On March 24, 1865, he launched a surprise attack on Grant east of Petersburg in a desperate bid to force the Union commander to contract the Union lines blocking a Rebel escape. Instead, Grant counterattacked and captured many of the Rebels; Lee's own lines grew so thin that they could not hold. With the arrival of Sheridan's cavalry from the Shenandoah Valley, Grant attacked the Confederate right on March 29, a move that two days later resulted in the most one-sided Union victory since the beginning of the Wilderness Campaign 11 months earlier. When Grant heard that George Pickett's two divisions had collapsed in surrender and rout, he ordered an assault all along the line for the next morning.

It came at dawn on April 2. The Army of Northern Virginia fought desperately as the Yankees punched through Confederate lines, trying to hold its inner defenses until dark in order to escape. Lee sent a message to President Davis to flee Richmond, and the next day Lincoln himself followed his troops into the former Rebel capital.

APPOMATTOX

By early April of 1865, Lee, reduced to 35,000 starving and despondent troops, was all but surrounded by Grant's Union army, which outnumbered him almost five to one. When Grant sent him a note under a flag of truce calling on him to surrender, Lee responded with a request for terms. Lee toyed with the notion of a breakout against Phil Sheridan's troops, who were blocking the road from his position at Appomattox Courthouse. But he finally faced the inevitable, rejecting suggestions from subordinates that his men take to the woods as guerrillas. Grant's terms were generous. Lee's men were free to go home, taking their horses, and the officers their horses and firearms. They would not be held accountable for their role in the war so long as they abided by the peace and obeyed the laws of their own localities.

The two men met at the home of Wilmer McLean—whose former house at Manassas had been hit by a Yankee shell during the war's first major battle—to sign the peace. The formal ceremony of surrender three days later was conducted with suitable dignity. When Stonewall Jackson's old brigade stepped forward to stack arms and surrender flags, the Union bugler blew a call to shift from order arms to carry arms. Thus the Union troops gave their Southern foes the U.S. Army's salute of honor.

Grant's advance against Petersburg, May-June 1864

United States Civil War: Trans-Mississippi Theater (1861–1865)

PRINCIPAL COMBATANTS: Confederate guerrillas vs. U.S. regulars and militia in Kansas and Missouri; Navajo, Apache, Comanche and other Indian tribe soldiers vs. U.S. and Confederate forces in Texas and the Southwest; CSA forces vs. U.S. forces throughout the trans-Mississippi region

PRINCIPAL THEATER(S): Eastern Kansas; Missouri; Texas and the Southwest

DECLARATION: See United States Civil War: Historical Background

MAJOR ISSUES AND OBJECTIVES: See United States Civil War: Historical Background

OUTCOME: See United States Civil War: Historical Background

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: See United States Civil War: Historical Background

CASUALTIES: See United States Civil War: Historical Background

TREATIES: See United States Civil War: Historical Background

This entry focuses on the United States Civil War in the trans-Mississippi region. See UNITED STATES CIVIL WAR: EASTERN THEATER for the causes and outbreak of the Civil War, major statistics relating to the war, and the war's resolution. For actions relating to the war in Alabama, Georgia, Kentucky, Mississippi, and Tennessee see UNITED STATES CIVIL WAR: WESTERN THEATER.

The Civil War in the trans-Mississippi American West was not like the epic struggle that raged east of the Mississippi. No great cities were lost or won, and no decisive strategic ends were achieved. Men fought, and men died—a great many of them Indians. In some places, most notably the far Southwest, withdrawal of Union troops to other battlegrounds gave Indians license to raid; in many other areas, residents took advantage of unsettled local conditions to settle old scores or to launch new attacks on Indians. These skirmishes led to Navajo wars and Apache wars that distracted Union forces in the West. Arkansas and Texas would join the Confederacy, but the rest of the trans-Mississippi West remained in the Union.

Kansas and Missouri had experienced a prelude to the war following the passage of the Kansas-Nebraska Act (see KANSAS-NEBRASKA BORDER WARS) and the violence that broke out in what became known as “Bleeding Kansas.” For the most part, the warfare along the Kansas-Missouri border had abated by 1860. But on both sides of the line there were those who had not forgotten the destruction of the late 1850s, those who longed for revenge, and those who sought, in the new outbreak of hostilities, an excuse to resume the midnight raids, the bushwhacking, and the reign of terror.

Because Missouri never seceded from the Union, it escaped the harshest aspects of the military occupation visited on the South after the war and during Reconstruction. But because of its lawless past and the deep-seated hatreds of its divided population, it spent most of the war under martial law and witnessed within its own borders a struggle harsher than Reconstruction ever could have been. For that reason, the Civil War was more destructive in loyal Missouri than in most of the states—except Virginia and Tennessee—that actually joined the rebellion, and the scars were long in healing.

MISSOURI AND KANSAS

After South Carolina fired on Fort Sumter in 1861, Missouri's pro-Southern governor, Claiborne Fox Jackson (1806–62), called a convention to debate the possibility of secession. Owing mainly to the efforts of conservative St.

Louis attorney and former Missouri Supreme Court justice Hamilton R. Gamble (1789–1864), the convention refused to pass a resolution to secede, and two armed camps quickly appeared in St. Louis. Street fighting broke out and resulted in 28 deaths. The Unionists, supported by the state's large German population, lined up behind Francis Blair (1821–75), a close friend and confidant of Abraham Lincoln (1809–65), who had been authorized by the president to go to St. Louis and organize a pro-Union Home Guard; and behind Captain Nathaniel Lyon (1818–61), a short fiery-headed former New Englander and veteran of the 1850s border war who trusted almost no one in Missouri but Blair. Southern sympathizers organized military forces—the Missouri Guard—which Governor Jackson placed under the direction of Sterling Price (1809–67), a veteran of the UNITED STATES–MEXICAN WAR and himself a former Missouri governor. Bowing to the “western” thinking of Missouri's moderates, who still hoped to avoid conflict, Lyon and Blair met with Jackson and Price at the Planter's House in St. Louis on June 11, 1861, to discuss the growing tension in the state. The meeting degenerated into an exchange of threats as both sides held firm and vowed to take up arms. Afterward, Jackson and Price fled St. Louis by rail to Jefferson City, Missouri's capital, literally burning their bridges—those across the Gasconde and Osage rivers—behind them. Once there, Jackson called out 50,000 state troops to “repel the invasion” of Union forces under Lyon and abandoned the capital. Before the day had passed, Lyon was in hot pursuit. Against the will of the vast majority of the voters, hostilities were under way in earnest.

Finding Jefferson City deserted, Lyon struck northwest and caught up with Jackson's State Guard a few days later on June 17, 1861, at Boonville. Price was ill, so Jackson took command of the ill-trained Rebel troops himself, ordering a reckless headlong charge, which Lyon easily routed. Jackson ran, Lyon became an instant hero, and Gamble was appointed the new governor of Missouri. But the general's glory was short-lived. Sterling Price's plan had been to lead the militia toward the Arkansas border, where he could join forces with the regular Confederate army, raising volunteers as he went. From Jefferson City, Lyon detached the Home Guards under Colonel Franz Sigel (1824–1902) to cut off the retreating Confederate irregulars. By the time Sigel came face to face with Price at Carthage, Missouri, on July 7, he was outnumbered four to one. When he charged anyway, Price brushed him aside and continued on his way. Meanwhile, Lyon was facing political problems, and Lincoln placed him under a new commander, John Charles Frémont (1813–80), the western adventurer familiar to Missourians as the son-in-law of the great, now deceased, U.S. senator Thomas Hart Benton (1782–1858).

While Frémont dallied in St. Louis, Lyon had to deal with Sterling Price, who was determined to gain control of the Missouri River and free the state from Federal captivity. Price's confidence soared when he defeated Lyon at

Wilson's Creek near Springfield on August 10, 1861. Lyon had desperately urged Frémont to send reinforcements, but Frémont instead ordered him to avoid the fight. With little love lost between the two Union officers, Lyon chose to ignore Frémont's orders, lost the battle, and died in the effort. Frémont, like many Northern commanders at the time, had been busy politicking, wrangling with Gamble, angering Missourians, and irritating the president. Declaring martial law, Frémont also proclaimed the emancipation of Missouri's slaves (something Lincoln would avoid for another three years) and began confiscating property of Southern sympathizers—actions that only encouraged the growing guerrilla warfare between Missourians. As a result, by the time Frémont finally decided to engage the enemy, Price was ready. Price's subsequent victory at Lexington on September 13 cost the blustering and militarily inept Frémont his perhaps undeserved reputation, and he was transferred from his short-lived command in the West to a short-lived command in West Virginia.

But radicals such as Blair and Lyon on one side, and Jackson and Price on the other, had always been at least a jump ahead of most Missourians, and when Jackson followed his victories with a general call to arms, few recruits appeared to rally to his cause. The call came after the pro-Southern members of the legislature had met in October in Neosho and, in the absence of a quorum, passed an act of secession. Although Missouri was immediately accepted into the Confederacy, Jefferson Davis (1808–89) was suspicious of Price—because of his former relationship with the Union general William A. Harney (1800–89) and possibly also because of reservations conveyed to him via Claiborne Jackson. Davis was reluctant to commit troops to help. Meanwhile, Union general Henry Wager Halleck (1815–72), who had replaced Frémont, ordered Brigadier General Samuel R. Curtis (1817–66) to drive the Confederates out of the state. When Curtis launched his offensive in February 1862, Price—without support from the Confederate States of America (CSA)—had no choice but to move south into Arkansas where his forces were soundly defeated at the Battle of Pea Ridge on March 7 and 8, 1862.

Price was transferred east of the Mississippi, and Jackson's rump government went into exile, first in Arkansas and then in Texas, by which time Jackson had died and had been replaced by his lieutenant governor, Thomas C. Reynolds (1821–87). After Pea Ridge, the Civil War in Missouri degenerated into the vengeful marauding of red-legged Jayhawkers and irregular guerrillas. But it was no less bloody and brutal for that. The first attacks had come in the summer of 1861. John Brown (1800–59) was dead, but his spirit lived on in crews of “Kansas irregulars,” which, acting loosely as advance guards of the Union army, sacked Harrisonville in July. Because there were no Confederate troops anywhere near the town, western Missourians understood that the terror of the 1850s had returned. At the outbreak of war, Charles R. (“Doc”) Jen-

nison's (1834–84) Independent Mounted Kansas Jayhawkers were commissioned as the Seventh Kansas Cavalry, and in the fall of 1861 they invaded Jackson County. The troops occupied the county seat and then sacked and looted at will. They murdered all they suspected of being Southern sympathizers and anyone else who dared to protest their actions or disobey their orders. On September 23, Sterling Price chased Jayhawk leader James Henry Lane (1814–66) back into Kansas, but the Jayhawkers returned as soon as Price moved his major forces to Lexington. “Red Legs” swept into the wealthy port of Osceola, stole some \$1 million worth of goods, and burned the city to the ground. Next they pillaged Butler and then Parkville.

Perhaps not surprisingly, when a handsome, 24-year-old named William Clarke Quantrill (1837–65) gathered around him a few Missouri boys and struck back, he was seen at first as a savior not just also by the state's slave owners and Southern sympathizers but by the entire sullen, silent, and abused population. Quantrill's slight build, his boyish wavy hair, and his heavy-lidded pale eyes belied his ruthlessness. The son of a schoolmaster, and a former schoolmaster himself, Quantrill had moved to Lawrence, Kansas, at the height of the border war, joined in several raids on Missouri, and even freed a few slaves. Now he changed sides and led his band against Doc Jennison's raiders in mid-December as they looted a farmhouse in Jackson County. Soon Quantrill was Missouri's most notorious bushwhacker, for which he received a commission as a captain in the Confederate Army. Quantrill was recruited by Major General Thomas C. Hindman (1828–68), commanding the District of Arkansas, under the Confederate Partisan Ranger Act of April 21, 1862. In addition to Quantrill, Hindman commissioned at least a dozen other Missouri officers early that summer to return to their respective areas and recruit both Confederate regulars and guerrillas who could be left behind.

Men such as William C. (“Bloody Bill”) Anderson (1840–64) and Cole Younger (1844–1916) joined Quantrill to wreak havoc on the Kansas border patrols and Missouri's Union militia. In March of that year, Quantrill's Raiders sacked Aubrey, Kansas, and in October, they hit Olathe. Quantrill stopped at nothing to accomplish his objective, including wearing captured Union uniforms to surprise the enemy. At Baxter Springs, Kansas, 65 of 100 Union troops were slain when Quantrill and his men approached them in Union blue. (Quantrill himself would be killed on May 10, 1865, by Union guerrillas as he traveled through Kentucky, reportedly on his way to Washington, D.C., where he had planned to assassinate Abraham Lincoln, slain the previous month by John Wilkes Booth [1838–65]).

As the depredations mounted on both sides, Union general John Schofield (1831–1906), replacing Henry Halleck and charged with pacifying the Missouri countryside, mulled over a plan by his subordinate, General Thomas Ewing (1829–96). Ewing's job was to guard the long

boundary between Kansas and Missouri, and he had grown to distrust the citizens he was bound to protect. He proposed to Schofield that they try to control the guerrillas by mass evacuation, removing everyone known to have aided or abetted the guerrilla cause. Although reluctant, Schofield approved the plan on August 14, 1862, with the provision that the evacuation be limited to the smallest number of people possible. Ewing had already rounded up the wives, mothers, and sisters of suspected guerrillas and jailed them in a decrepit three-story brick building in Kansas City. The same day Schofield approved his evacuation plan, the makeshift prison collapsed from overloading. Several of the women were severely injured, and five were killed, among them the sister of “Bloody Bill” Anderson, one of Quantrill's most effective guerrilla leaders. Immediately, the rumor spread that Ewing had engineered the outrage from the start.

With 450 men, Quantrill took his revenge on Lawrence, Kansas. Riding all night, the raiders hit the town at dawn with Quantrill's order to “kill every man big enough to carry a gun.” Moving from house to house, they murdered 150 men, often deliberately in front of their wives and children. Eighty widows and 250 orphans fled into the streets as Quantrill's men set more than 185 buildings ablaze. While \$2 million worth of property burned to the ground, Quantrill sat in the dining room of a Lawrence hotel, enjoying his breakfast and complaining that Jim Lane had escaped a Missouri hanging by springing from his bed in a nightshirt and running into the nearby cornfields. As suddenly as they had appeared, the guerrillas vanished. They lost only one man, a drunk who had lingered long enough to be gunned down by an Indian. A bereaved mob dragged his dead body into the street and tore it to pieces—which is what everybody in Kansas and, shortly thereafter, in the rest of the nation, wanted to do with Quantrill. Because Quantrill was unavailable, Jim Lane turned on those who were. He blamed Schofield. He blamed Governor Gamble. He blamed the people of Missouri. They were too lax, or too softhearted, or too treasonous, he said. Soon the radical press picked up Lane's complaint and lay the responsibility at the feet of Governor Gamble. The *Missouri Democrat* even charged him with personally supporting Quantrill.

Schofield rushed to the border to take charge of the situation, but he was too late. Without waiting for his commander, Ewing instituted a general evacuation policy, one much harsher than Schofield had authorized. Vindictively placing Lane in command of the evacuation, Ewing proclaimed General Order No. 11, perhaps the most controversial of the war. The edict ordered everyone in Jackson, Cass, Bates, and the northern half of Vernon counties who lived one mile's distance from a Union military post to leave their homes within 15 days. Those who could prove their loyalty might remain in a post in the area; all other people would be forced to move completely out of the military district. The order also required them to take all grain

and hay from their farms to the nearest military post. Their other crops and perishable goods would be destroyed.

Doc Jennison and his hated Kansas cavalry went to work enforcing the order. Ruthlessly driving farmers off their homesteads, Jennison forced many to leave without adequate clothing or transportation. The Kansas troops stole whatever furniture, household goods, and livestock the farmers left behind. Everything else the troops put to the torch. For 100 miles around, the wind swept the fires across the prairie and left in their wake only smoke-stained chimneys, blackened stumps, and the scorched earth. Within two weeks, much of the border area lay in ruins. For decades afterward, it was referred to acidly as the "Burnt District." By mid-September, 5,000 refugees a week were crossing the Missouri River at Lexington. Of the 10,000 people who lived in Cass County when the war began, only 600 remained. Bates County was hit even harder.

Union generals, whether battling Price's forces early in the war or hunting down guerrillas thereafter, were notoriously lax with their men, often allowing them unlicensed and indiscriminate raiding and pillaging. Like Major General John Pope (1822–92), who patrolled northern Missouri, they would move into an area, set up committees of public safety in each county, and fully expect communities to call out their citizenry as militia when trouble started. When they failed to respond, the Union commander automatically assumed Rebel sympathies. The county would be occupied by Union troops, and countywide levies would be placed on local resources to sustain them. If county officials could not meet the levies, the general simply ordered his troops to take what they needed, regardless of the owners' political leanings.

While he was still alive, Governor Gamble protested the abuses visited on Missouri civilians, and when he was still in command, General Halleck acknowledged the justness of Gamble's protest. Schofield too had made a real effort to curb excesses, but the truth was that maintaining order in a bitterly divided society during the middle of a civil war was no easy task. Honest differences of opinion that might once have caused little more than a heated debate now led almost inevitably to bloodshed. For example, even after the Union army began relying more heavily on the state militia, commanders found that militiamen often used their new power to settle old grudges, political or otherwise. Sensitivity to the rights of citizens is not the long suit of military men facing a hostile civilian population under conditions of civil war and martial law.

In the countryside, the abuses grew increasingly worse. A guerrilla, a militiaman, or an army regular might show up at a farm with demands. None of them considered property sacrosanct any longer, and to say life was cheap would be an understatement. As pillage and assassination became commonplace, Missouri's refugee problem assumed major proportions. Because it was big, safe, and well located, St. Louis turned into a mecca for the state's homeless masses. The first wave came in the winter of 1861–62 from the southwest.

Many died on the way in the bitter cold. Those who made it had often been robbed by various vigilante groups of the few possessions they had managed to cart from the homes burning behind them. To care for these victims of the war, the women of St. Louis formed the Ladies Union Aid Society to establish a number of refugee homes supported by voluntary contributions and compulsory assessments on Southern sympathizers. When Lincoln suspended the latter source because of the corruption associated with it, the federal government underwrote the costs of the homes. By then, houses like those in St. Louis had sprung up in Pilot Knob, Rolla, Springfield, and Cape Girardeau. Agents of the Western Sanitary Commission supervised them all. But by 1863, in the darkest of the war years, a vast number of Missourians had simply decided to pull up stakes and head farther west. By the thousands, they joined wagon trains leaving for California and points in between—anywhere, just out of Missouri.

In January 1864, Sterling Price, now something of a hero in the state, led one last invasion of Missouri. Accompanied by a colorful fellow Missourian, General Joseph O. Shelby (1830–97), a cavalry leader who rode a Missouri mule, Price had sent orders to guerrilla leaders to attack north of the Missouri River in order to draw troops from St. Louis and the south. Once again the terror raged. "Bloody Bill" Anderson led the most effective of the bands, dashing here and there through central Missouri a step ahead of pursuing Union troops and militia. On September 27, Anderson and 30 of his men rode into Centralia on the North Missouri Railroad. As they bullied and tortured Centralia's citizens, robbed its homes, and looted its stores, the Columbia stage rolled into town. On board was Missouri congressman James S. Rollins (1812–88). They pulled him from the stage, stuck a gun under his nose, and let him go only after he pledged his love of the rebellion. Hiding in a nearby attic, Rollins could hear the noon whistle of a train coming from the east.

The raiders blocked the tracks with railroad ties and then hid from view till the train had stopped. They jerked helpless citizens from the cars and relieved them of their valuables. Then they came across 25 unarmed Union soldiers headed home to Iowa on furlough. Anderson lined them up on the station platform, demanded they strip off their uniforms, and asked any officers to step forward. A sergeant, Thomas Goodman of the Missouri Engineers, defiantly did so. "Bloody Bill" Anderson laughed and ordered him to move aside. Then he turned to Little Archie Clemens, his second in command, whose pathological grin played permanently on his lips. "Muster out the troops," Anderson told him. The shots came at point-blank range, Clemens firing with a pistol in each hand, the others blasting away at will, murdering 24 Union soldiers. Guerrilla leader Cole Younger's 15-year-old cousin, Jesse James (1847–82), already a killer, watched as Anderson told Goodman he was free to go on home and enjoy his furlough.

Price and Shelby reached Jackson County before they were defeated at Westport on October 23 in a decisive three-day battle, a kind of engagement rare in the trans-Mississippi West's war history. The Centralia Massacre was much more typical, and therefore a more fitting end—a futile and senseless slaughter in a theater of the war that had not counted strategically to North or South for nearly three years. After Price recognized he was beaten and scurried south across the Arkansas border, the irregular Confederate bands began to break up. But robbery and murder had become a way of life for them, the only vocation a goodly number would ever know. Many of them teenagers when the war started, they had lost their innocence in the 1,162 battles or skirmishes fought on Missouri soil, 11 percent of all the engagements in the Civil War, the third-highest number in the entire nation—a savage passage to manhood.

TEXAS AND THE SOUTHWEST

At the start, Texas, too, was a major problem for the North. Pro-Union governor Sam Houston (1793–1863) was forced out of office when the state seceded in February 1861, and General David E. Twiggs (1790–1862), commander of the Union Army's Department of Texas, soon surrendered all property and supplies to the Confederates. Union forces enjoyed a temporary victory in October 1862, when a seaborne squadron captured Galveston. The town, a crucial Confederate supply point, was occupied by Union troops in December but was quickly retaken by Confederates aboard riverboats that had been converted to gunboats. By 1863, the Union threw a blockade around Galveston, which reduced but did not stop the flow of Confederate supplies. Combined with Admiral David G. Farragut's (1801–70) capture of New Orleans in April 1862, however, the blockade ultimately helped sever Texas and the rest of the Confederate West from the Confederate states east of the Mississippi.

The outbreak of the Civil War had a major impact on the Union army, especially its officer corps. In the West, 313 officers, one-third of the army's officer corps, left commands to take up arms for the Confederacy. "We were practically an army without officers," one Union soldier complained. Unionists in the West feared that the Confederates would actively cajole or purchase Indian allies in the struggle. In fact, the Confederacy did find some recruits among the Caddos, Wichitas, Osages, Shawnees, Delawares, Senecas, and Quapaws. Both the North and the South recruited some troops from tribes who had been removed to the Indian Territory, including the Cherokees, Chickasaws, Choctaws, Creeks, and Seminoles. The Cherokee leader Stand Watie became a Confederate general of considerable tenacity; his command was the last Rebel unit to lay down arms, fully a month after Appomattox. It is also true that for a time the Confederates armed the Comanches and Kiowas on the southern Plains. For the most part, however, Indian-white conflict during the

period of 1861 to 1865 had little to do directly with the white man's war against himself, except that in the far Southwest, the withdrawal of Union troops to fight elsewhere unleashed a torrent of Indian raids, and in many other places the massed presence of troops provided sufficient excuse for local settlers to bring the war to the Indians. Many soldiers and settlers believed—or convinced themselves—that the Indians had sided with the Confederacy.

Early on in the Southwest, Confederate lieutenant colonel John Robert Baylor (1822–94) took advantage of the Union's weakened position to sweep up from the Rio Grande into southern New Mexico Territory. Fort Bliss in El Paso fell to him in July 1861. He marched into the Mesilla Valley of New Mexico and took Fort Fillmore and Fort Stanton, whereupon Baylor grandiosely proclaimed the Confederate Territory of Arizona (which, in theory, included all of present-day Arizona and New Mexico south of the 34th parallel) and named himself governor.

Santa Fe was the headquarters of Union colonel Edward Richard Spring Canby (1817–73), commander of the Department of New Mexico. As the Texas invaders threatened, Canby had his hands full with Navajo raids in New Mexico and unauthorized, highly provocative New Mexican counter-raids. Indeed, the very people he was trying to protect, the citizens of New Mexico, repeatedly provoked the Navajos by raiding and taking captives, who were subsequently sold as slaves. In retaliation, the Navajos (as well as Mescalero Apaches, Utes, Comanches, and Kiowas, for their own reasons) ravaged the countryside. Learning that the majority of New Mexicans were loyal to the Union, Canby hastily sought to organize them as the First and Second Regiments of New Mexican Volunteers. This gesture, however, failed to bring the volunteers under Canby's control.

One episode suggests something of the tenor of white-Indian relations during the war. Lieutenant Colonel Manuel Chaves (1818–89), second in command of the Second Regiment, was placed in charge of Fort Lyon at Ojo del Oso on August 9 with a detachment of 210 officers and men. As the Canby Treaty of February 1861 had promised, Chaves's men began distributing rations, including liquor, to the Navajos in August and September. Along with the liquor came gambling. A series of horse races were run, the featured event being a contest between Chief Manuelito on a Navajo pony and an army lieutenant on a quarter horse. Many bets were laid. Early in the race it was apparent that Manuelito had lost control of his mount, which soon ran off the track. The horse's reins and bridle, the Indians claimed, had been slashed with a knife. Despite Indian protests, the "judges"—all soldiers of the Second New Mexican Regiment—declared the quarter horse the winner. The soldiers formed a victory parade into the fort, as the angered Navajos stormed after them, only to have the gates shut in their faces. One Navajo tried to force his way into the fort. A sentinel shot and killed him. Then Colonel

Chaves turned his troops on the 500 or so Navajos gathered outside the fort and opened fire. Thirty or 40 Navajos were killed. The rest fled and began a campaign of raiding.

After relieving Chaves and arresting him, Canby ordered John Ward, the Indian agent, to attempt to persuade the Indians to gather at Cubero, where they could be given the “protection” of the government during the impending Confederate invasion. Canby’s primary aim, of course, was to concentrate the Indians where they could be watched and kept from alliances with Rebel forces. Canby dispatched the celebrated Christopher Houston (“Kit”) Carson (1809–68), commander of the First Regiment of New Mexican Volunteers, to move vigorously against any Navajos who persisted in raiding. Carson was ordered to take no prisoners.

On the Confederate side, Baylor was having his own problems with the Indians. While his troops were suffering through an epidemic of smallpox, Chiricahua and Mimbres Apaches, convinced that the Union soldiers had permanently withdrawn from the region, intensified their raids in the new Confederate territory. Blue-clad or gray, the white men who had invaded their country were all fair game. Confederate authorities organized a company of Arizona Rangers to punish the Indians. This unit was soon augmented by a volunteer group calling itself the Arizona Guards. Neither was very effective at halting the raids.

If soldiers ostensibly under Canby’s command had created an outrage at Fort Lyon, Baylor soon proved that the Confederates could be equally vicious. Angered by the poor showing of the Arizona Guards, Baylor sent their commander a letter announcing that the Congress of the Confederate States had passed a law declaring extermination of all hostile Indians. Baylor ordered his subordinate commanders to kill all adult Indians and take the children prisoners. When Baylor’s order was made public, it not only caused great embarrassment to the Confederacy, but also destroyed Southern efforts to win allies among the tribes.

Baylor’s operations were followed during the winter of 1861–62 by a larger Confederate invasion led by General Henry Hopkins Sibley (1816–86) and aimed at seizing the Colorado gold mines (and eventually all of New Mexico). Once again, Indian troubles figured in the mix. Tucson, Arizona, which had come into existence in the decade before the Civil War as a mining boom town, lay deep in the heart of Apache country and depended for its survival on a garrison of Union troops. When these men were withdrawn at the outbreak of the war, the town and its strongly pro-Confederate miners were virtually besieged by raiding Apache bands. Late in January 1862, Sibley sent a detachment of 54 men to Tucson, whose citizens greeted the troops as saviors.

Sibley, in the meantime, turned his principal attention not to the Indians but to Colonel Canby, engaging his forces at Valverde, New Mexico, on February 21, 1862. Victorious here, Sibley next took Santa Fe and pressed on toward Fort Union, the best-provisioned Union

post in the Southwest. En route, at La Glorieta Pass, the Confederates encountered a Union force under the command of Colonel John Slough (1829–67). In a battle sometimes called “the Gettysburg of the West,” from March 26 to 28, Slough’s regulars, reinforced by Colorado volunteers, defeated the Texans. Major John M. Chivington (1821–94)—soon to become infamous for his unbridled policy of Indian extermination—led a flanking party that destroyed the Confederates’ supply train. Sibley’s invaders, who had seemed unstoppable, were forced to retreat from New Mexico.

Simultaneously with the victories of Slough and Chivington, James H. Carleton (1814–73) was sweeping through the Southwest. Carleton commanded a volunteer outfit, the First California Regiment of Infantry, which, when mustered into the Federal army, became known as the “California Column.” A colonel when he raised his regiment in California, Carleton was promoted to brigadier general before he reached New Mexico Territory. With the California Column newly designated by the War Department as Union regulars, General Carleton now pushed the Confederates out of present-day Arizona—fighting the westernmost battle of the Civil War, at Picacho Peak on April 15, 1862—and southern New Mexico. By the end of 1862, the short-lived Confederate Territory of Arizona was no more, and both Arizona and New Mexico were securely in Union hands.

Back in Texas, the Gulf Squadron had been unable to check Rebel blockade runners and in January 1863 had seen two Union navy vessels overpowered by Confederate river boats at Sabine Pass, Texas. Finally, the squadron managed to take control of the Mississippi River late in 1863 and cut Texas off from the South. West of the river, it became the job of Union troops to keep Confederate forces in Arkansas and western Louisiana from reinforcing their beleaguered compatriots to the east. President Lincoln had long believed cotton vital to the Union war effort, and grew frustrated when the unofficial and limited trade he had permitted with Southern cotton planters degenerated into scandalous abuse by speculators in the cotton trade. He accordingly turned General Nathaniel P. Banks’s (1816–94) Red River campaign, from March to May 1864, into a long cotton raid. Designed to take Shreveport and gain control over East Texas, the expedition became a farce. A joint U.S. Army-Navy action floundered in the tricky river waters, Confederate general Edmund Kirby Smith’s (1824–93) troops escaped defeat, and Rebels burned their cotton rather than see it fall into the hands of the Yankee soldiers on Banks’s clumsy boats. The Confederates routed Banks’s troops at both Sabine Cross Roads and Pleasant Hill; the overloaded Union armada was lucky to avoid running aground in a fast-flowing river.

Smith managed to keep his soldiers fighting with money from the sale of Southern cotton to Northern traders. He also used the money to purchase supplies from throughout Mexico, all under the winking eyes of the “10

percent” governments (so called because 90 percent of the populations governed by Union puppet regimes supposedly remained in rebellion) that Lincoln had set up in Louisiana and Arkansas. When General Canby took over from Banks in May 1864, he complained mightily about both the trade policy and the rump rule, but his complaints fell on deaf ears. Smith finally surrendered to Canby on May 26, 1865, about a month after Appomattox, and Galveston formally capitulated a few weeks later in June. The war in the West, finished years before strategically, finally came to an end in fact.

United States Civil War: Western Theater (1861–1865)

PRINCIPAL COMBATANTS: United States of America vs. the Confederate States of America

PRINCIPAL THEATER(S): Alabama, Georgia, Kentucky, Mississippi, South Carolina, Tennessee

DECLARATION: See United States Civil War: Historical Background

MAJOR ISSUES AND OBJECTIVES: See United States Civil War: Historical Background

OUTCOME: See United States Civil War: Historical Background

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: See United States Civil War: Historical Background

CASUALTIES: See United States Civil War: Historical Background

TREATIES: See United States Civil War: Historical Background

This entry focuses on the United States Civil War in Alabama, Georgia, Kentucky, Mississippi, South Carolina, and Tennessee. See UNITED STATES CIVIL WAR: HISTORICAL BACKGROUND for the causes and outbreak of the Civil War and major statistics relating to the war. For actions related to the war in Pennsylvania, Virginia, and the Carolinas, and the makeup of the two armies, the war's major commanders, and the war's resolution see UNITED STATES CIVIL WAR: EASTERN THEATER. For actions related to the war in eastern Kansas, Louisiana, Missouri, Texas and the Southwest, and for the role of Native Americans in the war, see UNITED STATES CIVIL WAR: TRANS-MISSISSIPPI THEATER. For actions relating to coasts and oceans see UNITED STATES CIVIL WAR: AT SEA.

GRANT'S EARLY CAREER IN THE WEST: BELMONT AND FORT DONELSON

If, before the Civil War, few people had heard of Robert E. Lee (1807–70), far fewer knew of Ulysses S. Grant (1822–85). Like Lee, Grant had served with distinction in the UNITED STATES–MEXICAN WAR, and he had been breveted captain. But whereas Lee, praised by that war's commander, Winfield Scott (1786–1866), as the best soldier he had ever met, rose steadily through the ranks of the peacetime army, Grant had settled into a dreary assignment at Fort Humboldt, California, where he acquired a reputation for heavy drinking, finally resigning his commission in 1854 to take up farming and then real estate. Failing miserably at both, he became a clerk in a Galena, Illinois, leather goods business owned by his father and operated by his brothers. It was the Civil War that rescued Grant from obscurity and made him the highest ranking officer in the American army since George Washington (1732–94) and, later, president of the United States.

From the beginning of the war, the attention of most Americans, North and South, was fixed on the East Coast. Being assigned to an army command in and about Virginia was prestigious, whereas leading soldiers into battle in the war's western theater—that is, west of the Appalachians—was regarded as something of a backwater assignment. In the opening months of the war, the Union entrusted command of operations in the area to John Charles Frémont (1813–80), a western explorer who had fought in the U.S.-Mexican War, but who was at best a marginally competent commander. Frémont did have sufficient intelligence to order the construction of a gunboat fleet, invaluable in a region watered by the Mississippi, Tennessee, and Cumberland Rivers, and he also elevated Grant to command the key position of Cairo, Illinois, where the Ohio River joins the Mississippi. Had not the North been

so pressed for officers following the exodus of its top personnel to the Confederacy, Grant might not have seen action so soon, if ever, and, as it was, he would literally have to fight his way on to the stage of world history.

Grant's first new step toward that stage was not an impressive one. Leading some 3,000 troops on riverboats out of Cairo across the Mississippi to Belmont, Missouri, he defeated Confederate forces under General Gideon Pillow (1806–78). It indeed seemed a victory—Grant suffered 607 casualties out of 3,114 engaged at Belmont, whereas the Confederates lost 642 (killed, wounded, and missing) out of 4,000 engaged—but besting Pillow was not the path to glory. Although the Union army became notorious for harboring large numbers of incompetent “political generals,” few could match in sheer ineptitude Confederate general Pillow, a Jefferson Davis (1808–89) political appointee. In any event, Grant allowed his men to revel in their achievement by looting the abandoned Confederate camp. At this point, General Leonidas Polk (1806–64), a close friend of Davis's (but a West Pointer and no political hack), trained his artillery against Grant's men, then massed some 10,000 troops below Belmont in an attempt to cut Grant off from his river transports. The Union commander was almost—and embarrassingly—trapped. But if Grant had made a terrible mistake in this, his first engagement with the enemy, he also demonstrated a remarkable presence of mind in recovering from it. Grant gave up the camp but preserved his command.

In September 1861, Kentucky ended its neutrality and declared itself for the Union, whereupon Polk invaded the state and occupied Columbus, situated on commanding bluffs above the Mississippi. Grant answered by taking Paducah, which controlled the mouths of the Tennessee and Cumberland Rivers. At this time (September), Davis appointed Albert Sidney Johnston (1803–62) (no relation to Joseph E. Johnston [1807–91], the ranking officer at First Bull Run), at the time considered the most capable of the Confederate army's officers, to command in the West. Johnston understood the vital importance of the rivers in the area. He secured the Mississippi by reinforcing Columbus, and he fortified the Cumberland and Tennessee Rivers, which Johnston figured to be principal highways of Northern invasion. He built Fort Henry on the Tennessee and Fort Donelson on the Cumberland.

In November 1861, the Union made some command changes of its own. Major General Henry Wager Halleck (1815–72)—known as “Old Brains,” because back in 1846 he had written a textbook called *Elements of Military Art and Science*—was put in charge of the area west of the Cumberland, and Brigadier General Don Carlos Buell (1818–98) was given command east of that river. Between them, Halleck and Buell commanded more men than Johnston, but neither of the Union generals was very aggressive, and even worse, neither liked the other. They consistently failed to coordinate plans and movements.

Nevertheless, the first assault on Johnston's army went well; Union general George H. Thomas (1816–70) defeated Confederates under the command of George B. Crittenden (1812–80) at Mill Springs, Kentucky, on January 19, 1862. After this, Halleck dispatched Grant with 15,000 men and a squadron of ironclad gunboats under Flag Officer Andrew Foote (1806–63) against Fort Henry on the Tennessee. That bastion fell quickly, on February 6.

Wasting no time, Grant turned to the east and marched to the Cumberland for an attack against Fort Donelson, again coordinated with Foote's gunboats. Johnston did not wish a repeat of Fort Henry, so he had reinforced the Cumberland River position with some 15,000 troops pulled out of Bowling Green, Kentucky. In consequence, Fort Donelson held out against the Union onslaught for three days, until Grant received reinforcements and was able to pound the position with artillery. Generals John Buchanan Floyd (1806–63), Gideon Pillow, and Simon Bolivar Buckner (1823–1914) argued over which of them would have the duty to surrender to Grant. General Nathan Bedford Forrest (1821–77), however, departed with his command to fight another day. Floyd and Pillow fled to evade capture, and Buckner surrendered.

BLOODY SHILOH

Grant and Foote had won a significant victory. With the fall of the river forts, General Johnston was forced to evacuate Nashville, leaving behind supplies the Confederacy could ill afford to lose. The strongly fortified and strategically critical position at Columbus was also abandoned. P. G. T. Beauregard (1818–93), transferred from Virginia, arrived as Johnston's second in command; his first assignment was to take the Columbus garrison south to join up with Johnston's troops—and whatever reinforcements could be found—at Corinth, Mississippi, a key rail connection. With luck, Johnston and Beauregard would be able to field about 50,000 men.

Of course, it was the job of the Union army to meet this combined force with overwhelming numbers. If Halleck and Buell managed their movements swiftly and efficiently, they could hurl some 70,000 troops against the Confederates' 50,000. Yet, the Union failed to capitalize on the gains it had made. Grant, having been promoted to major general, was still subordinate to Halleck. He urged “Old Brains” to press the pursuit of the retreating rebels, but Halleck and Buell moved slowly, giving Beauregard and Johnston ample time to meet and regroup at Corinth.

Grant established his camp with some 42,000 men at Pittsburg Landing, Tennessee, on the west bank of the Tennessee River, northeast of the Confederate position at Corinth, Mississippi. Nursing a badly sprained ankle, Grant set up his headquarters tent next to a log-built Methodist meeting house called Shiloh Chapel (after the Canaanite town mentioned in the Old Testament as the place where the Tabernacle and the Ark of the Covenant

were lodged). The name means “place of peace,” and that is precisely what Grant expected. Believing the Confederates would stay in Corinth for the present, Grant did not adequately defend his camp: no entrenchments, no cavalry patrols, and no remote pickets. On Sunday morning, April 6, Albert Sidney Johnston and P. G. T. Beauregard attacked.

Panic shot through Pittsburg Landing as surely and as violently as Confederate bullets. Many of the disorganized Union troops sought places to hide rather than fight. For the first 12 hours, the battle was a one-sided pounding of Confederates against Union troops, and by the end of Sunday the army in gray had captured the key position of Shiloh church and had pushed the Union lines nearly into the river. Union defeat seemed certain, but Sherman, whose troops had received the first full brunt of the attack and had broken and ran, now rallied and regrouped his forces.

Others also fought heroically to save the day for the Union. General Benjamin M. Prentiss (1819–1901) made an extraordinary stand on a wooded elevation in the heart of the Union’s position. The Confederate attackers called it the Hornet’s Nest, because of its stubborn resistance. Although the stand was costly—and the press later pilloried Prentiss for it—it bought time until the arrival of Buell’s Army of the Ohio and a division under Lew Wallace (1827–1905), who in 1880 would win fame not as a military commander but as the author of the novel *Ben-Hur*.

Despite their initial triumph, the Confederates suffered one loss more damaging than all the others, that of Albert Sidney Johnston. Then, on Monday morning, the reinforced Union army counterattacked and Beauregard, after a 10-hour fight, withdrew his army to Corinth.

Assessed in isolation, Shiloh might be considered a narrow Union victory or even a draw, but looked at in the broader context of its impact on Confederate operations in the western theater, the battle turned the tide of the war in that region in favor of the Union. This trend was reinforced in part by the ingenuity and initiative of another of Halleck’s generals, the surly and arrogant John Pope (1822–92). He had begun methodically attacking the Mississippi River defenses in March. The toughest of these was Island No. 10, at the extreme northwestern edge of Tennessee at the Kentucky line, which bristled with 50 guns and which occupied a seemingly unassailable double hairpin turn of the river. Flag Officer Foote thought it suicide to run past the Island No. 10 batteries with ironclad gunboats, let alone with unarmored troop transports. Pope was not stymied for long, however. He had his engineers dig a shallow canal connecting the Mississippi to a Kentucky stream called Wilson’s Bayou, which joined the river below Island No. 10. This enabled Pope’s transports simply to bypass the Confederate defenses, which they did on April 7. The canal was too shallow, however, for the ironclad gunboats Pope still needed as artillery support for his land force. But on April 4, under cover of night, one of Foote’s

captains, Henry Walke (1809–96), made a harrowing run past the island, and on April 6 another vessel made it past. Not only did Pope succeed in cutting off the Confederate line of retreat from Shiloh at Tiptonville, Tennessee, resulting in the capture of 3,500 men, but also by neutralizing the Mississippi defenses he opened the river downstream clear to Fort Pillow, which was destined to fall in June.

Shiloh was certainly the bloodiest battle fought to that date in North America. If it was effectively a Union victory, it came at the staggering cost of 13,000 killed, wounded, captured, or missing out of an army of 55,000. Confederate losses were 11,000 killed, wounded, captured, or missing out of 42,000. It was a bloodbath without precedent.

INVASION OF KENTUCKY

On August 14, 1862, shortly after Grant had won his victories over the rebel forts on the Mississippi, and while George B. McClellan (1826–85) was entrenching on Virginia’s James River after the failure of his Peninsula Campaign, Confederate major general Edmund Kirby Smith (1824–93) left Knoxville, Tennessee, to invade central Kentucky. Two weeks later, Confederate general Braxton Bragg (1817–76) left Chattanooga to join Kirby Smith in Kentucky. On August 30, Buell ordered the pursuit of these Confederate invaders.

The little town of Munfordville, Kentucky, was hotly contested between September 14 and 17, 1862. A premature Confederate assault on the town was repulsed with heavy losses on the 14th. Then, as the Union troops reinforced the town, Bragg mounted a much larger attack; by the 16th, he had surrounded the Union garrison there. It was Buckner who formally demanded and received its surrender.

The fall of Munfordville temporarily cut Buell’s communications with Louisville, but Bragg did not press this advantage and sought instead to avoid further battle until he united with Kirby Smith. Meaning to occupy Kentucky, he wanted to recruit troops in this border state and to establish supply depots before he engaged in large-scale combat.

In the meantime, however, on September 19, General William S. Rosecrans (1819–98), under Grant, had defeated 17,000 Confederate troops commanded by General Sterling Price (1809–67) at Iuka, Mississippi. Price withdrew southward and Confederate general Earl Van Dorn (1820–63) moved to join him. Believing, however, that Corinth, Mississippi, was lightly held by a handful of Union troops, Van Dorn attacked the town on October 3. To Van Dorn’s surprise, the town was actually held by 23,000 of Rosecrans’s troops (versus Van Dorn’s 22,000), and Grant quickly reinforced it with more. Union losses at Corinth were 2,520 killed, wounded, and missing; Confederate losses were 2,470 killed and wounded, with an additional 1,763 missing in action. Fighting was heaviest on October 4; the result was Van Dorn’s withdrawal to Holly Springs.

The defeat of Van Dorn cut off Bragg in Kentucky from any hope of reinforcement, and Buell maneuvered the now-vulnerable Bragg into battle at Perryville, Kentucky, on October 8. With Buell's combined forces amounting to 36,940 men, and Bragg having only about 16,000 available at Perryville, there should have followed a glorious Union victory. A victory it was, but hardly glorious. Buell was unable to bring all of his forces to bear, and although he pushed Bragg and Kirby Smith out of Kentucky and into eastern Tennessee, he failed to pursue the retreating Confederates. The opportunity for a truly decisive Union victory was again lost, and Buell was replaced as commander of the Department of the Ohio by Rosecrans.

Following Grant's initial victories against the Rebel forts on the Mississippi River, "Old Brains" Halleck, in overall charge of operations in this theater of the war, had made the mistake of dispersing his forces in order to occupy enemy territory. The effect of this was to forfeit the initiative to the Confederates and to assume a defensive posture. Had Halleck instead consolidated his forces—about 100,000 strong—he could have mounted a powerful offensive deep into Southern territory. The war would have been shortened.

As it was, by the middle of October the Union had at least beaten back the Confederate invasion of Kentucky, and Grant could turn his attention once again to the drive down the Mississippi. He understood that complete control of the river—and, with it, the final isolation of the western from the eastern Confederate states—required the capture of Vicksburg. But the Confederacy was also well aware of the strategic importance of Vicksburg. They transformed it into fortress town, heavily defended by artillery. Occupying a high bluff overlooking the river, it was virtually impregnable. Grant proposed an all-out combined water and land assault.

HOLLY SPRINGS AND CHICKASAW BLUFFS

In December, Grant established an advance base at Holly Springs, Mississippi, preparatory to a planned movement of some 40,000 troops down the Mississippi Central Railroad to link up with 32,000 riverborne troops led by William Tecumseh Sherman (1820–91). Confederate cavalry under Van Dorn raided Holly Springs on December 20, catching the Eighth Wisconsin Regiment asleep. After destroying \$1,500,000 worth of supplies at Holly Springs, Van Dorn raided one Union outpost after another. In the meantime, Forrest led his cavalry against the railroad, destroying 60 miles of it. The actions of Van Dorn and Forrest stopped Grant's advance, and Sherman, without Grant's support at Chickasaw Bluffs (just a few miles north of Vicksburg), failed as well.

Grant next took a leaf from John Pope's book and decided to dig a canal to avoid the guns of Vicksburg, as Pope had done to get behind the guns of Island Number 10. But heavy rains and high water during February 1863

prompted Grant to drop the project in March. Shortly afterward, Grant tried a more ambitious canal at Duckport. He managed to get a small steamer through the canal-connected bayous, but it soon became clear that the canal approach was impractical.

Grant ordered General James B. McPherson (1828–64) to open up a 400-mile route through Louisiana swamps, lakes, and bayous to a point on the Mississippi below Vicksburg. This laborious process was successfully under way when, in March, it was abandoned in favor of a more roundabout water route through the Yazoo Pass. The Confederates built a fort to block the pass 90 miles north of Vicksburg, and on March 11 the Yazoo Pass Expedition was also abandoned.

Yet another water route, through Steele's Bayou, was attempted. Admiral David Dixon Porter (1813–91) led 11 Union vessels through the difficult waterways, with Sherman's infantry following. On March 19, at Rolling Fork, Mississippi, due north of Vicksburg, Confederate forces stopped Porter's boats and might have destroyed the fleet had Sherman not arrived in the proverbial nick of time. While Steele's Bayou expedition was yet another failure, Sherman's rescue was brilliant and daring, his entire unit marching through the swampland at night, its path lighted only by candles inserted in rifle barrels.

JACKSON AND CHAMPION'S HILL

Grant probably had little hope that the preliminary expeditions against Vicksburg would succeed, but he understood the importance of keeping the offensive alive and keeping the enemy guessing. He kept his own superiors guessing as well. Grant had been ordered to move south once he had crossed the Mississippi to link up with forces under General Nathaniel Banks (1816–94) for a joint assault on Port Hudson, Louisiana. Learning that Banks was bogged down in his fruitless Red River campaign, however, Grant boldly decided to move immediately against Jackson, Mississippi, where he knew Confederate reinforcements were being assembled.

On May 14, 1863, corps under McPherson and Sherman took Jackson. This paved the way on May 16 for the bloody Battle of Champion's Hill, which fell to the Union after heavy losses on both sides. Fighting at Champion's Hill was the most severe of the Vicksburg campaign. Of 29,373 Union troops engaged, 410 were killed, 1,844 wounded, and 187 went missing. Of 20,000 Confederates, 381 died, about 1,800 were wounded, and 1,670 were missing.

The hard-won victories at Jackson and Champion's Hill put Grant in position for an assault on Vicksburg. He ordered a frontal assault on the city on May 19 but was repulsed. He tried again on the 22nd and was again repulsed with some 3,200 casualties. Grant settled in for a prolonged siege. From late May through the beginning of July, 200 heavy Union artillery pieces and siege mortars continuously pounded Vicksburg.

SIEGE OF VICKSBURG AND AFTERMATH

Vicksburg was the South's "Gibraltar of the West," a military fortress as well as a city populated by men, women, and children. The citizens of Vicksburg responded to the siege heroically. They dug caves into the yellow-clay hill-sides, then furnished them with finery dragged out of their ruined houses. Weeks crawled by under the pounding shells. The cave dwellers fought lice, rats, disease, boredom, and despair, eating their emaciated mules, horses, and dogs when all the food ran out. Surrender finally came on July 4, 1863, a day after the Union's victory at Gettysburg. With Gettysburg, Vicksburg was the most important victory of the war. The Mississippi River was now in Union hands, and the backbone of the Confederacy was broken.

In the aftermath of the Union victories at Vicksburg and Gettysburg, the pace of the war slowed to an exhausted crawl. Confederate guerrilla John Hunt Morgan (1825–64) led a dashing cavalry raid across Ohio, but it accomplished nothing. Half of Morgan's men were captured on July 19 at Buffington, Ohio, and Morgan himself surrendered on the 26th at Lisbon, Ohio. Slowly, the action shifted from Mississippi and Pennsylvania to central Tennessee and northern Georgia.

Ulysses S. Grant and his men may have been tired and worn after the fall of Vicksburg, but Grant was all for pushing on through southern Mississippi and Alabama. He could take Mobile; that would bring Bragg running down from Chattanooga, leaving that key city along the Moccasin Bend of the Tennessee River firmly in Union hands. Grant wanted to push on because there was no one to stop him.

But Halleck could stop Grant. He was a by-the-book general, and the book said that it was important for a victorious army to occupy the territory it took. This meant dispersing Grant's forces to various places in Louisiana (for an invasion of Texas), to Missouri, to Arkansas, and to garrisons in occupied Tennessee and Mississippi. As the action moved east from Mississippi and west from Virginia, concentrating in middle Tennessee, it came to center on General Rosecrans, who was at the head of the Army of the Cumberland. His opponent was Bragg.

CHATTANNOGA

"Old Rosy," as his troops called Rosecrans, had been sparing with Bragg since the end of October 1862 without taking the initiative. It is true that Rosecrans avoided disaster during the Battle of Stones River, Tennessee, during December 30, 1862–January 3, 1863, but he had lost ground to Bragg. Tennessee, Lincoln was well aware, harbored strong Union feeling, and seizing Chattanooga would make it possible to take Knoxville and thereby gain control of the entire eastern portion of the state.

After Grant crossed the Mississippi below Vicksburg on May 1, 1863, Union strategists realized that Bragg

would most likely want to send reinforcements to the beleaguered river stronghold. Rosecrans's mission was to bottle up Bragg in Tennessee to prevent Bragg's releasing any troops for Vicksburg duty, but the Union general did not get under way until mid-June. Still, his deliberation proved effective: His maneuvers forced Bragg to withdraw south of the Tennessee River.

Through a series of brilliant feints and deceptions, all carried out during 17 consecutive days of driving rain, Rosecrans moved his troops behind Bragg's right flank near Tullahoma. By July 4, after another flanking movement, Rosecrans forced Bragg, outnumbered, to retreat from Tullahoma and withdraw to Chattanooga. At this point, Rosecrans begged for reinforcements, in order to take Chattanooga. None were forthcoming, so Rosecrans decided to keep maneuvering; he executed a surprise crossing of the Tennessee River 30 miles west of Chattanooga. Were Rosecrans a Burnside, he would have launched a desperate frontal assault on Bragg's defensive positions in Chattanooga—and, like Burnside, he would have gotten his men slaughtered. Instead, Rosecrans marched through a series of gaps in Lookout Mountain, the long ridge south-southwest of Chattanooga, and targeted the Western and Atlantic Railroad. This was Bragg's supply and communications line to Atlanta. With it severed, Bragg would have no choice but to evacuate Chattanooga.

CHICKAMAUGA

Up to this the point, slow, deliberate Rosecrans had pulled off one of the most brilliant and remarkable campaigns of the war. After two and a half years of combat in which each small gain was paid for by a torrent of blood, Rosecrans had taken the prize of Chattanooga, shedding hardly any blood at all. But if there was one quality that dominated the strategic thinking of William S. Rosecrans, it was inertia—the tendency of a body at rest to remain at rest, or, if in motion, to stay in motion. Rosecrans was slow to start his campaign, reluctant to accelerate his campaign, and now that it was in full swing, he was not about to stop. He should have. He held Chattanooga now. He could concentrate his forces there, rest them, and resupply them, then resume the offensive against Bragg. Instead, Rosecrans kept going, his three tired corps becoming separated in the mountain passes.

Bragg, in the meantime, halted at La Fayette, Georgia, 25 miles south of Chattanooga, where he was met by substantial reinforcements, including two divisions commanded by James Longstreet ([1821–1904] newly arrived from the East). Reinforced, Bragg moved in for a counterattack. The place was Chickamauga Creek, in Georgia, just 12 miles south of Chattanooga, Tennessee. The date was September 19.

During the night before the battle, both sides shifted their troops. In the thick woods, neither side knew the other's position. Worse, neither side was fully aware of the

disposition of its own troops. With daybreak, Union general George Thomas ordered a reconnaissance near Lee and Gordon's Mill, a local landmark on Chickamauga Creek. These troops, led by Brigadier General John Milton Brannon (1819–92), encountered and drove back the dismounted cavalry of Nathan Bedford Forrest. Forrest called on nearby infantry units for help, and an all-out battle exploded. Every division of the three Union corps was engaged; the Confederates held only two divisions in reserve.

The fighting lasted all day and was some of the bloodiest in the war's western theater, more than making up for Rosecrans's relatively pacific capture of Chattanooga. Yet for all the bloodshed, neither side had gained an advantage by day's end. Applied to the site of the contest at Chickamauga, the word "battlefield" was a misnomer. A field it was not, but heavily forested and difficult terrain that had been turned into muddy soup by heavy rains. On the night before the second day of battle, both sides hastily tried to improve their positions, and Rosecrans's men dug in as best they could. That night, too, Bragg received reinforcements in the form of the rest of Longstreet's divisions.

At nine o'clock on Sunday morning, September 20, the Confederates attacked, and for the next two hours Union troops held them off.

Rosecrans was nothing if not a careful planner, but the terrain of Chickamauga could confuse any commander and confound any plan. The fact was that Rosecrans did not have an accurate understanding of how his own units were deployed. His object, by midmorning of this second day of battle, was to fill what he thought was a gap in his right flank. Accordingly, he ordered troops from what he thought was the left to plug it. But there was no gap. Worse, thinking he was moving troops from the left to the right, Rosecrans actually moved them out of the right flank, thereby creating the very gap he had meant to plug. At 11:30, Longstreet attacked at precisely the gap Rosecrans had created, hitting divisions commanded by Major General Philip Sheridan (1831–88) and by Brigadier General Jefferson Columbus Davis (1828–79), shattering them, and driving the Union right onto its left.

The Battle of Chickamauga was rapidly disintegrating into a disaster as bad as any that had ever befallen the Union army. Rosecrans and two of his corps commanders, Thomas Crittenden and Alexander McDowell McCook (1831–1903), unable to rally their routed forces, believed the entire army was being destroyed. They fled to Chattanooga.

But Major General Thomas did not run. He rallied units under General Thomas John Wood (1823–1906) and Brannon to block Longstreet on the south. Because Bragg had not held any men in reserve, he had nobody to send in to exploit Longstreet's initial breakthrough. In the meantime, Union general Gordon Granger (1822–76) deliberately violated his orders to remain in place to pro-

tect the army's flank and instead rushed to the aid of Thomas with two brigades. This action proved a splendid example of initiative on the field. Thomas—later hailed as the "Rock of Chickamauga"—was able to hold the field until nightfall and thereby save the Army of the Cumberland from destruction.

The name "Chickamauga" is derived from a Cherokee word meaning "river of death." Of 58,222 Union troops engaged, 1,657 were killed, 9,756 wounded, and 4,757 went missing. Confederate losses were 2,312 killed, 14,674 wounded, and 1,468 missing out of 66,326 engaged. Chickamauga was the costliest battle of the war's western theater. It was a tactical victory for Bragg, in that he had driven Rosecrans from the field. However, Confederate losses were greater than those of the Union, and even worse, Bragg had coordinated the attack poorly. Even after Longstreet found the nearly fatal gap in the Union line, the Confederate assaults were piecemeal. Without a reserve, the Confederate gains could not be exploited to the point of strategically decisive victory.

THE CRACKER LINE

Following Chickamauga, the Union's Army of the Cumberland was holed up in Chattanooga, to which Bragg's Confederates were laying siege. Starvation and capture were staring at the Union forces. In a sense, this desperate situation was a boon to the Union cause. It suddenly riveted Washington's focus on this neglected theater of the war. In consequence, two entire army corps were detached from the Army of the Potomac and dispatched west under the command of General Joseph ("Fighting Joe") Hooker (1814–79). In the war's most dramatic demonstration of the strategic importance of rail transportation, they were transferred from the banks of eastern Virginia's Rappahannock River to Bridgeport, Alabama, in the space of eight days, arriving on October 2. In the meantime, Sherman led part of the Union's Army of the Tennessee east from Memphis, and Grant was given command of all military operations west of the Alleghenies (save Nathaniel Banks's campaign along the Louisiana-Texas border).

Grant took charge as only he could. Through a series of complex operations planned and executed with great vigor and precision, the new commander efficiently punched through a Confederate outpost on the Tennessee River west of Lookout Mountain and opened up a supply route to beleaguered Chattanooga. By this time Major General Thomas had taken over command of the Army of the Cumberland from Rosecrans, and Thomas's miserable, hungry, lice-infested troops gratefully dubbed the new stream of supplies the "Cracker Line." The line, 60 miles long, was cobbled together of steamboats and scows, a pontoon bridge, and wagons.

On October 19, after turning the command over to Thomas, General Rosecrans quietly slipped away from the army. As for Bragg, his plan had been to starve the Yankees

out. When that seemed not to be working, he ordered raiding operations against the Union lines of communication (General Joseph [“Fighting Joe”] Wheeler’s Raid of October 1–9 and General Philip D. Roddey’s [1820–97] Raid of October 7–14), but these actions, while disruptive, were not decisive. Bragg was not beloved by his command, officers or men. Both Longstreet and Forrest reviled him for his failures at Chickamauga and for his long inaction at Chattanooga. The troops now laying siege against Chattanooga were almost as hungry as the city’s Union defenders.

LOOKOUT MOUNTAIN AND MISSIONARY RIDGE

Sherman did not reach the Union rallying point at Bridgeport, Alabama, until November 15, having been delayed by Halleck’s frustrating insistence that he pause to repair rail lines into Nashville. It was perhaps just as well, for now the defenders of Chattanooga, fed by the Cracker Line, were refreshed and ready to fight. Grant too was in position, and after a delay imposed by heavy rains, Sherman prepared to attack as well. The fight was set for November 24.

November 24, 1863, dawned in heavy overcast and fog. Joseph Hooker, due to a failure in command at Chancellorville, was now subordinate to Grant. Ordered to take Lookout Mountain, the 1,100-foot prominence standing guard over the Tennessee River just outside Chattanooga, Hooker commenced an uphill battle from eight in the morning until after midnight. Early on the morning of the 25th, soldiers from the Eighth Kentucky Regiment scrambled up to the summit and planted the Stars and Stripes. The sun had come out by then, and the spectacularly dramatic effect was not lost on war correspondents, who dubbed the Battle of Lookout Mountain the “Battle Above the Clouds.” Joe Hooker was “Fighting Joe” again, a national hero.

Sherman did not fare as gloriously. He took his units upstream on the Tennessee and hit the Confederate right but made little headway. Finally, on the afternoon of November 25, Grant ordered Thomas to lead the men of the Army of the Cumberland forward to take the Confederate rifle pits at the base of Missionary Ridge south of Chattanooga and just to the east of Lookout Mountain. Grant’s object was to put enough pressure on Bragg to force him to recall troops from Sherman’s front and possibly allow Sherman to break through.

The men of the Army of the Cumberland had been bottled up in Chattanooga for a long time, and they had been given a hard time by the soldiers under Hooker and Sherman, who took every available opportunity to remind them that it was because they had lost at Chickamauga that they had had to be rescued. Clearly feeling it had something to prove, the Army of the Cumberland advanced, took the rifle pits, thereby accomplishing the

mission Grant had assigned them—but then, with orders neither from Grant nor Thomas, kept going, charging up the steep slope of Missionary Ridge and sweeping all before them. Incredibly, the Army of the Cumberland broke Bragg’s line where it was the strongest, sending the Confederates into full retreat. Thus the Chattanooga campaign came to a victorious conclusion for the Union. The assault on Missionary Ridge was a “soldier’s battle,” an explosion of fury, frustration, and a burning desire to avenge defeat at Chickamauga.

THE ATLANTA CAMPAIGN

Most important towns and cities usually develop near great rivers or other bodies of water, but not landlocked Atlanta. It owed its existence to the railroads. By the Civil War, several key Southern rail lines converged on Atlanta. Certainly, then, the city and its railroads qualified as “war resources,” and Atlanta became Sherman’s objective. He began his advance from Chattanooga into Georgia on May 7, 1864. Confederate general Joe Johnston had assumed command of the Army of Tennessee from Bragg at Dalton, Georgia, a few miles below the Tennessee state line.

Although Sherman commanded 100,000 men against Johnston’s 62,000, he realized that the Confederate defensive position at Dalton was too strong to attack head-on. He sent a division under McPherson, preceded by a cavalry division under Brigadier General Hugh Judson Kilpatrick (1836–81), to force Johnston to turn his vulnerable flank as Thomas—“The Rock of Chickamauga”—proceeded frontally, and John M. Schofield (1831–1906) menaced the Confederate right.

At Resaca, Sherman once again maneuvered to envelop Johnston from the west, and once again Johnston wriggled out of a major engagement, although the armies skirmished during May 13–16. Johnston retreated farther south down the railroad, about 25 miles, to Cassville. He decided to concentrate and counterattack Sherman’s widely separated corps. He planned to send Generals William J. Hardee (1815–73) and Joseph Wheeler against McPherson and Thomas, and John Bell Hood (1831–79) against Schofield. Hood was a singularly courageous and daring commander, but he was not a sophisticated tactician. Deceived by the positioning of Union cavalry, he mounted his attack from the wrong direction, creating a delay that fouled the timing of Johnston’s intricate plan of coordinated attack. Johnston could do nothing other than order a withdrawal to Allatoona Pass, about 12 miles south of Cassville.

Once again, Sherman realized that the Confederates had withdrawn to a point too strong to attack frontally. His army was tired from so much fruitless pursuit; he rested his troops for three days, then undertook a series of maneuvers and skirmishing actions that pushed Johnston to Kennesaw Mountain.

The twin peaks of Big and Little Kennesaw are landmarks just north of Atlanta—uncomfortably close landmarks, as

far as the citizens of the city were concerned—but in withdrawing to Kennesaw, Johnston had found a very strong position indeed. Using tow ropes, he hauled up his artillery, which thereby commanded the railroad below and much of the level area between Kennesaw and Pine and Lost mountains.

On June 19, Sherman ordered his forces into a position from which he hoped to flank Johnston. Critical to his plan was getting troops south of the Confederate left and in secure possession of the road leading to Marietta. Johnston, however, grasped the situation as well as Sherman did and ordered Hood to defend the road at the farm of the widow Valentine Kolb. On June 22, Union forces found themselves checked by Hood at this position.

Then Hood did what he was all too apt to do—he acted rashly and with blind aggression. Instead of holding his strong defensive position, as ordered, he attacked. The result was heavy casualties in a totally unnecessary action. The result too was friction within the Confederate as well as Union armies. Johnston reprimanded Hood, who chafed under his commander's apparent reluctance to offer battle as the Yankees drew closer and closer to Atlanta. On the Union side, Sherman scolded Hooker, who, he said, had grossly overestimated the enemy at Kolb's Farm, thereby relinquishing the initiative to the rebels.

Sherman was in ill humor. Even as Johnston was being criticized in the Southern press for failing to make a stand and stop Sherman, so the Northern press began printing its doubts that Sherman was a "fighting general." Frustrated, pressured, Sherman decided to risk a frontal assault on Kennesaw Mountain.

The attack came at 8 A.M. on June 27. Miserable weather and tangled underbrush made the uphill assault even more difficult than it would have been under the best conditions. The attack failed with very heavy losses. Of 16,225 Federals engaged at Kennesaw, 1,999 were killed or wounded, and 52 went missing. Of the 17,333 Confederates engaged, 270 were killed or wounded, with 172 missing.

Sherman gained nothing at Kennesaw, but there was no such thing as retreat now. Johnston made yet another "retrograde" move, to the Chattahoochee River at the outskirts of Atlanta. With each withdrawal, Johnston picked up reinforcements. He was now stronger than ever, but he had allowed the enemy to approach the threshold of the city. Johnston had taken the measure of his man and knew that Sherman was no McClellan, Burnside, or Hooker. Johnston knew he could not beat Sherman, but what he could do was keep his own army intact and delay the taking of Atlanta long enough to cost Lincoln reelection, thereby bringing in a Democratic administration willing to negotiate a favorable peace.

Under the circumstances, it was a sound strategy. The only ally the South had now was time. If it could use up enough time, the North might lose patience. But the gov-

ernment of Jefferson Davis did not see it this way; it saw only a Yankee army on Atlanta's doorstep. On July 17, 1864, Davis replaced Johnston with Hood and ordered him to keep Sherman from taking Atlanta.

Ringed with earthworks, Atlanta was a formidable objective. Sherman's strategy was not to assault these but to cut the four rail lines into the city, thereby forcing the Confederates to come out to fight or retreat. While Schofield and McPherson approached the city from the east, Thomas was crossing Peachtree Creek, north of the city. But in executing his plan Sherman had left a gap, between McPherson's Army of the Tennessee and Schofield's Army of the Ohio on the one hand and Thomas's Army of the Cumberland on the other. It was at this gap that Hood chose to attack, and on July 20 the savage Battle of Peachtree Creek was fought. Fortunately for Sherman, Thomas successfully defended against the attack, which might otherwise have destroyed his army before he could join the armies of McPherson and Schofield.

Then, on the 22nd, Hood attacked McPherson's Army of the Tennessee, nearly flanking it by swinging around it to the east. This was the beginning of the Battle of Atlanta, and it was one of the hardest-fought engagements of the war. McPherson died in the struggle; his army was attacked simultaneously from the front and the rear. Still, the Union rallied and, with superior numbers, forced Hood back into his defensive works.

Having cut the rail lines north and east, Sherman brought his army down around to the southwest, to seize the Macon and Western Railroad. On July 28, Hood emerged again and attacked the Army of the Tennessee, now commanded by O. O. Howard (1830–1909), at Ezra Church, west of the city. In a hard fight, Howard repulsed Hood, inflicting heavy losses. Sherman had Atlanta within his grasp. Yet he also knew that in a sense he was failing. Johnston's (now Hood's) army was still intact. Worse, if Hood could keep Sherman out of Atlanta sufficiently long, Sherman realized, the Union rear was vulnerable to Sherman's nemesis, Nathan Bedford Forrest, who on July 15 had forced Union major general A. J. Smith (1815–97) to withdraw from Tupelo, Mississippi.

Then, on August 25, Sherman summarily halted bombardment of Hood's entrenchments. The next day, most of his army disappeared. Hood rashly concluded that Sherman had retreated. Perhaps it was wishful thinking.

What Sherman had done was to swing far to the south, cutting the Macon and Western Railroad, the last rail connection into the city. Forrest, far to the northwest, had indeed performed brilliantly, but even in defeat the Union force there kept him occupied, and he was unable to come to Hood's aid. On September 1, Hood realized that Sherman had swung south, and to avoid being trapped in Atlanta, the Confederate commander evacuated the city. On September 2, the bluecoats marched in. For his part, Sherman was not gentle with citizens who had chosen not

to leave their homes. He sternly ordered the city evacuated of noncombatants.

A NEW PLAN

With the citizens of Atlanta evacuated (only about half actually left), Sherman set about transforming the Southern city into a Northern fortress. Sherman's victory at Atlanta accomplished three things, two of which Sherman and Grant had foreseen: The South was deprived of a major rail hub and industrial city, and Lincoln was assured of reelection. Further, however, Sherman found himself unexpectedly rethinking basic strategy. He had previously concurred with Grant that the war would likely continue as long as the South had armies to fight it. Destroy those armies, he had been convinced, and the war would end.

Now, however, having taken Atlanta, he saw that the Confederacy was not merely weak but hollow. He therefore proposed to Grant a reversal of strategy. He would shift his principal objective away from the destruction of Hood's army; in fact, he would effectively ignore that army and, instead, advance with 60,000 of his troops southeast to Savannah in a "march to the sea." This, he proposed to Grant, would accomplish two immediate military objectives. First, it would cut the Confederacy in two, north and south, just as the victories along the Mississippi River had severed it east from west. Second, it would allow Sherman to come at Lee's Army of Northern Virginia from the south even as Grant continued to bear down on it from the north—a classic pincers movement.

But the March to the Sea would accomplish another, even more important, but less immediate, military objective. The Union soldiers would live off the land and would wreck or burn whatever they left, thereby adding to the Confederacy's economic ruin and to its psychological destruction. This would be total war, just as Clausewitz had conceived it. The armies of Hood and Forrest would be able to accomplish little; Sherman would demonstrate to the people of the North as well as the South that the Confederate army was powerless to defend the lives, homes, and property of the so-called Confederacy. After some soul searching, Grant approved Sherman's revised strategy.

ALLATOONA PASS

Early in October, leaving a corps in Atlanta to hold the city, Sherman chased Hood, who was trying to disrupt the Union army's greatly extended lines of supply even as Sherman was trying to pin him down for a fight to the finish. At Allatoona Pass, on October 5, Hood menaced a Union supply depot commanded by Brigadier General John M. Corse (1835–93). Hood demanded Corse's surrender—"to avoid a needless effusion of blood." The Union brigadier replied that he and his men were ready to shed blood "whenever it is agreeable to you." Sherman, in the meantime, signaled Corse: "Hold the fort." (The phrase immediately entered the language as a common figure of speech

and became the subject and title of a popular ballad of the day.) Corse held, and Hood withdrew.

At last, by the middle of November, the armies simply turned away from each other, Sherman to the sea and Hood toward Nashville. Hood's plan now was to work with Forrest to overwhelm the 30,000 men under Thomas, who had been sent to clear the Confederates out of Tennessee. This, Hood reasoned, would draw Sherman out of Atlanta to rescue Thomas. At the very least, it would halt Sherman's raid of the deep South. In the best-case scenario, it might even recover Tennessee for the Confederacy and give Hood a base of operations in Nashville, from which he could launch an invasion of Kentucky and knock at the door of Cincinnati. He might even be able to attack Grant's army from the rear, thereby relieving Lee and Richmond.

It was less a bold plan than a desperate and doomed one. In the meantime, on November 11, Sherman ordered everything of military significance in Atlanta to be destroyed. It was not a precision operation, and when Sherman marched out of the city during November 16, virtually all of Atlanta was ablaze.

FRANKLIN AND NASHVILLE

In Nashville, during early November, Thomas strengthened and augmented his forces to some 50,000 men. He was braced for an attack by Hood and Forrest. Hood had been advancing against Schofield, maneuvering him on November 29 into a vulnerable position at Spring Hill, Tennessee, that could have cut off his retreat from Columbia, Tennessee, to Franklin, just south of Nashville. But Hood's plans of envelopment failed, and Schofield's army continued its withdrawal.

At Franklin, on November 30, a frustrated Hood ordered a frontal assault on Schofield's well-defended position. The assault was both stupid and futile. Of the 18,000 men he fielded in this attack, more than 6,000 were killed or wounded. Schofield continued his withdrawal to Nashville, where he combined with Thomas's force. Hood had had fewer men than Thomas to begin with; now he had fewer still and was outnumbered two to one.

No one could doubt the courage of George Thomas, but, in contrast to Hood, Thomas did not confuse rashness with courageous action. He understood that he was in control of the situation around Nashville, and he took his time organizing an attack. When it was delayed by an ice storm, however, Grant, back in Virginia, was seized by doubt and became alarmed lest Thomas allow Hood to slip away. Accordingly, he dictated an order relieving Thomas of command; just before he transmitted it, during December 15–16, Thomas attacked, decisively defeating Hood. Although a brilliant rearguard action by Forrest prevented its outright destruction, the Army of Tennessee was driven from the field, routed, and finished as an effective fighting force.

SHERMAN'S MARCH TO THE SEA

During this period, Sherman marched southeast from Atlanta toward Savannah, Georgia, cutting a broad, burned swath of destruction and misery as he went, picking up so-called “bummers” along the way: freed slaves, criminals, land-based pirates, and out-and-out scoundrels who reveled in the bounty of looting and havoc. Attaching themselves to Sherman's columns during the March to the Sea, they partook in the looting and destruction visited by the Union army.

On December 22, 1864, Sherman's forces reached the Georgia port city of Savannah. The town surrendered without a fight. Shortly before Sherman's forces left Savannah to invade South Carolina, a fire broke out—apparently set by accident—and spread to a Confederate arsenal. It exploded, touching off a blaze that engulfed much of the city, despite the efforts of citizens, freed slaves, and Union troops to put the fires out.

On February 16, 1865, Sherman's army reached the South Carolina capital of Columbia. The mayor surrendered the city on the next day, whereupon fires broke out, razing half the town. Confederate general Wade Hampton (1818–1902), accused Sherman of deliberately burning Columbia to the ground. Sherman responded that the fires had been started by Confederates in an attempt to destroy valuable cotton bales in order to keep them out of Union hands.

On February 18, the day after Columbia was occupied, the Confederates abandoned Fort Sumter as Union troops closed on Charleston. This city had stoutly resisted all Union attempts to capture it, but now, with the interior of South Carolina a hollow shell, there was no point in making a stand. Charleston surrendered, and the Stars and Stripes were raised above Fort Sumter for the first time since April 13, 1861. There was no time for ceremony—Sherman needed to continue his drive northward, toward the rear of Lee's army—but on April 14, 1865 (a matter of hours before John Wilkes Booth (1838–65) murdered Lincoln), Major General Robert Anderson (1805–71), who had valiantly, if reluctantly, defended Sumter in the early spring of 1861, returned to raise over the fort the same flag he had taken down four years earlier.

United States Invasion of Panama (Operation Just Cause) (1989)

PRINCIPAL COMBATANTS: Manuel Antonio Noriega, the president of Panama, and his Panamanian Defense Force vs. the United States

PRINCIPAL THEATER(S): Panama

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In a climate of deteriorating relations between the United States and Panama's dictator, the United States supported an alternative Panamanian government, then invaded the nation to arrest Noriega on drug-trafficking charges.

OUTCOME: Noriega was apprehended, brought to the United States for trial, convicted, and imprisoned.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: U.S. forces, 24,000; unspecified number of Panama Defense Force (PDF) troops

CASUALTIES: United States, 19 killed, 303 wounded; PDF, 314 killed, 124 wounded, 5,313 taken prisoner; numerous collateral civilian casualties

TREATIES: None

The 1989 invasion of Panama was unique in American military history as an act of war essentially directed against an individual, Manuel Antonio Noriega (b. 1938), the president of Panama. In 1988, Noriega had been indicted by a U.S. federal grand jury for drug trafficking. Following this, the administrations of both Ronald Reagan (1911–2004) and George H. W. Bush (b. 1924) used economic and diplomatic sanctions to pressure the dictator

into resigning. When these failed, the United States, in the spring of 1989, deployed additional marine units and army and air force units to U.S. installations in Panama. Noriega failed to take the hint. In October 1989, a coup attempt against Noriega by members of the Panamanian army was put down by troops loyal to him. This failure was followed by several incidents of harassment against U.S. citizens and then by Noriega's issuance of a "declaration against the United States." Shortly after this call to arms, Panamanian soldiers killed an off-duty U.S. Army officer. The events precipitated, on December 19, 1989, the U.S.-sanctioned creation of an alternative government for Panama, led by President Guillermo Endara (b. 1936), who was sworn in by a Panamanian judge at a U.S. military base. Early the next morning, December 20, Operation Just Cause began.

It began when U.S. F-117 stealth fighters bombed the Panamanian Defense Force (PDF) barracks. The raid was the combat debut of the new fighter, and Operation Just Cause would also serve as the maiden battle of the army's innovative light infantry and special operations forces, which had been trained specifically for such operations. The army would be responsible for the major aspects of the operation, but among the 24,000 troops, navy SEALs, air force personnel, and Air National Guard units also participated.

The object of the operation was to capture Noriega. Marines were assigned to guard the entrances to the Panama Canal and other U.S. defense sites located in the Canal Zone. Rangers and other special task forces were dropped by Apache attack helicopters over key points in the Canal Zone. Troops aboard M-113 armored personnel carriers emerged from Fort Sherman and rode through the streets of Panama City, engaging whatever PDF units they encountered. The Rangers, reinforced by marines, moved toward the central Canal Zone, pausing to attack the Commandancia, headquarters of Noriega and the PDF. Simultaneously, other task forces guarded the western entrances of the Panama Canal opposite Balboa and Panama City as well as other U.S. defense sites located in the Canal Zone. These forces were assigned to block the PDF from infiltrating the Canal Zone and from moving reinforcements from Panama City. American units also took and held Torrijos International Airport, the Bridge of the Americas, and Rio Hato airfield, 90 miles south of Panama City. Another task force secured all U.S. military bases, and yet another was assigned to free prisoners taken by the PDF. Air force and Air National Guard units provided continuous close-air support for the ground troops.

For the first time in its history, the Panama Canal was closed; it would reopen on December 21. Fighting continued for five days, house to house, as marines conducted a manhunt for PDF troops as well as for Noriega, who had disappeared. In the meantime, a special civil-affairs Rangers battalion was airlifted to Panama City to assist

President Endara in establishing order. The civil-affairs Rangers also went about creating a new police force, the Panama Public Force, to preserve civil order after U.S. troops withdrew.

By this time, the United States had learned that Noriega had sought refuge in the Vatican embassy in Panama City, but was refused sanctuary. Not until January 1990 was he located, arrested, and transported to the United States for trial, which began in Miami in the fall of 1991. Witnesses testified that Noriega had laundered Colombian drug money in Panama and had used his country as a clearinghouse for cocaine on its way to the United States. On April 10, 1992, Noriega was convicted on eight counts of cocaine trafficking, racketeering, and money laundering. He was sentenced to 40 years' imprisonment. For the first time in history, the United States had captured, tried, convicted, and punished a head of state for criminal wrongdoing.

United States—Iraq War (“Operation Iraqi Freedom”) (2003–ongoing)

PRINCIPAL COMBATANTS: United States and Great Britain vs. Iraq

PRINCIPAL THEATER(S): Iraq

DECLARATION: No formal declaration, but the war commenced pursuant to a U.S. presidential ultimatum of March 16, 2003.

MAJOR ISSUES AND OBJECTIVES: U.S. president George W. Bush initially stated as the objective the removal of weapons of mass destruction from Iraq, then subsequently declared the objective to be the removal of Iraqi president Saddam Hussein from power.

OUTCOME: Militarily, the United States and Great Britain prevailed, Saddam Hussein was removed from power and captured in December 2003; however, as of spring 2004, no weapons of mass destruction had been discovered in Iraq, and political instability verging on chaos, accompanied by widespread violence, pervaded the nation.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: U.S., 466,985 (includes combat and support troops, not all deployed in theater); British, 40,906 (includes combat and support troops actually deployed); Iraqi forces, numbers actually and actively engaged unknown, but available military personnel numbered more than 500,000
CASUALTIES: U.S., 139 killed and 553 wounded from the beginning of the war to May 2, 2003 (end of major combat phase); by September 14, 2004, 1,018 U.S. service members had been killed and 7,245 had been wounded in

hostile action; total British casualties included 65 killed; total Iraqi casualties were estimated at 6,100–7,900 military and police killed or wounded, and perhaps as many as 20,000 civilians injured or killed

TREATIES: None

Although the PERSIAN GULF WAR (1990–91) ended in a disastrous defeat for the Iraqi military, the regime of the anti-Western, anti-American dictator Saddam Hussein (b. 1937) remained in place. A decade after the end of the war, the United States was attacked by suicide terrorists associated with the Islamic al-Qaeda terrorist organization. As part of the UNITED STATES'S WAR ON TERRORISM that followed these attacks, President George W. Bush (b. 1946) almost immediately authorized an undeclared war on al-Qaeda and its host, the Taliban government in Afghanistan. Also on the table for discussion among top U.S. government officials was another war, this one directed against Saddam Hussein and his regime in Iraq. Although there was no evidence implicating Hussein or his nation in the terrorist attacks on the United States, President Bush and his administration argued that the regime supported anti-Western and, in particular, anti-American terrorism and that Hussein possessed weapons of mass destruction (perhaps nuclear, but certainly chemical and biological) with which he planned either to attack U.S. interests or aid others in doing so.

On September 12, 2002, President Bush addressed the United Nations General Assembly, declaring that Iraq presented a threat to the United States and other nations and that the Iraqi regime was also a threat to the authority of the United Nations. Bush secured congressional resolutions authorizing the use of U.S. military forces against Iraq (the final vote came on October 11, 2002), and on November 8, 2002, the United Nations approved Resolution 1441, pressuring Iraq to comply with its disarmament obligations or to prove that it had divested itself of all weapons of mass destruction. UN inspectors were dispatched to Iraq, which submitted an apparently evasive disclosure report. Although the inspectors found nothing of significance in Iraq, the Bush administration persisted in its assertions that Iraq possessed the weapons; on February 5, 2003, U.S. secretary of state Colin Powell (b. 1937) presented the Bush administration's case to the UN Security Council. Despite this presentation, most of the international community was reluctant to support a war against Iraq. Some nations, most notably France and Germany, actively opposed such a war. Others did not directly oppose the war but declined to commit any substantive support to it; still others, notably Spain, voiced support and pledged logistical and humanitarian assistance but likewise withheld active military forces. Only Great Britain strongly endorsed the position of the Bush administration and resolved to participate in military action.

While international and (highly divisive) domestic debate continued, the Bush administration suddenly shifted its definition of what constituted an appropriate cause for war. Whereas previously the president had proposed war as a consequence of Iraq's failure to reveal what, despite an absence of evidence, he asserted to be Iraq's stockpile of weapons of mass destruction, on March 16, 2003, the president issued an ultimatum to Saddam Hussein demanding that he and his immediate cohorts (including his sons, Uday [1964–2003] and Qusay [1966–2003]) permanently leave Iraq within 48 hours. When this deadline passed, on March 19, President Bush authorized a “decapitation” attack on the Iraqi leadership, an aerial bombardment of a bunker in Baghdad believed to shelter Saddam. This attack was the commencement of the undeclared war called Operation Iraqi Freedom. Saddam Hussein was uninjured in the attack.

The evening of the 19th was the beginning of a series of very carefully targeted air strikes, using satellite-guided Tomahawk cruise missiles fired from American warships in the Red Sea and Persian Gulf, and bombardment by guided “smart weapons” launched from aircraft. The object, U.S. military officials said, was to produce “shock and awe” in the Iraqi people and their armed forces, prompting a quick surrender. In fact, however, the attacks were surgical in nature, pinpointing only military and governmental targets, not civilian structures.

On March 20, while the air attacks were under way, the ground war commenced as U.S. Army troops and marines captured strategically vital oil fields. The ground war progressed rapidly, and U.S. and British Marines and army troops advanced against major Iraqi cities, including the capital, Baghdad. All through the campaign, British and American military leaders anticipated that the Iraqis would unleash chemical or even biological weapons against the invaders. Iraq never did so.

On March 25, battles for the southern town of Najaf and the southern port city of Basra began. On the next day, U.S. paratroopers began the process of securing northern Iraq. By March 28, U.S. Marines were engaged in a heavy firefight for the important city of Nasiriya. On April 2, U.S. forces began taking Karbala, 50 miles from Baghdad. The attack signified the opening of the “Battle of Baghdad.” The town of Karbala soon fell, and on April 3 U.S. Special Forces troops seized the Thar Thar presidential palace, just northwest of Baghdad. Simultaneously, an attack was launched against Baghdad's Saddam International Airport. That same day, the holy city of Najaf fell to the U.S. 101st Airborne Division. On April 4, American forces secured Saddam International Airport, renaming it Baghdad International Airport. From this base of operations, the occupation of Baghdad proper began.

On April 6, U.S. and British troops commenced maneuvers to encircle the Iraqi capital, and on the 7th U.S. forces advanced into the city itself, seizing presiden-

tial palaces. The same day, an air strike was made against a building in a residential neighborhood of Baghdad said to harbor Saddam Hussein. Once again, however, the dictator evaded death. By then, too, after a long struggle, the British had finally taken control of the important port city of Basra. On April 9, international television broadcasted images of massive statues of Saddam Hussein being pulled down in Baghdad and other cities, by apparently jubilant Iraqis. In some places, U.S. and British soldiers were clearly welcomed as liberators. In other places, they found themselves the targets of gunfire, booby traps, and explosive devices. By the 10th, however, President Bush confidently announced that the regime of Saddam Hussein was indeed being removed from power.

With Baghdad occupied, more military attention was focused on Tikrit, the hometown of Saddam Hussein and a stronghold of his Ba'ath political party. The U.S. military issued a deck a playing cards bearing the pictures and names of 55 of the most wanted members of Iraq's former regime. The cards were distributed to U.S. troops in the field to help them identify the senior members of Saddam Hussein's regime, and descriptive posters and handbills were also displayed for the Iraqi public. Monetary rewards were posted for information leading to the capture or killing of Hussein, his sons, and others. By April 11, U.S. military officials were sufficiently confident to announce that Baghdad had been secured. The city of Al Kut fell the next day, and Tikrit was put under heavy attack on April 13.

On April 14, 2003, the Pentagon announced that while some fighting continued, the major combat phase of Operation Iraqi Freedom appeared to have ended. All over the country, Iraqi officials, including many appearing in the U.S. deck of cards, were being taken into custody, and on April 20, the U.S. Marines left Baghdad, turning it over to U.S. Army occupying forces. Lieutenant General Jay Garner (Ret.) (b. 1938) arrived in the capital to lead U.S. reconstruction efforts in Iraq and arrange for an interim civil authority in Baghdad. However, these efforts got off to a slow and unsteady start and, on May 11, 2003, Garner was replaced by a new administrator, diplomat L. Paul Bremer (b. 1941).

On May 2, 2003, President Bush personally announced from the deck of the aircraft carrier *Abraham Lincoln* that major combat had been concluded in Iraq. At this point, Saddam Hussein and his sons were still at large. The latter two, Uday and Qusay Hussein, would be killed in a July 22 raid, leaving their father somewhere in hiding. As of May 2, 139 U.S. military personnel had been killed and 553 wounded in combat. Yet despite President Bush's announcement of victory, combat continued; by August 28, 2003, another 142 U.S. service personnel had been killed and 490 wounded. No official estimates of Iraqi casualties exist, but unofficial estimates as of the beginning of September 2003 ranged from 6,100 to 7,900 mili-

tary and police casualties, killed and wounded. As many as 20,000 Iraqi civilians may have been injured or killed.

On December 13, 2003, U.S. forces captured Saddam Hussein, who had been hiding near his hometown, Tikrit. He was imprisoned, to await trial for war crimes. Despite the capture, United States, British, and (in very small number) Polish military forces continued to struggle to impose, restore, or maintain order throughout Iraq, which was chronically subjected to booby-trap bombing, suicide bombings, and other guerrilla-style attacks. In the spring of 2004, resistance to the U.S.-led occupation intensified in the towns of Najaf, Karbala, Kirkuk, Fallujah, and Ramadi, as well as in parts of Baghdad. Complicating the occupation further was a growing scandal over the abuse of Iraqis detained by U.S. and British forces. As of September 2004, there was no estimate as to how long the occupation of Iraq would continue.

United States—Mexican War (1846–1848)

PRINCIPAL COMBATANTS: United States vs. Mexico

PRINCIPAL THEATER(S): Southern Texas, California, New Mexico, and Mexico

DECLARATION: United States on Mexico, May 13, 1846

MAJOR ISSUES AND OBJECTIVES: The principal U.S. motive for war was western expansion at Mexico's expense. Mexico wished to restrain this expansion and punish U.S. "insolence." The proximate issues were Mexico's failure to make restitution for losses suffered by U.S. citizens during various Mexican uprisings and civil conflicts, a feeling in the United States that the Mexican government espoused a policy of barbarism, and the Mexican government's rebuff of a U.S. mission to negotiate the purchase of California.

OUTCOME: A decisive Mexican defeat resulted in the cession of New Mexico (which also included parts of the present states of Utah, Nevada, Arizona, and Colorado) and California to the United States and relinquishing of claims to Texas above the Rio Grande; in return for territorial cessions, the United States paid \$15 million and assumed claims of U.S. citizens against Mexico (\$3,250,000).

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Mexico, 36,000 regulars; United States, 31,000 regulars and marines plus approximately 73,000 short-term volunteers

CASUALTIES: Mexico, approximately 5,000 killed, approximately 8,000 wounded; United States, 1,721 killed (11,155 died of disease), 4,102 wounded

TREATIES: Treaty of Cahuenga (January 13, 1847; United States-Mexican insurgents in California); Treaty of Guadalupe Hidalgo (February 2, 1848; United States-Mexico)

The second war the United States fought to achieve expansionist objectives (the WAR OF 1812 was the first), the U.S.-Mexican War resulted in the acquisition of vast western territories that brought the continental United States essentially to its modern configuration.

The Mexican state of Texas had been colonized chiefly by Americans beginning in the 1820s and had won a stirring war of independence in 1835–36 (see TEXAN WAR OF INDEPENDENCE), but the United States was at first reluctant to accept the newborn republic's bid for annexation. Statehood for Texas would mean not only war with Mexico but, during the tense decades leading up to the Civil War, would also entail admitting into the union another slave state. In the late 1840s, on the other hand, both France and England were openly working to maintain an independent Texas as a profitable market for export goods. England in particular envisioned Texas as a potential ally against the United States should some future conflict develop.

In the context of such foreign interest, outgoing President John Tyler (1790–1862) urged Congress to adopt an annexation resolution. Three days before the expiration of his term, Tyler signed the resolution. On June 16, 1845, the Congress of the Republic of Texas accepted, and President James K. Polk (1795–1849) admitted Texas to the Union on December 29.

England and France seemed also to have designs on California, held so feebly by Mexico that it looked to be ripe and ready to fall into the hands of whoever was there to catch it. Once again, in the face of perceived interest from abroad, the president was prompted to action. Polk offered Mexico \$40 million for California, but Mexican president José Herrera (1792–1854) refused to receive Polk's minister, John Slidell (1793–1871). Thereupon Polk commissioned the U.S. consul at Monterey, Thomas O. Larkin (1802–58), to organize California's small but powerful American community into a separatist movement sympathetic to annexation.

In the meantime, John Charles Frémont (1813–90), the intrepid western explorer surveying potential transcontinental railroad routes for the U.S. Bureau of Topographical Engineers, led the so-called BEAR FLAG REBELLION, which gained California's independence from Mexico. At this point, on May 13, 1846, the United States declared war on Mexico, and on July 7, 1846, Commodore John D. Sloat (1781–1867) landed at Monterey. He took the harbor and the town without firing a shot, raised the Stars and Stripes,

and claimed possession of the newly independent California in the name of the United States. Frémont was named commander of the California Battalion and would fight in the larger war into which the Bear Flag Rebellion had suddenly escalated.

Yet it was Texas, not California, that had provided the immediate pretext for the war. When it was part of Mexico, Texas's southern boundary had been the Nueces River. But the independent Texas claimed the Rio Grande as its southern boundary, a claim the United States chose to enforce when the republic entered the Union. By the end of July 1845, 1,500 American troops commanded by General Zachary Taylor (1784–1850) occupied the country south of the Nueces. After Slidell's mission was rebuffed, in January 1846, President Polk ordered Taylor to advance all the way to the north bank of the Rio Grande. By the end of March, Taylor's force had been increased to 4,000 men. In April, 5,700 Mexican troops under General Pedro de Ampudia (1803–68) were quartered across the river at Matamoros.

The powder was packed in the keg, and Mexican general Mariano Arista (1802–55) (who had replaced Ampudia) lit the fuse. Under orders, he sent his cavalry upriver and crossed to the north bank. Sixty-three of Taylor's dragoons encountered the vastly superior force of 1,600, trading fire with it. Eleven dragoons were killed, five wounded, and most of the remainder captured. Those who escaped rode back to the general with news that the Mexicans had invaded American territory. On April 26, Taylor sent Polk the message that "hostilities may now be considered as commenced."

On the first of May, Mexican forces laid siege against Fort Texas (present-day Brownsville). Taylor, marching south with a force of 2,000 to relieve the fort, encountered 6,000 Mexican troops at a waterhole called Palo Alto on May 8. Fortunately for the Americans, the engagement began as an artillery duel; the Mexicans' powder was so unreliable that their cannonballs fell short or merely bounced behind the American lines and could readily be dodged. There was nothing wrong with the Americans' powder; Taylor's fire was withering. When General Arista attempted to change the mode of battle by rallying for a charge, his troops got bogged down in a morass, panicked, and retreated—whereupon Taylor resumed cannon fire.

At battle's end, 400 Mexicans lay dead, whereas only nine American lives were lost. But Taylor, who was repeatedly to prove himself an overcautious commander, failed to capitalize on his victory. Instead of charging the Mexican ranks, he continued to cannonade them until nightfall, when he broke off the engagement. By daybreak the Mexican force had disappeared. However, later in the day, the Americans engaged the Mexicans at Resaca de la Palma, a dry riverbed just north of the Rio Grande. In mostly hand-to-hand combat, 547 Mexicans were killed or wounded, whereas American casualties numbered 122. But again Taylor failed to pursue the routed enemy. It was

not until May 18 that he crossed the Rio Grande and occupied the now-undefended town of Matamoros.

U.S. action commenced against the Mexicans in California early in June. Stephen Watts Kearny (1794–1848), already a popular western leader, was put in command of the “Army of the West,” which mustered at Fort Leavenworth, Kansas, and began moving westward at the end of July. The various units of Kearny’s force made their rendezvous at Bent’s Fort on the Arkansas River and escorted the annual caravan to Santa Fe.

As Kearny’s army approached, New Mexico’s governor Manuel Armijo (c. 1792–1853) at first attempted to rally resistance. Kearny sent word to the citizens of Santa Fe—via captured Mexican spies—that those who surrendered would be protected. He also sent emissaries to Armijo in order to convince him to surrender the entire province. The talks that ensued were cordial, but Armijo led an army of 3,000 out of Santa Fe on August 16 and took up a position at steep-walled Apache Canyon, through which Kearny’s columns would have to pass on their way to Santa Fe. It was an ideal point from which to defend the town. Unfortunately, Armijo’s ill-disciplined and ill-equipped troops panicked at the approach of the Americans. The governor loudly quarrelled with his officers and finally commanded the entire army to disperse. Kearny passed through the canyon unopposed, Santa Fe was taken, and, on August 15, New Mexico was annexed without a shot having been fired.

Kearny pressed on to California but was intercepted en route by a band of frontiersmen led by Kit Carson (1809–69), who told him that victory had already been achieved there; on August 17, Commodore Robert F. Stockton (1795–1866) had announced the annexation of California. Commodore Sloat had taken Monterey, but, due to retire from the navy, he had been replaced by Stockton, who sent Frémont and his California Battalion south to San Diego in pursuit of the retreating forces of Mexican governors Pío Pico (1801–94) and José María Castro (1810–60), and who took possession of Santa Barbara and Los Angeles.

The victories in California and New Mexico did not go unchallenged. Frémont was charged with defending the northern half of California, while the southern portion was administered by Lieutenant Archibald Gillespie (1812–73), with a force of only 50 men. On the night of September 22, 1846, rebels—poorer Californians and Mexicanized Indians led by José María Flores (1781–1836)—attacked Gillespie’s small troop, which surrendered and fled north to Monterey. Flores next retook Santa Barbara, Los Angeles, and San Diego. In December, Kearny and 100 dragoons, reinforced by 38 men under Gillespie, engaged a force of 80 rebels at San Pasqual and were defeated with the loss of 18 dead and 15 wounded; the wounded included both commanders. Commodore Stockton, anchored off San Diego, had been awaiting the arrival of Frémont’s overland force of 428 men. At the

news of Kearny’s defeat, Stockton decided to wait no longer and landed his sailors immediately. Four hundred of them attacked and overran the rebel position on the San Gabriel River near Los Angeles. Stockton retook Los Angeles on January 10 and was at last joined by the recently arrived Frémont. The Americans granted the insurgents such generous surrender terms that resistance evaporated. California was secure.

In New Mexico, the winter of 1846–47 also brought rebellion. The army of occupation often abused citizens and indulged in drunkenness, brawling, and general looting. Citizens began plotting revolt in December and made their move in Taos on the night of January 19, 1847, killing the sheriff and a deputy, then Governor Charles Bent (1799–1847) (whose body was paraded through the town), and finally any other Americans they could find; in all, 15 were killed. Colonel Sterling Price (1809–67) responded with five companies of soldiers. On their way to Taos, Price’s men engaged and dispersed rebels at La Cañada and elsewhere. In Taos itself, the Americans had to face a rebel force barricaded behind the adobe walls of the seven-story-high Taos pueblo. When artillery proved useless against the pueblo, Price ordered a charge. His men breached the wall with axes, engaged the enemy within, killed 150 of them, and the Taos Rebellion was quelled.

Although the “Army of the West” was engaged in securing what had been Mexico’s northern provinces, Zachary Taylor’s “Army of the Center” had secured the borderlands, and now his “Army of Occupation” was thrusting deep into Mexico itself. His object was the capital, Mexico City, but first he would have to take the Mexican towns of Monterrey and Buena Vista. Two smaller forces, one commanded by Brigadier General John Ellis Wool (1784–1869) and the other by Colonel Alexander W. Doniphan (1808–87), guarded Taylor’s right flank. Wool succeeded in taking the city of Monclova without firing a shot and then rejoined Taylor’s main force. The career of Doniphan’s First Missouri Regiment—“ring-tailed roarers,” these backwoodsmen called themselves—was far more involved.

Doniphan set off from Santa Fe in November 1846 with 856 men accompanied by a 315-wagon caravan of Santa Fe traders seeking to sell their wares, war or no war. After crossing the Jornada del Muerto, the desert expanse dreaded by all those who plied the Santa Fe trade, marching three days without water, they encountered 1,200 Mexican soldiers near El Paso. The gorgeously outfitted Mexican regulars summarily demanded the surrender of Doniphan’s ragtag army. “Charge and be damned,” Doniphan replied, according to contemporary newspaper accounts. Charge they did—and, with devastating calm and accuracy, the First Missouri picked off rank after charging rank. Doniphan’s jubilation was short-lived, however, as he next learned that the rebellion at Taos had cut off his supplies. The men pressed on, foraging for what they needed. On February 27, 1847, they reached Chihuahua,

where Doniphan received his next piece of distressing news. The town was defended by 2,700 Mexican regulars and an additional 1,000 rancheros. They were perched on a rise of land where the Sacramento River joins a canyon called the Arroyo Seco and were certain of victory, in anticipation of which they were preparing short lengths of rope to bind their prisoners and were already dividing the anticipated spoils of the Santa Fe traders.

Attacking such a force head-on, Doniphan knew, would indeed ensure a Mexican triumph. Instead, he ordered his Missourians to cross the arroyo and labor up a steep bank beyond it so that they could face the Mexican force in the open. The engagement began with an artillery duel, and yet again the Mexicans' powder failed them. As had Taylor's men at the battle of Palo Alto, Doniphan's Missourians simply dodged slow-moving cannonballs while they returned fire with devastating chain shot.

When the Mexicans began their retreat, Doniphan ordered a charge. The Battle of Sacramento had begun at three in the afternoon; by five it was over. The First Missouri's 800 had defeated a force of 4,000. The troops, deep behind the enemy lines now, marched 1,000 miles across completely unfamiliar country to rendezvous with Taylor's main force at Saltillo. When they arrived on May 21, 1847, Taylor had already moved on. The First Missouri caught up with him at Monterrey, some 60 miles distant.

Taylor's far more conventional army had attacked Monterrey on September 20, 1846, driving the Mexican defenders under General Ampudia deeper and deeper into the town. After a four-day siege, Ampudia, fearful that American artillery would touch off his own powder magazines, surrendered. Yet again Taylor declined to capitalize on what he had gained. He allowed Ampudia's forces to withdraw—armed—and promised not to advance deeper into Mexico for two months.

In July 1846 the ever-resilient Antonio Lopez de Santa Anna (1794–1876), exiled in Cuba after a rebellion had ended his dictatorship of Mexico, made a proposal to the government of the United States, pledging to help it win the war, to secure a Rio Grande boundary for Texas, and to secure a California boundary through San Francisco Bay. His price was \$30 million and safe passage to Mexico. The United States was prudent enough not to pay him, but Santa Anna was allowed to return to his homeland—whereupon he began to organize an army to defeat Zachary Taylor, making especially good use of the eight-week armistice the general had imposed on himself. By January 1847, Santa Anna had gathered 18,000 men, about 15,000 of whom he hurled against Taylor's 4,800-man force at Buena Vista after the American declined a demand for unconditional surrender. Two days of bloody battle ensued, and when it seemed certain that the far more numerous Mexicans would break through the American lines, Taylor brought up his highly mobile artillery, which fired on Santa Anna's troops at point-blank range and forced their withdrawal on February 23.

President Polk replaced General Taylor with General Winfield Scott (1786–1866), who had distinguished himself in the War of 1812, and who adopted a far less cautious approach than Taylor. On March 9, Scott launched an invasion of Veracruz, beginning with the first amphibious assault in U.S. military history. He laid siege against the fortress at Veracruz for 18 days.

Santa Anna next withdrew to the steep Cerro Gordo canyon with 8,000 of his best troops. Like Doniphan at the Battle of Sacramento, Scott declined the frontal attack the Mexicans expected. Instead, he sent part of his force to cut paths up either side of Cerro Gordo and attacked pincer-style. Panic gripped Santa Anna's troops, who, skirmishing all the way, retreated to Mexico City. Scott boldly severed his rapidly pursuing army from its slower-moving supply lines and embarked on a three-month cycle of pursuit, engagement, and pursuit until he reached the gates of the Mexican capital.

On September 13, Chapultepec Palace, the seemingly impregnable fortress guarding Mexico City, now defended by a force that included teenage cadets from the Mexican Military College, fell to Scott. Hand-to-hand combat followed in the streets of the city itself until, on September 17, Santa Anna surrendered.

Peace talks, which had been commenced before the invasion of Mexico City, on August 27, and which were broken off by the Mexicans on September 7, resumed on November 22. On March 10, 1848, the Treaty of Guadalupe Hidalgo was ratified by the U.S. Senate. The United States gained New Mexico (which also included parts of the present states of Utah, Nevada, Arizona, and Colorado) and California as well as Mexican renunciation of its claims to Texas above the Rio Grande.

United States—Sioux War (1854–1857)

PRINCIPAL COMBATANTS: The United States vs. the Lakota People (also called the Teton Sioux, and consisting of the Brulé, Hunkpapa, Miniconjou, and Oglala tribes, among others)

PRINCIPAL THEATER(S): Northern and Central Great Plains

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: In the wake of the “Grattan Massacre,” a punitive expedition under General William S. Harney was sent to assert the sovereignty of the United States over the lands of the Lakota tribes.

OUTCOME: Following a decisive victory in the Battle of Ash Hollow, Harney was able to conclude an uneasy truce with the Teton Sioux, establish Fort Randall, and for a time protect the emigrant traffic along the Platte River.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: United States: 1,000; Lakota: 250

CASUALTIES: 85 Lakota killed; U.S. troops, 4 killed, 7 wounded, 1 missing

TREATIES: A treaty negotiated by Harney was signed by the Lakota chiefs but was not ratified by the U.S. Senate.

Forty years of warfare on the central and northern plains began on August 18, 1854, when a Miniconjou Sioux, traveling with a Brulé hunting party, shot an arrow into the flank of an ox belonging to a wagon train passing through the North Platte valley of Wyoming, near Fort Laramie. The Mormon owner of the ox put in a complaint at the fort, and, the next day, Lieutenant John L. Grattan (d. 1854), eager to show the Sioux what the U.S. Army could do, was dispatched to the Indian camp commanded by Brulé chief Conquering Bear (d. 1854). A brief parley, marred by the aggression of Grattan and his interpreter, led to a quick battle in which one Sioux, Conquering Bear, and all of Grattan’s troop of 30 were killed. (One trooper survived long enough to return to Fort Laramie, where he later died of his wounds.) Seizing upon the GRATTAN MASSACRE as sufficient cause, Secretary of War Jefferson Davis (1808–89) ordered General William S. Harney (1800–89) to “punish” (that favorite word of the military with regard to the Indians) the Brulé. Leading 600 men out of Fort Kearny, Nebraska, he was heard to declare, “By God, I’m for battle—no peace.”

What happened was called the Battle of Ash Hollow, but was not much of a fight. Chief Little Thunder (d. 1855), successor to Conquering Bear, gathered his band of 250 about him and simply waited for Harney’s approach. For, although his camp harbored those who had participated in the Grattan massacre, he considered himself peaceful. He gave an old fur trapper named Louis Vasquez (1798–1868) a message to deliver to Harney: The general could have peace or war, whichever he wished. Apparently this was a rhetorical offer by Little Thunder, who assumed that any rational man would want peace. Little Thunder was tragically mistaken.

On September 3, 1855, Harney and his infantry approached from the south, and his two companies of dragoons and two mounted-infantry companies, under Colonel Philip St. George Cooke (1809–95), moved in from the north, approximately 1,000 troopers in all.

Under a flag of truce, Little Thunder approached Cooke. Cooke did not want to talk. Instead, he offered a stark ultimatum: Give up those responsible for the Grattan Massacre or die. The chief and his party rushed back to their people. Neither Harney nor Cooke waited for any further reply. They opened fire and charged. A rout followed amid murderous fire, and the mounted troops, too far advanced to hear Harney’s bugler sound recall, mercilessly cut down survivors from the initial onslaught. By the time it was over, 85 Indians had perished and 70 women and children were taken captive. The Sioux would learn to call Harney “The Butcher.”

Following his victory in the Battle of Ash Hollow, Harney continued his march to carry the sovereignty of the United States into the very heart of Sioux country, the Black Hills. No Indians offered a fight as Harney took up camp at the decaying palisade of Fort Pierre, a former fur-trading post, where he planned to station 10 companies of infantry and cavalry. Instead, threatened by the mass of Sioux surrounding him, Harney the next year retreated downstream on the Missouri River to the outer edge of Sioux country. Officially explaining the move as an abandonment of dilapidated facilities with little access for steamboats, Harney built Fort Randall on the new, more advantageous site, where a well-known natural tower marked a narrow point in the Missouri Valley at the crossroads of two overland trails. Here, the rushing water offered a potential landing site for steamboats and Harney’s troops could rest secure because they had an avenue of escape.

At the new post, Harney began to harrass the Lakotas, rattling his saber in the face of the far superior forces of the Teton Sioux without much risk. Setting up a peace conference, he attempted to renegotiate the rights of passage for white emigrants with the Lakota chiefs, who signed a treaty. Even though the U.S. Senate declined to ratify the terms of the new understanding, the treaty actually endured for a number of years, as Harney—by his presence, at least—contained further interruptions in the traffic along the Platte. He was also able to provide protection to teams of surveyors, who—under G. K. Warren (1830–82) and William F. Raynolds (1820–94)—modified tribal trails into a map of suitable routes across Lakota land, creating further cause for the cross-cultural conflicts with the Sioux that marked the second half of the 19th century.

