Another goddess who had probably been worshipped by Italic peoples was Pales, goddess of flocks, herds, and herders. Ovid describes her festival, the Palilia (or Parilia), held on April 21, as a rustic feast amid the sheepfolds, with sheep driven through fires of sulfur to purify them of spirits that could cause disease. Millet and milk was offered to Sylvan (“of the woods”) Pales with prayers for protection of the flocks.

Ovid's prayer to Pales gives an idea of early peoples' sense that they were surrounded by spirits and deities of all kinds and of the need to maintain one's *pietas* (spiritual loyalty) with regard to them. He asks forgiveness if he mistakenly trod on holy ground or sat under a hallowed tree; if he interrupted the half-goat god Pan and his nymphs at their revels; if he desecrated a holy copse by cutting boughs, or suffered his flocks to foul a sacred spring with their hooves.

The thunder god Jupiter, Vulcan, god of smiths, and some other deities of the later Roman pantheon probably had their beginnings among the Numina worshipped by the different Italic tribes.

The absorption of the many Italic tribes into the Roman state is a classic example of the cen-

tralizing tendencies that come into play as societies become increasingly militarized, a process that tends to become self-perpetuating and that, because of the range of human ability, tends to bring about the emergence of powerful war leaders, whose abilities and success in battle gain them more followers and thereby more victories. Power thus eventually resides in ever fewer hands. A countertendency in such societies is the expansionism caused by war leaders' continuing need to engage in further wars to gain spoils and territory with which to reward their expanding corps of followers. These tendencies play themselves out on the level of societies as a whole, as well as on the individual level. This was the way in which Rome emerged as the eventual victor among the Italic tribes. The trajectory of victory carried Roman arms beyond the Italic territories and eventually beyond Italy itself to fulfill the needs of the growing economy and of generals for ever expanding fields of endeavor.

Iuthungi (Iutungui; Juthungi)

The Iuthungi are classified as GERMANICS. They lived around present-day Augsburg (the former Roman colony of Augusta Vindelicorum from 14 B.C.E.) in southern Germany, having displaced or absorbed the HERMUNDURI.

In the 250s–270s C.E. a number of Germanic tribes crossed into present-day Italy. In 271 C.E. the Iuthungi crossed the Alps and carried out raids in northern Italy. The ROMANS under Emperor Aurelian defeated them and drove them back north, part of his campaign to restore the

Danube as a border with Germania. He also had a wall built around Rome. For his victories he became known as Restitutor Orbis, or “restorer of the world.”

In the fourth century the Iuthungi eventually became part of an ALAMANNI confederation yet retained some autonomy. In 430 a force of Iuthungi were defeated by a Roman force under Flavius Aetius, after which surviving tribal members lost their political identity.

Iverni (Eurerni; Iberni; Iberi; Juerni; Uterni; Uterini)

The Iverni are classified as a Celtic tribe. They lived in the present-day county of Cork in southern Ireland at least by the first century C.E. and are discussed as CELTS or IRISH. Their name, recorded by the second-century C.E. Alexandrian geographer Ptolemy, is thought to be related to Greek names for Ireland, Ierne and Hibernia. They are associated with the legendary people known as Erainn (or Fir Bolg).

Izhorians (Izhora Ingrians; Ijores;

Lyds)

The Izhorians are a Finnic-speaking people, classified among FINNO-UGRIANS. They lived mostly in the present-day St. Petersburg region near the Gulf of Finland in northwestern Russia. Since their homeland was formerly known as Ingria, they are sometimes referred to as INGRIANS, as are the VOTES, their neighbors near the gulf, and the Ingrian FINNS, who migrated to the region from Finland. Unlike the other peoples, however, the Izhorians are considered a subgroup of the KARELIANS living to the north.

The Izhorians are mentioned in the historical record from the 12th century C.E. when their homeland was along the Neva River, which runs from Lake Ladoga into the gulf. Early in their history, at least by 1270, they were tributary to the SLAVS of Novgorod and forced to serve in their military. They were under Swedish rule in the 17th century and Russian rule in the 18th century.

Izhorians living along the coast were known as fishermen, and as carpenters in between fishing seasons; inland they were known more as smiths and iron founders. Izhorians in eastern villages were renowned for weaving. Unlike the Ingrian Finns, who later practiced Lutheranism, the Izhorians under Russian rule largely converted from their pagan religion to Eastern Orthodox Christianity.

Jews (Hebrews; Israelites)

The Jews are a Semitic people tracing descent to common ancestors from ancient Israel (known formerly as Canaan, then Judea, then Palestine, then Israel) in Asia or, by another definition, adherents of a religion known as Judaism. Although they never established a political entity in Europe, the Jews have played a part in the history of all European nations from ancient times to the present.

ORIGINS

The Jews are a Semitic people, related to other Semites of the Middle East, such as PHOENICIANS and Arabs. According to tradition as related in the Bible the first Jews migrated to present-day Israel from Mesopotamia (part of present-day Iraq). Descendants perhaps spent time in Egypt before returning to found the kingdoms of Israel and Judah. Yet over the centuries many Jews began to live away from their homeland, their dispersion known as the Diaspora. The Jews who settled in Europe and elsewhere tended to assimilate economically but not culturally, continuing to practice their traditional religion and keep their community intact. Their descendants are thus believed to have a high

percentage of Jewish ethnic ancestry. Yet some modern Jews are descended from peoples in other lands who converted to Judaism. In reference to ancient peoples the names Hebrews and Israelites are used synonymously with Jews; the name Israelis refers to citizens of the modern-day nation of Israel. (The name Jews is derived from Judah, a kingdom; the Hebrew word for Judeans was *yehudi*, and the Greek *ioudaios*.)

LANGUAGE

The original language of the Israelites was Hebrew, part of the Canaanite branch of the Semitic family (which includes the extinct language of the Phoenicians). Other branches are Akkadian (which includes extinct Babylonian and Assyrian), Aramaic (languages of Syria), Arabic (of the Arab world), and Ethiopic (of Ethiopia). Hebrew survived the ages in its written form. The nation of Israel, founded in 1948, revived it as an official language. The Jews who settled in other countries spoke other languages. Jewish scriptures were translated into Greek and Latin. The extant Yiddish, which evolved from the German of the Middle Ages in Eastern Europe and spread elsewhere, includes many Hebrew and Aramaic words. Judezmo (or Ladino), a combination of Hebrew and Spanish, developed among Jews living on the Iberian Peninsula in the Middle Ages and was spoken by their descendants into the 20th century.

HISTORY

Legendary Wanderings

On the basis of tradition the Jews trace their lineage to the Israelite patriarchs Abraham, Isaac, Jacob, and Jacob's fourth son, Judah. Abraham supposedly traveled from Mesopotamia to present-day Israel, and for a time Jacob and his 12 sons lived in Egypt. Their descendants departed Egypt, led by Moses—as related in the biblical book of Exodus. After years of wandering in the Sinai Desert, according to their belief, God revealed to them the Ten Commandments, the basic rules and principles of Jewish life. Finally they returned to Canaan, which they called Eretz Israel (the land of Israel). They formed a tribal confederation, of which Saul reportedly became the first king. He eventually was defeated by Philistines, a non-Semitic people who migrated to Palestine from the Aegean (probably Crete) in the 12th century B.C.E., a time when the eastern Mediterranean region was experiencing devastating wars and other destructive forces that are poorly understood, leading to widespread depopulation of some areas and migration of peoples. The Philistines built cities and had a tight political organization that made them formidable foes of the people of Israel.

Ancient Jews crafted this seal. (drawing by Patti Erway)

Early Kingdoms and Invasions

According to the Bible David was leader of the tribe of Judah who defeated the enemies of the Israelites. On the basis of other sources as well as the Bible he is believed to have ascended to power in at least a small kingdom in about 1000 B.C.E., with Jerusalem as his capital. His son, Solomon, succeeded him and ruled over a period of expansion and peace. After Solomon's death in about 920 B.C.E. a period of disruption followed, and two kingdoms formed, the 10 tribes in the kingdom of Israel in the north, and two tribes in the Kingdom of Judah in the south. In 722 B.C.E. the Assyrians under Sargon II conquered Israel and exiled most of the Israelites, the basis for the legend of the Lost Tribes of Israel. In 586 B.C.E. the Babylonians out of Mesopotamia conquered Judah and destroyed the Temple at Jerusalem. During the subsequent 50-year-long period of their rule known as the Babylonian Captivity many Jewish leaders were exiled. This and subsequent scattering of the Jews are known as the Diaspora. At this time large Jewish communities in Babylonia, Asia Minor, and Egypt developed. Some of them became centers of learning of Jewish history and culture. Without significant political power Jewish communities were increasingly led by scholars and rabbis.

The Persians gained control of Judah in about 540 B.C.E. and allowed Jews to return as well as granting a degree of self-government. Alexander the Great of the MACEDONIANS conquered the region in 332 B.C.E., and afterward the various states of his surviving empire were ruled by monarchs, influenced by Hellenism, that is, based on traditions of the ancient GREEKS. Yet Judah continued to have some autonomy. Jews traveled widely during the Hellenistic period and sought to add to their numbers through an active policy of conversion (the word *proselyte* originally referred to a Greek who had converted to Judaism). Some foreign communities used a Greek translation of the Hebrew Scriptures known as the Septuagint, and Judaism evolved to varying forms.

Because of later attempts to impose Greek religion on the Jews in their homeland in 167 B.C.E. they revolted under the leadership of a family known as the Maccabees—including Mattathias and his son, Judas Maccabeus—and successfully created an independent Jewish kingdom ruled by the Hasmonaean dynasty (after an ancestor, Hashmon) from 165 to 63 B.C.E.

In 63 B.C.E. the ROMANS under Pompey conquered Judah and established the province of

Palestine, with Judea as the southern division. The Romans sometimes ruled through Jewish kings and sometimes through Roman military governors. Pontius Pilate, who repressed the sect of Judaism that evolved into Christianity and himself presided over the crucifixion of Jesus, was a military governor. The Temple of Jerusalem was once again destroyed in 70 C.E. During Roman occupation many Jews traveled to other parts of the Roman Empire, because of repression but also for economic opportunities. Some became citizens of other countries.

The Continuing Diaspora

During the Roman period the Jews suffered varying degrees of repression. After a Jewish revolt led by Simon Bar Kokhba in 131–135 C.E. Jews were refused entrance to Jerusalem. Yet the polytheistic Romans were more concerned with political and economic domination than religious conversion. This condition changed when the Emperor Constantine made Christianity the official Roman religion in the early fourth century C.E., after which many Jews were persecuted for not accepting Jesus Christ as the son of God.

The GERMANICS, who seized control of much of the Western Roman Empire in the fifth century C.E., as well as the BYZANTINES, the rulers of the Eastern part of the divided empire, also made life hard for the Jews. After their conversion to Catholicism in the sixth century the VISIGOTHS launched attacks on Jewish communities in Spain and southern Gaul. Meanwhile Jews in Byzantium were barred from holding public office, building new synagogues, or engaging in certain businesses.

Sephardim and Ashkenazim

The rise of Islam in the seventh century C.E. and the subsequent rise of the FRANKS led to a period of new opportunity for Jews in Europe. After the MOORS occupied the Iberian Peninsula in 711 they allowed economic development among Jewish and Christian peoples, whom they taxed. Jews in Muslim Spain developed new centers of learning and in part because of creative interaction between Jewish and Islamic culture enjoyed what is considered a golden age of literature. Even in those regions that Christians recaptured over the centuries some Jews, because they had mastered Arabic, remained in positions of influence.

The Jews in Spain and Portugal became known as Sephardim, from the Hebrew word for Spain, Sefarad. They practiced Babylonian

Ashkenazim (German Jews) pose for a photograph in 1876. (*Library of Congress, Prints and Photographs Division [LC-USZ62-100149]*)

rather than Palestinian Jewish ritual traditions and later spoke Ladino.

The Franks meanwhile had encouraged Jewish settlement in Provence in present-day southern France and in the Rhineland, territory west of the Rhine River in present-day western Germany, to further the economic development of those regions. Since the Jews were not a military threat and depended directly on the rulers for protection, the Franks and later Holy Roman rulers could trust them not to attempt to expand territory.

The Jews of the Rhineland, along with their Jewish neighbors in France, became known as Ashkenazim, from the Hebrew word for Germany, Ashkenaz. They practiced their own synagogue traditions, known as German rites, and spoke Yiddish.

The Crusades

The Crusades, the military expeditions undertaken by European Christian powers from the late 11th century through the late 13th century to recover the Holy Land in the Near East from the Muslims, meant new hardship for the Jews as they, too, experienced religious hostility from crusading armies or local mobs, especially in the

Rhineland, where populations of entire villages were massacred and homes destroyed. Some of these peoples fled eastward into territory held by the SLAVS, especially in present-day Poland, Lithuania, Ukraine, and Russia.

Expulsion and Inquisition

In many parts of Europe during and after the Crusades Jews were forbidden ownership of land and most occupations other than trading and moneylending. In some places Jews were even expelled—Naples in 1288; England in 1290; France in 1306; Spain, partially, in 1391; and Germany periodically in the 15th century. The Jews were blamed for the bubonic plague—by poisoning wells—in Europe in the 14th century, known as the Black Death, by some among European Christian society. Some Jews chose to convert rather than leave their home. A number converted in name only. Those in Spain who continued what was known as *judaizing*—that is, practicing Judaism—were called Marranos. In 1478 to ferret out this practice and other forms of heresy against the Catholic Church, the Spaniards launched the Spanish Inquisition, during which some Jews were executed.

In 1492 when King Ferdinand II and Queen Isabella I conquered the last Moorish kingdom in Spain they expelled the rest of the Jewish population. In the course of these expulsions many Ashkenazim joined earlier established Jewish communities in Poland. Some Sephardim from Spain went to other parts of Europe. Portugal was a place of refuge until 1497, when King Manuel I ordered the forced conversion of Jews. Sephardim spread throughout the Mediterranean world, many to lands in Europe and Asia controlled by the Islamic Ottoman TURKS. Some joined communities of Oriental Jews in North Africa and Asia (many of whom spoke Arabic) founded in ancient times. The expulsions of the 15th century were the last for the Jews until the 20th century.

Growing Tolerance and Opportunity

By the 16th century European Jews had developed thriving communities, typically urban, with increasing mobility among them. The Polish-Lithuanian Jewish community became a major center of scholarship in the 16th century. In the 17th century Jews began to return to western Europe. Holland, after gaining its independence from Spain in 1648, became a commercial center. The city of Hamburg in Germany drew a great number of migrants for its economic opportunities. England readmit-

ted Jews in 1654. Economic opportunities grew, and Jews in the economic centers of western Europe gained prominence and wealth in businesses such as finance, importing and exporting, and shipbuilding.

During the cultural period of the 18th century known as the Enlightenment philosophers and writers developed the concept of human rights held by all peoples regardless of race or creed. In accordance with this principle during the French Revolution in 1789–99 French Jews were granted emancipation, in which legal restrictions and other inequities applied specially to Jews were abolished, Jews were recognized as equal to other citizens, and they were granted the rights and duties of citizenship. The Revolutions of 1848 led to the emancipation of the Jews in Germany and Austria as well. By 1871 every European country except Russia had emancipated its Jewish inhabitants.

In the meantime some Jews adopted the languages and clothing of the dominant cultures in a secularization movement countering the age-old religious tradition of cultural isolation, which for some Christian advocates of emancipation had been its main purpose, including the wearing of clothes that set them apart from other peoples. During the period from the mid-18th to late 19th century Jewish society became fragmented, and various sects formed throughout Europe, following different interpretations of Judaism.

Some European Jews had great success in business, such as the family banking dynasties, including the House of Rothschild in Germany. Mayer Amschel Rothschild, the founder, began as a moneylender at Frankfurt am Main in the late 18th century and became an agent of the British in subsidizing European sovereigns in the wars against the French under Napoleon (see BRITISH: NATIONALITY; FRENCH: NATIONALITY).

Pogroms and Migration

Emancipation did not prevent persecution, however, as the liberalizing tendencies of the Enlightenment dissipated during the Napoleonic Wars and Europe became more politically conservative. Assimilated as well as unassimilated Jews proved easy targets for other groups, because they tended to marry among their own people and maintain their ancient religion. The growing political and economic power of Jews caused anxiety among adherents of the nationalistic movements that had arisen during the 19th century, particularly in Germany, where the French occupation under Napoleon caused both a backlash against the liberal measures

established by the French and a movement glorifying German ethnicity and patriotism that fueled the backlash. In many countries members of the laboring and artisan classes who were suffering from the effects of the massive economic restructuring taking place as merchant capitalism replaced the economics of the ancien regime opposed the 1848 revolution because it was a product of the bourgeoisie (middle-class businessmen) who were bringing about this restructuring. Seeing Jews as prominent players in the creation of this new order, disaffected laborers took advantage of the turmoil during the revolution to attack them. In the late 19th century anti-Semitism became a political stance, as anti-Semites categorized Jews as a separate race from the supposed dominant Aryan race, and sought to segregate and disempower them.

Jews became scapegoats in many historical incidents, with authorities sometimes inciting anger against them. The assassination of the Russian czar Alexander II by revolutionaries in 1881 prompted the first pogrom—a Russian term for devastation referring to mob attacks on Jews and their property, condoned or even sponsored by authorities. After an attempted revolution in 1905 against the czar Jewish communities in some 600 cities and villages suffered attacks, with thousands killed. During the period of unrest after the Russian Revolution in 1917 numerous pogroms were carried out, especially in Ukraine. The antireligion policy of the Bolshevik government suppressed Jewish religion in the Soviet Union (see RUSSIANS: NATIONALITY). At this time more Jews migrated to Poland, which became a center of Jewish cultural activity.

In response to persecution and pogroms the Jewish movement of Zionism, founded in Basel, Switzerland, in 1897, advocated the return of Jews to Palestine (the hill Zion, where the ancient Temple stood, is a holy site in Jerusalem), which some families chose to do. Many more migrated to the United States—an estimated 2.5 million from the time of the first pogrom to the start of World War I in 1914.

The Holocaust and the Founding of Israel

In 1933 the Nazis (National Socialists) gained power in Germany under Adolf Hitler, who used Jews as scapegoats for the economic depression in gaining support for his policies. He rescinded rights of Jews granted in the emancipation, purging the civil service and educational institutions of Jews and establishing boycotts of Jewish businesses. When in 1938 a German diplomat was killed by a Jew,

the Nazis launched a pogrom known as the Kristallnacht (German for Night of Broken Glass), a night of violence against Jewish lives and property. Germany's invasion of Poland in 1939 started World War II (1939–45). During the war the violence against the Jews turned horrific when the Nazi Germans (see GERMANS: NATIONALITY) and their collaborators used concentration camps to gather and exterminate Jews in Hitler's "final solution." Nearly 6 million Jews in Germany itself, Poland, Czechoslovakia, France, and elsewhere—almost two-thirds of all European Jews—lost their life in the episode of history known as the Holocaust. Moreover Jewish European subcultures were dispossessed, and great works of literature, especially in Yiddish, were lost.

After the war great numbers of Jews from Europe and elsewhere sought refuge in Palestine. David Ben-Gurion led the movement for independence, and in 1948 the state of Israel, with Judaism as its official religion, was established from part of ancient Palestine.

European Subgroups

In addition to Ashkenazim and Sephardim there are a number of Jewish subgroups who developed distinct cultural identities around the world, many still extant. Among those in Europe are the KHAZARS, a Turkic-speaking people, who created an empire centered on the Eurasian steppes to the northwest of the Caspian Sea in present-day southwestern Russia and southeastern Kazakhstan in the eighth to 10th centuries. Many Khazars, including the nobility, were converted to Judaism when in the eighth century large numbers of Jews fled the Byzantine Empire, where repressive measures had been instituted against them. The Khazar leadership, which until now had practiced a form of shamanism, adopted a simplified form of Judaism differing from that practiced by most Jews, in which they erected a tent for a tabernacle and offered sacrifices. Khazars are believed by some scholars to have been the ancestors of many Eastern European Jews.

The Romaniotes, Greek-speaking Jews living in the Balkans from the Hellenistic era until modern times, have traditionally practiced Judaism. When numerous Sephardim settled in Ottoman-controlled Greece, some of the Romaniotes were assimilated into their groups, but others preserved their language and identity. Those still in Greece live mainly in the region of Ioánnina near the Albanian border.

Another group are the Juhurim, or Mountain Jews (also called Dagchufuts) of

Dagestan, a republic in the northern Caucasus region of southwestern Russia and surrounding regions. They settled in the highlands on the west coast of the Caspian Sea as early as the fifth century and eventually moved to the coastal lowlands. An agricultural people, they specialized in cultivating rice, tobacco, and vineyards and raising silkworms. Their wine became popular among other peoples. They spoke an Iranian dialect and lived and dressed similar to Indo-Iranian and Caucasian peoples (see CAUCASIANS) around them. Although the Communist government attempted to assimilate them, they clung to their religion and now are active culturally, with theatricals and concerts celebrating their identity.

Krymchaks, or Crimean Jews, on the Crimean Peninsula of present-day Ukraine began forming a community and distinct identity in the 13th–14th centuries, Jews who perhaps had settled the region in ancient times. Over the centuries both Ashkenazim and Sephardim settled among them. In close contact with the Turkic TATARS they began to speak a dialect known as Crimean Tatar. They also developed their own rituals. They were nearly exterminated during World War II. Descendants now live mostly in Feodosiya, Kerch, and Sevastopol.

CULTURE

Government and Society

Religious Foundations Judaism, or at least for secular Jews the history of Judaism, is central to Jewish identity. The religion has been categorized as both the religion and the civilization of Jews. Even those Jews who have assimilated in other cultures have drawn on their religion and the idea of a covenant—a special relationship with God—in defining themselves as a people. The foundations of Judaism are the written law as found in the Bible's Old Testament and the oral law as recorded in the Talmud, which, in their surviving written forms, date at least to the early centuries C.E. The first five books of the Old Testament, known as the Torah, contain the fundamental laws of moral and physical conduct, including the Ten Commandments supposed to have been handed down to Moses on Mt. Sinai (the term Torah is sometimes used to refer to all teachings of Judaism). The Talmud comprises 63 books of writings by ancient rabbis defining proper Jewish life. Its two divisions are the Mishna, the text of oral law, and the Gemara, the interpretation of that law. The legal section is known as the Halakah; the laws relate to family, civil, and criminal matters; work; agri-

culture and food; clothing; festivals and fasts; and rituals. Poetical digressions in the text, including legends, parables, allegories, and anecdotes, are known as Haggada. In traditional Judaism spiritual leaders are known as rabbis, and places of worship are known as synagogues. In many synagogues a *hazzan* (cantor) leads the congregation in prayer and sings or chants liturgical music. Throughout the history of the Jews rabbis have also taken on political roles, and synagogues have served as communal centers.

Clothing and Personal Habits

Judaism, in its Orthodox form, calls on Jews to set themselves apart from other peoples by wearing certain hairstyles—*peot* (earlocks) for men and *sheitels* (wigs) for women—and certain clothing, such as garments with *tzitzit* (fringes) and *yamilkes* (skullcaps) for men. Food is supposed to be kosher, that is, sanctioned by Jewish law. Circumcision is a rite performed on male infants as a sign of inclusion in the Jewish religious community. Yet throughout history various branches of Judaism have reinterpreted ritual observances, allowing, for example, the wearing of the clothing of other peoples to prevent discrimination.

Religion

Literature Many different interpretations of Judaism have developed over the centuries. The Cabala is a form of Jewish mysticism, which holds that every word, letter, accent, and number of the Bible contains meaning. The earliest extant cabalist work, dating possibly to the sixth century C.E., is the *Sefer Yezirah* (Book of Creation). The *Sefer ha-zohar*, or Zohar (The Book of Splendor), was written in the 13th century by Moses de León (although he attributed it to a second-century rabbi named Simeon ben Yohai).

Abraham ben Meir ibn Ezra, born in Toledo, Spain, traveled widely throughout Europe and North Africa, and Moses ben Maimon (Maimonides), born in Córdoba, Spain, attempted to reconcile rabbinic Judaism with Arabic and Greek teachings.

The German Jewish philosopher centered in Berlin Moses Mendelssohn (Moses Desau) sought a modern perspective on traditional texts and advocated tolerance and assimilation.

Religious Movements In addition to philosophies various sects formed in response to societal pressures. The Hasidim (or Assideans) formed between 300 and 175 B.C.E. to resist the growing Hellenism among Jews. Hellenistic

leaders required them to sacrifice to the Greek gods and eat pork. The Hasidim played a part in the early stages of the Maccabean revolt, and many of them were killed.

An antirabbinical sect was founded in Persia in about 765 C.E. by Anan ben David, who wrote *Sefer ha-mitzwot*, which interpreted the Bible even more literally than presented in the Talmud. Followers of his beliefs came to be known as Karaites (or Caraites) and the movement as Karaism. Their written studies in both Hebrew and Arabic flourished in the 10th century. Although the movement declined in the 12th century, it survives in Israel and the Crimea. Members of this group, such as among the KARAIMS, refer to themselves as Karaites, not as Jews, and a Karaite spiritual leader is known as a *hakham* (wiseman), not a rabbi.

In the 17th century a messianic movement arose around Shabbetai Tzevi (Sabbatai Zebi). Born in Turkey he traveled throughout the Near East proclaiming himself the Messiah. Word spread and he gained adherents in North Africa and Europe as well. In 1666 he was arrested in Constantinople (modern Istanbul), whereupon he converted to Islam to save his life, and the movement died out.

In the 18th century Hasidism, as founded by the Ba'al Shem Tov (Israel Ben Eliezer) in the region of Podolia (part of modern Ukraine), taught that God could be reached not just through Talmudic study, as rabbinical Judaism maintained, but through purity of heart and joyous expression, such as in music and dance as well as in the everyday activities of working and eating. Although the Hasidim leaders, known as *rebbe*s, aroused great opposition among traditional rabbis, the movement gained followers throughout eastern and central Europe, especially among the uneducated, and is still active today around the world.

In the 19th century along with the push toward emancipation there developed the Reform movement of Judaism. The movement started as the Haskalah, as had been proposed by Moses Mendelssohn and others, which encouraged the secularization of Jewish life and acculturation to modern societies while preserving the ethical content of Ashkenazic Judaism. The movement became generally known as Reform Judaism, and it is one of the main branches of contemporary Judaism, as an alternative to Orthodox Judaism. Another branch of Judaism, known as the Conservative movement, which evolved out of the theology known as positive-historical Judaism founded by Zacharias Frankel in the

mid-19th century, can be viewed as a compromise between Orthodox and Reform Judaism. It has retained some traditional elements while discarding others; in recent times, for example, it has allowed the ordination of women as rabbis.

It is estimated that 2.4 million Jews of some 14 million worldwide live in Europe. Those nations with large Jewish populations include Belgium, France, Germany, Hungary, Russia, and Ukraine. The different interpretations and multiplicity of Jewish identities make it difficult to determine exact population figures. Some people consider themselves part of an ethnic and religious group; others define themselves as part of an ethnic group yet lack religious affiliation; others consider themselves Jewish because they practice Judaism; still others manifest a strict adherence to the ancient Jewish law that states that Jewishness is determined by female descent or the conversion to Judaism in accord with tradition. The state of Israel has a broader Law of Return, which holds that anyone who has a Jewish grandparent or who has converted to Judaism is Jewish. Despite the varying beliefs and ways of life in a broad sense Jews—whether “religious Jews” or “secular Jews”—represent a peoplehood.

Jutes (Jutae; Eotan)

The Jutes, a Germanic tribe, originally occupied territory on the Jutland Peninsula in present-day Denmark, named for them. They, along with the ANGLES, FRISIANS, and SAXONS, were among the GERMANICS who in the fifth and sixth centuries settled in Britain and eventually became known as ANGLO-SAXONS.

ORIGINS

In the middle of the second millennium B.C.E. Jutland became part of an important north-south trade route to the northern Carpathian Mountain region and beyond; the most important Jutish trade product was amber. This far-ranging trade had relatively little impact on the Jutes, however, until the Romans expanded their empire north and east to the Rhine in the first centuries B.C.E. and C.E. Trading activities accordingly expanded far beyond anything that had been seen in the region before. The Romans had a great demand for slaves, on which their agricultural economy was based, and for leather to equip their armies, both of which the Jutes and the other Germanic tribes began to supply to them in great quantities. The Jutes, being the farthest from the Roman border, were least affected by the trade and seem to have preserved a more archaic barter economy with less social stratification than developed in the tribes to their south and west. But the Roman presence fostered the warrior elite in Jutish society, who would spearhead the migration of many Jutes to Britain in the fifth and sixth centuries C.E. The name Jutes is thought to be derived from the Old Norse Iotar, originally applied to the tribe.

LANGUAGE

The now-extinct Jutish dialect of German is known as Jutic. It was similar to the Angle and

Saxon dialects, grouped with them in the Low German branch. After these tribes migrated to Britain, their dialects grew grammatically closer to one another; out of them English emerged.

HISTORY

According to a traditional story recorded by Gildas, a Briton, and Bede, an Anglo-Saxon, writing in the sixth century and afterward, Vortigern, a king of the BRITONS, invited the Saxons to Britain, along with the Angles and Jutes, to help fight the PICTS. The time frame given for their arrival is 446–454 C.E., although Germanics had migrated there earlier after governance by the ROMANS ended in 410 and groups continued to arrive in the sixth century. The first Jutes to arrive, Hengist and Horsa, sons of one Wihtgils, reportedly landed at Ebbsfleet on the Isle of Thanet. After helping defeat the Picts the Jutes supposedly rebelled against the Britons, who were eventually driven west to Wales. Horsa was killed in battle in 455. Hengist ruled his people from Kent. The kings of Kent trace their direct descent from him and through his son, Oeric (or Oisc), after whom the Kentish royal house, Oiscingas, is named. Other tribal members settled in southern Hampshire and on the Isle of Wight. The tribe Eotan mentioned in the Old English epic poem *Beowulf*, probably from the eighth century, is thought to refer to the Jutes.

The Jutes, Angles, Frisians, and Saxons collectively became known as the Anglo-Saxons as early as the seventh century. By the eighth century the name Jute was no longer used in Britain. Those Jutes in Jutland who did not migrate were later absorbed by the VIKINGS, who established the kingdom of Denmark, comprising most of the Jutland Peninsula.

CULTURE (see also GERMANICS)**Economy**

In the Bronze Age Jutish amber was traded south along the Rhine and Upper Danube to the northern Carpathian region, where there was a flourishing bronze industry. New forms of swords, spears, and other objects were introduced to Jutland by peoples of the Carpathians. Jutish amber also found its way into the maritime trade routes of the Atlantic coastal zone.

At Drenghsted in Jutland evidence of the effect of trade with the Romans has been found in the large scale of iron making carried out there in the third century C.E., far in excess of local needs. The Roman trade indirectly caused an increase in local trading as well, as wealth flowed into Jutland. Stocks of luxury goods such

sixth century Jutish kingdom of Kent is first Anglo-Saxon polity of rise to dominance.

eighth century Jutes assimilated into English with other Anglo-Saxon tribes.

as glassware have been found. At the same time farmsteads began to differentiate in size, an indication of social stratification. Often a single farmstead in a locality would dominate the rest; such sites yield concentrations of Roman items such as Samian Ware, bronze vessels, and beads.

Dwellings and Architecture

The Jutes of the first millennium C.E., as did other northern Germanic peoples, continued to live in longhouses little changed from those built from the beginning of the Neolithic Age thousands of years before. The roofs of these longhouses were supported on centrally placed rows of timbers, usually two rows on either side of the roof ridge. A fifth-century B.C.E. house at Grøntoft in Jutland had three aisles of supporting timbers.

Clothing

Examples of Jutish Bronze Age clothing were recovered from a burial mound at Egtved in southern Jutland. The woman in the grave wore a short-sleeved woolen shirt, a string skirt, and a woven belt with a large disk-shaped bronze belt ornament with a central spike. She was laid on fur and wrapped in a coarse woolen blanket, with a birchbark cup. Her coffin was a single hollowed-out log.

Other Technologies

A distinctive technique of bronze working based on casting was developed in Jutland in the mid-second millennium B.C.E. in response to new styles arriving there from the Carpathian region. Weapons were decorated with spirals, and women's collars and large disk-shaped belt ornaments were made.

Art

One of the finest examples of northern Germanic art consists of a pair of gold horn-shaped objects unearthed in Gallehus in Jutland. Dating from about 400 C.E. they are among the largest gold artifacts ever found in Denmark. They bear runic inscriptions and numerous enigmatic figures, including warriors and other human figures hard to interpret, most notably a three-headed woman, horses, deer, and other unidentified mammals, snakes, fish, a centaur-like creature, and horned naked men. The style of decoration differs from the Celtic La Tène style predominant in much of contemporary Europe. The use and meaning of these horns have not been satisfactorily explained, although the runes give the name of their maker, one Hlewagastir.

Religion

Ritual Deposition in Bogs During the Iron Age in the second half of the first millennium B.C.E. people in Jutland followed the practice, similar to that of Celtic peoples during the same period, of depositing objects, animals, and human bodies in bogs. This was probably a religious ritual, an offering to the gods. A number of the human bodies had clearly been sacrificed. For example, "Tollund man," named after the village near which he was found—so well preserved by the peat in which he had been buried that his stomach contained the remains of his last meal—had been fed a gruel of many different kinds of wild and domesticated vegetables and seeds, some of them rare and hard to find, growing only in the vicinity of the spring near his burial place, suggesting it was a ritual food, like the *polyspermia* (many-seeded soup) of the GREEKS. After eating this gruel Tollund man was stripped naked except for a cap and belt and strangled with a leather rope, then buried in the bog. The composition of his gruel suggests that he was killed in late winter or early spring, since some of the ingredients would have been available only then. Thus his sacrifice may have been part of the Germanic festival of Eostre. Many similar bodies have been found in Jutland.

The Gundestrup Cauldron Among the most famous archaeological finds ever made in Jutland was from a ritual deposit in a bog: the second-century B.C.E. Gundestrup Cauldron, a large, elaborately decorated silver vessel. Instead of providing evidence of a distinctively Jutish culture, however, the Cauldron underscores the relative fluidity of cultural identity in the Iron Age, for its strongly Celtic character, in terms of motifs, shows it was probably made for a Celtic chieftain (see CELTS). But the style of its ornamentation makes it nearly certain the maker was of the THRACIANS. And it depicts the Celtic god Cernunnos with knees bent in the yogic "lotus" position, perhaps reflecting the shamanic use of tantric yoga from India among the Thracians and the eastern Celts. It is thought to have reached Jutland as booty carried there by a member of the Germanic CIMBRI, who had left the German Baltic coast in the second century B.C.E. and raided south as far as Thracian territory before returning to settle in Jutland.

Many of the Germanic tribes whose names have been recorded in written historical accounts seem to have had only a fleeting exis-

tence as distinct peoples. Their names are used for several centuries and then disappear. The Jutes are one of these, whose name had long been forgotten by the end of the first millennium C.E. This impression given by written records is largely illusory, of course. In the case of the Jutes people of Jutish descent continued to occupy Denmark and England down to the present, whatever they called themselves. The fact that so many Germanic tribal names come and go in history may point to the fact that tribal allegiances were relatively fluid, and cultural similarities among them predominated

over the differences that separate names seem to imply.

K

Kalmyks (Kalmucks; Oryats; Oirats)

The Kalmyks are a Mongolian people, living mostly in Kalmykia, a republic along the northwestern shore of the Caspian Sea and west of the lower Volga River in southwestern Russia. Subgroups include Buzawa, Dorbet (Derbet), and Torgut. Their language belongs to the Oryat (Oirat), or western, branch of the Mongolic language. The name Oryat is derived from a confederation of western MONGOLS known as the Dörben Oyrat, meaning “Four Allies,” various tribes united against the eastern Mongols.

In the early 17th century C.E. these ancestors of the Kalmyks migrated westward from Chinese Turkestan to the southern Ural Mountains. From there they moved farther to the west to the lower Volga. In the 18th century their territory became part of the Russian Empire, and in 1771 the majority of Kalmyks living east of the Volga attempted to return to China but suffered attacks by Russian SLAVS, Mongols, and TURKICS en route, and many perished. The word Kalmyk in Turkish means “remnant,” in reference to those who stayed in the west.

The Kalmyk homeland became a region of the Soviet Union (USSR) in 1920 and then a Soviet Socialist Republic. Kalmykia is now part of the Russian Federation. In 1945 just after World War II the Kalmyks were deported to Siberia for aiding the Nazis against the Russians, but they were allowed to return to their homeland in 1956.

Many Kalmyks have maintained their traditional nomadic way of life and still move about seasonally with their herds and live in a type of tent known as a *ger*, their word for a yurt. Others have adopted a more sedentary agricultural way of life and live in permanent dwellings. Most are Tibetan Buddhists but practice some shamanistic rituals unique to them. Some Kalmyks are Muslims.

Karachay (Karachai; Karachayevs)

The Karachay are a Turkic-speaking people, that is, TURKICS, living mostly in Karachay-Cherkessia in southern Russia in the northern Caucasus Mountains along with the Cherkess, a subgroup of the Caucasian-speaking CIRCASSIANS. Their language, related to that of the BALKARS and known as Karachay-Balkar, is of the Turkic Northwestern (Kipchak) group.

With the arrival of the MONGOLS in eastern Europe in the 13th century C.E. the Karachay took refuge in the northern Caucasus Mountains, migrating from southern Ukraine; others migrated there in the 15th century. The Karachay are sometimes grouped with the TATARS.

Karachayev, traversed by the Kuban River, became part of the Russian Empire in 1828, although the Karachay continued to resist Russian rule into the 1860s, and many of them emigrated to the Ottoman Empire to escape Russian oppression. Their homeland was first

Karaims (Karailar; Karaite)

The Karaim are a Turkic-speaking people, their dialect of the Northwestern (Kipchak) language family also known as Karaim. They live in the North Caucasus region of southwestern Russia, in Ukraine, in Lithuania, as well as in Poland and Romania and in Asia in small numbers.

In the eighth century C.E. the Karaim adopted Judaism as part of a sect known as Karaism. The name Karaim is probably derived from the Old Hebrew *qārāim* referring to readers of Holy Scripture. Hebrew, in which their sacred texts have been written since the Middle Ages, became a second language for many Karaim. From the eighth to the 10th century tribal members were subject to the KHAZARS, also TURKICS, but managed to preserve their Jewish religion.

From the 11th to the 18th century most Karaim lived in the mountainous central part of the Crimea. Their traditional activities were farming, crafts, and trading.

Most Karaim now live in urban areas. With the Karaim dispersed and many of their young people adopting the languages of the nations where they live, their native language is on the verge of extinction.

See also RUSSIANS: NATIONALITY.

Karantians *See* CARANTANIANS.**Karelians (Carelians; Karjalaiset; Karjalazhet; Korklaks)**

The Karelians are a Finnic-speaking people living in both Finland and Russia. In Finland they are classified as one of the major tribal groups of FINNS, a subgroup of FINNO-UGRIANS, in the historic record since the ninth century C.E. Their homeland comprised central and eastern regions of FINLAND. The Karelians gave their name to the Russian Federation's Republic of Karelia to the north of St. Petersburg; the largest Karelian population is found in the province of Tver, southeast of St. Petersburg. The IZHORIANS, who live around St. Petersburg in Russia, are considered an offshoot of the Karelians, as are the Kainulaiset (or KVENS), who migrated from Finland to Sweden and

Norway. Among the other subgroups of the Karelians in Finland and Russia are the Ludes, Olonets, and Tvers. Karelians who moved to Siberia are known as Korklaks. On the basis of their language, which has Estonian elements, a connection is made to the ESTHS, also Finnic speaking, but whether the Karelians ever lived in present-day Estonia or when they settled their homeland is not known.

The name Karelia first occurs in Scandinavian sources in the eighth century C.E. A later report by the VIKINGS to King Alfred of the ANGLO-SAXONS places the Karelians on the southern Kola Peninsula and White Sea in the ninth century C.E. From the ninth to the 12th century the southern part of Karelia was ruled by the RUS of the Kievan Rus principality. In the 12th century the Karelians were subservient to Novgorod and were converted to Eastern Orthodox Christianity. From the 13th century Sweden and Russia battled over Karelia; in 1323 the Russian-Swedish border divided the Karelian territory.

The Karelians traditionally have been fishermen, hunters, farmers, and lumberjacks. They have lived in large family groups. Karelians have always followed the Finnic practice of creating story songs, often with magical lyrics. Most of the famous Finnish *Kalevala* songs originated in Karelia, but very few Karelian language books have ever been published. The earliest example of the Karelian Balto-Finnic language is written on birch bark and was discovered in Novgorod in 1957. The document dates from the 13th century and represents a pagan prayer for protection against lightning. The writing is in the Cyrillic alphabet.

See also RUSSIANS: NATIONALITY.

Kashubes (Kashubs; Kashubians; Kaschubians; Kasubes; Kasubians; Kaszebe; Cassoubs; Cashubians)

The Kashubes are an ethnolinguistic group of POLES, currently living along the Baltic Sea coast between the Oder and Vistula Rivers in northern Poland (formerly the region of Pomerania). They are descendants of the tribe known as POMERANIANS, considered Western SLAVS, who arrived in the region by the seventh century C.E. Their dialect, known as Kashubian or Kaszub, is West Slavic. It resembles Polish more than a related dialect, Slovincian, of Slavic peoples living to the west known as Slovincians and Kabatki.

In the Treaty of Versailles (1919–20) after World War I Poland was granted a narrow strip

of land along the Baltic, known as the Polish Corridor, west of the Vistula River and between East and West Prussia, where many Kashubs lived. In 1939 the Germans seized the region (see GERMANS: NATIONALITY). With the establishment of the Oder-Neisse boundary between Poland and East Germany in 1950, however, the Kashub native homeland again became part of Poland.

Although mostly farmers and fishermen, the Kashubs have maintained little of their traditional folk culture as distinct from that of other Poles (see POLES: NATIONALITY). Since the 19th century many have migrated to the United States.

Kauki See CAUCI.

Kazakhs (Kazaks; Qazaq; Quazaq)

The Kazakhs are a Turkic-speaking people, who make up nearly half of the people of the nation of Kazakhstan, a small portion of which—west of the Ural River and to the north of the Caspian Sea—is located in Europe. Kazakhs live in other parts of Asia as well, especially in China, Uzbekistan, and Asian Russia, with smaller communities elsewhere. The language Kazakh (or Qazaq) is of the Northwestern (Kipchak; Ogur) family, part of the Aralo-Caspian subgroup.

It is believed that the Kazakh identity came into being in the mid-15th century C.E. after the dissolution of the Mongol Empire. A number of different tribes of TURKICS united, including KIPCHAKS, NOGAY, and Uzbeks; some MONGOLS were presumably among them as well. The Kazakh khanate, extending throughout much of present-day Kazakhstan, was ruled by Kasym Khan in 1511–23. Yet the khanate ultimately consisted of three separate hordes composed of a number of tribes collectively ruled by a khan: the Great or Elder Horde (Ulu Zhuz) in the southeast, the Middle Horde (Orta Zhuz) in the central steppes, and the Little or Lesser Horde (Kishi Zhuz) between the Aral Sea and the Ural River in the west. The hordes united from time to time to defend against invaders, in particular the Mongols living to their east.

In the 19th century the hordes were absorbed into the Russian Empire. In the early 20th century after an unsuccessful revolt against the Russian presence and resulting forced labor, some Kazakhs fled to Sinkiang (the Xinjiang Uygur Autonomous Region) in China. Kazakhstan, after being a republic in the Soviet Union (USSR), became independent in 1991.

About half of the population consider themselves ethnic Kazakhs. Russians make up about a third; the rest are largely other Turkic and Slavic groups. Many modern Kazakhs (also called Kazakhstanis) still live their traditional rural way of life as nomadic herders of yaks on the steppes of both Kazakhstan and China. Most are Muslims.

Khazars (Chazars; Kavars)

The Khazars, a Turkic-speaking people, created an empire centered on the Eurasian steppes to the northwest of the Caspian Sea in present-day southwestern Russia and southeastern Kazakhstan in the eighth to 10th century C.E. They were unique among the ancient TURKICS in that they made Judaism their official religion.

ORIGINS

The Khazars are thought to have had a distinct identity among Turkic peoples as early as the second century. They were part of the eastern Gokturk Empire of much of central Asia founded in the sixth century C.E. By the seventh century they had established their independence from other Turkic peoples. Their name is thought to be derived from a Turkic word for “wandering.”

LANGUAGE

The language of the Khazars was related to that of the BULGARS and the CHUVASH. Some scholars have classified it as distinct from Turkic, that is, a separate but related Altaic branch. No written Khazar document or inscription has survived.

HISTORY

South of the Caucasus

The Khazars are known to have had contact with the Persians in present-day Iran in the mid-sixth century. In 628 they were allies of

Caucasus Mountains in Asia. Yet Arab expansion northward threatened their homeland. The Khazars resisted, but by the mid-seventh century the Arabs managed to seize territory in the northern Caucasus region, including Derbent on the Caspian Sea in 661. The Khazars drove them back into Transcaucasia in 685 but were themselves forced out of Transcaucasia by the 720s.

The Khazar Empire

the BYZANTINES under the Eastern Roman emperor Heraclius in his campaign against the Persians. During this period they held territory in Transcaucasia, that is, lands south of the

In 737 the Khazars made Itil on the Volga delta their capital and a center of commerce. Through both commerce and conquest they expanded their territory westward and north-

ward. They exacted tribute from numerous peoples, such as the ALANS, the Volga BULGARS, the eastern SLAVS, and the GREEKS of Black Sea colonies. By the second half of the eighth century the Khazar Empire had grown from the Caspian Sea and Black Sea (including the Crimean Peninsula) as far north as the Ural Mountains and as far west as the Dnieper River and Kiev in present-day Ukraine. The Khazars maintained a commercial alliance and at times a military alliance with the Byzantines. The emperors Justinian II and Constantine V both married Khazar women, furthering ties.

In the early ninth century three dissident tribes of Khazars, known as Kavars (or Kabars), had joined the MAGYARS. In 965 the RUS under Svyatoslav, duke of Kiev, defeated them. Meanwhile the PECHENEKS were growing in power to their north and west. In 1016 the last known Khazar ruler, Gerogius Tzul, was captured by a joint Rus-Byzantine force. In the following years the KIPCHAKS controlled their homeland. The Khazars were dispersed and absorbed by other peoples. Yet their name appeared in accounts of travelers through the region as late as the 12th century. The name Khazaria also endured for a time in reference to Crimea and the lands beside the Sea of Azov (part of the Black Sea).

CULTURE (see also TURKICS)

Economy

The Khazars supported themselves primarily through agriculture and trade. As their empire expanded the collection of tribute also provided revenue. The fact that they held lands along the east-west trade route, linking Byzantium and the Far East, and the north-south route, linking Arab and Slavic interests, also allowed for the collection of duties on goods.

Government and Society

The Khazars were a sedentary people, living in villages with fortresses for defense. A supreme ruler, known as a *khagan* (or *qaghan*), had symbolic more than practical political and religious power. The tribal chieftains, or military commanders, each known as a *beg* (or *bek*), exercised greater day-to-day authority.

Religion

The Khazars originally practiced a polytheistic and shamanistic religion, centered around the sky god Tengri. Although both Christian and Muslim missionaries sought to convert them, the Khazar ruling class converted to Judaism in

about 740, possibly as a way of avoiding both Byzantine and Arabic dominance. The Khazar highest court came to consist of two Jews, two Christians, two Muslims, and a follower of traditional Turkic religion. The first Jewish king was named Bulan Sabriel, founder of the Bulanid dynast in the eighth century. A later king, Obadiah of the eighth and ninth centuries, welcomed rabbis among the Khazars and encouraged the building of synagogues. Yet religious tolerance was also encouraged, and many subjects retained their traditional religions, and Judaism spread only gradually among them.

The Judaism of the Khazars had led scholars to seek connections to other Jewish people around the world. Some scholars have maintained, for example, that many Eastern European JEWS—the Ashkenazi—are descended from Khazars. Genetic studies, however, have indicated that the Khazars are not dominant in their ancestry.

The word Khazar has been theorized to be the root of other words, such as *cossack* and *hussar*.

Kipchaks (Kypchaks; Kimaks; Cumans; Polovtsi)

The Kipchaks were a loose tribal confederation of TURKICS, originally nomads living on the steppes or western Asia and eastern Europe. The westernmost Kipchak tribes who played a significant role in European history were known as CUMANS or Polovtsi. (The name Cumans is used both synonymously with and as a subgroup of Kipchaks.) The name Kipchaks is also associated with a Turkic language group, the Northwestern group, Ogur, or Kipchak group.

The ancestors of the Kipchaks are thought to have lived in western Siberia by the ninth century C.E. and to have migrated from the Irtysh River southwest across Kazakhstan to establish themselves in the steppe country of

eastern Europe—from north of the Aral Sea to north of the Black Sea—in present-day southwestern Russia and Ukraine by the early to mid-11th century. Many of them are thought to have been Kimaks, an Asian steppe people known as fur traders who built underground villages with networks of trenches and large wooden idols surrounded by stone monoliths.

From the late 11th through the 12th century the Kipchaks were the most powerful people on the eastern European steppes. They are closely associated with the MONGOLS, who invaded their territory in the 13th century; in 1237 the Mongols defeated the eastern Kipchak tribes under Bachman, leading to the breakup of the tribal confederation by 1239. (The Mongols themselves, who founded the Kipchak khanate in present-day western Russia, were called Kipchaks although the leaders were of different ancestry and tradition.)

Some Kipchaks remained in Europe as the Cumans; others are thought to be ancestral to the KAZAKHS; others, in their weakened state, became a source of slaves for the Muslim world.

Kizi-Kumuk See LAK.**Komi (Syrnenians; Zyrians; Zyrane; Zyryani; Serjane; Sirene; Saran; Saran-Jakh; Sanor; Sara-kum; Permyaks)**

The Komi are a Finnic-speaking people, classified among the FINNO-UGRIANS. They lived in present-day east-central and north-central European Russia. Their ancestral core territory is considered the region around the Kama River descending from the Ural Mountains. The Komi tribes split into two groups in about 500 C.E. Those who stayed behind in the Kama basin became known as Komi-Permyaks (or Permyaks); their homeland later became

organized as Permyakia (the Komi-Permyak Autonomous Okrug). Those who migrated northward to the Vychegda and Pechora Rivers became known as the Komi-Zyrians (or Syryenians); their homeland later became organized as the Kama Republic, a small portion of which is north of the Arctic Circle. Another group migrated southeastward to the Middle and Upper Jazva, part of the Kama watershed, and were known as the Komi-Jazva (or Komi-Yazua or Komi-Yazvas); their homeland is now part of the Perm Oblast. The Komi have since settled in adjoining regions as well.

ORIGINS

According to linguistic theory the Permic branch of the Finnic populations of Russia is considered to have split off from other groups, possibly between 2500 and 2000 B.C.E. It is thought that sometime during the first millennium B.C.E. the Komi tribe separated from the UDMURTS and eventually settled in the Middle and Upper Kama River region. Their name may be derived from the name of the river. Other possible source words are *Kommu*, “homelands”; *kom*, “grayling” (the totem of the Komi); *Kama*, “white.”

LANGUAGE

The Komi language is in the Permic group of Finnic in the Finno-Ugric language family. The closest linguistic relatives to the Komi are the UDMURTS. The various Komi dialect languages are written with the Russian alphabet, with two extra letters.

HISTORY

In 1187 Russian SLAVS out of Novgorod first traveled to the Ural Mountains to collect furs and taxes, as attested by the first reference to the Perm settlement in Russian sources. Moscow continued to establish its influence over the homeland of the Komi and initiated sporadic military campaigns. In 1463 some Komi began to move to the Upper Vychegda and Pechora River basins. By 1472 Moscow had gained control over their territories, which became a hub for trade with Siberia and later the starting point for the conquest of Siberia by the COSSACKS.

From the 16th century Russians began extensive settlements in the area, and a salt and mining industry was established. Many Komi-Permyaks migrated to Siberia rather than suffer exploitation as cheap labor in these industries. Those who remained in their homeland experi-

enced poverty and a loss of their traditional way of life. The severity of the frigid climate and their inaccessible geographic location kept the Komi-Zyrians culturally isolated until after World War II (1939–45).

CULTURE (see also FINNO-UGRIANS)

The traditional economy of the Komi was based on agriculture, breeding, hunting, and fishing. Archaeological evidence also provides evidence of the extensive smelting of copper and bronze. They had trade contacts with neighboring peoples. The economic activities of the Komi now vary significantly: Reindeer herding, hunting, fishing, and lumbering are typical among northern groups, and agriculture, industry, and mining among southern groups.

In 1379 Saint Stephen of Perm out of Byzantium constructed the Komi alphabet, or *abur*, and translated a series of religious texts into Komi. Since about that time the Komi have been nominally Eastern Orthodox Christians, although some of their animistic pre-Christian beliefs and rituals have endured.

Kosovars (Kossovars; people of Kosovo)

The name Kosovars refers to people living in the province of Kosovo, situated in the southwestern portion of present-day Serbia and Montenegro. Kosovo was originally inhabited by ILLYRIANS. From the sixth century C.E. SLAVS began migrating to the region. For a time in the ninth century the BULGARS established a presence. In the 12th century Kosovo became the central part of the Serbian Empire under the Nemanjic dynasty. The Ottoman Turks (see TURKICS) invaded and defeated the Serbs in 1389 and again in 1459 and maintained control over the region until 1912, when for one year it was part of the newly founded independent state of Albania, until Serbian domination was negotiated. In 1918 Kosovo became a part of the Kingdom of Serbs, Croats, and Slovenes, later renamed Yugoslavia. Kosovo is now polit-

ically defined as part of Serbia and Montenegro (see SERBS AND MONTENEGRINS: NATIONALITY), although the Albanian inhabitants maintain close ties with Albania (see ALBANIANS: NATIONALITY). Conflicts between the occupying Albanians and Serbs influenced government policies and instigated warfare throughout the 20th century.

Krivichians (Krivichi; Krivichy; Kriviches; Crivichi)

The Krivichians were a tribal confederation of Eastern SLAVS, living along the Upper Western Dvina and Dnieper Rivers in present-day northern Belarus and western Russia, centered around the site of present-day Smolensk possibly by the sixth century C.E. They expanded westward toward Lake Peipus and Lake Pskov on the edge of present-day eastern Estonia, where with the founding of the trading town of Pskov in the ninth century they created a point of access to the Baltic Sea. Pskov was linked with Novgorod in a trade network first created by VIKINGS, thought to be involved in the founding of both cities.

In the second half of the ninth century with other Slavic peoples, the Krivichians were under the suzerainty of the RUS of the Kievan Rus principality, paying tribute to them and serving under their princes in military campaigns, including the attack by Oleg on the BYZANTINES of Constantinople (modern Istanbul) in 907. With other Slavic tribes in the region—DREGOVICIANS, DREVLANS, POLOCHANIANS, and RADIMICHANS—the Krivichians are considered ancestral to modern Belarusians (see BELARUSIANS: NATIONALITY).

Kumyks (Kumuks)

The Kumyks are a Turkic-speaking people, living in the northern Caucasus region of southwestern Russia, mostly in the lowlands of northeastern Dagestan near the Caspian Sea and to the north in Chechniya. Others live in Turkey, Iran, and Syria. The Kumyks consider themselves indigenous to the region. The first historical mention of them occurred in the second century C.E. Yet they acknowledge ancestry and influences from other peoples as well, such as the KHAZARS and KIPCHAKS, fellow TURKICS who lived among them in the fourth to 12th centuries; their speech has elements from the languages of those peoples. They also count HUNS among their ancestors.

The Kumyks adopted Islam in the 11th century. From the 15th century to 1867 they

were united in the Shamkhalat khanate (shamkhal is their word for a prince), after which they were under Russian administration. The Kumyk language was the lingua franca of the region for some three centuries.

After the Russian Revolution in 1917 the Kumyks joined other North Caucasian peoples in the struggle for a North Caucasian Democratic Republic; Dagestan was created in 1920 as a Soviet republic, and cultural identities were suppressed. In 1989 during the First Congress of Kumyk People the Kumyk People's Movement known as Tengelik was founded to preserve cultural traditions and develop the economy. In 1991 Dagestan, consisting of 19 different ethnic groups, became a republic within Russia and subsequently a member of the Russian Federation.

The Kumyks are traditionally an agricultural people who in the 20th and 21st centuries have worked increasingly in industry, especially in port cities. Traditional Kumyk clothing includes tunic-shaped shirts and pants and quilted coats, often decorated with gold and silver trim. They perform songs and dances accompanied by stringed instruments called *kumuzes*, wind instruments, and accordions.

Kuns *See* CUMANS; KIPCHAKS.

Kurs *See* CURONIANS.

Kuyavians (Kujavians; Kujawianie)

The Kuyavians are classified as a tribe of Western SLAVS. They lived along the central Vistula River in present-day northern Poland by at least the 10th century C.E. Their neighbors to the southwest, the MAZOVIANs, spoke a related dialect. As were all Western Slavs they were called WENDS by early medieval FRANKS. Along with the POLANIANs, who gained hegemony over other area tribes in the 10th century, the Kuyavians are among the ancestors of the POLES.

Kvens (Kvins; Kvaens; Kwaenes;

Kaïans; Kainuu; Kainulaiset;

Kainuunmaa)

The Kvens are a Finnic-speaking people, that is, classified among the FINNO-UGRIANs. They can be considered an offshoot of the KARELIANs, in turn a subgroup of the tribal FINNS, and originally lived in present-day northern Finland and later northern Sweden.

Kvens currently living in northern Norway maintain their cultural identity (*see* NORWEGIANs: NATIONALITY).

The earliest mention of Kvenland or Cwenland in northern Finland is from the ninth century C.E. It is also mentioned in the sagas of the VIKINGs. Neither its exact location nor the constituent subtribes are known. The name Kven is probably derived from the Old Norse word *hvein* for flat and humid lands and has been used variously over the centuries. Kvens and related names such as Kainulaiset were first used in reference to people who settled along the northern Gulf of Bothnia in northern Finland and Sweden as well as to those who migrated farther north into northern Norway, especially to the present-day counties of Finnmark and Troms in the 18th and 19th centuries.

For a time Norwegians used Kvens with negative connotations in reference to all Finnic-speaking peoples who had settled in Norway. The ancestral Finnic, now grouped as Kvens in northern Norway, have minority status as a distinct group apart from other Finnish immigrants, such as those who settled in Finnskogen in southeastern Norway in the 17th century.

The earliest Kven visitors to the Arctic Sea coast of Norway were probably seasonal fishermen; some settled there permanently. Other visitors were traders, who sought to exchange flour, hemp, iron artifacts, and clothing for dried fish. Farming families migrated north and west in search of new lands. In later centuries many of those who settled in Norway did so to work as commercial fishermen or in the copper mines.

In recent decades the Kvens have increasingly celebrated their identity and culture. The organization Norske Kveners Forbund, founded in 1987, helped bring about the granting of minority status in 1996. Kven newspapers appear in both Finnish and Norwegian; most Kvens are bilingual.

L

Lactorates

The Lactorates are classified as a Celtic tribe. They lived in Gaul around present-day Lectoure in southwestern France at least by the first century B.C.E. and are discussed as CELTS or GAULS. Lectoure takes its name from the tribal name.

Ladins

The Ladins are people of modern-day Italy, most of whom live in the Trentino–Alto Adige region in the north, especially in the Dolomites, a chain of the Eastern Alps. They are classified on the basis of their shared language known as Ladin, a Rhaeto-Romanic dialect of the Romance branch of Italic languages, probably related to Friulian, which is also spoken in Italy (see FRIULIANS). Presently 20,000 Italians speak Ladin, recognized as an official language by the Italian government since 1937. Romansch dialects spoken in Switzerland, such as Engadine, Sursilvan, and Sutsilvan, are closer to Ladin than to Friulian.

CELTS, among them the RAETI, occupied the region as early as the second century B.C.E., whence the name for the language group, but numerous other peoples lived there over the previous and subsequent centuries, among them the ETRUSCANS, ILLYRIANS, ROMANS, and ancient GERMANICS. It is therefore hard to determine the ancestry of the Ladins.

See also ITALIANS: NATIONALITY.

Laks (Lakks; Kazi Kumukh; Kizi-Kumuk; Ghazi-Qumuq)

The Laks are various Caucasian-speaking tribes, living for the most part in the northern Caucasus Mountains of central Dagestan, a republic in southwestern Russia. About one-third of their number live in Makhachkala, the capital of Dagestan. Their five dialects are classified as part of the North-East (Dagestanian) branch of North Caucasian and are closely related to the dialects of the DARGWAS.

As all other CAUCASIANS, the Laks are considered indigenous to the region, perhaps maintaining identity based on language since the second millennium B.C.E. Over the centuries they have been influenced by the many invaders of their homeland from both Europe and Asia. The Ghazi-Qumuq khanate, established in the 14th century, maintained its relative independence and was a place of refuge for other Caucasians as well. In the 15th century it expanded to the northeast, occupying territory of the Shamkhalat khanate of the KUMYKS. The Laks lost power in the 17th century, and many tribal members lived in isolation in the high mountains.

Lak territory fell under Russian rule in the beginning of the 19th century; at that time the Laks were first voluntarily and then forcibly moved from the high country to pasture lands. Their economic life has been organized around herding and farming. They have maintained traditional extended family structures, as well

Latins (Latini)

The Latins, classified as a tribe of ITALICS, lived south of the Tiber River in the region of ancient Latium (part of modern Lazio) in present-day west-central Italy. Latin cities included Alba Longa, Ardea, Lavinium, Praeneste (modern Palestrina), Tibur (modern Tivoli), and Tusculum. They are considered the primary ancestors of the ROMANS. Their name and that of ancient Latium are related to the legendary king Latinus.

ORIGINS

The Latins are thought to have settled the valleys and coastal areas of Latium by about 1100 B.C.E., part of the wave of population movements apparently set in motion throughout the Mediterranean region by the collapse of the civilization of the MYCENAEANS.

LANGUAGE

The Latins spoke Latin, part of the Latino-Faliscan branch of Italic. They adopted the Greek alphabet for their writing.

HISTORY

Alba Longa, considered the oldest city in Latium, was the legendary birthplace of Romulus and Remus, the supposed founders, along with some SABINES, of Rome in 753 B.C.E. Latin territory was reduced in the late sixth century B.C.E. to Apennine lands between the Albanus Mons (the Alban Hills) and the Aurunci Mountains by expansion of the VOLSCI. In the seventh–sixth centuries B.C.E. the ETRUSCANS were the most dominant political force in Latium.

By the fifth century B.C.E. about 30 tribes and villages had formed the Latin League, with Alba Longa as the capital. Rome joined the league in 493 B.C.E., it is thought because of an alliance of Volsci and AEQUI. In 358 B.C.E. the Latin League was reorganized with Rome assuming leadership. In 341 B.C.E. at the end of the First Samnite War the league, in alliance with the AURUNCI, CAMPANI, SIDICINI, and Volsci, rebelled against Rome. In 340 B.C.E. the Romans campaigned through Marsi and Paeligni lands and entered Samnium (modern Abruzzi and part of Campania); then the Romans with auxiliaries from among the SAMNITES descended the Volturno River and defeated the Latins at Suessa Aurunca (modern Sessa Aurunca). In 338 B.C.E. Rome dissolved the Latin League, after which Latin history became part of the Roman story.

CULTURE (see also ITALICS)**Government and Society**

The Latin League was centered at Alba Longa, the religious center of the Latins. The league was a commercial as well as a military alliance. Moreover the citizens of the various Latin city-states shared certain rights, in particular those of *commercium*, *connubium*, and *migratio*. The right of *commercium* allowed citizens of one town to conduct business and own property in another town; that of *migratio* allowed citizens of one town to settle in another; and that of *connubium* honored marriages of citizens of two different Latin towns. Rome later used these same rights—free trade, freedom of travel, and intermarriage—in its relations with other peoples.

Religion

A temple honoring Jupiter was situated on the Alban Hills. The Latins, similarly to the Etruscans and other peoples living to the north, practiced cremation as a funeral rite. Latin beliefs and cults probably resembled

those of other Italics and endured among the Romans.

Although Rome and the Roman world became a melting pot of many different peoples, the history of Rome begins with the ancestral Latins, who passed down political systems and religious beliefs to the Romans.

Latovici (Latovicii; Latobici; Latobrigi)

The Latovici are classified as a Celtic tribe. They lived at the confluence of the Breg and Brigach Rivers, tributaries of the Danube, in present-day western Germany. Along with other CELTS—the BOII, RAURICI, and TULINGI—they joined the HELVETII in their migration to the west in 58 B.C.E. The ROMANS under Julius Caesar defeated them at the start of his conquest of the GAULS.

Latvians: nationality (people of Latvia)

GEOGRAPHY

Latvia is flanked by Estonia and the Gulf of Riga to the north, Lithuania and Belarus to the south, and the Baltic Sea to the west. Latvia, Lithuania, and Estonia make up the Baltic States. Latvia has an area of about 24,600 square miles. Lowlands and plains make up much of the country. Lakes, streams, marshes, and swamps are scattered throughout the terrain; morainic hills lie in the east. Sandy beaches run along the coastline. Principal rivers include the West Dvina (Daugava), Gauja, Venta, and Lielupe.

INCEPTION AS A NATION

The Germanic military and religious order Brothers of the Sword invaded the region in the early 13th century C.E. and attempted to convert the region's tribes, both BALTS, such as the LETTS and CURONIANS, and FINNO-UGRIANS, such as the ESTHS and LIVS. In 1270 the Germans formed the state of Livonia. Russian invasions set off the Livonian War in 1558, and by 1561 the Livonian Order disbanded. Livonia was then divided and controlled as a duchy under Polish-Lithuanian suzerainty. The northern provinces became part of Poland, while western Livonia formed Courland, a duchy.

Sweden gained control of Riga from Poland-Lithuania, although it was forced to

relinquish Latvian territories to Russia after the Great Northern War (1700–21). Russia controlled all of Latvia by 1795. After Russia's collapse during the Russian Revolution (1917), Latvia declared itself an independent republic in 1918. The Latvian-Russian treaty of 1920 forced Russia to respect Latvian autonomy. Upon the outbreak of World War II in 1939, Germany and then the Soviet Union (USSR) occupied Latvia, forming the Latvian Soviet Socialist Republic (SSR). Latvia declared full independence from the Soviet Union in 1991.

CULTURAL IDENTITY

During the 20th century Latvians found themselves in what has been called a demographic crisis, under both the Nazi and Soviet Russian regimes. The country lost some 40 percent of its ethnic Latvians during and after World War II. Hundreds of thousands of people were deported to Siberia during the years of forced Russification, many more were conscripted into the army, and the wealthiest Latvians meanwhile escaped to the West. These events virtually destroyed the Latvian middle class. In many Latvian cities the indigenous population became a minority, as many Russians took

demographics:

More than 50 percent of the population are Latvians, descendants of Baltic and Finnic peoples; about 30 percent are Russian; minorities include Belarusians, Ukrainians, Poles, and Lithuanians.

Latvians: nationality time line	
C.E.	
1201	Germans, led by Bishop Albert von Buxhoevden, found city of Riga.
1237	Brothers of the Sword unite with Teutonic Knights.
1270	Germans found Livonia.
1297	People of Riga rebel against Teutonic Knights.
1558–82	Poland, Russia, and Sweden dispute over Livonia in the Livonian War, afterwards dividing it.
1629	Livonia is conquered by Sweden.
1638	First Latvian (and German) dictionary, by Georgius Mancelius, is published.
1644	First grammar of the Latvian language, by Johann Georg Rehehausen, is published.
1685	First Latvian translation of Bible is published.
1721	Part of Latvia is ceded to Russia.
1783	<i>Lettische Grammatik</i> , grammar of Latvian by G. F. Stender, is published.
1806	A book of verse by Indrikis the Blind, <i>Ta Neredzīga Indrika Dziesmas</i> (Those songs of Indrikis the Blind), is published.
1812	Fearing attack by French under Napoleon I Bonaparte, Riga defensively burns down its own suburbs.
1816	Serfdom is abolished.
1856	Juris Alunans book of verse <i>Dziesminas</i> (Little songs) begins tradition of modern Latvian verse.
1879	First major Latvian novel, <i>Mernieku laiki</i> (The times of the land-surveyors) by Reinis Kaudites and Matiss Kaudzites, is published.
1888	Epic poem <i>Lacplēsis</i> (Bear slayer), by Andrejs Pumpurs, based on Latvian folk stories, is published.
1889	Latvian Historical Museum is founded in Riga.
1898	<i>Purva bridejs</i> , novel by Rudolfs Blaumanis, is published; he later dramatizes it as play.
1905	Janis Rainis's play <i>Uguns un nakts</i> (Fire and Night) is produced, drawing on Latvian folklore.
1918	Latvians declare independence, repelling Russian and German military with aid of Great Britain and Estonia.
1919	University of Latvia is founded in Riga.
1920	Latvia's independence is officially recognized; lands of German nobility are redistributed to peasant population to alleviate country's poverty.
1922	National Library of Latvia is founded in Riga.
1925	Rainis Museum of the History of Literature and Arts is founded in Riga.
1941–44	During World War II Latvia is occupied by Nazi Germany and the Soviet Union.
1991	Soviet rule collapses and Latvia regains independence.
1999	Latvia elects its first woman president, Vaira Vīke-Freiberga.
2004	Latvia joins North Atlantic Treaty Organization (NATO) and European Union (EU).

advantage of the demographic vacuum. In the countryside prosperous farms were destroyed through forcible collectivization. Because of this systematic attempt to annihilate the identity of the Latvian state and nation, part of the Latvians' cultural identity is the consciousness of their own fragility.

Latvia's national epic, *Lacplēsis* (Bear slayer)—written in 1888 by Andrejs Pumpurs, based on traditional Latvian folk stories, demonstrates how cultural identity, far from being a static substrate that emerges once and for all fully formed, never to change, instead evolves through time in response to the exi-

gencies of history. *Lacplesis*, son of a man and a female bear, a mighty hunter, is actually atypical of Latvian folklore, in which humans more usually appear tolerant and pantheistic. *Lacplesis* was written at a time when the struggle for Latvian independence was reaching a crescendo; he was thus a hero for his times.

