Times to World War I* (New York: Knopf, 1981).

Cretan Rebellion (1770)

PRINCIPAL COMBATANTS: Crete vs. the Ottoman Empire

PRINCIPAL THEATER(S): Crete

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Christians of Crete, with encouragement from the Russian navy, attempted to gain their independence from the Ottoman Empire.

OUTCOME: The rebellion was crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown. When the Cretans surrendered, there were only 71 rebels to do so; all others had been killed.

TREATIES: None

Long the target of European invaders, the isle of Crete passed from one conquering empire to the next. In 1669 it was conquered by the predominantly Muslim Ottoman Empire. The theological differences between the Christian Greek island and the eastern European power caused

bitter hatred on both sides. The Christians resented the Muslim presence in their homeland, and the Turks treated the Cretans as second-class citizens of the empire. Occasional flare-ups of violence occurred, but they were savagely suppressed by the Turks.

After the ascension of Catherine the Great (1729–96) in 1765, Russia took a hostile view of the Ottoman Empire, which was already beginning to slip into decline as the “Sick Man of Europe” syndrome. Catherine hoped to push the burgeoning empire over the edge and lay claim to its choicest pieces. To that end Admiral Alexei G. Orlov (1737–1808) and Russia’s Baltic Fleet sailed to the Mediterranean and captured Navarino in April. From there he incited the Cretan merchant and shipowner known only as Daskaloyiannis (d. 1770) to lead a Cretan insurrection. Daskaloyiannis began fomenting rebellion in the mountainous Sfakian region. After gathering forces and leading them onto the plains of Canea in late spring 1770, Daskaloyiannis’s pleas for aid from Orlov were ignored.

The Turks assembled a sizable force of mostly Albanians and in June pushed the Cretans back off the plains and into the White Mountains. The Turks ordered Daskaloyiannis to surrender, but he refused, and the Turks all but wiped out the rebel force. When a second call for surrender was accepted, all that remained was Daskaloyiannis and 70 rebels. With the rebellion crushed, the Russian fleet retreated to the Baltic, and Daskaloyiannis was taken to Candia, the Turkish capital of Crete, where he was interrogated and then skinned alive by Ottoman authorities.

Cretan Rebellion (1821–1822)

PRINCIPAL COMBATANTS: Crete vs. the Ottoman Empire and Egypt

PRINCIPAL THEATER(S): Crete

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Amid a fervor of nationalist sentiment on Crete, Turkish soldiers panicked and began to attack Christians.

OUTCOME: The rebellion was essentially crushed; the Ottomans retained control of Crete.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

With the revitalization of nationalism in nearby Greece and the subsequent outbreak of conflict in the GREEK WAR OF

INDEPENDENCE, 1821–32, the Turks controlling the island of Crete became uneasy, as the province was the most notoriously misgoverned region in all of the Ottoman Empire. When signs of Cretan independence appeared, the elite Turkish corps, the Janissaries, panicked and ruthlessly and indiscriminately massacred Christians. What followed was total butchery: Armed bands, tacitly encouraged by the Janissaries, roamed the streets murdering, mutilating, and immolating thousands of Christians. When a marauding band broke in on the services of the archbishop of Candia, he was slaughtered along with his entire congregation.

When the Turks reached Sfakia, the site of the CRETAN REBELLION (1770), they exacted a harsh revenge, savaging the town and its inhabitants. After several months the Cretans struck back, capturing hundreds of Janissaries as well as rampaging through the Islamic sections of the island. Christian retaliation brought about a temporary cessation of hostilities, but it was quickly broken when Egyptian troops invaded in 1822 to rescue the captured Turks. The Egyptians were as brutal as the Turks, burning villages and forests and driving remaining Christians into the mountainous caves of Sfakia. The Egyptian raids ended any further uprisings on the part of the Cretans and temporarily satisfied the Islamic thirst for Christian destruction. The leader of the Egyptian forces, Pasha Muhammad Ali (c. 1769–1849), was made pasha of the island.

Cretan Uprising (1866–1868)

PRINCIPAL COMBATANTS: Cretan Christians vs. Ottoman overlords

PRINCIPAL THEATER(S): Crete

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Cretans wished to achieve independence from the Turks; the uprising was triggered by the failure of the Sublime Porte to implement reforms promised by the Organic Act of 1858.

OUTCOME: The rebellion was suppressed but not crushed, and Cretan independence remained an active cause, culminating in the Cretan Uprising of 1896.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Crete had long chafed under the rule of the Ottoman Empire (*see* CRETAN REBELLION [1821–1822]). A particular problem was the Ottoman attempt to suppress Christianity on the island. The region of Sfakia, in the White Moun-

tains, was a stronghold of Christian resistance and the focus of chronic anti-Ottoman rebellion. The anti-Ottoman agitation came to a head in 1858 with a spasm of violence that induced the Sublime Porte (the Ottoman government) to promise a series of reforms, the most important of which was the Organic Act, which would give Christianity legal parity with Islam. By 1866, however, it became apparent that the Porte had no intention of implementing the promised reforms, and the Sfakians as well as Christians living in urban areas rose up in rebellion. The panic-stricken pasha of Crete—the Ottoman governor of the island—hurriedly called for military reinforcements from the mainland. However, the insurgents were highly motivated and well skilled. In a showdown battle on the plain of Apokoronas in 1866, they forced the surrender of an entire Turkish army. Believing this had put an effective end to Turkish rule, the insurgents dispersed. At this other Turkish military units and civilians on the island took vengeance by attacking the monastery at Arkadi, which was a rebel repository of guns, ammunition, and gunpowder. In the midst of the attack, a powder magazine ignited and exploded, killing hundreds of civilians. From here the Turks invaded the White Mountains, ravaging large areas there before pulling out and returning to Turkey.

As Greece and the Western powers saw it, Crete was being oppressed by the Ottomans. Some military support was sent to the Cretan freedom fighters, whereupon Turkey threatened (December 11, 1868) to blockade Greece. Greece backed down in its support, but other Western powers met in Paris in 1869 and voted to recognize a degree of self-government for Crete. This, however, proved too little too late to forestall the CRETAN UPRISING (1896).

See also CRETAN REBELLION (1770); GREEK WAR OF INDEPENDENCE.

Further reading: David Brewer, *The Greek War of Independence* (New York: Penguin Putnam, 2003).

Cretan Uprising (1896)

PRINCIPAL COMBATANTS: Cretan Christians (aided by Greeks and with diplomatic intervention by Western powers) vs. Ottoman overlords

PRINCIPAL THEATER(S): Crete

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Christians constituted 90 percent of Crete's population, but the Ottomans administered Crete largely for the benefit of the 10 percent Muslim minority; the Christians rose in rebellion, appealing to Greece and other nations for support.

OUTCOME: Crete won limited independence under the supervision of Prince George of Greece.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Crete had endured many years of Ottoman overlordship, and the island's Christian majority had frequently rebelled (*see* CRETAN REBELLION [1821–1822], CRETAN UPRISING [1866–1868]). By the end of the 19th century the Ottoman attitude toward Crete had become cynical, with Sultan Abdul-Hamid II (1842–1918) appointing a Christian governor for the island only to remove him and substitute a particularly repressive Muslim. In a spasm of violence all too familiar on the island, Christians suddenly rose up in 1896, killing a number of Muslims and touching off something approaching full-scale civil war.

Turkish forces already stationed on Crete rushed to suppress the rebellion, even as Greece dispatched troops to assist the Cretan freedom fighters. The major powers of Europe attempted various forms of intervention aimed at keeping the peace in the eastern Mediterranean. Though these meddlings were at first chiefly diplomatic, they were also disparate, with Germany and Russia pushing for a blockade of Greece while retaining the current Turkish forces and Great Britain promoting a liberal measure of Cretan autonomy, the withdrawal of Greek forces, and the maintenance of some of the Ottoman force for policing purposes. But that was before the Muslims helped engineer the death of the British vice consul and before the accelerating hostilities had caused the GRECO-TURKISH WAR (1897). Ultimately, the Great Powers not only landed troops on Crete and bombarded insurgent positions, they forced the Turks to accept Prince George of Greece (1863–1913) as high commissioner for the island. With both sides fighting hard on the mainland, they were forced to withdraw their troops and let Crete become something like an international protectorate. Crete may have been free from the Ottoman yoke, but the Turks gave bitter sway to their frustration in one final massacre as they retreated. They slaughtered some 500 Cretans and 14 British soldiers at Canea before they fully evacuated the island.