United States—Sioux War (Minnesota [Santee] Sioux Uprising) (1862–1864)

PRINCIPAL COMBATANTS: Santee Sioux vs. United States

PRINCIPAL THEATER(S): Minnesota and Dakota Territory

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Sioux rose in anger and protest over mistreatment under the U.S. government's new policy of concentrating Native Americans on reservations; the United States fought to protect settlers from Indian attack and to return the Sioux to reservations
OUTCOME: Although terrifying and costly to white settlers in the region, the uprising was crushed at great cost to the Sioux.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Sioux, 4,500–6,000 warriors; United States, 5,000 troops

CASUALTIES: Sioux, 500+ killed, 39 executed, 2,000+ captured, wounded unknown; United States, 800 settlers killed, 100+ troops killed, 150+ wounded, 650 settlers taken captive

TREATIES: None

The Santee Sioux of Minnesota were a division of the Sioux (or Dakota, as they called themselves) consisting of the Mdewakantons, Wahpekutes, Sissetons, and Wahpetons. The Santee had at first accepted the federal government's newly developing policy of "concentration" on reservations, but by 1862, as more and more Scandinavian and German immigrants crowded the Santee into a narrow strip along the upper Minnesota River, hatred smoldered. Worse, a combination of incompetence, indifference, and corruption delayed the distribution of government rations and funds guaranteed by treaty. On August 4, 1862, after enduring these delays for some time and on the brink of starvation, a band of mounted warriors broke into the Indian Agency warehouse and began carrying away sacks of flour.

The agency's garrison narrowly prevented a riot, and a meeting between the agency officials, local traders, and Little Crow (c. 1803–63), chief of the Mdewakanton villages and highly influential among the Sioux generally, was called. He forcefully but reasonably represented the Indians at the council, warning that his people were growing desperate from a lack of food. The agent turned to the assembled traders, who, at their option, could distribute provisions on credit. They deferred to the most prominent trader, Andrew J. Myrick (d. 1862), who declared that as far as he was concerned the Indians could eat grass if they

were hungry. Myrick's words were to trigger the most destructive Indian uprising in American history. The agency promised to distribute funds and rations as soon as possible, but it then found further excuse to delay.

The situation was explosive. On August 17, 1862, four young Mdewakanton men were returning dejectedly from a fruitless hunting trip. At Acton, Minnesota, one of them stopped to steal eggs from the nest of a hen belonging to a white man. Another of the hunters warned him against taking the eggs. The other three taunted the first man, calling him a coward, whereupon, to prove his prowess, he incited his companions to kill a local farm family, five persons in all.

Hearing what they had done, Little Crow was thrown into despair. With the rest of the tribe spoiling for a fight, he declared to them: "You are little children, you are fools. You will die like rabbits when the hungry wolves hunt them in the Hard Moon. Taoyateduta [Little Crow] is not a coward; he will die with you!"

Their first target was Andrew Myrick, whose store they attacked on August 18, killing him and, in symbolic rebuke, stuffing his mouth with grass.

Other war parties swept the countryside, sending a stream of white refugees into Fort Ridgely. The garrison there consisted of a mere 76 men and two officers. John S. Marsh (d. 1862), the captain in command, dispatched a messenger to one of his lieutenants, who was taking 50 men to nearby Fort Ripley. In the meantime, Marsh headed out of Fort Ridgely with a detachment of 46 men to investigate the situation. At the Redwood Ferry, which crossed the Minnesota River, they found the body of the ferryman and were suddenly ambushed. Twenty-five of the 46 men died, five were wounded, and Marsh himself drowned in the river.

The survivors reached Fort Ridgely, now commanded by future Medal of Honor recipient Lieutenant Thomas P. Gere (1842–1912), who could muster only 22 able-bodied men. He sent to Fort Snelling (Minneapolis), requesting reinforcements; the messenger overtook a volunteer force called the Renville Rangers, who rode back to Fort Ridgely. But even with reinforcements, the fort, nothing more than a collection of buildings without a stockade, stood little chance of long resisting an attack.

On August 19, Chiefs Little Crow, Mankato (d. 1862), and Big Eagle (c. 1827–1906) led an assault just short of Fort Ridgely. In full view of the fort, the Indians halted, held a council, then turned to the village of New Ulm, which they attacked on August 20.

On August 21, Little Crow returned to Fort Ridgely with 400 warriors opposing about 180 soldiers and civilians now defending the fort. The fort's artillery drove the attackers back, but on August 22 they returned with an additional 400 Sisseton and Wahpeton Sioux warriors. Again artillery drove the attackers off. On the 23rd, Little Crow attacked New Ulm again. At great cost, the Indians

were driven off, but not before most of the town had been destroyed. Two thousand residents fled to Mankato.

By August 27, the entire Sioux nation in Minnesota had been inflamed, between 350 and 800 settlers had been killed, and fully half the state's population were in flight. At the end of August, Minnesota's territorial governor and militia colonel Henry Hastings Sibley (1811–91) marched with reinforcements into the Minnesota River valley. On August 31, Sibley sent 150 men under Captain Hiram P. Grant (1828–97) to the Redwood Agency to reconnoiter and to bury the dead. At dawn on September 2, warriors led by Big Eagle, Mankato, and Gray Bird (fl. 1860–70) attacked Grant's camp at the head of Birch Coulee, killing 22 troopers and wounding 60. The remainder were saved by reinforcements under Colonel Samuel McPhail—who, however, soon found themselves surrounded as well. It was not until the next day that the main body of Sibley's force arrived, relieving McPhail and Grant—the latter having suffered through 31 hours of battle.

By September 19, Sibley's forces had been augmented by the addition of officers and men from the Third, Sixth, Seventh, and Ninth Minnesota Infantry and a mounted company of Renville Rangers. Now commanding 1,619 men, Sibley advanced.

On September 23, as he was advancing near Wood Lake, Sibley accidentally discovered Little Crow lying in ambush with a large contingent. He was able to surprise the would-be ambushers in the ensuing Battle of Wood Lake, which resulted in the deaths of 30 Indians but, more importantly, suddenly dissolved Little Crow's army. Beginning on September 26, Sibley accepted the surrender of 2,000 hostiles.

Sibley, who had moved with painful slowness and deliberation in battle, rushed to punish those found guilty of having participated in the uprising. By November 3, a military tribunal had sentenced a total of 303 Santees to be hanged. Seventeen hundred other prisoners were transferred to Fort Snelling. President Abraham Lincoln (1809–65) personally reviewed the 303 death sentences, and on December 6 he overturned all but 39 of the sentences. Still, the 38 hangings (one Indian was given a last-minute reprieve) at Mankato stand as the largest mass execution in American history.

The Battle of Wood Lake ended the Santee Sioux Uprising, but it also raised the curtain on decades of more or less continuous warfare with the Sioux (*see* BOZEMAN TRAIL, WAR FOR THE; GHOST DANCE UPRISING; UNITED STATES—SIOUX WAR [1854–1857]; UNITED STATES—SIOUX WAR [1876–1877]). Most immediately, however, the theater of battle shifted from Minnesota to Dakota territory, where Sibley—who, despite his request that he be allowed to retire to his home, was now commissioned a brigadier of U.S. Volunteers—and another general, Alfred Sully (1821–79), succeeded in stirring to war Santee Sioux refugees and the Teton Sioux as well as the Cheyenne.

In the spring of 1863, General John Pope (1822–92), who had been put in charge of the new Department of the Northwest the month after the Santee uprising began, ordered Sibley to travel up the Minnesota River, crossing into Dakota Territory to Devil's Lake, while Sully went up the Missouri and turned northeast to meet him. It was intended as a show of force that would discourage Santee and Yanktonai Sioux from massing for another uprising. Neither Pope, Sibley, nor Sully were aware that Little Crow had repeatedly failed in efforts to garner renewed support for the war against the whites. In June, a disappointed Little Crow and his son disappeared into Canada, where, near the town of Hutchinson, Little Crow was shot and killed while picking berries. The Indians who were gathered near Devil's Lake were Sisseton Sioux led by Standing Buffalo (1833–69), who considered himself at peace. Not far from them were Indians of the same tribe who were followers of Inkpaduta (1815–82), a hostile chief, as well as Teton Sioux (including Hunpapas and Blackfeet), who were potentially hostile.

Between them, Sibley and Sully commanded about 4,200 troopers. Hampered by supply problems—riverboat traffic was snarled by low water in the Missouri—the columns made slow progress. By the time Sibley reached the Devil's Lake area, Standing Buffalo had left, joining Inkpaduta's people in search of buffalo. On July 24, 1863, Sibley at last made contact with Standing Buffalo and Inkpaduta's followers and arranged a parley near Big Mound, northeast of present-day Bismarck, North Dakota. Clearly, Standing Buffalo wanted no war, but at the start of the parley a young partisan of Inkpaduta shot and killed the surgeon of the rangers.

At this, Sibley's artillery opened fire on the Indians, whom the cavalry routed from one defensive position to the next until nightfall. On July 26, Sibley pressed the pursuit, burning villages and using his artillery to counter Sioux attacks. On July 28, at Stony Lake, a large body of Sioux charged for a head-on attack, which was successfully parried. Sibley resumed the pursuit until the next day, July 29, when he decided that 150 Indians killed (at a cost of a dozen Minnesota casualties) was sufficient.

Sully, who had been more seriously delayed than Sibley, met Sibley's command in August, long after the action was over. Sully dispatched elements of his command to search for Inkpaduta, and that is exactly whom four companies of the Sixth Iowa Cavalry, commanded by Major Albert E. House, found on September 3 near Whitestone Hill (northwest of present-day Ellendale, North Dakota).

Badly outnumbered, House seemed destined for certain destruction—and would have been annihilated had he not managed to get a message to Sully, who brought the rest of the brigade to his rescue. A savage battle ensued in which 22 soldiers fell, 50 were wounded, and 300 warriors died. Two hundred fifty women and children were taken captive. What had begun as a virtually certain triumph for

Inkpaduta ended as disaster for the Sioux. Yet it prompted few Indians to seek peace. When the spring of 1864 brought rumors of Sioux resistance along the Missouri and the routes of Montana-bound prospectors, the army's general in chief, Henry Halleck (1815–72), warned Pope that the exigencies of the Civil War in the East left him few resources with which to prosecute an Indian campaign. He urged Pope to seek peace.

Peace, however, was far from Pope's mind. He ordered Sibley to establish forts on Devil's Lake and the James River. Sully would also increase military presence in the Dakotas and was directed to hunt for Sioux. Between them, Sibley and Sully mustered about 3,400 troops, though the entire command for this campaign would be under Sully—Sibley having secured Pope's permission to remain in Minnesota. Despite the number of troops, conditions were hardly ideal for undertaking a campaign of pursuit and punishment. One of the volunteer groups assigned to Sully's command arrived with 123 immigrant wagons in tow. Close behind this unit was another train of gold prospectors. Not only would these civilians get in the way of military operations, but also the officers and men resented the prospectors, whom they regarded either as draft evaders or Rebel sympathizers. Sibley was compelled to detach 400 of his men to escort the wagons.

On July 28, the remaining 3,000 of Sully's troops reached Killdeer Mountain, site of hostile camps. Sully estimated the enemy's strength at 6,000 warriors, whereas the Indians themselves claimed no more than 1,600. The wooded, hilly terrain made a cavalry assault impractical, so Sully dismounted his men and formed them into a hollow square that enclosed artillery and horses. Remaining in formation, the men advanced on the Indian camp. The advancing troops continuously exchanged fire with the Indians. When things got too hot, howitzers were brought to bear. On one occasion, Major Alfred B. Brackett led an effective cavalry charge into the woods, but with the loss of two killed and eight wounded. Sully decided that it was safer simply to bombard the Indians with the howitzers. Sully's total losses were light—five killed and 10 wounded—and he estimated that he had killed 150 warriors (the Indians put the figure at 31). The Battle of Killdeer Mountain resulted in something worse for the Sioux, however. Forced to run, they abandoned a vast store of food and provisions, which the soldiers promptly destroyed.

After the battle, Sully turned to escorting the emigrant train west to the Yellowstone River, crossing the Little Missouri Badlands and enduring the early August heat, thirst, hunger, and repeated Indian attacks. After depositing the emigrants on the banks of the Missouri River, Sully marched far and wide in a fruitless search for more Sioux. This, indeed, would be the character of the Indian wars throughout the balance of the century: interminable marches and empty-handed searches punctuated by brief, sharp, bloody battles. At Fort Rice, North Dakota, Sully

was called to rescue a group of emigrants who were under Indian attack, and he sent a detachment of 850 men, who successfully lifted the siege.

United States—Sioux War (Great Sioux War) (1876–1877)

PRINCIPAL COMBATANTS: Sioux and Cheyenne vs. the United States

PRINCIPAL THEATER(S): Black Hills, Dakota Territory

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Sioux and the Cheyenne, refusing to settle on to a reservation, fought to keep whites out of their sacred lands in the Black Hills when gold was discovered there in 1876; the United States, claiming to fight in defense of settlers, actually launched a punitive war aimed at forcing the remaining Sioux and Cheyenne to give up their nomadic hunting (and hunting grounds) and retire to reservations.

OUTCOME: The Indians, forced onto reservations or chased into Canada, ultimately surrendered; the U.S. Army suffered its most famous defeat at the hands of Native Americans, in the Battle of Little Bighorn.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Sioux and Cheyenne, 2,500 to 6,000; United States, approximately 3,200

CASUALTIES: Sioux and Cheyenne, 220 killed; United States, 238 killed, 125 wounded

TREATIES: None

After the War for the BOZEMAN TRAIL, various Sioux, Cheyennes, and Arapahos retired to the reservations, resigned to live on the government dole, abide by the terms of the Fort Laramie treaties of 1867, and remain at peace with the United States. Red Cloud (1822–1909) and Spotted Tail (1823–81)—Brulé Sioux—became leaders of these “reservation Sioux,” locked into a seemingly perpetual contest with the Indian agency on the one hand and their own restless young warriors on the other. The reservations, always places of despair, were often places of violence as well.

Those groups that shunned the reservation—mainly the Oglala, Hunkpapa, and Miniconjou Sioux and factions of the Northern Cheyennes, as well as some Yankton,

Teton, and Santee Sioux—remained openly and defiantly militant. Among them, Crazy Horse (c. 1849–77), an Oglala, and Sitting Bull (1834–90), of the Hunkpapas, were gaining legendary status as warrior chiefs. Indeed, the very name of Sitting Bull had become among the Indians a word (as one white scout observed) for “all that was generous and great.” In his 40s during the 1870s, swarthy and broad-shouldered, with a penetrating gaze, Sitting Bull had nothing but contempt for his reservation brethren, who, he believed had traded freedom and honor for government rations.

Provoked by the inexorable white incursion into their lands, the Sioux of the northern Plains raided settlements in Montana, Wyoming, and Nebraska. Sitting Bull, in particular, menaced survey parties laying out the Northern Pacific in 1873. A year later, Colonel George Armstrong Custer (1839–76), leading a military expedition in the Black Hills, discovered gold. Within another year—and in flagrant violation of treaty—thousands of whites swarmed the Black Hills in search of ore. The army made some gestures of interference, but the high command was not about to incur the public’s censure for vigorously defending Indians against whites. The only real hope for a peaceful resolution of the crisis was government purchase or lease of the Black Hills. Accordingly, a commission chaired by Senator William Allison (1829–1908) attempted negotiation, but as the ground most sacred to the Sioux people, the Black Hills were neither for rent nor for sale. At the end of 1875, therefore, the federal government dropped all pretext of fair dealing by issuing the tribes an ultimatum: Report to an agency and reservation by January 31, 1876, or be hunted and killed as hostiles.

The deadline came and went. Even if the Indians had decided to leave—and it is doubtful many would have—they could hardly have done so on such short notice and in the middle of a cruel northern winter. Indian Bureau inspector E. C. Watkins (fl. 19th century) had furnished justification for a campaign against the Sioux by citing various depredations committed by Sitting Bull and his followers. He recommended a winter campaign to inflict the greatest hardship, and that is precisely what General Philip H. Sheridan (1831–88), commander of the Division of Missouri (including the Great Plains and the U.S. Army’s departments of the Missouri, Platte, Dakota, and Arkansas), prepared to do.

The first planned winter campaign, however, failed even to get under way. Acting under orders from General Alfred H. Terry (1827–90), Custer was supposed to lead his 7th Cavalry westward from Fort Lincoln but was repeatedly foiled by heavy snow. General George Crook (1829–90) led 900 men out of Fort Fetterman, Wyoming, on March 1, 1876, and, battling storms and cold, scoured the Powder River country for Indians. After three discouraging weeks, a trail was found, and Crook dispatched Colonel Joseph J. Reynolds (1822–99) with a large com-

plement of cavalry—about 300 men—to attack a village of 105 lodges beside the Powder River. Although taken by surprise, the Oglalas, under He Dog (c. 1838–1938), and the Cheyennes, led by Old Bear, counterattacked so effectively that Reynolds was forced to withdraw back to Crook and the main column. Only one of Reynolds’s squadrons had managed to penetrate the village; another had seized the pony herd. But the first squadron had barely begun their work of destruction before withdrawing under the counterattack. As to the ponies, the warriors managed to recover most of them.

Reynolds in tow, Crook retreated to Fort Fetterman, where he brought charges against his subordinate for mismanaging both the attack and the retreat. General Sheridan ascribed Reynolds’s poor showing to the weather and dismissed the charges. If winter combat made the Indians more vulnerable, as Sheridan believed, it also took a terrible toll on the attackers. Reynolds complained to the chief commander of the U.S. Army, General William Tecumseh Sherman (1820–91), that winter campaigns in those latitudes should be prohibited. Indeed, Crook’s abortive winter campaign did little damage to the Indians; if anything, it galvanized them into a large fighting force under the inspired leadership of Crazy Horse and Sitting Bull.

Late in the spring of 1876, Sheridan initiated another campaign of convergence: General Terry led a force from the east (including Custer and his 7th), Colonel John Gibbon (1827–96) approached from the West, and Crook marched out of Fort Fetterman. They converged on the Yellowstone, even as the Indians were traveling that way. Early in June, on the Rosebud Creek, the Indians held a religious ceremony known as a Sun Dance, at which Sitting Bull announced that he had had a vision. It was of many, many soldiers “falling right into our camp.”

On the morning of June 17, General Crook, with more than 1,000 men, halted for a rest at the head of the Rosebud. Crow and Shoshoni scouts attached to Crook’s column sighted Sitting Bull’s Sioux and Cheyennes as they descended upon Crook’s position. The scouts gave sufficient warning to avert disaster, but, even so, the Indians withdrew only after a six-hour fight. Crook’s column had taken severe punishment and was also forced to retreat. The battle was harder than most; more significantly, it was characterized by an unusual degree of coordination and unity of action on the part of the Indians, whose style of fighting customarily sacrificed cooperation to acts of individual heroism and prowess. Under the likes of Sitting Bull and Crazy Horse, these Plains warriors had become a militarily effective unit.

Following the Rosebud battle, the Indians established a camp. In the meantime, General Terry’s column united with Colonel Gibbon’s at the mouth of the Rosebud. Both men were unaware of Crook’s retreat. The officers of both commands, including Custer, convened in the cabin of the Yellowstone steamer *Far West* to lay out a campaign

strategy. They figured they would find the Sioux encampment on the stream that the Indians called the Greasy Grass and that white men called the Little Bighorn. What they had no notion of was the size of the camp. Augmented by the arrival of agency Indians who left the reservation for the spring and summer, the Rosebud village now consisted of about 7,000 people.

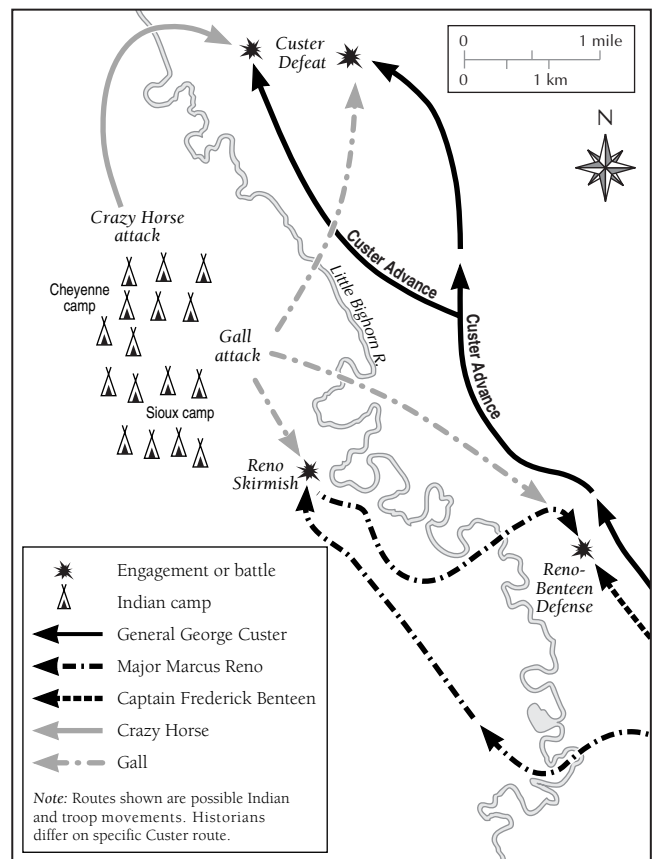

The *Far West* plan called for Custer to lead the 7th up the Rosebud, cross to the Little Bighorn, and proceed down its valley from the south as Terry and Gibbon marched up the Yellowstone and Bighorn to block the Indians from the north. In that way, Sitting Bull's forces would be caught between the two columns of a classic pincers movement.

On the morning of June 22, to the tune of "Garry Owen," the 600 men of the 7th passed in review before Terry, Gibbon, and Custer. Shaking hands with his fellow officers, Custer set off to join his men.

Custer was supposed to follow the Rosebud beyond the point where the Indians' trail was expected to turn west, so that he would cross to the Little Bighorn Valley south of the Indians' position, thereby ensuring the enemy would be caught between the 7th Cavalry and the forces of Gibbon and Terry. Custer departed from the plan. He found the Indian trail, but it was much fresher than anticipated, which meant that the Indians were not in the upper valley of the Little Bighorn but close by. To continue up the Rosebud would carry the 7th far from the Indians' position. Instead, Custer sent out scouts to follow the trail and locate the Indian village.

He planned to attack on June 26, the day Gibbon and Terry were scheduled to reach their position at the mouth of the Little Bighorn, but on June 25 the scouts discovered not only a Sioux camp but also warriors lurking nearby. Custer did not choose to amplify this intelligence. He made no attempt to ascertain the numbers of Indians involved. All he was certain of was the consequences of delay. If he waited even one day to attack, he believed, the Sioux would spot him and flee. Then this campaign, like so many others, would degenerate into days of weary, fruitless, thankless pursuit. He decided to act.

Custer led his men across the divide between the Rosebud and the Little Bighorn, dispatching Captain Frederick W. Benteen (1834–98) with 125 men in three troops to the south, in order to make sure that the Sioux had not in fact moved into the upper valley of the Little Bighorn. As Custer approached the Little Bighorn River, he spotted about 40 warriors and sent Major Marcus A. Reno (1834–89), with another three troops, after them. The plan was for Reno to pursue the warriors back to their village while Custer, with his remaining five troops, charged the village from the north. Custer had not actually seen the village, and he was maneuvering in entirely unfamiliar terrain. Neither Custer nor his commanding generals had any idea of how many warriors they were going up against.

Battle of the Little Bighorn, June 25, 1876

Later estimates put the number at anywhere from 2,500 to 6,000. Custer's combined strength was 600, and that force had been split up.

Reno's squadron of 112 men, in pursuit of those 40 warriors, was rapidly overwhelmed by masses of Sioux. He ordered his command to dismount and set up a skirmish line. When his left flank came under attack, he ordered a retreat to a cottonwood grove. Again his position was infiltrated. He ordered his men to remount for a run to the bluffs across the river. By the time Reno's troopers had reached this position—45 minutes after they had first engaged the enemy—their number had been reduced by about half.

Where—Reno must have agonized—was Custer? The colonel had ascended a bluff, had seen the vast Sioux encampment, and had seen Reno advancing for the attack. Custer called for his trumpeter, Giovanni Martini, and handed him a note to deliver to Captain Benteen, ordering him to bring the ammunition packs and join the fight. Martini was the last surviving cavalryman to see Custer alive. Warriors led by a Hunkpapa chief named Gall (c. 1840–94) surged across the Little Bighorn, pushing the troopers back. As Gall pressed from the south, Crazy Horse pushed in from the north. Within an hour, Custer and his men were dead.

In the meanwhile, Benteen, having received Custer's note, united with the remnant of Reno's command as it withdrew from the Little Bighorn Valley. When the sound of firing was heard signifying that Custer was engaged, a number of officers wanted to ride off to his support. Reno refused—but some did go, only to return when warriors riding back from the Custer fight blocked their way.

The combined forces of Reno and Benteen—368 officers and men—dug in on the bluffs and fought off a day-long siege. On the next day, June 26, the siege was renewed, continuing until early afternoon. Finally, the entire village moved off to the south as Generals Terry and Gibbon at last approached from the north. Casualties among the combined commands of Reno and Benteen were heavy. Far grimmer, of course, was the Custer battlefield, strewn with the naked and mutilated corpses of 263 men. The body of Custer, found near his personal pennant—beside which he had taken his “last stand”—had been stripped naked. But the attackers in this one instance had refrained from scalping and other mutilation.

The debacle of Little Bighorn moved Congress to increase army strength in the West by 2,500 cavalry privates. It also won for the military control of the Sioux agencies. However controversial, Custer had been, after all, young, dashing, and a hero of the late Civil War. His death and that of his command gave the military in the West what it had long wanted: support from the civilian government. But the disaster also seemed to transform the army. Crook and Terry, both excellent officers, were demoralized, even unmanned by the Little Bighorn. They spent the rest of the summer of 1876 in desultory and mostly futile pursuit of Sioux, who had already scattered and headed east after the Custer fight. One of Crook's officers, Captain Anson Mills (1834–1924), leading 150 men of the 3rd Cavalry, destroyed a Sioux camp of 37 lodges on September 9 in the sharply fought Battle of Slim Buttes. Mills's attack scattered the Indians into the hills, from which they returned fire, pinning down the attackers until Crook himself arrived with the main column. The important war chief American Horse (1846–76) was killed in the battle. But there was no followup to the battle until November, when the able commander of the 4th Cavalry, Ranald Mackenzie (1840–89), won a significant victory in the Bighorn Mountains against a Cheyenne band led by Dull Knife (c. 1808–83) and Little Wolf (c. 1830–1904). With 1,100 troopers and Indian scouts out of Fort Fetterman, Mackenzie surprised a village of 200 lodges in a canyon of the Powder River's Red Fork on November 25. Four hundred warriors defended the village in fierce combat, often hand to hand. By afternoon, however, Mackenzie had taken the village, destroyed provisions, and appropriated 700 horses. He also found souvenirs of Custer's defeat at the Little Bighorn. Forty Cheyenne died in the battle, but far more would suffer and die, provisionless and without shelter, in the intense

cold—30 below zero—that followed the battle. Mackenzie lost one officer, five enlisted men, and sustained 26 wounded. Apparently, no record exists of the number of allied Indian scouts killed, though they had absorbed the first shock of the battle.

As great an asset as the Indian scouts were, they also had their own agenda, which was beyond the control of the military. Following Mackenzie's November 25 assault, a delegation of Cheyenne, Miniconjou, and Sans Arc chiefs came to talk peace with Colonel Nelson A. Miles (1839–1925). They approached his Tongue River cantonment on December 16, only to be attacked by the general's Crow scouts, who killed five. Miles sent the Sioux the Crows' ponies as atonement and apology, but the incident had been quite enough to discredit the peace faction among the assembled Sioux, and the Indians harried the Tongue River cantonment throughout the balance of the month. In response, Miles took five companies of the Fifth Infantry and two of the 22nd—about 350 men and two artillery pieces—up the Tongue Valley in search of the hostiles.

In fact, the Indians wanted to be found; they were planning an ambush. But, as often happened, the young warriors could not be restrained from acting prematurely. On January 7, 1877, Miles's scouts captured a party of Cheyenne women and children. About 200 warriors attempted to recover them; they not only failed in this but also alerted Miles to the presence of a large party of warriors. Miles was prepared for the 500 Sioux and Cheyenne, led by Crazy Horse, who attacked his camp the next day. The Battle of Wolf Mountain was fought in a severe snowstorm, which hampered the attackers more than the soldiers. When it was over, Miles was able to boast that he had taught the Indians that his small command could whip them as long as they dared face it.

Actually, casualties were light on both sides. But in the wake of indecision that followed the Custer debacle, the victory was significant. Once again, the peace faction among the Sioux and Cheyenne gained the ascendancy. Unfortunately, Bear's Coat, as the Cheyenne called Miles, and other military commanders responded to Indian peace feelers with nothing but stern demands for absolute and unconditional surrender. Sitting Bull decided to take his Hunkpapa Sioux north into Canada. The Miniconjous, Oglalas, Sans Arcs, and Cheyennes scattered. By mid-February of 1877, however, the army had softened its position somewhat and persuaded Spotted Tail (1823–81) to undertake a peace mission. By early April, large groups of Cheyenne had surrendered to officials at the Indian agencies. Crazy Horse brought the Oglala to the Red Cloud Agency and surrendered there, dramatically throwing his Winchester to the ground.

The great Sioux War was not yet over, however, as 51 lodges of Miniconjous under Lame Deer (d. 1877), pledging never to surrender, made for the Rosebud to hunt buffalo. Miles gathered to himself a squadron of 2nd Cavalry

and six companies of infantry and, on May 1, marched up the Tongue River in search of Lame Deer. Soon feeling hampered by the slow-moving infantry, Miles took four cavalry troops west and, on May 7, acting on information from his scouts, he surprised Lame Deer's camp on Muddy Creek, a Rosebud tributary. One of Miles's scouts, a Miniconjou known as Hump (1848–1908), until recently an adversary, persuaded Lame Deer and his head warrior, Iron Star (d. 1877), to give up. Shaken by the presence of Hump, the two Indians laid their rifles down and approached Miles. The tension, however, was terrific; when a scout rode up, drawing his rifle on Lame Deer and Iron Star, apparently intending nothing more than to keep them covered, the two Indians went for their own weapons. Lame Deer fired at Miles, who dodged the shot (which struck an unfortunate cavalryman behind the general). The soldiers opened fire and killed Lame Deer. Iron Star fell next. So the Battle of Muddy Creek ended: 14 Sioux dead, including the chief and the head warrior; four enlisted men were also killed, and another seven of Miles's command wounded. The general pursued the fleeing Sioux to the Rosebud before returning to burn the village and appropriate the ponies.

Throughout the summer a series of skirmishes followed, but the greatest threat to an uneasy peace was Crazy Horse, who proved restive on the reservation—an “incorrigible wild man, silent, sullen, lordly and dictatorial,” as the Indian agent described him. Fearing that Crazy Horse would stir the reservation to revolt, General Crook ordered his arrest and confinement. Taken into custody on September 5, 1877, he was stabbed to death in a scuffle involving soldiers and Indians. It is unclear whether he was mortally wounded by his own hand, the knife of another Indian, or a soldier's bayonet.

To the army's way of thinking, the last remaining loose end in the Sioux War was Sitting Bull, who was living in Canada with approximately 4,000 Hunkpapa, Oglala, Miniconjou, Sans Arc, and Blackfoot Sioux as well as a handful of Nez Percé. In October 1877, General Terry, with the cooperation of the North-West Mounted Police, located Sitting Bull in Canada and attempted to persuade him to come back to a reservation in the United States. Faced with winter famine and not welcomed by Canadian tribes, who did not want to share with them the little game that was available, the Hunkpapas and members of the other tribes that had gathered around Sitting Bull were beginning to defect in small bands. But according to others Sitting Bull spat at Terry in 1877: “You come here to tell us lies. Go home where you came from.” Within a very few years, however, only 200 people remained with Sitting Bull. On July 19, 1881, he and Little Bighorn veteran Gall traveled with their followers to Fort Buford, Dakota Territory, where they surrendered. Both were pardoned, and Sitting Bull continued to wield much prestige among the Sioux, encouraging them to resist the “civilizing” pro-

grams of the reservations and becoming not only the most famous Indian chief of the late 19th century but also something of a hero to the American public.

United States's “War on Terrorism” (2001–ongoing)

PRINCIPAL COMBATANTS: Al-Qaeda terrorists and Afghanistan's Taliban government vs. the United States and Afghan anti-Taliban forces (mainly the Northern Alliance)

PRINCIPAL THEATER(S): New York City, the Pentagon, rural Pennsylvania, Afghanistan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Terrorist objectives: related to U.S. support for Israel against the Palestinian state; also related to a general religious opposition of Islam against the "Western" religions (Christianity and Judaism); U.S. objectives: to destroy the al-Qaeda and other international terrorist networks and to "bring the terrorists to justice"

OUTCOME: The Taliban was overthrown; however, as of the end of 2004, a low-level insurgent war was still being fought, and Americans remained anxiously watchful for future terrorist attacks.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: September 11, 2001, attacks: at least 16 suicide terrorists directly involved; size of U.S.-based terrorist network, unknown. In Afghanistan: Taliban forces, about 40,000; Northern Alliance, 15,000; U.S. troops, about 1,000 deployed on the ground, many more personnel at sea and in the air

CASUALTIES: September 11, 2001 attacks: about 3,190 killed; in Afghanistan, large but unknown number of Taliban fighters killed, wounded, or captured; Northern Alliance casualties unknown; U.S. casualties, 5 killed; fewer than 50 wounded or injured

TREATIES: None

AT 8:45 (EDT) on the morning of September 11, 2001, a Boeing 757 passenger jetliner—later identified as American Airlines flight 11 out of Boston—crashed into the north tower of the World Trade Center in New York City's Lower Manhattan. At 9:03, as the news agencies' cameras rolled, a second 757, United Airlines flight 175, also out of Boston, hit the as-yet-undamaged south tower. At 9:40, the Federal Aviation Administration shut down all U.S. airports, but three minutes later, American Airlines flight 77 crashed into the Pentagon, the U.S. military headquarters. At 10:05 in New York, the 110-story south tower of the World Trade Center collapsed. At 10:10, a portion of the Pentagon collapsed. At almost precisely the same time, United Airlines flight 93 crashed in rural Somerset County, Pennsylvania, outside of Pittsburgh. At 10:28, the north tower of the World Trade Center collapsed.

The United States had been attacked by terrorists. Four small groups of Middle Eastern men, most of them Saudis, apparently members of a terrorist organization called al-Qaeda ("The Base") and trained in the rudiments of flight, had hijacked four U.S. commercial jetliners. They had used them as suicide missiles, directing them to the World Trade Center and the Pentagon. The hijackers on the fourth aircraft, which crashed in Pennsylvania, were overpowered by passengers, who, via cell phone conversations, had heard of the attack on the World Trade Center. Tragically, a crash could not be averted, but the plane had been most likely headed for the White House or Capitol. The attacks were the first time mainland America

had been struck by a foreign power since the WAR OF 1812 and the first peacetime assault against U.S. territory since the attack on Pearl Harbor, December 7, 1941. The combined death toll in New York, the Pentagon, and Pennsylvania was 3,190.

Al-Qaeda, the terrorist organization that apparently sponsored the attacks, was financed in large part by Osama bin Laden (b. 1957), a 44-year-old multimillionaire, Saudi by birth, and at the time living in Afghanistan, where he enjoyed the protection of the radical Islamic Taliban government. He was implicated in earlier terrorist attacks, including the bombings of two U.S. embassies in 1998 and an attack on the U.S. guided missile destroyer *Cole*, in port at Yemen, on October 12, 2000. His al-Qaeda served as a center for the indoctrination, training, coordination, and financing of Muslim terrorists dedicated to carrying out jihad (holy war) against Israel and the West, especially the United States.

In the days following September 11, the United States deployed its military in an undeclared "war against terrorism," beginning with a campaign to capture or kill bin Laden, destroy al-Qaeda, and overthrow the Taliban government of Afghanistan. A rapid diplomatic effort forged a loose coalition of key nations pledged to support the war against terrorism. Pakistan, which shares a border with Afghanistan and had been a supporter of the Taliban regime, cooperated closely, and even Iran, hostile to the United States since the fall of the shah and the hostage crisis of 1979–81, agreed to allow flyovers and to accept emergency landings. Only Iraq (*see* PERSIAN GULF WAR) refused cooperation.

The first attack against the Taliban government of Afghanistan was launched at 16:38 Greenwich Mean Time, October 7—nighttime in Afghanistan. Supported by British air units, the United States attacked with B-1 bombers, B-2 "stealth" bombers, and venerable B-52s, as well as ship-launched cruise missiles. After less than a week of bombardment, the United States had achieved "air supremacy," and daylight raids were added to those at night. High-altitude bombers were replaced by lower-altitude strike aircraft, capable of close ground support. Simultaneously with the air raids, U.S. cargo transports dropped food packages intended for Afghan civilians.

The U.S. air strikes were coordinated with action on the ground by anti-Taliban Afghan forces, primarily the Northern Alliance, which fielded about 15,000 men against the 40,000-man Taliban army. On October 20, the Northern Alliance ground forces were joined by about 100 U.S. Special Forces commandos, who staged the first U.S. raid on the ground, destroying some Taliban facilities and obtaining Taliban documents.

While the war was being fought in distant Afghanistan, in the United States a new form of terrorist attack was unleashed. On October 4, U.S. health officials reported that a Florida man had contracted anthrax—the

first case in the United States since the 1970s. At first authorities played down any link between the infection and terrorism, but anthrax was well known as a bioterrorist weapon. More cases followed, most of which were traced to letters sent to prominent media figures (such as NBC news broadcaster Tom Brokaw) and government officials (such as Senate majority leader Tom Daschle). By the end of November, scores of people had been exposed to anthrax, several became ill (with either the highly treatable cutaneous form of the disease or the far more deadly inhaled form), and six victims had died.

Was the anthrax attack the work of Osama bin Laden and al-Qaeda? Was Saddam Hussein's Iraq responsible for it? Was it an instance of "homegrown" terrorism? As of the end of 2004, the questions remained unanswered.

Meanwhile, by November 2001, the pace of the Afghan war had rapidly accelerated. Combined U.S. and Northern Alliance attacks resulted in the fall of Mazar-e Sharif, gateway for Afghanistan and Taliban sympathizers in Pakistan, on November 12. On November 13, the Afghan capital city of Kabul was occupied by Northern Alliance troops. By the end of the month, Kunduz, a northern Taliban stronghold, fell. Kandahar, the only major Taliban-held city, reeled under siege and seemed, by early December, about to fall to the Northern Alliance, which it did in the general rout of Afghan forces that followed, during which Osama bin Laden and much of al-Qaeda's senior leadership vanished. Throughout 2002, as U.S. Special Forces continued to hunt for Osama bin Laden and other al-Qaeda leaders, President George W. Bush (b. 1946) repeatedly observed that the "War against Terrorism" had not ended with the fall of the Taliban and would not end even with capture of bin Laden and his associates. In late 2002, the speculation that had been running high all year as to the next battleground proved true when the Bush administration began stridently to argue the case for making Saddam Hussein's regime in Iraq the next target of the U.S.-led war on terrorism. As of the end of 2004, low-intensity combat continues in Afghanistan.

United States's War with the Navajos and Jicarilla Apaches (1851–1860)

PRINCIPAL COMBATANTS: Navajo and Jicarilla Apache Indians vs. United States

PRINCIPAL THEATER(S): New Mexico

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Territorial disputes, Navajo raiding tradition, and punitive federal and military Indian policy.

OUTCOME: Conflict ceased until 1863.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Navajos, 1,000 warriors; United States, 970

CASUALTIES: United States, 200 to 300 killed between 1846 and 1861; Navajos and Jicarilla Apaches, unknown

TREATIES: "Bonneville Treaty," "Canby Treaty," 1860

Beginning with the Spanish during the late 18th century, the Navajo Indians of the American Southwest resisted domination by every white government that attempted to assert authority over them. Their culture guided by a strong warrior tradition, the Navajos raided white and other Indian settlements alike, nearly wiping out the Hopi village of Oraibi in 1837. Seeking to restore order, the Mexican government intervened with troops, but to little effect. During the UNITED STATES–MEXICAN WAR in 1846, U.S. authorities concluded a treaty with the Navajo, but from 1846 to 1849, the federal government was obliged to launch five military campaigns against them.

On July 19, 1851, Lieutenant Colonel Edwin V. Sumner (1797–1862)—nicknamed "Bull-Head" because a musket ball had once (reportedly) ricocheted harmlessly off his skull—assumed command in the Southwest. Determined to put a stop to Navajo raiding, he built a chain of forts. The appearance of fortifications prompted the Navajos to participate in peace talks, which might have succeeded had not James S. Calhoun (1802–52), the able territorial governor of New Mexico, fallen ill. He withdrew from the negotiations (and subsequently died), leaving the uncompromising Sumner in charge. Peace nevertheless endured until the summer of 1852, when William Carr Lane (1789–1863) arrived as the new territorial governor and declared that it was better to feed the Indians, than to fight them. Accordingly, he high-handedly bypassed Sumner to negotiate generous treaties with the Navajos and the Jicarilla Apaches, with whom the Navajos were closely allied.

Unfortunately, the U.S. Congress failed to appropriate the modest \$20,000 needed to make good on the treaties. The Jicarillas resumed raiding, but the Navajos remained relatively quiet until the spring of 1856.

In 1856, in response to the renewed raids, the army launched a series of punitive expeditions, which served only to escalate the violence into a full-scale war. The war erupted in 1858 following an argument between some Navajos and soldiers who had grazed their horses on land claimed by the Navajo chief Manuelito (c. 1818–93). A few months after the incident, Manuelito defiantly set his stock to graze on land claimed by the fort. Major Thomas H. Brooks, commander of Fort Defiance at the time, ordered his men to slaughter 60 of Manuelito's animals. In retaliation, on July 7, 1858, Navajo warriors shot volleys of arrows into a soldiers' camp, and on the 12th a Navajo warrior murdered Brooks's black servant, Jim. The major demanded that the Navajos produce the murderer, and General John Garland (1792–1861), who had replaced Bull-Head Sum-

ner, prepared a full-scale offensive to be commanded by Lieutenant Colonel Dixon S. Miles (d. 1862).

Miles issued an ultimatum, setting a deadline for the surrender of the murderer. When the Navajos failed to produce him, Miles commenced hostilities on September 9, 1858, with a punitive expedition to Canyon de Chelly, Arizona, where soldiers burned fields of corn and a peach orchard, killed six Indians, and appropriated 6,000 Navajo sheep. Miles next raided the village of Zarcillos Largos, an important Navajo chief, wounding him gravely and capturing 40 warriors. The Navajos retaliated with raids and an attack on Fort Defiance.

In October, a third commander arrived on the scene, Colonel Benjamin Bonneville (1796–1878), who sent Miles to lead more assaults against the Navajos, which did relatively little damage but sent the Indians to the peace table nevertheless.

Unfortunately, the government negotiators took an uncompromising punitive position, pushing the boundary of their lands farther west, extracting exorbitant damages, securing the right to build any number of forts on Navajo lands, and declaring the entire Navajo nation culpable for the future actions of any individual.

For a time, the Navajos tried to comply with the “Bonneville Treaty,” but by the middle of 1859 white-aligned Ute Indians had begun raiding the Navajos, who retaliated against them and, in the course of retaliation, rustled some New Mexican sheep. In response, a new military offensive was launched, once again bringing in the Navajos to talk peace. Negotiations broke down when Navajo chief Huero refused to sign the proposed treaty, claiming that such pieces of paper bound the Indians but not the whites, and by the beginning of 1860, Navajo raids were almost a daily occurrence. The army seemed powerless to stop the escalating Indian violence.

On April 30, 1860, 1,000 warriors attacked Fort Defiance, which was evacuated and abandoned on May 4. Colonel Thomas T. Fauntleroy (1796–1883) was sent to replace Bonneville but was ordered to concentrate his undermanned forces against the Comanches and Kiowas, who were raiding mail routes in Texas. Outraged, the governor of the New Mexico territory called for a volunteer force, but before it could be raised, Fauntleroy had received reinforcements and launched a full-scale expedition against the Navajos.

More than 500 regulars were joined by 470 civilian volunteers, all led by Brigadier General Edward R. S. Canby (1817–73). Again, the Navajos came in for peace talks, agreeing to the “Canby Treaty,” which brought a truce until 1863, when a much larger NAVAJO WAR broke out.

Press, 2000); Frank McNitt, *Navajo Wars: Military Campaigns, Slave Raids, and Reprisals* (Albuquerque: University of New Mexico Press, 1990); Charles Phillips and Alan Axelrod, *Encyclopedia of the American West*, 4 vols. (New York: Macmillan Reference USA, 1996).

Uruguayan Revolt (1811–1816)

PRINCIPAL COMBATANTS: Banda Oriental (Uruguay) vs. Spain, then Portugal, then United Provinces of Río de la Plata (Argentina, Paraguay, Bolivia), then Brazil

PRINCIPAL THEATER(S): Banda Oriental (Uruguay)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Banda Oriental fought to obtain and maintain independence, first from Spain, then the United Provinces of Río de la Plata, then from Brazil.

OUTCOME: Banda Oriental achieved independence from Spain and maintained independence from Argentina but was annexed by Brazil.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Uruguay, known as the Banda Oriental until it gained independence as a result of the ARGENTINE-BRAZILIAN WAR of 1825–28, was disputed colonial territory between Portugal and Spain during the early 19th century. It fell under the viceroyalty of Spain, as part of Río de la Plata (encompassing Argentina, Paraguay, Bolivia, and Uruguay) in 1776, but after Napoleon Bonaparte (1769–1821) overthrew Ferdinand VII (1784–1833) of Spain in 1808, Argentina assumed the lead in a movement of independence and union. Banda Oriental was invited to join the newly proclaimed United Provinces of the Río de la Plata. However, when the independence movement forced the Spanish viceroy, Francisco Javier de Elío (1767–1822), out of his palace in Buenos Aires, it was to Banda Oriental that he fled, seeking refuge in Montevideo. Uruguayan revolutionaries, led by José Gervasio Artigas (1764–1850), attempted to evict him. To resist the revolutionaries, Elío sought aid from Carlota Joaquina (1775–1830), sister of the deposed Spanish king, and wife of the Brazilian regent John (1769–1826). In 1811, she persuaded her husband to dispatch a Portuguese force from Brazil to invade Banda Oriental and defend Elío. Artigas, however, led his revolutionaries to victory against the Portuguese invaders and took control of Banda Oriental. Instead of joining Argentina in the United Provinces of Río de la Plata, however, Artigas decided that Banda Oriental would remain independent. In response, Argentine troops invaded in 1814. They assaulted Montevideo but were repulsed in 1815. Thus Banda Oriental stood independent of Argentina as well as Spain.

In 1816, Banda Oriental was invaded by Brazilian troops, who removed Artigas and set up an occupation. Banda Oriental was formally annexed to Brazil, now independent of Portugal, in 1821. It would break free of that nation following the Argentine-Brazilian War.

Uruguayan Revolution (1933)

PRINCIPAL COMBATANTS: Uruguayan president Gabriel Terra and the conservative Blanco Party vs. radical forces within his own party, the Colorados.

PRINCIPAL THEATER(S): Uruguay

DECLARATION: Terra himself created the revolution by dissolving the government's representative bodies and abrogating the constitution on March 30, 1933.

MAJOR ISSUES AND OBJECTIVES: Control of depression-plagued Uruguayan government

OUTCOME: Terra prevailed as a fairly moderate dictator.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

With Uruguay hit hard by the worldwide Great Depression of the 1930s, Gabriel Terra (1873–1942), a liberal member of the Colorado (Red) Party, was elected president. The National Council of Administration quickly attempted to usurp or curb executive power, and Terra also found himself opposed by the conservative party, the Blancos (Whites) as well as by radical members of the Colorado Party. The Blancos favored increased privatization of the economy, whereas the radical Colorados demanded sweeping nationalization. Caught in the middle, Terra dissolved the National Council as well as the Uruguayan Congress on March 30, 1933. He did so forcibly, ordering troops into both bodies to clear out the members. Terra then abolished the constitution and declared himself dictator while a new constitution was prepared. Promulgated in 1934, the new document gave the chief executive permanent near-dictatorial powers. Terra was reelected, however, and suppressed a minor revolt against him in 1935. He stepped down voluntarily in 1938 and was succeeded by his brother-in-law, Alfredo Baldomir (1884–1948), an army general. Baldomir restored a significant measure of democratic government.

Uskok War See THIRTY YEARS' WAR.

Utah War (Mormon War) (1857–1858)

PRINCIPAL COMBATANTS: United States Army vs. Mormon "Danites"

PRINCIPAL THEATER(S): Southern Utah

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Militant Mormons ("Danites") used terror tactics to exclude "gentiles" from their land; the United States deemed this an insurrection and dispatched federal troops to put it down.

OUTCOME: The "insurrection" was ended peacefully, and Mormon leader Brigham Young was replaced as governor of the Utah Territory by a federally appointed official.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

United States, 2,500; Danites, unknown

CASUALTIES: 123 emigrants, murdered by the Danites; one Mormon was convicted of murder and executed in 1877

TREATIES: None

The territory encompassed by the present state of Utah was settled by members of the Church of Jesus Christ of Latter-Day Saints, popularly called the Mormons, in the mid-1840s. It was proclaimed a U.S. territory in 1850, with Mormon leader Brigham Young (1801–77) as its appointed governor. A religious leader first and a political official second, Young adopted a dictatorial style of governance. Conflict with the federal government was inevitable. The most acute conflict, however, had less to do with the infringement of democracy than popular outrage against the Mormon practice of polygamy. In response to hostility from the outside—the world of the "gentiles"—a significant faction of Mormons acted to exclude gentiles from settling in their territory and even sought to bar their crossing Utah on their way farther west. Elements of this opposition movement became militant, and a violent episode erupted in September 1857, when a band of 140 emigrants from Arkansas passed through southern Utah, bound for California. They pitched camp in a valley called Mountain Meadows and were suddenly attacked by Paiutes. The emigrants defended themselves. Pinned down, the emigrants spent the next several days resisting sporadic Paiute attacks. Eventually, they were approached by a group of whites who offered to escort them to safe haven, provided they disarm. Desperate, their food and supplies waning, the emigrants handed over their weapons. No sooner had they done so than the "rescue" party shot and killed all of them, except for 17 infants.

When a group of armed Mormon zealots, called the Danites, was identified as having been responsible for the MOUNTAIN MEADOWS MASSACRE, President James Buchanan (1791–1868) dispatched 2,500 troops under Colonel Albert S. Johnston (1803–62) to Utah to enforce the installation of a newly appointed non-Mormon governor and impose federal authority.

The Danites harassed the troops, stampeding their horses, attacking supply wagons, and even setting prairie fires to impede Johnston's progress. In the meantime, Brigham Young created a siege mentality by summoning Mormons to defend Salt Lake City, the capital of the Mormon settlement. With Utah on the verge of civil war, President Buchanan authorized a compromise that averted further bloodshed. Brigham Young agreed to step down as governor and to recognize the federally appointed governor. In return, Johnston's troops withdrew from the environs of Salt Lake City, and all involved in the "rebellion" were unconditionally pardoned.

For years afterward, no Mormon admitted involvement in the Mountain Meadows Massacre. Ultimately, however, Danite leaders confessed that they had not only directed the Paiute attack on the emigrant wagon train but also murdered the travelers. Only one man, John Doyle Lee, was arrested for the Mountain Meadows Massacre. Tried and convicted, he was executed in 1877.

Ute War (1879–1880)

PRINCIPAL COMBATANTS: Ute Indians vs. the United States

PRINCIPAL THEATER(S): Colorado

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Miners pressed the U.S. government to release more Ute reservation lands for silver prospecting.

OUTCOME: Utes lost their lands and were removed to reservations in Utah and southwest Colorado.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

United States, 175–1,500 troops; Utes, unknown

CASUALTIES: Battle of Milk Creek, United States, 13 killed, 43 wounded; Utes, 23 killed; Indian agent Nathan Meeker and other agency employees killed, Meeker's wife and daughters taken captive

TREATIES: None

During the 1870s, after silver strikes in western Colorado and eastern Utah, mining interests pressured the federal government for permission to exploit what remained of the Ute reservation in Colorado, which had already been greatly reduced by a series of cessions. Silver speculators called for the removal of the Utes to Indian Territory (Oklahoma).

On the Ute reservation at White River, Agent Nathan C. Meeker (1817–79) had embarked on a program to force the free-ranging Utes into sedentary lives as farmers and demanded that the Indians plow up their ponies' grazing land. Meeker provoked a fight with a Ute medicine man (known only as Johnson) on September 10, 1879, and the agent called in the army.

Major Thomas T. "Tip" Thornburgh (d. 1879) led 153 infantry and cavalrymen, with an additional 25 civilians, to Meeker's relief on September 16, 1879. The approach of the troops stirred up increased hostility. To cool off the situation, Meeker suggested a parley, which Thornburgh arranged. But Thornburgh decided to move 120 cavalrymen closer to the agency as protection. The Utes interpreted the move as preparation for battle and confronted the soldiers on the trail on September 25.

As soldiers and Utes stood face to face, the major's adjutant removed and waved his hat, apparently in innocent greeting. But either an Indian or a soldier took it for a signal, a shot rang out, and the Battle of Milk Creek began.

Thornburgh was among the first killed, and the battle settled into a week-long siege, which ended only when two of the defenders sneaked through the Indian lines and summoned reinforcements. On October 2, a unit under Captain Francis Dodge (1842–1908) arrived but was unable to break the siege, and it was not until a larger unit under Colonel Wesley Merritt (1834–1910) arrived on October 5 that the Utes withdrew.

In the meantime, Agent Meeker and others had been killed and several women taken captive. Generals William Tecumseh Sherman (1820–91) and Philip Sheridan (1831–88) recommended a swift punitive campaign of punishment, but Secretary of the Interior Carl Schurz (1829–1906), Indian agent Charles Adams, and an elderly Ute chief named Ouray (d. 1880), negotiated the release of the captives without further bloodshed.

A special commission meeting during November and December 1879 concluded that the Utes as a tribe should suffer no punishment. Twelve Ute men, however, were tried for murdering Meeker and for committing "outrages" against the captive women. In 1880, Chief Ouray led his tribe to reservations in eastern Utah and southwestern Colorado. Congress siphoned off a portion of the Utes' annuity trust fund as compensation for the death of Meeker and the others.

Vandal Raids: Vandal Resurgence in Spain (420–428)

PRINCIPAL COMBATANTS: Vandals vs. Suevi and, separately, Rome

PRINCIPAL THEATER(S): Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Domination of the Iberian Peninsula

OUTCOME: The Vandals defeated the Suevi and the Romans, thereby becoming the dominant power on the peninsula.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Gunderic (d. 428), king of the Vandals, led his forces out of defeat in Galicia (at the hands of the Visigoths in VISIGOTHIC RAIDS ON THE ROMAN EMPIRE: VISIGOTH INVASION OF GAUL and VISIGOTHIC RAIDS ON THE ROMAN EMPIRE: VISIGOTH INVASION OF SPAIN) to resurgence and victory against the Suevi, barbarians from the region of modern Swabia. After defeating the Suevi, Gunderic led an assault against Roman

forces in eastern Spain led by General Castinus (fl. 422–35). The Romans were beaten on the Iberian Peninsula by 421, and the Vandals emerged as the dominant group there, fighting skirmishes primarily against the Suevi.

The death of Gunderic in 428 brought Gaiseric (390–477) to the Vandal throne. The Suevi leader Hermanric was tempted to try a major uprising against the Vandal overlords that year. This attempt was defeated at the Battle of Merida, on the Anas River, in 428.

Thompson, *Romans and Barbarians: The Decline of the Western Empire* (Madison: University of Wisconsin Press, 2002).

Vandal Raids: Bonifacius's Revolt (428)

PRINCIPAL COMBATANTS: Bonifacius's barbarian forces vs. Rome

PRINCIPAL THEATER(S): Tunisia, Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Bonifacius sought to break away from the Roman Empire.

OUTCOME: Expanded into a general Vandal invasion of Africa

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: In the first phase, minor

TREATIES: None; but an alliance was concluded between Bonifacius and the Vandals.

The Roman barbarian general Bonifacius (d. 433), also known as Count Boniface, successfully defended Massilia (Marseille) against the Visigoths during the VISIGOTHIC RAIDS ON THE ROMAN EMPIRE: VISIGOTH INVASION OF GAUL (412–14) and, later, remained faithful to the Roman emperor Valentinian III (419–55) during the usurpation of Valentinian's prime minister John (Johannes Theodosius, d. 425) in 423–25. For his valiant service against the Visigoths and for his loyalty during the usurpation, Bonifacius was rewarded with the governorship of Africa. However, Bonifacius felt that this was hardly sufficient reward for his many services and that, furthermore, he was losing influence within the imperial government. Therefore, in 428 he staged a revolt against the empire. The revolt quickly escalated into a full-scale war after Boniface appealed to the Vandals for alliance and aid.

See also VANDAL RAIDS: VANDAL INVASION OF AFRICA.

Further reading: John B. Bury, *The Invasion of Europe by the Barbarians* (New York: Norton, 2000); Thomas Hodgkin, *Huns, Vandals and the Fall of the Roman Empire* (London: Greenhill, 1998); E. A. Thompson, *Romans and Barbarians: The Decline of the Western Empire* (Madison: University of Wisconsin Press, 2002).

Vandal Raids: Vandal Invasion of Africa (429–435)

PRINCIPAL COMBATANTS: Vandals and Alans vs. provincial Roman forces of Bonifacius

PRINCIPAL THEATER(S): Region of modern Algeria and Tunisia, Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Gaiseric of the Vandals sought control of northwestern Africa.

OUTCOME: Gaiseric came to control all of the region, save eastern Numidia (Tunisia).

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Vandals, 50,000; Bonifacius's forces, unknown

CASUALTIES: Unknown

TREATIES: None

Pursuant to an appeal from Bonifacius (d. 433), Gaiseric (390–477), ruler of the Vandals, invaded Africa with 50,000 men (see VANDAL RAIDS: BONIFACIUS'S REVOLT), including Vandals and Alans. Unfortunately, in a display of catastrophically bad timing, Bonifacius had reconciled with the Romans. He now made an attempt to call off the Vandal-Alan incursion. It was to no avail, and thus Bonifacius led his provincial Roman forces against the invaders he himself had summoned.

Gaiseric easily defeated Bonifacius in two key battles, both fought near Hippo (Bone, Algeria) in 429 and again

in 431. The second battle marked the culmination of a 14-month siege of the city of Hippo. After this important city fell, Gaiseric exploited internal dissension throughout the region to seize control, by 435, of all of northwest Africa, save eastern Numidia (Tunisia).

Thompson, *Romans and Barbarians: The Decline of the Western Empire* (Madison: University of Wisconsin Press, 2002).

Vandal Raids: Gaiseric's Wars of Expansion (435–450)

PRINCIPAL COMBATANTS: Vandals (with Hun alliance) vs. Eastern Roman Empire

PRINCIPAL THEATER(S): Northern Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Gaiseric sought to expand his territorial holdings.

OUTCOME: Gaiseric came to control most of northern Africa and established a piratical reign of terror on the Mediterranean.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Vandal ruler Gaiseric (390–477) amassed a mighty navy and systematically consolidated his grip on Mauretania and western Numidia. In October 439, he overran Carthage and came to control eastern Numidia (Tunisia). This accomplished, he raided Sicily in 440 and established bases from which the Vandals terrorized the Mediterranean for the next 100 years with pirate raids.

The Roman general Aetius (c. 396–454), preoccupied with the defense of Gaul, sought aid from Theodosius II (408–50), emperor of the East. Theodosius responded by dispatching a fleet to Sicily with the intention of raiding Africa from there. The wily Gaiseric bribed no less a figure than Attila the Hun (c. 406–53) to draw off the Eastern imperial fleet by attacking Thrace and Illyricum. With the empire directly menaced, Theodosius had no choice but to recall the fleet to defend Constantinople. Gaiseric retained his hold on northern Africa.

Further reading: John B. Bury, *The Invasion of Europe by the Barbarians* (New York: Norton, 2000); Thomas Hodgkin, *Huns, Vandals and the Fall of the Roman Empire* (London: Greenhill, 1998); E. A. Thompson, *Romans and Barbarians: The Decline of the Western Empire* (Madison: University of Wisconsin Press, 2002).

Vandal Raids: Gaiseric's Wars of Expansion (461–477)

PRINCIPAL COMBATANTS: Vandals vs. Eastern and Western Roman Empire

PRINCIPAL THEATER(S): Northern Africa and southern Italy, in addition to raids in Thrace, Egypt, Greece, and Asia Minor

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Gaiseric sought territorial expansion and spoils.

OUTCOME: The expansion was ended only by Gaiseric's death in 477.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Roman forces, 100,000; Gaiseric's forces, numbers unknown

CASUALTIES: Unknown

TREATIES: None

The expansion begun during VANDAL RAIDS: GAISERIC'S WARS OF EXPANSION (435–450) continued apace between 461 and 477 as the Vandal ruler Gaiseric (390–477) led raids all along the coast of the western Mediterranean. Gaiseric's forces hit as far east as Thrace, Egypt, Greece, and into Asia Minor.

The Eastern and Western Roman Empires united in an attempt to crush Gaiseric once and for all. In 468, they invaded southern Italy and northern Africa, seizing both Tripoli and Sardinia. However, Gaiseric quickly was able to recover not only these two territories but also to stage a counteroffensive by which all of Sicily came under his control. Moreover, Vandal seapower on the Mediterranean had developed beyond challenge.

In the end, neither the Eastern Empire nor the Western—tottering on the verge of a collapse that finally came on September 4, 476, with the end of the reign of Romulus Augustulus (r. 475–76)—curbed Gaiseric. His efforts at expansion were impeded by internal religious dissension, which had become especially intense at the time of his death in 477.

Further reading: John B. Bury, *The Invasion of Europe by the Barbarians* (New York: Norton, 2000); Thomas Hodgkin, *Huns, Vandals and the Fall of the Roman Empire* (London: Greenhill, 1998); E. A. Thompson, *Romans and Barbarians: The Decline of the Western Empire* (Madison: University of Wisconsin Press, 2002).

Vandal-Roman Wars in North Africa (533–534)

PRINCIPAL COMBATANTS: Eastern (Byzantine) Empire vs. the Vandals

PRINCIPAL THEATER(S): North Africa

DECLARATION: In effect, Eastern Empire on the Vandals

MAJOR ISSUES AND OBJECTIVES: Eastern emperor Justinian I resolved to end Vandal rule in North Africa, formerly a Roman province.

OUTCOME: The great Byzantine general Belisarius scored two massive victories against Vandal forces, which not only ended Vandal rule in North Africa but also destroyed the Vandals as a political entity.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At Ad Decium (Second Battle of Carthage), the Vandals fielded 30,000 men against 15,000 Byzantines.

CASUALTIES: The Vandal army was almost completely destroyed.

TREATIES: None

The Vandals, a Germanic tribe originally concentrated in Jutland (part of modern Denmark), settled in Roman imperial territories and, by the fifth century, were menacing a disintegrating Roman Empire. By the mid-400s, the Vandals also came to control North Africa, having wrested the region from Roman control. They proved tyrannical and harsh rulers, openly abused the Romanized populations of the region, and imposed their own religion. At last, in 533, Justinian I (483–565), Roman emperor of the East, dispatched the great Byzantine general Belisarius (c. 505–65) at the head of a large army with the object of ejecting the Vandals from North Africa. Justinian's cause was the usurpation of the Vandal throne by Gelimer (fl. 530–34), a sworn enemy of Rome, who had ousted his pro-Roman cousin.

In a battle outside of Carthage (the Vandal capital), Belisarius met and defeated the Vandal forces, then overran Carthage. Three months later, Gelimer attempted to mount a counterattack to retake the city but was dealt a defeat at the Second Battle of Carthage (a battle also known as Ad Decium) on September 14, 533, a defeat that was stunning in its totality. His army was almost completely destroyed, and Gelimer fled for his life to Numidia (roughly Algeria). Belisarius pursued him relentlessly and captured him in March 534. He was taken to Constantinople, then set free and allowed to settle far from North Africa, in Asia Minor. With this defeat in battle and the removal of Gelimer, the Vandals ceased to exist as a political entity.

Vandal Sack of Rome (455)

PRINCIPAL COMBATANTS: Vandals vs. Western Roman Empire

PRINCIPAL THEATER(S): Rome and environs

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Gaiseric targeted Rome for a raid.

OUTCOME: Rome fell to Gaiseric, who sacked it over a two-week period.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Petronius Maximus (c. 396–455), protege of the Roman general Aetius (c. 396–454), assassinated Emperor Valentinian III (419–55) and compelled his widow, Licinia Eudoxia (d. c. 493), to become his bride. Eudoxia's response was to appeal for aid from the Vandals, led by Gaiseric (390–477). He steered a Vandal naval fleet to the mouth of the Tiber River. As the Vandals closed on Rome, Petronius Maximus fled, only to be killed by his own people. The Vandals stormed the city, which they occupied and sacked from June 2 to June 16. Taking Eudoxia as a hostage, the Vandals then withdrew to Carthage.

Thompson, *Romans and Barbarians: The Decline of the Western Empire* (Madison: University of Wisconsin Press, 2002).

Vellore Mutiny (1806)

PRINCIPAL COMBATANTS: Sepoys (British East India Company native troops) vs. British East India Company and British colonial forces

PRINCIPAL THEATER(S): Vellore, India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The sepoys mutinied against British orders prohibiting the wearing of turbans and the display of caste marks among soldiers.

OUTCOME: Many British were killed in the initial onslaught, which, however, was quickly (and brutally) put down.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Sepoys, 1,500; British and other Europeans (during the initial stage of the mutiny), 4,000

CASUALTIES: Many of the 4,000 Europeans were killed in the initial onslaught; in the British counterattack, 350 sepoys were killed; British losses in the counterattack were 130 dragoons.

TREATIES: None

This war was triggered by the cultural arrogance and insensitivity that characterized British colonial policy in the 19th century. The British East India Company, seeking to introduce Western-style military uniformity into the

ranks of native troops under the command of the company, ordered that all sepoy (Indian soldiers) discard their turbans and wear leather military headdress. Furthermore, no caste marks or other ornaments were to be worn during parades.

These orders triggered a massive mutiny in Vellore, India, during May 1806. Fifteen hundred sepoys divided into two groups. One attacked the Europeans (troops and civilians) in Vellore. One hundred of 4,000 troops were killed. While this was taking place, the second group of sepoys attacked the houses of British officers, killing 14 of them—much of the British officer corps present.

The mutiny was put down by British dragoons dispatched from nearby Arcot. They stormed the fortress at Vellore, which had been taken over and occupied by the sepoys, and ruthlessly shot and slashed their way through the fortress. About 350 sepoys were killed in this assault, at the cost of 130 British dragoons. The mutiny was ended, and William Bentinck (1774–1839), the British governor-general of Madras, was replaced for his failure to prevent the mutiny.

Further reading: Maya Gupta, *Lord William Bentinck in Madras and the Vellore Mutiny, 1803–7* (New Delhi: Capital, 1986); P. J. Marshall, *Problems of Empire: Britain and India, 1757–1813* (London: Allen and Unwin; New York: Barnes and Noble, 1968).

Vendée, Wars of the (1793–1832)

PRINCIPAL COMBATANTS: Royalist rebels of the Vendée region vs. forces of the French Republic

PRINCIPAL THEATER(S): Vendée and Brittany, France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Vendée rebels sought to restore the Bourbons to the French throne.

OUTCOME: The Vendée rebellion was repeatedly extinguished.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Vendée rebels, 65,000 combatants; Republican forces, 400,000 (total, over the span of the war)

CASUALTIES: Vendée rebels, 80,000–100,000 died, including many noncombatant civilians; Republican forces, 21,500+ killed, including 13 Republican generals

TREATIES: Convention of La Jaunaye, February 17, 1795

The peasantry of the French Vendée, a region south of Brittany, rebelled against the Revolutionary republic in support of a Bourbon king and the Catholic Church. Early in 1793, riots began, which, by March, developed into a full-scale rebellion with the killing of 150 Republican officials. Peasant leaders joined forces with noblemen to recruit an army of 30,000 by May 1793, which, in the Battle of Fontenay-le-Comte on May 28, readily repulsed a 14,000-man Republican force sent to the region to restore

order. Some 4,000 Republicans fell in that battle, as did 1,000 Royalist rebels.

In June, the Vendée army took the offensive, taking Saumur on the 9th. However, an attack on Nantes, June 29, proved unsuccessful, with 5,000 casualties among the 38,000 Royalists who were pitted against a mere 12,000 Republicans (their losses were 2,000 killed and wounded). However, on July 5, at the Battle of Chatillon-sur-Sevre, a Vendée army of 20,000 defeated an equal number of Republicans.

The extraordinarily able General J. B. Kléber (1753–1800) assumed command of the Republicans, only to lose the Battle of Chantonnay on September 5, 1793. Eight thousand Republicans faced 20,000 Vendée troops and lost 4,000 men. But this was the high-water mark of the Vendée cause, which began to show signs of internal dissension. Recognizing encroaching weakness, Kléber attacked at Cholet on October 17 and won a major victory. However, 10 days later, Vendée forces routed a Republican army at Entrammes. They lost on November 13, at Granville, to a far inferior Republican force: 30,000 versus only 5,000. Next came a Vendée defeat at Le Mans (December 12, 1793) and then at Savenay on December 23, a battle in which at least 8,000 Royalist rebels were killed.

Savenay marked the end of the principal Vendée force; however, a diehard group known as the Chouans—“long-eared owls”—persisted in fighting until their final defeat in the spring of 1794. After this, the war became a guerrilla affair. Even this phase diminished after the signing of the Convention of La Jaunaye on February 17, 1795.

Shortly after the convention was concluded, the British navy supported a resurgence of the rebellion at Quiberon Bay, Brittany, in June 1795. Within a year, by July 1796, this new rebellion was crushed—but never entirely extinguished. Small-scale uprisings occurred in 1799 and in 1815. In 1832, the Vendée rose yet again, this time in opposition to the Orleanist king Louis Philippe (1773–1850) in a bid to restore the Bourbons to the throne. The short-lived rebellion was readily put down.

Venetian-Byzantine War (1170–1177)

PRINCIPAL COMBATANTS: Venice (with Norman aid) vs. Byzantium

PRINCIPAL THEATER(S): Aegean Sea and Sicily

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Byzantium and Venice contested control of Sicily and the waters of the Aegean.

OUTCOME: Indecisive, with gains on neither side

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

By the close of the 12th century, Byzantium was struggling to survive. One of its persistent enemies was Venice, a trading rival. The sporadically fought war of 1170–77 was an unproductive draw. At first, the Byzantines prevailed against the Venetians, and by the end of 1170 Venetian forces were driven off the Aegean. However, Venice secured an alliance with Normandy and was thereby able to take Chios and Ragusa in 1171. When the allies mounted a more ambitious attack against Ancona in 1173, however, they were repulsed. After that battle, fighting was desultory and entirely without definitive result.

Further reading: Donald MacGillivray Nichol, *Byzantium and Venice: A Study in Diplomatic and Cultural Relations* (Cambridge: Cambridge University Press, 1992); John Julius Norwich, *Byzantium: The Decline and Fall* (New York: Knopf, 1996).

Venetian-Genoese War (1255–1270)

PRINCIPAL COMBATANTS: Venice vs. Genoa

PRINCIPAL THEATER(S): Palestinian coastal waters and the Aegean

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Venice and Genoa fought over possession of a monopoly on the highly profitable trade with the Byzantine Empire (paramountly, the right to maintain trade relations and facilities within Constantinople itself) and the Latin colonies of the Crusaders.

OUTCOME: Venice consistently won in this long war, which ended only after Venice secured exclusive trading rights in Constantinople.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: At the Battle of Trapani, the Genoese fleet was largely destroyed, with the loss of 1,000 sailors.

TREATIES: Truce of 1270

Venice and Genoa were longtime commercial rivals, which, over the years, fought to eliminate one another. At stake in the war of 1255–70 was the highly profitable trade with the Byzantine Empire (paramountly the right to maintain trade relations and facilities within Constantinople itself) and the Latin colonies of the Crusaders, including trading concessions within Palestine and Acre.

The Venetians launched three naval campaigns against the Genoese off the coast of Palestine. After winning all

three, Venice drove the Genoese and Genoese shipping out of Acre. In addition, during this period, Venetian and Genoese vessels skirmished on a chronic basis near various islands in the Aegean and off the Greek coast. The naval Battle of Trapani, fought in Sicilian waters in 1264, was no mere skirmish. A Venetian fleet annihilated the opposing Genoese force, sinking many ships and killing at least 1,000 Genoese sailors. This greatly weakened Genoa, whose hold on trade in Constantinople was instantly imperiled. However, imprudently and despite even more losses, Genoa did not sue for peace. The war dragged on in a desultory manner until Venice at last secured exclusive trading rights in Constantinople. With that cause for war eliminated, Genoa and Venice concluded an uneasy truce in 1270, which lasted until 1291, when a new VENETIAN-GENOESE WAR (1291–1299) erupted.

See also VENETIAN-GENOESE WAR (1350–1355).

Further reading: Steven A. Epstein, *Genoa and the Genoese, 958–1528* (Chapel Hill: University of North Carolina Press, 1996); John Julius Norwich, *A History of Venice* (New York: Knopf, 1982).

Venetian-Genoese War (1291–1299)

PRINCIPAL COMBATANTS: Venice (with Pisan alliance) vs. Genoa

PRINCIPAL THEATER(S): Black Sea and eastern Mediterranean

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Venice sought to usurp the Black Sea and eastern Mediterranean spice trade from Genoa.

OUTCOME: Genoa soundly defeated the Venetians, who ended their challenge to the Genoese spice trade and who agreed to a nonaggression pact with Genoa.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: At the decisive Battle of Curzola, at least 900 Venetians were killed or captured.

TREATIES: Nonaggression pact of 1299

Genoa's arch trading rival, Venice, having defeated Genoa in a contest over trade with the Byzantine Empire (particularly over concessions in Acre and Constantinople) in the VENETIAN-GENOESE WAR (1255–1270), now challenged Genoa on the Black Sea and eastern Mediterranean. Venice jealously eyed Genoa's valuable spice-trade routes.

After some months of desultory skirmishes, the combined fleets of Venice and Pisa fought a major battle against Genoese vessels in the Gulf of Alexandretta in 1294. The Genoese defeated the combined fleets, then landed at the Venetian port of Canea (Khania) on the island of Crete, and sacked the town. They also destroyed much of the Venetian spice fleet at anchor there.

While combat took place in the Gulf of Alexandretta and at Canea, Genoese citizens living in Constantinople rose up against Venetian residents there. Many Venetians died, and, in retaliation Admiral Rogerio Morosini (fl. 1290s), of the prominent Venetian maritime family, led the Venetian fleet in an attack on Galata, a Genoese trading port near Constantinople. The town was sacked.

Once again, the war fell into a chronic state of low-level combat, until 1299, when Lamba Doria (fl. 1290s) led the Genoese fleet to victory at the Battle of Curzola, off the Dalmatian coast. The battle resulted in 900 casualties among the Venetians, including killed and captured. As a result, Venice backed off in its challenge to the Genoese spice trade, and the rivals signed a nonaggression pact later in the year.

See also VENETIAN-GENOESE WAR (1350–1355).

Further reading: Steven A. Epstein, *Genoa and the Genoese, 958–1528* (Chapel Hill: University of North Carolina Press, 1996); John Julius Norwich, *A History of Venice* (New York: Knopf, 1982).

Venetian-Genoese War (1350–1355)

PRINCIPAL COMBATANTS: Venice (with Byzantine and Aragonese allies) vs. Genoa (with Milanese allies)

PRINCIPAL THEATER(S): Crimean, Greek, Sardinian, and Genoese coastal regions

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Genoa acted to check Venetian encroachment on its trading territories and trade routes.

OUTCOME: The war was a seesaw affair until Genoa, allied with Milan, mounted a decisive counteroffensive; the rivals agreed to refrain from encroaching on one another's established trade territories and trade routes.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Agreement defining exclusive trade territories and routes, 1355

The trading rivals Venice and Genoa went to war after Genoese vessels captured several Venetian trading ships near Caffa (Feodosiya), an important Genoese trading port on the Crimean peninsula. The Genoese sought to defend their monopoly on trade here.

Shortly after taking the Venetian vessels, Genoese forces captured the Venetian colony at Negroponte (Euboea, Greece). In response, the Venetians rapidly concluded alliances with the Byzantine Empire and with Pedro IV (1319–87), the king of Aragon, in Spain. Thus allied, the Venetians engaged in a battle at the Bosphorus. This ended in a draw, but the Venetians went on to triumph at a sea battle fought off the coast of Sardinia in 1352. Capitalizing on this victory, the Venetian navy

established a blockade of Genoa, to which the Genoese responded by allying themselves with Milan. Together, the new allies mounted an effective counteroffensive, defeating Venice at the Battle of Sapienza in 1354, which resulted in the destruction of most of the Venetian fleet. This crippling blow prompted Venice to sue for peace, and the two rivals concluded an agreement to refrain from encroaching on one another's established trade territories and routes.

See also CHIOGGIA, WAR OF; VENETIAN-GENOESE WAR (1255–1270); VENETIAN-GENOESE WAR (1291–1299).

Further reading: Steven A. Epstein, *Genoa and the Genoese, 958–1528* (Chapel Hill: University of North Carolina Press, 1996); John Julius Norwich, *A History of Venice* (New York: Knopf, 1982).

Venetian-Genoese War (1378–1381) *See* CHIOGGIA, WAR OF

Venetian-Milanese War (1404–1406)

PRINCIPAL COMBATANTS: Venice vs. Milan

PRINCIPAL THEATER(S): Northeastern Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Dominance over northeastern Italy

OUTCOME: Venice defeated Milan, forcing the city to relinquish virtually all of its holdings.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The death of Milan's ruler, Gian Galeazzo Visconti (1351–1402), resulted in the fragmentation of Milan as a number of cities in northeastern and central Italy were returned to local lords, and Venice took control of Vicenza, Verona, Padua, and Bassano. The Venetian seizures triggered a war in which Venice solidified its hold on the former Milanese territory. In the turmoil, Florence managed to seize Pisa. In 1406, Venetian agents strangled Lord Francesco II Novello da Carrara (d. 1406), thereby putting an end to the Carrara family line and ensuring the termination of Milanese hegemony. Francesco had retained the lordships of Padua and Verona. With his death, these cities were permanently under Venetian rule. As a result of this war, Venice emerged as the dominant power in northeastern Italy.

Venetian-Milanese War (1426)

PRINCIPAL COMBATANTS: Venice (with Florence, Savoy, Ferrara, Siena, and Mantua) vs Milan

PRINCIPAL THEATER(S): Brescia and Milan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Venice and its allies sought to check the ambition of Milan's ruler.

OUTCOME: Milan was defeated, lost more territory, and agreed to relinquish expansionist designs in the region between it and Rome.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Venice, December 30, 1426

The disastrous VENETIAN-MILANESE WAR (1404–1406), which followed the death of Gian Galeazzo Visconti (1351–1402), ruler of Milan, brought about the dissolution of virtually all of the city's territorial holdings. Gian Galeazzo's son, Filippo Maria Visconti (1402–47), resolved to recover Verona and Vicenza. In a preemptive response to the younger Visconti's professed ambitions, Venice formed an alliance with Florence against Milan, and Savoy, Ferrara, Siena, and Mantua signed onto the alliance as well. Thus, in 1426, the allies were able to assemble an impressively large army, which was commanded by Francesco Carmagnola (1390–1432). Carmagnola also arranged for the outbreak of revolt in Brescia, to coincide with his army's entry into the city. While this diversion was under way, Carmagnola laid siege to Milan. Its defender, Francesco Sforza (1401–66), surrendered, but the arrival of substantial reinforcements brought a renewal of fighting, which lasted until November 1426. In that month, Carmagnola unleashed newly developed artillery, and the city was forced to surrender.

Milan concluded a treaty with Venice on December 30, 1426, whereby Venice gained Brescia and the surrounding area, Florence retook previously lost territory, and Savoy acquired some Milanese territory. Milan, for its part, agreed to refrain from meddling in any state between it and Rome.

Venetian-Milanese War (1427–1428)

PRINCIPAL COMBATANTS: Venice (with Florence) vs. Milan

PRINCIPAL THEATER(S): Cremona and Brescia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Filippo Maria Visconti sought to recover what he had just lost in the Venetian-Milanese War of 1426.

OUTCOME: Once again, Milan was defeated, resulting in the loss of Brescia and part of Cremona to Venice.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Ferrara, April 1428

No sooner did Filippo Maria Visconti (1402–47), son of Gian Galeazzo Visconti (1351–1402) and new ruler of Milan, conclude the humiliating Peace of Venice, which ended the VENETIAN-MILANESE WAR (1426), than he laid an ambush at Chiari for General Francesco Carmagnola (1390–1432), the commander who had defeated Milan in the war just concluded. The ambush failed, and Visconti withdrew to rearm for a new war. He engaged Carmagnola's forces at the Battle of Goltolengo, which resulted in a draw.

Carmagnola led his army from Goltolengo to Cremona, which was occupied by Milanese forces. Carmagnola attacked Casa-al-Secco, just outside of the moated city. The attack on Casa-al-Secco was devastating; reportedly, Carmagnola's army walked across Cremona's moat on the piled bodies of the soldiers killed at Casa-al-Secco. In whatever way he breached Cremona's defenses, Carmagnola won the city, driving the Milanese out. From here, he made a surprise attack, from ambush, on Milanese forces near Brescia. Florence, fearful that its ally Venice was becoming far too powerful, sued for peace, which was concluded at Ferrara in April 1428. The treaty gained for Venice part of Cremona and all of Brescia.

Venetian-Milanese War (1429–1433)

PRINCIPAL COMBATANTS: Venice and Florence vs. Milan

PRINCIPAL THEATER(S): Cremona, Riviera, Bina

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Florence broke the Peace of Ferrara, which had ended the Venetian-Milanese War of 1427–28, thereby embroiling its ally Venice in a new war.

OUTCOME: Francesco Carmagnola, the Venetian commander who had performed brilliantly in the Venetian-Milanese War of 1426 and Venetian-Milanese War of 1427–28, unaccountably failed in this war.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace treaty, 1433

Florence, allied to Venice, ended the VENETIAN-MILANESE WAR (1427–28) by suing for peace and concluding with Venice and Milan the Peace of Ferrara. However, Florence broke the peace in 1429 by attacking Lucca, then battling and defeating a Milanese fleet off the Riviera. This ignited renewed war between the Florentine ally, Venice, and Milan.

As he had in the VENETIAN-MILANESE WAR (1426) and VENETIAN-MILANESE WAR (1427–28), Francesco Carmagnola (1390–1432) led the Venetian forces. He attacked Cremona on June 6, 1431, but was defeated by the Milanese commander, Francesco Sforza (1401–66). Milan also bested the Venetian fleet at Bina. Having suffered two disastrous losses, Venice recalled Carmagnola and charged him with high treason. Found guilty, he was beheaded on April 5, 1432. Without Carmagnola, the war quickly ended, and the duke of Milan agreed to peace terms in 1433. Venice negotiated a generous settlement, retaining Brescia and Bergamo.

Venetian-Milanese War (1448–1454)

PRINCIPAL COMBATANTS: Venice vs. Milan (later with Florence, Genoa, and Mantua)

PRINCIPAL THEATER(S): Northern Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Venice sought to exploit instability in Milan to gain territory at Milanese expense.

OUTCOME: Milanese forces under Francesco Sforza, Milan seized the initiative and conquered Venetian territory—only to turn against Milan and force the citizens to proclaim Sforza duke.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Lodi, 1454

The death of Milanese duke Filippo Maria Visconti (1402–47) without an heir apparent created a crisis in government, which Venice, Milan's archrival, was eager to exploit. A civil war began in 1447 and was in full cry when Venetian forces invaded Milan. To the astonishment of the Venetians, who expected paralyzing chaos in the city, they were met by a Milanese army under Francesco Sforza (1401–66). A *condottiere* (mercenary leader), Sforza was an amoral military genius, who led the army of the rebel Milanese republic as "captain general." He quickly seized the initiative, mounted a massive counteroffensive, and conquered a great deal of Venetian-controlled territory. Worse, Sforza destroyed the Venetian battle fleet, then triumphed at the Battle of Caravaggio.

In a manner typical of the intrigues of Renaissance Italy, the more Sforza triumphed on behalf of Milan, the more he schemed with Venice. Apparently detecting this, the Milanese made peace with Venice, whereupon Sforza suddenly turned on Milan, blockaded it, and forced the citizens to proclaim him the new Milanese duke. This accomplished, Sforza, in 1452 turned against Venice, allying Milan with Florence, Genoa, and Mantua. This, however, resulted in no great battles, but only a series of skirmishes, which ended with the Peace of Lodi in 1454.

See also VENETIAN-MILANESE WAR (1404–1406); VENETIAN-MILANESE WAR (1426); VENETIAN-MILANESE WAR (1427–1428); VENETIAN-MILANESE WAR (1429–1433).

Further reading: John A. Marino, ed., *Early Modern Italy: 1550–1796* (New York: Oxford University Press, 2002); William H. McNeill, *Venice: The Hinge of Europe, 1081–1797* (Chicago: University of Chicago Press, 1974); John Julius Norwich, *A History of Venice* (New York: Knopf, 1982).

Venetian-Turkish War (1416)

PRINCIPAL COMBATANTS: Venice vs. the Ottoman Empire

PRINCIPAL THEATER(S): Aegean Sea and waters off Gallipoli

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Venice sought to counter Ottoman advances in the Aegean.

OUTCOME: The total defeat of the Ottoman fleet forced the Ottoman sultan to yield important territories to Venice.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty negotiated in Venice, 1416

Product of chronic intermittent seagoing conflict between Venice and the Ottoman Empire, this brief war had only one major battle, a June 1416 naval engagement off Gallipoli, in which the Venetian fleet, commanded by Admiral Pietro Loredan (d. 1439), defeated the Turkish fleet, which was supporting advances by Ottoman forces in the Aegean coastal region. As a result of its victory, Venice acquired control of the islands and coastal regions of Dalmatia and also was able to establish new military and trading outposts in Negroponte (Euboea) and in Greece. Most humiliating of all for the Sublime Porte (Ottoman government) was the requirement that Sultan Muhammad I (c. 1389–1421) send an ambassador to Venice. It was the first time that an Islamic empire had ever deigned to send a diplomat to a Christian state.

See also VENETIAN-TURKISH WAR (1425–1430); VENETIAN-TURKISH WAR (1443–1453); VENETIAN-TURKISH WAR (1463–1479); VENETIAN-TURKISH WAR (1499–1503); VENETIAN-TURKISH WAR (1537–1540); VENETIAN-TURKISH WAR (1570–1573); VENETIAN-TURKISH WAR (1685–1699); VENETIAN-TURKISH WAR (1714–1718).

Further reading: D. S. Chambers, *The Imperial Age of Venice, 1380–1580* (London: Thames and Hudson, 1970); William H. McNeill, *Venice: The Hinge of Europe, 1081–1797* (Chicago: University of Chicago Press, 1974); John Julius Norwich, *A History of Venice* (New York: Knopf, 1982); Lucette Valensi, *The Birth of the Despot: Venice and the Sublime Porte* (Ithaca, N.Y.: Cornell University Press, 1993).

Venetian-Turkish War (1425–1430)

PRINCIPAL COMBATANTS: Venice vs. the Ottoman Empire

PRINCIPAL THEATER(S): Albanian and Greek coastal regions, especially Thessalonica (Salonika, Greece)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Ottomans wanted to acquire territory at the expense of one of their chief Christian rivals, Venice.

OUTCOME: Venetian forces responded ineffectually early in the war and then, occupied with the Venetian-Milanese War of 1429–33, were unable to respond to the major Ottoman offensive. The Ottomans acquired important Venetian outposts, including Thessalonica, which they devastated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Ottoman forces were substantial; the largest Venetian force involved was the 1,400-man garrison of Thessalonica (Salonika, Greece).

CASUALTIES: The entire Venetian garrison at Thessalonica was lost, and civilian losses were high; Ottoman losses were negligible.

TREATIES: Treaty concluded in 1430

Devastating defeat in the VENETIAN-TURKISH WAR (1416) did not bring a permanent end to Ottoman aggression against Venice. In 1425 Sultan Murad II (1403–51) sent Ottoman ships to attack Venetian trading outposts that had been established along the coast of Albania and at Epirus in western Greece. The Venetians responded ineffectually, and in 1430 a major Ottoman drive captured Thessalonica. This had been a principal Venetian outpost on the Aegean coast, garrisoned by 1,400 Venetian troops. The troops were killed or captured, and the citizens of Thessalonica were killed or sold into slavery. Christian churches in the city were converted into mosques.

Because it was embroiled in the VENETIAN-MILANESE WAR (1429–1433), Venice lacked the resources to reinforce or retake Thessalonica or other remote outposts. It concluded a one-sided peace with the Ottomans in 1430.

McNeill, *Venice: The Hinge of Europe, 1081–1797* (Chicago: University of Chicago Press, 1974); John Julius Norwich, *A History of Venice* (New York: Knopf, 1982); Lucette Valensi, *The Birth of the Despot: Venice and the Sublime Porte* (Ithaca, N.Y.: Cornell University Press, 1993).

Venetian-Turkish War (1443–1453)

PRINCIPAL COMBATANTS: Venice vs. the Ottoman Empire

PRINCIPAL THEATER(S): Constantinople, Greece, Albania, Rumelia (Balkan Peninsula), Anatolia (Turkey)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Venice sought to help in the defense of Constantinople.

OUTCOME: Venice was caught up in the Ottoman conquest of Constantinople, Greece, Albania, and much of the Balkans; it lost major trading outposts as a result of the conflict.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

When Sultan Muhammad II (1429–81) of the Ottoman Empire attacked Constantinople in an effort to seize the city, Venice dispatched a fleet to aid in its defense. Despite the aid, the sultan succeeded in taking Constantinople by 1453, then used it as a base from which to subjugate Greece and

Albania. In the process, the Ottomans cut off all Venetian trading outposts in these regions. Venetian colonies and trading interests were driven out of a vast area now under Ottoman domination, including Greece, Albania, Rumelia (a region of the southern Balkan Peninsula), and all Anatolia (the Asian portion of modern Turkey). From the perspective of Ottoman operations, Venetian involvement in the conquest of these regions was nothing more than a sideshow.

Venetian-Turkish War (1463–1479)

PRINCIPAL COMBATANTS: Venice (with Persia as ally) vs. the Ottoman Empire

PRINCIPAL THEATER(S): Anatolia (Turkey), Albania, the Aegean

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Muhammad II (“the Conqueror”) wanted to lead the Ottoman Empire in continued conquest.

OUTCOME: Venice ceded substantial territories and agreed to pay an annual tribute to the Ottoman Empire in exchange for continued trading rights.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Constantinople, 1479

Muhammad II (the Conqueror; 1429–81), called after vastly expanding the Ottoman realm, continually built up the Ottoman military, including its already formidable navy. During the 1460s, his fleet raided Dalmatia and captured Mytilene, an important Greek port on the Aegean Sea. After a program of continual seaborne raids against Dalmatia, a combination of Ottoman sea and land forces attacked the Euboean port of Negropont (Chalcis), which quickly fell.

To respond to the Ottoman juggernaut, Venice allied itself with Persia. The Persians invaded Anatolia (Turkey), only to be repulsed at the Battle of Erzinjan by Ottoman forces personally commanded by Muhammad II. By 1473, Muhammad had succeeded in forcing the Persians to

withdraw completely from Anatolia. With its ally defeated, Venice now found itself at the mercy of Muhammad II. His troops completely overran Anatolia, then advanced through Albania. The Ottomans' advance guard raided the outskirts of Venice itself. In panic, Venice concluded the Treaty of Constantinople in 1479, formally ceding to the Ottoman Empire all of the territories now occupied by Ottoman forces, including Scutari, a portion of Constantinople garrisoned by Venetian troops who had held out against relentless Ottoman assault during 1478–79. All Venetian Aegean outposts were lost, including Negroponte and Lemnos. Venice also agreed to pay an enormous 100,000-ducat indemnity to the Sublime Porte (the Ottoman government) and secured continued trading rights—essential to Venetian economic survival—only in exchange for an exorbitant annual tribute to the Porte.

Venetian-Turkish War (1499–1503)

PRINCIPAL COMBATANTS: Venice (with military aid from Aragon, France, and Portugal) vs. the Ottoman Empire

PRINCIPAL THEATER(S): Italy and Greece

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Ottoman Turks sought further to expand their empire at the expense of Venetian holdings.

OUTCOME: The Ottoman Empire gained parts of the Peloponnese and various islands but relinquished Cephalonia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty, November 1503

This war was the culmination of Ottoman conquest at the expense of the Venetians, which had begun with the VENETIAN-TURKISH WAR (1425–1430) and proceeded through the VENETIAN-TURKISH WAR (1443–1453) and the VENETIAN-TURKISH WAR (1463–1479). Although Venice

was able to secure some military aid from France, Portugal, and Aragon, trade rivals like Rome, although Christian, were content to see the Ottoman Empire devastate Venetian commerce.

Under Muhammad II (the Conqueror; 1429–81), the Ottoman fleet had been expanded and well trained. Now it was launched against the Venetian fleet, which it defeated at the Battle of Lepanto on July 28, 1499. This was the first Ottoman naval victory in a major battle with the naval forces of a Christian country. The Venetian commander, Antonio Grimani (1436–1523), was captured. Although he was subsequently returned, he suffered the indignity of being sent home bound in chains.

Following Lepanto, the Ottoman Turks were victorious at Pylos, Modon, and Coron. Having taken these places, the Ottomans launched heavy raids over the Julian Alps and into Italy, as far as Vicenza. These relentless operations close to home forced Venice to conclude a treaty in November 1503, ceding to the Ottomans control of much of the Morea (the Peloponnese) and various islands. The Ottomans, in return, relinquished Cephalonia, the largest of the Ionian island group.

McNeill, *Venice: The Hinge of Europe, 1081–1797* (Chicago: University of Chicago Press, 1974); John Julius Norwich, *A History of Venice* (New York: Knopf, 1982); Lucette Valensi, *The Birth of the Despot: Venice and the Sublime Porte* (Ithaca, N.Y.: Cornell University Press, 1993).

Venetian-Turkish War (1537–1540)

PRINCIPAL COMBATANTS: Venice (with its Holy League ally, the Holy Roman Empire) vs. the Ottoman Empire

PRINCIPAL THEATER(S): Apulia, southern Italy, and the Aegean and Adriatic

DECLARATION: Ottoman Empire against Venice, 1537

MAJOR ISSUES AND OBJECTIVES: Ostensibly redressing a Venetian slight against Ottoman sultan Süleyman I (“the Magnificent”), the Ottoman Empire sought further conquest at the expense of Venice.

OUTCOME: Venice ceded all of its Aegean islands and its mainland holdings in the Peloponnese, including Nauplia and Monemvasia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Ottoman forces, 85,000; Venetian forces, unknown

CASUALTIES: Ottoman forces, 8,000 killed or wounded; Venetian losses unknown

TREATIES: Treaty, 1540

Warfare was reignited between perennial rivals Venice and the Ottoman Empire over a perceived Venetian insult against Ottoman sultan Süleyman I (the Magnificent; c. 1496–1566). Ottoman troops raided Apulia in southern Italy during 1537 while Süleyman prepared a major invasion fleet to lay siege against the Venetian-held island of Corfu. However, the great Venetian admiral Andrea Doria (c. 1468–1560) led a combined fleet of the Holy Roman Empire and Venice (allied in the Holy League) in a preemptive move against the Ottoman fleet. Under the command of Khair ed-Din Barbarossa II (c. 1466–1546), the Ottoman fleet turned away from its objective of Corfu and raided up and down the Aegean and Adriatic, hitting Taranto in July, then capturing numerous Venetian-controlled islands and trading outposts. Khair ed-Din Barbarossa II also staged a major raid on Crete in 1538. He conquered most of Venice's holdings in the Aegean and on the Morea.

On September 27, 1538, Andrea Doria was finally able to maneuver Barbarossa into battle. Leading 81 Venetian, 36 Papal, and 50 Spanish galleys, Doria tried to check Barbarossa at Prevesa, but the Venetian admiral suffered a stunning loss in the ensuing battle; with seven of his galleys sunk, he withdrew.

Barbarossa next led 60,000 men in 120 ships against the Spanish garrison at Castel Nuovo on the Adriatic. He laid siege from July 13 to August 10, 1539, when Castel Nuovo fell to him. The siege had cost him 8,000 men, but Venice was so disheartened that it at last sued for peace and ceded to the Ottoman Empire all of its islands in the Aegean as well as key mainland holdings in the Peloponnese, including Nauplia and Monemvasia.

McNeill, *Venice: The Hinge of Europe, 1081–1797* (Chicago: University of Chicago Press, 1974); John Julius Norwich, *A History of Venice* (New York: Knopf, 1982); Lucette Valensi, *The Birth of the Despot: Venice and the Sublime Porte* (Ithaca, N.Y.: Cornell University Press, 1993).

Venetian-Turkish War (1570–1573)

PRINCIPAL COMBATANTS: Venice (in alliance with the Holy League) vs. the Ottoman Empire

PRINCIPAL THEATER(S): Cyprus and the waters off Lepanto, Greece

DECLARATION: Ottoman Empire against Venice, 1570

MAJOR ISSUES AND OBJECTIVES: The Ottoman Empire wanted to acquire Venetian-held Cyprus.

OUTCOME: Despite the defeat and annihilation of a major Ottoman fleet by the navy of the Holy League, Venice ceded Cyprus and other possessions to the Ottoman Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Venetian forces on Cyprus, 10,000; Ottoman invasion forces, 50,000. At the Second Battle of Lepanto: Holy League, 316 ships with 50,000 sailors and 30,000 land troops; Ottoman Empire, 250 ships, 82,000 sailors, 16,000 land troops.

CASUALTIES: The 500-man Venetian garrison at Nicosia was killed, along with most of the civilian population of the city. At Famagusta, 2,500 Venetian soldiers were lost in battle, and another 2,500 were subsequently massacred. Ottoman losses at the Second Battle of Lepanto: 130 galleys captured, 80 destroyed, 25,000 men killed, 5,000 captured; Holy League losses: 17 galleys lost, 7,500 men killed.

TREATIES: Treaty of March 7, 1573

In response to the refusal of Venice to cede to the Ottoman Empire the island of Cyprus, Sultan Selim II (c. 1524–74) launched an invasion of the disputed island by land and by sea during the summer of 1570. Fifty thousand Ottoman troops landed at Nicosia, Cyprus, where they were engaged by the Venetian garrison of 5,000. Although the Venetians fought gallantly, they were massacred, along with most of the citizens of Nicosia.

After taking Nicosia, the Ottoman forces laid siege to Famagusta, another Venetian-held Cypriot town. The Ottoman fleet also instituted a naval blockade. After about a year of precarious defense and with the 5,000-man garrison reduced by half, the town surrendered. Although promising good treatment to his prisoners, the Ottoman commander ordered the massacre of the defenders of Famagusta in August 1571.

On October 7, 1571, a Holy League fleet—316 Venetian, Papal, and Spanish vessels under the command of Austria's Don Juan (1547–78)—pursued and engaged the Ottoman fleet at the Second Battle of Lepanto, off the Greek coast, with 50,000 crewmembers and 30,000 land troops. Don Juan faced Ali Pasha (fl. 1570s), the Ottoman admiral-general, whose fleet was outnumbered and outclassed—250 galleys, manned by 82,000 crew members and about 16,000 soldiers. The battle lasted three hours and was fought mainly with arrows unleashed by the opposing embarked troops. In the end, Ottoman losses included 130 galleys captured, 80 galleys destroyed, and 25,000 men killed, including Ali Pasha; another 5,000 Ottoman crew and soldiers were captured. Don Juan's losses included 17 galleys and 7,500 men; the victory resulted in freedom for about 15,000 Christian slaves.

Remarkably, Spain failed to capitalize on the triumph at the Second Battle of Lepanto, and in 1572 an Ottoman naval force defeated a Venetian fleet, which compelled

Venice to accede to a treaty of March 7, 1573, by which Venice ceded yet more territory to the Ottoman Empire, including Cyprus and remaining holdings in Epirus and Albania. Venice paid a substantial indemnity to the Ottoman Empire as well.

Venetian-Turkish War (1645–1669) *See* CANDIAN WAR.

Venetian-Turkish War (1685–1699)

PRINCIPAL COMBATANTS: Venice vs. Ottoman Empire

PRINCIPAL THEATER(S): Dalmatia, Peloponnese, Greece

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Venice sought to recover what it had lost to the Ottomans in the wars of the preceding century.

OUTCOME: Venice recovered the Peloponnese and much of Dalmatia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Treaty of Karlowitz, January 1699

During 1685–87, Francesco Morosini (1618–94) led Venetian forces in an invasion of Dalmatia and Morea (the Peloponnese) and successfully seized portions of both territories, which had been lost to the Ottoman Empire in wars of the previous century (*see* VENETIAN-TURKISH WAR [1499–1503], VENETIAN-TURKISH WAR [1537–1540], and VENETIAN-TURKISH WAR [1570–1573]). Morosini went on to advance against Athens, which fell to him in 1687, but under Ottoman counterattack the Venetians soon withdrew from the city.

In 1591, Venice captured the island of Chios, but subsequently returned it. The Treaty of Karlowitz, concluded in January 1699, secured for Venice only the first two conquests, the Peloponnese and a large portion of Dalmatia.

Venetian-Turkish War (1714–1718)

PRINCIPAL COMBATANTS: Venice (with some aid from Austria, Spain, Portugal, and a number of Italian states) vs. Ottoman Empire (with aid from Egypt and the Barbary states)

PRINCIPAL THEATER(S): Aegean Sea and coastal areas

DECLARATION: Ottoman Empire against Venice, 1714

MAJOR ISSUES AND OBJECTIVES: The Ottomans responded to Venetian attempts to foment rebellion in Montenegro, an Ottoman possession.

OUTCOME: Venice gained some land in Albania and Dalmatia but permanently relinquished the Peloponnese.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Venice, unknown; Austria, 65,000; Ottoman Empire, 180,000

CASUALTIES: Venice, 20,000 killed or wounded; Austria, 40,000 killed or wounded; Ottoman Empire, 80,000 killed or wounded

TREATIES: Treaty of Passarowitz, July 21, 1718

In 1714, Venetian agents incited an anti-Ottoman uprising in Montenegro, which was held as a province of the Ottoman Empire. The Turks responded with troops, who quickly crushed the rebellion. Simultaneously, a Venetian force also invaded Bosnia and captured a number of Ottoman vessels plying the Mediterranean. In response to the provocations in Montenegro and Bosnia, the Sublime Porte (Ottoman government) declared war on Venice and launched an amphibious mobilization against Venetian-held islands and military outposts in the Aegean Sea and coastal areas.

Beginning in December 1714 and throughout 1715, Ottoman forces drove the Venetians from the Morea (the Peloponnese), not only capturing all Venetian fortresses there but also taking some 8,000 prisoners of war. From here the Turks went on to take the Aegean Islands and Crete. However, in 1716 the Venetian garrison on Corfu held out against some 33,000 Ottoman troops. In August, a major storm sunk a large part of the Ottoman fleet, forcing the Ottomans' final withdrawal from the island.

As 1716 began, Austria joined forces with Venice against its old rival, the Ottoman Empire. The Austrians handled most of the land war, and the Venetians focused on the sea. A naval battle off Corfu on July 8, 1716, ended without decision, as did a battle off Lemnos in June 1717. On July 19, 1717, in the First Battle of Cape Matapan, however, the Venetians defeated the Turks, albeit at a high cost. In the Second Battle of Cape Matapan, July 20–22, the Venetians again repulsed the Ottoman fleet but at a substantial cost to both Venice and the Turks.

In the meantime, the Austrians won a magnificent victory at Peterwardein on August 5, 1716. A force of 63,000 Austrians defeated 110,000 Ottoman troops, inflicting some 20,000 casualties. This was followed in October by a successful five-week siege of the Ottoman fortress of Temesvár, the last Ottoman stronghold in Hungary. Its loss was gravely felt by the Ottoman Empire.

During the summer of 1717, the Austrians laid siege to Ottoman-held Belgrade. Remarkably, a 40,000-man Austrian siege force repulsed an Ottoman relief army of 180,000 men on August 16. Twenty thousand Ottoman troops perished; Austrian losses totaled 5,400 killed and wounded.

After the Battle of Belgrade, Austrian forces generally overran Serbia, Wallachia, and the Banat, forcing the Ottoman Empire to sue for peace. By the Treaty of Passarowitz, concluded on July 21, 1718, Austria gained Temesvár, Belgrade, and a portion of Wallachia, while Venice took Dalmatia and a portion of Albania.

Venezuelan Civil War (1858–1864)

PRINCIPAL COMBATANTS: Principally Conservative Party vs. Liberal Party, with *caudillos* (warlords) fighting among themselves

PRINCIPAL THEATER(S): Venezuela

DECLARATION: Coup d'état of March 1858

MAJOR ISSUES AND OBJECTIVES: After the overthrow of the Monagas brothers, Liberals fought Conservatives for control of the government; simultaneously, *caudillos* fought with one another.

OUTCOME: In 1864, the Liberal forces gained the upper hand and introduced a federalist government and constitution.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

As a result of the VENEZUELAN REVOLT of 1848–49, the Monagas brothers—José Tadeo (1789–1868) and José Gregorio (1795–1858)—came to power and instituted a dictatorial and oppressive government. Seeing opportunity in the widespread discontent with the rule of the Monagas brothers, parties at both ends of the Venezuelan political spectrum, Conservative and Liberal, collaborated on a revolution that ousted the brothers in March 1858. However, the Conservatives and Liberals now came to blows, and Venezuela erupted into civil war.

The belligerents in the war included Liberals against Conservatives, but also a host of *caudillos* (essentially warlords), who fought one another for power. Some historians see this civil war as really two wars, fought more or less in parallel: a civil war among the *caudillos* and their followers; and the “Federalist Wars,” a struggle between the Conservatives, who favored a strong, autocratic central government, and the Liberals, who wanted to institute democratic federalism.

In any case, the war proceeded with great ferocity, but without decision or even trend, one government collapsing after another. At last, in 1861, a former Venezuelan president, José Antonio Páez (1790–1873), was recalled from exile and asked to form a Conservative ministry. This constituted a more stable Venezuelan government, but Páez was soon assailed by the Liberals, who objected to his autocratic manner and his oppressive policies. Liberal political and military pressure defeated Páez and his followers by 1863 and sent him back into exile. By the following year, the Liberals gained the upper hand and, led by General Juan Falcón (1820–70) and Antonio Guzmán Blanco (1829–99), established a new government, promulgated a new constitution, and introduced federalism.

See also VENEZUELAN CIVIL WAR (1868–1870).

Further reading: Robert L. Gilmore, *Caudillism and Militarism in Venezuela, 1810–1910* (Athens: Ohio University Press, 1964); Donna Keyse Rudolph and G. A. Rudolph, *Historical Dictionary of Venezuela* (New York: Rowman and Littlefield, 1996).

Venezuelan Civil War (1868–1870)

PRINCIPAL COMBATANTS: Liberals vs. Conservatives

PRINCIPAL THEATER(S): Venezuela

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the Venezuelan government

OUTCOME: After a seesaw war, the Liberals, in the person of Antonio Guzmán Blanco, assumed control of the government.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Liberal regime of Juan Falcón (1820–70), introduced after the VENEZUELAN CIVIL WAR (1858–1864), brought a government so decentralized that all semblance of authority broke down. Into the resulting power vacuum stepped the *caudillos*, the warlords who controlled Venezuelan provinces on the local level. They vied violently with one another for control of the larger government.

In response to the growing chaos, José Tadeo Monagas (1784–1868), one of the brothers whose rule had been toppled in March 1858, led a Conservative revolt against Falcón, who, in 1868, was ousted. Monagas assumed the presidency, but died (of natural causes) within months of taking power. The coup d'état, followed by the death of Monagas, brought an increase in the nation's instability and full-scale renewal of civil war.

To counter the Conservative revolt initiated by Monagas, the *caudillo* Antonio Guzmán Blanco (1829–99) led a Liberal counterrevolution, which, after two years of bitter fighting, succeeded in toppling the Conservative regime. In 1870, Guzmán Blanco stepped into the presidency and was elected by popular vote three years later. Although he was a Liberal, Guzmán Blanco instituted a benevolent dictatorship, by which he introduced many social reforms. Venezuela's economy improved, and its level of literacy rose. However, the president's suppression of the Roman Catholic Church brought a new coup d'état in 1888–89, when Guzmán Blanco was traveling abroad. He never returned to Venezuela but lived in Parisian exile until his death in 1899.

Venezuelan Insurrection (1749)

PRINCIPAL COMBATANTS: Venezuelan Creoles vs. Spanish colonial forces

PRINCIPAL THEATER(S): Venezuela

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Creoles sought greater autonomy from the Spanish Crown.