The modern Latvian poet Imants Ziedonis has written that cultural identity is such an elusive entity that it is hard to define; he prefers rather to list cultural elements particular and peculiar to a people. Taken together they can indicate something of a people's essence. Storks, one such element, are now ubiquitous in Latvia. People treasure them and help them find nesting sites. But they were not part of the landscape in the past. Part of the reason for this seems to be the pollution and environmental degradation in neighboring countries, whereas Latvia preserves great biological diversity and a healthy ecology. Other Latvian characteristics include the use of the affectionate diminutive in folk songs; the huge Latvian song festivals that take place on an unprecedented scale, with choirs of up to 20,000 singers under the guidance of world-class conductors; the great number of landscape variations in one square kilometer of Latvian land; the Midsummer Night's festival (St. John's Eve, or Janu Naktis), with its unique melodies and fertility rites. There is also the Latvian custom of drinking birch sap in spring and making beverages from it to be consumed in the months of summer heat. A large book-publishing enterprise produces huge editions of poetry books for such a small nation. The music of the Latvian Women's Choir, founded in the dark days of 1947, is a strong symbol of Latvian identity. And there is the *Latvju Dainas*, eight volumes of some 400,000 Latvian folk songs that embody the essence of the values that build the Latvian character.

The ideal for Latvians is indicated by the word *raženais*, used to denote "a man of culture." *Raženais* has a whole range of meanings: "strong, fertile, rich, effective, controlled, persistent." Besides all these qualities, which apply to a single individual, *Raženais* has significance to the relationships between people. It is a principle of guidance, empathy, and assistance.

Laudani

The Laudani are classified as a Celtic tribe. They lived in Gaul around present-day Laon (formerly Laudanum) in northwestern France at least by the first century B.C.E. and are discussed as CELTS or GAULS. Laon takes its name from the tribal name.

Ledzianians (Ledzians; Ledzianie; Ledziane; Lecsyans; Lendites; Lendizi; Lenthans; Lendians; Lendzanenoi; Lendzeninnoi; Lachs)

The Ledzianians were a tribe of Western SLAVS, living between the Upper Vistula River and its tributary the Western Bug around present-day Sandomierz in central Poland. One of their important fortified strongholds in the eighth century C.E. was Chodlik. The Ledzianians were under the domination of the RUS in the ninth century, and then of the CZECHS in the 10th century. Along with the POLANIANS, who gained hegemony over other area tribes in the 10th century, they are among the ancestors of the POLES, who expanded into their territory.

Lemkos (Lemko; Lemkians; Lemaky)

The Lemkos are a Slavic people currently living in Transcarpathia, that is, the Carpathian Mountains and surrounding regions. Their lands are in southwestern Ukraine. To their east are the BOIKOS and the HUTSULS. All three groups of SLAVS, speaking distinct dialects, are among the people known as RUSYNS, or Carpatho-Rusyns. The Lemkos speak an East Slavic dialect known as Lemko.

Lemkos also now live in Poland and Slovakia, where they once held more territory. Slavs lived in the Carpathian region as early as the late fifth century C.E.; the exact time the Lemkos assumed a distinct identity is not known.

LEMKOS

location:

Carpathian Mountains in southwestern Ukraine

time period:

After fifth century C.E. to present

ancestry:

Slavic

language:

Lemko (East Slavic)

As have their Carpathian neighbors, the Lemkos have preserved traditional farming culture in terms of rituals, tools, architecture, and clothing (such as the characteristic woolen mantles known as *chuhy*). Their music has been influenced by both Slovak and Czech songs.

See also UKRAINIANS: NATIONALITY.

Lemovices (Limovici)

The Lemovices are classified as a Celtic tribe. They lived in Gaul around present-day Limoges in central France and are discussed as CELTS or GAULS. They fought as allies of the ARVERNI under Vercingetorix against the ROMANS under Julius Caesar in 52 B.C.E. Augustoritum on the site of Limoges became a *civitas* capital in Roman Gaul; Limoges takes its name from the tribal name.

Lendites *See* LEDZIANIANS.

Leponti (Lepontii)

The Leponti are classified as a Celtic tribe. They lived north of Lake Maggiore in present-day southern Switzerland and northern Italy in the region of the southern Lepontine Alps by the second century B.C.E.; the ROMANS classified them with other CELTS among the GAULS. The name of a branch of the Celtic language spoken by tribes in the region is Lepontic.

Letts (Lette; Lettish; Letis; Letygola; Lettigallians; Lettigallions; Lettgallions; Latgallians; Lattgalls; Latgalli; Latgalians; Latgale; Lalvis; Letgola; Letygola)

The Letts were one of the tribal entities to evolve out of the ancient BALTS, Baltic-speaking peoples living in north-central Europe. Their homeland was in the eastern part of present-day Latvia along the Western Dvina (Daugava) River and its tributaries, especially in the Latgale Upland and the East Latvian Lowland. Along with the CURONIANS, SELONIANS, SEMIGALLIANS, and assimilated Finnic-speaking peoples (such as from among the ESTHS, LIVS, and VOTES), the Letts are among those peoples considered ancestral to contemporary Latvians (*see* LATVIANS: NATIONALITY). Before the 19th century Latvia was known variously as Lettland, Lotygola, Leththia, Lothwa, and by similar names, thought to be derived from Latve, an

ancient name for a river; Lette is the Germanic version.

ORIGINS

In about 3000 B.C.E. ancestors of various Finnic-speaking peoples had settled the region of Latvia. In about 2000–1500 B.C.E. proto-Baltic peoples had arrived in the area. They were pushed farther east and north by the expansion of SLAVS in the seventh century C.E. Identifiable tribes had coalesced in the region by the ninth century. By the 12th century the Letts had reached the region known as Livonia (part of present-day Latvia and Estonia). This northward movement did not lead to the withdrawal of the Finnic Votes. The Votes gradually merged with the Baltic-speaking peoples, adopting their culture and language, although vestiges of the Votes language were adopted by the Balts. The Letts were mentioned in written sources in the early 12th century under the name Letgola and variations. In a second written source from the same era describing the same location appears the tribal name Neroma. It is thus possible that the Letts were the people the Greek historian Herodotus called Neurida in the fifth century B.C.E.

LANGUAGE

Latvian has three dialect groups: East (or High) Latvian, West Latvian, and Central Latvian. The earliest texts in Latvian, a Roman Catholic catechism and a Lutheran catechism, were recorded in a Gothic script in the 16th century. The modern literary language was developed by the late 19th century, and a modified Latin alphabet was adopted in 1922. Along with Lithuanian Latvian is one of the two surviving Baltic languages.

HISTORY

Since the Letts and the Selonians to the south inhabited rugged interior regions, they had minimal encounters with the VIKINGS, unlike their neighbors to the west, the Curonians and to a lesser extent the Semigallians. They also suffered comparatively fewer losses against Germans invading the region in the late 12th century, yet they also were under Germanic influence and later in their history Polish and Russian influence as well (*see also* GERMANS: NATIONALITY; POLES: NATIONALITY; RUSSIANS: NATIONALITY). In 1201 the city of Riga was founded by Germans from Bremen and Hamburg, the beginning of a long period of Germanic influence. The military and reli-

gious order the Brothers of the Sword in the north, founded the next year, campaigned against the pagan peoples of the region. The Brothers of the Sword pacified the Letts in 1214.

Unlike in Lithuania, where a confederation of tribes was established in the mid-13th century under the rule of King Mindaugas, there was no unified state in Latvian territory governing ancient tribes, but alliances were formed by various communities and castles. In 1270 the Livonian Order and the Catholic Church founded the state of Livonia, a loose political union of territories in present-day western Latvia and southern Estonia. Livonia, also known as Livland, was probably named after the Finnic-speaking Livs.

CULTURE (see also BALTS)

The Western Dvina River was central to the economy of the region. In addition to general transportation, the Letts used it to float wood to Riga in Semigallian territory.

Over history the variations of the name Letts, originally applied to the tribe, became associated with all Latvians.

Lezgians (Lezgi; Lezghi; Lezgins; Lezghians; Lesghins; Kurins; Kyurins)

The Lezgians are various Caucasian-speaking tribes, living for the most part in the northern Caucasus Mountains of central and southern Dagestan, a republic in southwestern Russia; others live south of the Samur River in the nation of Azerbaijan (in Asia). Their Lezgian-Samur dialects are classified as part of the North-East (Dagestanian) branch of North Caucasian. The Cyrillic alphabet is used in the written form. Among the peoples considered part of the Lezgian linguistic family are the Lezgians proper, as well as the Aguls, Archis, Kryz, Rutuls, Tabarascans, Tsakhurs, and Udis—each tribe with its separate traditions. As are other CAUCASIANS the Lezgians are considered indigenous to the region, perhaps maintaining tribal identity since the second millennium B.C.E. The traditional life of all Lezgian peoples has revolved around the raising of livestock and farming. They have been forced over the centuries to contend with many invading peoples in their homeland from both Europe and Asia. Islam was introduced in the region in the eighth–ninth centuries C.E.; but the Lezgians remained primarily animist in their religion until the 15th century. Now they are primarily Muslims.

When the Russian Empire reorganized its administrative structure in 1860, the homeland of the Lezgians, Lezgistan, was divided along the Samur River; that division led to the creation of Dagestan in Europe and Azerbaijan in Asia. In 1990 Sadval (Unity), a democratic movement for a unified Lezgistan, was founded. In 1991 Dagestan became a republic within Russia and subsequently a member of the Russian Federation, while Azerbaijan declared its independence, and

Libici

The Libici are classified as a Celtic tribe. They lived in present-day northwestern Italy in the early centuries B.C.E. They and their neighbors, the INSUBRES, also CELTS, are thought to have descended from the GOLASECCANS, the first Celtic-speaking people in the region.

Liechtensteiners: nationality (people of Liechtenstein)**GEOGRAPHY**

Liechtenstein is landlocked by Austria to the east and by Switzerland to the south, west, and north. The total area is 62 square miles. About 45 percent of the mountainous land is

forested. The Alpine foothills cover nearly the entire country, rising to 8,000 feet in the south. Principal rivers are the Rhine, which forms the western border, and the Samina.

INCEPTION AS A NATION

When the Carolingian Empire of the FRANKS was divided in the late ninth century C.E., present-day Liechtenstein was split into the states of Vaduz and Schellenberg. The Viennese prince, Johann Josef Adam of Liechtenstein, acquired Schellenberg in 1699 and eventually Vaduz. The two states were united in 1719 as Liechtenstein, an independent principality of the Holy Roman Empire. The Napoleonic invasion in the early 19th century dismantled the country. After the of French withdrew, Liechtenstein regained its independence and joined the newly formed German Confederation (1815). When the confederation collapsed in 1866, Liechtenstein renewed ties with Austria and by 1868 declared

its neutrality in all future wars. With the fall of the Hapsburgs at the end of World War I (1914–18), Liechtenstein formed its present ties with Switzerland.

CULTURAL IDENTITY

Because of its small size Liechtenstein has never been a self-contained cultural area. A remnant of the territory of the ancient Germanic tribal confederacy called the ALAMANNI (in some areas Alemannish is still spoken), it was part of Hapsburg Austria for centuries. Ties with Switzerland, part of which was settled by the Alamanni, have also been important. A vibrant cultural exchange throughout the entire region has taken place for centuries. Through membership in international organizations cultural collaboration has developed far beyond the boundaries of the country.

Liganiens

The Liganiens are classified as a Celtic tribe. They lived in Gaul near the Lower Rhône in present-day southeastern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Ligurians (Liguri; Ligurii; Ligures)

The Ligurians were a pre-Indo-European people, perhaps a collection of peoples of varying origins, living from the mouth of the Arno River in present-day northwestern Italy, along coastal southern France, to the mouth of the Ebro River in present-day northeastern Spain, and on the island of Corsica, by the first millennium B.C.E. During the historic period the name became associated primarily with tribes living in Italy in the regions of Liguria, Piedmont, Tuscany, and part of Lombardy; it is probably derived from the early Greek Ligyes, applied to all peoples west of Greece. With the arrival of the CELTS in their homeland in the fourth to third centuries B.C.E. a shared culture

developed between the peoples, leading to the designation Celto-Ligurians, or Celtoligures.

ORIGINS

It is unknown whether the adoption of farming practices in what would later be Ligurian territory involved incomers who brought them there or indigenous peoples who took them up; a combination is likely. (Modern archaeologists use the name Ligurian, or Ligures, for a stratum of Neolithic remains from northeastern Spain to northwestern Italy, but this is a term of convenience and not related to the Ligurians of the historic period.) The Late Bronze Age was a time of widespread population movements brought on by massive systems collapse as the civilization of the MYCENAEANS came to an abrupt end around 1200 B.C.E. In northern Italy the Golasecca iron-making culture, perhaps with ancestral ties to the Ligurians, developed with some traits similar to those of the Halstatt culture to the north (see GOLASECCANS).

LANGUAGE

The original Ligurian language was probably pre-Indo-European. In its later stages it seems to be related to both Italic and Celtic; some scholars maintain it holds an intermediate linguistic position between them. What little is known about the language is derived from place-names, tribal names, and a few classical writings.

HISTORY

The various tribes that are described as part of the Ligurian tradition had early contacts with the coastal trading posts of the GREEKS, such as Massilia (modern Marseille in southeastern France), founded in about 600 B.C.E. The expansion of Celtic tribes around that time meant a reduction of Ligurian territory, with tribal members retreating into the back country of the Alps.

c. 400 Celtic expansion in Ligurian homeland in Italy

218–201 Ligurians support the Carthaginians against Romans in Second Punic War.

180 Romans resettle 40,000 Ligurians in Samnium.

The expansion of the ETRUSCANS and invasion of the BOII and other Celts over the next centuries meant a further loss of lands, and some Ligurian tribes moved south of the Apennines, founding a confederation. They are referred to as the Apuan Ligurians. The Etruscans controlled Corsica for part of their history.

The Ligurians were viewed by the ancients as a warlike people, valued as mercenaries. In 480 B.C.E. they served with the CARTHAGINIANS under Hamilcar against the Greeks in Sicily. They also served under Agathocles, the tyrant of Syracuse, in Sicily against the Carthaginians and elsewhere in the late fourth and early third centuries B.C.E. In the Second Punic War of 218–201 B.C.E. the Ligurians openly supported the Carthaginians under Hannibal against the ROMANS. By this time many of the Ligurians had been Celticized. The Greek historians Diodorus Siculus and Strabo in the first centuries B.C.E. and C.E. described the Celticized Ligurians as a troublesome people who carried out acts of piracy on commercial shipping.

After the Second Punic War the Romans began campaigning against the Apuan Ligurians, who blocked access to the north from Rome. In 180 B.C.E. the Romans deported some 40,000 of them to the region of Samnium in the south (modern Abruzzi and part of Campania), settling them near Beneventum (modern Benevento). That same year the Romans founded Luca (modern Lucca) and Luni on the sites of Ligurian towns in Tuscany; Luca would be the chief town of Tuscany before the rise of Florence. Genua (modern Genoa), on the coast of the Ligurian Sea in Liguria, also became a major trading post in Roman times. By mid-century the Romans had pacified the independent Ligurians.

CULTURE

The Ligurians were an agricultural people who established trade contacts with their neighbors. They also practiced piracy in the Ligurian and Tyrrhenian Seas. According to some source, they passed navigational techniques to the Romans.

The Ligurians crafted statue-menhirs, representing male figures, holding Iron Age swords, axes, and lances. Stelae, carved or inscribed stone slabs, have also been found among their ruins. Neolithic petroglyphs have been found in their homeland.

The Ligurians generally buried their dead except during the Golasecca and part of the Celtic period, when cremation was practiced for at least a warrior class. A large circle of 46

stones, about 78 yards in diameter, at Piccolo San Bernardo near the border of Italy and France is assumed to be a sacred site.

In addition to the region of Liguria the Ligurians gave their name to the Ligurian Alps, the Ligurian Apennines, and the Ligurian Sea.

Limovici See LEMOVICES.

Lingones (Lingons; Longones)

The Lingones are classified as a combined Celtic-Germanic tribe. They lived in Gaul around present-day Langres in northeastern France at least by the first century B.C.E. and are discussed as CELTS or GAULS. They were neighbors of the more powerful TREVERI, who also consisted of some GERMANICS. A Celtic tribe with the same name, thought to be a branch of the same people, lived in present-day northeastern Italy toward the end of the first millennium B.C.E. Andematunnum on the site of Langres became a *civitas* capital in Roman Gaul; Langres takes its name from the tribal name.

Lithuanians (Litva; Liluanians; Letuvininkai; Aukstaiciai)

The Lithuanians were one of the tribal entities to evolve out of the ancient BALTS, Baltic-speaking peoples living in north-central Europe. Their homeland was in present-day eastern Lithuania—in the Middle Lithuanian Lowland as well as the Baltic highlands (one of their names means highlanders). Along with other Baltic peoples of the region, especially the SAMOGITIANS, classified as a subtribe of Lithuanians by some scholars, the tribal Lithuanians were ancestral to inhabitants of the modern nation of Lithuania (see LITHUANIANS: NATIONALITY). They are sometimes referred to as Lithuanians proper to distinguish them from other tribes ancestral to modern Lithuanians, such as the SAMOGITIANS.

ORIGINS

Baltic-speaking peoples migrated westward to the Baltic Sea region by about 2000 to 1500 B.C.E. Although the Lithuanians perhaps coalesced as a tribe by the ninth century C.E. the first reference to the Lithuanians by name was in 1009 C.E. in a medieval German manuscript, the *Quedlinburg Chronicle*.

LANGUAGE

Lithuanian and Latvian are the only two Baltic languages still spoken. Lithuanian is considered the most archaic of all surviving Indo-European languages, that is, preserving more characteristics of the original language ancestral to all Indo-European languages, Aukstaitich (from the tribal name Aukstaiciai for highlanders), or High Lithuanian, is one of the two major speech patterns of the Lithuanian language; the other is Samogitian, or Low Lithuanian. Between the 16th and 19th centuries three Lithuanian dialects developed: a Low Lithuanian dialect in the west near the Baltic Sea, an East High Lithuanian poetic dialect, and a West High Lithuanian dialect, used primarily in the southern region bordering the region that became known as East Prussia. The modern standard literary language, written in a 32-letter Latin alphabet, is based on the West High Lithuanian dialect.

HISTORY

Lithuanians and Germans

Because they lived inland, much of their territory rugged terrain, the Lithuanians proper had fewer contacts with outside peoples, such as the VIKINGS, who, from the ninth century, traded with and carried out raids on coastal regions. The arrival of German missionaries in the Baltic Sea region in the late 12th century C.E. and the founding in 1202 of the military and religious order Brothers of the Sword to Christianize Baltic lands had a greater early impact on coastal peoples as well. In 1229 the Brothers of the Sword began raids in Lithuania, although without great success. The Lithuanians, along with allies among the SEMIGALLIANS, triumphed under the nobleman Vykintas at Saule (near modern Siauliai) in 1236. The next year the Brothers of the Sword united with the Teutonic Knights.

Mindaugas became the most powerful leader, uniting other nobles under him in 1236–38. In 1251 he chose to be baptized as a Christian to gain the backing of Christian interests; in 1253 he was crowned grand duke of Lithuania under the authority of Pope Innocent IV. His capital was at Trakai. In 1259–61 Lithuanians defeated the Teutonic Knights in a series of battles. In 1261 because the Germans continued their aggression despite his being baptized, Mindaugas returned to paganism. Two years later he was assassinated, and Treniota, a Samogitian, succeeded him as Lithuania's ruler, at which time Lithuania

officially reverted to paganism. Treniota was assassinated the next year, but Christianity would not take hold in Lithuania for more than another century.

Lithuanian Expansion

Over the next years the Lithuanians expanded into Slavic lands to the southwest, including the region of Volhynia, present-day Belarus, and present-day northwestern Ukraine. The grand duke Gediminas established Vilnius as the new capital in 1323. As joint rulers his sons, Kestutis and Algirdas, defeated the Teutonic Knights in 1360, then expanded the Lithuanian domain east toward Moscow and south to the Black Sea, where they defeated the Golden Horde (*see* MONGOLS) in 1362–63. In 1386 Grand Duke Jogaila joined Lithuania in a dynastic union with Poland through marriage to the Polish queen Jadwiga (*see* POLES). Jogaila accepted Christianity, becoming a Roman Catholic, and was crowned Wladyslaw II Jagiello, king of Poland. In 1410 he and his cousin, Vytautas, grand duke of Lithuania since 1392, decisively defeated the Teutonic Knights at Tannenberg (modern Stebark) in northern Poland.

As of 1447 the king of Poland also ruled Lithuania, and the various peoples who then identified themselves as Lithuanians went through a period of Slavicization.

CULTURE (see also BALTS)**Art**

Over the centuries Lithuanian women developed weaving as an art form. Their fabrics for male and female garments, table cloths, bedspreads, towels, sashes, and ribbons are notable for originality. The basic materials are linen and wool. The fabrics are decorated with national ornaments—mostly geometrical—such as checks, crosses, stars, stripes, and conventionalized leaves. The color pattern is based on contrast; Lithuanian weavers have traditionally contrasted red and green, orange and blue, yellow and violet, black and white.

Religion

Before the introduction of Christianity the Lithuanians worshipped the forces of nature and had many gods and goddesses. The chief god was Perkunas, the thunder god. The ancient Lithuanians worshipped their gods in sacred groves and forests where a holy fire was kept, guarded by *vaidilutes* (the Lithuanian equivalent of vestal virgins). The will of the gods was expounded by priests called *kriviai*, headed by the principal priest, *kriviu krivaitis*. Lithuanian burials included numerous ornaments and tools. Many graves contained a horse's head and feet.

The Lithuanians and Samogitians have the distinction of speaking the most archaic of Indo-European languages as well as being the last European people to practice paganism officially.

Lithuanians: nationality (people of Lithuania)**GEOGRAPHY**

Lithuania is flanked by Latvia to the north, by Belarus to the east and south, by the Baltic Sea and Russia's Kaliningrad Oblast to the west, and by Poland to the southwest. Lithuania, Estonia, and Latvia constitute the Baltic States. Lithuania has an area of about 25,200 square miles; low-lying plains cover the majority. Uplands lie in the south and east, and marshes and swamps are found in northern and western Lithuania. A

long sandbar extending from Lithuania's Baltic coast forms the Courland Lagoon, shared with Russia. Lithuania has many rivers—the Nemunas is the largest—and more than 3,000 lakes.

INCEPTION AS A NATION

In the 13th century C.E. the LITHUANIANS, SAMOGITIANS, and other tribes resisted invasions of the Germanic Brothers of the Sword and Teutonic Knights by forming a unified state under Mindaugas. Pope Innocent IV recognized him as grand duke of Lithuania in 1251. Throughout the 14th century Lithuania expanded southward to include present-day Belarus and the Black Sea territories, and eastward, encompassing Moscow. Lithuania united with Poland in 1386 by marriage, and in 1569 the Treaty of Lublin formed a political union, the Polish-Lithuanian Commonwealth. After the partitions of Poland (1772, 1793, 1795) Lithuania was annexed by Russia.

At the end of World War I (1918) Lithuania declared independence. It was briefly occupied by Poland in 1920. Two years later Lithuania approved a new constitution, establishing an independent republic. Soviet troops invaded Lithuania in 1940, making Lithuania a constituent republic of the Soviet Union (USSR), the Lithuanian Soviet Socialist Republic. Lithuania won full independence in 1991.

CULTURAL IDENTITY

The crux of Lithuanian cultural identity lies in the variety of its antecedents. Lithuanians sometimes point to their centuries-long textile tradition as a metaphor for Lithuanian society, woven of many colored threads in a unique pattern. Indeed Lithuanian culture consists of an unusual integration of many colorful traditions, values, and forces. Among the cultural elements that are interwoven are pagan mythology with Christianity. Another interweaving occurred in the Renaissance period and later, when Lithuanian high art emerged and absorbed a great influence from western Europe. Moreover productive contact between Lithuania and the rest of Europe during the independence period of the 20th century were an enormous contribution to the development of modern Lithuanian culture.

Lithuanian cultural variety is rooted in the multiethnic heritage of the Grand Duchy of Lithuania. Thus people who maintain a Lithuanian cultural identity live beyond the limits of the original Lithuanian ethnic territory. Today Lithuanian culture exists in Poland,

Lithuanians: nationality time line**C.E.**

1253	Mindaugas is crowned grand duke of Lithuania.
1323	Grand Duke Gediminas establishes city of Vilnius.
1386	Monarchical union of Lithuanian grand duke and Polish queen ends paganism.
1392–1430	Lithuania-Poland expands territory to Black Sea.
1547	The first book in Lithuanian, <i>Catechismus</i> , is prepared by Lutheran priest Martynas Mažvydas.
1569	Under Union of Lublin Lithuania becomes commonwealth of Poland.
1579	Vilnius University is founded.
1795	After Poland's partitions Lithuania is annexed by Russia.
1818–25	Poem "Metai" (The year) by Kristijonas Donelaitis is published, depicting life of Lithuanian peasants.
1832	Russian czarist government closes Vilnius University.
1845	Writings by historian Simonas Daukantas are published, first about Lithuanian history in native language.
1860–85	Lithuanian revolts fail to achieve independence.
1866	Drawing school is founded in Vilnius.
1907	Composer Mikalojus Ciurlionis gives up music to devote himself to painting.
1915–18	During World War I Germany occupies Lithuania.
1918	Lithuania declares independence.
1919	Martynas Mažvydas National Library of Lithuania is founded; Vilnius University reopens; first Lithuanian professional theater opens in Kaunas.
1920	Under Treaty of Moscow Soviet Russia recognizes Lithuania's independence; Kaunas becomes Lithuania's temporary capital.
1922	Lithuanian University is founded in Kaunas.
1936	Maironis Lithuanian Literature Museum is founded in home of poet Maironis (Jonas Maciulis).

1940	Lithuania becomes part of Soviet Union (USSR).
1941–44	During World War II Nazi Germany occupies Lithuania.
1944	Soviets reclaim Lithuania.
1967	Ciurlionis Museum, honoring composer and painter Mikalojus Konstantinas Ciurlionis, opens in Kaunas.
1987	Anti-Soviet revolt breaks out.
1989	Lithuanian Communists vote for independence from Soviet Party.
1990	Lithuania declares independence.
1991	Lithuania joins United Nations (UN).
1992	Lithuania establishes new constitution; presidency and coalition government are formed.
1994	Lithuania joins the North Atlantic Treaty Organization (NATO) and signs friendship treaty with Poland.
2004	Lithuania joins European Union (EU).

Belarus, Russia, Ukraine, the United States of America, and many countries of western Europe.

At the same time as they were absorbing influences from abroad Lithuanians were per-

sistent in preserving elements that form the identity of their traditional culture. A notable example of this is the Lithuanian style of folk music called *sutartine* (the name originating

A Lithuanian woman mends a fishing net in the late 19th century. (*Library of Congress, Prints and Photographs Division [LC-USZ62-91799]*)

from the word *sutarti*—to sing in unison). It is a polyphonic style of two or three voices singing either in heterophony (with the themes rising and falling independently of one another), in parallel (with the themes moving in parallel motion, rising and falling together, although beginning on different tones), or canonically (with themes imitating one another but beginning at different times, as in a round) as well as in free imitation. One of the most outstanding phenomena of traditional Lithuanian culture, the tradition of cross crafting, that is, making wooden crosses, originated in the pre-Christian times. Crosses are embellished in geometrical and floral decorations that have symbolic meanings. Paganism is now recognized as an important part of the Lithuanian tradition in that Lithuania was the last part of Europe to maintain the pagan tradition in its resistance to the Christian crusaders.

A century-old celebration—a national song and dance festival held every four years—is one of the major cultural festivals in Lithuania. This is the most universal manifestation of Lithuanian national, cultural, artistic, public, and political identity nationwide. It has

become a link between the ancient heritage of folklore culture and contemporary national culture as well as professional art.

Livs (Livonians)

Livs, or Livonians, a Finnic-speaking people, lived in coastal regions of present-day southwestern Estonia and northwestern Latvia around the Gulf of Riga, including coastal Courland, a region of Latvia. They are classified as Baltic (or Western) Finnic, a subgroup of FINNO-UGRIANS, as distinct from the Volga (or Eastern) Finnic. To the north were the ESTHS, also Finnic speaking; to the south, the Baltic-speaking CURONIANS; and to the east, the Baltic-speaking LETTS. Along with the Letts the Livs are considered ancestral to modern Latvians (see LATVIANS: NATIONALITY).

ORIGINS

Balto-Finns perhaps reached the Baltic region as early 3000 B.C.E. It is theorized that the Livs were the first tribe to separate from other Balto-Finns, but this idea has not been confirmed archaeologically.

LANGUAGE

The Livonian language is in the Balto-Finnic group of Finnic in the Finno-Ugric language family and is closely related to Finnish.

Modern dialects include East and West, with a number of subgroups. The Livonian written language is based on the East dialect, with some Latvian vocabulary, pronunciation, and grammar.

HISTORY

The first written mention of the Livonians in the Baltic region dates from the 11th century C.E. In the mid-12th century German merchants started entering coastal regions. Father Meinhard arrived on Liv territory in the 1160s. As an enticement to conversion of the indigenous population, he built a castle to protect them. In return he induced the Livs to be baptized in the Western Dvina River. After the castle was completed, the local population returned to the river, this time to wash off their baptism. Angered, Father Meinhard convinced Pope Innocent III that a more aggressive approach was needed. In 1198 Pope Innocent II sanctioned the first Baltic crusade.

Bishop Albert von Buxhoevden of Bremen arrived in 1199 and founded Riga to the south in 1201. The next year he founded the military and religious order Brothers of the Sword to Christianize local peoples. The Brothers of the Sword pacified the Livs by 1207, thereby creating a new tax base for the Catholic Church and creating soldiers for the conquest of the remaining tribes. The Livonians had to take part in subsequent military campaigns, including those against the Esths. The Esths and Letts started to settle in the sparsely populated Livonian areas in present-day Latvia. In 1237 the Brothers of the Sword united with Teutonic Knights, who held lands to the south in present-day northern Poland; they became known as the Livonian Order of Teutonic Knights. Livonian interests continued to develop their own state, however. In 1282 Riga joined the Hanseatic League of northern Germany—a group of merchants in the Baltic region—and assumed a central role in east-west trade and control of trade with local tribes over the next centuries.

The Great Livonian War

A dispute in 1557 over the tribute to be paid Czar Ivan of Russia by the diocese of Dorpat in Livonia was among the reasons for the Great Livonian War. This was followed by a pact of mutual aid between the Germanic knights and Polish king Sigismund II, ruler of a dynastic union of POLES and LITHUANIANS against Russian incursions. Ivan IV (Ivan the

Terrible) used the failure to pay tribute and the pact as justification for military action against Livonia and its allies, probably to acquire a seaport on the Baltic. The Great Livonian War lasted from 1558 until 1582. Ivan was at first successful but later was defeated by Poland and Sweden. The Livonian Order disbanded, and Livonia was partitioned in 1561. The dynastic union of Poland and Lithuania absorbed the provinces of Latgale and Vidzeme to the north of the Western Dvina (Daugava) River; the provinces Kurzeme and Zemgale to the west and south became Courland, an autonomous duchy under Polish-Lithuanian sovereignty.

Modern Livs

Most Livs had merged with the Latvians by the 19th century. During World War I (1914–18) German troops occupied Courland, and many Livs departed their villages in Courland, never to return. In the two decades after the war a cultural renaissance occurred, with attempts to revive the language in schools and publications. In 1940 Latvia was annexed by the Soviet Union (USSR), and ethnic culture was suppressed. During World War II (1939–45) many Livs again had to flee their home. Latvia became an independent republic in 1991. The Livonian Union (formerly the Livonian Cultural Society) has since attempted to preserve the linguistic and cultural heritage of the Livs.

CULTURE (see also FINNO-UGRIANS)

The ancient Livs had a well-developed trading organization and were also farmers, breeders of livestock, and fishermen. Livs living along the

Western Dvina River were part of a trade network of Kievan Rus, Finland, and the Swedish island of Gotland.

The present situation of the Livs, with few people identified as direct descendants of the ancient tribe, demonstrates that language is critical to cultural identity. Few people speak their Finnic tongue; the majority of surviving Liv descendants now speak Latvian, a Baltic language. As a result few other traditions are preserved.

Lobetani (Lobetanos)

The Lobetani are classified as a Celtic tribe. They lived in present-day north-central Spain at least by the first century B.C.E. and are discussed as CELTS or CELTIBERIANS.

Lombards (Langobards; Longobards; Langobardi)

The Lombards, a tribe from along the Elbe River in central Germany, held lands on the Italian Peninsula for two centuries, from 572 to 774 C.E., longer than any of the other GERMANICS. Their name, also written as Langobards or Longobards, is derived either from “long halberds,” a type of axe, or “long beards.”

ORIGINS

It is theorized that the Lombards emerged as a tribe from the Lower Oder River (the boundary between modern Germany and Poland near the Baltic Sea). Conflicts with VANDALS living to the east may have led to their tribal formation and migration. By the first century C.E. they had settled along the middle Elbe River in central Germany, near the CHAUCI and CHERUSCI, the

latter of whom they absorbed. The SAXONS, who absorbed the Chauci, eventually lived to their north.

LANGUAGE

The Lombards originally spoke a dialect of German ancestral to what is known as Low German, typical of the tribes of northern Germany. Probably sometime in the fifth century the Lombards adopted the dialects of the Germanic peoples of southern Germany—known as High German.

HISTORY

The Lombards (known at this time as Langobardi) were allied with other Elbe River tribes, among them the MARCOMANNI and QUADI. With the Marcomanni they were among the first Germanic tribes to attempt to migrate into the Roman Empire, following by a few years the first recorded Germanic incursion by the CHATTI in 160 C.E. The Lombards participated with them in raids to the south, crossing the Danube into transdanubian Hungary, among the actions that provoked the Marcommanic Wars of 166–180 between Germanics and ROMANS. They attempted to invade the province of Pannonia (modern Hungary and surrounding areas) but were repelled.

By 300 they were situated farther south, east of the Upper Elbe; meanwhile their southern neighbors, the BURGUNDII, were moving west across the Elbe toward the Rhine and Gaul. The Lombards did not take part in the general westward movement of a number of Germanic tribes at this time.

In the 480s with new territorial competition among European peoples caused by the onslaught of the HUNS, the Lombards sought out new homes, especially to the south in northern Austria, where they entered into conflict with other peoples on the move, a complex mix of competing tribes that had been dominated first by the GOTHs, then by the Huns. Among the strongest of these tribes were the HERULI, former allies of the Goths, then of the Huns after they were subdued by them, and the GEPIDS, the Huns' chief Germanic allies until the death of Attila.

After the defeat of the RUGII, a Germanic tribe who had been allied with the Gepids when they turned against the Huns, by the Heruli and SCIRI, the tribe of the powerful leader Odoacer in 487, the Lombards moved into their territory in Noricum (roughly mod-

ern Austria), perhaps displaced by the growing power of the THURINGI to the northwest. In about 505 the Heruli forced them to move—it is thought to the east onto the Hungarian plain between the Danube and the Tisza (Theiss)—and pay tribute. Three years later the Lombards rose up and defeated the Heruli. The Lombards were thus emerging from the seething mass of tribes as among the most powerful.

In 526–527 the Lombards invaded Pannonia, becoming a dominant force in the region. Their king at this time, Wacho, maintained friendly diplomatic relations with the Eastern Roman Empire and with the FRANKS through royal marriages.

In 547 the Eastern Roman emperor Justinian I, as a counterbalance to the Gepids, who also held lands in Pannonia, granted the Lombards more lands in Pannonia and Noricum. Many of the Gepids were soon driven out of Pannonia and dispersed. In 552 the Lombards aided the Byzantines in their last campaign against the OSTROGOTHS in Italy. This acquainted the Lombards with the attractions of this region, of interest because their territory in Pannonia was under increasing pressure from the AVARS, steppe people out of Asia with an expanding empire from the east.

In 567 the Lombards under Alboin, their ruler since 565, with the help of the Avars, who were allies of the Byzantines at the time, defeated the remaining Gepids under Kunimund in a battle somewhere between the Danube and the Tisza. After their victory they departed Noricum, as a result of an agreement with the Avars and BYZANTINES.

Invasion of Italy

Between 568 and 572 Alboin, recognizing that his people's hold on Pannonia would be increasingly contested by their erstwhile allies the Avars, determined that Italy held a more promising future for them. Accordingly he led a large army consisting of the Lombards and allies from among the Gepids and other Germanic tribes, SARMATIANS, and even BULGARS, across the Alps in an invasion of Italy. The power vacuum these groups left behind them in Pannonia and the northern Balkans was soon filled by Avars and Slavs, respectively. Italy at this time was under the control of the Byzantines since the defeat of the Italian kingdom of the Ostrogoths in 552.

Alboin's army swept through Italy, meeting limited resistance from the Byzantine forces. Within a year they controlled many of the northern cities and much of the fertile Po valley. With limited siege skills the Lombards did not

try to capture walled Italian cities, such as Rome, Naples, or Ravenna, instead plundering the remaining rich estates of the Italian countryside. Their behavior in Italy contrasted sharply with that of the Ostrogoths in the previous century. They were not federates of the empire but invaders, and for some 30 years they made no attempt to establish a stable government using Roman institutions or any others, instead dissolving into war bands under *duces* (chiefs), some 36 in all, who raided freely. Their central monarchy was destroyed when Alboin and his successor, Clyph, were murdered only a

few years after the invasion. The duchies of Spoleto and Benevento had complete independence. Legend has it that the daughter of the king Kunimund, Rosamund, was forced to marry Alboin and drink from the skull of her slain father and in revenge arranged the murder of Alboin. In 584 the Lombards united again under Clyph's son, Authari, to strengthen themselves against the papacy, the Byzantines, and the Franks.

By the end of the Lombards' long looting spree the Roman landed order had been largely destroyed, with former Roman estates now held by Lombards. Pope Gregory the Great called them "unspeakable" for burning churches. The Lombard kingdom in Italy was far more Germanic in character than Theodoric's Ostrogothic one.

The Lombard-held territory consisted of northern and central Italy and part of southern Italy, with Pavia on the Ticino River, a tributary of the Po River, as its capital. Their holdings in the north included inland Liguria (formerly known as Cisalpine Gaul) and Venetia; in central Italy, Tuscany and a stretch of land along the Apennines that became the Duchy of Spoleto; and the present-day province of Campania, which became the Duchy of Benevento. The east coast of the peninsula remained imperial holdings for the most part. The Lombards continued their expansion of their control over territory in the seventh century under the united monarchy.

Later Centuries

For nearly two centuries the Lombards were a primary force on the Italian Peninsula, with shifting territories. Effective rulers included King Rothari, who captured Genoa in about 641. He is also known for issuing a Lombard code of criminal and civil law based on Germanic principles in 643. The next century King Liutprand gained control of Spoleto and Benevento, thus consolidating the Lombard kingdom.

However by the eighth century their dominance in Italy attracted the attention of the greatest Germanic power of the day, the Franks. Lombard pressures on the city of Rome and the church gave the rising Frankish Carolingian family an opportunity to gain the gratitude of the papacy and its help in their dynastic ambitions.

When King Aistulf finally captured Ravenna in 751 and threatened Rome, his actions led Popes Zacharias and Stephen II to seek the help of the Franks under their *de facto*

but not yet *de jure* ruler, Pépin III. Pépin defeated the Lombards and gave control of Ravenna to the pope (the Donation of Pépin). In return for this and other aid Pépin obtained the pope's permission to depose the Frankish king and establish his own royal dynasty.

King Desiderius renewed the Lombard threat against Rome, however. In 773 Pope Adrian I, fearing the fall of Rome to the Lombards, again requested help from the Franks, now led by Charlemagne. The Franks defeated the Lombards and captured Pavia the next year. Charlemagne received the "iron crown" of the Lombard kingship on his own head, proclaiming himself the new king of the Lombards (a highly unusual proclamation when one Germanic king conquered another). Desiderius was taken to France as a prisoner, and died in captivity. Lombard lands were reorganized as the Papal States, all but the duchy of Benevento, which remained in Lombard hands until conquered by the NORMANS in the 11th century.

Those Lombards who remained near the Elbe River were absorbed by the Saxons.

CULTURE (*see also* GERMANICS)

Government and Society

Place-names and Lombard cemeteries on the Italian Peninsula indicate the location of their settlements; places where cemeteries are near hilltop strongholds, such as Nocera Umbra and Castel Trosino in the duchy of Spoleto, were contested territory, obtained probably in land taking in the seventh century. The region was of strategic importance since it lay near the road linking Rome and Ravenna. Nocera Umbra contains the graves of several high-ranking warriors. Castel Trosino has evidence of contemporary Roman and Byzantine influence on jewelry, even in the seventh century, an indication that the community was more mixed.

Several cities in northern Italy were important in the Lombard polity. A cemetery outside Cividale in the northeast contains the graves of Lombard men and women who by their age must have been part of the original invasion of 568. There were noble burials within the walls of Cividale, including one within a church.

It is often difficult to assess archaeological relations between invaders and invaded in a territory; many of the latter often fall to the lowest levels of society and leave little in the way of material remains, while both invaders and invaded usually exchange cultural influences after a very short period, so that distin-

guishing them by their possessions—weapon or jewelry styles and the like—becomes problematic. The written records in Lombard Italy show little participation in affairs by the indigenous population, but it is thought they were neither exterminated nor expelled. Evidence for this hypothesis is derived from craft articles, which show a mingling of influences, and also loanwords from the Lombard language to Italian—the Lombards seem to have given up their own language by the end of the seventh century. The Lombard loanwords are of ordinary, day-to-day objects and things. The evidence suggests that they integrated rapidly into what remained of Roman society.

The chief historian of the Lombards was the eighth-century Paul the Deacon, who had served as a councilor to Desiderius and had become a member of Charlemagne's palace school. From his work *Historia Langobardorum* (*History of the Lombards*) of the late eighth century we derive information about the Lombards in Italy. A Lombardian law code survives from the same period (the law code of Rothari).

Military Practices

The Lombards adopted some of the military techniques of the steppe horsemen. They never developed a navy, however, and were therefore at a disadvantage in capturing port cities.

Religion

Sometime in the fifth century most Lombards converted to Arian Christianity.

In about the mid-seventh century (after the reign of King Rothari, the last Arian king) the Lombards converted to Roman Catholicism and adopted Latin as their primary language. A noble Lombard family was buried in the Church of San Stephano around the year 600.

equipped armies, while the fighting forces of the Lombards had not progressed much beyond the mob of independent war bands of the Germanic past. In a sense the Franks were a Roman legacy nurtured in a backwater of the empire, who were able to defeat the Lombard holders of an Italian homeland mostly bereft of the last vestiges of Roman civilization. The region held by the Lombards in northern Italy, Liguria, now bears the name Lombardy. The iron crown of the Lombard kings is kept at Monza in Lombardy. The name of the modern town of Bardowick near Lüneburg, Germany, is also derived from the tribal name.

Longones See LINGONES.

Lopocares

The Lopocares are classified as a Celtic tribe. They lived in Britain in the Tyne valley of present-day northern England at least by the first century B.C.E. and are discussed as CELTS or BRITONS. They are considered a subgroup of the BRIGANTES.

Lucani (Lucanians)

The Lucani are classified as an Italic tribe. They inhabited the Apennines in present-day southern Italy by about 500 B.C.E. Their homeland,

The Lombards' tenure in Italy lasted longer than that of any of the Germanic peoples. However, the lack of sophistication of their political organization, as compared to that of the Goths or Franks, meant that their rule was based on armed might alone and could not last. They made little attempt to take advantage of Roman institutions, instead mostly sweeping them away. For these reasons they became vulnerable to the armed might of the Franks, much stronger than their own because the Franks' more evolved political system, in part influenced by the Romans, helped them to assemble large, disciplined, well-provisioned, and well-

Lusitanian (Iberian)

known as Lucania, corresponds to present-day Basilicata and part of Calabria. An earlier name for the region was Oenotria, the homeland of the non-Indo-European-speaking ENOTRI. Some scholars group the Lucani with the SAMNITES, who also spoke Oscan dialects of Italic. Lucanian cities included Atena Lucana, Grumentum, and Teggiano.

The Lucani were allies of the BRUTH living to their south and made war on colonies founded by GREEKS. In about 400 B.C.E. the Lucani captured Paestum, a Greek city on the Gulf of Salerno (where elaborately painted Lucanian graves have been found).

The Lucani became allies of the ROMANS in 298 B.C.E. but opposed Rome in later conflicts. In the Pyrrhic War of 280–275 B.C.E. they supported Pyrrhus, king of Epirus; in the Second Punic War of 218–201 B.C.E. they supported the CARTHAGINIANS under Hannibal; in the Social War of 90–88 B.C.E. they allied themselves with other Italic-speaking tribes. After being Romanized, Grumentum became a flourishing commercial center. *See also* ITALICS.

Lugadii

The Lugadii are classified as a Celtic tribe. They lived near Dingle Bay in the present-day county of Kerry in southwestern Ireland at least by the first century C.E. and are discussed as CELTS or IRISH.

Lugi

The Lugi are classified as a Celtic tribe. They lived in Britain in present-day northern Scotland and are discussed as CELTS, CALEDONIANS, or SCOTS. They were defeated by the ROMANS under Gnaeus Julius Agricola in the 80s C.E.

Lugii (Lugians; Lugier; Lygians; Lygier)

The Lugii are classified as a Germanic tribe of GERMANICS, possibly with some tribal members from among the CELTS. They lived between the Oder and Vistula Rivers in modern-day northern Poland. They are thought to have eventually allied themselves with the MARCOMANNI living to their south in the early first century C.E. They are associated early in their history with the VANDALS, perhaps from the same ancestral group, and in 406 C.E. crossed the Rhine into Gaul with them and eventually lost their tribal identity among them.

Lusatians *See* WENDS.

Lusitani (Lusitanii; Lusitanians)

The Lusitani are generally grouped among IBERIANS, although some scholars have classified them as CELTIBERIANS, because they manifested cultural traits of both Iberians and CELTS. Their unique language, referred to as Lusitanian, makes them the hardest of all the indigenous people of the Iberian Peninsula to classify. They lived in present-day central Portugal and western Spain between the Douro and Tagus Rivers.

The Greek geographer Strabo of the first centuries B.C.E. and C.E. described them as the most powerful of Iberian peoples. Hannibal of the CARTHAGINIANS used them as mercenaries in his invasion of Italy in the late third century B.C.E. They offered resistance to the ROMANS in the second and first centuries B.C.E., with organized revolts in 195–190 B.C.E.; in 154–150 B.C.E.; in 147–139 B.C.E. under Viriathus, in 80–73 B.C.E. under the Roman expatriate Quintus Sertorius. They were pacified by troops under Julius Caesar in 61 B.C.E. Lusitania, including much of present-day Portugal and the Spanish provinces of Salamanca and Cáceres, later became a Roman province; all the people of the region were referred to as Lusitanians.

In addition to stone statues, depicting warthogs, pigs, bulls, and sheep, three inscriptions have been found on rocks in Lusitanian territory in a Latin alphabet reproducing an undeciphered language, apparently referring to animal sacrifice.

Lusones

The Lusones are classified as a Celtic tribe. They lived north of the Sierra del Solorio in present-day north-central Spain at least by the first century B.C.E. and are discussed as CELTS or CELTIBERIANS.

turies it was alternately controlled by European powers, including Spain, Austria, and France until Napoleon I Bonaparte's defeat in 1815, at which time the Congress of Vienna declared Luxembourg a grand duchy under William I of the Netherlands.

In 1839 Belgium annexed western Luxembourg while the remainder formed an independent state in a personal union with the Netherlands and the German Confederation. When the German Confederation dissolved in 1866, William III of the Netherlands attempted to sell Luxembourg to France. At the London Conference in 1867 Luxembourg was declared a neutral territory. In 1890 Duke Adolf of Nassau became grand duke of an independent Luxembourg. Its neutrality was violated during World Wars I and II in the 20th century and occupation by Germany, but it regained its independent status in 1946.

CULTURAL IDENTITY

The cultural identity of Luxembourgers has been strongly impacted by the number of foreign powers that have ruled it, including the House of Burgundy, Spain, France, and Austria. It is now nestled among Belgium, France, and Germany. Yet despite the input from other cultures, the people of Luxembourg take pride in their distinct historical identity and have maintained their independent state of mind, embodied in the

national motto: *Mir wëlle bleiwen wat mir sinn* (We want to remain what we are). This motto has gained vast symbolic importance each time the people of Luxembourg have resisted and withstood an attempt by invaders to overpower them and has been inscribed on historical landmarks throughout its capital city, also known as Luxembourg.

People who consider themselves Luxembourgers also live outside the country, notably in Belgium. Even today more than 150 years after the Luxembourg Province of Belgium was created many of its inhabitants still consider themselves Luxembourgers. Many Belgian-Luxembourgers speak Letzebuergesch, the native language of Luxembourg, and continue to observe the Luxembourg National Holiday on June 23.

Macedonians

The ancient Macedonians were the people of Macedon on the Balkan Peninsula who created a state in the seventh century B.C.E. that lasted until the second century B.C.E. The name of the kingdom, Macedon, is sometimes cited as Macedonia; it is perhaps derived from the name of a ruler, Makedon, or from the Greek word *makedos* or *makednos* for “tall man.” The latter form is more applied to a historical region encompassing the present-day region of Macedonia in northern Greece (defined administratively as Central Macedonia, Western Macedonia, and Eastern Macedonia and Thrace); the present-day nation of Macedonia (Former Yugoslav Republic of Macedonia); and a small portion of Bulgaria and Serbia. The Greek portion of the historical region (Greek or Aegean Macedonia) is about half of the total area; the Macedonian portion (Vardar Macedonia), about 40 percent; and the Bulgarian portion (Pirin Macedonia), about 10 percent. Macedon (or ancient Macedonia) is also at times discussed as Macedon proper, constituting the coastal plain north of the Chalcidice (Khalkidikhi) Peninsula in Greece, and as Upper Macedon to the west and the north of the plain. Prior to the fourth century and expansion under its most powerful rulers Philip II and his son, Alexander III (Alexander the Great), Macedon was roughly equivalent to Greek Macedonia or Macedon proper.

ORIGINS

The region of Macedonia has been inhabited for millennia. By the third millennium Indo-European-speaking peoples first arrived and intermingled with indigenous Neolithic peoples. In the late second millennium B.C.E. the region that would be Macedonia was impacted by movements of people from the north and east and momentous events occurring in the eastern Mediterranean. Civilizations there, including those of the Egyptians and MYCENAEANS, were undergoing a period of widespread destruction. The identity of the attackers is not known with certainty, but some of them appear to have come from the north and must have traveled through the Balkans to southern Greece and beyond. Probably in the form of war bands, peoples ancestral to those later to be identified as DORIANS and IONIANS, subgroups of GREEKS, passed through the Balkans; some of these may have remained in the area of Macedonia or returned there during the Greek Dark Ages when large population movements took place, driven by the shock waves of the Mycenaean collapse. Peoples may have also come from the region to the east at this time, judging from the fact that historic peoples such as the DACIANS and ILLYRIANS had characteristics linking them with Thrace and the adjacent Pontic (Black Sea) steppe lands. By the eighth century B.C.E. the Greeks had founded colonies along the shore. In about 700 B.C.E. Perdiccas I, from the city of Argos in Greece, founded a kingdom and a

dynasty uniting the diverse elements in the population. The Macedonians controlled territory in the Greek part of Macedonia and the Bitola district in the present-day Republic of Macedonia and over the centuries increased in influence in the region and began to compete with Greek city-states to the south.

LANGUAGE

By about 400 B.C.E. if not before the kingdom of Macedon had adopted Greek as its official language in both speech and writing (archaeological finds at Aiani have confirmed this fact). It can be assumed, however, that some inhabitants of the region, especially more isolated groups in the mountains, continued to speak their native tongue, especially Illyrians.

HISTORY**Kingdom of Macedon**

In the late sixth century under Amyntas I the fifth ruler in descent from Perdiccas I, the kingdom of Macedon became tributary to the Persians of present-day Iran. During the rule of

The Empire of Alexander the Great in Europe, Asia, and Africa, 334–323 B.C.E.

his son and successor, Alexander I, the Persians and Greeks engaged in what is known as the Persian Wars (500–449 B.C.E.). Alexander, the first Macedonian ruler to engage significantly in Greek politics, managed to keep Macedon out of the conflict. With Greek victories and a weakening Persia, Macedon gained its autonomy during Alexander I's reign. Over the next century Hellenic influences increased. In about 400 B.C.E. Pella became Macedon's capital.

During the growth of Macedon tribal clans to the north retained much of their autonomy, though they were nominally under Macedon's rule, and controlled mountain passes in the Rhodope Mountains and other ranges.

Philip of Macedon

In about 367 B.C.E., while he was a teenager, Philip, son of Amyntas II, became a hostage in Thebes, then the most powerful city-state in Greece. During his two years there he observed Theban military techniques, in particular the use of close, deep ranks in the phalanx formation. In 359 B.C.E. after briefly serving as regent for his nephew, Amyntas III, son of his brother Perdiccas III, he usurped the throne as Philip II and began reorganizing Macedon's military. Within two years he had defeated his rivals, including Illyrian factions to the west, and, in 357 B.C.E. he launched a campaign of conquest eastward, attacking the Athenian colony of Amphipolis in Thrace (the region to the east of Macedon comprising modern northeastern Greece, southern Bulgaria, and European Turkey). In 356–355 B.C.E. he captured other towns, including the Thracian town of Crenides, which he renamed Philippi and would soon flourish. Among his conquests were the Thracian gold mines, control of which enabled him to finance additional campaigns southward into Greece.

Philip's continuing success, including victory in the region of Thessaly in 353 B.C.E., led the renowned Athenian orator Demosthenes to deliver the first of his *Philippics* in 351 B.C.E., orations in which he warned the Athenians about the threat of expansionist Macedon. By 348 B.C.E. Philip had annexed the Chalcidice Peninsula, including the city of Olynthus, an ally of Athens. In 346 B.C.E. he made peace with Athens. The Thebans also requested an alliance with the Macedonians against Phocis in a dispute over control of the Delphic oracle. Upon victory Philip became a member of the Delphic council, and Macedon replaced Phocis in the Amphictyonic League; in 338 B.C.E. the council appointed Philip commander of the league's forces.

Alexander III: Known as the Great

Alexander, the son of the Macedonian king Philip II, was born in Pella, the ancient capital of Macedon, in 356 B.C.E. His early years were spent under the tutelage of the Greek philosopher Aristotle, who exposed him to philosophy, literature, and the sciences.

In 336 B.C.E. Philip was assassinated, and Alexander, then 20 years old, assumed the throne and took control of his father's nascent empire. In 336–335 Alexander defeated rebel elements, including the Thracians and Illyrians as well as Greek rebels in Thessaly and Thebes, consolidating his rule over the region. He then embarked, as his father had planned, on a military campaign against the Persian Empire to the east, leading an army across the Hellespont (the modern Dardanelles) into Asia in 334 B.C.E. He defeated a Persian force at the Granicus River near the ancient city of Troy. He proceeded along the east shore of the Mediterranean Sea, then inland into Asia Minor, where, according to legend, he cut the intricate Gordian Knot with his sword rather than attempting to untie it, thus foreshadowing his ascent to rule Asia. In 333 B.C.E. at Issus in present-day northeastern Syria Alexander defeated the main Persian army under King Darius III.

Alexander and his army headed southward into present-day Lebanon, and in 332 he captured the Phoenician city of Tyre. He continued southward along the north coast of the Sinai Peninsula into Egypt, which he conquered with little resistance. That same year he established Alexandria on Egypt's northern Mediterranean shore. This city became the commercial, literary, and scientific center of the Hellenistic Greek world. He crossed the Euphrates and Tigris Rivers and in 331 defeated Darius once and for all.

In subsequent years until his death in Persia in 323 B.C.E. probably of malaria, Alexander expanded his domain eastward as far as the Jhelum River in India, founding other cities along the way. His army traversed a total of some 20,000 miles of territory, founding cities as they progressed.

The conquests of Alexander the Great began what is called the Hellenistic Age. Macedonian rulers considered themselves part of the Greek tradition and furthered Greek culture throughout his empire.

This gold stater, showing Alexander the Great, was used by Macedonians in the mid-fourth century B.C.E. (Drawing by Patti Erway)

When Philip's forces occupied more of Thrace, the Athenians, at Demosthenes' urging, united with the Thebans against the Macedonians. Philip defeated the combined Athenian-Theban army at the Battle of Chaeronea, after which he moved into the Peloponnese and completed the conquest of Greece. In 337 B.C.E. he organized the League of Corinth. In 336 B.C.E. during preparations for an invasion of Persia Philip was assassinated by a Macedonian youth, who had probably been hired for the task.

Philip's consolidation of the Greek Peninsula, plus his creation of a powerful military with talented generals, made possible the

Alexander the Great consults the Delphian Oracle in this 1898 painting. (*Library of Congress [LC-USZ62-46320]*)

creation of an empire on three continents by his son, Alexander.

Alexander the Great

Alexander III (see sidebar, p. 503) succeeded his father, Phillip II, to the throne at the age of 20. During his first years of rule he consolidated his power over Macedonian rivals, the Greeks. In 334 B.C.E. he embarked on an invasion of Persia, as his father had planned, and conquered much of Asia Minor. In 332 B.C.E. his Greco-Macedonian forces defeated the PHOENICIANS at Tyre on the eastern Mediterranean Sea and subjugated the Egyptians. That same year he founded the city of Alexandria in North Africa. Over the next years Alexander pushed eastward into Asia, conquering territory and founding other cities. By 327 B.C.E. the Alexandrian Empire stretched from the Greek Peninsula and Egypt as far east as the border of India. Alexander withdrew from India to Persia in 325–324 B.C.E. He died in 323 B.C.E. while planning a sea voyage around Arabia.

After Alexander

After Alexander's death his generals carved up his empire and founded their own states. Among them were two dynasties that held power through much of the eastern Mediterranean world—the Ptolemies in Egypt and the Seleucids in Syria—until the ascendancy of the Romans. With this continuing spread of Hellenism (Greek culture), Koiné Greek (common Greek) became an international language.

Macedon, one of the divisions of the new order, with Greece as a dependency, went through a series of power struggles over the next centuries. On the death of Antipater, Macedon's first ruler after Alexander, Cassander, Antipater's son, defeated a faction led by Polyperchon and married Alexander's half sister Thessalonica. In 315 B.C.E. he refounded the seaport city of Therma as Thessalonica (or Salonika). In 305 B.C.E. Cassander proclaimed himself king of Macedon.

Cassander's death in 297 B.C.E. began a period of short-lived reigns until Antigonos II rose to power in 276 B.C.E. Among the problems facing the Macedonians just before and during Antigonos's reign were invasions of the GALATOI (the Greek name for CELTS), which began in about 279 B.C.E. Antigonos, who ruled until 239 B.C.E., was also forced to contend with uprisings of the Greek city-states. He defeated Sparta and Athens in the Chereimonidean War of 267–261 B.C.E. and managed to maintain Macedonian control over the Aegean Sea and reestablish Macedon as an economic power. Yet unrest continued, and his nephew, who rose to power in 229 B.C.E. as Antigonos III, continued the restoration of Macedonian hegemony throughout the Greek Peninsula during his eight-year reign.

Wars with Rome

The new threat to Macedonian power was Rome, expanding from the west. Antigonos's successor, Philip V, who gained power in 221 B.C.E., had success in the First Macedonian War in 215–205 B.C.E., seizing Roman territory in Illyria while the ROMANS were fighting Hannibal and the CARTHAGINIANS on the Italian Peninsula in the First Punic War. In the Second Macedonian War of 200–196 B.C.E. Philip V was decisively defeated by the Romans and their Greek allies in the Battle of Cynoscephalae, after which he was forced to pay an indemnity and give up much of the Macedonian navy, as well as control of territory outside Macedon proper. After restructuring the Macedonian economy accordingly, he turned his ambitions northward with campaigns in the Balkans in 184–181 B.C.E.

Philip's successor, Perseus, who attained power in 179 B.C.E., aroused Roman concern by making alliances with Greek city-states, and Rome initiated the Third Macedonian War of 171–168 B.C.E. After a decisive victory at Pydna the Romans took Perseus as a captive to Italy and divided Macedon into four republics. A pretender to the throne, Andriscus, claiming to be Perseus's son, tried to revive a Macedonian king-

dom, leading to the Fourth Macedonian War of 149–148 B.C.E. The Romans easily suppressed the rebellion, executed Andriscus, and in 146 B.C.E. annexed Macedon, thus establishing the first Roman province. With its continuing expansion into the Balkans Rome incorporated northern and eastern parts of greater Macedon into the province of Moesia in 15 C.E.

Later Macedonia

The region of Macedonia fell under the rule of the BYZANTINES after the division of the Roman Empire into Western and Eastern parts in 395 C.E. Various peoples invaded the region over the centuries—the HUNS, OSTOGOTHS, VISIGOTHS, AVARS—but none of these peoples established a permanent presence. The SLAVS, who entered in waves in the sixth–seventh centuries, settled in northern Macedonia. In the ninth century the BULGARS controlled central Macedonia and by the 10th century extended their holdings briefly to the coast. As the centuries progressed the Bulgarians and Serbs in the north, the Greeks in the south, and Byzantines in the east continued to contend over the region until the Ottoman Turks (see TURKICS) made it part of the Ottoman Empire. The present borders of the modern Former Yugoslav Republic of Macedonia, whose peoples are mostly of Slavic ancestry, were defined in 1913 (see MACEDONIANS: NATIONALITY).

CULTURE (see also GREEKS)

Ancient Macedonian culture has its basis in the Hellenic culture of the Greeks. In its early stages the kingdom of Macedon depended on local agriculture, which thrived on the fertile and cattle-rich coastal plain. Silver mines in eastern Macedonia were also developed. With conquest the gold mines of Thrace also provided wealth. Macedon also became a trading empire through control of the Aegean Sea. Macedonian society, with its strong ruling family and rulers who had multiple wives, resembled the palace culture of the MYCENAEANS more than that of the classical Greek city-states. Later in its history Macedon became increasingly Romanized. Rome built a number of roads through the region, the course of which modern roads still follow.

The ancient Macedonians, occupying a region that was a crossroads and melting pot of many peoples, can be said to be less a people with a distinct tradition than inhabitants of a political entity that was the kingdom of Macedon. The story of Macedon, in the apparent identity of its

founders and in its creation of a vast empire spreading Hellenistic civilization, can be said to be part of that of ancient Greece.

Macedonians: nationality (people of Macedonia)

GEOGRAPHY

Macedonia is landlocked by Serbia and Montenegro to the north, by Bulgaria to the east, by Albania to the west, and by Greece to the south. It has an area of 9,928 square miles. Deep valleys, fertile steppes, mountains, and hills mark the terrain. The Rhodope Mountains lie to the east, where Mount Korab (9,068 feet), the republic's highest peak, is found. The Babuna Mountains divide the Bitola plain in the south from the Skopje plain in the north. The Vardar River, the republic's largest river, bisects the country. Principal lakes include the Doiran, Ohrid, and Prespa.

INCEPTION AS A NATION

When the Roman Empire was divided into the Western Roman Empire and the Eastern Roman Empire in the fourth century C.E., Macedonian lands fell under the rule of the BYZANTINES. SLAVS settled the region around the seventh century, and Bulgaria seized Macedonia from the Byzantines in the ninth century. Macedonia was restored to the Byzantine Empire in 1261 and then conquered by Serbia in the 14th century. Ottoman Turks (see TURKICS) invaded Macedonia and it fell under their control in the late 14th

century, remaining part of the empire for five centuries.

The Treaty of San Stefano, ending the Russo-Turkish War (1877–78), temporarily gave Macedonia to Bulgaria; Bulgaria, Serbia, and Greece all claimed ethnic rights to Macedonia. The treaty was nullified by the Congress of Berlin in 1878, again placing Macedonia under Ottoman control.

During the Balkan Wars (1912–13) Macedonia was split among Greece, Serbia, and Bulgaria. During World War II (1939–45) Bulgaria occupied Macedonia; the Bulgarian armistice treaty of 1944 established Macedonia's prewar boundaries, confirmed in the 1947 peace treaty. By 1945 Macedonia became part of Yugoslavia, under the leadership of Josip Broz Tito, forming the People's Republic of Macedonia, later known as the Socialist Republic of Macedonia. It declared itself an independent republic in 1992—becoming known as the Former Yugoslav Republic of Macedonia (FYROM).

CULTURAL IDENTITY

The cultural identity of the people of the Former Yugoslav Republic of Macedon (as opposed to peoples in the other parts of the region that comprises greater Macedonia) has been an issue of contention and confusion since the nation was formed in 1991, seceding from the former Yugoslavia. From the start the new republic aroused antagonism in Greece, which objected to its use of the name Macedonia, a Greek word, since the people of the FYROM are ethnically and linguistically Slavic. The proposed flag of the FYROM, which had the 16-pointed star of Vergina associated with Alexander the Great, further affronted the Greeks, since Alexander of the ancient MACEDONIANS drew culturally from the GREEKS. Nationalists among the Slavic Macedonians of the FYROM assert that when Slavs entered the region in the seventh century C.E., they became so closely intertwined with the natives (whom nationalist scholars have termed "Old Macedonians") that they established a "biological compromise" in which a new ethnicity, which could claim the Old Macedonian heritage to be as much its own as its Slavic heritage, was born. Thus Slavo-Macedonian nationalists of the FYROM regularly claim as part of their cultural identity architectural and artistic artifacts from the classical Greek period and earlier.

Greeks resist this identification, since the most notable of the ancient remains in Macedonia (which the Slavo-Macedonians are claiming as part of their heritage) are stylisti-

This photograph shows a Macedonian family in 1900. (*Library of Congress, Prints and Photographs Division [LC-USZ62-118864]*)

cally Greek; the reason for this is that the kingdom of Macedon was founded by Perdiccas I, a Greek from Argos, and that the Macedonian kingly line, including Philip and Alexander the Great, descended from him. The Macedonian nobility was Greek, culturally at least, as their material culture demonstrates, and the culture of the native peoples of the region—ILLYRIANS, THRACIANS, and those of other descent—who were peasant farmers, left less in the way of culturally identifiable remains. Greeks see the people of the FYROM as for the most part Slavic in ethnicity and believe that their claim to an Old Macedonian heritage is an attempt to co-opt what is essentially Greek. By the time Slavs entered the Macedonian region, this Greek culture was long gone, and the peoples with whom the Slavs joined and intermarried had little more claim to the Macedonian Greek heritage of classical and Hellenistic times than had the incoming Slavs.

Meanwhile the Albanian ethnic minority in the FYROM (themselves descended from the ancient Illyrians, who may have lived in the Balkans from as early as the late second millennium B.C.E.) began lobbying for more recognition, feeling that their minority status was preventing full participation in the country. When in 1995 Albanians tried to found an Albanian language university, the University of Tetovo, it was declared illegal by FYROM authorities because a state university cannot, under FYROM law, be established by private individuals outside state channels. Its founding caused clashes between police and demonstrators that resulted in the death of one Albanian. The university has since maintained a tenuous existence, holding classes in stores, private

homes, and sometimes mosques. Albanians support the university by a voluntary tax.

The history of the FYROM thus far demonstrates how tenuous is the cultural identity of its Slavo-Macedonian majority, as the very existence of the nation has come under great threat by events in neighboring Bosnia, where SERBS, CROATS, and Muslim Bosniaks (see BOSNIANS AND HERZOGOVINIANS: NATIONALITY) engaged in bloody and protracted civil war that caused thousands of refugees to flee to the FYROM, and in Kosovo in the Federal Republic of Yugoslavia, where Serbian authorities and Albanian separatists also engaged in armed struggle.

Maeatae

The Maeatae are classified as a Celtic tribe or confederation of tribes. They lived in Britain in present-day northern Scotland and are discussed as CELTS or SCOTS. The BORESTI, VACOMAGI, and VERTURIONES were possibly part of this group, which formed by about 200 C.E.

Magyars (Ungarii; Hungarians)

The Magyars, originally a steppe people from Asia, are the founders of Hungary. They are

known also as Hungarians, although modern Hungarians are an ethnic mix. The terms Magyar and Hungarian are used interchangeably, although in modern usage Magyar is sometimes used to distinguish the Hungarian-speaking population of Hungary from other minorities. (Sometimes the Magyars are referred to as HUNS; although they may have had some ancestors from among the Huns, the two peoples had a different tradition.)

ORIGINS

The nomadic proto-Magyars were related to FINNO-UGRIANS living in the western Ural Mountain region of western Siberia. By the fifth century C.E. they roamed southwestward to the region of the Caspian Sea and had considerable contacts with Turkic KHAZARS. It was under the influence of the Khazars that the "crystallization" of Magyar identity took place. Among their early rulers were elites from among the TURKICS. At some point they too adopted a nomadic way of life on the steppes. By 830 they had reached the west bank of the Don River in Europe (present-day western Russia), about which time they formed a tribal confederacy of seven related clans: the Kari, Kasi, Kurt-Djarmat, Magyari (Madjary), Nyék (Nyak), Taryán, and Yenö. In the early ninth century three dissident clans of Turkic Khazars, known as Kavars (Kabars), joined them. The 10 tribes formed the On Oghur (Ten Arrows) confederation (the name of which has been theorized to be the source of the name Hungary).

LANGUAGE

The Magyar language, generally called Hungarian, belongs to the Ugric branch of the Finno-Ugric family. It contains many ancient Turkic words, especially relating to animal husbandry and political and military organization.

HISTORY

The Magyars along the Don River were under pressure from the Turkic PECHENECS. In the late ninth century the Magyars, under Árpád (see sidebar), became involved in the competition for control of eastern Europe when the BYZANTINES under Eastern Roman Emperor Leo VI paid them to attack the Turkic BULGARS, led by Simeon I. Although they had initial success, they suffered losses when Simeon in turn hired Pechenegs as mercenaries. With continuing pressure from the Pechenegs the Magyars relocated to the Hungarian plain, the territory known in ancient times as Pannonia (roughly

Árpád: National Hero of Hungary

Árpád was born in 869 C.E. According to legend he was elected chieftain of the Magyar tribe at the ceremonial sacrifice of his father, whose blood was then shared among the Magyar leaders. Árpád ruled an alliance of seven Magyar tribes and three Khazar tribes, chosen to lead them to a new homeland across the Carpathian Mountains because of pressure from the Pechenegs. In the course of their migration they encountered Byzantines, Bulgars, Vlachs, and Slavs, including the Moravians, before settling on the Hungarian plain. Árpád died in 907; after his death dukes of the house of Árpád ruled what would evolve into modern Hungary. Stephen I became the first king of the Árpád dynasty in 1000, and Andrew III, who died in 1301, was the last. Árpád's children were Tarhos (Tarkascu), Jegel, Jutas (Jutosca), and Zolta (Zaltasz).