Cretan Uprising (1935)

PRINCIPAL COMBATANTS: The Greek antiroyalist Liberal Party vs. the Greek royalist Populist Party

PRINCIPAL THEATER(S): Crete, Athens, Macedonia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Cretan-born Eleuthérios Venizélos, former premier of Greece, led a rebellion against the restoration of the Greek monarchy.

OUTCOME: The royalists won, leading to the restoration of George II to the Greek throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: No treaty; plebiscite of 1935 resulted in the restoration of George II and signaled the end of the uprising.

Cretan-born Eleuthérios Venizélos (1864–1936) had had a stormy career as a Greek politician, holding the premiership six times between 1910 and 1933. He was best known to the West for his opposition to Greek king Constantine I (1868–1923), who wanted to align Greece with the Central Powers during WORLD WAR I. Venizélos manipulated the country into the camp of the Allies.

In 1933 Venizélos was replaced as premier by Panayoti Tsaldaris (1868–1936), leader of the royalist Populist Party. Venizélos's partisans, known as Venizélists, rebelled against the government of the new premier, inciting violence in Athens and Macedonia as well as Crete. They sought to prevent the restoration of the monarchy—Greece had been a republic since 1924—which would come under the Tsaldaris government. The uprising was quickly put down in Athens and Macedonia by government forces under General George Kondylis (1874–1936), but in Crete the rebellion was more strongly entrenched. Nevertheless, it yielded before the end of the year, and Venizélos was sent fleeing for his life to France. There he died in 1936. But before the end of 1935, General Kondylis turned against Premier Tsaldaris, staging a coup that made him premier. It was under Kondylis that Parliament voted to recall George II (1890–1947) from exile. By plebiscite George II was restored to the throne on November 25, 1935.

Crete, Fall of (c. 1400 B.C.E.)

PRINCIPAL COMBATANTS: Crete vs. the Achaeans and Mycenae

PRINCIPAL THEATER(S): Crete

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: Achaean migration southward from Indo-Europe

OUTCOME: Annihilation of Cretan civilization

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Unknown

Cretan civilization, as the center of the Mediterranean world, heavily influenced the surrounding settlements,

none more so than Mycenae. As Mycenae began to emulate Crete more and more, the two eventually became rivals, and Mycenae challenged Crete as the preeminent Mediterranean civilization. At the same time, the Achaeans, a central Indo-European people, began their southward migration into the Mediterranean region. Near the dawn of the 15th century B.C.E., the Achaeans occupied all of the mainland cities and began raiding Crete. At the same time the Mycenaeans either joined the Achaeans in the invasion of Crete or supplanted them altogether in Cretan dominance. Regardless, by 1250 Cretan civilization was totally overrun, and Achaean-Mycenaean influence, a mix that would ultimately produce the civilization we have come to call Greek, completely occupied Crete.

Crimean War (1854–1856)

PRINCIPAL COMBATANTS: Ottoman Empire, Britain, France, Sardinia, Austria, and Prussia, vs. Russia

PRINCIPAL THEATER(S): The Crimea

DECLARATION: October 4, 1853, Ottoman Empire against Russia

MAJOR ISSUES AND OBJECTIVES: Russia claimed an exclusive right to protect Orthodox Christians within the territory of the Ottoman Empire; the Ottomans rejected this, and the Russians responded by invading Moldavia and Wallachia, whereupon the Ottoman Empire declared war. Fearing Russian seizure of Constantinople and the Dardanelles, the Western powers, led by Britain and France, allied themselves with the Ottomans.

OUTCOME: Russia renounced its role as protector of the Orthodox; the autonomy of Moldavia, Wallachia, and Serbia was guaranteed; doctrines upholding the principle of freedom of the seas were affirmed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Russia, 888,000; France, 309,268; Britain, 97,864; Ottoman Empire, 165,000; Sardinia, 21,000

CASUALTIES: Russia, 73,125 battle deaths; France, 20,240 battle deaths; Britain, 4,602 battle deaths; Ottoman Empire, 20,900 battle deaths; Sardinia, 28 battle deaths; many more soldiers died of illness, for a total of 615,378 dead on all sides.

TREATIES: Treaty of Paris, March 30, 1856

The Crimean War is noteworthy on at least two counts: first, as the only European war Britain fought after the conclusion of the NAPOLEONIC WARS in 1815 and before the opening of WORLD WAR I in 1914, and second, as a

showcase of logistical incompetence and poor generalship on all sides.

The war began as a dispute between Russian Orthodox priests and French Catholics over who had precedence at the holy places in Jerusalem and Nazareth. After the dispute turned violent, Russia's czar, Nicholas I (1796–1855), asserted his nation's duty and right to protect Orthodox Christians as well as Christian shrines in the Holy Land and elsewhere within the Ottoman realm. To show that he meant business, Nicholas invaded Wallachia and Moldavia, which were then part of the Ottoman Empire. On November 5, 1853, a Russian naval squadron attacked and destroyed a Turkish flotilla off Sinope in the Black Sea. British newspapers reported—falsely—that the Russians had purposely fired on wounded Turkish sailors. Presumably, the news reports were planted by the British government, which wanted an excuse to declare war on the Russians in order to forestall their domination of Constantinople and the Dardanelles Strait. For his part, French emperor Napoleon III (1808–73) was eager for a war that would give him an opportunity to emulate the military prowess of his uncle, Napoleon I (1769–1821). Moreover, he felt an obligation to protect the French monks in Jerusalem. Thus, each for their own reasons, Britain and France allied themselves with the Ottoman Empire against Russia.

A combined British and French fleet sailed into the Black Sea and ordered the Russians to withdraw from Wallachia and Moldavia. When Russia refused, war was declared. Austria allied itself with Prussia and, securing Ottoman permission, invaded Moldavia and Wallachia, driving the Russians out by the summer of 1854. This should have brought an end to the war, but Britain and France decided that the major Russian naval base at Sevastopol was a threat to the region and to freedom of the seas. Accordingly, in September 1854 a combined expeditionary force of British, French, Sardinian, and Turkish soldiers landed on the Crimean Peninsula and moved against Sevastopol. The principal British commander was the superannuated Fitzroy James Henry Somerset, lord Raglan (1788–1855), who had not seen service since the Battle of Waterloo.

By the time the allies landed at Calamita Bay on September 13, 1854, many had fallen ill with cholera and dysentery; disease would prove the deadliest foe in this war. The landing was managed poorly, and the British were particularly disorganized. Fortunately for the allies, the landings were unopposed. Three rivers lay between Calamita Bay and Sevastopol. At the second of these, the Alma, a Russian army under Prince Aleksandr Mentschikoff (1787–1869) took its stand. Not only did the Russians enjoy superiority of numbers, they commanded a narrow pass and held ground that was well defended. It should have been an easy victory for them, but in the confusion of battle they misread the strength of the Highland

Brigade. These superbly trained troops conducted a fighting advance, firing while advancing. It was a maneuver unknown to the Russians, who panicked and fell back. Thanks to the Highlanders, the Battle of the Alma became a Russian rout.

Defeated, the Russians retreated inland and, as the siege of Sevastopol began, they regrouped along the British flank. As the British and French laboriously prepared their siege works, the Russians struck against the British right flank. Once again, it was Colin Campbell's (1792–1863) Highlanders who drove off the first wave of Russian cavalry, but an even larger body of Russian cavalry advanced against the British headquarters. The British cavalry was led by General Sir James Scarlett (1799–1871), who ordered a charge into the much stronger Russians. Tactically, it approached being a suicide mission, yet its ferocity and execution overwhelmed the numerically superior Russians, who retreated.