OUTCOME: The uprising was suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

During the 18th century—and throughout its entire colonial era—the structure of Venezuelan society was rife with conflict and causes of conflict. Top government posts were held by agents of the Spanish Crown. During the 16th and 17th centuries, the *Audiencia* (supreme court) of Santo Domingo governed the country, but beginning in 1717, authority was vested in the viceroy of New Granada, headquartered at Bogotá. In actual practice, however, the Creoles—native-born whites—exercised a great deal of local autonomy, a situation that often led to conflict with Crown officials. The Creoles were economically powerful, owning most of the colony's wealth and land. They, in turn, used their power to dominate the nonwhites of the country, including the mestizos (persons of mixed ancestry), the Indians, and the black slaves.

In 1749, recognizing their own power, the Creoles briefly rebelled in various parts of Venezuela. There were no set battles, and the uprising was swiftly crushed by Spanish troops. However, it foreshadowed the independence movement that would explode during the Napoleonic era and afterward in the VENEZUELAN WAR OF INDEPENDENCE fought during 1811–21.

Venezuelan Revolt (1848–1849)

PRINCIPAL COMBATANTS: Liberals vs. Conservatives

PRINCIPAL THEATER(S): Venezuela

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of the Venezuelan government

OUTCOME: The Conservative Monagas brothers were able to control the presidency for a decade, during which a repressive dictatorship was maintained.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

From 1830 to 1848, the Venezuelan government was dominated by the powerful Conservative José Antonio Páez (1790–1873), who, despite his autocratic ways, brought to Venezuela a rare period of sustained stability

and comparative economic well-being. In 1846, thanks to the power brokering of Páez, General José Tadeo Monagas (1784–1868), his close associate, was elected to the presidency. Monagas, a Conservative, nevertheless named to the government a number of Liberal ministers, hoping to introduce some harmony into the government. The result, however, was a break with the uncompromising Páez and the alienation of the Conservative Venezuelan congress. Páez organized a revolt against his former associate, but Monagas defended his position well and defeated the attempted coup. Páez fled into exile.

With Páez gone, but Congress still present, Monagas abandoned all pretense of maintaining a Liberal presence in his government. He instituted a hard-line dictatorship, and, for the next decade, through 1858, Venezuela was ruled either by José Tadeo Monagas or by his brother, José Gregorio Monagas (1795–1858).

Venezuelan Revolt (1945)

PRINCIPAL COMBATANTS: Acción Democrática party vs. Venezuelan government

PRINCIPAL THEATER(S): Venezuela

DECLARATION: Coup d'état of October 18, 1945

MAJOR ISSUES AND OBJECTIVES: The Acción Democrática sought extensive liberalization of government, including the institution of popular election of the president.

OUTCOME: The coup d'état was successful

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Limited

TREATIES: None

After Venezuelan president Isaias Medina Angarita (1897–1953) liberalized government restrictions on the operation of opposition political parties, the Acción Democrática, a left-wing socialist party, became increasingly popular, especially among the middle class, students, the working class, and a sizable segment of the military (especially the younger officers). The party was in an excellent position to gain power; however, under the conservative constitution then in force, the next president was to be chosen not by popular election but by the Venezuelan congress, which was not likely to bring into power anyone palatable to the Acción Democrática. Accordingly, on October 18, 1945, a cadre within Acción Democrática led a revolt, stormed the presidential palace, seized Med-

ina, and threw him in jail. In his place they set up a seven-person junta with Rómulo Betancourt (1908–81) as provisional president. By 1947, the provisional government promulgated a new constitution, which not only provided for social reform but also mandated the first free, popular presidential election in the history of Venezuela.

Venezuelan Revolt (1958)

PRINCIPAL COMBATANTS: Venezuelan rebels (military and civilian) vs. government of Marcos Pérez Jiménez

PRINCIPAL THEATER(S): Venezuela, principally Caracas

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Coup d'état

OUTCOME: Pérez Jiménez was forced out.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Elements of the Venezuelan air force rose up against the corrupt regime of President Marcos Pérez Jiménez (1914–2001) on January 1, 1958, by bombing Caracas, the capital. Despite the devastation caused by this raid, government forces regained control by the next day. However, discontent continued to rock the Venezuelan military, and on January 8 a general mutiny swept the navy. Pérez Jiménez responded by radically reorganizing his cabinet, but to no avail. Caracas was hit by a general strike on January 21, a move that propelled the entire military of the nation to join in a revolt on January 23. With his position now quite untenable, Pérez Jiménez looted the treasury and fled Caracas for Miami, Florida. The governing vacuum was filled by a five-man military junta pending elections.

Venezuelan War of Independence (1810–1821)

PRINCIPAL COMBATANTS: Venezuela vs. Spain

PRINCIPAL THEATER(S): Venezuela

DECLARATION: Independence declared, July 5, 1811

MAJOR ISSUES AND OBJECTIVES: Independence from Spain.

OUTCOME: After a decade-long struggle, Venezuela achieved independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: Armistice of 1819

The Napoleonic Wars gave impetus to a general independence movement in Central and South America. The first of Spain's colonies to move toward independence was Venezuela. Napoleon Bonaparte's (1769–1821) invasion of Spain resulted in the ouster of the principal Spanish authority in Venezuela, headquartered at the capital city of Caracas, on April 19, 1810. In the absence of a colonial government, a junta took charge. The junta, however, continued to claim allegiance to the Spanish Crown; therefore, Simón Bolívar (1783–1830) traveled to Britain to appeal for military aid in a full-scale war of liberation. The Venezuelan independence forces were led by Francisco de Miranda (1750–1816), who returned to his native land from service in France during the FRENCH REVOLUTIONARY WARS.

Rebels defeated Spanish forces in November 1810, only to be defeated at Huaqui on June 20, 1811. Despite this setback, Miranda proclaimed independence on July 5, 1811. Spanish forces quickly defeated Miranda and restored Venezuela to the Spanish Crown. Captured, Miranda was transported to Spain and a prison cell, in which he died five years later.

In the meantime, Bolívar, returned from England, assumed leadership of the Venezuelan forces of liberation, and by 1813 had succeeded in taking Caracas after defeating the Spanish forces led by Domingo de Monteverde (1772–1823). With the fall of Caracas, Bolívar earned the sobriquet by which he would be known throughout South America, "Liberator." Yet the war for independence was hardly over, and although he did win other victories, he suffered a stinging defeat at the Battle of La Puerta in 1814, which forced him to flee to New Granada (Colombia) and to relinquish Venezuela, once again, to the Crown.

Bolívar remained in exile, in New Granada, Jamaica, and Haiti, for two years before he returned to Venezuela in 1816. This time, his forces were allied with a patriot band under the command of José Antonio Páez (1790–1873) and volunteer freedom fighters from Britain and other European countries. Establishing his base of operations in Angostura (Ciudad Bolívar), Bolívar concentrated first on liberating New Granada from Spanish rule (see COLOMBIAN WAR OF INDEPENDENCE). When this was achieved in 1819, he turned immediately to completing the liberation of Venezuela. Although he signed an armistice with the Venezuelan royalists, he did so only to buy time to prepare a major thrust. The offensive came on June 24, 1821, resulting in the Battle of Carabobo, in which the forces

Bolívar led decisively defeated the Spanish. Venezuela joined New Granada in liberation.

Vesey's Rebellion (1822)

PRINCIPAL COMBATANTS: African-American freedmen and slaves vs. white slaveholders and citizens

PRINCIPAL THEATER(S): Charleston, South Carolina, and environs

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: An attempt to free African-American slaves from their masters

OUTCOME: The rebellion was suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Total unknown; estimates of the number of African Americans involved are as high as 9,000.

CASUALTIES: Thirty-five African-Americans hanged

TREATIES: None

In the early decades of the American republic, the forced enslavement of African Americans was a well-established practice sanctioned by the U.S. Constitution and governed by local laws aimed at minimizing the possibility of slaves rebelling against their masters.

Denmark Vesey (c. 1767–1822), an intelligent black freedman who worked as a carpenter, planned and organized a major slave rebellion that never happened. While in bondage to a slave trader, Vesey saw firsthand the manifest evil of the "peculiar institution." When in 1800 he won by lottery enough money to purchase his freedom, he did so, settling in Charleston, South Carolina, and working for 20 years as a carpenter. Well traveled, proficient in several languages, and devoted to the teachings of the Bible, Vesey became an educated and prosperous man. But he could not ignore the plight of other African Americans enslaved to white masters. By contemporary accounts, Vesey became obsessed with freeing the slaves in and around Charleston.

In 1820, Vesey began developing plans for a revolt. For months he recruited followers among Charleston's freedmen and plantation slaves, selected lieutenants, and collected weapons. By some estimates, he amassed a following of about 9,000 recruits. His followers were organized into cells; each member knew only the name of the cell leader and a vague description of the cell's task, thereby ensuring that betrayal by a single member of the rebellion could not endanger the entire plan.

Vesey intended to call upon his slave army to strike at six points simultaneously and by surprise on Sunday, July 16, 1822, taking possession of arsenals, powder magazines, guardhouses, and naval stores in Charleston. When those points were secured, the army was to kill all the whites, seize their weapons, burn and destroy the city, and free the slaves.

Vesey's elaborate plan was betrayed to white officials, who responded by calling out the militia to guard the city's stores of weapons and ammunition. Vesey tried to move up the date of the assault, but he was arrested along with 135 followers. In the trials that followed, 67 were convicted of trying to incite an insurrection. Vesey and 36 others were hanged; 32 were condemned to exile; and four white men, convicted of supporting the insurrection, were fined and imprisoned.

Vienna, Siege of (1683)

PRINCIPAL COMBATANTS: The Hapsburgs of Austria (and their Polish and German allies) vs. the Ottomans (and their vassals in Europe)

PRINCIPAL THEATER(S): Hungary and Austria

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Defending Vienna against Ottoman attack and Hungary from Ottoman hegemony

OUTCOME: The Turks never again posed a real threat to Europe

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Ottoman-Transylvanian forces: 200,000; Allies: 80,000

CASUALTIES: Ottoman-Transylvanian forces: 15,000 dead, 25,000 wounded; Allies: 3,200 dead, 1,800 wounded

TREATIES: Treaty of Linz, March 31, 1684 (establishing Holy League against Turks)

As early as 1678, Magyar rebels, Calvinists led by Count Imre Thököly (1657–1705), had tried to break free of Hapsburg control, but Hungary remained subject to Catholic Austrian hegemony. In search of allies, Thököly turned to Sultan Muhammad IV (1641–91), who was only too happy with the chance to break the Hapsburg grip on Middle Europe and bring Hungary fully into the Ottoman orbit. In 1683, a 200,000-strong Turkish force, swelled by the Transylvanian troops of Ottoman vassal Prince Michael

Apafi (1661–90) and commanded by Grand Vizier Kara Mustafa (1664–1704), marched from Adrianople. Meanwhile, Thököly's Hungarians had gone on the attack.

The Hapsburgs quickly signed a defensive pact with Poland's king John Sobieski (1624–96), then defeated the Hungarian rebels at Pressburg before turning to face the larger menace, the Turks who crossed into Austria in June 1683. Emperor Leopold I (1640–1705) and his court fled Vienna; his 33,000-man army, under Charles of Lorraine (1643–90), fell back on Linz to await the arrival of Sobieski's 30,000 Poles.

Meantime, only a relatively small force of 11,000 regulars and 6,000 citizen volunteers remained to defend the Hapsburg capital, and on July 17, 150,000 Turks besieged Vienna. The Turks succeeded in capturing Vienna's outer fortifications before Sobieski, urged on by Pope Innocent XI (1611–89), arrived. Innocent had also tried—and failed—to induce Louis XIV (1638–1715) of France to aid Leopold against the Turks. Even Sobieski had held out despite the alliance he signed earlier in the year, until Rome offered him a large subsidy and persuaded Charles of Lorraine to combine his army with those of the electors of Saxony and Bavaria as well as some 30 German princes.

Ultimately 80,000 allied troops formed up in the hills above Vienna, and, on the morning of September 12, attacked the Turks. For 15 hours the battle raged before Sobieski and Charles's troops drove the Turkish invaders from their trenches. The grand vizier escaped, but he left behind most of his routed army, with its 15,000 dead (including six pashas) and 25,000 wounded. Some chroniclers claimed it took the soldiers and the liberated Viennese a week to loot the booty left behind by the Turks, including 300 guns, 9,000 ammunition wagons, and 25,000 tents full of goods. When Mustafa reached Constantinople (Istanbul), the sultan had him strangled to death with a silken cord. Meanwhile, Sobieski had delivered the Ottoman's battle standard of the prophet Muhammad in to the hands of Pope Innocent XI. In a broader context, the defeat marked the beginning of the end of Turkish domination in eastern Europe and was the last time the Turks would ever pose a true threat to Middle Europe.

The war went on, however, and Venice joined Austria and Poland in the formation of a Holy League against Turkey in the Treaty of Linz on March 31, 1684. Two years later Russia signed on as well.

Vietnamese-Cambodian War (1738–1750)

PRINCIPAL COMBATANTS: Vietnam (Annam) vs. Cambodia

PRINCIPAL THEATER(S): Vietnam

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Cambodia sought to recover territory lost to Vietnam over the years.

OUTCOME: Vietnamese forces seized the initiative from the Cambodians and turned a defensive war into a protracted offensive campaign, which secured even more territory for Vietnam.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Annam (a large portion of modern Vietnam) made repeated incursions into Cambodian territory. By the beginning of the 18th century, Annam had acquired the Cambodian border region in the Mekong River delta. Much of the Cambodian coast fell under Vietnamese control. In 1738, Cambodian leaders decided to embark on a military campaign to retake some of the lost territory. The campaign proved arduous and seemingly endless, producing little result. Vietnamese troops repeatedly repulsed Cambodian counterattacks, and they also repeatedly seized the initiative from the Cambodians. After each defense, the Vietnamese would take the offensive and eat away at additional Cambodian land. By the middle of the 18th century, all of Cochinchina (southern Vietnam) had fallen to the Vietnamese, and Cambodia was thereby deprived of its most fertile agricultural territory.

Vietnamese-Cham War (1000–1044)

PRINCIPAL COMBATANTS: Annam (northern Vietnam) vs. Champa (part of southern Vietnam)

PRINCIPAL THEATER(S): Champa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Champa attempted to end Annamese incursions into its territory and thereby provoked an Annamese counterattack.

OUTCOME: Annam repeatedly prevailed against the Chams, acquiring more and more Cham territory and killing its king.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: In the culminating capture of the Cham capital of Vijaya (Binh Dinh), 5,000 Chams were made prisoner.

TREATIES: None

Champa was a kingdom of seafarers located south of Annam (Dai Viet, or northern Vietnam). Over the years, Annamese settlers made incursions into northern Champa and began farming the region under the protection of the Annamese government. Although Cham settlement was primarily coastal—the people having little interest in agricultural pursuits—the incursions became intolerable, and the Chams invaded the Red River Delta region, attacking Vietnamese settlements. The Chams enjoyed considerable military success until Le Dai Hanh (d. 1005), the Annamese ruler, led a strong force in a counterinvasion and took the Cham capital city. The Annamese not only extorted tribute from the Chams but also forced the cession of Amaravati (Quang Nam). The Cham capital was moved to Vijaya (Binh Dinh).

War continued sporadically between Annam and Cham until 1044, when another Annamese ruler, Ly Thai-Tong (999–1054), led a fleet in a vigorous attack on Champa. Weakened by internal rebellion, Champa reeled under the attack. Its new capital, Vijaya, fell to the Annamese. Five thousand Chams became prisoners, the court was pillaged, and the Cham king was killed.

Vietnamese-Cham War (1068–1074)

PRINCIPAL COMBATANTS: Annam (also called Dai Viet, in northern Vietnam) vs. Champa (central Vietnam)

PRINCIPAL THEATER(S): Annam-Champa border region and the interior of Champa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Champa sought to recover its capital, Vijaya (Binh Dinh).

OUTCOME: For its action against Annam, Champa suffered fierce retribution and ultimately was compelled to cede three border provinces to Annam.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown
TREATIES: None

The VIETNAMESE-CHAM WAR (1000–1044) was disastrous for the kingdom of Champa. Among many other losses, the Chams lost their second capital, Vijaya (Binh Dinh), to the Annamese. The Chams struck an alliance with the Khmers and launched an invasion into the three border provinces of Annam. The invasion was met with fierce retaliation by Ly Thanh-Tong (1022–72), ruler of Annam. In 1068, he launched an attack into Champa, burning Vijaya and taking the Cham king, Rudravarman III (d. 1074), prisoner. Over the next several years, Ly Thanh-Tong continued to ravage Champa until the country finally yielded, ceding three of its border provinces to Annam as ransom for Rudravarman III.

See also CHINESE-ANNAMESE WAR (1057–1061); VIETNAMESE-CHAM WAR (1103).

Vietnamese-Cham War (1103)

PRINCIPAL COMBATANTS: Annam (also called Dai Viet, northern Vietnam) vs. Champa (central Vietnam)

PRINCIPAL THEATER(S): Annam-Champa border region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Champa wanted to recover three border provinces ceded to Annam in the Vietnamese-Cham War of 1068–74.

OUTCOME: Initially successful, the Chams ultimately relinquished the three provinces again.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Jaya Indravarman (d. c. 1113), king of Champa, acquired intelligence from an Annamese refugee suggesting that the three border provinces Champa had ceded to Annam as a result of the VIETNAMESE-CHAM WAR (1068–1074) were lightly held and could be easily recovered. Acting on this information, Jaya Indravarman immediately stopped paying the tribute demanded by Annam. Then he launched an attack on the three border provinces in question. Indeed, the initial results were heartening. The Chams won a succession of victories and reacquired the provinces. After holding the provinces for less than a year, however, the Annamese counterattacked and drove the Chams out of the disputed territory.

Vietnamese-Cham War (1312–1326)

PRINCIPAL COMBATANTS: Annam (also called Dai Viet, corresponding to northern Vietnam) vs. Champa (central Vietnam) (with Mongol military aid)

PRINCIPAL THEATER(S): Champa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Champa wanted to recover its lost border provinces.

OUTCOME: At first defeated, Champa was annexed to Annam; with Mongol assistance, the Chams regained their independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

By the early 14th century, southern Annam was made up of provinces that had once been the northern borderlands of Champa. These regions often rebelled against the Annamese overlords, and in 1312, Tran Ahn-tong (d. c. 1314) of Annam sent troops to quell the disturbances. Victory accomplished, he ordered the troops to proceed farther south and invade Champa. The Cham forces were quickly defeated, and the Annamese troops took captive the Cham king, Jaya Simhavarman IV (also known as Che Chi, 1284–1313). This time, Annam annexed the entire kingdom of Champa and appointed the brother of the captured king, Che Anan (fl. early 14th century), to serve as feudal lord of what had been an independent kingdom.

In 1313, Thai forces invaded Champa but were repulsed by a combination of Cham and Annamese troops. The invasion did, however, destabilize Annam and prompted the abdication of Tran Ahn-tong. Taking advantage of temporary Annamese weakness, the lord of Cham organized a rebellion. The uprising against Annam consumed four years (1314–18) before it was finally suppressed.

In 1318, the new ruler of Annam elevated a new man, General Che A-nan (fl. 14th century), to govern Champa. No sooner had he been installed, however, than Che A-nan secured military aid from the Mongols to help Champa regain its independence from Annam. In 1326, the combined Cham and Mongol forces prevailed over the Annamese, and Che A-nan was crowned king of the again independent Champa.

Vietnamese-Cham War (1446–1471)

PRINCIPAL COMBATANTS: Annam (also called Dai Viet, northern Vietnam) vs. Champa (central Vietnam)

PRINCIPAL THEATER(S): Champa, especially Vijaya and environs

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Annam sought total conquest of Champa.

OUTCOME: After a monumentally bloody battle for Vijaya, Champa was almost totally annexed to Annam.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: In the 1471 assault on Vijaya, 40,000 Chams were slain, 30,000 made prisoner.

TREATIES: None

Annam frequently invaded Champa and had done so since the 11th century (see VIETNAMESE-CHAM WAR [1000–1044], VIETNAMESE-CHAM WAR [1068–1074], VIETNAMESE-CHAM WAR [1103], and VIETNAMESE-CHAM WAR [1312–1326]). Annam launched a new invasion in 1446, overrunning and capturing the Cham capital of Vijaya (Binh Dinh). The Chinese offered an alliance with the Chams, who declined it in the belief that China would use such an alliance as an excuse to invade. Fighting alone, Champa was able to recapture its capital, but the fighting diverted military resources needed to keep internal order in the kingdom. Torn by civil war, Champa was vulnerable to renewed attack from Annam. The invasion came in 1471 when Le-Thanh-Ton (1441–97) led his Annamese forces in a massive assault on Vijaya. Forty thousand Chams were killed and another 30,000 captured, including most of the royal family. The king of Champa was killed, and Annam moved quickly to annex the conquered kingdom—or most of it. A small region in the south survived independently. But the area was of strategic advantage to the Annamese, who wanted a buffer zone between their kingdom and the aggressive Khmers. By the 17th century, however, even this small corner of Champa was absorbed by Annam, or Dai Viet.

See also VIETNAMESE-CHINESE WAR (1405–1407); VIETNAMESE-CHINESE WAR (1418–1428); VIETNAMESE CIVIL WAR (1400–1407).

Vietnamese-Chinese War (1405–1407)

PRINCIPAL COMBATANTS: Dai Viet (also called Annam, northern Vietnam) vs. China

PRINCIPAL THEATER(S): Dai Viet

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Deposed from the Dai Viet throne, the Tran family secured Chinese aid to regain power, but China annexed Dai Viet.

OUTCOME: China annexed Dai Viet, reacquiring the kingdom after it had been independent for 500 years.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: China, 200,000 land troops; Dai Viet also fielded large numbers but was substantially outnumbered.

CASUALTIES: Unknown

TREATIES: None

In the course of the VIETNAMESE CIVIL WAR (1400–1407), Ho Qui Ly (d. 1407) seized the throne of Dai Viet, deposing the Tran king. The Tran royal family sought aid from the Ming emperor of China, Yongle (Yung Lo; 1359–1424), who sent a fleet under the command of Zheng He (Chen Ho; 1371–1433), a Muslim eunuch. The Chinese fleet attacked the coast of Dai Viet periodically during 1405–07, ultimately liberating Champa from Dai Viet domination. Then, in 1407, two massive Chinese armies, totaling 200,000 troops, invaded Dai Viet, and Ho Qui Ly deployed the Dai Viet troops in defensive positions along the Red River. Unknown to Ho, however, Tran agents were at work within the ranks of the army, undermining its morale. Thus a stunned Ho Qui Ly looked on when his forces were overrun by the Chinese invaders. Both Ho Qui Ly and his son, Ho Han Thuong (d. c. 1407), were taken prisoner and transported to China. However, instead of restoring the Trans to the Dai Viet throne, the Ming emperor annexed Dai Viet to China and renamed it Annam (“Pacified South”). After half a millennium of independence, Dai Viet, or Annam, was once again under Chinese control.

See also CHINESE-ANNAM WAR (907–939); VIETNAMESE-CHINESE WAR (1418–1428).

Further reading: Joseph Buttinger, *Dragon Defiant: A Short History of Vietnam* (New York: Praeger, 1972).

Vietnamese-Chinese War (1418–1428)

PRINCIPAL COMBATANTS: Annam (Dai Viet, northern Vietnam) vs. China

PRINCIPAL THEATER(S): Annam

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Annam wanted to regain independence from China

OUTCOME: Independence was won, and a new Dai Viet dynasty founded.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: China, 100,000; Annam, 100,000

CASUALTIES: Unknown

TREATIES: Treaty concluded after 1428

As a result of the VIETNAMESE-CHINESE WAR (1405–1407), Dai Viet became Annam, the “Pacified South” annexed to the Chinese (Ming) Empire. Immediately, the Dai Viet people chafed under Chinese domination and, under Le Loi (1384–1433), organized a guerrilla resistance about

1416. Le Loi joined forces in 1418 with the poet Nguyen Trai (1380–1442) in the Lam Son district and launched a guerrilla war against the Chinese occupiers. They began by disrupting the long supply lines of the Ming army but avoided outright battle with the superior Chinese forces. The guerrillas' objective was to wage a war of attrition that would ultimately wear down the occupying forces.

Three times Le Loi found himself in direct battle with portions of the Chinese forces, and three times the Annamese lost. Le Loi decided to withdraw his forces into the remote Chi Linh Mountains, just outside of Lam Son. Then, in 1419, Le Loi made an alliance with the Laotians, who quickly betrayed the Annamese and began to aid China instead. Le Loi had no choice but to retreat yet again.

By this time, however, internal problems within China following the death of Emperor Yongle (Yung Lo; 1359–1424) brought about a precipitous decline in Chinese military might. Le Loi was able to secure a two-year armistice, during which he regrouped and enlarged the rebel forces. In 1426, he went on the offensive, launching an attack with elephants against Chinese positions in Nghe An province, south of the Red River Delta. Victorious here, Le Loi pushed the Chinese northward.

By 1427, the Chinese had been confined to Hanoi; the rest of Annam was back in Dai Viet hands. The Chinese proposed withdrawing from the kingdom if Le Loi put a Tran dynasty ruler on the Dai Viet throne. He agreed, and Tran Cao (d. c. 1428) was named king. All seemed well until Le Loi intercepted a Chinese military communication requesting reinforcements. Immediately, Le Loi resumed the war and defeated a Chinese army of at least 100,000 men. The higher command of the army was decimated, its generals either killed or captured.

Following his victory, Le Loi laid siege against Hanoi, and in 1428 Hanoi fell to him. He ordered the evacuation of all Chinese, even furnishing the junks to carry them back to China. As for Tran Cao, Le Loi took no chances on his reestablishing ties with China. He ordered the king killed and put himself on the throne as the first of the Le dynasty rulers. Among his early acts was to conclude a peace treaty with the Ming emperor.

Vietnamese Civil War (1400–1407)

PRINCIPAL COMBATANTS: The Tran dynasty (with aid from Champa and China) vs. the Ho dynasty

PRINCIPAL THEATER(S): Dai Viet (later called Annam, "Pacified South," by the Chinese; northern Vietnam)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: This was a dynastic war, in which rivals vied for the Dai Viet throne.

OUTCOME: When the Chinese intervened, the war dissolved into the Vietnamese-Chinese War of 1405–07.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 1398, after annexing Champa, Dai Viet moved its capital from Hanoi south to Than Hoa. Triumphant though it was, Dai Viet had been internally weakened by centuries of fighting with Champa. Its ruling dynasty, the Tran, were becoming progressively weaker and less capable of governing the kingdom. In the mountains, rebellion was frequent. In 1394, desperate elements of the government connived in the murder of King Tran Nghe Tong (d. 1354), who was strangled by General Ho Qui Ly (d. c. 1407). Named regent after Tran's death, Ho successfully conspired to overthrow the new king, Tran Thuan Tong (d. 1394), which elevated the three-year-old crown prince to the throne. This, of course, gave the regent supreme power. But even that was not enough, and Ho Qui Ly seized the Tran throne in 1400, founding the Ho dynasty.

After ruling for a year, Ho Qui Ly abdicated in favor of his son Ho Han Thuong (d. c. 1407), although he continued to direct policy. Adherents to the deposed Tran dynasty frequently battled with the forces of Ho Han Thuong and his father. Seeing an opportunity, perhaps, to recover independence, the Chams exploited the civil war in Dai Viet by throwing their support behind the Tran. At about this point, in 1405, the Chinese, in response to an appeal from the Tran insurgents, sent a war fleet against Dai Viet, and the civil war melted into the VIETNAMESE-CHINESE WAR (1405–1407).

Further reading: Joseph Buttinger, *Dragon Defiant: A Short History of Vietnam* (New York: Praeger, 1974).

Vietnamese Civil War (Tay Son Rebellion) (1772–1802)

PRINCIPAL COMBATANTS: The "Tay Son" brothers vs. the Nguyen dynasty; the Trinh dynasty also fought the Nguyen dynasty, as well as the Tay Son brothers; the Chinese briefly attacked the Tay Sons; French and Siamese troops aided Nguyen Anh in the reestablishment of the Nguyen dynasty.

PRINCIPAL THEATER(S): Vietnam

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The principal objective in this complex civil war was unification and control of Vietnam.

OUTCOME: The Tay Son rebels successfully toppled the Nguyen dynasty (in the south) as well as the Trinh dynasty (in the north); however, Nguyen Anh, the

Nguyen dynasty crown prince, mounted a successful campaign against the usurpers and reestablished the Nguyen dynasty, this time over a unified Vietnam.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

As in many Asian nations, governing power did not rest with the royal dynasty, but with certain influential families. In Vietnam, after the 16th century, two families, the Trinh of the north and the Nguyen of the south, shared governing power, whereas the Later Le dynasty, the imperial dynasty, only nominally governed Vietnam.

In the 1770s, three Nguyen brothers, Nguyen Hue (c. 1753–92), Nguyen Nhac (c. 1752–93), and Nguyen Lu (c. 1752–92), agitated for reforms in defiance of their own family. They instigated a rebellion in their home village of Tay Son (the war is sometimes referred to as the “Tay Son Rebellion”) in 1792 and attacked and defeated Nguyen government troops at the nearby town of Qui Nhon in 1773. Word of this victory quickly spread the rebellion.

Word of the rebellion also reached the Trinh, in the north, who decided to exploit the instability of the Nguyen in order to make conquests in the south. A Trinh army overran and seized the Nguyen capital of Hue, then assisted the Tay Son brothers in taking Saigon (Ho Chi Minh City). Correctly fearing Trinh power, however, the Tay Sons turned against their ally and in 1775 drove them out of Hue.

In 1777, the Tay Sons ravaged Saigon and eliminated most of the ruling Nguyens. However, the teenage Prince Nguyen Anh (1762–1820) fled and was joined in flight by a French missionary, Pierre Pigneau de Behaine (1741–99). The Tay Sons now controlled all of central and southern Vietnam; however, in 1782, supporters of Prince Nguyen Anh seized control of Saigon. By the next year, the Tay Sons had reclaimed the city, and Nguyen Anh once again fled, this time to Siam (Thailand). Here, in exile, he recruited aid in resisting the Tay Sons. Father Pigneau assisted in these efforts, and although his appeals to the French government fell on deaf ears, he was able to recruit volunteers from among many French adventurers.

In the meantime, the Tay Sons exploited the increasing anarchy of the north and took control of Hanoi. Both the Later Le dynasty and the Trinh family were overthrown. Under the three brothers from Tay Son, Vietnam was reunited, each brother taking responsibility for a region; Nguyen Hue proclaimed himself Emperor Quang Trung. During 1788–89, he successfully led an indigenous force against Chinese invaders.

In Siam, Nguyen Anh mustered an army, which he led in a landing in the Mekong Delta region. In September 1788, Saigon fell to these invaders. He held the city, and

by 1789 French volunteer forces were helping him win back territory from the Tay Son rebels. A crucial victory came in 1792, when Nguyen Anh and his allies destroyed the Tay Son fleet. The three brothers held out and continued to fight the war, but their deaths (1792 and 1793) brought to power their sons, who proved far less effectual than the brothers had been. In 1801, the forces of Nguyen Anh recaptured Hue, which gave him enough credibility to declare himself emperor. He adopted the title Gia Long, reestablished the Nguyen dynasty, and in 1804 secured recognition from China.

See also SIAMESE-VIETNAMESE WAR (1769–1773).

Vietnamese Civil War (1955–1965)

PRINCIPAL COMBATANTS: North Vietnam vs. South Vietnam (with military support from the United States)

PRINCIPAL THEATER(S): Southern Vietnam

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: When, with U.S. backing, South Vietnam ignored the free elections mandated by the Geneva Accords that ended the French-Indochina War of 1946–54 and declared itself an independent republic, widespread rebellion—urged on and supported by communist North Vietnam—broke out across the south.

OUTCOME: The rebel Viet Cong, inspired, supported, and supplied by North Vietnamese leader Ho Chi Minh, utterly defeated the South Vietnamese under Ngo Dinh Diem, whose assassination sent the south into political chaos. Fearing a complete communist takeover of its Indochinese client, the United States openly entered the conflict, which escalated into the decade-long Vietnam War.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

South Vietnam, 125,000; Viet Cong, 27,000 regulars plus 80,000 regional militia; United States, 23,300

CASUALTIES: Between 1961 and 1965, South Vietnam, 33,000 killed; Viet Cong, 39,000 killed; United States, 1,600 killed

TREATIES: None

The small Southeast Asian nation of Vietnam had known thousands of years of intermittent warfare when, following WORLD WAR II, Vietnamese nationalists, led by the communist Ho Chi Minh (1890–1969), fought French colonial forces to a stalemate (*see* FRENCH-INDOCHINA WAR [1946–1954]). As a result of a 1954 Geneva peace conference, the country was divided into North and South Vietnam pending the outcome of free elections scheduled for 1956. Caught up in the COLD WAR strategy of containing communism wherever possible, U.S. president Dwight

D. Eisenhower (1890–1969), concluding that free elections would result in the unification of the country under Ho Chi Minh, gave American approval and covert support to South Vietnamese president Ngo Dinh Diem (1901–63) when he co-opted the election process and ruthlessly suppressed the opposition.

First gaining control of the army, Diem quickly moved to destroy three rebellious but well-armed religious groups—the Bin Xuyen, Hoa Hao, and Cadaist sects. In 1955, Diem's troops managed to drive the Binh Xuyen rebels out of South Vietnam's capital, Saigon, but they and the other rebels continued to harass the government, which led to further attacks by Diem's forces at Can Tho, Vinh Long, and in the Seven Mountains. By the following year, Diem felt confident enough to refuse to hold the general elections promised in the Geneva talks. This act prompted the expansion of the already existing guerrilla forces, which included not only the Buddhist sects but also South Vietnamese nationalists, and communists supported by North Vietnam and other communist nations. The next five years were consumed in guerrilla-led civil warfare, with North Vietnam calling on the National Liberation Front, popularly known as the Viet Cong, to lead the struggle against Diem.

As the terrorism and rebellion spread, Diem fell from grace with his paymasters in the United States, especially after he was forced to suppress a military revolt in 1960 and his American-trained army proved generally ineffective against the dedication and the tactics of the Viet Cong. Fearing a communist takeover, Eisenhower's successor, President John F. Kennedy (1917–63), heedlessly, secretly, and without securing the consent of Congress sent U.S. combat troops to aid Diem, so that by 1962, 15,500 Americans were involved in an undeclared war against the Viet Cong (an involvement justified only after the fact in 1966 by invoking the ambiguous SEATO treaty). In 1962, the United States pushed on its client state the "strategic hamlet program," which was a widespread effort to resettle South Vietnam's peasants from their small traditional villages (easily infiltrated by the Viet Cong) to larger towns that could be more readily defended. Meanwhile, Catholic Diem's constant repression against Buddhist priests led to riots and self-immolations that did not play well on American television.

In 1963 Kennedy involved himself and the United States even deeper in Vietnam's affairs by allowing the Central Intelligence Agency to plot the murder of the thoroughly corrupt Diem, now perceived as a political liability rather than an asset, in a military coup that led to years of instability, during which South Vietnam had 12 governments, none popular enough to survive on its own. By 1965, Ho Chi Minh's North had essentially prevailed, having killed 33,000 South Vietnamese soldiers and having so demoralized the others that more than 100,000 deserted.

By then, too, South Vietnam was being run by an Armed Forces Council, headed by Generals Nguyen Cao Ky (b. 1930) and Nguyen Van Thieu (1923–2001), who were desperately trying to maintain military control of their country. The prospects, in fact, were looking better. The year before, President Kennedy himself had been assassinated, and Lyndon Johnson (1908–73) determined to fight on in Southeast Asia when he entered office. He had gotten what he needed when, in response to an apparent (but in fact staged) attack on a U.S. destroyer conducting espionage activities in the Gulf of Tonkin off the coast of North Vietnam, the U.S. Senate passed the Gulf of Tonkin Resolution on August 7, 1964. It gave President Johnson a free hand to prevent further "aggression" by North Vietnam and provided broad congressional support for expanding the VIETNAM WAR.

Vietnamese-French Wars See FRENCH INDOCHINA WAR (1858–1863); FRENCH INDOCHINA WAR (1873–1874); FRENCH INDOCHINA WAR (1882–1885); FRENCH INDOCHINA WAR (1946–1954).

Vietnamese-Khmer War (1123–1136)

PRINCIPAL COMBATANTS: Dai Viet (northern Vietnam) vs. the Khmer Empire (Cambodia and Laos), with aid from Champa (central Vietnam)

PRINCIPAL THEATER(S): Dai Viet

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Khmers sought to exploit a Dai Viet government crisis to achieve conquest.

OUTCOME: The Khmers were repeatedly repulsed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: The initial Khmer-Cham force was 20,000 men; a subsequent force included 700 Khmer warships manned by an unknown number of crew; Dai Viet strength unknown.

CASUALTIES: Unknown

TREATIES: Treaty between Champa and Dai Viet, 1136; no treaty between Dai Viet and Khmers

In the 12th century, Dai Viet was wracked by internal discord and was continually menaced by China. These conflicts rendered the kingdom weak and vulnerable. Suryavarman II (d. c. 1150), king of the Khmer Empire, decided to exploit Dai Viet weakness by invading. He pressured the perpetually inferior kingdom of Champa to aid him in the invasion and in 1128 led 20,000 troops from Savannakhet (in

south-central Laos) to the Dai Viet province of Nghe An. He was, however, defeated in battle.

Undaunted, Suryavarman II sent a new force against Dai Viet in 1124, this one consisting of 700 ships, which ravaged the Dai Viet coast, then landed an invasion force. Incursions were made, but the invasion stalled, and it was not until 1132 that a combined Khmer and Cham army successfully penetrated Nghe An. Yet even this success was short-lived; Dai Viet troops soon drove the invaders out.

In 1136, discouraged and eager to break free of the Khmers' war, the Champa king Jaya Indravarman III (d. c. 1145) concluded a treaty with Dai Viet. Without Champa aid, Suryavarman was unable to conquer Dai Viet. He did seize much of Champa in the KHMER-CHAM WAR (1144–1150), and he attacked Dai Viet again (in 1138 and 1150), but to no avail.

Vietnamese-Mongol War (1257–1288)

PRINCIPAL COMBATANTS: Dai Viet (later called Annam, northern Vietnam) vs. Champa (central Vietnam) and the Mongol invaders of Kublai Khan

PRINCIPAL THEATER(S): Vietnam (Dai Viet and Champa)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Kublai Khan wanted to acquire control of the spice trading routes that passed through Dai Viet and Champa.

OUTCOME: After a protracted war, Dai Viet and Champa acknowledged Mongol suzerainty, and Kublai Khan refrained from taking any further action in or against Vietnam.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Mongols, 300,000–500,000; Vietnamese defenders fielded considerably fewer men

CASUALTIES: Unknown; 400 Mongol ships lost on the Bach Dang River, and many Mongol troops killed at the Battle of Noi Bang

TREATIES: Presumably the war was ended by a formal treaty (unidentified) in 1288

In 1257, Kublai Khan (1216–94), ruler of the Mongols, embarked on a campaign ancillary to his principal campaign, the MONGOL CONQUEST OF THE SUNG EMPIRE. He decided to preempt the great spice-trade routes that traversed the coastal region of Dai Viet. To accomplish this, Kublai Khan dispatched a force into both Dai Viet and Champa. Advancing down the Red River, the Mongol army overran Hanoi in 1257 and sacked it. For the first three years of its incursion into Dai Viet and Champa, the Mongol hordes encountered almost no resistance. But in 1260,

when Kublai Khan began pushing for formal Dai Viet and Cham acknowledgment of Chinese suzerainty, the two Vietnamese kingdoms joined together to resist the Mongols.

Resistance was difficult. By 1260, the Mongol forces invading Vietnam amounted to half a million men. The invaders drove Vietnamese forces, under General Tran Hung Dao (d. 1300), steadily southward, until they fell back on Tranh Hoa. Here the Cham contingent took to various mountain strongholds, from which they conducted a guerrilla war. Although overwhelmingly outnumbered, the Chams, through their great military skill, managed to force the Mongols to withdraw back into China. With the Mongols in retreat, the Dai Viet and Cham forces united in a counterattack by land as well as by sea.

It was 1287 before the Mongols mounted a new invasion of Vietnam, this time with about 300,000 troops. This second invasion seized Hanoi, the Dai Viet capital, but the Mongol advance southward thereafter met increasingly heavy resistance.

In 1288, Tran Hung Dao used decoys and other ruses to lure the Mongol fleet up the Bach Dang River. The Bach Dang was a tidal river, and the Dai Viet had previously prepared the river bottom with great iron spikes. The Mongol fleet sailed up at high tide. When the tide receded, the spikes destroyed the fleet. The Dai Viet attacked and captured 400 Mongol vessels, along with their crews and troop passengers. This was sufficient to send the remainder of the Mongol army into retreat, but more Vietnamese forces fell on them in ambush at the Noi Bang Pass.

Exhausted by this protracted war, both sides made peace overtures. The rulers of Dai Viet and Champa decided to acknowledge the suzerainty of Kublai Khan, and, this done, the Mongols withdrew and did not molest Vietnam further.

Vietnamese Uprisings (Yen Bai Uprising) (1930–1931)

PRINCIPAL COMBATANTS: Vietnam vs. France

PRINCIPAL THEATER(S): Vietnam

DECLARATION: Uprising began February 9–10, 1930

MAJOR ISSUES AND OBJECTIVES: Many Vietnamese sought independence from French colonial rule.

OUTCOME: This series of uprisings was quelled by the French, but it led to others, culminating in the French Indochina War of 1946–54.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Vietnamese numbers unknown; France, 10,000

CASUALTIES: Vietnamese colonials, 1,000 killed in battle, and some 50,000 imprisoned, of whom 10,000 subsequently died; French losses were 1 man killed.

TREATIES: None

Oppression by the French colonial government of Vietnam gave rise to numerous covert revolutionary cells, most notably the Viet Nam Quoc Dan Dang (VNQDD, or Vietnamese Nationalist Party), which was founded in 1927 by Nguyen Thai Hoc (1904–30), a teacher. VNQDD employed sporadic guerrilla and terrorist tactics but planned a general uprising. The revolt began on the night of February 9–10, 1930, when military members of VNQDD mutinied against their French commanders at the garrison of Yen Bai, Tonkin (the war is sometimes called the “Yen Bai Uprising”).

However, the French were a step ahead of the VNQDD, having been alerted shortly before the commencement of the uprising. French troops were able to crush the Yen Bai mutiny by February 11, and they prevented planned mutinies in other garrisons. Nguyen Thai Hoc was arrested, along with a dozen subordinates. All were summarily executed by beheading. A nationwide crackdown gutted the membership of VNQDD. Those who escaped the French dragnet joined the Indochina Communist Party, which had been formed in 1930 by Ho Chi Minh (1890–1969) (at the time known by his given name, Nguyen Than Thanh). This group instigated and led a series of peasant uprisings in Tonkin and Annam (northern Vietnam). The French mobilized large forces to crush these numerous rebellions, using aerial bombardment and ground actions known as the “white terror.”

By 1931, the uprisings that had begun with the Yen Bai mutiny had been quelled. On its face, the war had been grotesquely one-sided: 1,000 killed and 50,000 captured (of whom 10,000 subsequently died) at the cost to French forces of a single soldier. Yet this brutal suppression of anticolonial rebellion did not kill the independence movement, which persisted. Uprisings increased in frequency and intensity, eventually leading to the FRENCH INDOCHINA WAR (1946–1954).

Vietnam War (1956–1975)

PRINCIPAL COMBATANTS: The United States (and some SEATO allies, notably Australia) and American-backed South Vietnam vs. North Vietnam (with advice, supply, and backing by communist powers, notably the USSR and China)

PRINCIPAL THEATER(S): South Vietnam and Cambodia

DECLARATION: Undeclared in the early years; the Gulf of Tonkin Resolution by the U.S. Senate, August 7, 1964, gave U.S. president Lyndon Johnson broad authority to conduct the war

MAJOR ISSUES AND OBJECTIVES: For the United States, the objective was to prevent the expansion of communism from the north to the south.

OUTCOME: Despite extremely heavy losses, the communist North prevailed, the United States withdrew, and in 1975 North and South Vietnam were united under a communist government.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

United States: 500,000; North Vietnam, 250,000; South Vietnam, 327,000

CASUALTIES: From 1966 to 1973, United States: 58,193 killed, 149,000 wounded; North Vietnam: 731,000 killed, unknown wounded; South Vietnam: 197,000 killed, 502,000 wounded. In addition, 587,000 noncombatants in North and South Vietnam were killed during the conflict.

TREATIES: Paris Peace Accords, January 27, 1973

FROM CONTAINMENT TO COUNTERINSURGENCY

At the end of WORLD WAR II, Europe's old colonial powers expelled the Japanese from South Asia, only to find themselves faced with a wave of indigenous national liberation movements. In Malaya, the British fought a successful counterinsurgency against communist guerrillas (see MALAY JUNGLE WARS), but the Dutch were much less fortunate in Indonesia, where they were forced to grant the country independence in 1949 (see INDONESIAN WAR OF INDEPENDENCE). In Indochina, the French waged a prolonged, painful, and ultimately futile war with the communist Viet Minh (see FRENCH INDOCHINA WAR [1946–1954]). When the French army found itself surrounded and desperate at Dien Bien Phu in 1954, Paris appealed to the United States for help, specifically for air support.

By that time the COLD WAR colored every aspect of American foreign policy, and U.S. diplomats and policy makers certainly viewed the insurgency in French Indochina as part of the Moscow-backed worldwide communist campaign to undermine the West's liberal democracies and take control everywhere they could. Thus, for the first time, American leaders began talking about Indochina as a “domino.” If it fell, they reasoned, the rest of Southeast Asia would topple into the communist camp as well. Despite his belief in the “Domino Theory,” U.S. president Dwight Eisenhower (1890–1969) was reluctant to send American troops into Asian jungles, to arrogate—as Harry S Truman (1884–1972) had in Korea—war-making powers to the Oval Office, or to sacrifice so valuable a Cold War asset as the U.S. reputation for being basically an anti-imperialist nation. Besides, neither he nor the American public wanted another Korea.

Eisenhower responded to French reversals at the hands of Ho Chi Minh's (1890–1969) communist forces in the north by sending the aid to rescue trapped French forces and stop the fighting. His ultimate goal, however, was to partition Indochina, as the best strategy to “contain” Ho Chi Minh's communist Viet Minh. Following the French collapse, a new premier, Pierre Mendes-France (1907–82), agreed to meet in Geneva and work out some kind of international accord. In a diplomatic farce, various states attending the Geneva Conference of 1954 did not recognize others; the United States for example, did not recognize as legitimate the People's Republic of China, or the French the Viet Minh government. There they were, nevertheless, negotiating the 10 documents that went to make up three military agreements, six unilateral declarations, and a Final Declaration to end the fighting.

The United States, in unilateral declarations, repudiated important sections of these accords and refused to sign any of the agreements of the Final Declaration. The Geneva Agreements, as a collection of documents, in fact, contained no actual treaty binding on all participants, and certainly no political treaties as such were signed. This made the agreements unusual by treaty standards and probably unique in modern times. In any case, the military agreements imposed by the accords divided Vietnam into two parts, a Democratic Republic controlling the north and recognized only by the Soviet Union and China, and the Republic of Vietnam uneasily holding sway in the south. Elections were set for 1956. They never took place, aborted by a United States that had assumed France's former role as South Vietnam's sponsor. Thus the United States was dragged into a war less popular, longer, and deadlier than the KOREAN WAR it was seeking to avoid repeating.

In accordance with the terms of the armistice, the United States had evacuated its personnel from Vietnam and assisted in the medical evacuation of wounded French troops. Ho Chi Minh felt confident that a popular vote on the issue of reunification mandated by the armistice, scheduled for July of 1956, would bring a communist victory. The United States, in the meantime, worked with French and South Vietnamese authorities to create a stable government and build an effective South Vietnamese military. The United States also sponsored the creation of the Southeast Asia Treaty Organization (SEATO) as a shield against communist aggression and proposed building up the Military Assistance Advisory Group (MAAG) staff in Saigon to accommodate its increased advisory role following the evacuation of the French. The international commission charged with enforcing the Geneva armistice refused to approve the buildup, so when 342 men were authorized as a “Temporary Equipment Recovery Mission” ostensibly assigned to inventory and removal of surplus equipment, MAAG simply appropriated them as logistical advisers; they became its Combat Arms Training and Organization Division. Despite the international commission,

Eisenhower had got his buildup, and these men became the nucleus of an expanded U.S. involvement in Vietnam.

When South Vietnam, with U.S. urging, refused to conduct the reunification plebiscite mandated by the Geneva agreements, U.S. officials braced themselves for an anticipated invasion from the north. It failed to materialize, and President Eisenhower decided to commit the United States to a long-term advisory role, intending to accomplish what the French had not—the creation of an effective indigenous Vietnamese military. Nevertheless, internal dissent over the aborted elections, especially from Buddhist groups, continued to plague the Republic of Vietnam, and the North Vietnamese insurgency in the south increased during the closing years of the decade (*see* VIETNAMESE CIVIL WAR [1955–1965]). In September 1959 the communist-supported rebels (Viet Cong) commenced guerrilla warfare by ambushing two South Vietnamese army companies in the Plain of Reeds. In 1960, the United States expanded its MAAG advisers to 685 men, including Special Forces teams assigned to train Vietnamese Rangers. Despite these efforts, relations between the South Vietnamese civil government, run by the corrupt and venal Ngo Dinh Diem (1901–63), and disaffected elements of the military became strained to the point of an attempted coup on November 11, 1960. Compounding the crisis was the situation in Vietnam's neighbor, Laos, the government of which was being challenged by military forces of the pro-communist Pathet Lao (*see* LAOTIAN CIVIL WAR).

When John F. Kennedy (1917–63) took office as U.S. president in January 1961, the numbers of Viet Cong insurgents in South Vietnam had swelled to 14,000. They waged a combination guerrilla war and campaign of terror and assassination, targeting thousands of civil officials, government workers, and police officers. If the arrival of the missile age and its promise of mass destruction had made Eisenhower, always a frugal and careful commander, ever more cautious in his execution of the Cold War, it led his successor to be more vigorous in his responses to perceived communist aggression around the globe, especially in the Third World. Kennedy styled his “new” technique “counterinsurgency.” Overtly, he launched the Peace Corps, the Latin-American Alliance for Progress, and NASA's race to the moon, to name a few new programs aimed at “paying any price” to compete successfully with the communists anywhere in the world or out of it. Covertly, Kennedy unleashed the CIA on such “trouble spots” as Cuba and Southeast Asia, resulting in the disastrous BAY OF PIGS INVASION, and the assassination of Diem. These in turn led, respectively, to the Cuban Missile Crisis and, after his own assassination, to full-scale war in Vietnam.

COVERT WAR

The escalations began modestly enough. On April 29, 1961, Kennedy authorized an additional 100 advisers, the establishment of a combat development and test center in

Vietnam, increased economic aid, and other measures. On May 11, he committed 400 Special Forces troops to raise and train a force of irregulars in areas controlled by the Viet Cong, particularly along the border. The first U.S. Air Force unit to arrive in Vietnam on permanent duty status were the 67 men assigned to a mobile combat reporting post, essentially a radar installation, which was secretly airlifted to Vietnam during September 26–October 3, 1961. On October 11, 1961, President Kennedy ordered the first combat detachment to Vietnam.

Officially called the 4400th Combat Crew Training Squadron, this elite force, the brainchild of General Curtis LeMay (1906–90), was nicknamed “Jungle Jim” and code named “Farm Gate.” An air commando organization, its officers as well as airmen found themselves on an ambiguous mission. They were officially expected only to train Vietnamese forces; nevertheless, they were trained and briefed for combat. In fact, the group did train Vietnamese crews and performed difficult aerial reconnaissance missions. Flying actual combat strikes was another matter; on December 26, 1961, word came from the highest level of command that the unit was to conduct combat missions only when the Vietnamese air force could not. Restrictions and mixed signals concerning their mission undermined the morale of Farm Gate. The situation proved prophetic of the tenor of the entire war.

In October 1961, President Kennedy dispatched General Maxwell Taylor (1901–87) and Walt Rostow (1916–2003), chair of the policy planning council of the State Department, to survey the situation in Vietnam and advise him as to whether to continue the U.S. advisory role or to commit to a direct combat function. Taylor and Rostow advised continuing air force reconnaissance flights, setting up a tactical air-ground system—which included training functions—and giving Farm Gate a freer hand but not committing substantial U.S. combat forces. Kennedy’s approval of these recommendations on November 3, 1961, marked a shift from a purely advisory role for the United States to what was described as a “limited partnership and working collaboration.” The flow of aid and materiel increased dramatically, so that by June 30, 1962, there were 6,419 Americans in South Vietnam.

Even as these forces were building, President Kennedy reported to the press and public that no U.S. combat forces were in Vietnam. However, he admitted, the “training units” were authorized to return fire if fired upon. Yet the existence of Farm Gate had become known to the press—both in the United States and in Hanoi—which reported that Americans were participating in air strikes and in operations supporting Vietnamese ground forces.

ESCALATING THE U.S. PRESENCE, 1961–1964

Beginning in January 1962, U.S. forces executed an airlift operation dubbed “Mule Train,” transporting quantities of cargo and personnel into Vietnam. Airmen also partici-

pated in “Ranch Hand,” an early experiment in spraying chemical defoliants to reduce cover and concealment available to the Viet Cong. On February 2, 1962, a C-123 training for this mission crashed, probably as the result of ground fire or sabotage, killing three crewmen. On February 11, an SC-47 assigned to Farm Gate crashed on a propaganda leaflet-dropping mission, killing eight Americans (six air force and two army personnel). The American press took note of the mishap as evidence of the nation’s growing combat role in the war. Indeed, by mid-August, 11,412 U.S. personnel served in Vietnam; by June 1963, 16,652 American military personnel were stationed in Vietnam.

During 1963, Viet Cong attacks increased, and, in the Mekong Delta, the Viet Cong escalated the war from guerrilla engagements to full-scale field operations. By the end of the year, the Viet Cong were clearly defeating the forces of South Vietnam, the administration of President Ngo Dinh Diem was rapidly losing support, and friction between the Diem government and the United States was intensifying. On September 2, 1963, President Kennedy declared in a television address to the American public that the Diem government was out of touch with the Vietnamese people and that the war could be won only if it had popular support.

The seeds of dissent were also present in the United States. Many Americans objected to their military’s increasing involvement in a distant war to support an unpopular and repressive regime. On November 1, 1963, elements of the Vietnamese army, secretly supported by the CIA, staged a coup against Diem, who was assassinated the following day. A military junta set up a provisional government, which the United States recognized on November 8. Taking advantage of the confusing situation, the Viet Cong stepped up its attacks, and the U.S. Air Force heightened its response to them.

GULF OF TONKIN INCIDENT

In the midst of the deteriorating situation in Vietnam, on November 22, 1963, President John F. Kennedy was himself assassinated, and Vice President Lyndon Johnson (1908–73) took office. General LeMay and the Joint Chiefs of Staff advised the new president to expand the war with quick, decisive action against North Vietnam, including the bombing of Hanoi. Secretary of Defense Robert McNamara (b. 1916) favored a more conservative approach, confining operations principally to South Vietnam but relaxing the rules for air engagement within South Vietnam and thereby expanding the role of air force personnel working with Vietnamese crews. A short time later, however, when Hanoi responded negatively to American peace feelers, Secretary McNamara called for the formulation of an air-strike plan against North Vietnam. Devised in the summer of 1964, the plan was held in abeyance.

The situation in Vietnam took a dramatic turn on August 7, 1964, when the U.S. Senate passed the Gulf of

Tonkin Resolution after the U.S. destroyer *Maddox*, conducting electronic espionage in international waters in the Gulf of Tonkin, was reportedly fired upon on two separate occasions (the second time in company with the U.S. destroyer *C. Turner Joy*) by North Vietnamese torpedo boats. The Senate resolution gave the president latitude in expanding the war as he might see fit.

During the second half of 1964, Viet Cong attacks on hamlets and outposts had doubled. On November 1, 1964, the Viet Cong penetrated the perimeter of the Bien Hoa air base, killing four air force personnel and wounding 72 in addition to destroying or damaging a number of aircraft and buildings. The Joint Chiefs recommended severe reprisals against North Vietnam, but President Johnson, on the eve of election, bided his time. Following his victory, however, Johnson authorized a program of restricted air strikes on infiltration targets in Laos (Operation Barrel Roll). When a 300-pound charge exploded in the bachelor officers' quarters for U.S. advisers at the Brink Hotel, killing two Americans and injuring 64 people (including 43 Vietnamese), the Joint Chiefs again urged immediate reprisals. President Johnson demurred. A few days later, on December 27, the Viet Cong raided the hamlet of Binh Gia; on December 31, the Viet Cong surrounded the U.S. Fourth Marine Battalion, which had marched to Binh Gia's relief, inflicting heavy casualties. These incidents, combined with the Brink Hotel explosion, prompted Ambassador Maxwell Taylor, who had been appointed ambassador to South Vietnam in 1964 and who had earlier argued for restraint, to recommend immediate air action against North Vietnam.

Faced with a weakening Saigon government, President Johnson was undecided whether to commit forces directly against North Vietnam or to disengage from what might well be a losing proposition. In February 1965, Johnson sent adviser McGeorge Bundy (1919–96) on a fact-finding mission to Saigon. But all indecision came to an end on February 7, when Viet Cong mortar squads and demolition teams attacked U.S. advisory forces at Camp Holloway, headquarters of the U.S. Army's 52nd Aviation Battalion, near Pleiku, killing nine Americans and wounding 108. Bundy, General William Westmoreland (b. 1914) and Ambassador Taylor sent President Johnson a joint recommendation to strike North Vietnam; accordingly, Operation Flaming Dart hit a military barracks near Dong Hoi. A Viet Cong counterstrike came on February 10 against a barracks at Qui Nhon, killing 23 enlisted airmen and seven Vietnamese troops. The United States responded on the following day. These exchanges marked the end of the U.S. advisory phase in the Vietnam War and the beginning of a long offensive escalation.

THE TET OFFENSIVE AND U.S. DOMESTIC UNREST

Even as the Gulf of Tonkin resolution was being passed, Lyndon Johnson assured the American public that its sons

would not die fighting an Asian war. But the 1964 presidential election was scarcely over when Johnson—faced by withdrawing from or escalating the conflict—chose to commit 22,000 fresh troops. By 1965, 75,000 Americans were fighting in Vietnam; by 1966, 375,000; by the next election, over half a million. Earlier in the conflict, both Kennedy and then Johnson had referred to the troops as “military advisers.” By 1966, there was no way to call them anything other than combat troops sent to fight and possibly to die. As draft calls increased by 100 percent in 1965, young men flooded into American colleges to avoid conscription and service in that “little green country.” Starting in February of that year, the United States bombed the North, then stopped to see Ho Chi Minh's response, which was invariably to send yet more leaders, more weapons, and more troops to help the Viet Cong. Over the next eight years the American army in Vietnam would grow to a peak of 542,000, and the economic cost of the war would bleed dry Johnson's cherished Great Society programs.

By then, too, opposition to the war was mounting in America, as some businessmen began questioning the astronomical costs, and many draft-age students puzzled over the morality of dropping bombs and chemicals to destroy and defoliate the very country their president claimed to be protecting. An obsessed Johnson and military leaders, acting almost as if they were independent of the publicly stated American policy, no longer bothered to consult citizens or senators while they turned Vietnam into the fourth-bloodiest conflict in American history. Johnson's own secretary of defense, Robert McNamara, admitted in 1967 that the bombing had not stopped North Vietnam's infiltration.

Then, in 1968, as if to prove McNamara's point, came a stunning, massive, and coordinated attack of the Viet Cong, the January Tet Offensive. In 35 cities all over South Vietnam, allied troops were surprised by the enemy's ferocity and determination. Though they suffered enormous casualties, the Viet Cong continued the attack for a month, penetrating the U.S. embassy in Saigon and capturing the ancient capital of Hue before being forced back into the countryside, destroying hamlet after hamlet during their retreat. Tactically, the Tet Offensive was a failure that cost the Viet Cong heavily. Strategically, however, it put the lie to Lyndon Johnson's public claims about the war. As 350,000 refugees abandoned their hamlets en masse and poured into the recently besieged towns, the United States began to strong-arm its puppet regime in South Vietnam toward the peace table. On May 10, 1968, talks with the North opened in Paris.

If Johnson was willing to ignore the growing unrest on American campuses and the perhaps more ominous disaffection among the business community, he certainly could not ignore the challenge to his leadership that his conduct of the war brought within his own party. By 1968, it was obvious to everyone that Robert F. Kennedy

(1925–68), who had served as attorney general under his brother John and briefly under Johnson, was searching for a way to run against the incumbent president of his own party. There had been little love lost between the two men even during the Kennedy administration, but their enmity swelled into loathing, especially after Kennedy embraced the antiwar movement. When Eugene McCarthy (b. 1916) showed strongly in the Democratic primary in New Hampshire, demonstrating that a mainstream presidential candidate opposing the Vietnam War was viable, Kennedy entered the ring, winning both the Indiana and the Nebraska primaries.

Johnson's worst fears were realized. The press despised him; the voters did not trust him; his approval ratings were the lowest in history; the 1968 election was obviously turning into a referendum on America's involvement in Vietnam; and the hated Bobby Kennedy would likely humiliate him by stealing the nomination of the Democratic Party for president. Surprising almost everyone in the world, Johnson went on national television before the California primary and announced he would not seek a second term, thereby throwing the election wide open.

Robert Kennedy's assassination on June 6, 1968, following his victory in the California presidential primary, destroyed the potential for the election to become a public referendum on Vietnam. The self-professed Arab nationalist Sirhan Sirhan (b. 1944) took more than an individual life that night; he destroyed more than one man's vision of how the nation's problems should be solved. Because Kennedy was clearly trying to mold an antiwar constituency into a true Democratic coalition for withdrawal, his murder deprived the American middle class of the opportunity to vote up or down on the war at a national level (until George McGovern's [b. 1922]) ultimately ineffectual campaign of 1972 when Richard Nixon [1913–94], running for a second term, asked the "silent majority" for the right to end the war at his own pace).

The murder turned a disorienting, violent, and chaotic year into an incomprehensible one, virtually ensuring that the United States would be politically incapable of avoiding the most profound and dangerous divisions in the body politic since the Civil War. As the raging Chicago police beat antiwar demonstrators before the eyes of the world at the Democratic Convention, a politically revived Richard Nixon made plans to continue—once he won the Oval Office—the grim policy, legalized by the Gulf of Tonkin Resolution, of bombing a small country into oblivion.

VIETNAMIZATION, 1969–1972

Since the Eisenhower years, U.S. presidents had wanted the Vietnam War to be fought and resolved by the Vietnamese. Through 1963 and much of 1964, American forces operated under restrictive rules of engagement in a futile effort to maintain the definition of the U.S. role as "advisory" only. After the Gulf of Tonkin incident and

Senate resolution late in the summer of 1964, the advisory role, both in appearance and fact, rapidly became the primary responsibility for combat operations. Yet the United States never stopped working with the Vietnamese army to develop its capability to prosecute the war itself.

Then, in January 1969, shortly after taking office, President Nixon announced that one of the primary goals of his administration was to end U.S. combat in Southeast Asia. Accordingly, Secretary of Defense Melvin R. Laird (b. 1922) charged the Joints Chiefs with making "Vietnamization" of the war a top priority. In June, after meeting with South Vietnamese officials, President Nixon announced plans to withdraw U.S. forces. In May 1969, the withdrawal of U.S. Army ground units from Vietnam began in earnest, although air support units lingered. In 1972, taking advantage of the reduced American ground presence, communist forces of the National Liberation Front crossed the Demilitarized Zone (DMZ) and seized a South Vietnamese province. President Nixon ordered the mining of harbors of Haiphong and other North Vietnamese ports; peace talks between the United States and North Vietnam, which had been conducted sporadically since 1968, broke down entirely in December.

The president then ordered 11 days of intensive "Christmas bombing" of North Vietnamese cities. B-52s out of Anderson Air Force Base on Guam carried out the operation, called "Linebacker II"—though many who served on the mission referred to it as the "Eleven-Day War." Linebacker II, conducted from December 18 to December 29, followed Linebacker I, a campaign of B-52 interdiction bombing in North Vietnam during the spring, summer, and fall of 1972. Linebacker I, in turn, had followed the sustained program of air interdiction over North Vietnam conducted from 1965 to 1968 and known as "Rolling Thunder." The Linebacker II operation was far more concentrated and intensive than the earlier sustained operations and was intended to force the North Vietnamese back to the conference table at Paris. Linebacker II succeeded in breaking the deadlock of mid-December. The North Vietnamese resumed negotiations on January 8, 1973, and a cease-fire agreement was hammered out by January 28.

The Paris Accords brought U.S. withdrawal and the return of the prisoners of war (POWs). A four-party Joint Military Commission was set up to prevent the resumption of hostilities, and a four-power (Canada, Poland, Hungary, and Indonesia) International Commission of Control and Supervision supervised the cease-fire. Yet both the communists and the South Vietnamese (backed by American aid) repeatedly violated the accords. For its part, the United States continued to bomb Cambodia and resumed reconnaissance flights over North Vietnam. Nevertheless, Washington was committed to withdrawing from Vietnam. On January 27, Laird announced an end to the military draft, and, on March 29, the last U.S. troops

left Vietnam, leaving behind some 8,500 U.S. civilian “technicians.” On June 13, a new cease-fire agreement among the United States, South Vietnam, North Vietnam, and the Viet Cong was drawn up to end cease-fire violations. Meanwhile, President Nixon’s own position at home was rapidly eroding as the Watergate scandal emerged. While the president was preoccupied, Congress approved an amendment requiring the cessation of military operations in and over Indochina by August 15. In November 1973, Congress passed the War Powers Act, requiring the president to inform Congress within 48 hours of deployment of U.S. military forces abroad, and to withdraw them within 60 days in the absence of explicit congressional endorsement. Combined, these two measures ensured an absolute end to U.S. involvement in Indochina.

But not quite yet. From 1973 to 1975, the fighting in Vietnam continued. In January 1975, communist forces captured the province of Phuoc Einh, then launched a major offensive in the central highlands during March. South Vietnamese forces withdrew from parts of the northwest and central highlands, and on March 25, 1975, the old imperial capital of Hue fell. In April, Da Nang and Qui Nhon followed, and after a fierce battle the South Vietnamese gave up Kuon Loc on April 22. A day earlier, President Nguyen Van Thieu (1923–2001) resigned and was briefly replaced by Tran Van Huong (served 1975), whom the communists found unacceptable for negotiations.

Late in April 1975, the U.S. forces remaining after the last ground combat troops withdrew from Vietnam on August 12, 1972, evacuated Saigon just ahead of the advancing North Vietnamese army, bringing U.S. involvement in Vietnam—and the existence of South Vietnam itself—to an end. Lieutenant General Duong Van Minh (1916–2001) became South Vietnam’s last president and surrendered to the forces of North Vietnam on April 30. North and South Vietnam were officially unified under a communist regime on July 2, 1976.

THE COSTS AND CONSEQUENCES OF THE WAR

The war cost \$140 billion and 58,193 American lives—750,000 lives on all sides. At its height in 1968–69, more than half a million American troops were fighting in it—and that was hardly the total cost of America’s longest war.

To begin with, there was what the war in Vietnam cost Johnson’s “Great Society,” a set of visionary social programs intended to end poverty and inequality in America. The funding stream for these programs was diverted to Vietnam, a trickle at first, then a roaring torrent. There was the physical and emotional cost to the soldiers, airmen, and sailors who fought a war many of their countrymen came to despise them for fighting—a war without a front, a war with an all-but-invisible enemy, a war against a regime defined as some vague evil and in support of a regime weighed down by incompetence, corruption, and

outright larceny. There was the cost to the United States as an entity—a United States deeply divided by the war, on the verge, it seemed, of open rebellion, morally exhausted by the self-realization that what it was doing in Asia was fruitless at best and terribly wrong at worst. Finally, there was the cost to Vietnam itself—hundreds of thousands dead; hundreds of thousands more wounded, homeless, and starving; cities in ruin; a countryside napalmed in places to a crisp; its village culture destroyed.

In America, involvement in Vietnam had always had its critics, and even President Kennedy, shortly before his assassination, in the last television interview he was to give, hinted at a withdrawal of support, declaring that South Vietnam would have to fight its own battles. Following the events of November 22, 1963, in Dallas, President Johnson did not act on these hints. Using the Gulf of Tonkin incident as a pretext, he committed ever-increasing amounts of American treasure and personnel to the war, so that, by 1966, domestic opposition mounted. Following the devastating North Vietnamese Tet Offensive of 1968 and political challenges—to the war and Johnson’s leadership—from within his own party, it was only after launching the Paris Peace talks that Johnson made his stunning announcement to the world of his plans for withdrawing, not from the war, but from the upcoming presidential election.

If Robert Kennedy’s assassination and the hardline stance of Democratic leaders at the 1968 Chicago convention robbed the upcoming election of its ability to serve as a plebiscite on the war, Richard Nixon’s calling for the support of the “silent majority” of Americans, and his massive—at first secret and illegal—bombings of Viet Cong supply operations in nearby Cambodia to buy time for a U.S. withdrawal sowed the seeds for the destruction of his own presidency.

In June of 1971, the *New York Times* launched a series of articles called collectively *The Pentagon Papers*, reprinting government documents revealing that for three decades the United States government had not only bungled its handling of Vietnam but had, intentionally and as a matter of course, deceived the American people about its foreign policy.

Officially entitled *The History of the U.S. Decision Making Process in Vietnam*, the secret study, ordered by Robert McNamara before his resignation from the Johnson administration in 1968, traced through its 2-million-word collection and analysis of documents, telegrams, memos, and position papers a tale of confusion, conflict, and covert action in the policy making of every administration from Harry S. Truman to Lyndon Johnson. Courtesy of a conscience-stricken MIT professor, Daniel Ellsberg (b. 1931), who had been a member of the RAND Corporation team that conducted the study, and a *Times* reporter, Neil Sheehan (b. 1936), to whom Ellsberg leaked the papers, Americans learned for the first time that their

government had helped plan the ouster and execution of another country's head of state—South Vietnam's prime minister Diem. They discovered that the Gulf of Tonkin resolution, supposedly a response to North Vietnam's attack on the U.S. destroyer *Maddox*, had been drafted months in advance of the incident. They learned that one of their presidents, Lyndon Johnson, had been lying to them in his public pronouncements that he had no long-range strategy for the war.

President Nixon, at first delighted to see past—read, Democratic—administrations come under attack, soon realized that to let the leaking of classified documents go unchallenged established a dangerous precedent, especially when those documents proved to be official confirmation of what the most radical antiwar activists had been claiming for years. Even before the publishing of the *Pentagon Papers*, more and more Americans—especially students—had been listening to the radicals. In October of 1969 half a million protesters had congregated in Washington, D.C., to demonstrate against the war.

Then, when Nixon had announced the U.S. invasion of Cambodia in his “silent-majority” speech of April 1970, students across the country had poured onto the grounds and quadrangles of colleges and universities to protest. At Kent State University in Ohio, protesters set fire to the Reserve Officer Training Corps building. In response, the governor called out 900 National Guardsmen, most of them inexperienced “weekend warriors.” Twenty-eight of them opened fire on a crowd of students, killing four and wounding nine. A photograph of a bewildered and grief-stricken young woman kneeling beside the body of a slain student, which appeared in *Life* magazine, seemed to sum up the tragedy of the times in a single, horrific image. There had been other such images—newsreel footage of a Saigon policeman summarily executing a suspected communist sympathizer by shooting him in the head in sight of God, CBS News, and the world; a *Newsweek* photo of a naked girl, a child, crying into the camera in the middle of a hellish road—images that had turned the world against the U.S. adventure in Southeast Asia, but the *Life* photo captured the sense that the “war” had come home to the streets of America.

That sense was only underscored in May 1971—two months before the *Pentagon Papers* were published—when once again a horde of protesters descended on Washington, D.C. Nixon, barricaded in the White House behind specially requisitioned school buses and unable to sleep, made a surprise 4:00 A.M. visit to protesting students before frantic aides located their president and whisked him away. Before it was over, the police and the National Guard had moved in, dispersing the crowds with tear gas and locking up thousands in hastily erected chicken-wire pens, where they stood, glaring out at news cameras and for all the world looking like prisoners of war. By then, the President's Commission on Campus Unrest had investi-

gated the Kent State shootings and issued a report calling them “unnecessary, unwarranted, and inexplicable,” but no legal action had been—nor would be—taken against the guardsmen. It was shortly after the May Day demonstrations that Ellsberg, like McNamara a former “hawk” who had lost his enthusiasm for the war, quit his job and—unlike McNamara—decided to go public immediately with what he knew, becoming one of the most famous and effective “whistle blowers” in history.

Once Nixon realized the implication of what Ellsberg and the *Times* were doing, he sent Attorney General John Mitchell (1913–88) to threaten the newspaper with charges of espionage; when that failed, he got a temporary injunction from the federal courts blocking further publication. By then, both the *Washington Post* and the *Boston Globe* had also begun publishing the papers; they too were restrained until June 30, 1971, when the U.S. Supreme Court ruled six to three in favor of freedom of the press under the First Amendment to the Constitution and against prior restraint by the state. Congress, responding to public outrage at the four deaths at home, the three-quarters of a million deaths in Vietnam, and the shocking revelations of the *Pentagon Papers*, voted to cut off funds for the war. With no legal money to continue the fighting, with the antiwar protests escalating with every incident in the conflict, Nixon in 1973 and his negotiator Henry Kissinger (b. 1923) decided to settle with the North Vietnamese, regardless of the consequences.

All of this reinforced the “bunker mentality” of the Nixon White House, and a vengeful Nixon's response was to try Ellsberg for treason. With hopes of discrediting Ellsberg personally, Nixon set up a special “unit” run directly from the White House by a former CIA special agent, E. Howard Hunt (b. 1918), and an ex-FBI agent, G. Gordon Liddy (b. 1930), under the tutelage of Special Counsel Charles Colson (b. 1928). The unit was called the “Plumbers,” because it was supposed to plug leaks; it was the same group of men who—beginning with a burglary of Ellsberg's psychiatrist's office—went on to “bug” Democratic Party headquarters at the Watergate complex, engineering the scandal that would lead to Nixon's resignation.

The publication of the *Pentagon Papers* damaged, for a while, the nation's security credibility and perhaps some of its intelligence operations; it immensely strengthened, however, its First Amendment guarantees to the press and provided the Vietnam protest movement with respectability and new vigor. Nixon, in effect, declared victory, as he called the “peace with honor” of the January 1973 Paris accords, and withdrew from the war. Ellsberg's act of conscience hastened the end of a war that had for nearly a decade bitterly divided the country, and the revelations about the “Plumbers” burglary during the series of Watergate investigations would cause Ellsberg's case to be thrown out of court. The antiwar sentiment would spill over from the end of the war to fuel the Watergate investigations,

which, like the *Pentagon Papers*, would reveal to Americans that its president was lying to them, not only costing Richard Nixon his job, but engendering public disillusionment with government as well. Within two years from the time Nixon left office in disgrace, Saigon fell. North Vietnam had defeated the South and reunited a country that almost everyone admits would have come under Ho Chi Minh's control, minus the spilling of so much blood, in 1956 had the United States allowed its people to conduct legitimate, free elections.

Vijayanagar Conquest of Madura (1378)

PRINCIPAL COMBATANTS: Vijayanagar kingdom vs. Bahmani sultanate

PRINCIPAL THEATER(S): Southern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Hindu Vijayanagar sought expansion at the expense of the Muslim Bahmanis.

OUTCOME: Exploiting internal disorder among the Bahmanis, Vijayanagar prevailed, expanded, and came to dominate all of southern India.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Vijayanagar (“empire of victory”) was located in southern India. Its origin is complex. Muslims captured two Telugu-speaking brothers—Harihara I (fl. 1336–57) and Bukka I (fl. 1354–77)—in the 1320s, converted them from the Hindu religion to Islam, then made them administrators of Kampili, in southern India. When Kampili was attacked and defeated by the Hoysalas in 1336, the brothers reverted to their native Hindu faith. This gained them the support of local landholders, and the pair transformed Kampili into Vijayanagar. The brothers and, subsequently, Harichara II (fl. 1377–1404), the son of one of the brothers, continually exploited Hindu-Muslim enmity to enlarge Vijayanagar. By the 1370s, Vijayanagar extended south of the Krishna (Kistna) River from one coast to the other.

Throughout the later 14th century, Vijayanagar fought the Bahmani sultanate in the VIJAYANAGAR WARS WITH THE BAHMANI (1350–1410). The conflict was resumed in the 16th century with the VIJAYANAGAR WARS (1509–1565). In 1377, the Bahmanis gained the military advantage and

checked Vijayanagar expansion. However, the following year, the Bahmani sultan, Alauddin Ahmad Shah (fl. 14th century), was assassinated, the sultanate was torn by internal dissension, and Vijayanagar exploited the resulting disorder and weakness by overrunning Goa and other ports along India's west coast. The city of Madura, long under Muslim control, was liberated and returned to Hindu rule under Vijayanagar authority. In this way, all of southern India became Hindu and would remain so until the conclusion of the Vijayanagar Wars.

Vijayanagar Wars (1509–1565)

PRINCIPAL COMBATANTS: Vijayanagar vs. the Muslim Indian states

PRINCIPAL THEATER(S): Southern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Hindu Vijayanagar sought to conquer Muslim India.

OUTCOME: Ultimately, Vijayanagar was all but totally destroyed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

For the founding of Vijayanagar, see VIJAYANAGAR CONQUEST OF MADURA. During its early years, the kingdom was continually at war, mainly with the Bahmani sultanate, and thus Vijayanagar developed into an intensively militaristic Hindu kingdom. Vijayanagar reached the apogee of its power and extent under Krishna Deva Raya (fl. 1509–29), who led campaigns against internal dissidents and external enemies, including Orissa, a rival Hindu state, during 1513–16. Victory in this conflict gained territory and a dynastically advantageous marriage. Shortly after this war, Krishna Deva Raya allied Vijayanagar with Portuguese trading interests in waging war against Bijapur, successor state to the Bahmani sultanate. Krishna Deva Raya harassed his Muslim neighbors, intending to weaken them. The strategy backfired, however, because his continual interference in Muslim affairs prompted the normally fractious Muslim states to unite against Vijayanagar.

At his death in 1529, Krishna Deva Raya bequeathed to his successors a kingdom beset by war, continual incursions, and outright invasions from the united Muslim states. Rama Raya (d. 1565), effectively prime minister of Vijayanagar, controlled Krishna Deva Raya's successors,

but he could not hold off the Muslim threat. In 1560, Golconda and Ahmadnagar, two major Muslim states, united in war against Vijayanagar and Bijapur. This aggressive alliance drew the support of other Muslim states, which soon overwhelmed Vijayanagar. At the Battle of Talikota in 1565, Rama Raya was slain and his army destroyed. The capital of Vijayanagar, also called Vijayanagar, was overrun and destroyed.

Although the kingdom of Vijayanagar continued to exist well into the 17th century, it never recovered its former extent, influence, or power.

Vijayanagar Wars with Bahmani (1350–1410)

PRINCIPAL COMBATANTS: Vijayanagar vs. Bahmani

PRINCIPAL THEATER(S): Mainly Vijayanagar (southern India) and a disputed border region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Religious rivals (Hindu vs. Muslim), Vijayanagar and Bahmani both sought control of a fertile region between their borders.

OUTCOME: Vijayanagar was largely subjugated by Bahmani, but the region over which they fought remained in dispute.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Dynastic marriage brought an uneasy peace.

Vijayanagar, a Hindu kingdom, found a natural enemy in Muslim Bahmani, which had been founded in 1346, a decade after Vijayanagar had been established. During 1350–1410, the rival kingdoms fought 10 wars, principally contesting possession of the fertile region between the Krishna (Kistna) River (northern border of Vijayanagar) and the Tungabhadra River (southern border of Bahmani). Under the leadership of Muhammad Shah I (fl. 1358–75), Bahmani triumphed in 1365 and 1367—visiting extensive devastation on Vijayanagar in the latter war—but suffered defeat in 1377 and 1398, when Bahmani forces were repulsed from the Vijayanagar capital (also called Vijayanagar) with heavy losses.

After the death of Muhammad Shah in 1375, Bahmani was torn by internal strife over succession, and, thus weakened, it suffered more defeats at the hands of Vijayanagar. However, Bahmani enjoyed significant success beginning in 1399, culminating in the 1410 campaign of Taj-ud-Din-Firuz (fl. 1397–1422), who succeeded in over-

running the capital city of Vijayanagar, killing the sons of King Devaraya (r. 1400–22), and making peace at the point of a sword. Taj extracted an exorbitant tribute from Vijayanagar and married the king's daughter.

Despite nominal peace between the rivals, the original cause of war, the disputed territory between the rivers, remained an undecided issue and a source of continued conflict.

Viking Conquest of the Isle of Man (1079)

PRINCIPAL COMBATANTS: Norse Vikings vs. Manxmen (inhabitants of Man)

PRINCIPAL THEATER(S): Isle of Man

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Vikings sought conquest of the island.

OUTCOME: Man fell after raiders took Skyhill in 1079.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Viking raids spanned the ninth century through a portion of the 11th. The last major raid was against the Isle of Man in the Irish Sea. The windswept island had been raided all during the Viking period, but it was under the control of the Dublin Northmen until a Viking raid landed at Skyhill. Godred Crovan (d. 1087) led the Viking raiders against the Manxmen. The fall of Skyhill brought final defeat to the Manxmen, and the entire Isle of Man fell under Norse control. Norway continued to hold the Isle of Man until 1266, when it was sold to Scots nobles.

Viking Raids against Alfred (871–896)

PRINCIPAL COMBATANTS: Saxons vs. Danish Vikings

PRINCIPAL THEATER(S): England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Danish Vikings wanted to extend their territory, known as the Danelaw.

OUTCOME: Under Alfred the Great, Saxon forces ultimately contained the Vikings, forcing them to respect the boundary between Saxon Wessex and Viking Danelaw.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: Peace of Wedmore, 878

Saxon forces were victorious against Danish Viking invaders at the Battle of Ashdown in 871; however, in this so-called Year of Battles, two new Viking armies attacked again. Together, they overran eastern Britain and occupied Reading. From this base, they advanced against Wessex, where Ethelred I (d. 871) and Alfred (subsequently Alfred the Great [849–99]) led the defense, and the Vikings were repulsed. Wessex lords decided to seize the initiative and mounted a counterattack against the Vikings at Reading, but they in turn were repulsed with heavy casualties.

Following the ill-fated counteroffensive, Ethelred died, and Alfred succeeded him. No major combat took place until late in 871 when Alfred attacked the Vikings near Wilton. The Vikings outgeneraled Alfred, however, pretending to retreat in order to lure his forces into a trap. Alfred surrendered and secured an armistice by paying the Vikings a tribute payment (Danegeld). In 872, however, the Vikings violated the armistice by attacking and conquering Mercia. From here, Viking bands raided freely throughout southwestern Britain for the next several years. Thus emboldened, in 878 Viking forces staged a surprise raid on Alfred's headquarters at Chippenham. The king fled amid a rout. However, this crowning indignity prompted Alfred to order an unprecedented general mobilization of Saxon forces. Later in 878, Alfred attacked the Vikings at the Battle of Ethandun (Edington), routing the enemy, driving them from the field, and forcing them to fall back on Chippenham, where Alfred set up a siege. The Vikings now agreed to the Peace of Wedmore, concluded in 878, by which they pledged to respect the boundary between Saxon Wessex and the Viking-controlled Danelaw.

Although contained, the Vikings were not defeated, and in 885 they took London and attempted an invasion of Kent. Alfred not only repelled the Kentish invasion but also retook London and, in this way, became acknowledged king of all Saxon England—the first ruler to govern something approaching a united realm. The fighting subsided again until 892, when Danish Vikings sporadically raided Wessex and other parts of England, but to little effect. By 896, even these raids had ceased.

Viking Raids in England, Early (793–870)

PRINCIPAL COMBATANTS: Norwegian and, separately, Danish Vikings (allied for a time with rebellious Cornishmen) vs. the Saxons

PRINCIPAL THEATER(S): England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Vikings sought treasure and territory.

OUTCOME: By 870, Danish Vikings occupied more than 30 percent of England.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: None

Norwegian Vikings raided the monastery at Lindisfarne in 793, the first of somewhat more than two centuries of raids by the dreaded “Norsemen.” More raids followed sporadically, including attacks on Wearmouth, Jarrow, and Iona. For the most part, these were hit-and-run raids; however, by the early ninth century, the Norwegian Vikings began to establish more permanent bases in the islands off the coast of Scotland.

In 835, Danish Vikings entered the picture, raiding Sheppey, an island in the Thames River. This raid was followed by four major battles. In 837, Danish Vikings united with rebellious Cornish Britons to attack the West Saxons. Egbert (c. 775–839), the Saxon king, defeated the combined forces and annexed Cornwall. The next major battle came in 851, when Danish Vikings, operating from Thanet, another island in the Thames, attacked Aclea, only to be defeated by Saxon forces under Ethelwulf (d. 858), the father of Alfred the Great (849–99). This victory propelled Wessex to predominance in the Anglo-Saxon heptarchy.

Vikings settled in East Anglia in 865, then attacked Northumbria the following year. They did not raid from ships but operated on land, with infantry as well as cavalry. Invading York during an internecine Northumbrian war, the East Anglians readily defeated the defenders and killed both Northumbrian kings. This neutralized Saxon power and influence in the north of England. By 870, when the East Anglian king Edmund (c. 841–70) was beheaded for refusing to renounce Christianity, Danish Vikings occupied more than 30 percent of England.

Viking Raids in England, Later (899–1016)

PRINCIPAL COMBATANTS: Danish and (separately)

Norwegian Vikings vs. Saxons

PRINCIPAL THEATER(S): England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Saxons sought to reclaim the Danelaw.

OUTCOME: Under Canute the Great, the Danish Vikings not only reacquired the Danelaw (lost briefly to the Saxons) but also attached to it Mercia. By 1016, England was governed and controlled by the Danish Vikings.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

At the conclusion of the Early VIKING RAIDS IN ENGLAND in 870, the Danelaw—territory of the Danish Vikings—extended over more than a third of England. The period of the later Viking raids was defined by Saxon attempts to recover the Danelaw.

Edward (the Elder; c. 870–924), one of the successors to the Saxon throne of Alfred (the Great; 849–99), failed in battle at East Anglia in 902 but defeated Danish Vikings living in Northumbria at the Battle of Tatenhall in 910. Eight years later, Edward's army attacked Tempsford, killing Guthrum II (r. 902–918), the Viking ruler there, and bringing Danish resistance in East Anglia to an end. It was not until 927, however, that King Athelstan (d. 939) retook York for the Saxons. A decade later, York fell under heavy Viking attack when Olaf Guthfrithsson (d. 941), leader of the Dublin Vikings, united with fierce Scots and Britons of Strathclyde to overthrow Athelstan. The allied Viking, Scot, and British forces once again took York, then advanced into the Midlands. At Brunanburh, they encountered Saxon warriors, and a brutal two-day battle ensued. The death toll was high, including five of the invading kings and seven Irish earls. Guthfrithsson, however, escaped, and in 939 retook York.

The next major battle did not come until the Viking attacks resumed in 980. The particular focus was London, and the warfare assumed a more menacing aspect because the Viking attackers were now less hit-and-run raiders than professional soldiers. In place of the small raiding parties, they attacked with substantial, well-organized, and ably led armies. Even worse, the Saxons were now under the leadership of a weak monarch, Ethelred II (known as Ethelred Unraed—Ethelred the Unwise, although “Unread” is often mistranslated as “Unready” [c. 965–1016]). The Saxon king

sought to avoid war by paying ever higher tribute payments (Danegeld), which the Vikings eagerly collected—only to use as finance for redoubled raids. The crisis culminated in the Battle of Maldon of 991, in which Norwegian Vikings emerged triumphant and from which Ethelred fled all the way to Normandy, having paid 21,000 pounds in tribute.

The Danish Vikings attacked London in 994 but were driven off. Returning in 1002, they were far more successful and managed to extract 24,000 pounds in tribute money. Ethelred II, returned from Norman exile, took vengeance on the Vikings by ordering the slaughter of all native-born Danes within his kingdom. Yet the Viking depredations continued. In 1011, Canterbury was raided, and Alphege, the archbishop, was slain. Four years later, the Danish king, Canute (the Great; c. 994–1035), led a successful general invasion of England. Ethelred II died a year later and was succeeded by Edmund Ironside (c. 989–1016). He took up the fight Ethelred II had largely attempted to dodge. He met Canute in battle at Pen and Assundun (Ashingdon) but was defeated. With this, Canute regained all of the Danelaw and added to it Mercia. No sooner had he taken possession of the spoils of war than Edmund Ironside died. With that, Canute effectively made England a Danish realm.

Viking Raids in France, Early (799–886)

PRINCIPAL COMBATANTS: The Franks vs. Norwegian and (separately) Danish Vikings

PRINCIPAL THEATER(S): France and the Frankish Empire

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Vikings wanted treasure and territory.

OUTCOME: The Franks suffered mightily under Viking raids, but through a combination of modern fortification, Danegeld payments, and out-and-out bribery, they managed to survive.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Vikings at the 885–886 siege of Paris, 40,000; Frankish numbers unknown

CASUALTIES: Unknown

TREATIES: None

France—the empire of the Franks—fell victim to Norwegian Viking raids beginning in 799. These were conducted sporadically through 810, when Frisia was attacked. In response to the raids, Charlemagne (742–814) established strong defenses on his northern coast. In 820, the

Norwegian Vikings met with fierce resistance at the mouth of the Seine River and were repulsed.

Danish Vikings first invaded Frisia and Dorestad in 834. By this time, Charlemagne had been dead 20 years, and his kingdom, torn by internal disorder, was too weak to resist the raids. Danish Vikings stormed, pillaged, and burned Antwerp and Noirmoutier in 836. Rouen was sacked in 841; Quentovic fell under heavy attack in 841. That same year, Norwegian Vikings sailed into the Loire River with 67 longboats. They attacked Nantes, abducting a number of citizens, who were subsequently enslaved. The Vikings settled with their booty near Noirmoutier.

In 845, a Danish Viking leader named Reginherus (or Ragnar [fl. ninth century]) sailed into the Seine at the head of 120 ships. Charles the Bald (823–77) deployed his Frankish troops on either side of the river, but it was to no avail. The Viking forces responded aggressively and were triumphant. They terrified the Franks by summarily hanging 111 citizens as a sacrifice to the god Woden. Thoroughly intimidated, the Franks paid a large tribute (Danegeld).

In 857, the son of Reginherus attacked Paris, leveling it save for four churches. The Franks defended their kingdom by building up fortifications around their cities or, where resistance was impractical, paying huge sums in Danegeld. Soon the Franks were playing one Viking group against another, paying the Danish Vikings 5,000 pounds to fight the Norse at Noirmoutier. The Danes succeeded in ousting the Norwegians. Paris, rebuilt and strongly fortified, held out against an 11-month siege, thoroughly exhausting the attackers, who numbered 40,000.

Viking Raids in France, Later (896–911)

PRINCIPAL COMBATANTS: Danish Vikings vs. France

PRINCIPAL THEATER(S): Normandy, France

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Vikings wanted treasure and territory.

OUTCOME: The Viking followers of Rollo colonized Normandy; King Charles the Simple of France made peace with Rollo, who was subsequently baptized and became the first duke of Normandy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of St. Clair-sur-Epte, 911

Rollo (c. 860–c. 931), also known as Gunge-Hrolf, led Danish Vikings from fruitless raids against Alfred's (849–899)

England (see VIKING RAIDS AGAINST ALFRED) to France. He pillaged the region between the Seine and the Loire until about 900, when he and his forces settled in Normandy.

From their base between the great rivers, the Danish Vikings continued to raid. In 910, Rollo unsuccessfully attacked Paris, then hit Chartres, but also without success. The following year, the French king Charles the Simple (879–929) negotiated terms of peace with Rollo. The French king agreed formally to deed the area occupied by Rollo and his followers in exchange for the Viking leader's pledge of loyalty to the French Crown. Indeed, Rollo was baptized in 912—as Robert—and became the first duke of Normandy.

Further reading: Gwyn Jones, *A History of the Vikings*, 2nd ed. (New York: Oxford University Press, 2001); Paddy Griffith, *The Viking Art of War* (London: Greenhill, 1998); Mark Harrison, *Viking Warrior* (London: Osprey, 2001).

Viking Raids in Ireland (795–1014)

PRINCIPAL COMBATANTS: The Vikings vs. the Irish

PRINCIPAL THEATER(S): Ireland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Vikings sought treasure and territory.

OUTCOME: Vikings settled along the Irish coast, founding a number of longboat ports.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: 6,000 Vikings killed at Clontarf

TREATIES: None

Norwegian Vikings occupying the Shetland and Orkney islands raided the Irish coast at least as early as 795. They were sporadic raids spanning more than two centuries, reaching their highest levels of intensity and frequency in the 830s. During this period, Turgeis (d. 845)—known chiefly through Viking legend—led the Orkney and Shetland Vikings in raids against Armagh, Connacht, Meith, and Ulster. In 837, he led his followers up the Liffey River, and they colonized coastal areas, where they built port towns and founded Dublin in 841. It was a miniature Norse kingdom by 853.

Over the years, the Danish Vikings founded port towns at Wexford, Waterford, Wicklow, and Limerick, always following raids. Establishing themselves here, the Vikings launched assaults against northern England, at Strathclyde, Mercia, and Northumbria.

King Brian Boru (926–1014), an Irish chieftain, led forces against the Danish Vikings at the Battle of Clontarf, outside of Dublin. Although Brian Boru fell in battle, the Irish defeated the Vikings and took control of Dublin from

them. Viking settlers continued to live in the town until 1170, when the English took it from the Irish.

Viking Raids in Russia (c. 825–907)

PRINCIPAL COMBATANTS: Swedish Vikings (Rus) vs. various indigenous peoples in Russia and, separately, the Byzantine Empire

PRINCIPAL THEATER(S): Russia and Constantinople

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Vikings wanted treasure and territory.

OUTCOME: Rus expansion was extensive during this period, and strong trading ties were established between the realm that became known as Rus and the Eastern Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Rus-Byzantine trade treaty, 907

During the second quarter of the ninth century, Swedish Vikings (the Rus) raided (and traded) along the eastern Baltic in what is now Russia. At some point in the early 860s, Rurik (d. 879), leader of the Rus, was either invited to rule Novgorod or simply conquered it. Rurik founded a center of trade here, near Lake Ladoga. From this strategic position, the Rus had access to rivers that carried them south. Their trade (and raids) took them into southern Russia and the Ukraine. Oleg (d. c. 912), successor to Rurik, led the Vikings in an attack on Kiev, which fell to them in 882. This conquest united the northern and southern realms of the Rus.

Oleg led a fleet down the Dnieper River in 907. Exiting at the Black Sea, he mounted an invasion of Constantinople, which yielded to him with little resistance. He did not seek to conquer the Byzantine capital but to negotiate forcibly an exclusive trade treaty with the Eastern Empire. In fact, the Byzantines embraced the Rus, whom they called “Varangians.” Many Rus troops remained in Constantinople as the constituents of the eastern emperor’s “Varangian guard.”

(New York: Oxford University Press, 2001); Paddy Griffith, *The Viking Art of War* (London: Greenhill, 1998); Mark Harrison, *Viking Warrior* (London: Osprey, 2000).

Viking Raids in the North Sea (c. 800–994)

PRINCIPAL COMBATANTS: Norwegian Vikings vs. Scots; also, Norwegian royal forces vs. Orcadian Vikings

PRINCIPAL THEATER(S): Scots islands, Scottish North Sea coast

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The primary objective was the Viking hunger for treasure, trade, and territory; later, King Olaf Tryggvason of Norway sought to regain control of the Vikings who had settled on the Orkney Islands.

OUTCOME: Viking influence and control was powerful all along the North Sea coast and in the North Sea islands.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In the North Sea, Norwegian Vikings staged raids beginning at the start of the ninth century or perhaps even somewhat earlier. They focused on the Shetlands and Hebrides, then used these Scottish islands as staging areas from which to attack Ireland and northern England through 825.

In the Orkneys, the Norwegian Viking presence was so well established that a Norwegian earldom was created here. From an Orkney base, Vikings attacked the Scottish mainland and thereby come to control Moray and Caithness. The Norwegians enjoyed hegemony there until 1057.

Over time, the Orkney (or Orcadian) Vikings grew apart from their Norwegian forebears; however, a 994 invasion by Norway’s King Olaf Tryggvason (c. 963–1000) forced the Orcadian Vikings to convert to Christianity. The Orcadians were thus absorbed into other Viking bands, which raided Ireland and England.

See also VIKING RAIDS IN ENGLAND, LATER; VIKING RAIDS IN IRELAND.

Further reading: Gwyn Jones, *A History of the Vikings*, 2nd ed. (New York: Oxford University Press, 2001); Paddy Griffith, *The Viking Art of War* (London: Greenhill, 1998); Mark Harrison, *Viking Warrior* (London: Osprey, 2000).

Villa's Raids (and Pershing's Punitive Expedition) (1916–1917)

PRINCIPAL COMBATANTS: The United States vs Pancho Villa and his raiders

PRINCIPAL THEATER(S): U.S.-Mexican border, northern Mexico

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Apparently seeking to enhance his political power in Mexico, Villa invaded and terrorized southern New Mexico, prompting a U.S. military response against him.

OUTCOME: Villa evaded capture, but his army had been greatly reduced, and his most senior commanders killed; raids into the United States were stopped.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Columbus, N.M., raid: 500 raiders vs. an unspecified number of U.S. soldiers and civilian volunteers; U.S. soldiers deployed to the border at the height of the crisis, 158,000; Pershing's Punitive Expedition, 10,000; Villista numbers, variable, but fewer than 10,000

CASUALTIES: Columbus, N.M., raid: United States, 10 civilians, 14 soldiers killed; Villa, 100 killed; many more Villistas killed during the Punitive Expedition

TREATIES: None

In 1913, Mexican politics was rocked by the assassination of President Francisco Madero (1873–1913), which left a power vacuum into which a number of candidates rushed. The struggle for control, in turn, became the MEXICAN REVOLT (1914–1915). The reactionary dictator Victoriano Huerta (1854–1916) seized office, whereupon U.S. president Woodrow Wilson (1856–1924) sent naval forces to blockade European arms shipments to the Huerta regime. By 1914, U.S. troops occupied the port of Veracruz, a situation that helped precipitate the collapse of the Huerta government and its replacement in 1915 by the administration of the more moderate Venustiano Carranza (1859–1920). Wilson favored Carranza, but Mexico's revolutionary strife was by no means at an end. Most powerful of the revolutionaries still active was the charismatic Francisco "Pancho" Villa (1877–1923), who worked to cultivate cordial relations with the United States in the hope of winning Wilson's support in his bid to oust Carranza as president. Wilson, however, continued to support Carranza, who scored a series of military defeats against Villa. By the end of 1915, Villa had turned openly hostile to the United States, and he either sanctioned or led raiders who harried the U.S.-Mexico border region.

As the pace of raids increased, Villa seems to have decided on a strategy of even more deliberately attacking the United States. His motives for this strategy are unclear. Some historians have suggested that he merely wanted to exact personal revenge against a nation that had failed to support him. Others believe he hoped that by provoking U.S. intervention in Mexican affairs, he would put Carranza in a weak and subservient light. Still other historians believe that Villa had a grand plan to embroil Mexico in an outright war with the United States, which would inevitably destabilize and perhaps unseat the Carranza government. Whatever moved him, Villa led some 500 "Villistas" into the New Mexico town of Columbus on March 9, 1916, and fought with civilians as well as soldiers from the nearby 13th Cavalry. Major Frank Tompkins (1868–after 1934) led elements of the cavalry in pursuit of the raiders across the border but soon turned back. Ten American civilians and 14 U.S. soldiers had

been killed in Columbus, while Villa lost at least 100 out of his 500-man raiding party.

The American public was outraged by Villa's raid on Columbus, and Major General Frederick Funston (d. 1917), commander of the army's Southern Department, concentrated troops along the border and formulated a plan for an expedition into Mexico. The combined National Guard and regular army troops patrolling the border eventually reached a strength of 158,000—the bulk of the active military strength of the United States in 1916. In addition to border patrols, President Wilson authorized a "Punitive Expedition" into Mexico. On March 14, 1916, Brigadier General John J. Pershing (1860–1948) was given command of two cavalry brigades and a brigade of infantry—10,000 men—with orders to find, pursue, and destroy Villa's forces. The Punitive Expedition advanced into Mexico on March 15, initially with the consent of President Carranza; however, as the expedition wore on through the next 11 months, Carranza became increasingly hostile to it.

Pershing divided his forces into two columns, which marched toward Casa Grande 100 miles south of Columbus. When Pershing learned that Villa had moved even farther south, he established a supply base at Colonia Dublan, then sent cavalry detachments in advance to sweep the countryside. Most of the riding was in vain. On March 29, however, a patrol of the 7th Cavalry, a detachment of 370 men, attacked Guerrero, believed to be a Villista stronghold. Taken by surprise, the Mexicans were routed from the village; at least 35 Villistas were killed, including Nicolas Hernández (d. 1916), reputedly Villa's right-hand man.

While the Seventh Cavalry had moved on Guerrero, elements of the 10th Cavalry searched in vain to the east. At Aguas Calientes, on April 1, about 150 Villistas fired on the 10th but were quickly driven off. The American troopers scoured the countryside for fugitives but aborted this operation when they were ordered, on April 10, to advance on Parral, 400 miles south of the border.

Backing up the Seventh and 10th Cavalry columns were several smaller "flying columns" assigned to block possible escape routes. On April 12, one of these flying columns, a squadron of the 13th Cavalry, was surrounded by an angry crowd at Parral. The squadron withdrew, only to find itself under attack from "Carranzistas"—troops loyal to Venustiano Carranza. The squadron withdrew to Santa Cruz de Villegas and, on April 13, was reinforced by elements of the 10th and 11th Cavalry. The situation at Parral developed into a standoff between U.S. and Mexican forces that threatened to propel the nations to the verge of war. To avert this, Pershing ordered his troops to withdraw from Parral. Seeking to avoid further provocation, Pershing decided to use his five cavalry regiments to patrol prescribed areas only. On April 22, while pulling back to its assigned district, the 7th Cavalry encountered Villistas under Candelario Cervantes (d. 1916) and

defeated them at Tomochic. On May 5, Major Robert L. Howze (1864–1926) led a squadron of the 11th Cavalry against a Villista band at Ojos Azulas.

The battles of April 22 and May 5 were the last “major” engagements of the Punitive Expedition—although, in minor fights during May, two of Villa’s principal commanders, Julio Cárdenas (d. 1916) and Cervantes, were killed. In the meantime, however, relations between the United States and the Carranza government deteriorated further as Mexican bands continued to raid U.S. border towns along the lower Rio Grande. A number of the raids had been led not by Villistas but by Carranzistas. It was at this point, with the National Guard mobilized, that U.S. troop strength along the border reached six figures. On the Mexican side of the border, a severe fight broke out in Carrizal at the end of June when a 10th Cavalry patrol entered the town without Carranzista permission. Outnumbered, the 10th Cavalry patrol lost half its men, killed, wounded, or captured. The bright side of this grave incident was that it shocked both sides to the negotiating table. Pershing reduced the scope of his operations, concentrating around his main base at Colonia Dublan. At length, talks with Carranza petered out, but the crisis between the two governments eased. Although Villa remained at large and even organized a new army in southern Mexico, President Wilson ordered the withdrawal of the Punitive Expedition. The last of the force recrossed the border on February 5, 1917.

The Punitive Expedition failed to capture Villa, but it was hardly the fiasco that some historians portray. As a result of the operation, Villa’s army was greatly reduced, and his most senior commanders were killed. By the end of the campaign, raids into the United States had stopped. As for Villa’s new army, it never posed a threat to the United States.

Villmergen War, First (1656)

PRINCIPAL COMBATANTS: Swiss Catholics vs. Swiss Protestants

PRINCIPAL THEATER(S): Villmergen, Switzerland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Catholic peasantry sought to overcome domination by the Protestant urban wealthy classes.

OUTCOME: The peasant forces prevailed, but achieved nothing more (or less) than a guarantee that religious uniformity could be enforced within the confines of each canton.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Land Peace of Baden, 1656

Ostensibly, the cause of the First Villmergen War in Switzerland was religious. Five Catholic cantons warred against two Protestant cantons. Yet behind the religious differences was an even more profound economic dispute. The five Catholic cantons were rural, populated by farming peasants, whereas the two Protestant cantons, Bern and Zürich, were wealthy and urban. The peasantry was oppressed by the economic policies of the urban cantons, which imposed burdensome taxes, controlled the money supply, set markets, and generally profited at the expense of the less-well-off cantons.

The war took its name from its only major battle, at Villmergen in 1656, which resulted in the defeat of Bern and Zürich at the hands of Catholic forces. These cantons agreed to the terms of the Land Peace of Baden, which did little to correct Switzerland’s economic inequalities, but did guarantee the right of each canton to enforce religious unity and uniformity within its confines. The Protestant cantons were never fully satisfied with the terms of the Land Peace and, in 1712, reopened hostilities with the SECOND VILLMERGEN WAR.

Lindsay, *History of the Reformation: Reformation in Switzerland, France, the Netherlands, Scotland and England* (Belle Fourche, S.D.: Kessinger, 2003).

Villmergen War, Second (1712)

PRINCIPAL COMBATANTS: Swiss Catholics vs. Swiss Protestants

PRINCIPAL THEATER(S): Villmergen, Switzerland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Protestant cantons sought to restore the power they had lost as a result of the First Villmergen War.

OUTCOME: The Protestants regained control over most of Switzerland.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Peace of Aarau, 1712

The Land Peace of Baden, which ended the First VILLMERGEN WAR in 1656, endured until 1712, when the Catholic abbot of Saint Gall, Leodegar Bürg Isser (1640–1717), decided to help the needy Protestants of the Toggenburg build a much-needed road. This gesture of brotherly love violated the intracanton religious unity guaranteed by the

Land Peace, and although efforts at reconciliation were made, the Protestant forces of Zürich and Bern invaded and occupied the Catholic cantons of Toggenburg, Thurgau, Aargau, and Rheintal. Bernese forces met the Catholics in the Second Battle of Villmergen on July 25, and this time, in contrast to the first battle in the first war, the Protestant forces prevailed. The defeated peasantry agreed to the Peace of Aarau of 1712, which supplanted the Land Peace of Baden by guaranteeing religious toleration between Protestants and Catholics. The agreement diminished the power of the Catholic peasantry and restored it to the urban, wealthy Protestant cantons—the situation prior to the First Villmergen War.

Lindsay, *History of the Reformation: Reformation in Switzerland, France, the Netherlands, Scotland and England* (Belle Fourche, S.D.: Kessinger, 2003).

Visigothic-Frankish War (506–507)

PRINCIPAL COMBATANTS: Visigoths vs. Salic Franks

PRINCIPAL THEATER(S): Gaul (France)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Clovis, king of the Franks, sought to purge western Europe of the Visigoths and with them the Arian heresy.

OUTCOME: The Franks triumphed, Roman Catholicism displaced Arianism in western Europe, and Clovis was poised to become the dominant ruler of Gaul and western Germany.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The basis of this war was largely religious, as the Roman Catholic king of the Salian Franks, Clovis (c. 466–511), launched a war against the Visigoths, led by Alaric II (d. 507), who cleaved to Arianism, a Christian sect that denied the Trinity and the oneness of Christ with God.

The war consisted mainly of maneuver before the Battle of Vouillé, near Poitiers, France, which was fought in May 507. Not only did the axe-wielding Franks rout the Visigoths—who abandoned Toulouse and retreated into Spain—but Alaric III (d. 507) fell in combat. The Franks occupied Toulouse, and in Gaul the Visigoths held only the small region of Septimania, just north of the Pyrenees.

As a result of this war of purge, Catholicism became dominant in western Europe, and Clovis was in position to become king of most of Gaul as well as the western Germanic states.

Thompson, *The Goths in Spain* (Oxford: Oxford University Press, 1969); Lewis Thorpe, tr., *Gregory of Tours: The History of the Franks* (New York: Viking, 1983).

Visigothic Raids on the Roman Empire, Early (332–390)

PRINCIPAL COMBATANTS: Visigoths vs. Roman Empire and Eastern Roman Empire

PRINCIPAL THEATER(S): Roman Danubian frontier; Roman northern frontier

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Visigoths sought to exploit growing Roman weakness and obtain territory.