Árpád appears in many Hungarian legends and folklore as a brave leader on the battlefield against the Magyars' enemies.

modern Hungary), in about 895. There they campaigned successfully against VLACHS and against SLAVS, among them the MORAVIANS, whom they defeated in 906 or 907.

After Árpád's death in 907, dukes of the Árpád dynasty ruled the Magyars. Over the next years the Magyar horsemen carried out raids in central and western Europe—including Bremen in present-day northwestern Germany, Orléans in present-day central France, and Constantinople in present-day Turkey. They did not suf-

fer a major defeat until 955, when King Otto I of Germany (later the Holy Roman Emperor) defeated them on the Lechfeld, a plain along the Lech River in Bavaria.

Géza, a duke of Hungary, encouraged Christianity among his people. His son, Stephen, succeeded him, he was anointed as King Stephen I in 1000, which can be considered the beginning of modern Hungary (see HUNGARIANS: NATIONALITY). He was later canonized as a saint.

FINNO-UGRIANS; TURKICS)**Economy**

Until migrating to central Europe the Magyars lived a nomadic way of life similar to that of other steppe peoples. Their warriors fought with bow and arrows from horseback, as did most steppe warriors, such as the Huns and AVARS. They had a stratified society, in which elites owned huge herds of cattle and sheep that were herded for them by peasants. Magyars traded in Islamic silver and horses.

An account by the Jewish traveler Ibrahim ibn Yaqub mentions Magyars (whom he calls Turks) trading in the city of Prague in Bohemia (present-day Czech Republic). He says they traded goods (perhaps horses and cattle) and coins for slaves, tin, and various kinds of fur.

Government and Society

After the creation of the Hungarian state in the reign of Géza elaborate public buildings were erected, and other trappings of civilization were adopted, as Magyars made a rapid transition from a steppe warrior to an early medieval society. Stephen abolished tribal divisions among his people and did away with pagan customs involving dynastic succession. Magyar ethnicity became dominant, with Slavic elements subsumed into the new Hungarian identity.

Technology and Art

The material culture of the early Magyar state (called the Bialobrdó culture after a site in Croatia) combined many influences, including Slav-Avar (a mixture of Slavic and Avar styles), Magyar, and Moravian. Its metalwork is characterized by plaited wire jewelry, sheetwork pendants, snake-headed bracelets, and S-shaped temple rings (rings suspended from a headband). Motifs of this style survived into the late Middle Ages and have been used in recent folk costumes.

Religion

Conversion of the Magyars to Christianity was spearheaded by Otto I, emperor of Germany. In

972 Prince Géza accepted the new faith while, however, retaining the old, as he continued to sacrifice to pagan idols despite reprimands from Otto's missionaries.

King Stephen, to avoid German influence, adopted Christianity directly from the pope. He worked to convert other Magyar leaders in part to establish his overlordship and subsume them under his rule.

The Magyars settled in territory that became parts of other modern nations, especially Croatia, Romania, Slovakia, Ukraine, and Serbia. Those Magyar descendants in Romania, living mostly in the area of the former Magyar Autonomous Region, are called Székely (Szeklers), meaning "frontier guards." The name was applied to them because they had been sent to Transylvania to protect Hungary's eastern frontier region.

Maltese: nationality (Maltese;
people of Malta)**GEOGRAPHY**

Malta is made up of a small cluster of islands in the Mediterranean Sea, south of Sicily. The total area of the islands (Malta, Gozo, Kemmuna, Kemmunett, and Filfla) is 122 square miles.

Coralline limestone plateaus make up much of the terrain. Malta's highest point reaches 784 feet. Malta's natural resources are limited, with no rivers or lakes; much of the country's water supply is from desalination plants.

INCEPTION AS A NATION

After being controlled by various powers in ancient times, including the GREEKS, CARTHAGINIANS, ROMANS, and BYZANTINES, Malta was under Arab rule imposed by the SARACENS from 870 C.E. until 1090. In that year NORMANS from Sicily seized control. It existed as a fiefdom of Sicily and of the Holy Roman Empire. In 1530 Emperor Charles V passed Malta to the Knights

of Saint John of Jerusalem. The Knights resisted Ottoman Turk (see TURKICS) invasions throughout the 16th century.

In 1798 Malta surrendered to the French under Napoleon I Bonaparte. After British occupation in 1800, the Treaty of Paris of 1814 made Malta a British colony. In 1921 under British rule Malta was granted a constitution and a locally elected legislature in return for aid in World War I (1914–18). A series of constitutions were enacted and revoked throughout the early 20th century until a constitution granting self-government was reinstated in 1961. By 1964 Malta gained full independence; 10 years later it was declared a republic.

Maltanese: nationality time line	
C.E.	
870	Saracens invade island, part of Byzantine Empire.
1090	Norman king of Sicily conquers country.
1523	Ottoman emperor Suleiman I grants Knights Hospitaller island of Malta.
1530	Holy Roman Emperor Charles V cedes Malta to Knights of St. John of Jerusalem.
1565	Suleiman I of Ottoman Turks fails to capture Malta despite seige.
1647	Giovanni Francesco Abela writes about Maltese history.
1732	Manoel Theater holds its first show, Scipione Maffei's classic tragedy, <i>Merope</i> .
1776	National Library of Malta is founded.
1798	Napoleon I Bonaparte expels Knights of Malta; Maltanese revolt.
1800	British capture Malta; Treaty of Paris of 1814 makes it British colony.
1849	Malta establishes council of government under British rule.
1923	Poet Dun Karm (pseudonym, Carmelo Psaila) writes lyrics of national anthem, <i>Innu Malti</i> (Hymn of Malta).
1933	Malta is reaffirmed as colony of United Kingdom.
1939–45	During World War II Germany and Italy bomb Allied bases on island.
1945	Playwright and novelist Francis Ebejer begins writing career.
1947	United Kingdom grants Malta self-rule.
1959	Autonomy is revoked.
1964	Malta declares full independence.
1965	Malta joins United Nations (UN).
1974	Malta becomes republic. National Museum of Fine Arts is founded in Valletta.
1983	Folklore Museum is founded in Gozo.
1994	Composer Charles Camilleri uses folk themes in oratorio <i>Pawlu ta' Malta</i> .
1995	John Schranz and Ingemar Lindh launch interdisciplinary research program at University of Malta, known as Questioning Human Creativity as Acting (xHCA).
2002	Cultural Heritage Act of 2002 establishes Heritage Malta as national agency entrusted with management of national museums and heritage sites.
2004	Malta joins European Union (EU).

MALTANESE: NATIONALITY

nation:
Malta; Republic of Malta (Repubblika ta' Malta)

derivation of name:
From Phoenician *MLT* or "refuge"; possibly related to the Greek and Latin word *melitta*, "honey"

government:
Democratic republic

capital:
Valletta

language:
Official languages are Maltese (Semitic) and English; Italian is also spoken.

religion:
More than 95 percent of the population are Catholic.

earlier inhabitants:
Phoenicians; Greeks; Carthaginians; Romans; Byzantines; Saracens; Normans

demographics:
About 96 percent of the population of Malta are Maltese; minorities include British, Arabs, French, Normans, Spanish, and Italians.

CULTURAL IDENTITY

Despite Malta's geographical location between Europe and Africa as well as the fact that Maltese speak a Semitic language, the Maltese identify themselves culturally with Europeans. The Maltese have shared the same religion and culture with Europe for centuries; the Catholic religion has played, and still plays, a leading role in the molding of the culture. Moreover, because Europeans colonized Malta for a thousand years after the Saracens surrendered the islands to the Normans in 1090, most Maltese feel culturally closer to Europe.

In a survey carried out in 1995 the Maltese were asked which of the following they felt most part of: their village or town, their district, their country, the countries of the Mediterranean, Europe, the West, or the world. The results were then compared to the results of a similar survey held in Spain. According to the survey most Maltese (65 percent) see themselves primarily as citizens of their country and only 6 percent of Maltese and 2 percent of Spaniards think of themselves as citizens of Europe. Whereas 22 percent of Spaniards identify with the Mediterranean region, only 2 percent of Maltese do so.

The word *ghana* (pronounced "an-ney") refers to Maltese indigenous singing, and *ghannejja* (pronounced "an-ney-ya"), to the singers. *Ghana* has changed both stylistically and in content over the years; it has become associated largely with three highly stylized genres, in particular with the genre of *spirtu pront* (or

quick spirit, a ritualized, improvised song duel). Current versions are variously viewed by different segments of society. The middle and upper classes tend to regard it as quaint folk singing, practiced by working-class men, and consider the forms tainted by the partisan political use made of them by their present "low" practitioners. Its working-class practitioners have seized upon the attention awarded *ghana* by intellectuals to see it as being somehow part of Maltese cultural identity, a pure entity that they are preserving. By preserving *ghana* the *ghannejja* consciously see themselves as "guardians of folklore" and in this role use *ghana* as a vehicle for statements about cultural traits in Maltese society.

Manapii See MENAPII.

Mandubii (Mandubians; Mandurii)

The Mandubii are classified as a Celtic tribe. They lived in Gaul around the town of Alesia on Mont Auxois, about 32 miles northwest of present-day Dijon in eastern France, and are discussed as CELTS or GAULS. It is assumed they were allies of the AEDUI. A number of tribes under Vercingetorix made a stand against the ROMANS under Julius Caesar at Alesia in 52 B.C.E., and the town eventually fell. The Mandubii were not one of the tribes listed as part of the Gallic alliance.

Manx (Manxmen; people of the Isle of Man)

The Manx are people of the Isle of Man (also known as Mann and Ellan Vannin). They are descended in large part from the CELTS. The island, with its strategic position in the Irish Sea and mild semitropical climate, was a focus of competition for territory between the IRISH and WELSH and later the VIKINGS, especially Norse from Norway, during the first millennium C.E. As a result the Manx culture can be characterized as Hiberno-Norse, a mixture of mostly Irish Celtic and Viking influences. Hiberno-Norse building styles and Norse folk

A Maltese woman hangs laundry in the 1940s. (Library of Congress, Prints and Photographs Division [LC-USZ62-70798])

beliefs contributed to Manx culture. The most important contribution of the Vikings to the Isle of Man however, was the Tynwald, the Manx legislative body or parliament.

ORIGINS

The Isle of Man has been inhabited since 7000 B.C.E. in the Mesolithic Age, by which time the climate had improved enough from earlier Ice Age conditions to allow subsistence. By 4000 B.C.E. people on Man had become farmers. As elsewhere in the Atlantic coastal zone the arrival of farming was accompanied by the practice of building megalithic monuments. Around 2000 B.C.E. the Bronze Age Beaker culture appeared on the Isle of Man.

The chronology of finds in the area of Billdown north of Castletown is typical of Manx prehistory. It is extremely rich in Neolithic constructions and artifacts, the former represented by a causewayed enclosure, stone circles, standing stones, and round cairns. After 1000 B.C.E. ritual use of the area had ceased and intensive farming began, possibly suggesting the arrival of newcomers. A number of roundhouses built there during the first millennium B.C.E. show that people were living an Iron Age Celtic lifestyle.

LANGUAGE

Manx is related to the Gaelic (Goidelic) branch of the Insular Celtic languages, which includes Irish and Scots Gaelic. The Manx language, however, has an overlay of Norse words. The last native speaker of Manx died in 1974, but a revival movement is under way to teach children Manx.

HISTORY

Between the fifth and ninth centuries C.E. possession of the Isle of Man was contested by the Dalriadic SCOTS of eastern Ireland and western Scotland and the Welsh. In 625 Edwin, king of Northumbria of the ANGLO-SAXONS, conquered Welsh Anglesey and the Isle of Man. Anglo-Saxon control of Man was brief, and at Edwin's death it reverted to the Scots and again, in about 825, to North Wales.

Vikings and Manx

The Vikings who most strongly impinged on the Isle of Man were from the settlements on the east coast of Ireland, especially Dublin. They made Man a prime staging ground for forays elsewhere around the rim of the Irish Sea during the ninth century and later. The island

for the first period of Viking raids seems to have been subject either to the Norwegian kings of Dublin or to independent Viking chieftains. During the 10th and 11th centuries the Viking earls of Orkney laid claim to Man, as did chieftains loyal to the Crown of Norway, but in the 12th century the king of the Island swore fealty to King John of England. Thereafter the English Crown continued to assert the right to fealty from the kings of Man—a right that did not become a reality, however, for 200 years. Scottish kings fought against the Viking Norse on Man and the surrounding islands, and in 1265 what was known as the Kingdom of Man and the Isles was transferred to Alexander III of Scotland. In 1290 the people, voting in their Tynwald or parliament, voluntarily placed themselves under the protection of Edward I of England.

After this the island became a prize contested between Scotland and England, with control passing time and again from one to the other. In 1405 Henry IV of England finally defeated the Scots and made the English Crown's sovereignty over Man a reality. It has never, however, been a part of the United Kingdom in terms of ceding the self-governing powers of the Tynwald to the English Parliament.

During the late 17th and early 18th centuries as a result of its strategic position in the Irish Sea the island became a center of extensive smuggling into the United Kingdom. To curtail this the island was placed under the almost complete control of the imperial government. In 1866 Westminster restored some of its self-governing powers to the Tynwald. The island's current status is that of a Crown dependency with a royal governor, the queen's representative, appointed every five years.

MANX

ninth century	Viking raids begin; Viking Norse begin settlements, establish Tynwald.
1265	Kingdom of Man and Isles transferred to Alexander III of Scotland.
1290	Tynwald votes to place Isle of Man under protection of Edward I of England.
18th century	Isle of Man put under almost complete control of British government.
1866	Westminster restores some self-governing powers to Manx; Tynwald becomes a popularly elected assembly.

CULTURE (see also CELTS)

Economy

The Isle of Man's semitropical climate and fertile soil have long made agriculture an important part of the economy; more than half of the land is farmed. The many good harbors contributed to fishing; in the Middle Ages the island had a major herring fishery. Viking settlers in the ninth century C.E. established trading towns and included Man in their overseas trading networks. Man's location off the coast of Britain made it ideal for smugglers. Vast amounts of commodities, including spirits, wines, tea, coffee, tobacco, and East India goods, were imported to Man during the 17th and 18th centuries and then smuggled to England to avoid duties.

Government and Society

With their Tynwald (from the Norse *Tingvollr*, "assembly field"), the Manx claim the oldest continuously running parliament in the world. The Norse kings who ruled Man after the ninth century C.E. introduced the Norse system of legislation and open-air assemblies, where laws were promulgated (read aloud to the people), where the ruling elite's authority was displayed, and where wrongdoers were punished. During the time of the later Norse kings the Isle of Man formed the center of a large maritime kingdom, together with the Scottish Hebrides, called the Kingdom of Man and the Isles. This kingdom was ruled by a Tynwald with 32 members: 16 from the Isle of Man and 16 from the Isles of Lewis, Skye, Mull, and Islay. During the 12th century the Isles of Mull and Islay (and their eight representatives) were lost to the Argyll Scots, and the Tynwald was reduced from 32 to 24 members.

Because of this early establishment of the Tynwald the development of democracy on the Isle of Man at times was more advanced than in England. With the House of Keys election bill (referring to the building in Castletown where the Tynwald long met) in 1866 the Tynwald became a popularly elected assembly.

Literature

Little literature has been written in Manx over the centuries. Aside from translations of religious works, including the 1610 English Book of Common Prayer, there are ballads and what are known as *carvals*, a form of Christmas carol. The Bible was not translated into Manx until the 18th century.

Religion

The Isle of Man is named for a Celtic sea god called Manannan Mac y Leir, who figures in Irish as well as Manx mythology. In Manx belief Manannan, although he had left the Isle of Man, dwelled on an island nearby under the sea and continued to cast his protective mists over Man. From time to time his island rose out of the sea, letting him look on his namesake land.

Christianity was introduced to the Manx from Ireland in the sixth century C.E. by Irish monks. Many Manx churches are dedicated to Irish saints. Cross slabs, some with ogham inscriptions, which almost certainly date to the period between the sixth and 10th centuries, are in the tradition of the Irish high or ringed cross, which had its origins in the standing stones of the PICTS. In the ninth century chapels called *keails* were built, with associated burial grounds; the ruins of these are found throughout the island. Many holy wells on Man still commemorate the names of early Celtic saints. After the Norse on Man became Christian, they created some of the finest stone crosses on the island.

Inhabiting an island that is in some ways a microcosm of the larger islands of Britain surrounding it, the Manx have contrived to chart an independent course from the other insular peoples and with their Tynwald have been in the forefront of the political evolution, undertaken eventually by all the European nations, to democracy.

Marci (Marcians; Marsi; Marsians)

The Marci are classified as a Germanic tribe. They lived east of the Rhine near the BRUCTERI,

CHATTI, CHERUSCI, and SUGAMBRI in present-day western Germany. Little is known about them; they are mentioned by the Greek geographer Strabo (first centuries B.C.E. and C.E.) and the Roman historian Tacitus (first–second century C.E.) in connection with campaigns of the ROMANS against GERMANICS east of the Rhine in the late first century B.C.E. and early first century C.E. They are associated with the Chatti and Cherusci and supported the Cherusci leader Arminius in his revolt against Rome in 9 C.E. Some Marci reportedly merged with the Sugambri.

Marcomanni

The Marcomanni are classified among those GERMANICS known as SUEBI. In the course of their history, they lived in present-day Germany, Czech Republic, and Austria. Along with other Germanic tribes, they battled the ROMANS in what is referred to as the Marcomannic or Marcomannian Wars in the second century C.E.

ORIGINS

The Marcomanni are thought to have settled along the Main River, a tributary of the Rhine, in present-day south-central Germany by the first century B.C.E. In 8 to 6 B.C.E., they settled along the upper Elbe and Moldau Rivers in the region of Bohemia in present-day Czech Republic. The QUADI, Marcomanni allies, settled to the west in the region of Moravia. The Marcomanni eventually held territory in present-day northern Austria as far south as the Danube.

LANGUAGE

The Marcomanni spoke a Germanic language. Little is known about the different Germanic dialects until about the fourth century C.E., by which time the Marcomanni had largely disappeared as a distinct group.

HISTORY

An early mention of the Marcomanni in Roman texts mentions how, in 8 to 6 B.C.E., Emperor Augustus planned a pincer operation from the Rhine to the Danube in order to entrap the Marcomanni, Quadi, and allied tribes under King Marobodus considered a threat to Rome. The Romans called off the campaign because of unrest elsewhere. Texts also refer to a defeat of the Marcomanni by the CHERUSCI under Arminius in 17 C.E. It was Arminius’s annihila-

tion of three Roman legions in 9 C.E. and subsequent unsuccessful Roman attempts to regain control of the territory east of the Rhine forced the Romans to roll back the imperial frontier to the Rhine itself, a situation that would determine relations between the Romans and Germanic tribes for centuries.

The Marcomanni were among those peoples whose movement across the Danube into present-day Hungary in the second century C.E. made the Romans aware of the changes happening deep in the Germanic interior, probably caused in part by population pressures and in part by the growing level of conflicts among peoples who had become militarized by their participation in the Roman slave trade and whose societies had been destabilized by increasing socioeconomic differentiation both between and within tribes. Conflict with some of these tribes may have catalyzed the Marcomanni, who by this time had become more peaceful under Roman influence. In particular they were affected by the expansion of power of the Gutonen, the tribe that would later form the kernel of the GOTHs, from their base along the Vistula River in present-day Poland.

The Marcomannic Wars

In the second century the Marcomanni and allied tribes successfully raided southward, crossing the Danube into the Roman provinces of Pannonia (modern Hungary and surrounding regions) and Dacia (roughly modern Romania). They are thought to have numbered around 6,000. In 167 C.E. the Marcomanni, along with the Quadi and the Iranian IAZYGES, began an even more massive movement to the head of the Adriatic Sea, where they raided the cities of Aquileia and Oderzo, close to present-day Venice.

In addition to the Marcomanni and Quadi other Germanic peoples were part of the

late fourth century–453 Marcomanni under rule of Huns.

Marcomannic Confederation. The exact number of tribes is not known. During negotiations with the Romans after the first invasion in 167 C.E. King Ballomarius of the Marcomanni spoke for at least 11 tribes, and perhaps even more were involved. Among them were the Germanic LOMBARDS and VANDALS and Iranian SARMATIANS living in present-day Hungary at the time. (There is archaeological evidence for the presence of northern Germanics at this time in Marcomannic Bohemia and Austria. And Roman arms probably taken as booty have been found in contemporary burials in Schleswig-Holstein, Jutland, and the island of Fyn in present-day Denmark.)

The Roman emperor Marcus Aurelius organized legions, which included Germanic recruits, to move against the invading tribes in 166 C.E., the first year of the Marcomannic Wars, as Roman historians relate. The heavily armed Romans managed to drive back the invading Germanics, who lacked iron armor and helmets and whose iron weapons were few, consisting mostly of iron arrow points and short, single-edged swords. After losing Carnuntum on the south bank of the Danube near present-day Hainburg, Austria, the Romans recaptured it and used it as their base of operations. Despite some Roman defeats by 175, they had killed hundreds of Germanic warriors; destroyed numerous Germanic villages, burning their log-and-thatch huts; and sent women and children (who in some instances killed themselves rather than be captured) into slavery. After visiting Egypt and Athens Marcus Aurelius returned to Italy and further campaigned in the north until his death in 180. Because of his victories Rome announced the founding of two new provinces, Marcomannia and Sarmatia. But Marcus Aurelius's son, Commodus, resumed the policy of maintaining defensive positions along the Rhine and Danube. It can be assumed that some Marcomanni survived the Roman onslaught because they maintained their identity through ensuing centuries, and some continued to raid along the middle reaches of the Danube.

Lost Identity

By the early fifth century the Marcomanni fell under the rule of the HUNS invading from the east. They participated in Hunnic campaigns through the disintegration of the Hunnic Empire in 453. Their identity as a distinct group probably did not survive this period because the Elbe River Germanics were afterward generally discussed as Suebi. Some

Marcomanni perhaps found refuge among other peoples, such as the ALAMANNI, RUGII, and VANDALS. Some among them are thought to have settled in present-day Bavaria in southern Germany and were perhaps ancestral to the BAVARII.

As late as 500 a Queen Fritigil is said to have ruled a group of Marcomanni, an indication that remnants did survive, but afterward they disappear from the historical record.

CULTURE (*see also* GERMANICS)

Economy

Although they were not under direct Roman hegemony, the Marcomanni were profoundly influenced by Rome nevertheless, primarily through trade. Their territory lay within what archaeologists have called the "market zone" adjacent to the imperial border, where numerous coin finds indicate that a market economy developed during the first two centuries C.E. Tribes in the market zone developed a basically friendly relationship with Rome; the Marcomanni's neighbors the HERMUNDURI were allowed to make trading trips over the border onto Roman lands without a guard set over them. Roman traders in turn traveled deep into Germanic territory. Roman trade policy with tribes such as the Marcomanni aimed at making them depend on Rome for vital resources such as iron and grain and at developing markets within the tribe for Roman exports such as wine and pottery.

Government and Society

The Marcomanni were actually a confederation of tribes rather than a single tribe made up of clans.

Trade with the Romans had a profound effect on Marcomannic society (and, it is assumed, on that of their allies the Quadi as well). To facilitate trade Romans encouraged the emergence of authoritarian leaders among Germanic tribes with whom they dealt. Such leaders were desirable because they could negotiate trade treaties with Rome and take steps to curb the warlike tendencies of their young men. The Romans helped create such leaders by giving them rich gifts that enabled them to display their status and to bind followers to them in turn by gift giving. But although such developments in the short term made dealing with tribes such as the Marcomanni easier for the Romans, they tended to create tensions between the ruling class and the mass of free warriors. Such tensions increased the

importance of the *comitati*, the informal war bands, who would go off on raids for their own reasons and on their own authority, eventually in some cases leaving their tribe altogether to form a new one. It is not known whether this happened among the Marcomanni in particular, since there is little evidence of the specifics of their tribal structure, but it is highly probable that something of the sort occurred, and that the Marcomannic confederacy was under attack both from within and from without by other tribes destabilized by contact with the Romans.

Archaeological evidence for the increasing Romanization of the Marcomanni consists of structures, possibly villas or fortifications of some kind, made of Roman building materials.

The successful incursions of the Marcomanni and allied tribes onto Roman-held territory represented the second organized Germanic invasion of the Roman Empire, the first that of the CIMBRI and TEUTONES in the late second century B.C.E., which the Romans also repelled. Many more Germanic invasions followed.

Mari (Cheremis; Cheremisses; Cheremissians)

The Mari are a Finnic-speaking people classified among the FINNO-UGRIANS. They live mostly in Mari El, a republic in present-day east-central European Russia. Mari also live in neighboring regions, such as Bashkortostan, Perm, Tatarstan, and Udmurtia (see RUSSIANS: NATIONALITY). Classified as Volga (or Eastern Finnic), they were formerly known as the Cheremiss by Westerners; their native name Mari means “human being.” Their ancestral homeland is at the confluence of the Volga and Kama Rivers for centuries and, along with the MORDVINS, they are known as the Volga Finnic.

ORIGINS

The Mari are among the few Finnic-speaking tribes who still live in their most ancient known territory. In historic times they were actually organized as three groups, based on geographic differences: the Mari-kuryk (Mountain or Hill Mari), the Mari-olyk (Meadow Mari), and the Mari-erel (Eastern Mari). The Mountain Mari live on the western bank of the Volga River in the southwestern corner of the Republic of Mari El and are close-

ly related to those Mari living in the Vetluga River basin on the other side of the Volga. The Meadow Mari are those inhabiting the flatlands on the eastern bank of the Volga between the Vetluga and Viatka Rivers. The Eastern Mari live to the east of the Viatka along the Kama River and its tributaries. The Eastern Mari are further divided into several groups, of which four main ones can be identified: Kama, Belaia, Ik-Siun’, and Ural Mari.

LANGUAGE

The Mari language together with that of the Mordvins and the extinct MUROMA form the Volgaic group of the Finnic languages. There are two Mari dialects: Mari-kuryk (Mari-Hill or Mari-Hig) and Mari-olyk (Mari-Meadow or Mari-Low). Mari-Meadow is considered the official language (along with Russian).

HISTORY

From about 700 C.E. the Mari had close contacts with the Turkic-speaking CHUVASH, forming an alliance. In the 13th to 16th centuries they were under the dominion of the TATARS and afterward the Russian SLAVS.

The Finnish Mari peoples withstood the pressures of colonization from Russia far longer than most other Finnic tribes. Before and during the Middle Ages the Mari were politically connected with the Turkic peoples; originally with the Volga BULGARS, then with the Tatars of the Kazan khanate. In the 16th century when the Russian conquest of the Volga Basin began most Mari tribes remained loyal to the Tatars. Until 1552 the Mari were still fighting on the side of the Tatars until the ultimate fall of the khanate.

The Mari fought against Muscovite subjugation in a series of uprisings, known collectively as the Cheremis Wars. This unrest continued into the second half of the 16th century, when Mari begin to migrate eastward to escape forced Christianization generated by

Russian domination. This migration ended by the middle of the 18th century but caused the formation of the Eastern Mari group.

In 1937 the Soviet Union (USSR) initiated a policy of suppression of minorities, which led to relocation and a loss of traditional culture among the Mari. Since 1991 Mari El has been a republic within the Russian Federation. It borders the Chuvash Republic, the Republic of Tatarstan, and the Republic of Udmurtia.

CULTURE (*see also* FINNO-UGRIANS)**Economy**

The forest has been an important resource for the Mari. Many Mari work in farming and animal husbandry. Beekeeping has become important economically. Other industries that have historically been important to the Mari include metalworking.

Art

The Mari are known for traditional wood and stone carving and embroidery.

Music

The Mari have two musical instruments unique to their culture. One is a many-stringed zither called the *kusle*; the other is a *shyuvr* bagpipe. Their musical traditions include song lyrics that mention the Volga and reflect their love of nature, especially the forest and rainbows.

Religion

The Russian Mari nominally converted to Russian Orthodoxy in the 16th century under pressure from czarist Russia. The isolation of the Eastern Mari communities has enabled them to preserve the Mari religion, which is based on animist traditions rooted in a deep reverence for nature, especially trees. Religious rituals and animal sacrifice are performed in sacred groves called *keremet* and presided over by a *kart*, a priest. A *kart* blessed the president of Mari El at his inauguration in 1992, and a prayer book has been published. The Eastern Mari of Bashkortostan have best been able to maintain their cultural traditions.

In about 1870 a movement arose among them known as Kuga Sorta, “big candle,” in which they revived their traditional pagan religion in combination with a belief in the spirit world and in Christ as a prophet. Rituals, including marriage ceremonies, are performed in homes or forests around a large candle. A respect for nature is central to the cult.

Marrucini

The Marrucini are classified as an Italic tribe. They lived at the southern end of the region that was known to the ROMANS as Samnium (modern Abruzzi and part of Campania) in east-central Italy. Their principal city was Teate (modern Chieti) just inland from the east coast.

The fact that the Marrucini lived near the coast to the north of the Illyrian APULI means that their ancestors also may have been related to the ILLYRIANS and branched off from them, migrating from across the Adriatic, later fusing with ITALICS. However at the time of an inscription on what is known as the Bronze of Rapino from the mid-third century B.C.E. they used an Oscan dialect written in a Latin alphabet, not Illyrian; the Marrucian language was one of the Sabellian subgroup of the Oscan branch of Italic languages, related to Aequian, Marsian, Paelignian, Sabine, Vestinian, and Volscian.

The Marrucini are mentioned in fourth-century B.C.E. historical accounts as part of a confederacy with the MARSII, PAELIGNI, and VESTINI. Those tribes supported the SAMNITES against the Romans in 309–304 B.C.E. during the Second Samnite War and as a result are sometimes discussed as Samnites. Afterward they were ruled by the Romans. Some among them joined other tribes against Rome in the Social War of 90–88 B.C.E.

Marsi (Marsians)

The Marsi, classified as a tribe of ITALICS, lived about the former Lake Fucino (drained in the 19th century) in the Apennines in the present-day region of Abruzzi in central Italy, part of the area known to the ROMANS as Samnium. Their capital was Marruvium on the lake’s east shore. As are other ITALICS in the central Apennines they are known through contacts with the Romans. They played a key part in the Social War of 90–88 B.C.E.

ORIGINS

It is not known certainly when the Marsi formed a group distinct from other Italics and settled in the central Apennines. Roman writers refer to them as a distinct people by the fourth century B.C.E.

LANGUAGE

The Marsian language was one of the Sabellian subgroup of the Oscan group of Italic languages, related to Aequian, Marrucianian,

ancestry:

Italic

language:

Marsian (Italic)

Paelignian, Sabine, Vestinian, and Volscian. By the first century C.E. Latin was in use among some of the Marsi.

HISTORY

The Marsi, known as a warlike people (and named after the war god Mars), became allies of the Romans in 325 B.C.E. at the start of the Second Samnite War of 326–304 B.C.E. In 309 B.C.E., however, they were part of a confederacy, which included the MARRUCINI, PAELIGNI, and VESTINI, in support of the SAMNITES against the Romans (leading to their sometimes being discussed as Samnites.) With the defeat of the Samnites in 304 B.C.E., the Marsi again became Roman allies, only to revolt again briefly two years later; at that time the Romans punished them by seizing some of their lands.

The Marsi remained loyal allies of Rome until the Social War of 90–88 B.C.E., when various tribes revolted against Rome to achieve equal rights as citizens. Since their warriors were central to rebel efforts under their leaders Quintus Pompeius Silo and Caius Papius Mutilus (known to history by their Latin names), the Social War is referred to in some texts as the Marsic war (and in others as the Italic war). Although the Romans prevailed on the battlefield, resistance continued until the passage of a law granting citizenship to non-combatants in 90 B.C.E. Three years later citizenship was granted to all inhabitants of Italy south of the Po River.

CULTURE (see also ITALICS)

The Marsi were known to the Romans as practitioners of witchcraft and magic, with considerable skill in the healing arts, using herbs from the Marsian woods. A principal deity among them was Angitia, a goddess of healing. The Marsi built a temple to her at the southwestern end of Lake Fucino (near modern Luco).

The Greek historian Appian of the second century wrote that the Romans never triumphed over the Marsi or without the Marsi, indicating their value as soldiers.

Mattiaccians

The Mattiaccians are classified as a Germanic tribe. The Roman historian Tacitus of the first–second centuries C.E. describes them as

Mazovians (Masovians; Mazowszanie; Mazovshane)

The Mazovians were a tribe of Western SLAVS, living between the middle Vistula River and its tributary the Western Bug in present-day northern Poland—a region that came to be known as Mazovia—by the early ninth century C.E. Their principal fortified town was located at Plock on the Vistula. Their neighbors to the northwest, the KUYAVIANS, spoke a related dialect. The Mazovians and other Western Slavs were called WENDS by early medieval FRANKS. Along with the POLANIANS, who gained hegemony over other area tribes in the 10th century, the Mazovians are among the ancestors of the POLES. Some Mazovians, who settled in the Mazurian Lakes district of present-day northeastern Poland and the forests of southwestern Lithuania, located to the north of Mazovia, became known as the MAZURS (although the names Mazovians and Mazurs are sometimes used interchangeably). The name Mazovians has also been applied to anyone from the historic region of Mazovia, regardless of tribal or linguistic affiliation.

Mazurs (Mazurians; Masurs; Masurians; Mazurzy Pruscy)

The Mazurs, a subgroup of POLES, lived in the Mazurian Lakes district of present-day northeastern Poland and to the east in southwestern Lithuania, formerly part of the Duchy of Prussia. They were descendants of the MAZOVIANs, grouped among the SLAVS, and Germans, who had settled the region under the protection of the Teutonic Knights early in the 13th century C.E. They spoke a combination of Polish and German (see GERMANs: NATIONALITY;

In the 20th century during Communist rule in Poland many Mazurs were forced to relocate; that led to the loss of their traditional culture. Since that time there has been a resurgence in awareness of both Mazur and Mazovian roots.

Mediomatrici (Mediomatrici; Mediomatrices)

The Mediomatrici are classified as a Celtic tribe. They lived in Gaul around Metz in present-day northeastern France, south of the TREVERI. As are the Treveri, they are discussed as CELTS or GAULS; they probably had some Germanic ancestry as well. They were among the tribes Julius Caesar considered BELGAE. Some Mediomatrici fought as allies of the ARVERNI under Vercingetorix against the ROMANS under Julius Caesar in 52 B.C.E. Divodurum on the site of Metz became a *civitas* capital in Roman Gaul; Metz takes its name from the tribal name.

Medulli

The Medulli are classified as a Celtic tribe. They lived in Gaul near the Atlantic Ocean in the district of Médoc in southwestern France at least by the first century B.C.E. and are discussed as CELTS or GAULS. Midoc takes its name from the tribal name.

Meldi (Meldae; Meldes)

The Meldi are classified as a Celtic tribe. They lived in Gaul around present-day Meaux in northwestern France and are discussed as CELTS or GAULS. Julius Caesar describes the Meldi as building ships for the ROMANS to attack Britain in 55–54 B.C.E., although their distance from the mouth of the Seine makes this unlikely, and the boat builders may have been a different people.

Meminii

The Meminii are classified as a Celtic tribe. They lived in Gaul around present-day Carpentras in southeastern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Memmates

The Memmates are classified as a Celtic tribe. They lived in Gaul around present-day Mende

in southern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Menapii (Menapi; Manapii)

The Menapii are classified as a Celtic tribe. They lived in Gaul in present-day northwestern France, western Belgium, and western Netherlands and are discussed as CELTS or GAULS. Along with the MORINI and other BELGAE they resisted the ROMANS under Julius Caesar longer than other Gallic tribes, driven to spend the winter with the AULERCI and LEXOVI in 56 B.C.E. Castellum Manapiorum on the site of present-day Cassel in France became a *civitas* capital in Gaul during the Roman occupation that lasted until the fifth century C.E.

The Menapii, a seafaring people, traveled to and settled on the British Isles. Their name appears in reference to a Celtic tribe in the present-day counties of Waterford and Wexford in eastern Ireland, who can be classified as Celts or IRISH. One theory maintains that this group migrated there from the mainland by way of Britain. The Menapii of Ireland are associated with a group called MONAIG (or Fir Manach; Fermanagh).

Merya (Meria; Merians; Merja)

The Merya were a Finnic-speaking tribe, living in the southeastern part of the present-day Yaroslavl region of east-central European Russia. Their ancestors are considered indigenous to the Volga and Oka Rivers; they are grouped among Volga or Eastern Finnic, a subgroup of FINNO-UGRIANS. The Merya language was probably related to that of the MARI and MORDVINS of the Volgaic group of Finnic languages although, on the basis of place-names, it is known to share elements with the Balto-Finnic language of the VEPS, who lived to their northwest.

The first mention of the Merya in historical texts places them around Nero and Plescheyev Lakes and a tributary tribe of the Kievan RUS in the 860s C.E. In the second half of the ninth century with various tribes of SLAVS

the Merya were under the suzerainty of the Rus of the Kievan Rus principality, paying tribute to them and serving under their princes in military campaigns, including the attack by Oleg on the BYZANTINES of Constantinople (modern Istanbul) in 907.

In the 11th century many of the Finnic tribes, including the Merya and MUROMA, became embroiled in the power struggles of the Russian Slavs and were displaced or absorbed.

Meshchera

The Meshchera were a Finnic-speaking tribe, living along the Oka River, a tributary of the Volga, in present-day east-central European Russia. Some of the settlements were near present-day Moscow. On the basis of place-names it is theorized that the Meschera language was related to that of the MARI and MORDVINS of the Volgaic group of Finnic languages, although some scholars classify them among the Ugrians, a separate branch of FINNO-UGRIANS.

The Meshchera along with MERYA and MUROMA are recorded as living in the region since at least the ninth century C.E.; their ancestors, associated with the Oka-Ryazan culture, are considered indigenous to the region. The village of Meshcherka is mentioned in a will in 1358; the territory between the Oka and Klyazma Rivers is known as the Meshchera lowlands.

As were many Finnic tribes the rural Meshchera were fishermen, bronze craftsmen, beekeepers, and hunters. They were capable of cultivating their land but were not avid farmers. They had an animistic belief system and especially revered waterfowl.

Western Meshchera groups had contacts with the RUS and Russian SLAVS; eastern groups had contact with the TATARS. Some Meshchera may have merged with the Mordvins in the 16th century. Those absorbed by the Tatars at about the same time were known for a time as Tatar-Mishers or Misherler.

Messapi (Messapii; Messapians; Messapic; Salentini)

On the basis of their language the Messapi are assumed originally to have been ILLYRIANS who migrated to present-day southeastern Italy from the western Balkan Peninsula, probably by the ninth century B.C.E. or earlier. The Messapic, or Messapian language, is related to Illyrian languages.

The Messapi lived on the heel of the boot of the Italian Peninsula between the Adriatic

and the Ionian Seas, as well as to the north in the region of Apulia (Puglia). Their name, with the root *ap*, “water,” possibly means “people living between two seas.” According to the first-century B.C.E. Roman poet Virgil, however, it means “master of horses,” and they were known to raise horses. The fifth-century B.C.E. Greek historian Herodotus mistakenly describes them as people from Crete who were shipwrecked on the coast of Salento, and they are also known by the alternate name Salentini.

The Messapi had extensive contacts with the GREEKS of Tarentum (modern Taranto). Inscriptions found on coins and other artifacts are in the Greek alphabet, and Messapian pottery is often decorated with Greek mythological beings. The ROMANS ultimately controlled their lands. Some among the Messapi joined various tribes of ITALICS against Rome in the Social War of 90–88 B.C.E.

The Messapi are sometimes grouped as IAPYGES with the APULI and PEUCETI living to the north, or the name is used synonymously with Iapyges since all these groups spoke Messapic dialects.

Metanastae *See* IAZYGES.

Minoans

The Minoans, named in modern times after the legendary king Minos, were a Bronze Age people of the island of Crete in the Mediterranean Sea. (As their language has not been deciphered, their name for themselves is unknown.) Their civilization flourished from about 2000 to 1000 B.C.E., although in the last centuries in a state of decline. They are associated with the Greek myth of the Minotaur, a creature with a bull’s head. Minoan civilization was one of three archaeologically known highly developed Bronze Age cultures of pre-Hellenic Greece; the other two are those of the CYCLADITES of the Cyclades island group to the north of Crete and the MYCENAEANS on the mainland. All three are discussed as Aegean civilizations as distinct from the later Hellenic civilization of the ancient GREEKS. (The name PELASGIANS has been applied by ancient writers to the earliest peoples of Greece, but this term has not been archaeologically defined.)

ORIGINS

Minoan origins are not known. The earliest peoples on Crete were Neolithic peoples, who

probably came there from Asia Minor in the seventh millennium B.C.E.

Origin Myth

According to a Greek legend—perhaps derived in part from the ancient sport of bull leaping practiced by the Minoans—Minos was the son of Zeus, the king of the gods, and of the mortal Europa. Poseidon, the god of the seas, helped Minos obtain the Cretan throne. Ruling from Gortyn (Knossos), he expanded

his domain to the Aegean islands and rid the sea of pirates. He married Pasiphae, the daughter of Helios, who bore him children. Because Minos did not sacrifice a white bull to Poseidon, as arranged, Poseidon caused Pasiphae to lust after the animal. She mated with it and bore the Minotaur, a monster with the head of a bull and the body of a man. A labyrinth was built to hold the creature. When King Aegeus of Athens killed Androgeos, one of Minos's sons, Minos forced Athens to pay him an annual tribute of seven youths and seven maidens to be sacrificed to the Minotaur. Theseus, the son of Aegeus, joined the victims. Ariadne, the daughter of Minos, fell in love with him and agreed to help him find the Minotaur so as to destroy the creature and save the Athenians. She gave him a ball of thread, which he could unwind as he entered the labyrinth and use to find his way back to the entrance. He then traversed the Labyrinth to its center, where he found the Minotaur and wrestled him to death.

Theseus then sailed from Crete with Ariadne, but when they stopped at the island of Naxos, the god Dionysos appeared to them and demanded that Ariadne remain there with him. Theseus then continued on without her. He had agreed to signal his father that he was successful on his return by raising white sails rather than his boat's black ones. He forgot to do so, and his father, Aegeus, in grief, threw himself in the waters off Athens. The sea where he died became known as the Aegean Sea.

Minoan Cities on Crete

LANGUAGE

Nothing is known of the Minoan spoken language, other than hypothesized relationships to Semitic or Greek dialects, based on written scripts found on some 3,000 clay tablets. Many place-names on Crete and nearby Aegean islands indicate a time when a group of related languages were spoken before the introduction of Greek. The earliest Minoan writing is in the form of pictographs, referred to as Cretan hieroglyphs, and dates from about 2000 B.C.E. The first linear script, known as Linear A, appears on clay tablets dating from 1750 to 1400 B.C.E., was partly pictorial and has been classified as a West Semitic script. In about 1450 B.C.E., Linear A was replaced by Linear B, the script used by the Mycenaeans.

HISTORY

Minoan civilization is organized into three phases, with varying dates as applied by different scholars. The British archaeologist Sir Arthur Evans (1851–1941), who was the first to uncover the splendors of Knossos 1900–35, applied the following system: Early Minoan (c. 3000–2200 B.C.E.), Middle Minoan (c. 2200–1500 B.C.E.), and Late Minoan (c. 1500–1000 B.C.E.).

During the Early Minoan period the Minoans began importing metals, with a growing use of bronze. What is known as the Palace period—on the basis of archaeological excavations of elaborate palaces all over Crete—developed during the Middle Minoan period from about 2000 to 1600 B.C.E., when most palaces were destroyed following a large disturbance in Crete, probably an earthquake. The Minoans rebuilt their centers, showing the resiliency of their culture and their great wealth. In about 1628–1627 B.C.E. the explosion of the volcano on the island of Thera caused a tsunami that damaged coastal areas.

Nevertheless, Minoan civilization was at its peak in about 1600 B.C.E. Knossos in the north, Phaestus in the south, Malia in the central eastern part, and Kato Zakras on the eastern tip were among the many population centers (the ninth–eighth century B.C.E. Greek poet Homer refers to 90 such centers). The Minoans became a maritime power in the Mediterranean Sea and developed an extensive trade network; and excelled in stonework, metalwork, ivory and gem carving, fresco painting and ceramics. By about the 16th century B.C.E. Minoan civilization is known to have spread northward to neighboring islands in the

Aegean and to the mainland of Greece. It is thought that Mycenaeans settled among the Minoans; certainly they were much influenced by Minoan culture. New palaces were built at other sites, including Cydonia (modern Khánia) and Gournia.

Archaeological evidence indicates that the city of Knossos was destroyed and rebuilt twice, the second time in about 1425 B.C.E. The date cited by some as the start of the Late Minoan period is 1500 B.C.E., during which the Minoans were less influential in the region. During the 15th century B.C.E. Mycenaeans came to dominate Crete, after which most Cretan cities and palaces went into decline. Knossos endured until about 1200 B.C.E., the probable date of its final destruction by fire. By the mid-13th century B.C.E. the PHOENICIANS had replaced the Minoans as the greatest maritime traders.

It is not known with certainty what caused the decline and eventual disappearance of Minoan civilization. Earthquakes damaged some of their buildings, as did fire. The Minoans may have suffered invasions by the Mycenaeans, particularly as Minoan sea power waned, and perhaps warring seagoing marauders (who may have been precursors of raiders later referred to as SEA PEOPLES).

After the destruction of all the Minoan palaces—except Knossos—by fires in 1425 B.C.E., Mycenaean pottery replaced Minoan on Crete and other Aegean islands, in the Near East, and Egypt; Greek came into use at Knossos for the administrative matters documented on numerous clay tablets inscribed with Linear B script; and mainland style chamber tombs containing weapon burials were introduced on Crete. There is evidence from Linear B tablets that Mycenaean overlords and entrepreneurs engaged in large-scale farming and manufacturing projects (as they were doing on the mainland), particularly of cloth. Lists enumerate large numbers of sheep, and there are accounts of foremen overseeing large gangs of workers weaving cloth.

The cause of the destructive fires of 1425 B.C.E. is still unknown. Although Mycenaean dominance clearly took hold on Crete and throughout the Minoan world soon after this disaster, whether the Mycenaeans brought that destruction about or merely took advantage of it—arriving on a Crete laid low by devastating earthquakes—is still unknown. As noted above, it is now known that the great eruption of the volcano on the island of Thira took place some 200 years earlier than the final collapse of

Minoans crafted this vase, shaped as a bull's head, in about 1550 to 500 B.C.E. (Drawing by Patti Erway)

This Linear A tablet was produced by Minoans in about 1450 B.C.E.

(Drawing by Patti Erway)

This Linear B tablet was produced by Mycenaeans on Crete in about 1400 B.C.E. (Drawing by Patti Erway)

Minoan civilization, but the ash, which fell on a wide area of the eastern Mediterranean, both on Crete itself and on surrounding islands, including Rhodes, may have had a strong impact on the economy of the Minoan network, destroying crops, including many of the slow-growing vines and olive trees whose products were core elements of that economy. Tidal waves could have caused wholesale destruction of fleets and harbors. These impacts could have weakened the Minoan system for years so that, when disaster struck again only two centuries later, it administered the coup de grâce to a civilization that had lost the resiliency that had allowed it to recover from the destruction of the Old Palace cities in 1600 B.C.E.

CULTURE

Economy

Minoan agricultural products included wheat, barley, chickpeas, figs, olives, and grapes. They also raised livestock, including cattle, oxen, pigs, sheep, goats, and donkeys. Farmers used wooden plows, pulled by pairs of oxen or donkeys.

The dispersion of artifacts, as determined archaeologically, indicates that the Minoans developed extensive trade contacts with other peoples of the Mediterranean region. It is assumed that they coordinated trade throughout an extensive region. Tin was central to that trade. The island of Cyprus, east of Crete, became part of the trading network, with copper mined there and alloyed with imported tin to produce bronze. (Isotopic analysis of the tin in some Mediterranean bronze objects from the period indicates that it originated as far away as Britain, although, without confirmation that the Minoans traveled there, the tin very likely passed through the hands of many different peoples on its way to the Mediterranean region.) In any case, the Minoans used the bronze to craft objects which were used to barter for other goods.

Minoans traded manufactured goods for agricultural products and raw materials, such as obsidian, copper, gold, and silver. They are thought to have traded for grain with farming peoples on the shores of the Black Sea. Olive oil and wine were prime Minoan trade products probably grown on Crete itself and on other Aegean islands over which the Minoans had hegemony. The multiple rows of huge amphorae found at Knossos and other palaces may have been used to store agricultural products, perhaps as a hedge against times of shortage. Minoan artifacts themselves have been

found as far west as the Balearic Islands off the east coast of Spain. The Minoans specialized in luxury items, finely carved and polished steatite vases, intricately carved rock crystal and gemstone sealstones, and objects of gold and faience.

Minoan writing apparently underpinned an efficient mercantile bureaucracy. (This can only be inferred, however, since Linear A has not been deciphered. In Sumer in Mesopotamia scripts were first developed as means of documenting lists of trade goods.) Some Linear A writings have been interpreted as documenting a complex system of weights and measures. The extensive records apparently relating to trade indicate the importance of Minoan commercial relationships throughout the Mediterranean. From their wide-ranging travels one can assume that the Minoans were proficient mariners, having a mastery of navigational techniques necessary for Mediterranean travel, perhaps the most advanced maritime skill to that time.

Government and Society

Minoan palaces would indicate that Minoan population centers were city-states that ruled the surrounding rural population. The existence of stone roads among the cities indicates perhaps political relations in addition to economic ones. None of the Minoan cities had defensive walls, and relatively few weapons have been found compared to other ancient societies, indicating peaceful relations among the various population centers. A fresco from Knossos does show a scene of war, with ships, a cohort of soldiers bearing large shields of oxhide, and men overboard. The defensive walls of the Minoans may have been their ships; it seems likely that they were effective at naval warfare because their wealthy trade routes undoubtedly would have attracted raiders. In all probability it was sea power that made possible their centuries long dominance of the Mediterranean.

Dwellings and Architecture

Minoan buildings, typically two to three stories high, were built at the base with stone and rubble, then above with mud brick. Timbers were used to hold flat tiled roofs. Floors were either of wood, plaster, or flagstone. Minoan temples were generally L-shaped. The four-story temple at Knossos, built of cedar, covered some 24,000 square yards and had more than 60 rooms, including a center court.

Clothing

The many depictions in frescoes give a clear idea of how the elite among the Minoans dressed. Minoan men went bare-chested and wore loincloths or codpieces, belts that cinched in their waists, and kilts. Women wore fitted short-sleeved jackets that were tight in the waist and open at the front, leaving their breasts bare, and flounced skirts. Their hair was long and elaborately coiffed into sinuous curls. Men, too, wore their hair in long curled tresses. Clothing was often decorated with geometric designs.

Transportation

Images on stone reveal that Minoans traveled in galley ships, with high sterns and forecastles.

Other Technologies

Minoans produced bronze ax heads and saws as well as other metalwork. They used the saws to cut stone blocks for their roads. Clay pipes were used for water and sewage.

Art

In addition to metalwork Minoan art included stone carvings and ceramics. Some of the most impressive examples of Minoan art are the gold rings with wide bezels wrought with intricate scenes of dance or worship. These and the figures carved on crystal and gemstone seal pendants are remarkable for the realism achieved on such a small scale. Early pottery had mostly geometric designs. Later pottery typically had animal and floral designs. One style of pottery, known as Kamáres ware, has light-on-dark decoration. Minoan frescoes on palace walls display a variety of themes, such as gardens, monkeys, wild goats, snakes, and possible goddesses or priestesses. The sport or ritual of bull leaping, conducted in temple courtyards, is also represented.

The frescoes, like much of Minoan art, have a verve and style appealing to modern taste. One wall painting found in the palace at Knossos (15th century B.C.E.) of a woman with high-piled hair, eye makeup, and richly rouged lips has been dubbed “La Parisienne” for her resemblance to ladies painted by Toulouse Lautrec in the dance halls and theaters of 19th-century Paris. Minoan art often has an atmosphere of gaiety and enjoyment, of *joie de vivre* that must convey something of the essence of Minoan life.

An artifact known as the Phaistos Disc because it was found in the ancient city of

Phaistos in southern Crete has inscriptions in a unique script that has not been deciphered. It is thought to date from about 1700 B.C.E., contemporary with Linear A. It may have been carried to Crete from elsewhere, since no other object like it has been found there. Its origin is speculative: One sign depicts what seems to be a sarcophagus typical of the Lycians of Asia Minor; another depicts a helmet with a crest, typical of the Philistines from coastal Palestine. Because there is essentially no variation (other than weathering) between different versions of the same symbols, it would seem that stamps where used to create them.

Religion

The lack of written evidence of Minoan religion makes interpretation of possible cult places problematic. On the basis of the number of female figures represented in Minoan artwork, many apparently engaged in ritual activity, it is theorized that Minoan religion was predominantly matriarchal. A common form of female figurine, typically represented as holding or having her arms entwined by snakes, was possibly a priestess or herself the goddess of fertility, harvests, and animals, as well as cities and households, and the underworld. The many images of bulls found point to the existence of a bull cult; this is reinforced by the myth of the Minotaur. The monster deep within the Labyrinth may have been the one who caused the Earth to shake. The bull leapers may have been sacrifices to this powerful and feared god, who staved off their eventual deaths by playing and distracting the bull (the god’s representative) until he was tired and they were spared to live another day.

Before the New Palace period mountain top sacred sites seem to have been used for worship. Afterward, both religious and political power apparently became more concentrated in the palace-cities and mountaintop worship decreased.

The Minoans buried their dead communally in ceramic jars.

Minoans used this beaked clay jug from Phaistos in about 1850 to 1700 B.C.E. (Drawing by Patti Erway)

The Minoans themselves were remarkable in that they apparently thrived without a sizeable military and without fortified cities. They developed perhaps the most extensive bureaucracy in ancient times and used writing to maintain it. Their technology, architecture, and artwork was highly refined. They traveled widely, mostly for peaceful purposes. It may be

Moesians (people of Moesia)

The name Moesians refers to people living in the ancient country and Roman province of Moesia, south of the Lower Danube, extending from the Drina River in Bosnia and Herzegovina to the Black Sea, originally the domain of the THRACIANS. Around 75 C.E. ROMANS first invaded the region, conquering it in about 30 B.C.E. and establishing in 15 B.C.E. a province that was later divided into Moesia Superior (roughly modern Serbia) and Moesia Inferior (roughly modern Bulgaria). GOTHs occupied the region in the fourth century C.E. and the SLAVS and the BULGARS established a presence in the seventh century.

Moesogoths See GOTHs.**Moldovans: nationality (Moldavians; people of Moldova)****GEOGRAPHY**

Moldova is landlocked by Ukraine to the north, east, and south, and by Romania to the west. The area is about 13,000 square miles. Plains and river valleys make up most of the terrain. The forested Kodry Hills run through central Moldova, where the country's highest point, Mount Bălăneşti (1,410 feet), is found. Of the 3,000 rivers and streams running through Moldova the Prut, along the Romanian frontier,

Moldovans shop at a fruit-and-vegetable stand in Kishinev (now Chişinău), Moldova, in the 1940s. (*Library of Congress, Prints and Photographs Division [LC-USZ62-105363]*)

and the Dniester, forming the Ukrainian-Moldovan border, are the largest.

INCEPTION AS A NATION

The region that would become Moldova has been occupied by many ancient peoples in the centuries C.E., including GERMANICS, SLAVS, BULGARS, and PECHENEGS. In the 13th century C.E. Hungarian expansion forced many VLACHS to relocate south and east of the Carpathians, establishing the principalities of Walachia and Moldavia. In 1359 Bogdan I ruled the Moldavian principality, occupying the area between the Carpathian Mountains and the Dniester River; Walachia bordered the territory in the southwest. These principalities were ruled by either Hungary or Poland until their conquest by the Ottoman Turks (*see* TURKICS) in the 16th century.

Michael the Brave, who rose to power in 1593, gained independence from the Ottoman Empire and consolidated control over Transylvania, Walachia, and Moldavia. In 1601, Transylvania fell to Hungarian rule, and the Ottoman Empire regained control over Walachia and Moldavia. Revolts broke out in

the principalities in 1821; Russia established a protectorate over the two principalities in 1821, eliminating Ottoman control. The Treaty of Paris in 1856 ended the wars between Russia and Turkey, confirming Walachia and Moldavia, now united with Bessarabia, as independent principalities paying tribute to the Ottoman Turks.

Moldovans: nationality time line

C.E.

- 1359** Bogdan I rules principality of Moldavia.
- 1457 to 1504** Stephan IV the Great reigns.
- 16th century** Ottoman Turks dominate principality.
- 1599** Michael the Brave, Walachian prince, fights Ottomans, uniting Moldavia, Walachia, and Transylvania.
- 1601** Michael the Brave is assassinated; Ottomans regain Moldavia, Walachia, and Hungary and annex Transylvania.
- 1703–05** Prince Dimitrie Cantemir writes *Historia Hieroglyphica* (Hieroglyphic history), critical history of Romania.
- 1774** Under treaty of Kuchuk Kainarj, Ottomans cede Moldavia to Russia, and Austria acquires northern Moldavia, renamed Bucovina.
- 1812** At end of Russo-Turkish War Russia controls Bessarabia, and Ottomans control western Moldavia and Walachia.
- 1821** Russia establishes protectorate over Moldavia and Walachia.
- 1832** Public library is founded in Chişinău; in 1991 its name becomes National Library of the Republic of Moldova.
- 1853–56** Russia is defeated in Crimean War; Moldavia and southern Bessarabia unite, gaining independence from Ottomans and Russia.
- 1861–62** Moldavia and independent Walachia unite as Romania.
- 1878** By Congress of Berlin Ottomans recognize united Moldavia and Walachia as Romania; southern Bessarabia regained by Russia.
- 1889** National Museum of Ethnography and Natural History (originally Zoological, Agricultural, and Handicraft Museum of Bessarabia) is founded in Chişinău.
- 1918** After Russian Revolution of Bolsheviks, Bessarabia declares independence.
- 1920** Bessarabia unites with Romania under Treaty of Paris.
- 1924** Moldavian Autonomous Soviet Socialist Republic is formed with Ukraine, east of Dniester River.
- 1939** Germany and the Soviet Union (USSR) divide Romania; Bessarabia is annexed by Soviet Union; World War II begins.
- 1940** Soviet Union unites Bessarabia and Moldavian Autonomous Soviet Socialist Republic as Moldavian Soviet Socialist Republic.
- 1945** World War II ends; Nazi regime is driven out of Moldavian SSR when Soviet Union regains control.
- 1987** National Museum of History is founded in Chişinău
- 1990** Moldavian SSR is renamed Moldova; Gagauz region attempts to declare independence.
- 1991** Moldova declares independence from Soviet Union, joins Commonwealth of Independent States.
- 1992** Moldova joins United Nations (UN); revolts break out in Dniester River valley.
- 1994** Under new constitution Moldova declares neutrality, and Transdniestrian and Gagauz gain autonomy status.
- 2001** Vladimir Voronin of Communist Party is elected president.

In 1862 the two principalities united as a hereditary monarchy under the name of Romania; they received international recognition in the Congress of Berlin in 1878. Romania acquired Transylvania from Hungary and officially incorporated Bessarabia at the end of World War I (1914–18). The Soviet Union (USSR) did not accept Bessarabia's unification with Romania and designated the territory east of the Dniester River as the Moldavian Autonomous Soviet Socialist Republic. The Soviet Union won Bessarabia in the German-Soviet Nonaggression Pact and occupied Bessarabia in 1940. The Moldavian Soviet Socialist Republic was formed, including central Bessarabia and the Trans-Dniester region. In 1990 the Moldavian SSR was renamed Moldova. The next year it declared independence from the Soviet Union and became the Republic of Moldova.

CULTURAL IDENTITY

Created by Stalin in 1940 out of one portion of the ancient state of Moravia, Moldova lacks ethnic, political, or cultural legitimacy as an independent state and has been continuously torn between competing political projects: as a new European nation, a new colony of Russia, or territory integrated into the Romanian state. From the beginning the Soviet Union instituted policies aimed at drawing Moldova into its own sphere and away from the rest of Europe. This was most evident in the Soviet language policy, which maintained that the language of ethnic Moldovans was entirely separate from the Romanian language. To reinforce this idea the Soviets mandated that the Moldovan language would no longer use the Latin alphabet and would be written in the Cyrillic alphabet.

In recognition that the country lacks a unifying ethnic heritage, Moldova now emphasizes ethnic, cultural, and linguistic diversity, as well as mutual tolerance and peaceful coexistence of ethnic groups. Moldovan, now fully recognized as Romanian, is an official language of the country to be used in all political, economic, social, and cultural affairs. Russian is considered a language of interethnic communication. The use of Ukrainian, Gagauzian, Bulgarian, Hebrew, Yiddish, Roma, and other languages of ethnic minorities is not discouraged. In terms of foreign policy the priority is given to upholding ties with the Moldovan diaspora abroad and the development of ties with the ethnic minorities' historical home countries, enhanc-

ing cooperation with other countries and international organizations in the sphere of human rights protection.

Monacans: nationality (Monegasques; people of Monaco)

GEOGRAPHY

Monaco is an enclave of southeastern France, bordering the Mediterranean Sea. It is situated between the Côte d'Azur (French Riviera) and the Italian border. The French Maritime Alps surround Monaco to the north, east, and west. Monaco is divided into four districts: Monaco, the capital (also known as "the Rock," a headland jutting into the sea); La Condamine; Monte Carlo; and Fontvieille. The terrain includes small clustered hills and a promontory overlooking the Mediterranean Sea.

INCEPTION AS A NATION

The region that became Monaco was once the homeland of the GAULS and LIGURIANS. It was also at times controlled by PHOENICIANS, GREEKS, ROMANS, and FRANKS. In 1191 C.E. the Grimaldi family out of Genoa, Italy, seized Monaco. They ruled the principality for over five centuries. During the French Revolution the Grimaldi were overthrown and France annexed the principality. At the fall of Napoleon I Bonaparte the Congress of Vienna assigned Monaco to the protection of Sardinia in 1815. In 1861 a Franco-Monegasque treaty declared Monaco an independent state under French protection.

CULTURAL IDENTITY

Monegasque culture is strongly French, although the language of some Monacans, Monegasque, partly derived from Italian, shows the added influence of that country.

Monacans: nationality time line**C.E.**

1297	Monaco is settled by Genoese family, Grimaldi; becomes independent principality.
1793	Grimaldi are dispossessed; Monaco is annexed to France.
1815–60	Monaco is protected by Sardinia.
1861	Monaco is recognized as independent state under protection of France.
1863	Monte Carlo Casino is built.
1892	Garnier Hall, built in 1879 as part of Monte-Carlo Casino, becomes home of Opéra de Monte Carlo.
1909	Louis Notari Library, Monaco's national library, is founded.
1910	Oceanographic Museum of Monaco is founded.
1911	Monaco becomes constitutional monarchy.
1962	New constitution is adopted.
1967	Operations of Monte Carlo Casino are taken over by Principality of Monaco.
1972	National Museum of Monaco is founded.
1979	First permanent orchestra of Monaco, established in 1863, becomes Monte Carlo Philharmonic Orchestra.
1984	Springtime of the Arts festival is first held.
1985	Les Ballets de Monte-Carlo, founded in 1911, becomes official dance company of Principality of Monaco.
1993	Monaco is admitted to United Nations.

Monaco's status as a prime tourist destination, largely due to the gambling casino in Monte Carlo, and its location on the Mediterranean have seemed to give its people a joy of living. Its royal family has been celebrated in popular culture.

As are French and Italians, most Monegasques are Catholic. Religious and civil traditions are an integral and exclusive part of the social, cultural, and moral heritage of the principality. They are sometimes linked: Rites and ceremonies are accompanied by popular festivities, but the former are more firmly anchored in the collective memory of Monegasques than the latter. Saint Dévote is the patron saint of Monaco, and every year on her feast day, January 27, there is a torchlight procession in her honor. A religious ceremony and blessing are followed by the setting on fire of a boat on a pyre decorated with olive, pine, and laurel branches.

About 47 percent of the population are French, about 16 percent are Monegasque, and 16 percent, Italian.

MONGOLS**location:**

Eastern and central Europe

time period:

11th century C.E. to present

ancestry:

Mongolian

language:

Mongolic (Altaic)

ORIGINS

The origins of the Mongols are uncertain. They were indigenous to eastern Asia, originally consisting of nomadic tribes inhabiting steppe and desert country.

LANGUAGE

The Mongol language is known as Mongolic or Mongolian. It is part of the Altaic family, related to Bulgaric and Turkic. Their written language dates from at least as early as the 11th century.

HISTORY**Genghis Khan**

In the early 13th century a chieftain of the Yakka Mongols, Genghis Khan, defeated his rivals and united the various tribes. He founded a capital at Karakorum in the northern Gobi Desert, established codes of law, and created a powerful army, consisting of horse-mounted warriors.

Under Genghis's leadership and that of subsequent khans the Mongols seized territory in much of Asia and eastern Europe. Their armies included other peoples, such as **TURKICS**, who became known collectively as the **TATARS** or Tartars (a name by which the Mongols were known to some Europeans). The Mongols adopted many of the customs of peoples they conquered, in particular the Chinese, whose capital, Yen-King (present-day Beijing), they occupied under Genghis in 1215.

Batu Khan

Genghis died in 1227, whereupon his son, Ögödei, ascended as supreme khan. Ögödei's

brother, Juchi, was granted territory comprising much of present-day Russia. In 1235 Batu Khan, Juchi's son, along with his chief general, Subatai, campaigned in the west. In 1237 the Mongols defeated the Turkic **KIPCHAKS**, leading to the breakup of their tribal confederation within two years. In 1238 Batu's warriors—referred to in Russia as the Golden Horde because of Batu's golden tent—captured Moscow, and in 1240 Kiev in present-day Ukraine. His razing of Kiev, at the time ruled by the **RUS**, led to the rise of Muscovite Russia.

The Mongols proceeded westward and within two years had also conquered present-day Hungary and Poland and made military incursions into Germany. The death of Ögödei in 1241 led to Batu's recall to Karakorum in 1242, but Batu had laid the groundwork for the founding of the Kipchak khanate (also known as the Khanate or Empire of the Golden Horde) between the Volga and Danube Rivers in 1243, with a capital first at Sarai Batu near present-day Astrakhan on the Lower Volga and later at Sarai Berke also on the Volga near present-day Volgograd. This had been territory of the Kipchaks. The occupying forces also became known as the Golden Horde and the Kipchaks. Many of the Kipchaks migrated westward at this time into present-day Hungary, where they became known as **CUMANS**. With Batu's recall further significant Mongol expansion in Europe had ended. Yet the Mongols of the Kipchak khanate continued to control the lucrative trade routes connecting the Black Sea ports with central Asia.

By 1260 the Mongol Empire was subdivided into four khanates, that is, territories ruled by khans, descendants of the royal line founded by Genghis Khan. They included the Great Khanate, comprising all of China and most of East Asia; the Jagatai khanate in Turkestan; a Persian khanate; and the Kipchak khanate in western Russia.

Contacts between Europe and Asia

The Mongol age of conquest led to a new age of contact between Asians and Europeans. The movements of armies and subsequent occupation led to the passing of knowledge between cultures. Routes, including the trade route known as the Silk Road, became secure, leading to increased travel. The khans maintained a system of mounted couriers for communication throughout the empire.

With the Golden Horde (as Mongol and Tatar armies were called) at their doorstep

Mongols time line**C.E.**

1215 Mongols under Genghis Khan occupy Beijing.

1238 Mongols under Batu Khan capture Moscow.

1240 Mongols capture Kiev.

1240–41 Mongols capture Hungary and Poland.

1243 Kipchak khanate is founded.

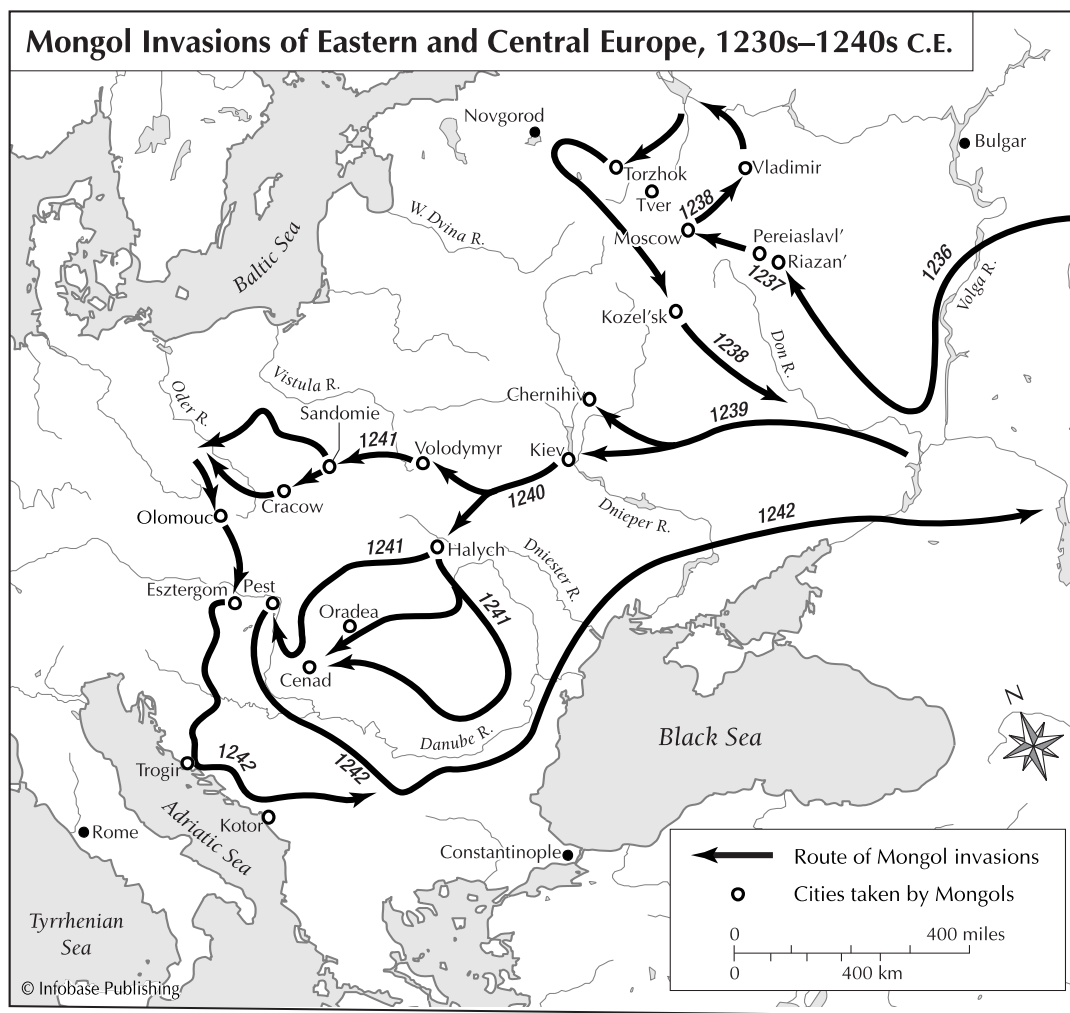

1260 Mongol Empire is divided into four khanates.

1271–92 Travels of Marco Polo in Asia

1382 Mongols are expelled from China.

1391–95 Turks and Turkic-speaking Mongols under Tamerlane (Timur) capture Mongol holdings.