The battlefield at Balaclava was extremely hilly, and Lord Raglan was anxious to gain the high ground. Accordingly, he ordered George Charles Bingham, lord Lucan (1800–88), the commander of the cavalry, to regain the heights at any cost. Because infantry support failed to materialize, Lucan refused to move. When the Russians began to remove the guns they had captured from British positions, Raglan demanded that Lucan prevent their removal—again at all costs. Lucan in turn ordered the Light Brigade, led by James Thomas Brudenell, lord Cardigan (1797–1868), to take the lead. The Light Brigade advanced into a trap of massed Russian infantry and cavalry on both sides of the valley and ahead of them. When Cardigan protested the folly of charging an unassailable position, Lucan reminded him that his orders came directly from Lord Raglan, the commander in chief. Without further protest, then, Cardigan ordered the bugler to sound the charge, and the Light Brigade advanced into what Alfred, lord Tennyson (1809–92), in his famous poem "The Charge of the Light Brigade," would call the "valley of death." Of the 673 men who advanced, fewer than 200 returned, and most of these were wounded.

The British claimed the Battle of Balaklava as a victory, but, in fact, they had failed to dislodge the Russians from the strategic position of the Causeway Heights. Nevertheless, the principal Russian forces had been flung back. The Russians counterattacked at the Battle of Inkerman, which was fought largely hand-to-hand in a thick fog. A slugfest, the battle resulted in yet another Russian retreat. From this point on the Allies advanced slowly upon Sevastopol, enduring, as they inched forward, a bitter winter. The great scandal of the war was the corruption, heartlessness, and general incompetence of the British commissary department, which failed properly to clothe, feed, and shelter the freezing troops. It was in this context that the British nurse Florence Nightingale (1820–1910) campaigned so vigorously for sanitary and

decent treatment of the sick and wounded at the hospital in Scutari.

In the meantime, Malakov and Redan, the two main Russian fortifications overlooking Sevastopol, fell on September 8 and 9, 1855. This led to the fall of Sevastopol itself, whereupon Czar Alexander II (1818–81), who had succeeded his father, Nicholas I, opened peace negotiations—even as the war continued to rage in the Caucasus. The Russian siege of Kars, an Ottoman fortress, proved successful, the Turks succumbing mostly to starvation and disease. However, British and French naval bombardment of Russia's Baltic fortresses continued unremittingly, and Alexander at last agreed to the Treaty of Paris, signed on March 30, 1856.

Russia relinquished its self-proclaimed role as protector of the Orthodox in the Ottoman realms, and the Russians as well as the Turks agreed to recognize self-government in Moldavia, Wallachia, and Serbia. Issues relating to domination of the Dardanelles were also resolved, with all sides agreeing to recognize a general principle of freedom of the seas.

Cromwell's Irish Campaign (1649–1652)

PRINCIPAL COMBATANTS: Protestant forces of Oliver Cromwell (Parliamentary Army) vs. Royalist-Catholic Confederacy

PRINCIPAL THEATER(S): Ireland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Cromwell sought to suppress Catholic opposition in Ireland during the Second English Civil War.

OUTCOME: Submission of Catholic forces in Leinster Province in Ireland, followed by general submission to parliamentary government.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Parliamentary Army, 12,000; Royalist-Catholic Confederacy, 8,700

CASUALTIES: Parliamentary Army, 1,900+ killed or wounded in battle, in addition to about 2,000 dead from disease; Royalist-Catholic Confederacy, 9,200 killed (some by execution) or wounded

TREATIES: Articles of Kilkenny, May 13, 1652

Oliver Cromwell (1599–1658) is usually given the lion's share of credit for the English Parliament's subjugation of

Ireland between 1649 and 1652. His magnetic leadership, political determination, careful logistical preparation, and lightning military strokes played an unquestioned role in the ultimate victory. But it is sometimes forgotten that the groundwork for that victory had been laid over a period of several years by other commanders. Nor was the conquest ultimately secured until more than two years after the lord lieutenant himself had departed from Ireland.

The government of the English republic justified its invasion of Ireland on three grounds: 1) to reclaim it as an English possession; 2) to avenge the slaughter of 12,000 English settlers in the revolt of 1641; and 3) to prevent its becoming a royalist base of operations against the republican regime.

When the invasion was finally launched in 1649, Oliver Cromwell benefited from the political and military disunity of the Catholic Confederate forces. Their unwillingness to cooperate with Protestant royalist leaders such as Murrough O'Brien (1614–74), earl of Inchiquin, and James Butler (1610–88), earl of Ormond, combined with inept leadership by Owen Roe O'Neill (1582–1649), commander of the Catholic army in Ulster, James Tuchet (1614–84), earl of Castlehaven, commander in Munster, and Thomas Preston (1585–1655), viscount Tara, commander in Leinster, eventually gave Cromwell the opportunity to win his major triumphs. In August 1647 Colonel Michael Jones (fl. 1649–52), leading a force of 6,500 men supported by nine cannons, took the offensive against Thomas Preston's Leinster army and shattered it at the battle of Dungan's Hill. In November Inchiquin met and destroyed the 8,200-man Confederate army of Munster. Only Owen Roe O'Neill's army in Ulster remained intact. However, the Catholic cause briefly took on a new lease on life with the return of Ormond to Ireland in September 1648. Negotiating a peace with the Confederates (excluding O'Neill), he and Inchiquin combined with Theobald Taaffe (d. 1677) and Thomas Preston to raise a joint force of 16,000–20,000 men. Enjoying the protection of a small royalist navy of 12 warships under Prince Rupert (1619–82), they prepared to besiege Colonel Jones in Dublin. But Ormond's coalition did not move fast enough. Already in May and June the first wave of parliamentary reinforcements from England had arrived, raising Jones's field strength to more than 8,000 men. Unhampered by the excessive caution that characterized Ormond, Jones launched a surprise attack on August 3, 1649, against Ormond's outpost at Baggarath, less than a mile from Dublin. News of the rout of these 1,500 defenders demoralized Ormond's main force at Rathmines, already weakened by Inchiquin's withdrawal to defend Munster from a rumored English landing. About 600 royalist troops and six cannons were lost, as well as many prisoners taken. It was a stupendous reversal of royalist fortunes, carrying with it incalculable psychological and strategic consequences. Had Jones not won the battle at Rathmines,

Dublin would have been lost, Cromwell would have had nowhere to land his forces, and the invasion of Ireland might have been indefinitely postponed. None of Cromwell's later victories would equal Jones's in importance.

During the previous six months Cromwell and the Rump Parliament had carefully laid the groundwork that enabled them to exploit fully the opportunity now handed to them. Conscious that Ireland was a graveyard for English military reputations, Cromwell had refused to accept the leadership of the expedition and appointment as lord lieutenant until he was guaranteed the manpower, money, and supplies necessary for success. Nor did he set sail before he had accumulated a war chest of £100,000, 12,600 troops, vast quantities of food, supplies, horses, and oxen, and an awe-inspiring artillery train of 56 great guns. It took 130 ships to deliver this invasion force across the Irish Sea. Without the formidable parliamentary navy, Cromwell could not have contemplated the invasion in the first place. The navy would continue to play a critical role in the conquest, not only ferrying men and supplies from England during the next several years but also neutralizing the small royalist navy under Prince Rupert.

Initially it was thought that Ireland could be conquered quickly on a budget of £20,000 a month. In the event the price of subjugation came to £6.8 million for the seven years from 1649 to 1656. In line with the policy of making the country pay for its own conquest, close to half the sum spent in Ireland was raised there. Indeed, it was the impossibility of conquering Ireland out of existing sources of revenue that led the republic in 1652 to adopt the fateful policy of paying its military and civilian creditors in Irish land and transplanting most of the native population to Connacht, the poorest of the four provinces.

There was another dimension to Cromwell's preparation of the Irish project in 1649: diplomacy. During the spring and summer of that year he directed much of his energy to sabotaging the royalist coalition under the marquess of Ormond. With Cromwell's apparent approval, Colonel George Monk (1608–69) engineered a three-month cessation of hostilities with Owen Roe O'Neill in Ulster. Equally important was Cromwell's personal success in detaching Roger Boyle, lord Broghill (1621–79) from the royalist cause. Finally, Cromwell negotiated the desertion of a number of officers from the earl of Inchiquin's army in Munster but persuaded them to postpone announcing their desertions until he could squeeze the maximum tactical benefit from them.