OUTCOME: Years of Visigothic raiding progressively undermined both the Western and Eastern empires.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Roman strength at Adrianople (378) was 30,000; Visigoth strength unknown, but probably similar.

CASUALTIES: Roman casualties at Adrianople (378) were catastrophic, 20,000 killed; Visigoth losses unknown

TREATIES: No documents exist; a formal treaty may have existed between the Eastern Empire and the Visigoths beginning in 382.

Of all the barbarian tribes that menaced Rome during its long decline, none was more formidable or possessed greater skill at arms than the Visigoths. Although their first action against the Roman Empire—at least the first recorded in Roman chronicles—ended in defeat in the Danubian region of Yugoslavia and Bulgaria in 332, they did not desist. Badly defeated, the Visigoth king Ermanaric (d. c. 376) took a different approach, raiding the northern outposts of the empire and avoiding pitched battles. This became the pattern for the next three decades until the growing internal weakness of the Roman Empire became apparent to Visigoth leaders. Amid civil war (see ROMAN CIVIL WAR [350–351] and ROMAN CIVIL WAR [360–361]), the Visigoths exploited Roman preoccupation by raiding the Eastern Empire.

During 364–365, Procopius (d. 366) rebelled against the Eastern emperor Valens (c. 328–378). The Visigoths threw in their lot with Procopius to share in control of the Balkans. However, a Syrian army under Roman control defeated Procopius in 366, and Valens took vengeance on the Visigoths by invading territory near the Danube during 367–369. During the course of two years of relentless Roman campaigns, the Visigoths were forced to retreat into Transylvania. This defeat shook Visigothic unity, and a civil war broke out between followers of King Athanaric (d. 381) and those Visigoths who had converted to Arian

Christianity. Athanaric was killed and replaced by Fritigern (d. after 382).

Under Fritigern, the Visigoths confederated for purposes of fighting Rome. The culmination of this rebellion came at the Battle of Adrianople on August 9, 378. The battle proved the superiority of cavalry over infantry for the next 1,000 years; it also demonstrated that a barbarian army could triumph over the Roman legions.

Emperor Valens fell at Adrianople and was succeeded by Theodosius I (the Great; 346–395), who vowed vengeance against the Visigoths and other Gothic peoples. However, Theodosius, a pragmatist, understood the advantage of pitting one Goth against another. After forcing the Ostrogoths (eastern Goths) westward, he opened the region to settlement by the Visigoths, who colonized northern Thrace during 382. In exchange for this privilege, the Visigoths furnished Theodosius with mercenary troops. Under Alaric (c. 370–410), however, the Visigoths broke the peace with Theodosius and the Eastern Empire in *STILICHO'S WARS WITH THE VISIGOTHS*, which commenced in 390.

Visigothic Raids on the Roman Empire: Alaric's First Invasion of Italy (401–404)

PRINCIPAL COMBATANTS: Visigoths vs. Western Roman Empire (with aid from the subject Germanic tribes)

PRINCIPAL THEATER(S): Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Visigoth leader Alaric sought control of Italy.

OUTCOME: The Visigoth invasion was ultimately repulsed, and Alaric became an ally of the Western Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: Treaty of 402; reconciliation of 404 (no formal treaty)

Leading a Gothic-Roman army, Alaric (r. 395–410) advanced from Thessalonika through Pannonia and crossed into Italy via the Julian Alps in October, then laid siege against Aquileia at the head of the Adriatic. After the city fell to him, Alaric captured both Istria and Venetia.

Alaric moved with such speed that Stilicho (c. 359–408), effectively the ruler of the Western Empire in the name of the incompetent emperor, Honorius (395–423), was completely surprised. To Stilicho's credit, however, he was able to rally his forces to fight delaying and harassing actions that so impeded the Visigoth advance that Alaric was forced to winter in northern Italy. Stilicho used this delay to raise an army among the Germanic

federati (client tribes of the Roman Empire) in Raetia and southern Germany. He also withdrew the Roman Rhenish garrisons and legions in Gaul, concentrating them in Italy to fight the Visigoths.

About February 402, Stilicho led the German troops he had recruited in a treacherous winter march over the Alps. He linked up with units recalled from Gaul and advanced against Milan, to which Alaric had laid siege. Under attack, Alaric lifted the siege and advanced to the southwest, apparently with the intention of outrunning Stilicho and capturing Honorius. Stilicho, however, pressed his pursuit and forced Alaric to a stand at Asta in March 402. Alaric offered some resistance, then rapidly withdrew up the Tanarus (Tanaro) River to Pollentia (Bra). The tenacious Stilicho conducted a forced march in pursuit.

On April 6, Stilicho maneuvered Alaric into another battle, at Pollentia. He caught the Visigoth by surprise, but this time it was Alaric's turn to show his tactical skill. He rallied his troops, who repelled Stilicho's attack—at first. In the end, however, the Roman general was able to capture Alaric's camp, forcing him to withdraw across the Apennines toward Tuscany. Even as he slipped away, he opened negotiations and concluded a treaty with Stilicho and Honorius.

The treaty turned out to be a dodge to buy time. In June 403, Alaric began an advance through the Brenner Pass to reinvade Italy. Stilicho's superior intelligence network obtained information about Alaric's plans, and Stilicho halted the Visigoth advance in a narrow pass north of Verona. With Alaric stalled, Stilicho attacked in force from the rear and delivered a stunning defeat to the Visigoths. Nevertheless, Alaric, once again exhibiting the skill and resolve of a fine commander, kept his forces intact and withdrew to the east. Within a year, however, Alaric renounced his allegiance to the Eastern emperor Arcadius (c. 377–408), rival of Honorius and Stilicho, and was recruited by Stilicho to hold the province of Illyricum against both the barbarians and the forces of the Eastern Empire.

Further reading: J. B. Bury, *Invasion of Europe by the Barbarians* (New York: W. W. Norton, 2000); Peter J. Heather, *Goths and Romans, A.D. 332–489* (Oxford: Oxford University Press, 1992).

Visigothic Raids on the Roman Empire: Alaric's Second Invasion of Italy (409)

PRINCIPAL COMBATANTS: Visigoths vs. Western Roman Empire

PRINCIPAL THEATER(S): Northern Italy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Alaric was invited to invade the Western Empire and oppose Emperor Honorius after the treacherous murder of Stilicho.

OUTCOME: Roman resistance collapsed, and Alaric installed a puppet emperor.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** None

In 408, Honorius (395–423), emperor of the West, instigated the murder of his chief general and the power behind the throne, Stilicho (c. 359–408). This treacherous and foolish act prompted Stilicho's legions of barbarian auxiliaries to turn against Honorius. They appealed to the Visigoth ruler Alaric (r. 395–410) to unite with them in opposition to the emperor of the West.

In 409, then, Alaric led his Visigoths across the Julian Alps in a second invasion of Italy (see VISIGOTHIC RAIDS ON THE ROMAN EMPIRE: ALARIC'S FIRST INVASION OF ITALY). After crossing the Po River at Cremona, he invested Rome. The incompetent Honorius, hunkered down at Ravenna, ordered no resistance and left it to the Roman Senate to deal with the invasion. Without military power, the Senate forfeited a heavy tribute to Alaric, who agreed to lift the siege. He encamped his forces in Tuscany for the winter and opened negotiations with Honorius. When these broke down, Alaric laid siege against Rome again and enthroned a puppet emperor. This done, he marched against Ravenna but was unable to take the city and, therefore, could not capture Honorius.

Alaric returned to Rome, invested the city briefly, and in 410 sacked it (VISIGOTHIC SACK OF ROME).

Visigothic Raids on the Roman Empire: Visigoth Invasion of Gaul (412–414)

PRINCIPAL COMBATANTS: Visigoths vs. Western Empire, Burgundy, Romanized barbarians

PRINCIPAL THEATER(S): Gaul (France)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Gaul and the hand of Galla Placidia.

OUTCOME: Through a combination of murder and political circumstance, Athaulf of the Visigoths emerged victorious.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown**TREATIES:** None

The inept governance of Honorius (395–423), emperor of the West, created chaos in Gaul, which was left open to four competing powers: the Visigoths under Athaulf (d.

415), the Burgundians under Jovinus (d. 412), the Romans under General Constantius (d. 421), and the Romanized barbarians under General Bonifacius (d. 433).

At issue was not only control of Gaul but also the hand of Galla Placidia (c. 388–450), half sister of Honorius. The emperor had promised her to Constantius, but he told Athaulf that she was his if he could defeat all other barbarian contenders for Gaul. Athaulf made short work of Jovinus, killing him in 412, then launched a massive offensive against southern Gaul. He quickly overran the region, except for Massilia (Marseilles), which Bonifacius defended successfully in 413. Constantius now launched an offensive against Athaulf, whom he defeated in 414, but from which he had to withdraw after being recalled by Honorius to Italy. At this, Athaulf high-handedly announced that he had returned Gaul to the Western Empire, and he claimed Placidia, whom he married in 414.

Further reading: J. B. Bury, *Invasion of Europe by the Barbarians* (New York: W. W. Norton, 2000); Peter J. Heather, *Goths and Romans, A.D. 332–489* (Oxford: Oxford University Press, 1992).

Visigothic Raids on the Roman Empire: Visigoth Invasion of Spain (415–419)

PRINCIPAL COMBATANTS: Visigoths vs. (severally) Alans, Suevi, and Vandals

PRINCIPAL THEATER(S): Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The emperor of the Western Roman Empire, Honorius, invited the Visigoths to drive other barbarians out of Spain in order to reclaim it for the empire.

OUTCOME: The Visigoth campaign succeeded, and Spain was brought back into the Western Empire.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: No document survives; presumably, a formal agreement between Honorius, Emperor of the West, and Athaulf, king of the Visigoths, existed.

In 415, Honorius (395–423), the inept emperor of the Western Roman Empire, invited the Visigoth leader Athaulf (d. 415) to invade Spain and retake it for the Western Empire. Before the end of the year, however, Athaulf was murdered, and the expedition into Spain was taken over by his successor Wallia (d. 419). Wallia during 416–419 defeated the Alans, the Suevi, and the Vandals, driving all of them into northeastern Spain, confining them to the province of Galicia.

Honorius rewarded Wallia with the territory of Aquitaine (Toulouse), which thereby became in 419 the

first barbarian kingdom within the Western Empire. When Wallia died later in the year, Theodoric I (r. 419–451), son of Alaric (c. 379–410), inherited the throne.

Visigothic Sack of Rome (410)

PRINCIPAL COMBATANTS: Visigoths vs. Western Roman Empire

PRINCIPAL THEATER(S): Rome

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: This was the culmination of a Visigothic invasion intended to overthrow the Western Roman emperor.

OUTCOME: Emperor Honorius escaped, but Rome was sacked by a foreign invader for the first time in its history.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 410, following Alaric's second invasion of Italy (see VISIGOTHIC RAIDS ON THE ROMAN EMPIRE: ALARIC'S SECOND INVASION OF ITALY) and after negotiations with the Western Roman emperor Honorius (395–423) broke down, Alaric (r. 395–410), ruler of the Visigoths, laid siege to Rome and captured it. The city fell on August 24, 410, whereupon Alaric turned his Visigoths loose on it for six days. They systematically looted the capital's treasures—the first time Rome had been captured by foreign invaders.

After the sack, Alaric marched his troops through the Campania and into southern Italy. In December, as he was poised to invade Sicily, Alaric died.

Visigoth Invasion of Spain (456)

PRINCIPAL COMBATANTS: Visigoths vs. Suevi

PRINCIPAL THEATER(S): Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Control of Spain

OUTCOME: The Visigoths ejected the Suevi from the region.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Backed by the approval of the Roman master general of Gaul, Avitus (d. c. 456), Theodoric II (d. 466), leader of the Visigoths, led an invasion into Spain. The single great battle of the campaign, at the Urbicas River—in Galicia—swept the Suevi (a Germanic tribe from the region of modern Swabia) out of Spain. They had controlled the region since about 450.

Further reading: Alberto Ferreiro, *Visigoths in Gaul and Spain, A.D. 418–711: A Bibliography* (Leiden, Neth.: Brill Academic, 1988); E. A. Thompson, *The Goths in Spain* (Oxford: Oxford University Press, 1969).

Visigoth Wars of Expansion (461–476)

PRINCIPAL COMBATANTS: Visigoths vs. Western Roman Empire and, separately, the Suevi

PRINCIPAL THEATER(S): France and Spain

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Visigoths sought expansion.

OUTCOME: The Visigoth realm was extended to all of Spain and much of France; the Suevi were reduced to vassals and confined to Galicia.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The reign of Majorian (r. 457–61) over the Western Empire ended with his death in 461, whereupon the Visigothic ruler Theodoric II of Toulouse (d. 466) spurned an alliance with the West and invaded the southeastern French city of Narbonne, which fell to him in 461. Having secured this city, Theodoric brought the Visigothic realm to the Mediterranean. He then advanced into Spain, where he was generally successful against the Suevi in the central and northwestern regions. Returning to Gaul, Theodoric invaded the eastern and central portions, only to be repulsed by Aegidius (dates unknown) at Arles and Orléans in 466. Shortly after these engagements, Theodoric was assassinated and was immediately succeeded by his brother Euric (r. 466–84), who pressed the Visigothic expansion even more vigorously. In 468, his forces defeated Remismund (dates unknown), king of the Suevi, a victory that extended Visigothic control to the whole of Spain. The Suevi were reduced to Visigothic vassals in Galicia.

By 471, Euric expanded the Visigothic borders in Gaul to the Loire and Rhône Rivers.

Vladimir, Conquests of (981–985)

PRINCIPAL COMBATANTS: Russian (Novgorod) forces under Prince Vladimir vs. peoples of Chervensk (Galicia), Poland, and Byelorussia, as well as the Bulgars along the Kama River

PRINCIPAL THEATER(S): Poland, Byelorussia, region along the Kama River, east of the Volga River

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: Vladimir greatly expanded the holdings of his principality, laying a foundation for the Russian state.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

On the death of Prince Sviatoslav (r. 945–72) of Russia in 972, his three sons vied for control of their father's domain. From this struggle, Vladimir (c. 956–1015) emerged triumphant and, during 981 to 985, engaged in a vigorous campaign of expansion. He took Chervensk (Galicia) in 981. In 983, he overran the territory encompassed by modern Poland and modern Byelorussia, defeating the disparate heathen tribes in this region. Within another two years, he came to control a large part—perhaps all—of the Bulgar region along the Kama River, east of the Volga. In 988, Vladimir converted to Christianity, thereby beginning the religious transformation of the vast region he had acquired.

FRENCH CONQUEST OF CHAD.

Wahabi War (1811–1818)

PRINCIPAL COMBATANTS: Egypt vs. Wahabis (Saudis)

PRINCIPAL THEATER(S): Arabian desert and Red Sea coast

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Egypt sought to suppress Wahabi piracy, which threatened its chief trading partner and political benefactor, Great Britain.

OUTCOME: After a seven-year struggle, Egypt gained control of the Muslim holy cities and the Red Sea coast, effectively suppressing Wahabi piracy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:
Unknown

CASUALTIES: Unknown

TREATIES: None

Calling themselves al-Muwahhidun (“unitarians”), a name that emphasized the absolute oneness of God, the Wahabis were (and remain) an orthodox, fundamentalist Islamic sect, followers of the teachings of the 18th-century theologian Muhammad ibn Abd al-Wahab (1703–92), who believed that all doctrine proclaimed after the death of Muhammad the Prophet was unorthodox and spurious. Early in the 18th century, the prominent Saudi family adopted Wahabism, which is now the state orthodoxy of Saudi Arabia.

By the early 1800s, Saudis, embracing Wahabism, plied the waters of the Indian Ocean as pirates, preying

upon British merchant shipping. The pasha of Egypt, Muhammad Ali (c. 1769–1849), resolved to put an end to Wahabi piracy against the British, whose support was absolutely necessary to his government. However, by 1811, the Wahabis were in control of Jidda, Mecca, and Medina. From their capital in Riyadh, they prepared to invade Syria. At this juncture, Muhammad Ali moved against them in Arabia, which was, at least nominally, an Ottoman vassal state.

Under Muhammad Ali and his son Ibrahim (1789–1848), the Egyptians fought a series of bitter battles in the desert over the course of seven years. On an individual basis, most of the battles were inconclusive, but collectively they wore down the Wahabis. By 1818, Egypt had regained Medina, Mecca, and Jidda, the great Muslim holy cities. Egypt was firmly in control of the Red Sea coast. But, even though the Ottoman sultan had brought the first Wahabi empire to an end, the sect survived to spread again under the leadership of Saudi Faisal I (1885–1933) in the aftermath of WORLD WAR I.

Wahehe War (1891–1893)

PRINCIPAL COMBATANTS: Wahehe tribe vs. German-supported Arab government

PRINCIPAL THEATER(S): Kilimanjaro district of German East Africa

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Wahehe rebelled against the abusive and corrupt Arab administration of their territory in German East Africa.

OUTCOME: After a two-year guerrilla war, the German commissioner of the Kilimanjaro district, Carl Peters, dispatched German and mercenary troops to aid the Arabs in brutally crushing the uprising.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: German “Schutztruppe” mercenaries numbered 768 native (Sudanese) troops, 22 German officers, 63 German NCOs, 2 medical officers, and 3 civilian officials.

CASUALTIES: Unknown

TREATIES: None

To keep the peace in German East Africa, the high commissioner of the Kilimanjaro District, Carl Peters (1856–1918), maintained in office the existing Arab administrators in the courts and in local government. Although laudable in principle, this proved disastrous in practice, as local administrators were both corrupt and disloyal to the German colonial government. The Arabs abused and exploited the black tribes in the region. One of these, the Wahehe, centered along the Rufiji River, rose up against the Arab administration. The Wahehe waged a violent guerrilla war against the Arabs for two years until Peters, acting under pressure from the Deutsch-Ostafrikanische Gesellschaft, a private trading and colonizing enterprise, finally dispatched German colonial troops as well as mercenary auxiliaries—the Gesellschaft’s own Schutztruppe—to aid the Arabs in quelling the uprising.

Peters’s intervention earned him the hatred of the black Africans throughout the Kilimanjaro District and, indeed, all of German East Africa, where he became known as *nkono-wa-damu* (“the man with blood on his hands”). Especially brutal were the Schutztruppe, who owed allegiance to no one but their paymasters. Most of the troops were Sudanese mercenaries hired in Egypt and desperate for money. Peters entrusted the Schutztruppe to answer only to the direct command of Reichskommissar Hermann von Wissmann (1853–1905), famed as an explorer. Although Wissmann became as hated as Peters, he was appointed governor of German East Africa in 1895. As for Peters, in 1897, the German imperial government recalled him from duty as commissioner, citing his cruelty to the Africans.

Waikato War, Second See TARANAKI WAR, SECOND.

Wairau Affray (Wairau Massacre) (1843)

PRINCIPAL COMBATANTS: Maoris vs. the New Zealand Company

PRINCIPAL THEATER(S): Wairau, New Zealand

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The conflict erupted over Maori resistance to illegal land seizures by the New Zealand Company, contrary to the Treaty of Waitangi of 1840.

OUTCOME: The conflict ultimately escalated into the Bay of Islands War, 1844–1847.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: New Zealand Company, 50; Maoris, 92

CASUALTIES: The New Zealand Company lost 22 men; the wife of a Maori chief was killed; however, during the period 1843–79, 20,000 Maoris died in chronic fighting.

TREATIES: Treaty of Waitangi, 1840

The Maoris are the indigenous people of New Zealand. William Hobson (d. 1842), the first lieutenant governor of New Zealand (who also held the office as British consul to the Maori chiefs), sought to avoid the kind of destructive abuses committed in British India during the 18th and early 19th centuries by the British East India Company. Accordingly, he drew up the Treaty of Waitangi in 1840, by which the Maori chiefs voluntarily ceded sovereignty to the British Crown in return for the Crown’s protection and a guarantee that the chiefs would continue to possess their lands until such time as individual chiefs might sell their territories. Such sales were to be exclusively to the British government. Moreover, any senior chief retained the right to veto a sale by any other chief.

Although the Crown and the Maori both officially accepted the treaty, the New Zealand Company, a powerful private trading and colonizing enterprise, did not, and it ignored the treaty and its provisions. The company freely entered into many sales with nonsenior chiefs and sub-chiefs. In some cases, the company summarily appropriated property.

The actions of the New Zealand Company outraged most Maoris, who often militantly resisted seizure of their lands. Yet they also restrained themselves from outright war, and this ambivalence was their undoing. On June 17, 1843, 50 Europeans associated with the New Zealand Company, reporting that Maori chiefs had prevented their surveying land that had been purchased, had a deadly encounter with 90 Maoris and two chiefs at a place called Wairau. When the chiefs resisted arrest by the New Zealand Company men, the men opened fire, and the Maoris returned it. The wife of one of the chiefs was

killed, but so were 22 New Zealand Company men. A subsequent inquiry cleared the Maoris of wrongdoing, but the incident created a permanent climate of hostility, which resulted in the BAY OF ISLANDS WAR in 1844 and led to a chronic state of warfare through 1846 and, again, during 1860–72. In all, some 20,000 Maoris would die in fighting that stemmed from the Wairau Affray. After this long spasm of bloodletting, starvation conditions prevailed, resulting in the deaths of another 25,000 Maoris.

Wakarusa War See KANSAS-MISSOURI BORDER WARS.

Walker's Invasion of Mexico (1853–1854)

PRINCIPAL COMBATANTS: Walker's filibustering band vs. the Mexican government

PRINCIPAL THEATER(S): Sonora, Mexico

DECLARATION: Walker's declaration of the republic of Sonora, November 3, 1853

MAJOR ISSUES AND OBJECTIVES: Walker attempted to found a republic within Mexico.

OUTCOME: Walker's filibustering was suppressed, and he fled Mexico.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Walker's forces, 45 men; Mexican opposition numbers unknown

CASUALTIES: None

TREATIES: None

William Walker (1824–60) was born on May 8, 1824, into a well-to-do Nashville, Tennessee, family. At the age of 14, Walker became one of the youngest men ever to graduate from the University of Nashville, and his parents hoped he would follow a career in the ministry, but he decided instead to become a physician. He graduated from the University of Pennsylvania Medical School in 1843 and returned to Nashville to set up his practice. His medical career was short-lived, however. The restless young doctor soon left Nashville to enroll in the University of Edinburgh and then to embark on a tour of western Europe. He subsequently returned to Nashville, but was quickly off again, this time to New Orleans, where he studied law and was admitted to the Louisiana bar. In

1848, at the age of 24, he embraced a third occupation, that of journalist, and joined the great gold-driven migration to California, where he became the editor of a San Francisco newspaper.

It was during his California days that Walker became obsessed with the idea of personally "liberating" the Mexican state of Sonora and establishing an independent American colony there. The charismatic and intense Walker became a filibuster (an adventurer engaging in private military action abroad), recruited a rag-tag army of 45 men, and on the pretext of defending Mexicans from Apache raids, sailed from San Francisco on October 15, 1853. He and his followers landed at La Paz, Baja California, where, on November 3, 1853, he proclaimed the creation of a republic, with himself as president. Next, on January 18, 1854, Walker announced the annexation of the Mexican state of Sonora. The response of Mexican authorities was a series of attacks that within a few months forced Walker and his followers to flee.

In May 1854, Walker surrendered to U.S. authorities at the border near San Diego. He was tried for having violated U.S. neutrality laws, but popular opinion—especially in the slaveholding South, which saw imperial expansion into the Southwest as a means of building up slave territory—actually approved his filibustering. The jury refused to convict him. Acquitted, Walker found that his appetite had been whetted for an even grander venture, an invasion of Nicaragua (see WALKER'S INVASION OF NICARAGUA).

Further reading: Alejandro Bolanos Geyer, *William Walker: War of Liberation* (Managua, Nicaragua: Bolanos Geyer, 1990); Walter H. Z. Carr, *The World and William Walker* (Westport, Conn.: Greenwood, 1975); William Oscar Scroggs, *Filibusters and Financiers: The Story of William Walker and His Associates* (London: Best Books, 1969).

Walker's Invasion of Nicaragua (1855–1857)

PRINCIPAL COMBATANTS: Walker's "American Phalanx" vs. conservative Nicaraguan forces, plus armies from Costa Rica, Guatemala, Honduras, and others allied against his filibuster rule

PRINCIPAL THEATER(S): Nicaragua

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Backed by American business interests, Walker—a southern filibuster originally hoping to advance the cause of slavery (and his own dreams of power) by expanding the American empire—acquired political control of Nicaragua and sought to enhance his personal fortunes.

OUTCOME: Walker led a small army in the service of the revolutionary government of Nicaragua and achieved election to that nation's presidency; he was subsequently overthrown and ultimately executed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Walker commanded fewer than 100 men.

CASUALTIES: Unknown; Walker was executed in Honduras.

TREATIES: None

In 1851, U.S. shipping magnate Cornelius Vanderbilt (1794–1877) set up a mail and passenger transit service through Nicaragua. Within a year of starting the service, however, Vanderbilt sold his Nicaraguan holdings to the Accessory Transit Company, the American enterprise he had been using to construct the Panama Railroad across the Isthmus. With his investments consolidated in Accessory, Vanderbilt hoped to turn attention to his real interest in the region, a Nicaraguan transit railroad. Supported by American imperialists, especially in the South, Accessory began looking for a strong man to take advantage of a Nicaragua made ripe for revolution by internal strife and a power struggle among several leaders. They found the “Gray-Eyed Man of Destiny,” William Walker (1824–60) of Tennessee. By installing Walker as president of Nicaragua, Accessory would be acting in a manner that became traditional in Latin America—American businesses serving as proxies for powerful members of the U.S. foreign policy community who could not afford politically to push their schemes forward in public.

Late in 1854, with the backing of Accessory and Vanderbilt, Walker obtained a contract from the currently prevailing government of Nicaragua, allowing him to bring to that country approximately 300 colonists to settle a land grant of 50,000 acres. In return, Walker and his American colonists would be liable for military service, for which they would receive monthly compensation. Walker legitimated his operation by subjecting the papers concerning it to review by the U.S. attorney at San Francisco and by the commander of the Pacific Division of the U.S. Army.

Together with 56 or 58 followers, Walker arrived at Realejo, Nicaragua, on June 1, 1855. Walker and the others—grandiosely self-styled as the “American Phalanx”—were immediately absorbed into the Nicaraguan army. This group captured an American steamer plying the waters of Lake Nicaragua and then took the town of Granada. Walker's victories earned him popular acclaim and, with his powerful backers, handed him election as president of Nicaragua in July 1856. Immediately the U.S. government recognized the legitimacy of the election, at least briefly. However, Walker soon antagonized neighboring Central American states as well as U.S. foreign policy makers by interfering with schemes to build a canal across Nicaragua. More importantly, he fell afoul of Cornelius Vanderbilt.

Walker had garnered the financial support for his filibustering through two officials high in Vanderbilt's Accessory Transit Company, but these officials had ambitions and plans of their own. In exchange for their help, Walker

had seized the company's property and put Vanderbilt's two employees in charge of the new Nicaragua Transit Company. They, in turn, had paid for Walker's presidential campaign. Vanderbilt became agitated by Walker and his two cohorts' attempts to take control of Vanderbilt's Nicaraguan railroad, which was completed in 1855, as well as other aspects of his transit business. The Commodore organized the Independent Line, started a rate war against Walker's Nicaraguan Transit Company, and fomented his own local revolution to unseat Walker.

U.S. funds began flowing to an alliance of Central American countries to unseat the “uncontrolled” Walker. In autumn of 1856, a band of Costa Ricans led by Juan Rafael Mora (1814–60) invaded Nicaragua and captured the towns of San Juan del Sur and Rivas, as well as the road along the proposed canal route. The president of Guatemala, Rafael Carrera (1814–65), also sent troops into Nicaragua and, with the help of Salvadoran volunteers and Nicaraguan conservatives, laid siege to Granada. Although Walker successfully appealed to America for volunteer reinforcements, the U.S. government now prevented their departure. Walker's forces were depleted by an epidemic of cholera, and he evacuated Granada for Rivas. There he was held under siege for several weeks by the Costa Rican troops. At last, on May 1, 1857, Walker sought asylum from the coalition of powers arrayed against him by surrendering to U.S. Navy commander Charles Henry Davis (1815–86) aboard the USS *St Mary's*.

Although Walker was indeed expelled from the presidency in 1857, the Nicaraguan Transit Company cooperated with Pacific Mail Steamship and U.S. Mail Steamship to rid themselves of Vanderbilt and his troublemaking. They did so by paying him directly to stay out of the business, some \$40,000 a month beginning in 1856. By 1859, when U.S. Mail Steamship's original mail contract expired and it withdrew from the Isthmus, Vanderbilt's monthly fee had increased to \$56,000. Now Vanderbilt went head to head with Pacific Mail for the new contract and won, which in turn inspired the Panama Railroad to hook up with Pacific Mail in order to compete against the Commodore by running steamers on the Atlantic route between New York and Aspinwell (renamed Colón), Panama. The competition proved expensive for everybody, and within a year all parties were ready for a truce. After Pacific Mail had agreed to limit its operations to the Pacific and Vanderbilt his business to the Atlantic, the Commodore purchased a huge interest in Pacific Mail Steamship in late 1860 and consolidated his various other interests into a corporation he called the Atlantic and Pacific Steamship Company.

Walker could not resist trying to regain power in Nicaragua and attempted two more forays to recapture the country. Arrested at the end of his first attempt in late 1857, he was deported. On his second expedition in 1860, he landed in Honduras rather than directly in Nicaragua,

only to be arrested by British authorities. They turned him over to the Honduran army, which court-martialed him and condemned him to death. William Walker was executed by Honduran soldiers at Trujillo five years after he first tested the waters of the Central American cauldron.

Carr, *The World and William Walker* (Westport, Conn.: Greenwood, 1975); William Oscar Scroggs, *Filibusters and Financiers: The Story of William Walker and His Associates* (London: Best Books, 1969).

Wallace's Revolt (1297–1305)

PRINCIPAL COMBATANTS: English forces of Edward I vs. Scottish nationalists under Sir William Wallace of Renfrew.

PRINCIPAL THEATER(S): Scotland and northern England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Scottish resistance to Edward I proclaiming himself ruler of Scotland after disposing and imprisoning John de Balliol, the ruling king of Scotland

OUTCOME: After an initial victory, the Scottish rebellion was quelled; but following years of conflict, Scotland's independence was established in 1328.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Wallace's initial raid on Lanark involved 30 Scottish nationalists; Edward's forces consistently and vastly outnumbered Wallace's.

CASUALTIES: Unknown

TREATIES: None

In 1296, Edward I (1239–1307) of England, attempting to impose direct rule over Scotland, deposed John de Balliol (c. 1250–1313), the Scottish king, and had him imprisoned. Scottish nationalists had had sporadic encounters with Edward's army when, in May 1297, William Wallace (c. 1270–1305), a small landowner from Renfrew, led a band of 30 rebels in an attack on Lanark. The town was burned, the English sheriff was murdered, and Wallace was on his way to becoming one of Scotland's greatest national heroes.

Gathering a modest force of peasants and small landowners, Wallace led an assault on the English garrison at Stirling Bridge. On September 11, 1297, Wallace's forces slaughtered the king's troops as they crossed the River Forth. Although the English troops outnumbered the rebels, crossing the narrow bridge made them vulnerable. Wallace went on to capture Stirling Castle, and for some time Scotland was nearly free of occupying forces. In the next month, Wallace took the offensive, attacking northern England and ravaging the counties of Northumberland and Cumberland.

Returning from his raids, Wallace was knighted and declared guardian of Scotland, but his support among the nobles was weak; when Edward attacked Wallace's army in July 1298 at Farkirk, the king's archers and cavalry defeated the Scottish spearmen. Wallace was disgraced, and his leadership passed to Robert the Bruce (1274–1329). Wallace's activities are unknown for the four years following his defeat at Farkirk; he may have continued as a solitary guerrilla against the English army, but his. By 1304, most of the Scottish nobles had submitted to Edward's rule, but the English king continued to hunt for Wallace. He was finally arrested near Glasgow on August 5, 1305. Taken to London and convicted of treason, Wallace was hanged, disemboweled, and beheaded. Robert de Bruce raised a rebellion (*see* BRUCE'S REVOLT) in 1306 that eventually won Scotland its independence from English rule, but it is William Wallace, martyr to Scottish nationalism, who captured the imagination of his people.

MacKay, *William Wallace: Brave Heart* (London: Mainstream, 1995); Robert McNair Scott, *Robert the Bruce: King of Scots* (New York: Carroll & Graf, 1996); Nigel Tranter, *Wallace: The Compelling 13th Century story of William Wallace* (London: Hodder & Stoughton, 1995).

Wallachian Revolt *See* AUSTRO-TURKISH WAR (1591–1606).

Warbeck's Rebellion (1495–1499)

PRINCIPAL COMBATANTS: Rebels led by Perkin Warbeck (with some Scottish assistance) vs. forces of the English Crown

PRINCIPAL THEATER(S): Northern England and Cornwall

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Warbeck, impersonating Richard, duke of York, wanted to usurp the British throne.

OUTCOME: Repeatedly defeated, Warbeck was captured and executed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At Exeter, Warbeck led 6,000 troops against the superior forces of Henry VII.

CASUALTIES: Few

TREATIES: None

Fifteenth-century England was rife with plots and counterplots relating to the royal succession. Lambert SIMNEL'S REBELLION in 1486–87 attempted to overthrow Henry VII (1457–1509), deemed a usurper, but failed. Eight years later, new conspirators induced Perkin Warbeck (c. 1474–99), a

Flemish-born silk worker, to impersonate Richard, duke of York (d. 1460), this time with the purpose of overthrowing Henry VII. Richard was presumed dead, the victim of former king Richard III (1452–85). Were he alive, of course, the duke of York would have a legitimate claim to the throne. Warbeck was backed by Maximilian I (r. 1488–1513), the Holy Roman Emperor; Margaret, the duchess of Burgundy (1446–1503); and James IV (1473–1513), king of Scotland.

In 1495, Warbeck led an invasion of England but was quickly turned back. He then retreated to Scotland, where he managed to persuade James IV of his authenticity. This led to marriage to Catherine Gordon (c. 1465–1537), one of James's cousins and the full backing of the Scots. A new invasion, this one led by Scots, was mounted in 1496 but also failed, in large part because of a growing rift between Warbeck and James.

Disgruntled, Warbeck left Scotland and invaded Cornwall in 1497. Leading 6,000 troops, he was defeated at the Battle of Exeter when his army, confronting the superior forces of Henry VII, refused to fight and departed the field. Warbeck ran for his life but was captured in Hampshire, at Beaulieu, two years later. The king promised him a pardon if he would confess to and detail the plot. The trusting Warbeck did so and was summarily cast into the Tower of London. After two unsuccessful escape attempts, he was hanged.

War of a Thousand Days See THOUSAND DAYS, WAR OF A.

War of 1812 (1812–1815)

PRINCIPAL COMBATANTS: Great Britain and its Indian allies in Tecumseh's Confederacy vs. the United States

PRINCIPAL THEATER(S): The Old Northwest, the trans-Appalachian West, the Niagara Frontier, the Atlantic Seaboard, and some sites in the Atlantic and Pacific Oceans

DECLARATION: Declaration of War by the U.S. Congress on June 19, 1812

MAJOR ISSUES AND OBJECTIVES: Canadian support of the general Indian uprising in the trans-Appalachian West led by Shawnee chief Tecumseh in 1810–11 brought to a boiling point the always simmering anti-British sentiment in the United States, especially in its western territories, when the voting public elected to Congress a majority of

bellicose representatives called "War Hawks." Touting as their cause British impressment of American sailors and British disruption of American trade at sea during the Napoleonic Wars, the War Hawks attracted enough support from the northern states to push a somewhat reluctant President James Madison to call for a war to protect American sovereignty, despite British attempts to defuse the situation. The true agenda of the War Hawks, however, was the subjugation of Indian tribes in the Old Northwest and the Old Southwest, and the expansion of the United States onto their lands and into Canada.

OUTCOME: Traditionally considered to have decided nothing, the war did remove the threat of Indian hostilities east of the Mississippi and bound the trans-Appalachian West firmly to the United States, while setting the northern limits of any future American expansion. After the war, the British never repeated their high-handed conduct at sea, and the Americans never again tried to conquer Canada.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: U.S., 286,730 (including 56,032 regulars); British, 25,975
CASUALTIES: U.S., 2,260 killed, 4,505 wounded; British, about 3,000 killed

TREATIES: Treaty of Ghent, December 24, 1814

Like the FRENCH AND INDIAN WAR, the War of 1812 was in major part a battle for hegemony over the American West—the earlier fight between France and England, the latter between Great Britain and its American offspring, the United States. But just as the French and Indian War was, to the major European belligerents, merely a theater in a worldwide conflict of empires, the War of 1812 was something of a sideshow, and an unwelcome one, to an England deeply engaged in a larger war with Napoleon Bonaparte (1769–1821). It was the Americans, especially those Americans living in the trans-Appalachian West, who insisted on fighting what they called a "Second War for Independence."

Claiming they fought to protect U.S. sovereignty, for their country's right to remain neutral, and to engage in foreign trade at sea, the War Hawks of 1812 in truth longed to expand the nation westward. They had drunk at the well of Thomas Jefferson's (1743–1826) "empire of liberty," and to the Louisiana Purchase lands they wished to add British Canada and the Spanish territories of Florida and Texas. Standing between them and their dreams were the Indians of Ohio, Indiana, Alabama, Mississippi, Illinois, and Michigan, who at just about the same time developed a vision of their own, a vision of the trans-Appalachian West as the home of a grand pan-tribal Indian confederacy, the vision first imagined by Shawnee chief Tecumseh (1768–1813). Ultimately, little else would be resolved by the War of 1812 but the conflict between these two visions. It was a resolution, however, that

helped to lay the groundwork for the United States's continental expansion across North America.

In the election year of 1810, fears that Great Britain would support a confederacy of Indian tribes in the creation of an Indian nation-state were very real, especially to western and southern voters. As evidence of a British plot, various candidates cited seven Northwest posts that Britain had been promising to give up since the Revolution, but had not. Britain was also continuing to supply the Indian tribes from its bases at Fort Niagara—on the American side of the border—and apparently inciting Indians against American trappers and traders who competed with British interests. The British plan seemed to be to settle the Indians along the south shores of the Great Lakes and eventually create an Indian buffer state out of the Old Northwest. There was, then, in the American westerners' call for a preventive war against the former mother country a genuine longing for security, despite their dreams of expansion and of annexing Canada, Texas, and Florida. Even opportunists had enemies.

Those spearheading the war movement—Henry Clay (1777–1852) and Richard M. Johnson (1780–1850) of Kentucky; Felix Grundy (1777–1840) of Tennessee; Langdon Cheves (1814–84), William Lowndes (1782–1822), David R. Williams (1776–1830), and John C. Calhoun (1782–1850) of South Carolina; George M. Troup (1780–1856) of Georgia, among others—were from states with current or recent Indian frontiers. Collectively, they became known as the “War Hawks.” Opposed to them were the New England Federalists, a few upper class northern Republicans called the “Invisibles,” and a handful of Republicans from the old seaboard planter aristocracy. These men thought war with Britain the ultimate folly, not merely because it was bad for business, but also because Britain was the world's major defense for conservative, stable, and orderly government against that spawn of the French Revolution, the empire-building Napoleon Bonaparte. However, the War Hawks enjoyed substantial majorities in both the Senate and the House.

War fever was already on the rise when Great Britain, at war with Napoleon and in need of sailors for the Royal Navy, routinely intercepted and boarded neutral vessels, including those of the United States, and, on the flimsiest of pretexts, impressed seamen into His Majesty's service (more than 6,200 American citizens would be thus abducted). Impressment was something the public could understand, and therefore it attracted much attention as a cause for war; however, it was really only one symptom of the commercial war that both Britain and France were waging against neutral nations such as the United States. After protracted congressional debate, a declaration of war was voted up, and, on June 18, 1812, President James Madison (1751–1836) signed it.

Congress expanded the country's small regular army to 25,000 five-year volunteers, raised another 50,000 vol-

unteers, and called on state and territorial militias, which numbered on paper 700,000. But Americans did not respond eagerly to the call to arms. Neither coercion nor bribes—cash bounties nor land grants—had much effect, and the army never fielded more than 35,000 men on a given day during the war.

Despite a small army and an even smaller navy, the American strategy was to attack Canada on three fronts, the first along Lake Champlain toward Montreal, the second across the Niagara frontier, and the third from Detroit into upper Canada. Invasion, it was thought, would force the British to make many concessions. But the American campaigns during the summer and fall of 1812 were utter disasters.

Britain's most effective ally was the Shawnee sachem Tecumseh (1768–1813). His first adversary was the governor of Michigan Territory, William Hull (1753–1825), a superannuated hero of the Revolutionary War, now in command of American forces north of the Ohio. Hull moved his troops to Detroit in the summer of 1812 with the object of taking Fort Malden, which guarded the entrance to Lake Erie. When Tecumseh, on his way to join the British stationed at the fort, ambushed men Hull sent out to scout the area, the old man falsely assumed he was outnumbered and quickly lost his stomach for a fight. Repeatedly, he delayed the assault on Fort Malden, long enough for the British, under the very able major general Isaac Brock (1769–1812), and their Indian allies to reinforce their positions.

Brock and Tecumseh worked well together and planned a vigorous offensive against Hull's troops. However, Colonel Henry Proctor (1787–1859), Brock's second in command, protested a shortage of regulars, and he believed Indians to be unreliable in a pitched battle. Disregarding Proctor, Tecumseh attacked the escorts Hull sent out to protect resupply efforts both to troops in Canada and at Detroit. In early August, Hull withdrew his forces from just across the line in Canada at present-day Windsor back to the safety of Detroit. Then Brock and Tecumseh moved on Detroit. Hull surrendered the fort almost immediately on August 18. He had not fired a shot. It was the most humiliating capitulation in American history.

Meanwhile, the American garrison at the strategically crucial Mackinac Island had surrendered without a fight to a combined force of British soldiers, Indian warriors, and North West company *engagés*. (Contrary to the War Hawks' assurances that Canadians, oppressed by Britain, would rally to the American cause, they were staying with the English.) The day before Hull caved in, the garrison at Fort Dearborn—present-day Chicago—had also surrendered. As the troops, together with settlers, their wives, and children, evacuated the fort, Potawatomi Indians attacked, killing 35, many by torture.

The United States also suffered defeat on the Niagara frontier at the Battle of Queenstown Heights in October,

when Brock—hurrying to the defense with reinforcements from Detroit—pinned down an invading force of some 3,200—2,270 of them militia—under the command of New York’s Major General Stephen van Rensselaer III (1764–1839). The militiamen, still on the American side of the Niagara River when Brock arrived, refused to leave the territorial limits of the United States and stood idly by as 600 British regulars and 400 Canadian militiamen overwhelmed their comrades. Two hundred and fifty of the American regulars were killed and nearly 700 captured, whereas the British lost only 14, including the remarkable Brock. Something similar happened a month later to Major General Henry Dearborn’s 5,000-strong Lake Champlain expedition. As Dearborn moved down the lake to Rouses Point, his militiamen stood on their constitutional rights and declined to cross over into Canada, forcing Dearborn on November 19 to return to winter quarters.

What was planned as a bold American assault on Canada became a desperate scramble for survival. As had happened during the Revolution, the frontier was now laid open to Indian massacre and British invasion. Every Indian tribe between the Great Lakes and the Rocky Mountains was poised against the American settlers. War parties, responding to Tecumseh’s call, attacked Fort Wayne, Indiana, Fort Madison near St. Louis, Fort Harrison on the Wabash River, and the town of Pigeon Roost in southern Indiana. By late fall, most of the Old Northwest was effectively under Indian control, except for Ohio territory south of the Maumee River.

Yet neither the British nor their Indian allies were able to capitalize decisively on their advantages. The anticipated fully coordinated British-Indian assault never materialized. The problem began when Isaac Brock was killed in October at the Queenston engagement and was replaced by the far less imaginative, less aggressive, and less effective Henry Proctor.

Proctor had mismanaged the attack on Fort Wayne back in August. He panicked when he heard that U.S. commander William Henry Harrison (1773–1841) was rushing to the rescue of the fort’s garrison and refused to commit British troops and—more importantly—British cannon to the assault. The rumor proved false, but Tecumseh, realizing that it was futile to attack a fort without artillery, broke off his assault. Many warriors dispersed, and the chiefs could hardly hide their disgust with Proctor, whose own disdain for his Indian allies had been clear from the beginning.

Harrison did arrive in the Fort Wayne area later in 1812, but he turned his attention to the neutral and essentially defenseless Miamis, followers of the peaceful Little Turtle (1752–1812), who had died in July. Burning their homes and crops, Harrison forced them to move west into a series of refugee camps around Peru, Indiana, before attacking the depleted tribe in force. Reassured by his “victory,” Harrison decided in January of 1813 to move

against Fort Malden by advancing across the frozen Lake Erie. At the Raisin River, just south of Detroit, Harrison’s men ran into a larger British and Indian force, including a contingent of Red Stick Creeks led by the infamous Little Warrior (d. 1813), all under the command of Henry Proctor. After a surprise attack at Frenchtown that routed the Americans, Proctor made no attempt to stop the Indians from torturing and murdering the wounded. Almost half of Harrison’s army was killed, and more than half captured. Of the 960 Americans engaged, only 33 escaped.

As a result of this crushing defeat, Harrison tried to buy time to rebuild an army. What had started out as an offensive campaign became a desperate effort to defend positions already held by shocked frontiersmen. Proctor, meanwhile, pressed his advantage. In May, he laid a two-week siege against Fort Meigs at the Maumee Rapids of the Ohio River, which Harrison defended at great cost. A relief force was cut off and trapped by the British on May 5, and, as the Indians whipped themselves up to repeat the horrors of Raisin River, a bored and indifferent Proctor once again looked on. Only this time, unlike at Raisin River, Tecumseh was present. He instantly regained control of his Shawnee warriors. However, the next morning, many of the Indians and even some of the Canadian militia, who had been clamoring to go home and plant crops, began drifting away, and on May 7, Proctor broke off the siege.

By late June 1813, the Sioux and other far western tribes had arrived in the Ohio and swelled Tecumseh’s supply of warriors to 2,000. Between July 21 and 23, now fielding a combined army of 3,000, Proctor attacked Harrison’s principal supply depot, Fort Stephenson on the Sandusky River. But Proctor was held off by Major George Croghan (1791–1849) with only 150 men. The British-Indian alliance continued to sour. On the face of it, the Americans were the big losers, with 4,000 men either killed or captured in the course of the war’s first year. Combined British and Indian casualties were about 500. But, for many of the Indians, the victories had been Pyrrhic. Their losses—houses burned, crops destroyed, populations displaced—were terrible. By the end of August 1813, William Henry Harrison had, indeed, rebuilt and enlarged the western army, fielding 8,000 men, and the tide was about to turn against Tecumseh.

Since March 1813, the 27-year-old American naval captain Oliver Hazard Perry (1785–1819) had been supervising the construction of an armed flotilla at Presque Isle, Pennsylvania. By August, the shallow-draft vessels were ready, and Perry moved them out onto Lake Erie. On September 10 he engaged the British fleet. The message he sent to General Harrison, as stirring as it was laconic, entered instantly into American lore: “We have met the enemy and they are ours.” The Battle of Lake Erie was the first real American victory of the war.

In a single, brilliant stroke, Perry had cut off Proctor’s waterborne support, and the jittery British general, fearing

American reprisals over Raisin River, hastily prepared to abandon Fort Malden. Tecumseh reluctantly followed, retreating into the backwoods of Canada.

With 3,000 men, Harrison pursued the retreating British and Indians as far as the Thames River, where Tecumseh was finally able to persuade Proctor to make some sort of stand before everything was lost. In combat especially distinguished by the brilliant performance of a Kentucky mounted regiment under Colonel Richard Mentor Johnson (1780–1850), William Henry Harrison defeated the combined British and Indian forces at the Battle of the Thames on October 5, 1813. The Americans never found Tecumseh's body. Some say grieving warriors bore him off the field and gave him a secret burial, so even the site of his grave was a mystery. Certainly no one knew who killed him. But he was dead, and there would be no Confederate Indian State in the American West.

ANDREW JACKSON'S WAR

The Battle of the Thames and the death of Tecumseh reversed the course of the Indian uprising during the War of 1812. At the end of 1813 Benjamin Howard (1760–1814), governor of the Missouri Territory, led a successful invasion of the Illinois country. William Clark (1770–1838), who succeeded Howard as governor, mounted an offensive against Prairie du Chien (in Wisconsin) in 1814. But the most successful of the war's Indian fighters—and the most historically significant American commander to come out of the war—was Andrew Jackson (1767–1845). If Tecumseh's death spelled the end of an Indian Confederacy in the West, the rise of Andrew Jackson tolled the disappearance of the Indians themselves.

The Creek Indians of Alabama, Georgia, and Florida had become embroiled in a civil war between those who advocated cooperation with the Americans and those bent on driving the whites from their lands (*see* CREEK WAR). One leader of the Red Stick faction, also known as the Upper Creeks, was Little Warrior, who had joined the British in the Ohio country when the War of 1812 was declared and took part in the Raisin River massacre. He had since returned to his Muskogean homelands, raiding settlements along the Ohio River on his way down. The tribe's "peace" faction, led by Big Warrior (fl. early 1800s) and called the Lower Creeks or White Sticks, sided with the Americans. Their capture and execution of Little Warrior intensified the civil war.

The Red Sticks were equipped by the Spanish, in league with Britain, out of Pensacola, Florida, and leadership of the faction now fell to Tecumseh's disciple William Weatherford, or Red Eagle (c. 1780–1824). It was Weatherford who attacked Fort Mims on the lower Alabama River on August 30, 1813. Nothing that happened in the 1812 war, including the later capture and torching of the nation's capital city, terrified the American public as much as the Fort Mims massacre. The Red Sticks not only killed

white settlers but also freed and armed their black slaves, many of whom joined the Indian cause.

In response to the attack, the Tennessee state legislature authorized the staggering sum of \$300,000 to outfit a large army, and at the end of September 1813 Andrew Jackson marched into Red Stick country with 5,000 Tennessee militiamen, 19 companies of Cherokee warriors, and 200 Lower Creeks. Early in November 1813, a detachment under Jackson's longtime political crony Colonel John Coffee (1772–1833)—and including Ensign Sam Houston (1793–1863), the future governor of Texas, and a backwoodsman named Davy Crockett (1786–1836)—ambushed a large contingent of Red Sticks at Tallushatchee. Later in the month, Jackson relieved Talladega, a White Stick fort that had been held under siege, killing another 300 Red Sticks there.

After the siege, Jackson's expedition began to fall apart. Pushed forward too quickly, Jackson's line was overextended and supplies failed to reach his army. As weeks turned into months, his men, half-starved volunteers whose enlistments would soon be up, grew ill disciplined and mutinous. One entire company threatened to head back to Tennessee. However, 800 new recruits arrived in January 1814, and Jackson quickly resumed his march against the Creeks. His army burned Creek villages, destroyed Indian food supplies, and racked up a string of victories that gained its commander a reputation as the country's foremost Indian fighter. Twice in January, Jackson engaged the enemy in major battles, at Emuckfaw and Enotachopco Creek. On March 27, 1814, Jackson attacked Horseshoe Bend, a peninsula on the Tallapoosa River. During the day-long battle, Jackson's troops killed men, women, and children indiscriminately. Jackson himself sent clothing worn by the fallen Indian soldiers to female acquaintances back in Tennessee. Horseshoe Bend proved the decisive American victory of the Creek War.

William Weatherford surrendered a few days later, and Jackson pardoned him and allowed him to leave. But that was the general's only magnanimous act following the defeat of the Red Sticks. Under the draconian Treaty of Fort Jackson that he imposed following the victory, Jackson compelled all the Indians of the region—those friendly to and even allied with the United States, as well as the pro-British hostiles—to cede enormous tracts of land, 23 million acres of it, in Tennessee, Georgia, Alabama, and Mississippi.

ON THE NORTHERN FRONT

As Tecumseh retreated toward Canada and Jackson fought against the Creeks, General James Wilkinson (1757–1825) headed north to launch an operation against Montreal. Six months earlier, General Henry Dearborn (1751–1829) had sent a force of 1,600 under Brigadier General Zebulon Pike (1779–1813) to capture York (Toronto). Embarking at Sacketts Harbor, Pike took the

capital of Upper Canada on April 27, 1813, but an exploding powder magazine killed him and 320 of his men. The other troops, against Dearborn's express orders, burned York to the ground. They returned on May 8, having accomplished little but the hardening of Canadians against the United States.

Later that month, Colonel Winfield Scott (1786–1866), Dearborn's adjutant, mounted an assault on Fort George with Oliver Hazard Perry. On May 27, Scott and Perry landed 4,000 men in the rear of the British fort at the mouth of the Niagara and took it by assault. As a result, the British opposite Buffalo at Fort Erie withdrew, which freed American ships bottled up in the Black Rock navy yard. All of this went for naught, however, when the retreating British commander, John Vincent (fl. 1800s), turned his 700 men on the Americans chasing him—a force three times the size of Vincent's—at Stony Creek. Not only did Vincent throw back the Americans, but also he captured two generals—William H. Winder (1764–1829) and John Chandler (1762–1841)—both political appointees.

Even Jacob Brown's victory the next day at Sackets Harbor, when his tiny garrison repulsed an amphibious assault by the British under Sir George Prevost (1767–1816; the governor general of Upper Canada), could not mask the fact that Dearborn in command was a disaster. Not until September, however, did Wilkinson arrive to take his place and carry on with Armstrong's plan. Wilkinson was to work his way down the St. Lawrence from Sackets Harbor while Brigadier General Wade Hampton (1752–1835) pushed north from Lake Champlain. They would meet at and take Montreal, defended by around 15,000 British soldiers.

At the Battle of Chateaugay on October 25, Hampton—who had entered Canada with 4,000 troops—became bogged down in a swamp as he attacked a much smaller British force. Hampton ignominiously retreated to Plattsburg and winter quarters.

Meanwhile, Wilkinson, with twice Hampton's number of troops, was floating down the St. Lawrence, flanked on both sides by marching guards. Ninety miles outside Montreal, a combined British and Indian force (including only 900 regulars) began to harass Wilkinson's rear. Wilkinson fought back in piecemeal fashion and suffered a rout, losing 102 killed, 237 wounded, and 100 captured. He retreated to winter quarters, at French Mills on the Salmon River, where his troops came close to starving.

While Wilkinson was encamped, Indians ravaged the frontier, Fort Niagara fell into British hands on December 18 (and remained there for the rest of the war). After Christmas, British general Gordon Drummond (1772–1854) marched 1,500 troops down the river to Buffalo and burned the city, including the Black Rock navy yard. Wilkinson's response, when he renewed his offensive in the spring, was to advance from Plattsburg and Sackets

Harbor with 4,000 troops. He attacked a tiny border fort at La Cole Mill, only to be repulsed by the garrison's 600 men. He immediately fell back on Plattsburg and, on April 12, was relieved of his command.

Jacob Brown (1775–1828), the new commander, promoted Winfield Scott to brigadier general and set him the task of reorganizing Wilkinson's army. Brown's refitted 3,500 troops invaded Canada on July 2, 1814, crossing the Niagara and, the next day, taking Fort Erie before heading north. On July 5, 16 miles upriver from the fort, they engaged in a battle that, for the first time in the war, saw equal numbers of regulars on both sides meet in close combat.

British general Phineas Riall (d. 1850), with 1,700 regulars and a small number of Canadian militia and Indians, occupied a defensive position on the north bank of the unfordable Chippewa when, on July 4, Brown bivouacked a mile south of the river at Street's Creek. Riall crossed the flat plain lying between the two on the next morning and drove back a mixed militia-Indian force deployed by Brown on his left until the British troops ran smack into Scott's 1,300-man brigade. Because Scott's men were dressed in gray, Riall assumed they too were militia until, under fire, they formed a line and moved toward him with the precision of troops on a parade ground. The British lost 236 killed, 322 wounded, and 46 captured to Scott's 61 killed, 255 wounded, and 19 captured.

Brown pressed his advantage, and Riall fell back to Queenston, but Commodore Chauncy failed to coordinate on the lake with Brown's movement, while at the same time British reinforcements reached Canada. Then, bringing even more fresh troops, Sir Gordon Drummond arrived to take over command from Riall. The rebuilt British forces and the laggard American forces met near Niagara Falls on July 25 and fought each other to a standstill. At the Battle of Lundy's Lane, Brown, Scott, and Drummond were all wounded, and Riall fell captive to the Americans. In all, 171 Americans and 84 British soldiers died in battle, 572 and 559 were wounded, and 110 and 235 went missing or were taken prisoner. Brown retreated to Fort Erie, which Drummond immediately besieged.

Although an American sortie from Fort Erie would break the deadlock on September 17, killing 609 British soldiers at the cost of 511 of the attackers, the fort was nevertheless soon abandoned, and with it all further effort to invade Canada. In 1814, with France collapsing, the British could turn their full attention to upstart America. An effective British blockade had already so strangled American trade and manufacture that the U.S. Treasury was verging on bankruptcy. All summer, British landing parties, under orders to destroy and lay waste whatever coastal towns and districts were vulnerable, had been wreaking havoc all along the Atlantic. Two weeks before, on August 31, backed by the duke of Wellington's (1769–1852) veterans from Europe, a British invasion force,

determined to complete the march down the Hudson Valley bungled by General Burgoyne 37 years earlier, had begun advancing on Lake Champlain from Montreal. Just about the same time, August 24–25, 1814, the English had struck a devastating blow by burning Washington, D.C., as Madison and his War Hawk Congress fled.

THE WAR AT SEA

By summer 1814, British leaders had every reason to feel confident about the course of the war with the Americans. With Napoleon safely dispatched to Elba, British land and sea forces were freed up to fight the Americans. U.S. strategy called for attacking British maritime commerce instead of engaging the Royal Navy in a hopeless direct confrontation. Individual ships, eluding the British blockade and joined by a number of privateers, cruised the oceans, attacking targets of opportunity. On February 24, 1813, American and British sloops of war had clashed off the coast of Brazil, with the USS *Hornet* sinking HMS *Peacock* after 11 minutes of battle. But the British navy more than lived up to its reputation on June 1813, when HMS *Shannon* and USS *Chesapeake* met off Boston in the North Atlantic.

The U.S. captain James Lawrence (1781–1813) suffered a bout of hubris when Captain Sir Philip Broke (1776–1841) sailed into view and issued the Americans a challenge. Lawrence unwisely took his untried frigate and recently raised crew out of Boston Harbor to meet a war ship touted as the most effective in the Royal Navy. Before many minutes had passed, Broke's frigate had so efficiently raked the *Chesapeake's* deck that nearly one-third of her crew had been killed or wounded. Among them was Captain Lawrence, who shouted as he died: "Don't give up the ship!" It was an admonition the Americans chose to ignore after Broke brought the *Shannon* alongside and boarded the *Chesapeake*. One hundred forty-six of the surrendering Americans were casualties, including nearly all the officers, whereas the British had lost 83. Worse, Broke brought the *Chesapeake* into Halifax as a prize, and it would remain on the Royal Navy list throughout the war and for years to come.

A few U.S. warships and many privateers were successful against British commerce. The sloop USS *Argus* had captured or destroyed some 20 prizes in its cruise of the English Channel before HMS *Pelican* finally sank it on August 14, 1813. Closer to home, USS *Enterprise* a few weeks later captured its own prize, HMS *Boxer*, off the New England coast. In April 1814, USS *Peacock*, derisively named after the British ship sunk in the first naval battle a year before, defeated the *Epervier* in a 45-minute gun battle off the coast of Florida. Captain David Porter's (1780–1843) USS *Essex* had left the Delaware back in October of 1812 on a 17-month cruise that terrorized British trade up and down the Pacific and, in company with *Essex Junior* (a prize converted into a man of war),

had captured 40 merchantmen and whalers before being trapped and destroyed in a three-hour battle by HMS *Phoebe*, a frigate, and *Cherub*, a sloop of war, off Valparaiso, Chile, on March 24, 1814. (It was a horrific defeat: Of the *Essex's* 255-man crew, 58 were killed, 31 drowned, and 70 wounded, compared to British losses of five killed and 10 wounded.) On June 28, USS *Wasp*, sailing the English Channel, met and virtually destroyed HMS *Reindeer* in a half-hour fight before continuing her cruise and capturing 14 merchantmen. In fact, by midsummer of 1814, the Americans had captured more than 800 British merchantmen, and the only traffic that moved along the English and Irish coasts did so under heavy naval escort.

The surprising American success at sea would continue, with few setbacks, throughout the war and even after the peace had been signed. In late September (26–27) 1814, the nine-gun privateer brig *General Armstrong*, bottled up in the neutral port of Fayal in the Azores, held off wave after wave of boarding parties from a British squadron. After two days of fighting, Captain Samuel C. Reid (1783–1861) put his crew ashore and blew up the brig, while Portuguese authorities refused to let the British land an assault. The squadron sailed away. On January 15, 1815, USS *President* fell to HMS *Endymion* after a long chase when the American vessel attempted to run the blockade at New York. "Old Ironsides," USS *Constitution*, managed, through clever maneuvering, to capture in February two British ships—*Cayne* and *Levant*—off Madeira. In the last naval action of the war, USS *Hornet* (ending what it had begun) captured HMS *Penguin* off Tristan da Cunha Island on March 23, 1815. But, despite these individual victories, the tiny U.S. naval force could not do to England what the Royal Navy did to America in 1814—drive the opposing economy to the verge of collapse or transport a large army across the ocean for an effective amphibious assault on the homeland.

THE BRITISH INVASION

In July and August of 1814, Admiral Sir George Cockburn's (1772–1853) naval squadron, the same that had been harassing the Atlantic seacoast all summer, was joined by 5,400 veteran British soldiers, who had just rung down the curtain on the PENINSULAR WAR. Cockburn landed them on the Patuxent on August 19, and from there, under the command of General Robert Ross, they advanced on the American capital 40 miles away. Standing between the British expedition and the federal district was a tiny force of 400 sailors and marines, led by another incompetent political appointee, Major General William H. Winder (captured at Stony Creek and released), and buttressed by 6,500 newly recruited and as yet untrained militiamen. Ross's advance guard alone, 1,500 redcoats, was enough to rout the motley Americans and send them fleeing in panic. At the so-called Battle of Bladensburg on August 24, only a contingent of Commodore Joshua Barney's (1759–1818)

naval gunners, including U.S. Marines, and a handful of regular army troops fought back at all. Although the action cost the British more casualties (294, to the 100 Americans killed or wounded and the 100 captured), when it was over the road to Washington, D.C., lay open.

By the time the British reached the capital later that day, the American government had fled. That night and through the next day, Cockburn's troops torched the city in retaliation for the burning of Upper Canada's capital, York, at the beginning of the war. The Capitol, the White House, and several other public and private buildings were burned before the invaders, their job done, marched back to their ships and began planning an assault on Baltimore, 50 miles to the north. Indignant at the ease with which Washington had fallen, the nation's public and members of both political parties called for Secretary of War John Armstrong's (1758–1843) resignation, and he was promptly replaced by James Monroe. Among the first news he would have received was the announcement that Canadian governor-general George Prevost, along with 14,000 hardened veterans of the Napoleonic Wars, was on Lake Champlain, heading toward the Hudson Valley and a march down to New York City. Much to the War Department's chagrin, the story in Upstate New York was a familiar one. Manning the field fortifications at Plattsburg, the only such American position on Champlain blocking Prevost's advance, were 1,500 green regulars and 3,000 or so raw militia under General Alexander Macomb (1782–1841).

Prevost's battle plan called for a frontal assault on the fort and a simultaneous naval attack on the American flotilla protecting Plattsburg's flank along the lake. If Macomb's men were vastly outnumbered, the two naval forces were roughly equal. Both British captain George Downie's (d. 1814) and American lieutenant Thomas Macdonough's (1783–1825) flotillas had been hastily constructed; each consisted of 4 ships and 12 armed galleys; and each carried about the same weight in metal, although the Americans, anchored close to shore, had more long guns. These unleashed a withering fusillade when the British squadron rounded Cumberland Head just as Prevost opened fire on the fort.

The fight on water lasted two hours. Downie, in his flagship, the frigate *Confiance*, was badly battering Macdonough's frigate *Saratoga* when the American swung his ship about by using a stern anchor and presented a fresh broadside to the surprised English captain. Downie was killed. Some 180 of his crew were dead or wounded by the time the splintered *Confiance* struck her flag and the rest of the British squadron surrendered. In all, Americans counted their losses at around 200, and the British estimated theirs to be 300. A veteran of Trafalgar called that engagement "child's play" compared to Lake Champlain.

When Prevost heard that the Americans had completely defeated the British flotilla, he quickly called off his attack, even though one of his assault columns was

making excellent progress. Reasoning correctly that without command of the lake his invasion would founder, he beat a hasty and disordered retreat, abandoning vast stores of supplies and equipment. The land invasion was over, and after Champlain there would be no further threat from the Canadians. In retrospect, the Battle of Plattsburg was viewed by American and British chroniclers alike as the war's decisive action, saving America from likely conquest or dismemberment.

The English fared no better in the Chesapeake the following day, September 12, when the British expedition, having sailed north, penetrated the Patapsco River. Ross landed his troops 16 miles from Baltimore, while the navy attacked Fort McHenry in Baltimore Harbor. (The fort withstood the bombardment, inspiring Francis Scott Key to write "The Star-Spangled Banner.") Local militia, firing from behind entrenchments, cut Ross's troops to shreds and mortally wounded the British commander. On September 14, 1814, the expedition departed American shores. American fortunes had revived. The British failure to capture Baltimore and the retreat of the army of invasion into Canada led English diplomats on December 24, 1814, to sign a truce at a peace conference in Ghent, Belgium, that had been under way since August.

BATTLE OF NEW ORLEANS

Word of the Treaty of Ghent did not reach American shores in time to prevent the Battle of New Orleans. Andrew Jackson marched into New Orleans on December 2, 1814, with his ragtag army. There, he reconnoitered the area, located three lines of defense, and began to gather supplies and new recruits, accepting help from the notorious pirate Jean Laffite (c. 1780–1825?) and volunteers from among the city's free men of color. With his men behind hastily constructed earthworks and bales of cotton, Jackson waited at Chalmette for 8,000 redcoats to appear under the command of Sir Edward Pakenham (1778–1815).

On January 8, 1815, Pakenham ordered his men into tight formation and marched them in a rash frontal assault. Kentucky rifles and artillery cut them to pieces, raking the columns with deadly fire and slaughtering 2,000, Pakenham among them. The Americans reported fewer than 20 casualties. Thirteen of Jackson's troops were killed.

News of a major victory at the Battle of New Orleans and news that the warring nations had signed a peace treaty in Ghent reached most Americans about the same time. The treaty was a disappointment. Few of the American war aims—defending American commerce, vindicating republican independence, annexing Canada and Florida—had been achieved. Many felt the war had decided nothing, and (at least until the Battle of New Orleans) felt the British had somehow beaten them. Jackson's triumph, on the other hand, was hailed as a vindication of national honor in a war that had generally gone badly for the United States.

Battle of New Orleans, December 14, 1815

Warwick's Rebellion (1469–1471)

PRINCIPAL COMBATANTS: Earl of Warwick vs. King Edward IV

PRINCIPAL THEATER(S): England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Warwick sought to overthrow the king.

OUTCOME: Warwick's Rebellion was defeated, Warwick was killed in battle, and Edward IV returned to the throne.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Richard Neville (1428–71), earl of Warwick, was the power behind the throne of England's Edward IV (1442–83). While he had been negotiating a grand diplomatic marriage between Edward and some French bridal candidates, Warwick discovered that Edward had already secretly wed Elizabeth Woodville (1437–92), an English woman, the widow of a Lancastrian knight, and well outside of the royal circle. She was an extraordinary beauty who refused to be kept as Edward's mistress; he yielded and married her. Warwick kept his outrage to himself—until Edward dared to replace certain government appointees chosen by Warwick with those nominated by Elizabeth Woodville, who, it was clear, was emerging as a political power. Even worse, in 1467, Edward struck an alliance with Burgundy, the traditional rival of France, thereby wrecking Warwick's negotiations with that nation. Edward cemented the alliance by marrying his sister Margaret of York (fl. 1470s) to Burgundy's Charles the Bold (1433–77).

This was the final straw. In 1469, Warwick led an outright rebellion. Warwick defied the king in June 1469 by marrying his eldest daughter, Isobel (fl. 1460s), to the king's brother, George, duke of Clarence (1449–78). A figure known to history as Robin of Redesdale, and subsequently identified as Sir John Conyers (1433–69), assembled a force of discontented northerners. Edward sent an army against this band. As a battle developed at Edgecote, an army under Warwick suddenly appeared and immediately sided with Conyers's rebels. Together, Conyers and Warwick defeated the royal army and gave chase to Edward, whom they ran to ground at Coventry and took prisoner. Warwick held Edward for three months, but, finding that he had little support from his fellow nobles, he released the king.

The new-found freedom did not make Edward grateful. In March 1470, with the rebellion renewed, Edward dispatched an army to confront the rebels at Losecoat Field.

This time, it was the king's forces that emerged victorious. Edward declared Warwick a traitor, sending him fleeing to France for his life. There he plotted with Queen Margaret of Anjou (c. 1430–82), the consort of Henry VI (1421–71), the deposed English king who was then languishing in the Tower of London.

After recruiting a French force, Warwick invaded England in 1470, stormed the Tower, and freed Henry. This time, Edward fled—to Burgundy. He returned to England in 1471, however, and fought Warwick at the Battle of Barnet. Warwick was slain in this battle. Henry VI was subsequently recaptured and, once again, sent to the Tower, where he died, leaving Edward IV the undisputed king of England.

Waziristan Revolt (1919)

PRINCIPAL COMBATANTS: Anglo-Indian forces vs. tribal peoples of the Waziristan region

PRINCIPAL THEATER(S): Waziristan (southwest portion of the Northwest Frontier Province of Pakistan)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The British colonial government of India sought to suppress disorders on its frontier.

OUTCOME: The “revolt” was suppressed, albeit at substantial cost.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 30,000 Anglo-Indian troops; tribal numbers unknown

CASUALTIES: Anglo-British forces, 2,286 killed and wounded; tribal losses unknown

TREATIES: None

Waziristan is a mountainous region in the southwest portion of the North-West Frontier Province of Pakistan. During the long British occupation of India, the wild tribes of this region fought continually, bringing disorder to the Anglo-Indian frontier. From November 1919 to March 1920, 30,000 Anglo-Indian troops combed the region with the object of putting down what the British colonial government deemed a revolt—although it was, in fact, more in the

nature of a flare-up of chronic internecine conflict. Order was restored to the region for 10 years, but at the cost of 2,286 killed and wounded among the Anglo-British forces.

Ahmed, *Resistance and Control in Pakistan* (London: Routledge, 1991); Hugh Beattie, *Imperial Frontier: Tribe State in Waziristan* (London: Taylor and Francis, 2001).

Welf Rebellion (1138–1142)

PRINCIPAL COMBATANTS: Welfs vs. Hohenstaufens

PRINCIPAL THEATER(S): Germany

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Welfs bridled under Hohenstaufen domination and sought autonomy.

OUTCOME: The Welf duke Henry the Lion succeeded in achieving a large measure of independence and used the opportunity to expand eastward at the expense of the Slavs.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Welfs (Guelphs) were a dynasty of Germanic nobles who were the chief rivals of the Hohenstaufens in Italy and central Europe during the Middle Ages. In 1138, when Conrad III (1093–1152), the first of the Hohenstaufen dynasty, came to power in Germany, the Welfs, under the leadership of two Saxon dukes, Henry the Proud (c. 1108–39) and his son Henry the Lion (1142–80), rebelled. While Conrad was distracted with the Second **CRUSADE**, Henry the Lion set himself up as a virtually autonomous king, expanding his Saxon realm steadily eastward and doing battle with the Slavs to extend his eastern frontier.

Whiskey Rebellion (1794)

PRINCIPAL COMBATANTS: Tax-protesting farmers vs. U.S. government

PRINCIPAL THEATER(S): Western Pennsylvania

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The federal government wanted to enforce an excise tax on whiskey.

OUTCOME: The rebellion collapsed without a battle.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Farmers, 6,000; U.S. militia troops, 12,950

CASUALTIES: 2 farmers killed, 6 wounded**TREATIES:** None

As many citizens of the young American republic saw it, the AMERICAN REVOLUTION had been fought in large measure to win freedom from direct taxation by a remote government. There was, then, great discontent among some segments of the U.S. population when George Washington's (1732–99) secretary of the treasury, Alexander Hamilton (1755–1804), introduced a direct taxation scheme to finance the national debt and support a substantial federal government. Hamilton believed that federal taxes would give the United States the financial stability it so badly needed while also asserting the precedence of the powers of the federal government over those of the states. Hamilton successfully urged Congress to enact a federal excise tax on spirits distilled in the United States (March 3, 1791). This incited a protest in western Pennsylvania, where farmers, who distilled a portion of their corn and grain into liquor, harassed and even assaulted federal tax collectors. The violence became most intense on July 16, 1794, when about 500 attacked the home of General John Neville, Allegheny County's inspector of the excise. Neville defended his home with the support of a small detachment of U.S. Army regulars. In the ensuing combat, two of the attackers were killed and six wounded. However, Neville and the troops, outnumbered, finally left the house to the mob, which looted and burned it.

Emboldened by the attack on Neville, some 6,000 protesters gathered at Braddock's Field, near Pittsburgh, on August 1, 1794. However, the rabble failed to coalesce into an army and by August 3 had dispersed. Despite the disappearance of the mob, President Washington announced on August 7 that he was calling out the militia to restore order and enforce collection of the excise tax. At the same time, the president sent special commissioners to western Pennsylvania with an offer of amnesty to all those who agreed to swear an oath of submission to the United States. When few chose to swear the oath, Washington, on September 25, ordered 12,950 militiamen and volunteers from Pennsylvania, New Jersey, and Maryland to march to Pittsburgh. This force arrested a small number of ringleaders and participants in the Whiskey Rebellion; however, most of the prominent insurgents fled. Those who were arrested were soon granted presidential pardons.

While the suppression of the Whiskey Rebellion was of no real military significance, it was of great political importance because it demonstrated both the will and the competence of the federal government to create and enforce national laws. The result of the confrontation was a strong assertion of the authority of a central government.

White Hun (or Ephthalite, Hunas) Invasion of Gandhara (c. 400–c. 450)

PRINCIPAL COMBATANTS: White Huns vs. various peoples of Central Asia and northwestern India

PRINCIPAL THEATER(S): Central Asia and northwestern India

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Territorial expansion

OUTCOME: The White Huns penetrated into India as far as the Punjab, where they were resisted by the Guptas.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The Ephthalites, or White Huns (in Indian history, called Hunas), were a people of mixed Indo-European and Mongoloid racial heritage, presumably descended from the Xiongnu (Hsiung-nu) of Mongolia and, it is believed, related to Yueh Chih people and the offshoot of the Yueh Chih, the Kushans. These people began migrating from Central Asia into the Sassanid Empire. By about 420, the White Huns had a firm foothold in Bactria, from which they quickly dominated the area encompassed by modern Russian Turkestan, southeast of the Aral Sea. Once established there, they penetrated into Gandhara, frequently pushing their raids well into the Punjab. Not far behind the raiding parties, the main body of White Huns slowly pushed general settlement south, into the mountains of northwestern India, where they would come into conflict with the Guptas (see GUPTA DYNASTY, CONQUESTS OF THE).

White Lotus Rebellion (1796–1804)

PRINCIPAL COMBATANTS: White Lotus rebels vs. the Qing (Ch'ing; Manchu) dynasty

PRINCIPAL THEATER(S): Central China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The White Lotus guerrillas sought to overthrow the Qing dynasty and restore the Ming dynasty to power.

OUTCOME: After the Qing government coerced the peasantry of central China to form a pro-government militia, the White Lotus guerrillas were slowly but steadily defeated.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown, but certainly in the tens of thousands among the guerrillas and the militia.

CASUALTIES: Unknown

TREATIES: None

China had long been a land of secret politico-religious societies, including the White Lotus, a Buddhist society with a history dating back to the 1300s in Hubei (Hupei), Sichuan (Szechuan), and Shaanxi (Shensi) provinces in western China. When, in 1644, the Qing (or Manchu) dynasty was established, the White Lotus, deeming the dynasty foreign to China, dedicated itself to the overthrow of the Qing and the restoration of the Ming dynasty.

As famine swept China late in the 18th century, the White Lotus Society was joined by many thousands of desperate Chinese, especially in the central mountains. Their hope was that if they rid China of the Qing and restored the Ming dynasty, Buddha would return and restore the land to prosperity.

A guerrilla war began in which White Lotus bands preyed upon government troops. At first, the attacks rarely had much military significance, because they were poorly coordinated. Fortunately for the rebels, however, the Qing court was so corrupt that funds allocated to put down the White Lotus Rebellion were embezzled. The army, unpaid, grew mutinous; in any case, it was poorly led. Mostly as a result of the general debility of the Chinese army, the White Lotus rebels gained control of a large area of central China. Government forces gave up confronting the rebels directly and instead simply rounded up the peasants in the region and confined them to the equivalent of concentration camps. In this way, the government sought to deprive the rebels of sustenance. With the farmers gone, the rebels could not live off the land.

In the meantime, government officials offered the confined peasants freedom in exchange for military service against the White Lotus. In this way, thousands were inducted into a peasant militia. These forces, and not the professional government army, finally defeated the White Lotus guerrillas. Fighting was heaviest in the provinces hardest hit by famine, Shaanxi, Sichuan, and Hubei, which were also the traditional strongholds of White Lotus influence. The rebellion was typical of growing discontent with the Qing leadership and presaged the great TAIPING REBELLION, which would break out in the middle of the next century.

Whitman Massacre (1847)

PRINCIPAL COMBATANTS: Cayuse Indians vs. Oregon settlers

PRINCIPAL THEATER(S): Oregon Territory

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Cayuse Indians and the other tribes of the far Northwest were disturbed by the ever growing number of settlers attracted to their lands through the way-stations of Oregon's Protestant missions; when an outbreak of measles killed off the Indians but not the missionaries, angry Indians, suspicious of white treachery, attacked and destroyed the Whitman Mission.

OUTCOME: The Whitman Mission was destroyed, its settlers killed or captured, and a white backlash brought decades of war to the Pacific Northwest; the "Whitman Massacre" was the rallying point of those wars, just as the Alamo had been the rallying point of the Texan War of Independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: A few dozen Indians

CASUALTIES: Settlers, 14 killed, 53 captured and held for ransom; no Indian casualties

TREATIES: None

In 1835, Marcus Whitman (1802–47), a physician and Presbyterian minister, identified a suitable location for an Oregon mission. After finding the site, he returned east briefly, marrying Narcissa Prentiss (1808–47), who returned to Oregon with him.

Although many Nez Percé and Cayuse Indians were grateful for Whitman's medical ministrations, many others saw his mission as the vanguard of an army of white settlers invading Indian lands east of the Cascades. Then, in 1847, came the measles; an epidemic—brought by the immigrants—struck the Cayuses. Half of them died. Marcus Whitman, the missionary doctor, did what he could to alleviate their suffering in unspeakable conditions, but he also continued to engross himself in establishing a new mission on the Dalles River and in building a sawmill and gristmill. When the deaths continued, many of the Indians began to suspect that he was deliberately poisoning them to get their lands, especially when most of the sick whites, gathered at the mission after a long summer's trip, recovered.

Whitman had not helped matters much with his zealotry, insisting from the beginning that his Cayuse converts sever themselves utterly and completely from their former beliefs. Now, it seemed only natural for the Cayuse to talk of the epidemic as a function of Whitman's evil

influence. A French Canadian from Maine named Joe Lewis (fl. 1840s) sought to direct the Indians' growing resentment of whites away from himself and exclusively against Whitman. It was he who first planted the notion that the epidemic was a plot to steal the Indians' land. But, some pointed out, didn't the doctor try to heal the sick Indians? Yes, replied Lewis, and the whites, too. The difference was that the whites recovered from the measles, whereas the Cayuses all died.

On November 28, 1847, Whitman traveled 30 miles south of his mission at Waiilatpu to treat sick Indians in the Umatilla Valley. He ministered to them and returned directly home—for 11 of the 42 mission children were ill with measles—reaching his house about midnight. There Narcissa was watching two girls, Helen Meek (d. 1847) and Louise Sager (d. 1847), one of the Whitmans' adopted daughters, both very ill. Although he had been traveling and working all day and night, Whitman sent his wife to bed while he continued to watch the two sick girls. After breakfast on a foggy, dark morning, he supervised the butchering of some beef. He returned to the kitchen, where 17-year-old John Sager (1830–47) was winding twine. Whitman sat reading and, for a time, dozed.

About noon, an Indian came to tell Whitman of three more measles deaths among his tribe. The missionary officiated at the burials.

Later in the afternoon, when Whitman had returned home, two more Indians, Tomahas (d. 1849) and Tiloukaikt (d. 1849), whose daughter had been among those who had died that day, came to the doctor's door. Tiloukaikt spoke to Whitman, and, as he did, Tomahas struck him from behind with a bronze tomahawk and hacked his face. Another Indian entered, pressed a rifle against Whitman's neck, and fired. When young John Sager leaped up to get a gun that was hanging on the wall, he was shot dead. Remarkably, Whitman was still breathing; he was dragged outside to die.

Narcissa, who had been in another room, ran to the window. A bullet hit her in the breast. She apparently staggered upstairs to the attic bedroom. Later there were those who claimed she was not hiding but praying for the children and for the Indians.

More Indians attacked the mission's miller, teacher, tailor, and the three men who had been butchering the beef, but other whites in the Whitman house held off a final assault. At last, one Indian, an old friend of the Whitmans, warned those inside that the house was about to be put to the torch. He promised them safe conduct out. Narcissa, unconscious from loss of blood, was put on a wooden settee and carried out the door. Thereupon the Cayuses opened fire. The missionary's wife, riddled by bullets, rolled off the settee. An Indian seized her by her long, blonde hair and beat her across her face with a quirt.

Soon, Oregon, then all the nation, had heard how the Indians had sprung from the early morning fog on

November 29 to kill Marcus Whitman, his wife Narcissa, and 12 white workers, taking five men, eight women, and 34 children captive, and leaving the two small girls, Louise Sager and Helen Meek, suffering from measles, to die of neglect. One man had fled for help; he drowned in the Columbia River. Five others had escaped to tell the world how the braves raped some of the women and the little girls.

Oregon's provisional governor raised a small army, paying it with promises and a few in-kind contributions; everyone realized the territory was incapable of conducting a large campaign. The mission on the Dalles was fortified, the ringleaders arrested, and the captives ransomed for \$500 worth of tobacco, shirts, blankets, and bullets. The mountain man Joe Meek (1810–75) led a party of Oregon settlers all the way east to Washington, D.C., to petition his cousin-in-law, President James K. Polk (1795–1849) himself, to make Oregon, at last, a territory of the United States, entitled to the full protection of the federal government. Meek saw Polk on May 28; on August 14, the Oregon Territory was formed. Once again the powerful race-war symbolism of the Indian massacre functioned to hasten the displacement of Indians by white settlement. A force of some 500 settlers formed to track down and punish the Cayuse in their homelands for the crimes they had committed against the mission, which launched nearly a decade of conflict that came to be called the CAYUSE WAR. Tomahas and Tiloukaikt surrendered in 1849, were tried, and were both executed.

William I's Invasion of Normandy (1077)

PRINCIPAL COMBATANTS: William I (William the Conqueror) vs. rebel forces under Robert Curthose

PRINCIPAL THEATER(S): Normandy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Robert Curthose wanted to become duke of Normandy and therefore led a rebellion against his father, William I, who had taken Normandy from the counts of Anjou in 1073.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Having taken Normandy in northwestern France in 1073, William I (William the Conqueror; 1027?–87) put his son, Robert Curthose (c. 1054–1134), in control of the territory, but he did not accede to Robert's wish to be created duke of Normandy. This galled Robert, who fell under the influence of Philip I (1052–1108) of France. Nominally, William was the vassal of Philip, who had observed that William had become overly ambitious. Anxious to check the progress of William's conquests, Philip induced Robert Curthose to lead a rebellion against William, beginning with an attempt to seize Rouen. William led an army into Normandy and quickly suppressed the rebellion.

William held Robert under siege at Gerberoi in 1080 until William's wife, Matilda of Flanders (c. 1030–83), persuaded William to reconcile with their son. The reconciliation did not last long. Robert's continued defiance moved William to exile him, although, on William's death in 1087, Robert did become duke of Normandy. Once this was attained, however, Robert Curthose wanted even more, and his ambitions led to war with his brothers, most notably WILLIAM II'S WAR WITH ROBERT CURTHOSE from 1089 to 1096.

Further reading: David Crouch, *The Normans* (London: Hambledon and London, 2002); David Charles Douglas, *William the Conqueror* (Berkeley: University of California Press, 1997).

William I's Invasion of Scotland (1072)

PRINCIPAL COMBATANTS: William I (William the Conqueror) vs. Scotland (under Malcolm III Canmore)

PRINCIPAL THEATER(S): Northern England and Scotland

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: William I sought to counter an invasion of northern England by Malcolm III Canmore.

OUTCOME: Malcolm surrendered without offering battle; he acknowledged William I's suzerainty over Scotland and thus became his vassal.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: None

TREATIES: Treaty of Abernathy, 1072

The NORMAN CONQUEST in 1066 of England did not establish an unambiguous border between England and Scotland. King Malcolm III Canmore (d. 1093) of Scotland decided to exploit the ambiguity by invading northern England with the object of enlarging Scottish territory. He led forces into Northumbria and Cumberland during 1070–71. During this period, William I (William the Conqueror) (c. 1027–87) was preoccupied with political problems and could not respond to the invasion. He returned to northern England in 1072 and advanced through

Northumbria and Lothian. At Abernethy, William's forces encountered those of Malcolm. Malcolm instantly backed down. Instead of fighting William, he acknowledged his suzerainty in Scotland. Edgar the Aetheling (d. 1125), the Saxon heir to the English throne, who had taken refuge in Scotland at the court of Malcolm III Canmore, was forced to flee to Flanders.

William II's Invasion of Scotland (1091–1093)

PRINCIPAL COMBATANTS: England (under William II Rufus) vs. Scotland (under Malcolm III Canmore)

PRINCIPAL THEATER(S): Cumberland, northern England

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: William II sought to repulse an invasion and subdue Scottish aggression.

OUTCOME: The Scottish army was defeated, Malcolm III Canmore and his son were killed in battle, and the invasion was repulsed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

In 1072, King Malcolm III Canmore (d. 1093) acknowledged William I (William the Conqueror) (c. 1027–87) suzerain of Scotland (WILLIAM I'S INVASION OF SCOTLAND), but after William's death in 1087 the Scottish king resumed his attempts to enlarge his realm at the expense of northern England. In 1091, he led an invasion into northern England, where English forces under William II Rufus (c. 1056–1100) not only resisted but also pushed the invaders back and exacted homage from Malcolm. Following this, William II subjugated Cumberland and firmly established the northern boundary of England at Solway Firth, the line of Hadrian's Wall.

In 1093, Malcolm proved that he had not learned his lesson. He attempted yet another invasion and was defeated at the First Battle of Alnwick, Malcolm's army had penetrated as far as the Aln River and had put Alnwick Castle under siege. William II Rufus dispatched a force to relieve the garrison at the castle. The English were able to ambush the besieging Scots on November 13. Both Malcolm and his eldest son, Edward (c. 1068–93), fell in battle, and, leaderless, the invasion instantly collapsed.

William II's victory completely pacified the turbulent north country. In an effort to quell internal instability, William put a younger son of Malcolm, Edgar (c. 1074/75–1106/07) on the Scottish throne in 1097.

William II's War with Robert Curthose

(1089–1096)

PRINCIPAL COMBATANTS: William II Rufus vs. his brother, Robert Curthose

PRINCIPAL THEATER(S): Normandy

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Believing Robert Curthose would lose Normandy to France, William II wanted to take the dukedom from him.

OUTCOME: After three unsuccessful invasions, William II acquired Normandy as collateral against a loan he made to Robert Curthose to finance an army for the First Crusade.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

On the death in 1087 of William I (William the Conqueror) (c. 1027–87), his Anglo-Norman holdings were apportioned among his heirs. Robert Curthose (c. 1054–1134), his eldest son, who had rebelled against him in 1076, but with whom William had reconciled, received Normandy. Robert, whose administrative talents were severely limited, had trouble governing his dukedom, and the always-scheming king of France, Philip I (1052–1108), did his best to destabilize the Norman situation.

In 1088, a group of Norman nobles, among them Odo of Bayeux (1036–97), Robert of Mortain (1038–91), Richard Fitz Gilbert (c. 1026–1091), William Fitz Osbern (fl. late 11th century), and Geoffrey of Coutances (d. 1093), mounted an uprising against William II Rufus with the object of placing Robert Curthose on the throne. The rebellion failed, because the majority of Normans in England remained loyal. Rufus personally led an army against rebel strongholds at Tonbridge, Pevensey, and Rochester. All the rebel leaders were exiled to Normandy, which William II Rufus invaded in 1091, establishing at his headquarters, Eu, an army so formidable that Robert Curthose agreed to a peace whereby William II Rufus was given absolute control over much of Normandy. Moreover, Robert Curthose agreed to unite with his brother in a campaign to take Maine and Cotentin.

Successful in his Maine and Cotentin expedition, William II Rufus returned to England in August 1091 and embarked on WILLIAM II'S INVASION OF SCOTLAND. In March 1094, William II Rufus returned to Normandy, using funds obtained from heavy taxation of England to bribe

King Philip I Capet (1052–1108) of France not to support Robert Curthose. However, William finally wrested complete control of Normandy from his brother, not through arms but by collecting on a loan. Robert Curthose had borrowed from William the funds to finance an army for the First CRUSADE in 1095, posting Normandy as collateral. When Robert failed to repay the loan, William II Rufus came into complete possession of the long-sought prize.

Winnebago-Illinois War (1671)

PRINCIPAL COMBATANTS: Winnebago vs. Illinois Indians

PRINCIPAL THEATER(S): Eastern Wisconsin region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Presumably, competition for trade with white settlers

OUTCOME: Defeat and great reduction of the Winnebago tribe

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: It is estimated that half the Winnebago population of 6,000 died.

TREATIES: None

History records a picture of chronic violence between white settlers and Indians almost from first contact through the massacre at Wounded Knee in December 1890. The historical record of intertribal warfare is far less extensive. Although little Indian history was recorded unless it impinged on Euro-American settlement, intertribal warfare was certainly even more frequent and extensive than that between Euro-Americans and Indians.

The Winnebago-Illinois War of 1671 is one of the few major intertribal conflicts of which we have even sketchy knowledge. Indeed, beyond the fact that the 1671 war was devastating to the Winnebagos, little is known about it.

The Winnebago Indians were generally a peaceful people who, in the 17th century, lived in the region of present-day eastern Wisconsin from Green Bay to Winnebago Lake. During the early 17th century, the Illinois Indians lived on the east bank of the Mississippi River, but they were driven by Iroquois attacks (*see* BEAVER WARS) relentlessly westward and also to the north. Retreating from the Iroquois in 1671, the Illinois invaded Winnebago territory. As the Illinois were overmatched by the Iroquois, so the Winnebagos were inferior in military terms to the Illinois. Despite an apparently valiant resistance, the Winnebagos were rapidly defeated. It is estimated that the war killed

more than half of the Winnebago tribe, reducing it to a population of perhaps 3,000.

Bieder, *Native American Communities in Wisconsin, 1600–1960: A Study of Tradition and Change* (Madison: University of Wisconsin Press, 1995); Paul Radin, *Winnebago Tribe* (Lincoln: University of Nebraska Press, 1990); Claudio R. Salvucci and Anthony P. Schiavo, eds., *Iroquois Wars*, vol. 1, *Extracts from the Jesuit Relations* (Bristol, Penn.: Arx, 2002).

Winnebago Uprising (1827)

PRINCIPAL COMBATANTS: Winnebago Indians vs. United States

PRINCIPAL THEATER(S): Southern Wisconsin

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Winnebagos, hostile to white American settlement and incursions by white miners on their traditional lead-mining lands, responded to the abduction and rape of a group of Winnebago women by chasing down and killing those responsible; the United States responded to that attack with a show of force.

OUTCOME: The "uprising" was suppressed and Chief Red Bird jailed and broken.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None; as terms for his surrender, Red Bird negotiated clemency for his tribe

The Winnebago Indians were strongly pro-British during the WAR OF 1812 and vigorously resisted white incursions into their lands, which lay between the Rock and Wisconsin rivers in northern Illinois and southern Wisconsin, east toward Lake Michigan. But a conflict with the Fox (Mesquakie) Indians drove them to seek aid from the United States during the war, and in return they pledged neutrality.

The pressures of white settlement following the War of 1812 again drove the Winnebagos to active resistance, and this time their situation was rather more urgent; they were facing lead miners who came in large numbers to work the rich ore in the vicinity of Galena, Illinois, on the Mississippi River. Friction between Winnebagos and white Americans intensified as the Indians began to compete with the miners by selling lead to white traders. Bowing to mining interests, the federal government ordered its Indian agents to pressure the Winnebagos to stop trading in lead. It was becoming quite clear that the Winnebagos not only felt the strong emotional attachment to their home lands that was common among Indians of almost all tribes (and peoples of all nations, for that matter) but also that they were acutely aware of the mineral-rich land's mercantile value.

The actions of the miners and the Indian agents incited numbers of Winnebagos to acts of violence. The most serious came in 1826, when several Indians killed a family of sugar-maple farmers living near Prairie du Chien, Wisconsin. The attack emboldened Chief Red Bird (c. 1788–1828) and two braves to kill another farmer and his hired hand. Miners and settlers agitated for an increase in the garrison at Galena and got it, which served only to exacerbate the situation. In June 1827, two Mississippi keelboats bearing supplies for the augmented garrison stopped at a Winnebago village near Prairie du Chien. The boatmen drank rum and encouraged the Winnebago men to indulge as well. The Indians and the traders were soon drunk, the Winnebagos to the point of stupor. The keelboatmen abducted several women and raped them. As the warriors came to their senses, they set out after the boats, catching up to them after several days. The braves attempted a nighttime assault, and although they failed to capture the boats, they managed to free the captive women. A number of Indians as well as boatmen were killed in the fight.

News of the attack spread, and soon a combination of federal regulars and territorial militiamen, led by Generals Lewis Cass (1782–1866), Henry Atkinson (1782–1842), and Samuel Whiteside (1784–1856), and Colonel Henry Dodge (1782–1867), were in pursuit of the Winnebagos. They appealed to the closely allied Sac (Sauk) and Fox tribes for aid but were turned down. General Atkinson, however, negotiated with the Sac chief Keokuk (c. 1783–1848), who pledged the cooperation of the Sac and the Fox. Atkinson did not actively employ the Sac and Fox against the Winnebagos, but Thomas Forsyth (1771–1833), a U.S. Indian agent, used Sac warriors as spies to report on Winnebago activity.

In the face of overwhelming odds, Chief Red Bird surrendered to the forces arrayed against him on condition that his people should suffer no reprisals. This granted, Red Bird was imprisoned and, spiritually broken, died in captivity awaiting trial for murder and inciting rebellion. As in the case of Kennekuk's Kickapoos (see KICKAPOO UPRISING), the defeat of Red Bird prompted other Winnebagos—most notably White Cloud (c. 1794–c. 1841) (the so-called Winnebago Prophet)—to ally themselves with bellicose Sac chief Black Hawk (1767–1838) in his war of 1832 (see BLACK HAWK'S WAR).

Bieder, *Native American Communities in Wisconsin, 1600–1960: A Study of Tradition and Change* (Madison: University of Wisconsin Press, 1995); Paul Radin, *Winnebago Tribe* (Lincoln: University of Nebraska Press, 1990); Claudio R. Salvucci and Anthony P. Schiavo, eds., *Iroquois Wars*, vol. 1, *Extracts from the Jesuit Relations* (Bristol, Penn.: Arx, 2002).

"Winter War" (1939–1940) See RUSSO-FINNISH WAR.

World War I: Historical Background

(1871–1914)

PRINCIPAL COMBATANTS: Austria-Hungary, Germany, Romania, Bulgaria, and Turkey (the Central Powers) vs. Serbia, Russia, Belgium, France, Great Britain, Italy, Japan, the United States (the Allies)

PRINCIPAL THEATER(S): Western and Eastern Europe, the Balkans, colonial Africa, colonial Asia, colonial possessions in the Pacific (with associated naval action), naval action chiefly in the Atlantic

Declarations:

- Austria-Hungary against Serbia, July 29, 1914
- Germany against France, August 3, 1914
- Germany against Belgium, August 4, 1914
- England against Germany, August 4, 1914
- Austria-Hungary against Russia, August 5, 1914
- Serbia against Germany, August 6, 1914
- Montenegro against Austria-Hungary, August 7, 1914
- Montenegro against Germany, August 12, 1914
- France against Austria-Hungary, August 10, 1914
- Great Britain against Austria-Hungary, August 12, 1914
- Japan against Germany, August 23, 1914
- Austria-Hungary against Japan, August 25, 1914
- Austria-Hungary against Belgium, August 28, 1914
- Italy against Germany and Austria-Hungary, April 26, 1915
- United States against Germany and Austria-Hungary, April 6, 1917

MAJOR ISSUES AND OBJECTIVES: War was triggered by the assassination of Austria-Hungary's Archduke Franz Ferdinand and his wife, Archduchess Sophie, in Sarajevo, Bosnia-Herzegovina, on June 28, 1914, but the chief underlying issues included the following:

- Germany wanted to become more influential among its European neighbors and to amass a colonial empire.
- The Austro-Hungarian Empire sought to stamp out nationalist rebellion among its Balkan provinces.
- France wanted to recover Alsace-Lorraine, the eastern provinces it had lost to Prussia (now Germany) as a result of the Franco-PRUSSIAN WAR (1870–71).
- Russia, seething with revolution and the threat of revolution, wanted to restore the prestige it had lost in the Russo-Japanese War (1904–05) by gaining territory at the expense of its rival Turkey, and presenting itself to the world and to its own discontented citizens as the spiritual, cultural, and military champion of all Slavic peoples everywhere.
- Great Britain wanted to check the colonial ambitions of Germany, seen as a rival to empire.
- Italy wanted territorial expansion.
- Turkey wanted to recover lost territory and diminished imperial prestige.
- The United States entered the war ostensibly in defense of its rights as a sovereign neutral nation,

after Germany attacked U.S. shipping and made other threats against U.S. neutrality.

- All of the nations involved were bound by a constraining set of treaties and alliances, some of them secret.

OUTCOME: The Allies (without Russia, which made a separate peace with Germany early in 1918) prevailed against the Central Powers, compelling the dissolution of the Austro-Hungarian Empire and the virtual disarmament of Germany, and levying ruinous reparations against Germany.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 65,038,810

CASUALTIES: 8,020,780 (military); 6,642,633 (civilian); 21,228,813 military wounded

TREATIES:

- Treaty of London, May 30, 1913, among the Balkan League (Greece, Bulgaria, Serbia, and Montenegro) and the Ottoman Empire (Turkey), ending the First Balkan War
- Treaty of Bucharest, August 10, 1913, among Romania, Greece, Serbia, and Montenegro on one side and Bulgaria, ending the Second Balkan War
- Treaty of Constantinople, September 29, 1913, between Ottoman Empire and Bulgaria, constituting a separate peace between the Ottoman Turks and Bulgaria following the Second Balkan War
- Secret Treaty Between Germany and the Ottoman Empire, August 2, 1914
- Treaty of London, April 26, 1915, alliance among France, Russia, Great Britain, and Italy
- Sykes-Picot (Secret) Agreement, May 9, 1916, among Britain, France, and Imperial Russia, defining the goals of the Allied powers of Britain, France, and Russia for the partition of the Ottoman Empire at the victorious close of the Great War
- Treaty of Brest-Litovsk, March 3, 1918, separate peace concluded among Germany, Austria-Hungary, Bulgaria, and Turkey with Russian Federal Soviet Republic after the Bolshevik Revolution
- Treaty of Versailles, June 28, 1919, among United States (signed, but failed to ratify), British Empire, France, Italy, and Japan ("Principal Allied and Associated Powers"), Belgium, Bolivia, Brazil, China, Cuba, Ecuador, Greece, Guatemala, Haiti, the Hedjaz, Honduras, Liberia, Nicaragua, Panama, Peru, Poland, Portugal, Romania, Serb-Croat-Slovene State, Siam, Czechoslovakia, and Uruguay ("The Allied and Associated Powers") and Germany, constituting the principal document ending World War I
- Covenant of the League of Nations, June 28, 1919, among United States (signed, but failed to ratify), British Empire, France, Italy, and Japan ("Principal Allied and Associated Powers"), Belgium, Bolivia, Brazil, China, Cuba, Ecuador, Greece, Guatemala, Haiti, the Hedjaz, Honduras, Liberia, Nicaragua,

Panama, Peru, Poland, Portugal, Romania, Serb-Croat-Slovene State, Siam, Czechoslovakia, and Uruguay (“The Allied and Associated Powers”) and Germany

- Treaty of Guarantee, June 28, 1919, postwar alliance between Great Britain and France
- Treaty Between the Allied and Associated Powers and Poland on the Protection of Minorities, June 28, 1919, among the “Principal Allied Powers” (United States [signed, but failed to ratify], British Empire, France, Italy, and Japan) and “Associated Powers” (Belgium, Bolivia, Brazil, China, Cuba, Ecuador, Greece, Guatemala, Haiti, the Hedjaz, Honduras, Liberia, Nicaragua, Panama, Peru, Poland, Portugal, Romania, Serb-Croat-Slovene State, Siam, Czechoslovakia, and Uruguay) and Poland
- Treaty of St. Germain, September 10, 1919, among “Principal Allied Powers” (United States [signed, but failed to ratify], British Empire, France, Italy, and Japan), and “Associated Powers” (Belgium, China, Cuba, Ecuador, Greece, Nicaragua, Panama, Poland, Portugal, Romania, Serb-Croat-Slovene State, Siam, and Czechoslovakia) and Austria, dissolving the Austro-Hungarian Empire
- Treaty of Neuilly, November 27, 1919, among the “Principal Allied Powers” (United States [signed, but failed to ratify], British Empire, France, Italy, and Japan) and the “Associated Powers” (Belgium, China, Cuba, Greece, the Hedjaz, Poland, Portugal, Romania, the Serb-Croat-Slovene State, Siam, and Czechoslovakia) and Bulgaria, by which Bulgaria ceded territory to Serbia (the Serb-Croat-Slovene State) and Greece
- Treaty of Trianon, June 4, 1920, among The “Principal Allied Powers” (United States [signed, but failed to ratify], British Empire, France, Italy, and Japan) and the “Associated Powers” (Belgium, China, Cuba, Greece, Nicaragua, Panama, Poland, Portugal, Romania, the Serb-Croat-Slovene State, Siam, and Czechoslovakia) and Hungary, reducing the area of Hungary
- Treaty of Sèvres, August 10, 1920, among the “Principal Allied Powers” (United States [signed, but failed to ratify], British Empire [UK], France, Italy, and Japan) and the “Associated Powers” (Armenia, Belgium, Greece, the Hedjaz, Poland, Portugal, Romania, the Serb-Croat-Slovene State, and Czechoslovakia) and Turkey (Ottoman Empire), by which the Ottoman Empire was formally dissolved
- United States and Austria Treaty of Peace, August 24, 1921
- United States and Germany Treaty of Peace, August 25, 1921
- United States and Hungary Treaty of Peace, August 29, 1921

This entry provides a general introduction to World War I. **WORLD WAR I: WESTERN FRONT (1914–18)** treats the course of the war on Europe’s Western Front and the war’s resolution with the Treaty of Versailles and associated treaties. The following entries treat the course of the war on each of its fronts: **WORLD WAR I: AFRICA AND ASIA (1914–1918)**; **WORLD WAR I: AT SEA (1914–1918)**; **WORLD WAR I: BALKANS (1914–1918)**; **WORLD WAR I: EASTERN FRONT (1914–1918)**; **WORLD WAR I: ITALIAN FRONT (1915–1918)**; **WORLD WAR I: MESOPOTAMIA (1914–1918)**; **WORLD WAR I: TURKISH FRONTS (1914–1918)**.

BACKGROUND AND CAUSES OF WORLD WAR I

Two hostile alliances dominated Europe at the beginning of the 20th century: the Triple Alliance of Germany, Austria-Hungary, and Italy; and the Triple Entente of France, Russia, and Great Britain. These broad alliances were supplemented by lesser agreements, which essentially bound the major signatories to render military aid to a number of small nations. The conditions were thus ripe for the immediate escalation of relatively minor conflicts into a conflagration that would engulf all of Europe.

The grand alliances of the early 20th century had their origin in the statesmanship of Otto von Bismarck (1815–98), the Prussian chancellor who reshaped Europe in 1871 by creating a unified Germany following Prussia’s victory against France in the **FRANCO-PRUSSIAN WAR**. As a result of the war, Germany acquired the coal-rich Alsace-Lorraine region, creating, Bismarck understood, lasting enmity between France and Germany. Accordingly, Bismarck moved to isolate France from potential allies by tying both Russia and Austria-Hungary to Germany. In 1873, he negotiated the Three Emperors’ League, binding the three powers to assist one another in time of war. In 1878, Russia withdrew, and Germany and Austria-Hungary signed the Dual Alliance in 1879. The agreement bound the signatories to aid one another if either were attacked by Russia. In 1881, Bismarck negotiated the Triple Alliance. In 1883, Austria-Hungary and Romania concluded an alliance, to which Germany agreed to adhere. Then, in 1887, Bismarck negotiated a secret “Reinsurance Treaty” between Germany and Russia, by which the two nations agreed to remain neutral if either became involved in a war with a third power—unless Germany attacked France, or Russia attacked Austria-Hungary. With this secret treaty, Bismarck hoped to keep Germany from facing a two-front war against France and Russia, but the alliance lapsed in 1890.

When Russia left the German sphere, it formed an alliance with France, culminating in the Franco-Russian Military Convention of 1894, intended specifically to counter the Triple Alliance. Next, France concluded a secret agreement with Italy, which—despite its obligations under the Triple Alliance—agreed to remain neutral if Germany attacked France or if France, to protect its

“national honor,” attacked Germany. By the beginning of the 20th century, Britain also altered its policy of “splendid isolation” in 1902 by concluding with Japan a military alliance intended to check German colonial advances in the Pacific and Asia. Two years later, Britain signed the Entente Cordiale with France, which opened the way for close cooperation between the two nations in diplomatic and military matters. In 1907, the Anglo-Russian Entente was signed; it, with the Entente Cordiale, formed the Triple Entente among Britain, France, and Russia.

The Triple Entente was not an outright military alliance, but in 1912 Britain and France concluded the Anglo-French Naval Convention, whereby Britain pledged to protect the French coast from German naval attack, and France promised to defend the Suez Canal. The signatories also agreed to consult if either were attacked on land.

The Franco-Prussian War had created a permanent enmity between Germany and France, yet Western Europe was deceptively peaceful until the outbreak of war in 1914. In the Balkans, however, war was chronic. In 1911–12, Italy and Turkey went to war over certain of Turkey’s African possessions. The result was that Turkey lost Libya, Rhodes, and the Dodecanese Islands to Italy. No sooner had Turkey concluded peace with Italy than it found itself at war with Greece, Serbia, and Bulgaria, which, joined later by Montenegro, fought Turkey over possession of territories on the Balkan Peninsula. The war was ended by intervention from the “great powers” of Western Europe, who essentially forced Turkey to relinquish Crete and all of its European possessions (see BALKAN WAR, FIRST.) A Second BALKAN WAR erupted in 1913 when the “Young Turks” (Turkish army officers who aimed to overthrow the ancient and corrupt rule of the sultans) denounced the peace after Bulgaria attacked its recent allies in an effort to acquire more of Macedonia, which had been ceded by Turkey as a result of the first war. The Balkan allies quickly beat back Bulgarian forces in a series of bloody battles between May and July 1913. During July and August Romania declared war on Bulgaria, invaded that country, and took its capital, Sofia. For their part, the Turks also prevailed against the Bulgars, reoccupying Adrianople, which had been lost in the first war. Bulgaria surrendered on August 10, 1913.

The Balkan Wars not only failed to resolve the tensions that had been mounting in this part of Europe but also fanned the flames of nationalism among the small countries that had been torn between Turkey and Austria-Hungary for so long. Individual countries sought independence, yet they also sought a “pan-Slavic” identity, a solidarity with one another and with Russia, which readily presented itself as the spiritual, cultural, political, and military defender of all Slavic peoples.