1440s Kipchak khanate breaks up into four independent khanates.

Europeans became more aware of Asian issues. Papal and political diplomatic missions were sent out. European traders followed. In 1271–75 the Italian merchants Maffeo Polo, Niccolò Polo, and Marco Polo traveled across central Asia to Cambaluc (present-day Beijing), the new Mongol capital founded by Kublai Khan. Marco Polo in 1275–92 explored on behalf of the khan, traveling throughout the Far East. His book *The Travels of Marco Polo*, with its descriptions of Mongol customs, was influential in Europe over the next two centuries.

End of the Empire

In the 14th century the far-flung Mongol Empire eventually weakened as a result of internal conflicts as well as resistance from conquered peoples. By 1382 the Mongols were completely expelled from China, retreating to their original homeland. Timur (Tamerlane) created a Turkic empire centered in Samarkand in the region of Turkestan (part of present-day Uzbekistan), defeating the Golden Horde in

1391–95 and occupying Moscow. He claimed descent from Genghis Khan, as did Babur (Zahir-ud-Din Muhammad), who founded the Mughal (Mogul) Empire in India in the early 16th century. The Kipchak khanate remained intact until the 1440s, breaking up into four independent khanates.

Modern-Day European Mongols

One group of Mongols who live in Europe—mostly in Kalmykia, a republic along the northwest shore of the Caspian Sea and west of the Lower Volga River in southwestern Russia—are known as the KALMYKS.

CULTURE

Economy

The Mongol economy over the centuries has been based on herds of horses and sheep, with seasonal movement. The Mongols of today are still a pastoral people, maintaining sheep, horses, cattle, camels, and goats and living much as their ancestors did.

Government and Society

The Mongol imperial code, the *Yasa* (Jasagh), established a system of governmental organization, including the administration of the army, as well as civil, commercial, and criminal codes of law. Many Uighurs, a Turkic people, were employed as bureaucrats to help administer this code.

The four khanates were ruled regionally, but final authority rested with the great khan at Karakorum. In the Kipchak khanate the Mongol overseers allowed the conquered principalities of primarily Russian SLAVS to retain their own rulers and administer themselves internally but collected taxes.

Dwellings and Architecture

The Mongols lived in felt-covered yurts, light circular tents made of felt stretched over a lattice framework.

Religion

The Mongol traditional religion was shamanistic. Many modern Mongols also practice Lamaism, a branch of Buddhism.

The Mongols are among those Asian peoples whose patterns of conquest became part of the European story. They are included among the

many peoples who held power for a time in eastern Europe.

Montenegrians (people of Montenegro)

The name Montenegrians refers to people living in the region of the former kingdom of

Slavs in rowboats net fish in Montenegro in the early 20th century. (Library of Congress, Prints and Photographs Division [LC-USZ62-105369])

Montenegro (meaning “Black Mountain”), southwest of Serbia on the Adriatic Sea. Evolving out of kingdoms in the region known as Doclea and Zeta, it was founded in 1389 C.E., when SERBS, defeated by the Ottoman TURKS (see TURKICS), took refuge on “Black Mountain.” Unlike the people of Serbia the Montenegrins maintained independence from the Ottomans. They established ties with Russia in the 18th century to strengthen their position. In 1992 Montenegro joined Serbia to form the Federal Republic of Yugoslavia, after the breakup of the former Yugoslavia, which became known as Serbia and Montenegro in 2003 (see SERBS AND MONTENEGRINS: NATIONALITY).

Moors (Mauri; Mauretanians)

The Moors were Muslims from the Near East and North Africa who held territory on the Iberian Peninsula from the eighth to the 15th century C.E. The term Moors evolved out of the Latin *mauri*, meaning “dark,” which was used by the ROMANS in reference to all non-Romanized natives or inhabitants of the ancient North African province of Mauretania, which comprised western present-day Algeria and the northeastern part of present-day Morocco, who were ruled by their own chiefs. The term has also been applied in more recent times to people of the nations of Morocco and Mauritania in North Africa and, by extension, as was the term SARACENS, to Muslims in general, and even to various non-Europeans and non-Muslims (for a time the term *blackamoors* was applied to all Africans). Various pre-Moorish peoples of the Iberian Peninsula who converted to Islam were grouped among the Moors.

ORIGINS

The Muslims who occupied territory in Europe were both Arabs who had migrated westward from the Arabian Peninsula as well as Berber people native to North Africa, mainly tribes from present-day Morocco, Algeria, and Tunisia. They developed as a political entity out of the Islamic movement, which had been founded by the Prophet Muhammad in the seventh century C.E. Muhammad, born in about 570, was a native of Mecca in present-day western Saudi Arabia. In 630 he and his Muslim followers conquered Mecca. After Muhammad's death in 632 the new religion spread rapidly through much of Asia and North Africa, largely through military conquest under a succession of caliphs (spiritual leaders of Islam).

Those Arabs who conquered lands controlled by the BYZANTINES in North Africa intermingled with the indigenous non-Arabic tribes grouped together as Berbers, who are known to have lived throughout much of North Africa as nomads from at least as early as about 3000 B.C.E. After conquest the Arabs had greater power, but over the century Berber influence grew. Those combined Arabs and Berbers who invaded Europe and became known historically as Moors were originally centered in present-day Morocco and western Algeria.

LANGUAGE

The Moorish language was a combination of Arabic, a Semitic language, and Berber, a related Hamitic language. Berber, primarily a spoken language, comprises about 300 dialects.

HISTORY

Moorish Conquest

In the early eighth century most of the Iberian Peninsula was ruled by Germanic VISIGOTHS. In 710 on the death of King Witiza a struggle ensued over succession to the Visigothic throne. When Roderick, duke of Baetica, assumed power, Witiza's sons appealed to Muslim leaders in Tangier. The general Tarik ibn Ziyad ruled the region, left in charge by his fellow general Musa ibn Nusayr, the Arab conqueror of ancient Mauritania. Tarik seized the opportunity to lead an army of some 7,000 Berbers and Arabs across the Strait of Gibraltar, landing on Gibraltar in May 711. That July Tarik's Moorish army, with support from both Christian supporters of Witiza's sons and

- 1094–99 El Cid controls Valencia.
- 1174 Almohads, Berber dynasty, come to power.
- 1212 Christian victory over Almohads drives Moors out of central Spain.
- 1236 Christian forces capture Córdoba.
- 1492 Christian forces seize Granada, last Moorish kingdom.

Spanish Jews persecuted by the Visigoths, defeated Roderick's army at an unknown location (referred to as the Battle of Guadalete, after the river). He soon captured the city of Córdoba and the next year occupied Toledo, the capital of Visigothic Spain. Musa ibn Nusayr joined Tarik in 712, with about 18,000 more troops. The two generals were recalled to Damascus in Syria in 714, but the Moors continued their campaign of conquest and by 719 added more than two-thirds of the Iberian Peninsula to the Muslim caliphate. One survivor of the Battle of Guadalete, the Visigothic chieftain Pelayo, founded the kingdom of Asturias in the mountains of northwestern Spain in 718 and held out against Moorish expansion, starting a tradition of a Christian north.

Moors versus Franks

The Moors sought to seize territory to the north and under Abu ar-Rahman al-Ghafiqi

crossed the western Pyrenees and invaded lands held by the FRANKS. In 732 a Frankish army under Charles Martel countered their advance. In a battle at a site between Poitiers and Tours the Franks proved victorious; the Moorish leader himself was killed, and surviving Moors retreated to the Iberian Peninsula. With time through commerce the Moors prospered in their new lands and relinquished military campaigns.

Rival Dynasties

Islamic Spain, or al-Andalus, as it was known, was ruled as part of the Province of North Africa, a division of the caliphate, controlled by the Umayyad dynasty centered at the capital in Damascus (in modern Syria). In 750 the Umayyads suffered defeat at the hands of the Abbasids, a rival dynasty. Some of the ousted Umayyads sought refuge in Spain. There Abd ar-Rhman I defeated his rivals and in 756 made himself emir (governor) of an independent

emirate at Córdoba. Under Abd ar-Rahman III an-Nasir in 929 the emirate became the caliphate of Córdoba, which grew in power to become one of the largest cities in the Mediterranean region.

Rivalries continued, however, with Moorish elites challenging the Umayyads. Those Moors descended from Berbers, who made up the majority of the Moorish population on the Iberian Peninsula, resented the ruling Arabic Muslims from Egypt and Asia. Visigothic and other elements of the population, many of whom converted to Islam to increase their influence, constituted another faction.

The last powerful leader of Córdoba was Abu 'Amir al-Mansur, who ruled as regent and was victorious against surviving Christian kingdoms in the north. With time Moorish cities became independent, especially after 1036 and the death of the last Umayyad caliph. Small, independent kingdoms, known as *taifas*, formed at Granada, Murcia, Saragossa, Seville, Toledo, and Valencia in present-day Spain, as well as Lisbon in present-day Portugal. The later rulers of Moorish Spain were after 1086 the Almoravids, a Berber dynasty founded in Morocco by Yusuf ibn Tashuvin, and after 1174 the Almohads, another Berber dynasty out of North Africa, founded by Ibn Tumart.

Christian Reconquest

The *reconquista* is said to have begun with Pelayo in 718, when he defeated a Muslim army at a glen near Covadonga in Asturias in the northwest. Little is known of the actual engagement, and it may have been exaggerated with time. Yet it is known that Alfonso I, possibly his son-in-law, drove the Moors out of the region of Galicia west of Asturias. The conquering Christians evolved out of the Visigothic tradition but can be viewed as the first leaders in the formation of modern Spain (see SPANISH: NATIONALITY).

During the reign of Alfonso III in 866–910 the kingdom of Asturias expanded into both Christian and Moorish lands and eventually included most of the northwest and as far south as the Douro River valley. Several new Christian kingdoms emerged in the northeast, including Navarre, where a large population of BASQUES lived, and Aragon. The Franks also held some territory in Catalonia south of the Pyrenees. By the end of the ninth century Christian rulers had gained control of about one-third of the Iberian Peninsula from the Moors.

In the mid-11th century Ferdinand I won back territory from the Moors, gaining suzerainty over Muslim leaders of Toledo, Saragossa, and Seville. Yet Christian power was still centered in the north. The first major victory occurred in 1085, led by Alfonso VI, who captured Toledo, the ancient capital of Visigothic Spain, and made it the capital of the kingdom of Castile. Christian Spain now extended south of the Tagus River.

The fall of Toledo prompted a faction of Muslim leaders to invite Yusuf ibn Tashuvin and the Almoravids to Spain. They invaded the peninsula in 1086, seized Muslim kingdoms, and blocked the Christian advance. Seville became their regional capital. They failed to secure the kingdom of Valencia in the east, however, and it was captured by El Cid (Rodrigo Díaz de Vivar) in 1094. After his death in 1099 Valencia returned to Moorish control, but he became a Spanish national hero for his resistance against the Almoravids.

Splintering Almoravid power led to Almohad gains, including Andalusia and New Castile. In 1212 a coalition of Christian kings, led by Alfonso VIII, king of Castile, defeated Almohad forces near Toledo in the Battle at Las Navas de Tolosa, driving Moorish armies out of central Spain. In 1236 Ferdinand III, king of Castile and León, captured Córdoba in Andalusia in the south. Yet warfare and shifting alliances continued over the next centuries.

The last Moorish kingdom to resist the Christian advance was Grenada. In 1487 after a long siege the coastal city of Málaga was captured by the Spanish forces of Ferdinand II, king of Aragon, and Isabella I, queen of Castile. In 1492 their Christian forces seized Granada. This was the same year Ferdinand and Isabella sponsored Christopher Columbus's first transatlantic voyage.

Despite the expulsion of some of the Moors from Spain in 1492, a Moorish presence continued on the Iberian Peninsula for more than a century. Some converted to Christianity; they are referred to as Moriscos to differentiate them from the Islamic Mudejares. Both groups were persecuted; conflict came to a head under Philip II—the Moors revolted in 1568 and were violently suppressed. In a systematic expulsion in 1609–14 the Moriscos were driven from Spain.

CULTURE

Economy

In general the centuries the Moors ruled Spain were prosperous, except in times of upheaval and warfare. The Moors sought to integrate the

local population—existing landowners and peasants on large estates and small farms—into the new society even as new farmers migrated out of Africa. The Moors also introduced new crops and irrigation techniques to the Iberian Peninsula. Agriculture and commerce expanded leading to agricultural growth. Highly skilled Moorish artisans also produced products that stimulated commerce with other Mediterranean societies.

Government and Society

Under the Moors the power was in the hands of local rulers rather than in a strong central government. They allowed independence among conquered peoples without forced conversion to Islam. One reason was that Islamic law restricted the taxation of the Muslim population by Muslim rulers, making them financially dependent on non-Muslim subjects. Many non-Muslims adopted Arabic; Latin and Hebrew were even written in Arabic script, creating greater cohesion among the diverse population. Muslim universities became great centers of learning.

Dwellings and Architecture

The Moors, known for their great architectural treasures, in particular mosques and palaces in their cities, introduced new styles of architecture to the Iberian Peninsula. As in their ances-

tral homelands buildings were built facing inward onto a patio. Richly decorated interiors were typically hidden behind unassuming exteriors. The Almoravid and Almohad periods were known for more austere styles of architecture than the earlier Arabic period. Mosques were built with columns for support and tall, massive square minarets. Fortifications had massive gates with low-slung horseshoe arches.

A famous example of Moorish architecture, one of the few surviving medieval Islamic palaces, is the Alhambra hill palace complex at Granada, which evolved over the centuries, probably from the 11th century, with units added on. Behind gates and exterior towers with cupolas are the long Court of the Myrtles, the huge Hall of Ambassadors, and the Court of the Lions, with a lion fountain in the center (water is a main design feature). Off this court are various rooms, including the Hall of the Two Sisters and the Hall of the Abencerrajes. The halls have many windows; light is another recurring architectural feature. Higher on the hill is the Generalife, a summer residence surrounded by gardens with fountains, pavilions, and portico walks. Decoration at Alhambra is executed for the most part in stucco. Calligraphic ornamentation presents poems, some of them celebrating the complex's cupolas as domes of heaven.

Out of a fusion of Moorish and Christian styles a new style of architecture, known as Plateresque, developed during the Renaissance. Moorish-style structures were decorated with Gothic or Renaissance motifs.

Other Technologies

The Middle Ages, from the ninth to the 14th century, were a time of inquiry in the Muslim world, and knowledge in science, mathematics, technology, and medicine was carried to the Iberian Peninsula, where the fields were further developed.

Art

Although western Islamic art is best known for its work in architecture, styles of calligraphy, metalwork, wood inlaid with ivory, and ceramics were also developed. One style of pottery, made with a luster glare, is known as Hispano-Moresque ware; it was created after Muslim rule. The term *Mudéjar* is used for Muslim-style art made under Christian rule. Mozarabic art, on the other hand, is the artwork of Christians under Muslim rule, as found in illuminated manuscripts thought to be influenced by Muslim miniature painting or book illustration.

A Moorish couple are seated at home in this photograph from about 1876. (*Library of Congress, Prints and Photographs Division [LC-USZ62-93342]*)

Literature

During the Middle Ages there was a wealth of Muslim literature: cosmographies, world geographies, regional geographies, geographies of particular routes, chronologies of nations, and astronomical studies.

Religion

Muslim authorities in Spain manifested religious tolerance, and Muslims, Christians, and Jews lived near one another. According to Islamic tradition Christians and Jews were “peoples of the book,” that is, of the Old Testament. But they were required to pay special taxes. Those Christians known as Mozarabic adopted Arabic language and culture and developed Catholic rites different from those of Rome.

Muslims often traveled from Spain for religious purposes, with pilgrimages to Mecca, the holiest city of the Islamic faith as the birthplace of Muhammad (travel to the city became regarded as an essential act of faith, known as the Hajj). Religious research was part of devotion, and Islamic scholars journey throughout Muslim lands to research the *hadith*, oral teachings attributed to Muhammad and his followers.

While the Middle Ages were the Dark Ages for much of Europe, they were a period of enlightenment in Moorish Spain. In addition to their great impact on the history and culture of the Iberian Peninsula, such as in architecture, the Moors had a great influence on the history and culture of all of Europe, providing a continuum of knowledge from ancient Greece to the Renaissance, in that Spanish victories over the Moors and the capture of various universities led to greater access to Muslim scholarship, as well as to Greek scholarship from ancient texts that had been in Muslim hands.

The name of the Moors lives in the names of two countries, Morocco and Mauritania.

Moravians (people of Moravia)

The name Moravians is used for people living in the ancient state or region of Moravia in the present-day eastern Czech Republic (see CZECHS: NATIONALITY). A tribe known as Marharii gave their name to the Morava River, the heart of an early state founded by SLAVS called Greater Moravia, which flourished in the ninth century C.E. The ruling dynasty, from the Marharii, absorbed tribes of SLOVAKS and CZECHS. Greater Moravia at its broadest extent included the present-day countries of Slovakia, Czech Republic, and parts of Poland (Silesia) and Romania (Pannonia; although claims of Moravian annexation of Silesia and Pannonia have come into question) and of Hungary. Moravia was conquered by the MAGYARS, raiders from the forest zone north of the eastern steppelands, in the early 10th century.

Mordvins (Mordvians; Mordvanians; Mordva)

The Mordvins are a Finnic people, who live in the Mordvinian Republic of present-day western Russia, as well as in the provinces of Samara, Penza, Orenburg, Ulyanovsk, and Nizhni-Novgorod (see FINNO-UGRIANS; RUSSIANS: NATIONALITY). The Erza (Erzyas; Ersja) and Moksha are two subgroups that maintain ethnic identity and identify themselves by those names as opposed to the general name Mordvins or Mordvinians. The Engushav, Karatay, and Teryukhsn (Terjukhans) are former subtribes. Along with the MARI the Mordvins are known as the Volga Finnic, their ancestral homeland along the Volga and its tributaries, the Oka and Sura.

ORIGINS

Mordvins belong to the Finno-Ugrian tribes who lived in the Volga area and its tributaries, the Oka and Sura.

This area was an early homeland of Finno-Ugrians, but only the Mordvins, in addition to the Mari, still live here. There is evidence, in place-names and also skull types, that Indo-European speakers may have lived here. They may have been related to ancestors of the SCYTHIANS. The area may have received incomers during the Bronze and Iron Ages from both the eastern Mediterranean and Asia. The metal-rich Ural Mountains bordering the territory on the east had attracted traders from the eastern Mediterranean and Black Sea regions since the Bronze Age. Some of these perhaps settled in lands adjacent to their trade routes to the Urals. Skull analysis shows that people in the Volga-Kama region have traits from both Europe and Asia. People in the Volga-Oka region displays eastern Mediterranean characteristics.

Greek historian Herodotus of the fifth-century B.C.E. described a people called Budinoi in eastern Volga country; west of them he placed the Androphagoi; then the Melancheles (Black Mantles); and the farthest west, the Neuroi. The name Androphagoi (Cannibals), has the same meaning as the Iranian word Mord-Chvar, from which is possibly derived Mordva and subsequently Mordvin. Such names may be the result of ancient fears and prejudices regarding traditional enemies. The black mantle to which Herodotus referred is still a part of the national costume of Volga Finnic.

LANGUAGE

The Mordvinian language, those of the Mari and the extinct MUROMA, form the Volgaic

group of the Finno-Ugric languages. The extinct languages of the MERYA and MESHCHERA were probably also related. Mordvinian is common in the Volga-Kama region and has two literary languages, the larger eastern Erza and the smaller western Moksha. The literary versions of the languages use the same Cyrillic script but are mutually unintelligible.

HISTORY

During the first millennium B.C.E. the ancestors of the Mordvins and other Finno-Ugrians may have been in contact with the Scythians as the Scythians received gold from the Ural Mountains. In the third–fourth century C.E. the OSTROGOTHS controlled Mordvin territory. The BULGARS gained control by about 800. The BALTS seem to have had contact with the Mordvins from the west, for Baltic words are used among Mordvins, who have never lived near the sea.

The Erza and Moksha separation was complete by the seventh century. By the 12th century Erzas and Mokshas had already developed distinct cultures and languages. The next century in 1236 the MONGOLS ruled their homeland, followed by the TATARS the following century.

The Mordvins were farmers and carpenters so, during colonization by the Russian SLAVS from 1562, they were chosen by Ivan the Terrible to build bridges and cut down forests. Many migrated eastward to avoid Russian economic exploitation and conversion to Eastern Orthodox Christianity. Rebellions against the Russians in 1671 and 1743–45 failed. Nesmeyan Vasilyev, leader of the Erza, was burned at the stake in the latter. After a third revolt in 1804 Mordvin resistance ended.

During the 20th century the Mordvins continued to endure hardship. In the years between the Russian Revolution of 1917 and World War II (1939–45) famine led to relocation, and collectivization led to loss of traditional culture. Industrialization in the 1950s also contributed to a weakening of traditional tribalism. The Mordvins are now largely dispersed, and use of their language is decreasing.

CULTURE (see also FINNO-UGRIANS)

Until the 20th century the Mordvins were primarily an agrarian people. Some of them became renowned as beekeepers and traders in honey.

During the Christian era the Mordvin people became Eastern Orthodox Christians, but Ivan IV the Terrible forced them to become

Baptists. Sun worship, known as Shkay, is still practiced. The Moon, trees, water, thunder, and frost are also still considered integral to religious belief. Many Mordvins still believe that dead family members return briefly on the 40th day after death.

The Mordvin name has endured as an official designation despite the fact that the Mordvins consider themselves two different peoples, Erza and Moksha.

Morini (Morins)

The Morini are classified as a Celtic tribe. They lived in Gaul around present-day Calais in northwestern France and are discussed as CELTS or GAULS. They were among the tribes Julius Caesar considered BELGAE. Along with the MENAPII the Morini resisted the ROMANS under Julius Caesar longer than other Gallic tribes, holding out until 56 B.C.E. Some fought as allies of the ARVERNI under Vercingetorix against the Romans in 52 B.C.E.

Muroma (Muromians; Mouromians)

The Muroma, a Finnic-speaking tribe, lived along the banks of the Oka River, a tributary of the Volga, in present-day east-central European Russia. The Muroma language, together with that of the MARI and MORDVINS, form the Volgaic group of Finnic languages.

The first mention of the Muroma in historical texts places them in the region in the 860s C.E. Their ancestors from among the FINNO-UGRIANS are considered indigenous to the region. In the 11th century many of the Finnic tribes, including the Muroma and MERYA, became embroiled in the power struggles of the Russian SLAVS and were displaced or absorbed.

Mycenaeans

The Mycenaeans, named in modern times after the city of Mycenae, which was the first site where Mycenaean culture was recognized, were a Bronze Age people of the Peloponnese (southern Greece). Mycenaean civilization flourished from about 1600 to 1200 B.C.E. and was one of three known highly developed Bronze Age cultures of pre-Hellenic Greece, the other two being the CYCLADITES of the Cyclades island group to the north of Crete and the MINOANS on the island of Crete. All three are discussed as Aegean civi-

lizations as distinct from the later Hellenic civilization of the GREEKS.

ORIGINS

The origins of the Mycenaean civilization are still uncertain. In 1876–77 at the ancient site of Mycenae (from the root word *mukes*)—the city named for a mushroom supposedly found at its site by its legendary founder Perseus—the German amateur archaeologist Heinrich Schliemann located deep shafts containing rich grave goods. Schliemann went on to explore the *tholos* (beehive-shaped) tombs at Mycenae, the ruined palace at Tiryns, and what he believed to be the site of the Greek poet Homer's Troy in Asia Minor, all as part of his obsessive quest to demonstrate that the Trojan War was an actual historical event. The magnificence of his finds convinced him that Mycenaean civilization must have been the society ruled by Homer's Agamemnon and the other heroes of the Trojan War.

Schliemann worked at a time just before a rigorous science of archaeology had been developed to assess the chronology of finds through careful and thorough excavation. By documenting the placement of all artifacts and by examining their context and depth archaeologists can make inferences about relative age (deeper being older) and can reconstruct a “holistic” picture of a site that provides insights into the way people actually lived. This work depends as much or more on commonplace objects such as potsherds as on more glamorous items such as swords and gold face masks. Schliemann's contribution to Greek archaeology, although considerable, was thus a double-edged one, in that he destroyed much evidence that would have yielded worlds of information on Greek prehistory, making the Greek Bronze Age paradoxically less well documented and understood than the same period in many other European countries. For this reason crucial questions about the Mycenaeans, such as the cause of the collapse of their civilization in the 13th century B.C.E., are still far from answered.

Later work has revealed that not only were the artifacts in the shaft graves, including the gold mask dubbed “the face of Agamemnon,” centuries older than the traditional date of the Trojan War—the 13th century B.C.E.—but they were made not by Indo-European raiders from the north, as had been thought, but by people who had been living in Greece for centuries. Excavations of earlier burials throughout Greece showed a continuity of development of which the Mycenaean tombs were the culmination and

climax. Although the Mycenaeans had a much richer material culture than did Greeks of earlier periods, and their profusion of weapons, horses, chariots, and Indo-European language conjured up visions of raiders from the north descending on the Peloponnese and gaining their wealth by sacking the cities of Minoan Crete, they clearly were an indigenous people of Bronze Age Greece.

Emergence of Mycenaean Culture

The earliest Mycenaean culture of the early second millennium B.C.E. is found on the

The Mycenaean World in the Second Millennium B.C.E.

Peloponnese, the southernmost landmass of the Greek peninsula, adjacent areas to the east on the Greek mainland connected to the Peloponnese by the Isthmus of Corinth—Attica (the territory surrounding the future site of Athens), and Boeotia and Phocis, regions northwest of Attica. The settlements in Mycenaean Greece—including Mycenae, Argos, Tiryns, and Lerna—were mostly situated near defensible hilltops or promontories, where there were good agricultural land and a reliable water supply; many of these settlements had been inhabited since the early Neolithic Age.

The earliest graves in Grave Circle B at Mycenae, dating to about 1600 B.C.E., give evidence that Mycenaeans still lived a relatively simple warrior lifestyle and had a fluid tribal society in which any successful warrior could rise to the status of chief. From about 1600 B.C.E. onward the graves steadily became more elaborate and rich, perhaps evidence that the Mycenaeans began taking advantage of Minoan weakness in the wake of the huge volcanic eruption in about 1628–27 B.C.E. on the island of Thera (also called Santorini), causing a tsunami that damaged coastal areas of Crete, probably destroying both warships and trading vessels. Such widespread destruction was probably beyond the capability or imagination of Mycenaean warriors at this time, whose warfare probably was on the level of small-scale raiding, but the rise of certain chieftain families after this time to the status of kings by around 1500 B.C.E. could well have come about through Mycenaean takeovers of Minoan trade routes.

LANGUAGE

The language of the Mycenaeans was discovered when the numerous tablets inscribed with a script called Linear B that had been found (so-called because an earlier similar script had been found on Crete, now called Linear A) were deciphered in 1952. Scholars found that they were written in an early form of Greek.

HISTORY

The Spread of Mycenaean Civilization

After the destruction of the Minoan palaces by fires in 1425 B.C.E. Mycenaean pottery replaced Minoan on Crete and other Aegean islands in the Near East and Egypt; Greek began to be used at Knossos for the administrative matters documented on numerous clay tablets inscribed with Linear B script; and mainland-

style chamber tombs containing weapon burials were introduced on Crete. The cause of the destructive fires is still unknown. Although Mycenaean dominance clearly took hold on Crete and throughout the Minoan world soon after the disaster of 1425 B.C.E. whether the Mycenaeans brought about that destruction or merely took advantage of it—arriving on a Crete laid low by devastating earthquakes—is still unknown. The volcanic eruption on Thera in 1628 B.C.E. may have caused long-term damage to the Minoan economy and trade networks, leading to social stress and gradual weakening. As noted, it is now known that the great eruption of the volcano on the island of Thera took place 200 years earlier than the final collapse of Minoan civilization, but the ash, which fell on a wide area of the eastern Mediterranean, both on Crete itself and on surrounding islands, including Rhodes, may have had a strong impact on the economy of the Minoan network, destroying crops, including many of the slow-growing vines and olive trees whose products were core elements of that economy. Tidal waves could have caused wholesale destruction of fleets and harbors. These impacts could have weakened the Minoan system for years so that when disaster struck again only two centuries later it administered the coup de grâce to a civilization that had lost the resiliency that had allowed it to recover from the destruction of the Old Palace cities in about 1600 B.C.E.

No direct evidence of the impact of the Minoan collapse on the Mycenaeans has been found on the mainland, and the date of the destruction of Knossos by fire is still in dispute. Arthur Evans, the first excavator of Knossos, thought it was destroyed around 1400 B.C.E. The language of the Linear B tablets found there is similar to that on others found at Pylos on the Peloponnese, which seem to be as much as 200 years later—evidence for a later date for the fires.

The Mycenaeans expanded their influence and exports in the central and eastern Mediterranean in the centuries following the demise of Minoan civilization. Evidence of their presence has been found throughout the Cyclades and beyond, showing that the Mycenaeans not only traded abroad but also settled. A settlement with defensive walls has been found on the Asian mainland at Miletus. Depictions of warriors on a papyrus from Tell el-Amarna in Egypt may represent Mycenaean mercenaries; as many as 20 sites along the Nile have produced Mycenaean pottery. Given the

The Mask of Agamemnon, a gold funerary mask, dates to the 16th century B.C.E. (Drawing by Patti Erway)

lack of sophistication of Mycenaean Ware relative to that of Egypt, these sites may have been settlements of Mycenaean traders or mercenaries, rather than of Egyptians who used Mycenaean pottery. Pottery finds throughout the Mediterranean demonstrate the breadth of the Mycenaean trade network, as far west as Sardinia, Italy, and Malta and as far east as the Levantine coast.

Collapse of Mycenaean Civilization

There is archaeological evidence of rising social instability in the radical change in building programs, which diverted energies and resources from construction of palaces and elaborate tombs in the 13th century B.C.E. to the building of fortifications at the various centers, including Pylos, which hitherto had been the least defended of Mycenaean cities. A defensive wall was built across the Isthmus of Corinth, although whether as a protection against invasion from north or south is unclear.

The strongest evidence of violent activity at this time was that of the so-called SEA PEOPLES, a name given by the Egyptians to warrior armies who attacked them in repeated raids around the turn of the 13th and 12th centuries B.C.E. It seems probable that the Sea Peoples originally were bands of pirates preying on the lucrative trade routes crossing the Mediterranean, similar to the VIKINGS of a later day. By the end of the 13th century B.C.E. they had joined into armies massive enough to attack Egypt, documented in papyri there that show their distinctive horned helmets. Their place of origin is unknown, but they are associated with artifacts found on Sicily and Sardinia, where they probably settled after the collapse of Mycenaean civilization.

The dating of events during the period of destruction that occurred around 1200 B.C.E. throughout the Mycenaean world and beyond is highly uncertain. The attack on the palace at Pylos that caused its destruction seems to have been among the earliest; its former dating of approximately 1200 B.C.E. is now in some doubt and it could have been earlier. The scenario seems more complicated than a wholesale invasion of foreigners on Mycenaean civilization, with a simple equation of invaders against Greeks. Some strongholds were reoccupied after their destruction, then destroyed again. Athens remained largely unscathed, possibly because of the impregnability of the Acropolis (high city), the steep-sided hill on top of which a Mycenaean palace was built. The great powers of the time, the Egyptians

and the Hittites, were also under attack, as well as states in Syria, Palestine, and Cyprus, and during the succeeding century there is evidence of widespread population movements throughout the eastern Mediterranean, as well as depopulation and devastation of some regions. In some places there is a sharp break with what had gone before, evidence that a completely different culture replaced the native culture. Elsewhere there are signs of the establishment of new mixed communities who combined elements of previous cultures with new features. In general Greece suffered severe depopulation.

The fragmentary evidence from this period of destruction together with uncertainties of dating have given rise to a number of competing theories and an intensity of debate in inverse proportion to the strength of the data. A view held in the past has been to connect the demise of the Mycenaean with the invasion from the northwest of a people called DORIANS, an oral tradition preserved in writing by later Greeks. There is some evidence of newcomers to Greece from this time: handmade burnished pottery found on several 12th-century B.C.E. sites, which has been called "Barbarian Ware," and also some bronze weapons similar to types found in Europe north of the Peloponnese, "cut and thrust" swords of the so-called Naue II type. But the finds are too few to document a large movement of peoples. The swords have been found only in Mycenaean tombs as offerings or burial goods and thus suggest that Mycenaean had adopted this type of weapon, which they had probably obtained through trade.

Some scholars have seen in the so-called Barbarian Ware affinities with pottery made in contemporary Troy (Coarse Ware) and in southeastern Romania. Similar pottery is also found in southern Italy and Sicily, the latter associated with one of the Sea Peoples named by the Egyptians the Shekelesh. Another group called the Shardana by the Egyptians may have originated or lived on the island of Sardinia. In all contexts this pottery appears without precursors and seems to be associated with outsiders. Such pottery found at Korakou, Mycenae, Lefkandi, and a few other sites in central and southern Greece dates to just after the widespread destruction. The Coarse Ware of Troy is also contemporary with its destruction.

The small amount of Barbarian Ware that has been found shows that its makers probably were small-scale raiders and war bands who had found their way to the Mediterranean possibly from the Middle Danube region and who per-

haps would later become part of the armies of the Sea Peoples who attacked the Egyptians. However, such raiders, as would the Vikings, could have had a destructive effect all out of proportion to their numbers. There are signs, as well, that the makers of Barbarian Ware soon began to imitate Mycenaean pottery shapes in their handmade pottery. This is seen at Tiryns, where Barbarian Ware may predate the destruction of the palace, possibly evidence that its makers were mercenaries. Barbarian Ware continued to be made for some time after the collapse of Mycenaean society at Tiryns. Meanwhile the making of large amounts of sophisticated, wheel-thrown Mycenaean pottery also continued for a time. The possibility that outsiders may have quickly adopted material aspects of the more advanced culture of the Mycenaeans may be the reason there is so little sign of them in the archaeological record.

The Sea Peoples may have formed armies in response to defensive efforts of the Mycenaeans and other states. They could have swept into their forces smaller groups of warriors, such as the Dorians; it is equally possible that Dorians had been hired by the Mycenaeans as mercenaries for defense; these two possibilities are not mutually exclusive and could both be true.

It is also probable that the various Mycenaean power centers—Tiryns, Athens, Argos, Mycenae—competed for access to trade routes, each trying to carve out its own sphere of power, even as the city-states of classical Greece did. An early version of the Peloponnesian War played out among different Mycenaean powers may have been the cause of much of the damage that has been found.

Such competition could have intensified in times of climate change. The pattern of destruction could be explained by a prolonged drought in the areas of Crete, the southern Peloponnese, Boeotia, Euboea, Phocis, and the Argolid, where the destruction was greatest that did not greatly affect Attica, the northwest Peloponnese, Thessaly, and the rest of northern Greece, or the Dodecanese (that is, the islands of Rhodes, Kos, etc.), which were largely spared. Meteorologists have shown that such a pattern of drought is entirely likely and has actually occurred in recorded times. Study of tree-growth rings from Turkey suggests that there may have been a drought in central Anatolia, which may be connected with the collapse of the Hittite Empire in about 1200 B.C.E.

After the period of destruction some of the groups that made up the Sea Peoples settled in

the Near East; one group, later known as the Philistines, settled in southern Palestine. The majority of European-made swords and knives found in the Mediterranean from this period occur on Cyprus, where a phase of prosperity and cultural flowering took place, in stark contrast to most of the larger region. A bronze statuette of a warrior with horned helmet very similar to those depicted by the Egyptians as worn by the Sea Peoples was found at Enkomi on Cyprus. This find may suggest that one of the warrior groups settled here and was involved in the rebuilding of the main cities. On the other hand on the Greek mainland in places where warrior groups such as the Dorians seem to have taken hold and where Mycenaean culture disappeared no such resurgence occurred; instead a Dark Ages of economic dislocation, depopulation, and disorder ensued. Mycenaean and Near Eastern influences are clear in the art of Cyprus at this time, and later Greeks there spoke a dialect, called Arcado-Cypriot (because it was also spoken in the remote region of Arcadia in mainland Greece), which is more closely related to Mycenaean Greek than any other dialect that survived the Dark Ages. It is therefore more probable that the socioeconomic resurgence on Cyprus involved refugee Mycenaeans—both elites and artisans. The resurgence was probably facilitated by the favorable location of Cyprus for trading, but the dominant group could have been Mycenaeans alone or in conjunction with a Sea People group whom they had hired as mercenaries or with whom they had struck an alliance. The European weapons found on Cyprus could as easily have belonged to Mycenaeans (like those found earlier in Mycenaean tombs) as to barbarian European raiders. In any case the period of recovery on Cyprus was short-lived, and after several disruptions probably caused by further raiding, society there experienced the decline that had happened everywhere else.

CULTURE (see also GREEKS)

Economy

Mycenaean Central Planning Evidence of the Mycenaean economy is provided by the Linear B tablets found at Knossos and Pylos. One group of tablets lists thousands of male sheep, probably for use in a wool-making industry on a massive scale. Tablets from Pylos on the Greek mainland also include inventories of massive flocks and document the issuing of bronze to smiths. Pylian tablets document a

perfume industry there, and storehouses for oil and wine have been found. Other tablets from Knossos document land ownership in a hierarchy from the king through a series of lower ranks in feudal fashion. Whether this system existed in the Mycenaean homeland is unknown, but there is evidence of planned agricultural communities. A site in Macedonia where burning preserved stored produce shows that wheat, barley, lentils, bitter vetch, and grapes were grown. There were thousands of workers in Crete, often women, who were organized into gangs, each with a foreman who received their rations.

Government and Society

Rise of Elites Wealthy burials that antedate the emergence of Mycenaean civilization are found in a number of places in southern Greece in addition to those at Mycenae, showing that an elite class had arisen across the region. Other prosperous societies were located at Messenia, Marathon, Argos, and elsewhere. Burials were often grouped and covered with a single mound.

Grave Circle A (c. 1550 B.C.E.) at Mycenae was contemporary with the latest burials of Grave Circle B and was used for another 50 years. It was more exclusive than the earlier circle, having only six shafts, three of which were the deepest of all, and far more lavishly furnished. Men, women, children, and infants were all buried in these, perhaps members of a royal dynasty. Some 200 years after the last burial in Grave Circle A major renovations were done in the area and on the citadel. The citadel wall was extended, and the ground level over Grave Circle A was raised. The original carved stone grave markers were reused, showing that this royal family or group was still remembered.

The last burials of Grave Circle A were dramatically richer than anything known before. Grave goods included five gold masks, a profusion of gold ornaments, dozens of bronze rapier-type swords and heavy spearheads, and five short daggers inlaid with hunting scenes in gold, silver, and black enamel. The style of these scenes shows influence from Crete, but fully reinterpreted in an indigenous manner.

Imported objects and materials indicate wide-ranging contacts. Objects made of exotic materials included a rhyton (horn-shaped drinking cup) made of ostrich eggshell, probably from the Near East or North Africa, and items made of ivory, lapis lazuli, and other luxury materials from afar. There are amber necklaces, the material itself certainly imported

from the north, the style of the necklaces showing similarities with necklaces of the contemporary Wessex culture in Britain. There were also necklaces made of beads colored with faience (a blue-green glaze) like examples found in Britain and western Europe.

The Wessex Culture seems to have been a later development of the Bell Beaker Culture, which began in the early Bronze Age around 2500 B.C.E. and at that time spearheaded the development of wide-ranging trade networks throughout Europe, from Iberia to Brittany, Ireland, Britain, and along the North Sea coast to Denmark. Bell Beaker trade routes, which remained important for a millenium and more, were probably the source of the amber that entered the Mycenaean.

Sources of Mycenaean Wealth The sudden efflorescence of wealth seen in Grave Circle A at Mycenae has yet to be explained with any certainty, a consequence of the treasure-hunting style used by its first excavators, who discarded much material that could have shed light on this question. On analogy with other warrior societies located near flourishing trade routes (the example of the Vikings who preyed on and took part in the lucrative trade in Islamic silver along Baltic trade routes to the Carolingian Empire of the FRANKS in the ninth century C.E. is just one of many) the Mycenaean probably tapped into the trade between the civilizations of the Near East and the Minoans on Crete, both as pirates and as traders. Wealth and concomitant power probably accumulated in the hands of the most energetic and successful war leaders, whose descendants tended to grow wealthier and more powerful over time in a self-perpetuating cycle.

After the emergence of the wealthy elites from the time of Grave Circle A, consolidation and expansion of Mycenaean influence took place, a process again documented by funerary practices. Going beyond the simple accumulation of expensive objects and materials to furnish grave goods, Mycenaean nobles now marshaled immense labor and building expertise in the building of their tombs. Tombs cut into hillsides were made for the highest levels of society and for apparently lesser nobility as well. Tombs would be used by several generations, reflecting the stability of Mycenaean society at this time.

The artifacts from tombs show clear and strong Cretan affinities; influences seem to run both ways, because the art of both societies

developed in tandem, and it is often impossible to discern whether pieces were made in Minoan Crete or Mycenaean Greece. The location where they were found can tell nothing definitive on this score, since there must have been a great degree of back-and-forth exchange between the elites of the two societies, probably in the form of diplomatic gifts. Inter-marriage between Cretan and Mycenaean royalty and aristocracy seems likely.

Few buildings from this period have survived later construction programs; one of the few, the 13th-century B.C.E. palace of Tiryns, demonstrates that Mycenaeans emulated the palaces of Crete. Tiryns had wall paintings of bull leaping, the preeminent ritual-cum-sport of Crete, which are closely similar to those made at Knossos and probably were copies.

Mycenaean Wanax, or King The Linear B tablets contain information on the political order of the Mycenaeans. The king or highest ruler was called a *wanax*; there was another high office, the *lawagetas*, or “leader of the people,” probably a war leader. This division of leadership has analogies among other Indo-European peoples. Among both CELTS and GERMANICS the office of war leader was separate from another co-ruler who had a religious significance, as a sort of sacred king. Among the Celts the sacred king at his coronation wedded a priestess who represented the goddess of the land and fertility. The Germanic sacred king or *thiudans* seems to have interceded with the gods for the good of his people. Although it is not known whether the Mycenaean *wanax* had such functions, it seems at least possible that part of his role was to be closer to the gods than any other in his kingdom. There was a series of lower officials, including the *basileus*, which later became the Greek word for “king.” In contrast to the classical period, a special class of priests existed, as well as a palace economy with a complex division of labor and numerous slaves.

Mycenaean Influences on Later Greeks When Mycenaean culture was first discovered, it appeared to be almost completely exotic and unrelated to the world of later Greeks, as though the Dark Ages after the collapse of Mycenaean civilization had wiped a cultural slate clean, and the Greeks of Homer’s time (ninth to eighth century B.C.E.) and later built a new culture with few ties to the pre-Dark Age past. However, as archaeological discoveries of Mycenaean remains continued, more and more elements corresponding to descriptions from

Homer and to artifacts from Homer’s time were found. For example the Greeks who took part in the Trojan War as described by Homer worshipped in stone temples in their cities, even as Homer’s contemporaries did. Scholars had thought that the Mycenaeans worshipped in simple shrines and that Homer had based his stone temples on those of his eighth-century B.C.E. contemporaries. With the discovery of the temple complex at Mycenae and others at other 13th-century B.C.E. cities it seemed that Homer could have had knowledge of the Mycenaeans after all. Folk memories, perhaps kept alive in the oral poetic tradition, could have preserved details of Mycenaean culture. Numerous details mentioned in Homer have found correspondences in artifacts uncovered by archaeologists, such as silver-studded swords, chariots, tripods, corselets, helmets, and greaves. Even stylistically some of the figurative art of the Greek Archaic Age bears a remarkable resemblance to Mycenaean art, as though the intervening centuries of the Dark Ages had never occurred. The making of any figurative art at all appears to have ceased for some 500 years until about the end of the eighth century B.C.E. In about 700 B.C.E. wheel-made figurines of females—priestesses or goddesses—with upraised arms similar to those of the Mycenaean period appeared again, after a break in continuity of half a millennium.

How these apparent “throwbacks” to a distant past can have been made by later Greeks remains an unanswered question. It is possible that there actually was little or no break in continuity but that artifacts demonstrating that continuity, lost in the disorders of the Dark Ages, have not yet been found. A figurine with uplifted arms from the Dark Ages was found on Cyprus, suggesting that elements of Mycenaean culture were preserved there and could have influenced post-Dark Age Greeks on the mainland. Clearly the social conditions for making monumental stone buildings and accomplished figurative art did not exist during the impoverished Dark Ages, but this does not explain why post-Dark Age Greeks seem to have taken up cultural trends where they left off when Mycenaean civilization ended so long before.

Military Practices

Mycenaean warriors used long spears, swords, and daggers and bore large “man-covering” shields, either straight-sided or of hourglass shape, perhaps suspended by a strap worn over the shoulder (as shown in a hunting scene

depicted on a dagger from Grave Circle A). They were made of bull's hide, often unpainted so that the animal's natural coloring, often white with rufus-colored mottling, could be seen.

Elites wore helmets made of boar's tusks and, probably exceptionally, body armor. The earliest known European suit of armor, made entirely of bronze, was found in a tomb at Dendra in the Argolid. It consisted of a separate neckpiece and hinged shoulder plates over a cuirass made, for flexibility, of three separate plates in front and back that telescoped together. The utility of such armor is questionable, however, and it may have been used primarily for show. The boar's tusk helmets probably afforded more protection.

Dwellings and Architecture

Little architecture (beyond tombs) remains from the early Mycenaean period. One of the few studied is near the Archaic sanctuary of Helen and Menelaos south of Sparta. It had two stories, a central *megaron*, or king's hall, flanked by corridors and small rooms, an outer porch, and an anteroom.

Mycenaean architecture reached a pinnacle with the *tholos* tombs of the 14th century B.C.E., including the Treasury of Atreus near Mycenae, built of a local limestone so hard it could only be dressed with hammer blows and finished by grinding, requiring immense labor. The doorway, flanked by carved half-columns decorated with spiraling rosettes of lapis, features an ingenious technique of relieving the doorway of the weight of the corbelled interior vault. Bronze rosettes were set into the rock walls for decoration. It has a *dromos* lined with massive blocks, the large interior vault, and a side chamber for the body.

After the 14th century B.C.E. the palace of Mycenae was enlarged and its walls extended repeatedly. The famous Lion Gate, a relief of opposed lions facing a pillar set into a niche in the massive blocks of the wall, was built at this time. The motif of opposed lions was also carved on numerous ivories and sealstones, suggesting it had royal and perhaps religious significance for the Mycenaeans as a people. The Lion Gate was flanked on each side by bastions that allowed defenders to rain arrows and javelins from the side on enemies approaching it. This defensive principle was used in many Mycenaean fortifications.

The palace of Tiryns was built of blocks so massive later Greeks assumed they must have been built by the giant Cyclops; hence the term

Cyclopean used for massive architecture. The blocks were prised out of the limestone bedrock on which the palace stands, using natural faults and fissures, and levered into place. The walls were up to five meters thick and seven to eight meters high.

Such thick walls were hardly necessary to repel warriors bearing only Bronze Age military equipment, and the primary threat to Mycenaean citadels (in the arid climate of southern Greece) was the loss of a water supply under siege. The citadels of Mycenae, Tiryns, and Athens apparently depended on springs outside their walls and, late in the 13th century B.C.E., vaulted passages leading to them were built. These water sources were abandoned soon after the construction of the passages, suggesting that the measure was ineffectual or that the citadels were no longer being defended—one of many signs from the time of the imminent collapse of Mycenaean civilization. It is more probable that the Cyclopean walls were constructed to demonstrate the might and glory of Mycenaean rulers, and perhaps to create a kind of psychological warfare, to overawe and daunt the enemy, to convince him that the king must have had divine help in building his fortress.

Mycenaean engineers used their abilities in works of practical applicability impressive even today in demonstrating the vision of their planners and builders. The citadel of Gla was built on an outcrop in the basin of a shallow lake that had been drained for the purpose. It was surrounded by regularly planned buildings and open fields that show every sign that they were part of a single plan to create an agricultural estate, with buildings to house farmworkers and administrators and storage areas within the citadel to protect the estate's produce. The citadel was also large enough to allow flocks to be taken in times of danger.

Clothing

We have a clear idea of Mycenaean dress from the many depictions that remain. Men typically wore only short trousers, leaving the chest bare. Women also were bare-breasted and wore only long, flounced skirts cinched in at the waist, a style that probably originated in Crete.

Art

Attempts to trace the development of Mycenaean art face a number of difficulties. One of them is the close relationship of Minoan art and artisans with their Mycenaean counterparts, so that at times it is difficult to know by whom a

given art object was made—by a Minoan or by a Mycenaean influenced by Minoan art. Even if the object was found on the mainland, it could have been made by an immigrant Minoan craftsman, by a Mycenaean trained or influenced by Minoans, or by a Minoan on Crete and then traded to the mainland or given to a Mycenaean nobleman as a diplomatic gift. Another difficulty is that Mycenaeans seem to have kept objects for a long time as treasured heirlooms; as a result objects found buried in the late Mycenaean period are sometimes in an earlier style, giving the impression that Mycenaean art remained static for centuries. The possibility that an object may be much older than the context in which it was found must always be borne in mind. After the demise of Minoan civilization developments in artistic style increasingly did reflect the work of Mycenaean artists; even then, however, many Minoan artists must have continued to work for Mycenaean patrons. Their work then would have reflected the tastes of these patrons to some extent but not completely, as they, as do any artists, continued to adhere to their own stylistic imperatives.

Sealstones and Seal Rings Mycenaean artists adopted from the Minoans the carving of semi-precious gemstones for use as seals with which to make impressions on lumps of soft clay; these were probably affixed, perhaps with string, to other objects such as amphorae to mark ownership. Gold seal rings were also made. The great numbers of these found, which have survived because of their small size and durability, have allowed identification of general artistic trends that the fragmentary remains of other artworks, such as frescoes, sculpture, and painted vases, does not allow. Even disasters such as the burning of Minoan palaces added to the surviving evidence about the sealstones, because many pieces of clay with seal impressions were baked hard in the fires.

The carving of sealstones reached a very high level of skill and artistry, depicting religious subjects, lions attacking their prey, recumbent bulls, and other animals, such as stags and wild goats, with an amazing realism and vigor, considering their small size and the hardness of the stones used. Seals were made by using agate, cornelian, jasper, rock crystal, amethyst, hematite, and chalcedony. Steatite, a very soft stone, was used to make carved ornaments or amulets that probably were not used for sealing; the lower level of artistic skill and the vast numbers of the carved steatite stones

that have been found suggest that they were made and worn by common people.

It is possible to trace the development of Mycenaean-Minoan sealstone carving from a vigorous early style of the 16th–15th centuries B.C.E. (strictly Minoan sealstone carving began centuries earlier) to what is seen by scholars as an increasingly conventionalized, attenuated style just before the final collapse of Minoan civilization. A late seal shows an enormous and bloated bull reclining while a slender bull leaper vainly tries to find room within the oval frame of the picture to leap over him, almost a caricature of a ritual that once must have had a deep religious significance. The carving skill and the artistry of this seal are no less than those of earlier examples, but the life has gone out of the style; the artist no longer knows why he is making this object (or rather, he knows with his mind, but not with his heart). The making of such seals seems to have ceased with the end of Minoan civilization. Yet it is probable that seals and especially seal rings continued in use throughout the Mycenaean period, the great gold rings passed down as markers of royal and noble power. Many have been found in late contexts, just before the end of Mycenaean civilization, but their style shows that they had been made in the early period of seal carving.

Metalwork The artistic quality of the hunting scenes on the daggers found in the shaft graves at Mycenae (c. 1550 B.C.E.) is of the highest caliber. The lively and rhythmic compositions, amazingly realized in a simple medium of inlaid gold, silver, and black enamel, course with energy and have an admirable balance of stylization and realism. One example shows four hunters attacking a huge lion with spears and arrows; one hunter lies slain under the lion's ravaging paws and gape-mouthed roar. Other scenes show leopards hunting birds and lions attacking deer. Gold cups from Vaphio near Sparta show scenes of bull hunting.

Sculpture Ivory carving seems to have evolved in parallel with seal carving, showing a similar development in the anatomical rendering of animals. Lions have manes with the texture of fish gills and bulls have pistonlike legs. Such carvings, as were the seals, were kept throughout the Mycenaean period and are found in late contexts; examples include ivory plaques with antelopes from the Kadmeion at Thebes, the sphinxes from the contemporary House of the Sphinxes at Mycenae, both contexts (the surrounding material remains) dating to around

This Mycenaean terra-cotta figurine, assumed to be of a goddess, dates from the 14th or 13th century B.C.E. (Drawing by Patti Erway)

1300 B.C.E., and the ivories probably made 200 years earlier. Tablets from Pylos document this practice of keeping heirlooms; the very age of the objects adds to their luster and value. Possession of such heirlooms must have demonstrated a person's illustrious and ancient lineage, and the emotions evoked by a fine piece of worked ivory, yellow with age, kept in the family for generations would not be at all strange to us today.

By the later Mycenaean period from 1300 B.C.E. little sculpture was being made; exceptions are the lions and the pillar of the Lion Gate at Mycenae and painted highly schematic terra-cotta figurines of women, some with raised arms.

Painting As seal carving and sculpture faded, artistic energies were redirected to painting. Vases show stylized cows, bulls, and birds traced in two-dimensional line drawing on a white background. Scenes include charioteers, marching soldiers, women standing in buildings, a procession of men in robes or nude with scepter approaching an enthroned figure, and birds accompanying a man playing a lyre. Earlier vase painting from about the 15th century B.C.E. displays a rather undeveloped technique, which gradually improved as painters substituted lustrous for matte-textured paints.

By the late period fresco painting had risen to a high quality. The style shows derivation from Minoan style but has developed along its own lines. At Mycenae in what is known as the Cult Center the frescoes are masterfully drawn. A female figure called the Mykenaiia is shown with her face in profile. Her hands are drawn in fine detail and the expression of her face, replete with slight double chin as she looks pensively downward, shows the psychological insight of the artist as he evokes the power of a priestess—or goddess—and perhaps her sympathy for the mortals whose fates she decides.

Details of the technique of the artist can be seen in the paintings in what is known as the Room with the Fresco. Preliminary sketches were done in ocher; red paint was applied in a rather slapdash way, and thick black outlines were used to emphasize the depictions. A woman with a tall, elaborate headdress bearing wheat sheaves is shown in a pillared temple, but her headdress is so tall that part of the temple roof had to be erased to accommodate it, suggesting a rather loose, improvisational way of working.

Large frescoes with numerous figures in the *megaron* (central room) at Pylos depict a

feast; on the walls of the vestibule there is a procession of women and men bearing trays, bowls, and amphorae of food and drink; in their midst paces a giant—probably divine—bull, too large himself to be slaughtered for food, but perhaps serving as a symbol of plenty. In the *megaron* itself a feast is in progress, with pairs of men at tables probably drinking and a lyre player providing music; another large bull is in attendance. Flanking the throne are sets of wingless griffins and lions. The living feasts that may have taken place in the *megaron* surrounded by this painted one, with its divine animals, must have taken on an added luster, as the wall murals demonstrated the tradition of feasting within which the living event was to be understood. Women rather than men are depicted seated on thrones and presiding over feasts.

Religion

Evidence of Ritual at Mycenae Knowledge about Mycenaean religion is fragmentary. Because the state of writing at this time was rudimentary—Linear B script is suitable only for labeling and making lists of objects and commodities—we have no literary evidence of gods or ritual, other than votive tablets naming gods and listing offerings. Remains of the “paraphernalia” of religion bear mute and ambiguous witness to what seems to have been an elaborate system of worship.

A group of buildings near Grave Circle A in Mycenae, which has been dubbed the Cult Center, contains the clearest evidence yet found of Mycenaean ritual practice. (Scholars disagree as to how the Cult Center should be interpreted, even as to whether it served as a religious center at all.) One of the buildings, thought to be a temple, contains a main room with a central platform and benches around the walls, inner storerooms, and another room decorated on one wall with a large, elaborate fresco. The Room with the Fresco, as it is called, had an altar and the remains of a cult statue and probably of a throne. A carved ivory lion in crouched position that was found probably decorated an arm of the throne. The superbly carved head of a youth, made from a single piece of elephant tusk, may have had a wooden body that did not survive. The main figures of the fresco stand above the altar that projects outward from the wall and was painted to appear to be part of the building with pillars in the fresco within which the figures stand. The figures are of a woman bearing a lance and of another partially damaged taller figure, proba-

bly a female holding a large sword. The taller figure was probably a goddess and the other, facing her and seemingly presenting the lance, perhaps a priestess. Below these two figures and to the left of the altar is a much smaller woman possibly bearing wheat sheaves, with what resembles an animal at her side. (A goddess of grain, Sitopotinija, is mentioned on a Mycenaean tablet.) A clay bathtub in the room was possibly for purification ritual.

The main room of the temple contained a closely packed deposit of clay figurines, which consist of cylindrical jars or vases with human heads and raised arms molded in clay on top; the gender of many of them is ambiguous as none has obvious breasts, some have hair, and others are bald. Because many of them were in fragments, researchers have conjectured that they were hurriedly stacked in a haphazard pile after an earthquake or other disturbance had broken them. Alternatively they may have been deliberately broken, a practice known from other cultures in which cult figures are destroyed after use to free the spirits with which they had been imbued during the ritual. It seems plausible that they held offerings of food and were used as votaries. Three much smaller figurines that were found are clearly female as their breasts are obvious; one of these was found in a standing position and may have been an object of prayer and worship. The making of anthropomorphic vessels and the use of figurines in ritual have a very ancient history in Greece and the Balkans, dating from Neolithic times thousands of years earlier, evidence that Mycenaean religion, at least in some of its aspects, retained pre-Indo-European traditions.

The main room of the temple also contains clay figurines of tightly coiled snakes, some with bulging eyes and protruding tongue. Gods were sometimes depicted as snakes in classical times, and live snakes were kept in cult places, such as the caves at Eleusis used in the annual festival called the Thesmophoria. (The python that the Greek god Apollo was said to have slain at Delphi may have been one of these.) The style of some of the figurines shows that they probably predate the construction of the temple; these then had probably not been broken deliberately and were sacred objects carefully preserved for use in a new venue. In the final stage in the use of the temple before it was partly destroyed around 1200 B.C.E. as found by archaeologists, a single figurine vase of a woman with upraised arms stood on a bench in an inconspicuous position behind a pillar.

Archaeologists who uncovered the temple found the figurine still standing in this position.

Other Evidence of Ritual from Pictorial Art A ring found near the richest grave shafts at Mycenae may give a clue to Mycenaean religion. It shows three women bearing flowers approaching a seated woman holding poppy heads. The poppy was later sacred to the Olympian Greek goddess of grain, Demeter, because poppies usually grow in grain fields in Europe. An opiate derived from poppies could have been used in religious ritual to promote a sense of spiritual awareness.

In most of the Mycenaean cult places that have been excavated depictions of female cult figures predominate. Exceptions are the youth in the Room with the Fresco and a bronze statuette found at Hagia Eirene (modern Ayia Irini) on the island of Kea making a gesture of salute often depicted in Minoan art. Here some 50 female clay figurines have also been found.

The cult building here is notable in that it was used through a number of renovations, including one after an earthquake in about 1440 B.C.E., for a very long period from about the 18th to the third century. After the earthquake some of the rooms in the temple were packed solid with debris to prevent their use (probably because they had incurred the gods' wrath and were unlucky). One of the rooms, however, was only partially filled, leaving the upper parts of several statues projecting through. In about 1050 B.C.E. this room was once more used for worship. In the late eighth century B.C.E. an earthen floor with a packed surface was raised to the neck of one of the earlier statues, and a ring base supported by stone slabs held the extremely worn head erect, an extraordinary demonstration of piety and belief.

Vase paintings of classical times show a goddess rising up out of the Earth with only her upper body showing, or only her head, sometimes aided by Hermes in his role as summoner of souls, and worshipped by prancing satyrs. The scene depicted in such paintings (known from inscriptions on them) is the arrival of Demeter's daughter, Kore, who had been abducted by Hades, god of the Underworld, whose release from underground heralds the spring. A folk custom that continued long after antiquity was to bury in the autumn a doll made of sheaves of corn, which would be unearthed the following spring and found to be sprouting green, a custom that could well date to the Neolithic Age and could

have furnished the seed of the later myth of Demeter and Kore.

But it is not far-fetched to postulate that the visual image of the upper half of a female figure protruding from the ground could have derived from a temple such as that at Hagia Eirene and other earthquake-ruined temples that continued to be used by post-Dark Age Greeks. A number of these paintings show the emerging goddess with raised arms, in one example looking as though pleading for help, in another making a gesture that is hard to interpret. This too could be a depiction of the raised-arm gestures (not used in worship by later Greeks) of Mycenaean figurines and other images, which undoubtedly were well known to later Greeks, because they were uncovered periodically during excavations for building construction and by the plow. Many artifacts of the Mycenaean that had been buried in earthquakes must have been uncovered by later Greeks by accident in this way or by the opening of new earthquake fissures, revealing what had been buried. (The statues in the temple at Hagia Eirene did not have their arms raised.) On the reverse side of one of the emerging goddess vases a man is shown contemplating a vase with a woman's head, a type never made by post-Dark Age Greeks (a matter of puzzlement for earlier generations of scholars, who knew little of Mycenaean civilization). In Archaic and classical times the Hagia Eirene temple was utilized in the worship of Dionysos, and Dionysos figures in a number of the vase paintings that show the emerging Kore.

Mycenaean Pantheon of Deities Inscriptions found at Knossos and Pylos give the names of many deities, some of which are similar to the names of gods of later Greeks and some of which are not. The name Diwe or Diwijeu probably refers to Zeus, based on the similarity of his name to the Indo-European *Dyeu* (to shine) the root of the word Zeus. The name Diuja also appears in inscriptions and is a feminine form of Diwe. (This name may be the origin of Dione, mother of Aphrodite, a goddess of later times.) Linear B tablets at Knossos refer to a cult place called Diktaiou, and Zeus was said by classical Greeks to have been born in a cave in Mount Dikte on Crete. The Mycenaean Hera was Era. Poseidon was Posedo, the Enesidaone, "Earth shaker." Poseidon was the most frequently mentioned god in the Pylos tablets. A feminine version of his name is also mentioned: Posidaēja. (Feminine versions of Zeus and Poseidon may refer to their wives.) *Pajawo* has been identified with Paian, a title of Apollo;

Paian may have been a separate god whose attributes Apollo had appropriated in classical times. The name Atana refers to Athena, and Diwonisojo, to Dionysos. Artemis, Hermes, and Ares all had possible counterparts named on the tablets. A Matereteija (Mother Goddess) also received offerings.

Potnia (Lady or Mistress), spelled on tablets as Potinija, was the name given by Greeks of the Archaic period to a goddess who was mistress of animals, "the Lady of Wild Things," by classical times called Artemis. Thus the Mycenaean goddess, derived from the Minoans, who is depicted with raised hands and accompanied by beasts may be Potinija, although she is not named in her depictions. The Mycenaean mistress of animals is commonly shown with animals both real, often lions and doves, and mythical, often griffins (winged, eagle-headed lions); the Minoan double ax, which is a sacred symbol; and snakes. On Archaic vases from Boeotia Potnia is shown flanked by lions in heraldic poses like those of the Lion Gate at Mycenae. The woman with a lionlike animal by her side depicted in the Room with the Fresco could have been Potinija or her priestess. Mountains and trees were also sacred to the Minoan Mistress of Animals in her aspect as Mother of Mountains, and thus probably to Potinija as well. Icons showing the goddess surrounded by animals gave rise to later Greek myths of Artemis as huntress, an Indo-European reinterpretation that began in late Mycenaean times, when she was depicted wearing a helmet and bearing arms. An epithet applied to her on a tablet from Pylos connects her with bronze smiths. In her armed aspect she was a precursor of the armed Athena, whose Mycenaean name was sometimes spelled Atanapotinija. As was her counterpart, the Minoan Mother of the Mountains, she was probably associated with fertility, suggested by the wheat sheaves borne by the priestess in the Room with the Fresco.

The attributes of Potinija, evidently a potent and important goddess, the protector of nature, vegetation, and fertility, can be said to have been parceled out among three Olympian goddesses, Artemis, Athena, and Demeter (and possibly also Aphrodite, to whom doves were sacred). This division might be a form of the "divide and conquer" strategy of the Greeks of the Dark Ages and later, whose outlook may have become more patriarchal under the influence of the makers of Barbarian Ware who occupied former Mycenaean territories, and their descendants, speakers of Dorian and Ionian Greek.

Of the deity names written on Linear B tablets, the name *Era* (pronounced Hera, the sounded “H” being understood rather than having its own character), while clearly of fore-runner of Olympian Hera, long defied attempts by linguists to discern its meaning in terms of Mycenaean Greek. This has led to the conclusion by some scholars that Hera may not have been Greek or even Indo-European at all. Hera seems to be related to a Mycenaean word for “lord, master”—*oros*—that may be derived from or related to the Minoan (non-Indo-European) kingly title, Minos. Thus *Era* and *Hera* may have meant “mistress” and have been used as an alternative to the Indo-European Potinija. An alternative etymology derives *Era* from the Greek *ier*, “year” or “spring,” with the addition of the suffix “a” meaning “of the year” or “of the spring.”

Scholars use clues from the Homeric epics, both linguistic and mythological, to deduce the pre-Olympian significance of deities and heroes. Another word for spring used in Homer is *Hore*, the plural of which, *Horai*, means “seasons.” The *Horai* in Homer are mythological companions of Hera, keepers of the cloudgates through which she rides in her chariot and keeper of the stable for her horses. From this it would appear that Hera had earlier been a goddess of the seasons and, probably, of the yearly cycle (although by Homeric times she no longer had these powers). Bronze Age sites probably associated with Hera have yielded artifacts illustrating this aspect of hers. On the hill of Euboea (“rich in oxen”) midway between Tiryns and Mycenae, a figurine was found showing a female driving a chariot drawn by unidentified quadrupeds; female charioteers have been found elsewhere as well.

In post-Dark Age (Archaic) Argos, an important locus of Hera’s worship in historic times, Hera’s principal festival, the Hekatombaia, took place at the Argive New Year, in the spring. It seems likely that the Hekatombaia retained many features of Bronze Age ritual. It involved the ritual extinguishment of all fires in the land and the kindling of a new fire from which each household obtained fire for the hearth (a rite common to most New Year rituals throughout the ancient Mediterranean), athletic games, and the sacrifice of 100 oxen (the meaning of Hekatombaia) to the goddess. This, with several features of the myths involving Hera and Argos (which took its name from Hera’s oxherd Argos, who saved the people of Arcadia from a ravaging bull) and the fact that her common epithet in the *Iliad* is “Lady Hera

with the look of an ox” suggests that Hera was, among other epiphanies, an ox goddess, a characteristic that probably dates from Mycenaean times. Her role as goddess of oxen must have concerned agricultural cycles, sacrifices of bulls, the taming of heifers, and yoking of oxen. Other Argive titles of Hera’s were Yoker and Charioteer; a priestess of Hera in another Greek myth was named Hippodameia, “Horsetamer.” An important aspect of this festival was the awarding of a bronze shield (*aspis*) to the one who excelled in the athletic contests. The shield was sacred to Hera and an important symbol, for the main Mycenaean citadel at Argos was on the hill called *Aspis*, the citadel being the “shield” of the people. The citadel embodied the Argive goddess Hera, as the Athenian Acropolis embodied Athena. Mycenaean palace-citadels formed the loci of goddess worship, worship of gods taking place outdoors and in remote places like Zeus’s Olympia.

The epithet “Lady Hera with the look of an ox” seems to be an ancient formula long predating the composition of the *Iliad*. It contains a striking metrical irregularity unusual in Homeric verse; this implies that the Homeric poet or poets simply adopted the phrase intact because of longstanding tradition—audiences expected to hear it this way and no other. At the same time, it contrasts with other epithets given to Hera in the *Iliad*—such as “golden-throned Hera,” “white-armed Hera,” and “wife and sister [of Zeus]”—which are all appropriate for the Olympian Hera, whose principal function is to be wife to Zeus. “Lady Hera with the look of an ox” is not readily explicable in Olympian terms but fits in well with what can be deduced about her Mycenaean persona.

Another important locus of historic Greek worship of Hera was the island of Samos. Evidence of Hera’s cult on Samos may help to explain the meaning of the pillar flanked by lions that topped the Lion Gate at Mycenae, for Samian Hera had associations with trees—to which columns make metaphorical reference—and for centuries her cult image consisted of an upright plank or column rather than an anthropomorphic image. In an important annual spring ceremony at Samos, the plank figure, after arriving at a shrine in a procession probably symbolic of the return of new life and fertility in spring, apparently was bound to a type of willow tree called the *lugos*, as though to prevent her from being abducted for the span of the agricultural year (perhaps a variation on the tale of the

abduction of Persephone). She was often represented as associated with and sometimes flanked by lions and other animals in a fashion similar to that of Mycenaean Potinija.