Cromwell's military plan was to take as many ports on the east coast as possible, starting with Drogheda in the north and ending with Cork in the south, before moving inland. His first target, Drogheda, was in a pathetically weak condition after Ormond's recent defeat, but it was still not an easy target. Sitting athwart the deep channel of the River Boyne, it was girdled by ancient stone walls that on the south side were 20 feet high and four to six feet

thick. Below the wall plunged a steep ravine. The key factor in Cromwell's success was his heavy artillery, with which, after two days of bombardment, he blasted two large holes in the south wall at its eastern extremity. The defenders had not been idle during the bombardment, but had dug three lines of earthworks arching back from the breaches that Cromwell was opening up. The first regiment that poured into the town was hurled back after a quarter hour of furious fighting. Not until Cromwell himself accompanied his men on foot for a second assault was the garrison overrun. Perhaps on account of this harrowing and perilous experience, Cromwell, once inside the battlements, ordered all the defenders put to the sword. Some of his men, having already offered quarter and accepted the surrender of the royalists, defied their commander's order and let their prisoners escape. Much of the massacre was actually perpetrated a day later in cold blood. The death toll was about 3,500 soldiers, civilians, and clergy.

There was a rational motivation for Cromwell's severity. He thought that the terrible fate of Drogheda would convince the Irish that further resistance was futile. Events would prove him wrong.

In the short term his next experience, at Wexford, seemed to vindicate the policy of terror. The news of Drogheda and of Cromwell's tremendous firepower demoralized the enemy before he even arrived. As soon as he had shattered the walls of the outlying castle, the town signalled its intention to surrender. But having taken the castle, the English troops lacked the patience to wait for the conclusion of negotiations. Without orders they at once launched an assault on the town itself and slew 2,000 soldiers, townsfolk, and priests.

After Wexford the victories came much more slowly. There were over 350 garrisons in Ireland, and many of them held out with great stubbornness against the invader. Every conquered garrison had to be occupied, which reduced the number of soldiers available to besiege the next garrison. A second factor continually drained the amount of manpower available to the invader: disease. The English soldiers were afflicted first by dysentery and then by bubonic plague. The "bloody flux," or "country sickness," as dysentery was variously known, had infected 4,000 soldiers by the end of September 1649 alone. Many died, whereas others were so weakened that they were good for little else than garrison duty. By its nature dysentery attacks violently and without warning. In November, for example, a large part of the army, under attack by Inchiquin's army, were forced to fight with their breeches down because of the "flux."

Owing to these combined factors Cromwell's field army declined to 5,600 men after Wexford. The ravages of dysentery, exacerbated by bitterly cold, wet weather, go far toward explaining Cromwell's first major setback, at Waterford in December. Waterford was the only Irish city

that successfully resisted a Cromwellian siege. Part of the credit went to the brilliant tactics of Colonel Edward Wogan (fl. 1650s), who successfully deceived Lieutenant General Jones's forces. More significant, however, was the fact that Waterford was the only city where Cromwell was deprived of his heavy artillery, the weather having made it impossible for him to haul his guns overland. Nevertheless, the resistance at Waterford showed that the terror of Drogheda and Wexford had already worn off. Far from preventing further bloodshed, the atrocities had sharpened the resolve of royalists and Catholics to resist the invader with every sinew.

The site of Cromwell's second major setback was Clonmel. In April 1650 he besieged the town and three weeks later unleashed his artillery. But the countermeasures taken by the defenders illustrate how quickly the Irish had learned to neutralize heavy siege guns. At the point where Cromwell opened a breach in the town's walls, the defending commander, Major General Hugh O'Neill (d. c. 1660), enlisted every available person within to build a twin set of makeshift walls out of rubbish, stones, timber, and mortar running back 80 yards from either side of the breach. At the end of the lane created by these two walls he dug a deep ditch and planted his own guns behind it.

Not suspecting these preparations, Cromwell ordered the storm to begin. It was May 16, 1650. The town was eerily silent, and there was no opposition as the men climbed through the gap in the wall singing a hymn. Before those at the front of the assault force realized that they were in a trap, the whole lane was crammed with troops. At that point O'Neill sent a small party to seal off the breach. His main force then fell on those trapped within with muskets, pikes, scythes, and stones. They also hurled long timber posts among the helpless invaders and let loose with their two artillery pieces from the end of the lane, cutting the English soldiers between the knees and the stomach with chained bullets. By the end of the day Cromwell had lost 1,500 men and still had not broken the town's resistance.

Later that night, however, O'Neill and his troops, their ammunition exhausted, slipped out of the town. At midnight the townsmen offered to treat for surrender. Ignorant of the fact that the defending soldiers had stolen away, Cromwell quickly granted the town easy terms. Only after he had made the agreement did he discover the deception. Angry as he was he stuck to his terms.

A week later Cromwell reluctantly left Ireland after a stay of barely nine months. The English Parliament required him at home to cope with the looming threat from Scotland. He had come to Ireland intending a sharp, quick conquest, but as his campaign wore on he found the Irish unexpectedly stubborn. Despite notable diplomatic successes in winning over the Munster towns under Inchiquin's control, and despite very able support from Sir Charles Coote (c. 1622–72) in Ulster, Lieutenant General

Jones around Dublin, and Lord Broghill in Munster, his victories became ever more costly. His initially well-paid and well-supplied army shrank alarmingly from the dysentery that tore through its ranks and from the necessity to leave behind defenders in every garrison that was overrun. Recruits were slow to arrive from England. Had it not been for defections from the enemy he would have had almost no men left to put into the field by the end of 1649.

In principle the war should now have been no more than a mopping up operation, for the Irish resistance appeared to be in an advanced state of disintegration, while bubonic plague now raged across the breadth of the country. The royalist coalition had for all purposes flown apart, and Ormond's authority was nugatory. The final disaster was the loss of Owen Roe O'Neill's former army under the incompetent leadership of its new commander, Bishop Eamon McMahon (fl. 1650s), at the hands of Sir Charles Coote in June 1650 at the Battle of Scarrifhollis. A total of 3,000 Catholic soldiers were lost. By the end of the year Ormond had left the country.

With the royalist-Catholic cause in ruins, why did the Irish not see sense and capitulate? In reality their leaders would have been happy to bring an end to the killing and physical destruction of their country but for one stumbling block: Cromwell's and the English Parliament's refusal to let them practice the Catholic religion. Ireland consequently descended deeper into the maelstrom of violence.

At the end of 1651 the Confederate Irish adopted a classic pattern of guerrilla warfare against the occupying power. Control of the garrisons paradoxically weakened Parliament's grip on the country. Pinned down by their responsibilities, the soldiers found it less and less safe to venture outside the walls of their fortresses. The enemy, whose numbers never seemed to diminish, were by contrast free to roam at large, wreaking havoc when and where they chose. In order to cope with "the motions of a restless, desperate enemy" the English army swelled to more than 33,000 men in 1651, nearly three times the number Cromwell had brought over in 1649. Yet as late as the summer of 1652 the parliamentary commissioners reported that they were still occasionally engaging enemy armies larger than their own.

In this guerrilla phase the parliamentary commanders strove to deny food to their enemy and so render them hateful to the rural population. Houses and grain were burnt and cattle destroyed. By 1651 four-fifths of the fertile land lay wasted and uninhabited. In 1652 Parliament began implementing its policy of replacing the native population with Protestant settlers. More than half the landmass of Ireland was transferred to English investors, adventurers, and soldiers. Yet so great had the devastation been that the conquerors found themselves occupying a graveyard. Destroying the population through starvation, sickness, or deportation had the effect of reducing the value of the land almost to zero.

Irish resistance formally ended with the signing of the Articles of Kilkenny on May 12, 1652. All who had had a hand in the massacres of Protestants in 1641 and unarmed people thereafter were excepted from pardon. The rest who had borne arms against Parliament had the option of leaving the country or submitting to the parliamentary yoke. No member of the popish clergy was allowed to reside in the areas controlled by Parliament. Yet the dream of eradicating Roman Catholicism and planting a Protestant yeomanry proved to be a chimera: Most investors and soldiers refused to settle there.