Thus the Balkans emerged as the cauldron in which war, fueled by Europe’s great opposing alliances, would brew.

WAR RESOURCES AND WAR PLANS

By the time war broke out in 1914, the major belligerents had invested years in planning for the conflict. In 1914, the French army numbered 4.5 million men, most of them conscripts, and Germany mustered even more, 5.7 million, also mostly draftees. At sea, France had 14 modern dreadnought battleships and 15 of the earlier predreadnought types. In addition, the French navy had 76 submarines and a variety of other surface vessels. The German navy had 13 dreadnoughts and 30 older battleships, as well as 30 submarines, and many other surface craft. Unlike France and Germany, England had no program of compulsory military service. In 1914, its British Expeditionary Force (BEF) was a superbly trained body of professional volunteer soldiers, but it numbered only 160,000. Held in reserve was a poorly trained and poorly equipped Territorial Army, which was intended for use only in defense of the home territory. The Royal Navy was more formidable. England had 24 modern dreadnought-type battleships, and it also had 38 predreadnoughts. In addition to 76 submarines, the Royal Navy fleet included a mighty array of other surface vessels.

The Allies took much comfort in the muster rolls of the Russian army, which in 1914 showed 5.3 million men. With a population of 77 million, compared to 41 million for Germany, Russia had a vast pool of manpower from which to conscript an even bigger force. The problem was that the Russian army, though vast, was poorly trained, led, and equipped. Nor was the nation’s navy impressive.

Germany could take little comfort in the Austro-Hungarian army of 1914. True, it was large—2.3 million men—but it was poorly organized and often poorly led, and many of its troops felt far more allegiance to their Slavic brothers than to the Dual Monarchy. The Austro-Hungarian navy was comparatively small.

Strength of numbers was not the only measure of military power in 1914. The technology of war had greatly advanced since the Franco-Prussian War. In addition to the mighty dreadnought battleships (huge, heavily armored platforms for high-powered naval artillery), technological innovations included the machine gun, more powerful and accurate artillery, and advanced rail networks. The machine gun greatly multiplied the effectiveness of small parties of defenders. New artillery, combined with improved high-explosive shells, made combat deadlier than ever. Railroads would be used extensively for the rapid transport of huge numbers of troops. Later in the war, the development of the tank and the increasingly effective use of the airplane would also make their mark on the course of battle.

Beginning in the late 19th century, the belligerents had been drawing up grand strategies for using their large armies and the new weapons of war. After the debacle of the Franco-Prussian War, French military planners concentrated on war strategies intended to recover the lost

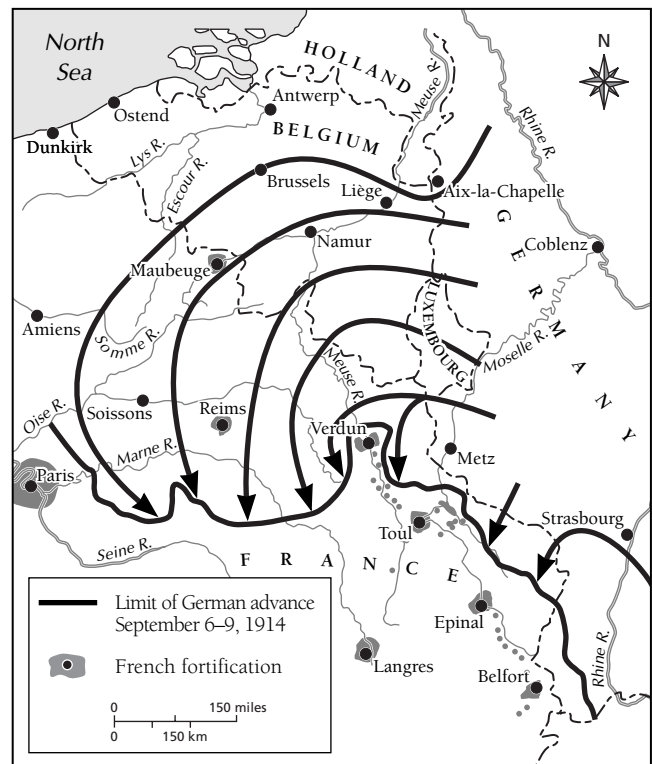

territories of Alsace-Lorraine. Plan XVII, the French master plan in effect in 1914, was almost entirely offensive in nature and called for an immediate and overwhelming concentration of force against the Alsace and Lorraine region. Little thought was given to fighting a defensive war, which, in fact, the war on the western front proved to be. Plan XVII called for four major forces to advance into Alsace-Lorraine on either side of the Metz-Thionville fortresses, which had been occupied by the Germans since 1871. Originally, the plan foolishly ignored the possibility of a German advance through neutral Belgium, but a last-minute alteration deployed troops to check such an advance. French commanders believed that the French soldier was animated by an overpowering patriotism amounting to an irresistible life force, *élan vital*. A charge into German territory, French generals believed, would send the invaders running back to their homeland.

Not only was the blind faith in *élan vital* tragic, but also Plan XVII had been formulated on the basis of a gross underestimation of German troop strength and a confidence that the Germans would mobilize only first-line troops and not reserves.

Like the French, the Germans had a master war plan. It had been formulated at the beginning of the 20th century by Count Alfred von Schlieffen (1833–1913), the chief of the General Staff. Like the French Plan XVII, the Schlieffen Plan relied first and foremost on taking the offensive, but in contrast to the French plan, it also included a strong defensive component. Also, whereas Plan XVII had been painted in broad strokes, the Schlieffen Plan was meticulously detailed and geared to a precise timetable.

Schlieffen understood that Germany would have to fight on two fronts, against the French to the west and the Russians to the east. He reasoned that the French, with a more modern and better-led army, were the greater of the two threats, because they could mobilize quickly. In contrast, the Russians, though numerous, were poorly equipped and poorly led. It would take them at least six weeks to mobilize effectively. Therefore, Schlieffen developed an offensive plan against France and a defensive plan against Russia. The objective was to invade France with overwhelming force and at lightning speed, while simultaneously holding off a Russian invasion of eastern Prussia. France was to be neutralized within a matter of weeks, after which forces could be transferred from the western front to the eastern in order to transform the defensive war against Russia into an invasion.

Whereas the French plan called for a direct frontal assault on Alsace and Lorraine, Schlieffen called for a “great wheel,” a wide turning movement across Flanders Plain, northeast of French territory, then into France from the north. That is, five principal German armies would cut a huge swath through France and Belgium, from Alsace-Lorraine all the way west to the English Channel in order to outflank the French forces, hitting them where they

Schlieffen Plan, Germany’s master plan for quick victory in World War I

were most vulnerable, mainly from the rear. Best of all, the “great wheel” would immediately carry the war into France, where the fighting would wear down French infrastructure and menace French civilians. Should tactical retreats be necessary, German troops could retreat farther into French territory rather than fall back into Germany. Brilliant as the Schlieffen Plan was, it called for executing extremely complex movements with machinelike precision over great distances and in adherence to a strict timetable. It would take little to derail the plan.

Both Austria-Hungary and Russia also had their military plans. Austria-Hungary’s Plan B shortsightedly assumed that the war would be confined to Serbia, calling for three Austrian armies to invade Serbia and another three to watch the border with Russia. When the war rapidly expanded beyond Serbia, Plan R was activated, calling for more of Austria-Hungary’s forces to be concentrated against Russia, in the south, in coordination with German action in the north. Yet it never really got under way, because the demands of the Schlieffen Plan prevented the Germans from committing sufficient forces against Russia at the outset of the war. Austria-Hungary was doomed to spend most of the war desperately and ineffectively thrashing against Italy and Russia, with great loss of life on all sides.

For their part, the Russians adhered to a variety of plans. Plan G assumed that Germany would commit most of its troops against Russia, not France—precisely the

opposite of what Germany actually did. Plan G called for little more than exploiting the vastness of Russia, a resource that had defeated no less a conqueror than Napoleon I (1769–1821) in 1812. The Germans would be allowed to invade until the Russian armies could mass sufficient combat power to launch a massive counteroffensive and drive the invaders out.

Russia's French allies were aghast at the wholly defensive tenor of Plan G and persuaded the Russians to develop Plan A, which assumed that the Germans would throw the bulk of their forces against France rather than Russia. In this case, the Russians were to advance simultaneously into East Prussia and Galicia (southeast Poland and the western Ukraine). From here, the Russians would advance into Silesia (southwestern Poland and northern Czechoslovakia), ultimately concentrating in southern Poland. What neither French nor Russian planners appreciated, however, is that the massive but poorly equipped and miserably led Russian army would be unable to shift rapidly from Plan G to Plan A.

THE TRIGGER

From the perspective of the Austro-Hungarian Empire, Serbia was a troublesome country. Its independence stood as a provocative example to other Balkan territories, which were provinces of the Dual Monarchy. Worse, certain forces within Serbia, most notably the Black Hand, a secret society consisting mostly of Serbian army officers, actively worked to foment rebellion among such Balkan states as Bosnia-Herzegovina. Clearly, Serbia wanted Bosnia-Herzegovina to be part of a grand Slavic state, but Bosnia-Herzegovina was now a province of the Austro-Hungarian Empire. The heir apparent to the Hapsburg throne, Archduke Franz Ferdinand (1863–1914), decided that an official visit to the provincial capital, Sarajevo, would assert Austria-Hungary's dominance over Bosnia-Herzegovina and take Serbia down a peg. To ensure that the message of dominance came across, the archduke's visit in 1914 was scheduled for June 28, St. Vitus's Day, a great Serbian national holiday known as Vidovan.

The visit to Sarajevo was well publicized, and even the route of the archduke's motorcade was made public. The Black Hand recruited a small cadre of assassins, all fanatical students, and deployed them along the route. Only one of these assassins, Gavrilo Princip (1894–1918), succeeded in his mission, firing at Franz Ferdinand from almost pointblank range. Both the archduke and his wife, Archduchess Sophie (d. 1914), were killed almost instantly.

There was no evidence of official Serbian complicity in the assassination; nevertheless, Count Leopold von Berchtold (1863–1942), Austria-Hungary's foreign minister, seized on the incident as an excuse for punishing Serbia and thereby quashing Bosnian nationalism and the pan-Slavic movement that threatened to erode the Dual Monarchy. Berchtold, in fact, wanted to provoke a local

war against Serbia, but in the Europe that Bismarck had engineered, a local war was all but impossible. Kaiser Wilhelm II (1859–1941) assured the Austro-Hungarian ambassador, Theobald von Bethmann-Hollweg (1856–1921), on July 5, 1914, that Germany would back Austria-Hungary even if it meant war with Russia. Armed with this assurance, Austria-Hungary delivered a set of ultimata to Serbia, which included a demand that Austrian officials be given full authority to operate within Serbia to root out sources of anti-Austrian agitation and propaganda. After securing an assurance of Russia's military aid, Serbian officials actually acceded to almost all of Austria-Hungary's demands, stopping short of entirely relinquishing its sovereignty—Serbia would not grant authority for Austrian officials to operate in Serbia. The rejection of this single item was deemed a cause for war. On July 29, 1914, Austrian river gunboats began to shell Belgrade, capital of Serbia. World War I had begun.

THE NATIONS MOBILIZE

Austria-Hungary and Serbia had officially mobilized on July 28. Russia had begun a partial mobilization on that day and a general mobilization on the 30th. Germany issued an ultimatum to Russia, demanding that it cease general mobilization. To France, Germany issued another ultimatum, threatening it with war if it began to mobilize at all. Russia rejected the German ultimatum; its mobilization would continue. France stated nothing more than that it would consult its "own interests." Germany took this as a negative reply as well. On August 1, 1914, Germany ordered general mobilization and began execution of the Schlieffen Plan. On August 2, Germany demanded free passage through Belgium. By the time King Albert (1875–1934) of that nation refused the demand, German divisions were already marching through Flanders. The Great War was now under way on the western front. On August 3, the British government announced its pledge to defend Belgium. That evening, Germany declared war on France. On the 4th, having already invaded it, Germany declared war on Belgium, and Britain in turn declared against Germany.

On August 5, Austria-Hungary responded to the Russian mobilization along its border by declaring war against Russia. Serbia declared against Germany on August 6. Montenegro, another of the Balkan countries, declared against Austria-Hungary on August 7 and against Germany on August 12. France and Great Britain declared war against Austria-Hungary on August 10 and on August 12, respectively. Japan joined in against Germany on August 23, and Austria-Hungary responded with a declaration against Japan on August 25, then against Belgium on August 28. On February 26, 1914, Romania had renewed with the Central Powers a secret anti-Russian alliance it had originally concluded with Germany in 1883. For the present, however, it chose to remain neutral, as did Italy.

World War I: Africa and Asia (1914–1918)

PRINCIPAL COMBATANTS: Britain, France, Germany, and Japan

PRINCIPAL THEATER(S)(THESE FRONTS ONLY): Africa: Togoland, Cameroons, German Southwest Africa, German East Africa; Asia: Tsingtao (China), Marianas, Caroline Islands, Marshall Islands, Western Samoa, Neu-Pommern (present-day New Britain), portion of New Guinea

DECLARATION: See World War I: Historical Background (1871–1914)

MAJOR ISSUES AND OBJECTIVES: See World War I: Historical Background (1871–1914)

OUTCOME: See World War I: Historical Background (1871–1914)

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: See World War I: Historical Background (1871–1914); numbers on the colonial fronts were small

CASUALTIES: See World War I: Historical Background (1871–1914)

TREATIES: See World War I: Historical Background (1871–1914)

This entry focuses on the colonial fronts of World War I. See WORLD WAR I: HISTORICAL BACKGROUND (1871–1914) for the causes and outbreak of the war and major statistics relating to the war. WORLD WAR I: WESTERN FRONT (1914–1918) includes the war's resolution with the Treaty of Versailles and associated treaties. Also see the following entries, which treat the course of the war on other fronts: WORLD WAR I: AT SEA (1914–1918); WORLD WAR I: THE BALKANS (1914–1918); WORLD WAR I: EASTERN FRONT (1914–1918); WORLD WAR I: ITALIAN FRONT (1915–1918); WORLD WAR I: MESOPOTAMIA (1914–1918); WORLD WAR I: TURKISH FRONTS (1914–1918).

A total of 36 nations fought in World War I, and combat extended to the colonial possessions of the principal powers—although on a small scale compared with the titanic struggle in Europe. The great powers fought on the peripheral fronts hoping to shorten the war and gain territory. In fact, the peripheral action probably served only to prolong the war, by drawing troops and materiel away from the major theaters.

TOGOLAND

As formidable as Germany's European-based army was, its ability to defend most of its colonial possessions was limited. The British planned to capture all of the German colonies throughout the world, ostensibly with the objectives of preventing German warships from gaining access to ports and of protecting Allied colonies from German aggression, but also of reaping the rewards of imperial expansion at the expense of Germany. In Africa, German colonies included Togoland, Cameroons, and German

Southwest Africa on the continent's west coast, and German East Africa on the east.

On August 7, three days after England declared war, four companies of British-led native troops from the Gold Coast (Ghana) and a unit of French-led native troops from Dahomey (Benin) invaded Togoland on their own initiative. After 20 days of sporadic combat, German colonial officials surrendered the colony. The immediate dividend of this victory was the capture of wireless (radio) stations that regulated the operation of German surface vessels raiding in African waters.

CAMEROONS

A combination of French, British, and Belgian colonial troops invaded Cameroons on August 20, 1914, from the south, the east, and the northwest. By sea, they also attacked in the west. German resistance was more formidable than it had been in Togoland. The German Cameroonian Army was a small but capable force of 12 companies. It withdrew to a stronghold at Mora and held out there against repeated attacks through February 18, 1916. With its defeat, Cameroons fell to the Allies.

SOUTH AFRICA

British regulars were withdrawn from South Africa for western front duty on August 10, 1914. To take their place, the white civilian residents of South Africa formed four irregular units and invaded German South West Africa (Namibia), beginning in September 1914. The British irregulars enjoyed a superiority of numbers that enabled them to gain control of all major ports; however, invasion of the interior was delayed by an uprising of pro-German South Africans, who had fought against the British during the Second (Great) BOER WAR (1899–1902). It was not until January 1915, by which time the ranks of the British irregulars had grown to 50,000, that an offensive was launched to put down the rebellion. It was quelled by February—except in Cameroons, where many Germans continued to fight a guerrilla war of sporadic skirmishes. The Germans in South Africa surrendered on July 9, 1915.

GERMANY'S PACIFIC AND CHINESE HOLDINGS

By the beginning of the 20th century, Germany had made a few colonial inroads into China and among the Pacific islands. These holdings included Qingdao (Tsingtao), a harbor town in the Chinese province of Guizhou (Kweichow); the Marianas, the Caroline Islands, and the Marshall Islands in the North Pacific; and Western Samoa, Neu-Pommern (New Britain), and a portion of New Guinea in the South Pacific. Japan entered the war at the end of August 1914, honoring an alliance with Britain. Beginning in September, it launched an attack on Qingdao, eventually with the support of Allied warships. The port fell on November 7. Simultaneously with the attack on

Qingdao, Japanese forces invaded the Marianas, the Caroline Islands, and the Marshalls, all of which fell by October.

The German colony of Western Samoa yielded to a force of New Zealanders, supported by Australian, British, and French warships, at the end of August 1914 without having offered any resistance. In September 1914, Australian troops invaded Neu-Pommern and took over all of German New Guinea in a matter of weeks.

GERMAN EAST AFRICA

Territory consisting of present-day Rwanda, Burundi, and continental Tanzania constituted German East Africa. In contrast to Germany's other colonial holdings, it was defended not only ably but also with genius and determination, by Paul von Lettow-Vorbeck (1870–1964). This officer possessed great skill in guerrilla warfare and commanded a force of *askaris*, superb European-trained native African troops.

Lieutenant Colonel Lettow-Vorbeck was dispatched to German East Africa early in 1914. With limited supplies and a small army equipped with outmoded weapons, Lettow-Vorbeck nevertheless resolved to strike preemptively. As soon as war was declared in Europe, he staged a series of raids against the British railway in Kenya. Next, he attempted to capture Mombasa. Although he was driven back by September 1914, he successfully defended against a British amphibious attack on the port town of Tanga in northeastern Tanzania (then called Tanganyika) during November 2–3, 1914. Lettow-Vorbeck inflicted heavy losses on the British and also captured a large cache of badly needed arms and ammunition. He forced the British, themselves poorly supplied, into a defensive posture, which tied up a disproportionate number of men. Even after the Royal Navy sank in the Rufiji-River Delta the German cruiser *Königsberg*—the vessel on which Lettow-Vorbeck depended heavily for support—the German commander refused to give up. He put his men to work salvaging most of the stricken vessel's guns and even commandeered the *Königsberg's* crew as land troops.

To deal with Lettow-Vorbeck, the British put a large force of British and colonial troops under the command of South African general Jan Christian Smuts (1870–1950). The operations of this invasion army were coordinated with those of a Belgian invasion from the west and with those of an independent British invasion from Nyasaland in the south. Hopelessly outnumbered, Lettow-Vorbeck met this formidable threat with cool patience, employing delaying tactics to keep the invaders exposed to the merciless jungle. He made an ally of a hostile climate and terrain; in the end, tropical diseases caused far more Allied casualties than German bullets. Lettow-Vorbeck's *askaris* were accustomed to the climate and therefore less vulnerable to regional disease.

Their losses notwithstanding, the British continued to pour men and resources into the invasion. Lettow-

Vorbeck slowly yielded to the advance, ensuring that the invaders paid dearly for every mile they claimed. At frequent intervals, he turned on his pursuers with surprise counterattacks carried out with lightning speed. At Mahiwa, during October 15–18, 1917, although outnumbered four to one, he inflicted 1,500 casualties on the British, sustaining no more than 100 himself. Nevertheless, it was clear to Lettow-Vorbeck that the superior numbers of the British would ultimately drive him out of German East Africa. He decided not to make a useless stand in defense of a lost cause but instead invaded the Portuguese colony of Mozambique in December 1917. By looting Portuguese garrisons, Lettow-Vorbeck was able to supply his 4,000-man army sufficiently to enable him to raid as far south as Quelimane on the coast during July 1–3, 1918. Here, he turned back north and reentered German East Africa during September and October. By this time the war was all but over in Europe, but Lettow-Vorbeck, out of communication and isolated, had no knowledge of the fate of his countrymen on the western front. He launched an invasion of British-held Rhodesia (Zimbabwe) and took the principal city of Kasama (in modern Zambia) on November 13, 1918—fully two days after the Armistice had officially ended the war.

After taking Kasama, Lettow-Vorbeck began to hear and heed rumors of the German surrender in Europe. He opened negotiations with the British, and on November 23, 1918, Lettow-Vorbeck surrendered his undefeated army at Abercorn (Mbala, Zambia). His was the last German force to lay down its arms in World War I. On the day of his surrender, Lettow-Vorbeck's entire army consisted of 155 Europeans, 1,168 African *askari* troops, and 3,000 other Africans.

World War I: At Sea (1914–1918)

PRINCIPAL COMBATANTS: The navies of Great Britain and the United States vs. the German navy were the principal combatants at sea. See World War I: Western Front (1914–18) for a complete list of belligerents.

PRINCIPAL THEATER(S): North Atlantic, North Sea, Indian Ocean, Pacific Ocean (off east Asia); Coronel and Falklands Islands, off the South American coast

DECLARATION: See World War I: Historical Background (1871–1914)

MAJOR ISSUES AND OBJECTIVES: See World War I: Historical Background (1871–1914)

OUTCOME: See World War I: Historical Background (1871–1914)

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: For personnel, see World War I: Historical Background (1871–1914); approximate naval strength of the belligerents (1914):

Dreadnoughts: Britain, 20; Germany, 13

Battle cruisers: Britain, 8; Germany, 5

Predreadnoughts: Britain, 40; Germany, 22

Cruisers: Britain, 102; Germany, 41

Destroyers: Britain, 301; Germany, 144

Submarines: Britain, 78; Germany, 30

CASUALTIES: See World War I: Historical Background (1871–1914)

TREATIES: See World War I: Historical Background (1871–1914)

This entry focuses on the naval action of World War I. See **WORLD WAR I: HISTORICAL BACKGROUND (1871–1914)** for the causes and outbreak of the war, as well as for major statistics. **WORLD WAR I: WESTERN FRONT (1914–1918)** includes the war's resolution with the Treaty of Versailles and associated treaties. Also see the following entries, which treat the course of the war on other fronts: **WORLD WAR I: AFRICA AND ASIA (1914–1918)**; **WORLD WAR I: BALKANS (1914–1918)**; **WORLD WAR I: EASTERN FRONT (1914–1918)**; **WORLD WAR I: ITALIAN FRONT (1915–1918)**; **WORLD WAR I: MESOPOTAMIA (1914–1918)**; **WORLD WAR I: TURKISH FRONTS (1914–1918)**.

World War I was first and foremost a conflict fought on land, but it did occasion the largest sea battle in history (Jutland), and the oceans were bitterly contested avenues of supply for the belligerents.

BRITISH NAVAL OBJECTIVES

From the beginning of the war, the chief British naval objective was not offensive but the defense of key trade routes. Soon, however, the British instituted a naval blockade of Germany and the other Central Powers, a blockade that increased in strength during the course of the war and proved highly effective.

GERMAN NAVAL OBJECTIVES

Some historians have argued that Kaiser Wilhelm II's (1859–1941) desire to build a German navy rivaling that of Great Britain was a prime cause of World War I. Yet when the war began, Germany deployed its surface vessels in ways intended to avoid a confrontation with the British. Initially, surface craft were used to lay mines in key enemy harbors, and German U-boats (submarines) preyed on Allied merchant ships as well as Royal Navy vessels—the latter with the purpose of reducing Britain's numerical superiority.

THE BATTLE OF HELGOLAND BIGHT

Contrary to its prevailing policy of avoiding offensive action, on August 28, 1914, British light cruisers ventured into German home waters to provoke a fight. German cruisers took the bait and headed for the British intruders, whereupon a battle cruiser squadron under Admiral Sir David Beatty (1871–1936) steamed over the horizon and opened up on the Germans. Four German light cruisers were sunk, and 1,000 German sailors were killed or captured. The British suffered substantial damage to a single ship and lost 35 sailors.

THE BEGINNING OF U-BOAT OPERATIONS

The outcome of the Battle of Helgoland Bight discouraged Germany from sending its outnumbered surface fleet beyond its home waters; however, German U-boat operations were commenced in earnest, and a program of submarine construction was rushed ahead.

On September 22, *U-9*, operating off the Dutch coast, sank three British cruisers, the *Aboukir*, *Hogue*, and *Cressy*, in the space of one hour. It was a staggering loss for the British, and it was followed on October 7 by a U-boat attack on the anchorage of Loch Ewe, off the west coast of Scotland. Several British craft were damaged in their home waters. On October 15, the British cruiser *Hawke* was torpedoed and sunk. This was followed by a U-boat raid on Scapa Flow, anchorage of the British Grand Fleet, at the northern tip of Scotland. Although no British vessels were lost in the raid, the Grand Fleet had to be transferred to an alternate station while submarine nets were installed at Scapa Flow.

THE DIPLOMATIC COST OF SUBMARINE WARFARE

Prewar international conventions, to which Germany was party, as well as informal naval usage dictated that U-boats surface, give warning, and allow passengers and crew to abandon ship before attacking a merchant vessel. In some cases German U-boat commanders observed this convention; however, early in the war, Germany declared Allied home waters a war zone and warned that all vessels in these waters were subject to attack without warning. Among the neutral nations—especially the United States—the policy of “unrestricted submarine warfare” increasingly turned public opinion against Germany. Although the U-boat was highly effective against Allied shipping (less so after the convoy system was adopted in 1917–18), it courted diplomatic disaster and was instrumental in bringing the United States into the war against Germany.

THE BATTLE OF DOGGER BANK

At the end of 1914, German admiral Franz von Hipper (1863–1932) resolved to venture out of home waters with the battle cruisers of the German High Seas Fleet for a lightning run across the North Sea to raid the British

coast. Hipper bombarded Scarborough and Hartlepool, inflicting many civilian casualties before he returned to home port.

The success of the raid encouraged Hipper to make another sortie in January 1915, but his fleet was intercepted on January 24 at Dogger Bank, midway between England and Germany. Royal Navy intelligence had intercepted German radio signals, and Admiral Beatty was prepared with five battle cruisers to meet Hipper's three. (Both squadrons were accompanied by various lighter vessels.) Outnumbered, Hipper attempted to flee, but Beatty overtook him, sinking the cruiser *Blücher* and damaging the two other cruisers, including the admiral's flagship, *Seydlitz*. After Beatty's own flagship, *Lion*, was hit, a breakdown in ship-to-ship communication brought a premature end to the attack, which permitted Hipper to get away. This was a disappointment for the Royal Navy, but Dogger Bank did result in an order from the Kaiser himself instructing naval commanders to avoid all further risk of losing major surface ships.

OPERATIONS OF THE GERMAN EAST ASIATIC SQUADRON

The German East Asiatic Squadron, commanded by Admiral Graf Maximilian von Spee (1861–1914), was assigned to defend Germany's Pacific colonial holdings. The squadron was equipped with modern, fast cruisers, including the heavy cruisers *Scharnhorst* and *Gneisenau*, and the light cruisers *Nürnberg*, *Emden*, and *Leipzig*. During the first four months of the war, from August through November 1914, the squadron ravaged merchant shipping on the British trade routes as well as troopships on their way to Europe or the Middle East from India, New Zealand, and Australia.

INDIAN OCEAN RAIDS

During August–November 1914, the *Emden*, under Captain Karl von Müller (1854–1940), was detached from the East Asiatic Squadron and sent to the Indian Ocean, where it sank several merchant vessels in the Bay of Bengal, bombarded Madras, India (September 22), and disrupted traffic in the approaches to Ceylon (Sri Lanka). On November 9, the Australian cruiser *Sydney* attacked *Emden*, which was scuttled off the Cocos Islands to avoid capture. By this time, *Emden* had sunk 15 Allied ships.

BATTLE OF CORONEL

Simultaneously with the *Emden's* operations in the Indian Ocean, the rest of the East Asiatic Squadron steamed toward the Chilean coast. Spee was unaware that Admiral Sir Christopher Cradock (1862–1914), commanding two obsolescent armored cruisers, *Monmouth* and *Good Hope*, and one light cruiser, *Glasgow*, in addition to *Otranto*, an armed merchant ship, had been assigned to hunt down the East Asiatic Squadron.

The two squadrons clashed at Coronel, off the southern coast of Chile, on November 1, 1914. Although the British and German forces were evenly matched, the older British vessels were outgunned by the much newer German ships, and Spee was able to fire from beyond the range of the British guns. The two British heavy cruisers sank with all hands, including Admiral Cradock; only *Glasgow* and *Otranto* escaped.

BATTLE OF THE FALKLANDS

Encouraged, Spee sailed for Port Stanley, in the Falkland Islands, to raid the British wireless facilities and coaling stations there. Spee was unaware that a British squadron, including the battle cruisers *Invincible* and *Inflexible* and six other cruisers, all under the command of Vice Admiral F. D. Sturdee (1859–1925), was taking on coal there.

The German admiral attacked on December 8, 1914, and Sturdee responded vigorously. *Scharnhorst*, with Spee on board, was sunk first, followed by *Gneisenau*, *Nürnberg*, and *Leipzig*. This time it was the British ships that enjoyed the advantage of bigger guns and could therefore fire from beyond the range of the Germans. The British sailors suffered a mere 25 casualties—none fatal—whereas 1,800 German sailors went down with their ships.

Of Spee's squadron, only the light cruiser *Dresden* escaped. Three months after the Falklands battle, it was intercepted off the Juan Fernández Islands on March 14, 1915. Its captain gave the order to abandon ship and scuttled her to prevent capture. The Battle of the Falklands ended commerce raiding by German surface vessels.

WAR ZONE PROCLAIMED

Although the German surface fleet had suffered serious blows, the submarine forces continued to prey upon high seas commerce. On October 20, 1914, the British merchant steamship *Glitra* was torpedoed, and numerous other sinkings followed. On February 4, 1915, came the German proclamation of a war zone in the waters around the British Isles. In this area, merchant ships, including those of neutral nations, such as the United States, were subject to attack without warning. U-boats were able to sink seven out of 11 Allied vessels attacked in the first week of the 1915 "war zone" campaign. It was an impressive record, but Germany had a limited number of U-boats. In March 1915, approximately 6,000 Allied sailings were recorded. Of this number, 21 ships were sunk. Far more effective against merchant shipping was the ongoing British blockade of Germany. During 1915, more than 3,000 vessels were intercepted and inspected, and out-bound trade from Germany was entirely halted.

The Allies also rushed to develop antisubmarine warfare techniques, including antisubmarine nets to block harbors, and so called Q-ships, heavily armed vessels disguised as merchant steamers.

THE SINKING OF THE *LUSITANIA*

On May 7, 1915, the British liner *Lusitania*, bound from New York to Liverpool, was torpedoed and sunk. Of almost 2,000 civilian passengers, 1,198 died, including 128 U.S. citizens. The incident irreparably damaged U.S.-German relations. On August 17, another British passenger ship, *Arabic*, was sunk, with more loss of American lives. On September 18, *Hesperia* was torpedoed and sunk. But with the threat of U.S. entry into the war, Germany agreed to suspend U-boat activity in the English Channel and west of the British Isles.

THE BATTLE OF JUTLAND

In January 1916, Vice-Admiral Reinhard Scheer (1863–1928) was put in command of Germany's High Seas Fleet and decided to attempt a new breakout of the surface vessels. He planned to provoke battle on the open sea between the entire German High Seas Fleet and some smaller portion of the British fleet. The German navy was greatly outnumbered, but if he could engage only a portion of the British fleet, Scheer would enjoy a temporary superiority of numbers. He might score a great victory and thereby significantly reduce the strength of the British navy. This, in turn, would relieve some of the pressure of the British blockade.

Scheer's chosen target was Beatty's battle cruiser squadron at Rosyth, halfway up Britain's eastern coast. Scheer proposed to attack and destroy the squadron before reinforcements from the Grand Fleet's main base at Scapa Flow, off the northern tip of Scotland, could arrive. As bait to lure Beatty, Scheer ordered five battle cruisers, the First Scouting Group, together with four light cruisers, the Second Scouting Group, to sail north under the command of Vice Admiral Franz von Hipper from Wilhelmshaven, Germany, to a point off the southwestern coast of Norway. Scheer, commanding the battle squadrons of the main High Seas Fleet, was to follow 50 miles behind and trap Beatty's ships between the High Seas Fleet and the First and Second Scouting Groups. Unfortunately for the Germans, British naval intelligence intercepted radio traffic relating to the operation, and on May 30, 1916, the entire British Grand Fleet set off for Norway's southwestern coast.

The forces involved were large, the greatest number of ships ever directly involved in a single battle. Admiral Scheer led 99 vessels into battle, including 16 dreadnoughts and six predreadnought battleships, five battle cruisers, 11 light cruisers, and 61 destroyers. British admirals Sir John Jellicoe (1859–1935) and Beatty commanded 151 ships, although many were of older design than the German vessels. Their command included 28 dreadnoughts, nine battle cruisers, eight armored cruisers, 26 light cruisers, five destroyer leaders (heavy destroyers), and 73 standard destroyers, as well as a minelayer and a seaplane carrier.

At 2:20 on the afternoon of May 31, Beatty's advance guard of light cruisers spotted the German light cruisers and opened fire. Hipper turned back toward the German main fleet, and Beatty paralleled his course. Beatty also signaled Admiral Hugh Evan-Thomas (1862–1928), in command of a squadron of four new superdreadnoughts, to follow. In the meantime, the two battle-cruiser forces opened fire on one another at a range of 16,500 yards. The German guns were bigger and their gunnery more accurate than the British. Within less than an hour Beatty's flagship, *Lion*, as well as *Princess Royal*, *Tiger*, and the more lightly armored battle cruisers *Indefatigable* and *Queen Mary*, were sunk. Although the German ships *Seydlitz*, *Derflinger*, and *Lutzow* were badly hit, Beatty was left with only four ships against Hipper's five—although Evan-Thomas was on the way. Though recognizing the superiority of the German guns at long range, Beatty ordered his remaining ships to engage the enemy more closely.

As Beatty and Hipper continued to fight, Hipper sighted the superdreadnoughts of Evan-Thomas's Fifth Battle Squadron A, and the fighting became even more intense. *Queen Mary* exploded and sank at 4:26 P.M., and at about this time the British Second Light Cruiser Squadron sighted Scheer's battleships. Jellicoe's main force was converging on these. But Evan-Thomas's superdreadnoughts took severe hits from Scheer's approaching battleships. At the head of the main British fleet was the Third Battle Squadron—three battle cruisers and two light cruisers—commanded by Rear Admiral Sir Horace Hood (1870–1916). Hood vigorously engaged Hipper's cruisers and destroyers, and at 6:34 his flagship took a direct hit, exploded, and sank, carrying with it the admiral and all hands. Two British cruisers, *Defence* and *Warrior*, were also sunk.

Despite devastating losses, the British Grand Fleet was now in a strong position across the front of the German High Seas Fleet. It had "crossed the T," bringing to bear the bulk of its guns against Scheer's fleet, which, facing the British broadside head on, could employ far fewer guns and was therefore at a great disadvantage. Admiral Jellicoe exploited his hard-won advantage, battering the German ships—which, however, proved remarkably strong and withstood the onslaught well. Scheer's stalwart vessel, coupled with his brilliant seamanship, allowed him to execute a 180-degree "battle turn," which took him out of the range of most of the British fleet.

But Scheer was not through. Executing another 180-degree turn, he steamed back toward Jellicoe's fleet in the belief that Jellicoe had divided his forces. The assumption proved to be a serious error. Scheer found himself under the guns of the entire British force, Jellicoe having yet again crossed Scheer's T. The end of the German High Seas Fleet seemed to loom, but Scheer refused to give up. He sent four German battle cruisers charging into the British line in what was later termed a "death ride." All four of the

Battle of Jutland, May 31, 1916

vessels were severely damaged, but they remained in action while German destroyers, masked by a smoke screen, closed in on Jellicoe's battleships to fire torpedoes. At this point, had Jellicoe ordered the Grand Fleet to advance through what was now a disorganized array of German battle cruisers, Scheer would have been defeated. Instead, worried that the destroyer torpedo attacks would sink more battleships, he ordered his fleet to turn away, thereby allowing Scheer to withdraw.

Scheer now turned to the southeast, heading directly into the formation of British light cruisers that brought up

the rear of Jellicoe's fleet. From about 9:30 P.M. until 3 A.M., the Battle of Jutland became a melee of intensive gunfire and even collisions. Scheer eventually limped away, eluding Jellicoe's attempt to isolate him from his port.

Thus the greatest naval battle in history ended as more or less a bloody draw. It may be said that the Germans achieved a tactical victory—having destroyed three British battle cruisers, three cruisers, and eight destroyers, with the loss of 6,274 officers and men—but suffered a strategic defeat. The Germans lost a battleship and a battle cruiser, in addition to four light cruisers, five destroyers,

and 2,545 officers and men, but, far worse, they had failed to reduce the numerical superiority of the British fleet. The German High Seas Fleet would never again seriously venture out from the security of its home ports. It had been neutralized as an instrument of war.

ACTION AFTER JUTLAND

On August 18, 1916, the German High Seas Fleet briefly sortied out of its home waters to meet the British Grand Fleet, but both Admiral Scheer and Admiral Jellicoe withdrew without making contact. Except for minor hit-and-run light-cruiser raids on the British coast, Germany conducted the rest of the naval war with U-boats until the day of the armistice.

After the armistice of November 11, 1918, the German High Seas Fleet was surrendered (November 21, 1918) and interned at Scapa Flow. On May 7, 1919, the skeleton crews manning the fleet learned of the humiliating terms of the Treaty of Versailles: The German navy was to be reduced to 15,000 men, six small battleships, six light cruisers, 12 destroyers, and 12 torpedo boats. All other vessels were to be irrevocably turned over to the Allies. The German navy would be permitted no U-boats, and German naval aviation was also banned. At 11:20 A.M. on June 21, 1919, in defiance of the terms of the Treaty of Versailles, the German crews scuttled the High Seas Fleet where it lay at anchor. Before British vessels could respond, 52 ships were lost. The British managed to save 22 others.

World War I: Balkans (1914–1918)

PRINCIPAL COMBATANTS (BALKAN FRONT ONLY): Austria-Hungary, Germany, Bulgaria vs. Serbia, Britain, France, Greece

PRINCIPAL THEATER(S) (BALKAN FRONT ONLY): Balkan region

DECLARATION: See World War I: Historical Background (1871–1914)

MAJOR ISSUES AND OBJECTIVES: See World War I: Historical Background (1871–1914)

OUTCOME: See World War I: Historical Background (1871–1914)

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: See World War I: Historical Background (1871–1914)
TREATIES: See World War I: Historical Background (1871–1914)

This entry focuses on the Balkan Front of World War I. See WORLD WAR I: HISTORICAL BACKGROUND (1871–1914) for the causes and outbreak of the war, as well as major statistics. WORLD WAR I: WESTERN FRONT (1914–1918) includes the war's resolution with the Treaty of Versailles and associated treaties. Also see the following entries, which treat the course of the war on other fronts: WORLD WAR I: AFRICA AND ASIA (1914–1918); WAR I: AT SEA (1914–1918); WORLD WAR I: EASTERN FRONT (1914–1918); WORLD WAR I: ITALIAN FRONT (1915–1918); WORLD WAR I: MESOPOTAMIA (1914–1918); WORLD WAR I: TURKISH FRONTS (1914–1918).

As described in World War I: Historical Background (1871–1914), World War I was triggered by events in the Balkans. Two wars had destabilized the region (see BALKAN WAR, FIRST and BALKAN WAR, SECOND), and although the Western powers intervened to restore peace, neither of the Balkan Wars resolved the tensions that had been mounting in this part of Europe. If anything, they fostered the nationalist passions of the small countries that had long been torn between Turkey and Austria-Hungary. Individual Balkan regions, provinces, and states sought independence, yet they also sought a “pan-Slavic” identity, a solidarity with one another and with Russia, which, eager to regain lost prestige, presented itself as the spiritual, cultural, political, and military defender of all Slavic peoples. Otto von Bismarck (1815–98), the great German chancellor whose 19th-century diplomacy had woven the web of alliances that would now bind Europe into world war, had famously remarked that catastrophic war would erupt some day because of “some damn foolish thing in the Balkans.” That “foolish thing” turned out to be the assassination, on June 28, 1914, at 11:15 A.M., of the Austro-Hungarian archduke and his wife. Count Leopold von Berchtold (1863–1942), Austria-Hungary's foreign minister, used the assassination as a pretext for declaring war on Serbia to squelch Bosnian nationalism and the pan-Slavic movement. After first securing Germany's pledge of military alliance and support, Austria-Hungary dispatched Baron Vladimir von Giesl (fl. 1900s), ambassador to Serbia, to deliver 10 demands to the government at Belgrade. The most important demands stressed prosecution of the assassination conspirators, with Austrian officials to be put in charge of the investigation; furthermore, Austrian officials were to operate within Serbia to root out sources of anti-Austrian agitation and propaganda. Serbia secured a pledge of Russian alliance but in fact acceded to all of Austria-Hungary's demands save one—Serbia would not give blanket authority for Austrian officials to operate in Serbia. This single item began World War I.

On July 28, 1914, Emperor Franz Josef (1830–1916) signed Austria-Hungary's declaration of war against Serbia. In response, Russia mobilized near the Austrian border. On the next day, July 29, Austrian river gunboats began to shell Belgrade, the capital of Serbia. On August 30, Russia expanded its partial mobilization into full mobilization, whereupon Germany and Austria-Hungary mobilized against Russia.

World War I would instantly leap beyond the Balkans, which, indeed, would become a secondary front, of less importance than either the western or eastern fronts; however, as the western front became deadlocked, the Allies gave thought to the Balkans as a means of achieving a breakthrough. For Austria-Hungary, the Balkans were the focus of the war, and Austria-Hungary deployed beyond the region only out of necessity. Austria-Hungary wanted nothing more or less than to punish Serbia in order to suppress the nationalist movements that were tearing apart the ethnically fragmented Austro-Hungarian Empire. Even such a limited objective, however, was far more formidable than Austro-Hungarian politicians realized.

To begin with, Serbia had fierce national pride and its military, though small, was resolute and well led. This fact escaped General Oskar Potiorek (1853–1933), commander of the Austro-Hungarian troops poised to invade Serbia, who dismissed the Serbian troops as “pig farmers.” Austria-Hungary's July 29 bombardment of Belgrade was not followed up until August 12–21, when Potiorek led an Austro-Hungarian army of 200,000 into Serbia across the Save and Drina rivers, from the west and the northwest. To their profound shock, the Austrians were met by an almost equal number of Serbs, victorious veterans of the Balkan Wars, under the command of Marshal Radomir Putnik (1847–1917). The Serbs counterattacked fiercely on August 16, jabbing at the invaders mercilessly and sending them back across the River Drina. It would be early September before the Austrians renewed the invasion.

The second Austrian offensive was more successful, at least at first. By December 2, Austrians occupied Belgrade, the Serbian capital; however, on December 3, despite shortages of supply and ammunition, the Serbs counterattacked, driving the Austrians out of Belgrade. By December 15, the Serbs had pushed the Austrians out of Serbia altogether. In the wake of this Austro-Hungarian humiliation, Marshal Potiorek was relieved of command.

Serbia gained but little respite. After Turkey joined the war on the side of the Central Powers, the major powers realized that Serbia was not just a pawn in the deadly game of international war but occupied what was now a critically strategic location astride the land route to Turkey. With the British navy largely in control of the Mediterranean supply routes, Germany and Austria-Hungary determined to seize Serbia in order to open an overland supply artery to and from Turkey. This objective was greatly aided on September 6, 1915, when Bulgaria joined the war on the side of the Central Powers. Bulgaria

had been discontented since its failure to realize all of its territorial ambitions in the two Balkan Wars of 1912 and 1913. Seeing Serbia as ripe for annexation, Bulgaria contributed four divisions to a tripartite invasion force of 330,000 Germans, Austro-Hungarians, and Bulgarians. In response to the impending invasion, Serbia's western Allies, France and England, advised Serbia to offer Bulgaria territorial concessions in Macedonia. Serbia refused to back down, however.

The Austro-Bulgar-German invasion force was under the overall command of the brilliant and aggressive German general August von Mackensen (1849–1945). He planned to use two armies, the Austrian Third and German Eleventh, to attack Serbia across the Save and Danube Rivers. Shortly after this, another two armies would attack from Bulgaria. The Austro-German contingent crossed the rivers on October 7, 1915, and marched into Belgrade just two days later. Before this advance, the Serbian army made an orderly retreat into the interior, pursuing a scorched-earth policy along the way, destroying depots, roads, and bridges to deprive the enemy of them. The Bulgarian First Army was to squeeze the Serbian forces between itself and the Austro-German armies, while the Bulgarian Second Army swung round from the south to block any reinforcement that might be forthcoming from Greece—which, however, had so far proved reluctant to help. The Bulgarian Second Army was also supposed to prevent French and British contingents, landed at the Greek-controlled Macedonian port of Salonika on October 5, from coming to the aid of Serbia.

From Salonika, General Maurice P. E. Sarrail's (1856–1929) French force marched up the Vardar Valley but was turned back by superior Bulgarian forces. Bryan T. Mahon (fl. 1900s), commanding a British contingent, reached the Bulgarian border and was also beaten back. The Serbs, then, were left to defend themselves. Through little more than courage and skill, Serbian field marshal Radomir Putnik avoided envelopment by the massively superior invasion forces, but he could do little against even deadlier enemies—exhaustion and typhus. With disease thinning the Serbian ranks, survivors sought to evade capture by withdrawing into the mountains of Montenegro and Albania. There, however, in mid-November, they found themselves among ancient tribal enemies, who attacked with a ferocity even greater than that of the political enemies who had invaded the country. Putnik lost 100,000 men killed or wounded, and an astounding 160,000 captured. The few who escaped made their way to Allied ships, which ferried them to the island of Corfu, where they were interned in squalid refugee camps until they were re-formed to join the allied ranks in Salonika. By the end of 1915, Austria occupied both Serbia and Montenegro.

In the meantime, throughout 1914 and 1915, Greece maintained a tenuous neutrality. King Constantine I (1868–1923) personally favored the Central Powers, but his prime minister, Eleuthérios Venizélos (1864–1936),

was strongly pro-Allies. It was the prime minister who gave the French and British permission to use Salonika as a base and staging area. But on October 7 Venizelos was forced to resign for violating the king's official neutrality policy. In October 1916, Venizelos would establish a rival government in Thessaloniki, and in June 1917 the Western Allies engineered the ouster of King Constantine and installed Venizelos as prime minister of a Greece officially reunited but in fact bitterly divided. Acting on the Allies' promise of territorial gains from Turkey, Venizelos was to end Greek neutrality and bring his nation into the war on the side of the Triple Entente.

By July 1916, the Serbian army had been reconstituted at Salonika as a force of 118,000 men. Sarrail's troops were added to make an army of 250,000. With this force, Sarrail decided to leave the fortified "Bird Cage," a ring of forts around Salonika, to conduct an offensive up the valley of the Vardar River, which flows through Serbia down into Greece and into the Gulf of Salonika. By the time Sarrail got under way, the Bulgarians had already seized the initiative and, coordinating with German forces, attacked the Allies at Florina, a Greek village a few miles south of the Serbian frontier, during August 17–27. The Allies retreated south, then mounted from September 10 to November 19 a counteroffensive that slowly drove the Bulgar-German forces northward, out of Greece and into Serbia. On November 19, the Allies took the southern Serbian town of Monastir. But then the Allied offensive bogged down. Sarrail, always disputatious, fell out with his subordinates, and the campaign ended in disorganization, at the cost of 50,000 Allied lives. The Bulgar-German forces lost 60,000 killed and wounded.

Beginning in July 1916 and lasting through November, a corps of Austrians dueled with an Italian corps in Albanian territory west of Greece. The Italians pushed the Austrians north and then joined forces with Sarrail's army at Lake Ochrida. Little came of these actions in Greece and Albania during 1916, however, yet neither side wanted to concede even this peripheral front. No one wanted to suffer defeat, even where it hardly mattered.

By 1917, Maurice Sarrail was stalemated in the Balkans. Although his nominal strength was almost 600,000, disease and desertion had reduced his command to fewer than 100,000 fit for duty. Sarrail continued to make periodic thrusts against the Bulgar-German forces. Both the Battle of Lake Prespa (also called the Battle of Djoran), March 11–17, 1917, and the Battle of the Vardar, May 5–19, ended inconclusively. If there was a bright spot for the Allies, it was the abdication of Greece's King Constantine on June 12, 1917, and the elevation of the pro-Allies prime minister, Eleuthérios Venizélos. Although Greece entered the war on the side of the Allies on June 27, 1917, its armies were in such disarray that no new offensive was developed.

On November 16, 1917, Georges Clemenceau (1841–1929) became premier of France—and almost immedi-

ately relieved Maurice Sarrail of command. On December 10, Sarrail was replaced in the Balkans by the vigorous M. L. A. Guillaumat (1863–1940), who organized the tattered Allied forces on this front and began a program of training for the Greek army. He commanded that force in a successful action against Bulgar-German forces holding Skra Di Legen Ridge before he was recalled to France to command troops defending Paris.

Guillaumat's replacement was Franchet d'Esperey (1856–1942), one of the finest tacticians of the French army. Using a polyglot force of 600,000 Serb, Czech, Italian, French, and British troops (of which perhaps only 200,000 were fit for duty), d'Esperey attacked an equal number of Bulgarians, whose German allies (save for some senior officers) had been withdrawn for service on the western front. With massive artillery support, the Serb contingent was deployed on September 15, 1918, between elements of a force now called the French Orient Army. The Serbs penetrated the Bulgarian defenders, then pushed northward while the French, on either side of the resulting gap, attacked both Bulgarian flanks. On September 18, the British contingent was committed to the battle with a diversionary attack on the Bulgarian far right. Unexpectedly, this diversion gathered sufficient momentum to propel the British forces as far as the Vardar River by September 25. Now the Bulgarian forces were split in two.

From the Vardar, the British drove on to Stumitsa, which they reached on September 26, while the French cavalry charged through the principal battle area to take Skoplje on September 29. Allied air forces strafed and bombed the retreating Bulgarians, transforming an orderly withdrawal into a rout. With the Bulgarians fleeing before him, Franchet d'Esperey pressed northward, forcing Bulgaria to agree to an armistice on September 29, 1918. Having ended the war in the Balkans, d'Esperey marched across the Danube to attack Budapest and then Dresden, Germany. This crossing was effected during November 10–11, just when the armistice ended World War I.

CASUALTIES: See World War I: Historical Background (1871–1914)

TREATIES: See World War I: Historical Background (1871–1914)

This entry focuses on the Eastern Front of World War I. See WORLD WAR I: HISTORICAL BACKGROUND (1871–1914) for the causes and outbreak of the war and for major statistics. WORLD WAR I: WESTERN FRONT (1914–1918) includes the war's resolution with the Treaty of Versailles and associated treaties. Also see the following entries, which treat the course of the war on other fronts: WORLD WAR I: AFRICA AND ASIA (1914–1918); WORLD WAR I: AT SEA (1914–1918); WORLD WAR I: BALKANS (1914–1918); WORLD WAR I: ITALIAN FRONT (1915–1918); WORLD WAR I: MESOPOTAMIA (1914–1918); WORLD WAR I: TURKISH FRONTS (1914–1918).

Although the western front of World War I has generally received the most attention from historians, the war on the eastern front was in itself a tremendously costly, large-scale conflict, which did much to precipitate the Russian revolutions of 1917 and bring an end to czarist rule.

At the beginning of the war the Western Allied powers took great comfort in the existence of what they called the “Russian steamroller.” They believed that the sheer numbers of Russian troops would constitute an irresistible force. On the eve of war, the Russian army numbered 1.4 million men, and mobilization added another 3.1 million. During the course of the war, 12 million Russians would serve. More than half this number, 6.7 million men, would be killed or wounded before the revolutionary communist government made a “separate peace” with Germany at the start of 1918.

What the Allies had not counted on was the impact on the Russian army of poor leadership and inadequate equipment, as well as an outmoded and poorly developed infrastructure, including a sparse and inefficient railway network. Most of all, they had not realized the depth and breadth of the Russian revolutionary movement, which would ultimately undermine the already faltering Russian military apparatus. Population and manpower Russia had in abundance. Equipment, however, was in short supply, and effective political and military leadership was almost totally absent.

EASTERN FRONT STRATEGIES

From the German perspective, Russian Poland posed a threat of invasion to East Prussia, but it was also highly vulnerable to invasion by Germany from the northwest and by Austria-Hungary from the southwest. Many in Germany desired conquest of Russian Poland as a buffer between Germany and Russia, but the German plan called for the conquest of France before embarking on an offensive war against Russia. For this reason, it was decided to pursue a defensive holding action against Russia until victory had been achieved on the western front. The German high command believed this strategy would succeed, estimating that it would take many weeks for the lumbering Russian army to mobilize, especially given the poor state of Russian railways.

Germany's chief ally, Austria-Hungary, regarded the eastern front differently. Much more of Austria-Hungary's frontier with Russia was farther east than Germany's, and the eastern fringes of the Austro-Hungarian Empire were populated by Slav minorities, which felt much greater affinity for the Russians than for the Austrians. Austrian authorities feared that a Russian offensive would be enthusiastically received by the Slav minorities, and the already creaky Austro-Hungarian Empire would face imminent peril. For this reason, Austria-Hungary wanted immediate, vigorous action to check any Russian offensive.

Russia, in fact, was eager to prosecute a war in the name of Slavic unity. Czarists saw war as an antidote to Russia's flagging international prestige and to its growing revolutionary movement. Russia did not want to fight Germany, however, but instead resolved to concentrate all immediately available forces against Austria-Hungary, leaving the German front alone until mobilization was complete. Russia's French allies objected to this strategy, however, and insisted on Russian action against Germany to relieve some of the pressure on the western front.

In the end, two Russian armies were deployed against the Germans in East Prussia, while another four armies were sent against the Austro-Hungarians in Galicia.

BATTLE OF STALLUPÖNEN

What France demanded of Russia was wholly unrealistic. Russia lacked the technology, leadership, and flexibility to wage a two-front war. Before the war, Russia's Stavka (General Staff) replied to French insistence that 900,000 men be available by the 14th day after mobilization that such a deployment would consume at least 20 days. In the end, however, the Russians promised deployment by day 15, a promise that would prove to be wishful thinking. Although the Russian Northwest Army Group, under General Yakov G. Jilinsky (fl. 1900s), did begin to march west on August 12, 1914—actually earlier than the schedule promised—it stepped off prematurely, without adequate supply or communications. On the 12th, the First Russian Army, under General Pavel V. Rennenkampf (1854–1918), began to

cross into East Prussia. The Second Army, under Alexander V. Samsonov (1859–1914), was supposed to keep pace with Rennenkampf's command, so that the two armies could converge in an attack on the German Eighth Army, a force they collectively outnumbered almost three to one. Although the Russian plan was sound, it faltered in execution, providing an opportunity for the outnumbered German Eighth Army, under General Max von Prittwitz (1848–1917), to fight a delaying action. At Stallupönen, about 100 miles east of Eighth Army headquarters and near the East Prussian frontier with Russian Poland, one of Prittwitz's most aggressive corps commanders, Hermann von François (1856–1933), disobeyed standing orders to avoid decisive engagement by launching an offensive against Rennenkampf's center. François inflicted 3,000 casualties and pushed the Russians back across the frontier into Russian Poland. Defeat at the Battle of Stallupönen stunned Rennenkampf into near-paralysis.

THE BATTLE OF GUMBINNEN

German victory at Stallupönen prompted the usually cautious Prittwitz to take the offensive. He was further encouraged by the fact that the literacy level of Russian troops was so low that commanders had taken to transmitting radio messages in the clear rather than in code. The result was that Prittwitz and his officers received Russian orders simultaneously with the Russian officers. Based on intelligence gathered, Prittwitz decided to attack with three corps at the village of Gumbinnen on August 20. The corps led by François was triumphant, but the other two German corps failed to take Rennenkampf's center. The Battle of Gumbinnen was, therefore, a draw. Worse, the results of the engagement reawakened the customary caution of Prittwitz, who now proposed a general retreat. His staff protested; one of his staff officers, Lieutenant Colonel Max Hoffmann (1869–1927), made the counterproposal of attacking Samsonov's left flank near Tannenberg, on East Prussia's southern frontier with Galicia. Although Prittwitz reluctantly agreed, the German overall chief of staff, Helmuth von Moltke (1848–1916), realized that Prittwitz was not the man for the job. He called the redoubtable Paul von Hindenburg (1847–1934) out of retirement to assume command of the Eighth Army and assigned the brilliant Erich Ludendorff (1865–1937) a hero of the assault against Verdun on the western front, as his chief of staff. This command team would prove to be the most effective of the entire war. On August 22, Ludendorff formulated a plan that, coincidentally, duplicated what Hoffmann had proposed to Prittwitz. Elements would attack Samsonov's Russian Second Army while others remained farther east to delay Rennenkampf's First Army. It was a classic strategy of divide and conquer—prevent Rennenkampf and Samsonov from joining forces, and their armies could be defeated in detail, even by inferior numbers.

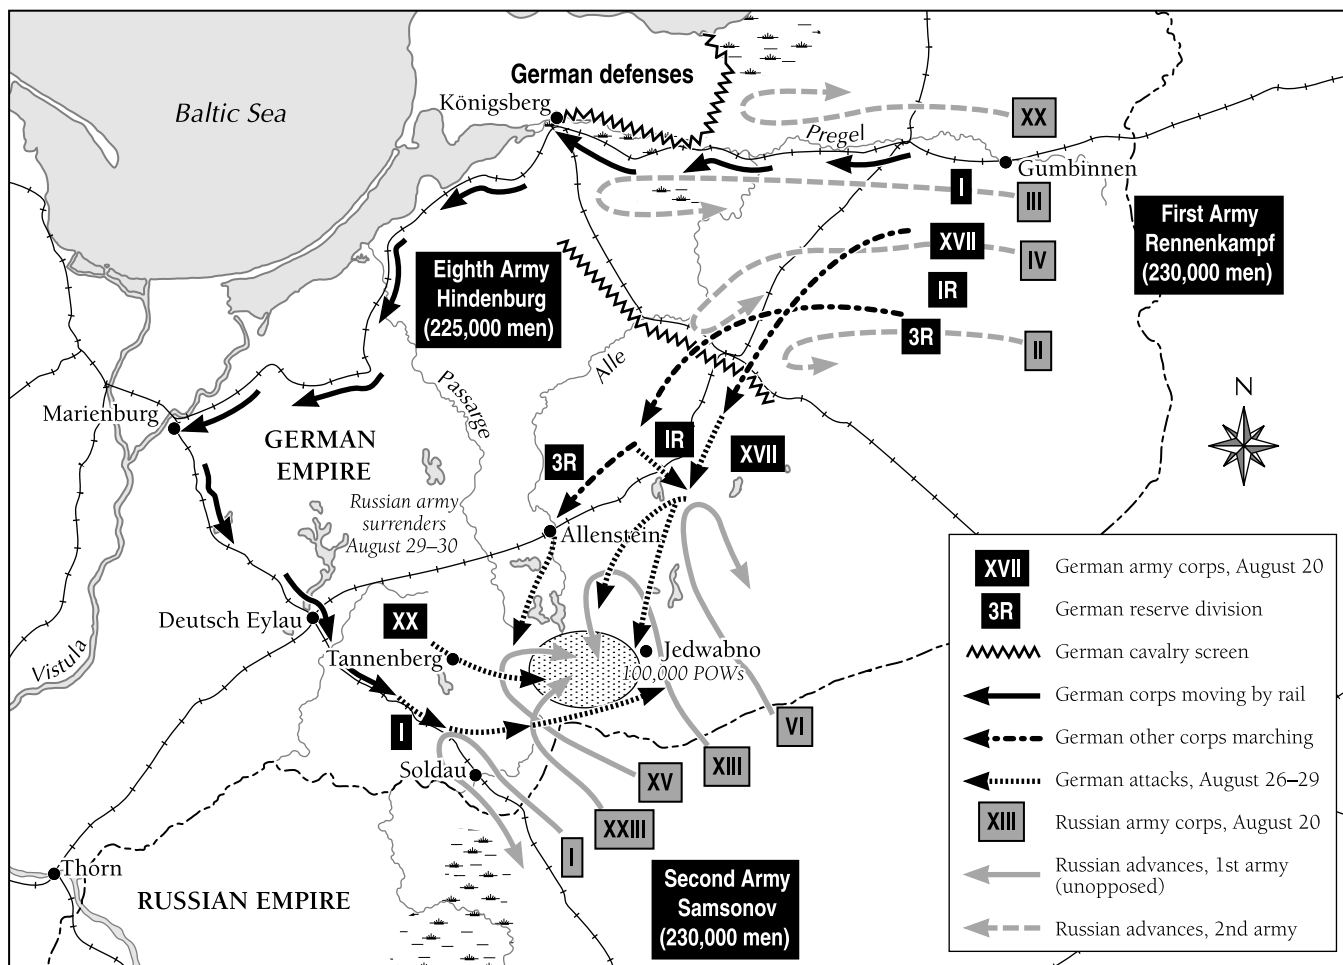

BATTLE OF TANNENBERG

On August 25, 1914, Erich Ludendorff received two intercepted messages. One was from General Rennenkampf, laying out the marching orders of the entire Russian Second Army. The uncoded message revealed the distance separating the Second and First Armies, and it revealed that Rennenkampf would not pose a threat to the German position for at least another day. The second message, from General Samsonov, betrayed the Russian general's mistaken belief that the German army was retreating from him. The message also laid out just how he planned to pursue the enemy he believed he had defeated.

Armed with the intercepted messages, Ludendorff could attack Samsonov in confidence that Rennenkampf could not come to his colleague's aid. Furthermore, the absence of Rennenkampf would allow the Germans to trap Samsonov's Second Army in a catastrophic double envelopment. For his part, believing himself in an excellent position for victory, Samsonov deployed on his extreme right (the northeast end of the Russian Second Army) his VI Corps, leaving that unit entirely isolated as he pushed the main body of his army westward for an assault on the Germans. Not only did this movement leave VI Corps vulnerable, it also drew Second Army farther from, not closer to, Rennenkampf's First Army. Samsonov was intent on placing himself between the Vistula River and what he believed was the retreating German army. In pursuing this error, Samsonov took his army farther and farther from sources of supply. His troops grew hungry and exhausted.

On August 26, Samsonov's VI Corps on the right was 50 miles from I Corps (and other elements) on the left. Between these, Samsonov had arrayed the rest of his army. At this point, however, Samsonov began to realize that his right flank was vulnerable. He had planned to pursue the retreating German army into Germany itself. Faltering, he ordered VI Corps to hold fast, to protect the army. But then he renewed his confidence and pushed the advance forward, only to countermand once again his order and instruct VI Corps to hold its position on the right. But it was too late. VI Corps was already on the move, and the right flank of the entire Russian Second Army was exposed.

As the Russian VI Corps marched toward Samsonov's center, unaware that this order had been changed, its commander received word that German forces had been sighted six miles behind it, to the north. Part of VI Corps was ordered to countermarch to meet the Germans. The unit was attacked, and VI Corps began taking devastating casualties. The command structure broke down; by the morning of August 27, what was left of VI Corps was a panic-stricken rabble. Quickly, the right wing of Samsonov's army collapsed, and the Russian center came under heavy attack. The Russian XIII Corps left the railway center of Allenstein to assist in the action at the Russian center. This left a wide gap at Allenstein, a perfect opportunity for the Germans.

Battle of Tannenberg, August 1914

Samsonov was being enveloped, but instead of cutting his losses in retreat—and thereby preserving some part of his army—he decided to reengage with the object of holding off the Germans with his center corps until Rennenkampf arrived to turn the tide.

At 4 A.M. on August 27, General François began an artillery barrage against the Russian I Corps at Usdau. The shelling was sufficient to rout the hungry and weary Russians, which left Samsonov’s left flank completely exposed. At this point, Samsonov’s only hope was to hold out with his two center corps until the arrival of Rennenkampf’s First Army. A combination of Rennenkampf’s indolence and incompetent orders from the Russian supreme command ensured that Rennenkampf would not arrive, and during August 27–28, 300,000 men were desperately engaged in one of the most violent battles in the history of modern warfare. By August 28, the Russian I Corps had collapsed on Samsonov’s left, and VI Corps had been destroyed on the right. Both flanks of the Russian Second Army had been turned. As night fell on the 28th, Samsonov attempted to rally his troops through personal command. When this failed, he ordered a general retreat

of what remained of the Russian Second Army. The Germans hammered away at the withdrawing forces during August 29–30. Tannenberg was no longer a battle but a slaughter. Some 30,000 Russians perished or were wounded at Tannenberg (compared to between 10,000 and 15,000 German casualties). Among the last of them was General Samsonov, who committed suicide on the night of August 29.

THE BATTLE OF THE MASURIAN LAKES

In 1914, the Masurian Lake district was in the southwestern corner of East Prussia, a region of some 2,000 separate lakes in marshy ground. Rennenkampf deployed the Russian First Army here, well north of Tannenberg. The now reinforced German Eighth Army, having crushed Samsonov, marched to meet Rennenkampf. On September 5, the German Eighth Army attacked the southern end of the Russian First Army. In response, Rennenkampf ordered a general withdrawal on September 9. François’s I Corps pursued the retreating Rennenkampf, and Rennenkampf counterattacked the German center on September 10. The attack halted the Eighth Army for two days, buying the

Russians enough time to escape the fate of double envelopment that had destroyed the Second Army at Tannenberg. Nevertheless, Rennenkampf had lost about as many men as Samsonov had lost at Tannenberg, about 125,000 killed, wounded, missing, or captured. German losses may have numbered as many as 40,000, but the last of the Russian invaders had been cleared out of East Prussia, and from these two defeats, at Tannenberg and the Masurian Lakes, Russia would never recover.

THE AUSTRIAN FRONT

Austria-Hungary had conducted the first operations of World War I with the bombardment of Belgrade, capital of Serbia, on July 29, 1914, but it was August 12–21 before the attack was followed up by an invasion of Serbia with some 200,000 Austro-Hungarian troops under the command of General Oskar Potiorek. Expecting easy victory, the Austro-Hungarians were met by fiercely determined Serbs under Marshal Radomir Putnik, who sent the Austro-Hungarian army fleeing back across the River Drina.

INVASION OF THE POLISH SALIENT

On August 23, General Count Conrad von Hötzendorf (1852–1925), the Austro-Hungarian chief of staff, prepared to lead the First, Fourth, and Third Austro-Hungarian armies (positioned from west to east) in an invasion of the Polish Salient, a portion of Russian Poland projecting westward below East Prussia and above Galicia, constituting a broad wedge dividing Germany and Austria-Hungary.

The three Austro-Hungarian armies deployed along a 200-mile front north and east from Lvov (then called Lemberg), Poland, and met the Southwestern Russian Army Group (consisting of the Third, Fourth, Fifth, and Eighth Armies) southwest of the Pripet Marshes deep inside Russian Poland. The Battle of Krasnik was fought here during August 23–24; it resulted in the retreat of the northern flank of the Russian Fourth Army.

Next, from August 26 through September 1, the Battle of Zamosc-Komarów forced the retreat of the Russian Fifth Army. In the meantime, at the southern flank of the engaged forces, the Austrian Third Army (together with some elements of the Second, which arrived from the Serbian front) suffered a setback at the Battle of Gnila Lipa (August 26–30). The combined Russian Third and Eighth armies drove this outnumbered force back to Lvov. A hasty Austro-Hungarian defense was quickly pierced by the Russian Fifth Army in the Battle of Rava Russka (September 3–11). The Austro-Hungarian forces fell back 100 miles to the Carpathian Mountains, leaving behind only a garrison at the fortress of Przemyśl.

Austria-Hungary had provoked what became World War I for the limited purpose of punishing Serbia. Now, the empire found itself menaced. Galicia—Austrian Poland—had fallen into Russian hands, and the Austro-Hungarian army had lost 250,000 men killed and wounded, with per-

haps another 100,000 taken prisoner by the Russians. Worse, Austria-Hungary had counted on two potential rivals—Italy and Romania—joining the cause of the Central Powers. Neither did this, however, and both would eventually join the Allies. Most immediately threatening was the large Russian force that was assembled between Lublin and the Dniester River, poised to invade Galicia. In response to the vastly expanded war, the Austro-Hungarian high command shifted from its Plan B to Plan R, which required the transfer of an entire army from Serbia to Galicia. Dividing forces in this way consumed both time and resources, but the Austro-Hungarians pressed ahead. It was critically important to meet the Russian threat in Galicia, north of the Carpathian Mountains, where there was far more room to maneuver than in the mountains. Moreover, defeated in Serbia, Austria-Hungary was eager to achieve a victory in Galicia and to prove itself an effective ally of the Germans.

BATTLE OF RAVA-RUSSKA

Following defeat at the hands of the Russians in the Battle of Gnila-Lipa at the end of August 1914, by September, the Austro-Hungarian forces found themselves being pushed back toward the Carpathians. To arrest this movement, Austrian field marshal Von Hötzendorf ordered his Fourth Army to break off contact with the Russian Fifth Army and attack the Russian Third, which was pounding the retreating Austrian Third Army. The result, on September 5, was the Battle of Rava-Russka, which resulted in yet another humiliating Austrian defeat. Although the Austrian Fourth Army managed to save itself, the Third Army was severely depleted, and Field Marshal Conrad ordered a general retreat. During September 12–26, Austro-Hungarian forces withdrew 100 miles to a position 50 miles east of Cracow, Poland. Galicia was now in Russian hands.

GERMANY RESCUES ITS ALLY

With Galicia lost—save for the besieged fortress of Przemyśl—and Serbia victorious, the Austro-Hungarian armies were demoralized but still intact. Having achieved great success against Russia, the German chief of staff, Erich von Falkenhayn (1861–1922), decided to create a new army, the Ninth, to rescue the Austrians. It was placed under the direct command of Hindenburg, and just in time, for on September 22 the Russian supreme headquarters decided to capitalize on its Galician successes by launching an offensive from the Polish Salient, around Warsaw and Lodz, into Silesia.

Hindenburg was quick to fathom the Russian intentions, and he knew that before the offensive could be launched, the Russian armies would have to be reinforced as well as realigned for purposes of maneuver and supply. The German commander decided to strike first, before the Russians could organize their offensive. On September 28, he led Ninth Army in a drive to take the Vistula River crossings from Warsaw to the San River. On September 30,

the Ninth Army, supported by the Austrians on the south, attacked west of the Vistula, battling through October 9. The Germans secured the Vistula south of Warsaw, but, greatly outnumbered, Hindenburg's Ninth Army was forced to retreat—not as a defeated force but as an engine of destruction. Hindenburg left behind a swath of wrecked roads and railroads as well as razed villages and farms. The Russians were unable to pursue.

BATTLE OF LODZ

Hindenburg as well as the Austro-Hungarian armies had withdrawn to their original lines by late October. But the retreat did not represent a Russian triumph. Fighting had cost the Russians heavily, and it had delayed the planned Russian offensive into Silesia. Hindenburg knew that it was suicidal to attack the strong Russian concentration southwest of Warsaw, so instead, in cooperation with Ludendorff, he shifted his army northwest to the vicinity of Posen and Thorn, ensuring that the intervening villages and farms were destroyed.

The shift put the German Ninth Army in an ideal position to exploit a fatal flaw in the Russian deployment. The Russian First and Second armies were on the northern flank of the Russian Northwest Army Group. The German Ninth Army—now under the direct command of August von Mackensen (1849–1945), since Hindenburg had been elevated to overall command of the entire eastern front—advanced between the Russian First and Second Armies in the Battle of Lodz, fought from November 11 to December 6. *Rennenkampf's* First Army was almost totally destroyed, and the Second suffered a double envelopment. It was saved from annihilation by the Russian Fifth Army advancing from the south and a hastily assembled mixed Russian force from the north. That the Russians had halted the German offensive meant that Lodz was a tactical Russian victory, but because Russian losses were massive and the Silesian offensive had to be abandoned, the battle has been judged a strategic victory for Germany. German losses at the Battle of Lodz were 35,000 killed or wounded. Russian losses were estimated at 90,000 killed or wounded.

GERMANY REINFORCES THE EAST

Because Hindenburg and Ludendorff had produced substantial results in the East, whereas the western front remained a stalemate at the beginning of 1915, the German high command reluctantly authorized the transfer of some forces from the West to the East. A new German force, the Southern Army, was created and placed under the command of General Alexander von Linsingen (1850–1935), intended to support the faltering Austro-Hungarians. Concerned that Russia would again advance into East Prussia, Hindenburg took it upon himself to create another new army, the Tenth, using four corps from the western front.

CARPATHIAN ACTION

Having failed to keep the Russians out of the Carpathians, the Austro-Hungarians, now supported by the German Southern Army, found themselves fighting in the deep Carpathian snows during January–March 1915. The Russians sought to break through to the Hungarian plains, whereas the Austro-German objective was not only to prevent this but also to relieve the fortress at Przemyśl.

The Austro-German forces were up against one of Russia's few truly able commanders, General Aleksei A. Brusilov (1853–1926); Przemyśl ultimately surrendered to the Russians on March 18. With this loss, the Austro-German force withdrew to the Hungarian plains, setting up defenses that discouraged a Russian invasion. A weak Russian offensive ended in April.

THE BATTLE OF BOLIMOV

Simultaneously with the action in the Carpathians, Hindenburg and Ludendorff planned a bold move in the north: the double envelopment of the Russian Tenth Army. As bait, the German command team used the German Ninth Army, east of Warsaw, to draw the Russians to Bolimov, about 30 miles west of the Polish capital. Once the Russians were concentrated there, the German Eighth and 10th armies would launch an offensive in the region of the Masurian Lakes.

At Bolimov, the Germans used a new weapon, xylol bromide gas (code named *T-Staff*), which proved remarkably ineffective—certainly giving no hint of the weapon that would soon terrorize the western front. Nevertheless, the artillery barrage that accompanied the gas attack did draw Russian troops away from the Masurian Lakes area, creating ideal conditions for the German offensive.

THE SECOND BATTLE OF THE MASURIAN LAKES (THE WINTER BATTLE)

The Second Battle of the Masurian Lakes began on February 7. It would also come to be called “the Winter Battle,” because it began in a raging snowstorm. On the first day of battle, the Germans devastated the Russian Tenth Army's left flank; on the second day, the German Tenth Army rolled up the Russian right flank. Completely surprised, the Russians retreated 50 miles southeast to the Augustow Forest. On February 21, the Russian XX Corps surrendered, having, however, sufficiently delayed the German offensive to permit three other Russian Tenth Army corps to escape. The Russians thereby avoided total defeat, but not devastation. Some 200,000 Russians were killed or wounded, and another 90,000 taken prisoner. The German advance of 70 miles was halted on February 22 by the newly formed Russian Twelfth Army.

GORLICE BREAKTHROUGH

Hindenburg and Ludendorff had not achieved final victory, but they had dealt the Russians severe blows. After the

Winter Battle, Hindenburg continued to engage the Russians north of Warsaw, while Mackensen's German Eleventh Army, supported by Austrian units, attacked Russian positions between Tarnow and Gorlice, southeast of Cracow.

On May 2, 1915, the Austro-German forces broke through the Russian Third Army lines along a 28-mile front—making the first substantial crack in the Polish Salient. On June 3, the fortress at Przemyśl was retaken; the town of Lvov was captured and occupied on June 22. During June 23–27, the Austro-German armies crossed the Dniester River, and the southern front now disintegrated. The German 12th Army advanced toward Warsaw, sweeping the Russians before it. Warsaw fell on August 7, heralding the total collapse of the Russian front and the end of the Polish Salient. By August 18, all of the Russian armies had retreated to the Bug River, 100 miles east of Warsaw.

But the Austro-German forces continued to press their advantage. Brest Litovsk fell on August 25, followed by Grodno, to the north, on September 2. Vilna (in present-day Lithuania) fell to the Austro-Germans on September 19. By the end of 1915, the Russian front was 300 miles east of where it had been at the beginning of the year, and, in this crisis, Czar Nicholas II (1868–1918) assumed overall command of Russian forces. Of all Russia's disastrous commanders, the well-meaning czar would prove the worst.

BATTLE OF LAKE NAROCH

From the perspective of Russia's Western allies, the value of the struggle in the East was mainly to draw off German resources from the western front. It was France, desperately defending Verdun, that called on Russia to make an offensive drive in the Vilna-Naroch area of what today is Lithuania. The Battle of Lake Naroch (March 18, 1916) began with an intensive two-day artillery preparation, but the Russian infantry advance that followed soon bogged down in the mud of a spring thaw. The German defenders lost 20,000 men, but the Russians suffered at least 70,000 and perhaps as many as 100,000 casualties.

THE BRUSILOV OFFENSIVE

Undaunted by defeat at Lake Naroch, the Russians again responded to a call for an offensive, this time from the Italians. The operation was led by General Brusilov. On June 4, he attacked the Austro-German line in two places, with great skill and in absolute secrecy. The Austrian Fourth Army crumbled almost instantly, and the Seventh soon followed it. With the collapse of these two armies, 70,000 prisoners were taken. Unfortunately for the Russians, the high command failed to capitalize on Brusilov's achievement, thereby missing an opportunity to take Austria-Hungary out of the war with a single decisive blow. As it was, German general Alexander von Linsingen led his army group in a counterattack against Brusilov on June 16 and checked the Russians' northern advance. Brusilov renewed the offensive on July 28, achieving some success, but he

was frustrated by a shortage of ammunition and supplies. By this time, German reinforcements had been transferred east from Verdun, and they were sufficient to bolster the faltering Austro-Hungarians.

For all its success, the Brusilov offensive was carried out at a staggering cost to the Russians. By the end of June 1916, Russian casualties topped 1,000,000, a figure that helped propel the nation toward revolution.

ROMANIA ENTERS THE WAR

The Brusilov offensive propelled Romania, hitherto neutral, into the Allied camp on August 27, 1916. Romanian troops promptly invaded Austrian-controlled Transylvania, but they were repelled by the German Ninth Army. Simultaneously, the German-reinforced Bulgarian Danube Army crossed the Danube River on November 23, advancing into the Dobrudja region and trapping the Romanians between itself and the Ninth Army. Despite a skillful defense, the Bulgar-German forces soundly defeated the Romanian army at the Battle of the Arges River (December 1–4, 1916). Some 300,000 to 400,000 Romanians were killed or wounded (half of the deaths were from disease), and the survivors fled into Russia, leaving the rich grain and oil fields of their country in German hands.

THE RUSSIAN REVOLUTIONS

The almost uniformly disastrous performance of the Russian army in World War I hastened the coming of the Russian revolutions of 1917. In March (February, according to the outmoded Julian calendar then used in Russia), the czarist government was overthrown and was replaced by a Provisional Government, and in November (by the old Russian calendar, October), the BOLSHEVIK REVOLUTION installed the Soviet government of Vladimir I. Lenin (1870–1924). Between March and October, the Provisional Government and the Soviets struggled for control of the nation. Aleksandr F. Kerensky (1881–1970) attempted to establish a coalition of the Provisional Government and the Soviets, but the issue of whether to continue fighting the war deeply divided the now-starving nation.

THE SECOND BRUSILOV OFFENSIVE

While Lenin's Bolsheviks and Kerensky's Social Revolutionaries and Mensheviks fought for control of the government, General Brusilov led the Russian 11th and Seventh armies against combined German, Austrian, and Turkish forces under German general Felix von Bothmer (1852–1937) at Lvov, near the Polish frontier. Brusilov broke through the enemy lines for about 30 miles along a 100-mile front, and his subordinate commanders on either of his flanks made substantial inroads against the Austro-Hungarian Second and Third armies. But all of Brusilov's brilliance as a commander could do nothing to stop Russia itself from dissolving beneath him. Morale and supplies both failed, and on July 19, 1917, German general Max

Hoffmann led a counterattack that routed the starving Russian armies south of the Pripet Marshes in Galicia. The second Brusilov offensive came to an end.

THE RIGA OFFENSIVE

With the southern end of the Russian front destroyed, General Oscar von Hutier (1857–1934) led the German Eighth Army against the northern end of that front at the Baltic Sea port of Riga (in modern Latvia) and its fortress on September 1, 1917. Hutier employed rapid, violent tactics with special emphasis on the use of light, rapid infantry shock troops to penetrate the enemy lines at various weak points. This secured the all-important ability to maneuver. Hutier's technique was soon dubbed "Hutier tactics" and would be adopted by both the Central Powers and the Allies during the rest of the war. Under Hutier tactics, the Russian 12th Army fled the field in panic.

It was a panic that reflected the prevailing chaos of revolutionary Russia. Within weeks, Lenin's Bolsheviks would be in charge of the government and would open up peace talks with Germany.

RUSSIA'S SEPARATE PEACE

The Soviet government concluded an armistice with the Central Powers on December 15, 1917, and the following year signed the Treaty of Brest-Litovsk. The Ukrainian Republic signed this treaty first, on February 9, 1918, although Soviet Russia held out for better terms. Germany was in no mood to negotiate and pressed its advance against undefended territory until, on March 3, Lenin signed.

The war on the eastern front ended, and tens of thousands of German troops were freed for service on the western front. Delivered either into direct German occupation or into the hands of newly created German puppet governments were Poland, Lithuania, the Baltic provinces, Finland, and the Ukraine. It was a total and ignominious defeat for Russia.

ITALY ENDS NEUTRALITY

Despite its alliance with the Central Powers, Italy maintained neutrality at the outbreak of war while the Allies applied adroit diplomacy, promising Italy territorial gains at the expense of Austria-Hungary in exchange for an alliance. This resulted in the secret Treaty of London with Great Britain, France, and Russia, signed on April 26, 1915, by which Italy's obligations to the Triple Alliance were abrogated. The promised prizes were the Italian-populated Trentino and Trieste (both under Austro-Hungarian control) as well as the South Tirol, Gorizia, Istria, and northern Dalmatia. On May 23, 1915, Italy formally declared war on Austria-Hungary.

Italy brought to the conflict an army of 875,000 men, who were, however, poorly equipped (especially with regard to artillery, ammunition reserves, and transport) and poorly led. The army's longtime chief of staff, General Alberto Pollio (d. 1914), succumbed to heart attack in 1914 and was replaced by the unpopular General Luigi Cadorna (1850–1928), a commander entirely lacking combat experience.

THE ITALIAN STRATEGY

Relations between Italy and Austria-Hungary had long been strained. Austria-Hungary had heavily fortified its Italian frontier, threatening attack from Trentino, which bordered Venetia to the northwest. Equally vulnerable was the northern Italian region along the Carnic Alps.

Cadorna adopted a defensive posture in these areas, choosing to concentrate the main effort on an offensive that would proceed eastward from the province of Venetia across the lower valley of the Isonzo (Soca) River. Cadorna's objective was to force a salient into Austro-Hungarian territory with the aim of taking the town of Gorizia on the east bank of the Isonzo. Beyond this immediate objective, Cadorna envisioned an Italian army of conquest marching through Trieste and into Vienna itself.

FIRST BATTLES OF THE ISONZO

Lacking practical command experience, Cadorna began his advance eastward in May 1915, only to find his armies bogged down by seasonal flooding of the Isonzo River. He had simply ignored the weather. With the progress of the Italian army arrested, both the Austro-Hungarians and the Italians dug in, and the Isonzo front became a trench line. Cadorna as well as the other Allies had hoped the Italian front would be one of movement. Instead, it had instantly hardened into yet another static battle zone.

Cadorna resolved to avoid the kind of stalemate that gripped the western front. He ordered a series of offensives that would become known as the Battles of the Isonzo. Cadorna counted on his superiority of numbers over the Austro-Hungarians—some 200,000 men versus 100,000. But, as was apparent from the experience of the western front, the defenders always enjoyed a disproportionate advantage over the attackers. The First Battle of Isonzo (June 23–July 7, 1915) resulted in no progress. The Second (July 18–August 3) likewise failed; Cadorna was forced to break off his attack when his artillery ammunition was exhausted. Together, these battles counted 60,000 Italian casualties versus 45,000 for the Austro-Hungarian army. No ground had been gained.

Despite the complete failure of the first two offensives, Cadorna mounted a third from October 18 to November 4, using more guns. The result was another disaster. On November 10, Cadorna resumed the offensive, breaking off on December 10. The Third and Fourth Battles of the Isonzo killed or wounded 117,000 Italians. Casualties on the Austro-Hungarian side were 72,000.

ASIAGO OFFENSIVE

If Italy's Cadorna was obsessive in his ambition to break through at the Isonzo, his Austro-Hungarian opponent, Field Marshal Conrad von Hötzendorf (1852–1925), was similarly obsessed—by a personal hatred of Italy and Italians. He believed that his army could deliver a single massive blow that would knock Italy out of the war, eliminate the Italian front, and allow Austria-Hungary to devote itself to helping Germany defeat Russia. Conrad appealed to Germany's commander in chief, Erich von Falkenhayn (1861–1922), to authorize a German-Austrian assault against Italy; when Falkenhayn declined, Conrad resolved to proceed on his own. He formulated an offensive—the Asiago offensive—in the Trentino, behind the main Italian

armies on the Isonzo front. His objective was to drive through Trentino's mountain passes, occupy the plain of northern Italy, and there trap the Italians deployed along the Isonzo front as well as those occupying the Carnic Alps.

Cadorna, preparing to mount the fifth Isonzo offensive, noted the fact that Conrad was assembling 15 divisions to menace the Trentino. Accordingly, Cadorna ordered General Roberto Brusati's (fl. 1900s) First Army to prepare for an anticipated Austro-Hungarian offensive there. Unfortunately, Brusati largely ignored Cadorna's orders, with the result that his men were wholly unprepared for attack by the Austro-Hungarian Eleventh and Third Armies.

The Asiago offensive at first went very well for the Austro-Hungarian forces, which made substantial gains over difficult terrain. Cadorna, however, responded quickly by breaking off the Fifth Battle of Isonzo to transfer 500,000 men to the Trentino. The reinforcements stemmed the Austro-Hungarian advance by June 2, 1916. Italian losses in the Asiago offensive were 147,000 killed or wounded, in addition to some 40,000 taken prisoner. Austrian losses totaled 81,000, including 26,000 POWs.

SIXTH, SEVENTH, EIGHTH, AND NINTH BATTLES OF THE ISONZO

The Sixth Battle of the Isonzo was fought during August 6–17, 1916, and, with Austro-Hungarian lines thinned by the Trentino offensive, resulted in the Italian capture of Gorizia. At the cost of 51,000 Italian dead and wounded (versus 40,000 Austrian casualties), this evidence of "progress" boosted badly flagging Italian morale.

The Seventh (September 14–26), Eighth (October 10–12), and Ninth (November 1–4) Battles of the Isonzo took a toll on the Austro-Hungarian army, but again at tremendous cost to the Italians. In this series of battles, 75,000 Italian soldiers became casualties versus 63,000 Austrians, killed, wounded, or taken prisoner.

THE ISONZO FRONT IN 1917

By early 1917, some Allied political leaders, most notably British prime minister David Lloyd-George (1863–1945), were proposing that French and British troops be diverted from the western front to aid the Italians. British and French military commanders opposed such a scheme, however, and Cadorna was left on his own. He pledged never to give up at Isonzo.

From May 12, 1917, to June 8, Cadorna mounted yet another offensive on the Isonzo front and managed to gain a small amount of territory. Although Austro-Hungarian casualties reached 75,000 killed and wounded, Italian losses were a staggering 157,000. Cadorna ignored the cost and focused instead on the slight gain he had made. On August 18, 1917, he commenced the 11th Battle of the Isonzo, with the Italian Second Army, under General Luigi Capello (1859–1941), attacking the Austrian line north of Gorizia, and the Italian Third, commanded by Duke

Emmanuel Philibert of Aosta (1869–1931), pushing south of this, into the hills between Gorizia and Trieste. The Austro-Hungarian Fifth Army checked this advance, but Capello's army advanced rapidly and captured the high ground at Bainsizza Plateau. The Austro-Hungarian forces here were close to collapse, but Capello had advanced so quickly and so far that he soon outran both his supply lines and his artillery. Capello, therefore, halted his advance, thereby providing the battered Austro-Hungarians sufficient respite to call on the Germans for help.

THE BATTLE OF CAPORETTO

Seven divisions of Austrians reinforced by Germans quickly concentrated at the small town of Caporetto. Cadorna apparently took no notice of this concentration, even as he paid little attention to the collapse of morale and discipline within his own exhausted and disgusted forces.

It was October before Cadorna began to suspect that the Austro-Hungarians were preparing for an offensive. Accordingly, Cadorna shifted from his own offensive preparations to mount a defense. However, he made the tragic mistake of discounting the mountainous Caporetto sector as the one place where an offensive was unlikely.

The combined Austro-Hungarian and German offensive was under the command of a German general, Otto von Below (1857–1944), who employed the rapid and violent "Hutier tactics" that had proven so effective against the Russians at Riga. The Battle of Caporetto (also called the 12th Battle of the Isonzo) began at 2 A.M. on October 24, 1917, with a massive artillery barrage of high explosives, gas, and smoke. Just six hours later, the German infantry assault commenced and punched through the Italian line at several points, allowing the Austro-German forces to outflank many positions. The attack was so violent and unexpected that many Italians simply surrendered or fled. By nightfall of the first day of battle, the attackers had penetrated 12 miles and had routed the defenders. Cadorna ordered a retreat to the Tagliamento River. His entire force had completed the withdrawal by the end of October. Ten thousand Italian troops had been killed in action, another 30,000 wounded, and an astounding 293,000 taken prisoner; 400,000 had broken ranks and deserted.

BATTLE OF THE PIAVE

Below's forces moved so far and so fast that they soon outran their lines of supply. The advance slowed. On November 2, they attacked the Italian line at Cornino, forcing another Italian withdrawal to a point north of Venice, on the Piave River, a heavily fortified position. Cadorna now commanded 300,000 troops—600,000 having become casualties or deserters.

Having withdrawn, Cadorna was relieved of command and replaced by General Armando Diaz (1861–1928). Recognizing Italy's dire straits, France at last sent reinforce-

ments by November 10. Soon the British also contributed troops. Diaz was a more capable commander than Cadorna, and the Italian army was now motivated by the knowledge that it was fighting in direct and desperate defense of the homeland. Under Diaz, the Piave line was held, and it became the new principal Italian front.

Fighting continued along this entrenched front through early spring 1918, when the Germans pulled their troops out of the Italian front, once again leaving the Austro-Hungarian forces to fight alone. At this point, dissension tore the Austro-Hungarian command. Conrad argued with General Svetozar Borojevic von Bojna (fl. 1900s) over who would be in charge of finishing off Italy. The dispute was referred to the high command, and Archduke Josef Augustin (1872–1962) settled the matter by allowing both commanders to attack simultaneously. This misjudgment ensured the failure of what was planned as the decisive Austro-Hungarian offensive. The mountainous terrain of the region would prevent communication between the divided forces, which doomed them to act independently—whereas neither alone was sufficient to achieve victory.

The Battle of Piave began with a diversionary attack at the Tonale Pass; the Italians repulsed it on June 13. This was followed by the main attacks. Conrad targeted the city of Verona, and Borojevic took Padua as his objective. Diaz, having intercepted some Austrian deserters, had acquired sufficient intelligence to prepare strong defensive positions. When Conrad's Eleventh Army struck the Italian Fifth and Sixth Armies, it was repulsed by violent counterattacks that neutralized Conrad's forces, leaving Borojevic on his own. He attacked along the lower reaches of the Piave and at first made extensive progress, penetrating the Italian lines for three miles. Diaz, however, sent bombers to disrupt Borojevic's supply lines, then attacked the Austro-Hungarians with the Ninth Army, a fresh force that had been held in reserve. Under attack and completely cut off from the possibility of reinforcement, Borojevic withdrew during the night of June 22–23.

ITALIAN COUNTEROFFENSIVE

To the consternation of the French and British, General Diaz refused to order his exhausted army to mount an immediate counterattack. It was not until October 1918, after British and French divisions had been sent to reinforce him, that Diaz began counteroffensive operations against Vittorio Veneto, across the Piave River. Because Austria-Hungary had already asked for an armistice, Diaz assumed that the army would offer little resistance. In fact, the Austro-Hungarians fought fiercely, pushing back the Italian Fourth Army and inflicting heavy losses at the Battle of Monte Grappa (October 23, 1918). On the next day, the Austro-Hungarian Sixth Army halted the advance of the Italian Eighth on the Piave line. French and British reinforcements gained positions to the left and right of the Austrians, and a single American regiment, the 332nd

Infantry, also joined the battle. The combined Allied forces were able to split the Austrian front, creating a gap that allowed them to penetrate to Sacile by October 30. Shortly after this, the Austro-Hungarian defense entirely collapsed, and the Italians marched on Belluno (November 1) and the Tagliamento River (November 2).

AUSTRO-HUNGARIAN COLLAPSE

Immediately following the Italian breakthrough, the British and French took Trent on November 3, forcing the surrender of 300,000 Austro-Hungarian troops. Trieste fell to the Allies on this day as well, and Austria-Hungary signed an armistice. The war on the Italian front had ended—just seven days before World War I itself would be concluded by a general armistice.

World War I: Mesopotamia (1914–1918)

PRINCIPAL COMBATANTS (MESOPOTAMIA ONLY): Britain and Turkey

PRINCIPAL THEATER(S) (MESOPOTAMIA ONLY): Mesopotamian region (modern Iran and Iraq)

DECLARATION: See World War I: Historical Background (1871–1914)

MAJOR ISSUES AND OBJECTIVES: See World War I: Historical Background (1871–1914)

OUTCOME: See World War I: Historical Background (1871–1914)

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: See World War I: Historical Background (1871–1914)

CASUALTIES: See World War I: Historical Background (1871–1914)

TREATIES: See World War I: Historical Background (1871–1914)

This entry focuses on the Mesopotamian front in World War I. See WORLD WAR I: HISTORICAL BACKGROUND (1871–1914) for the causes and outbreak of World War I and for major statistics relating to the war. WORLD WAR I: WESTERN FRONT (1914–18) includes the war's resolution with the Treaty of Versailles and associated treaties. Also see the following entries, which treat the course of the war on other fronts: WORLD WAR I: AFRICA AND ASIA (1914–1918);

WORLD WAR I: AT SEA (1914–1918); WORLD WAR I: THE BALKANS (1914–1918); WORLD WAR I: EASTERN FRONT (1914–1918); WORLD WAR I: ITALIAN FRONT (1915–1918); WORLD WAR I: TURKISH FRONTS (1914–1918).

As the British initially saw it, the strategic importance of Mesopotamia lay in its oil fields. Although most of the Royal Navy ran on coal in 1914–18, oil was still essential as a lubricant and as fuel for land vehicles. The British cabinet persuaded the Indian colonial government to mount an expedition to protect the great Anglo-Persian pipeline. At Qurna, this force brushed aside light Turkish resistance (April 12–14, 1915), an achievement British military planners inflated out of all proportion. A further advance was ordered, with the ultimate—and utterly unrealistic—objective of capturing Baghdad, which was seen as strategically more important than it really was. In fact, the campaign to take Baghdad was more a product of military frustration than it was of sound military strategy. Deadlocked on the western front, military planners sought movement wherever they might find it—even if such “progress” was of doubtful utility in hastening victory.

Major General Charles V. F. Townshend (1861–1924) led a reinforced division and naval flotilla up the Tigris River, took a Turkish outpost near Qurna on May 31, then proceeded to Amara, which he occupied on June 3. Major General George F. Goringe (1868–1945) coordinated his movements with those of Townshend and led a small force up the Euphrates as protection of Townshend's flank. Commencing on July 24, at the Battle of Nasiriya, he pounded strong Turkish defensive positions. After a month of hard fighting, these positions were taken.

Having been sent reinforcements, Townshend was now ordered to attack and capture Kut-el-Amara, a village at the confluence of the Tigris and Shatt-el-Hai Rivers. His 11,000 men and 28 guns arrived just below Kut by September 16. Kut was extremely well defended by about 10,000 Turks, who were well furnished with 38 guns. Fearful that his communication and supply lines were vulnerable, Townshend decided to await supply before attacking. This also gave him time to study Kut closely. He determined that the position was indeed well fortified but that it had a key weakness. The Turkish forces were deployed astride the Tigris River, divided, with the only bridge fully five miles upstream. The Turks were firmly planted, but they had foolishly limited their own lateral mobility.

Townshend planned an attack to exploit this weakness. On September 26, he ordered two brigades to conduct a demonstration on the right bank of the Tigris to decoy the Turkish reserves. Once the Turks had taken the bait, he moved the two decoy brigades back to positions north of the river under cover of darkness on the night of September 27. Now, with his full forces, he attacked and enveloped the isolated left flank of the divided Turkish army, driving two-thirds of the defenders out of their

positions. Townshend had achieved a neat and efficient victory. But desert combat was grueling, and his troops were too exhausted to press their advantage immediately. The Turks, defeated, withdrew intact. They took up new positions farther up the Tigris at Ctesiphon.

After resting, reorganizing, and, as far as he was able, resupplying his troops, Townshend advanced on Ctesiphon during November 11–22. He was determined to press on to Baghdad. However, at Ctesiphon Townshend found himself confronting extremely well fortified defenses. He also learned that the Turks had been reinforced to a total strength of 18,000 tough Anatolian infantrymen in addition to various Arab auxiliary troops. With only 10,000 infantry and 1,000 cavalry, mostly Indian troops, Townshend was seriously outnumbered. Nevertheless, he attacked on November 22 in all-out effort that left nothing in reserve. Remarkably, the first results were highly encouraging. The Turkish vanguard disintegrated before the Anglo-Indian onslaught. But these initial gains were followed by Turkish counterattacks, which came in rapid succession over the next four days. Townshend held out against wave after wave before he withdrew. His Anglo-Indian army had suffered 4,600 casualties out of 11,000 engaged, whereas the Turks lost 6,200 killed and wounded.

The Turkish troops were too battered to pursue the retreating Anglo-British effectively. Townshend fought a single rear-guard action at Umm-at-Tubal on December 1, then returned to Kut, reaching it on December 3. Townshend understood that his infantry was too exhausted to retreat farther. He sent his cavalry to the rear to fetch reinforcements, while he hunkered down with his infantry to await the Turks. The siege began on December 7. In the meantime, alerted to Townshend's peril, General Fenton J. Aylmer (fl. 1900s) led two Indian divisions to his rescue. He was checked by Turkish resistance in January, however. General George F. Goringe, sent to replace Aylmer, decided to overcome the Turkish roadblock with a surprise attack against the Turkish positions on the south bank of the Tigris on March 7. Turkish forces here were led by the superannuated German general Kolmar von der Goltz (1843–1916), who skillfully repulsed Goringe's attack. This prevented the rescue of Townshend. Several more times, the British mounted rescue attempts but were foiled in every attempt. By April 1916, Townshend's food supply had failed, and with starvation looming, he surrendered Kut and his force of 2,070 British and approximately 6,000 Indian troops. The cost to the failed British relief forces had been high—21,000 casualties—but General von der Goltz, aged 73, was not able to relish his victory. He died from cholera just before Townshend surrendered.

In August 1916, Sir Frederick S. Maude (1864–1917) was appointed to the Mesopotamian command, but he was restricted to an entirely defensive role while the War Office in London debated with the Indian army command as to whether simply to abandon the Mesopotamian front altogether. In the end, the British presence in Mesopotamia

was sustained, if only to continue to protect the oil fields. It was not until December 13, 1916, that Maude was given permission to mount a new offensive on this front. He embarked up both banks of the Tigris with an army of 166,000 men, most of them Indian troops. During February 22–23, 1917, Maude defeated the Turkish Sixth Army at the Second Battle of Kut, then, on March 11, after sustained fighting along the Diyala River, Maude marched into Baghdad—the prize that had figured so prominently in British eyes, the prize that had cost British forces dearly in Mesopotamia.

During September 27–28, Maude advanced out of Baghdad to secure the oil fields of Mosul. He was well on his way to achieving this objective when he succumbed to cholera.

Mosul was not definitively secured until the end of the war, when General A. S. Cobbe (1870–1931) engaged and defeated the Turkish Tigris Group on October 29, 1918. The Turkish armistice was concluded the very next day, but Cobbe was ordered to take and occupy Mosul, contrary to the provisions of the armistice. Cobbe prevailed, and the Turkish garrison of Halil Pasha withdrew without a fight. This was the last action on the Mesopotamian front.

Enver Pasha (1881–1922), a “Young Turk,” was one of the cadre of determined Turkish military officers who engineered the transformation of the archaic and ailing Ottoman Empire into modern Turkey. At the outbreak of World War I, Enver was Turkey's minister of war, and in this capacity, without orders from any higher level, he authorized two German vessels, the *Goeben* and *Breslau*, to lead the Turkish fleet across the Black Sea to bombard the Russian ports of Odessa, Sevastopol, and Theodosia during October 29–30, 1914. The attack constituted Turkey's declaration of war and provoked Allied declarations against Turkey. Although its military was poorly equipped and poorly led, Turkey controlled the Dardanelles, the heavily fortified sea passage to and from Russia. This made Turkey a major power in World War I.

THE CAUCASIAN CAMPAIGN

Enver Pasha was eager for war as an opportunity to reap substantial territorial gains at the expense of Turkey's perennial foe, Russia. Against the strong advice of Turkey's ally Germany, Enver planned a campaign against Russia in the Caucasus Mountains, the natural border between Turkey and Russia. He assumed personal command of 95,000 ill-equipped and inadequately trained soldiers during November and December 1914, leading them over the forbidding Caucasian terrain. Soon Enver found himself snowbound, whipped by severe weather, and then thoroughly outgeneraled by his Russian rivals. The Battle of Sarikamish (December 29, 1914) wiped out all but 12,000 of the would-be invaders, a loss from which the Turkish army would not fully recover during the war.

DARDANELLES CAMPAIGN

By the fall of 1914, the war on the western front was stalemated. Repeatedly frustrated by the failure of attempts to break through the front, Britain's First Lord of the Admiralty Winston Churchill (1874–1965), together with First Sea Lord Admiral John Fisher (1841–1920) and Chancellor of the Exchequer David Lloyd George (1863–1945), proposed at the beginning of 1915 an “indirect approach.” The deadlock might be broken by seizing control of the Dardanelles, opening an avenue of aid to beleaguered Russia. This, in turn, would force the Germans to transfer reinforcements from the western front to the eastern front,

thereby giving the Allies an opportunity for a breakthrough on the West. Moreover, possession of the Dardanelles would offer the West access to the vast grain fields of Ukraine, a key advantage in what had already become a war of attrition. Finally, there was the important morale factor. The defeat of Turkey would boost flagging Allied morale.

Churchill's plan was to take the Dardanelles with an exclusively naval operation. The scheme was inviting but hardly workable. Although naval action might be effective against fortifications, a land operation was required to occupy whatever the navy might win. Churchill gave little thought to such a requirement.

The naval assault was launched on February 19, 1915, and encountered much greater resistance from Turkish shore batteries than had been anticipated. The effect of the artillery was compounded by inclement weather. Worst of all, however, was the damage inflicted by Turkish mines, which had been laid in dense patterns across the Dardanelles straits. The naval assault was broken off in March. However, in the meantime, Britain's most senior military commander, Lord Horatio Kitchener (1850–1916), decided to release a few divisions (including one French unit) from duty on the western front to make up a land assault force for the Dardanelles campaign. By the time the 78,000 men under the command of General Ian Hamilton (1853–1947) arrived in the straits on March 18, 1915, they were just in time to see the failure of the naval assault.

The land phase of the campaign did not begin auspiciously. Landing the troops was a confused operation, and the first soldiers did not step ashore until April 25. They were deposited on a rugged, narrow shore, thoroughly exposed to Turkish guns. Allied units, especially the ANZACs (Australia–New Zealand Army Corps), came under murderous machine-gun fire. Although the Allies outnumbered the Turkish defenders six to one, their position was untenable, and they were slaughtered daily. By May 8, British mismanagement of the Dardanelles landings had created a set of entrenched beachheads. As on the western front, deadlock now replaced advance. Machine-gun fire and disease—for the troops were exposed to the merciless sun and other elements—claimed many lives. Churchill, father of the entire operation, was disgraced, removed as First Lord of the Admiralty, then relegated to a minor cabinet post. (He soon resigned to take field command of the Sixth Royal Scots Fusiliers on the western front.)

Still, the British refused to give up. During August 6–8, 1915, a second landing was made at Suvla Bay, a few miles north of where the ANZACs had landed in the first assault. The new assault, like the first, failed, yielding only a harvest of Allied dead. On October 15, General Hamilton was relieved of command and was replaced by General Sir Charles Monro (1860–1929), who carried out a brilliant evacuation, which was concluded by January 9, 1916. It was the only aspect of the tragic Dardanelles campaign

that may be said to have succeeded. More than 250,000 Allied troops had been killed or wounded, and Russia was now hopelessly cut off from its allies. As for the western front deadlock, it continued without change.

EGYPT, PALESTINE, AND ARABIA

Early in 1915, the British extended their defenses of the vital Suez Canal eight miles into the Sinai Desert. To do so, they had to fend off an uprising of the Sanusi (Senussi) tribes of western Egypt (see SANUSI REVOLT). In the autumn of 1915, British and French officials negotiated an agreement with Hussein Ibn-Ali (1852–1931), the grand shérif of Mecca, pledging to help him gain territory and to support Arab independence from Turkey if he would cooperate with the Allies in operations against the Turks. A British officer, T. E. Lawrence (1888–1935), worked closely with Hussein's son Feisal (1885–1933) in a series of brilliant guerrilla actions, many of them directed against the railway line the Turks relied on for movement and supply. Lawrence's exploits would become the stuff of legend, and "Lawrence of Arabia" would emerge as one of the few genuinely romantic figures of an otherwise unremittingly grim war.

It was not until 1917 that the British made significant headway against the Turks in the Middle East. The Battle of El Magruntein (January 8–9, 1917) forced the Turks from the Sinai Peninsula and put the British in position to take Palestine. The March 26 First Battle of Gaza went badly for the British, as did the Second Battle of Gaza (April 17–19). After the failure of the second battle, the brilliant general Edward Allenby (1861–1936) assumed overall command in the area and drove his army in a campaign to reach Jerusalem before Christmas.

The Third Battle of Gaza, also called the Battle of Beersheba, began early in the morning of October 31, 1917. Allenby attacked with great skill and determination, decimating the Turkish Seventh Army and pushing it back upon Jerusalem. The city fell to him on December 9, 1917. Having accomplished his mission, Allenby was now forced to give up many of his men to service on the western front. With his conventional forces all but idled due to a shortage of personnel, Allenby made much use of T. E. Lawrence as leader of Feisal's small force of tribal warriors. These 6,000 men raided the Hejaz Railway, principal supply line for the Turks. The continual raids effectively tied down some 25,000 Turkish troops, neutralizing them as surely as if they had been defeated in battle.

In August 1917, Lawrence led a force of camel riders to disrupt Turkish rail communications and, ultimately, capture the port of Aqaba by means of a surprise strike from the rear. Early in the fall of 1918, the intrepid Lawrence approached Allenby with a plan for Arab participation in the offensive Allenby planned as the decisive campaign to end the war in the Middle East. Lawrence proposed that the Arabs form the British right flank in the army's advance through Palestine to Damascus, Syria.

Allenby agreed—without understanding Lawrence's ulterior motive. A highly principled admirer of the Arabs, Lawrence was eager to help achieve Arab independence from the Ottoman Empire. Against Allenby's instructions, he planned to lead the Arab contingent in advance of Allenby and thereby capture Damascus before the main body of British troops arrived. This would give Feisal a claim on the city as the new capital of an independent Arabia. By early September 1918, under pressure from attack by Allenby and Lawrence, the Turks evacuated Damascus, and Lawrence, at the head of 3,000 Arabs, entered the city on October 1, three hours in advance of Allenby.

Allenby did fight the culminating action of the war in the Middle East, the Battle of Megiddo, which crushed the Turkish force by September 21, 1918. A masterfully executed attack, it was without doubt the most brilliant British action of World War I. Three enemy armies were annihilated and 76,000 prisoners taken. The cost to Allenby was light: 853 killed, 4,482 wounded, and 385 missing. From September 22 to October 30, Allenby pursued the fleeing remnants of the Turkish army. Damascus, as mentioned above, fell on October 1, and Beirut followed on October 2. Although elements of Allenby's infantry occupied these key cities, his Desert Mounted Corps—camel riders—led a further advance to the Syrian city of Homs (occupied October 16) and to Aleppo (occupied October 25), on Syria's border with Turkey. With the British on their border, the Turks agreed to an armistice on October 30, 1918. The war on the Turkish fronts was over.