In Mycenaean times Zeus had not yet attained the complete ascendancy over all goddesses that later in classical myth allowed him to rape Hera with impunity to force her to marry him. That Hera was said to have led a revolt of all the Olympian gods against Zeus (foiled when he hung her in chains until she begged for mercy) seems to hint that the evolution of the patriarchal Olympian system did not occur without struggle. And even as the rituals of the Olympian gods developed and elaborated in the urban religion of classical Greece, another class of rituals and festivals honoring what are called the chthonic deities, gods and goddesses of the underworld, continued to be observed, mostly among women. This set of rituals may well have had roots in Mycenaean times.

The Mistress of Animals had a male counterpart, also shown surrounded by animals or accompanied by a griffin. Sometimes a man with a lion is shown bearing a spear and shield. Some authorities see this figure as evolving into other depictions of a man bearing weapons but not accompanied by animals, who may have been a god of war. The name Eualios, known from Linear B inscriptions, is an epithet of Ares, god of war.

Festivals A number of festivals are mentioned on the Pylos tablets. The Preparation of the Couch could have involved a celebration of the sacred marriage of Poseidon and Potnia. Another festival was called “Setting Up of the Throne,” although which deity is the subject is unknown. A feast of new wine must have been presided over by a Mater Theia, a mother goddess, rather than Dionysos. Near a throne in the palace at Pylos were found hollows and channels cut into the floor that are thought to have been used to receive libations.

Offerings and Sacrifices Many tablets record offerings made to the different gods; commonly mentioned were gold vessels and “victims,” recorded as a man or a woman: “For Zeus, one gold bowl, one man,” and “For Hera, one gold bowl, one woman.” One tablet mentions four cups, eight bowls, two men, and eight women. It is possible that most of the victims mentioned were figurines, although this is only a conjecture. Alternately they could have been captives in war or slaves offered for service to the god (that may be the meaning of the term

slaves of the god found on tablets). One tablet offering men and women to a long list of deities appears to have been hastily written, almost as though during an emergency such as an attack on the palace that the sacrifices were intended to avert. Other offerings mentioned include herbs, cattle, sheep, and pigs. On one tablet Poseidon receives offerings of grain, wine, a bull, cheeses, rams’ skins, rams, and honey.

Cult Places Although the Mycenaean worshipped Zeus and other male gods, the cult places that have been discovered have no certain representations of them. It is unknown whether the youth in the Room with the Fresco, which was dominated by the fresco of a goddess and a priestess, was a god later enrolled among the Olympians. Instead goddesses and female figurines have been found, some of them depicted in a style reminiscent of Minoan goddesses. Snakes, too, figure in Minoan religion. It may be that the Indo-European (or non-Minoan) element of Mycenaean religion did not call for depicting its deities; possibly doing so was even taboo; if it was, that might explain the absence of figurative art during the Dark Ages, when Indo-European influence may have been stronger than in Mycenaean times.

No word for *sanctuary* has been found in ancient Mycenaean texts; for this reason the only hint the Pylos Linear B tablets give of possible cult centers are place-names listed as the locations where the offerings were made. It may be that for their gods as opposed to goddesses offerings were given out of doors, as exemplified by Nestor, king of Pylos, in Homer’s *Odyssey*, who sacrificed bulls to Poseidon on the beach.

The central room or *megaron* of the palaces at Mycenae, Tiryns, and Pylos may have had a ritual function. The *megara* (plural of *megaron*) are enfolded in a series of architectural features, vestibules, passageways, and outer rooms, which guided the views and movements of those who entered there. Even before entering the visitor had arrived at the palace along state-built roads leading to a massive gate—at Mycenae, the famous Lion Gate. Beyond the gate were entranceways and a grand stairway leading to a suite consisting of three rooms: a front porch, a transition vestibule, and the hall, the *megaron* proper. The porch opened off a larger court and, in the case of Pylos, which had a second story, may have supported a balcony.

These liminal and transitional movements may have been intended to give the visitor a

sense of making a journey toward a sacred center through increasingly ritualized and holy spaces.

The narrow vestibule at Pylos was painted with the procession of food bearers surrounding a giant bull described. The *megaron* itself was dominated by a large circular hearth with a shallowly raised rim decorated with metaphorical flames. Over the hearth was a large opening that let out the smoke, at Pylos perhaps surrounded by a mezzanine on the second floor. On the first floor surrounding the hearth were four massive pillars. A throne was placed against the right-hand wall as one entered.

The fresco on this right wall has been interpreted as showing ritual sacrifice and feasting, although some authorities see the scene as more secular, a matter perhaps of difference of degree rather than of kind, for there was a ritual element to all feasting in the Bronze Age (and indeed later) all over Europe.

The placement of the throne, not facing the entrance to the *megaron*, but to the right, has been interpreted as showing that the human ruler deferred to rather than dominated the deity of what was probably the sacred hearth, perhaps the center of attention. The state religions of the Near East and Egypt seem to have been centered on the ruler as in some sense a god, and anthropologists have tended to see religion as the tool of the state. In contrast, for the Mycenaeans the ruler, possibly the *wanax*, may have been the first among his people, the closest to the gods, but more in the sense of the Roman Catholic popes—the leader in ritual. Vessels found resting on a small tripod table beside the hearth at Pylos may have been used for libations, and the channels in the floor beside the throne, used to receive these libations, suggest that the one who sat there performed this rite.

There is argument, however, as to whether or not the occupant of the throne in the *megaron* was the male *wanax*. Iconographical study in recent years has led a number of scholars to argue that it was a woman, queen or priestess, who presided over the rites of the *megaron*, as depicted in the frescoes at Pylos, perhaps in honor of the Mater Theia (Sacred Mother) mentioned in the tablets at Pylos. The primacy of female figures in a number of sacred contexts, notably the Room with the Fresco at Mycenae, supports this view. Again Nestor, the *wanax* of Pylos mentioned in Homer, sacrificed on the beach. Perhaps then the *megaron* with its overtones of hearth, home, and fertility was the province of the goddesses. In classical

Greece the hearth symbolized human space. The ritual of the gods, in contrast, probably took place under an open sky, proper for what seem to have been deities of sky (Zeus), of sea, and of earthquake forces that could make the earth ripple in waves as the sea (Poseidon).

“Sacred Workers” There seem to have been a large number of priests and priestesses among the Mycenaeans. They were sometimes rich in terms of the amount of land they held and they were in charge of the “slaves of the god,” but which deity they served is never named. Their precise function is not always given; duties mentioned include “guardians of the fire,” “sprinklers of the grain,” and general “sacred workers.”

Burials The wealth and complexity of Mycenaean culture were first recognized by its burials. The deep shaft graves that Schliemann discovered first represent the final product of a long evolution. Earlier graves discovered outside the citadel of Mycenae in a cemetery called Grave Circle B (c. 1600 B.C.E.) were very similar to others that had been made elsewhere in Greece in the preceding period. These were cist graves only about a meter deep; their floors had a surface of pebbles and the walls of some of them were lined with stone slabs. Offerings of pottery, tools, or ornaments were placed beside the body; the cist was then covered with slabs. As time went on the graves in this cemetery became deeper and grave goods richer. The culminating deep shafts of Grave Circle B were large enough to hold two or three burials. A wooden roof a meter above the floor was held by rock ledges or stone walls. The pebble-lined floors show continuity of tradition, but now offerings include jewelry of gold and silver, gold cups, beautifully made Cretan stone vases, weapons, and one electrum face mask. The pottery found in all these graves shows the same clear evolution of style, motif, and technique. Many of the deep-shafted graves had stone markers, some carved with spiral designs, others with depictions of chariots. Thus the emergence of an elite class here antedated the rise of Mycenaean civilization.

Burials of equal wealth from this time are found elsewhere in southern Greece. In Messenia in the southwestern Peloponnese a different kind of tomb was built. Called in Greece *tholos* tombs after their domed beehive shape they are similar to grave mounds or tumuli found elsewhere in Bronze Age Europe in having a burial chamber inside the mound. But they were made not of earth, but of rough

masonry, with corbelled inner chambers, and massive undressed stone blocks forming the lintels above the doorways. *Tholoi* are found at Pylos on the southwest coast of Messenia and elsewhere.

Later tombs were far more elaborately built, cut into hillsides, with long entranceways (*dromoi*), no doubt to furnish the stage for lavish and impressive funeral processions. Corbelled interior vaults were flanked by side chambers for the burial; it is possible that the vaults with their entranceways were used for ritual after the actual funeral.

Survival of Mycenaean Cults in the Dark Age and Beyond The great increase in archaeological evidence in recent decades has considerably modified earlier theories that the collapse of Mycenaean civilization was accompanied by the demise and replacement of their cults, in which goddesses figured so prominently, with the strongly patriarchal religion of the incoming warrior groups, such as those whom later Greeks called Dorians and IONIANS. It has long been known that many sanctuaries of the Geometric period were built on top of Bronze Age sites, but it was assumed this practice constituted a complete takeover of places that continued to have an aura of sanctity, and a replacement of earlier ritual and even deity with those of the conquerors. Some classical Greek myths have been interpreted as allegories of these takeovers. Scholars have postulated that the many myths of Zeus's raping women and goddesses, such as Demeter, are allegories of his usurpation of the shrines of Mycenaean goddesses.

The chronological gap between the Mycenaean use of many shrines and their adoption by later Greeks has been narrowed by new evidence; in some cases cult places continued in use without a break. The cultic activities that were carried out at many shrines are known in much greater detail, and it can be seen that rituals at shrines evolved in a variety of ways as a result of the particular situation at each location and its associated historical contingencies. Developments ranged from preserving continuity of practice to a considerable degree, through various degrees of change, to complete rupture with the past. Rather than resulting from the forcible usurpation of shrines to new uses, changes in ritual, or the apparent abandonment of Mycenaean sites for a period, probably resulted from the socioeconomic disruptions and impoverishment in the first centuries of the Dark Ages, when offerings

were unlikely to have been of the sort that survive to be found by archaeologists.

In general the evolution that did take place had more the character of retaining much from the past, such as many of the deities, but giving the old ways and gods a different emphasis. The outdoor rituals of sacrifice and feasting in honor of Poseidon and Zeus seem gradually to have attained greater importance relative to the Mycenaean feast in the *megaron*, as did the accompanying games. For centuries such activities would have left few traces, but the bronze tripod cauldrons dating from the other side of the Dark Ages, which became offerings in great numbers at Olympia and Ithaca, suggest the new emphasis were given to the gatherings. The tripod and cauldron are symbols of the founder of a feast, the chief or lord whose generosity wins him followers. This sort of feasting acts as a cohesive force in tribal societies. The replacement of the hearth of the *megaron* with the portable cauldron as a central symbol for society bespeaks a fundamental shift in viewpoint.

Another feature of post-Mycenaean ritual was the holding of games and feasting in remote locations, such as Olympia and Ithaca, situated at the edge of the Greek world, where elites in their chariots, accompanied by their household, would travel, with distance conferring a certain amount of mystery and prestige. It is not surprising that Zeus, the god of Olympia, who rose to become chief of all gods, was the host of their immortal feasts.

In many ways the history of Mycenaean civilization can be seen as a “dress rehearsal” for later Greek history: the Mediterranean-wide reach of their trade networks, the emergence of cities as power centers, the splendid art and architecture with which they were adorned, and then, possibly, savage and protracted rivalries between cities on a par with those that precipitated the Peloponnesian War, which weakened the Mycenaean system enough to subject it to outside forces (the principal of which in the case of the Greeks would be that of expansionist Rome). Yet the strongly hierarchical, centralized society and economy of the Mycenaean seem more reminiscent of Egypt; like that of Egypt, too, was their failure to colonize regions with which they had trading contacts. The far-flung colonies of later Greeks and the hoplite citizen armies they developed to protect them helped lead to the creation of the sociopolitical phenomenon that more than any

other distinguished later Greeks from their Mycenaean forebears: namely, democracy.

NADRUVIANS

location:

Russian territory around Kaliningrad, northeastern Poland, and southwestern Lithuania

time period:

Ninth to 13th century C.E.

ancestry:

Baltic

language:

Baltic

Nadruvians (Nadrovians)

The Nadruvians were one of the tribal entities to evolve out of the ancient **BALTS**, Baltic-speaking peoples living in north-central Europe. As are the **SKALVIANS** living to their north, they are thought to have been linguistically related to the **BORUSSIANS** to their west, but there is no way to know certainly that their dialects were not closer to those of the **LITHUANIANS** to their east. Their homeland stretched inland from the Baltic Sea in the southern part of the present-day enclave of Russian territory around Kaliningrad, extending eastward into present-day northeastern Poland and southwestern Lithuania, probably by the ninth century C.E.

Nadruvian territory and that of the **Skalvians** lay between lands seized by the Germanic military and religious orders, **Livonian Brothers of the Sword** in the north and the **Teutonic Knights** to their south in the 13th century. In 1274 the united orders occupied **Nadrovia**. The Nadruvians eventually became assimilated by the **Lithuanians** and **SLAVS**.

Nagnatae

The **Nagnatae** are classified as a Celtic tribe. They lived in the present-day counties of **Mayo** and **Sligo** in western Ireland at least by the first century C.E. and are discussed as **CELTS** or **IRISH**.

Namnetes

The **Namnetes** are classified as a Celtic tribe. They lived in Gaul around present-day **Nantes**

in western France and are discussed as **CELTS** of **GAULS**. The **ROMANS** referred to them along with other tribes as **Armoricans**, that is, tribes living between the **Seine** and **Loire** on or near the Atlantic Ocean in the region of **Armorica** (roughly present-day **Brittany** and eastern **Normandy**), occupied by forces under **Julius Caesar** in 55 B.C.E. **Portus Namnetum** on the site of **Nantes** became a *civitas* capital in Roman Gaul; **Nantes** takes its name from the tribal name.

Nantuates

The **Nantuates** are classified as a Celtic tribe. They lived in Gaul in the western Alps in present-day France near **Lake Geneva** between the **ALLOBROGES** and the **VERAGI** at least by the first century B.C.E. and are discussed as **CELTS** or **GAULS**. The **ROMANS** under **Julius Caesar** battled them to open an Alpine pass.

Naristi (Nariscans; Varisti)

The **Naristi** are classified as a tribe of **Germanics** grouped among the **SUEBI**. They lived near the **HERMUNDURI** in present-day southern Germany by the first century C.E. The **ALAMANNI** and **IUTHUNGI** possibly either displaced both groups or absorbed them as part of a new confederation.

Nemetes

The **Nemetes** are classified as **GERMANICS**, a tribe grouped among the **SUEBI**. They are

thought to have lived along the Rhine in present-day western Germany. In 60 B.C.E. they fought under the Suebian leader Ariovistus against the Celtic AEDUI, allies of the ROMANS. The next century some Nemetes reportedly lived in the vicinity of present-day Speyer, Germany.

Nenets (Nenetses; Nentsi; Nentsy; Samoyeds; Samoyedes; Yurak-Samoyeds; Yuraks; Hasaba)

The Nenets are a partly sedentary, partly nomadic people living across a vast area of northern Russia, generally north of the Arctic Circle, stretching from the Kola Peninsula on the White Sea in the west to the base of the Taymyr Peninsula. In Siberian Asia they are centered in the basin of the Ob and Yenisey Rivers. Nenets also inhabit some Arctic Ocean islands, such as Novaya Zemlya. The Nenets were originally known to the Europeans as Samoyeds, but since the 1920s the name of a particular tribe (from the native *n'enay nenyts*, meaning genuine man), the Nenets, has been applied to all of them. Subgroups include the Enets (Entsy; Yenisey), Nganasans (Tavgi), and Selkup. Most of the Nenets' homeland is the treeless plain known as the tundra. In the Ob region their domain extends to forested taiga. The Nenets are one of the many ethnic groups of the modern-day Russians (see RUSSIANS: NATIONALITY).

ORIGINS

It is thought that sometime before the 12th century C.E. the Nenets moved to northern and western Russia from somewhere to the south in Siberia, perhaps eventually assimilating indigenous inhabitants of the region. On the basis of linguistic studies it is thought that the Nenets are distant relatives of the FINNO-UGRIANS.

LANGUAGE

The Nenets' language, known as Samoyedic, is a branch of the Uralic language family; the other major branch is the Finno-Ugric. There are numerous Samoyedic dialects. That of the Nenets proper, rich in ways of describing nature—such as weather conditions, properties of snow, as well as hunting, fishing, and reindeer breeding—has become a kind of lingua franca for northern peoples of Russia. (This is one possible mechanism for the emergence of the ancestral Uralic language: that it emerged as a lingua franca among peoples from Europe and Asia who had migrated north after the last Ice Age and mingled in the Ural region.) West

of the Ural Mountains in the European north all the Nenets are bilingual, speaking Russian as well. The Nenets have traditionally used pictographic writing. In 1932 the Nenets written form, using the Bolshaya Zemlya dialect and the Latin alphabet, was established.

HISTORY

Established in their homeland by the 12th century the Nenets in northern Europe were forced to pay tribute to the Rus principality of Novgorod from the 13th to the 15th century. Those in Asia also were forced to pay tribute to the MONGOLS and TATARS. By the end of the 16th century the Russians were expanding their domain, and by 1628 and the building of the Krasnoyarsk fortress on the Upper Yenisey River the various Samoyed tribes were under Russian rule. The Nenets resisted outside control and attacked tax collectors traveling to the north country as well as Russian posts, including Pustozersk, the last time in 1746.

Early attempts by Russian SLAVS to assimilate the Nenets had minimal success. Russian Orthodox Christianity was introduced in the 18th century. In 1824 a Russian Orthodox Christian mission was built at Arkhangelsk at the mouth of the Dvina River on the White Sea. Some assimilation resulted from a growing dependency on Russian merchants for such goods as flour, sugar, tea, tobacco, gunpowder, and liquor. Some merchants, through exorbitant prices, made fortunes in furs, and Nenets families were sometimes ruined. In the 1870s the Russian government relocated Nenets for political reasons, for example, to Novaya Zemlya to prevent NORWEGIANS from settling there.

During the Soviet era collective farms were established among the Nenets, the first in 1929, to dispossess them of their traditional culture. In some areas the Soviets went so far as

1957	Soviets institute program forcing education of Nenets youth at government-run boarding schools.
1991	Dissolution of Soviet Union (USSR) means greater independence for Nenets.

to murder shamans and destroy sacred sites. Some Nenets rebelled, attacking Russian settlements, such as Vorkuta in the northern Ural Mountains. Starting in the 1950s the Soviet government began merging the small collective farms and relocated many families, making it harder for the Nenets to maintain their traditional nomadic way of life. In 1957 the Soviets instituted a program of state-controlled sustenance, in which Nenets youth were in state custody from birth until the end of schooling. They were educated at government-run boarding schools and provided with food, clothing, schoolbooks, and transportation, thus weakening family ties and the ability to earn a traditional living. Reindeer herding was not discouraged, but it was regulated.

Another disruption to the Nenets' way of life has been the industrialization of the north, especially by oil and gas companies, which has resulted in population increases among nonnatives and pollution of their homeland. The Russian north suffers from acid rain, which pollutes the moss and contaminates the human diet through reindeer meat. Nuclear testing on Novaya Zemlya has also created great health risk.

The dissolution of the Soviet Union (USSR) in 1991 and creation of the Russian Federation meant greater independence for the Nenets and freedom of religion, yet their way of life is still under siege as their homelands are transformed. Unemployment has been a growing problem. The life expectancy of Nenets is only 45 to 50 years; alcoholism and suicide have taken their toll.

CULTURE

Economy

Traditional Nenets' economy has revolved around reindeer herds, with a migratory pattern of traveling from coastal regions to the taiga in springtime, then returning in the autumn. Hunting and fishing supplement their diet. A typical herd for a family is 70 to 100 animals. Reindeers provide meat, lard, and blood for food; skins and leather for clothing, tents, harnesses, and lassos; tendons for thread; and horn for tools. In addition to breeding reindeer the Nenets have bred the Samoyed dog to help herd reindeer and pull sleds.

Government and Society

The family unit is the focus of Nenet society, with descent traced through the paternal line and women subordinate. Clans of related fami-

lies maintain territories, which include common sacred grounds. Special family and clan signs called *tamga* are used to mark property. Individuals must marry outside their clan.

Religion

The Nenets' religion is shamanistic. There are several classes of shamans, with specialized abilities.

The total Nenets population is some 40,000 (with the Nenets proper making up about 80 percent). It is estimated that more than half of them still speak their native language, although it is in decline among young people. Reindeer herding is still central to the life of many Nenets. Nenets have one newspaper in their native language, *Nyaryana Ngyrm* (The Red North), published in Salekhard, the capital of the Yamalo-Nenets Autonomous Region in Asia.

Nerusi

The Nerusi are classified as a Celtic tribe. They lived in Gaul in the western Alps around present-day Vence in southeastern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Nervii (Nervi; Nervians)

The Nervii are classified as a combined Celtic-Germanic tribe, that is, as both CELTS and GERMANICS. They lived in Gaul east of the Scheldt in the present-day Netherlands and Belgium and around Bavay in northern France. They are sometimes grouped among the BELGAE, a subdivision of GAULS. The CEUTRONES, GEIDUNI, GRUDII, and PLEUMOXII were perhaps subgroups. Along with the ATREBATES and VIROMANDUI, the Nervii moved on the ROMANS under Julius Caesar in 57 B.C.E., but because they had no cavalry and because other allies, the ADUATUCI, did not arrive at the battle in time, they were defeated and virtually annihilated. Some later fought as allies of the ARVERNI under Vercingetorix against the Romans in 52 B.C.E. Bagacum on the site of present-day Bavay in

northern France became a *civitas* capital in Gaul during the Roman occupation until the fifth century C.E.

Nitiobriges

The Nitiobriges are classified as a Celtic tribe. They lived in Gaul along the Garonne River in present-day southwestern France and are discussed as CELTS or GAULS. They fought as allies of the ARVERNI under Vercingetorix against the ROMANS under Julius Caesar in 52 B.C.E.

Nogay (Nogai)

The Nogay are a Turkic-speaking people, living in the northern Caucasus region in southwestern Russia and the Ural region in western Russia, as well as in the Crimea in southern Ukraine, Bulgaria, Romania, Lithuania, Poland, and parts of Asia, especially Turkey. Those living in the Russian republics of Dagestan and Kalmykia are called Qara or Black Nogay; those in the province of Stavropol are the Aq or White Nogay.

Originally nomads the Nogay are thought to be descendants of TURKICS traveling with the MONGOLS in their invasion of Europe in the 13th century C.E.; they are associated with a Mongol general, known as Nogay, who ruled one of the Mongol hordes. Their Aralo-Caspian dialect of Northwestern (Kipchak; Ogur) Turkic is shared by peoples to the east in Siberia.

In 1554–56 the Russian SLAVS under Czar Ivan IV invaded their territory, and the Nogay horde split in two. One group, the Great Horde, settled along the Lower Volga River; the Little Horde occupied lands to the southwest toward the Black Sea. Some among them united with the KAZAKHS. Remnants of the two hordes reunited as TATARS in 1634.

In the 19th century with further Russian expansion the Nogays dispersed for the most part. Most of the Nogay are Sunni Muslims, although some living among the Tatars in western Russia are Russian Orthodox Christians.

See also RUSSIANS: NATIONALITY.

Nori (Norisci; Noricae)

The Nori are classified as a Celtic tribe. They lived in the Alps within the kingdom of Noricum in present-day Austria. They were part of a powerful coalition of tribes of CELTS in the second and first centuries B.C.E. with the AMBIDRAVI, RAETI, and TAURISCI. In about 90 B.C.E. a Roman merchant colony was estab-

lished at Virunum, the capital of the Nori. Noricum was conquered by the ROMANS under Emperor Augustus in 15 B.C.E.

Normans (Northmen)

The Normans were originally VIKINGS (their name a variation of Norsemen or Northmen) from Scandinavia, who settled in the eastern part of the Frankish kingdom—held by other GERMANICS, the FRANKS—in present-day northern France, now known as the province of Normandy. The Viking chief who founded Normandy in the 10th century C.E., Rollo (see sidebar, p. 561), was from present-day Norway, although more of his followers were Danes than Norwegians (or Swedes). The Normans settled other regions as well, including the British Isles, Italy, and Sicily. The name is sometimes applied to peoples of the region of Normandy in France but is more often used with historical context.

ORIGINS

Viking raids on the territory of present-day France began in the late eighth century C.E. According to the *Royal Frankish Annals* or the *Annales regni Francorum*, an anonymous contemporary account of Frankish political and military history from 741 to 849, the first raid on Frankish lands took place in 799. Raiding had become intense by the mid-ninth century in the Seine basin, beginning with an attack on St.-Wandrill in 841.

By about 900 the Vikings had secured a permanent foothold on Frankish soil in the valley of the Lower Seine River and their raids were crippling the Frankish economy and even the fabric of society. In 911 King Charles III the Simple of the Franks negotiated the Treaty of St.-Clair-sur-Epte with Rollo, who had emerged as a significant personality among the Vikings, ceding him the land around the mouth of the Seine and present-day Rouen.

LANGUAGE

The Normans originally spoke a variety of Scandinavian Germanic dialects. By the second generation of the Vikings in Normandy use of their native tongues, at least among the nobility, seems to have been declining rapidly, because William Longsword, Rollo's successor, had to send his son to Denmark to learn Danish. The Normans spoke dialects based on the languages spoken in the lands they had settled, such as Anglo-Norman (a French dialect

HISTORY

Normandy

Rollo, the first Norman ruler, set about carving out a much larger sphere of influence for himself, which became known as the Duchy of Normandy. Afterward Normandy experienced little interference from Frankish royalty; Norman rulers acted as kings in their homeland even though they were part of the Frankish domain.

The fact that Scandinavian place-names are scattered throughout Normandy may attest more to Viking administrative control than to actual Viking settlement. Danish place-names predominate in eastern Normandy, the area first ceded to Rollo; in the west names show a

Celtic influence, suggesting that Irish-Norse immigrants, and perhaps others from British Orkney and the Hebrides, may have relocated in Normandy. In any case the colony seems to have received repeated influxes of immigrants from all over the Viking world.

The Normans adopted many of the customs of the Franks. The few pagan Viking graves found in Normandy imply either a rapid adoption of Christianity among the Vikings or an imitation of Frankish burial customs.

The Normans soon expanded southward into what became known as Lower Normandy. Over the next centuries Norman counts or dukes sought to expand territory beyond Normandy.

England

The military conquest of England was led by William (William the Conqueror), duke of Normandy (see sidebar, p. 562). William believed he had been named as heir to the English Crown by Edward (Edward the Confessor). Edward was connected to the Norman ruling class through his mother, Emma, the daughter of Richard II le Bon of Normandy. He and his parents had been exiled in Normandy after the Danish invasion of 1013; Edward formed many ties there and on ascending to the throne angered many ANGLO-SAXONS by surrounding himself with Normans. In the end—whatever promise he had made to William—on his deathbed in 1066 he named Harold (Harold Godwinson), the powerful earl of Wessex, as his heir.

On Harold's coronation William (now called William I) began assembling an army. He received a stroke of good luck in his bid for the kingdom when Harold was faced with an invading army led by Harold III Sigurdsson, king of Norway. Harold managed to defeat Sigurdsson at Stamford Bridge on September 25, 1066. Two days later some 5,000 knights under William crossed the English Channel and landed at Pevensey Bay on September 28. The force headed for Hastings. Harold's troops marching southward, although numbering some 7,000, were poorly trained and armed (at least by Norman standards). At dawn on October 14 William led a surprise attack, with effective cavalry charges. In what is known as the Battle of Hastings Harold's army was routed, and he was killed by an arrow.

William then moved on London and forced a surrender. He was soon crowned king of England. Over the next years he suppressed a number of revolts by the Anglo-Saxon nobility,

Rollo: Founder of Normandy

Rollo, whose actual name may have been Hrólfr, was a Viking chief probably from present-day Norway. Most of his followers, however, were said to be Danes, Vikings who set out on their raiding and trading expeditions from territory that is now Denmark, also the homeland of the majority of Vikings who settled the British Isles.

Sometime in the early 10th century C.E. Rollo led a band of Vikings to the mouth of the Seine in present-day northwestern France and established a settlement there that became a staging area for raids upriver, including on Paris and Chartres. In 911 to stop the raids King Charles III the Simple of the Franks agreed to cede Rollo the land around the mouth of the Seine and present-day Rouen. Part of the agreement was that Rollo accept Charles as his king and convert to Christianity. He reportedly was baptized in 912, assuming the Christian name Robert.

Although nominally a duchy of France, the territory was ruled by the Norman dukes as an independent kingdom. Rollo and subsequent dukes gained additional lands. By the 11th century the Duchy of Normandy had become one of the most powerful regions in western Europe, and it helped shape the history of other lands, including the British Isles and Sicily.

Rollo was succeeded by his son, William Longsword, at least by 933, according to the historical record. William the Conqueror, who led Normans to the British Isles, was a direct descendant. A century later Dudo of Saint-Quentin wrote a chronicle of the dukes of Normandy, *De moribus et actis pimonum Normanniae ducum* (completed c. 1015–26). This work is considered historically unreliable, and the facts around Rollo's life remain clouded. Yet it helps to convey the notion that by that time Rollo had achieved legendary status as the founder of Normandy and the first Norman duke.

including one in Northumbria in 1069–70. He had a number of castles built in the English countryside to establish his rule, which, by 1071, was complete.

Scotland

With time the Normans extended their rule over much of Scotland. The king of the SCOTS, David I, encouraged Norman settlement there. King William II (William Rufus) captured the city of Carlisle in 1092 and had Carlisle Castle built.

Wales

No other people in the British Isles posed as much of a challenge to the Normans as did the WELSH. Before the conquest Ralph, the Norman nephew of Edward the Confessor, twice tried to invade Wales and was twice repelled by the counterattacks of Llewlyn ap Gruffudd, king of Gwynedd and Powys, who was attempting to unify Wales under his rule. Although Harold of England had inflicted a decisive defeat on Llewlyn in 1063, William's victory over Harold at Hastings seems not to have inspired him to take on the Welsh, whom Harold had bested. William dealt with the Welsh by setting up

earldoms in the Welsh Marches, a border buffer zone between England and Wales. For 200 years after the conquest Welsh leaders carried

on a guerrilla war with the Marcher earls and repeatedly thwarted Anglo-Norman attempts at conquest. During this period the Welsh experienced the fullest flowering of their culture. Finally in 1282 Edward I accomplished the annexation of Wales. In an effort at diplomacy that gives a sense of the importance of Wales at this time, Edward had his son—later Edward II, who had been born at Caernarvon Castle—made Prince of Wales in 1301; the English custom of entitling the king's eldest son Prince of Wales has lasted to the present day.

Ireland

The Normans first invaded Ireland in the 12th century. By that time the Vikings who had settled in Ireland in the ninth century were no longer in power and lived under the rule of native IRISH. A dispute arose over royal succession, with the Viking population supporting Roderic (Rory O'Connor) of Connaught in his attempt to seize the throne from Dermot MacMurrough, the king of Leinster. MacMurrough offered Richard FitzGilbert de Clare (Strongbow), earl of Strigoil, a share of his kingdom in return for Norman military help. Normans landed at Bannow Bay in Ireland in 1169 and soon sacked the Viking town of Wexford. De Clare, or Strongbow, led a larger force to Ireland the next year and captured the Viking city of Waterford. He then married Dermot's daughter, Aoife. After the Normans also captured Dublin Rory O'Connor withdrew his forces. The king of England at the time, Henry II, soon traveled to Ireland to affirm his sovereignty, threatened by the growing power of Richard FitzGilbert de Clare. Dublin became the capital of the Lordship of Ireland.

The Normans continued their expansion, seizing coastal settlements, then building castles and founding towns inland. As in France the Normans adopted native customs and intermarried with the native population.

Italy and Sicily

The first Normans of any numbers arrived in Sicily and southern Italy early in the 11th century as mercenaries serving the local nobility in battle against Arabs and BYZANTINES. Some of them eventually established their own principalities. Among these were a number of sons of Tancred de Hauteville: William Iron Arm, Drogo de Hauteville, and Humphrey de Hauteville. In 1053 Humphrey defeated Pope Leo IX, who attempted to enforce papal rights in southern Italy. In 1059 Humphrey's brother

William I: Conqueror and Reformer

William, called “the Bastard” because he was the illegitimate son of Robert I and Arletta, a tanner's daughter, was born in 1027 C.E. at Falaise in northwestern France. At the age of eight upon his father's death he received the Duchy of Normandy. A council consisting of noblemen and William's guardians ruled Normandy for a number of years, during which a number of barons revolted. In 1047 the 20-year-old William with the aid of his feudal lord, France's King Henry I, pacified rebel forces, then proceeded to consolidate his strength through further military action and diplomacy.

William may have visited England in 1051 or 1052; at that time his cousin, King Edward the Confessor, may have promised to name him as his successor. William reinforced his claim to the throne by marrying Matilda, daughter of Baldwin, count of Flanders, and a descendant of the Anglo-Saxon king Alfred the Great. William's army included some 7,000 soldiers, including infantry armed with crossbows and cavalry. His growing power threatened King Henry of France, who unsuccessfully led armies against the Normans in 1054 and 1058. Upon the death of Edward (who had named his successor on his deathbed) the royal council elected Harold Godwinson, earl of Wessex, as king. William raised an army and transport fleet and sailed for England, where he defeated Harold at the Battle of Hastings in 1066. He then led his army to London, forcing a surrender, and was crowned king on Christmas Day. He had to suppress a number of Anglo-Saxon revolts over the next years, which he did with utmost ruthlessness in a scorched-earth policy.

William, in addition to being a great military strategist, carried out extensive political, economic, and religious reforms. Under the Anglo-Saxons the earls had independence and regional power. William dissolved the earldoms and distributed the lands to his Norman knights. He reorganized the feudal system to make it similar to that in Normandy, in which landholders swore greater loyalty to him than to their separate lords. At the same time he recognized the value of some Anglo-Saxon governing institutions and retained them. He ordered an economic survey of England, which created the *Domesday Book*, which determined what revenues to collect from his subjects. And he established separate ecclesiastical courts.

In 1087 during a campaign against King Philip I of France William was injured in a riding accident at Maintes. He died at Rouen and was buried in the abbey of Saint Stephen's at Caen, which he and his wife had founded as penance for marrying without the pope's permission. As he had instructed, his son Robert succeeded him in Normandy and his son William (William II) in England.

In this bust portrait from 1732, William the Conqueror holds a sword; a vignette shows Britannia in supplication to him. (*Library of Congress, Prints and Photographs Division [LC-USZ62-120673]*)

and successor, Robert Guiscard (Robert de Hauteville), was invested by Pope Nicholas II with the duchies of Apulia and Calabria and the island of Sicily, although Sicily remained unconquered. Although in feudal terms this meant that Robert was a vassal of the pope and had sworn fealty to him, as a practical matter Robert had freedom to do as he liked. In 1085 Pope Gregory VII called on Robert for assistance against Byzantine forces marching on Rome. Robert, however, used this as an excuse to let his knights sack the city, and Gregory found himself a virtual prisoner of the Normans. The importance of the papal grant of Italian lands lay rather in the imprimatur or seal of approval it placed on the Normans' legitimacy, upstart foreigners though they were, giving them respectability in the eyes of the international community. Robert completed the Norman conquest of southern Italy. Still another brother, Roger I, conquered Sicily. In 1130 Roger's son, Roger II, founded the kingdom of Sicily, which included Norman possessions in southern Italy. The reconquest of Sicily, which had been in Muslim hands since the ninth century, further enhanced the reputation of the Normans as being in the vanguard of the knights of Christendom and the champions of the true faith.

The Normans soon adopted Italian speech and customs. Medieval Normans were notable

for the great authority given their dukes, their enthusiasm for conquest, and their control of the economic and social aspects of conquered areas. Italy, which had not yet recovered from the devastation brought about by the sixth-century campaigns of the Byzantines of the Eastern Roman Empire to retake the Western Roman Empire, actually benefited from the economic and social organization the Normans created.

Normans in the Crusades

The ambitious plans of the Italian Normans against the Byzantines were a factor that led to the Crusades from the late 11th century through the late 13th century, to recover the Holy Land in the eastern Mediterranean in the Near East from Muslim Arabs. When Pope Urban successfully called for the First Crusade in 1095, the Normans were among the first to respond and contributed some 10,000 knights to the enterprise. However, Roger I of Sicily took no part in the crusade; Bohemond I of Taranto played the leading role among Norman Sicilians in the crusade, after the city of Antioch had fallen, winning a dispute with the Frankish leader, Raymond IV de Saint-Gilles, for sole possession. Bohemond refused to hand over the city to the Byzantines, to whom the Frankish crusaders had sworn fealty in the previous winter in return for military support. Bohemond declared the alliance null and void because the Byzantine emperor had begun withdrawing his troops from Antioch. Apparently regarding this as no more than a stratagem (had they known it, worthy of a descendant of Odin the Cunning), the Byzantines regarded Bohemond and Westerners in general as potential enemies who could not be trusted. Robert II of Normandy, on the other hand, left the Holy Land with his knights, among the most battle-tested of the crusaders, as soon as Jerusalem was taken. Ultimately Godfrey de Bouillon, the Frankish duke of Lower Lorraine, became king of Jerusalem, and his Frankish vassals played the most important role in keeping the Holy Land safe for Christendom.

What Became of the Normans?

The last independent ruler of Normandy was a son of Henry II of England, John Lackland, who lost Normandy in 1202, when Philippe Auguste, a king of the French, invaded the duchy to avenge John's murder of his nephew, Arthur of Brittany. (With the accession of Henry II to the throne of England in 1154 the rule over Normandy of the descendants of

Rollo ended, because Henry was a Plantagenet from Anjou in France.) After 1204 Normandy was under French rule, first as a duchy and later as a province with its own governing body at Rouen. Normans were drawn increasingly into the French sphere of influence.

In England the end of the Normans as a distinct cultural group can be distinguished in different ways. In a strict sense the Norman dynasty of English kings ended when King Stephen, the last descendant of William I to rule, was forced in 1153 to accept as his heir Henry Plantagenet of Anjou, who became Henry II; Stephen died the next year. The use of the French dialect known as Anglo-Norman is another marker for the continued existence of the Normans. For the English aristocracy, most of whom were of Norman descent, the use of Anglo-Norman became a test of gentility. (On the other hand contemporary accounts indicate that some Anglo-Normans, even of the second generation after the Norman Conquest could no longer understand their original language.) It was introduced into Wales and Ireland and used to a limited extent in Scotland. The latest literary works in Anglo-Norman were written in the reign of Henry IV in the early 15th century. Alienation against France during the Hundred Years' War (1337–1453) sparked an increasing use of English and an increasing sense of separateness from the French. Many English people today recognize their Norman roots; the strong admixture of words of French origin in the English language contributes much to its richness and complexity, and the Norman heritage is an indelible part of the distinctive character of England.

In 1198 Frederick II von Hohenstaufen, a descendant of the last Norman king of Sicily through a female line, became king of Sicily as Frederick I. But Frederick identified more with Germany and spent little time in Sicily. Sicilian independence ended with the defeat of the last Hohenstaufen at the Battle of Benevento in 1266. The Angevin dynasty of France ruled the island from Naples until 1282, when a bloody uprising, the War of the Sicilian Vespers, expelled Angevin troops and nobles from Sicily.

CULTURE (see also GERMANICS)

Economy

Domesday Book The Normans, as were the Vikings, were as deeply involved in trade as in war; their first approaches to France during the eighth century had been as fur and silver

traders. A remarkable document created by the Normans in England 20 years after the Norman conquest was the *Domesday Book*, a survey, incredibly detailed for the time, of the economic resources of Norman England. It provides an invaluable window on life in 11th-century England. It is also a tribute to the energy and perspicacity of the Normans, and their understanding that economic and mercantile success depended on reliable information.

The *Domesday Book* was commissioned in December 1085 by William the Conqueror. The first draft, completed in August 1086, contained records for 13,418 settlements in English counties south of the Ribble and Tees Rivers (the border with Scotland at the time) and recorded population, acreage, type and value of land, buildings, plows, income, and taxes.

The manors were diverse in size but of the same type—compact, centered around a church, and separated by open land. Instead settlements in most areas of late-11th-century England followed an ancient pattern of isolated farms, hamlets, and tiny villages interspersed with fields and scattered over most of the cultivable land. As in the Iron Age over time the settlements gradually shifted or were abandoned or reclaimed.

Legislative Measures Further evidence of the efforts of the Normans to promote economic activity are laws that were enacted by the monarchy. Beginning with the reign of Henry I (1100–35), who realized the importance of a reliable monetary system, and continuing with that of Henry II (1154–89), English coinage was regulated in terms of its physical size and shape.

Henry I and his advisers believed in granting tax relief to stimulate economic activity, as evidenced by a law recognizing the city of London's potential as an economic powerhouse. Previously the city had been taxed by the royal sheriff; now its citizens were to choose their own sheriff. Sweeping exemptions from many taxes were also granted.

Growth through Warfare The appetite for wealth of the nobility also resulted from the increasing sophistication—and as a result, cost—of warfare: the panoply of the Norman knight, specially bred warhorse and heavy armor, and the Normans' program of castle building. Warfare probably also affected the economy, even as it does today, through the technological advances it fostered in working metal for armor and weapons and building cas-

ties, and through the employment it provided to builders and metalworkers.

Government and Society

As had happened earlier with the Germanic groups who overthrew the Roman Empire (see ROMANS), the Vikings' invasion of new territories caused the breakup of tribal groupings and allegiances rooted in the rural, relatively unstratified communities of Scandinavia. In a further development of the process by which the Viking warrior class first arose during the last centuries of the Roman Empire the social instability accompanying expansion into foreign lands fostered the emergence of new, more powerful war leaders whose attraction transcended tribal and national identities, such as the Norwegian Rollo, who led Danish warriors, who was able to gain followers through his success as a war leader and the award of the spoils of war and land. For such leaders to remain in power, more or less continual warfare was necessary, leading to an increased militarization of society and increased stratification, as warriors and war leaders differed more and more from farmers and traders. It also led to the Normans' further expansion beyond Normandy in search of new military horizons.

By the 11th century Normandy had become one of the most highly feudalized states in western Europe. The Norman dukes were notable for the persistence and tenacity with which they demanded and eventually won a very high degree of feudal control over the lords who owed them allegiance (called vassals).

From the earlier time of Rollo, however, the dukes of Normandy, called in Rollo's time *jarls*, endured repeated crises in their relations with both Frankish kings, their overlords, and their own vassals. In 1035 and again in 1047 there were rebellions among the Viking settlers, who remained fiercely loyal to their tradition of independence and to paganism, countering the efforts of the Norman leaders since Rollo to promote Christianity. Later ducal authority under William the Conqueror finally triumphed and the vassals of the duke were under his control. As had happened in Scandinavia, this consolidation of power caused many Norman lords to seek their fortunes abroad, either hiring themselves out as mercenaries or engaging in wars of conquest.

The Normans combined a ready ability to imitate foreign customs and institutions with a boundless self-confidence, which allowed them to adapt to their own purposes the institutions

they found in newly won territories. Thus in southern Italy and Sicily, although their control was based on faith in their own military superiority, their strategic use of castles and harbors, and their importation of feudalism, they also adopted the highly advanced and largely literate techniques of governing, including the use of bureaucracies, developed by the Byzantines and the Muslims. In England the Normans imported their own style of feudalism and their own ideas of strong personal government, fiscal, and religious institutions. But there, too, they adopted many of the existing Anglo-Saxon institutions and customs, such as a centralized and powerful monarchy, a king's council, a royal seal and writing office, the shire system, sheriffs, and a revenue system of cash payments from the produce of royal estates and of a direct tax on the landowning class. The Normans introduced the exchequer, itinerant justices, and the practice of sworn inquests. They also reorganized the church in England. William the Conqueror's archbishop of Canterbury, Lanfranc, established a system of ecclesiastical courts separate from civil courts and raised the standards of monasteries.

Military Practices

Although fighting on horseback was not native to the seagoing SCANDINAVIANS, the Normans soon mastered cavalry warfare as it was then practiced in continental Europe. Mounted on a large and powerful horse, wearing the heavy mail hauberk that was standard among the warriors of northwestern Europe, protected by a conical helmet and a kite-shaped shield, and armed with a long, broad-bladed sword and a slender lance, the Norman knights proved on countless occasions that their effectiveness in turning the tide of battle far exceeded their actual numbers. The critical inventions that made the knight so formidable were the saddle with high sides front and back, which held the rider firmly on his horse, and stirrups, both of which enabled him to incorporate the full weight and momentum of his horse in the thrust of his spear. The skill of Norman knights was due to the importance that the Norman knightly class attached to the training of young warriors.

Dwellings and Architecture

One reason for the Normans' drive for wealth was their building program of castles, cathedrals, and abbeys. Castle building was not a Norman invention, but the Normans became expert in the use of the simple yet extremely

effective motte-and-bailey castle, constructed of a steep-sided, roughly circular mound, partly constructed with soil from its surrounding ditch, topped by a timber palisade and tower, surrounded by a ditched and palisaded enclosure (bailey). These small and easily made fortifications, which complemented warfare conducted in open country by small units of cavalry, became the hallmark of Norman penetration and conquest. Castles were not just defensive structures because, in conjunction with cavalry, they could be part of offensive efforts as their garrison ranged out by day to strike their enemies and retired for the night or for recuperation from battle. Throughout Normandy were castles of dukes and vassals; such a network of fortifications gave the Normans a military supremacy that may be compared to the air supremacy of the modern age.

In England after the Norman Conquest the new manorial lords put their physical mark on the landscape in part by rebuilding the parish churches in the Norman style. The earliest architectural feature in the church in a town called Holt, an opening in the bell tower wall, may have been constructed within 10 years of the conquest. Its Saxon characteristics probably indicate that it was built by native stonemasons under orders from the Norman lord. The nave was constructed about 1100 to 1110, and the chancel arch in 1120. The font was carved by the same mason as the arch.

The Norman buildings in England and France were largely Romanesque, in the style of the Romanesque architecture of Lombardy in Italy, which became influential in northern France and Germany in the 11th century. Initially inspired by Roman building, the driving force in the development of the Romanesque was the importance of vaulting. In contrast to earlier styles, Romanesque buildings often had massive barrel vaults, making the reinforcement of load-bearing walls necessary to bear the lateral outward thrust. The frequent presence of galleries above the aisles, sometimes with half-barrel vaults, probably solved this problem of abutment. The limited number of wall openings grew out of the same concern; it contributed to the sense of massiveness and the sober yet somberly impressive light. Churches, abbeys, and castles, the principal works of the Normans, have massive proportions, sparsely adorned masonry, and frequent use of the round arch. The development of the style took place chiefly during the period from 1066 to 1154, a time of great building activity.

In England this style superseded that of the ANGLO-SAXONS.

Other Technologies

Plows of the early Middle Ages had hardwood cutting edges, which necessitated a number of passes to break up the soil sufficiently. In the 12th century the iron plow became widely used. In addition to its iron plowshare, or blade, it had a moldboard that turned over the soil as it was plowed upward. The harness collar, which enabled horses and other animals to pull heavier loads without being strangled, also made farming more efficient.

Literature

A distinctive body of literature was written in England by Normans in the French dialect known as Anglo-Norman from about 1100 to 1250 and initiated at the court of Henry I. The most frequent literary forms composed were histories, sacred and secular biographies, and homilies. Romance and fiction were relatively rare. Geoffrey Gaimar wrote a two-part history of England, *Histoire des Bretons* and *Estorie des Engles* (c. 1140–50), in verse. Philippe of Thaün, the earliest known Anglo-Norman poet, wrote the moral allegory the *Bestiaire* (c. 1121).

Religion

Just as the Normans fully embraced and promoted feudalism and were masters of cavalry and castle warfare, so they also became champions of Christianity and religious orthodoxy, and they underwent a great religious and ecclesiastical revival in the 11th century. The Normans' faith became central to their identity; *Deus Aie* (God help us) became their battle cry. A carryover from paganism was the belief that one should make sacrifice and offerings to win God's favor; they built monasteries in part to house monks who would pray for them and absolve them of the sin of killing in war that was such an integral part of their life. Some of these monasteries became renowned centers of Benedictine life and learning.

Another expression of religious fervor was the pilgrimage to Rome and the Holy Land. This enthusiasm for pilgrimages was one of the factors that led to both the Norman conquest of southern Italy and participation in the Crusades.

The exploits of the Normans, like those of their Viking forebears, were made possible by conditions at a particular moment in history, a win-

dow of opportunity between the fall of the Roman Empire and the emergence of powerful and organized states in the 12th and 13th centuries. The disorder in Europe let loose by the disappearance of the Roman center of gravity allowed highly organized groups such as the Vikings and the Normans to have an impact far greater than their actual numbers. The Carolingian Empire was too backward-looking, having been founded on political principles that had become irrelevant, to survive the demise of Charlemagne for long. The principle of political organization that would allow the aggregation of power in the future was to be that of feudalism; it is ironic, and yet unsurprising, that the Normans themselves did so much to promote and deploy this principle, which, in the end, would draw the independent Norman barons into orbit around the monarchies of England (in the case of England held by royal dynasties of Norman descent) and France and cause them to lose their separate identity.

GEOGRAPHY

Norway is flanked by Sweden to the east, by the Norwegian Sea to the west, by the Barents Sea to the north, and by the North Sea and the Skagerrak Strait to the south. Additional Norwegian territory includes Jan Mayen, a volcanic island; Svalbard, an archipelago in the Arctic Ocean; the unoccupied Bouvet Island of the Atlantic Ocean; and Queen Maud Land in the Antarctic continent. About one-third of Norway lies north of the Arctic Circle. The country's land area is 148,896 square miles. Norway's terrain is generally mountainous; rolling hills and valleys are found in the east. Low plains make central Norway agriculturally important. To the south lie the Dovrefjell and Langfjell Mountain Ranges. Norway's highest peak, Galdhøpiggen (8,100 feet), is located in the Langfjell Mountains. To the west of the mountains lies Jostedalbreen, Europe's largest glacier field. Sognafjorden, situated along Norway's west coastline, is the deepest and longest of the many fjords, about 5,000 feet deep and 127 miles long. Sharp plateaus, such as Dovrefjell, Hardangervidda, and Finnmarksvidde, rise up from the coast. The longest river, the Glåma, and largest lake, Lake Mjøsa, are both in the southeast.

INCEPTION AS A NATION

Norway was first united under King Harold I in about 900 C.E. during the age of the VIKINGS. However, the union dissolved by 940. Norway was not reunited until 1015 during the reign of Olaf II, Harold's son. In the late 13th century Norway gained control of Iceland. In 1397 Norway, Denmark, and Sweden joined under the Union of Kalmar. When Sweden pulled out of the union in 1523, Norway became a province of Denmark. Under Danish rule Norway lost Iceland to Sweden.

During the Napoleonic Wars (1799–1815) Denmark joined the French in a campaign against Britain. Upon defeat Denmark was forced to cede Norway to Sweden (1814). Norway resisted this transfer and attempted to establish an independent government. The Swedish monarchy was forced on Norway, which was however, acknowledged as an independent kingdom in personal union with

NORWEGIANS: NATIONALITY

nation:

Norway; Kingdom of Norway (Kongeriket Norge)

derivation of name:

From the old Norse root *northr* and *veg*, "north-ernway"; also *rike*, "kingdom"

government:

Constitutional monarchy

capital:

Oslo

language:

Bokmål and Landsmål are two idioms of the official language Norwegian; Saami and Finnish are also spoken.

religion:

About 86 percent of the population are members of the Evangelical Lutheran Church; religious minorities include Roman Catholics, Protestants, and Muslims.

earlier inhabitants:

Saami; tribal Germanics; Vikings

demographics:

Ethnically people of Norway are homogeneous; several thousand Saami and Finns (some of them known as Kvens) make up the largest minority groups; others include Swedes, Danes, Americans, Pakistanis, Britons, Vietnamese, Chileans, and Iranians.

Norwegians: nationality time line	
C.E.	
c. 870–c. 930	Norwegian Vikings colonize Iceland.
880s	Harold I Fairhair campaigns to unite Norway.
1380	Danish king Olaf II unites Denmark and Norway.
1397	Queen Margaret of Denmark unites Denmark, Sweden, and Norway under Union of Kalmar.
1536	Norway becomes province of Denmark.
1567	Humanist Absalon Pedersøn Beyer writes about Norwegian history and national consciousness.
1717	Man of letters Ludvig Holberg becomes professor at University of Copenhagen.
1739	“Norlands Trumpet” (The trumpet of Nordland), poem by Petter Dass, is published.
1772	<i>Kiaerlighed uden strømper</i> (Love without stocking), play by Johan Herman Wessel, opens.
1813–1989	University of Oslo Library serves as National Library.
1814	Under new constitution Norway is ruled by limited monarchy; Norway is ceded to Sweden by Denmark.
1826	Johan Christian Clausen Dahl, professor at Dresden Art Academy, returns home to paint Norwegian landscapes.
1837	Poets Peter Christian Asbjørnsen and Jørgen Moe collect Norwegian folktales and publish them as <i>Nor</i> .
1857–62	Henrik Johan Ibsen serves as director of Norwegian Theater in Oslo.
1879	Nasjonalgalleriet (National Gallery) is founded in Oslo.
1884	Norwegian parliament gains power.
1888	Edvard Hagerup Grieg writes music for Henrik Ibsen’s poetic drama <i>Peer Gynt</i> , written in 1867.
1899	Norwegian National Theatre is founded in Oslo.
1903	Poet, novelist, and dramatic Bjørnstjerne Martinius Björnson wins Nobel Prize in literature.
1905	Norway gains full independence.
1914–18	Norway remains neutral during World War I.
1919	Oslo Philharmonic Orchestra is founded.
1920	Novelist Knut Hamsun (Knut Pedersen) wins Nobel Prize in literature.
1928	Novelist Sigrid Undset wins Nobel Prize in literature.
1931–33	Norway claims coast of Greenland.
1939–45	During World War II Germany occupies Norway; Norwegian government flees to London.
1945	Germany surrenders; King Håkon VII returns from exile; Norway joins United Nations (UN).
1949	Norway joins North Atlantic Treaty Organization (NATO).
1959	Norway joins European Free Trade Association. Norwegian Opera opens in Oslo.
1995	Norway fails to ratify accession treaty to European Union (EU).
2003	National Museum of Art, Design and Architecture is established as foundation, merging former National Museum of Art (National Gallery), National Museum of Applied Art in Oslo, Norwegian Museum of Architecture, and National Museum of Contemporary Art.
2004	National Library is reorganized as one unit in two locations, Oslo and Mo i Rana.

Sweden and allowed its own constitution and legislature.

In 1905 Norway declared itself an independent monarchy; Sweden soon recognized

that status, Norway suffered from German occupation during World War II (1939–45) but immediately restored its monarchy on Nazi defeat in 1945.

CULTURAL IDENTITY

Modern Norwegian cultural identity has been marked by the resurgence in interest in the culture of the ancestral Vikings and in folk music and art that began with the romantic nationalist movement of the latter 19th century. The composer Edvard Hagerup Grieg, with his evocative arrangements of Norwegian folk music both for piano and for orchestra, brought out a sense of the Norwegian national character, sometimes lusty and spirited, as in the *Norwegian Dances*, at others dour or wistful. Parts of the music of his *Peer Gynt* suite, for example, “In the Hall of the Mountain King,” evoke the dark underside of this northern people’s traditional belief in trolls and other malevolent spirits that haunt the long winter nights. This folk consciousness informed the planning of the entertainments during the Winter Olympics in Lillehammer, which included an elaborate staging of a battle between spirit folk.

In the 20th century Norwegian folk musicians have returned to the use of traditional instruments and styles, instead of adapting folk tunes to symphonic style. The so-called Hardanger fiddle (*hardingfele*) has been called the national instrument of Norway and provides an important focus for the revival of traditional music. Dating at least from the 17th century (and possibly earlier) the Hardanger fiddle differs from the violin primarily in having eight strings, four of which are not directly played but add sonority to the instrument through their sympathetic vibrations. It is used primarily for dance music. Many Norwegian folktales tell of fiddle players in communion with the supernatural, either receiving their powers from the spirit world or captured by trolls to perform for them.

Modern Norwegians have engaged in lively debate about what it means to be Norwegian. (Other groups, such as the SAAMI and KVENS, maintain their identity as minorities.) The stereotype—accepted by many Norwegians themselves—is that they are mainly a nation of fishermen and farmers who live close to nature and are simple, bucolic, gauche, and awkward when abroad among strangers or in cities. This is, of course, a vast oversimplification and largely untrue—many modern Norwegians are as cosmopolitan and urban as any other Europeans, and like other Europeans have been greatly influenced by American mass culture. They joke that the Norwegian national costume is not the *bunader*—finely embroidered red vests and white aprons for women and black jackets with green piping and pewter buttons and knee breeches for men—but blue

Norwegians stand atop Pulpit Rock near Stavanger at Norway’s Lyse Fjord in the early 20th century. (*Library of Congress, Prints and Photographs Division [LC-USZ62-93696]*)

jeans. Yet the myth persists of Norway as a country of people living and skiing in rural isolation amid dramatic fiords and great mountains.

There is some accuracy in the stereotype, at least in the recent past. Norway has had neither a strong landed gentry nor a solid urban bourgeoisie, and the vast majority of Norwegians were farmers or fishermen right up to the early 20th century. This has fostered a strong sense of individualism and egalitarianism and a dislike of central authority. Norwegian self-government is marked by the need for consensus and an ideology that demands a highly exacting degree of equality and fairness. The influence of these values on the administration of the Norwegian social welfare state, which temper its central planning aspect by giving due regard to the needs and priorities of localities, has caused analysts to consider it a laboratory for the future.

Some Norwegians point to the downside of being “farmers in the city”—of lacking a well-

rooted urban culture and of having a fundamentally rural outlook on city life. Their compatriots, they say, tend to lack the flexibility, tolerance for difference, and perspective typical of city dwellers in other countries. The debate over “Norwegianness” includes a critique of the nationalistic version of recent history written by some Norwegian historians, especially Norway’s role in World War II. Overly glowing accounts of this role have succumbed to an uncritical and exaggerated patriotism strongly tainted with mythological and national ideology, skeptics say.

It is also pointed out that much of what is considered traditional Norwegian culture is really a construct by the urban bourgeoisie of the 19th century, who hailed the culture of the mountain peasantry—in an idealized version—as the one true Norwegian cultural identity, ignoring the fact that the cultural identity of any people is constantly evolving through time.

Novantae

The Novantae are classified as a Celtic tribe. They lived in Britain in present-day southwestern Scotland and are discussed as CELTS, BRITONS, or SCOTS. They had contacts with the ROMANS in the first century C.E. By the sixth century their descendants were part of a British kingdom in the original homeland known as Rheged.

Novgorod Slavs *See* ILMEN SLAVS.

Novioduni

The Novioduni are classified as a Celtic tribe. They lived in Gaul around present-day Noyon in northwestern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Obodrites (Obotrites; Obodriti;
Obodrichi; Obodricians; Obodritians;
Obotritae; Abodrites; Abodritians;
Bodryci; Bodrii; Nortabtrezi)

The Obodrites were a tribe of Western SLAVS, living north and east near the mouth of the Elbe River, which feeds into the Baltic Sea in present-day northeastern Germany. The tribal name is from the Slavic word *bodryci*, “brave.” As were all Western Slavs they were called WENDS by early medieval FRANKS.

The Obodrites moved into this formerly Germanic territory by the seventh century C.E., possibly joining remaining Germanic groups to form a distinct culture. The WAGRIANS were a branch tribe. Among the neighbors of the Obodrites were the POLABIANS and VELETIANS. To defend against these tribes in the eighth century Charlemagne, king of the FRANKS and emperor of the West, established a borderland entity known as the Saxon Mark.

By the ninth century the Obodrites had formed an independent principality. Their two most important towns were Starigard (modern Oldenburg) and the trading port of Reric/Veligrad (modern Mecklenburg), which thrived especially in the 11th century under Duke Gottschalk. In 929 the Obodrites, along with other Slavic tribes in the region, were defeated by Henry I, king of Germany. A number of peoples in the region, such as from the tribes known as Polabians and Wagrians, joined what is referred to as the Obodrite

Union (which led to the Polabians’ being referred to as part of the umbrella group of Obodrites, although some scholars refer to the Obodrites in terms of the umbrella group Polabians on the basis of dialect). In 1160 Henry the Lion, duke of Saxony, defeated the Obodrites and their allies under Duke Niklot; afterward German settlers and missionaries settled the region.

Oenotri See ENOTRI.

Ogurs See BULGARS.

Olcades The Olcades are classified as a Celtic tribe. They lived in present-day north-central Spain at least by the first century B.C.E. and are discussed as CELTS or CELTIBERIANS.

Onesi (Monesi)

The Onesi are classified as a Celtic tribe. They lived in Gaul in the northern Pyrenees around present-day Ozon in southwestern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Opici (Obsci; Osci; Oscans)

According to ancient sources the Opici were among those peoples who inhabited the present-day region of Campania in southern Italy

before the arrival of Indo-Europeans, probably in the second millennium B.C.E. Their origins are not known. They were perhaps the same as the Ausones, another name given to pre-Italic peoples. They may have been ancestral to some of those peoples who spoke Italic. The SAMNITES lived in their territory, and it is thought they or other ITALICS adopted the name Opici, whose alternate form, Oscan, is used to identify an Italic language grouping.

Ordovices (Ordovicians)

The Ordovices are classified as a Celtic tribe. They lived in Britain in present-day central Wales and are discussed as CELTS, BRITONS, or WELSH. They were allies of the SILURES. The ROMANS under Gnaeus Julius Agricola defeated them in 77 C.E. By the sixth century their descendants were part of a British kingdom in the original homeland known as Gwynned.

Oretani (Oretoni)

The Oretani are classified as an Iberian tribe. They lived in the Sierra Morena, a mountain range in the upper Andalusia region of present-day southwestern Spain. In either 229 or 228 B.C.E. during the campaign of the CARTHAGINIANS against the IBERIANS of southern Spain the general Hamilcar Barca was killed in a battle with the Oretani. Hannibal defeated them, along with the CARPETANI living to the north, in 219 B.C.E. In ensuing years the ROMANS controlled the Oretani homeland, which they defined as part of the province of Terraconensis.

Oscidates (Osquidates)

The Oscidates are classified as a Celtic tribe. They lived in Gaul in the Vallée d' Ossau in the northern Pyrenees in southwestern France at least by the first century B.C.E. and are dis-

cussed as CELTS or GAULS. A related group, the Oscidates Campestri, lived around Pau in the same region.

Osismi (Osismii; Osismes)

The Osismi are classified as a Celtic tribe. They lived in Gaul in present-day northwestern France and are discussed as CELTS or GAULS. The ROMANS referred to them along with their neighbors to the south, the VENETII, and other tribes as Armoricans, that is, tribes living between the Seine and Loire on or near the Atlantic Ocean in the region of Armorica (roughly present-day Brittany and eastern Normandy), which was occupied by forces under Julius Caesar in 55 B.C.E. Vorgium on the site of present-day Carhaix became a *civitas* capital in Roman Gaul.

Ossets (Ossetes; Ossetians; Digoron; Iron; Tualhg)

The Ossets, descended from the ALANS, are an Indo-Iranian people presently living in Alania (formerly North Ossetia, or North Ossetiya), a republic in the Russian Federation on the northern slopes of the central Caucasus Mountains. (South Ossetia is part of the Republic of Georgia in the South Caucasus). The Ossets are the largest ethnic group in Alania, thought to be descendants of the ancient Alans, making up just over half the population; Russian SLAVS constitute about a third, and the rest are the INGUSH and smaller groups. They have a variety of native names, including Digoron, Iron, and Tualhg.

ORIGINS

The Ossets are descended from the ancient people known as the Alans or Alani, classified as SARMATIANS.

LANGUAGE

The Osset language, known as Ossetic (or Ossetian), is Iranian, part of the Indo-Iranian family (the eastern branch of Indo-European). The two modern dialects are Digor and Iron, the more prevalent. Pronunciation has been influenced by the non-Indo-European languages of the Caucasus, Caucasian and Turkic, and the vocabulary has some Russian words.

HISTORY

Because of an invasion of MONGOLS in the 13th century C.E. surviving Alans moved to moun-

Ossets time line**C.E.**

13th century Mongol invasion; Alans move to mountainous regions.

17th century Alans' descendants, known as Ossets, are ruled by Circassians.

1774 Ossets are ruled by Russians.

1917–20 Fighting between pro-Soviet and anti-Soviet factions in Ossetia

1936 North Ossetian Autonomous Soviet Socialist Republic is created as part of Soviet Union (USSR).

1991 Alania Autonomous Republic established; joins Russian Federation.

tain country, where they built a new life. They mixed with other groups in the region, among them CAUCASIANS, and formed three territorial entities: Digor in the west, Tuallag in the south, and Iron in the north. In their rugged homeland they managed to maintain some independence from Mongol rule, which lasted until the 15th century. In the 17th century Digor fell under the rule of the Karbardians, a subgroup of CIRCASSIANS of the North Caucasus. Tualleg was ruled by Georgians from the South Caucasus. In 1774 the Ossetian homeland became part of the Russian Empire. The Ossets tended to support the Russian presence over that of the Muslim Turks (*see* TURKICS) competing for the region.

In 1917–20 during and after the Bolshevik revolution the region became an administrative district of the North Caucasus known as the Mountain Republic. North Ossetia became an autonomous region in 1924, redefined as the North Ossetian Autonomous Soviet Socialist Republic in 1936. In 1991 after the breakup of the Soviet Union the region became the Alania Autonomous Republic within Russia and subsequently a republic within the Russian Federation (*see* RUSSIANS: NATIONALITY).

CULTURE

Many of the Ossets earn a living in agriculture, especially of grains and fruit. They also raise and breed cattle. Lumbering also provides income. Industry in the region includes mining, metallurgy, and machinery. Some Ossets are expert woodworkers.

Ossets have a tradition of folk epics in the Ossetic language. Many of them relate tales about the Narts, hero warriors. The national poet, Kosta Khetagurov, of the 19th and 20th centuries helped establish a literary form of Ossetic, the dialect Iron, written in the Cyrillic alphabet.

The majority of Ossets are Christians, as a result of the influence of peoples of Georgia, where Christianity was introduced in the fourth century.

With family and cultural ties with Ossets in Transcaucasia some Ossets and others in Alania have sought to unify the regions known as North and South Ossetia, but both the Russian and Georgian governments have opposed such a move.

Ostrogoths (Ostrogothi; Ostragothae; Ostrogothones; East Goths; Greutungi; Greutungs; Greutungians; Greuthungi; Greuthungs)

The Ostrogoths were one of the two major groupings of GOTHs—a people classified as eastern GERMANICS—the other the VISIGOTHs. From the late third century C.E. their histories were separate; the Ostrogoths originally inhabited the region north of the Black Sea east of the Dniester River (part of modern Ukraine and Belarus). In the fourth century they dominated a territory extending north to the Baltic Sea and east to the Volga River. Their founding group, known as the Greutungi, were allied for about 80 years with the HUNS, then with the BYZANTINES of the Eastern Roman Empire. They became the dominant political entity on the Italian Peninsula in the late fifth century and first half of the sixth century.

ORIGINS

The tribe after which the Goths probably took their name, the Gutones, are thought to have originated in Scandinavia before migrating southeastward into eastern Europe. The approximate date given for the start of two distinct Gothic traditions is 290 C.E., after defeat by the ROMANS in 271. They later became known as the Ostrogoths (from the Low Latin Ostrogothi for eastern Goths) and Visigoths (from Low Latin Visigothi, good goths). The family of Amali (Amal, Amaling) were the founders of the Gothic kingdom that eventually would evolve into the Ostrogoths,

Ostrogoths time line

C.E.

- c. 290** Goths separate into groups that evolve into Ostrogoths and Visigoths.
- c. 360** Kingdom of Ermanaric extends from Black Sea, north to Baltic Sea, and east to headwaters of Volga River.
- c. 370** Huns reach Black Sea, leading to dispersion of various Gothic groups.
- c. 375** Ostrogoths conquered by Huns.
- 401** Romans repel Ostrogoth invasion of Italy.
- 451** Ostrogoths as allies of Huns fight Visigoths and Romans at Catalaunian Fields in France.
- c. 453** Ostrogoths settle in Pannonia as allies of East Roman Empire.
- 488–493** Ostrogoths under Theodoric invade and conquer Italy.
- 552** Ostrogoths defeated by Byzantines.

a polyethnic group, including steppe peoples originally out of Asia. This confederation was originally known as the Greutungi. In about 325 they were conquered and then absorbed by the Huns into the Hunnic confederation as mostly loyal soldiers, but after the confederation collapsed on Attila's death in 453 they went their own way as a newly reconstituted group and became known to other Europeans as the Ostrogoths.

LANGUAGE

The Ostrogoths spoke Gothic, a dialect of the East Germanic language group, which had become distinct by about the fourth century C.E. Gothic, now an extinct language, probably ceased to be spoken as the Ostrogoths and Visigoths lost their distinctive identities and were absorbed by other peoples during the Middle Ages.

HISTORY

The Kingdom of the Greutungi: Proto-Ostrogoths

The first Amali leader of the Greutungi—the founding group of proto-Ostrogoths—in the late third century C.E. was Ostrogotha; little is known about him and he may have been no more than a legendary, semimythical figure such as many Germanic tribes claimed as founding father. It was probably in this tradition that he was considered by later Ostrogoths to be their founder as the first of the royal lineage known as the Amali. During the next century under Ermanaric the first Greutungi king known to history, the proto-Ostrogothic people expanded their territory, centered along the Dnieper River, from the Black Sea north to the Baltic Sea and from the Dniester east to the Volga River in present-day western Russia. This vast region included traditional trade routes

Ostrogoths used this cloak pin in the fifth century C.E. (Drawing by Patti Erway)

among various peoples, north and south, east and west.