The guerrilla war continued unabated, and as late as 1655 the three provinces reserved to the English—Leinster, Munster, and Ulster—still swarmed with Tories, as the Irish rebels were called. Staggering quantities of treasure and manpower had been poured into the formal subjugation of Ireland. Yet Cromwell, the ruler of the English republic, had come no closer than his Elizabethan and Jacobean predecessors to bending the country to his will.

Cromwell's Scottish Campaign (1650–1651)

PRINCIPAL COMBATANTS: England vs. Scotland

PRINCIPAL THEATER(S): Scotland and northern England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Victory in the English Civil Wars

OUTCOME: The Scots forces were defeated, although Charles II and other Royalists refused to capitulate.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the Battle of Dunbar, parliamentary forces, 16,000; Scots, 26,000; at the Battle of Worcester, parliamentary forces, 30,000; Scots, 16,000

CASUALTIES: At the Battle of Dunbar, parliamentary forces, 30 killed; Scots, 3,000 killed, 9,000 captured; at the Battle of Worcester, most of the 16,000 Scots engaged were killed.

TREATIES: None

No sooner had Oliver Cromwell (1599–1658) begun to wind down CROMWELL'S IRISH CAMPAIGN than in 1650 Scottish Presbyterians proclaimed Charles II (1630–85), the son of England's king Charles I (1600–49), executed by Parliament, king of Great Britain. Charles II was crowned in Scotland on January 1, 1651.

In the meantime, in July 1650, seeking to put down the incipient uprising in Scotland, Cromwell led 16,000 (including 6,000 cavalry) Roundheads (parliamentary troops) across the border into Scotland and advanced on Edinburgh. He was opposed by 26,000 Scots (including 8,000 cavalry) led by David Leslie (1601–82). Instead of exploiting his overwhelming superiority of numbers, Leslie maneuvered defensively, instituting a scorched-earth policy to force the invading Roundheads to rely exclusively on the navy for supply. It became critical for Cromwell to force a battle as his army dwindled from hunger, exposure, and disease. By September his effective force was down to 11,000 men.

Cromwell withdrew his forces to Musselburgh and then to Dunbar. Leslie's Scots took up encircling positions on the surrounding hills in anticipation of a Roundhead evacuation. To Leslie's surprise, however, Cromwell attacked on September 3. The initial Roundhead cavalry charge at the Battle of Dunbar overwhelmed the Scottish right wing—a blow from which the Scots could not recover despite their superiority of number. A total of 3,000 Scots fell in battle, and another 9,000 were captured. The Roundheads lost no more than 30 men.

Leslie and the survivors retreated to Stirling, and Cromwell found himself in control of southern Scotland, including the route to Edinburgh. Cromwell's victory was followed by a lull in the campaign due to an attack of illness, which incapacitated Cromwell, and discord among the Scots, which prevented their attacking. In June 1651, however, Cromwell recovered sufficiently to lead his army to Perth. Here he lured Charles into a trap. Leading Leslie's army, Charles II marched south and then along the west coast by July 31. Cromwell dispatched his cavalry to follow the royalist forces, then sent his infantry from Newcastle to Warrington. The Midlands militia he ordered to march to the north. On August 2 Cromwell took Perth, then led the main Roundhead army on a forced march down the east coast, gathering militia reinforcements along the way. All four of Cromwell's forces converged on the Scots' position at Worcester, and Cromwell directed his engineers to throw bridges across the Teame and Severn Rivers. This done, Cromwell closed in to force the Battle of Worcester on September 3, 1651.

It was now the Scots who were outnumbered. Against 30,000 parliamentary troops, including 20,000 members of the powerful "New Model" army, the Scots fielded only 16,000. Most of the Scottish army was killed, although Charles II, having fought valiantly, escaped to Scotland.

Effectively, the Battle of Worcester brought an end to the Scottish campaign, although pockets of royalist resistance were active until the surrender of Dunnet Castle in May 1652 ended not only the war in Scotland, but the English Civil Wars.

Crusade, First (1095–1099)

PRINCIPAL COMBATANTS: European crusaders, Venetian adventurers, and Byzantium vs. Seljuk Turks
PRINCIPAL THEATER(S): Middle East and Asia Minor
DECLARATION: Called by Pope Urban II, 1095
MAJOR ISSUES AND OBJECTIVES: When Byzantium's holdings in Asia Minor fell to the Seljuks, the Byzantine emperor appealed to the West for help. Pope Urban II, seeking to distract the disputatious factions of feudal Europe, to recapture Jerusalem from the Muslims, and to promote the reunion of the splintered Christian Church, called for a crusade to the Holy Land. From then and throughout the next century, great armies from northern Europe made the hazardous journey to the east to fight in the name of Christ. A Muslim Middle East, which closed the 11th century rent by conflicts and incapable of joint defense, would over time become more united and effective in fighting their own jihad against these fanatical invaders.
OUTCOME: Answering the pope's call, the knights of Europe, the majority in this case French (thus they were "the Franks" to the Muslim world), were largely successful (without much help from the Byzantines) in defeating first the Seljuks and then the Fatimids and conquering the Holy Land, where they set up four Christian states ruled by some of the crusaders themselves. In the long run the Christian settlers who had accompanied the Crusades and occupied the lands they took in the Latin Kingdom (Outremer) lacked the forces to hold their gains securely in the Muslim world.
APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown
CASUALTIES: Crusader losses unknown; Seljuk battle deaths, more than 80,000.
TREATIES: None

The Crusades were inspired by the concept of pilgrimage, and in fact not until the 13th century would the word *crusade* be used to describe the venturings of European Christian soldiers into the Muslim-held Holy Land of the Middle East at the behest of the Byzantine Empire. Instead, they were called variously "the expedition of God," "the business of Christ," or just "the pilgrimage." But neither the First Crusade, conceived in 1095, nor any of those that followed, would ever be anything like an ordinary pilgrimage. These were military expeditions seeking by the might of the sword to expand the dominion of the Catholic Church and to bring an outpost in the east under the authority of

the pope in Rome. Thanks to the efforts of Europe's military leaders, soldiers, and missionaries, Jerusalem and a 600-mile strip of Syrian coast would pass for a time from Muslim to Christian control.

On a broader scale these would be the first undertakings in which the European nations as a whole cooperated. Little wonder the goal that first drew them together was a religious one, because religion permeated 11th-century European society. The idea of rendering service to God by conquering the Holy Land was an idea that could take hold of the imagination of generations of Europeans and fire the energies of the continent's warriors. These expeditions seemed of less consequence to the Muslim world. They were a mere complication in the vast stew of Middle Eastern society and politics. Ultimately, the continued attacks by a distant and alien world would drive the Muslim faithful, splintered into sects, more closely together and help ambitious Islamic leaders impose some unity and even orthodoxy on a divided area of the globe.

More than any of the religions and political orders of the day, it would be mundane pursuits that most benefited from the Crusades. They were especially stimulating for the commercial trading cities of Italy, foremost among them Venice. Because the ports of Byzantium and the Levant already served as key entrepôts in the trade between Europe and Asia, the arrival of Christian powers in the east would help spark worldwide commerce. As the financing grew to fund new trade, not only would exotic goods travel the world, but also new diseases and strange ideas. The world became a smaller but richer, better informed, less rigid, and less religious place.

HISTORICAL BACKGROUND

On the eve of the 12th century, the Muslim world was divided and disputatious. Since the prophet Mohammed's (570?–632) death in 632, his followers had swept through Arabia to make conquests as far west as Spain, beyond the Indus in the east, as far north as the Caspian Sea, and south of Egypt into Africa. In the process they had also split in two. Theoretically, the spiritual and political leader of all Islam was the caliph, which meant literally "the successor." But two rival dynasties—the Abbasids of Baghdad and the Fatimids of Cairo—claimed to be the true successors of the Prophet. The Abbasids were Sunni Muslims and in the majority; the Fatimids were Shi'ites. The Abbasid caliphate reached its peak in the ninth century, the Fatimid caliphate in the 10th, and by the 11th both dynasties had lost true power in the Middle East.