BATTLE OF THE FRONTIERS

On the western front, the period from August 2 to August 26, 1914, constituted the Battle of the Frontiers. This opening month of the war was occupied by the mass move-

ment of troops, as Germany advanced through Belgium and into France. Belgium had been a neutral power since 1839, and its neutrality was guaranteed by a multilateral international agreement. Belgium's King Albert had long recognized the threat posed by Germany, but he dared not coordinate military planning with Britain or France, which might be interpreted as an abrogation of neutrality. At the outbreak of war, Belgium was largely left to defend itself.

The army of Belgium was small, a mere 100,000 men, but it did have one of the most formidable systems of fortresses in Europe. The mightiest, Liège, a veritable fortress city, commanded the Meuse River at a highly strategic point. According to the Schlieffen Plan, which outlined Germany's war strategy, the German First and Second Armies, the northernmost of the five German armies invading France, had to pass through the area dominated by Liège. A special task force of 30,000 elite troops was assembled to attack Liège by night. In the meantime, other units invaded Luxembourg, securing vital railheads into France and Belgium. On August 2, the German ambassador delivered an ultimatum demanding free passage through Belgium. King Albert refused and began blowing up bridges and rail routes into his country. Two days later,

Western Front, which changed little from 1914 to 1918

German troops crossed the Belgian frontier at Gemmerich, and on the night of August 5–6, the task force began its assault on Liège. Belgian resistance was fierce and inflicted disproportionate losses on the Germans. However, by August 6, a German brigade, with the aid of bombardment by zeppelins, forced the Belgians from the main citadel of the fortification system, and Liège fell on August 16. The Belgian army, what was left of it, retreated to Antwerp, where it succeeded in compromising the Schlieffen Plan timetable by harassing the German right wing.

FRENCH ERRORS

The commander in chief of French forces, Joseph Jacques Césaire Joffre (1852–1931), rotund and superannuated, called “Papa Joffre,” mistakenly interpreted the attack on Liège as nothing more than a feint to decoy French forces away from the Ardennes, where, according to the assumptions of French Plan XVII, the Germans would make their main attack. In strict adherence to the plan, Joffre largely discounted the Belgian front and instead deployed his First and Second Armies to thrust toward the Saar River into Lorraine, while, to the north (the French left), the Third and Fifth Armies would stand prepared to launch an offensive between Metz and Thionville or to strike from the north at the flank of any German drive through the Ardennes. Because this deployment was well to the south of the Belgian border, Joffre had thus left his forces vulnerable to devastating attack on their left flank and rear.

BRITISH ERRORS

Great Britain declared war on August 4 and mobilized quickly and efficiently. The declaration had been motivated by Germany’s invasion of Belgium; however, British strategy called for rendering aid directly to the French, not the Belgians. Sir John French (1852–1925), commanding the British Expeditionary Force (BEF), asked permission to deploy to Antwerp to aid the Belgians but was overruled by his government. Accordingly, the BEF, having arrived on the Continent on August 9, marched toward Mons in northwestern France. As Joffre had failed to deploy troops where they could halt the German advance, so now the British lost another opportunity to check the Germans.

THE GERMAN ADVANCE

After the “Liège bottleneck” had been broken, the German right wing—the two northernmost armies, under General Alexander von Kluck (1846–1934) (First Army) and General Karl von Bülow (1846–1921) (Second Army)—advanced rapidly through Belgium as the “rim” of a great wheel movement that would take them deep into France and behind the main positions of the French army. Wherever the Allies resisted, they were swept away. The technology of defensive weaponry, especially the machine gun, had greatly outstripped the technology of offensive

weaponry. This gave defenders a great advantage—if they knew how to use it. France’s Plan XVII, however, was wholly offensive in nature. This meant that as the Germans advanced the Allies would put up defensive lines, which typically succeeded in halting the advance. As soon as it was halted, however, the Allied defenders would resume the offensive called for in Plan XVII. For their part, the Germans, the invaders and attackers, nevertheless put strong emphasis on defensive as well as offensive tactics. By the time the Allies mounted their offensives, the Germans had dug themselves in and were prepared to defend. The result, invariably, was Allied slaughter, as German machine gunners cut down the attackers. In this way, the Allies were forced into retreat. By the end of August, German troops were just 30 miles outside of Paris.

Back in Belgium, the civilian population suffered terribly at the hands of the German invaders. Ordinary Belgians laid ambushes for the advancing soldiers and destroyed or sabotaged bridges, railways, and telephone lines. The Germans responded with outrageous cruelty, including mass reprisals in the form of summary executions. German theft, vandalism, arson, and rape were widely reported by the press and even magnified by the Allied propaganda machine. The stories not only goaded the Allies into pressing the fight even in the face of mounting losses and increasing discouragement but also deeply affected neutral nations, especially the United States, where public opinion steadily turned against Germany.

ACTION IN LORRAINE AND ARDENNES

On August 8, General Paul Pau (1848–1932) led the French Army of Alsace to Mulhouse, in German territory, not far from the Swiss border. This was followed farther north, during August 14–22, by a full-scale offensive led by General Auguste Dubail (1851–1934) (First Army) and General Noël de Castelnau (1851–1944) (Second Army) against the German Sixth Army led by Crown Prince Rupprecht (1869–1955) of Bavaria and the Seventh Army commanded by General Josias von Heeringen (1850–1926). Both of these forces withdrew under attack before converging and returning with a strong counterattack, which forced the French into retreat west to Nancy. Through the heroic efforts of General Ferdinand Foch (1851–1929), in command of the French XXth Corps, Nancy held, but the French First and Second Armies suffered devastating losses.

Just north of the First and Second armies, the Third Army, under General Pierre Ruffey (1851–1932) and, behind him, in reserve, the Fourth Army, commanded by General Fernand de Langle de Cary (1849–1931), held the Ardennes. These forces collided head on with the German Fourth and Fifth armies, under Duke Albrecht of Württemberg (1865–1939) and Crown Prince Wilhelm (1882–1951), respectively. Badly outnumbered, the French resisted vigorously during August 20–25, suffering

stunning losses before finally withdrawing to the Meuse River and into the great fortress of Verdun.

BATTLES ON THE SAMBRE AND AT MONS

Joffre had largely ignored warnings of the great German advance through Belgium, but General Charles L. M. Lanrezac (1852–1925), commanding the French Fifth Army on the French left flank (extreme north), was so insistent in his demand for reinforcements that Joffre directed British and Belgian forces at Namur, Belgium, to join with Lanrezac in battle to the north. On August 9, Lanrezac sent a reconnaissance force into Belgium and quickly concluded that he would be trapped in the Ardennes if he proceeded with the attack Joffre demanded there. At last, on August 15, Joffre agreed to send Fifth Army north to Namur, at the confluence of the Sambre and Meuse rivers. Here, on the 21st, Lanrezac collided with Bülow's Second Army. Lanrezac panicked and dug in for defense but failed to issue adequate orders to his subordinate commanders. The result was a weak and poorly coordinated defense. Uncertain of the state of his left flank and of the intentions of his British and Belgian allies, Lanrezac chose to defend the high ground along the Sambre.

The Battle of the Sambre began on August 21 and continued, in its first phase, through the 22nd, when Bülow succeeded in repelling all French attacks. Bülow then launched a counterattack, which forced a further French retreat, even while other German forces took the key Belgian fortress of Namur.

By August 23, the BEF was in position at Mons, Belgium, about eight miles west of where Lanrezac was engaged. Lanrezac, incredibly, made no attempt to coordinate an attack or defense with the BEF, instead withdrawing under cover of darkness. On the morning of the 24th, the German commanders were stunned to find that they had no one to fight. Lanrezac and his Fifth Army were gone. However, Bülow, having been given operational control of Alexander von Kluck's First Army, ordered that unit to move south to support the Second Army's attack on Lanrezac's left flank. This unexpectedly brought Kluck into collision with the BEF under Field Marshal Sir John French at Mons on August 22.

Although outnumbered, the British had time to dig into favorable defensive positions, against which the notoriously aggressive Kluck mounted a full-scale attack, beginning on August 23. Highly trained British riflemen responded with devastating rifle fire, which forced the attackers to withdraw and regroup. For his part, French prepared to resume defensive operations on the 24th, in the expectation of reinforcement from Lanrezac. In the nick of time, however, French learned that Lanrezac had withdrawn. French felt that he had no choice but to withdraw as well. Kluck pursued, inflicting 7,800 casualties on the British rear guard (a force of 40,000 men) at the Battle of Le Cateau on August 26. The rest of the BEF now

joined the French Fourth and Fifth Armies in a general retreat.

THE ALLIES FACE DISASTER

The French attempt at an offensive had failed, at the cost of more than 300,000 of France's best troops and additional great losses among the other Allies. From August 27 to September 4, the defeated Allies withdrew deeper into France. For their part, the Germans, though victorious, faced grave problems of their own. Supply and communication lines were thin and vulnerable. In this all-out effort, there were no reserves to relieve the fatigued or replace the wounded and dead.

DEFENSE OF PARIS

With their nation deeply invaded and the army badly beaten, the French faced the imminent prospect of the fall of Paris, which was poorly defended and could not long withstand a siege. General Joseph-Simon Gallieni (1849–1916), a veteran of the FRANCO-PRUSSIAN WAR, appointed military governor of Paris, was charged with mounting a last-minute defense—even as Marshal Joffre proceeded to order troops out of the capital to reinforce positions at the front. It was clear that Joffre was willing to sacrifice the capital, if need be. Against all odds, Gallieni worked tirelessly to transform “the city of light” into an armed camp. He decided not to try to defend Paris from siege but to use it as a base of operations for battles that would be fought on the outskirts of the city. Gallieni understood that the “front” was about to become Paris itself. Preparations were made for mass demolition of buildings, to provide fields of fire, and of bridges, to impede German progress. Gallieni recruited bakers, butchers, and greengrocers to stockpile provisions, and farmers brought their cattle into the city to graze on the elegant Bois de Boulogne. In a rush to gather stores of ammunition, Gallieni pressed into service every transport vehicle available, including the city's legion of taxicabs.

REPRIEVE

At Le Cateau (August 25–27), the BEF successfully, though at great cost, resisted the entire strength of Kluck's army. On the 29th, Joffre at last ordered the French Fifth Army to the relief of the British, directing it to attack Kluck's flank. Initially unsuccessful, the attack eventually managed to check Bülow's advance, by forcing him to come to Kluck's aid, and was, therefore, the first French tactical victory in the Battle of the Frontiers.

As it turned out, this comparatively small triumph would have profound consequences.

General Bülow was forced to call on Kluck for help. The Schlieffen Plan called for the right wing of the German army to make a great sweeping movement of encirclement. This was vital to the plan. Now, in response to Bülow, Kluck instead turned his First Army, the German

right wing, abruptly to the southeast in order to hit what he believed was the vulnerable left flank of the entire remainder of the French army.

Up to this point, the French army had been rolled over by the Schlieffen Plan. Now the entire German right wing was turning so that it would pass east of Paris instead of west and around the capital. Realizing the opportunity this presented, Marshal Joffre now gave Gallieni an entire army, ordering the Sixth Army to concentrate in the Paris area.

Worried only that the French forces would escape him, Kluck had driven his First Army with great speed far in advance of the Second Army. He was totally unaware of the buildup of the French Sixth Army in and around Paris. Helmuth von Moltke (1848–1916), the German chief of staff, had learned of the buildup, however, and ordered Kluck to protect the right flank of the Second Army. But Moltke failed to specify a reason for his order, and Kluck, reasoning that this would allow the French to escape, concluded that he could disregard the letter of Moltke's order and still obey its seeming intention by continuing to move south in order to ensure that the French, whom he believed beaten and disorganized, were driven well to the southeast of Paris—where they could not menace the Second Army.

Thus Kluck departed even further from the already badly compromised Schlieffen Plan. He marched across the Marne River, exposing his own right flank just east of Paris—the very location at which the French Sixth Army had assembled. On September 4, Joffre issued orders for the Sixth Army to attack eastward, toward Chateau-Thierry, just to the northeast of Paris, while the BEF would move against Montmirail, farther east. The French Fifth and Ninth armies would operate in concert with the Sixth and the BEF as the developing situation required. The Fourth Army would hold on along the Marne, well to the east of these positions, ready to advance when ordered. The Third Army, stationed at the fortress of Verdun on the Meuse River, would strike westward. Properly coordinated, these attacks would result in the double envelopment of the German right wing. Kluck's turn had presented nothing less than an opportunity to save France.

THE BATTLE OF THE OURCQ RIVER

Under temporary command of Gallieni, the Sixth Army advanced from Paris to the Ourcq River, where Kluck had left exposed his right flank. At first, Kluck, still operating from his conviction that the French were done for, believed the attack on his right was nothing more than a feint. But when the Battle of the Ourcq raged for two days, Kluck realized that the French, although badly mauled, were not beaten. Quickly, he reversed himself and pulled his troops back north of the Marne, then turned to the west and unleashed a series of savage counterattacks, which sent the French reeling. They fell back toward Paris

during September 7–9, even as Gallieni responded by rushing to the Marne the last of the troops stationed within the capital.

Between Kluck's First Army and Bülow's Second was a wide gap, which the BEF and the French Fifth Army (now under General Franchet d'Esperey [1856–1942], the faltering Lanrezac having been relieved of command) exploited, striking at the flank of the German Second Army. Southeast of this combined French and British operation, the French Ninth Army, under General Foch, attacked at St. Gond, only to be battered by the other end of the German Second Army and by the German Third Army. On September 8, Third Army troops launched a violent bayonet attack, which threw the French into confused panic—except for the unshakable Foch, who ordered an immediate renewal of his attack. Stunned by this resilience, the Germans halted their advance.

Elsewhere along the extensive Marne front, the fighting raged intensely, although indecisively. From his distant headquarters, Moltke at last dispatched a staff officer to inspect the front personally. What he saw was the German right flank being turned under pressure from the French Fifth Army. Bülow was commencing a retreat. Kluck, always aggressive, was making progress, but his left flank and rear were highly vulnerable to the BEF. Moltke approved Bülow's retreat and ordered Kluck to withdraw as well. Next, Moltke ordered a general withdrawal to the Aisne River and, on September 14, acknowledged the failure of his stewardship of the Schlieffen Plan by turning over command of the armies to General Erich von Falkenhayn (1861–1922).

Within the space of a month, the German army had made a massive invasion of France, only to turn before Paris. The initiative lost would never be regained. From the Battle of the Marne onward, World War I on the western front would cease to be a war of movement and would become a static orgy of death and destruction between opposing trench lines.

THE RACE TO THE SEA

Erich von Falkenhayn immediately set about trying to rescue what he could of the Schlieffen Plan by massing strength on the right flank to attack the Allies' left. This strategy brought about what historians have called the "Race to the Sea"—a movement toward the North Sea coast as each army tried to outflank the other by moving progressively farther north and west. As the two armies maneuvered in this way, they dug into a series of trench lines that would come to characterize the western front for the next four years.

Although the Germans had let victory slip, they were hardly defeated and, indeed, occupied a strong position on high ground. The German armies were deployed from west to east, beginning with the First Army (Kluck), the Seventh (under Josias von Heeringen), and the Second (Bülow); the

Third, Fourth, Fifth, and Sixth German armies stretched from this point eastward to the Swiss frontier. Against the First, Seventh, and Second armies Joffre hurled, beginning on September 14, the Sixth (under Michel Joseph Maunoury [1847–1923]), the BEF (Sir John French commanding), and the Fifth Army (under d'Esperey). To the east, the French Ninth, Fourth, Third, Second, and First armies were positioned. Despite these massed Allied attacks, the German defenses could not be breached, and on September 18, Joffre called off the offensive.

The two armies jockeyed for position, and by the beginning of October, the Allies had reached the North Sea at Niuwpoort, Belgium. German forces drove the Belgian army out of Antwerp and sent it fleeing to the coast and then south from the coast to Ypres. The BEF took over the line from Ypres, Belgium, south to La Basée, France, while the seven French armies entrenched themselves from this point—which was now the Allies' extreme left—all the way down to the Swiss border. The long line of entrenchments became the western front.

The First Battle of Ypres commenced on October 14 and lasted through the first three weeks of November. The first phase was a nine-day German offensive halted at last by a massing of French reinforcements and the deliberate flooding of the Belgian front by opening dikes. Nevertheless, more than one-third of the Belgian army had been lost by this early point in the war. On October 20, Foch counterattacked in vain. Falkenhayn counterattacked on the 28th, also without success. The heavy rains and snows that closed in by the middle of November brought the First Battle of Ypres to a close.

Dead, missing, or wounded were 2,368 British officers and 55,787 enlisted men—some 80 percent of the BEF committed in this region. French casualties numbered perhaps 50,000, whereas the Germans had lost at least 130,000 men. Overall, in the first three months of fighting, France had lost 380,000 men killed and about 600,000 wounded. German losses were only slightly less.

FRUSTRATION

At the end of 1914 and the beginning 1915, the Allies as well as the Central Powers were frustrated by the prospect of a stalemated war, a war that apparently could not be won, only lost.

Germany's chief of staff, Erich von Falkenhayn, believed that the outcome would ultimately be decided on the western front, but he also recognized that for the present the only opportunities for immediate gain lay in the East. In sum, the Germans were caught between the notion that victory had to be achieved in the west but that, at least in the short term, productive action was possible only in the East. Thus, Germany's western-front strategy became thoroughly dominated by defense.

The Allies were even more frustrated than the Central Powers. France and Britain were deeply divided over the

conduct of the war. The subject of supply and provisioning created especially bitter disputes. After Turkey entered the war and cut off Russian access to supply from France and England, as well as Allied access to the Ukrainian grain fields, the young first lord of the Admiralty, Winston Churchill (1874–1965), advocated an immediate campaign to seize from Turkish control the Dardanelles, the strait affording passage between the Black Sea and the Mediterranean. Others, including the British war minister Field Marshal Horatio H. Kitchener (1850–1916) and France's "Papa" Joffre, believed that diverting resources from the western front to address the Dardanelles would bring disaster. In the end, an amphibious operation against the Dardanelles was grudgingly approved, only to end in costly failure.

ACTION IN THE CHAMPAGNE

At the end of 1914, Joffre mounted a general Allied offensive from Nieuport on the Belgian coast of the English Channel all the way southeast to Verdun in the Argonne Forest. From December 14 to December 24 British and French forces beat vainly against German lines. On December 20, the First Battle of Champagne commenced and expanded into an Allied offensive throughout the Champagne and Artois regions. Joffre focused on the Noyon salient, an extensive pocket of German troops bulging into central France between Reims and Verdun.

The First Battle of Champagne gained 500 yards for the Allies, at the cost of 50,000 troops. The Germans made limited counterattacks along the La Bassé Canal and near Soissons during January 8 through February 5, halting the French advance. Joffre regrouped and made another foray in March but got nowhere. In all, combat in Champagne and Artois resulted in some 400,000 French casualties. British and German losses were also heavy.

AN INNOVATIVE APPROACH AT NEUVE-CHAPELLE

On March 10, 1915, British general Sir Douglas Haig (1861–1928) tried a new approach to battle at Neuve-Chapelle, just below the Lys River in northwestern France. He began an assault by his First Army with an intensive 35-minute "artillery preparation," using artillery to bombard a narrow front of 2,000 yards. This was followed by an infantry advance. Haig's idea was to concentrate combat in the hope of breaking through the deadlock to disrupt German supply and communication lines. At first, the operation went well, but then it fell apart due to poor execution, communication, and coordination. Haig felt that he had come close to achieving a breakthrough. Analyzing what had gone wrong, Haig and other Allied commanders decided that the artillery preparation had been insufficient. In the future, they decided, offensives would be preceded by long barrages; in many places along the western front, World War I now became a duel

between artillery batteries. The result would be battles that were ever more destructive but no more productive. Extended artillery bombardment sacrificed the element of surprise and so chewed up battlefields that attackers had great trouble advancing.

THE BATTLE OF WOËVRE

The western front was not a straight line running north to south but included bulges of German strength projecting into Allied territory. The two most prominent of these “salients” were the Noyon salient and the Saint-Mihiel salient. The latter, between Verdun and Toul, would loom throughout the war as an inviting target for Allied offensives. From April 6 to April 15, French units repeatedly attacked the northern face of the Saint-Mihiel salient at the Battle of Woëvre. The Germans held fast, and the French withdrew with heavy losses.

THE SECOND BATTLE OF YPRES

Far to the north of Woëvre, the Allies prepared for a second attempt at an offensive against Ypres, Belgium. While preparation was under way, the Germans launched the first poison-gas attack on the western front, on April 22, 1915. Five thousand Allied troops died, and panic was general along a four-mile stretch of front. Fortunately for the Allies, however, the Germans failed to exploit the breach in the lines, and both sides soon resumed their original positions after a series of attacks and counterattacks. Like the other western-front battles after August 1914, the Second Battle of Ypres ended in continued deadlock. German casualties numbered 35,000 killed and wounded; those of the British, 60,000; of the French, 10,000.

THE BATTLE OF VIMY RIDGE

Southeast of Ypres, in northwestern France, the British staged an offensive in May by which they gained little before they were stopped at Festubert, southwest of Neuve Chapelle on May 26.

To the south of the British position, the French launched a vigorous offensive against Vimy Ridge, seeking to push the Germans off this commanding piece of high ground. This battle, near the French town of Souchez, ground on from May 16 to the end of June, at which point the Allies broke off the attack, having achieved nothing. Both sides refrained from mounting new offensives throughout the rest of the summer of 1915.

RENEWED FIGHTING IN CHAMPAGNE AND ARTOIS

Joffre renewed the Allied offensive in the Champagne, sustaining the campaign from September 25 to November 6, 1915. The Second Battle of Champagne resulted in 75,000 German casualties and 100,000 men wounded or killed among the French. From September 25 to October 30, the Third Battle of Artois sought again to dislodge the Ger-

mans from Vimy Ridge. Minor territorial gains came at the cost of another 100,000 French casualties.

THE BATTLE OF LOOS

North of the French at Vimy, the British attacked Loos during September 25–October 14, making small gains in territory but at the cost of 60,000 casualties. Following this, the British high command replaced Sir John French with Sir Douglas Haig—who, as it turned out, would spend lives even more prodigally than French had.

TO BLEED FRANCE WHITE

If the British high command was bitterly dissatisfied with the course of the war at the end of 1915, so was the German. Looking for a way to break the deadlock on the western front, Falkenhayn concluded that England had to be thoroughly demoralized. But the way to accomplish this, he wrote to the kaiser, was to knock France out of the war. He believed France was already near the breaking point. To take it beyond that point, he proposed to direct a limited offensive against a single point the French perceived as vital.

The objective Falkenhayn chose was the fortress of Verdun, which had figured as an important fortress since Roman times. Located in a loop of the Meuse River, it occupied a strategic blocking position in the Meuse River valley. It was now a state-of-the-art military fortification, yet at the beginning of 1916 it was occupied only by a small garrison, and its fortress guns had been dismantled and transported elsewhere on the western front for use as field artillery. Ever since the front had hardened into a set of trenches, Verdun had been a quiet sector, which had seen little action. Nevertheless, even if Verdun had been downgraded in immediate military importance, Falkenhayn understood that it was still of great symbolic significance to France. With the western front stalemated, the French would not willingly allow a German breakthrough at the ancient fortress. By threatening this one point, the German commander guessed that he could force the French to keep feeding reinforcements into a front only eight miles wide. If the French gave up at Verdun, they would lose Verdun and allow a German breakthrough. If the French did not give up, they would be “bled white.”

The German crown prince was given the mission of assaulting Verdun with his Fifth Army. He wanted to make an overwhelming assault on both sides of the Meuse River, but the conservative Falkenhayn overruled him and ordered the attack to be confined to the east bank of the river. Bad weather delayed the operation until February 21, 1916, giving Joffre time to order reinforcements to the menaced sector.

At 7:15 on the morning of February 21, the attack began with a massive, 1,400-gun artillery bombardment, which poured 100,000 shells each hour onto the small front.

Despite heavy losses, Verdun's defenders continued to resist; as Falkenhayn had predicted, Joffre resolved to hold Verdun at all costs. What Falkenhayn had not counted on was how costly this resistance would be to the Germans.

On February 25, an outlying fortress, Fort Douaumont, fell to the Germans, sending a shiver of panic through Verdun. Joffre responded with a promise to court-martial any commander who voluntarily gave up ground. He also replaced the hesitant General Langle de Cary, in overall command of the Verdun defenses, with Henri Philippe Pétain (1856–1951), who pledged *Ils ne passeront pas!*—They shall not pass! The phrase instantly became the battle cry of Verdun and, indeed, the French motto for the rest of the war.

Pétain was certainly willing to spend lives in the defense of Verdun, but he was also skilled at exacting tremendous casualties from the Germans as well. He did not merely hunker down but, on assuming personal command, used artillery to bombard the German columns as they threaded forward through the steep, narrow valleys east of the Meuse. Pétain also understood the crucial importance of keeping Verdun supplied with ammunition, provisions, and reinforcements. The general designated the one road that led to a depot—Bar-le-Duc, 50 miles westward—as an artery for the exclusive use of supply trucks. An entire division of Territorials was assigned to repair the road continually, filling in shell craters as soon as they were made. The route was christened the *Voie sacrée*—the Sacred Way.

On March 6, the Germans ordered a new assault, which made deadly progress until it, like the others, was finally repelled. Over the course of the month Falkenhayn sent wave after wave against the reinforced French, even reluctantly committing an entire reserve corps for an attack up the left bank of the river toward a small ridge with the sinister name of *Le Morte-homme*—The Dead Man. This would be the focus of the back-and-forth fighting for the rest of the campaign through April and May, when at last German energy and resources flagged. In the meantime, Pétain was promoted to higher command and was replaced at Verdun by the dashing Robert Nivelle (1856–1924).

In June, however, the Germans managed to take Fort Vaux, an outlying outpost on the east bank of the Meuse. This reinvigorated them sufficiently to renew their efforts. In late June and early July, the Germans unleashed their newest form of poison gas, phosgene, which worked by turning into hydrochloric acid in the lungs. At this point, even Pétain, overriding the new commander, Nivelle, recommended withdrawal from Verdun. Joffre refused, however. A Russian offensive in the East put a sudden demand on German forces, and 15 German divisions had to be withdrawn for duty on the eastern front. Verdun was saved, and, on August 29, 1916, having lost 400,000 men in his effort to bleed the French army white, Erich von Falkenhayn was

relieved of command, to be replaced by the team that had been so successful in the East: Erich Ludendorff (1865–1937) and Paul von Hindenburg (1847–1934).

THE FRENCH GO ON THE OFFENSIVE

Shortly after the Germans replaced Falkenhayn, the French brought in a new commander at Verdun, Charles Mangin (1866–1925). During the closing months of 1916, Mangin took his army on the offensive, retaking Fort Douaumont on October 24 and Fort Vaux on November 2, ultimately pushing his lines forward, nearly to the position the French had held at the beginning of the battle. The cost to the French of the Verdun campaign was 542,000 killed and wounded, whereas German losses for the period totaled 434,000.

THE SOMME OFFENSIVE

The First Battle of the Somme began on June 24, 1916. Following a massive seven-day artillery preparation, the British Fourth Army, under General Henry S. Rawlinson (1864–1925), made the principal thrust north of the Somme, while General Edmund Allenby (1861–1936) led the Third Army in a supporting action to the north. Simultaneously, south of the Somme, Foch's French Army Group of the North made a holding attack. On July 1, the British infantry hit the strongly defended German Second Army, which yielded scant territory at a cost of 60,000 British casualties, the heaviest one-day loss in Britain's military history. Nevertheless, the British pressed the attack, and action on the Somme continued through July 14, when a British nighttime attack broke through the German second line. Unfortunately, the breakthrough faltered and failed because of poor communications, the attackers were slaughtered, and the German defenders retaliated with massive counterattacks. Through the rest of the summer, a series of smaller actions engulfed the Somme front.

On September 15, southwest of the village of Bapaume, Haig unleashed another major offensive, which employed for the first time the tank, a British innovation intended to break the trench-war stalemate by simply rolling over the trenches. The new weapon created shock and panic where it was used, but its numbers as well as its mechanical reliability were insufficient to make a significant impact on the battle.

The First Battle of the Somme spanned June 24 to November 13, 1916, and resulted in territorial gains for the Allies, but at tremendous cost. The British lost 420,000 men killed and wounded and the French 195,000; German losses numbered about 650,000.

THE UNITED STATES DRIFTS TOWARD WAR

U.S. president Woodrow Wilson (1856–1924) won a second term in the White House in 1916 in large part on the campaign slogan, "He Kept Us Out of War." Since its beginning in 1914, Americans had watched the war with

a combination of anxiety and relief but, in many quarters, also with an awareness that the war was profitable. As a neutral, the United States traded with all sides. Soon, however, it became apparent that American public opinion as well as business and capital favored the Allies over the Central Powers. U.S. financial institutions made huge loans to both sides, but far more to England and France than to Germany and Austria-Hungary. As the war ground on, then, neutral America drifted closer to the Allied camp.

THE LUSITANIA IS SUNK

Beginning early in the war, the German navy pursued a policy of unrestricted submarine warfare, meaning that German U-boats were authorized to attack all Allied shipping, military as well as civilian, without first surfacing to give warning. On May 7, 1915, a U-boat torpedoed and sank the British liner *Lusitania*, with the loss of 1,198 lives, including 124 Americans. Amid great public outrage, President Wilson issued a stern note of diplomatic protest to the Germans. Despite the American complaint, in August, a U-boat sank the *Arabic*, again with loss of American lives. But, then, Kaiser Wilhelm II, fearing that such action would provoke U.S. entry into the war, ordered an end to unrestricted submarine warfare.

UNRESTRICTED SUBMARINE WARFARE RESUMES

In January 1917, President Wilson appealed to the belligerents to agree on “peace without victory.” Although Britain and Austria-Hungary responded favorably to the appeal, Germany boldly announced the resumption of unrestricted submarine warfare. Shortly after the announcement, a U.S. warship, the *Housatonic*, was torpedoed and sunk, and President Wilson severed diplomatic relations with Germany on February 3, 1917. On the 26th, he asked Congress for authority to arm U.S.-flagged merchant vessels and to take all other military measures to protect American commerce. The United States would pursue what Wilson now termed a course of “armed neutrality.” Additionally, a military preparedness movement began throughout the United States, with young men voluntarily reporting to various training camps. Wilson also encouraged American industry and commerce to assume a war footing, and he created a number of emergency federal agencies, including the Council of National Defense, the Civilian Advisory Committee, and the Shipping Board.

THE ZIMMERMANN TELEGRAM

In February 1917, British intelligence authorities turned over to President Wilson a telegram that had been intercepted between Germany’s foreign minister, Arthur Zimmermann (1854–1940), and the German ambassador to Mexico. Transmitted on January 16, 1917, the Zimmermann Telegram (as it came to be called) authorized the ambassador to propose a German-Mexican alliance to Mexican president Carranza. In return for a declaration of

war against the United States, Mexico would receive Germany’s support in the reconquest of its “lost territory in Texas, New Mexico, and Arizona.” Carranza was also to be asked to invite Japan to adhere to the anti-American alliance.

Although it was true that U.S.-Mexican relations had been strained of late, President Wilson had recently made many conciliatory gestures toward Mexico, and Carranza was therefore in no mood to fight with the United States. If the Zimmermann Telegram fell on deaf ears in Mexico, it opened eyes in America when President Wilson published it on March 1, 1917. One month later, on April 2, 1917, Wilson asked Congress for a declaration of war.

ALLIES IN CRISIS

The Americans were about to enter the Great War at a low point for the Allies. Every major Allied offensive had failed, and the Central Powers were in possession of huge tracts of Allied territory. Worse, the Germans knew that it would take many months for the United States to mobilize effectively. This gave the war renewed urgency, spurring Erich Ludendorff to mount a series of all-out offensives against the war-weary and depleted Allies before U.S. troops arrived in substantial numbers.

France did its best to refresh an aggressive spirit. In December 1916, when General Joffre was replaced by Robert Nivelle as army commander in chief, Nivelle proposed to use the “Verdun formula”—essentially the coordination of intense artillery bombardment with advancing infantry—to attack the Germans along a broad front. He meant to break that front in such a manner that the rupture could be immediately exploited and all reserve troops overcome. Nivelle planned for the British to make preparatory attacks north and south of the old Somme battlefield at Arras and Bapaume, with Cambrai as the objective. This would draw out the German reserves. In the meantime, French forces would launch the major offensive north of the Asine in Champagne in an attack that would combine, as Nivelle put it, “great violence with great mass”—that is, intense artillery bombardments (the violence) followed by massive frontal attacks (the mass).

Unfortunately for Nivelle, Ludendorff had thoroughly intuited the meaning of Nivelle’s having replaced Joffre. The advocate of defense was out, and the champion of offense was in; therefore, an offensive was in the offing, and the only place it could come was on the Somme. Ludendorff therefore strengthened his defenses by establishing a third line of defenses, well out of range of the French artillery. It was called the *Siegfriedstellung*, the Siegfried Zone—or, more commonly by the Allies, the Hindenburg Line—and Ludendorff confounded the Allies by withdrawing to this new position, as much as 20 miles behind the original German front line. The withdrawal was completed by March 16, 1917. The towns that lay within the territory evacuated by the Germans, including Bapaume, Péronne, Roye, Noyon, Chauny, and Coucy,

were left to the Allies—after having been rendered totally uninhabitable. The Germans mined the roads, destroyed the trees, poisoned the wells, and blew up houses and other buildings. They sowed the ruins with an array of booby traps. The Hindenburg Line itself was ingeniously fortified and seemed all but impregnable.

THE NIVELLE OFFENSIVE

General Nivelle refused to take heed of the new developments. On April 9, he ordered the commencement of the British preliminary attack at Arras. Indeed, the attack went remarkably well at first. At the northern end of the 15-mile battlefront, Vimy Ridge was taken by the Canadian Corps, but the British reserves were unable to exploit this breach, because of congested conditions in the rear lines. Although the British gamely sustained the attack until May 5, by that time German resistance had been augmented sufficiently to repulse all assaults against the line, and the advances made in the first five days of the British offensive would be the sum total of the British advance for the entire battle.

Nivelle launched the principal attack in Champagne on April 16, moving along the Aisne River front from Vailly east to Craonne and Reims. His strength was massive, at 1.2 million men and 7,000 guns. But the great Nivelle offensive was destined for disaster. The element of surprise, which had demonstrated its value time and time again, had not been achieved, or even sought. Worse, the French artillery could not be coordinated effectively with the infantry advance. The result was horrific slaughter as the French infantry struggled to attain the Chemin des Dames Ridge, a feature that dominated most of the sector.

Despite all that had gone wrong, the French forces managed to take the first German line before they were stopped. It was, however, an advance of no more than 600 yards, whereas Nivelle's plan had called for an initial thrust of six miles. In five days, Robert Nivelle had lost 120,000 French soldiers, killed and wounded. He captured 21,000 or more German prisoners, but other German casualties were relatively light.

THE FRENCH MUTINIES

The Nivelle offensive not only failed against the Germans but also provoked a widespread mutiny within the French army, beginning on April 29. There was no violence against commanders, just mass refusal to move up or attack. During the first three weeks of May, word of the rebellion traveled swiftly through the long trench line. By June, 54 French divisions were hit by mutinies, and only two reliable divisions stood between the Germans and Paris.

If French military strategy was less than brilliant, the forces of French censorship were extraordinarily effective. French counterintelligence successfully blocked all news of the mutiny, keeping not only the French people but also General Ludendorff in the dark for weeks. By the time Ludendorff caught wind of dissent in the French ranks,

the British under Haig had renewed attacks to distract him and his army.

In the wake of the disastrous offensive and the mutinies that followed, Robert Nivelle was removed from command and replaced by Pétain. He moved swiftly to address the troops' grievances, and gradually he restored order to the army.

BATTLE OF ARRAS

While the Nivelle offensive faltered, Haig, now commanding the British forces on the western front, renewed the offensive at the Battle of Arras in an effort to draw off some pressure from the French. Once the French mutinies began, Haig was compelled to assume the burden of action on the western front.

THIRD YPRES CAMPAIGN

Haig formulated a plan for a Third Ypres campaign in the hope of achieving objectives that were of great concern to the British, if only of minor interest to the French:

- To aid British shipping by attacking U-boat pens believed to be located in Belgium, at Ostend and Zeebrugge.
- To show the Germans that the Allies had no intention of waiting for the Americans before pressing an offensive.
- To keep the focus on the western front. The British government of Lloyd George, discouraged by the deadlock, had turned increasingly to the Italian front and the Middle East for a breakthrough. Haig believed it dangerous to draw off needed strength from the western front.
- To achieve Britain's original stated objective for having entered the war—the restoration of Belgium as a sovereign and neutral state.

Before a full-scale offensive could be launched from the Ypres salient, the high ground dominating the area, the Messines-Wytschaete ridge, had to be secured. Haig chose General Sir Herbert Plumer (1857–1932) and his Second Army to assault this position. The battle had been thoroughly planned and was brilliantly executed; on June 7 the ridge quickly fell into British hands. Haig had every reason to be optimistic.

PASSCHENDAELE

But the success of Messines was not to be repeated. Organizing the main assault took more time than anticipated, creating a fatal lag between the initial inroads made at the Battle of Messines and the principal assault. When Haig finally commenced the operation, he did so with the biggest artillery preparation of the entire war, beginning on July 18—65,000 artillery shells from 3,091 guns. This time, however, the shells fell directly on the territory staked out for the British advance. The bombardment cratered the poorly drained ground, which the heaviest

rains the region had seen in 30 years transformed into a quagmire. The infantry assault slogged through the mud, against devastating German defenses. Bogged down, the British were slaughtered by machine-gun fire and by airborne strafing attacks. A new gas—mustard gas—was also used. It caused intense chemical burns on contact with skin, eyes, and the lining of the human lungs.

Despite monumental difficulties, the British infantry took Passchendaele Ridge as well as Passchendaele village by November 6. Of Belgium, only five miles had been regained. The cost was 300,000 British dead and wounded, plus 8,528 French casualties. German losses were also high, however, at 260,000.

THE BATTLE OF CAMBRAI

Haig seemed unaffected by the terrible cost of Passchendaele and immediately ordered General J. H. G. Byng's (1862–1935) Third Army to attack at Cambrai, France, 50 miles south of the site of the Belgian battle. This time, terrain conditions were highly favorable for the attackers, and Byng did not precede the assault with an artillery preparation, so both the element of surprise and the excellent ground were preserved. For the first time in the war, large numbers of tanks—200—were used.

At first, the attack went well, and a five-mile breach was torn into the Hindenburg Line. But just as Byng was ready to exploit the breach, his tanks began to break down in large numbers. This gave time for German reinforcements to plug the gap, which the British cavalry and infantry follow-up now proved too weak to breach. On December 3, Haig ordered a partial withdrawal. Both sides suffered approximately equal casualties, about 45,000 each (including 11,000 Germans and 9,000 British taken as POWs), and no territory was permanently gained by either side.

ANOTHER BLOW TO THE ALLIES: THE RUSSIANS WITHDRAW

On the eastern front, the **BOLSHEVIK REVOLUTION** and the Russian Revolutions of 1917 greatly undermined the already disastrous Russian war effort. In March 1917, Czar Nicholas II (1868–1918) abdicated the throne, and the Russian Duma appointed a Provisional Government, which gave way in October 1917 to a communist regime led by Vladimir I. Lenin (1870–1924). Among the very first acts of the new Soviet government was the conclusion of a “separate peace” with Berlin. Negotiations resulted in an immediate armistice on December 15, 1917, which was formalized the following year by the two treaties of Brest-Litovsk. Russia was out of the war, and Germany could now concentrate virtually all of its troops on the western front.

U.S. MOBILIZATION

On May 18, the Selective Service Act of 1917 was signed into law; 23.9 million men were registered for the draft over the next two years, and 2.8 million, most between

the ages of 21 and 30, were actually drafted. In 1916, the U.S. Army mustered 133,000; by Armistice Day, November 11, 1918, 4.5 million men were in army uniforms. Spectacular as it was, the mobilization took more time than the Allies thought they could afford. America had entered the war in April 1917, and the commander of the American Expeditionary Force (AEF), General John J. Pershing (1860–1948), arrived in Paris with a small staff on June 14. A massive transport effort was organized to bring the bulk of the U.S. Army to Europe, but Pershing declared that it would be February 1918 before an effective American force could be committed to battle. The Allies, especially the French, demanded that U.S. troops be turned over to French command as they arrived. Pershing stoutly resisted this attempt to fritter away American lives in piecemeal fashion. With great difficulty, he succeeded in persuading the Allies to allow him to consolidate his forces into viable units under American command.

By the end of 1917, only 175,000 U.S. troops were in Europe. In the meantime, Ludendorff had begun launching his all-out offensives.

THE LUDENDORFF OFFENSIVES

Once the Schlieffen Plan had collapsed in 1914, German strategy became increasingly defensive on the western front. The idea was to let the Allies wear their armies down in fruitless attacks on well-defended German trenches. By the winter of 1917–18, however, Ludendorff realized that the impending approach of massive American manpower on the western front required a push for decisive victory as soon as possible. This would not be accomplished by a defensive strategy, he reasoned, and so he set about mounting the massive concentration of a series of offensives.

Using troops freed up from the eastern front, Ludendorff instituted a rigorous training program designed to convert soldiers who had been accustomed to defensive warfare to troops capable of aggressive offense. The best of his trainees he assigned as shock troops to spearhead the assaults.

A brilliant if mercurial strategist, Ludendorff understood that the British and French were typically at cross-purposes. The British were perpetually concerned to maintain lines of communication with the English Channel ports, whereas the French focused on the protection of Paris. Ludendorff decided to exploit this divergence of purpose by driving a wedge between the two allies. This accomplished, he would concentrate on destroying the British army, which would, in turn, force the French to negotiate a favorable peace.

THE SOMME OFFENSIVE

The first of the Ludendorff offensives, on the Somme, began on March 21, 1918, when three German armies attacked the British on their right flank along a 60-mile front. Initially, the British were driven back, and, as

Ludendorff had correctly surmised, Pétain was more concerned with protecting Paris than he was with aiding his British colleagues. When General Sir Henry Wilson (1864–1922), British chief of staff, protested, the Supreme War Council responded by appointing Foch commander in chief of the Allied forces in France. Not only did Pershing approve of the appointment, but, contrary to his own buildup policy, he offered eight American divisions to Foch on an emergency basis.

In the meantime, by April 5, after creating a 40-mile salient, the German advance petered out. Foch had shifted French reserves to check the advance at Montdidier, but the Somme offensive had inflicted some 240,000 Allied casualties. Nevertheless, it had been just as costly to the Germans, whose heaviest losses were among the elite shock troops. Thus it was a tactical success for the Germans but a strategic victory for the Allies. The Germans had penetrated the Allied lines but in so doing had lost men they could not replace—even as the Allies were about to be reinforced from the seemingly limitless pool of American doughboys. Perhaps even worse for Ludendorff, the offensive aimed at splitting the British and the French ended by uniting them—along with the Americans.

THE LYS OFFENSIVE

Yet Ludendorff pressed on with a second offensive, against the British at the Lys River, forming part of the Belgian-French border. This attack directly threatened the English Channel ports, and the initial impact of the assault was indeed devastating. A Portuguese division fighting under British control in the sector was all but annihilated, creating a gap that threatened the British flanks. Within a mere three hours of the initial onslaught, the German Sixth Army reached the open country behind the British rear lines. The defenders were caving in everywhere.

It was at this point, on April 11, 1918, that Haig issued perhaps the most famous order of the war. Telling his men frankly that their backs were “to the wall,” he ordered them to stand their ground—even if this meant death. Perhaps astoundingly, the “backs to the wall” order worked. Not only did they hold, but they began to push back, so that by April 29 Ludendorff was compelled to break off his second offensive. British losses in the Lys offensive were 239,000, among whom were 28,000 dead. The Germans, who had come so close to a major victory with this offensive, lost 348,300, including some 50,000 dead.

THE AISNE OFFENSIVE

The third German offensive, on the Aisne River, began on May 27 against lightly held French positions on the Chemin des Dames Ridge. This was supposed to be a diversionary attack only, but it was so successful that it became the major effort of the offensive. In 24 hours, the Germans advanced 20 miles, and by May 30, they had reached the Marne, just 50 miles outside of Paris.

U.S. forces had played a minor role in assisting the British on the Lys. The first major U.S. action now occurred, when on April 20 two companies of the 26th Division came under heavy attack near Seicheprey along the St. Mihiel salient. About 2,800 regular German troops spearheaded by 600 elite shock troops overran the American positions. A large number of Americans were taken prisoner, and 669 others were either killed or wounded. German losses were slight. It was a disappointing baptism by fire. Pershing was unshaken, however, and rushed the U.S. Second and Third Divisions to reinforce the French along the Marne. In the meantime, Major General Robert Lee Bullard (1861–1947) launched the first U.S. offensive of the war, at the village of Cantigny, some 50 miles northwest of the action at Chemin des Dames and about 60 miles north of Paris.

Cantigny was the site of a German advance observation post and was very strongly fortified. On May 28, the U.S. First Division attacked the village and drove the Germans out. Later in the day and on the next day, the Americans repulsed German counterattacks. The American victory boosted Allied morale and gave the U.S. troops great confidence.

The spearhead of the German offensive was at Château-Thierry, on the Marne. The U.S. Second and Third Divisions rushed to block the Germans from crossing the river at this point. The Third Division defended the Marne bridges, holding them against the Germans, then counterattacking. The French 10th Colonial Division, inspired by the Americans, joined the fray, and pushed the German onslaught back across the Marne at Jauglonne.

BELLEAU WOOD

As the U.S. Army had performed so well at Cantigny and Château-Thierry, now the U.S. Marines ventured into Belleau Wood as the spearhead of the army's Second Division. To capture Belleau Wood, the marines advanced across a wheat field that was swept by machine-gun fire. The casualties incurred on June 6, 1918, were the heaviest single-day losses in Marine Corps history to that time (the record would endure until November 1943, during WORLD WAR II, when the marines took the Japanese-held island of Tarawa). During June 9 through June 26, the marines and the army's Second Division took, lost, and retook Belleau Wood and the nearby villages of Vaux and Bouresches no fewer than half a dozen times before the Germans were expelled for good.

THE NOYON-MONTDIDIER OFFENSIVE

Deserters from the increasingly demoralized German army revealed to the French the strategy of Ludendorff's next two offensives. The next assault, they said, would come at Noyon and Montdidier, just southeast of Cantigny and northwest of Château-Thierry. Foch and Pétain were well prepared for the assault, which came on June 9, and a combined Franco-American counterattack checked the

advance of the German Eighteenth Army by June 11. The next day, the Allies repulsed an attack by the German Seventh Army.

By this time more than 250,000 Americans were arriving in France each month. By June 1918, seven of the 25 U.S. divisions in France were in action at the front.

THE CHAMPAGNE-MARNE OFFENSIVE

The increasingly desperate Ludendorff was determined to end the war with the fifth German offensive in five months. As before, Ludendorff's principal objective was the destruction of the British army in Flanders, but he would precede the main thrust with a preliminary offensive against the French and Americans in the Champagne region, focusing the attack on the fortified city of Reims. Foch, however, had been informed by the German deserters of the impending attack. He used his artillery to arrest the advance of German shock troops during the night of July 14–15. East of Reims, General Henri Gouraud's (1867–1946) Fourth Army checked the German attack within a matter of hours.

West of Reims, the Germans reached the Marne and crossed it with 14 divisions. Here American troops became heavily engaged, and the U.S. Third Division earned the nickname "Rock of the Marne" for its determined and highly successful defense of the region west of Reims.

SECOND BATTLE OF THE MARNE

Ludendorff's five great offensives had cost more Allied lives than German—but they had cost many German lives indeed, and they had failed to win the war. Adequate replacements could no longer be found. On the German homefront, the British naval blockade, long in place, was taking its toll. People were hungry and weary of the war.

On July 17, 1918, Foch concluded that Ludendorff was pulling troops away from the Marne sector, which had threatened Paris, to send them north, against the British positions. The French commander saw an opportunity. He decided that the time was now ripe for an Allied counteroffensive, to be launched before the Germans could commence action against the British. Colleagues argued that he should wait until additional American forces could be summoned into action, but Foch realized that time was of the essence. He concentrated his available forces around the Marne salient, the bulge of German penetration, and decided deliberately to leave Haig's British armies exposed before the growing German concentration to the north. It was a trick designed to encourage Ludendorff to continue weakening the Marne sector even while Foch built it up. Foch would attack here, on the Marne, after Ludendorff had withdrawn many troops, but before he had concentrated them in the north to overwhelm Haig. It was a bold gamble, with a large part of the British army at stake.

As Ludendorff shifted his troops from the Marne salient, the Allied counteroffensive stepped off, at 4:35 on the morning of July 18.

The French Tenth, Sixth, and Fifth Armies, from left to right along the front, made the assault, while the French Ninth Army waited in reserve. The Tenth was commanded by General Charles Marie Emmanuel Mangin, a native of Sarrebourg, in Lorraine, territory lost to the Germans in the Franco-Prussian War. He was spoiling for revenge and was precisely the tiger Foch needed to lead the main attack. The infantry advance was accompanied by a precisely timed rolling barrage, which battered the German lines.

U.S. forces were also active in the Second Battle of the Marne. The American First and Second Divisions spearheaded Mangin's main assault, and six other divisions also fought valiantly.

Ludendorff, the brilliant tactician, was this time taken by surprise. He desperately ordered four of his reserve divisions into the Marne sector, but he soon realized that withdrawal was his only viable option. He began to move eastward across the Marne on the night of July 18. Although this action was an Allied victory, with heavy German losses, Ludendorff's army remained intact on August 6, when the counteroffensive came to an end.

THE AMIENS OFFENSIVE

Ludendorff interpreted the fact that Foch had ended his counteroffensive as a sign that this action had been an isolated incident; he decided to mount a new offensive himself. Others in the German high command, most notably the crown prince, objected, arguing that the war had been lost and that it was time to stop the fighting. In the end, a terrible compromise was reached among the German officers—there would be no new offensive, but there would be no surrender, either.

On the Allied side, Haig proposed an Anglo-French attack east of Amiens in northwestern France along the Somme River, with the objective of freeing up the rail network in the area. Agreeing, Foch placed the French First Army under Haig's direction; Haig chose the British Fourth Army, under General Henry Rawlinson (1864–1925), to operate in conjunction with the French First. Rawlinson carried out a lightning attack along a 14-mile front, using artillery, infantry, and air power, as well as virtually the entire British tank corps, 604 vehicles.

The British advance, on August 8, was led by Canadian and ANZAC (Australian–New Zealand Army Corps) infantry, preceded by the tanks, and was protected by a thick blanket of fog. On the right, the French assault was preceded by a brief artillery preparation. The Allies rolled over the Germans, taking more than 15,000 prisoners and capturing 400 guns. Years later, in his memoirs, Ludendorff would call August 8 the "Black Day" of the German army.

Nevertheless, Ludendorff did not give up but reestablished a position 10 miles behind what had been the nose of the salient. On August 10, however, the French Third Army, under General Georges Humbert (1862–1921), pushed the Germans out of Montdidier. Haig, however, paused to regroup, which gave the German army a reprieve.

The Allies resumed the offensive on August 21, when the British Third Army, on the left, and the French armies, on the right, again attacked. On the 22nd, the British Fourth came racing up the center, followed by the British First on the far left. The German positions crumbled, and Ludendorff withdrew not only from the Lys salient in Flanders but also from Amiens, to the south, in France. At this point, however, the ANZACs struck, advancing across the Somme during August 30–31 and taking the German-held village of Péronne. On September 2, a Canadian corps forced its way through the German lines near Quéant. The German withdrawal turned into flight back to the Hindenburg Line.

In the Amiens offensive, the Germans suffered casualties in excess of 100,000 killed, wounded, or taken prisoner. Some 22,000 British soldiers and 20,000 French were killed or wounded. The western front was no longer stalemated, and now Ludendorff himself recommended an end to the war.

AGAINST THE ST. MIHIEL SALIENT

The U.S. First Army, with the French II Colonial Corps attached to it, was assigned to the St. Mihiel sector on August 30. Its assignment was to push back this western German incursion, which had existed since 1915.

The assignment came at a critical time, for Ludendorff, on September 8, ordered withdrawal from the salient, to begin on September 11. If his troops were allowed to retreat to the Hindenburg Line, the salient would be vacated, but the German army would also be saved. General Pershing was determined to prevent Ludendorff from withdrawing without a fight.

Early on the morning of September 12, 16 U.S. divisions attacked, supported by French artillery and French tanks, as well as a mixed force of American, French, Italian, and Portuguese pilots flying some 600 planes (out of 1,400 deployed) under the command of U.S. military air pioneer Colonel William “Billy” Mitchell (1879–1936). The U.S. I and IV Corps smashed into the south face of the salient, while the French II Colonial Corps jabbed at the salient’s nose and the U.S. V Corps closed in from the west.

The massive battle raged for 36 hours, but its outcome was a foregone conclusion. Stunned Germans surrendered in droves, the salient was cleared of the enemy, and the German army had been dealt another severe blow. The reduction of the St. Mihiel salient by half a million U.S. troops was the largest U.S. military operation since the UNITED STATES CIVIL WAR.

MEUSE-ARGONNE OFFENSIVE

Pershing did not allow his army to rest on its laurels following the reduction of St. Mihiel. Immediately after the sector was secured, he marched the entire U.S. First Army, unrested, 60 miles to the Verdun area to participate in Foch’s Meuse-Argonne offensive.

Foch’s plan was for the Franco-American forces to drive forward from Verdun toward Mézières, a key German rail junction and supply depot. Simultaneously, British units would attack between Péronne and Lens, with the objective of controlling the rail junction at Aulnoye. Foch understood that it was important to kill the enemy, but that it was even more vital to seize control of its lifelines along the western front. With the railroads severed, the Germans would be cut off from the rear.

Pershing brilliantly executed the transfer of a 500,000-man army, by night, into position for the attack that would initiate the offensive. It began at 5:25 on the morning of September 26 against a German army group under Max von Gallwitz (1852–1937) and another commanded by the crown prince. The German defenses were well prepared and heavily fortified. The terrain, rugged and heavily wooded, was deadly for any attacker. Indeed, after an initial rapid advance penetrating the first two German lines, the American drive flagged along the line between Apremont and Brioules by October 3.

By October 4, it was apparent that the dense Argonne afforded no room for maneuver. Pershing’s only option was to make a series of brutal frontal assaults. The Argonne operation stretched through nearly the end of October before the third German line was broken. Although an impatient French premier Georges Clemenceau wished to relieve Pershing of command, Foch stood by his American colleague. He could see that the Germans were using themselves up, fighting Pershing in the Argonne.

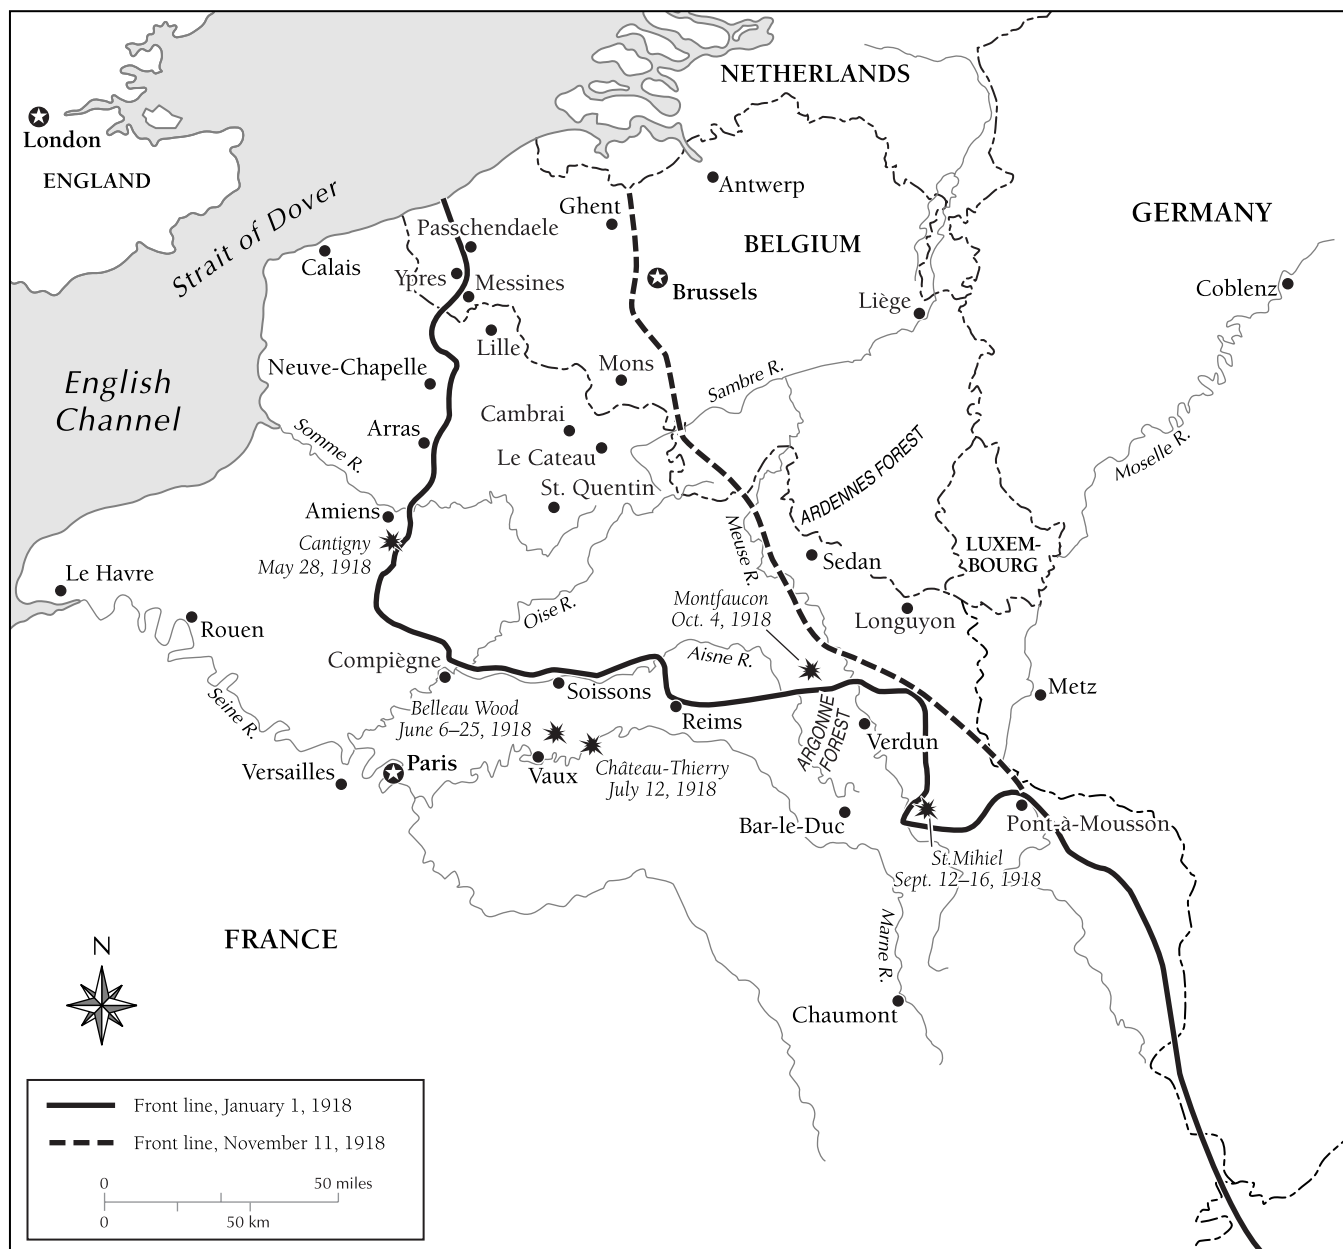

APPROACHING THE ARMISTICE

During the first 11 days in November, the last days of the war, the U.S. Army raced, now in the open, through the last German positions in the Meuse Valley. The U.S. First Division was about to take Sedan on November 6, when higher command ordered a halt. The honor of conquering that city, it was decreed, must be French. Only this would blot out the stain that had endured since the humiliating defeat at this place during the Franco-Prussian War in 1870. On November 10, the U.S. Second Army, under Bullard, launched an attack in its drive toward the village of Montmédy, only to break it off the next day at 11 A.M., the hour of Armistice.

THE BRITISH FLANDERS OFFENSIVE

The Amiens offensive not only inflicted great losses on the Germans but also resulted in the capture of a complete and detailed plan of the Hindenburg Line. Haig used this to plan what he saw as a decisive, war-ending breakthrough Germany’s last-ditch defense.

Haig commenced the Flanders offensive on the evening of September 26, 1918, with an artillery barrage precisely targeted against such key points as headquarters, artillery positions, and troop shelters, all of which were revealed in the captured plans. Haig also employed a new, more concentrated form of mustard gas, and he now laid

Western Front after United States entry into the war, late 1917–November 11, 1918

down tons of it. The following morning, the First and Third armies quickly captured the area around Cambrai, including Brouillon Woods, long a concentration of German strength. On the 28th, a combined force of British, French, and Belgian troops advanced through Flanders, taking the area in front of battered Ypres, and on the 29th the British Fourth Army, with French units in support, breached the Hindenburg Line.

To Haig's dismay, this success did not end the war. By October 5, the British attacks had succeeded in driving through the last of the Hindenburg Line positions, yet the Germans kept finding new positions to which to withdraw, and Haig's momentum slowed.

ALLIED PRESSURE, GERMAN COLLAPSE

Disappointed that the war had not instantly ended, the Allies nevertheless were confident of victory, and they resolved to keep the pressure up. On October 17, General Rawlinson led his British Fourth Army against German defenses at the Selle River and broke through them. On October 20, Byng's British Third Army crossed that river at a point farther south. The German army group commanded by General Max von Boehn (1850–1921) fell back toward the Sambre River, some 50 miles east of his original position, while Crown Prince Rupprecht's army group was pushed toward the Schelde River, about 40 miles east of the line held before the offensive. Boehn lost

20,000 men as prisoners of war, and still the British and Belgians kept coming, giving the Germans no time to form new lines of defense.

On September 29, Ludendorff advised Wilhelm II to seek an immediate armistice, and the kaiser accordingly appointed Prince Max of Baden (1867–1929) as chancellor of Germany to open negotiations—initially with President Wilson. The president shocked Prince Max by replying that nothing short of Germany's complete and unconditional surrender would end the war. Moreover, Wilson declared that the Allies would not negotiate with what he called the present German military dictatorship. In response to this, the kaiser effectively compelled Ludendorff's resignation on October 26, effective on the 27th. Yet the kaiser himself refused to abdicate in favor of one of his grandsons, and so negotiations were put off. At this juncture, an intensely war-weary Germany began to feel the shudder of revolution, much as Russia had earlier. When, on November 7, Austria-Hungary capitulated to the Allies, Bavarian revolutionaries declared the overthrow of the monarchy and the creation of the Bavarian People's Republic. In response to this, Friedrich Ebert (1871–1925), leader of Germany's majority Social Democrat Party, called on Prince Max to persuade the kaiser to abdicate, if only to save Germany from communism. Max announced Wilhelm's abdication on November 9; Hindenburg informed the former kaiser that he no longer had the army's support. Wilhelm fled to the still-neutral Netherlands (November 10).

In view of developments in Germany, the Allies opened armistice negotiations with a German delegation led by Matthias Erzberger (1875–1921), a civilian politician, at Rethondes, in the Forest of Compiègne, in a railway carriage that served Foch as his traveling headquarters. The armistice was set for the 11th hour on the 11th day of the 11th month.

THE TREATY OF VERSAILLES

On November 17, 1918, under terms of the Armistice, Allied troops began to reoccupy the parts of France and Belgium that had been held by the Germans since 1914. Allied troops occupied the German Rhineland beginning on December 9, and a peace conference—among the Allies and excluding the Central Powers—was convened at Paris on January 18, 1919.

Twenty-seven Allied nations participated in creating the Treaty of Versailles, but the four major Allied powers—Britain, France, Italy, and the United States—dominated. Woodrow Wilson championed a conciliatory settlement based on the so-called “Fourteen Points,” which he had enumerated before a joint session of Congress on January 8, 1918:

- Point one, “open covenants, openly arrived at,” mandating an end to the kind of secret treaties and alliances that had dragged Europe into war
- Point two, freedom of the seas

- Point three, removal of economic barriers to international trade
- Point four, radical reduction of armaments to the lowest point consistent with domestic security
- Point five, modification of all colonial claims on the basis of the self-determination of peoples

Eight additional points addressed specific postwar territorial settlements, and the 14th point called for a league of nations, an international body that would guarantee political independence and territorial integrity for all nations and that would provide a forum for the peaceful resolution of conflict.

French premier Georges Clemenceau opposed Wilson, demanding vengeance as well as measures that would crush Germany economically and militarily. Britain's Lloyd George personally favored moderation, but he had been elected on his promise that Germany would be punished. Italy's Vittorio Orlando (1860–1952) was primarily concerned to ensure that his nation would receive the territories it had been promised in 1915 as inducement to join the Allied cause.

In the end, the treaty emerged as largely punitive, as well as humiliating to Germany and the other Central Powers. Chief provisions included German territorial cessions, German admission of guilt for the war, German disarmament, and an assessment against Germany (and the other Central Powers) of ruinous monetary reparations.

- The population and territory of Germany was reduced by about 10 percent by the treaty.
- Alsace and Lorraine were returned to France.
- The Saarland was placed under the supervision of the League of Nations until 1935.
- Three small northern areas were given to Belgium.
- Pursuant to a plebiscite in Schleswig, northern Schleswig was taken from Germany and returned to Denmark.
- A new Poland was created and given most of formerly German West Prussia and Poznań (Posen), as well as a “corridor” to the Baltic Sea; pursuant to a plebiscite, Poland also gained part of Upper Silesia.
- Danzig (Gdansk) was declared a free city.
- Germany's overseas colonies in China, the Pacific, and Africa were taken over by Britain, France, Japan, and other Allied nations.
- Germany was compelled to endorse a “war guilt clause,” deeming itself the aggressor.
- Kaiser Wilhelm II was accused of war crimes and was to be brought to trial. (The Dutch government declined to extradite him to the jurisdiction of the Allies. He died in Dutch exile on June 8, 1941.)
- Reparations were called for but were not computed by the time the treaty was signed. (In 1921, they were fixed at \$33,000,000,000, a sum calculated to destroy the German economy.)

- The German army was limited to 100,000 men, and the general staff was abolished.
- Arms manufacture was mostly prohibited.
- Germany west of the Rhine and 30 miles east of that river was declared a demilitarized zone.
- Allied occupation of the Rhineland was set to continue for at least 15 years, and possibly longer.
- The League of Nations was created.

Additional treaties, all essentially congruent with the Treaty of Versailles, were drawn up with the other Central Powers. The most important of these, the Treaty of St. Germain, dissolved the Austro-Hungarian Empire. (See the heading *Treaties*, in WORLD WAR I: HISTORICAL BACKGROUND)

With great reluctance and under protest, Germany signed the treaty on June 28, at the Palace of Versailles. Although President Wilson signed the Treaty of Versailles as well as the Covenant of the League of Nations, which was attached to it, the conservative Republican-controlled Senate refused to ratify either document. The United States subsequently drew up brief separate peace treaties with the Central Powers.

The unremittingly punitive treaty created the political, economic, and emotional climate that promoted the rise of Adolf Hitler (1889–1945) and Naziism, and that made a second world war inevitable.

World War II: Historical Background

(1920s–1939)

PRINCIPAL COMBATANTS: Axis powers (including Germany, Italy and Japan) and Allied powers (including Austria, Czechoslovakia, Poland, Belgium, Netherlands, France, Britain Canada, Australia, New Zealand, China, and later, the United States and the Soviet Union)

PRINCIPAL THEATER(S): Europe, the Atlantic, the Pacific, Pacific islands, Asia (especially China, Burma, India, and Japan)

DECLARATION: The war began with the German invasion of Poland, September 1, 1939; formal declarations followed.

MAJOR ISSUES AND OBJECTIVES: The causes of World War II are many and complex; the principal source of German aggression may be found in Adolf Hitler's pursuit of *Lebensraum* (living space).

OUTCOME: See World War II: Pacific, World War II: Russian Front, and World War II: Western Front

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: See World War II: Pacific, World War II: Russian Front, and World War II: Western Front

CASUALTIES: See World War II: Pacific, World War II: Russian Front, and World War II: Western Front

TREATIES: See World War II: Pacific, World War II: Russian Front, and World War II: Western Front

This entry provides the historical background of World War II in Europe. For the outbreak of the war, see WORLD WAR II: OUTBREAK AND EARLY GERMAN CONQUESTS (1939–1941). For historical background of the war in Asia and the Pacific, see SINO-JAPANESE WAR (1937–1945) and WORLD WAR II: PACIFIC (1941–1945), which also include discussion of the course and conclusion of the war in these theaters. For entries that treat the course and conclusion of the war in its other theaters, see WORLD WAR II: AFRICA AND THE MEDITERRANEAN; WORLD WAR II: ATLANTIC FRONT; WORLD WAR II: CHINA-BURMA-INDIA THEATER; WORLD WAR II: GREECE AND THE BALKANS; WORLD WAR II: ITALIAN FRONT; World War II: Pacific; WORLD WAR II: RUSSIAN FRONT; WORLD WAR II: WESTERN FRONT. For the development and deployment of the atomic bomb, see World War II: Pacific. For the treatment of the major Allied summits, the Holocaust, and the Nuremberg trials, see World War II: Western Front.

Germany had been defeated in WORLD WAR I, yet it had suffered less devastation than France or Italy, two of the victorious Allies. Its army, though it had suffered terrible losses, was intact, as was the nation's civilian infrastructure. The Treaty of Versailles, which ended the war and which was imposed on Germany by the Allies, was less concerned with creating world peace than it was with punishing Germany and crippling it economically as well as militarily. In addition to saddling Germany with reparations of impossible magnitude, the treaty limited the German army to a mere 100,000 men, of which only 4,000 were to be officers. Heavy weapons, aircraft included, were prohibited. The German navy was limited to only 15,000 sailors and was forbidden to build any new submarines. Economic hardships and the collective national humiliation created by the Treaty of Versailles combined with the effects of worldwide economic depression and the threat of communist revolution to push Germany into the most hazardous of political situations.

In this climate of desperation, Adolf Hitler (1889–1945) rose to power. Austrian born, Hitler had been frustrated in every attempt at making a living until, following service as a corporal during World War I, he became increasingly active in popular politics, which played on fear of communism and hatred of Jews. Hitler orchestrated a premature uprising in Munich in 1923—the so-called

“BEER HALL PUTSCH”—for which he was convicted of treason but imprisoned only briefly. He used the few months of his confinement to write a political autobiography, *Mein Kampf* (*My Struggle*), which became the blueprint for his rise to power during the next decade.

Even before Hitler achieved power, however, German military leaders found ways to turn the Treaty of Versailles to their advantage. Under General Hans von Seeckt (1866–1936), the puny army permitted by the Versailles Treaty was forged into a *Führerheer*—literally, an “army of leaders,” composed of the military elite. This small force consisted of volunteers only, recruited in a highly selective manner to form the professional core around which a new, full-sized army could be quickly, efficiently, and effectively created through mass conscription when the time was right. The German military also circumvented treaty restrictions on weaponry, including by means of the Treaty of Rapallo with the Soviet Union (1922), which established a program of military cooperation between Germany and the USSR. Although the Treaty of Versailles restricted or barred the development of weapons within Germany, the Treaty of Rapallo provided facilities in Russia where Germany could develop advanced ground weapons and aircraft. Another document, the London Naval Treaty, concluded in 1935 with Britain and other nations, allowed Germany increased tonnage in warships and even gave Hitler the hope of an eventual alliance with Britain. Emboldened, Germany greatly increased the pace of rearmament during the 1930s, ultimately in direct defiance of the Versailles Treaty.

While Germany rearmed, its military planners also developed a new approach to war. Determined to avoid another unproductively static trench war, German militarists developed the doctrine of *Blitzkrieg* (“lightning war”), which combined tactics and weapons designed to be brought to bear against an enemy with overwhelming force and speed, quickly penetrating its frontline defenses while encircling and destroying it.

In contrast to the German blitzkrieg doctrine, clearly suited to an offensive war, France adopted a resolutely defensive posture. André Maginot (1877–1932), France’s minister of war, authorized construction of a great system of fortifications that would bear his name. Completed in 1938, the Maginot Line was a string of elaborately hardened fortresses connected by a network of tunnels through which troops and supplies could be transported by rail. The Maginot Line covered the entire French-German frontier, from the southern tip of Belgium down to the top of Switzerland; out of respect for Belgian neutrality, however, it was not extended along France’s border with that nation. Thus was created an Achilles’ heel of tragic proportions.

The hunker-down mindset responsible for the Maginot Line was all too typical of the post-World War I European democracies and was in stark contrast to the German attitude, which Adolf Hitler, who became chan-

cellor (prime minister) of Germany in 1933 and *Führer* (absolute dictator) the following year, skillfully developed and nurtured. Hitler borrowed a concept developed in the 19th century by the German geographer and ethnographer Friedrich Ratzel (1844–1904) called *Lebensraum* (literally, “living space”). Ratzel had pointed out that states tend to expand their boundaries according to their ability to do so. Hitler distorted the concept of *Lebensraum* as a quasi-philosophical justification of national conquest. He declared it both natural and inevitable that the German people should have whatever living space the might of the German state could obtain for them. By the mid-1930s, Hitler’s clearly aggressive talk of *Lebensraum* had prompted a reluctant Britain, France, and Italy to issue a joint statement opposing German expansion. The French entered into a defensive alliance with the Soviets in 1935, and the Soviets concluded a similar pact with the Czechs.

That Italy should voice concern over German expansionism was inconsistent with its own aggressive international policy, developed under Benito Mussolini (1883–1945), who had effectively become dictator of Italy in 1922 and whose Fascism both inspired and, in its brutal spirit, resembled Hitler’s Nazism. In 1935, Mussolini’s forces invaded Ethiopia, prompting the British foreign secretary, Sir Samuel Hoare (1880–1959), to attempt to “appease” Mussolini by offering him most of Ethiopia in return for a truce that would preserve the defensive alliance against Germany. The cowardice of Hoare’s plan outraged the British public and forced Hoare’s resignation, but the idea of appeasing aggression would resurface in the policies of Neville Chamberlain (1869–1940), who became prime minister of Britain in 1937.

Mussolini proceeded with a brutal war against Ethiopia, which was annexed to Italy in 1936 (see ITALO-ETHIOPIAN WAR [1935–1936]). The timidity with which Britain and France reacted to the aggression of Italy against Ethiopia emboldened Hitler to take the first step in his program of expansion. In defiance of the Treaty of Versailles, which ordered the evacuation of all German forces from the Rhineland, Hitler, on March 7, 1936, ordered 22,000 soldiers back across the bridges of the Rhine. This was little more than a token force, easily withdrawn if France responded. But neither France, Britain, nor Italy protested, let alone resisted, the German remilitarization of the Rhineland. Now the manifest weakness of France and Britain persuaded Mussolini to conclude a pact with Hitler. After Mussolini agreed on July 11, 1936, that Austria should be deemed “a German state”—something Italy had long resisted—Mussolini and Hitler concluded the Rome-Berlin Axis on November 1, 1936, which was followed on November 25 by the German-Japanese Anti-Comintern Pact—an alliance ostensibly against communism but in fact an alliance of general military cooperation.

In this climate of growing menace, Britain’s Chamberlain, eager to preserve peace, developed a policy of “active

appeasement” with regard to Germany. As he saw it, his task was to discover what Hitler wanted and then give it to him, in order to conserve military resources to fight what Chamberlain regarded as the more serious military threats posed by Italy and Japan.

Having remilitarized the Rhineland, Hitler now made his next bold move. On March 13, 1938, he invaded and annexed Austria. Neither Austria nor Italy opposed this *Anschluss* (annexation), and Hitler was therefore emboldened to further aggression. He now demanded possession of the Sudetenland, a large portion of Czechoslovakia bordering Germany and home to a substantial number of German-speakers, who complained of oppression at the hands of the Czechs. At first, Chamberlain sternly warned Hitler to negotiate a solution with the Czechs, but when Hitler stood firm in his insistence on annexing the Sudetenland, Chamberlain traveled to Berchtesgaden, Hitler’s Bavarian retreat, and proposed to give Hitler all that he demanded. Chamberlain persuaded Hitler to delay his invasion until he could persuade Paris and Prague to go along with the plan. The French appealed to President Franklin D. Roosevelt (1882–1945) but were unable to shake the United States out of its post–World War I attitude of isolationism. Without support from any other nation, France agreed to hand the Sudetenland to Hitler. Chamberlain subsequently organized the Munich Conference on September 29–30, 1938, which effectively abrogated Czech sovereignty in return for Hitler’s promise to make no more territorial demands in Europe. The Munich Pact signed, Chamberlain returned to London, proclaiming that he had returned with “peace for our time.”

Almost immediately after signing the Munich Pact, Hitler broke his promise by moving against all of Czechoslovakia and occupying Prague on March 16, 1939.

Joseph Stalin (1879–1953), premier of the Soviet Union, took notice, along with the rest of the world, of German aggression. Although Nazism and communism were ideological rivals and Stalin was by definition the archenemy of Hitler, Stalin sought to forestall German aggression against the USSR by proposing to Hitler a “Non-Aggression Pact.” Signed on August 23, 1939, the document gave Hitler free rein to invade Poland; the Soviets would not only refrain from defending Poland but would even aid the invasion—in return for Hitler’s agreement not to interfere with Stalin’s plan to invade Finland, which Stalin wanted as a military buffer zone against Germany.

World War II: Outbreak and Early German Conquests (1939–1941)

PRINCIPAL COMBATANTS: Germany vs. Poland, Belgium, France, USSR

PRINCIPAL THEATER(S): Poland, Belgium, Netherlands, Luxemburg, Denmark, Norway, France, USSR

DECLARATION: See World War II: Historical Background

MAJOR ISSUES AND OBJECTIVES: See World War II: Historical Background

OUTCOME: See World War II: Russian Front

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

See World War II: Russian Front

CASUALTIES: See World War II: Russian Front, World War II: Western Front

TREATIES: See World War II: Russian Front; and World War II: Western Front

This entry focuses on the outbreak and early course of the war in Europe. For the historical background of the war, see WORLD WAR II: HISTORICAL BACKGROUND (1920S–1939). For entries that treat the course and conclusion of the war in various theaters, see the SINO-JAPANESE WAR (1937–1945); WORLD WAR II: AFRICA AND THE MEDITERRANEAN; WORLD WAR II: ATLANTIC FRONT; WORLD WAR II: CHINA-BURMA-INDIA THEATER; WORLD WAR II: GREECE AND THE BALKANS; WORLD WAR II: ITALIAN FRONT; WORLD WAR II: PACIFIC; WORLD WAR II: RUSSIAN FRONT; WORLD WAR II: WESTERN FRONT. For the development and deployment of the atomic bomb, see World War II: Pacific. For treatment of the major Allied summits, the Holocaust, and the Nuremberg trials, see World War II: Western Front.

OUTBREAK

At 4:30 on the morning of September 1, 1939, Hitler’s Luftwaffe (air force) commenced the bombing of airfields all across Poland. Simultaneously, a German battleship “visiting” the Polish port of Danzig opened fire on Polish fortifications, and the Wehrmacht (army) surged across the Polish frontier. The rapid combined air, sea, and land assault was the essence of blitzkrieg (lightning war), and the superbly trained and equipped German forces swept aside the valiant but outgunned and outnumbered Polish forces. On September 27, Warsaw fell to the invaders; the next day, the town of Modlin surrendered. In a single action, 164,000 Polish soldiers became prisoners of war. By early October, the last organized Polish force, at Kock, had been crushed. It mattered not at all that two days after the invasion both France and Britain honored their treaty obligations to Poland by declaring war on Germany.

As agreed in the Non-Aggression Pact between the Soviet Union and Germany, Stalin also invaded Finland, which the Soviet Union annexed on March 12, 1940, after a brief but bloody war (see RUSSO-FINNISH WAR).

So it began again, a war sparked by nationality conflicts in east-central Europe and provoked, in part, by a German stab at continental hegemony that expanded into a global conflict touching every continent. It was more a total war than even WORLD WAR I had been, since the belligerent powers’ civilians not only contributed to their war efforts but also became targets for their enemies. Subject populations also became targets. Most horrific was Hitler’s attempt to exterminate the Jews of Europe, but Germany

also attacked Slavs and other ethnic, social, and political groups deemed inferior by or a threat to Nazi ideology. Stalin expanded the Russian terror against the Ukrainians to the conquered Poles. Even in the Pacific, the Japanese-American conflict at times degenerated into brutal race war. Indeed, World War II all but eliminated the age-old diplomatic distinction between combatants and noncombatants, with the result that not only would its death toll greatly exceed that of the Great War, but also civilian casualties would vastly outnumber those of the military.

Yet again the war in Europe developed into a contest between a German-held Europe and an Allied coalition attacking on its periphery. Again, the United States kept clear of the conflict until its own sovereignty was insulted by direct attack. But unlike the last war, the Italians quickly joined the Germans rather than remaining neutral, and the Soviet Union—itsself soon invaded by Germany—did not collapse as imperial Russia had. Instead, Joseph Stalin's Russia held out while France fell to the Nazis, and thus ultimately the Soviets instead of the French joined the British and the Americans in the wartime conferences of the "Big Three." Although Japan, joining the Axis powers, invaded China and Southeast Asia and provoked the entry of the United States into the war, it also managed to remain neutral toward Russia. In turn, the anti-Fascist Allies, while determined to reduce Germany to rubble, nevertheless simmered with tension over varying strategies and war aims. In fact, World War II was in many ways a label for several parallel or overlapping wars, and the central conflict in Europe overlay a three-way struggle for power among Nazism, democracy, and communism. Once Germany fell and Japan was bombed into submission, these subterranean struggles among the Allies burst into the open in a new kind of war and an odd sort of peace (*see* COLD WAR).

EARLY FIGHTING

While Poland reeled and withered under blitzkrieg, no significant fighting took place in the West. Although France and Britain had declared war on Germany, they took little action, and, in its first months, World War II on the Western Front was derisively described by the British as a "Sitzkrieg" or, more commonly, the "Phony War." France and England did cooperate in an attempt to mine and occupy Norwegian ports to close them to German U-boats. The German navy and Luftwaffe, however, were quick to occupy Denmark and then, with the help of Norwegian turncoat Vidkun Quisling (1887–1945), took over Norway as well, installing Quisling as head of a Nazi puppet regime. The British military hurriedly evacuated Norway on June 6, 1940, and, at the insistence of Parliament, Neville Chamberlain (1869–1940) appointed his harshest critic, Winston Churchill (1874–1965), First Lord of the Admiralty in his war cabinet on September 3, 1939.

Austria, Czechoslovakia, Poland, Denmark, and Norway had all fallen under Nazi control when, on May 10,

1940, German forces surged into Holland, Luftwaffe bombers almost totally leveling Rotterdam. Simultaneously, German ground forces advanced through Belgium, marching around the northern end of the Maginot Line. Within 10 days, sweeping ineffectual French resistance aside, the German armies reached Abbeville, on the French coast, just below the Straits of Dover.

The invasion of France cut the Allied armies in two, with French forces to the south of the invaders and British to the north. Belgium had little choice but to surrender, which it did on May 28, 1940; the British Expeditionary Force, which had been dispatched to the continent, now faced almost certain annihilation or capture. By means of a heroic and massive amphibious operation, most of the British forces made a hair's-breadth escape across the English Channel from the coastal town of Dunkirk. This evacuation not only saved the British army from complete destruction but also rescued Britain from imminent invasion.

Despite the lightning speed with which France had been overrun, Premier Paul Reynaud (1878–1966) wanted to continue the war. He was voted down, however, and chose to resign rather than accept an armistice. His vice premier, a popular hero of World War I, Marshal Henri Phillipe Pétain (1856–1951), sued for peace, asking Hitler for an armistice, even as Pétain's World War I subordinate and protege, Brigadier General Charles de Gaulle (1890–1970), broadcast to France from London (where he happened to be stationed at the outbreak of the war) an appeal to the French people never to surrender. Despite de Gaulle's plea, on June 22, 1940, Pétain signed an armistice by which two-thirds of France was yielded to German occupation. The rest of the country was to be administered by Pétain from Vichy as a German puppet.

The fall of France left Germany master of the European continent, and it left England to stand alone against Nazi aggression—although de Gaulle, operating from England, worked feverishly to organize the "Free French" resistance against the Nazi occupation of his homeland.

Winston Churchill, who had replaced Chamberlain as prime minister on May 10, 1940, appealed to President Roosevelt for aid from the United States. On November 4, 1939, Roosevelt had secured repeal of a U.S. arms embargo on belligerent nations. In response to Churchill's appeals, on December 8, 1940, he proposed instituting the Lend-Lease program, which was passed into law in March 1941. This gave the president authority to aid any nation whose defense he believed vital to the United States and to accept repayment for such aid "in kind or property, or any other direct or indirect benefit which the President deems satisfactory." The United States, not yet in the war, was rapidly on its way to becoming the "arsenal of democracy."

From August 8 to August 18, 1940, the Luftwaffe began the first phase of the Battle of Britain, mainly by attacking coastal areas and ports. The British Royal Air Force (RAF), although outnumbered, outflew the Germans

and inflicted severe losses on the attackers. From August 24 through September 5, the second phase of the battle began with attacks concentrated on RAF bases. These attacks were far more effective, but, at Hitler's direction, the Luftwaffe shifted its strikes from the RAF bases to the civilian population, with massive bombing raids on London during September 7 through September 30.

In the meantime, the British responded by bombing Berlin (August 24–29), which caused relatively little damage but did have a profound psychological effect on the Germans and was instrumental in Hitler's (militarily poor) decision to concentrate on civilian targets instead of wiping out the RAF. Once the Germans had lost momentum, British forces were able to destroy vessels massed for an invasion of Britain (Operation Sea Lion) during September 14–15, thereby preventing a rapid German victory. Sporadically, from November 1940 to May 1941, a number of English cities, including London, were subjected to the "blitz," an intensive nighttime bombing campaign. Designed to break the English will to fight, it served only to strengthen the people's desire to resist and to win.

During 1940–41, war also raged in the Balkans, the Mediterranean, and in Africa, theaters in which Germany's ally Italy fought with poor success. Japan, which, on September 27, 1940, had formally signed a three-power pact with Germany and Italy to form the Rome-Berlin-Tokyo Axis, was fighting in China, India, and Indo-China. At the end of 1941, by attacking Pearl Harbor and the Philippines, Japan would bring the United States into the war.

On June 22, 1941, without warning, Germany suddenly abrogated the nonaggression pact with the USSR by invading the Soviet Union and penetrating deep into Soviet territory. On December 8, 1941, the day after Japanese aircraft attacked Pearl Harbor, Hawaii, the United States joined Britain in its lonesome and perilous stand against the Axis. But the year closed with Germany, in a phrase Chancellor Otto von Bismarck (1815–98) had used to justify his nation's aggression in the late 19th century, very much "in the saddle."

World War II: Africa and the Mediterranean (1940–1943)

PRINCIPAL COMBATANTS: Britain, United States, and Colonial French forces (capitulated early) vs. Germany and Italy

PRINCIPAL THEATER(S): North Africa and Mediterranean Ocean

DECLARATION: See World War II: Outbreak and Early German Conquests and World War II: Pacific

MAJOR ISSUES AND OBJECTIVES: The Allies wanted to protect the Suez Canal and oil-rich Middle East, while also creating a staging area for an invasion of mainland Italy and Europe via Sicily.

OUTCOME: The Axis forces were defeated in North Africa by 1943.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Britain, 160,000; United States, 107,000; Italy, 325,000 in East Africa and Libya; Germany, 113,000

CASUALTIES: Britain, 35,476 killed, 184,500 wounded or missing; United States, 16,500 killed, wounded, or dead of disease; Italy, 13,748 killed, 8,821 missing; Germany, 18,594 killed, 13,000 captured, 3,400 missing

TREATIES: See World War II: Western Front

This entry focuses on the course of World War II in Africa and the Mediterranean. For the historical background of the war, see WORLD WAR II: HISTORICAL BACKGROUND (1920s–1939). The outbreak of the war and its early course in Europe are treated in WORLD WAR II: OUTBREAK AND EARLY GERMAN CONQUESTS. For entries that treat the course and conclusion of the war in various theaters, see the SINO-JAPANESE WAR (1937–1945); WORLD WAR II: ATLANTIC FRONT; WORLD WAR II: CHINA-BURMA-INDIA THEATER; WORLD WAR II: GREECE AND THE BALKANS; WORLD WAR II: ITALIAN FRONT; WORLD WAR II: PACIFIC; WORLD WAR II: RUSSIAN FRONT; World War II: Western Front. For the development and deployment of the atomic bomb, see World War II: Pacific. For the treatment of the major Allied summits, the Holocaust, and the Nuremberg trials, see World War II: Western Front.

As long as the fighting was confined to Europe, the majority of Americans favored neutrality in the early days of World War II, but all question of continued neutrality was destroyed by the December 7, 1941, Japanese attack on Pearl Harbor. Although Americans understood that the

nation was now deeply involved in a two-front war, popular opinion craved vengeance against the Japanese as payback for their sneak attack. If most Americans had had their way, the initial war effort would have been directed against Japan, not the Atlantic and Europe. The U.S. high command, diplomats, and politicians, however, were anxious to work in earnest with Britain and Russia to contain and defeat Hitler. It seemed all too apparent that neither of these two allies, the last anti-Nazi holdouts in Europe, would be able to stand indefinitely against an all-conquering Germany without aid from a large American force.

Mobilization of U.S. forces would take time, however, and for most of 1942 the United States did concentrate on the Pacific, because the Japanese held Americans under fire in the Philippines and posed a real threat to the United States itself. In the meantime the United States helped Britain and Russia primarily by serving these nations as the so-called arsenal of democracy, producing and conveying a continual supply of munitions and other materiel. In the case of Britain, convoys ran the deadly north Atlantic, whereas supplies to the Soviets traveled via the equally hazardous Murmansk Run—along the coast of Norway and into the Arctic Ocean—or via the longer, though less dangerous, Persian Corridor, which terminated in the ports of Iran.

Not that American military planners were any less than eager to get U.S. personnel actively involved in Europe. They intended to use England as a staging area on which to build a large force for a cross-Channel invasion. Initially, the plan was to attack German forces from the west while the Soviets continued to resist from the east—essentially, to wage a two-front war against Germany. British planners, however, were concerned that it would require far too much time to build up an effective invasion force, time during which Germany would create defenses in continental Europe that simply could never be breached, let alone overcome. Besides, the British had already attempted continental invasions by way of France, Norway, and Greece. Each time, they had failed miserably.

The British solution to the invasion dilemma, a solution especially favored by Prime Minister Winston Churchill (1874–1965), was to delay a frontal assault on what was being called Hitler's "Atlantic Wall" and attempt, first, an invasion via what Churchill called the "soft underbelly of Europe." The British proposal was to gain victories against the Germans and the Italians in North Africa, then jump off from North Africa to Sicily and then onto the Italian mainland. The Allies would advance up the Italian Peninsula and, ultimately, into the rest of Europe. This type of semi-indirect invasion would accomplish several things: It would give the Allies time to build up, train, and equip an overwhelming invasion force from the west. It would win victories where they could be won, and thereby improve Allied morale. It would dispose of Italy as an enemy. It would tie down German forces that otherwise would be used against the Russians, thereby enabling the

Russians to turn their desperate defense into an offensive from the east. Ultimately, it would also tie down German troops who would otherwise be used against the Allies invading from the west. The Germans would be surrounded on three sides—west, south, and east.

American planners resisted the "soft underbelly" approach until the actions of the brilliant German tank tactician General Erwin Rommel (1891–1944) in North Africa forced their hand. By the autumn of 1942, Rommel, dubbed the "Desert Fox" by the wary and weary Allies, had pushed the British out of every North African nation and bottled them up in Egypt. At immediate stake was the Suez Canal, without which the flow of Allied supplies would quickly be strangled. It was clear that attacking North Africa was no longer optional. It had become an urgent necessity.

British commander Bernard Law Montgomery (1887–1976) led his Eighth Army to a hard-fought victory against Rommel's hitherto invincible Afrika Korps at the second Battle of El Alamein during October–November 1942. On November 13, Tobruk fell to Montgomery, followed by Tripoli on January 23, 1943. Capitalizing on these victories, Montgomery pursued the Afrika Korps across the Tunisian frontier throughout February 1943.

In the meantime, beginning on November 8, 1942, U.S. troops were landing in North Africa in Operation Torch. Employing a combination of military and diplomatic means, the American supreme commander, General Dwight D. Eisenhower (1890–1969), secured U.S. bases of operation in French-occupied Morocco and Algeria by November 15. From these bases, U.S. forces launched operations eastward against Tunisia, into which Montgomery was pushing Rommel's Afrika Korps. Eisenhower's intention was to trap Rommel, catching him between the American forces and the British. This was easier said than done. In the first battle between U.S. troops and the Afrika Korps, at Kasserine Pass, Tunisia, during February 14–22, 1943, the American forces, poorly equipped for the desert and poorly led by Major General Lloyd Fredendall (1883–1963), suffered a humiliating defeat. Fortunately for the defeated Americans, Rommel did not capitalize on his victory at Kasserine. He withdrew, leaving the U.S. forces stunned and demoralized but intact.

In the wake of Kasserine, Eisenhower called in Major General George S. Patton (1885–1945) to take over command of the U.S. II Corps. Patton quickly instilled discipline and pride in the bloodied unit, and, collaborating with Montgomery, led II Corps in a pursuit that drove the Afrika Korps into full retreat from its positions in Tunisia.

As Patton now prepared to lead the invasion of Sicily, Major General Omar Bradley (1893–1981) was put in command of U.S. forces in North Africa. Under his direction, the U.S. and Free French armies descended on a combined German-Italian army from the north while Montgomery's Eighth Army came up from the south. On May 13, 1943, the Italian First Army surrendered to Montgomery in a

major defeat that signaled the collapse of the entire Axis position in North Africa. In one fell swoop, approximately 275,000 Axis soldiers became Allied prisoners of war, and North Africa was cleared of the enemy. With victory in North Africa, Patton and Montgomery were ready to step off toward Sicily, from which they would invade the Italian mainland.

World War II: Atlantic Front (1939–1945)

PRINCIPAL COMBATANTS: United States and Britain vs. Germany

PRINCIPAL THEATER(S): Atlantic Ocean

DECLARATION: See World War II: Outbreak and Early German Conquests and World War II: Pacific

MAJOR ISSUES AND OBJECTIVES: The German navy waged a campaign of commerce destruction; the Allies fought to regain control of the sea lanes.

OUTCOME: The Battle of the Atlantic lasted throughout the war, but by the end of 1943, most Allied convoys were reaching their destinations.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the beginning of the war, Allied warships of all types numbered 735; Axis warships, 540.

CASUALTIES: Allies, including merchant marine, 50,000 killed; Germany, 32,000 killed; Allies and neutrals lost 2,575 vessels; Germany lost 781 U-boats

TREATIES: See World War II: Western Front

This entry focuses on the course of World War II on the Atlantic Front. For the historical background of the war, see WORLD WAR II: HISTORICAL BACKGROUND (1920S–1939). The outbreak and course of the war in Europe are treated in WORLD WAR II: OUTBREAK AND EARLY GERMAN CONQUESTS. For entries that treat the course and conclusion of the war in various theaters, see the SINO-JAPANESE WAR (1937–1945); WORLD WAR II: AFRICA AND THE MEDITERRANEAN; WORLD WAR II: CHINA-BURMA-INDIA THEATER; WORLD WAR II: GREECE AND THE BALKANS; WORLD WAR II: ITALIAN FRONT; WORLD WAR II: PACIFIC; WORLD WAR II: RUSSIAN FRONT; WORLD WAR II: WESTERN FRONT. For the development and deployment of the atomic bomb, see World War II: Pacific. For the treatment

of the major Allied summits, the Holocaust, and the Nuremberg trials, see World War II: Western Front.

At the outbreak of war in Europe, Great Britain proclaimed a naval blockade of Germany. Germany's fleet was too small to declare in return anything so grandiose as a blockade, but it was prepared to wage a war of commerce destruction, using U-boats and some surface ships to attack British and Allied merchantmen as well as warships escorting them. On September 3, 1939, a German U-boat sank the British passenger liner *Athenia*, and on September 17 the carrier HMS *Courageous* was sunk. From September through the end of 1939, the pocket battleship *Graf Spee* raided the South Atlantic, capturing or sinking 11 British merchant vessels and rendering itself the object of an intensive search mission. Also lost to the Germans in 1939 were the battleship HMS *Royal Oak* and HMS *Rawalpindi*, a merchant vessel that had been converted to a cruiser.

By 1940, the United States, though still a noncombatant, was shipping large consignments of materiel to Britain, and on December 8, 1940, President Franklin Roosevelt (1882–1945) proposed a “Lend-Lease” policy, enacted in March 1941, which gave him executive authority to aid any nation whose defense he believed vital to the United States and to accept repayment for such aid “in kind or property, or any other direct or indirect benefit which the President deems satisfactory.” By September 1941, American warships were escorting, west of Greenland, materiel convoys bound for Britain. In effect, America was engaged in an undeclared naval war with Germany. The U.S. Navy destroyer *Kearny* was damaged by German torpedoes on October 17, 1941, and the destroyer *Reuben James* was sunk on October 31.

In the meantime, during 1941, the Germans unleashed U-boats operating in “wolf packs,” groups of up to 15–20 boats spread out along the sea lanes so that they could trap more merchantmen and conduct coordinated attacks on convoys. Working in concert with the wolf packs, German long-range bombers attacked vessels as they approached Britain. To combat the wolf packs and the bombers, Britain began deploying escort carriers, which allowed fighter planes to accompany convoys. As more escort carriers were constructed and deployed, they proved increasingly effective against the bombers and wolf packs.

On the surface, during 1941, the German battleships *Hipper* and *Bismarck* raided the North Atlantic. *Bismarck* sank the battle cruiser HMS *Hood* and badly damaged the battleship HMS *Prince of Wales* in the May 24, 1941, Battle of Denmark Strait. The loss of the *Hood* was so profound a shock that Prime Minister Winston Churchill (1874–1965) personally authorized an all-out campaign against the *Bismarck*, which was sunk on May 28, 1941, with the loss of 2,300 German sailors, including Admiral Günther Lütjens (1889–1941).

The sinking of the *Bismarck* chastened the German Navy, which, as it had done in World War I, now kept its

surface fleet close to home and relied almost exclusively on U-boat action against commerce vessels. As important as the sinking of the *Bismarck* was, both strategically and as a badly needed boost to British morale, even more crucial was the ongoing work on cracking the German “Enigma” naval code. By 1941, British intelligence officers were able to read much of the coded radio traffic to and from the U-boats, giving the beleaguered convoys and their escorts a much-needed advantage.

When the United States entered World War II in December 1941, the German navy redoubled its efforts to block the sea lanes between North America and Europe. By early 1942, German U-boats were also being dispatched to U.S. coastal waters, where they wreaked havoc on undefended merchant vessels that, at night, made vividly silhouetted targets against the background of U.S. coastal urban lighting. However, by the late spring and into the summer of 1942, U.S. Navy and Coast Guard defenses were greatly improved, as were Army Air Force coastal patrols; the U-boats working in or near American waters began to take heavy losses. Farther out in the sea lanes, U-boat attacks on Allied convoys intensified, but so did the Allied response. In 1942, 1,027,000 tons of Allied shipping was sunk by German U-boats—but at the staggering cost of 85 U-boats sunk.

The year 1943 brought a new approach to the operation of the Allied convoys. During April 28–May 6, Commander Peter W. Gretton of the Royal Navy led across the Atlantic a convoy in which the transports were not only escorted by more warships but also were kept in tight formation. Accepted doctrine called for spreading out the vessels, since it was believed that pulling them together simply made them more convenient targets. In fact, close convoy formations made it much easier to defend the convoy, especially when escorted by large numbers of armed ships. The new-style convoy tactics proved highly effective, and from this point forward the tide of the U-boat war began to turn against the Germans. The submarines, once almost invulnerable to attack, were now more readily targeted, and, indeed, the hunters became the hunted. Beginning in June 1943 and extending through the end of the year, the U.S. 10th Fleet organized a “hunter-killer” campaign, which was aggressively directed against the U-boats. American warships and aircraft were organized into “killer groups” and conducted well-coordinated attacks that located and destroyed many wolf packs. By the end of 1943, although the U-boats still took a heavy toll on Allied shipping, the hunter-killer campaign made assignment in the U-boat service all but suicidal. By the end of the year, Allied U-boat kills exceeded the Germans’ ability to replace the vessels and crews.

The year 1943 also brought the end of the German surface menace to the vital Murmansk convoys, which supplied the Soviet Union. During September 6–9, 1943, the German battleship *Tirpitz* and battle cruiser *Scharnhorst*, in concert with 10 destroyers, raided Spitzbergen,

causing serious damage to important Allied coal mining and loading facilities. In the attack, however, *Tirpitz* was badly damaged by British midget submarines during September 21–22, and on December 26 the *Scharnhorst* was destroyed by a combination of artillery bombardment and torpedo attack.

During 1944, U.S. hunter-killer groups became increasingly effective in combating the U-boat menace, in time to allow the transport of more than one million U.S. troops in preparation for the invasion of France. Technological improvements in sonar and hydrophone devices made the detection of U-boats easier and more accurate. Although an intensive U-boat campaign in shallow British coastal waters during November–December 1944 spiked Allied shipping losses, retaliation against the U-boats was swift and effective.

In November, another German naval menace, the repaired battleship *Tirpitz*, was sunk by British aerial bombardment as it attempted to hide in a Norwegian fjord.

Although German naval chief Karl Dönitz (1891–1980) poured new U-boats into the Atlantic theater during the first quarter of 1945, Allied countermeasures were so firmly in place—convoys escorted by a double screen of destroyers, aircraft carriers on continual patrol in the sea lanes—that the U-boats had no chance. On May 6, 1945, the USS *Atherton* and *Moberly* sunk the *U-853* off Block Island in the last naval engagement in the Atlantic. Allied merchant ships no longer needed to travel in convoys. The sea lanes had been opened, and the long Battle of the Atlantic won.

World War II: China-Burma-India Theater (1941–1945)

PRINCIPAL COMBATANTS: Britain, British Commonwealth nations, China, and the United States vs. Japan

PRINCIPAL THEATER(S): China, Burma, and India

DECLARATION: Various; United States declared war on Japan, December 8, 1941

MAJOR ISSUES AND OBJECTIVES: Japan sought control of China and southern Asia, which was rich in various raw materials, especially rubber.

OUTCOME: Allied resources in the CBI theater were minimal until late in the war; once adequately supplied and manned, the Allied offensive was totally successful in Burma and India; Japanese occupation of China ended only with the total surrender of Japan.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: In Malaya and Singapore, Japan, 68,000; British Commonwealth, 88,000. During the Japanese invasion of Burma, Japan, 85,000; British Commonwealth, 47,000; Chinese, 95,000

CASUALTIES: In Malaya and Singapore, Japan, 9,824 killed, wounded, or missing; British Commonwealth, 138,708 killed, wounded, missing, or captured. In Burma, Japan, 185,149 killed in battle or from other causes; British Commonwealth, 15,326 killed, 44,731 wounded, 14,852 missing; United States, 3,349 killed, 2,177 wounded, 707 missing, 710 captured, 2,721 died of disease or other causes; Chinese, unknown

TREATIES: See World War II: Pacific

In coordination with the attacks on the U.S. naval and army bases at Pearl Harbor, Hawaii, on December 7, 1941, and on the Philippines and other Pacific targets, imperial Japanese forces attacked objectives in Asia during December. They invaded Kowloon, Hong Kong, during December 8–10, forcing the British to withdraw to Hong Kong Island. When British major general C. M. Maltby refused a Japanese demand for surrender on December 13, the British crown colony came under continuous heavy attack during December 18–25 and fell on Christmas Day, with the loss of the British garrison of 12,000 killed, wounded, or taken prisoner. At the same time, on December 8, northern Malaya was invaded by 100,000 Japanese troops, who faced a British force of approximately equal numbers. Taken by surprise, the British forces were pushed steadily to the south; they fell back on Singapore by December 31. With the new year came British defeat on the Malay Peninsula, which was followed during February 8–15 by the Japanese conquest of Singapore.

While Malaya and Singapore were being taken, Thailand and Burma fell under attack and were invaded during January–March. Here, with the aid of Chinese forces under the command of American general Joseph “Vinegar Joe” Stilwell (1883–1946), Allied forces were able to regroup and offer sustained resistance. Nevertheless, under ceaseless pounding from the Japanese, the Allies were forced to retreat from Mandalay and from Burma. China was now cut off from the other Allies.

All that was left of Allied military presence in China was air power, chiefly in the form of the American Volunteer Group, better known as the “Flying Tigers,” under Colonel Claire Chennault (1890–1958). Flying a small number of semi-obsolete P-41 pursuit aircraft, Chennault’s skilled and daring pilots were highly effective in the skies over China and Rangoon, intercepting Japanese bomber attacks and defending Rangoon itself. Together with British RAF squadrons, the Flying Tigers also supported the Allied troop withdrawal from Burma and were instrumental in preventing the destruction of this force.

Air power was also vital in the form of airlift, as General Stilwell organized the continuous air cargo supply of Kunming, China, after Burma fell to the Japanese. Cargo craft routinely flew the “Hump,” an extraordinarily hazardous route over the eastern Himalayas, and thus kept Chinese forces supplied.

THE BURMESE THEATER

For much of the war, the Allies fought little more than holding actions in the so-called China-Burma-India (CBI) Theater, for the greatest share of Allied resources in the war against Japan had to be committed to the Pacific campaign. CBI commanders, such as Stilwell and the supreme Allied CBI commander, Louis Mountbatten (1900–79), had to improvise with whatever meager resources were available. Nevertheless, the Allies did plan offensives in this theater. They attempted to consolidate strength in India and China for an invasion of Japanese-held Burma. For their part, the Japanese planned to use Burma as a staging area from which to invade British-held India.

It was not until the beginning of 1944 that the British began their offensive, by advancing into Arakan, Burma. They were almost pushed back by a sharp Japanese counterattack during February 4–12, but a deftly executed British strike against the Japanese encircling force resulted in the envelopment of the attackers. At this point, however, the Burmese climate intervened. The onset of the seasonal monsoon in May brought action to a muddy halt on both sides for the rest of the year.

In northern Burma, the principal Allied offensive effort was directed against the Japanese stronghold of Myitkyina. Combined American-Chinese forces under Stilwell attacked Myitkyina during May 17–18 but were repulsed by troops firing from very well prepared defenses. Stilwell decided to lay siege to Myitkyina, despite the punishing monsoon. The

Americans' perseverance paid off, and the starving garrison surrendered to Stilwell on August 3, 1944. However, the campaign in northern Burma had to be cut off at the end of the year when Chinese generalissimo Chiang Kai-shek (1887–1975) ordered the withdrawal of Chinese troops from Burma to defend China itself against a renewed Japanese offensive.

With the offensive in the north thus stalled, British forces repelled a Japanese invasion of India that was launched from central Burma. By September 1944, the British had all but totally destroyed the Japanese Fifteenth Army. From India, the victorious British advanced into central Burma. Their immediate objective was to secure the Burma Road, the great overland route of supply and communication between India and China.

THE CHINA THEATER

By early 1944, Chennault's Flying Tigers, which had been transferred into the U.S. Army Air Force as the U.S. 14th Air Force, were making substantial progress against the Japanese air and ground forces in China. Anxious to neutralize the 14th Air Force, the Japanese launched a major counteroffensive in east China. Seven of 12 14th Air Force airfields were overrun and captured, and the cities of Kunming and Chongqing (Chungking) were put in imminent danger of capture. Chennault consolidated his 14th Air Force and used it to support the Chinese ground forces, but Chinese resistance inexorably fell away.

Late in 1944, Chiang Kai-shek asked U.S. high command to recall Stilwell. Although he was a formidable commander, the strong-willed Stilwell had never worked easily with the equally strong-willed Chiang. He was replaced by General Albert C. Wedemeyer (1897–1989), who immediately established a fine rapport with the Chinese generalissimo. By December 1944, under Wedemeyer, combined U.S. and Chinese ground forces, supported from the air by Chennault, at last checked the Japanese advances throughout China.