The Hunnic Period

The arrival of the conquering Huns along the Black Sea in the 370s led to a shift in power in the region as the proto-Ostrogothic armies were unable to withstand the Hunnic onslaught. Reportedly Ermanaric committed suicide, possibly as a sacrifice to the gods for the safety of his people. In the following years most of his people were absorbed into the Hunnic confederation. Some among them managed to flee to Roman-held territory in Pannonia (roughly modern Hungary), but most became loyal allies.

In 401 a group of Greutungi Goths under Radagaisus, along with some VANDALS and QUADI, invaded the Roman province of Raetia (parts of present-day Austria and Switzerland) and threatened Italy. Stilicho, a Roman general of Vandal ancestry, managed to repel them before they crossed out of the Alps. The next year he defeated the Visigoths under Alaric I in northern Italy.

In the following century reportedly tens of thousands of Greutungi Goths fought alongside Attila in his invasion of western Europe. Three brothers of the Amal line—Thiudemir, Walamir, and Widimir—led the Greutungi contingent. In 451 the Visigoths fought against them as allies of the Romans at the Battle of the Catalaunian Fields, south of modern Châlons-sur-Marne in present-day France. After the defeat of the Huns and Attila's death in 453 some of the Greutungi Goths, now known as Ostrogoths, settled in Pannonia as *foederati* (federates) of the Byzantines. By this time many of them were adherents of Arian Christianity.

Pannonia had been reduced by war into a region with a barely subsistence agricultural economy, making the Ostrogoths dependent for their welfare on payments from the eastern Romans who would evolve into the Byzantines. Thus whenever these were not forthcoming the Ostrogoths would go on raids within the empire. As a result of one of these raids Theodoric, the eight-year-old son of Thiudemir, was sent to Constantinople (modern Istanbul) as a hostage, and spent about 10 years there.

Ostrogoths in Italy

In the ensuing years the Ostrogoths competed for territory with the SCIRI and GEPIDS, also former allies of the Huns. In 469 the Ostrogoths

Theodoric: Germanic King of Italy

Theodoric was born in the Roman province of Pannonia in about 454 C.E., the son of Thiudemir. As an eight-year-old, he was sent to Constantinople as a hostage. He reportedly lived there until he was 18, gaining an education unprecedented for an Ostrogoth, learning about the workings of the Roman Empire and the imperial system of government. Shortly after returning to his people Theodoric became co-ruler of the Ostrogoths with his father, until he inherited the throne in 474.

Theodoric was much more successful in playing the political games with the Romans than the Visigoth Alaric had been in the early years of the fifth century, and eventually he won the position of *magister militum* (master of soldiers) and was even adopted into the imperial Flavian house. But he also knew the importance of impressing the Romans with his military might. Thiudemir and Theodoric led an Ostrogoth contingent southward onto the Balkan Peninsula and forced Emperor Leo I to grant them additional territory in Macedonia.

Over the years the Ostrogoths and Byzantines of the Eastern Roman Empire maintained a shaky truce. The Byzantines had not given up the ambition of regaining Italy for the empire, and at Emperor Zeno's request Theodoric invaded Italy in 488 and defeated Odoacer, the first Germanic ruler of Italy. By 493 Theodoric occupied nearly the entire Italian Peninsula and declared himself king with the official title Flavius Theodericus rex. His title in Gothic was Thiuda-reiks, a highly unusual combination of the archaic Germanic term *thiudans* used for a kind of sacred king among early Germans, with the term *reiks*, related to the Latin *rex* for "king." He established Ravenna as his capital. Through military positioning, diplomacy, and marriage Theodoric forged an alliance with other Germanic powers of the day, including the Alamanni, Burgundii, Franks, and Visigoths.

Theodoric honored Roman traditions even as he built Ostrogothic power on the Italian Peninsula. He promoted a dual system in which his Germanic soldiers were generally segregated from the local population, and the latter were encouraged to develop commerce and agriculture. Although an Arian Christian, he demonstrated tolerance for other Christian sects. He erected the impressive mausoleum of Theodoric in Ravenna, which still stands. After his death in 526 his daughter, Amalasantha, ruled as regent to her son, Athalaric. Dietrich von Bern, a character in the German epic poem *Nibelungenlied*, is based on Theodoric.

defeated the Sciri. Theodoric (see sidebar) became co-ruler of the Ostrogoths with his father in 471, shortly after he returned to his people, and began a period of both warfare and alliance with the Romans.

In 476 the Scirian ruler Odoacer, leading an alliance of Sciri, HERULI, and RUGII, captured Ravenna, the capital of the Western Roman Empire, causing the deposition of the last Western emperor, Romulus Augustus. In a form of "divide and conquer," the Byzantine emperor Zeno commissioned Theodoric to quell Odoacer, hoping to reduce the power of both by setting them at war with one another. Theodoric and Zeno knew each other from the former's days as a hostage.

In 488 Theodoric's forces defeated the Gepids in battle at Sirmium near present-day

Seremska, Serbia, on the Sava River and then proceeded southward into Italy. The next year Theodoric defeated Odoacer's forces at Aquileia and Verona and besieged Ravenna for two and a half years. Odoacer admitted Theodoric to Ravenna under a truce, and the two agreed to rule Italy jointly. But Theodoric personally killed Odoacer and seized complete power, establishing in 493 a kingdom with Ravenna as the capital. He continued to pay homage to the Byzantine emperor, to maintain the legitimacy of his kingdom, nominally holding Italy until Zeno should return. Zeno died before he could accomplish this, and his immediate successors were too preoccupied with their Eastern Empire to trouble about Italy, by now an economically feeble backwater.

Theodoric's rule rested squarely on Roman traditions; he took as his official title Flavius Theodericus rex and retained Roman governmental structures. However, to maintain the loose confederation of Germanic peoples he had forged, partly through marriage, which included the Visigoths, ALAMANNI, BURGUNDII, and FRANKS, he ruled through a dual system, keeping his Germanic troops apart from the Roman populace and commanding them as the general of a Roman army. Theodoric's way of balancing Gothic with Roman elements, in which the two were paired but not melded, as would happen in the next century with the Franks under their king, Clovis I. The Roman-educated Theodoric perhaps understood that his people, whose very identity had been honed by being part of Theodoric's hordes, could not be expected to become Romanized overnight.

On the death of Theodoric in 526 his grandson, Athalaric, became king and his daughter, Amalasantha, regent. She allied herself with the Byzantine emperor Justinian I, arousing the opposition of Ostrogothic nobles. When she was banished, then killed, Justinian sent his general Belisarius, who had defeated the Vandals in North Africa. Belisarius invaded Italy by way of Sicily and occupied Rome in 536. When Belisarius was recalled in 541, the Ostrogoths rose up under Totila. In 552 the Byzantine general Narses defeated Totila's forces at Taginae (near modern Gubbio), killing Totila and regaining Italy for the Byzantines. In 555 all Ostrogothic resistance ended. In 572 the LOMBARDS, another Germanic people, invaded and took control of Italy.

The Ostrogoths lost their political identity and were absorbed into other tribes.

CULTURE (see also GERMANICS)

Government and Society

Ostrogothic Ethnogenesis The Ostrogoths, like most other Germanic tribal groups, while being made up of fragments of other tribes that previously had come apart in the exigencies of the migration period—war and movement into new territories—saw themselves as belonging to a distinct ethnic people with their own royal lineage, the Amali, founded by the semi-mythical Ostrogotha, and shared history. The crux of Ostrogothic ethnogenesis lay in the experience of being defeated by the Huns, the self-sacrifice of their king Ermaneric, and their subsequent experience as allied warriors of the Hunnic confederacy. Attila with great shrewdness flattered the Greutungi leaders of the Ostrogoths, counting on them to control the rest of the Germanic warriors who had joined him. Many Ostrogothic elite graves from this time contained eagle-shaped plaques whose style shows steppe art influence. They may have been badges showing allegiance to the Hunnic overlords.

Theodoric and Roman Institutions Perhaps the greatest Germanic king of his age, Theodoric sought to protect and extend the benefits of Roman civilization and at the same time preserve his people's sense of their Ostrogothic identity. Thus he lavishly supported public works, restoring seaports and aqueducts with the sense of civic duty that had been a central tenet of Roman civilization; took steps to promote the economy; and acted to safeguard Roman customs and institutions, especially the senate. He appointed Romans to important administrative posts. At the same time he segregated his own people under their own commanders in enclaves in northern and central Italy—perhaps also to eliminate temptations to raid—where they could live according to custom.

Military Practices

Ostrogoth warriors, influenced by Asian steppe people, typically fought from horseback, often with lances.

Theodoric established the *exercitus Gothorum*, a Roman army in name although under his command, which incorporated soldiers from all over the Roman Empire.

Dwellings and Architecture

During the period they lived near the Black Sea the proto-Ostrogoths built many settlements,

which have been identified archaeologically. In present-day Moldova alone 150 are known. Hundreds more have been found in a large territory reaching from the Dnieper River to central Transylvania and from the region of the rivers Pripet and Bug to the Lower Danube. Many of their settlements were built on riverbanks and were not fortified. Their material remains are known archaeologically as the Cerneachov culture, after a cemetery at the Dnieper River. About 1,500 burials of this culture have been found.

Literature: Scholarship

It is a measure of the caliber of Theodoric that he esteemed the great philosopher Boethius, one of the founders of medieval philosophy, and made him a consul in 510. However, another measure of the Ostrogothic king is that some 20 years later, when Boethius was accused by his enemies of plotting to restore Roman (that is, non-Ostrogothic) rule, Theodoric believed his accusers and ordered Boethius imprisoned and later executed. During his imprisonment Boethius wrote *De consolatione philosophiae* (Consolation of Philosophy). (This work would later be translated into Old English on the reign of Alfred the Great of the ANGLO-SAXONS, another of the series of great kings produced by Germanic peoples in the early Middle Ages, and would be influential in that society as well.) Boethius can be said to have flourished in part because of and in part despite Ostrogothic rule, his ambivalent experience with Theodoric a sign that the Ostrogoths had not quite left their barbarian past behind them.

Another Roman scholar patronized by Theodoric was Cassiodorus, who served as his secretary, among other posts. Cassiodorus wrote a *History of the Goths*, of which only a digest remains. Dionysius Exiguus (Dennis the Small), a DACIAN monk and friend of Cassiodorus, laid the foundations of ecclesiastical or canon law that would be followed throughout the Middle Ages and beyond, by translating from Greek into Latin 401 ecclesiastical canons, including the apostolical canons and the decrees of the Councils of Nicaea, Constantinople, and others. He also played a major role in determining the method of calculating the date of Easter.

As evidenced by the achievements of these scholars the Ostrogoths, whatever their failings, managed to preserve a degree of peace, a breathing space, in which crucial work for the

preservation of Roman culture and institutions could take place, before their successors as rulers of Italy, the considerably less Romanized Germanic people the LOMBARDS, swept much of it away.

Religion

The Ostrogoths suffered in their relations with their Roman subjects because the religion they had adopted, in abandoning the paganism of their ancestors, was Arian Christianity, considered by the Roman Church a heretical creed.

Saint Benedict of Nursia, the founder of Western monasticism, lived during the latter period of Ostrogothic rule in Italy, having grown to young manhood by the time of Theodoric's death. However, he found Rome, where he had grown up as the son of noble Roman parents and studied for a time, such a degenerate place that he withdrew to an isolated area, where he lived in a cave, then finally to northern Italy, where he founded the monastery of Monte Cassino. This suggests he had little to do with the Ostrogoths and their rule; indeed, when King Totila visited him, Benedict rebuked him severely as a wicked man and prophesied his further career and his death in 10 years. It is said that Totila was so impressed with Benedict that he was never so cruel again as he had been in the past. But at least the Ostrogoths had procured a period of relative peace in which Benedict could pursue his holy work.

The career of the Ostrogoths in Italy shows what might have been achieved in preserving the Roman Empire, which had done so much to bring the great Germanic confederacies into being. The continued violent movements of peoples in the sixth century and for centuries afterward made this impossible. It would be left to the Frankish Carolingians, viewing the imperial tradition from across a dark divide of several centuries of destruction, to bring into being the Germanic dream of reviving the empire, and to achieve a true melding of Germanic and Roman elements and traditions. This fusion proved to be more enduring than the dual system attempted by Theodoric.

Oxibii

The Oxibii are classified as a Celtic tribe. They lived in Gaul near Cannes in the western Alps in southeastern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

P

Paeligni (Peligni; Pelini)

The Paeligni are classified as an Italic tribe. The Paelignian language was one of the Sabellian subgroup of the Oscan branch of Italic languages, related to Aequian, Marrucian, Marsian, Sabine, Vestinian, and Volscian. The Paelignian homeland, situated in the Apennines in present-day central Italy, was south of the Aterno River, beyond which the VESTINI lived, and west of the Sangro River, beyond which the FRENTANI and MARRUCINI lived. To the west and south, separated by high mountains, were the MARSI.

With their central location to these various peoples the Paeligni played a key role in trade among them. Paelignian wines, cereals, olives, honey, and linen were valued.

In 309 B.C.E. the Paeligni participated in a confederacy of the Marrucini, Marsi, and Vestini in support of the SAMNITES against the Romans during the Second Samnite War (326–304 B.C.E.), until a major loss to the Romans in 305 B.C.E. (The Paeligni are sometimes discussed as Samnites, fellow ITALICS; they also may have had ancestors from among the ILLYRIANS, who migrated to the Italian Peninsula from across the Adriatic.)

The Paeligni were also central to the alliance of tribes during the Social War against Rome of 90–88 B.C.E. Their capital Corfinium, south of another Paelignian Sulmo (modern Sulmona), became the rebel capital and its name was changed to Vitallio, as indicated by

inscriptions on the coins struck there in 90 B.C.E., to honor the hoped-for Italia Republic, with rights equal to those of Roman citizens (the name Vitallio is the Oscan version of Italia). The third powerful Paelignian town was Superequum, the location of which is not known. After the revolt failed, the Paeligni were soon Romanized.

Paemani

The Paemani are classified as a combined Celtic-Germanic tribe. They lived in Gaul in the Famenne region of present-day eastern Belgium near the CONDRUSI at least by the first century B.C.E. and are discussed as CELTS, GERMANICS, or GAULS. The ROMANS grouped them among the BELGAE.

Palmiensi

The Palmiensi lived near the ADRIANI and PRAETUTII in the present-day province of Teramo in the northern region of Abruzzi in east-central Italy, assumed to be there at least from the eighth century B.C.E. Along with those tribes they are sometimes grouped with the PICENES living to their north beyond the Tonto River, although it is generally believed that the Adriani, Palmiensi, and Praetutii spoke Italic dialects, leading to their classification as ITALICS, and the Picenes either an Illyrian (*see* ILLYRIANS) or a pre-Indo-European dialect. The Palmiensi lived along the Adriatic coast

between the Tronto and the Vibrata Rivers. Their principal town, Civitas Truentina (or Truentum), was situated on the Tronto (formerly known as the Truentum). The region was pacified by the ROMANS in the third century B.C.E., during and after wars with the SAMNITES, and Romanized in the second century B.C.E.

Pannonians (people of Pannonia)

The name Pannonians refers to people living in the ancient Roman province of Pannonia, south and west of the Danube, most of it in present-day Hungary. At its widest extent Pannonia included territory in Austria, Slovenia, Croatia, and Serbia. Pannonia was first inhabited by the ILLYRIANS and then invaded by the Romans in 35 B.C.E. and conquered by 99 C.E. In about 103 C.E. the province was divided into Pannonia Superior and Pannonia Inferior. One sees the term Pannonian SLAVS in reference to Slavic peoples who migrated to the region in the sixth–seventh centuries.

Parisii (Parisi; Parisis)

The Parisii are classified as a Celtic tribe. They lived in Gaul around present-day Paris in northern France and are discussed as CELTS or GAULS. They were allies of the SENONES. Another group, by the same name, lived in Britain around present-day York in northeastern England and may have been a migrant group of the Gallic Parisii. Both had contacts with the ROMANS in the first century B.C.E. The Parisii fought as allies of the ARVERNI under Vercingetorix against Julius Caesar in 52 B.C.E. Petuaria on the site of present-day Brough became a *civitas* capital during the Roman occupation of Britain. Lutecia on the site of Paris became a *civitas* capital in Roman Gaul; Paris takes its name from the tribal name.

Patzinaks *See* PECHENECS.

Pechenegs (Petchenegs; Patzinakoi; Patzinaks; Bessenyo; Besseni)

The Pechenegs were a Turkic-speaking confederation of tribes, perhaps eight of them, who in the 10th to 12th centuries had numerous contacts with the RUS and BYZANTINES in eastern and central Europe, as enemies or allies and trading partners. (The Byzantines called them Patzinakoi, possibly from the Arabic Badjanakia, a name that evolved into Patzinaks.

They were known to the Hungarians as Bessenyo, or in its Latin form Besseni.)

ORIGINS

The original homeland of the Pechenegs is not known. By the eighth century C.E. they had broken off from other TURKICS and inhabited territory between the Ural and Volga Rivers in present-day western Russia. In the late ninth century they were pressured by other steppe peoples, among them the KHAZARS, and migrated westward. In the 10th century they controlled the territory north of the Black Sea between the Don and Dnieper Rivers in present-day southwestern Russia and eastern Ukraine, including the Crimean Peninsula.

LANGUAGE

The now-extinct Turkic dialect of the Pechenegs, known as Pecheneg, is of the Northwestern (Kipchak; Ogur) language group.

HISTORY

The Pechenegs became known as both fierce warriors as well as trading partners, providing horses, cattle, and sheep to more sedentary peoples. In the late ninth century they became renowned for their fierceness, fighting as mercenaries for the BULGARS against the MAGYARS, driving them westward into present-day Hungary.

In 944 the Pechenegs allied with the Rus to invade Byzantine lands. The Byzantines bought them off with rich bribes to induce them to attack the Bulgars instead. The first eight chapters of *De administrando imperio*, (On the administration of the empire), written by Emperor Constantine VII (Constantine Porphyrogenitus) in about 950—for his son, giving guidelines on ruling the Eastern Roman Empire—concern the importance of the alliance with the warlike Pechenegs. The Byzantines reportedly sailed up the Dnieper and Danube Rivers for negotiations with the Pechenegs.

The Pechenegs were known to attack the Rus of the Kievan Rus principality as they sailed downriver for trade with the Byzantines. In 968–969 the Pechenegs besieged Kiev, the Kievan Rus capital in present-day Ukraine. For a time afterward, they were allied with the Kievan Rus and attempted another invasion of Byzantium. In 972, led by Kuryea, they killed Svyatoslav who had failed to pay the agreed amount for their help. (It is said that Kurya, the most dominant khan of the Pechenegs of the time, drank from a goblet made from Svyatoslav's skull.)

Pecheneg (Turkic)

The Rus under Yaroslav defeated the Pechenegs in 1036. At that time they were centered along the Lower Danube in present-day Romania, from which they continued to be a threat to Byzantium.

In 1064 the Pechenegs were defeated by the CUMANS, another Turkic people, who absorbed many survivors. In 1090–91 the Pechenegs advanced into Thrace and threatened Constantinople (modern Istanbul). The Eastern Roman emperor Alexius I, with the help of the Cumans, defeated and dispersed them. Some survivors found work as soldiers for the Byzantines.

In the course of their wanderings some Pechenegs settled in present-day Bulgaria,

Serbia, and Hungary. Others who had remained in Russia joined the TORKS in a confederacy called Chenrye Klobuki (Black Hoods) and were settled at the limits of Rus territory northeast of Kiev as a buffer against the Cumans.

CULTURE (see also TURKICS)

Economy

For the ancestors of the Pechenegs as for other nomadic steppe peoples the harshness of the steppe climate prevented anything but a simple nomadic socioeconomy, whose main imperative was to find pasturage for the herds, a need constantly threatened by the extremes, severe winters and drought, that periodically ruined pasturelands. In general the various deserts in central Eurasia, among them the Garagum, the Qyzylqum, and the Gobi, have slowly been expanding since prehistoric times, each encroachment caused by a period of drought and also overgrazing, which periodically pressures groups along their borders, pressures that ripple out in waves of disturbance in all directions across the steppe.

Raiding and Trading An important part of the economy of the Pechenegs involved raiding on trade routes. The Pechenegs attacked traders of the Rus traveling down rivers through their territory on expeditions to Constantinople. The Dnieper River had nine sets of rapids to be negotiated, and the laborious portages around them furnished the Pechenegs opportunities for attack.

The Pechenegs also engaged in trade with the Rus and other neighboring peoples, as documented in Constantine VII Porphyrogenitus's *De administrando imperio*. The Rus bought cattle, horses, and sheep from them. From a neighboring people called the Chersonites they received pieces of purple cloth, ribbons, woven cloths, gold brocade, pepper, and scarlet or "Parthian" leather.

After Pecheneg groups had settled in present-day Hungary as allies of the MAGYARS who had seized this territory, they took up a sedentary existence and built prosperous towns.

Government and Society

Steppe Tribalism The name Pecheneg may have derived from Badjanakia, a name given in an early Arabic account to peoples living from the Volga River to the Ural Mountains. The name may have been related to the Turkish *badjanak*, which means "brother-in-law," possibly indicating the political structure of peoples here as being primarily tribal, with tribes made up of familial clans whose members were genuinely related to one another. When a number of clans formed a tribe, all tribal members may have adopted one another as honorary brothers-in-law.

The social organization of steppe peoples through prehistory and history was profoundly

influenced by the conjunction of harshness of the Eurasian steppe lands in the interior with the circumstance that it lay between growing civilizations to the east and west, a wilderness at the heart of Eurasia crossed by the Silk Road along which the civilizations reached out to one another. The impoverished inhabitants of the wilderness, observing the products of cultures of unimagined sophistication and luxury, fell upon the Silk Road caravans and wrested the goods for themselves, thereby profoundly changing their own societies. They developed societies in which status depended on success in war, in this way warfare became ever more important in steppe societies: used by different groups of nomads to compete for pasturelands and later for dominance in controlling access to trade routes.

By the time of the rise of the HUNS in the middle of the first millennium C.E. attempts by Byzantine armies to destroy Hunnic power caused former loose coalitions of tribes to join in a tighter, more disciplined organizations. A vast territory, including many Turkic areas, was more or less united into a Hunnic empire. Turkic involvement in Attila's empire in the fifth century caused the spread of Turkic languages and influence. The Pechenegs, however, who had emerged (or were first written about) some 400 years later, seem to have preserved the much more loose tribal organization of the pre-Hunnic past.

Foreign Relations and Internal Organization

The Byzantines made it a conscious policy to remain on peaceful terms as much as possible with the Pechenegs. They concluded conventions and treaties of friendship with them and every year sent to them a diplomatic agent bearing gifts. According to Porphyrogenitus the agent received from them hostages and a Pecheneg diplomatic agent. Also according to Porphyrogenitus the Rus did what they could to pacify the Pechenegs, both because they had valuable livestock to offer in trade and because their hostility hampered Rus activities in trade and war. At times the Pechenegs allied with the Rus in war.

Porphyrogenitus described the political organization of Patzinacia, the name of the original Pecheneg territory homeland. It was divided into eight provinces, each with a great prince. As in many tribal societies (including those of the GERMANICS before they were under Roman influence), traditional laws ensured that no one family could gather the reins of power in their own hands. Princes were suc-

ceeded by cousins, rather than sons or brothers to vary the lineage. It is probable that “cousins” could include men with only a distant or even no actual family relationship, because it was common for tribes to consider all their members as being in some sense related through their common ancestry from a usually mythical founding hero. Thus Pecheneg society is likely to have been relatively egalitarian, at least compared to the highly stratified Byzantine Empire, with anyone of the warrior class able to rise to power if he were successful at war. The eight provinces were divided into 40 districts, each with a minor princeling ruling it. The names of the tribes were based on horse colors (for example, Qara-Bay, the tribe of Bay with grayish horses).

Military Practices

The Pechenegs were famous for their skill and ferocity in warfare and reportedly did not even wear armor or build protective palisades or ditches around their camps. The mention of lack of armor is probably based on rumor and hearsay, inflating the prowess of the fierce Pechenegs to mythic dimensions, and says more about the psychological effect they had on their victims than actual fact. It is more likely that they were armed and fought very much as other steppe races such as the Huns did, with felt or leather lamellar armor, shooting the bow from horseback. A helmet found in Hungary, though apparently of Byzantine manufacture, had decoration thought to be of Pecheneg origin, indicating that Pechenegs readily adopted arms from other peoples. On the other hand a type of cavalry saber made by Byzantines in the 10th century may have derived from a Pecheneg sword.

Art

The Pechenegs decorated their arms and other metalwork with designs used by steppe peoples everywhere, which were strongly influenced by the art of the SCYTHIANS.

Religion

The Pechenegs probably practiced a form of animism and shamanism observed for millennia by peoples all over the steppes. Shamanism among steppe peoples usually involved the shaman’s entering a trance state, often attained by ingesting cannabis, to communicate with the spiritual realm and gain wisdom. Later other religious impulses moved through the steppe lands—from Persian Zoroastrianism

and Hinduism to Buddhism especially the Tantric sect.

By the end of the 14th century most Pechenegs in Hungary had been forcibly converted to Christianity.

The Pechenegs were among those Turkic steppe people who had a major impact on European history.

Pelasgians (Pelasgoi)

The term *Pelasgians* has been used variously in myths of the ancient GREEKS, sometimes associated with specific places, including Thessaly, Arcadia, and Argos (in which case it may refer to an actual group). In Homer’s work of the ninth or eighth century C.E. Danaos, founding ancestor of the Danaans (*Danaoi* in Greek, a name used interchangeably for a specific people and for Greeks in general), displaced the Pelasgians of Argos, taking the land for his own people. In a myth collected by Greek geographer Pausanias of the second century C.E. (perhaps adopted from the possibly mythical Asios of Samos who may have lived in the seventh century B.C.E.), the hero Pelasgos was the founder of the Pelasgians, who lived in Arcadia. Elsewhere Pelasgos figures as the founder of the human race itself, the first man. Pelasgos, who was born directly from the Earth, sprouting up like a plant, was said to have invented the making of huts, wearing of sheepskin clothing, and eating oak acorns. In another story, he also invented bread making while in Argos. Greek historian Herodotus of the fifth century B.C.E. says that the Pelasgians did not know that gods have names.

In both of these accounts the Pelasgians are depicted as primitive, rustic, and uncivilized. Pelasgos’s birth from the Earth, without a father, and his connection in myth with Demeter (his wife Chrysanthis informed Demeter of the place where her daughter Persephone had been taken down into the underworld by Hades) and Argive Hera (he is said to have built temples to Hera) show that he and his people had worshipped goddesses as at least coequal with gods (as had been the case in Minoan-Mycenaean times during the

Bronze Age; see MINOANS and MYCENAEANS) and that their mythology informed the chthonic rituals performed mostly by women well into classical Greek times when the male-dominated Olympian religion held sway. Herodotus also draws on Greek historian Hecataeus of the sixth–fifth centuries B.C.E. in saying that all pre-Doric Peloponnesians, including IONIANS, AEOLIANS, and Arcadians, were Pelasgians. Eventually, *Pelasgians* came to be used as a general term for “foreign tribe.” Thus it seems to have been a catch all term for “others,” either earlier more primitive people, non-Greeks, non-DORIANS, and finally foreigners.

Another similar term is *Leleges*, which possibly originated as an onomatopoeic word to describe those who speak unintelligibly. As in the case of the term *Pelasgians*, Greeks used the name *Leleges* to describe previous, non-Greek speaking inhabitants of Greece, the islands, and Asia Minor. The *Leleges*, too, had an eponymous founding ancestor, *Lelex*, whose son *Myles* (“mill”) was said to have invented the mill to grind grain. Many of the tribes mentioned by Homer and other early writers fall into this category.

In general, however, *Pelasgians* have been conceived of as the aboriginal, pre-Hellenic people of Greece. Since the Hellenic people spoke Indo-European languages, some scholars have assumed that the peoples lumped under the name *Pelasgians* must have been non-Indo-European-speaking. The use of the name *Pelasgians* for pre-Dorian Greeks casts some doubt on this usage. According to a theory of the spread of Indo-European languages that is currently in favor, an Indo-European language came to Greece sometime in the fourth millennium B.C.E. It seems unlikely that Greeks 2,000 years later can have known much about pre-Indo-European Greece. It may well be, however, that non-Indo-European languages continued to be spoken in Greece for a long time, possibly in more remote, backward places (since it was the Greek-speaking Mycenaeans who came into dominance by at least the early second millennium B.C.E. and built the cities). Possibly these peoples were swept away in the dislocations of the Dark Ages, embodied in Greek myth as the “Dorian invasions.”

Pelendones (Palendones)

The Pelendones are classified as a Celtic tribe. They lived in present-day north-central Spain

at least by the first century B.C.E. and are discussed as CELTS or CELTIBERIANS.

Permyaks See KOMI.

Petrocorii (Petrocori; Petrocores)

The Petrocorii are classified as a Celtic tribe. They lived in Gaul around present-day Périgueux in southwestern France and are discussed as CELTS or GAULS. They fought as allies of the ARVERNI under Vercingetorix against the ROMANS under Julius Caesar in 52 B.C.E. Vesunna on the site of Périgueux became a *civitas* capital in Roman Gaul; Périgueux, formerly Petrocorios, takes its name from the tribal name.

Peuceti (Peucetii)

On the basis of their Messapic language it is assumed that the Peuceti were originally an Illyrian people, who migrated to present-day southeastern Italy from the western Balkan Peninsula. They lived around present-day Bari on the Adriatic coast, north of the MESSAPI and south of the APULI, with whom they are sometimes grouped as IAPYGES, a term used for all the ILLYRIANS on the southern Italian peninsula. Lupatia (modern Altamura) was an important settlement. Between the late fifth and early fourth centuries B.C.E. the inhabitants built high walls around it possibly to defend against the LUCANI, or the GREEKS who colonized Tarentum (modern Taranto) in the eighth century B.C.E. The Peuceti eventually became tributary to the ROMANS.

Peucini See BASTARNAE.

Phoenicians (Phoenice; Poinicians; Sidonians)

The ancient people known as the Phoenicians lived in Asia along the east coast of the Mediterranean Sea, starting around the third millennium B.C.E. at the latest. About 200 miles long and five to 15 miles wide, Phoenicia extended eastward along the coast roughly to the Lebanon Mountains in present-day Lebanon, northward to the Eleutherus River (now known as the Kebir), and southward to Mount Carmel. The ancient GREEKS first referred to them as Phoenicians, from the word for “purple,” because of a dye they traded. The Phoenicians became influential as

traders throughout the Mediterranean Sea region and established a number of colonies in Africa and Europe. One of the city-states they founded in North Africa, Carthage, rose to ascendancy in the western Mediterranean (see **CARTHAGINIANS**).

ORIGINS

The original homeland of the Phoenicians is not known. In the Bible they are referred to as Sidonians, related to the Canaanites, a Semitic people. Some have theorized that their ancient ancestors migrated to the eastern Mediterranean from India; this hypothesis is highly speculative.

LANGUAGE

Phoenician is a Semitic language, classified as part of the Canaanite subgroup, related to Hebrew. The earliest known Phoenician inscription dates from the first century B.C.E. The Phoenicians are known as the first people to develop an exclusively alphabetic system of writing, that is, a standardized system of symbols representing sounds, instead of the hieroglyphics and cuneiform of the other cultures in the region. Their alphabet has 22 characters and does not indicate vowels; the Greeks eventually adopted and altered the Phoenician alphabet. Spoken Phoenician eventually was superseded in Phoenicia by Aramaic, another Semitic language. The Carthaginians spoke a dialect known as Pun, or Punic, which was influenced by the Hamitic language of the Berbers.

HISTORY

The Phoenicians lived in allied city-states. Byblos, a site near present-day Beirut, Lebanon, became an important Phoenician center by about 2800 B.C.E. The Phoenicians early in their history were under the influence of Mesopotamian peoples, the Sumerians and the Akkadians. The Egyptians, out of North Africa, occupied their territory from about 1800 to 1400 B.C.E. The conflict between the Egyptians and Hittites of present-day Syria, which started in about 1400 B.C.E., led to eventual Phoenician independence and the rise of many city-states. The port cities of Sidon (Sayda) and Tyre (Sour; Sur), 22 miles to the south, alternated as the primary seat of Phoenician political power. By the mid-13th century B.C.E. the Phoenicians had become known in the region as accomplished shipbuilders and mariners and as reliable traders.

For periods of its history Phoenicia was under assault from Asian peoples from the east, in particular the Assyrians in the eighth to seventh centuries, the Chaldeans in the sixth century, and the Persians in the sixth to fourth centuries B.C.E. Although some city-states fell to invaders, the Phoenicians continued to operate as merchants, navigators, and artisans, sometimes as servants or employees of other peoples. The Greeks took over much of the region's trade; with the Greeks evolving into a naval power Phoenician traders lost their monopoly. Phoenician culture of the eastern Mediterranean was absorbed into Hellenistic culture. In 332 B.C.E. Tyre fell to the **MACEDONIANS** under Alexander the Great during his push into Asia, after which the Hellenized Egyptians controlled the region. In 200 B.C.E. Phoenicia was part of the Hellenistic Seleucid kingdom, centered in present-day Syria. In 64 B.C.E. Phoenicia became part of the Roman province of Syria, and the name Phoenician was no longer used.

Phoenician Travelers and Settlers

Wide-ranging seafarers, the Phoenicians explored the entire Mediterranean, from the Dardanelles to the Iberian Peninsula. Some Phoenician outposts were in Europe, thus leading to the classification of Phoenicians as a European in addition to an Asian and African people. The Phoenicians traded as far west as the Iberian Peninsula, a source of tin and silver. Tradition dates the founding of the earliest trading post in the Iberian Peninsula in present-day Spain—Gadir (later Gades; modern Cádiz) beyond the Strait of Gibraltar in present-day southern Spain—to 1110 B.C.E. although a date after 800 B.C.E. has been confirmed archeologically.

Many outposts, originally anchorages on this trade route, evolved into thriving trading centers. Pressures on Phoenicia by invading

peoples led to growing migration westward, and the trading centers evolved into colonies and eventually independent city-states. In addition to present-day Spain the Phoenicians were active on various islands in the Mediterranean—Cyprus, Crete, Malta, Sicily, Sardinia, Corsica, the Balearic Islands—as well as on the European mainland, at Genoa in present-day Italy and Marseille in present-day France.

Utica and Carthage in present-day Tunisia in North Africa evolved into powerful city-states. Tradition maintains that Utica was founded in the 12th century B.C.E., even before Gadir, but again there is no concrete evidence. Carthage may have been founded as early as the late ninth century, but more likely in the mid-eighth century B.C.E. In any case by the sixth century B.C.E. the Carthaginians had become a powerful presence in the western Mediterranean, reestablishing many of the Phoenician colonies and competing with the Greeks and Romans for centuries until defeat by Rome in the second century B.C.E.

Phoenicians also navigated southward into the Red Sea and, according to the fifth-century B.C.E. Greek historian Herodotus, in about 600 Phoenicians, commissioned by the Egyptian pharaoh Necho II, sailed along the Red Sea and all the way around Africa, returning to the Mediterranean by the Pillars of Hercules at the Strait of Gibraltar. Such a voyage cannot be confirmed. The Carthaginians in the mid-fifth century B.C.E. reportedly explored the Atlantic coast of Europe.

CULTURE

Economy

The Phoenician economy was organized around commerce. The Phoenicians traded natural resources, such as wood from cedar and pine trees; foodstuffs, such as dried fish, salt, and wine; as well as manufactured goods, such as textiles and dyes (including the Tyrian purple, made from the snail *Murex*), pottery, colored glass, metalwork, ebony and ivory carvings, and jewelry. They also acted as middlemen for other people's products, such as perfume, spices, and incenses carried in Arab caravans to their homeland, some of which they shipped westward by sea. They also traded for other raw materials such as silk, ebony, ivory, amber, papyrus, oak timber, silk, cotton, wool, animal skins, gold, silver, copper, tin, gemstones, horses, wheat, corn, honey, oil, and ostrich eggs. And the Phoenicians participated in the slave trade. In addition to

their alphabet, which facilitated record keeping, the Phoenicians devised a standardized system of weights and measures.

Government and Society

Despite trade relations Phoenician city-states maintained independence from one another. Kings ruled the various city-states, along with councils of elders and *suffetes* (judges or magistrates). In some instances a republic was formed, and the *suffetes* replaced the monarchy altogether. The wealthy merchant families also had great political influence. And priests played political roles; temples were centers of political and civic activities.

Dwellings and Architecture

The early Phoenicians shaped dwellings, temples, and tombs out of the calcareous limestone caves and fissures found in their homeland. Yet with time they built dwellings typical of other Mediterranean cultures, using stone building blocks, masonry, and timber. Some dwellings were a combination of both styles: building materials added to natural formations.

Transportation

The Phoenicians developed what was considered a superior version of the galley ship, vessels powered primarily by oar with a number of rowers. They constructed it from cedar planks and used caulk to seal the seams. A keeled hull enabled them to sail on open seas. By the eighth century B.C.E. they built their ships with more than one tier of rowers: Those with two were known as biremes; with three, triremes; and so on. The Carthaginians reportedly built quadiremes and quinqueremes, four-tiered and five-tiered galleys. Merchant ships were broader and rounder than war galleys and typically had a single mast and a square sail in addition to oars.

The Phoenicians are credited as the first people to navigate by means of Polaris, the North Star, located along the axis of the North Pole and relatively fixed in position throughout the year. Using the North Star would enable them to travel at night and away from coastlines.

Religion

Each Phoenician city-state had its special deity, referred to in many cases as Baal for a god and Baalat for a goddess, although they were often known by their local names, such as Baal-peor, Baal-hazor, and Baal-hermon. Baal was consid-

ered the father of the gods and bore such titles as “Lord of the Earth” and “Rider of the Clouds.” The most prevalent goddess in Phoenicia was Astarte, Queen of the Heavens and Lady of the Sea. Gods from other cultures also were worshipped by Phoenicians. They practiced holy prostitution and child sacrifice.

The Phoenicians accepted Christianity. A woman from Sidon, a Phoenician town, is mentioned in the Bible as a convert who witnessed a miracle performed by Jesus.

As the foremost navigators of their day and the most active traders the Phoenicians have special significance in the ancient history of Europe as disseminators of knowledge and material culture throughout the Mediterranean world and beyond into Atlantic coastal regions. They absorbed elements of cultures of those who had invaded their homeland and those with whom they traded, yet maintained a distinct identity as a cosmopolitan people who made much of the ancient world—parts of Asia, Africa, and Europe—a smaller place.

Picenes (Piceni; Picenians; Picenti; Picentini)

The Picenes occupied, at their greatest extent, the present-day region of Marche in east-central Italy, an area between the Apeninnes and the Adriatic coast. The Picene culture and language were heavily influenced by Latin and Roman culture before they were absorbed into the Roman Republic in the third century B.C.E. The Picenes are said to have taken their name from the word for “woodpecker,” *picus*, which was their sacred animal and guide for their migration.

ORIGINS

Archaeological excavations suggest the Picenes emerged as a distinct culture around 900 B.C.E.; from then until 700 B.C.E. their material remains diverge substantially from those of the neighboring VILLANOVANS. The diversity of the cultures within the region that was defined as Picenum by the ROMANS has led some scholars to differentiate a northern and a southern population of Picenes, which seem to have had a linguistic divide. The northern group were possibly a non-Indo-European population, subject to influences from the ETRUSCANS, ILLYRIANS, and LIGURIANS (some scholars even consider them Illyrian migrants from across the Adriatic); the southern have been identified as descendants of the ITALICS and are known by the tribal names ADRIANI, PRAETUTII, and PALMIENSI. Archaeological evidence does little to solve this question. The historians Strabo and Pliny of the first centuries B.C.E. and C.E. viewed all the peoples of this region as one.

LANGUAGE

The language of the Picenes is unknown. By 100 B.C.E. it had been entirely obliterated by Roman influence, and even before that time there are records of Latin comedies being played in Asculum (modern Ascoli Picento) to Romans and Picenes together. During the Social War of 90–88 B.C.E. records of items plundered by Romans in Asculum include Greek and Latin books. Fragmentary inscriptions do little to help, suggesting similarities with the language of Illyrians, and variously with that of the UMBRIANS, who spoke an Italic language.

HISTORY

From their emergence around 900 B.C.E. until their first encounters with Rome in the third century B.C.E. the Picenes left no clear historical records. It is known that they traded with the GREEKS around 700 B.C.E. They seem to have settled along the coast and in river valleys, slowly spreading through the central region until conflict with their southern neighbors and chief rivals, the Praetutii, probably in the fourth century B.C.E. In addition to Asculum, Firnum Picenum (modern Ferno) was a principal town.

During the Third Samnite War between the Romans who were attempting to expand their territory and the SAMNITES and their allies, which began in 298 B.C.E., the Picenes allied themselves with the Romans, while the Praetutii supported the Samnites. In 295 B.C.E. the Samnites and their allies were defeated in a crucial battle at Sentinum and finally crushed in 290 B.C.E. Many of the Picenes resisted the Roman presence until pacified in 268 B.C.E. The Romans forced the relocation of some to the west coast, between Salerno and the Sele River, which later bore the name Ager Picenum. In 232 B.C.E. in an effort to solidify control of the region Rome parceled out the territory of the Picenes to Latin-speaking settlers. The Romanization of the area began in earnest in 207 B.C.E. during the Second Punic War with the CARTHAGINIANS.

Throughout the second century B.C.E. the Romans demanded troops and supplies from their allies, such as the Picenes, who had all been granted the status of *civitas sine suffragio*, that is, citizenship without the right to vote. These demands put a great strain on the *socii*, or allies, and in 90 B.C.E. the Picenes revolted in Asculum along with the LUCANI and many of the other Roman allies and started what is known as the Social War. The Picenes were given the right to vote in 89 B.C.E., and two years later after the war had finally ended the Romans granted full citizenship to all Italians living south of the Po River.

CULTURE

Economy

The inland Picenes bred and herded sheep, while others became seafarers. The seafaring Picenes were both traders and pirates. The Picenes flourished through the amber trade with people of the Balkan Peninsula.

Transportation

A depiction of Picene boats has been found on a sixth-century B.C.E. funeral stele (stone slab).

The ships were long and low, having a single mast with a square sail and a serpentlike bowsprit with a ram at water level.

Other Technologies

The artifacts made by the Picenes were limited primarily to stone and bronze, with ivory and amber for decoration. Their technology remained that of a Bronze Age people through the Iron Age up to the time of their encounters with the Romans. Among the peoples of east-central Italy they were known for their metalwork.

Art

Picene culture manifests continuity with early Villanovan culture, with influxes of art and artifacts from the Etruscans, Illyrians, Umbrians, and other people of the surrounding region from around 900 B.C.E. The Picenes show influences from the Greeks and eastern Mediterranean as well. The diversity of the Picenes is in part due to the independence of their small settlements, based on family or tribal alliances, and their key location in the profitable amber trade between the Balkans and Mediterranean.

Religion

Little is known of the Picenes' religious practices. Their highest deity, called Cupra, was a goddess of fertility.

The Picene culture is notable in its diversity with influences from numerous other peoples of the region.

Pictones (Pictons; Pictavi)

The Pictones are classified as a Celtic tribe. They lived in Gaul around present-day Poitiers in western France and are discussed as CELTS or GAULS. They fought as allies of the ARVERNI under Vercingetorix against the ROMANS under Julius Caesar in 52 B.C.E. Limonum on the site of Poitiers became a *civitas* capital in Roman Gaul; Poitiers takes its name from the tribal name.

Picts (Cruithne; Cruithin; Pechti; Caledonii; Caledonians)

The Picts were a tribal people living in northern Scotland during the time the ROMANS held Britain. The Romans' formal name for them

was CALEDONIANS; the name Pict probably was a vernacular name given them by Roman soldiers. They competed with Celtic SCOTS and BRITONS, as well as ANGLO-SAXONS, for territory in southern Scotland. After the ninth century C.E. the Picts united with the Scots in a kingdom called Alba. The kingdom was called Scotia, because the Scots and their language were dominant, while the distinct identity of the Picts, as well as their language, disappeared within a few generations. In the ensuing centuries the kingdom of Scotia expanded to include most of present-day Scotland.

ORIGINS

Pict origins are shrouded in uncertainty. Even the degree to which they were different from other prehistoric inhabitants of Scotland is unknown. Although they emerged as a distinctive culture in historical times, they are thought to be at least in part descendants of the inhabitants of Scotland who migrated from Europe around 8000 B.C.E. during the Mesolithic period. These were the hunter-gatherers who lived in temporary camps, hunted animals such as deer and fish, and lived off the plentiful supplies of fruits and berries found in the forests. Around 4000 B.C.E. they settled down and started to farm the land, clearing the forests to plant crops and tend animals such as cattle and sheep. Their settlements were located where many Scots live today, in fertile river valleys where they built farmsteads or small village communities. The Neolithic village of Skara Brae on the Orkney Islands, an archipelago off the northeast coast of Scotland, shows that they built communal stone dwellings in areas where wood was not available. Stone was also used in building stone circles and mortuary monuments.

Bronze began to be made in Scotland around 2000 B.C.E. Scotland was part of the Bronze Age trading network involving Ireland and Britain, in which gold from Ireland and tin from Cornwall were traded to the mainland of Europe. The wealth and the new ideas from Europe fostered the emergence in Scotland of the Beaker culture. Incoming groups from Britain and Ireland may have been part of this culture, which was probably also adopted by natives.

The climate was warmer than it is today, so that even high upland pastures were farmed for crops; agriculture flourished and the population expanded. But in the Late Bronze Age the climate rapidly cooled and became wetter. Much formerly arable land became peat bogs, increasing the competition for resources. It is

thought that this is part of the reason people began to live on hilltop locations or on artificial islands called crannogs, to reserve scarce arable land for farming, although such locations may have served defensive purposes as well.

Ironworking began to be important in Scotland in the eighth century B.C.E. Because iron was more abundant than bronze, its use improved farming and accumulation of wealth, as well as a greater proliferation of weapons. Warfare became more common, and a class of warriors and chieftains, whose doings and strivings would provide the material for history, emerged. Scotland was greatly influenced by the pan-European Celtic culture and its La Tène art style. By the first century C.E. the land was organized into a patchwork of tribal groups with warriors engaged in probably small-scale raiding, which had relatively little impact on the life of the predominant group, numerically speaking: the farmers.

The first mention of the Picts in historical sources is by the Roman writer Eumenius in 297 C.E.; he writes that they were northern invaders of Roman Britain. The name Picti is

thought to mean “painted ones,” possibly a vernacular name given them by Roman troops. Alternately it may have been a Latinized version of their own collective name. Another theory considers them to have been Celtic; their socioeconomic organization was similar to that of the CELTS in being based on farming but having an important warrior element, and they built brochs, round stone towers, as the Celtic Scottish peoples did. Yet they created a distinct art form, the inscribed standing stone, many examples of which have been found throughout their territory. These stones have carved drawings of hunting scenes, battles, and strange animals, along with motifs different from those of the Celtic La Tène style. A distinctive style of fort with timber-laced ramparts has been associated with Picts, although this may reflect differences in the availability of building materials in Pictish and Celtic regions.

Irish tradition indicates that the Picts were related to the Cruithin, the ancient IRISH who, according to the writings known as the Irish Annals, undertook the first of the four main invasions of Ireland perhaps during the first part of the first millennium B.C.E. The inhabitants of Ulster considered themselves the descendants of the Cruithin and thus related to the Picts (a relationship that has been used to the present time to emphasize the distinctness of the Northern Irish from the rest of Ireland). Cruithin may be the Irish Gaelic form (q-Celtic) of the Latin Priteni, the general name applied by the Romans to the people of the British Isles, thought to derive from a fourth-century B.C.E. account by a Greek traveler, Pytheas. Some sources derive the term Pict, rather implausibly, from Priteni. A document called the *Pictish Chronicle*, known from a 14th-century C.E. manuscript but apparently compiled in the reign of Kenneth II of Scotland (971–995), names as the progenitor of the Picts Cruithne, who founded the nation with his seven sons, alluding perhaps to the seven clans or nations that the Pictish kingdom once comprised. The names of Cruithne’s seven sons were also equated to the seven provinces of Pictland detailed in an ancient account of Scotland called *De situ Albanie*, possibly written in the 14th century C.E. (The number 7 seems to have had some symbolic significance for the Picts.) According to the Anglo-Saxon English historian the Venerable Bede of the seventh–eighth century C.E. the Picts traced descent through the mother rather than the father, a practice that seems to support the idea that the Picts were non-Indo-European. The Bede calls them SCYTHIANS, by which he may have meant Scandinavians.

Recent study of the ogham inscriptions found in Pictland has finally been able to decipher them, sending the search for Pictish origins in an entirely new direction, for they are written in Old Norse. Nineteen of the inscriptions carved on standing stones, about half of those known in the whole of Scotland, have been deciphered; they are memorials recording the names of the carver and of the person in whose honor the stone was erected, a common form of inscription in contemporary Scandinavia. Such stones in Scandinavia would have been written in runes. This need not rule out a strong Celtic influence on the Picts, which probably dated from the Bronze Age as in other Celtic lands. It may only show that the Picts were absorbing influences from the different groups invading and settling in Scotland

during the latter first millennium C.E. It is possible that there was commerce of some kind between Norway and northeastern Scotland from very early times, and even that small numbers of Norse speakers settled in Scotland, elements of their culture contributing to that of the natives and giving it a distinctness relative to the predominantly Celtic culture of the rest of Scotland.

The shadowy history of the Picts made them the subject of folklore after they had long been gone. In many folktales they were said to be little dark people, for reasons that are unclear. In a work called the *Historia Norvegiae* an Icelander of the 12th century C.E. described them as pygmies who came out only in the mornings and the evenings but lost their strength at mid-day and hid in holes in the ground. The remains of Atlantic wheelhouses typical of the Scots, as well as their own double-celled dwellings, which are half submerged underground, may have given rise to this idea. The Picts became identified with the Faerie Folk.

LANGUAGE

The language of the Picts is not known. It is possible that they spoke a non-Indo-European language; a number of historical accounts state that their language was different from that of other Celtic-speaking peoples of Scotland. This difference could have been simply dialectical, yet the fact that they among the many tribes in Scotland are singled out as different from the rest is suggestive of different linguistic origins.

The Picts had no writing and never adopted Latin. During the latter part of their history they began to use the Irish ogham script in inscriptions, but attempts to decipher these inscriptions by using either the Gaelic or the Brythonic branch of Celtic have been unsuccessful. On the other hand study of place-names in Pictish areas shows them to have been related to Celtic words, as were the kings' names in the *Pictish Chronicle*. Many scholars used to believe that the language of the Picts was a dialect based on a combination of the Brythonic and Gaelic languages, suggesting that the people known in historical times had an indigenous culture that had been or was in the process of being modified by that of the incoming Gaelic speakers out of Ireland. This process in any event culminated in their complete absorption after they were united with the Scots in the ninth century C.E. The discovery that the ogham inscriptions were written in Old Norse does not mean that this was the lan-

guage of the Picts, only that Old Norse speakers erected and inscribed the stones. Picts may have been absorbing Gaelic and Scandinavian influences at the same time.

HISTORY

The Roman writer Eumenius describes the Picts as formidable warriors. The groups mentioned by Eumenius—Britons, Picts, and Hibernians—imply that “Pict” referred to the inhabitants (or at least warriors) of neither Roman Britain nor Hibernia, but the rest of Britain, that is, Scotland, which the Romans called Caledonia after a tribal group called the CALEDONES. They may simply have been Caledonians by another name, for the Caledonians against whom the Roman governor Gnaeus Julius Agricola waged his campaign between 79 and 84 C.E. lived in the northeast of Scotland, later known to have been the heart of Pictland. Agricola is said to have slaughtered 10,000 Caledonians in this campaign.

The emperor Lucius Septimius Severus and his son, Caracalla, may have subjected the Picts to even worse in 208 and again in 211; archaeological remains of Roman forts and roads in northeast Scotland strongly suggest that they waged a scorched-earth campaign, marching through the principal agricultural regions of the northern tribes and deliberately destroying their food supplies. Recent scholarship suggests that a list of forts compiled during the Severus campaign may actually be the earliest known written reference to the Picts, although that name was not used. Some 80 years later Roman soldiers defending Hadrian's Wall—a fortified wall built in 122, reaching from Solway Firth, on the Irish Sea, to the mouth of the Tyne River—were referring to the tribes *to the north* of the wall by a nickname, Picts, that was common enough to reach Rome itself and the ears of Eumenius.

It is known that by the next century after the Severus campaign raiders from Ireland, called by the Romans Scoti from an Irish Gaelic word meaning “raiders,” were settling in western Scotland and engaged in conflict with the Picts over this territory. Very probably they had begun this raiding long before. One of the Scots' main strongholds, Dunadd, was important to the Picts as well.

In 367 the Picts overran southern Caledonia, forcing the Romans to retreat behind Hadrian's Wall, until they were quelled in 368–69 by Theodosius, a Roman general under Valentinian I. Nevertheless, until the

Romans finally withdrew from Britain entirely in 410 the Picts continued to conduct raids into Roman Britain south of Hadrian's Wall.

Militarization of the Picts

Some scholars have questioned whether Agricola's campaign in the north was necessary and whether the tribes there had really been troublesome enough to warrant attack. The evidence of their belligerence is mostly from the writing of Tacitus of the first–second century C.E., Agricola's son-in-law, not an unbiased reporter. Romans generals frequently used campaigns for political advancement; the achievement of a triumph in Rome was a priceless political asset, as Julius Caesar had shown. Thus it was in Agricola's interest that the Caledonians appear dangerous enough to warrant their subjugation.

A hundred years after Agricola's campaign the northern tribes were causing so much trouble that Hadrian's Wall had to be built. It may well be that whatever their behavior before the Roman incursion into their territory the campaign generated only resistance in the north, as the massacre of Caledonians incited their fellow tribes to revenge. Unquestionably the Picts became increasingly militarized and aggressive throughout and after the Roman period.

After the Romans

Little is known with certainty about the Picts after the Roman era, and their history merges into legend. They appear to have continued to struggle with the Scots from Ireland over territorial dominance, and with Britons and Anglo-Saxons. By the eighth century they seem to have reached their height of power, apparently controlling most of northern and eastern Scotland. Soon afterward probably because of the VIKINGS, who began raiding in the 790s, the Picts began to decline. The Scots were increasingly successful against them until 843, when the Scots king Kenneth I MacAlpin united the Scots and Picts into the kingdom of Alba, which later became known as Scotland.

Sources on the Picts

What is commonly called Pictish history after the Romans is derived from early medieval sources, historians such as the sixth-century British monk and historian Gildas, the seventh–eighth-century Anglo-Saxon Bede, the eighth-century Welsh writer Nennius, and early medieval copies or transcriptions of much older Scottish, Irish, and Welsh annals. The *Pictish Chronicle*, as do other histories

written under the aegis of medieval Scottish kings, has to be viewed with caution in that it probably contains material aimed at glorifying and legitimizing the lineage of the current king. For example the information that the DÁL RIATA (or Dalriada) from Ireland were the first progenitors of the kings of the united Scotland of the Middle Ages, descendants of Kenneth MacAlpin, has been seen by some scholars as mostly propaganda.

Another early source on the Picts are the *Annals of Ulster*, compiled in Ireland in the 15th century from information apparently recorded year by year from 431 to 1540. Although mostly dealing with events in Ulster in northern Ireland, the *Annals of Ulster* also mention events in Scotland concerning the Scots and other groups with whom they were competing for dominance, among them the Anglo-Saxons from the kingdom of Northumbria in Britain, the Britons of Strathclyde in Scotland, and the Vikings. The native inhabitants of Scotland to the east and north of the Scots' Dál Riata kingdom, whose battles with the Scots and whose kings are also mentioned in the *Annals of Ulster*, are usually assumed to be the same people as the Picts or Caledonians mentioned in Roman sources. It should be borne in mind that in the Ulster material we are seeing them through an early medieval Irish filter as before we were seeing them through a Roman one. Moreover the Ulster annals and others covering roughly the same period, although apparently fairly accurate in many respects, also contain fantastic tales, such as that of a 195-foot-long woman white as swan's down who was washed up on the shore of Scotland in the year 891, a story that was repeated in several different annals. Caution, then, has to be the watchword in using such material.

The great limitation of the early annals is that they amount to little more than a catalogue of battles and birth and death dates of kings, none of which is placed in any sort of larger context. They reinforce the impression that history consisted of continual warfare and little else.

Picts in the Dark Ages: Their Rise and Fall

In the sixth century Gildas wrote that the Picts had settled in the remotest parts of the Orkney Islands off the northeast coast of Scotland. From there, he said, they raided in southern Scotland as far south as Hadrian's Wall, as unlikely as such a remote location as Orkney was as a staging area for raids so far inland. Nennius also mentions this, saying that Picts occupied the islands known as the Orchades,

whence they attacked northern regions. Irish annals also mention that the Picts used the islands as a base for southern raids.

The seventh century saw pressure in Scotland applied by the Anglo-Saxons. By 640 they had destroyed the kingdom of Gododdin and had absorbed most of the low-lying land south of the river Forth. In 685 a huge army of these Anglo-Saxons from Northumbria under King Ecgfrith marched north of Perth into Angus. Near Forfar they were met by a Pictish army and crushed, ending their incursions for the time being. This Pictish victory seriously weakened the Northumbrian hold on their lands in southern Scotland. The story of the battle seems to be depicted on the great stone carving at Aberlemno Church.

Meanwhile in 682 as recorded in the Irish *Annals of Tigernach*, a settlement on the Orkneys was “destroyed” by the Pictish power High King Bridei mac Bile. This account seems to contradict the other sources, which said that the Orkneys were part of the Pictish kingdom. It may be that Viking raiders had already established strongholds on the Orkneys and that it was they whom the Pictish king destroyed.

In the *Annals of Ulster* Angus figures as the greatest king at the height of Pictish power in the eighth century. He inflicted defeats on the Scots in their own territory, including a seizure of Dunadd, their principal stronghold, during which he reportedly laid waste the territory of the Dál Riata. He also made several ultimately unsuccessful attempts to conquer the British kingdom of Strathclyde with Northumbrians as allies. Thus by the middle of the eighth century eastern and northern Scotland had apparently been consolidated into the largest kingdom in Scotland, yet 100 years later this independent kingdom had vanished. The reason for Kenneth MacAlpin’s final conquest of the Picts is unknown. The story in the annals is that the Scots invited the Picts to a feast, giving them all chairs with loosened legs. At a signal the Scots pulled out the loose legs, causing the Picts to fall to the floor, where the Scots slaughtered them en masse. Many historians believe that the Picts were gravely weakened by the Viking raids on the north coast of Scotland that began in the 790s. The Vikings took over large parts of the Pictish kingdom, including the Orkneys, Shetland, and Sutherland, and destroyed many Pictish strongholds. There are indications that plague and famine were involved in the Picts’ decline.

On the other hand the tradition that Kenneth had a Pictish mother, giving him legit-

imacy to rule the matrilinear Picts, whether true or not, may point to the underlying reason for the disappearance of the Picts: that the many centuries of contact with the Scots had not all been hostile and that intermarriage and cultural exchange had occurred between the peoples all along, culminating in the apparent absorption of the Picts’ distinct culture into that of the Scots.

The Picts’ language is conventionally said to have disappeared in favor of the Scots’ Gaelic tongue. Yet the great uncertainty over what language the Picts spoke and how distinct it was from the Celtic Brythonic and Gaelic languages makes any such assertion problematic. The fact that Old Norse through the agency of the Vikings soon began to impinge on Scots Gaelic as well must make it extremely difficult to distinguish any earlier influence on Scots Gaelic that the Pictish language may have had. In other words the assumption that the Scots culture completely subsumed that of the Picts may fall under the heading of history “as told by the victors.” In reality both cultures may have played an important role in subsequent Scottish culture.

CULTURE

Government and Society

The Picts seem to have had a social organization similar to that of the Celts, of kings, warriors, and farmers. Pictish standing stone carvings associated with crosses commonly include images of mounted warriors. One example at Aberlemno seems to depict an important battle that took place nearby. This juxtaposition of mounted, elite warriors with the cross may indicate a wedding of spiritual and temporal authority, but also a more pagan attitude of spiritual forces marshaled to the aid of warriors and of the tribe. The victory near Aberlemno was against invading Anglo-Saxons, who were thereby driven out of Pictland. A theory about the standing stones holds that they served as territorial markers, their “broken arrow” motifs signaling the agreement of both sides on the boundary location.

One difference between Picts and other ancient peoples of Scotland is the question of descent. Evidence for matrilineal descent among the Picts is taken from the works of Bede. According to him the Picts landed first in the north of Ireland. The Irish sent them on to Scotland and, because they had no women with them, gave them Irish wives with the admonishment that the lineage must be traced

through the women. In support of this assertion is the fact that the king lists in the *Pictish Chronicle* seldom show kings' sons' inheriting their kingdoms. On the other hand kingship may not have been inherited at all, and kings may have been chosen from among a group of eligible leaders. This system, called tanistry, alleviated the problem that could arise when a king died, leaving an underage successor.

Brochs The Picts made brochs similar to those in southern Scotland; both were a local development of the Celtic hill-fort and Irish ring-fort ideas. The earliest brochs in Pictish areas date to the eighth century C.E. Many were constructed of timbers to lace (hold) stone, earth, and rubble filling together. Timber lacing, also a feature of pre-Roman Celtic forts in Gaul, has been identified at such forts as Craig Phadraig, Burghhead, and Portknockie on the Moray Firth, and at Dundurn in Strathearn.

Vitrified Forts A distinctive type of construction often associated with the Picts is the vitrified fort, which has in its ramparts many stones that have been partly melted under high heat, causing them to have a glassy appearance, hence the term *vitrified*. The semimagical appearance of these rocks became part of the body of legendary lore surrounding the Picts, leading to tales about glass castles. There is as yet no satisfactory theory to account for the way the stones were melted. Burning by assailants' stacking wood against the ramparts and setting it alight has been shown to provide insufficient heat. The stones would have to be fired in an enclosed environment similar to a kiln to reach temperatures high enough to melt them, suggesting it was done deliberately by the forts' builders. The purpose for this is also obscure, since the melted stones are weaker and less useful for defense than unmelted stones. There may have been rather a magical or psychological reason for vitrifying the stones, because stones thus treated would have had a striking shiny appearance that could have convinced the enemy that the forts' defenders were in league with the gods. Vitrified forts are also found in France. Other than the use of melted stones, their construction is similar to that of brochs, which were also made by the Picts.

Houses of Common People Villages in Pictish territories contained houses that were typically constructed as pairs of adjoining circular, stone-built cells with floors sunk underground. Because separate conical roofs over each cell

would create a water trap between them, it is thought that they may have been covered with a single long roof with a symmetrically placed central ridge, so that from outside they would have appeared to be a longhouse such as the VIKINGS built. They thus seem to be a combination of the Celtic roundhouse and the Scandinavian longhouse. The roofing material is unknown but could have been turf, heather, or thatch. The drystone walls of the cells, like those of brochs, were double, but in contrast to brochs were filled with sand, clay, and midden material. And unlike Celtic houses, which had doors facing east, Pictish doors faced south. They had beaten peat floors and rectangular stone hearths with one side open and facing south toward the doors.

Clothing

No artifacts of Pictish clothing have been found so far. The standing stones show mounted warriors wearing long cloaks covering them completely and what are apparently close-fitting helmets flaring out at the back.

Personal Habits

Some scholars question whether the name given the Picts of "painted ones" actually means that they painted or tattooed themselves, pointing out that no material archaeological evidence exists of this practice. It is hard to know what such evidence might be. Bodies with intact skin are extremely rare, and the Picts' figural art also does not show body painting. However, two famous mummified bodies found in recent years, the Copper Age "Ice Man" found in a glacier in the Alps and Lindow Man II found in a marsh in Cheshire in England, both had body markings. The Ice Man had tattoos and Lindow II's skin was dyed, indicating a widespread practice in Europe. Julius Caesar said that the Britons painted their body with a blue substance called woad, which made their appearance in battle more frightening. That Roman soldiers probably coined the term Picts lends credibility to the idea, because no one studies the appearance of people with more intentness than a soldier in battle, for whom an understanding of the enemy is a life-or-death matter. Wearing war paint is a form of psychological warfare at which Celtic peoples excelled.

Art

Pictish art is known from standing stones and metalwork, although recognizable Pictish motifs on metal objects are not known until

well after the Roman period, suggesting that what is considered Pictish is truly a melding of Celtic and Nordic cultures. Artisans in Scotland before the Pictish era worked in a local adaptation of the Celtic La Tène style.

Standing Stones The Pictish standing stones, which after the Picts' conversion to Christianity usually had a cross depicted on one side, contributed to the development of what is called the Celtic or Irish high or ringed cross, a monumental three-dimensional freestanding stone cross with a ring centered on the intersection of the arms. The high cross—a combination of the Pictish standing stone and the Christian cross—was created at Kells when the monastery of Columcille on the island of Iona was transferred to Ireland after the Viking raids began. The Ionan monks introduced the Pictish idea of an inscribed standing stone. Some motifs and conventions of the Pictish stones were used for the Irish crosses, including the dense interwoven lines resembling basket weave called Celtic knotwork.

The discovery that the Irish ogham inscriptions on some standing stones are in Old Norse underscores the likelihood that the idea for these monuments was introduced to the Picts from Norway. In style they seem midway between the Celtic and the Nordic.

Religion

The lives of Bronze Age people living in what would become Pictland were marked by great rituals celebrating the land and the round of the seasons, using the many megalithic monuments they built near their settlements, such as the passage grave Maes Howe, a large mound over a central drystone corbelled chamber reached by a long, narrow passage through which the Sun shone only at sunset on the winter solstice. Other monuments are great stone circles such as Callanish on Lewis in the Outer Hebrides and the Ring of Brodgar on Orkney. In the Iron Age the marked influence on the Picts of Celtic culture makes it likely that in broad outline their religion shared certain features of Celtic religion. These probably included a pantheon of deities and a supernatural otherworld; a veneration of nature and the land, closely intertwined with the practice of farming and the agricultural year; and a vivid mythology of stories about heroes and gods.

Worship at Watery Sites In common with that of Celtic peoples the pagan religion of the Picts ascribed importance to water; wells, springs, and rivers were sites of offerings and worship.

A gigantic well at Burghead in Moray may have been a holy place. Written sources suggest that the Picts drowned their prisoners, perhaps to appease water spirits. As among Celtic peoples elsewhere archaeological evidence suggestive of human sacrifice either by drowning or beheading has been found.

Burials Burials have been found in Pictish areas dating from the seventh century B.C.E. to the third century C.E. Bodies in flexed or crouched positions were placed in oval-shaped, stone-lined graves. With the entry of Christianity after the sixth century there was a shift to graves in long cists, generally oriented east-west with the head to the west, where the inhumed body, without grave goods, is extended in a narrow full-length grave, lined, roofed, and often floored with flat stone slabs. Such graves numbering in the hundreds have been found in cemeteries.

Pictish Stone Carvings In the latter part of their era the Picts made elaborate carvings on upright stone slabs that are thought to have had religious significance. It is unclear whether they had begun this practice before or after they converted to Christianity, because dating of the carvings is problematic. The earliest may date to the fifth century; that date would place them in the pagan era, but most were made during the centuries after the Picts converted.

Many of these stones face to the southeast and are located near water. Some are near places such as river confluences, where evidence of ritual activity that has been found dates back to the Bronze Age. The iconography on the stones is very varied. Only three of the motifs have a widespread distribution or occur more than 20 times. These are the so-called crescent, the double disk (two joined disks), and the Pictish beast (a horselike creature whose elongated nose has earned it the name "swimming elephant"). Animals, including bulls, cows, horses, boars, stags, wolves, bears, lions, serpents, salmon, eagles, and geese, are common on the stones. There are some composite animals, such as horses with serpent tails instead of hind legs and griffinlike creatures. Other elements are so-called V-rods and Z-rods, which appear to be broken arrows or spears.

Many of the animals depicted—cattle, boar, salmon, and serpents—are known to have been revered by the Celts. The broken weapons recall those deposited in bogs and streams by Celts, probably as offerings to the gods.

This sword chape, a type of metal trimming, was used by the Picts. (Drawing by Patti Erway)

A Pictish man drinks on horseback in this detail of stonework from eastern Scotland. (Drawing by Patti Erway)

Breaking the weapons could have been a way of releasing their strength to the otherworld; alternatively it may have been meant to symbolize the cessation of war: the weapons deposited to mark peace treaties or alliances between tribes.

Conversion to Christianity By the end of the sixth century some Pictish kings had been converted to Christianity. Legend has it that Saint Columba converted King Brude, whose fort commanded the top of Craig Phadraig in Inverness, to Christianity in 597. Saint Cuthbert, the bishop at Lindisfarne, born in Scotland, conducted missionary work among the Picts of Galloway in the latter part of the seventh century.

Through their ninth-century king Eoganan the Picts may have been responsible for establishing Scotland's patron saint, Andrew, and the blue-and-white national flag of Scotland, called the Saltire. Eoganan is said to have adopted the X-shaped cross of St. Andrew as his standard. According to one legend St. Andrew appeared to Eoganan in a dream on the eve of a great victory against the Northumbrians at Athelstaneford in East Lothian in 832. Alternately a cloud shaped like a St. Andrew's cross appeared in the sky to Angus, accounting for the standard's white cross on a blue field. An important shrine to St. Andrew grew up at Kilreymont in northeast Fife in the ninth and 10th centuries. In time St. Andrew displaced earlier Celtic saints as the patron of the kingdom of Alba. He was probably used by Scottish kings to help unify his Scottish and Pictish peoples in one nation.

The history of the Picts implies that they were simply the native inhabitants of all of Scotland during the Iron Age, who by historical times were being pushed northeastward by the Romans and the Scots from Ireland. Raiders and perhaps traders from Norway had in all probability been traveling to northeastern Scotland for some time as well, introducing practices such as inscribed standing stones and the Old Norse language. Thus the Picts seem to have been a people living on the far northern periphery of the Celtic world, receiving influences from Celts in Britain and Ireland, but also from the Scandinavian world. What we can discern of their culture, in piecemeal fashion only, is probably the result of their own unique blending of all these elements into a whole largely unknown to us.

Pleumoxii (Pleumo)

The Pleumoxii are classified as a Celtic tribe. They lived in Gaul, their location unknown, at least by the first century B.C.E. and are discussed as CELTS or GAULS. They were a subgroup or allies of the NERVII.