Nominally, the Abbasids ruled the huge stretch of land between the eastern Mediterranean and India, but they had lost much of their power to the Seljuk Turks, nomads from the steppes of Central Asia originally employed by the Muslims as mercenaries who had fought their way to control of Sunni lands by 1059. Recent converts to Sunni Islam, they had all the zeal of new converts

and, at least nominally, afforded the caliph great respect. But in worldly things the caliph had become the puppet of the sultan, which was the Seljuk term for war chieftain. And the sultan was gleefully planning the conquest of all Shiites and infidels.

Egypt's rich Fatimids had also fallen. Native Egyptians, as a rule, had no great love for combat, and as a result the Fatimid army employed as soldiers large numbers of slaves from diverse—usually pagan—origins. Egypt's slave-based military included Turks and Sudanese spearmen who fought in the Egyptian army alongside a mercenary cavalry made up of Berbers from North Africa. In 1060 a military spat sparked this volatile mix into 17 years of civil war. Joining the warring factions of the Fatimid army were Egypt's native Arabs, interfering Seljuks, and Sinai Desert Bedouins, who seemed always to be spoiling for a fight. When the war ended, Egypt was in the hands of an Armenian Muslim dynasty of slave origin, the Mamluks, who had slaughtered all other possible claimants. The Fatimid caliph Al-Mustansir (r. 1036–94) remained in office, but—as in Abbasid Arabia—he was a mere puppet. This caliph's strings were pulled by the Mamluks, who were the real power in Egypt.

Syria, which then included today's Syria, Jordan, Lebanon, and Israel, had been tossed back and forth by the Abbasids and the Fatimids for centuries. Among its dominant Arab-speaking peasants and townspeople there lived numerous Jews, Greek Orthodox Christians, and the members of heretical Christian sects such as the Armenians, Maronites, and Jacobites. The Muslim rulers generally tolerated Christians, though they had to pay heavy taxes and evidence outward respect for Islam. Outside the settled areas, in the vast Syrian desert, roamed the tribal Arabs.

The long civil war in Egypt and the Seljuks' intervention created chaos in Syria. Some cities were held by Seljuk warlords, others by local Arab families, Armenian (Mamluk) princes, former Fatimid governors now grown independent, and a mélange of adventurers. Along the coast a few strongholds remained loyal to Egypt, but Jerusalem changed hands three times before becoming a more or less permanent possession of the Seljuks. None of those creating this turmoil ever had a mind to harass or disrupt the lucrative Christian pilgrimages from Europe and Byzantium in the decades before the Crusades, though there was no question the instability in the region made such journeys more dangerous. Then, while engaged in Egypt's civil war and various conquests in Syria, the Seljuks struck a major blow to another great power in the region—the Byzantine Empire.

In 1071 the Byzantine emperor Michael VII Parapinates (r. 1071–78) marched eastward to face the increasingly troublesome Seljuks, and the two armies clashed at Manzikert in Armenia, which lay on the disputed eastern borderlands of Byzantium. The Seljuks shattered the Byzantine army and captured the emperor. The whole of

Anatolia (Turkey), a broad stretch of land in Asia Minor, fell to the ravages of the Seljuks. Soon a new Seljuk dynasty established itself in the area and declared independence from Baghdad. Constantinople itself now felt imperiled from this new Muslim sultanate—the sultanate of Rum—and pilgrims traveling, as was customary, to Jerusalem from Constantinople faced a much greater threat.

The fall of Anatolia was a fearful blow to an already troubled Byzantium, which was the successor state to the eastern half of the old Roman Empire. Byzantine holdings embraced Greece, much of the Balkans, and remnants of Asia Minor. Though the very name Byzantium conjured in western Europe notions of immense splendor, a series of weak rulers had left it dependent on an army made up of foreign mercenaries. And though it was beleaguered by its Muslim neighbors, Byzantium could not count on the loyalty of the Christian west, for the Orthodox Church in Constantinople and the Catholic Church in Rome had been drifting apart for centuries, fighting over doctrines and converts and which had primacy, before a quarrel about the wording of the Nicene Creed in 1054 led to open schism. The Orthodox patriarch and the Catholic pope had declared each other anathema. So Emperor Alexius I Comnenus (r. 1081–1118) was truly desperate when he appealed to Pope Gregory VII (r. 1073–85) for help.

When the pope, caught up in events closer at hand and unable to send troops, declined to help, the Byzantines had to go it alone. But Alexius, perhaps the most subtle politician of the time, managed with a mix of bribery, bluff, and treachery to keep his enemies in a state of discord even as they surrounded him. When Malik Shah I (r. 1073–92), the last undisputed sultan, died in Baghdad leaving behind too many sons, the resulting civil war threatened to destabilize the sultanate of Rum as well. This was an opportunity too good to pass up, and Alexius wrote to Rome for a second time requesting aid from the Christian west. It was not so much a plea for rescue as an amicable request for a contingent of professional soldiers who the Byzantines would pay to help them get back some of their lost territories from the Muslims. Alexius was probably not thinking about Jerusalem, because the Holy City had not been part of the empire's holdings for centuries. That was not, however, the message from Alexius that the new pope in Rome, Urban II (r. 1088–99), imagined he heard, or—to be more precise—not the one he wished to hear.

CALL TO ARMS

Western Europe in the 11th century consisted of several feudal kingdoms, and although some were already developing into integrated monarchies, most of the problems associated with feudalism—widespread vassalage, draconian inheritance customs, endemic private warfare, brigandage—were still prevalent. Europe was not in any way unified outside its Catholicism, and conditions in some parts of western Europe prevented some kingdoms from

playing major roles in the First Crusade. England, for example, was still adjusting to the NORMAN CONQUEST of 1066, Spain was preoccupied with its own Muslim incursions from Africa, and Germany was in the throes of civil strife resulting from long-standing strife with the pope. Consequently, most of the support for a crusade had to come from France, and France just happened to be the most feudal of the European kingdoms. Thus, it was no accident that the Muslims would refer to the first crusaders—and by extension, all crusaders ever afterward—as Franks.

By then, too, Europe was feeling the effects of a population explosion that had begun in the 10th and would continue on to the 13th century, when plagues, picked up in part from the Crusades and the increased trade they encouraged, began to decimate a Europe grown dense with people. Younger sons of the nobility, unless they married well, either entered the religious life or turned to soldiering and adventure. At the same time an economic revival was in full swing, undercutting centuries of feudal stagnation. Europeans were clearing forests, expanding frontiers, and organizing markets. In the Mediterranean Italian shipping interests were challenging the Muslim hegemony over trade. Even more significant, the Catholic Church was undergoing a general overhaul of its ecclesiastical structure aimed at allowing the popes to play a more active role in society. Although the Holy Roman Emperor in Germany was opposing papal reforms, Urban II was in a strong enough position to invoke two important ecclesiastical councils in 1095, at one of which—the Council of Clermont—he made his soon-to-be famous sermon calling for a holy war to reclaim Jerusalem from the Muslims.

Urban, like many in Europe, had heard the horror stories about the grievous suffering of Christians in Syria at the hands of warring Muslims. Likewise, he knew the tales of danger on the annual pilgrimages to the Holy Land, and he no doubt truly wished to succor his suffering fellow Christians in the east and diminish the jeopardy to pilgrims from the west. Even so, as the scion of a noble French family, Urban also knew the evils bellicose western Christians inflicted on one another every day, and it seemed to him that if the knights of Europe could be somehow persuaded to direct their energies against infidels in the east, rather than against one another, peace throughout the land would follow. Finally, Urban seems to have reasoned that if Byzantium were to become dependent on western arms, the unity of Christendom, east and west, could be restored.