CBI THEATER: LATE PHASE

By the start of 1945, the Japanese situation in the Pacific was desperate, yet, in defeat, the Japanese resolve to resist became, if anything, stronger than ever before. Although Japan's Pacific perimeter had greatly contracted, the empire still held much of Burma and southern Asia, and it still controlled much of China at the beginning of 1945. Therefore, after years of operating on a shoestring in the CBI, the Allies were at last prepared to commit more adequate resources to the theater.

At the start of 1945, four Allied forces converged on Burma. The British XV Corps pushed through Arakan toward Akyab, while the British Fourteenth Army advanced through the dense jungle between the Chindwin and Irrawaddy rivers. Simultaneously, yet another British force, the Northern Combat Area Command, moved in on the vital Burma Road from the west, while the Y-Force

of the Chinese army approached China's frontier with Burma. These Chinese troops succeeded in opening up the Burma Road on January 27, and land convoys began rolling into China. With supply lines now fully open, the pace of progress in Burma accelerated. By the middle of March 1945, all of northern Burma was back in Allied hands.

Central Burma, however, remained a problem. General William Slim (1891–1970), the resourceful commander of the British Fourteenth Army, outguessed his Japanese counterpart, General Hyotaro Kimura (served in theater, 1943–45). Kimura planned to draw Slim deep into central Burma, then counterattack just as Fourteenth Army attempted to cross the Irrawaddy north of Mandalay. Anticipating this trap, Slim used a decoy unit to draw off Kimura as the bulk of the Fourteenth Army made a surprise crossing of the Irrawaddy. Slim's maneuvering culminated in the Battle of Mandalay during March 9–12, in which the city fell to the British. In desperation, Kimura counterattacked at Meiktila, but Slim readily checked this action, and Meiktila also fell to the British.

The war in Burma was all but won. Rangoon was captured on May 2. Despite the drenching monsoon, Slim relentlessly pursued the remaining Japanese forces, which were in full retreat.

Even as its positions in the Pacific and in Burma collapsed, the Japanese made extensive gains in China itself during early 1945, especially in the region close to the border with French Indochina. During the early spring, from March through May, the Japanese also advanced deeply into central China as well. In April, however, the Soviet Union began preparations for a declaration of war against Japan. As the Soviets built up their forces for an invasion of Japan and Japanese-held China, the Japanese had little choice but to pull troops from coastal and central China in order to concentrate them in Manchuria, the inevitable route of a Soviet invasion.

As it turned out, Joseph Stalin (1879–1953), the Soviet dictator, put off a declaration against Japan until August 8, after the atomic bombing of Hiroshima made Japan's doom all but certain. At this late date, the Soviets commenced their advance into Manchuria, which extended several days beyond August 14, the day of Japan's unconditional surrender. The surrender ended the Japanese occupation of China.

World War II: Greece and the Balkans

(1939–1941)

PRINCIPAL COMBATANTS: Italy, Germany, and the Soviet Union vs. Greece (with British assistance) and Romania

PRINCIPAL THEATER(S): Greece, Crete, Yugoslavia, and adjacent Mediterranean waters

DECLARATION: See World War II: Outbreak and Early German Conquests and World War II: Pacific

MAJOR ISSUES AND OBJECTIVES: See World War II: Outbreak and Early German Conquests

OUTCOME: Greece, Yugoslavia, and the rest of the Balkans remained in German hands until the end of the war in Europe.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Axis, 260,000 (13 divisions), Yugoslavia, 800,000, Britain, 56,600 (in Crete)

CASUALTIES: In Greece: Britain, 3,700 killed, 8,000 captured; Greece, 70,000 killed or wounded, 270,000 captured; Germany, 4,834 killed or wounded; Italy, 6,000 killed or wounded. In Yugoslavia, Germany, 151 killed, 407 wounded; Italy, 1,000 killed or wounded; Yugoslavia, 3,000 killed (in Belgrade), 341,000 captured. In Crete, Allies, 1,742 killed, 2,225 wounded; Germany, 3,352 killed, 3,346 wounded

TREATIES: See World War II: Western Front

The outbreak and early course of the war in Europe are treated in WORLD WAR II: OUTBREAK AND EARLY GERMAN CONQUESTS. For entries that treat the course and conclusion of the war in various theaters, see the SINO-JAPANESE WAR (1937–1945); WORLD WAR II: AFRICA AND THE MEDITERRANEAN; WORLD WAR II: ATLANTIC FRONT; WORLD WAR II: CHINA-BURMA-INDIA THEATER; WORLD WAR II: ITALIAN FRONT; WORLD WAR II: PACIFIC; WORLD WAR II: RUSSIAN FRONT; WORLD WAR II: WESTERN FRONT. For the development and deployment of the atomic bomb, see World War II: Pacific. For the treatment of the major Allied summits, the Holocaust, and the Nuremberg trials, see World War II: Western Front.

Although Italy was bound by the “Pact of Steel” between Adolf Hitler (1889–1945) and Benito Mussolini (1883–1945) to enter any war on which Germany might embark, Mussolini declined to declare war until he felt certain of his ally’s victory. Thus on October 28, 1940, General Sebastiano Visconti Prasca (1883–unknown),

already occupying Albania with an army of 160,000 men, invaded Greece with the bulk of his forces. To the chagrin of the poorly led, poorly equipped, and indifferently motivated Italians, Greek forces under General Alexander Papagos (1883–1955) offered fierce resistance. Deploying 150,000 men in skillfully prepared defensive positions, Papagos pushed the invaders back.

On November 9, Visconti Prasca was replaced by General Ubaldo Soddu (1883–1949), who soon faced a determined Greek counteroffensive, spanning November 22 to December 23. With air support from the British Royal Air Force (RAF), the Greeks not only drove the Italian invaders out of their country, but pushed them back into Albania as far as the Valona-Tepelino-Lake Ochrida line. Loss of men and materiel was great, but even greater was the loss of Italian military prestige. As Italian forces huddled near Valona, British warships bombarded the Valona naval base. Defeat was so complete that Marshal Pietro Badoglio (1871–1956), Italy’s chief of staff, was forced to step down.

While the Italians were suffering defeat in Greece and Albania, the Soviets—at the time more or less allied with the Germans—occupied Bessarabia and northern Bukovina during June 26–28, 1940, while German forces took the Romanian oil fields on October 8. Crete was occupied by British forces under General Archibald Wavell (1883–1950).

Early in 1941, the Balkan front heated up further as Hitler threatened Yugoslavia, prompting the prince regent, Paul (1893–1976), to agree to join the Axis rather than offer resistance. This, however, triggered a coup d’état on March 21, 1941, by anti-German elements of the Yugoslav army, which established a provisional government that denounced the alliance with the Axis. Hitler concluded that the coup had been made possible by Italy’s failure in Greece, and he ordered an immediate invasion of Yugoslavia as well as Greece. With truly terrifying speed, the German 12th Army under Field Marshal Wilhelm List (1880–1971) and the First Panzer Group under Paul von Kleist (1881–1954), augmented by the German Second Army and the Italian Second Army, invaded Yugoslavia during April 6–17. The *Blitzkrieg* (lightning war) invasion was executed so swiftly that much of the million-man Yugoslav army was never even mobilized. Zagreb fell on April 10, Belgrade on April 12, and Sarajevo on April 15. The provisional Yugoslav government surrendered on April 17. The stunning operation had cost the Germans no more than 558 men killed, whereas Yugoslav losses were staggering—at least 300,000 captured and perhaps as many as 100,000 killed or wounded.

Despite the horrific losses, a core group of Yugoslav military men fled into the mountains and organized partisan resistance against the invaders. Unfortunately, the two principal partisan groups, the Chetniks (Četniks) and the Yugoslav communists (led by Josip Broz, Marshal Tito

[1892–1980]), hated each other as much as they did the Germans, and Yugoslavia was effectively gripped by a three-way war before the end of 1941.

While Yugoslavia fell under Nazi control, 57,000 British troops under General Maitland Wilson (1881–1964) arrived in Greece during March 2–27, 1941, in anticipation of a German invasion. Greek forces resisted valiantly but quickly crumbled under the onslaught, and the British were forced to withdraw north of Mount Olympus. During April 12–20, the Germans pressed into central Greece, dividing the Greek First Army from the British forces. General Papagos gallantly advised the British army to save itself while he bought time for his Greek forces by a covering action. General Wilson withdrew to Thermopylae. The Greek army held out until April 23, when it finally surrendered. On the next day, Wilson began evacuating his troops by means of a hazardous amphibious operation under Luftwaffe strafing and bombardment. The air attacks took a heavy toll, but most of Wilson's army—43,000 men—escaped, having had to abandon a huge stock of materiel. Total British casualties amounted to 11,840 killed and wounded, whereas Greek losses were more than 70,000 killed and wounded and 270,000 captured. German losses amounted to no more than 4,500 men. The invasions of Greece and Yugoslavia were examples of Blitzkrieg at its most efficient and devastating.

Some 15,500 of the British troops evacuated from the Greek mainland were landed on Crete to assist in repelling an anticipated German invasion. This force was joined by 12,000 British troops from Egypt and was augmented by a Greek garrison of 14,000. The expected assault came during May 20–28 and was executed with the usual German efficiency, violence, and speed. Aerial bombardment was followed by a paratroop attack. The Allies offered strong resistance and inflicted casualties far beyond what the Germans had expected; however, the Germans had reinforcements available and poured in troops, mostly by air. The island fell to the invaders on May 31 and was the first significant airborne assault in military history. Although it succeeded in attaining its objective, the losses incurred—almost 6,000 paratroops—were so high that Hitler never again used the airborne tactic.

While suffering disaster on land, the British fought gallantly in the Mediterranean. In the Battle of Cape Matapan on March 28, 1941, the British Mediterranean fleet under Admiral Andrew Cunningham (1883–1963) dealt the Italian fleet a stunning blow, sinking two cruisers, four destroyers, the heavy cruiser *Pola*, and the battleship *Vittorio Veneto*, pride of the Italian fleet. In this single action, the Italian surface navy was effectively neutralized. Surviving ships remained bottled up in port at La Spezia. However, on December 19, the British fleet suffered crippling damage to the battleships *Queen Elizabeth* and *Valiant*, victims of attack by Italian midget submarines, and the loss of three cruisers and a destroyer to mines. On

Christmas day, the battleship *Barham* was sunk by a German U-boat.

Greece, Yugoslavia, and the rest of the Balkans remained in German hands until the end of the war in Europe.

World War II: Italian Front (1943–1945)

PRINCIPAL COMBATANTS: United States and Britain vs. Germany and Italy

PRINCIPAL THEATER(S): Italy

DECLARATION: Italy against Britain and France, June 10, 1940; Italy against United States, December 11, 1941

MAJOR ISSUES AND OBJECTIVES: The Allies saw Italy as the “soft underbelly” of Europe—a means of invading the continent from the south.

OUTCOME: Italy officially surrendered early in the invasion, but Germany held northern Italy, where some Italian forces remained a threat to the Allies. After a long and difficult campaign, the Allies prevailed against the Germans in Italy.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Initial assault, U.S. and Britain, 160,000; Germany and Italy, 350,000

CASUALTIES: Allies, 313,495; Germany, 434,646; 200,000 Italians fighting the Allies were killed; 130,000 Italians fighting the Axis powers were killed.

TREATIES: Instrument of Surrender of Italy, September 29, 1943; Peace Treaty between the Allies and Italy, February 10, 1947

This entry focuses on the Allied invasion of Italy during World War II and its consequences. For the historical background of the war, see WORLD WAR II: HISTORICAL BACKGROUND. For the outbreak of the war and its early

course in Europe, *see* WORLD WAR II: OUTBREAK AND EARLY GERMAN CONQUESTS. For entries that treat the course and conclusion of the war in other theaters, *see* the SINO-JAPANESE WAR (1937–1945); WORLD WAR II: AFRICA AND THE MEDITERRANEAN; WORLD WAR II: ATLANTIC FRONT; CHINA-BURMA-INDIA THEATER; WORLD WAR II: GREECE AND THE BALKANS; WORLD WAR II: WORLD WAR II: PACIFIC; WORLD WAR II: RUSSIAN FRONT; WORLD WAR II: WESTERN FRONT. For the development and deployment of the atomic bomb, *see* World War II: Pacific. For treatment of the major Allied summits, the Holocaust, and the Nuremberg trials, *see* World War II: Western Front.

Pursuant to the Allied strategy of first invading Europe by way of what British prime minister Winston Churchill (1874–1965) called its “soft underbelly,” British and American forces invaded North Africa and defeated German and Italian forces there between 1941 and 1943, then stepped off to invade Sicily.

OPERATION HUSKY

The Allied invasion of Sicily from North Africa, called Operation Husky, began on the night of July 9–10, 1943, when 3,000 ships and landing craft carried 14,000 vehicles, 600 tanks, 1,800 guns, and 160,000 men of the Fifteenth Army Group to a landing on the island. Air strikes to soften up defenses had prepared the way for the landings, and an advance guard of paratroopers, from the British First Airborne and U.S. 82nd Airborne also participated. Combined German and Italian land forces, about 350,000 men, outnumbered the attackers, but 3,680 Allied planes overwhelmed the 1,400 Axis planes in the area and quickly achieved air supremacy, greatly facilitating the landings. The Allies rapidly secured beachheads, and the British Eighth Army captured Syracuse on July 12, then Augusta on July 14. Axis resistance stiffened at Catania, where the enemy held the slopes of Mount Aetna. While the British forces were stalled at Catania, U.S. general George Patton (1885–1945) continued his advance, taking the port of Licata, then beating back a counterattack at Gela. After this, the U.S. II Corps, under Omar Bradley (1893–1981), drove up the center of Sicily to capture San Stefano.

After Gela and San Stefano, the thrust of the American advance turned east in two columns. One proceeded along the coast, while the other advanced via an inland route. The bifurcated American advance drew off pressure from the British Eighth Army, which was able to take Catania. However, it was the capture of Messina by U.S. units that ended the 38-day campaign for Sicily.

FALL OF MUSSOLINI

At a cost of 167,000 Axis casualties, mostly Italian, and 31,158 Allied losses (including 11,923 Americans), the Allied offensive had been brought to the doorstep of the Italian mainland and the European continent. The rapid advance of the Allies pulled the last supports from Benito Mussolini's (1883–1945) tottering Fascist regime. Many in

Mussolini's own party, including his foreign minister and son-in-law Galeazzo Ciano (1903–44) and his general Pietro Badoglio (1871–1956), had already denounced him and been sacked by February of 1943. With the Allied invasion, a Grand Council of Fascist leaders convened on July 25 and, after a vicious debate, voted to depose Il Duce and return their country to “the King and parliament.” Mussolini resigned the next day. Victor Emmanuel III (1869–1947) appointed Badoglio to head a new government and issued a warrant for Mussolini's arrest.

Faced with a dilemma—Italy wanted peace but was afraid to break with Adolf Hitler (1889–1945) and provoke a German attack—Badoglio feigned loyalty to Germany but made secret contact with the supreme Allied commander, Dwight Eisenhower (1890–1969). Badoglio was hoping to time an armistice with immediate Allied occupation in order to avoid having to fight Germans, but the Americans made it clear in August that Italy's surrender had to be unconditional. Worse, Eisenhower would not promise to land as far north as Rome.

The Germans were growing suspicious as two British corps crossed the Strait of Messina unopposed, and Badoglio agreed on September 3 to Allied occupation. The Italian surrender was announced on the 8th and Allied landings followed immediately, that very night, in the Bay of Salerno south of Naples. Before the week was out, Hitler's commandos parachuted into northern Italy, rescued Mussolini, and set him up as puppet dictator. All Badoglio's efforts to exit the war proved fruitless when the Allies demanded that the Italians declare war on Germany. He executed the volte-face on October 13, and Italy became an Allied “co-belligerent.”

Allied confusion over just what Italians under Badoglio would do—would they honor the peace? would they resist?—stayed the British and Americans from rushing to occupy all of Italy. The delay bought the Germans time to occupy the mainland with a large force. The Allies now realized that even with Italy formally out of the war the invasion would not be the swift stroke that would open up the rest of Europe.

MAINLAND ITALY CAMPAIGN, 1943

The object of fighting up through Italy was not only to take Italy and invade Europe by its back door but also to force the Germans to withdraw troops from the Russian front to defend Italy. This, it was hoped, would enable the Russians to defeat the vast German forces that had invaded Soviet territory. With Allied pressure applied from the Italian south and the Russian east, a massive landing in the west, across the English Channel, would successfully complete the invasion and subsequent liberation of Europe.

What Allied planners had not counted on was how fiercely and effectively the Germans would resist Italy's invasion. On September 3, 1943, the British Eighth Army landed on the mainland at Calabria, the toe of the Italian boot. On September 9, the day after Badoglio concluded

an armistice with the Allies, the U.S. Fifth Army under Lieutenant General Mark Clark (1896–1984) landed at Salerno, where German resistance was extremely intense. It was not until September 18, after much bloodshed, that British and American operations were sufficiently coordinated to enable the U.S. Fifth Army to declare the Salerno beachhead secure. The cost had been tremendous. The able German general Albert von Kesselring (1885–1960) inflicted more than 15,000 casualties on the Allies while incurring 8,000 losses.

Slowly and painfully, during September and early October, the U.S. Fifth and British Eighth Armies advanced northward, methodically consolidating gains in southern Italy. The advance was all but halted during the Volturno River campaign (October 12–November 14) by especially effective German resistance along what Kesselring called the “Winter Line,” or “Gustav Line,” a series of very well prepared defenses extending from the Gulf of Gaeta to the Adriatic Sea. Here the Allied advance was stalled through the end of 1943, when a standoff developed in rugged and frozen terrain just five miles southeast of the Rapido River.

Heartbreaking as the Italian campaign was for the Allies, the effort of resistance did take a terrible toll on German forces as well, and, as the Allies had hoped, it also tied up forces that might otherwise have been used against the Russians. Thanks in some measure to the Italian campaign, the Soviet army was able to make significant progress, and 1943 proved to be a turning point on the Russian front. Whereas the Soviets had continuously fallen back since 1941, the seemingly interminable Stalingrad campaign, which ended in the loss of 300,000 Germans and the surrender of the 93,000 survivors of the German Sixth Army, brought, at the end of 1943, the launch of a major Soviet offensive. The tide had turned, and if Allied pressure pushing up from the south had stalled, it had nevertheless allowed the Russian push from the east to become overwhelming.

ITALIAN CAMPAIGN, 1944

By January 1944, the U.S. Fifth Army and British Eighth Army had advanced to the Rapido River but got no farther. A fresh Allied landing took place on January 22, when an Anglo-American force of 50,000 hit the beaches at Anzio and encountered almost no resistance. Unfortunately, Major General John P. Lucas (1890–1949) decided to take time to consolidate his forces before commencing his inland advance. This delay allowed Kesselring to reinforce his positions in Anzio and, during February 16–29, mount a fierce counterattack, which forced Lucas to retreat.

Lucas was relieved by Major General Lucien K. Truscott, Jr. (1895–1965), who had earned a reputation as an uncompromisingly aggressive commander. Yet even Truscott could not compensate for the momentum that had been sacrificed. Anzio rapidly hardened into a bloody stalemate that brought to mind the unproductive slaughter of WORLD WAR I trench warfare.

With the opposing armies locked in a death grip at Anzio, the U.S. Fifth Army continued to strike against the Gustav Line along the Rapido. Three assaults were hurled against Monte Cassino. The Allies were repulsed in the first Cassino battles, on February 12 and during February 15–18; the Third Battle of Cassino (March 15–23, 1944) also failed to produce a breakthrough, even though massive air support was employed. The Anzio-Rapido-Cassino operations produced 23,860 U.S. and 9,203 British casualties during the four months before a brute-force frontal assault during May 11–25, coordinated with Allied air bombardment of German supply lines (Operation Strangle), finally produced a breakthrough toward Rome.

Rome was an important objective, and it lured Clark to shift the advance of his Fifth Army in order to attain it. This decision, however, saved the German Tenth Army from envelopment; thus, while Clark was able to enter Rome in hard-won triumph on June 4, the German Tenth remained a viable force and continued to exact a heavy toll on the Allies. Still, the liberation of Rome set up a rapid Allied advance to the Arno River during the summer of 1944. The Fifth Army crossed the Arno on August 26, and the British Eighth Army took Rimini on September 21. Resistance at Bologna proved too strong for Clark to overcome, and Bologna remained in German hands, even after a full-out assault in October.

ITALIAN CAMPAIGN, 1945

In contrast to the war's other fronts, Allied progress in Italy remained slow as 1945 began. In April, the British Eighth Army made a major breakthrough against the German Tenth Army just southeast of Bologna. Shortly after this, the U.S. Fifth Army penetrated the Po Valley in an action that sent the remaining German defenders there into full retreat. The German stronghold of Bologna was at last in Allied hands, and the U.S. Fifth and British Eighth Armies steadily and relentlessly pursued the retreating Germans far into northern Italy. On May 4, 1945, the U.S. Fifth Army linked up with the U.S. Seventh Army at the Brenner Pass, at long last marking the end of the Italian campaign.

DEATH OF MUSSOLINI AND POLITICAL CHAOS, 1943–1945

After his dramatic rescue, Mussolini, in German-occupied northern Italy, renamed the Fascist Party the Republican Fascist Party and created the Italian Social Republic as Germany's new ally. Meanwhile, anti-Fascist parties were springing up all over Italy, merging and reemerging, and launching a resistance campaign that drew Nazi reprisals against tens of thousands of civilians. Left-wing anti-Fascist parties in the south, which had refused participation in the current regime (because they wanted the king, tainted by long association with the Fascists, to abdicate), executed their own about-face when Joseph Stalin (1879–1953) recognized Badoglio's government. Coalitions between royalists and communists, Christian Democrats

and traditional socialists, conservatives and liberals, produced an uneasy provisional government of national unity in March 1944, shortly before Rome was liberated in June.

The situation was, to say the least, complicated. Rome was declared an “open” city; the Nazis still occupied the north; American and British troops fought alongside Italian soldiers they had been fighting against only recently; communist partisans roamed the countryside; Sicily, whose well-established Mafia had aided the Allied invasion, was openly separatist; Italian colonies were up in arms. The government called for a constituent assembly to write a new constitution when all of Italy had been liberated but then fell in a crisis created by its refusal to purge with enough gusto Fascists from its administration. The government that replaced it was even more right-wing. By the spring of 1945, a general partisan uprising was under way, and Allied forces were closing in on Milan and Mussolini. Mussolini and his mistress, Clara Petacci (d. 1945), fled but were captured by Italian partisans and executed by firing squad on April 28. Their bodies were hung by their heels in a Milan public square.

After the entire peninsula had been liberated, long negotiations to form a government resulted in the formation of yet another coalition, this one headed by the Committee of National Liberation’s Ferruccio Parri (1890–1945), a compromise candidate between Socialist Pietro Nenni (1891–1980) and Christian Democrat Alcide De Gasperi (1881–1954). But Parri’s leftist leanings led to the coalition’s collapse in November 1945, and De Gasperi, the ablest of the Italian political leaders emerging from the war, took control and, backed by the Allies, began formulating Italian policies along moderate lines.

PEACE AND INSTABILITY

In May 1946, Victor Emmanuel III abdicated in favor of his less compromised son, Umberto II (1904–83). A referendum on the constitution and elections to the constituent assembly limited the government’s powers to drafting the constitution and ratifying treaties. With the increasing strength of the left evident, De Gasperi took conservative steps to strengthen the powers of the state and maintain law and order.

By January 1947 what would come to be called the COLD WAR was clearly having an impact on Italian politics, and De Gasperi declared which “side” he was on by that month visiting the United States, and a month later—a little over three years after Badoglio’s surrender—the Italian government signed the peace treaty with the Allied powers in New York on February 10, 1947.

The treaty acknowledged that Fascism in Italy had been toppled not only because of the Allied victory but also “with the assistance of the democratic elements of the Italian people.” Accordingly, Italy enjoyed special status in comparison to the other Axis nations. While its government had willed aggressive war, a large portion of its people had worked for peace.

Italy’s frontiers were reestablished as they had existed on January 1, 1938, except that the conquests of Albania and Ethiopia were annulled, the Dodecanese was ceded to Greece, and certain Adriatic islands were likewise ceded to Greece or Albania. The boundary between Italy and France was also subject to adjustment. The Italian armed forces were strictly limited until modified “by agreement between the Allied and Associated Powers and Italy or, after Italy becomes a member of the United Nations, by agreement between the Security Council and Italy.” A schedule for the withdrawal of Allied occupation troops was established and reparations were fixed—the Soviet Union receiving about \$100 million over a seven-year period, with additional amounts going to Yugoslavia (\$125 million), Greece (\$105 million), Ethiopia (\$25 million), and Albania (\$5 million). For their part, France, Britain, and the United States agreed to forgo reparations claims.

Despite fears in the West that Italy might go the way of Eastern Europe—become communist and fall into the orbit of the Soviet Union—the Constituent Assembly completed its work by approving on December 22, 1947, the text of a new constitution (which entered into force on January 1, 1948) that clearly established Italy as one of the West’s liberal democracies. That did not mean, however, that Italy became a steady member of the European post-war community. Instead it suffered through years of instability; the republic saw six successive Christian Democratic administrations rise and fall between 1953 and 1958. While the Christian Democrats did manage to produce a Ten-Year Plan for Growth and Development, the limited maneuverability of these governments severely hampered their attempts to pass essential legislation. As laws for instituting the regions called for in the constitution, for establishing the Constitutional Court, and for replacing the Fascist codes were postponed again and again, Italy gained a reputation for corruption, violence, and political volatility that it has never completely shaken.

World War II: Pacific (1941–1945)

PRINCIPAL COMBATANTS: United States (with British Commonwealth and Philippine allies) vs. Japan
PRINCIPAL THEATER(S): Pacific Ocean and islands

DECLARATION: United States against Japan, December 8, 1941, following Japan's attack on Pearl Harbor, December 7, 1941

MAJOR ISSUES AND OBJECTIVES: Japan sought control of most of the Pacific Ocean as a vast defensive perimeter for its empire.

OUTCOME: Japan suffered total defeat.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the beginning of the war, United States, 2,169,000; Japan, 2,391,000.

CASUALTIES: United States, 107,068 battle deaths, 194,299 wounded; Japanese, 1,506,000 battle deaths, 500,000 wounded; Japanese civilian dead, 300,000

TREATIES: Japanese surrender, September 2, 1945; definitive Treaty of Peace, September 8, 1951

This article focuses on the entry of the United States into World War II, the fighting in the Pacific, the development and deployment of the atomic bomb, and the Japanese surrender and its consequences. For the historical background of the war, see *WORLD WAR II: HISTORICAL BACKGROUND*. For the outbreak of the war and its early course in Europe and a brief discussion of U.S. neutrality prior to December 7, 1941, see *WORLD WAR II: OUTBREAK AND EARLY GERMAN CONQUESTS*. For entries that treat the course and conclusion of the war on other fronts, see the *SINO-JAPANESE WAR (1937–1945)*; *WORLD WAR II: AFRICA AND THE MEDITERRANEAN*; *WORLD WAR II: ATLANTIC FRONT*; *WORLD WAR II: CHINA-BURMA-INDIA THEATER*; *WORLD WAR II: GREECE AND THE BALKANS*; *WORLD WAR II: ITALIAN FRONT*; *WORLD WAR II: RUSSIAN FRONT*; *WORLD WAR II: WESTERN FRONT*. For the treatment of the major Allied summits, the Holocaust, and the Nuremberg trials, see *World War II: Western Front*.

By the fall of 1941, U.S. relations with Germany had deteriorated to the point of undeclared war in the North Atlantic, as German U-boats attacked U.S. destroyers detailed to escort Allied convoys traveling west of Greenland. Although Americans and Japanese did not exchange fire, a U.S. embargo on trade with Japan moved the German-allied militarist dictatorship of that nation to decide on waging war against America.

At 7:55 A.M., December 7, 1941, approximately 200 Japanese carrier-launched dive-bombers, torpedo planes, and other assault aircraft hit U.S. military bases at Pearl Harbor, Hawaiian Territory. Sunk in the attack were the battleships *Arizona*, *Oklahoma*, *California*, *Nevada*, and *West Virginia*, and three other battleships, three cruisers, three destroyers, and other vessels were severely damaged. One hundred eighty U.S. aircraft were destroyed on the ground, and U.S. casualties exceeded 3,400 men, including more than 2,403 killed. Japanese losses, in contrast, were light: 29 to 60 planes shot down, five midget submarines, possibly one or two fleet submarines lost. Total deaths were fewer than 100 Japanese sailors and airmen.

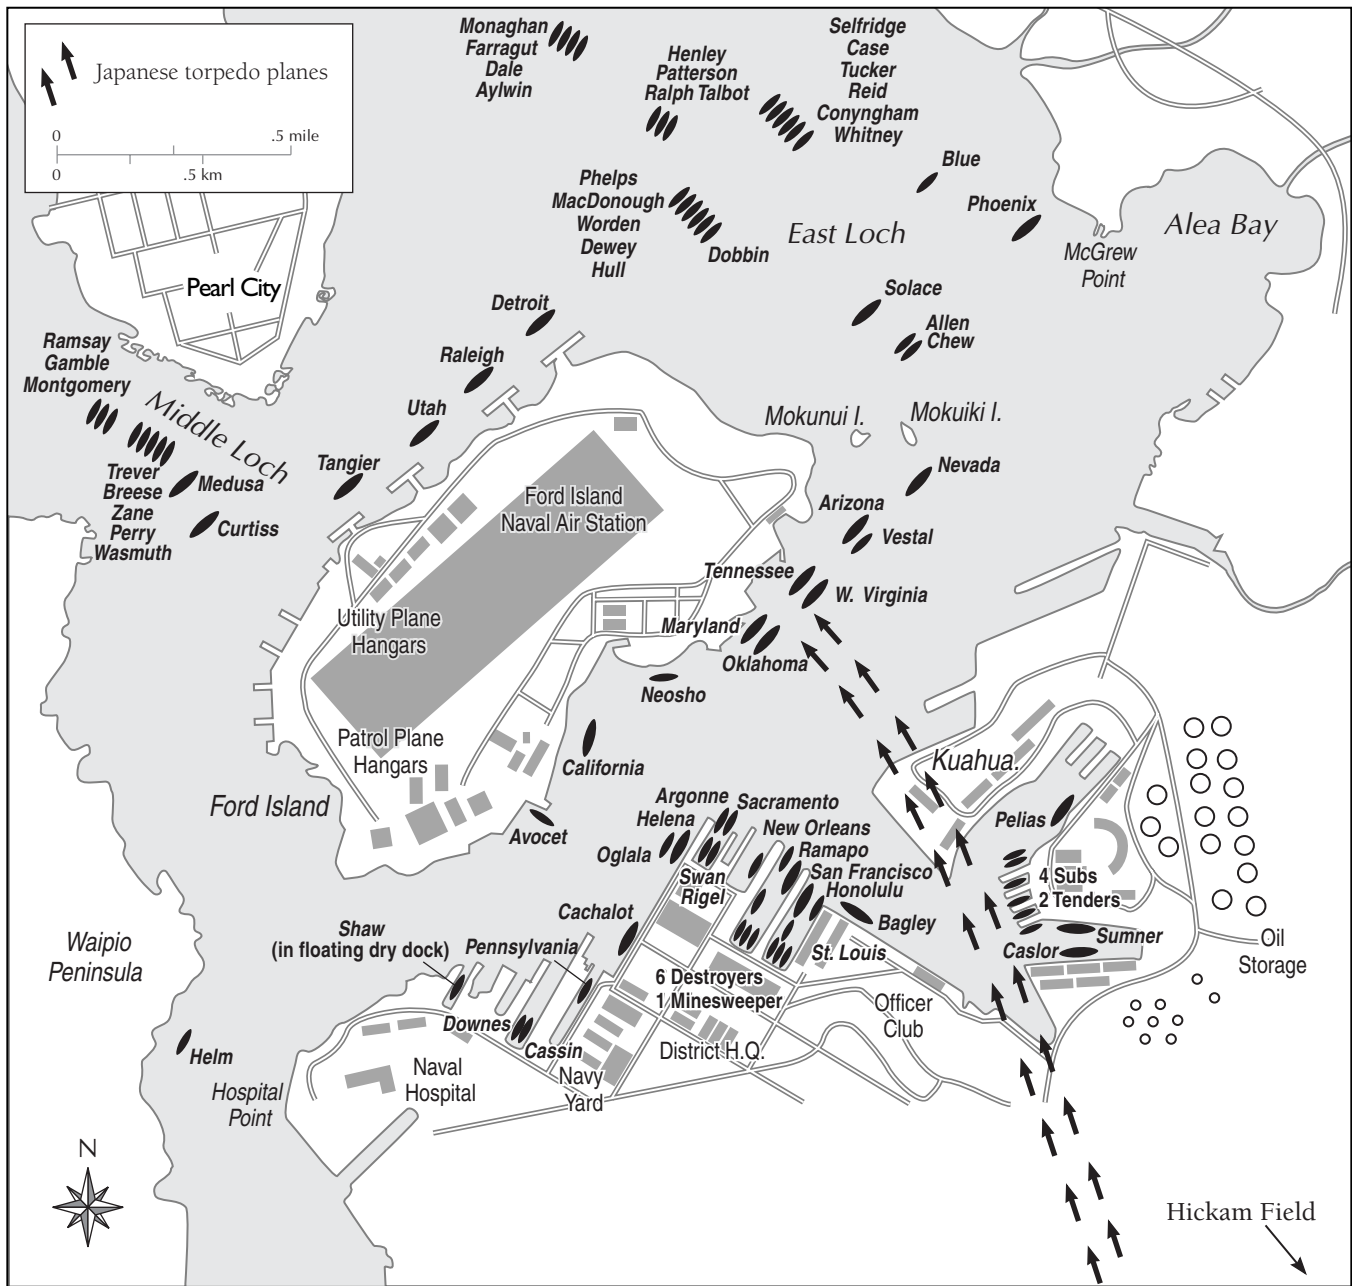

President Franklin D. Roosevelt (1882–1945) secured from Congress a declaration of war the next day. Inasmuch as Japan was a member of the Berlin-Rome-Tokyo Axis, the U.S. declaration against Japan was a de facto declaration against Germany and Italy, as well.

The attack on Pearl Harbor was devastating; only the U.S. aircraft carriers, which were at sea, escaped destruction. The Japanese strategy was to hit U.S. and British holdings in the Pacific hard and fast in order to create an impregnable circle of defenses distant from the Japanese homeland, so, beginning on December 8, 1941, Wake Island, gallantly defended by hopelessly outnumbered U.S. naval personnel and marines, came under attack and managed to hold out until December 23. Guam, defended by a small garrison of marines and sailors, fell quickly on December 10. Simultaneously, in Asia, Japanese forces defeated British forces.

The myth is that the United States was totally unprepared for war. In fact, it was as prepared as it had ever been—and far more prepared to fight than had been the case on the eve of entry into *WORLD WAR I*. In 1932, the army had a strength of only 134,024 men and women, which doubled to 267,767 by 1940. With the threat of a two-front war imminent, a peacetime draft was instituted, and by mid-1941, months before Pearl Harbor, 1,460,998 men and women were on active duty. A vigorous ship-building program was also well under way, as was the fulfillment of a mandate to build 10,000 aircraft.

Yet the attack took Pearl Harbor's defenders completely by surprise. It shouldn't have. Even while Japanese negotiators were conducting business in Washington, ostensibly to avert war, "Purple" and "Magic" messages (Japanese diplomatic ciphers U.S. intelligence had broken) were being decoded continually. By November 24, Admiral Harold Stark (1880–1972) had telegraphed Admiral Husband Kimmel (1882–1968), commanding naval forces at Pearl Harbor, that "chances of favorable outcome of negotiations with Japan very doubtful" and that "a surprise aggressive movement in any direction" was anticipated. On November 25, Stark told Kimmel that Roosevelt and Navy secretary Cordell Hull (1871–1955) half-expected the Japanese to launch a surprise attack. Before war alert messages were issued to the military on November 26, Secretary of War Henry Stimson (1867–1950) even spoke of the strategic desirability of maneuvering the Japanese into war. Yet, through inertia, inaction, and just plain blundering, the Pacific fleet and an array of aircraft, including many B-17 bombers, were left as easy prey for the Japanese carrier-based dive-bombers and torpedo planes.

As costly as the attack was in terms of American lives lost and materiel destroyed or damaged, it ultimately cost the Japanese and their German allies far more. Pearl Harbor instantly forged an America more unified than it ever had been or, perhaps, would ever be again. On the Monday

Disposition of American ships at Pearl Harbor, Hawaii, December 7, 1941

following Pearl Harbor, tens of thousands jammed recruiting offices, rushing to enlist, and the government conscripted millions more, rapidly building a fighting force of more than 16 million men and women. Roosevelt used his unprecedented war powers not only to launch this immense mobilization but also to build a massive war machine, which worked production miracles that astonished the nation, its allies, and its foes. Before Pearl Harbor, the American public and the U.S. Congress had been deeply divided over the drift of U.S. policy toward a declared war. The surprise attack ended that debate for

good and created an America grimly determined, and soon well equipped, to wage global war.

FALL OF THE PHILIPPINES

Since the SPANISH-AMERICAN WAR (1898), the Philippines had been a U.S. possession and were now the home of a major American military installation. Under General Douglas MacArthur (1880–1964) were 130,000 troops, including 22,400 U.S. regulars (among them 12,000 Philippine Scouts), 3,000 members of the Philippine Constabulary, and the Philippine army, consisting of 107,000 men—the

latter partly untrained, virtually unorganized, and in some cases unarmed. Under MacArthur's command as well was the Army Air Corps' Far East Air Force (FEAF), which consisted of 35 B-17 bombers and about 90 other combat aircraft. Most of the U.S. warships stationed in the Philippines were hurriedly withdrawn from the islands and sent to safety in Java; however, four destroyers, 28 submarines, and smaller surface craft remained in island bases.

MacArthur deployed most of his ground troops north of Manila, under Major General Jonathan M. Wainwright (1883–1953), with orders to resist an anticipated invasion via Lingayen Gulf. An aggressive commander, MacArthur planned to use the B-17s to hit Formosa by way of counterattack. But his principal objective was to hold the Philippines against the invasion forces until U.S. naval action could open the way for reinforcements. This proved a forlorn hope. For their part, the Japanese intended to overwhelm the defenders rapidly, destroy them, and take the islands long before any reinforcement was possible. Japanese planners believed that the combination of an air attack from Formosa and an amphibious landing of 50,000 troops would take the islands within 50 days. The Japanese wholly discounted the fighting ability of the Filipino troops, despite their substantial numbers.

The attack was launched on December 8, 1941, and, like the attack on Pearl Harbor, it effectively exploited the element of surprise. Japanese air attacks hit Clark Field near Manila, destroying more than half of the B-17s on the ground, along with 56 fighters and other aircraft. The losses immediately prevented MacArthur's planned air assault on Formosa. Two days later, Japanese bombers destroyed the naval base at Cavite, while troops began to land at Luzon. Japanese forces rapidly established air bases in the northern Philippines, and within days the invaders also claimed beachheads in the south, at Mindanao and the island of Jolo. Caught in the as yet wide jaws of a pincer movement, the Philippine army withdrew into the hills. The Japanese now held naval bases from which they could freely strike at the Dutch East Indies—and the main invasion was not yet even under way.

On December 22, Japanese troops overran Luzon, the inadequately trained and armed Filipinos falling away before the onslaught. However, U.S. regulars and Philippine Scout units made an orderly and effective armed retreat, which cost the invaders heavily. Nevertheless, the invasion was relentless. Two days after the assault on Luzon began, another Japanese invasion force landed in the south, at Limon Bay. To avoid immediate envelopment, MacArthur pulled his troops back to Bataan, abandoning the Philippine capital, Manila, which MacArthur declared an open city on December 26. The Japanese occupied it unresisted.

The Bataan withdrawal was costly both to the Japanese and to American and Filipino forces, but by January 7, 1942, these defenders were hunkered down in

hardened positions strung across the upper Bataan Peninsula. The tenacity of the resistance stunned the Japanese, and the process of taking the Philippines proved far more costly in men, materiel, and, above all, time than Japanese planners had bargained for.

Yet the U.S.-Filipino situation was hopeless. In mid-March, President Roosevelt ordered MacArthur to leave the Philippines in order to assume command of Allied Pacific forces. He and his family made a daring and hazardous escape by PT boat through enemy lines to Mindanao, from which they flew to Australia. There MacArthur broadcast his famous promise to the thousands of Filipinos and Americans still on the island: "I shall return." Within less than a month, however, those troops, under Wainwright, were starving. After enduring a heavy artillery attack at Bataan, Major General Edward P. King, Jr., surrendered U.S. and Filipino forces there on April 9. Corregidor, still held by Wainwright, hung on until May 5, when, after a five-day barrage, Wainwright surrendered.

THE BATTLE OF THE CORAL SEA

By early 1942, the Japanese plan was to seize Tulagi in the Solomon Islands and Port Moresby in New Guinea while the Imperial Combined Fleet destroyed the American fleet, then captured Midway Island. These gains would enable Japanese forces to create an unbreakable defensive chain all the way down from the Aleutian Islands, through Midway, Wake, the Marshalls, and the Gilberts. Once these islands were in Japanese hands, New Caledonia, the Fijis, and Samoa would easily fall, and Australia would be entirely isolated.

Essential to Japanese domination of the Pacific was the destruction of the American fleet, in particular the aircraft carriers, which had been out of port during the attack on Pearl Harbor. So important was the objective of destroying the fleet that Japan's chief admiral, Isoroku Yamamoto (1884–1943), decided on a strategy that overextended even the great Japanese military machine. What prevented Yamamoto's immediate implementation of an all-out deployment to destroy the American fleet was a combination of certain misgivings within the high command and an incredibly daring U.S. air strike against no less a target than Tokyo.

Under the leadership of Lieutenant Colonel James Doolittle (1896–1993), 16 B-25 medium bombers were launched from the aircraft carrier *Hornet* on April 18, 1942, in a surprise air raid on the Japanese capital. The mission was desperate enough to be deemed nearly suicidal; for the twin-engine Mitchell bombers could not carry sufficient fuel to return to any American base and certainly could not land on an aircraft carrier. The plan was for the fliers to land in China, where Doolittle's raiders would find safe haven among Chinese resistance fighters, and then somehow find a way to return home. Risky as it was, the raid was highly successful. If damage to Tokyo

Battle of the Coral Sea, May 4–8, 1942

was minor, the psychological effect on the Japanese military was profound: Confidence was shaken, more military aircraft were reserved for home defense, and the timetable of Japanese conquest was considerably delayed. More immediately, the attack gave American morale a terrific boost, and, almost miraculously, most of Doolittle's bomber crews were eventually rescued.

Japanese invasion forces sailed to Tulagi and Port Moresby, New Guinea, in May 1942. Tulagi fell without opposition, but the larger force sailing to New Guinea was intercepted on May 7 by aircraft launched from *Lexington* and *Yorktown*. The Battle of the Coral Sea began on May 8, a duel between carrier-launched aircraft—the first sea battle in history to be fought at such great range that the opposing ships never saw one another. U.S. aircraft damaged the carrier *Shokaku*, but 33 out of 82 of the attacking U.S. planes were lost. The Japanese sank the *Lexington*, a destroyer, and a tanker, losing 43 of 69 aircraft in the attack. The Battle of the Coral Sea ended as a Japanese tactical victory but a strategic defeat; for while U.S. losses were greater, the Japanese advance had been stopped—for the first time in the war—Port Moresby saved, and the Japanese fleet driven out of the Coral Sea.

THE BATTLE OF MIDWAY

Although the Japanese had failed to achieve strategic victory in the Battle of the Coral Sea, Midway Island remained the Japanese objective. Admiral Yamamoto sent a diversionary force to the Aleutian Islands, while Admiral Chuichi Nagumo (1886–1944), who had led the Pearl Harbor attack, took a four-carrier strike force followed by an invasion fleet—88 ships in all—to Midway. His American opponent, the perspicacious Admiral Chester A. Nimitz (1885–1966), had anticipated just such an attack. Therefore, he assembled two forces east of Midway, designated Task Forces 16 (under Admiral Raymond Spruance [1886–1969]) and 18 (under Admiral Frank Fletcher [1885–1973]). The task forces included the carriers *Enterprise*, *Hornet*, and *Yorktown*, in addition to land-based aircraft on Midway itself. The Midway-based planes attacked elements of the Japanese fleet on June 3 but inflicted little damage. Worse, on June 4, 108 Japanese aircraft struck Midway, destroying 15 of 25 U.S. Marine aircraft based there. These reverses notwithstanding, American carrier-based torpedo bombers attacked the Japanese fleet. The first two attacks failed—with heavy U.S. losses—as did a third attack, by Midway-based B-17 heavy bombers. A fourth attack, again by torpedo bombers, resulted in the loss of 35 of the 41 aircraft launched. However, the attack opened the way for a massive sortie by 54 dive-bombers from *Enterprise* and *Yorktown*; within five minutes three Japanese aircraft carriers were sunk, their planes still on deck. A fourth Japanese carrier, *Hiryu*, was sunk in a separate attack later in the day—but not before *Hiryu*'s aircraft sank the *Yorktown*.

Despite the high cost in American lives and aircraft—and the loss of the *Yorktown*—the Battle of Midway was an American triumph that turned the tide of the Pacific war, and Japanese forces began withdrawing on June 5, 1942. U.S. losses were 307 men, 150 planes, a destroyer, and the *Yorktown*, whereas the Japanese lost 275 planes, four carriers, a cruiser, and about 4,800 men. From Midway forward, the U.S. Pacific strategy became offensive rather than defensive.

GUADALCANAL

Defeated at Midway, Japan abandoned the plan of taking New Caledonia, the Fijis, and Samoa. Now imperial forces concentrated on the southwest Pacific instead. They targeted Port Moresby for invasion, not by direct amphibious assault but overland, using troops landed at Buna-Gona, New Guinea. This required a buildup at their major naval base on Rabaul and at lesser bases in the Solomon Islands. As soon as the Japanese began building an airfield on the island of Guadalcanal, American commanders decided to launch an offensive there and also against Tulagi, using 19,000 marines under General Alexander Vandergrift (1887–1973), in 89 ships. The Guadalcanal landings, begun on August 7, 1942, took the Japanese by complete

Guadalcanal and associated islands: scene of an epic Pacific campaign, 1942–1943

surprise. On Tulagi, however, marines met severe resistance, and from Rabaul the Japanese launched a fierce counterattack by sea, sinking three American cruisers and one Australian cruiser. With his fleet in grave danger, Admiral Richmond K. Turner (1885–1961) had no choice but to withdraw and, for the present, leave the marines to fend for themselves on Guadalcanal. What had begun as a bold U.S. offensive was suddenly converted into one of the most heroic defensive stands of World War II; for the next four months the marines resisted Japanese counterattacks. Finally, on the night of November 12–13, an outnumbered U.S. cruiser force under Admiral William “Bull” Halsey (1882–1959) rescued the beleaguered marines. Once the flow of Japanese reinforcements to Guadalcanal was stemmed, more marines were landed, and by early February 1943 the Japanese had evacuated the island. As Midway was the turning point of the Pacific war at sea, so Guadalcanal changed the course of the land war.

While the Guadalcanal defense, rescue, and counteroffensive were under way, Australian and U.S. forces defeated the Japanese attack on Port Moresby, New Guinea. The Australians pushed the attackers clear of the port city, while a combination of U.S. and Australian troops counterattacked the Japanese beachhead at Buna-Gona, driving the Japanese off the island.

ISLAND-HOPPING STRATEGY: THE SOUTH PACIFIC

U.S. and Australian victories on Guadalcanal and New Guinea penetrated the outer perimeter of Japan’s defenses of its homeland. In response, Japan reinforced Rabaul and the lesser military outposts it held in the South Pacific and Southwest Pacific. American strategists focused on an “island hopping” strategy, attacking selected Japanese-

held islands while leaving others alone. The Japanese perimeter strategy presupposed an attack on one island after another, step by step. American strategists realized, however, that by “hopping” past some of the islands, Japanese forces on those missed islands would be isolated, rendered useless, even though they had not been attacked. In this way, the Americans forced the Japanese to invest extravagant amounts of manpower. At the same time, each successful U.S. assault pushed the Japanese perimeter closer to the homeland.

U.S. forces targeted Rabaul, the main Japanese base in the South Pacific. MacArthur directed a two-pronged offensive aimed ultimately at taking Rabaul. MacArthur ordered Halsey’s fleet to drive northwestward through the Solomon Islands, while General Walter Krueger (1881–1967) was to lead the Sixth Army through New Guinea and New Britain toward Rabaul. An Australian force established a forward base at Wau on January 9; by the end of June, Krueger’s U.S. troops had landed at Nassau Bay, New Guinea. This was followed by operations at Lae and Salamaua, New Guinea, by combined Australian and American troops, which drove the Japanese out of Salamaua by mid-September. Finschafen was enveloped on September 22 and fell on October 2, thereby securing southeastern New Guinea for the Allies to use as a base from which to mount an assault on New Britain during October through December. By the end of 1943, an Allied beachhead had been established on New Britain.

Simultaneously with the assaults on New Guinea and New Britain, U.S. land and naval forces stepped off from Guadalcanal to attack the central and northern islands of the Solomons chain. Russell Island fell on February 11, 1943, followed by Rendova Island on June 30. From here, U.S. forces assaulted New Georgia during July 2–August 25 but faced fierce resistance in jungle combat. The fighting ended only when the Japanese troops had been virtually wiped out.

Overlapping the assault on New Georgia was an attack on Vella Lavella, from August 15 to October 7, which finally delivered the central Solomons into American hands—at a cost of 1,136 U.S. troops killed and 4,140 wounded. Of the 8,000-troop Japanese garrison on Vella Lavella, 2,500 died.

What had been bought with so much blood was a staging area for a thrust against Bougainville, which, with Rabaul and Choiseul, was the last Japanese stronghold in the Solomons. Bougainville fell in December and became a major Allied naval and air base. In the meantime, U.S. carriers began striking at Rabaul on November 5 and 11, 1943. As a result, a major Japanese cruiser and destroyer force under Vice Admiral Takeo Kurita (1889–1977) retreated to Truk Island.

The fighting in the South Pacific combined ground, sea, and air operations. Air-to-air and air-to-ground encounters were frequent. The combined Australian-American Fifth Air

Force achieved air superiority—neutralizing the Japanese fighter force—by May; however, the high point of the South Pacific air war for the Allies was without doubt the Battle of the Bismarck Sea, during March 2–4, 1943. U.S. aircraft attacked a Japanese squadron of eight destroyers escorting troop transports from Rabaul to Lae. Seven Japanese transports were sunk, along with four destroyers, making it impossible for the Japanese to reinforce and resupply their forces on New Guinea.

Although his air strength had been severely depleted by early 1943, Yamamoto committed the bulk of his remaining aircraft to a counterattack during April 7–12. The new Allied bases in New Guinea and the Solomons were hit hard, but the attacks were costly in Japanese aircraft. Also, in the course of the action, thanks to intercepted Japanese radio traffic, an air transport carrying Yamamoto was identified and shot down. The death of Yamamoto was the greatest single disaster the Japanese navy suffered during the war.

CAMPAIGN IN THE CENTRAL PACIFIC, 1943

During the fall of 1943, the Fifth Fleet, under Vice Admiral Raymond A. Spruance (1886–1969), which included the Fifth Amphibious Force (Army) and the Fifth Amphibious Corps (Marines), the largest naval force the United States had ever assembled, sailed west across the Pacific with the Seventh Air Force and elements of the Third Fleet. Beginning during November 13–20, USAAF bombers strafed Tarawa and Makin in the Gilbert Islands preparatory to an amphibious assault, which stepped off on November 20 against Makin. Makin fell on November 23; from Makin, Tarawa was assaulted during November 20–24. The cost of taking this tenaciously defended island was 985 marines killed and 2,193 wounded. The extent of Japanese losses is not known, but the island was defended to the death. Of the 100 prisoners taken, only 17 were Japanese combat soldiers. With Tarawa gained, Nimitz was poised to attack the Marshalls and then to destroy the major Japanese naval base at Truk.

NORTH PACIFIC COMBAT IN 1943

Japanese occupation forces held Attu and Kiska, westernmost of the Aleutian Islands—the only part of the North American continent the Japanese invaded. The Battle of the Komandorski Islands on March 26 forced Japanese transports to divert from Attu and seriously impeded resupply of the islands. During May 11–29, U.S. ground forces cleared Attu of the invaders, and a Canadian-U.S. force landed on Kiska on August 15, only to find that it had already been evacuated.

CAMPAIGNS IN THE SOUTH PACIFIC AND SOUTHWEST PACIFIC, 1944

By the beginning of 1944, the Allies were progressively securing the Solomons. On February 15, New Zealand troops captured Green Island, and on March 20 Emirau

fell. This completed the isolation of Rabaul. To the west, Saidor, the Admiralty Islands, and New Britain all fell to Allied control early in the year. However, as they continued to yield island after island to U.S. and Allied forces throughout the South Pacific, the Japanese resolve to hold western New Guinea only increased. During March and April, U.S. and Australian forces encircled the Japanese at Hollandia, New Guinea, inflicting extremely heavy casualties. From here, the Allies pacified or captured the islands of Wake (May 17), Biak (May 27–June 29), Wewak and Aitape (June 28–August 5), Noemfoor (July 2–7), and Sansapor (July 30).

CENTRAL PACIFIC CAMPAIGN, 1944

Along with action in the South Pacific and Southwest Pacific, Nimitz conducted a Central Pacific campaign that targeted the Marshall Islands. Kwajalein Island, in the Marshalls group, was invaded on January 29 and cleared of Japanese resistance by February 7. Of the 8,000-man Japanese garrison, 7,870 were killed; U.S. losses were 372 dead and about 1,000 wounded.

The next big target was Truk, a key Japanese naval base. Air assault was conducted during February 17–18, sinking many Japanese cargo vessels and destroying 275 out of 365 Japanese aircraft on Truk. A Japanese light cruiser and a destroyer were also sunk. Simultaneously, marine and army forces landed in the Eniwetok atoll on the island of Engebi, then proceeded to Eniwetok Island and Parry Island, where they had to overcome suicidal Japanese resistance. Eniwetok Island served as the rendezvous point for the large Fifth Amphibious Force, a collection of warships and landing craft capable of delivering 127,000 men. Using Eniwetok as a staging area, U.S. forces landed on Saipan beginning on June 15. The conquest of this key island was one of the bloodiest campaigns of the Central Pacific war. More than 3,000 Americans were killed and 13,160 wounded, whereas Japanese losses amounted to 27,000, including many hundreds of civilians who, having been told by Japanese occupiers that U.S. forces would torture and cannibalize them, committed mass suicide by jumping off the island's cliffs.

PHILIPPINE CAMPAIGN, 1944

The importance of the assaults on Saipan and the Marianas was in forcing the Japanese fleet out into the open for the first time since its defeat at Midway and Guadalcanal. The Battle of the Philippine Sea, which began on June 19, pitted carrier-based U.S. aircraft against Japanese land- and carrier-based planes. After eight hours of continuous aerial combat, 330 of the 430 Japanese aircraft engaged had been lost. Of 450 U.S. aircraft in combat, only 30 were downed. This single most decisive aerial battle of the war was dubbed the “Marianas Turkey Shoot.” While the air battle raged, U.S. submarines sank two Japanese aircraft carriers, sending the Japanese fleet into full retreat by nightfall. On June 20, U.S. admiral Marc Mitscher (1887–

1947) launched 209 carrier-based planes against the fleeing Japanese ships. The carrier *Hiyo* was sunk, and 40 of the 75 Japanese planes sent to defend against the attack were lost; however, U.S. aircraft losses were also high, reaching 100, although many of the aviators were rescued.

The Saipan landings and the Battle of the Philippine Sea put American forces in a position to redeem the famous pledge MacArthur had made when he fled the

Philippines at the start of the war—"I shall return." On September 15, 1944, units of MacArthur's forces made a surprise landing on the island of Morotai, south of the Philippines. Pelelieu was attacked next and proved much more formidable; the island fell only after a month of bitter fighting.

MacArthur had planned to advance from Morotai and Pelelieu to Mindanao and Yap, but Halsey recommended

Retaking the Philippines: the Battle of Leyte, October 17–December 25, 1944

skipping these intermediate steps to launch an immediate invasion of Leyte, at the center of the Philippine archipelago. It was a daring gamble, but if successful it would split in two the quarter-million-strong Japanese army there. With the enemy forces thus divided, they could be defeated in detail—first on Leyte, then on Luzon, and finally on Mindanao. If the Japanese decided to attempt to reestablish a continuous front across these islands, they would have to bring in their fleet, which would afford Nimitz an opportunity to destroy it.

During October 13–16, 1944, Halsey's Third Fleet attacked Formosa, Okinawa, and Luzon. More than 650 Japanese aircraft were lost in these attacks, making Leyte all the more vulnerable.

Landings on Leyte commenced on October 20 and extended through October 22, with MacArthur wading ashore a few hours after a beachhead had been established. From a radio truck he broadcast, "People of the Philippines: I have returned! By the grace of Almighty God our forces stand again on Philippine soil—soil consecrated in the blood of our two peoples . . . Rally to me!" Retaking the islands would not be easy, however. The Japanese quickly counterattacked, both on land and in Leyte Gulf, where the biggest naval battle in history soon got under way.

The Japanese fleet was divided into three groups: the Northern Group (under Admiral Jisaburo Ozawa [1886–1966]), built around four carriers; the Center Force (Admiral Takeo Kurita), consisting of battleships and cruisers; and the Southern Group (Admiral Shoji Nishimura [d. 1944]), also a battleship and cruiser force. The Northern Group was to lure the U.S. Third Fleet away from Leyte Gulf while the Center Force came down on the American invasion fleet from the north and the Southern Force, passing up through Surigao Strait, converged on the invaders from the south. Once the invasion fleet was destroyed and the American army stranded, the combined Japanese forces could turn on the Third Fleet and destroy it.

The attack began badly for the Japanese when U.S. submarines sank two cruisers, and aircraft sank the battleship *Musashi*. When Kurita retreated, Halsey concluded that the Center Force had been defeated and set out to pursue the Northern Group—thus taking the Japanese bait and leaving the invasion fleet exposed. Admiral Jesse B. Oldendorf (1887–1974), commanding six obsolescent battleships, eight cruisers, and an assortment of destroyers and PT boats, was left to face the Southern Group in the Battle of Surigao Strait of October 25. Incredibly, the outgunned U.S. forces succeeded in sinking two Japanese battleships, including Nishimura's flagship, with Nishimura on board. However, during this battle, the Japanese Center Force ended its retreat, turned, and bore down on the still-unprotected U.S. invasion fleet. Only three modest forces of small carriers stood between Kurita's Center Force and the vulnerable invasion fleet. Outgunned and outnumbered, the American vessels nevertheless managed

to drive Kurita off. By this time, Halsey, far to the north, had effectively destroyed Ozawa's Northern Group. All four Japanese carriers were sunk, as were a cruiser and three destroyers. It was the end of the Japanese navy as a strategic force.

On December 7, 1944, General Krueger's troops joined U.S. forces already landed on Leyte, and the island fell to the Americans before the month was out. From here, an assault was launched against Luzon, and thence to Bataan. Manila fell to the Americans in January, and the last Japanese garrison on the islands, at Corregidor, surrendered in February 1945. Mop-up operations, especially on Mindanao, continued almost to the very end of the war. It was not until July 5, 1945, that MacArthur formally declared that the Philippines had been retaken.

IWO JIMA, 1945

As Japan's situation became clearly hopeless, the Japanese will to resist became more desperate than ever. USAAF strategic bombing of the Japanese mainland did little to break the people's will to fight, and Allied planners resigned themselves to a costly invasion of the Japanese homeland. If the Japanese held each Pacific island virtually to the last man, the Americans feared, how much more fiercely would they defend their homeland? An important stage in that invasion was the capture of Iwo Jima, a tiny, rocky island in the Bonin group, which the Japanese used as a base for fighter aircraft to intercept incoming American bombers. U.S. forces not only needed to clear the Japanese out but also wanted the island as a forward air base to use against the Japanese mainland.

The invasion began on February 19 when the U.S. Fifth Fleet landed Major General Harry Schmidt's (1886–1968) V Amphibious Corps of marines on the southeastern end of the island. In the very first day, marine casualties were 2,420 killed or wounded. The high ground, Mount Suribachi, was captured on February 23 (the marines raising the Stars and Stripes in an event immortalized first in a Pulitzer Prize-winning news photograph and then in a famed Washington, D.C., sculpture group). After the capture of Mount Suribachi, the battle consisted of mopping-up operations. Total marine casualties were 6,891 killed and 18,070 wounded. Of the Japanese garrison of 22,000, only 212 lived to surrender.

OKINAWA CAMPAIGN, 1945

The Ryukyu island group, midway between Formosa and Kyushu, the southernmost island of Japan itself, was the last stepping-stone to invasion. Okinawa, the major island of the group, was the principal objective of Operation Iceberg, a massive amphibious assault by a 130,000-man army against formidable Japanese defenses.

The campaign began, in the second half of March, with heavy bomber attacks; however, Admiral Spruance's Fifth Fleet was attacked by a new weapon of Japanese des-

peration. After limited use at the Battle of Iwo Jima, the *kamikaze* (“divine wind”) attack was now employed in earnest. Japanese pilots transformed their explosives-laden aircraft into human-guided missiles, purposely crashing them into American ships. At Okinawa, the carriers *Franklin*, *Yorktown*, and *Wasp* were severely damaged by kamikazes, with the loss of 825 officers and men killed and 534 wounded. Yet the invasion went on, and the landings took place during April 1–4.

On land, the heaviest resistance came from the Machinato Line, a dense, interlocking system of defenses in the island’s mountain region. At sea, on April 7, two U.S. destroyers, two ammunition ships, a minesweeper, and a landing ship were sunk by mass kamikaze attacks, which also damaged 24 other ships. Losses among the kamikazes were 383 aircraft and pilots—and, on that very day, American aircraft sunk the pride of the surviving Japanese navy, the giant battleship *Yamato*.

Progress on land was slow but steady until the end of April 1945, when the invasion was stalled. More kamikazes—some 3,000 sorties—were launched against the amphibious force, sinking 21 ships, damaging another 23 beyond immediate repair, and taking 43 more out of action. With the invaders stalled on land, the Japanese counterattacked during May 3–4. However, the counterattack was quickly defeated. By counterattacking, the Japanese had revealed their previously well-hidden positions, and the U.S. invaders were able to knock out Japanese artillery and resume a full-ahead offensive during May 11–31.

Japanese casualties in the Battle of Okinawa totaled a staggering 107,500 dead (it is believed an additional 20,000 were sealed in their defensive caves during the fighting and died). American casualties were in excess of 12,000 killed and 37,000 wounded, but the fall of Okinawa meant the loss of what remained of Japan’s navy and air force.

THE BOMB

With invasion of Japan itself in the offing, the USAAF conducted intensive strategic bombing of major Japanese industrial centers and cities. The most destructive raid was against Tokyo during March 9–10, which created an incendiary firestorm that instantly killed 83,000 and wounded at least 100,000 more. As U.S. planes pounded Japan from the sky, American naval vessels, especially submarines, contracted their blockade around Japan in an effort to starve the country while MacArthur and Nimitz assembled a vast amphibious invasion force.

Unknown even to the top American commanders, the United States had succeeded in creating nuclear weapons—two “atomic bombs.” This would not only prove the key to ending the fighting in the Pacific but also, perhaps more than anything else that occurred during World War II, would shape the postwar years.

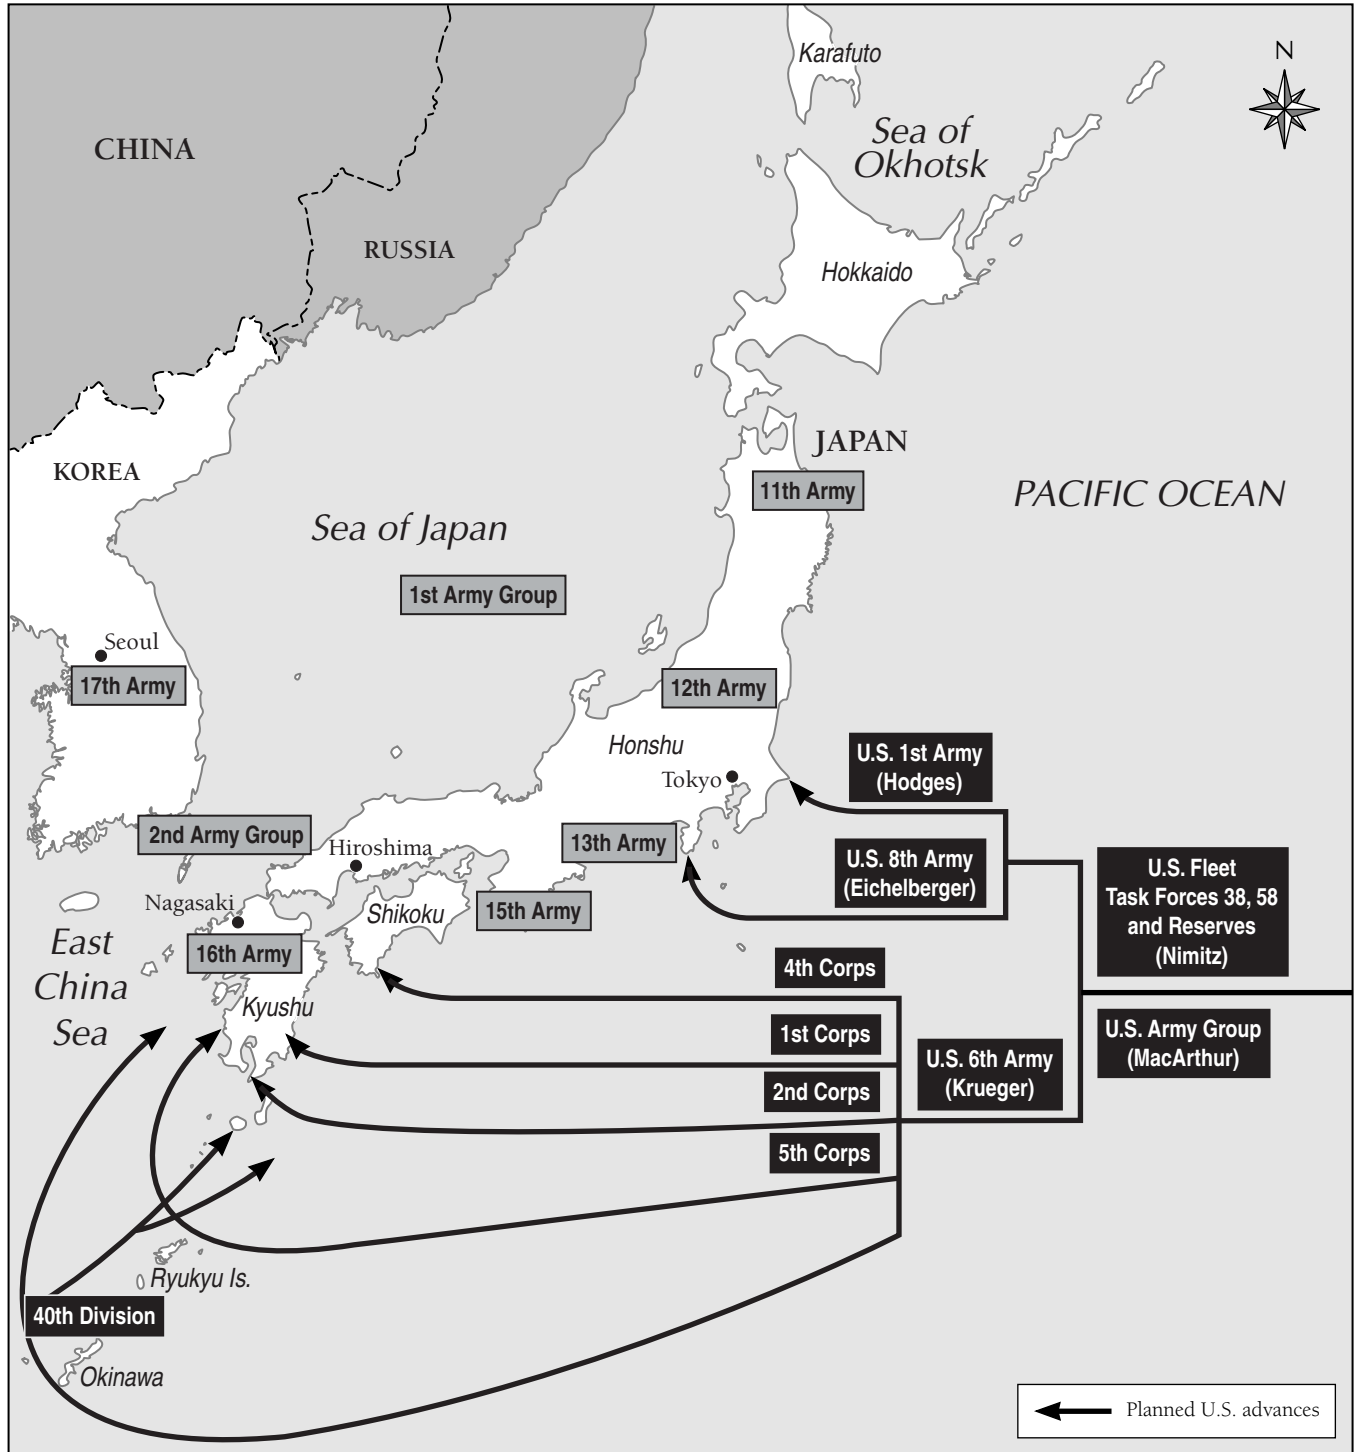

Because everyone mistakenly assumed that German scientists—under the leadership of the brilliant theoretical physicist Werner Heisenberg (1901–76)—had a head start in the first nuclear arms race, the creation of the bomb became the object of perhaps the world’s most famous secret project. Even before the war, the Hungarian-born physicist Leo Szilard (1898–1964)—who in 1938 had first imagined that nuclear fission could produce an atomic chain reaction capable of releasing enormous amounts of energy—had prevailed upon no less a prominent scientist than Albert Einstein (1879–1955) to write to President Roosevelt about the destructive possibilities of such a weapon and to warn him that German scientists were perfectly capable of producing an atomic bomb. On December 6, 1941, just one day before Japan’s attack on Pearl Harbor, Roosevelt signed a secret order authorizing the Manhattan Project to investigate the feasibility of nuclear weapons and to create a fission bomb. The project was headed by Brigadier General Leslie R. Groves (1896–1970), the army engineer who directed construction of the Pentagon.

Groves’s assignment was stated in starkly simple terms—develop a bomb before the Nazis do. He assembled a group of scientists directed by physicist J. Robert Oppenheimer (1904–67), who spent months confined to a secret base at Los Alamos, New Mexico, feverishly experimenting with the “gadget,” as they called it. The scientists and their “gadget” were backed by the costliest engineering and manufacturing program the U.S. government had ever undertaken to develop a single weapon. As it turned out, Heisenberg either purposely or accidentally misled his team of scientists, and the German atomic program meandered off toward dead-end experiments for developing a “heavy-water” atomic bomb. Meanwhile, the Allies had marched toward the successful construction of an implosive device that would trigger a chain-reaction in “enriched” uranium. “Trinity,” the first test of the bomb, took place in the New Mexico desert at 0529:45 on July 16, 1945, well after Germany had been defeated, and three months after the death of Franklin Roosevelt.

It fell to Harry S. Truman (1884–1972) to decide whether to use the weapon against the remaining enemy, the empire of Japan. Even with most of their cities reduced to rubble by the massive fire-bombings, even with their navy and air force effectively neutralized, the Japanese steadfastly refused to accept unconditional surrender. Invading the islands, it was estimated, would cost the lives of perhaps one million Allied soldiers, not to mention the toll it would take on the Japanese themselves. Truman faced a U.S. public anxious to pay back the Japanese for Pearl Harbor and fully supportive of the demand for unconditional surrender, but one that would hardly have tolerated the high American casualties of an invasion if it became known he had possessed all along the technology to end the war immediately without them. He was fearful,

too, that Japan's resistance to such an invasion would give Soviet dictator Joseph Stalin (1879–1953) sufficient time to enter the war against the Japanese, as he had promised at the Yalta Conference, and claim his share of the spoils of victory as he was doing in Europe.

At the same time, however, a small group of scientists—including many of those who had played roles in theorizing about and building the bomb—were now arguing against its deployment, especially against civilians, and proposed steps that could be taken to avoid the poten-

This U.S. plan for the invasion of Japan was rendered unnecessary by Japan's surrender after the atomic bombing of Hiroshima and Nagasaki on August 6 and 9, 1945.

tial for a nuclear arms race in the future. Despite such sentiments among scientists, Truman—and Roosevelt before him—along with Winston Churchill (1874–1965) were not unmindful of the military and political advantages they imagined would result from an American-British nuclear monopoly. How large a role these various considerations played in Truman’s decision to drop the bombs is a matter of much conjecture among historians, but the fact is that Harry Truman did decide that fateful summer to deploy the weapon the United States had developed. He ordered the only nuclear attacks in history.

On August 6, 1945, a specially equipped B-29 called the *Enola Gay* appeared in the skies over the Japanese military port of Hiroshima and dropped a single atomic bomb. The blast destroyed everything in the vicinity, burning four and a half square miles, killing more than 66,000 people, and horribly injuring some 70,000 others. Stalin immediately declared war on Japan and invaded Manchuria. Three days later, Truman—to prove the first nuclear attack was no one-time fluke—dropped a second bomb on Nagasaki, killing nearly 40,000 more.

THE JAPANESE SURRENDER

Emperor Hirohito (1901–89) of Japan summoned his cabinet to an audience, told them that to continue the war would be suicidal, and expressed his wish that Japan accept the terms of the Potsdam Protocol—produced by the Allied conference that had set “unconditional surrender” as the goal of the fighting—with one exception, that Hirohito should remain emperor and sovereign of Japan. He then upbraided the military men present for failing to perform as they had promised him. On August 10, the day after the attack on Nagasaki, Japan sued for peace on condition that Emperor Hirohito be allowed to remain its ruler.

If this was not completely unconditional, it was close enough. Truman and his advisers decided that even had the emperor not raised the issue, they would probably have kept him on under Allied supervision, if for no other reason than to ensure the surrender of the Japanese armies scattered across East Asia and the Pacific. The Americans replied on August 11 that the emperor and the Japanese government’s authority would be subject to the Supreme Commander of the Allied Powers, as required by Potsdam, but also implying that Hirohito could retain the title of emperor. A few of the more fanatical officers attempted a coup on the palace grounds, but their revolt failed. On August 14, Hirohito accepted Potsdam, and a “cease-fire” was announced. On the morning of September 2, 1945, General MacArthur, on board the battleship *Missouri* anchored in Tokyo Bay, received the Japanese delegation and accepted the surrender. The greatest war in history had come to an end.

Some historians have argued that if the Americans had made their willingness to retain Hirohito as titular

emperor clear earlier, even if under the yoke of an Allied supreme commander, the Japanese might well have surrendered much sooner and there would have been no need to employ nuclear weapons. As it was, the Allies carefully employed the authority of the emperor throughout the surrender process, accepting the surrender documents from the delegation to the *Missouri* as the “First Instrument of Surrender,” then carefully proclaiming the emperor’s receipt of the surrender, and finally securing additional “instruments of surrender” in other parts of the Pacific theater, such as the Philippines and Singapore.

ALLIED OCCUPATION

MacArthur became the Allied commander of the Japanese occupation between 1945 and 1951. Certainly autocratic, if not megalomaniacal, MacArthur nevertheless proved to be an effective and humane administrator. He directed the demobilization of the Japanese military forces, seeing to the complete expurgation of the island empire’s entrenched militarists, and he guided the restoration of the Japanese economy and the drafting of a liberal constitution, which was adopted in 1946. Under his tutelage, Japan inaugurated significant reforms in land distribution, education, labor relations, public health policies, and the treatment of women. Serving also as head of the U.S. Army’s Far East command, MacArthur was called upon to take charge of UN forces when the KOREAN WAR broke out in 1950. He soon ran afoul of President Truman, who removed MacArthur from command—and from the Far East—for his insubordination and his unwillingness to fight a limited war. Thus MacArthur was gone and his influence over Japanese affairs at an end, when the peace treaty, which he had long negotiated, was finalized.

The signing of the 1951 treaty was the culmination of negotiations essentially completed during MacArthur’s day. These included the establishment of territorial boundaries as they existed at the end of the war, with Japan affirming its renunciation of rights to all territories surrendered by the armistice concluded aboard the *Missouri*. It also renounced any special rights with regard to China. However, the treaty conveyed to the Soviet Union no special title to the Kuriles and southern Sakhalin. Nor did it turn over Taiwan to China. For these reasons, the Soviet Union and the two Chinas declined to sign the treaty—though a majority of the Allies did sign, making it universally effective.

Although the treaty established the principle that Japan should pay reparations, it left the amounts to subsequent bilateral negotiation. The treaty also brought to bear the principles of the United Nations Charter, to which Japan agreed to subscribe, further agreeing to follow internationally accepted fair trade and commerce practices. The treaty provided for the transition from a government of military occupation to sovereignty and independence within 90 days of the date on which the treaty came into force. Of signal importance was the absence of military

clauses restricting armed forces in Japan. A central feature of the Treaty of Versailles and other World War I treaties, these were made unnecessary by the Japanese constitution adopted in 1946, which forbade the maintenance of any Japanese armed forces. However, Japan agreed to accept “the obligations set forth” for nation states under the UN Charter, and, for their part, the Allied signatories recognized “that Japan as a sovereign nation possesses the inherent right of individual or collective self-defense referred to” in that charter. (In part at the insistence of the United States, a small defense force was later created.)

One might say MacArthur had learned the lessons of Versailles and applied them in Japan, avoiding its punitive aspects and carefully nurturing the economic reconstruction of the defeated country. Many Japanese would have disagreed; certainly MacArthur’s dictatorial rule sometimes felt punitive, and the total disarmament forced on the Japanese under their constitution more resembled the intent of Versailles than not. MacArthur’s time in Japan was an occupation—more subtle than the Soviet occupation of East Germany, even benign perhaps, but an occupation nevertheless. And in many ways, the peace treaty signaled only the official end of the postwar occupation.

By 1951, under MacArthur’s stewardship, Japan had already become a political and economic asset to an America engaged in the COLD WAR, although nothing like the financial juggernaut the island would become in future decades. However, having—at the insistence of the United States as an occupying power—constitutionally disarmed, the Japanese without American protection were defenseless against the two neighboring communist giants, the Soviet Union and China, who—in the wake of Mao Zedong’s (1893–1976) takeover of the mainland in 1949—appeared at the time to be more a single ideological and political monolith than later proved to be the case. Especially with the coming of the Korean War, which witnessed both a massive invasion of South Korea by Chinese communist troops and significant technical support for North Korea from the Soviet Union, it became important for the United States at last not only to sign a permanent peace with Japan but also to reach some agreement on security.

Thus, on the same day that the peace treaty was signed, Japan concluded the Japanese-U.S. Security Treaty, which allowed (among other provisions) the United States to maintain military forces in Japan. This treaty was supplanted in 1960 by the Treaty of Mutual Cooperation and Security between the United States and Japan. The postwar arrangements between the United States and Japan proved an unexpected boon for the island kingdom. Freed of the need to maintain a costly security sector, the Japanese economy, fully industrialized before the war but saddled with none of the outmoded plants (courtesy of Allied bombing) such industrialization might have implied, eventually took off to dizzying new heights.

In short, Japan, though it had suffered tremendously at the end of the war, reaped unexpected benefits from the postwar occupation. Protected in many ways from foreign competition, freed to develop an all but entirely new industrial infrastructure, and forbidden to invest in the costly weapons and security programs that would consume so much of the budgets of other industrialized powers, Japan developed a truly world-class economy that in the coming decades became a marvel and a model around the globe, made the Pacific Rim a hot-bed of economic growth, and came to rival that of its occupier.

Defense spending for the Allied countries grew ever more expensive after the war precisely because the United States had dropped the atomic bombs on Japan and unleashed a nuclear age in world history. Immediately after the war, the United States sat content in the knowledge that it and only it possessed the atomic bomb, but unknown to Truman and Churchill, Klaus Fuchs (1911–88), who had worked on the Manhattan Project and was among the scientists who objected to the deployment of the bombs, had already passed atomic secrets to the Soviets. By war’s end, Stalin knew all about the bomb. He had not built one yet, but he soon would, and over the succeeding decades the USSR and the United States would create thousands of nuclear weapons that could be launched from almost anywhere on land, at sea, or in the air. Within a few years the victors in World War II had become prisoners of their own technology, former allies turned “superpower” rivals who would spend 40 years locked in a cold war dance of death called “mutually assured destruction” that neither could really control or bring to a good end, and from which Japan was all but exempt.

World War II: Russian Front (1941–1945)

PRINCIPAL COMBATANTS: Nazi Germany and allies (Italy, Hungary, Romania, Slovakia, co-belligerent Finland, and the Croats and volunteer “Spanish Legion” in support) vs. the Soviet Union and allies (Great Britain, United States)

PRINCIPAL THEATER(S): European Russia

DECLARATION: Germany against Soviet Union, June 22, 1941

MAJOR ISSUES AND OBJECTIVES: Adolf Hitler’s plans envisaged the military defeat of the Soviet Union, the eradication of “Jewish-Bolshevism,” the extension of German’s *Lebensraum* (“living space”) to the east, and the subjugation, exploitation, and extermination of the Slav *Untermensch* (“sub-human”). In response, the Soviet Union waged the “Great Patriotic War” (*Velikaia Otechestvennaia voina*) inspired more by feeling for endangered “Mother Russia” than commitment to communism.

OUTCOME: In spite of huge initial successes, the German forces were defeated in the east, and the Red Army liberated Soviet territory, advanced deep into the Balkans, Eastern Europe, and Germany itself, capturing Berlin on May 2, 1945. By May 1945, Vienna and Prague had also fallen to the Red Army.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Total Soviet wartime mobilized military manpower amounted to 29,574,900. Red Army strength in June 1941 was 4,826,900, in May 1945, 11,390,600. German Army (Wehrmacht) strength in the east was 3.3 million in June 1941, 3.10 million in 1942, 2.56 million in 1943, 3.13 million in 1944, 2.53 million in January 1945. On average, over four years, more than 9 million troops were continuously committed on the front.

CASUALTIES: Even after 50 years, there are no final loss figures, German or Soviet. German troop losses in the east from June 1941 to March 1945: total 6,255,000 (1,001,000 killed, 3,966,000 wounded, 1,288,000 missing). Soviet figures for German prisoners of war: 2,289,600 of whom 450,600 died in captivity. Losses of Germany’s allies in the east: 1,725,800 (killed, missing, prisoners) according to Soviet figures.

Protracted controversy surrounds Soviet battlefield losses. One total for killed and missing is 10,008,434 (yet another sets that figure at 11,444,100); wounded and sick, 18,190,693, giving a total of 28,199,127 (revised upward by some to 29,629,205). Figures for Soviet prisoners of war vary between 5,245,000 and 5,734,528; 1,836,000 were repatriated in 1945, leaving a deficit of some 3.3 million prisoners presumed shot, executed, starved, maltreated. Recent Russian figures put total wartime permanent losses, military and civilian, at 26–27 million, though this is contested as too conservative.

TREATIES: See World War II: Pacific and World War II: Western Front

This entry focuses on the Russian front in World War II. For the historical background of the war, see WORLD WAR II: HISTORICAL BACKGROUND. For the outbreak and early course of the war, see WORLD WAR II: OUTBREAK AND EARLY GERMAN CONQUESTS. For entries that treat the course and conclusion of the war in various theaters, see the SINO-JAPANESE WAR (1937–1945); WORLD WAR II: AFRICA AND THE MEDITERRANEAN; WORLD WAR II: ATLANTIC FRONT; WORLD WAR II: CHINA-BURMA-INDIA THEATER; WORLD WAR II: ITALIAN FRONT; WORLD WAR II: PACIFIC; WORLD WAR II: WESTERN FRONT. For the development and deployment of the atomic bomb, see World War II: Pacific. For treatment of the major Allied summits, the Holocaust, and the Nuremberg trials, see World War II: Western Front.

Historians judge the Soviet-German war, the “Great Patriotic War of the Soviet Union, 1941–1945,” to be the greatest land campaign ever fought on a single front, more geographically extended than any other in history. In terms of duration, numbers of men engaged, levels of guns, tanks, aircraft, and casualties, the Russian front dominated World War II. The Wehrmacht never had less than 60 percent of its divisions committed in the east against the Red Army, which in turn claimed the destruction or disabling of 607 enemy divisions in the course of nine campaigns, seven of them offensive, for the reported loss of 297 Soviet divisions (177 in 1941 alone). An extensive, savage partisan war developed in the German rear, adding more terror and brutality. Soviet population loss was on the order of 23.5 percent, the physical destruction enormous, 1,170 towns, 31,850 industrial plants, 84,000 schools, and 7 million dwellings.

ORIGINS

As early as 1925 in *Mein Kampf*, Adolf Hitler (1889–1945) widely advertised his virulent anticommunism and pronounced war a test of national virility and the conquest of *Lebensraum*, “living space,” for the German master race, the latter to be achieved by war on the Slavs in the east. “If we want to rule we must first conquer Russia.” The war against the Soviet Union was both an ideological war to destroy “Jewish-Bolshevism” and a war of racial subjugation. The August 23, 1939, German-Soviet Treaty of Non-Aggression, the “Nazi-Soviet Pact,” ushered in a temporary *rapprochement* between Hitler and Joseph Stalin (1879–1953), the latter affirming that he used the pact to buy time, though throughout 1940–41 he pursued appeasement of Germany as much as he prepared for war.

In the summer of 1940, the German high command initiated the first operational studies for an attack on the Soviet Union. The November 1940 Berlin conference between Hitler and Vyacheslav Molotov (1890–1986), the Soviet foreign minister, disclosed serious differences and confirmed Hitler in his view of Stalin as a “cold-blooded blackmailer.” On December 5, 1940, Hitler received a

detailed briefing on the operational plans for war on Russia, and on December 18 he issued his Directive No. 21 stipulating that “the German Armed Forces must be prepared to crush Soviet Russia in a swift campaign (Operation Barbarossa),” preparations to be completed by May 31, 1941.

Repeatedly warned by intelligence about Hitler’s intentions and German plans, Stalin refused as late as June 1941 to believe in the imminence of a German attack, denouncing all warnings as “lies” and “provocations.” While reinforcing the Red Army on the frontiers, he declined to authorize an operational alert until late on June 21. In effect, the Red Army in June 1941 could neither attack nor defend. Between 3:00 and 3:30 A.M. on Sunday, June 22, 1941, 3,050,000 German troops—148 divisions, including 19 panzer (armored) divisions, 15 motorized divisions (75 percent of Wehrmacht field strength), 3,350 tanks, 7,184 guns, 600,000 motor vehicles, and 650,000 horses—supported by 2,500 Luftwaffe aircraft, opened the greatest land campaign in history, unleashing a high-speed offensive that achieved almost complete tactical surprise.

HALTING THE *BLITZKRIEG*, 1941–1942

On June 22, 1941, three massive German army groups—North, Center and South—spearheaded by the tanks of four Panzer groups, smashed into a Red Army that was largely without orders, badly deployed, its reorganization and reequipping far from complete. Neither Stalin, who anticipated further negotiation, nor the Soviet people expected imminent German attack. The Luftwaffe destroyed 800 Soviet aircraft parked on their airfields in a matter of hours. Army Group North struck deep into the Baltic States, and Army Group Center, advancing north of the Pripet Marshes, trapped Soviet armies in the huge Bialystok-Minsk encirclement operation. Army Group South met more organized resistance but began its advance on Kiev.

At the front, the Red Army succumbed to chaos and confusion, mobilizing under fire and hampered by the lack of a functioning war machine. The State Defense Committee (GKO), created after a delay of a week on June 30, 1941, assumed full military and political power, with Stalin as its chairman. Stalin’s own belated national broadcast followed on July 3, ordering a “scorched earth” policy, calling for partisan warfare, appealing to Russian patriotism, and welcoming aid from the West. A vast, improvised movement to evacuate key industries to the eastern hinterland began, producing the greatest industrial migration in history.

At the front, Red Army losses mounted—thousands of tanks, aircraft, a huge tally of prisoners. The creation on July 10, 1941, of three Soviet “strategic high commands” (*glavkoms*)—Northwest, West, and Southwest—cumbersome as they were, did little to restore a gravely dangerous and deteriorating situation. The German plan aimed to destroy the Red Army between the Dnieper and Dvina

ivers. The German command concluded this had been accomplished by early July, anticipating only disorganized resistance to the east. The final drive to take Leningrad was planned for August 10, whereas on August 5, Army Group South had already trapped up to 20 Soviet divisions and raced into the Dnieper bend.

The initial phase of Barbarossa closed in mid-August with Hitler deciding to concentrate, not at the center, a drive on Moscow, but to attack in the south, taking the Crimea and the industrialized Donets Basin, thus cutting off the Soviet oil supply from the Caucasus. Simultaneously, in the north the Germans would finally occupy Leningrad, linking up with the Finns. The advance on Moscow was to be resumed only after Leningrad had been captured and operations in the south well developed. On August 25, German troops linked up to the east of Kiev, trapping seven armies and taking some 600,000 prisoners. But Leningrad did not fall. Hitler decided that it should only be surrounded and besieged. On October 2, after a six-week delay, Army Group Center resumed the advance on Moscow, carrying out three huge encirclements at Viazma and Briansk, bringing the Red Army near to collapse, and precipitating panic in Moscow, which was hurriedly evacuated. Soviet war production plummeted disastrously, grain lands were lost, Red Army manpower dropped to its lowest level, more than 3 million men were taken prisoner, and 177 divisions were destroyed or disabled.

On November 15, 1941, Army Group Center launched its double envelopment to close east of Moscow, two panzer groups attacking to the north, a third to the south. Early in December 1941, in freezing temperatures, German advance units were 21 miles north and 40 miles south of Moscow, but German commanders reported exhaustion, lack of reserves, and stiff resistance. In the south late in November, a Red Army counteroffensive had recaptured Rostov and forced German troops back to the Mius River; in the north at Tikhvin, Soviet troops were closing on the German garrison. With the Red Army still fielding some 280 rifle and cavalry divisions, the German offensive halted in its tracks on December 5, 1941; the following day General (later Marshal) Georgii Zhukov (1896–1974) opened his counterstroke on the center, joined on the northern left flank by the Kalinin Front (army group) and to the south by Marshal Semyon Timoshenko’s (1895–1970) Southwest front. The Soviet attacks quickly developed into a counteroffensive, with a shattering effect on Army Group Center, catastrophe barely averted by Hitler’s personal “stand fast” order of December 18, 1941.

Stalin steadily expanded the Soviet operations against Army Group Center and extended them to Army Group North. Soviet penetrations north and south of Army Group Center forced the German command to suspect a Soviet plan to encircle the entire army group. On January 15, 1942, Hitler sanctioned a major withdrawal to shorten

the German lines. Though the German southern flank was stabilized, to the north extreme danger persisted until mid-February 1942.

On January 5, 1942, Stalin decided on a strategic counteroffensive involving all Soviet fronts, much against the advice of Zhukov and the General Staff, who recommended one all-out effort to finish off Army Group Center. In the late winter of 1942 the Soviet offensives lost momentum, followed by a gradual German recovery throughout March. Army Group Center stabilized in the north and closed the gap with Army Group North. The Ostheer, the German army in the East, had survived.

Hitler had earlier taken over personal control of operations in the East and on April 5, 1942, specified German objectives for the summer campaign with Directive No. 41. The main weight of the German effort would be directed to the south—to the Don, Stalingrad, and the Caucasus oilfields—designed to bring the Soviet Union to its knees. Leningrad would become a secondary theater, but the Kerch Peninsula had to be cleared and Sevastopol captured. Defending the vital oil fields would finally deprive the Soviet Union of its remaining strength. The offensive would develop in two stages, Blau I and Blau II, the first designed to bring German troops to the Don River, the second moving on to Stalingrad and threatening the Soviet flank in the Caucasus. Once fully engaged, Army Group South would split into Army Groups A and B, the former striking in the north, the latter into the Caucasus.

Stalin, though pressed to remain on the defensive and concentrating reserves before launching a counteroffensive, sanctioned immediate offensive operations by Marshal Timoshenko's Southwest Front, aimed at the recovery of Kharkov and a subsequent advance southwestward. On May 12, 1942, Timoshenko attacked, but within days his forces were encircled, Soviet armor decimated, and a quarter of a million men taken prisoner. Stalin refused to believe in a major German offensive in the south, insisting that Moscow remained the German objective, but on June 28, 1942, two panzer armies, the Second and Fourth, opened the German offensive against the Soviet southern wing. The original intention behind Hitler's Directive No. 41 was the destruction of the Red Army west of the Don with two huge armored thrusts from Voronezh and Taganrog closing near Stalingrad, after which the advance into the Caucasus would be resumed. But the first thrusts to Voronezh and east of Kharkov did not bring about huge encirclements in the style of 1941. Few Soviet forces remained west of the Don, having begun a large-scale, orderly withdrawal. The previous appalling "hold at any cost" policy was abandoned. Hitler now determined to eliminate an elusive Red Army on the lower Don. Rostov was captured on July 23, 1942, but Soviet divisions were falling back east and south. Stalin issued his own draconian "not a step back order" and began hurriedly moving reserves southward. Hitler produced Directive No. 45,

ordering Army Group A to drive on Batum and the oilfields and Army Group B to capture Stalingrad and prepare the Don as a defensive line. Fritz von Manstein's (1887–1973) Eleventh Army received orders to move from south to north, from the Crimea to Leningrad.

Stalin frantically rushed three reserve armies into the recently established Stalingrad Front under Timoshenko. In Stalingrad itself, the evacuation of industry, previously halted, was now resumed. German advances continued throughout August 1942 but without achieving decisive success. Army Group A struck deep into the Caucasus, covering the 200 miles to Maikop only to find a ruined oilfield. Far to the north, German forces frustrated a Soviet attempt to lift the siege of starving Leningrad but at the cost of forcing Army Group North to abandon its own plans to take the city. The German Sixth Army, the most powerful in the East, under the command of Friedrich von Paulus (1890–1957), advanced into the Don bend and toward the Volga. On Hitler's specific orders, the Fourth Panzer Army had reverted to Army Group B, now striking northeastward and joining the attack on Stalingrad. Early in August, Stalin decided to split the sprawling Stalingrad Front in two. He formed a new Stalingrad Front to defend Stalingrad from the northeast and established the Southeastern Front under Colonel General Andrey Yeremenko (1892–1970) to take positions opposite the city itself and to cover the southern flank.

To screen an ever-lengthening flank, Army Group B deployed the Second Hungarian and the Eighth Italian armies on the Don north of Stalingrad. By mid-September 1942, Soviet troops had been forced back into a bridgehead at Stalingrad itself, nine miles long but nowhere more than three to four miles deep, the Volga at their back. Here, from October to November, General (later Marshal) Vasily Chuikov's (1900–82) Sixty-second Army, inside Stalingrad, fought one of the most savage battles of attrition ever seen. In early October, desperate for men to fight inside Stalingrad, the German Sixth Army turned to the Romanian troops of Third Army to defend its own left flank on the Don immediately north of the city. This was the prelude to disaster.

On August 23, a German panzer division crossed the Don and reached the Volga north of Stalingrad. Stalin erroneously assumed the city had fallen, though the Soviet defensive perimeter was shrinking fast. On September 14, German troops took the main railway station, broke through to the waterfront, and cut the defending Sixty-second Army in two, already separated from Sixty-fourth Army defending to the south. The first half of October now saw the final effort to subdue Stalingrad, but already two future Soviet marshals, Zhukov and Aleksandr Vasilevskii (1895–1977) had begun to formulate plans for a Soviet offensive. It envisaged a double envelopment with armored thrusts, one from the north driving southeastward, the other from the south of Stalingrad moving northwestward,

designed to link up at Kalach on the Don, trapping two German armies, the Sixth and Fourth Panzer.

Twelve Soviet armies, including a tank army, launched the massive Soviet offensive on November 19, 1942, smashing through the Romanian Third Army north of Stalingrad and to the south routing the Sixth Romanian Corps deployed with Fourth Panzer Army. On November 21, Hitler ordered Paulus and his staff to move back into the Stalingrad area and to prepare an all-round defense. Paulus flew back into an encirclement completed on November 23 at 2 P.M. when Soviet armored spearheads linked up southeast of Kalach, cutting the land communications of the German Sixth Army and elements of the Fourth Panzer, trapping five corps headquarters, 14 German infantry divisions, three motorized and three panzer divisions, two Romanian divisions, and a Croat infantry regiment, in all some 250,000 men. The Red Army accomplished the encirclement in four days.

German resistance at Stalingrad ended on February 2, 1943, in surrender. The battle for Stalingrad waged from July 1942 to February 1943 cost the Red Army 1,129,619 men dead, missing, or wounded. The German army lost 20 divisions, and 209,500 men, 91,000 of them prisoners.

LIBERATION AND CONQUEST 1943–1945

After Stalingrad, Stalin aimed to destroy the entire German southern wing. The Red Army offensive struck out north, west, and south of Stalingrad with a deep southwesterly drive, aimed originally at Rostov, to trap the German divisions deep in the Caucasus seeking to withdraw. Soviet armies also attacked from the Don north of Stalingrad southward to the Donets, threatening to envelop the remnants of Army Group B and Army Group Don (Manstein's new command), the latter fighting to hold open a German escape route from the Caucasus. As Manstein fell back, Army Group B lost Kharkov, but in late February and early March Manstein struck back, trapping Soviet divisions west of Kharkov and advancing to Belgorod. German troops regained the line of the Donets. To the north the Red Army held a huge salient jutting out west of Kursk.

During an unusual lull in the east and after much hesitation, Hitler decided to try once more for victory with Operation Citadel, a two-pronged attack to reduce the Soviet salient at Kursk. It was the prelude to the mightiest tank battle ever seen. The Red Army undertook prodigious defensive preparations but amassed a huge reserve force for a counteroffensive. The Wehrmacht was at the peak of its strength. On July 5, 1943, the German Ninth Army in the north and the Fourth Panzer in the south attacked across the base of the Soviet salient. On July 13, 1943, after massive losses on both sides, Hitler halted the attack. Hitler's bid for victory had failed. Henceforth the German army in the east was condemned to inevitable withdrawal and to eventual defeat.

On August 3, the Red Army unleashed its massive counteroffensive, blasting a path to the Dnieper. In little more than a month, the northern flank of Army Group South was shattered, with German troops falling back on the Dnieper. In October, Soviet armies regrouped and front commands were renamed. Attacking from the extensive Soviet bridgeheads on the Dnieper, the First Ukrainian Front took Kiev on November 3, 1943, pushing on west and south to threaten the left flank of Army Group South. Further Soviet thrusts southward, aiming for the Black Sea coast, had trapped Army Groups South and A between the Dnieper and Dniester rivers. The German army's entire southern wing was imperiled in January 1944, the year during which the Soviet high command intended to launch "ten decisive blows," isolating each German army group, destroying them one by one.

The deblockading of Leningrad and the assault on Army Group North opened this sequence. At the end of February, the Red Army deployed all of its six tank armies against Army Group South, a massive force employed in an offensive that, by mid-April, had forced the Germans back to the Carpathians. In April–May, the Fourth Ukrainian Front cleared the Crimea. The German command anticipated further Soviet operations in the south, an impression actively encouraged by Soviet deception measures, but the Soviet high command intended to destroy Army Group Center in Belorussia to the north.

The Red Army attacked on June 22–23, 1944, on the third anniversary of Barbarossa and two weeks after the D-day landings in Normandy. In 11 days, four Soviet Fronts ripped Army Group Center apart, inflicting a defeat greater than Stalingrad, in which 28 German divisions were destroyed and 300,000 men lost. A huge 250-mile gap had been torn in the German lines, leaving the Baltic States and East Prussia open to attack, a situation Stalin was determined to exploit by clearing Belorussia, entering Poland, and striking into the Baltic States before this gap could be closed. Seizing this opportunity on July 15, the First Baltic Front pressed ahead through Lithuania into Latvia, operating in the gap between Army Groups Center and North. Farther north, a Soviet offensive against the Finns had opened on June 9, a weight of men and metal that forced the Finns to seek an armistice on September 2, 1944. Soviet troops in the far north finally halted their pursuit operations of German troops northwest of Kirkenes in Norway.

Army Group North Ukraine, formerly Army Group South, was the target of a second huge Soviet offensive. General Ivan Konev's (1897–1973) First Ukrainian Front and Marshal Konstantin Rokossovskii's (1896–1968) left flank armies (First Belorussian Front) attacked and seized Galicia and southern Poland, Lublin, and Warsaw in central Poland respectively. At the end of July, three armies of First Ukrainian Front reached the Vistula, while Rokossovskii's tanks and infantry passed Lublin, turning

northwestward toward Warsaw. The lead Soviet tank corps, however, was encircled and destroyed east of the Polish capital. Within hours, on August 1, the Warsaw rising began, an inferno raging for two months, during which time the Red Army on the Vistula remained only a bystander.

Striking once more in the south on August 20, the Second and Third Ukrainian Fronts burst into Romania, encircling the German Sixth and Eighth Armies. Romania's subsequent defection from the Axis and the Soviet advance into Bulgaria, which also abandoned Hitler, shattered Germany's southeastern theater. The two Soviet Ukrainian fronts prepared to strike northward into Hungary and northern Yugoslavia. They took Belgrade on October 20 and closed on Budapest early in November. Though encircled by late December 1944, the German-Hungarian defenders fought on until February 13, 1945.

At the end of October 1944, the Soviet General Staff worked on plans for the final campaign of the war, the invasion of the Reich, designed to be one of the greatest strategic operations ever conceived. All German army groups had suffered drastic losses in Soviet offensives sweeping from the Barents to the Black Sea. The Red Army had completely destroyed 96 divisions, inflicting 1.5 million casualties and destroying 6,700 tanks. The "central sector," the most direct route into Germany, assumed decisive importance for the Red Army. In November, the Soviet General Staff submitted that the German war machine could be smashed in 45 days by offensive operations reaching to a depth of 375–440 miles and mounted in two stages without an "operational pause." Stalin fixed January 15–20, 1945, as a provisional date for the Soviet offensive; he also appointed himself operational "coordinator" for the four Soviet fronts involved and named Marshal Zhukov commander of the Soviet forces assigned to capture Berlin. The nature of the tempest about to break over the Eastern Front and Germany was indicated by Red Army strength: 6.5 million men, 100,000 guns, 13,000 tanks, 15,000 aircraft, 55 field armies, six tank armies, 13 aviation armies, and 500 rifle divisions.

The Soviet offensive, the Vistula-Oder operation, timed for mid-January 1945, was planned around two huge, parallel, armored blows, the lines of advance converging on Berlin. To the south, on the First Ukrainian Front, Konev planned to attack from the Vistula toward Breslau and Silesia; in the north, Zhukov's First Belorussian Front aimed at Poznan, first enveloping Warsaw. The Oder River, only a short distance from Berlin, was the specific objective. The Second and Third Belorussian Fronts received orders to attack northwestward and westward into East Prussia. Between January 12 and 14, 1945, Konev and Zhukov attacked, achieving a massive breakthrough in four days, smashing or overrunning the German defensive system, and crushing the Fourth Panzer Army and the Ninth Army. By January 20, the Red Army

had ripped a 350-mile gap across the German lines from south to north. Striking from north of Warsaw, the Second and Third Belorussian Fronts devastated East Prussia and, by January 26, 1945, reached the Baltic coast to the east of Danzig.

German attempts to relieve Budapest in January failed. Hitler's attempt to regain the Danube line early in March ended in defeat. The Second and Third Ukrainian Fronts turned at once from defensive to offensive operations. Sweeping past Lake Balaton, Soviet forces moved into Austria and took Vienna on April 13, 1945. Farther north on February 3, the First Belorussian Front reached the Oder on a broad front, 37 miles from Berlin. Zhukov's neighbor Konev with the First Ukrainian Front had already advanced to the middle Oder by the end of January. Attacking across the Oder from bridgeheads north of Breslau, Konev invaded Silesia, halting his advance on the Neisse River in early March.

In mid-February, the Soviet drive to Berlin came to an abrupt halt. Zhukov was forced to divert a tank army and infantry to counter the threat from East Pomerania to his right flank, a potential danger that had been recognized earlier in October 1944 but ignored. Zhukov's right flank and Rokossovskii's left flank (Second Belorussian Front) attacked on March 1, sweeping north to the Baltic coast, closing on Danzig and Gdynia by March 10, and clearing the entire right bank of the Oder. At the end of March, Stalin suddenly reacted to what he perceived to be "the race for Berlin" between the Red Army and the Anglo-American armies. He summoned a major command conference at the end of March to finalize preparations for a giant Soviet attack aimed directly at Berlin, timed to begin no later than April 16 and to be completed in 12–15 days.

The Soviet attack on Berlin involved a race not only with the Western allies but also between Zhukov and Konev to be the first to break into Berlin. The operational plan envisaged three Soviet fronts (First Belorussian, Second Belorussian, First Ukrainian) striking along several axes, cutting the German "Berlin grouping" into isolated elements and taking the city itself. Between the 12th and 15th day of operations, Soviet assault forces were ordered to reach the river Elbe on a broad front and link up with the Anglo-American troops. Under cover of smokescreens, Konev's tanks and infantry opened the Berlin offensive on April 16, forcing the Neisse and achieving a major breakthrough on the first day. Zhukov attacked from the Küstrin bridgehead on the Oder but took two days to break out from the Seelow Heights. Swinging two tank armies to the northwest, Konev's front closed rapidly on Berlin from the southeast, but Zhukov lagged behind in the north. By April 24, Berlin was fully encircled by the two Soviet fronts.

The German Ninth Army was also trapped south of the city between the flanks of First Belorussian and First Ukrainian Fronts. North of Berlin, the Second Belorussian

Front had beaten back the Third Panzer Army from the Oder. The outer encirclement was complete when, on April 25, the Soviet Fifth Guards Army linked up with the U.S. First Army at Torgau on the Elbe. Berlin was isolated, Germany split in two. Inside Berlin, savage street fighting pulverized much of the city, overwhelmed the defenses, and engulfed the citizenry in a nightmare. Hitler committed suicide on April 30, while the storming of the Reichstag by units of the First Belorussian Front allowed Zhukov to be acclaimed “victor of Berlin.” On May 2, 1945, Berlin surrendered.

In Czechoslovakia, the Second and Fourth Ukrainian fronts were advancing on Prague from the east. In yet another race with the Allies, Stalin ordered Konev to swing his tank armies south from Berlin and race for the Czech capital at top speed. Shortly after noon on May 9, 1945, the lead tanks and infantry from Konev’s First Ukrainian Front linked up in Prague with the tanks of Sixth Guards Tank Army from Marshal Rodion Malinovskii’s (1898–1967) Second Ukrainian Front advancing from the southeast. In Czechoslovakia, this final Soviet encirclement operation of the war trapped the last shrunken remnants of what had for years been the formidable, inveterate foe of the Red Army, Army Group Center.

THE RECKONING

In this war of unparalleled, sustained ferocity, waged across a half-million square miles, stretching from Moscow to Berlin and inflicting combined casualties on the order of 40 million, the Red Army outfought the Wehrmacht, and the Soviet war industry outproduced that of Hitler’s Germany. Both Hitler and Stalin waged coalition warfare, the former unsuccessful, as his allies were defeated or defected, the latter militarily and politically triumphant within the “Grand Alliance,” which endured in spite of mutual suspicions and ill-concealed animosities.

Hitler and Stalin were comparable in their roles of dictator-commander, committed to calamitous or impetuous strategies, indistinguishable in their profligacy with the lives of soldiers. Behind the “heroic myth” of Soviet popular resistance and sacrifice lay a terrible reality, that of a draconian regime that callously abandoned its populace or subjected it to inhuman coercion, at the front, in the factories, on the land. The arbitrary practices of Stalin’s wartime regime too often prejudiced communal safety or individual survival. The battlefields alone cannot adequately convey all the political, social, and human dimensions of the war in the east. Stalin waged war not only against Nazi Germany but also on his own people, wherever the security and continuity of his own personal power demanded. Prisoners were condemned as traitors and their families punished, labor illegally militarized, suspect nationalities deported, the barbarities and treacheries of partisan warfare concealed, the cost in human life deceitfully, disgracefully minimized.

The magnitude and intensity of this gigantic military encounter produced numbers, figures, and statistics astronomical enough to encourage disbelief or promote skepticism. Evidence from the archives of the former Soviet Union confirms the magnitude of human losses, the scale of destruction, the depth of suffering, and the rigors of self-sacrifice. Nazi Germany and the Soviet Union have both disappeared as states, but the totality of the human tragedy they unleashed will remain a stark historical memory unlikely to fade for generations to come.