Podilians

The Podilians are a Slavic people native to Podilia, a region northeast of the Carpathian Mountains between the Dniester River and the Western Bug and Southern Bug Rivers in present-day western Ukraine. They currently live to the south of the VOLHYNIIANS and, as they are, are assumed to be descended, at least in part, from the DULEBIANS of the 10th century C.E. The Podilians have maintained ethnic unity and many of their traditional customs, such as particular folktales and songs.

See also SLAVS; UKRAINIANS: NATIONALITY.

Polabians (Polabs; Polabian Slav)

The Polabians were a tribe of Western SLAVS who lived east of the Lower Elbe River near the Baltic Sea in present-day northern Germany. Identified as the WENDS by the FRANKS, they moved into territories vacated by GERMANICS several centuries before, by the seventh century C.E. Germanic groups remaining there may have joined the first Slavs to enter their region, judging by distinctions between the culture that developed there and that of most Slavs elsewhere. Among their neighbors were the Slavic OBODRITES and VELETIANS.

In the eighth century to defend against these tribes Charlemagne, king of the Franks and emperor of the West, established a border-

land entity known as the Saxon Mark. In the ninth and 10th centuries Polabians became allied with the CZECHS though the royal marriages of Ludmilla and Drahomir. The Polabians rebelled against the Germans under Henry I, who died fighting them and other Slavs in 936. By the end of the 10th century the Germans had been driven out of the Polabian and Obodrite territories, which remained united under rule by the POLANIANS until the late 11th century, when they were under German hegemony, still maintaining a degree of independence, however. In 1160 Henry the Lion, duke of Saxony, finalized the subjugation of the Slavic tribes in the region, after which German settlers and missionaries settled there (see GERMANS: NATIONALITY). In 1169 the Danish commander Absalon rooted out the Polabian island stronghold of Rügen during his campaign against Polabian pirates in the Baltic.

The Polabian dialect of West Slavic endured into the 18th century. On the basis of the dialect, the name Polabians or Polabs or Polabian Slavs is now commonly applied to all the Slavs east of the Elbe and its tributary the Saale and west of the Oder (the name Polabian means along the Elbe).

Polanians (Polans; Polanie; Polians)

The Polanians were a tribe of Western SLAVS who lived along the Warta River in present-day northwestern Poland by the seventh century C.E. As were all Western Slavs they were called WENDS by early medieval FRANKS.

The name Polanian is taken from a Slavic word for “prairie” and can be interpreted as “those who live on cleared fields.” (An alternate spelling of the name, Polians, is sometimes also used for the Polianians of present-day Ukraine.) The Polanians were centered around the present-day cities of Gniezno, Kruszwica, and Poznań in a region referred to as Kujawy. The territory was a densely populated farm country.

In the 10th century the Polanians under Mieszko I became the dominant political entity in the region, gaining hegemony over other tribes in the Oder-Vistula region, among them GOPLANIANS, KUYAVIANS, LEDZIANIANS, MAZOVIANIANS, POMERANIANS, SILESIAIANS, VELETIANIANS, VISTULANIANS, and WOLINIANS, and founding a common state structure. In 966 Mieszko was christened as a Catholic. His son, Boleslaw I, gained additional territory and further promoted Christianity in the region. In 1000 he was crowned the first king of Poland by the Holy Roman Emperor Otto III (see POLES).

Poles (Polish; Polanders)

The Poles are the descendants of the POLANIANS, a tribe of Western SLAVS who lived along the Warta River in present-day northwestern Poland by the sixth century C.E., and of other Slavic tribes of the area, including those in the Oder-Vistula region. The Polanians gained hegemony over such peoples as the GOPLANIANS, KUYAVIANS, LEDZIANIANS, MAZOVIANIANS, SILESIAIANS, VELETIANIANS, VISTULANIANS, and WOLINIANS and founded the first Polish state. The name Poles, a shortened form of Polanians, relates to living on cleared fields.

ORIGINS

The first Slavs to enter the region of present-day Poland are thought to have migrated there along the eastern and northern flanks of the Carpathian Mountains, probably sometime in the sixth century C.E., either from the Danube region or from the Ukraine. A pottery type related to early Slavic pottery known from other regions at this time dates from the middle or later sixth century (earlier dates have now been discounted as unreliable). The migration of Slavs here coincides in time with Slavic migrations across a wide region of central and eastern Europe, known to have taken place during the sixth century, into many of the lands that have Slavic populations today. The impetus for this widespread migration is not known with certainty. It may have begun as part of a twofold process, as tribes and tribal confederacies of GERMANICS, such as that of the GOTHs, moved out of central and eastern Europe toward the toppling empire of the ROMANS, some hoping for plunder, others hoping for lands where they could settle away from the HUNS and other steppe peoples invading at this time. At the same time tribes who joined in a Slavic confederacy somewhere between the Lower Danube and western Ukraine in the late fifth and early sixth centuries developed a warrior elite, probably in part under the influence of the HUNS, who began to move into lands vacated by Germanic groups, including areas of Poland.

The Olsztyn culture (named for a region in northern Poland) shows substantial signs of change just before the middle of the sixth century and lasting for about 100 years, its cemeteries containing what appear to be Slavic fibulae from the Lower Danube delta, and at least one site containing possibly Slavic pottery. The Olsztyn culture from this period seems to be mixed, having both Germanic and Slavic elements. The change in this culture may document the arrival of the Slavs, but whether they

migrated from the Danube region, where the earliest historical accounts document the presence of Slavs, or from the western Ukraine, which is closer to Poland, is uncertain (however, the Danubian Slavic fibulae suggest the Danube). Most signs of Germanic culture had disappeared from Poland by the early sixth century, but western BALTS continued to live in the northeast.

In the late sixth century further although somewhat limited expansion took place in

Poland beyond the rich farmlands in the south-east, mostly following the major river valleys, and the culture remained largely unchanged here. Material from the latter sixth century in southern Slovakia, Moravia, and Bohemia is very similar to that from contemporary Poland to the north, showing little sign of the differentiation that would take place later. In general the material culture remained what it had been from the first emergence of a Slavic ethnicity—simple and unsophisticated. Slavs lived in small, flimsily built, sunken-floored huts or cabins of timber; made crude undecorated pots; and had very little in the way of decorative metalwork. They used iron tools and weapons, but the fact that few of these are found in burials or hoards suggests they were too few and precious to be consigned to the ground.

Significant changes in this material culture, beginning in the mid-seventh century, seem to signal a departure from the simple Slavic culture of the past. In southern Poland more accomplished pottery was being made, finished on what is called a “slow wheel” that allowed for a more regular shape. Pottery now was being decorated and made in a greater variety of shapes; influences from south of the

The Poles under Mieszko I in About 970 C.E., Showing Location of Polanians and Absorbed Tribes

Carpathians seem to have gone into the making of this pottery. Dwellings continued to be of the familiar sunken-floor type, but burials of cremated remains now were commonly covered with earthen barrows and placed in small cemeteries, possibly for clan or family members. Such burials, memorials to the dead that would have been visible in the landscape, may signal a deeper connection with place than the mobile Slavs who first immigrated to Poland had ever had. In eastern Poland hilltop strongholds (with, however, relatively weak defenses) were first to be built in the early seventh century. Rich ornamental metalwork has been found in these strongholds, showing influences from the BYZANTINES of the Eastern Roman Empire; the LOMBARDS, a Germanic tribe in Italy; and the AVARS, steppe nomads.

By the eighth century further advances in Slavic culture in Poland were fostered by increasing contact with more advanced societies to the southeast and west. Both trade and territorial expansion were involved. A trade network between, on the one hand, the Byzantine Empire and Persia and, on the other, Denmark and southern Sweden with its large Baltic islands had developed by the fifth century. By the eighth century coastal Baltic tribes northeast of Slavic areas in Poland, such as the BORUSSIANS, a people related to the Baltic LITHUANIANS, were taking part in this trade, which by the early ninth century involved silver coins from Islamic lands in the Near East. The Borussians built a trading emporium at Truso near the mouth of the Vistula by the early ninth century. A number of silver hoards near the mouth of the Vistula attest to the rich trade carried out there. These trade routes passed near and through Slavic territories and had an increasing impact on them as Slavs began to take part in this trade and to build trading centers in competition with those of the BALTS and VIKINGS.

LANGUAGE

The Polish language is part of the West Slavic branch, which includes Czech and Slovak as well as a number of other less widespread languages.

HISTORY

Early Trade Contacts

By the ninth century the Polonians had established trade links with the POMERANIANS, a Slavic tribe living along the Baltic coast between the mouths of the Oder and the Vistula, in whose territory trading emporia

Mieszko I: Founder of Poland

Mieszko (also Mieczyslaw; Mieczyslaw) of the Polonian tribe is considered the founder of the first Polish state. He was born in about 930 C.E., reportedly son of the semilegendary Siemomysl and a descendant of the legendary tribal ruler Piast of some 90 years before, to whom the Piast dynasty is traced.

Mieszko married Dobrava, daughter of Boleslav I, a prince of Bohemia, in about 965. Supposedly at her intercession he converted to Christianity, following the Christian tenets of Rome as opposed to the Eastern Orthodox Christianity adopted by other Slavs. His conversion helped prevent confrontation with the Holy Roman Empire. To prove his devotion he built a church at Gniezno dedicated to Saint George.

Mieszko led numerous campaigns against other area tribes, during which his two brothers were killed, one of them of unknown name in about 964, and another, Czeczbor, at Cedynia in Pomerania in 972. He also is thought to have had a sister. In 978, after the death of his first wife, Mieszko reportedly kidnapped Oda von Haldensleben, a nun, the daughter of Dietrich von Haldensleben, count of the North March, and married her.

Although he never established a central capital, Mieszko built a number of castles throughout his domain. One was Ostrow Lednicki, a ring fort some 460 feet in diameter with a monumental palace. In 980 he founded the city of Gdańsk at the mouth of the Vistula River. Shortly before his death in 992 Mieszko placed his state under the suzerainty of the pope in a document known as the *Dagome Iudex*.

By Dobrava Mieszko had a son, who, after deposing one of three half brothers by Oda, ruled as Boleslaw I (Boleslaus Chrobry), and a daughter, Swiatoslawa (Sygryda), later the wife (known as Queen Gunhild) of King Sweyn Forkbeard of Denmark, and mother of King Canute of Denmark and England.

were built in the ninth century probably at first by SCANDINAVIANS, who had been trading along the Baltic for centuries. Silver hoards dating from the 940s contain large quantities of silver from Pomerania, which had been carried there along the Baltic sea-lanes from trade routes connecting the Islamic Near East, the ultimate source of the silver, with the Carolingian kingdom of the FRANKS in France and western Germany. The rise of the Kievan Rus state in the Ukraine in the previous century caused the great increase in the flow of Islamic silver northward, and of Baltic products such as amber and furs southward. The silver passed westward through the hands of middlemen in Baltic lands such as Lithuania and Prussian territory; in southern Sweden, Denmark, and Frisia; and in Slavic Pomerania and Polabia (between the Oder and Elbe to the west of Pomerania). Probably in part because of the agricultural wealth of the Polonians some of this silver was diverted to their territory, and its arrival coincides in date with the building of strongholds in Poland in the 940s.

The First Polish State

In about 960 Prince Mieszko (see sidebar, p. 599) rose to leadership of the Polanians and through his military and political skills took advantage of his tribe's wealth greatly to expand his realm. As in other Slavic states (for example, Bohemia) during this period many tribal centers in Poland were destroyed and replaced with new ones, perhaps to usurp the power of the old tribal nobility, a process that was both enabled and symbolized by the erection of new fortifications commanded by officials of the state. Contemporary accounts mention a new "king of the north," and Mieszko's rise attracted the attention of Boleslaw I of Bohemia and of the German emperor Otto I. Mieszko allied himself with Bohemia through his marriage with the Bohemian Dobrava, Boleslaw's daughter.

In 960–967 Mieszko, with Bohemian aid, fought the Pomeranians, Veletians, and Wolinians to annex Pomerania; he succeeded in 967 and made peace with Otto, whose Northern Mark bordered on Wolinian territory. Mieszko's alliance with Bohemia involved his baptism in 966, and he allowed the establishment of a bishopric in Poznan in 968. Mieszko refrained from much eastward expansion, probably because the lands there were sparsely inhabited forest zones. When news of Mieszko's activities reached the Kievan ruler Vladimir I southeast of this buffer zone of forest lands, he began to take territory there. But his borderlands were still far from those of Poland.

After a successful Polabian rebellion against German control Mieszko, in alliance with the SAXONS, attacked the POLABIANS, OBODRITES, and other area tribes and annexed their lands. Mieszko continued to strengthen his relations with the Germans when after his first wife died he married Oda, the daughter of the margrave of the Northern Mark; this, however, strained his relations with Bohemia. His children by this, his second wife, were expelled by their half brother Boleslaw I after Mieszko's death.

Mieszko also expanded south, annexing Silesia and territory south to the northern Carpathians, both to take advantage of this natural boundary and to gain control over trade routes to Kiev and Byzantium that ran along the Oder valley. In this process he became too close to Bohemia to the southwest, thereby generating conflict with that state.

Near the end of his life Mieszko had a document drawn up, the *Dagome Iudex*, which defined the boundaries of his realm, which he intended to entrust to the spiritual guardian-

ship of the pope. These boundaries are fairly close to those of today's Poland. Two years later Mieszko died, leaving his kingdom to his half-German son by Oda, who was soon deposed by Boleslaw.

Coronation and Expansion

Boleslaw continued attempts at expansion west and east and consolidated his holdings in Pomerania and Silesia, subsuming Kraków in his polity. He also entertained ambitions toward Prussian territory on the Baltic, with its rich ports, sending the Bohemian bishop Adalbert (Wojciech, who had fled his native land because of dynastic disputes) on a mission to the Borussians, on which he met a martyr's death. Boleslaw placed Adalbert's body in a church in Gniezno, and the latter was canonized in 999.

In the year 1000 the young German emperor Otto III traveled to Gniezno with a papal legate to visit Adalbert's tomb and to confer with Boleslaw. For his part Boleslaw went to great lengths to impress Otto with the wealth of his kingdom and to signal his eagerness to further the cause of Roman Christianity in Slavdom. At this summit meeting bishoprics were established in Kraków and several other Polish cities. Otto for his part wanted Boleslaw's aid in strengthening German control over Slavic lands. It is believed that Otto placed his own diadem, conferred on him by papal authority, on Boleslaw's head, calling him "brother and partner of the empire" and "friend and ally of the Roman people" (meaning subjects of the Holy Roman Empire). German historians tend to see this ceremony as conveying Otto's acceptance of Boleslaw as a "tributary" or vassal, whereas Polish historians see it as a true coronation, establishing Poland as a polity of equal status with the empire. A German writer of the time chides Otto for raising Boleslaw so high "when making him a tributary." Possibly this had been Otto's intention in traveling to meet Boleslaw, but perhaps the young emperor's feelings ran away with him in awe of the relics of St. Adalbert and the other splendors of Poland, leading him to carry out an impromptu "coronation" of Boleslaw. Otto's regard for St. Wojciech/Adalbert may be suggested by the fact that Boleslaw gave him the saint's arm as a relic; Otto gave Boleslaw a replica of the "Holy Lance," which was part of the imperial regalia (the original containing a nail from the Holy Cross).

Boleslaw made good use of his anointing by Otto to extend his power into Polabia, and

in 1003 attacked Prague. He took advantage of internal dissension in Bohemia to annex lands in Moravia and in much of Bohemia. A feud between the sons of Vladimir of Kiev tempted Boleslaw to an attack there in 1018. Boleslaw's reign reached its height when he was crowned in 1025 with a diadem sent by the pope.

Polish rule in Moravia soon collapsed, however, and the territory was retaken by Bohemia in 1019 and henceforth remained attached to the Bohemian state. Poland had increasing conflict with the German Empire in the reign of Henry II in 1002–24, which led to the loss of Silesia and western Pomerania. Bohemian forces raided Polish territory in 1034 and reclaimed the body of St. Wojciech/Adalbert.

Rival Powers

After a period of continued conflict with the German Empire and with the papacy (Poland was placed under a papal interdict in 1079 when the king had the bishop of Kraków murdered) on the death of Boleslaw III in 1183, Poland was divided among his sons, causing central power to disintegrate. In 1240 and 1241 the steppe warrior MONGOLS invaded and ravaged Poland; the Teutonic Knights, a German order of crusaders, in 1226 invaded Prussian territory on a crusade to end paganism there. (Their power was only ended by Poland in the 15th century, and they became vassals of the Polish kings.)

Alliance with Lithuania in 1386 led to what has been called the Golden Age of Poland, which lasted until the 16th century. Although wars with many other states, including Hungary, Moscow, Moldavia, the TATARS, and the Ottoman TURKS, were frequent, the closely allied Polish and Lithuanian states maintained an empire that reached from the Baltic to the Black Sea. The arts and sciences flourished in Poland during this time, reaching a high point in the 16th century with Nicolaus Copernicus, who proposed the heliocentric astronomical system. Jesuits introduced the Counter-Reformation to Poland, which the ruling class accepted without coercion, in 1565.

Toward the end of this period Poland became involved in conflicts with Russia, in part because of its alliance with Lithuania, which had annexed Belarus and Ukraine, and in part because of religious tensions between Catholic Poles and Eastern Orthodox worshippers in the former Russian territories. In the 17th century the claims of Sigismund III, who had reigned as king of Sweden as well as of

Poland until deposed by the Swedes, to the Swedish throne led to wars with Sweden. In the mid-17th century COSSACKS rebelled in the Ukraine, and Poland was attacked in 1655 by both Sweden and the Russian czar. Poland was overrun and, although it managed to stave off complete collapse for some decades, particularly during the reign of John III (John Sobieski), whose leadership during the siege of Vienna in 1683 by the Ottoman Turks (*see* TURKICS) temporarily restored the prestige of Poland, after his death Poland virtually ceased to be an independent country.

Henceforth Poland was ruled by other states—Russia, Prussia, Sweden, and Austria—vying for power with each other, the nominal government of the country chosen by the victor in a series of wars. Finally during the 18th century the Russian and Prussian monarchs partitioned Poland between them; Russia gained the larger share, and most of Poland disappeared from the political map.

Enduring Identity

The Poles would maintain their political identity and cultural identity, however, and Poland would endure and be established as an independent state again in the 20th century (*see* POLES: NATIONALITY). The overwhelming majority of people who consider themselves Poles live in Poland, but small numbers of Poles live elsewhere in central Europe. These countries, in order of Polish population size, are Belarus, Lithuania, Ukraine, Czech Republic, Hungary, Moldova, Romania, and Slovakia.

CULTURE (*see also* SLAVS)

Economy: Rise of Money Economy

The port of Gdańsk was founded by the Polish state at the end of the 10th century for the explicit purpose of tapping into and controlling part of the Baltic trade network, and around this time the first Polish coinage was minted for the same purpose (although partly also for prestige). The Polish currency was modeled on that of Bavaria and Saxony. However, the fact that silver continued to be buried in hoards through the 10th century is a sign that a money economy had not yet become dominant (hacksilver in these hoards, pieces of broken-up silver objects, was used for barter, based on weight). Such hoarding seems to have largely ended by the second half of the 11th century, evidence that silver now was freely circulating in a market economy.

This cartoon shows European leaders partitioning Poland in the 18th century. (Library of Congress, Prints and Photographs Division [LC-USZC4-6751])

Government and Society

The reigns of Mieszko and Boleslaw saw dramatic shifts in Polish society as it moved in a short time from a tribal society to a medieval state. Social stratification increased markedly, while the population as a whole continued to grow. Craft specialization increased to include, besides pottery and leatherwork, shoemaking, bone and antler work, and fine metalworking. There was a rise in the standard of living for part of the population.

The governmental structure was similar to that of the Carolingian state. The ruler had several seats of power, moving among them with a personal retinue of troops and a corps of court officials. The Polish equivalent of the

Carolingian mayor of the palace was a count palatine, who dealt with royal administrative matters. Local administration was entrusted to the commanders of strongholds (later known as castellans) helped by an elite hierarchy with military, judicial, and fiscal powers over local populations. Tribute was collected at the strongholds. There were some 500 of these strongholds across Poland, whose military strength provided the Piast dynasty with a monopoly of armed might in the land. Their elite retinues also increased demand for luxury and other goods, stimulating trade as well as local agricultural production. Settlements near the strongholds thus became a focus of economic development across Poland.

The settlements sometimes had earth and timber ramparts themselves, but their social structure was open and diverse. They seem to have had mixed populations of members of the elite, soldiers serving the local stronghold who were garrisoned in the town, merchants, innkeepers, artisans, servants, and peasants. With the formation of regular local trade networks these settlements became medieval towns similar to those across contemporary Europe but maintaining a greater degree of independence from the castellans.

Polish Conquests beyond Its Core Territory

Polish military might allowed its rulers to annex many surrounding territories, but the extent to which the people in them saw themselves as ethnically “Polish” is questionable, given the frequency with which they split away from Polish hegemony. Slovakia, Moravia, Pomerania, Silesia, and others repeatedly broke away and were reconquered. It is unknown to what extent these people spoke Polish (although all Slavic languages are mutually intelligible to some extent).

The Poles, and other Slavic cultures, experienced the same sociocultural changes fostered by contact with more advanced societies the CELTS had experienced in the second half of the first millennium B.C.E. and GERMANICS, in the first half of the first millennium C.E. The rich trade and military pressures on these peoples by the Greco-Roman world, which led to the rise of elites that culminated in state formation, were brought to bear on the Poles by the Frankish and German Empires, themselves rooted in contact with the Roman Empire. Quickly the Poles rose to be full-scale players in international power politics. However, perhaps

having arrived late at the game, they were never afforded the time needed to fully establish and extend their power, and their center of power remained the relatively limited territory of Poland itself. Although the Poles experienced a Golden Age in the 15th and 16th centuries, they remained beleaguered by surrounding powers whose greater resources finally enabled them to crush Polish power, a defeat from which the Poles never fully recovered.

Poles: nationality (Polish; Poles; people of Poland)

GEOGRAPHY

Poland lies along the Baltic Sea in the north. Russia and Lithuania lie to the northeast, and Belarus and Ukraine to the east. The Sudeten and Carpathian Mountains define Poland's southern border between the Czech Republic and Slovakia. The Neisse and Oder Rivers in the

west divide Poland and Germany. The predominantly lowland terrain of the North European Plain accounts for the vast arable lands. Poland has more than 9,300 lakes, the majority in the north. Poland's highest point, Mount Rysy in the Carpathians, is 8,200 feet. Poland is divided into 16 provinces. Poland's total area is 120,728 square miles.

INCEPTION AS A NATION

Poland's frontiers have dramatically shifted within the past millennium. Poland was first united as a kingdom under Mieszko I of the POLANIANS, who founded the Piast dynasty in 960 C.E. and united the various tribes of Western SLAVS. The established territory of the early POLES expanded and diminished over the centuries. The War of the Polish Succession (1733–35) led to a division Polish territories among Russia, Prussia, and Austria. Successive partitions that occurred within the next 40 to 50 years made Poland disappear from the map. The French under Napoleon I Bonaparte established a buffer Polish state in 1807. After Napoleon's defeat the Congress of Vienna (1814–15) defined a Polish kingdom (Congress Poland) in personal union with Russia. Poland lost autonomy after the Polish Revolt in 1830–31.

A Polish family poses for this early 20th-century photograph. (*Library of Congress, Prints and Photographs Division [LC-USZ62-100123]*)

demographics:

About 98 percent of the population are Polish; minorities include Germans, Ukrainians, Lithuanians, Jews, Belarusians, Ruthenes, Tatars, and Armenians.

Poles: nationality time line**C.E.**

- 960** Piast dynasty begins under Mieszko I.
- 1138** Kingdom divides when Boleslaw III dies.
- 1241** Mongols invade region.
- 1370** Piast dynasty ends; Jogaila dynasty begins.
- 1386** Poland and Lithuania form dynastic union.
- 1497** Nicolaus Copernicus (Mikoaj Kopernick) begins making astronomical observations.
- 1569** Under Sigismund II Union of Lublin unifies Polish-Lithuanian state.
- 1572** End of Jogaila dynasty marks end of territorial expansion.
- 1578** Jan Kochanowski writes first Polish tragedy, *Odprawa posłów greckich* (The dismissal of the Grecian envoys).
- 1670–95** Wacław Potocki writes patriotic epic *Wojna Chocimska* (The war of Khotin), celebrating Polish victory over Ottoman Empire in 1621.
- 1700–1721** Poland sides with Russia against Sweden in Great Northern War.
- 1733** Saxony assumes control of Poland; War of the Polish Succession begins, with dynasties struggling for throne of Poland.
- 1772** Under Treaty of Polish Partition Russia acquires large Polish territories.
- 1783–1814** Wojciech Bogusławski serves as director of Polish National Theater in Warsaw.
- 1791** Poland proclaims a hereditary monarchy and attempts to liberalize government despite gentry opposition.
- 1793** Territorial partitions among Russia, Prussia, and Austria inspire Polish Revolutionary War led by Tadeusz Kościuszko.
- 1795** Poland is divided among Russia, Prussia, and Austria.
- 1807** Napoleon I Bonaparte forms Grand Duchy of Warsaw from Russian and Prussian territories.
- 1815** Congress of Vienna establishes Kingdom of Poland.
- 1831** Poland attempts to declare independence; Russia crushes revolts.
In despair over Russian oppression, composer Frederic Chopin settles in Paris; he conceives of “Revolutionary Étude” at this time.
- 1834** Poet Adam Mickiewicz writes national epic, *Pan Tadeusz* (Master Thaddeus).
- 1843** First volume of songs by Stanisław Moniuszko, *Spiewnik Domowy* (Songbook for home use), is published.

After occupation by Germany and Austria during World War I (1914–18), the Treaty of Versailles redefined Poland as an independent republic and settled some territorial disputes, although the Polish-Russian border was controversial even after the Treaty of Riga in 1921. That same year Poland adopted a constitution. One-third of the newly created Poland included peoples who considered themselves Germans, Ukrainians, Belarusians, Jews, and Lithuanians. World War II (1939–45) caused the further shifting of borders. The boundaries of Poland

were negotiated at the Yalta Conference of 1945 and the Potsdam Conference later that year. In 1947 a Soviet-controlled government gained power. In 1970 a treaty with West Germany determined western Polish boundaries along the Oder-Neisse line. In 1989, free elections led to the victory of the Labor Party.

CULTURAL IDENTITY

The cultural identity of Poles endured for centuries in the absence of a sovereign Polish state. Polish culture developed, crystallized, and

- 1878** Jan Matejko celebrates Polish and Lithuanian 1410 victory over Germanic forces in his painting *The Battle of Grunwald*.
- 1901** *Wesele* (The wedding), play by Stanisław Wyspiański, opens.
- 1905** Novelist Henryk Sienkiewicz wins Nobel Prize in literature.
- 1916** National Museum is founded in Warsaw.
- 1918** After downfall of Russian Empire and collapse of Central Powers at end of World War I Poland proclaims itself independent republic.
- 1919** Treaty of Versailles gives Poland territorial and economic rights.
- 1921** Soviet-Polish frontiers are established.
- 1924** Novelist Władysław Stanisław Reymont wins Nobel Prize in literature.
- 1928** National Library is founded in Warsaw.
- 1930** Composer Karol Maciej Szymanowski becomes head of Warsaw Academy.
- 1932** Poland agrees to nonaggression pact with Soviet Union (USSR).
- 1939** Nazi Germany invades Poland, starting World War II.
- 1944** Anglo-American invasion of France leads to Poland's liberation.
- 1945** Official frontiers are established under Potsdam Conference, marking end of World War II.
- 1947** Soviet-controlled government is established.
- 1948** Mazowsze, Polish state folk song and dance ensemble, is founded.
- 1952** Poles adopt new constitution.
- 1955** Poland is an original member of Warsaw Pact formed under direction of Soviet Union.
- 1960s** Jerzy Grotowski's Laboratory Theater and Henryk Tomaszewski's Pantomime Theatre gain international acclaim.
- 1968** Poland assists Soviet Union with invasion of Czechoslovakia.
- 1970** West Germany affirms Polish boundary.
- 1980** Independent trade union, Solidarity, forms in response to labor turmoil.
- Poet and novelist Czesław Miłosz wins Nobel Prize for literature.
- 1989** Labor Party is victorious in free elections.
- 1996** Poet Wisława Szymborska wins Nobel Prize in literature.
- 1999** Poland joins North Atlantic Trade Organization (NATO).
- 2004** Poland joins European Union (EU).

became more visibly distinct in reaction to cultures of the occupying German, Austrian, and Russian powers. Poles of all social strata became increasingly aware of ethnicity and cultural distinctness. A sense of identity motivated a continuing struggle for independence. Polish arts and sciences became the primary bearer of Polish identity to an unusual degree and united Poles, preserving them from Russification and Germanization.

As a number of Polish writers have noted, the strong sense of Polishness risks parochial-

ism, which may make Polish cultural products incomprehensible to foreigners and prevent the creation of art and science of universal reach. Such self-involvement might hinder objectivity and, because the highest art involves a balancing of form and content, might tilt the balance too far toward content—material of national connotations overblown and overemotional—at the expense of form. The composer Frederic Chopin demonstrated that this need not be the case, however. Many of his works are based on Polish dance forms, the polonaise and the

mazurka, and have patriotic references, yet his command of counterpoint, among the most highly formal of musical techniques, was absolute.

Although the Polish sociocultural system has been shaped by Polish nationality and the predominance of Roman Catholicism, it was formed in creative cooperation with many ethnic and religious groups. Poland over time included large groups of other Slavic nationalities and many other ethnic groups. In the union of the Polish Commonwealth with the Great Duchy of Lithuania, for example, Poles, LITHUANIANS, Ukrainians, Germans, JEWS, Belarusians, RUTHENES, TATARS, Armenians, and many other smaller ethnic groups lived together in relative peace and solidarity. In this cultural community the tendency was for tolerance of distinctness. In 1505 Jews founded a school of higher education in Lublin, Jeshibot, with academic rights granted by Sigismund the Elder. After the Academy of Kraków it was the second most important academic school in the commonwealth, established before academic centers in Vilnius (1578), Zamosc (1595), and Lvov (1661). In the commonwealth there also existed a variety of religions and denominations. In 1772 there were more than 10,000 parishes of the Eastern Orthodox Church in the commonwealth, 3,996 Roman Catholic parishes, hundreds of auxiliary churches and chapels of both denominations and rites, and hundreds of synagogues and Protestant congregations.

The multiethnicity and religious diversity of the Polish sociocultural system were maintained for centuries. Before the outbreak of World War II in 1939 Poland was one of the most ethnically and religiously diversified states of Europe. Because of the large population movements after the war, when many fled a Soviet-dominated Poland for the West, and of the annexation by Soviet Russia of former Polish territories where Ukrainians and Belarusians lived, Polish society became almost monoethnic and uniconfessional. Today ethnic minorities constitute only about 3 percent of the population. But the traditions of pluralism are deeply rooted. Polish culture is still characterized by a broad openness and tolerance. This does not preclude, however, a relative insularity as well, perhaps a product of the vast tragedies and shocks of the 20th century.

Private ownership of land is a premier value of the Polish peasant, only strengthened by the experience of Soviet experimentation with collective landholding. Polish resistance

to collectivization caused the Communist government to abandon the effort. A private farm was not only a source of income, but a symbol of personal freedom and independence and a bastion of Polish identity.

Poles consider that a certain set of values characterizes Polish cultural identity. These include a belief in family and home; community; democracy; spirituality based on the tenets of Catholicism; inner freedom and individualism; hospitality, sociability, and generosity; a sense of service; optimism in the face of apparent hopelessness (a trait apparent during the long struggle of the Solidarity Movement); creative activities; criticism of ruling forces; and expression of emotions.

Polianians (Polians; Poliane; Polyans; Poliany; Polyane; Polyanians)

The Polianians were a tribe of Eastern SLAVS who lived along the middle Dnieper River near Kiev in present-day Ukraine probably by the early sixth century C.E. Their name is taken from a Slavic root word for “prairie” or “field,” as in “people of the field”; an alternate spelling of the name, Polians, is sometimes used for the POLANIANS of present-day Poland.

According to Ukrainian tradition a Polianian leader known as Kyi formed a tribal confederation and founded Kiev. In the second half of the ninth century with other Slavic peoples the Polianians were under the suzerainty of the RUS of the Kievan Rus principality, paying tribute to them. They also served under Rus princes in military campaigns, including the attack by Oleg on the BYZANTINES of Constantinople (modern Istanbul) in 907.

The Polianians were renowned for the making of swords; in the early ninth century

when the KHAZARS imposed a tribute on the Eastern Slavs they demanded a sword from every Polianian household and furs from other tribes.

Polians See POLANIANS; POLIANIANS.

Polochanians (Polotchans; Polachanians; Polchani; Polechane)

The Polochanians are classified as a tribe of Eastern SLAVS who lived along the Western Dvina River in present-day northern Belarus and eastern Russia in the vicinity of Smolensk. In 862 C.E. they founded the principality of Polotsk, with the capital Polatsk. Unlike other Slavic tribes in the region, they retained their autonomy from the RUS. The Polochanians are assumed to have descendants among both the Belarusians (see BELARUSIANS: NATIONALITY) and the Russians (see RUSSIANS: NATIONALITY).

Polovtsi See CUMANS.

Pomaks (Achrjani)

The Pomaks are a people of uncertain origin presently living in the Rhodope Mountains in Thrace in southern Bulgaria, northeastern Greece, and northwestern Turkey. The name Pomak is applied to them generally; in Bulgaria they are called Bulgarian Muslims or Bulgarian Muhammadans. They have the status of a religious Muslim minority in Bulgaria and Greece. One Pomak native name is Achrjani.

ORIGINS

The origins of the Pomaks are the subject of dispute based on nationalistic views. A number of different peoples have probably intermingled with the Pomaks over the centuries, and SLAVS, GREEKS, and TURKICS are probably all among their ancestors, as well as other groups, such as the THRACIANS, from ancient times. Modern Bulgarians consider them Slavic in origin. A theory put forth by modern Greeks is that at least some among them are descendants of Thracians, in particular a tribe known as Agrianes (or Agrianoi) of the Rhodopes, who were over the centuries Hellenized, Latinized, Slavized, Christianized, and Islamized. Some modern Turks have hypothesized that the Pomaks are descendants of Turkic-speaking peoples, such as

CUMANS, PECHENEGS, or AVARS (the Avars being Turkic or Mongolic), who took refuge in the mountains from the Ottoman Turks.

The various theories relating to the etymology of the name Pomaks attest to the broader dispute over origins. According to the Greek, Pomak is derived from *pomax*, for “drinker,” used to describe the Thracian tradition of drinking. According to the Bulgarians it is from either the Turkish term *pomagach* for “helper,” reflecting the social position of Pomaks in the Ottoman period or an alleged Pomak collaboration with the Ottoman government in order to maintain land rights; from the Bulgarian Pomochamedanci for “Islamized”; or from the phrase *po māka*, meaning “by pain of death,” in reference to the forced conversion from Christianity to Islam of the Pomaks under the threat of death by Ottoman Turks. The alternate name Achrjani may be from the Old Bulgarian Aagarjani, meaning “infidels,” or from the name of the ancient Thracian tribe the Agrianes.

LANGUAGE

The Pomak language, known as Pomakika (or Pomakci), is a variant of Bulgarian, a Southern Slavic tongue related to Macedonian, with many Greek and Turkic borrowings. Because Pomak does not have a standard written form, various alphabets have been used to record it, including Arabic, Cyrillic, Greek, and Latin. Pomak religious services are held in Arabic. Many modern Pomaks are multilingual, speaking some Arabic, Greek, and Turkic as well as their native tongue, which is still prevalent in mountain villages but in decline among young people.

HISTORY

Part of the Ottoman Empire

Because the origins of the Pomaks are uncertain, it is not known when they settled in the Rhodope Mountains. As a result known Pomak history is tied in with histories of the nations where they live and the shifting boundaries of their homeland. In 1876 there occurred an uprising against Ottoman Turkish rule by the Bulgarians. Some Pomaks aided in the suppression by the Turks, perhaps participating in a massacre of Bulgarians in the mountain village of Batak (leading to the theory that their name means infidels and helpers). In 1878 after the Treaty of San Stefano ended the Russo-Turkish Wars the Pomaks revolted against the

Pomaks time line**C.E.**

- 1876** Pomaks aid Ottoman Turks in suppression of Bulgarian uprising.
- 1878** Pomaks try unsuccessfully to create autonomous region.
- 1913** Short-lived Republic of Gumuldjina created.
- 1923** Treaty of Lausanne recognizes Pomaks as minority.
- 1951** Greek Pomaks allowed to choose between Greek and Turkish schools.
- 1989** Migration of many Bulgarian Pomaks to Turkey
- 1995** Pomaks allowed to cross between Bulgaria and Greece.

Bulgarians and created an autonomous administration in some 20 localities in the Rhodopes, which was never recognized internationally.

Early Attempts at Autonomy

The Pomaks were forced to honor international agreements and boundaries created after the disintegration of the Ottoman Empire and the First Balkan War of 1912–13 and the Second Balkan War of 1913. In 1913 after the retreat of Ottoman and Bulgarian troops the Pomaks again attempted to create an autonomous region, the Republic of Gumuldjina (Komotini), in Thrace. During this period some Pomaks who had been forcibly Christianized by Bulgarians resumed the practice of their Muslim religion. After World War I (1914–18) Pomaks in Bulgaria continued to seek autonomy and freedom of religion.

Western and Eastern Thrace

By the Treaty of Lausanne in 1923 western Thrace was incorporated into Greece (now part of the administrative region of Eastern Macedonia and Thrace), and eastern Thrace became part of Turkey. The treaty called for an exchange of population between Greece and Turkey, with Muslims of Greece to resettle in Turkey, and Christians of Turkey to resettle in Greece. There were two exceptions, however: Muslims could stay in Thrace, and Greeks in Istanbul and on certain Aegean islands. At that time Pomaks and other Muslims of Thrace were granted official minority status, with the right to education in their own language and to religious freedom. The departments of Evros, Rhodope, and Xánthi in western Thrace have the greatest number of Greek Pomaks. Yet after the treaty other Pomaks living in parts of Greece other than Thrace resettled in Turkey.

Pomaks under Communism

During World War II (1939–45) and after Bulgaria had become part of the Communist bloc in 1946 Bulgarian officials attempted a new round of Bulgarization among Bulgarian Pomaks. Bulgaria also instituted the *izselvane* (resettlement) program, relocating Pomaks from southern border regions. As a result small pockets of Pomak populations can be found today in the Balkan Mountains and other regions. During the Communist era in Bulgaria the Pomaks were not allowed to travel freely across international borders. In Bulgaria Pomaks lived in a military “restricted zone,” requiring special permission for access. Campaigns to force the changing of Muslim names to Slavic names were carried out. Those who refused risked death or imprisonment.

Some Bulgarian Pomaks were sympathetic to the Communist cause, which led to distrust in Bulgaria of its own Pomak population as Communist. During the cold war Greek officials also blocked border crossings. They also implemented a policy to encourage Pomak ties to Turkey, a North Atlantic Treaty Organization (NATO) ally, as opposed to Bulgaria, leading to a Turkish national identity among the Greek Pomaks.

Greek and Turkish Issues

Over the years, however, with growing tensions between Greece and Turkey over border issues, discrimination against the perceived Turkish Pomaks arose among the Greek population. In 1951 Greek Pomaks were granted the right to attend either Greek-language or Turkish-language schools (because Pomak is a language without an established written form, there are no Pomak-language schools). RROMA attend some of the same schools as Pomaks.

Since 1995 border crossings between Bulgaria and Greece have been allowed and the restricted zone has been abolished. Turkey, which experienced a mass immigration of Pomaks and other Muslims on opening its borders in 1989, closed them again because of difficulties in supporting the great influx of people. Even in Turkey although they are Islamic, as are the majority of the population, the Pomaks sometimes face discrimination as outsiders. (See BULGARIANS: NATIONALITY; GREEKS: NATIONALITY; TURKS: NATIONALITY.)

CULTURE

The Pomaks live in small villages typically as seminomadic farmers—potatoes and tobacco

are the main crops—and shepherds. Many women still wear multicolored garments. Much of the social life revolves around the mosque. As in earlier times Pomaks cross borders to visit family members and to graze animals. Some traditional festivals are held.

In 2000 some 287,000 Pomaks lived in Bulgaria, and about 39,000 in Greece. The number in Turkey is more difficult to determine; it is estimated that as many as a million Bulgarian Muslims now live in Turkey, a great number of them Pomaks. Living in three different countries and having undergone attempts at forced assimilation, as well as ongoing attempts at Christianizing by evangelical missionaries, and with young people less likely to use the native tongue, the Pomaks risk losing their political and cultural identity.

Pomeranians (Pomerani; Pommeranen; Pomorjane; Pomorzanie)

The Pomeranians were a tribe of Western SLAVS who lived along the Baltic Sea between the lower Oder and lower Vistula Rivers in present-day northern Poland by the seventh century C.E. Their name is derived from the Slavic word Ponorze for “land by the sea.” Gdańsk was later a principal fortified town in the region. The Pomeranians and other Western Slavs were called WENDS by early medieval FRANKS.

The Pomeranians were conquered by Boleslaw III of the Piast dynasty of POLANIANS in 1133–35. In the 12th century the western part of Pomerania was established by the GERMANS as the Duchy of Pomerania; the eastern part became known for a time as Pomerelia.

The Pomeranians are considered ancestral to the KASHUBES, one of the groups of Poles (see POLES: NATIONALITY). The name Pomeranians also has been used to refer to anyone from Pomerania. A West Slavic dialect still spoken in the region is known as Pomeranian.

Pomorzanie See POMERANIANS.

Portuguese: nationality (people of Portugal)

GEOGRAPHY

Portugal is situated between Spain to the north and east, and the Atlantic Ocean to the west and south. The Madeira Islands and Azores of the Atlantic Ocean are also Portuguese territory. The total area of Portugal is 35,655 square miles. Portugal's diverse terrain consists of arable river valleys, plains, mountains, plateaus, and sandy coastlines. The valleys of the Douro and the Tagus Rivers are used for vineyards and agriculture. A mountain range, Trás-os-Montes, lies to the northeast. Portugal's highest peak, Malhão de Estrela (6,532 feet), part of the Serra da Estrela, is found in the central region. The Meseta Central, a mountainous plateau, extends from Spain into eastern Portugal. Large coastal plains are found in the southern and western regions, south of the Tagus River, Portugal's longest river. The Serra de

More than 90 percent of the population are Catholic; Protestants, Jews, and Muslims make up religious minorities.

earlier inhabitants:

Iberians; Celtiberians; Lusitani; Romans; Visigoths; Moors

demographics:

Ethnically people of Portugal are homogeneous; small numbers of Africans, Brazilians, and Asians also live in the nation.

Portuguese: nationality time line**C.E.**

- 711** Moors invade Iberian Peninsula from Africa and depose Visigothic monarchy.
- 997** Bermudo II, king of León, invades Moorist territory between Douro and Miño Rivers.
- 1064** Ferdinand I, king of Castile and León, attempts Christian reconquest of Moorish lands.
- 1093** Alfonso I, king of Asturias, makes Henry of Burgundy count of Portugal as reward for defeating Muslims at Toledo.
- 1139** Portugal is declared independent of Castile and León under Afonso Henriques, son of Henry of Burgundy, who proclaims himself Afonso I, first king of Portugal, in 1143.
- 1179** Afonso I puts Portuguese kingdom under protection of Holy See.
- 1297** Treaty of Alcanices with Castile establishes Portugal's frontier.
- 1383** Ferdinand I, last descendant of Henry of Burgundy, dies.
- 1385** Aviz dynasty rises to power; England and Portugal become allies in Treaty of Windsor.
- 1450** Nuno Gonçalves becomes court painter.
- 1453** Gomes Eannes de Azurara writes about voyages of exploration sponsored by Portuguese prince Henry the Navigator.
- 1495–1521** King Manuel I reigns; Portugal enters golden age of exploration.
- 1502** Poet and playwright Gil Vicente performs for royal court.
- 1516** Garcia de Resende compiles *Cancioneiro geral* (General songbook), encompassing work of 300 poets.
- 1572** Luís Vaz de Camões writes epic poem *Os Lusíadas* (*The Lusíads*) about 1497–99 voyage of exploration to India by Portuguese navigator Vasco da Gama.
- 1640** Portuguese conspirators, supported by France, win independence for Portugal.
- 1668** Under Treaty of Lisbon Spain recognizes Portugal's independence.
- 1775** Equestrian statue of José I by Joaquim Machado de Castro is unveiled in Lisbon.
- 1796** National Library is founded in Lisbon.
- 1807** Napoleon I Bonaparte invades and conquers Portugal.
- 1808** Peninsular War begins; Britain, Portugal, and Spain fight against Napoleonic France.

Monchique range runs from east to west in the extreme south of the country.

INCEPTION AS A NATION

The ROMANS conquered earlier inhabitants of what would become Portugal, tribes of IBERIANS and CELTIBERIANS. Among them were the LUSITANI. The Iberian Peninsula was ruled by the VISIGOTHS from the early fifth century C.E. and then occupied by the MOORS in the eighth century. Portugal's first roots as a nation were established during the Christian reconquest of the region. Afonso Henriques, son of a Burgundian count and grandson of Alfonso VI of Castile, built an empire out of the reconquered lands. After defeating the Moors in 1139 he declared himself the first king of Portugal. Portugal's independence was recog-

nized by Spain in 1143 and by the Vatican in 1179. Alfonso III recaptured Algarve from the Moors in 1249, thus consolidating Portugal.

Portugal's monarchy fell under Castilian Spanish rule in 1383 through marriage, although João I, founder of the Aviz dynasty, regained independence from Castile in 1385, assisted by England. Over the next two centuries Portugal became a major economic and colonial empire. The Aviz dynasty ended in 1580 when Spain occupied Portugal. During Spain's wars against the English and the Dutch, Portugal lost many of its overseas territories.

Portuguese independence was reestablished by João IV with help from England in 1640. Portugal's ties to England led to Napoleon I Bonaparte's occupation from 1807 to 1811. In 1910 the monarchy was overthrown in a revolution and a republic was founded.

- 1822** First constitution is adopted; people win sovereignty; Brazil, Portugal's most profitable colony, declares independence.
- 1826** Pedro I inherits thrones of Portugal and Brazil, then abdicates throne under condition of Constitutional Charter.
- 1844** *Frei Luis de Sousa* (Brother Luiz de Sousa), play by João Baptista da Almeida Garrett, opens, leading to growth of national theater.
- 1872** Sculptor António Soares dos Reis begins teaching at Porto Academy of Art at age 25.
- 1875** *Crime do Padre Amaro* (*The Sin of Father Amaro*), novel by José Maria Eça de Queirós, is published.
- 1884** Museu Nacional de Arte Antiga (National Museum of Old Art) is founded in Lisbon.
- 1911** Portugal becomes a republic; Manuel José de Arriaga is first president.
- 1914** Poet Fernando Pessoa adopts heteronyms (alter egos)—Alberto Caeiro, Ricardo Reis, and Álvaro de Campos—for his poems.
- 1914–18** During World War I Portugal sides with Allies.
- 1926** Military coup establishes dictatorship.
- 1928** Painter Maria Helena Vieira da Silva becomes naturalized French citizen.
- 1933** New State constitution is adopted.
Composer and musicologist Luís de Freitas Branco begins publishing periodical *Arte Musical* in support of international musicians.
- 1939–45** Portugal declares neutrality during World War II.
- 1949** Portugal joins North Atlantic Treaty Organization (NATO).
- 1955** Portugal joins United Nations (UN).
- 1971** Lisbon Municipal Orchestra is founded.
- 1974–75** Portuguese colonies of Guinea-Bissau, Mozambique, Cape Verde Islands, São Tomé and Príncipe, and Angola win independence.
- 1976** New constitution is adopted, and again in 1982.
- 1986** Portugal joins European Community (EC).
- 1993** Portugal becomes one of original 12 members of European Union (EU).
- 1998** Novelist José Saramago wins Nobel Prize in literature.

CULTURAL IDENTITY

Perhaps the essence of Portuguese cultural identity grew out of the country's proximity to the Atlantic Ocean, a sea road that has lured the inhabitants away from the land for fishing and trading from earliest times. The Atlantic coast of the Iberian Peninsula has been linked with coastal regions of France, Britain, Netherlands, Denmark, and southern Sweden from the Neolithic Age, forming a distinct Atlantic coastal culture as gift-exchange networks circulated ideas as well as goods to all of these regions. The large stone constructions that began to be built throughout the Atlantic coastal zone in the Late Neolithic are the first clear evidence of the wide-ranging contacts of people in what would become Portugal. Over the centuries overseas links grew ever stronger as trade in metals became important and

traders from the Mediterranean—PHOENICIANS and GREEKS—rounded the Iberian Peninsula to the Atlantic coast. The region became under the Romans the province of Lusitania; it was part of Visigothic territory and then was conquered by the Muslim Moors.

The international character of the region was reflected in the events that would create the state of Portugal, as knights from all over Europe traveled to Iberia to take part in the Reconquest of the land from the Moors. Henry of Burgundy, who had assisted the Crown of Castile, was awarded rule over Portugal. The fervor of the Reconquest fueled Portugal's subsequent overseas expansion. It is fitting that the very name of Portugal is derived from the name *Comitatus Portaculenis*, a military holding that extended around the old Roman seaport of *Portus Cale* (present-day Porto).

For centuries it has been a way of life for Portuguese to travel far from home, not only as fishermen, such as those who sailed to the far North Atlantic each year to spend a season fishing for cod, but also as explorers, adventurers, colonizers, and immigrants. It may be for this reason that a quintessentially Portuguese musical art form is *fado*, a type of solo singing accompanied by two guitars. *Fado* is imbued with a mood called *saudade*, a melancholy longing for the Portuguese homeland. A particular style of *fado* has been influenced by the music of Brazil, one of the foreign lands where the Portuguese ventured.

Praetutii (Pretuzi)

The Praetutii lived in the present-day province of Teramo in the northern region of Abruzzi in present-day east-central Italy. Along with the ADRIANI and PALMIENSI they are sometimes grouped ancestrally with the PICENES living to their north beyond the Tonto River, although it is generally believed that the Adriani, Palmiensi, and Praetutii spoke Italic dialects and the Picenes either an Illyrian or a pre-Indo-European dialect.

The classifications of the ITALICS and ILLYRIANS often overlap. The Praetutii are thought to have migrated from the mountainous regions into river valleys and toward the shore of the Adriatic in the eighth century B.C.E. Because of a similar Oscan dialect it has been theorized that they were descendants of the SABINES, who dominated much of central Italy between the eighth and sixth centuries B.C.E. The main town of the Praetutii was Interamna (modern Teramo), located at the confluence of the Vezzola and Tordino Rivers.

The Praetutii economy was based on farming and herding. In the fourth century B.C.E. the government of the Praetutii seems to have

shifted from one of monarchy to an oligarchy, that is, from rule by one to rule by a small group. The Praetutii were in conflict with the Picenes that same century, as the Picenes expanded and advanced toward the Adriatic.

During the Third Samnite War between the ROMANS and the SAMNITES, which began in 298 B.C.E., the Praetutii joined the Samnites and their allies, in an attempt to stop the Romans, who were also expanding. The Picenes aligned themselves with the Romans. After a bitter and violent campaign led by the Roman Manius Curius Dentatus the Romans and allies defeated the Samnites and allies in 290 B.C.E. At that time the Praetutii, along with the Samnites, became *civitas sine suffragio* of Rome, that is, citizens without the right to vote in the Roman assembly. The land of the Praetutii became the Roman province of Ager Praetutianus. Many Picenes eventually settled there, displacing and absorbing the Praetutii. In 232 B.C.E. the Romans divided the region among Latin-speaking settlers, and the Praetutii as a distinct group dropped from the historical record.

Preciani

The Preciani are classified as a Celtic tribe. They lived in Gaul in present-day southwestern France and are discussed as CELTS or GAULS. They surrendered to the ROMANS under Julius Caesar with the fall of Aquitania in 56 B.C.E.

Pretuzi See PRAETUTII.

Prussians (Pruzzi; people of Prussia)

The name Prussians refers to people living in the former state of Prussia, present-day north-central Germany. BALTS occupied the territory along the shore east of the Vistula (the Baltic-speaking BORUSSIANS are also called Old Prussians). Prussia was conquered by the primarily Germanic military and religious order the Teutonic Knights in the 13th century C.E. Prussia was under Polish control until 1701 (see POLES), when it became an independent kingdom. Its people, although ethnically mixed, maintained predominantly Germanic customs (see GERMANICS). Prussia became a strong military state during the reign of Frederick the Great (1740–86). At its widest extent it included West Pomerania, Silesia, the western part of present-day Poland, and by

Swabian (Germanic)

**Quadi (Quades; Quadians)**

The Quadi were a subgroup of the SUEBI, part of the Germanic ethnic complex (see GERMANICS). By the mid-first century B.C.E. they inhabited lands north of the Main River in present-day central Germany. By 40 C.E. they had settled in the region of Moravia in the present-day eastern Czech Republic, and in northeastern Austria and western Slovakia. To their west in the region of Bohemia were their allies, the MARCOMANNI. The Quadi held territory in northern Hungary as well and eventually expanded their domain southward to the Danube. Later in their history some among them migrated to present-day Spain.

ORIGINS

It is assumed that the Quadi became known by their name, possibly given to them by the Romans and meaning “four tribes” in Latin, after they separated from other Suebi and migrated eastward.

Quadi time line**C.E.**

101–106 Quadi warriors fight under Decebalus of the Dacians against Romans.

166–180 Quadi join Marcomanni against Romans in Marcomannic Wars.

373–375 Quadi battle Romans.

406–409 Quadi join Vandals and Alans in invasion of Iberian Peninsula.

**LANGUAGE**

The Quadi spoke a High German dialect known as Swabian.

HISTORY

The Quadi were persistent enemies of the ROMANS and carried out early raids north of the Danube. On the other hand, they, and their western neighbors the Marcomanni, may well have taken part in the trade the Romans had established with tribes north of the Danube in the first century C.E. and were, in effect, client states of Rome. This sort of relationship had a profound and ultimately destabilizing effect on many Germanic tribes, and probably on the Quadi as well, in that Romans promoted the emergence of elites and greater social stratification than had ever been known before, contributing to social tensions and both intra- and intertribal rivalries on a more significant scale than that of the simple cattle raids of the long Germanic past.

Allies in the Dacian Wars

In 101–102 and 105–106, possibly as a result of such tensions, the Quadi fought against Rome as allies of the DACIANS, a broad confederacy of peoples living in the uplands of Transylvania, who had developed a sophisticated, nearly urban state protected by the Carpathian Mountains and the Transylvanian Alps. One possible reason for Quadi involvement in the Dacian Wars may have been as an outlet for the

energies of young Quadi warriors whom the tribal elite, at the behest of the Romans, were trying to quell. The Dacians under Decebalus with their Quadi allies crossed the Danube, defeated and killed the Roman governor of Moesia, and ravaged the province. The Romans under the emperor Trajan counterattacked and eventually defeated Decebalus, who committed suicide with many of his nobles. After the Romans annexed Dacia many of the province's inhabitants migrated east.

Allies in the Marcomannic Wars

The experiences of the Quadi in the Dacian Wars may have convinced them of the iniquity of the Romans. Also the depopulation of Dacia may have made it a tempting territory to which to migrate. In any case the Quadi along with the Marcomanni were among the Germanic tribes whose movement across the Danube into Pannonia (roughly modern Hungary) and Dacia (roughly modern Romania) in the mid-second century prompted Roman campaigns along the northern frontier. In 166–175 the Romans under Emperor Marcus Aurelius waged successful warfare against them and the Marcomanni, as well as allies among the SARMATIANS, restoring the Danube frontier. Many Quadi men were conscripted into the Roman army for warfare against the BRITONS on the British Isles.

Quadi Raids in the Fourth Century

In the late fourth century Quadi were angered that the Romans were building fortifications in their homelands north of the Danube. They sent a deputation to complain in 373, but their leader, Gabinius, was killed. Along with their allies the Sarmatians they began attacking Roman posts and protected towns along the Danube frontier. The Roman emperor Valentinian I waged war successfully against them. At treaty negotiations in 375 he died of a stroke reportedly after being upset by the insolence of Quadi leaders.

During the same period some Quadi attempted to establish their own kingdom

south of the Danube in the Roman province of Pannonia but fell under the dominion of other invading peoples, such as the HUNS, HERULI, LOMBARDS, and VISIGOTHS.

Migration to Spain

The Quadi were the predominant Suebian group who invaded the Iberian Peninsula with the VANDALS and ALANS in 406–409 and settled in Spain (these Quadis are referred to in the historical record as Suebi). Their domain, originally consisting of the present-day Spanish provinces of La Coruña, Lugo, Orense, and Pontevedra, was known as Gallaecia. They expanded southward until pushed back by the Visigoths and finally defeated in 585.

CULTURE (*see also* GERMANICS)

During the first centuries C.E. the Romans engaged in large-scale trade with tribes north of the Danube and possibly with the Quadi. The Romans traded silver coinage, wine, olive oil, and luxury products for slaves and furs.

The Quadi are said to have worshipped their swords as gods. In later centuries they were under the influence of the non-Germanic steppe tribes to the east, such as the Sarmatian IAZYGES, who fought on horseback with lances.

The Quadi are noteworthy among the Suebi as allies of the Dacians in the Dacian Wars, allies of the Marcomanni in the Marcomannic Wars, and allies of the Vandals in their migration to the Iberian Peninsula.

Quariates (Quariates Sebusiens)

The Quariates are classified as a Celtic tribe. They lived in Gaul in the western Alps around present-day Vesant in southeastern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

R

RANIANS

location:

Island of Rügen in the Baltic Sea in Germany

time period:

Seventh to 13th century C.E.

ancestry:

Slavic

language:

West Slavic

Radimichians (Radimichi; Radimichy; Radimiches; Radimitches; Rodimichi)

The Radimichians are classified as a tribe of Eastern SLAVS. They arrived in the region between the Dnieper and Desna Rivers in present-day eastern Belarus and western Russia probably by the sixth century C.E. Their territory eventually extended to the Volga basin. In the second half of the ninth century with other Slavic peoples they fell under the suzerainty of the RUS of the Kievan Rus principality, paying tribute to them and serving under their princes in military campaigns, including the attack by Oleg on the BYZANTINES of Constantinople (modern Istanbul) in 907. The Radimichians, along with the DREGOCICHIANs, DREVLIANs, KRIVICHIANs, and POLOCHANIANs are considered ancestral to modern Belarusians (see BELARUSIANs: NATIONALITY) and Russians (see RUSSIANs: NATIONALITY).

Raeti (Rhaeti; Rhaetii; Raetians; Rhaetians)

The Raeti are classified as a Celtic tribe. They lived north of the Alps within the kingdom of Noricum in present-day Austria. They were part of a powerful coalition of tribes of CELTS in the second and first centuries B.C.E. with the AMBIDRAVI, NORI, and TAURISCI. Raetia (or Rhaetia) became the name of a Roman province in 15 B.C.E. and the people who lived there became known as Raetians or Rhaetians.

The FRIULIANs and LADINs are thought to be partly descended from them, and the Rhaetian Alps are named after them.

Ranians (Rügen Slavs; Rugians)

The Ranians are classified as a tribe of Western SLAVS. By the seventh century C.E. they lived on Rügen, an island in the Baltic Sea, now part of Germany. As were all western SLAVS they were called WENDs by early medieval FRANKs.

The Ranians eventually formed a principality whose political and religious center was at Arkona, a promontory on its north coast, where a pagan temple was built inside a fortress. In 1168 the Danes under Waldemar I conquered the Ranians and destroyed the fortress; they ruled the Slavic population until 1218 (see DANES: NATIONALITY). The German dukes of Pomerania then gained control (see GERMANs: NATIONALITY). It was also ruled by the Swedes (see SWEDES: NATIONALITY) and the Germans of Prussia.

The name Rugians is applied to both the Slavic peoples of Rügen and earlier Germanic inhabitants (see RUGII).

Raurici (Rauraci; Rauraki; Rauragues)

The Raurici are classified as a combined Celtic-Germanic tribe, that is, of both CELTS and GERMANICs. They lived west of the Rhine near present-day Basel in northwestern Switzerland. They joined the HELVETII in their migration to

Celtic peoples utilized gold coins in commerce. (Drawing by Patti Erway)

the west in 58 B.C.E. The ROMANS under Julius Caesar defeated them at the start of his conquest of Gaul. Some tribal members fought as allies of the ARVERNI under Vercingetorix against the Romans in 52 B.C.E. Augusta Rauricorum on the site of present-day Augst in Switzerland became a *civitas* capital in Roman Gaul, and they are further classified as GAULS.

Redones *See* RHEDONES.

Regni

The Regni are classified as a Celtic tribe. They lived in Britain in the present-day counties of East Sussex and West Sussex, England, and are discussed as CELTS or BRITONS. After the suppression by the ROMANS of the British rebellion led by Queen Boudicca of the ICENI in 60–61 C.E. King Togidubnis of the Regni, probably having helped quell the Iceni, became a client-king of the Romans, and may have ruled other tribes as well. He promoted the growth of towns and of municipal self-government along the lines of towns among the GAULS. Noviomagus (modern Chichester) became the Regni *civitas* capital during the Roman occupation; an inscription found there calls him Great King of Britain.

Simon Bean. *The Coinage of the Atrebates and Regni* (Hatfield, Mass.: Oxbow, 2000).

Remi (Remes)

The Remi are classified as a Celtic tribe. They lived in Gaul around present-day Reims in northeastern France at least by the first century B.C.E. and are discussed as CELTS or GAULS. They were among the tribes Julius Caesar considered BELGAE. The Remi were faithful allies of the ROMANS, supporting various campaigns. Durocortorum on the site of Reims became a *civitas* capital in Roman Gaul; Reims takes its name from the tribal name.

Rhaeti *See* RAETI.

Rhedones (Rheidones; Redones; Redons)

The Rhedones are classified as a Celtic tribe. They lived in Gaul around present-day Rennes in northwestern France and are discussed as CELTS or GAULS. The ROMANS referred to them along with other tribes as Armoricans, that is, tribes living between the Seine and Loire on or

near the Atlantic Ocean in the region of Armorica (roughly present-day Brittany and eastern Normandy). The region was occupied by forces under Julius Caesar in 55 B.C.E. Condate Redonum on the site of Rennes became a *civitas* capital in Roman Gaul; Rennes takes its name from the tribal name.

Ripuarian Franks *See* FRANKS.

Robogdi (Robogdii)

The Robogdi are classified as a Celtic tribe. They lived in northeastern Ireland (the present-day county of Donegal in the Republic of Ireland and the district of Londonderry in Northern Ireland) at least by the first century C.E.; they are discussed as CELTS or IRISH. Some among the DÁL RIATA or Dalriada, who eventually settled in present-day northwestern Scotland by the fourth century, are thought to be of the Robogdi.

Romanians: nationality (Rumanians; people of Romania)

GEOGRAPHY

Romania is bordered to the east by Moldova, to the north by Ukraine, to the south by Bulgaria, to the southwest by Serbia and Montenegro, and to the west by Hungary. The Black Sea touches Romania in the southeast. Romania's total area is 91,700 square miles. The Carpathian Mountains, including the Transylvanian Alps in the south, run from northern to southwestern Romania in a crescent shape. Bukovina, a forested region, is found in the eastern Carpathians. Romania's highest peak, Moldoveanu, measures 8,343 feet.

Beyond the mountainous region lies the Tisza Plain in the west; hills, small plateaus, and arable lowlands make up the remaining terrain. The Danube is the principal river of Romania, running along the Bulgarian and Serbian and Montenegrin frontier. The Prut River forms the border with Moldova. Romania's largest lake is Lake Razelm, part of the saline lagoon on the coast of the Black Sea.

INCEPTION AS A NATION

The name Romania is derived from that of the ROMANS who conquered earlier peoples and

Turkics; Vlachs

demographics:

Romanians make up about 90 percent of the population and Hungarians about 7 percent; remaining minorities include Rroma, Ukrainians, Germans, Ruthenians, Russians, Serbs, Croats, Turks, Bulgarians, Tatars, and Slovaks.

Romanians: nationality time line**C.E.**

- 1599** Michael the Brave, a Walachian prince, fights Ottoman Turks, uniting Moldavia, Walachia, and Transylvania.
- 1601** Michael the Brave is assassinated; Ottomans regain Moldavia, Walachia, and Hungary annex Transylvania.
- 1711** Princes of Moldavia and Walachia create alliance with Peter I of Russia.
- 1774** Under treaty of Kuchuk Kainarji Ottomans cede Moldavia to Russia; Austria acquires northern Moldavia and renames it Bucovina.
- 1812** After renewed warfare Russia controls Bessarabia, and Ottomans control western Moldavia and Walachia (Danubian Principalities).
- 1822** Turks grant Romanians leadership of principalities.
- 1836** National Library is founded in Bucharest; in 1861 it is moved to University of Bucharest.
- 1844** Vasile Alecsandri publishes collection of Romanian folk songs.
- 1848** Romanians rebel against boyars and foreign control.
- 1853–56** During Crimean War Austria drives out Russian troops from Romania; Congress of Paris unites Walachia, Moldavia, and southern Bessarabia (present-day eastern Moldova), now independent from Ottomans and Russia.
- 1861** Painter Nicolae Grigorescu wins scholarship to study in Paris.
- 1861–62** Moldavia and Walachia are officially united as Romania.
- 1863** Painter Theodor Aman becomes director of National School of Fine Arts in Bucharest.
- 1865–68** Bogdan Petriceicu Hasdeu compiles *Arhiva istorica a Romaniei* (Historical archive of Romania), collection of historical documents.
- 1875** Poet Mihai Eminescu and short story writer Ion Creanga meet.
- 1878** By Congress of Berlin ending final Russo-Turkish War Ottomans recognize united Moldavia and Walachia as Romania; southern Bessarabia regained by Russia.

who in turn were displaced by tribes of GERMANICS and followed by tribes of SLAVS. Romania was also invaded by steppe peoples such as the HUNS, AVARS, and PECHEWEGS, and MONGOLS. The BYZANTINES also established a presence there. In the 13th century C.E. Hungarian expansion forced many VLACHS to relocate south and east of the Carpathian Mountains, establishing the principalities of Walachia and Moldavia. These principalities were vassals to either Hungary or Poland until their conquest by the Ottoman Turks (see TURKICS) in the 16th century. Michael the Brave, who ruled in 1593–1601, gained independence from the Ottoman Empire and consolidated control over the three Romanian lands, Transylvania, Walachia, and Moldavia. In 1601 Transylvania fell to Hungarian rule and the Ottoman Empire regained control over Walachia and Moldavia.

Revolts broke out in the principalities in 1821; Russia established a protectorate over the two principalities, eliminating Ottoman con-

trol. The Treaty of Paris in 1856 ended the wars between Russia and Turkey and confirmed Walachia and Moldavia, now united with Bessarabia, as an independent tributary of the Ottoman Empire. In 1862 the principalities were unified as a hereditary monarchy under the name of Romania and received international recognition at the Congress of Berlin in 1878.

Romania acquired Transylvania from Hungary and officially incorporated Bessarabia at the end of World War I (1914–18). During World War II (1939–45) Hungary reclaimed Transylvania and then returned it to Romania while ceding some territory to the Soviet Union (USSR). In 1947 Romania abolished its monarchy and declared itself a Communist republic. Romania renamed itself the Socialist Republic of Romania in 1950s, breaking ties with the Soviet Union. The collapse of Communist power in 1991 allowed the creation of Romania's current democratic form of government. The same year Moldova, formerly the Moldavian Soviet Socialist Republic, also gained independence.

- 1881** Romania is proclaimed kingdom.
- 1884** *O scrisoare pierduta* (A lost letter), play by Ion Luca Caragiale, opens.
- 1886** George Enescu performs violin concerto in Paris as teenager.
- 1904** Novelist Mihail Sadoveanu moves to Bucharest and begins literary career.
- 1906** Sculptor Constantin Brancusi first exhibits his work in Paris.
- 1914–18** During World War I Romania maintains neutrality until 1916, entering on side of Allies; peace treaty, ending war, allows for Romanian expansion.
- 1920** Bessarabia unites with Romania under Treaty of Paris; Romania enters alliance, Little Entente, with Czechoslovakia and Yugoslavia.
- 1938** King Carol II becomes dictator.
- 1939–45** During World War II Romania first sides with Germany, then with Soviet Union.

- 1990** Communist regime overthrown; first free elections held.
- 2004** Romania joins North Atlantic Treaty Organization (NATO).

CULTURAL IDENTITY

The physical heart of Romania is its mountain region: the Transylvanian Alps curving northward at their eastern end into the Carpathian Mountains, important since the Bronze Age for their mining and metalworking industries. Although the Romanian language is derived from Latin as are other Romance tongues, the Roman presence in the region, where they established the province of Dacia, was relatively brief, only a century and a half, and at a time late in the Roman Empire's history when its economic influence in the provinces was dwindling. The Latin language took hold in Dacia because many of its inhabitants (probably mostly the elite class) left rather than suffer Roman rule, and the region was colonized by Romans. The native DACIANS had developed a unique theocracy centered on the mountain sanctuary settlement of Sarmizegethusa. The Dacians' ancient roots were Thracian. The Dacian state lay in the region called today Maramures; folk beliefs here and in the Transylvanian Alps in general (such as the

belief in vampires) may have distant roots in the powerful Dacian religion. In general the spirituality of the Romanian mountain population shows features of the original Thracian background but also the influences of the Eastern and Western civilizations.

Romanians remember military heroes of the past. One of these, Stephan the Great (of Moldavia), led a great struggle against the Ottoman Empire in the 16th century. Michael the Brave (of Walachia) also led a briefly successful uprising against the Ottoman Turks in the 16th century. He is a national hero as the first to combine the three territories that were to form Romania.

Among Romanians today great emphasis is placed on multiculturalism among the many ethnic groups who settled the countrys during its long history. The Vlachs, the Slavs, the Ottoman Empire, and the Austro-Hungarian

Empire have all left their marks and have had an influence on the cultural identity. Ethnic communities in Romania include Hungarian, German, Polish, Slovak, Ukrainian, and Serbian. The importance of ethnicity in Romania, as in other countries that were under Soviet domination, with its attempt to do away with religion and with customs of the past, is to some extent a “rebound” from past oppression. The Romanian mountain area was never collectivized; the farmers strove to preserve their ancient agricultural and especially cultural traditions. Important among these was a method of transhumance, the so-called short swing in the summer, when more than 4,000 sheepfolds are created. Preserving their cultural identity was a silent form of resistance to the aggression of the political system.