Urban had a model in the *reconquista* of Spain. From the start, after Arabs had overrun Spain in the eighth century, the Christian areas that survived in the north had cherished the notion of taking back the south from the Muslim Moors. Also, from the outset the struggle had drawn in Christians from elsewhere. In 1085 the *reconquista* had achieved its first major success by seizing Toledo, the old

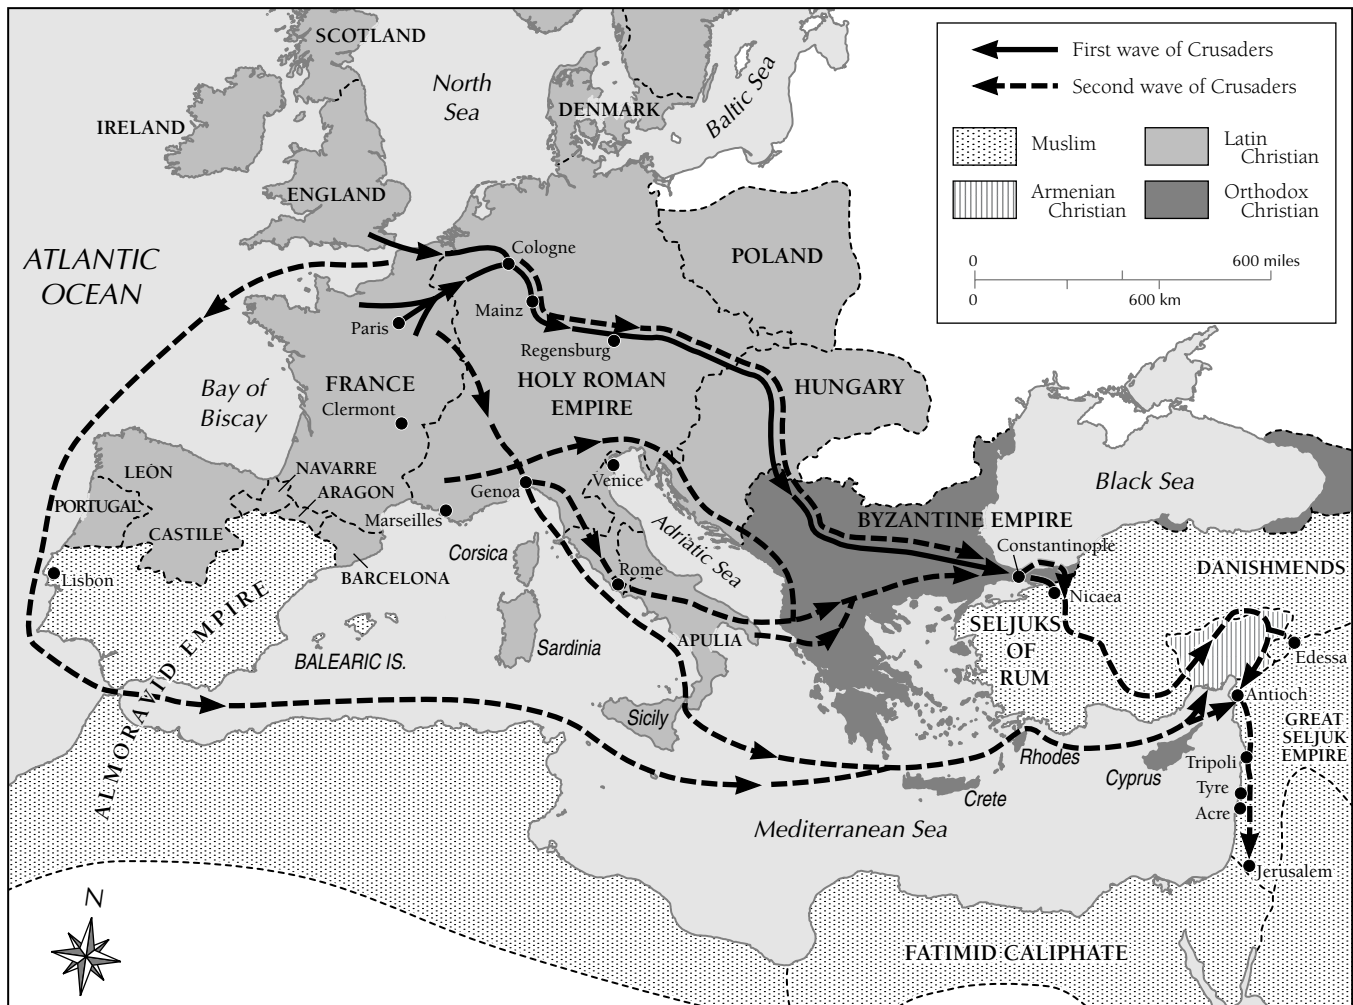

capital of the Spanish plateau. When he responded to Alexius's call to arms, Urban could rely on the Spanish tradition of a just war against Islam to legitimate his action. For that reason, Urban chose Jerusalem, the Holy City and the one Europeans knew best, by repute if not by pilgrimage, as the proper objective for a holy war, rather than the nearer Asian cities Alexius actually had in mind.

In his famous convocation at Clermont on November 18, 1095, Urban stressed the plight of eastern Christians, the molestation of pilgrims, and the desecration of holy places. He urged his listeners who were guilty of disturbing the peace to turn their warlike ways toward a holy cause. He emphasized the need for penance, for the acceptance of suffering, and for exalted motives. But he also promised that crusaders would be treated as pilgrims and become temporary churchmen, subject to church courts rather than the law of any land. He promised those who died a place in heaven and those who lived not only such salvation but also absolution for any sins they might commit.

The response was overwhelming, far greater probably than Urban had imagined. Everywhere in Europe could be heard cries of "*Deus Volte*" (God wills it), and those who joined up, came to wear a stylized cross on their tunics. As preparations began in both the east and the west, Alexius realized he was getting much more than the sort of auxiliary force he had imagined, and he would have somehow to provide for and police this new mass of Christian soldiery. In the West, leaders assembled their armies—such feudal lords as Raymond IV of Toulouse (c. 1038–1105), Robert II of Normandy (d. 1035), Hugh of Vermandois (1032–1120), Bohemond I (c. 1056–1111) and his nephew, Tancred of Normandy (d. 1148), and brothers Baldwin (1058–1118) and Godfrey of Bouillon (1058–1100). Those who took up the cross had to raise money, mostly by selling or mortgaging property, to buy equipment and fund the journey. And even then they would arrive in Byzantium woefully short of funds, dependant on Alexius to make up the shortfall. By August 1096 the main crusading force moved out under instructions from the pope.

COURSE OF THE CONFLICT

Meanwhile, a number of unruly bands of pilgrims, including some bearing arms and commonly called the People's Crusade, took off across Europe. The best known of these were led by a remarkable lay preacher called Peter the Hermit (c. 1050–1115) and his comrade at arms Walter the Penniless (d. 1096). It actually reached Constantinople ahead of the crowd after causing much mayhem in Hungary and Bulgaria on the way. Alexius was cordial enough, but he advised Peter to hold off on any fighting until the main force of crusaders arrived. However, Peter's rude following grew restless, and on August 6, 1096, the Byzantines ferried them across the strait. Soon Peter was back in the city begging for aid, and while he was there

First Crusade, 1095–1099

Turks ambushed and massacred his followers at Cibotus. Other disorderly bands of peasants, mostly from north-west Germany, committed a number of atrocities against Jewish communities on their way to Byzantium. These groups the Turks attacked and dispersed before they reached the Byzantine frontier, selling some into slavery and killing the others.

The main crusading force, perhaps 40,000 altogether, including knights, foot soldiers, and camp followers, began arriving in Constantinople in December 1096, and the last straggled in during April 1097. To the cultured and leisure-loving Byzantines it appeared as if the whole of barbarian Europe was descending on their city, and they worried about the true intentions of their not-quite-expected allies. Alexius exploited their staggered arrival with his usual skill, keeping them divided and dependent on the empire for supplies and using that leverage to exact homage from the majority of them. Most of the crusading lords swore fealty to him and pledged to turn over to him all the lands gained that once belonged to Byzantium.

When Alexius excused himself from participating in the venture he had initiated, the surprised crusaders, manipulated into swearing loyalty to a man who refused leadership in battle, recoiled from the Byzantines. The antipathy between the two cultures festered for most of the 12th century.