World War II: Western Front (1943–1945)

PRINCIPAL COMBATANTS: United States, Britain, Free French forces, and USSR vs. Germany

PRINCIPAL THEATER(S): France, Belgium, Luxemburg, Netherlands, Germany, and Czechoslovakia

DECLARATION: See World War II: Outbreak and Early German Conquests and World War II: Pacific

MAJOR ISSUES AND OBJECTIVES: See World War II: Historical Background

OUTCOME: Germany surrendered to the Allies unconditionally.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Germany, 10,200,000; Allies, 4,581,000 (on VE Day)

CASUALTIES: Allies, 186,900 killed, 545,700 wounded (United States, 135,576 killed; Britain, 30,280 killed; France, 213,324 killed); Germany, 80,819 killed, 265,526 wounded, 490,624 missing, 2,057,138 captured
TREATIES: Act of Military Surrender (Rheims), May 7, 1945, and Act of Military Surrender (Berlin), May 8, 1945

This entry focuses on the Allied air war against, invasion of, and occupation of Europe during World War II, including the major Allied summits, the Holocaust, and the Nuremberg war crimes trials. For the historical background of the war, *see* WORLD WAR II: HISTORICAL BACKGROUND. For the outbreak of the war and its early course in Europe, *see* WORLD WAR II: OUTBREAK AND EARLY GERMAN CONQUESTS. For entries that treat the course and conclusion of the war in other theaters, *see* the SINO-JAPANESE WAR (1937–1945); WORLD WAR II: AFRICA AND THE MEDITERRANEAN; WORLD WAR II: ATLANTIC FRONT; WORLD WAR II: CHINA-BURMA-INDIA THEATER; WORLD WAR II: GREECE AND THE BALKANS; WORLD WAR II: ITALIAN FRONT; WORLD WAR II: PACIFIC; WORLD WAR II: RUSSIAN FRONT. For the development and deployment of the atomic bomb, *see* World War II: Pacific.

After Germany's early victories on the western front from 1939 through early 1941, little major resistance was possible on this front until the United States collaborated with Britain in beginning a campaign of strategic bombing against Germany and German-occupied France. Franklin Delano Roosevelt (1882–1945), the president of the United States, and Winston Churchill (1874–1965), the British prime minister, had already met in secret off the Newfoundland coast in the summer of 1941. At that time, Roosevelt was engaged in the last great battle with an isolationist Congress over his Lend-Lease agreement, and Churchill was trying to keep up the spirits of a Britain that for almost a year had been holding out alone against the onslaught of the Axis powers. The two leaders issued a joint manifesto, the Atlantic Charter, outlining for the world—and for their new ally, the Soviet Union, which had only a month before been invaded by Nazi Germany—the principles upon which an anti-Axis alliance should be founded. There were eight of them: the renunciation of territorial aggression; prohibition of territorial changes without consent of the peoples concerned; restoration of sovereign rights and self-government; guaranteed access to raw materials for all nations; world economic cooperation; freedom from fear and want; freedom of the seas; and disarmament of aggressors.

Since September 1940, Germany, Italy, and Japan had been united in their pursuit of world domination following the Axis Pact, but on the day Roosevelt and Churchill issued their joint statement—August 14, 1941—the United States was not yet even a belligerent, although Roosevelt was seeking to extend Lend-Lease to the Russians and was fighting an undeclared naval war in the

Atlantic with the Nazis. Roosevelt clearly expected soon to be engaged in the war, believing it would come—as World War I had come—as the result of German U-boat attacks on U.S. ships. Instead, Roosevelt achieved his day of infamy via the Japanese sneak attack on Pearl Harbor on December 7, 1941. On December 11, Germany and Italy declared war on the United States. The United States became an ally of both Britain and Russia in the war in Europe against Germany and Italy, but only Great Britain and the United States were allied in the Pacific war against Japan.

The first attempt to draft the terms of this Grand Alliance came when Churchill, immediately following Pearl Harbor, requested an emergency conference with Roosevelt, and the two met for three weeks following December 22 in Washington, D.C. Called the Arcadia Conference, the meeting saw the two leaders reaffirm a “Europe first” policy, which meant that the United States would put its considerable resources toward defeating Nazi Germany rather than seeking instant revenge against Japan, which most Americans probably favored. That meant, most immediately, an air war against the Germans as well as a fight against Erwin Rommel's (1891–1944) forces in North Africa.

AIR WAR

Although the United States deployed forces to the Pacific and to North Africa soon after Pearl Harbor, it took a little longer for the U.S. industrial war machine to produce the necessary bombers and for the U.S. Army Air Force to strain the pilots, crews, and ground personnel needed to begin strategic bombing. It was not until 1943 that the U.S. Eighth Air Force arrived in Britain to conduct, in coordination with the Royal Air Force (RAF), round-the-clock air raids against France and Germany. Generally, the British attacked during the night, while the Americans bombed by day. Daylight raids were much more accurate and, therefore, effective than night bombing, but also far more dangerous and costly in aircraft and crews. Half of USAAF casualties during World War II were incurred by the Eighth Air Force—more than 47,000 casualties, including more than 26,000 killed. Military historians continue to debate the effectiveness of strategic bombing, which was intended to cripple German industrial capacity as well as wear down civilian morale. However, no one disputes that the fighter squadrons of the Eighth achieved air superiority by effectively destroying the Luftwaffe, downing a total of 9,275 German aircraft.

Whatever the shortcomings of the strategic bombing, the air raids were certainly highly destructive. During July 26–29, 1943, Hamburg was totally destroyed by air raid. During August 17–18, Peenemünde, location of development of the German V-1 “buzz bomb” (a pilotless, rocket-propelled, high-explosive bomb, typically directed at civilian targets) and the V-2 rocket (a long-range rocket weapon),

was hit. Although the attack did not end the V-1 and V-2 programs, it probably crippled and delayed them.

Other important targets in 1943 included Wilhelms-haven (June 11), the oil fields of Ploesti, Romania (August 1), the ball-bearing industries at Schweinfurt (October 14), and the capital city of Berlin (November–December). German air defenses, including fighters and ground-based anti-aircraft artillery, took a devastating toll on U.S. bomber planes and crews. The situation improved dramatically after the introduction of P-51 Mustang fighters at the end of 1943. Not only were these high-performance aircraft, which could outfly comparable German fighters, but also they had sufficient range to escort bombers deep into enemy territory and back again. Earlier fighters had had to turn back well before the bombers had deeply penetrated enemy air space.

The combination of the air war and action in the other theaters, especially the Russian front, North Africa, and Italy, put Germany on the defensive by the beginning of 1944. In desperation, Adolf Hitler (1889–1945) launched his “vengeance” weapons, the V-1 “buzz bomb” and later the V-2 rocket, against targets in England, especially London, during the entire second half of 1944. The damage was severe, and some 20 percent of the British capital was reduced to ruins; however, the British will to fight was undiminished, and, as the tide of war turned against him, Hitler found himself opposed at home by many of his own officers who had turned against him. On July 20, 1944, a cabal of high-ranking military officers attempted to assassinate Hitler by detonating a bomb in his headquarters. Hitler survived the blast, and the war continued, but now Hitler took a much more direct role in strategy. Although Hitler’s death would surely have shortened the war, the failed assassination attempt, in prompting Hitler to distrust his top military commanders, did benefit the Allies, for Hitler was not a competent military strategist.

THE 1943 ALLIED SUMMITS

Once the strategic bombing of Europe had been planned in secret summits, Roosevelt and Churchill began holding a series of well-publicized conferences on the conduct of the war. The Allied leaders always discussed matters of substance and came to major decisions at these conferences, and they issued statements, reports, or declarations about many of them, though much of what was discussed of necessity remained secret. Some of the public announcements were significant in themselves, however, beyond the propaganda purposes their language was clearly meant to serve. The Casablanca Conference, one of the earliest summits in January 1943, produced just such a significant declaration.

Roosevelt and Churchill met in Casablanca in the wake of Operation Torch, the combined Allied invasion of North Africa, to determine the strategy for the coming year. Roosevelt once again soothed Churchill’s feelings by

putting off the opening of a second front in France in favor of operations in Sicily. General George Marshall (1880–1959) and Admiral Ernest Joseph King (1878–1956) won approval at the conference for offensives in Burma and the Southwest Pacific. The two leaders spent a lot of time trying to persuade the rival military leaders of Free France—Charles de Gaulle (1890–1970) and Henri Giraud (1879–1949)—at least to feign unity. Then, as the conference was drawing to a close, Roosevelt made the parting pronouncement that peace could only come with the total elimination of Germany and Japan’s military and their “unconditional surrender.”

With this declaration, which was not nearly so spontaneous as he would have had those in attendance believe, Roosevelt was trying to send a signal to Joseph Stalin (1879–1953) about American resolve in the war. He felt he needed to do so because his commander in Operation Torch, Dwight Eisenhower (1890–1969), had blundered politically in North Africa. The collaborationist Vichy government had severed diplomatic relations with Washington and ordered French forces to resist the Allied invasion. Looking for a French leader with enough prestige to rally French Africa against the Axis, the Allies had turned to Henri Giraud, a hero of the Free French who had escaped from a prison camp. The only trouble was that Giraud demanded command of the whole invasion force. Then Admiral François Darlan (1881–1942) showed up suddenly in Algiers. A leading fascist, Darlan was, according to the Vichy government, the commander of the local French forces, and he promised Eisenhower he would make them stop fighting the Allies if the American commander recognized him as the political chief of North Africa. Eisenhower made the deal, and the Americans escaped utter humiliation only when a French royalist assassinated Darlan and de Gaulle outmaneuvered Giraud to become de facto leader of the Free French. The point, however, was that it all seemed rather sinister to Stalin, who had objected to the North Africa invasion from the start, suspecting his Western allies of delaying a direct invasion of the mainland as a way of bleeding the Red Army by letting it do the brunt of the fighting against the Nazis. Thus Roosevelt’s “unconditional surrender” was aimed as much at the ally who was absent from Casablanca as it was at the enemies whose future it was destined to dictate.

Couched in the “tough-guy” phrasing and casual punctuation of American wartime propaganda, the Casablanca Declaration was in many ways a rash act. It committed the United States to a power vacuum in post-war Europe rather than a balance of power, which would vastly complicate the peace and give Stalin ample opportunity to fill the vacuum with puppet regimes. It may also have discouraged Germans from attempting to oust Hitler even when facing sure defeat. It certainly underlay Japan’s determination to fight on in Asia long after losing all realistic hope. The Soviets themselves would not attend any of

these summits to discuss war aims and set Allied strategies until the winter of 1943, although Roosevelt in particular remained aware of the need to make Stalin feel part of the Allied effort.

But Roosevelt's openness to Stalin had its limits. At the Quebec Conference in August 1943, the Americans decided to share with the British their results under the top-secret Manhattan Project, which would produce the atomic bombs that ended the war in the Pacific, but they announced that agreement to neither the public nor the Russians. Following the conference, however, at which Roosevelt and Churchill agreed on May 1944 as the deadline for an invasion of France, the British and Americans sent Anthony Eden (1897–1977) and Cordell Hull (1871–1955) to Moscow to reassure Stalin of their governments' intentions to open this Allied "second front" and to make sure that he was in tune with other Allied plans.

At the Moscow Conference, Eden and Hull first and foremost secured Stalin's blessing for the arrangements Roosevelt and Churchill had made concerning Italy. Anglo-American commanders on the spot would run the occupied country, whereas the inter-Allied commission that Stalin had requested as a governing body would instead merely advise those commanders. Following their conference, the diplomats issued a joint declaration to include China, which at the Cairo Conference a month later would formally become one of the Great Powers of the Alliance. Stalin's cooperation at the conference was deceptive. Later, when the Red Army liberated the Axis-controlled states of Eastern Europe, Stalin would point to the Italian precedent to justify his imposition of unilateral military control by the Soviet Union through long occupation of what became East Germany, the installation of a puppet communist government in Poland immediately after the war, and the communist takeover of Czechoslovakia in 1948.

In 1943 Nationalist Chinese leader Generalissimo Chiang Kai-shek (1887–1975) joined Roosevelt and Churchill at the war council held in Cairo between November 22 and 26. Churchill was not at all happy that Roosevelt had invited Chiang, whom Churchill viewed as not much better than a corrupt warlord. Certainly Chiang represented trouble for British colonial interests in China and East Asia, and—always a greedy man—he was proving more bothersome than helpful in Allied attempts to prosecute the war in the China-Burma-India theater. Nationalist Chinese generals under Chiang demanded an unlimited supply of weapons and goods but were totally unreliable on the battlefield, except for troops trained and led by Chinese communists. The communists were supposedly allied with Chiang's Nationalists in a United Front but Chiang subverted their participation whenever possible. But Roosevelt, whose family also had financial roots in the Far East, was insistent, and Cairo established Chiang as the voice of a Great Power ally in the war.

At the Cairo Conference the three leaders discussed at length the war in Burma and issued a declaration setting goals for ending the war in the Pacific, which included—in addition to an unconditional surrender—the retaking from Japan of Manchuria, Formosa, Korea, the Pescadores, and all the Pacific islands Japan had conquered or acquired since 1914. But Chiang's inclusion among the Great Powers' leaders of World War II would turn out to be an embarrassment. Not only would he prove less than useful in fighting the Japanese in the Pacific, but also the long-corrupt and immensely vain Chiang would find himself and his Nationalist government chased off the mainland by the Chinese communists under Mao Zedong (1893–1976) soon after the war.

The last of this series of diplomatic and strategic-planning conferences held by the Allied powers in 1943, the Tehran Conference was also the first "Big Three" summit. Stalin had not attended the meetings in Casablanca, Quebec, or Cairo, and neither Roosevelt nor Churchill had gone to Moscow in October. But all were present at the November 25–December 1 conference, and for the first time the personal and ideological dynamics that would have such impact on the peace process following World War II came into play.

From Stalin's point of view, the meeting probably underscored the validity of Marxist theory, as the inevitable conflict between national imperial powers predicted by communist ideology certainly became evident. It was hardly surprising that Roosevelt, the product of a Puritan culture that just yesterday had clung to its moral isolation from the rest of a corrupt world, should have trouble with the contradictions inherent in the views of Winston Churchill, who represented a colonial empire that had been protecting its assets and imposing its will on the world for two and a half centuries via a combination of sea power, free trade, and diplomatic chicanery. To Stalin both no doubt seemed self-serving, the one wishing to remake the world in its image, the other seeking to maintain a centuries-old policy of a balance of power in Europe. As for the Soviet dictator himself, Churchill certainly had no illusions about the ruthlessness of this canny survivor of the treacherous political culture of the Bolsheviks, who clung to power by relentlessly destroying any who could even remotely pose a threat to his rule and who—as it turned out—engaged in mass murder as blithely as any Nazi. Roosevelt, on the other hand, chose to believe he could reason with the man if only he could get beyond Stalin's evident suspicions.

So while Roosevelt openly, even buoyantly, criticized Churchill in Stalin's presence and demanded that the prime minister come to terms with the need to end European colonizing—including British imperialism—after the war, Stalin steadfastly insisted on the strategies and policies that would allow the Soviet Union to realize many of Imperial Russia's fondest dreams in Eastern Europe, while

Churchill—and others, even other Americans—brooded in silence. Churchill wanted to fight the Nazis to the last drop of Russian blood, and Stalin knew it; Stalin wanted to establish a hegemony over Eastern Europe, and Churchill knew it. Roosevelt wanted to end the war and build a new world order in which such wars could never recur, and neither Churchill nor Stalin believed it.

Stalin demanded the territories he had already gained with the acquiescence of the Nazis—the 1941 frontier in Poland at the Curzon Line (Poland could be compensated with German land to the west)—plus the Baltic coast of East Prussia. Churchill advocated the breaking up of Germany and turning the Danube area—Austria, Hungary, Bavaria—into a “peaceful, cowlike confederation.” He wanted similar confederations in Eastern Europe, but Stalin—worried that his Allies were reviving the notion of a *cordon sanitaire* between the West and the Bolsheviks that the peacemakers at Versailles tried to establish in 1919—objected, especially because it would interfere with his plans to establish hegemony over the area, piece by piece if need be. The Allies should, he insisted, Balkanize Eastern Europe, punish France for collaborating and strip away her colonies, and keep Poland and Italy as weak as they had ever been. Stalin, as some at the conference, such as U.S. diplomat Charles Bolen noted at the time, wanted the Soviet Union to be the only important military power and political force on the continent of Europe.

All this the Big Three discussed and debated, but that is not what they declared to the world public. Instead they chose to emphasize the agreement that Roosevelt wrung from the others to form an international organization that would become the globe’s diplomacy in a postwar world—led, naturally enough, by the United States, Britain, the Soviet Union, and, he insisted, China. The Tehran declarations, then, fit the tone of the propaganda proclamations issued by the previous summit conferences, but for the first time the Allies floated the notion of a United Nations to arise from the ashes of the most destructive war in history. The Big Three also announced the military conclusions of the conference in relation to the continuation of the war, including the deadline that Churchill and Roosevelt had already set for the opening of the “second front” in Europe that had all along been the diplomatic obsession of the Russians. That second front now had a code name—Operation Overlord. Thus, at Tehran the Allies got a glimpse of Stalin’s vision for postwar Europe, one Roosevelt chose to ignore and Churchill to brood over. Stalin got what he wanted most—a commitment to the opening of a second front on the Continent.

INVASION AT NORMANDY

The broad Allied strategy, then, was to press Germany on three fronts: from the south, via Italy, which Winston Churchill referred to as the “soft underbelly” of Europe; from the east, where the Russians were driving the Ger-

mans out of Russia and steadily back into Eastern Europe; and, finally, from the west. This major thrust would require a full-scale invasion across the English Channel and into France. It was decided to land 1 million men at Normandy during the first week of June 1944. Preparatory to the invasion, Allied planners staged a brilliant campaign of disinformation, which successfully deceived the Germans into believing that the invasion would come not at Normandy but at the Pas de Calais. Although the Germans did not leave Normandy undefended, they concentrated their still-formidable might at Pas de Calais.

Allied planners targeted five Normandy beaches. The westernmost was designated Utah Beach, with Omaha Beach just east of it. At these two points, Lieutenant General Omar Bradley’s (1893–1981) First Army would land. The big risk here was that Bradley was obliged to divide his force on either side of an impassable estuary, so that troops landing at Utah Beach could attack north, to Cherbourg, a port city that was critical to the logistical support of the rest of the invasion, whereas those landing at Omaha would press east. East of Omaha Beach were beaches designated Gold, Juno, and Sword. The British Second Army (with a Canadian corps attached), under Sir Miles Dempsey (1896–1969), would land at these points. Overall command of the invasion was assigned to General Dwight D. Eisenhower, supreme Allied commander; command of ground forces was given to British field marshal Sir Bernard Law Montgomery (1887–1976). The initial landing force consisted of approximately a million men, who were supported by another million troops in logistical functions. Two-thirds of the invasion force was American.

Although Hitler’s army was certainly depleted, the defenses of what Hitler liked to call “Fortress Europe” were formidable—a so-called “Atlantic Wall,” consisting of a network of fortifications, minefields, and underwater obstacles manned by 10 panzer (armor) divisions, 15 infantry divisions, and 33 coast-defense divisions (mostly novice troops, still in training). German defenders were deployed from Norway in the north to the Mediterranean in the south, with the very greatest concentration of troops, including the entire Fifteenth Army, stationed at what was perceived as the most vulnerable invasion point: Pas de Calais. At Normandy, there was the smaller Seventh Army (commanded by Colonel General Friedrich Dollmann [1882–1944])—still a force to be reckoned with. Two great advantages were in the Allies’ favor at this point in the war: The Luftwaffe was all but finished as a credible fighting force, as was the German navy. As strongly fortified as the coast of France was, Hitler lacked any substantial naval defense here.

Operation Overlord was the biggest and most complex amphibious operation in military history. In the initial (D-Day) landings on June 6, 1944, 176,000 troops were conveyed by 4,000 ships and landing craft escorted by 600 warships. Air support was provided by 2,500 heavy

bombers and 7,000 fighters. Five divisions were ashore by nightfall, and beachheads were firmly established everywhere except on Omaha Beach, where German resistance was heaviest and Allied casualties correspondingly severe. The gallantry and initiative of individual line commanders pushed the advance inland even in that difficult area, however, and kept the invasion from bogging down. During June 7–18, the invasion expanded, as German reinforcements were slow to arrive in Normandy. The single greatest impediment to the Allied advance was the landscape of coastal Normandy, which was dense with *bocages*, or hedgerows. These restricted the passage of foot troops as well as vehicles, even tanks. In two attempts, Montgomery failed to take Caen (June 13 and 18), but Cherbourg did fall to the Allies on June 27 and then provided a vital harbor by which troops and supplies could be continually funneled into the invasion. Thus the beachhead expanded through July, even though the hedgerow country, by slowing the Allied inland advance, bought time for the Germans to mount a very determined defense. By the end of the early phases of the invasion, the Allies had incurred 122,000 casualties, killed and wounded, compared to about 114,000 casualties among the German defenders. On July 25, Operation Overlord became Operation Cobra—the breakout from the Normandy beachheads.

BREAKOUT FROM THE BEACHES

While Bradley led the U.S. First Army against the German defenses west of St. Lô, the newly organized U.S. Third Army, under George S. Patton (1885–1945), took the Allied right on August 1 and led the principal breakout through Brittany by way of Avranches. For Patton and his Third Army this was just the beginning of a remarkable drive through France and, ultimately, into Germany itself. Patton's armor swept through Brittany, then wheeled south into the Loire while his infantry moved to the left toward Le Mans. Behind the Third Army, the First Army pivoted left. Although the Germans mounted a strong counterattack at Avranches, hoping to cut off the Third Army from the First, British ground forces, with close air support, counterattacked the counterattack and relieved the pressure on the American forces, which pressed their advance. Nevertheless, an immediate opportunity to destroy much of the German Seventh and Fifth Panzer divisions was lost when these units escaped through a gap in the Allied line, the Falaise-Argentan pocket. The Allies pursued the retreating German divisions during August 20–30.

LIBERATING FRANCE

On August 25, U.S. and Free French troops liberated Paris, and by the early fall, German forces in western France were isolated. In the meantime, on August 15, Operation Anvil-Dragoon landed U.S. Seventh Army troops (plus elements of Free French forces) under Lieutenant General Patch Alexander (1889–1945), on the Côte

d'Azur in the south of France. The Seventh was victorious against German forces in the region, and, by the end of the month, the Germans had been ejected from southern France. After this victory, the Seventh Army marched north to the Vosges, where it linked up with Patton's Third Army and other elements as part of the general and ongoing steamroller drive to the east.

While American and Free French forces advanced through central and southern France, British troops advanced in the north, pursuing the retreating Germans into the Netherlands. The pursuit was highly successful, but it required diverting fuel and other supplies from Bradley's army group (including Patton's Third Army), so that when on August 30 Third Army crossed the Meuse (Maas) River, it ran out of gas and halted. During much of September, in the meantime, the Canadian First Army and the British Second Army ceaselessly pounded at German positions blocking Antwerp. Even while fighting to gain that city, British and Canadian forces besieged Le Havre; one by one, they took the Channel ports. Of particular importance was the capture of several V-1 missile bases near the Pas de Calais. With these out of commission, the V-1 menace to London was greatly reduced.

OPERATION MARKET-GARDEN

Although temporarily slowed by a shortage of fuel and supplies, the Allies continued to advance closer to the German frontier. Field Marshal Montgomery launched Operation Market-Garden, with the object of turning the northern flank of the German army by gaining a bridgehead over the Meuse River, then clearing Antwerp. Market-Garden was a bold operation that depended heavily on airborne troops dropped behind German lines to prepare for the advance of the British Second Army. However, the joint Anglo-American parachute drops at Arnhem, Nijmegen, and Eindhoven met with such heavy resistance (culminating in the Battle of Arnhem during September 17–26) that the German defenses remained intact. Operation Market-Garden proved disappointing and nearly disastrous, a waste of troops and time.

Undaunted by the failure of Market-Garden, Montgomery continued his campaign to secure Antwerp, a port city believed essential to continuing the Allied advance. During October–November 1944, Montgomery's troops, augmented by American units, took the South Beveland Peninsula and Walchern Island, two great Scheldt estuary fortresses guarding Antwerp. With these positions secured by November 8, extensive minesweeping operations were undertaken to enable Allied convoys to use the Scheldt. The convoys began arriving at the end of November, and the invaders were thus assured of a strong line of supply.

While Montgomery campaigned in the north, Bradley attacked the last-ditch German defenses known as the Siegfried Line. This perimeter was breached at Aachen; the U.S. Third Army reached Metz on October 3, and the

U.S. First Army captured Aachen itself on October 21. Throughout November, the thoroughly resupplied Allies fought an all-out offensive west of the Rhine, concentrating during November 16–December 15 on the Roer River–Hürtgen Forest region and, to the south, Lorraine. Simultaneously, Free French and other Allied units fought in Alsace and liberated Mulhouse and Strasbourg.

THE BATTLE OF THE BULGE

By December 1944, the Allies had reason to be confident of imminent victory. Germany's armies were either surrendering or in retreat. But then, incredibly, Hitler, in his fanatic determination to prevail, mounted a final—and completely unanticipated—counteroffensive against the Allies. He planned to drive a wedge between Allied forces, then defeat in detail the invaders north of the line formed by Antwerp, Brussels, and Bastogne. The Ardennes offensive—popularly called the Battle of the Bulge—began on December 16 with a massive assault by 20 German divisions coming out of fog and snow. The onslaught pushed a great bulge into the U.S. First Army line. Outnumbered and overwhelmed in this sector, Allied forces scrambled. General Bradley understood that Bastogne was the key to the entire Ardennes region. If he lost it, the Germans could indeed divide the Allied forces. Desperate to delay the fall of Bastogne, Bradley ordered the U.S. 101st Airborne Division to join the 10th Armored Division to hold the town. Major General Anthony McAuliffe (1898–1975), the 101st commanding officer, set up a defensive perimeter that was rapidly enveloped by overwhelming German forces and became an Allied enclave within the German-held bulge. The situation of the 101st was perilous in the extreme, and when bad weather prevented the use of air support during the first week of the battle, that situation became desperate. Nevertheless, when the German commander demanded McAuliffe's surrender, he replied with a single word: "Nuts!"

Fortunately, McAuliffe's bravado did not prove hollow. At virtually the last possible moment, the weather cleared sufficiently to allow air support. Meanwhile, in an incredible show of tactical genius, General Patton had halted the advance of his Third Army in the Saar, turned the entire force 90 degrees to the north, and advanced against the German southern flank at the Ardennes. This move rescued the Bastogne defenders and very quickly transformed the Battle of the Bulge from an Allied disaster to an Allied triumph. At the end of December, U.S. forces defeated a final German attempt to take Bastogne. During the first two weeks of January 1945, the Allies mounted a fierce counterattack that reduced the bulge entirely by January 16. The cost to the Allies was 7,000 killed, 33,400 wounded, and 21,000 captured or missing. German losses were about 120,000 killed, wounded, or captured. The destruction of materiel was something from which the Germans would never recover: 600 tanks

and assault guns were destroyed, along with 6,000 other vehicles; some 1,600 German aircraft of the already moribund Luftwaffe were also downed.

Lesser action in Alsace and Lorraine broke out during January 1945, but the campaign in the Ardennes proved to be the last German offensive of the war. With the Americans, the British, and the Free French crossing the German frontiers in the west, the Americans and British driving through Italy from the south, and the Russians steadily closing on Germany from the east, Hitler's "Thousand Year Reich" was enveloped and doomed.

THE BOMBER OFFENSIVE CONTINUES AND CULMINATES

High casualty rates and doubtful results notwithstanding, the Allied bomber offensive was carried into the last year of the war, even as the ground war was drawing to a climax. German technology had produced the first jet fighters, which outperformed even such superb American piston-engine fighters as the P-51 Mustang; fortunately for the Allies, the jets were introduced too late in the war and were produced in quantities too small to make an impact on the air war.

During February 13–14, the RAF and U.S. Eighth Air Force fire-bombed Dresden, igniting a firestorm that killed more than 100,000 German civilians and razed the great medieval city. Dresden was targeted in part because Allied planners were running out of strategic targets. Most of them had already been destroyed. Thereafter, air operations focused increasingly on finishing off the Luftwaffe and on directly supporting the ground offensive.

YALTA

During the summer of 1944, Churchill—who had cast a critical eye on the Bolsheviks since 1919 and had no great love for his putative ally Stalin—had lobbied for an Italian campaign in the European theater of the war in hopes that the Western Allies would reach the Danube before the Red Army. Representing a Britain that was the weakest of the "Big Three" powers in the alliance (the other two, of course, being the United States and the Soviet Union), Churchill was interested in restoring a balance of power in Europe that might keep England competitive with its old imperial rival Russia. Toward that end, he preempted Roosevelt by meeting with Stalin in October to make a deal on their respective nations' "spheres of influence" in the post-war world. Roosevelt seemed hardly to mind. Not only was he ill and growing sicker, but American war aims in general were nebulous at best, effectively nonexistent except for a reaffirmation of Woodrow Wilson's (1854–1924) post-World War I internationalism. Stalin, for his part, was perfectly willing to barter. He planned ultimately to honor only those arrangements he was forced to honor. Like Churchill, Stalin realized that Roosevelt's unwillingness to strain the alliance helped the Soviet leader to

undermine Churchill's ministers' diplomatic goals. In fact, Roosevelt's pliant attitude toward Stalin made the British prime minister gloomy about his country's postwar prospects. Heading for the last summit of the war, he warned colleagues that this world conflict might prove even more disappointing than the last one.

When a dying Roosevelt arrived at Yalta on the Crimean Peninsula in February of 1945, he was exhausted from the strenuous journey. If Churchill saw Yalta as the final opportunity for the British and Americans to take a firm stand against Soviet control of eastern Europe, Roosevelt probably viewed it as the last chance to forestall the disintegration of the alliance upon what everyone knew was the coming victory. Certainly the U.S. position showed little evidence of economic motives. Indeed, Roosevelt seemed not even to have a contingency plan for the breakdown of relations with an increasingly assertive USSR. What he feared more than that, evidently, was a retreat at home into isolationism, which would scuttle his Wilsonian vision of a great-power postwar condominium, an effective United Nations organization. Wishing for Soviet participation in a postwar UN, Roosevelt was prepared in both word (at the Yalta Conference) and deed (in the Allied advance across Europe) to assure Stalin that the Anglo-Saxons were not ganging up on him. But Stalin, for all his former revolutionary zeal, proved as old-fashioned a European as Churchill; he sought postwar security through military and political control of Eastern Europe, control that would create a buffer for Russia against the liberal democracies and the kind of ideas that might threaten his iron control even over the varied peoples of the USSR.

At length, the Big Three were able to maintain their unity at the Yalta Conference only by resorting to vague language and postponing the more explosive issues that divided them. The Yalta agreements reaffirmed earlier pronouncements in that nothing less than unconditional surrender by the Axis powers would be accepted. Inviting the Free French to join them, the Big Three decided to divide the defeated Germany into zones of occupation, with the French zone carved out of land held by the Americans and British, while the Soviet zone would extend to the Elbe. The German capital, Berlin would also be divided into four zones, although it would be located in Soviet-held territory. Overall, the occupation would be run by a joint European Advisory Commission. The Western powers had rejected extreme plans discussed earlier at Quebec to turn Germany into a pastoral nation, pushing instead for a revitalized German industry under Allied control; still, Stalin continued to insist on reparations, on stripping the vanquished foe of some \$20 billion in industrial machinery and raw materials. The conference meekly assigned the question to a reparations commission. Stalin also revived earlier talk about breaking up Germany into small states, but here at least the Americans heeded British

warnings about further Balkanization in central Europe in the face of the newly powerfully Soviet behemoth, and this too they left for additional study.

Stalin was more conciliatory when the rest of the Allies wished to issue a call—pursuant to proposals made at the Dumbarton Oaks Conference back in August through October of 1944—for a “Conference of United Nations” to be held in San Francisco on April 25, 1945. He nevertheless demanded that all 16 of the republics that made up the USSR be represented. Although the United States might have made a similar argument for its individual states, it did not; Stalin's rationale again owed something to Russia's long-standing competition with the British Empire; he needed such representation, so he claimed, to balance all the nations of that empire, which would naturally vote with London. The Soviets also demanded that the permanent members of the Security Council, which of course included Russia, retain a veto on all issues, instead of merely on questions involving sanctions and threats to the collective peace. In light of concessions elsewhere, however, Stalin settled for three members in the General Assembly and a limited veto. A relieved Roosevelt declared, “The Russians have given in so much at the conference that I don't think we should let them down.” Like Wilson, Roosevelt put much—as it turned out, too much—stock in international peacekeeping organizations.

The Americans also put great stock—and, as it turned out, too much—in free elections. Roosevelt proposed a Declaration on Liberated Europe by which the Big Three would commit to help all liberated peoples to solve their pressing political and economic problems “by democratic means” and would endorse free elections of governments “responsive to the will of the people.” To Bolshevik ears—which interpreted the lexicon of democracy quite differently than American ears—this may well have sounded like more Wilsonian rhetoric, perhaps meant by Roosevelt for domestic consumption to keep his nation from once again isolating itself from European affairs. Because Roosevelt announced—much to Churchill's dismay—that the United States intended to withdraw its troops from Europe within two years, Stalin would feel perfectly comfortable that he could, if he wished, soon simply ignore the declaration.

Poland, as always with the Soviets, proved the biggest sticking point at Yalta. The British and Americans wanted to keep the Curzon Line, agreed to in Tehran, as the Soviet-Polish border, even to modify that line slightly in Poland's favor. Churchill, however, objected to assigning 2.7 million Germans to western Poland, to—as he put it—stuffing “the Polish geese so full of Germans that it died of indigestion.” Once again, the three leaders put off the question; it would be resolved, they declared, at a peace conference come war's end. Roosevelt, with Churchill's stout backing, secured a promise from Stalin to permit free elections among “non-Fascist elements” within a month

of that peace. But it was a vague promise, and Stalin reserved for himself the sole right to determine who exactly was “Fascist” and rejected international supervision of the elections.

The conference also took up the question of Yugoslavia, once again trying to yoke the future interests of communists and democrats, and then arranged for the foreign secretaries of each power to keep in closer contact for the duration of the war.

As the Big Three—Roosevelt, Churchill, and Stalin—concluded in the Report of the Yalta (Crimea) Conference on February 11, 1945, “Nazi Germany [was] doomed.” The Japanese cause, too, was doomed, but the Japanese military seemed—much more than the German military—unwilling to admit it. Invasion of the Japanese home islands was inevitable, but the Allied experience in taking back the Japanese-held islands of the Pacific suggested that the Japanese would resist invasion virtually to the last man. Hitherto, the Soviets had refrained from declaring war on Japan, for Stalin had everything he could do to resist provoking a German invasion of his country, and when it came, to avoid fighting his own two-front war. Having incurred the greatest losses of all the powers involved in the war, the Soviets had no desire to turn from an incalculably dear victory over Germany to help Britain and the United States finish off Japan. Franklin Roosevelt, however, persuaded Stalin to declare war on Japan “two or three months after Germany has surrendered” in return for U.S. support of the Soviet acquisition of territories lost in the RUSSO-JAPANESE WAR from 1904 to 1905 and Soviet dominance in Outer Mongolia and Manchuria—all the objectives of Imperial Russia in East Asia.

GERMANY COLLAPSES

The Allies were accurate in their conclusions at Yalta about Germany. By early February 1945, the Colmar pocket, a position in the Vosges held by the German Nineteenth Army, was cleared, enabling the British and American forces to sweep through the Rhineland. On March 7, a task force of the U.S. Ninth Armored Division in the vanguard of the First Army’s advance found that the railroad bridge across the Rhine at Remagen had not been demolished by the enemy. The task force took the bridge, which was then used to expedite the Allied advance across the Rhine. On March 22, General Patton led the Fifth Division across the Rhine at Oppenheim in a surprise crossing that met with virtually no resistance. Within two days, multiple bridges had been thrown across the river, and the Third Army began rolling into Germany in great numbers. Close behind Patton was Montgomery, who crossed his forces above the Ruhr, north of Patton’s positions. On March 24, the U.S. Ninth Army crossed at Dinslaken. The U.S. First Army broke out of Remagen on March 25 and crossed there. Additional crossings followed before the end of the month. Troops poured into Germany.

Dwight D. Eisenhower, the Allied supreme commander, had originally set Berlin as a focal objective for U.S. and British advance. With progress of Third and First Armies so rapid, he now decided to send the Twelfth Army Group east through central Germany, to advance on Leipzig instead of Berlin. For both strategic and political reasons, Eisenhower decided to leave Berlin to the Russians, whose push westward was now also rapid. Eisenhower decided it prudent to destroy whatever remained of the German army, even if that meant leaving Berlin to an ideologically antagonistic ally. Sound enough from a military point of view, the decision was politically shortsighted and created the conditions for much friction throughout the COLD WAR that followed World War II.

Acting on Eisenhower’s new strategy, the Americans and British encircled the Ruhr, entrapping some 300,000 survivors of German Army Group B. To the north, Germany’s Army Group H was being beaten in Holland and northwestern Germany. Army Group G, located to the east and the south of the encircled Army Group B, continued to fight fiercely but with poor organization and to relatively little effect. Adolf Hitler, cowering in a bunker beneath the ruined streets of Berlin, issued orders for all German forces to “hold in place”—in other words, to fight to the death.

As British and Canadian forces defeated the last German resistance in Holland and the northwest, the U.S. 12th Army Group swept around far to the east, marching into Czechoslovakia, and, on April 25, made contact with the advancing Soviets at Torgau. The U.S. Sixth Army Group advanced through southern Germany and Austria, capturing, among other sites, Berchtesgaden, Hitler’s Bavarian retreat. At the Brenner Pass, the U.S. Seventh Army made contact with the U.S. Fifth Army, which had completed, at long last, its heartbreakingly difficult advance through Italy.

At the end of April 1945, with Eisenhower’s troops in control of a liberated France and western Germany, with Allied bombs dropping on Berlin almost daily, and with his capital surrounded by Russian troops hungry for revenge, Adolf Hitler married his long-time companion Eva Braun (1912–45), denounced the German people as unworthy of him, appointed Admiral Karl Dönitz (1891–1980) to succeed him as head of state, and, on April 30 committed suicide in his Berlin bunker. The Nazi government, now under Admiral Dönitz, surrendered not just unconditionally but twice, first at Eisenhower’s headquarters on May 7 and then again to the Russians in Berlin on May 8.

World War II had ended in Europe.

THE OCCUPATION ZONES

Already the suspicions and strains that had plagued the Allied war effort were becoming more evident, especially the historical distrust and dislike between Britain and Russia. Churchill had already vented his worries about Stalin at Yalta and would do so again as the “peace” pro-

cess progressed. As it was, it took the occupying powers—the United States, Britain, Russia, and France—a month to come up with their final declarations for handling the defeated Nazis. The Potsdam Conference—attended by Stalin, Churchill, and the new U.S. president, Harry S. Truman (1884–1972)—reflected the agreements at Yalta and produced the Potsdam Protocols, which became the basis for the Allied occupation.

The surrender—or more precisely, the surrenders—of Germany restored its frontiers to their extent as of December 31, 1937, prior to the *Anschluss* with Austria, the acquisition of the Sudetenland, and the invasion of Poland. This contracted Germany was divided by the protocols “for the purposes of occupation . . . into four zones, one to be allotted to each Power as follows: an eastern zone to the Union of Soviet Socialist Republics; a northwestern zone to the United Kingdom; a southwestern zone to the United States of America; a western zone to France.” Each of the four occupying nations was to designate a commander in chief with responsibility for its zone. The Allies set up the “control machinery” for Germany during the “period when Germany is carrying out the basic requirements of unconditional surrender.” The isolation of Berlin in the Soviet zone of occupation made it necessary to establish three air corridors into Berlin (from Hamburg, Bückeburg, and Frankfurt am Main).

THE HOLOCAUST AND THE NUREMBERG TRIALS

The end of the war and the occupation of a defeated Germany revealed to the world yet another aspect of Nazi rule, one that defied belief—although the Nazi’s treatment of the Jews from the beginning had led many outside Germany to suspect that something like it was possible. Still, the reality was more horrible than any had imagined and would take a powerful hold on the postwar world’s attempt at reconstruction, leading many to question the very notion of “civilization.” Toward the end of World War II, British troops, hardened by battling their way across Europe into the heart of Nazi Germany, were horrified when they marched up to the Bergen-Belsen concentration camp in Lower Saxony. There they found emaciated and diseased Jewish prisoners, together with some 13,000 unburied corpses. They had just discovered the results of a genocidal policy the Nazis called the “final solution” to the “Jewish question” and that a stunned world would come to call the Holocaust.

The 20th century had, of course, no monopoly on unbridled intolerance and irrational hatred, but what the century did have was the political and technological means to act upon such collective psychopathologies with unprecedented viciousness, thoroughness, and bureaucratic efficiency—all on a scale that was almost inconceivably vast. Jews had been persecuted for some 1,800 years, but between 1933 and 1945, Adolf Hitler directed the murder of more Jews than had been killed in

18 centuries of pogroms and organized persecution. Some 6 million human beings, two-thirds of Europe’s Jewish population, became victims of the systematic Nazi genocide of an entire race in specially designed and equipped “death camps.”

Early in his political development, Adolf Hitler had riveted on the Jews as the cause of Germany’s degradation. He did not tailor his anti-Semitism from whole cloth but summoned up a welter of pseudoscientific theories and allegations that had been in the air at least since the 19th century in the writings of the Anglo-German political scientist H. S. Chamberlain (1855–1927), who developed theories of racial purity, and the French ethnologist J. A. Gobineau (1816–82), who argued the superiority of the “Aryan race.” Indeed, anti-Semitism was virulent in most of Europe and a well-organized movement in Germany long before Hitler came to power; his Nazi party, however, made it official government policy.

Between 1933 and 1938, the Nazis instituted boycotts of Jewish businesses, established Jewish quotas in Germany’s professions and schools, enacted the Nuremberg Laws of 1935, banning intermarriage between Jews and Gentiles, and, in 1933, established the first concentration camp, at Dachau, near Munich. The camp was first intended for the detention of communists and other political undesirables. By 1935, Theodor Eicke (1892–1943), acting under the direction of Hitler’s Gestapo chief, Heinrich Himmler (1900–45), standardized the administration of the camp, which would serve as the pattern for others, including those at Buchenwald and Sachsenhausen. In 1938, after years of persecuting them, Hitler decided to “deport” all Jews from Germany and instituted mass arrests in May 1938. Dachau and the other camps were soon supplemented by additional forced-labor facilities, all intended to house the deported Jews.

On November 9–10, 1938, using as a pretext the assassination of Ernst von Rath (1909–38), a German legion secretary in Paris, Nazi storm troopers burned 267 synagogues and arrested 20,000 Jews. Jewish homes and businesses were destroyed; so much smashed glass littered the streets that the nocturnal orgy of destruction was given the ironically poetic name *Kristallnacht*—crystal night, the night of broken glass. Following the arrests came more deportations to the camps, but not before Hitler levied an atonement fine of \$400 million against the Jews to pay for the damage that had been done—to their own property.

In 1940, after Poland had been overrun, the German invaders rounded up Warsaw’s more than 400,000 Jews and confined them to the ancient ghetto, which was then cut off from the rest of the city. Many died from starvation and disease, and about 300,000 more were sent to concentration camps. Then German authorities drastically contracted the size of the quarter and on April 19, 1943, attacked it, with 2,000 German regulars supplemented by a

force of Lithuanian militiamen and Polish police and fire-fighters. The attackers had expected to be executing a slaughter. Instead, they were confronted by some 60,000 Jews—all those who remained in the ghetto—armed with a few pistols, rifles, machine guns, and homemade weapons. They put up a heroic, though ultimately futile, resistance. The Nazis countered by setting fire to the ghetto block by block, then flooding and smoke-bombing the sewers, through which the inmates attempted escape. On May 16, 1943, General Juergen Stroop (1895–1951) reported: “The former Jewish quarter of Warsaw is no longer in existence.” Stroop further reported that his men had killed about 56,000, some 20,000 in the streets of Warsaw and the remainder, presumably, in death camps.

For that is what the concentration camps had become—not places of deportation and detention, not even primarily sites for the forced labor the German war machine desperately needed, but instruments of execution. The decision to institute this “final solution,” and the first use of that blandly horrible euphemism by one of Himmler’s Chief lieutenants, Reinhard Heydrich (1904–42), occurred in January 1942 at a conference in Wannsee, chaired by Heydrich.

Auschwitz, as the Germans called the southern Polish town of Oswiecim, was the site of the camp chosen as the center of annihilation. Here 1 to 3 million—no one knows just how many—human beings were herded naked into gas chambers disguised as delousing showers and were murdered with hydrocyanic gas produced by “Zyklon B” crystals. Other Nazi methods of execution included carbon monoxide asphyxiation, electrocution, phenol injections, immolation by flamethrower, death by hand grenade, gunshot, beating, torture, and “medical experimentation.” Their clothing and valuables were systematically collected, including gold dental fillings, which were melted down to finance the war machine. The bodies themselves were burned in massive crematoria constructed expressly for the purpose. The killings at Auschwitz began in March 1942 and included large numbers of Poles, Russians, and gypsies in addition to Jews. Concentration camps at Oranienburg, Buchenwald, Dachau, Bergen-Belsen, and elsewhere became death camps as well.

During the war there had been Jewish resistance to the mass roundups and deportations to concentration camps that accompanied this policy, of which the Warsaw Ghetto is only the best known. In fact, outbreaks of resistance occurred at 17 of the Nazi concentration camps, notably Sobibor and Treblinka, and in the ghettos of Vilna, Kaunas, Minsk, and Slutsk. As many as 60,000 Jews served in partisan resistance units from North Africa to Belorussia. But it was to no avail. Worse, the Allies—who were, perhaps willfully, uninformed of the full genocidal extent of the execution programs—did nothing to prevent the murders and persecution of which they were aware. Only after the liberation of Europe, as British, Soviet, and

American forces marched into camp after camp, did the horror of six million Jewish deaths—and of some 3 million more ethnic civilians and prisoners of war the Nazis considered “subhuman”—become unmistakably apparent.

In the wake of the horrifying discovery, the victorious Allies set up an International Military Tribunal at Nuremberg, Germany, to indict and try former Nazi leaders as war criminals. The indictments lodged four counts—crimes against peace, or the planning, initiating, and waging of wars of aggression in violation of international treaties and agreements; crimes against humanity, including exterminations, deportations, and genocides; war crimes, or violations of the laws of war; and “criminal conspiracy” to commit the crimes included in the indictment. The tribunal rejected the two major defenses offered by the defendants that only a state, and not individuals, could be found guilty of war crimes and that the acts of the tribunal itself were *ex post facto*—that is, that the tribunal was leveling charges of crimes that had not been declared crimes at the time they were committed. To the first, the tribunal ruled that crimes against international law were committed by men, not nations, and that only by punishing such individuals could such law be enforced. To the second, it responded that the acts committed by the Nazis had been considered criminal long before World War II.

In 1946, under the impact of revelations at Nuremberg and other war-crimes trials, the General Assembly of the United Nations affirmed a convention that stated “genocide is a crime under international law which the civilized world condemns.” In 1948 the General Assembly approved the Convention on the Prevention and Punishment of the Crime of Genocide, which went into effect in 1951. Unlike the Nuremberg Tribunal, which had associated genocide with war crimes, the United Nations declared that it was a crime whether committed in peace or war and established the principle that even if genocide was perpetrated by a government within its own territory, it was not merely an internal matter but one of international concern.

The Holocaust also had a profound effect on the post-war Middle East. As European Ashkenazi Jews poured into Palestine at war’s end, they provided an immense boost to the Zionist movement. Determined never again to suffer the fate of their relatives under the Nazis, and supported in that determination by the Allies in general, they joined the political and action wings of the movement, including such underground terrorist organizations as the Irguns, and pushed Zionist agitation to new levels. The British still administered Palestine under their World War I mandate and were in many ways responsible for these troubles—the Balfour Declaration having had the effect of promising the Jews the same territory Britain had promised the Arabs in the Great War. Now, as violence escalated between Arab and Jew in Palestine, the British passed the problem onto the newly created United Nations. Sympathy for the Jewish

plight during the war was marked, and in 1948 the UN partitioned Palestine into Jewish and Arab sections. The Zionists immediately proclaimed the new state of Israel, sparking the first in a long series of Arab-Israeli wars that would last beyond the coming cold war.

A NEW INTERNATIONAL ORDER

The end of World War II brought American commitment to a major role in international affairs. Unlike at Versailles after World War I, the victors in the Second World War held no grand peace conference to attempt a comprehensive postwar settlement. Partly this had to do with the abject failure of the old Versailles peace, partly with the “total” nature of the present conflict, partly with the way the war ended in two completely separate victories (one in Europe, spearheaded by Russia, and one in Japan, courtesy of the Americans), and partly with the irreconcilable differences in ideology and needs of the Allies themselves. Instead of a peace conference, there was only a complete surrender and a long occupation.

Although the early occupation agreements might suggest accord, the four Allies ultimately failed to agree on whether (or how) to reunite the occupied zones. As World War II was replaced by the cold war, the temporary dividing lines between the Soviet zone in the east and the British, French, and U.S. zones became permanent boundaries. Late in March 1948, the Soviets, wary of the West’s growing determination to establish a separate capitalist state in the western zones of Germany, began detaining troop trains bound for West Berlin. On June 7, 1948, the Western democracies officially announced their intention to create West Germany. Two weeks later, the Soviets blockaded West Berlin, arguing that Berlin, because of its location, could not serve as the capital of West Germany. Truman responded by ordering the most massive airlift in history in order to keep West Berlin supplied. In this, the first great “battle” of the cold war, the West emerged victorious. After some 272,000 flights over 321 days—an unparalleled logistical achievement—the Soviets backed down, on May 12, 1949. Later that month, East and West Germany became separate nations. Over the next several months and years the Soviets erected a wall of barbed wire, with armed patrols and checkpoints, between East and West Berlin.

The Berlin Airlift was proof that the United States was not withdrawing from the international scene as it had after World War I. Other signals were just as clear. The United States put its considerable power and influence behind the creation of the United Nations and the establishment of such international agreements as the General Agreement on Tariffs and Trade (GATT). These understandings had been arrived at during wartime Allied meetings, such as the Bretton Woods Conference, when all the parties involved still needed each other to finish the business of defeating the Axis powers. Because the United

States was determined to see these instruments survive the conflict, they were not marginalized and abandoned the way the League of Nations had been. However weak, tentative, and ineffectual the United Nations at first appeared, it became the underpinning of a new international order still in operation today. Likewise, such financial instruments as the World Bank and GATT, despite the opposition and self-imposed exclusion of the Soviets, underwrote a global market that eventually played no small role in the fall of the communist world. This new international order, much tested, often found wanting, nevertheless outlasted the bitter postwar rivalry of the world’s two new “superpowers,” the Soviet Union and the United States, brewed first in Berlin.

Wudi Conquests (140–80 B.C.E.)

PRINCIPAL COMBATANTS: Han China vs. (severally) Xiongnu (Hsiung-nu) nomads and indigenous peoples of the wars’ several theaters

PRINCIPAL THEATER(S): China, region of modern Vietnam, Manchuria, northern Korea, Jaxartes Valley of Central Asia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Removal of a barbarian threat, followed by general imperial expansion

OUTCOME: Under Wudi (Wu Ti), Han China expanded prodigiously, and an era of peace and prosperity commenced.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

The Han fielded more than 100,000 men, mostly cavalry; Xiongnu numbers are unknown.

CASUALTIES: At the momentous Battle of He Si (121 B.C.E.), the Xiongnu lost 40,000 as prisoners of war. At the Battle of Mo Bei (119 B.C.E.), Xiongnu casualties included 70,000 killed. During the campaign into Central Asia (105–102 B.C.E.), the Han army of 60,000 lost 50,000 men, killed or missing.

TREATIES: Unknown

The so-called Martial Emperor, Wudi (156–87 B.C.E.), ascended the throne in 140 B.C.E. at age 16 and, from the beginning, formulated a strategy to defeat the Xiongnu, which he considered to be the greatest threat to his kingdom. Under Wudi, the military was greatly expanded, and the cavalry was forged into a formidable weapon. His diplomatic efforts to secure an alliance with the Yuezhi (Yueh Chih or Tocharian people) against the Xiongnu failed in 138, and Wudi resolved to face the enemy on his own.

In 133 B.C.E., the emperor sent his ablest general, Wei Qing (Wei Ch'ing; dates unknown), to invade and take the territory between the Great Wall and the northern bend of the Yellow River. Early efforts proved fruitless, but Wei Qing refused to give up and by 119 had recovered territory lost to the barbarians in the previous century. In 121 B.C.E., Wei Qing dispatched his nephew Huo Qubing (Huo Ch'u Pang; d. 117) with a huge army of 100,000, mostly cavalry. At the Battle of He Si, Ho routed the Xiongnu, taking 40,000 prisoners, including the king. The territory west of the Yellow River was now under Han control.

The final defeat of the Xiongnu came in 119 B.C.E., when Wei and Ho pushed the barbarians into the Gobi Desert, then north of it. In Ulaan Bataar, at the Battle of Mo Bei, 70,000 Xiongnu were killed, thereby ending the threat from that quarter forever.

Just two years after the triumph at Mo Bei, Huo Qubing died (at age 22), but Wudi continued his policy of imperial expansion nevertheless. Between 111 and 109, having consolidated control over the former Xiongnu regions, Wudi invaded the southern kingdom of Yueh (encompassing Vietnam) and compelled the people there to acknowledge Han suzerainty. From here, in 108, Wudi turned to Manchuria and northern Korea—collectively the kingdom of Ch'ao Hsien—which he quickly annexed.

Beginning in 105 B.C.E., Wudi's general Li Guang (Li Kuang) penetrated the Jaxartes Valley of Central Asia. Suffering defeat by the surprisingly well-united tribespeople

of the region, Li regrouped and attacked again. By 102, the people of the region bowed to Chinese suzerainty. The campaign came at a great cost, however. Of an army of 60,000, only 10,000 returned to China.

From 100 to 80 B.C.E., Wudi worked to consolidate and govern his conquests, laying the foundation for the long period of peace and prosperity known as the Pax Sinica (80–1 B.C.E.).

Wyatt's Rebellion (1554)

PRINCIPAL COMBATANTS: Rebel forces of Thomas Wyatt vs. English government

PRINCIPAL THEATER(S): London

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Wyatt and his rebels wanted to overthrow Mary I ("Bloody Mary") and elevate Elizabeth (later Queen Elizabeth I) to the English throne.

OUTCOME: The rebellion stepped off prematurely and without promised aid from the French; it was quickly quelled after a single sharp battle.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

Wyatt's Rebellion was a short-lived uprising led by Sir Thomas Wyatt (c. 1521–54) against Queen Mary I (Bloody Mary; 1516–58) of England. The daughter of Henry VIII (1491–1547), Mary sought to reverse the English Reformation initiated by her father and became betrothed to the Catholic monarch of Spain, Philip II (1527–98). The prospect of a counter-reformation and English vassalage to Spain incited a number of English nobles to rebel. The nobles secured the aid of France in an uprising designed to overthrow Mary and replace her with her half-sister, Elizabeth (later Queen Elizabeth I, 1533–1603). (Young Elizabeth was almost certainly not a participant in the plot.)

When France leaked word of the impending rebellion, its chief architect, Sir Thomas Wyatt (son of the diplomat and poet of the same name), acted prematurely, pushing the rebellion from March 1554 to February. This meant that the rebellion would not be coordinated with French aid—and that proved fatal. Wyatt led his forces to London from Kent, fought a sharp battle in the city, then surrendered to superior government numbers. Meanwhile, young Elizabeth, remanded to the Tower of London, narrowly escaped the execution that had been the fate of her mother,

Anne Boleyn (c. 1507–36). After two months of extensive investigation, interrogations under torture of the conspirators, and constant spying produced no conclusive evidence of involvement on her part, she was released and placed under house arrest for a year at Woodstock. Wyatt, who had, with great dignity, proclaimed Elizabeth innocent of the plot, was executed for treason.

X

Xiongnu Invasion of China (c. 200 B.C.E.)

PRINCIPAL COMBATANTS: Xiongnu (Hsiung-nu; later known as the Huns) vs. Han China

PRINCIPAL THEATER(S): Northwestern China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest of the border region.

OUTCOME: The Xiongnu acquired the border territory and the Xiongnu leader, Mo Du, was given the Han emperor's daughter in marriage.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Xiongnu, 300,000; Han forces unknown

CASUALTIES: Unknown, but probably heavy among the Han

TREATIES: Treaty between Mo Du and Gaozu (Kao Tsu), 200 B.C.E.

The Xiongnu were a collection of Mongol tribes, which would later become known to the West as the Huns. Some time before 200 B.C.E., the various Xiongnu tribes were unified under the leader Mo Du. At the head of an army of 300,000, Mo Du (or Mao-tun, fl. c. 209–174 B.C.E.) invaded northwestern China. His forces were met by an army under Gaozu (256–195 B.C.E.), first of the Han emperors. Gaozu was quickly overwhelmed; however, his forces sought refuge in a fortified border town. Held under siege, Gaozu at last surrendered and made a treaty with Mo Du, whereby he ceded to the Xiongnu much border territory and betrothed his daughter to Mo Du.

Xiongnu Invasion of Turkestan, First (73 B.C.E.)

PRINCIPAL COMBATANTS: Xiongnu (Hsiung-nu) vs. the Wu Sun tribe

PRINCIPAL THEATER(S): Turkestan

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Conquest

OUTCOME: The Xiongnu were repelled.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Unknown

TREATIES: None

The Xiongnu (later known to the West as the Huns) were defeated by Chinese forces at the Battle of Mo Bei (Mo Pei) in China in 119 B.C.E. They turned their attention to Turkestan early in the next century, during a period often called the Pax Sinica, the Chinese Peace—nearly a century in which China was ascendant and the once mighty Xiongnu were increasingly confined to Outer Mongolia.

In 73 B.C.E., the Xiongnu broke out in a major invasion of Turkestan, which was met by the Wu Sun tribe, a Chinese and Indo-European people who lived in the

region of the Jaxartes River. The Wu Sun repelled the Xiongnu invaders.

Y

Yakama War (1855–1857)

PRINCIPAL COMBATANTS: Yakama (Yakima) Indians and allied tribes vs. United States

PRINCIPAL THEATER(S): Washington and Oregon

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Yakama were resisting attempts to confine them to a reservation; the United States sought to so confine them.

OUTCOME: Inconclusive

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: United States, 700 regular and volunteer troops; Yakama, 500

CASUALTIES: Probably less than 100 for both sides

TREATIES: None; the aging General Wool, finding Yakamas acting peacefully, simply declared the war over.

The fuse that touched off the Yakama War had been lit in May 1855 when Isaac Stevens (1818–62), the youthful and aggressive governor of Washington Territory, hastily concluded a treaty with the Yakama and 13 other tribes binding the Indians to relinquish their lands in exchange for life on a single, large reservation. He promised the tribes east of the Cascades—the Nez Percé, Cayuse, Umatilla, Walla Walla, and Yakama—homes, schools, horses, livestock, and generous annuities. He also pledged that removal to the reservation would be delayed two or three years after they signed the treaty. The majority of the tribal representatives believed that resistance was ultimately useless and that Stevens’s offer and pledge were the best treatment they were likely to secure at the hands of the Anglo-Americans. Accordingly, they signed.

A stubborn minority, including, most importantly, the Yakama chief Kamiakin (c. 1800–77), revered among the tribes of the Columbia River basin, refused to add their assent, for they believed they could not take Stevens at his word. A scant 12 days after the signing, Kamiakin and his fellow skeptics were proved right, as Stevens summarily declared the Indian country “open” to white settlement.

Kamiakin, distressed at the growing population of miners in the Colville region, forged an alliance that included the Walla Walla, Umatilla, and Cayuse as well as his own Yakama. Even so, he thought it best to bide his time, organize, and plan before confronting superior white forces. As often happened when Indians contemplated war, hot-headed young warriors acted independently—and rashly. A group of five braves led by Kamiakin’s nephew, Qualchin (d. 1858), attacked and killed six prospectors in mid-September 1855. A. J. Bolen, the local Indian agent, was sent to investigate the incident; he too was killed.

Although dismayed by the precipitate act, Kamiakin made the most of it, issuing a warning that a similar fate would befall any other whites who ventured east of the Cascades. In October, a small force of regulars—84 men and a howitzer—under Major Granville O. Haller (d. 1897), out of Fort Dalles, reconnoitered the east face of the mountains with the intention of coordinating, with 50 men out of Fort Steilacoom under Lieutenant W. A. Slaughter (d. 1855), a pincers attack against the Indians. Five hundred of Kamiakin’s warriors ambushed Haller’s column, killing five of their number, forcing the abandonment of the howitzer, and driving the remainder back to the fort. Fortunately for Slaughter’s command, the lieutenant was warned of the action and escaped by making a night march back to Puget Sound.

With few troops now in the area, local Indians raided a settlement along the White River above Seattle, killing nine. The survivors of the attack fled in panic to Seattle, where they hastily erected a stockade in anticipation of a siege. At this point, Lieutenant Slaughter reappeared and engaged the Indians repeatedly until they gradually broke off the attack on Seattle. This action cost the lieutenant his life; he was shot through the heart one night when he made the mistake of approaching too close to a campfire, thereby making himself a clear target.

Governor Stevens, who was busy making treaties in Montana, received a greatly exaggerated account of the Yakama “war” and incidents involving another group of Native Americans the settlers called Rogue Indians (see ROGUE RIVER WAR). He immediately dashed through hostile territory back to Washington. Hastily organizing a militia company of friendly Spokane Indians (the “Spokane Invincibles”), Stevens took personal command of a white militia he called the Stevens Guards. Combined, the forces numbered only 50 men, who were understandably fearful of making their way to Fort Dalles. Fortunately for them, they encountered no hostiles; Major Gabriel Rains, with a mixed force of regulars and volunteers, was keeping the Yakama amused by his inept attempts to ambush them.

Seventy-one-year-old General John Ellis Wool (1784–1869), commander of the U.S. Army’s Department of the Pacific, did not approve of “amateur” and “illegal” volunteer actions by Stevens and his ilk. Stevens persistently argued with Wool over the conduct of the “wars” with the Rogue Indians and the Yakama, pushing him to conduct a winter campaign. Wool protested, but responded by releasing reinforcements in the early spring of 1856 to the beleaguered Andrew Jackson Smith (1815–97) at Fort Lane, under attack by the Rogues, and assembled an additional 500 regulars under George H. Wright to march against Chief Kamiakin.

Wright and his regulars went on the hunt for hostiles. By then, however, Chief Kamiakin had retreated eastward, and all Wright found were Indians peacefully fishing for salmon. Wright spoke with these Yakamas, who convinced him that they intended no further harm. When the colonel reported this to General Wool, the old commander declared the Yakama War ended. In July, there was another engagement between the Yakamas and some of the volunteers Wool despised, and Governor Stevens had opportunity to savor his own private victory, as the War Department at last agreed to the removal of Wool as commander of the Department of the Pacific, citing (to the governor’s delight) his lack of initiative in punishing the Indians. In May 1857, Wool was replaced by Newman S. Clarke (d. 1860).

Wool may have declared the Yakama War over, but in truth Chief Kamiakin was hardly finished. While the general and the governor bickered, the Indian chief was

already inciting another group of Indians to rise and follow him against the hated whites (see COEUR D’ALENE WAR).

Yamasee War (1715–1716)

PRINCIPAL COMBATANTS: South Carolina colonists and Cherokee allies vs. Yamasee Indians

PRINCIPAL THEATER(S): South Carolina, Georgia, and Florida

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Retribution for a Yamasee raid

OUTCOME: Yamasee were driven from their lands.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: 100 settlers killed in Yamasee raid; number of Yamasee killed, unknown

TREATIES: None

The Yamasee War was as brief as it was terrible. The Yamasees of South Carolina had suffered a range of abuses at the hands of white traders and squatters, ranging from insults and land fraud to debauchment with liquor and enslavement. The whirlwind of the Yamasee discontent was reaped on Good Friday, April 15, 1715, when Yamasee, Catawba, and other, smaller tribes, probably encouraged by the French, attacked English settlements north of present-day Savannah, Georgia (then under the jurisdiction of South Carolina). More than 100 settlers were killed, and the survivors fled to Charleston, where South Carolina’s governor, Charles Craven (1682–1754), mustered the militia.

By June, Craven’s forces had driven the Yamasee from their villages, and through the fall he pursued them into Spanish Florida, giving no quarter but visiting death and destruction upon them nearly to the point of tribal extinction. Yamasee lands were carved up by James Edward Oglethorpe (1696–1785) for his new proprietary colony of Georgia.

The victories over the Yamasee in part persuaded the Cherokee to ally themselves with the English, and together they drove out remaining Yamasees and members of the Lower Creek tribe from territory northwest of Port Royal, which South Carolina settlers had attempted to occupy. Although casualties were heavy on both sides, the Cherokee-English alliance prevailed against the Yamasees.

Yangdi, Revolts against (613–618)

PRINCIPAL COMBATANTS: Yangdi (Yang Ti), Sui emperor, vs. internal rebels and Eastern Turk raiders

PRINCIPAL THEATER(S): China, especially the northern frontier region

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The rebels responded to the ruinous cost of Yangdi's many wars of conquest.

OUTCOME: The rebellion ended in the assassination of Yangdi, but the Sui dynasty continued.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Yangdi (560–618) of China's Sui dynasty was an aggressive expansionist who undertook massive operations in Sinkiang, Yunnan, Manchuria, and Korea. The Korean campaigns of 611–14 proved disastrous and brought great economic hardship upon the Chinese people. This in turn touched off a revolt against Yangdi beginning in 613. Exploiting the internecine conflict, the Eastern Turks raided China's northern frontiers during this period. To neutralize the threat from the Eastern Turks, the emperor personally took the field—only to suffer defeat at the Battle of Yenmen in 615. Yangdi was surrounded in this fortified town but was rescued by one of his generals, Li Shimin (Li Shih-min; 597–649), who later became the second emperor of the Tang dynasty. The war continued, ending only with Yangdi's death at the hands of rebel assassins in 618. With Yangdi's demise, the Sui dynasty came to an end, and the Tang dynasty came into being.

Yangtze Campaigns *See* JUCHEN MONGOL INVASION OF THE SUNG EMPIRE.

Yellow Turban Rebellion (184–c. 204)

PRINCIPAL COMBATANTS: Yellow Turban Taiping (Great Peace) Taoist rebels vs. the Han dynasty

PRINCIPAL THEATER(S): China

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Yellow Turbans rebelled against the Han emperor in the belief that his dynasty's commitment to power had brought natural disaster on China.

OUTCOME: The rebellion was ultimately suppressed, but the Han dynasty was left so weakened that it collapsed within a few years.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At their height, the Yellow Turban rebels numbered 400,000; imperial forces were fewer in number but far better equipped and led.

CASUALTIES: Unknown

TREATIES: None

Although the Han dynasty had been restored by 23 C.E. thanks to the RED EYEBROW REVOLT, eight of the 12 sovereigns during the dynasty's second incarnation became rulers before they were 15 years of age. While the throne passed from one child emperor to the next, real power was wielded first by imperial deputies and regents, then by consort families, and ultimately by the palace eunuchs. Chronic intrigue and political machinations at court continuously eroded the strength of the central government, and increasingly, provincial warlords began to fill the vacuum. By the middle of the second century, signs that the Han were toppling had become clear to virtually everyone.

Contributing to the ultimate fall of the Han was a secret Chinese society, the Yellow Turban, led by a Taoist faith healer in Taiping named Zhang Jiao (Chang Chueh; 140–184) who gained numerous adherents during a widespread pestilence, forged them into an army of rebellion, and directed a revolt against the tyrannical eunuchs who dominated the emperor. The rebels wore yellow headdresses to signify their association with the yellow "earth," which they believed would succeed the red "fire" that represented Han rule in the five elements of Chinese cosmology (the others being water, metal, and wood). In 184, the Yellow River flooded, rendering thousands homeless and triggering the great epidemic. As thousands sought spiritual comfort in the Taiping sect, Zhang Jiao persuaded his followers that the emperor's commitment to fire—which implied a heedless pursuit of power—had brought on the floods.

To suppress the uprising, which erupted in east China, the Han emperor, Cao Cao (Ts'ao Ts'ao; 155–220) conscripted huge armies at great cost, but their efforts were hampered by the inefficiency and corruption in the imperial government. Zhang was killed in 184, but the rebellion was a continuing menace to the government. By the time of his death, some 400,000 Chinese had joined the Yellow Turban movement and were in armed revolt against the Han. Despite their overwhelming numbers, however, the Yellow Turban rebels were defeated by the better-equipped and more thoroughly disciplined armies

of the emperor. The rebellion died around 204, but the Yellow Turbans continued to plague Chinese life for the next two decades until the Han dynasty, badly shaken, finally fell in 221, victim of its own corruption.

Yen Bai Uprising *See* VIETNAMESE UPRISINGS.

Yemenite Civil War (1962–1970)

PRINCIPAL COMBATANTS: Yemeni rebels (with Egypt and Syria) vs. the imam of Yemen (with Saudi Arabia and Jordan); South Yemeni rebels (with Egypt) vs. North Yemen (with British aid); conservative North Yemen forces vs. leftist North Yemeni government; conservative North Yemeni forces (aided by Syria, the Soviet Union, and South Yemen) vs. royalist forces (aided by Saudi Arabia)

PRINCIPAL THEATER(S): Yemen

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: This complicated series of conflicts centered on control of Yemen.

OUTCOME: Ultimately, South Yemen achieved independence from the northern portion of the country, which overthrew its king and became the Yemen Arab Republic.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: 10,000 republicans; 70,000 Egyptian-Syrian expeditionary troops; 40,000 royalists

CASUALTIES: 50,000–100,000 on both sides, total

TREATIES: Agreement between Yemeni republicans and royalists, 1970

A remote country in the southwest corner of the Arabian Peninsula, Yemen first made international news on September 25, 1962, when an uprising overthrew the Islamic kingdom of Imam Mohammed al-Badr, who had himself been on the throne for only a week, following the death of his father. Now the new and newly deposed *imam* (Islamic ruler) fled into the interior, to the mountains, as Colonel Abdullah al-Sallal proclaimed a republic in the capital at San'a. While the imam rallied tribes to the royalist cause, third-world leader Gamal Abdel Nasser (1918–70) and his United Arab Republic (the short-lived alliance of Egypt and Syria) broadcast support for the revolutionary government and came to its aid with both men and guns.

As the fighting against royalist guerrillas stretched on, the Egyptian military's involvement continued to grow, reaching 28,000 troops by the end of 1963 (then 40,000

by 1964, 60,000 by 1966, and 70,000 by 1967), while the Yemeni republican army totaled only some 7,000. Backing the 40,000-strong Yemeni royalists were the more tradition-minded Arab monarchies, Saudi Arabia and Jordan, who sent the imam and his forces arms, supplies, and advisers. The war, then, became something of an Arab civil war, as attempted mediation by the United Nations failed to prevent its escalation.

The fighting soon spread to what is now South Yemen but was then an area dominated by Great Britain since the 1950s through a group of dynastic chieftains. Backed by Egypt, the Front for the Liberation of Occupied South Yemen fought the British and their clients, as did the left-wing National Liberation Front. In the long run, the latter proved the stronger of the two revolutionary factions, and the NLF took control of the region, forcing the British out and declaring an independent South Yemen on November 29, 1967.

Meanwhile, Egypt had not had much luck in supporting the Republic of Yemen. Despite massive air bombardments and the reported use of mustard and phosgene gas in a series of air-delivered poison-gas attacks in 1966 and 1967 (the first use of internationally outlawed poison gas since 1938 in Spain), the allied forces of the UAR and the Yemeni Republic simply could not best the imam's army, entrenched in the mountains. Nasser had his own problems. His defeat in the ARAB-ISRAELI WAR of 1967 and the continued Israeli threat led him to withdraw the entire 70,000 UAR expeditionary force from the conflict. The royalists, who were by then in control of three-fourths of Yemen—everything but the cities—stepped up their siege of San'a and its 3,000-strong republican garrison late in 1967. Just as things looked their bleakest, however, a 1,000-man armored column, supported by 30 Soviet-built, Syrian-piloted MiGs and including in their number some 600 veterans of newly independent South Yemen's NLF broke through the royalist siege lines and saved the city.

This republican victory marked a turning point. Royalist morale collapsed just as the Saudis began to get cold feet. After Colonel al-Sallal's radical government had been ousted by right-wing conservatives in a military coup on November 5, 1967, the Saudis, weary of the imam, began pressuring him to end his resistance to republican Yemen, now under a government they found more tolerable. Thus the republican victory at San'a only increased Saudi impatience. There was little the imam could do but acquiesce. Peace was proclaimed on April 14, 1970. Though many leading royalists garnered positions in the new government of what was now called the Yemen Arab Republic, the imam and his family were forced into exile as the new government gained international recognition.

Yemenite Civil War (1986)

PRINCIPAL COMBATANTS: Forces of South Yemeni president Ali Nasser Muhammad vs. opposition forces led by Abdul Fattah Ismail

PRINCIPAL THEATER(S): South Yemen; most fighting took place in the capital city of Aden

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Radical Marxists objected to President Muhammad's political overtures to non-Marxist Arab neighbors.

OUTCOME: Muhammad was overthrown, and a new government installed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: At least 10,000 died in one week.

TREATIES: None

This civil war may be unique in history in that it began with a gunfight between a sitting president and leaders of the opposition during a meeting of an official government body, the Politburo. On January 13, 1986, South Yemen president Ali Nasir Muhammad (fl. 1986–1990) exchanged shots with opposition leaders, touching off a short-lived civil war in the Marxist Arab republic, which had broken away from northern Yemen in the YEMENITE CIVIL WAR (1962–70).

Over the course of one week following the shooting, perhaps as many as 10,000 died in fierce fighting, which was especially intense in the capital city of Aden. At issue was President Muhammad's overtures to non-Marxist Arab neighbors, which enraged the rabidly Marxist opposition, led by former president Abdul Fattah Ismail (1939–86). If Ismail had expected support from the Soviet Union, he was mistaken; the USSR announced its complete noninvolvement in what it deemed a civil conflict. Nevertheless, when Ismail's forces managed to overthrow Muhammad, the Soviet Union quickly disavowed him, and he fled for his life to Ethiopia. After Muhammad's departure, Haydar Abu Bakr al-Attas (b. 1939), former prime minister in the Muhammad government, was named interim president on January 24. He was elected in his own right to a five-year term in November 1986.

See also YEMENITE WAR.

Yemenite War (1979)

PRINCIPAL COMBATANTS: Yemen Arab Republic (North Yemen) (with support from Saudi Arabia and the United

States) vs. the People's Democratic Republic of Yemen (South Yemen) (with support from Soviet Union, Cuba, and East Germany)

PRINCIPAL THEATER(S): Border region of North and South Yemen

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Ideological differences triggered combat.

OUTCOME: The two sides reached a truce and began discussions toward the reunification of Yemen.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: About 500

TREATIES: Truce concluded on March 19, 1979

On June 24, 1978, Ahmad al-Ghashmi, the president of the Yemen Arab Republic (North Yemen), was assassinated. The government of the nation accused the People's Democratic Republic of Yemen (South Yemen), a Soviet-aligned breakaway state (*see* YEMENITE CIVIL WAR [1962–1970]), of perpetrating the act. Two days after the assassination, the president of South Yemen, Rubayi Ali (1934–78), was ousted and then executed by South Yemeni Marxist extremists in a military coup. The president, a moderate, had been working on a plan to reunite South Yemen with the pro-Western North Yemen. His execution immediately widened the gulf between North and South. A war of words developed, and, on February 24, 1979, troops on the border exchanged fire. Radical elements among the North Yemeni forces invaded South Yemeni border regions. In response, the South Yemeni army, bolstered by Soviet, Cuban, and East German elements, invaded North Yemen.

The invasion of North Yemen, an ally of Saudi Arabia, prompted the Saudis to convene an emergency session of the League of Arab States. Saudi Arabia and the United States supplied arms to North Yemen, and a U.S. naval task force was dispatched to the Arabian Sea. Under this pressure, a number of cease-fires were arranged, only to be violated almost immediately. An effective truce was reached on March 19, 1979. By agreement, both sides withdrew their forces from the border, and an Arab League peacekeeping force was sent to patrol the borderland and enforce the truce. The North and South Yemeni governments began reconciliation talks and planned for the reunion of the nation.

Yom Kippur War *See* ARAB-ISRAELI WAR (1973).

Young Turks' Revolt (1908–1909)

PRINCIPAL COMBATANTS: Young Turks vs. Ottoman sultan

PRINCIPAL THEATER(S): Salonika and Constantinople

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The Young Turks called for a restoration of the constitution abrogated by the sultan and sought to reform and modernize the corrupt and tottering empire

OUTCOME: Ultimately the Young Turks seized power and instituted reforms, but the empire collapsed in the Balkans, indirectly precipitating World War I.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

On July 3, 1908, the Ottoman Empire's Third Army Corps in Macedonia launched a revolt against the provincial authorities in Resna that quickly led to rebellion throughout the empire and brought into positions of power and authority the Young Turks, European-influenced young revolutionaries intent on modernizing Turkey. Though they succeeded internally in reforming the government and fostering Turkish nationalism, their revolt seriously destabilized the Balkans and helped to launch WORLD WAR I, during which their mishandling of foreign affairs resulted in the dissolution of the Ottoman state.

Established six centuries earlier, the Ottoman Empire had at its height controlled most of central and eastern Europe, western Asia, and North Africa. For the last 300 years, the Ottomans had steadily been losing ground, a process so rapidly accelerated in the previous quarter-century that by 1908 the empire was being called "the Sick Man of Europe." All but bankrupted by constant warfare and corrupt rulers, the Turks had watched their provinces slip away "like pieces falling off an old house"—Cyprus in 1878, Tunisia in 1881, Egypt in 1882. However decadent, the empire yet encompassed a vast territory—including Macedonia, Albania, Palestine, Libya, Syria, Mesopotamia, Crete, Bulgaria, and lands along the Red Sea and Persian Gulf—and still played a key political role in the European balance of power established by Otto von Bismarck's (1815–98) system of interlocking alliances. The three great powers of Central and Eastern Europe—Germany, Austria-Hungary, and Russia—all cast greedy eyes on certain Ottoman holdings, especially in the Balkans, but since no one in Europe could agree on how to carve them up, it became essential to European peace that no single major player stake a claim. The nations of Europe—including England and France—saw to it that the tottering giant did not fall.

Late in the last century, the empire's ruler—Sultan Abdul Hamid II (1842–1918)—had revoked the constitu-

tion that governed its polyglot of provinces and unleashed a vicious secret police force. The sultan's state terror horrified the empire's intelligentsia, but it was his massacre of tens of thousands of Armenians in the 1890s that made him an international pariah (see ARMENIAN MASSACRES [1894–1897]). Beset by a tide of rising nationalism among its subject peoples and Balkan neighbors, twisted hither and yon by the ambitions and demands of the Great Powers, Ottoman rule verged ever closer toward collapse. The Young Turks staged their revolt in 1908 to save the ailing empire, not destroy it.

By 1908, the Young Turk movement itself was some 50 years old, having begun back in the 1860s among writers inspired by European culture and philosophy. It was kept alive by exiled intellectuals, most of whom had fled to Paris in 1889 when a student-spawned plot against the sultan had been uncovered by his secret police. One faction, called the Committee of Union and Progress (CUP), which included the most notable of the liberal emigrés, Ahmed Riza (1859–1930), advocated orderly reform under a strong central government and the exclusion of all foreign influence. Another called for administrative decentralization and European assistance in creating the reforms. Both called for reinstating constitutional government; both prepared the groundwork for the future revolution against the sultan. When young officers from the Third Army Corps stationed in Macedonia's Salonika (Thessalonika, Greece), frustrated by irregular pay and inferior equipment, formed the Ottoman Liberty Society and began conspiring with the exiled intellectuals of the CUP, the stage was set.

First came a series of mutinies, then an uprising in Macedonia. The rebels did not demand that the sultan step down—however corrupt and tyrannical, he was the caliph (or spiritual leader) of many of the world's Muslims. What the rebels wanted was a restoration of the constitution and a recall of parliament. On July 23, amid the spreading revolt, Abdul Hamid surprised everybody by giving the rebels what they wanted, in theory reducing his status to that of a constitutional monarch. But the deep-seated ideological differences among the Young Turks resurfaced, preventing them from taking effective control of the government, and over the next two years, the sultan staged a destabilizing counterrevolution. His intrigues led the extremely reactionary Muhammadan Union to step up pressure on the loyalist troops in the First Army Corps, who stormed the Chamber of Deputies and demanded restoration of the Sacred Law. The sultan, pretending regret, "gave in" to their demands, and the CUP government fell. There followed not only the proclamation of martial law, the arrest of the 1908 rebels, and the reduction of the Constantinople garrison, but also a renewed massacre of the Armenians, who were literally annihilated in Adana, to the outrage of the civilized world (see ARMENIAN

MASSACRES [1909]). In response, the Salonika CUP sent an army of liberation under Mustafa Kemal, later to be known as Kemal Atatürk (1881–1938), to Constantinople, where it deposed the sultan—with the support of Muslim religious leaders—and put his brother Muhammad V Reshid (1844–1918) briefly in charge of a new CUP administration. Not until 1913, when new leaders took over Riza's faction—the triumvirate of Talat Pasha (1874–1921), Ahmed Cemal Pasha (1872–1922), and Enver Pasha (1881–1922)—did the Young Turks set themselves up as the arbiters of Ottoman politics.

Meanwhile, the old empire fell apart. Bulgaria promptly took advantage of the chaos to declare its independence in 1908, and that same year Austria-Hungary annexed Bosnia and Herzegovina, which it had ruled jointly and uneasily with Turkey. Turkish Crete proclaimed its union with Greece, though threats from Constantinople kept Greece from immediately acting on the declaration. In 1911, Italy invaded and overran Tripoli (Libya) (see ITALO-TURKISH WAR). The Italian conquest spurred the ambitions of the Balkans' small Christian states, and Serbia, Montenegro, Greece, and Bulgaria—all once provinces of the Ottoman Empire—suddenly attacked European Turkey in October, 1912 (see BALKAN WAR, FIRST). The Turkish army collapsed. By November 3 the Bulgarians had reached Constantinople, and five days later the Greeks entered Salonika. The Serbs took Durazzo on the Adriatic, and thus provided themselves with a seaport, on November 28. On December 5, the Turkish government begged the Balkan belligerents for an armistice.

Europe was shocked by the Ottoman defeat. England immediately called for a conference of the great powers, which opened a week later in London, on December 10, 1912. The Turks agreed to give up all they had lost to Serbia and Greece, but they drew the line at turning over to Bulgaria the city of Adrianople (Turkish Edirne), which their troops still occupied. The armistice collapsed. As the great powers continued to confer, the Balkans went back to war with the Ottomans for a second time in February 1913 (see the BALKAN WAR, SECOND). Adrianople promptly fell to a combined army of Bulgars and Serbs, and the Turks again sued for peace. Back in London, Austria-Hungary simply insisted that Durazzo either be given back to the Turks or made independent; the Serbs could not have it. Russia put pressure on the Serbs to give up the seaport, and on May 30, 1913, everybody signed the Treaty of London. Adrianople went to Bulgaria, Salonika to Greece, and an entirely new state—Albania—was carved out of Durazzo and the surrounding area. Everything was quiet for about a month; then, on June 29, Bulgaria attacked her former Balkan allies—Serbia and Greece—grabbing Salonika for herself and trouncing the surprised Serbian army. Now Romania, neutral in the first two Balkan wars, attacked Bulgaria from the rear, crossing the Danube and marching up to the outskirts of the Bulgarian capital, Sofia. Seeing that Bulgaria was for the moment distracted,

the Turks took back Adrianople. Germany's Kaiser William II (1859–1941) announced that he would support his cousin, King Carol (1839–1914) of Romania, but Russia's Czar Nicholas II (1895–1917) refused to help out the czar of Bulgaria, Ferdinand (1861–1948), whom he considered a maverick. So, in the Treaty of Bucharest—signed on August 6—Bulgaria lost everything she had won in the two previous wars, the Greeks took back Salonika, and a shank of Bulgarian territory was sliced off and handed to Romania.

Already the term “Balkanized” meant collapse into petty factions; everyone “balked” at anything that did not precisely suit them. For the Great Powers, still meeting in London, it mattered less who was stabbing whom in the back, or which country got which real estate. What mattered was that little wars not spread into general war. But without the “Sick Man of Europe” around to blame, they could not agree on what to do about his former property. Ten months after the end of the last Balkan War, the London Conference dissolved without settling anything, even the details of the new Albania's boundaries. That year, a Serb—angry at the treatment of Serbia—would shoot the heir to the Austro-Hungarian throne, Archduke Francis Ferdinand (1863–1914), and the old Europe Bismarck put together would vanish in the trenches and mustard gas clouds of the Great War that inevitably followed.

The Young Turks in power back in what was left of the Ottoman Empire were busy passing administrative reforms that would centralize their government, promote the industrialization of their economy, and secularize their legal system—none of which would prevent them from making the fatal mistake of overestimating German might and hastily entering the Great War on the side of the Central Powers. Dismembered by the Balkan Wars, the empire was beheaded after its defeat in World War I.

Ypsilanti Rebellions (1821)

PRINCIPAL COMBATANTS: Greek rebels (the “Sacred Battalion”) vs. the Ottoman Empire

PRINCIPAL THEATER(S): Moldavia and Romania

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Alexander Ypsilanti sought to begin a pan-Balkan rebellion against the Ottoman Empire, which would create Greek independence.

OUTCOME: The Ypsilanti uprisings were crushed at the decisive Battle of Dragasani, but they served to initiate the Greek War of Independence.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: Most of the Sacred Battalion was killed or captured.**TREATIES:** None

The Ypsilanti Rebellions may be seen as either an early phase of the GREEK WAR OF INDEPENDENCE or as a separate overture to it.

The Ypsilantis, a Phanariot (Constantinople Greek) family, left Constantinople for Russia because of a dispute with the Sublime Porte (the Ottoman government). In Russia, Alexander Ypsilanti (1792–1828) became a general in the Russian army and, by 1820, was also the leader (known as “prince”) of the Philike Hetairia, a nationalist band seeking Greek independence from the Ottoman Empire. Ypsilanti formulated a plan to unite all of the Balkans in rebellion against the empire, and in March 1821 he led a military unit, dubbed the “Sacred Battalion,” in an invasion of Moldavia. His troops overran and occupied the Moldavian capital, Jassy (Iasi, Romania), then marched on Bucharest.

Ypsilanti enjoyed the support of the Phanariot governor of Moldavia, and the Greek community in Wallachia also backed him; however, the anticipated and all-important support from Russia failed to materialize. Czar Alexander I (1777–1825) yielded to pressure from Austria and openly repudiated the rebellion. Worse, the Greek Orthodox Church excommunicated Ypsilanti for his action. The final straw was the failure of Romania to add its sanction. The Phanariot officials active in Romania were oppressive and imperious, and they had never been popular. Romania sought its own independence and wanted no part of a pan-Balkan movement dominated by Greece.

On June 9, 1821, at the Battle of Dragasani, about 90 miles west of Bucharest, Ypsilanti’s Sacred Battalion was defeated by Ottoman forces. Alexander Ypsilanti fled the field and made his way to Austria—where he was promptly arrested on orders of Emperor Francis II (1768–1835). Ypsilanti was imprisoned through 1827, and it was left to his brother, Demetrios Ypsilanti (1793–1832), to organize the Greek rebels for the full-scale war of independence that began shortly after the defeat at Dragasani.

Yuma and Mojave Uprising (1851–1852)

PRINCIPAL COMBATANTS: Yuma and Mojave Indians vs. the United States

PRINCIPAL THEATER(S): Southwestern Arizona and southeastern California

DECLARATION: None; Yuma chief Garra did indicate his dissatisfactions, however, by refusing to pay taxes.

MAJOR ISSUES AND OBJECTIVES: The Yumas and Mojaves launched a resistance to Anglo-American settlement, the pace of which had been greatly increased by the 1849 gold rush; the United States fought to quell the rebellion and pacify the tribes.

OUTCOME: The uprising was suppressed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Indians, 500–800 warriors; United States, 600 troops

CASUALTIES: Unknown

TREATIES: The Mojaves agreed to a treaty on Christmas Day, 1851, and the Yumas agreed to a treaty on October 12, 1852.

The California gold rush of 1849 not only helped to stitch the United States together as a nation after the UNITED STATES–MEXICAN WAR, it also accelerated the collapse of U.S.-Indian relations in the American West. Although the Forty-Niners did not prospect in the Yuma and Mojave homelands of southwestern Arizona and southeastern California as they did in the homelands of other tribes, many of the gold-blind immigrants did travel through those lands along the southern Overland Trail. The Yumas and Mojaves responded the way they had been responding since 1827, when the legendary guide and mountain man Jedediah Strong Smith (1799–1831) first led a trapping expedition through the area. They raided travelers.

The Yumas in particular controlled a strategic position known as Yuma Crossing, a natural ford across the Colorado River near the mouth of the Gila River. Partly to protest the abuses they had suffered at the hands of invading whites, Antonio Garra (d. 1852), leader of a Yuma tribe called the Cupanga-kitoms, in 1851 notified San Diego County authorities that his people would not pay the taxes assessed on them. By November 1851, Garra, Chief Gerónimo of the New River Kamias, Captain Alleche of the Cahuillas, and Chief Fernando of the Chemehuevis called on Yuma leaders and laid plans for a revolution among them and the Mojaves and Yokuts of the San Joaquin Valley as well as various tribes in Baja California.

On November 10, 1851, a party of sheep drovers, with 1,500 animals, reached the Colorado River near the Yuma Crossing. The next day, the party divided, five men continuing on with the sheep, the remainder making camp with a battle-hardened, one-armed veteran of the Mexican War, Lieutenant Thomas “Fighting Tom” Sweeny (1820–92) and his small command. Before the day was out, 400 Yumas had surrounded Sweeny’s camp but retired when he threatened them with a 12-pound howitzer. Another party of Indians attacked the drovers who had remained with the sheep, killing four of the five. On November 12, Sweeny’s troops were augmented by the arrival of reinforcements. However, Camp Independence—as Sweeny called his garrison—was more or less

continually besieged throughout November and into early December. Sweeny and a garrison now numbering about 100 men withdrew from the camp on December 6.

Elsewhere in California, Indians were also attacking whites, the most serious occurrence being a November 23 raid on Warner's Ranch outside San Diego. Alarmed Californians organized a militia, but it was neither the militia nor the regular army that ultimately captured Antonio Garra; it was a band of Cahuilla Indians who had refused to take part in the rebellion. He and other rebels (including a Mexican and an Anglo-American, in addition to Indians) were tried and executed. The executions were followed by an attack on the Cahuilla villages of nearby Coyote Canyon. U.S. Army major H. P. Heintzelman mobilized 80 troopers and, on Christmas Day of 1851, defeated the rebel Cahuillas, who quickly signed a peace treaty.

Along the Colorado, however, Sweeny's garrison having departed, the Yumas maintained control until February 1852, when 500 soldiers arrived in San Diego. Half were sent to the Colorado. California recruits were added to this number until Heintzelman commanded some 400 men. They marched against some 500 rebel Indians, who were less well armed and supplied. Operating out of Fort Yuma, on the California side of the Colorado, Heintzelman's men raided villages during March and April to relatively little effect. About 16 warriors were killed, although numerous settlements were razed. Sweeny, who had

headed south into Baja California, was more successful, burning two Cocopas villages on April 12, which led to the surrender of some 150 warriors, who agreed to help fight the Yumas.

In August 1852, a group of Mexican sheep drovers learned that the Yumas and neighboring tribes were planning an all-out attack on Fort Yuma at the end of the month. Heintzelman and Sweeny prepared for the onslaught, but it failed to materialize. Instead, the Yumas expressed their desire to talk peace. Sweeny arranged truce talks, and the Indians assembled near the Colorado River. Instead of approaching the warriors peacefully, Heintzelman ordered three companies of regulars to fix bayonets and charge. The Indians promptly retreated and, once again, requested a parley. Heintzelman again granted one, this time on August 27, and this time he kept his word—a 10-day truce was concluded. The truce stretched into several weeks of inconclusive peace while the parties wrangled over terms. On September 23, Heintzelman lost patience and renewed his campaign. On September 29, he surprised a band of Yumas near present-day Blythe, California. They fled without offering battle. Finally, on October 2, 1852, the Yumas held a grand council with the army, during which they negotiated both pardons and permanent peace.

Z

Zanj Rebellion (869–883)

PRINCIPAL COMBATANTS: Zanj slaves vs. the Muslim caliphate

PRINCIPAL THEATER(S): Southern Mesopotamia

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The slaves sought freedom from oppression under the caliphate.

OUTCOME: For more than 15 years, the Zanj lived independently of their former masters; in 883 the rebellion was crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Thousands of slaves participated in the uprising; caliphate numbers are unknown.

CASUALTIES: Heavy among the Zanj in the final campaign of 883

TREATIES: None

This was a servile rebellion by thousands of black slaves (captured from East Africa) known as the Zanj. During the MUSLIM CIVIL WAR (861–870) the caliphate, torn by internal strife, was seriously weakened. Exploiting this, the Zanj rebelled against their masters in southern Mesopotamia.

Initially, the rebellion was highly successful, and the Zanj erected their own capital deep within the salt marshes outside Basra in 870. In 871, they stormed Basra, which fell to them. From this base, they gained considerable territory before armies dispatched by the Abbasid caliph al-Mo'tamid (d. 892) began fighting the Zanj. The caliph's forces whittled away at Zanj strength for more than 15 years. During that time, a low-level guerrilla war persisted, and the caliphate's economy was seriously dam-

aged by disruption in trade. At last, in 883, the Zanj were defeated by a major force under the leadership of al-Muwaffiq (fl. early 880s), brother to the Abbasid caliph.

Zanzibar Rebellion (1964)

PRINCIPAL COMBATANTS: Leftist African nationalists (Afro-Shirazi Party) vs. the sultanate of Zanzibar

PRINCIPAL THEATER(S): Zanzibar

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The African nationalists wanted to overthrow the sultanate and proclaim a communist people's republic.

OUTCOME: The sultanate was overthrown and a people's republic proclaimed in its place.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS:

Unknown

CASUALTIES: 5,000 Arabs

TREATIES: None

Zanzibar was granted independence from Britain in 1963. The following year, black African Marxist nationalists who had been trained in the People's Republic of China staged a coup d'état against the Zanzibar government, an Arab sultanate. The Africans proclaimed a people's republic, sent the sultan, Jamshid ibn Abdullah (r. 1963–64), into exile, banned the two Arab political parties that had run the country, and launched a general persecution of Arabs. As many as 5,000 Arabs were killed by black military

personnel and mobs; thousands more were imprisoned, and their property was seized.

The new government, dominated by the Afro-Shirazi Party, instituted sweeping land reforms and measures to introduce a classless society into Zanzibar. Under President Julius Nyerere (b. 1922–99), the nation also merged with the like-minded leftist government of Tanganyika to create the United Republic of Tanzania.

Zanzibar Uprising (1896)

PRINCIPAL COMBATANTS: Zanzibar vs. Great Britain

PRINCIPAL THEATER(S): Zanzibar and Zanzibar harbor

DECLARATION: Sultan of Zanzibar on Great Britain

MAJOR ISSUES AND OBJECTIVES: The sultan of Zanzibar mistook a friendly visit of the British fleet for an attack and started a war.

OUTCOME: Within minutes of beginning, the war ended.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Zanzibar lost more than 500 sailors and soldiers killed; British casualties were negligible.

TREATIES: None

This war has the distinction of being almost certainly the briefest recorded war in history—it lasted 37 minutes and 27 seconds. It was declared on Great Britain by the sultan of Zanzibar when a British fleet anchored in Zanzibar's harbor so that its personnel could participate in a cricket match ashore. Alarmed, the sultan assumed that the English were attacking and dispatched his navy's single battleship against the fleet. HMS *Glasgow* blew the sultan's ship out of the water as soon as it appeared. Then the fleet trained its guns on the sultan's palace, demolishing it. Casualties among the sultan's navy and army were over 500 killed. British casualties were negligible. The sultan fled to German East Africa, and other officials of the Zanzibar government immediately sued for peace.

Zebrzydowski's Insurrection *See* POLISH REBELLION (1606–1607).

Zenobia's Conquest of Egypt (267)

PRINCIPAL COMBATANTS: Palmyra vs. Rome

PRINCIPAL THEATER(S): Palmyra and Egypt

DECLARATION: Unknown

MAJOR ISSUES AND OBJECTIVES: After the co-ruler of Rome (in the East) was murdered, his wife Zenobia assumed real power. Doubting her loyalty, Roman emperor Gallienus invaded to reclaim control of the region.

OUTCOME: Zenobia defeated Rome, then for good measure invaded and conquered Egypt, making her the virtually independent ruler of not only Palmyra and Egypt but also Syria, Mesopotamia, and most of Asia Minor.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

Zenobia (d. after 274) was the beautiful and able wife of Septimus Odenathus (d. c. 267), Prince of Palmyra. A Romanized Arab who preferred Roman authority to that of Persia, Odenathus led a new Roman-Arab army to challenge Shapur's (d. 272) control of Roman dominions in the East during the ROMAN-PERSIAN WAR (257–261), then in 262 invaded Persia itself (*see* ARAB INVASION OF PERSIA) before heading up a successful punitive expedition in 266 against the Goths, who were then ravaging Asia Minor. Odenathus, who was apparently accompanied and assisted in his campaigns by Zenobia, was so valuable to Rome that Emperor Gallienus (c. 218–68) had in 262 appointed him virtual co-ruler of the East, granting him the title "Dux Orientis."

Shortly after his Gothic campaign Odenathus was murdered, and he was then succeeded as prince of Palmyra by his son, Vaballathus (or Wahballat) (r. 270–71). But the real ruler of Palmyra—and, therefore, of the Roman East—was Zenobia. Emperor Gallienus, unsure of the queen's loyalty, sent an army to retake control of Rome's eastern dominions. In 267, backed by her general, Zabdus (fl. third century), Zenobia first defeated the Romans, then invaded and conquered Egypt. Thus she remained, secure in her virtual independence from Rome, until the rise of a new emperor, Lucius Domitius Aurelianus (c. 215–75), who was proclaimed caesar by the Roman army in 270. The next year, he determined to recapture the Roman East—Syria, Egypt, Mesopotamia, and most of Asia Minor—and launched a new war against the Palmyran queen (*see* AURELIAN'S WAR AGAINST ZENOBIA).

Zulu Civil War (1817–1819)

PRINCIPAL COMBATANTS: Zulus vs. Ndwandwe (and other tribes)

PRINCIPAL THEATER(S): Zululand (Natal and South Africa)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Shaka, chief of the Zulus, forged an army of conquest, with which he ravaged and dominated his neighbors to create a great African empire.

OUTCOME: Shaka and the Zulus emerged as the most powerful force in southern Africa.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown, but many Zulu “massacres” are recorded during this two-year period.

TREATIES: None

Shaka (c. 1787–1828), the great warrior leader of the Mtetwa people of South Africa, had rebelled against his father, Senzangakona (d. 1816), a Zulu chief. Upon the death of his father, Shaka returned to the Zulus and, with the aid of the principal chief of the Mtetwa, Dingiswayo (d. 1817), earned recognition as the new chief of the Zulus in 1816.

The bond between Shaka and Dingiswayo was powerful. The two allied their peoples against common enemies, including the Ndwandwe tribe led by Chief Zwide (d. 1819). In 1817, Zwide murdered Dingiswayo, and, in the absence of their chief, the Mtetwa rallied to Shaka and proclaimed themselves no longer Mtetwas but Zulus.

With his realm thus augmented, Shaka revealed himself a military genius. He enlarged the Zulu army and transformed it from a poorly armed and inadequately trained mob into a disciplined force, equipped with the assegai, a revolutionary light javelin far superior to the traditional long throwing spear. The assegai could be hurled or used in close combat. Shaka also discarded the small shield that warriors formerly used and adopted instead a shield that covered the entire front of the body. As for strategy and tactics, Shaka reexamined and revised these extensively. Traditionally, native warriors battled each other from a distance, threw their spears, jeered at each other, then ended the fight. It was rare that a clear-cut winner emerged from these halfhearted contests.

Shaka made his warriors fierce, encouraging them to move in close, protect themselves with the large shield, and slash with the short assegai. Using many of the same tactics that had once made the Roman legions the best fighting force in the world, Shaka’s Zulu regiments, called *impis*, would overwhelm their opponents with a pressing frontal assault while the “horns” of the Zulu crescent battle formation swept around enemy flanks in a double envelopment. Although he had no cavalry, Shaka’s loping *impis* covered ground as fast as mounted troops and ripped into enemy lines under a hail of hurled spears, stabbing their assegais at the rawhide shields of their opponents with a deadly and frighteningly controlled rhythm. In this way, ritual combat became outright war, and the Zulus became the foremost warriors of black Africa in the 19th century.

In 1819, at the Battle of Gqokoli Hill, Shaka led his troops to victory against the far superior numbers fielded

by the Ndwandwes. In the rout that followed, Zwide was killed, and most of the Ndwandwes fled their lands, leaving vast tracts to be gathered up by Shaka. Following the victory over the Ndwandwes, Shaka initiated the *Mfecane*—“The Crushing”—a sequence of wars that ravaged the region surrounding Zululand through the early 1820s. At the end of the Crushing, Shaka was effectively monarch of a large Zulu empire, which extended over the region now occupied by Natal and other parts of South Africa.

Zulu Civil War (1856)

PRINCIPAL COMBATANTS: Forces of Cetewayo vs. forces of Mbulazi, brothers vying for the Zulu throne

PRINCIPAL THEATER(S): Zululand (region of KwaZulu/Natal province, South Africa)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Succession to the throne

OUTCOME: Cetewayo emerged victorious, killed his brother, and immediately succeeded his father.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Numbers unknown, but all followers of Mbulazi who had not fallen in battle were captured and executed.

TREATIES: None

Cetewayo (c. 1836–84) and Mbulazi (d. 1856) were as ambitious as their father, the Zulu king Umpanza (d. 1872), was passive and weak. The young men each recruited followers and met in a single, decisive battle at the Tugela River in December 1856. Cetewayo defeated his brother, who, along with some followers, survived the battle only to be executed later in captivity. Cetewayo’s demonstration of ruthlessness and skill was enough to convince Umpanza to abdicate, and Cetewayo ascended the throne immediately.

Further reading: Ian Knight, *The Zulus* (London: Osprey, 1989).

Zulu Civil War (1883–1884)

PRINCIPAL COMBATANTS: King Cetewayo and, later, his son, Dinizulu (with European aid) vs. Zibelu, a usurper

PRINCIPAL THEATER(S): Zululand (Natal and parts of South Africa)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Cetewayo, released from British imprisonment, sought to retake power from a usurper, Zibelu.

OUTCOME: Cetewayo was killed in battle, but his son Dinizulu succeeded in defeating the forces of Zibelu.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

The defeat of the Zulu king Cetewayo (c. 1836–84) at the hands of the British in the ZULU WAR of 1879 drove him into hiding. British authorities ultimately located him and incarcerated him. To the surprise of the British, Cetewayo behaved as a model prisoner, and this persuaded his jailers to release him and allow his return to Zululand in 1883. Cetewayo returned to discover that his place of authority had been usurped by one Zibelu (d. c. 1884). Cetewayo immediately rallied those loyal to himself to oppose those now loyal to Zibelu, and a civil war broke out between the two factions.

In 1884, after a year of fighting, Cetewayo was killed in combat. His son, Dinizulu (d. after 1889), succeeded to power and continued to prosecute the war. However, it was soon clear to Dinizulu that a stalemate had been reached. To break it, Dinizulu approached some European adventurers, who agreed to fight on his side in exchange for territory in northern Natal. This aid was sufficient to tip the balance, and Dinizulu defeated the forces loyal to Zibelu, who was presumably (but not certainly) killed in 1884.

The good feelings between Dinizulu and his European allies were short-lived. After continual conflicts between Dinizulu and the Europeans, the Zulu king was arrested in 1889 and exiled to St. Helena, the South Atlantic island that had served as the final prison for Napoleon Bonaparte (1769–1821; see ZULU REBELLION).

Zulu Rebellion (1887)

PRINCIPAL COMBATANTS: Zulus under Dinizulu vs. British colonial forces

PRINCIPAL THEATER(S): Zululand (region of KwaZulu/Natal province, South Africa)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: Dinizulu sought independence after the British annexation of Zululand.

OUTCOME: The rebellion was quickly crushed.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: Unknown

CASUALTIES: Unknown

TREATIES: None

During the period of the First BOER WAR, the British annexed Zululand (region of KwaZulu/Natal province, South Africa), which provoked the Zulu leader Dinizulu (d. after 1889), son of Cetewayo (c. 1836–84), to organize a revolt against the new overlords. Armed insurrection began in June and was crushed by August 1887. Dinizulu was convicted of treason in a British colonial court and went into exile in 1889.

Zulu War (1879)

PRINCIPAL COMBATANTS: Zulus vs. Great Britain

PRINCIPAL THEATER(S): Zululand (eastern South Africa)

DECLARATION: None

MAJOR ISSUES AND OBJECTIVES: The British sought the suppression of Zulu border disputes.

OUTCOME: After initial failures, British forces succeeded in defeating the Zulus; to suppress subsequent chronic uprisings, the British annexed Zululand.

APPROXIMATE MAXIMUM NUMBER OF MEN UNDER ARMS: At the culminating Battle of Ulandi, European (British) forces numbered 4,200 plus 1,000 native auxiliaries; the Zulus fielded 10,000 warriors.

CASUALTIES: At Isandhlwana, 895 British and 471 Kaffirs dead; Zulus, about 2,000 dead. At Ulandi, European (mostly British) losses numbered 100 killed; Zulu losses included at least 1,500 killed.

TREATIES: Surrender of Cetewayo, August 1879

For many years, the Zulus disputed the border of their country with the border of Boer settlement in the Transvaal (in South Africa). In 1877, the British annexed the Transvaal from the Boers and decided to settle the border dispute once and for all. British authorities simply demanded outright control of the disputed territory. King Cetewayo (c. 1836–84) of the Zulus responded with contempt, defiantly ignoring all demands. To compel compliance, the Crown dispatched a force under General Frederic A. Thesiger, baron Chelmsford (1868–1933), to invade Zululand.

The British invasion was met with fierce resistance. Using spears, the Zulus defeated the invaders at the Battle of Isandhlwana on January 22, 1879. There, while the central column (1,600 British soldiers and 2,500 Natal Kaffirs, African auxiliary troops) was off on reconnaissance, 20,000 Zulus attacked the British camp at dawn. The calamity-ridden 24th Regiment, which had suffered misfortune all over the empire—at Minorca, Talavera, and Chilanwala—now suffered the greatest defeat in its history. The regiment's Second Battalion lost 21 officers and

581 men. There were 950 British soldiers in the camp all told; the Zulus killed 895 of them. Also falling victim to the Zulus' assegais (short-bladed spears) were more than half (471) of the 850 Kaffirs on hand. The Zulus paid dearly, with some 2,000 deaths, but when it was over, they had handed the British Empire the worst defeat, in terms of lives lost, in its colonial history. Zulus also prevailed, at least to some degree, at Eshowe and Kambula, with ambushes and assaults that cost the British forces heavily.

During April and May of 1879, British reinforcements arrived, and the fighting intensified. When a volunteer for the British, the adventure-seeking Louis Bonaparte (1856–79), son of the deposed French emperor Napoleon III (1808–73), was killed in an ambush, the war in far-off Zululand suddenly became the center of international focus. More volunteers joined the British forces, which were additionally augmented. Under General Garnet J.

Wolseley (1833–1913), the reinforced British forces advanced on the Zulu capital of Ulandi. There Wolseley's 4,200 European troops and 1,000 native auxiliaries were attacked by Cetewayo and 10,000 Zulus. Wolseley formed his troops into the classic hollow-square defensive formation and was able to break up each Zulu charge. This resulted in victory for the British and brought the main war to an end. European losses were about 100 killed, whereas Zulu casualties were 1,500 killed. Cetewayo fled the field but was captured on August 28. He capitulated unconditionally and was imprisoned. Individual pockets of resistance continued to emerge, however, and, to crush these, Great Britain annexed Zululand in 1887. This would lead to the Transvaal Revolt, better known as the First BOER WAR.