In any event, the crusaders took Nicaea in 1097, routed the Turks at Doryleum, and seized Antioch in 1098. Meanwhile, the Byzantine force accompanying the crusaders dwindled to a mere token, as Alexius and the main Byzantine army were busy in the crusaders' wake reestablishing Constantinople's control over the coast of Asia Minor. In fact, before Antioch fell Alexius had met Stephen of Blois (c. 1045–1102), son-in-law of William I the Conqueror (1027?–87) in Asia Minor on his way to Antioch. Alexius, having set out to help in the siege as he had promised, now persuaded Stephen that Antioch's cause was hopeless and turned back. Alexius's move may well have been justified tactically at that point, but it was a huge diplomatic blunder. When the other crusaders learned of

his decision, they felt free from any obligation to return Antioch to him.

In August 1098 the Fatimids had occupied Jerusalem, taking it back from the Seljuks, and so the Christian army faced a different Arab foe during the final drive of the First Crusade. On June 7, 1099, the crusaders, reduced to around 1,500 cavalry and 12,000 foot soldiers and short of supplies, camped before the walls of Jerusalem, where the governor was well supplied and confident he could withstand a siege at least until reinforcements arrived from Egypt. Instead, a month later, on July 15, Godfrey's men took a sector of the walls and opened the gates to Tancred and Raymond. The Muslim governor surrendered to them in the Tower of David, and he along with his bodyguard was escorted out of the city. Tancred had promised him protection for Jerusalem's Muslims, but the crusader could not control his Christian soldiers. They murdered all Muslims, men, women, and children, as well as the city's Jews in a general massacre.

Three years after setting out, the crusaders had achieved their goal. Though some may have joined the pilgrimage for the potential loot, some for the sheer adventure, and some out of religious devotion alone, most probably sustained their dedication, which was extraordinary, with the crusade's ultimate objective, liberation of the Holy City.

CRUSADER STATES

After the crusaders attacked a surprised Egyptian relief army and decimated it, confirming their hold on Palestine, most of them—having fulfilled their pilgrimage vows—went home. A few remained behind to govern the conquered territory. Amid arguments over the nature of the government—secular or ecclesiastical—Godfrey was elected to rule in the interim. Declining the title of king, he opted for the more modest “defender of the Holy Sepulcher.” Raymond, who had already turned down the crown, left immediately.

In December the confusion only grew worse when Bohemond showed up with Daimbert (d. 1109), the archbishop of Pisa, who was named patriarch of Jerusalem and probably had ambitions to rule the city. These ambitions, however, were effectively thwarted when Godfrey died, and his brother, Baldwin, was called back to Jerusalem from Edessa. Baldwin took the title of king in November 1100: Jerusalem would be no theocracy like Byzantium, but a feudal kingdom more like those in Europe.

The coming years would witness the formation of three other crusader states to the north of Jerusalem. The County of Edessa, a vaguely defined domain stretching to the upper Euphrates, was established by Godfrey's brother Baldwin before he left to become ruler of Jerusalem and was populated mostly by Armenians and Syrians. Baldwin bestowed Edessa, under his suzerainty, to his cousin Baldwin of Le Bourg (d. 1131).

Bohemond never returned Antioch to Byzantium as promised, but instead consolidated his hold over the city,

which was predominantly Greek, though some Armenians and Syrians were in residence. Bohemond only intensified the latent Latin-Greek hostility when he replaced the Greek Orthodox patriarch with a Roman Catholic. When Baldwin fell captive to the Muslims in 1100, his nephew Tancred became regent. A fourth crusader fiefdom was created around Tripoli under Raymond of Saint-Giles, who had been outmaneuvered in Jerusalem but who had always remained, unlike many crusaders, loyal to Alexius.

These four crusader states made up a fragile ribbon stretching 600 miles from the Red Sea to the headwaters of the Euphrates—at its narrowest point the crusader's Christian real estate in the Middle East measured less than 10 miles across. A strange fusion of east and west, they came to be known in the west variously as Outremer (Beyond-the-Sea), the Latin Kingdom(s), and, more generically, the Holy Land.

Crusade, Second (1147–1149)

PRINCIPAL COMBATANTS: French and German crusaders and Damascus vs. the Muslim forces of Zangi and his sons

PRINCIPAL THEATER(S): Damascus

DECLARATION: First formal Crusade papal bull, 1145

MAJOR ISSUES AND OBJECTIVES: Shocked by the fall of Edessa to aggressive new Muslim leaders in the east, Europe mounted a second crusade to reclaim the northernmost Christian kingdom in the Holy Land.

See also First CRUSADE for overview of issues and objectives of the Crusades

OUTCOME: The Crusade failed when crusaders, squabbling among themselves, decided not to attack Edessa, whose recapture was the point of their Crusade, but friendly Damascus, a far richer prize. When Damascus failed to fall, the crusaders retreated in defeat, having only driven the Muslims closer together in common cause against the crusader states.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Crusaders, 50,000; Muslim strength unknown

CASUALTIES: Numbers unknown, but very heavy among the crusaders

TREATIES: None

After the initial confusion of having not merely Christians, but also crusader states in its midst, the Muslim Middle East began to harden toward Outremer, as the crusader states were collectively called. At first some Sunnis imagined the crusaders had been summoned by the rival Fatimids to destroy them, the only true Muslims, but early in the 12th century Sunni scholars had come to understand that these Christian expeditions represented instead the mere expansion of “Frankish” (Muslims called all Europeans “Franks”) power that began in Sicily and Spain. By 1105 learned Sunni teachers were arguing that the Islamic world should unite and destroy them. Within a few years Muslim rulers, too, had begun to dream of a holy war against the infidels—a jihad, which was a concept stretching back to Islam’s early days of conquest but which had fallen into neglect since about the seventh century.

Clearly, to obliterate the crusader states any Islamic force that took up the call of jihad would need control of both Aleppo and Damascus, two Syrian cities of tremendous strategic importance, not least because they remained outside Christian control. But Damascus was in the hands of an independent ruler who had already allied himself with the crusader kingdoms, whereas Aleppo was in flux, a bone of contention disputed fiercely by various Muslim factions and by the crusaders themselves.

For years the Muslim world’s desire to rid itself of the crusaders was stymied by this stalemate before a new champion appeared to unite and lead the armies of Islam: Zangi (r. 1127–46), regent of Mosul. Nominally a vassal of the sultan in Baghdad, he, like many local rulers, had gained a certain autonomy with the disintegration of the Seljuks’ empire in Persia, and, like many other local rulers, he was determined to grab what he could. In 1128 he conquered beleaguered Aleppo. He would be the first of three celebrated in Islam for their jihads against the crusaders, the others being his son, Mahmud Nur al-Din (r. 1147–74) and his son’s able and brilliant general, Saladin (c. 1137–93) (see CRUSADE, THIRD).

His fight against the Latin Kingdom was all but an afterthought. A fighter, not a fanatic, Zangi, as Mosul’s ruler, was mostly preoccupied with Persian politics, and though for 20 years he harried Christians wherever he found them, his true goal was Damascus. In 1140 he besieged Damascus without success, but his reputation as a great champion of jihad led the Christians to recognize a common danger. This resulted in a Jerusalem-Damascus alliance, a kind of diplomacy by then typical of second-generation crusaders. Frustrated in Damascus, Zangi turned north, attacking a Muslim ally of Christian Edessa. When Joscelin III (1113–59), count of Edessa, and his army came to the rescue, Zangi switched his attention to this northernmost crusader state and quickly overran it.

The fall of Edessa, the first major city of Outremer to be lost, came as a shock to Christians both east and west, and urgent pleas for help soon reached Europe. In 1145 Pope

Eugenius III (r. 1145–53) issued a formal crusade bull, the first of its kind, with carefully worded provisions aimed at protecting the families and property of potential crusaders. The next year French king Louis VII (c. 1120–80) answered the call and took the crusaders’ oath, followed quickly by the even more influential Frenchman St. Bernard (1090–1153), abbot of Clairvaux, equally famous for his piety and his oratory. Summoning French nobles to Burgundy, the abbot inspired them with his eloquence to take up the cross before heading for Germany, where he recruited the emperor, Conrad III (c. 1093–1152), and his knights to join the fight alongside the French.