Romans (Latins; Quirites)

The Romans are classified as a subgroup of ITALICS, Indo-European peoples of the Italian Peninsula. They are named after the city of Rome (or Roma) on the Tiber River. The Roman Empire at its greatest extent in the second century C.E. included all of southern Europe, much of the British Isles, as well as much of northern Africa and southwestern Asia. Over the centuries peoples of varying ancestry were considered Roman. Some among them are grouped among the BYZANTINES of the Eastern Roman Empire.

ORIGINS

The LATINs, speakers of dialects of Latin, are considered the primary ancestors of the Romans. It is believed that the first Indo-European-speaking migrants, the most ancient ancestors of the Italics, crossed the eastern Alpine passes into the plain of the Po

River sometime around 250 B.C.E., then spread southward. Later Indo-European groups may have immigrated from elsewhere in about 1200–1100 B.C.E. during the Late Bronze Age, when many peoples were on the move in the Mediterranean region, and settled other

ILLYRIANS, developed into distinct cultures in later centuries, influenced by the Italic-speaking peoples.

During the Italian Iron Age, which began about 900 B.C.E. and lasted until 580 B.C.E.,

the Romans and Etruscans progressed from the Iron Age into more advanced societies of the Archaic and early republic periods, during which true cities developed among them, whereas other peoples maintained a tribal

The Roman Empire at Its Greatest Extent, 117 C.E.

Iron Age society and way of life over the next centuries.

The Romans were just one people in Latium, sharing the territory with other Italic tribes, which included the AEQUI, HERNICI, MARSI, and VOLSCI. Toward the Apennines east of Rome were the SABINES and UMBRIANS. To the northwest of the Romans lived the FALISCANS, a people who, despite speaking a dialect of Latin, were closely intertwined with the Etruscans, the inhabitants of Etruria. The Etruscans of that time had already established themselves as the largest and most thriving civilization in Italy, their 12 cities joined in a defensive league.

Latium in ancient times was the land in western Italy bounded on the northwest by Etruria, on the northeast by Samnium, on the east by the Apennine Mountains that bisect the Italian Peninsula, on the west by the

Tyrrhennian Sea, and on the south by the plain of Campania. Today ancient Latium makes up a large part of the Italian state of Lazio. Originally Latium referred to the dwelling place of the Latins and was a much smaller area; after Rome's expansion the name included the territory of subjugated Latin tribes. Latin probably takes its name from the region of Latium, from the Latin root meaning "side," probably for the long, flat, but undulating terrain of the main plain that occupies the central part of Latium, now called the Campagna di Roma.

LANGUAGE

The Latin language entered Italy in some form from Europe before recorded history, probably around 1000 B.C.E. Latin is an Italic language, a subfamily of Indo-European, the root language of ancient Greek, Sanskrit, and

Germanic. Latin was part of a major subgroup of the Italic languages: the Latino-Faliscan (or Latinian), which comprises various dialects of the Latin and Faliscan languages. The Latin that survives was spread by the advance of the Romans and replaced the other dialects of Latinian, of which Latin was the one spoken in Rome. Latin was influenced by Etruscan, a non-Indo-European tongue, and by Greek. The first written evidence of Latin is in Roman texts of the third century B.C.E. although there are inscriptions in Latinian from the sixth century B.C.E.

HISTORY

Founding of Rome

Legend says the city of Rome was founded by Romulus (and took its name from him) one of twin orphaned brothers who had been raised by a she-wolf, around 753 B.C.E. Romulus in legend and Remus were the grandsons of the king of Alba Longa, one of the oldest cities in Latium; when their grandfather was deposed by his brother, the children were thrown into the Tiber to die. The brothers were rescued and raised by the she-wolf. After restoring their grandfather to his throne, they founded a new city on one of the hills that make up Rome. Romulus walled the city. When Remus crossed the wall, Romulus killed him and became Rome's first king. To populate his city and to ensure it would grow, Romulus contrived to steal the women of the nearby Sabines.

The linking of the first Roman to a wolf and the taking of the Sabine women for Roman wives link the Romans to the inhabitants of the Apennines, and their method of expansion, called *ver sacra* (holy sacrifice). When a tribe had expanded beyond the resources of its area, part of the tribe would migrate, following a sacred animal and taking its name. With this founding myth Rome aligned itself with its neighbors to the west and east. From the founding of Rome onward, however, the major influences on Rome were her neighbors to the north, the Etruscans.

After Romulus's founding of Rome, the king who supposedly succeeded him was Numa Pompilius. Numa had been chosen despite being a Sabine and residing in the Sabine city of Cura. Roman citizens took their name from Numa's town of Cura, calling themselves Quirites. Unlike Romulus, who was prone to excess, Numa was regarded as a just and religious man. He supposedly founded many of Rome's traditional religious obser-

vances and established the Roman calendar, which divided festival from working days.

Under its kings Rome supposedly expanded slowly within its boundaries, building walls, draining the marshes of the lowlands to build a city center between the seven hills called the forum, which was the focal point of Roman economic life. Legend has it that the Romans branched outward and conquered the Latin city of Alba Longa, transferring its population to Rome. Afterward they established a colony at Ostia. Finally in the reign of the Etruscan king Tarquinius Superbus Romans invaded and absorbed the neighboring town of Gabii. There was no substantial territorial expansion, nor much dealing with foreigners beyond Rome's immediate Latin, Sabine, and Etruscan neighbors, until the very end of Tarquinius Superbus's reign.

The first Etruscan king of Rome was supposedly Lucius Tarquinius Priscus. In 616 B.C.E. Priscus, who had emigrated to Rome, become a citizen and, elevating himself to high political power, either seized the throne or was elected to it by a group of Etruscan families. He was assassinated by a group of high-class Romans who hoped to reduce the kingship to a ceremonial post. The plot was foiled and Servius Tullius, Priscus's son-in-law, became king.

After a long reign in 534 B.C.E. Priscus's son, Tarquinius Superbus (Tarquin the Proud), supposedly murdered Tullius and assumed the

The legendary Romulus and Remus and a she-wolf are depicted in this sculpture, located in the Capitoline Museum in Rome. (*Library of Congress, Prints and Photographs Division [LC-USZ62-97807]*)

kingship. He was an absolute monarch, and the Etruscans dominated the city. In 510 B.C.E. his son, Sextus, supposedly raped the wife of Collatinus, a Roman aristocrat. In shame she killed herself, after recounting her injury to her husband.

According to the historian Livy of the first centuries B.C.E. and C.E. this was a motivating event for the Romans tired of living under a foreign king who thought himself above the law. The Romans banded together under the Roman nobleman Lucius Junius Brutus and drove Tarquin the Proud and his son from the city in 509 B.C.E. The Romans refused to reestablish the monarchy and, under the rule of the senate and two consuls, established themselves as a republic.

How much truth there is to this account is extremely questionable. It is told from the vantage point of Roman triumphalism, after the ascendancy of Augustus established the Roman Empire, while he glorified the ideals of the republic. It is known that the Etruscans expanded and gained influence throughout the region during the sixth century B.C.E. Most probably there were Etruscan kings of Rome. By 509 B.C.E., however, the Etruscans had been squeezed by CELTS moving in from the north, and by GREEKS colonizing the south. The conditions were worsened by the weak bonds among Etruscan cities and internal strife. Romans had been highly influenced by Etruscan culture but retained a Roman identity and Roman institutions, especially the senate. They took advantage of the Etruscans' weakening to regain their independence. The story has been lost as a result of a lack of documentary evidence and obscured by history written centuries after the event with a clear political bias.

Also in 509 B.C.E. the Romans possibly made a treaty with the CARTHAGINIANS, a powerful seagoing people of North Africa, who controlled maritime trade in the western Mediterranean and had outposts on Sicily and Sardinia. The Carthaginians would generate Rome's first real opposition when the Romans expanded their control over Italy, but for now Rome represented no threat to the Carthaginians, who were concerned with the Etruscans. The treaty signed by the Romans protected their territorial rights in Latium and allowed them to trade in Sicily and Carthage, with the provision that a Carthaginian representative must be present.

In the face of the successes of the Etruscan, the people of Latium established themselves into a league for defense. In the sixth century

B.C.E. the league consisted of 30 cities. They were also joined because of shared religion and culture. There were agreements among the cities to maintain trade, allow for intermarriage, and let citizens move from city to city. Rome had originally been a member of this league but later tried to control it.

In 493 B.C.E. the Romans signed a treaty with the league, for mutual defense and sharing of plunder. At the time they probably felt more threatened by the Etruscans, as well as the growing alliance between the Oscan-speaking Volsci and Hernici, and were more comfortable with those tribes that spoke dialects of Latin. Other Latins most probably viewed the Romans askance, however, wary of their desire to take control of all Latium.

The Romans inherited a warlike spirit from the Etruscans. During the monarchy and early republic, the army was made up of citizens, who were called up as needed, supplying their own armor. Kings used military adventures as a way to quell popular dissatisfaction with their rule. After the establishment of the Roman republic warfare continued to be popular among the elite. What little history there is of the monarchy and early republic that escapes the patriotic tinge of the Roman historians reveals that the Romans were the primary aggressors throughout this time.

In 486 B.C.E. a period of continued warfare began between the Romans and the Aequi and Volsci. In 457 B.C.E. the Roman army was routed at the hands of the Aequi at Mt. Algidus. In Roman legends the Roman general Cincinnatus was called off his farm to lead the Romans as dictator and rescue their army. Sixteen days later, his mission accomplished, Cincinnatus is said to have resigned and returned peacefully to the plow. In 431 B.C.E. the Roman army fought another engagement with the Aequi, at the pass at Mt. Algidus, and this time were entirely triumphant, under the leadership of the dictator Aulus Postumius Tubertus.

Conquest of Veii

The culmination of Rome's competition with the Etruscans occurred in the decades of long struggle with the Etruscan city of Veii in the fifth and early fourth centuries B.C.E. It began in a competition to control territory between Rome and Veii, particularly the city of Fidenae. Rome captured this city in a siege from 437 to 435 B.C.E. then turned attention to Veii itself. The nominal unity of Latin peoples gave Rome an advantage over the Veiiantanes, who could

not count on aid from other Etruscan cities. After a costly 10-year siege the Romans took Veii in 396 B.C.E. and destroyed it. The destruction of Veii put vast new landholdings into Roman hands, increasing the amount of territory held by the state (called *ager Romanus*, Roman territory) by almost one-half. Much of this land was allotted to Roman citizens, increasing revenues to people and state from farming. This made the Roman state, which had already been a match for the whole Latin League, overwhelmingly predominant in resources. Before the Romans could establish their hegemony over the Latins, however, their attention was diverted suddenly to another and very different sort of foe, the Celts.

Invasion of Celts

The historian Livy places the migration of CELTS—GAULS, the Roman name for Celtic tribes north of Italy—into Italy as early as 600 B.C.E., but this date has not been proved archaeologically. There is evidence of some movement of Celtic groups through Alpine passes to the Lombard lake district in the sixth and fifth centuries B.C.E.; typical Celtic burials have been found there. But the main thrust occurred at the end of the fifth century B.C.E. as successive waves of Celts arrived, each wave bypassing the territories of their brethren to move ever farther southward. The earliest to arrive conquered the territory around Milan; others moved on to Brescia and Verona, to the Lake Maggiore region, and south of the Po River. Those among the last to arrive went to Umbria and the Adriatic coastal zone.

For a time the Apennine Mountains served as a barrier to further movement. Meanwhile to the south of the Apennines the Romans were engaged in acquiring the territories of the Etruscans. No sooner had their annexation been completed, however, than Celtic war bands appeared, having burst through the Apennine barrier. They overran the former Etruscan cities with an impetus that quickly propelled them all the way to the gates of Rome itself in about 389 B.C.E.

This was a defining moment in Roman history, as the proud might of Rome fell before a military force and a type of humanity such as they had never confronted. A Roman senator of the time called the Celts wild beasts who could not be reasoned with as one could with fellow members of Mediterranean civilization. The primal trauma produced in the Roman psyche by the Celtic onslaught is part of what would lie behind Julius Caesar's conquest of Gallic

France in the first century B.C.E.: the need to extend the Pax Romana as far as possible into barbarian territories to prevent the recurrence of such a catastrophe.

The Celts laid waste much of Rome outside the city itself, which held out for seven months until the Celts departed. Raiding continued throughout the Italian Peninsula for some 60 years, during which many Celts became employed as mercenaries for various local tyrants. By the 330s B.C.E. the raids had largely ceased, and in 332–331 B.C.E. the Romans concluded a treaty with one of the tribes, the SENONES.

Rome's Growing Power

In 358 B.C.E. the Latin League had been reorganized under Roman leadership. In 348 B.C.E. the Romans signed a treaty with the Carthaginians (perhaps a second treaty if that of 509 B.C.E. is fact) in which they were allowed supremacy over Latium. In 343 B.C.E. the Romans intervened in a conflict between the SAMNITES, who lived in the Apennine mountains, and the CAMPANI and SIDICINI. The Romans sided with the Samnites; the Campani were supported by the other members of the Latin League, who wished mainly to be treated as Rome's equals. The Roman army defeated the Campani and Sidicini easily in 341 B.C.E. and afterward marched through Latium, stamping out Latin resistance. In 338 B.C.E. the Romans dissolved the Latin League.

Rome eliminated some of the ancient Latin rights regarding commerce, requiring that individual communities be tied directly to Rome, instead of binding together economically with each other. The nearest Latin communities became part of the Roman state, while others remained independent but put their troops under Roman command. Finally the least Roman of the cities were required to provide troops and pay taxes but had no say in the government. This last kind of citizenship, and the generally enforced "alliance," became the norm for Roman dealings with neighboring tribes and would lead to the first crisis that eventually solidified Roman identity with all of peninsular Italy.

The Romans began to move into the territories of the AURUNCI and Sidicini and finally established a Roman colony across the Liris River, in the territory of the Samnites. The Samnites responded by putting troops in the Greek city of Naples. The Romans expelled the Samnites from Naples in 326 B.C.E., thereby beginning the Second Samnite War. The

Romans were soundly defeated at Caudine Forks in 321 B.C.E. and did not renew their attack until 316 B.C.E. The Romans suffered some further upsets but regained control of the Liris River and built a military road, the Via Appia, into Campania.

The Aequi and Hernici revolted, along with Marsi, FRENTANI, MARRUCINI, PAELIGNI, and VESTINI. The Etruscans, now severely weakened, joined the war in 311 B.C.E., but were quickly quelled. After Roman victories in 305 and 304 B.C.E. all but the Vestini had been defeated and signed alliances with Rome. The Vestini gave up in 302 B.C.E. Sporadic fighting continued, and in 298 B.C.E. the Third Samnite War broke out. The Samnites joined forces with the Umbrians, who had until then avoided contact with Rome. The Romans joined battle with the Samnites, Umbrians, and Celts at Sentinum in Umbria in 295 B.C.E., with an army of about 35,000 troops and an equal number of allies. The Romans' opponents were crushed.

Around the same time the Romans moved southward into territory in Magna Graecia, the area of Italy controlled by Greek colonies. The colonies had been weakened by internal conflict and by raids from Italic people. The Romans made a treaty with the city of Tarentum, promising not to send ships into Tarentum's waters, but violated the agreement in 282 B.C.E. The citizens of Tarentum sank some of the Romans' ships and expelled the Romans from Thurii, a city they had garrisoned, and replaced the oligarchic government the Romans had established there with a democracy. The Tarentines asked the Greek king Pyrrhus of Epirus for support, and in 280 B.C.E. he landed in southern Italy from Epirus, with 35,000 troops and 20 elephants. Pyrrhus defeated the Romans at Heraclea, and then with the support of the Italian Greeks, Samnites, and LUCANI, he marched on Rome. Defenses around Rome were too secure for the forces of Pyrrhus, and he returned south. After defeating the Romans outside Rome one more time, Pyrrhus asked for liberty for the Greeks and Samnites. The Romans rejected his offer, and Pyrrhus went to Sicily, to help the Sicilian Greeks against the Carthaginians. By 275 B.C.E. the Romans had placed two armies to guard against a southern attack. Pyrrhus returned to Greece. (His heavy losses of men in victory against the Romans gave rise to the expression *Pyrrhic victory*.)

By 260 B.C.E. the Romans had consolidated their control over all of Etruria and southern Italy: They had conquered Italy. Through three

Samnite Wars the Romans tested, developed, and fortified their military machine. They conscripted troops from their Latin "allies," and by the time they subdued the Samnites they had an army that was to spread Roman influence throughout the entire Mediterranean world.

The First Punic War

In the mid-third century B.C.E. it seemed that Rome's expansion of power had gone as far as possible. Although Rome was clearly the dominant power on the Italian Peninsula, no other people or city able to challenge Roman arms, the Celtic presence in the north presented a formidable barrier. The other power bloc of the time were the Carthaginians, with whom Rome had treaties; furthermore, Rome had nothing in the way of a navy or naval tradition, and the Carthaginians were as dominant in the western Mediterranean as Rome was in Italy. Significant conflict with Carthage thus seemed unlikely. However, the fact that a relatively insignificant incident ignited such a conflict shows that, in reality, there were latent but powerful forces in Rome that would make a showdown with Carthage all but inevitable.

The incident that brought on the First Punic War occurred after a group of Italian mercenaries, who called themselves the Mamertines (after the Oscan name for Mars, the god of war), seized the city of Messana (modern Messina), which overlooked the straits between Sicily and Italy. This aggression violated a precedent set when the senate had condemned another group of Roman citizens who had attempted to take a Greek city. Thus this quasi-illegal action of the Mamertines should have prevented them from receiving aid or comfort from Rome. Nevertheless, when in 265 B.C.E. the ruler of Syracuse, Hiero I, tried to retake the city, some of the Mamertines appealed to Rome for help. While the senate debated, others of the Mamertines asked Carthage for help. When Carthage answered by sending a garrison to Messana, Carthaginian control of Messana was too close to Rome for comfort and threatened control of the straits. At the same time the consuls and others of consular rank saw in a war with Carthage a way of expanding their personal political horizons and becoming rich through plunder. They argued powerfully, addressing the assembly of citizens, that war was necessary. They were able to sway the assembly to their way of thinking, and they voted for war (the only time in Roman history when war was declared by the assembly rather than the senate). In 263 B.C.E. both consuls led

a large force south toward Messana. The Carthaginian garrison withdrew, but Carthage in alliance with Syracuse laid siege to the city.

When the siege failed Hiero switched sides and, along with a number of other Sicilian cities under his influence, allied himself with Rome. The Romans began taking advantage of their foothold by attacking Greek cities allied with the Carthaginians. In this they had only limited success because, they concluded, they had no navy able quickly to transport troops and supplies to battlefronts around the island. They therefore determined to assemble a navy of their own.

Rome Becomes a Naval Power

The decision to build a navy is a striking example of Rome's determination and self-confidence, since the city had no naval tradition, either in building warships or in fighting naval battles. This is all the more remarkable in that most peoples of antiquity were rigidly tradition-bound, their societies and technology slow to venture beyond the habits of their forebears.

The Romans overcame the first of their deficiencies simply, by imitating Carthaginian shipbuilding techniques and adopting their ship types as models. They copied the design of a captured Carthaginian ship. As the first 100 quinqueremes (five-decked ships) were built, in a period of only 60 days, according to the second-century B.C.E. historian Polybius, crews were trained on land. That the Roman ships were heavier and less maneuverable than those of the Carthaginians was a considerable disadvantage.

The Romans tried to overcome their ignorance about fighting at sea by building ships more suited to the hand-to-hand combat to which they were accustomed. They devised a wooden gangway bearing a spike that could be hooked over the gunwale of an enemy ship so that soldiers could cross over into it (its shape inspired the nickname *corvus* for crow).

Remarkably enough in 260 B.C.E. at the Battle of Mylae a slightly numerically superior Roman fleet managed to gain a victory over the Carthaginians, capturing and sinking many of the latter's ships. However great a moral victory this was, however, Rome was unable decisively to gain the upper hand over the Carthaginians in and around Sicily. Such was Carthage's wealth that they easily replaced ships sunk or captured by Romans.

Rome then decided that invasion of Carthage was the road to victory, assembled a huge invasion force, and sailed to Africa in 257

B.C.E. A great struggle then ensued, each side expending enormous amounts of men and wealth and neither side able to defeat the other. A feature of the war was the great loss of Roman ships and men, often in gales, which was probably a consequence of Roman seafaring inexperience. In 255 B.C.E. a Roman fleet caught in a gale lost 184 of 264 ships when they were dashed against the rocks near Camarina in southern Sicily. Many tens of thousands were drowned, and the historian Polybius calls it the greatest naval disaster known to him. The Romans sustained staggering losses from their numerous naval defeats. The Roman census of 247 B.C.E. showed that the male population of Rome had declined by 17 percent since the start of the war. Roman determination in the face of such losses (and faith in its inherent superiority to the Carthaginians) is symbolized by the story of Marcus Atilius Regulus, a Roman consul captured by the Carthaginians. When he went to Rome as part of a prisoner exchange proposed by the Carthaginians, he argued against it in the senate, saying that while the Romans could afford the loss of manpower represented by the captives, the Carthaginians could not, and hence it was in Rome's interest to retain the Carthaginian captives. Accordingly he was returned to Carthage, where he was tortured to death.

Paradoxically Rome finally overcame the Carthaginians in 242 B.C.E. in a naval victory; the Carthaginians had neglected their navies in favor of building up armies to hold territory in Africa. The ensuing peace treaty required the Carthaginians to evacuate Sicily and surrounding islands that they held and to pay large indemnities to Rome.

Other Campaigns

The victory over the Carthaginians gave Rome the opportunity to pacify the norther part of Italy. In the 230s B.C.E. the Romans engaged in five campaigns to subdue the Ligurians, a people on the northwest shore of present-day Italy near Genoa, as well as in present-day southern France and Corsica. The Celts, too, were becoming restive, attacking Ariminum (a Latin colony founded in 268 B.C.E. on the Adriatic to guard against them.) Dissension among the Celts prevented them from completing their assault. When they again tried to move southward, they were devastatingly defeated at the Battle of Telamon in 225 B.C.E., with some 40,000 warriors killed. From 224 to 220 B.C.E. Roman armies waged campaigns against the

tribes of Cisalpine Gaul (the area between the Po and the Alps). In 218 B.C.E. two Latin colonies (Placentia and Cremona) were established on the Po to guard against invasion. The Celts were subdued for the time being, but resentful and awaiting their chance for revenge.

During the period between the First and Second Punic Wars the Romans also had to deal with the Illyrians, a people who lived to the northeast of the Italian Peninsula along the Adriatic Sea. By the 230s B.C.E. they had developed a state that encompassed parts of northern Greece (Epirus and Acarnania). Their acts of piracy in southern Italy drew the attention of Rome, and the Romans defeated them in 229–228 B.C.E. In the north of Illyria the Romans set up an Illyrian by the name of Demetrius as an allied king. In the south (the area just north of Epirus and closest to Italy) they set up a kind of protectorate by which local towns did not become formal allies but had to provide troops on demand. They thus became *amici*, “friends,” of the Roman people. Demetrius in the north proved troublesome, however, attempting to expand his territory beyond the agreed limits. In 219 B.C.E. a Roman expedition quickly expelled him.

The Second Punic War

Even the Romans lacked sufficient strength and organization at this time to engage in war on many fronts as they would do later. While they were occupied in Illyria, the Carthaginian leader Hannibal attacked Saguntum, a Greek town on the central Mediterranean shore of present-day Spain south of the Ebro. The Carthaginians, economically and militarily rejuvenated under Hannibal's father, Hamilcar, determined to push back against Roman power. A brilliant war leader, Hannibal believed that the only way to break Roman might was to carry the war to Italy and destroy as much of the Roman military and manpower as possible. His attack on Saguntum was part of this larger strategy.

While he prepared to march north and then east to Italy in retaliation for the capture of Saguntum in 219 B.C.E., the Romans sent out a two-pronged assault against the Carthaginians. The consul, Publius Cornelius Scipio, was to take an army to Spain via southern Gaul; another force was to invade Africa via Sicily. Hannibal's forces managed to evade Scipio's army and moved east toward the Alps. His army consisted of some 90,000 infantrymen, 12,000 cavalry, and 37 elephants, a number that steadily dwindled as a result of the

dangers of the route, which included crossing the Pyrenees and the Rhône River, and skirmishes with local tribesmen. By late October 218 B.C.E. he had reached the Alps and took two weeks moving his army (including elephants) over the mountains into Italy. Although he had lost about half of his force, his army was augmented by the Celts of Cisalpine Gaul, eager for revenge on the Romans.

Hannibal made a deliberate policy of appealing to local peoples who had been defeated by the Romans by liberating those who had been captured as part of Roman forces, retaining Roman prisoners only. He was greatly successful in inflicting severe defeats on Roman armies sent against him, while himself sustaining few casualties.

Meanwhile Roman strategists differed as to the best way of handling Hannibal. One strategy, called Fabian tactics after its proponent, Quintus Fabius Maximus, consisted of avoiding direct battle with the Carthaginians but maintaining close contact to limit their mobility, with the idea that the deeper into Roman territory they penetrated, the more precarious their position would become. At the end of Fabius's term of office the two consuls for the next year, 216 B.C.E., subscribing to an offensive strategy, assembled a large army and confronted Hannibal directly at Cannae in Apulia. The Carthaginian cavalry routed that of the Romans and attacked the larger force from the rear. Surrounded on all sides the Roman army was annihilated. Only some 15,000 escaped death or capture. Deaths may have totaled 50,000. It was one of the most dire defeats in Roman history.

After this Hannibal maintained his policy of inciting cities against the Romans. Some of the Apulian towns and most of the Samnites went over to him. He succeeded in winning over the city of Capua, the leading town of Campania, whose citizens had no Roman voting rights, a position they resented. Syracuse allied with him under Hiero's son, Hieronymus, along with several Greek cities in Sicily.

At this crisis Rome went to extraordinary lengths to recoup its losses after Cannae, raising new legions from among released debtors, those accused of capital crimes, and even freed slaves. The state's coffers empty, troops lived off the land. In spite of all difficulties in 211 B.C.E. both Capua and Syracuse were retaken. The same year Roman armies in Spain suffered a severe defeat; in previous years they had been successful against Carthaginian armies there,

retaking Saguntum in 212 B.C.E. In general Roman operations there prevented supplies or reinforcements from reaching Hannibal in Italy. Hannibal's reverses freed troops to be sent to Spain, so that by 206 B.C.E. Carthaginian power in Spain had essentially ended.

The war in subsequent years involved Hannibal's brother, Hasdrubal, who made repeated attempts to join his brother in Italy, none of them successful. Slowly from 206 B.C.E. the noose was drawn around Hannibal's force, which was increasingly unable to take action. Finally in 203 B.C.E. Hannibal was recalled to Carthage to defend against forces of Publius Scipio, who had invaded in 207 B.C.E. and was making inroads against Carthage with the help of Numidians, natives of the region around Carthage. But even Hannibal was unable to withstand Scipio and at the Battle of Zama in 202 B.C.E. he was for the first time decisively defeated with a reported 20,000 dead and almost as many captives, fleeing the field with his life. For his triumph in Africa Scipio received the honorary title Africanus, or conqueror of Africa.

The Macedonian Wars

The Second Punic War would lead to conflict with the MACEDONIANS in northern Greece. Macedon's ambitious king, Philip V, Antigonus's successor, who ascended power in 221 B.C.E., made a treaty with Hannibal offering Macedonian aid in the war in Italy, in return for which Carthage would help Macedon to exclude Rome from the east shore of the Adriatic.

Philip had success in the First Macedonian War in 215–205 B.C.E., seizing Roman territory in Illyria. The Romans responded with a desultory war in alliance with the people of Aetolia, which nevertheless served its purpose of preventing Hannibal from receiving reinforcements from Macedon. However, the bitter feeling left in Macedon would lead to a new war immediately after the defeat of Hannibal.

In the Second Macedonian War of 200–197 B.C.E. Philip V was decisively defeated by the Romans and their Greek allies at the Battle of Cynoscephalae, after which he was forced to pay an indemnity and give up much of the Macedonian navy, as well as control of territory outside Macedon proper. After restructuring the Macedonian economy accordingly, he turned his ambitions northward with campaigns in the Balkans in 184–181 B.C.E.

Philip's successor, Perseus, who rose to power in 179 B.C.E., aroused Roman concern by

making alliances with Greek city-states, and Rome initiated the Third Macedonian War of 171–168 B.C.E. After a decisive victory at Pydna the Romans took Perseus as a captive to Italy and divided Macedon into four republics. A pretender to the throne, Andriscus, claiming to be Perseus's son, tried to revive a Macedonian kingdom; the Fourth Macedonian War of 149–148 B.C.E. was the result. The Romans easily suppressed the rebellion, executing Andriscus; and in 146 B.C.E. annexed Macedon, thus establishing the first Roman province. With its continuing expansion into the Balkans Rome incorporated northern and eastern parts of greater Macedon into the province of Moesia in 15 C.E.

An Uneasy Peace

During the 50 years after the peace made in 201 B.C.E. at the end of the Second Punic War, the Carthaginians quickly recovered their economic strength. To rid themselves of Roman economic control of their affairs, they offered to pay off in a single payment the annual tribute they owed to Rome, to the amount of 8,000 talents, an enormous sum. The senate, however, refused this offer, unwilling to relinquish Carthage's obligation to Rome.

Militarily, however, the Carthaginians were helplessly dependent on Rome. Under the terms of the peace treaty Carthage could not wage war without Rome's consent and had no recourse but to sue to the senate for redress or help when attacked. Rome's Numidian ally, Masinissa, for some 40 years encroached on Carthaginian territory, in spite of the latter's complaints to Rome.

Cato and the Carthaginian Fig

A delegation sent from Rome to Carthage in 153 B.C.E., ostensibly to investigate these complaints, included the former consul, Marcus Porcius Cato. Cato was chagrined to find how prosperous Carthage had become. On his return to Rome he went before the senate and flung before the senators a large Carthaginian fig, signifying both Carthage's renewed prosperity and, because figs are perishable, the close proximity of this old and dangerously burgeoning enemy. It was clear that the burdens of the peace treaty had not permanently impaired the resources of the Carthaginians and that they were again in a position to threaten Rome. From this time on Cato ended each address he made to the senate on whatever topic with the litany: *ceterum censeo delendam esse Carthaginem* (besides which, my opinion is

that Carthage must be destroyed). Cato's opinion was representative of that of many of those who, as he had, had fought the Carthaginians in the Second Punic War and who could never forget Hannibal's audacious and nearly successful attempt to conquer Rome. Even a Carthage hamstrung by the provisions of the peace treaty was too dangerous an enemy to be allowed to thrive as it was. On the other hand younger men who had never fought the Carthaginians yearned for the honor and glory of facing this famous and ancient foe of Rome, not to mention getting their share of the spoils offered by the legendary wealth of Carthage.

The Carthaginians, goaded beyond patience by Massinisa's depredations and receiving no help from Rome, in 150 B.C.E. sent 25,000 troops to relieve a town being besieged by the Numidians, giving Rome the excuse it needed to declare war. Despite Carthage's reluctance to fight and offer of hostages to guarantee future passivity Rome made impossible demands. Carthage must be abandoned to Roman sack and control. Carthaginians could settle wherever they wanted in Carthaginian territory, provided that the new site be at least 10 miles from the sea. Such a move was clearly impossible for a society whose life breath was trade, and the Carthaginians refused, declaring war on the Romans. In 149 B.C.E. Rome invaded Carthaginian territory.

The Third Punic War

After several years of preparation and consolidation of their military position in Africa in 146 B.C.E. the Romans under Scipio Aemilianus Africanus Numantinus (Scipio the Younger), adoptive grandson of Scipio Africanus, who had defeated Hannibal, attacked the city of Carthage itself. The Carthaginians engaged in a kind of urban guerrilla warfare unheard of in antiquity, after the Romans had taken the city walls, burning streets and forcing the Romans into desperate street-fighting that lasted for six days, until the Romans had reached the citadel. At this the Carthaginians sued for peace. All survivors were sold into slavery; the town was stripped of its valuables and burned for 10 days. Roman priests then cursed the land where the city had stood (the story that it was sown with salt is a later invention). Carthage had ceased to exist.

The historian Polybius accompanied Scipio as he observed the destruction of the city. He reports that Scipio wept and quoted a line from the *Iliad*, a prophesy that Troy and Priam would be destroyed. When asked what

he meant, he said that he was worried that a similar event might befall Rome, too, having just witnessed how even the most powerful can be brought low. The final destruction of Rome's most dangerous foe, with whom the city had contended for well over a century, perhaps was an event too momentous for Scipio to contemplate with that stern *gravitas*, or stoicism, usually demanded of a good Roman.

Iberia

Having defeated the Carthaginians the Romans were able over the next years to pacify the IBERIANS and the CELTIBERIANS on the Iberian Peninsula. Earlier during the 50 years of peace between the Second and Third Punic Wars Hannibal's use of Iberia as a staging area for his invasion of Rome made it imperative that Rome secure control over the region, the "side door" to Italy. Resistance by Iberians and Celtiberians made this no easy task.

The LUSITANI living to the west in present-day Portugal mounted a number of organized but small-scale revolts against the Romans in 195–190 B.C.E. Roman troops under Tiberius Sempronius Gracchus destroyed 300 Celtiberian "cities," probably typical Celtic towns or hill-fort compounds, in 179–178 B.C.E. By 170 B.C.E. Roman colonies were established, although the Romans did not attempt to occupy the entire peninsula. The Lusitani finally mounted a full-scale rebellion in 154–150 B.C.E., with Celtiberian allies. The murder of tribal representatives by Roman troops during peace negotiations furthered the Celtiberian resolve to continue fighting. Beginning in 147 B.C.E. the Lusitani and allied tribes under Viriathus, whose charismatic leadership counted for much in the victories they achieved, waged a successful guerrilla war until the Romans bribed his retainers to assassinate him, probably in 139 B.C.E.; afterward Lusitanian resistance crumbled, but the Celtiberians continued to fight.

The Romans waged war among the Celtiberian tribes along the Ebro valley. Among the Roman generals was Scipio, the victor of the Third Punic War, who became consul in 134 B.C.E. The next year Scipio took the fortress of Numantia (from which he took the honorific, Numantinus) from the Celtiberians after a long siege, ending their rebellion.

Even while resistance continued in parts of Iberia the products of the country were having an important impact on the Roman economy. Pliny the elder, writing in the first century C.E., emphasized Iberia's raw materials but also its

people—how they were assiduous laborers, robust in body and character, and made perfect slaves. Labor, including slave labor, was a crucial component of the Roman economy.

The increasing importance to Rome of the Iberian provinces, given Roman distrust of sea travel, made securing the land route through southern Gaul a prime goal and turned Rome's attention toward southern Gaul itself as a trading opportunity. Local pirates preyed on shipping from Massalia and other Greek cities there, which appealed to Rome for help. Successful intervention gained for Rome the territories of the tribes involved, further involving Romans in affairs in Gaul, a harbinger of future events.

In 80 C.E. the Roman expatriate Quintus Sertorius, who had been sent to govern Hither Spain, led a campaign against other Roman factions. He sought the support of Iberians and Celtiberians, even establishing a school to educate the sons of chieftains. His other allies were Mediterranean pirates, for whom he set up a naval base at Dianium (modern Denia) in southeastern Spain. Sertorius was defeated by Pompey in 73 B.C.E., whereupon he was executed. The Lusitani were defeated once and for all by troops under Julius Caesar in 61 B.C.E., three years before his first campaigns in Gaul.

Continuing resistance from the northwest corner of Iberia was suppressed during the reign of Emperor Augustus by the year 19 B.C.E., allowing withdrawal of troops there to take part in the conquest of Germania east of the Rhine. In 13 B.C.E. Rome divided Hispania into the provinces *Tarraconensis*, which comprised the north, northeast, and part of the southeast of the peninsula; *Lusitania*, comprising the southwest; and *Baetica*, comprising the south, including the Strait of Gibraltar. As part of the Roman provincial system the Iberians became increasingly Romanized.

Many Romans emigrated to Hispania and stayed for generations, in some cases intermarrying with Iberians. One of these families produced the great emperor Hadrian, who ruled Rome in the second century C.E. at the empire's zenith of power and cultural achievement, both due in large part to his efforts. Hadrian's ancestors had immigrated to Spain generations before his birth, from the town of Hadria in Picenum, at the end of the Second Punic War. His mother was a member of a distinguished family of Gades. Although it is not certain whether Hadrian was born in Baetica, as had been his kinsman and predecessor, Trajan, he can be considered to some degree a

product of Romano-Iberian culture, because he probably spent much time there while growing up. His Iberian ties, which he shared with Trajan, fostered a bond between them beyond kinship that, no doubt, contributed to Trajan's decision to name Hadrian as his heir. Hadrian's upbringing in the less sophisticated society of Iberia, away from the increasingly decadent Rome, may have bred in him his hardihood both in battle and in pursuit of his lifelong habit of travel to the roughest far reaches of the empire, and the relative moderation of his personal life.

The Social War

In the first century B.C.E. many peoples of the Italian Peninsula, especially in the south, became united in the cause of attaining equal rights as Roman citizens, the Marsi foremost among them. Known as *socii*, for "allies," they helped the Roman army in its increasingly wide-ranging campaigns. They were also trading parties. Many of them used Latin in addition to native dialects. Yet they were not Roman citizens; did not have the same property, travel, trade, and marriage rights; and were subject to the will of Roman-appointed magistrates.

Among the participants were many of the same tribes who had revolted and been defeated in the Second Samnite War some two centuries before—the Marsi, Frentani, Lucani, Marrucini, Marsi, Paeligni, Samnites (including their subtribe, the Hirpini), and Vestini, many of them mountain people. Other peoples were also involved, such as the PICENES, who were perhaps Italics in origin, and the IAPYGES (except the MESSAPI) descended from Illyrian-speaking peoples; by this time, however, they had commingled extensively with Italics, making their identities in a city or town or region more important than ancestry. The inhabitants of Pompeii, referred to in some texts as Pompeiani (many of them Samnites), and of Venusium (modern Venuso), referred to as Venusini, also joined in the uprising.

Marcus Livius Drusus, the tribune of the Roman people, proposed granting citizenship to the *socii* in 91 B.C.E. His assassination that year, arranged by his opponents in the senate, prompted the revolt known as the Social War, or Italic War, or Marsic War. The actual fighting erupted in 90 B.C.E. with the massacre of Romans at Ausculum, the principal city of the Picenes (its inhabitants were referred to as the Asculani). The rebels organized a confederacy independent of Rome, with headquarters at

Corfinium, the capital of the Paeligni. The rebels with a force of some 100,000 men had some early successes, but before the end of the year the Roman consul Lucius Julius Caesar managed to overcome political opposition and pass a law granting citizenship to noncombatants. This undercut the alliance and the Romans won victories under Gnaeus Pompeius Strabo in the north and Lucius Cornelius Sulla in the south. The Samnites continued to resist, however, and the Romans granted citizenship to all peoples south of the Po valley in 87 B.C.E.

The Gladiatorial War

During the late republic the small farms of the Roman forebears were replaced by large plantations. Throughout the countryside of Italy the rich built large villas, which required many hands to run. Cities grew, and Rome swelled as prosperity increased. Demands for entertainment created the need for more gladiators. These developments encouraged and were encouraged by the sudden influx of thousands upon thousands of foreign slaves, taken from Rome's conquests beyond Italy's borders. Slaves were responsible for working the great plantations, for running the households of the wealthy, for educating their children in Greek, and for fighting in the gladiatorial contests. As slaves became more numerous and important, their treatment deteriorated.

In 73 B.C.E. Spartacus—captured in Thrace and trained as a gladiator—escaped and led a slave uprising, referred to as the Gladiatorial War, against the Romans. Many of his followers were fellow THRACIANS and Celts. The rebels rampaged through much of the Italian countryside, gaining support. Roman legions, commanded by Marcus Licinius Crassus and Pompey, defeated Spartacus and his men. Spartacus died in battle in 71 B.C.E. Some 6,000 prisoners were reportedly crucified along the Appian Way.

Expansion to the East

The year 146 B.C.E. saw the establishment of two new provinces, Africa and Macedonia. The same year after the Fourth Macedonian War the remnants of most of the Greek states fell into the hands of Rome.

In 200 B.C.E. Athens had sought Roman aid in war and thereafter for more than a century was counted as a loyal ally of Rome, a policy that protected the city from Roman attack until in 88 B.C.E. Athens backed the pro-Hellenic and anti-Roman campaign of King Mithridates VI Eupator of Pontus in Asia

Minor. The Roman general Sulla, an utterly ruthless commander, defeated Mithridates in 86 B.C.E. and sacked Athens, massacring so many Athenians that whole areas were covered in blood and destroying many Athenian buildings. Athens remained economically devastated for a generation.

In 63 B.C.E. Pompey, the only contemporary of Caesar to rival him as a general, defeated Mithridates IV of Pontus, putting that kingdom, Syria, and Palestine under Roman rule.

Almost 20 years later in the Roman civil war between Julius Caesar and Pompey Athens backed Pompey, who was defeated in 48 B.C.E. at the Battle of Pharsala, putting Athens into the hands of Caesar. Caesar, addressing the Athenians said, "How often do you expect to be rescued by the fame of your ancestors from the destruction you bring on yourselves?" His treatment of Athens was lenient, however.

Eventually all of the states founded by the generals of Alexander the Great after his death in 323 B.C.E. fell to Rome. After the defeat of the Roman Mark Antony and Queen Cleopatra of Egypt at the Battle of Actium in 31 B.C.E. the latter took her own life, thus becoming the last Greek ruler of Egypt.

Expansion into Gaul

The Romans divided "Gaul" into two main divisions: Gallia Cisalpina, "Gaul this side of the Alps" (in present-day northern Italy), and Gallia Transalpina, "Gaul across the Alps."

Gallia Cisalpina was also called Gallia Citerior, or Hither Gaul, to distinguish it from Gallia Ulterior, or Farther Gaul. The Romans established colonies in the various Gallic towns. In 49 B.C.E. Julius Caesar conferred Roman citizenship on the inhabitants of these towns. Many illustrious Romans were born in the territory of Gallia Cisalpina, including the poets Virgil (first century B.C.E.) and Catullus (first century B.C.E.), the historian Livy, and the statesmen and writers Pliny the Elder and Pliny the Younger (first–second century C.E.).

By 121 b.c.e. Rome had acquired the southern part of Transalpine Gaul. Called the Province (Provincia, from which is derived the modern Provence), it comprised a strip 100 miles wide along the sea from the eastern Pyrenees northeastward and up the Rhône River valley nearly to Lyon. The importance of this region to the Romans was twofold: It furnished the main route of their armies to Iberia (present-day Spain), which during the second century b.c.e. was a major focus of Roman

These Roman scenes include captives in the Forum, gladiators fighting in a theater and at a funeral, and the funeral of an emperor on a pyre. (*Library of Congress, Prints and Photographs Division [LC-USZ62-115366]*)

ambitions because of its wealth of gold, silver, and agricultural products, and, it was an increasingly important market both for Roman wine and for manufactured products such as pottery.

The Roman colony of Narbo Martius (Narbonne) was founded on the coast in 118 B.C.E., and the southern province later became known as Gallia Narbonensis. An alliance with the AEDUI against the ALLOBROGES and the ARVERNI gave the Romans control of the Rhône valley after 120 B.C.E. A new force now came into play as GERMANICS began putting pressure on Gauls north of the Alps. The Germanic onslaught was first felt in Bohemia, the land of the Boii, and in Noricum, a Celtic kingdom in the eastern Alps. The Germanic assailants were known as the CIMBRI and TEUTONES, peoples thought to have originated on the Jutland

Peninsula in present-day Denmark. A Roman army sent to the relief of Noricum in 113 B.C.E. was decisively defeated, and thereafter the Cimbri and Teutones ravaged widely in Transalpine Gaul, overcoming Gallic and Roman resistance. On attempting to enter Italy, these Germanic tribes were finally routed by Roman armies in 102 and 101 B.C.E. These victories were made possible because the Roman consul Gaius Marius reformed the Roman military, transforming it from a loose militia into a highly disciplined professional army manned by landless citizens, including the growing urban proletariat.

The migrations of Celtic tribes west of the Rhine to escape the Germanics, as well as further against Roman interests, by the Celtic HELVETII from present-day Switzerland and the Germanic SUEBI from present-day

Julius Caesar: General and Ethnologist

Gaius Julius Caesar was born into one of the Roman Republic's most prominent patrician families in 100 B.C.E. Through family connections and his marriage to the daughter of the consul Lucius Cornelius Cinna, he rose politically in Roman society. Caesar established his military reputation against the Celtiberians, Gauls, and Germans in the 60s–50s B.C.E. He defeated two of the most visionary leaders of early northern Europe, Vercingetorix of the Arverni and Ariovistus of the Suebi.

Caesar extended Roman influence northward from the Mediterranean coast all the way to present-day Belgium. He also established a route through the Alps by way of the 8,000-foot-high Great St. Bernard Pass, from northern Italy to the upper Rhône valley and the Lake Geneva region of present-day Switzerland. He crossed to the British Isles twice in 55 and 54 B.C.E. Although the Roman subjugation of Britain was not completed until the first century C.E., Caesar's campaign was the first recorded contact between Mediterranean peoples and those of the British Isles.

Caesar returned to Italy in 49 B.C. He became embroiled in a power struggle with the Roman general and statesman Pompey but defeated his rival in a civil war. Through his hold on the army Caesar gained rule as a dictator. A number of senators, fearful of his growing power, assassinated him in the senate building in Rome in 44 B.C.E.

Caesar's first wife, Cornelia, died in 68 B.C.E., and he married Pompeia, a granddaughter of Sulla. He divorced her in 61 B.C.E. because of rumors of adultery. In 59 B.C.E. he married Calpurnia. Without an heir he had stipulated in his will that his grandnephew, Octavius, would become his successor. Octavius rose to power as Rome's first emperor in 27 B.C.E. under the name of Augustus. Caesar's family name became an imperial title; KAISER in German and *czar* in Russian are variants of it.

Julius Caesar through his tactical brilliance and political savvy established his place in European history as creator of an empire. He also made significant contributions as an explorer of lands unknown to Mediterranean peoples and as a chronicler. His work *Commentarii de bello Gallico* (Commentary on the Gallic War) became an invaluable ethnological source on ancient Celtic and Germanic tribes. Caesar also introduced the Julian calendar, a revision of the Roman calendar, originally taken from the Egyptians, to Rome.

This 19th-century representation of Julius Caesar is based on ancient images. (*Library of Congress, Prints and Photographs Division [LC-USZ62-101360]*)

Germany, gave Julius Caesar (see sidebar) the opportunity to begin the campaigns that led to the Roman annexation of the whole of Gaul.

In 71 B.C.E. Ariovistus, leader of the Suebi, with his warriors had crossed the Rhine into Gaul, defeating the Celtic AEDUI. Rome's first response was to treat with Ariovistus, in 60 B.C.E., making him an ally to secure Roman trade routes through Gaul. However, Caesar in

part to further his personal ambitions in 59 B.C.E. argued in the senate that Rome could not afford to have Germanic tribes so close to Italy, with only Celtic tribes holding them off. Rome must take control of Celtic Gaul or be overrun by Germanics. He was given a five-year command, which was afterward extended, in Cisalpine Gaul. After defeating the Helvetii the next year he turned to the Suebi and drove them back as well, before turning his attention to subduing all of Gaul.

Caesar pacified Transalpine Gaul in the Gallic Wars from 58 to 50 B.C.E. He focused much of his effort on the tribes in the northern periphery from Brittany to the Rhine, among them Germanic tribes in the Low Countries, in which he was so successful that in 55 B.C.E. he crossed the Rhine over a bridge he had had constructed near present-day Cologne and the next year crossed the English Channel, engaging in promising but inconclusive attacks on BRITONS before returning to Gaul. Both excursions were probably more symbolic than practical, intended to impress the northerners with Roman might. In 52 B.C.E. he suppressed a Gallic revolt of allied tribes south of the Seine in present-day France led by Vercingetorix of the ARVERNI.

Caesar's campaigns devastated Gallic society; he treated rebellion and resistance with extreme ruthlessness, slaughtering tens of thousands and reducing more thousands to slavery. Such was the psychological and economic damage to the Gauls that further resistance was almost nonexistent for many years, and further significant Roman involvement with the Gauls awaited the reorganization of the province undertaken in 27 B.C.E. by the emperor Augustus.

Caesar wrote a detailed account of the country and its inhabitants, distinguishing three regions by ethnicity: Aquitania (south of the Garonne), Celtic Gaul (modern central France), and Belgica (very roughly Belgium). Aquitania was inhabited by the ancestors of the BASQUES in addition to Celtic peoples. On the basis of these distinctions in the early first century C.E. Emperor Augustus set up large administrative divisions: Narbonensis (the old Province), under the direct rule of the Roman senate; Aquitania, now extending from the Pyrenees to the Loire; Lugdunensis (Celtic Gaul), a central strip mainly between the Loire and the Seine; Belgica, where Trier and Reims were the chief towns and many of the people were Germanic in origin, included most of the rest. The latter three provinces—

Aquitania, Lugdunensis, and Belgica—sometimes called collectively, Gallia Comata, meaning “long-haired Gaul,” were administered from Lugdunum (modern Lyon), capital of Lugdunensis. In peacetime the only military presence was a single cohort at Lugdunum to guard the imperial mint, but the Rhine army could and did move rapidly into the Gallia Comata if trouble occurred.

Although the Romans had won political control of Gaul, following their usual procedure, they did not try to impose Roman culture; rather, a new Gallo-Roman culture developed on its own, through Gallic emulation of the Romans rather than by imposition. A strong Roman influence on the Gallic tribes, brought about by trade, had long predated the conquest. The Romans strengthened this influence by building towns and roads throughout Gaul, financed by taxing the old Gallic landowning class. The villa system became an important component of the economy and society of Gaul. A landed aristocracy grew up, part Gallic, part Roman, employing the laborers who made up the principal part of the population. At the same time the Romans promoted the development of a middle class of merchants, tradesmen, and government bureaucrats. Roman religion became intertwined with the Celtic as different Celtic gods were identified with gods of the Roman pantheon.

Early Roman Expeditions to Britain

As mentioned, in 55 B.C.E. Julius Caesar led an expedition to southern Britain, probably because tribes of Britons there had sent aid to Armorican tribes in Brittany who had staged a revolt against the Romans the year before. Caesar embarked from Portus Itius (Boulogne) with two legions, comprising some 10,000 troops and, after crossing the English Channel, landed at present-day Deal in Kent. Although initial skirmishes with British troops were successful for the Romans, bad weather prevented necessary cavalry troops from joining Caesar, forcing him to cut the expedition short.

The next year, 54 B.C.E., Caesar sailed to Britain again with a much larger force of five legions and 2,000 cavalry troops. With this force Caesar encountered at first little resistance from Britons, until under Cassivellaunus, ruler of the CATUVELLAUNI, different tribes together assembled a large force. The Romans were able to defeat this force as well, although less easily. Cassivellaunus, unable to win an outright battle against the Romans, resorted to

guerrilla and scorched-earth tactics and used chariots to harass the Roman legions. He was unable, however, to keep his allies together, and a number of them declared themselves allies of the Romans. In the end Cassivellaunus surrendered to Caesar. He was given lenient terms, however, and further unrest in Gaul caused Caesar to end his expedition.

As in the case of Gaul Roman influences arrived in Britain long before Roman arms, disposing some tribes well toward the Romans. Imported bronze jugs and pans probably from as far away as the Alps and even Italy have been found in burials and settlements from the first century B.C.E. An apparently important burial in a cemetery in Lexden contained a medallion issued by Emperor Augustus and an iron stool, a symbol of power. This grave had been covered by a huge barrow, further marking its significance. Roman sources attest that princes from Britain visited Augustan Rome, where, in all probability, they were presented with medallions and other gifts as Augustus sought to widen Rome's sphere of influence.

Caesar Gains Rule over Rome

From 60 B.C.E. Pompey, Caesar, and Crassus were joined in an alliance without official sanction known as the First Triumvirate, which in effect ruled Rome. Crassus had been executed in 53 B.C.E. after defeat by the Parthians in Asia Minor. With his defeat and execution of Pompey in 48 B.C.E. Caesar became master of Rome, ruling until his assassination in 44 B.C.E., a period that was a high point of Roman history, both in terms of overseas power and certainly in terms of culture. The territories ruled by Rome included Spain (except part of the northwest), Gaul, Italy, part of Illyria, Macedonia, Greece, western Asia Minor, Bithynia, Pontus, Cilicia, Syria, Cyrenaica, Numidia, and the islands of the sea, and Rome completely controlled Egypt and Palestine. It can be argued that although the extent of foreign territory held by Rome was to expand greatly after Caesar's rule, that expansion caused great changes in Roman government and society, as Rome lost its flexible, relatively egalitarian republican character, and necessitated a much greater militarization of the whole of society, changes that could be considered detrimental. After Caesar Rome became locked into an imperial strategy that required continual expansion of territory to maintain its socioeconomic equilibrium, and when further expansion became imprudent and unfeasible,

Augustus: The Great Administrator ✦✦✦

Augustus was born in 63 B.C.E. and was given his father's name, Gaius Octavius. His mother, Atia, was the niece of Julius Caesar. She raised Augustus after the death of his father and ensured a proper education for Augustus under the Greek philosopher Athenodorus Cananites. Augustus was admired by his great-uncle, who adopted him; he then was known as Gaius Julius Caesar (Octavianus, or Octavian in English usage, was later added by historians). In 44 B.C.E. he was pursuing studies at Apollonia in Illyricum when he learned of Caesar's assassination. Supposedly on the trip home he learned that he was Caesar's heir.

In Rome with Cicero's help he secured the consulship and in 43 formed an alliance with Mark Antony and Marcus Aemilius Lepidus, the Second Triumvirate, and defeated his enemies Brutus and Cassius. His sister, Octavia, married Antony in 40 B.C.E. Augustus sought to consolidate his power and in 36 B.C.E. disarmed Lepidus. Meanwhile Antony and Cleopatra had become lovers and allies; Antony divorced Octavia in 32 B.C.E. Two years later at the Battle of Actium Augustus defeated Antony. In 29 B.C.E. he was made *imperator* (commander, from which is derived *emperor*); in 28 B.C.E., *princeps* (leader, from which is derived *prince*); in 27 B.C.E. *augustus* (august, a title of honor); and in 12 B.C.E., *pontifex maximus* (high priest). Moreover the month Sextilis was renamed Augustus (August) in his honor.

Augustus, the first emperor of Rome, skillfully retained many of the trappings of the Roman Republic, calling himself publicly, despite all his other titles, The First Citizen. As supreme ruler he emphasized colonization over conquest, using the plans of Julius Caesar for reorganization. He had censuses taken and established a new system of taxation. He issued new coins and encouraged trade. He improved infrastructure, such as roads, housing, and police and fire services. He inaugurated reforms and made laws more equitable. He fostered support by granting titles. Augustus also encouraged the arts, and the Augustan Age is considered a golden age of literature on the basis of the works of Livy, Horace, Ovid, and Vergil.

The death of the children he had by various wives forced Augustus to choose his adoptive son Tiberius as his heir. Augustus, the first of the hundreds of Roman emperors, died in 14 C.E.

more or less continual warfare was needed to control the far-flung empire. In Caesar's Rome an equilibrium that did not require further expansion may have been reached.

With his victory over Mark Antony and Cleopatra in the Battle of Actium in 31 B.C.E. Octavian, Caesar's nephew, ward, and heir, took over the reins of power he had previously shared with Antony and Marcus Aemilius Lepidus in the Second Triumvirate. In 27 B.C.E. the senate voted him the title of Augustus (see sidebar) and the people gave him a lifetime tribuneship, making him emperor in all but name.

East of the Rhine

After the political chaos and civil war in Rome that followed Julius Caesar's assassination had been stemmed and the new order established by Augustus had taken hold a decade later the

emperor decided that the empire's frontier should be pushed beyond the Rhine farther east to the Elbe.

Annual campaigns from 12 to 7 B.C.E. and from 4 to 5 C.E. established Roman control over the area sufficient to allow armies to be withdrawn to quell a rebellion elsewhere in the empire. Soon thereafter Arminius of the CHERUSCI, a member of the Germanic elite who had served as a cavalry officer in the Roman army, was elected war leader of a confederacy of Germanic tribes. His experience in the Roman military may well have helped him to victory; in 9 C.E. he annihilated three Roman legions in the depths of the Teutoburger Wald (Teutoburg Forest) near present-day Warstein in north-central Germany. Because Roman campaigns from 10 to 16 C.E. were unsuccessful in regaining the lost territory, Emperor Tiberius decided that the region was ungovernable and withdrew his armies to the Rhine.

Gallic nobles rebelled in 21 C.E. but were soon quelled by Tiberius. The assimilation of the Gallic aristocracy was secured when the emperor Claudius I made them eligible for seats in the Roman senate and appointed them to governing posts in Gaul.

The next two centuries were marked by occasional revolts and by increasingly frequent invasions of Germanic tribes, against whom a line of *limites*, or fortifications, was erected from the Middle Rhine to the Upper Danube.

The Roman Invasion of Britain

The Romans under Emperor Claudius invaded Britain in 43 C.E. Far less is known in detail about this invasion than that of Caesar because it lacked a chronicler of the caliber of Caesar. Claudius very likely organized the campaign in the hope of a victory to consolidate his hold on power in Rome, which was threatened by a movement to restore the republic.

The invasion apparently was launched mainly from Richborough in Kent—a major Roman military installation dating from this time has been found there. The initial campaign was so successful that later in the year the emperor Claudius himself traveled to Britain to receive the surrender of the *oppidum* (town) Camulodunum (modern Colchester) of the TRINOVANTES. The Romans then moved north to Lindum (modern Lincoln) and west to Deva (modern Chester) and Isca Silurum (modern Caerleon) of the SILURES. The Britons' resistance was led by Caractacus and Togodumnus, who had divided the kingdom of Cunobelin between them. The British

forces gradually retreated before the Romans. Eventually Caractacus found refuge with either the *ORDOVICES* of Powys, or the *CORNOVII* of Shropshire in western Britain. After a final losing battle in 51 C.E. Caractacus was betrayed to the Romans by Queen Cartimandua of the *BRIGANTES*, among whom he had sought protection. He was taken to Rome in chains, along with his wife and family, and paraded before the emperor Claudius. The fortitude of his bearing impressed Claudius so much that he pardoned him and maintained him and his family in comfort in Rome for seven years. During this time many of his family became Christians, and after they returned to Britain they worked to convert their fellow Britons.

According to the account of the invasion by the Greek writer Cassius Dio Cocceianus (Dio Cassius) of the second and third centuries C.E. the Romans invaded after an appeal for help by an exiled king Verica of the southern *ATREBATES*. On the other hand the Roman historian Tacitus (see sidebar, p. 656) of the first and second centuries C.E. tells a story of implacable resistance of the Britons followed by subjugation and enslavement. In the words of Calgacus, a chieftain of the Britons, reported in Tacitus's *Agricola*, the Romans "create a desolation and call it peace."

Many scholars now question Tacitus's version of events, particularly in light of evidence that important British tribes were practically Roman allies and that trade with some Britons was flourishing. The Roman writer Strabo of the first centuries B.C.E. and C.E. tells us that British kings dedicated offerings to Rome and had virtually made the island a Roman province. Togidubnus of the *REGNI* engaged in a large-scale building program of palaces and temples and promoted the growth of towns and of municipal self-government along the lines of towns in Gaul.

The Roman presence in Britain was not without further unrest, however. In 60–61 C.E. Queen Boudicca of the *ICENI* led a revolt, which was suppressed by troops under the Roman governor Suetonius Paulinus.

Trade with Germanics

As earlier with the Gauls Romans inaugurated large-scale trade with Germanic tribes along the Rhine in the first century C.E., particularly in slaves and in leather goods, often opening relations by offering their elites luxury goods and coins, which greatly influenced them to accede to a process of Romanization. The participation of many Germanics in the Roman

Hadrian: The Great Traveler

Hadrian (also Adrian; Latin birth name, Publius Aelius Hadrianus; also Latin in full, Caesar Traianus Hadrianus Augustus) was born in 76 C.E., probably in Spain. At his father's death he became the ward of the future emperor Trajan, born in Spain, the first non-Italian emperor of Rome. Hadrian proved to be a skilled military leader. After Trajan's death in 117 Trajan's army declared Hadrian emperor, and the declaration was then approved by the Roman senate.

Ending the period of territorial expansion carried out under Augustus Hadrian consolidated the Roman Empire. An early campaign was the pacification of Moesia in 118. He ordered the building of defensive fortifications. Among them were Hadrian's Wall to defend against northern tribes in Britain; on a visit there he personally played a part in choosing its location, from Solway Firth on the Irish Sea to the mouth of the Tyne River. Hadrian traveled widely elsewhere in the empire, involving himself in regional affairs and overseeing the building of public works.

Hadrian's time in Greece, where he consulted the oracle at Delphi, inspired his architectural visions. After putting down an insurrection in Palestine, he had the temple of Jupiter Capitolinus built on the site of the destroyed Temple of Jerusalem. In Athens he built Hadrian's Arch. He also sponsored public works in Rome, including the rebuilding of the Pantheon and the building of the Athenaeum (an academy for the promotion of learning), the Temple of Venus and Roma, and the mausoleum (now Castel Sant'Angelo).

Hadrian's relationship with a young traveling companion he met in Asia Minor, Antinoüs—deified after his tragic death by drowning in the Nile—was noted by sculptors and architects, and a cult of Antinoüs developed in parts of the empire. Hadrian died at Baiae (modern Baia) near Naples in 138, having spent his last years cultivating the arts, of which he was an active patron. Antoninus Pius succeeded him.

The triumphal Arch of Hadrian was built by Athenians in 131 C.E. on a street leading from the old city of Athens to the new Roman section, in honor of their benefactor emperor. (*Library of Congress, [LC-USZ62-108917]*)

army led to the widespread influence of Roman culture in Germanic society. Members of certain tribes, such as the HERMUNDURI, were allowed to cross the Rhine on trading trips, during which they moved freely “without a guard set over them,” says Tacitus. In turn many Roman traders traveled into Germanic territory and lived there so long “they had forgotten their own country,” according to a contemporary report by Germanics among the MARCOMANNI in 18 C.E.

The Roman Empire at Its Greatest Extent

During the reign of Trajan, an able administrator who ruled in 98–117 C.E., the Roman Empire reached its greatest geographical extent. Under his successor Hadrian (see sidebar, p. 639), who ruled in 117–138 C.E. and was famous for his travels throughout Roman-held territory, the frontiers of the empire were pulled back somewhat, but it was a time of general peace and prosperity and cultural vitality.

Roman Territory in the Trans-Danubian Region

The DACIANS were a powerful people whose territory lay north of the Danube in present-day Romania. Dacians and Romans met in battle in 112, 109, and 75 B.C.E. By about 60 B.C.E. the Dacian leader Burebistas united various tribes in the region into a powerful kingdom. (These Dacians, as they were known to the Romans, included descendants of those people whom the Greeks had called Getae.) Among Burebistas’s conquests were the Celtic BOII, SCORDISCI, and TAURISCI living to the west. The Roman general Julius Caesar was preparing a major campaign against the Dacians before his assassination in 44 B.C.E. The Dacians continued raids on Roman-held lands during the reign of the Roman emperor Augustus, from 27 B.C.E. to 14 C.E. He claimed them as a tributary people but they remained unconquered. They swept into Moesia (parts of present-day Serbia and Bulgaria) in 69 C.E. but were driven back by Roman legions. In 85–89 C.E. during the reign of Domitian the Dacians and Romans fought a series of inconclusive battles. Although the Romans claimed overlordship of the Dacians, they nevertheless paid them tribute to prevent further raids.

In 101–102 and 105–106 C.E. the Dacians under Decebalus fought against the Romans under Emperor Trajan in what are known as the First Dacian Wars and Second Dacian Wars. Decebalus committed suicide when he was defeated. The Romans drove survivors

northward and seized enormous wealth from the Dacians. Trajan established numerous colonies and in 107 C.E. created the province of Dacia, the last province established in the Roman Empire. The Romans built roads and oversaw the operation of Dacian gold, silver, and iron mines. Dacia also provided grain to the empire.

Under Emperor Hadrian in the early second century C.E. the province was divided into Dacia Superior in the north (roughly the region of Transylvania) and Dacia Inferior (extending south to the region of Walachia between the Transylvania Alps and the Danube). In the mid-second century Emperor Antoninus Pius divided the region into three provinces, the Tres Daciae (Dacia Porolissensis, Dacia Apulensis, and Dacia Malvensis). By this time with merchants traveling to Dacia from numerous places the region had become a melting pot.

Germanic Migrations and Invasions

During the reign of Marcus Aurelius (161–180 C.E.) Germanic invaders of a number of tribes began crossing the *limes*, probably because of unrest and war to the east deep in Germanic territory. In 167 a massive movement of MARCOMANNI, QUADI, and IAZYGES began. They reached the head of the Adriatic Sea and laid siege to Aquileia. From 166 to 180 the Romans responded in a series of what have been called the Marcomannic Wars. At the end of these conflicts the Romans had reestablished the Middle Danube frontier for the time being.

Meanwhile frontier legions rebelled along the Rhine, spurring the civil wars that followed the death of Marcus Aurelius’s son, Emperor Commodus, in 192. An economic recession, marked by rising prices, hurt the towns and the small farmers.

After the Marcomannic Wars and other conflicts along the Rhine frontier and probably in response to them many among the Germanic tribes underwent a sociopolitical transformation. By the next century a new phenomenon had appeared among the Germanics: large, aggressive confederacies of tribes led by permanent war leaders-cum-kings. The first of these mentioned in historical sources was the ALAMANNI, driven out of Upper Germany by the emperor Caracalla (Marcus Aurelius Antoninus) in 213. The name Alamanni means “all men,” or “everyone.” Their territory lay between the Upper Elbe and the Rhine. The Alamannic Confederacy was long-lasting, and 20 years later they again broke through the Rhine border and wreaked havoc in the frontier

provinces. Their incursions contributed toward the abandonment of the Roman frontier system along the Rhine and Danube Rivers in 260.

In the east the GOTHs, a Germanic tribal confederacy similar to the Alamanni that had emerged north of the Black Sea, had first made themselves known to the empire in 238 and thereafter carried out raids in the Lower Danube region. In 251 the Gothic king Kniva led his warriors to a great victory over a Roman army at Abrittus in the Balkans, where they killed the Roman emperor, Decius. His successor was forced to pay them huge sums in bribes. Later they moved into Asia Minor, attacking coastal cities from fleets, and invaded Greece in 257. After they were forced out of Greece their invasions ceased, probably because the Romans began trying to negotiate with them, a process that culminated in a formal treaty in 332. Among its provisions the Goths were to receive annual payments; in return they would supply men for the Roman military.

Meanwhile in Gaul the onslaughts of Germanic tribes had weakened Roman control there; in 260 Gaul, Spain, and Britain formed an independent Gallic empire, governed from Trier in present-day Germany. The emperor Aurelian reclaimed Gaul for Rome in 273, but Germanic tribes devastated the country as far as Spain. Under Diocletian and his successors reforms in defense and administration were instituted, but Gaul became a center of the unrest that was fragmenting the empire.

Division of the Empire

Diocletian, who ruled in 284–305, in his reorganization of the unwieldy bureaucracy of the Roman Empire in the 280s divided its administration between two emperors, each with the title of Augustus, one in the East and one in the West. He himself decided to rule the East, with a capital at Nicomedia (modern Ismid); his colleague Maximian became Augustus of the West. On their voluntary retirement in 305 Diocletian left two Augusti, Constantius I and Maxentius. The next year Constantius died and his son, Constantine I, moved to claim the throne; he became sole emperor in 324. He chose to rule from the East and in 326–330 built a new capital at the Greek city of Byzantium on the Bosphorus, the narrow strait between present-day Turkey in Europe and Turkey in Asia; it came to be known as Constantinople (modern Istanbul). The empire was divided into the Western Roman and Eastern Roman Empires under two emperors in 395.

The Roman emperor Trajan hunts wild boar with a spear from horseback in this drawing from 1829. (*Library of Congress, Prints and Photographs Division [LC-USZ62-127029]*)

Rising Tide of Invasions

In the 370s steppe nomads known to the Greco-Roman world as HUNS overran the semi-civilized Goths, now split into two groups, the OSTROGOTHs and VISIGOTHs. The Huns conquered them with devastating speed and subjected them to harsh domination. In 376 large numbers of Goths requested from Roman authorities permission to cross the Danube to escape the Huns. However, conditions in the unproductive northern Balkans were so desperate that after two years the Visigoths had a violent confrontation at Adrianople with a Roman army, which they crushed, killing Emperor Valens.

Fritigern, a Visigothic leader at this time, adopted Christianity, possibly in a political move to gain support from the Romans; Christianity was now the official religion of the Roman Empire. Unfortunately the religious doctrine that he accepted, Arian Christianity, still being debated by church leaders at this time, ultimately was decreed a heresy.

A treaty in 382 under which the Visigoths were given lands within the empire itself did little to alleviate their situation, because the new territory likewise proved inadequate, and they began to raid northern Italy under their leader Alaric. Alaric achieved a victory that, symbolically at least, struck a death knell for the Roman Empire when in 410 he took control of the city of Rome itself, an event that horrified Romans everywhere. The great Christian

leader St. Jerome wept in his cell in Bethlehem when he heard the news. As it happened, little was changed by Alaric's feat; he was more interested in the wealth of Africa and immediately began preparations to mount an invasion there. In the midst of these he suddenly died. His successor, Ataulf, through diplomacy gained Roman permission to march into Gaul and establish control over a viable territory in Aquitaine in Gaul, from which the Visigoths soon expanded into northern Spain. The fact that they were still willing to abide by a treaty with Rome, after what must have seemed to them repeated betrayals by Roman authorities in failing for so long to provide for their welfare, may speak to the continuing allure Rome had for these Germanics.

In about 400 Germanic settler groups from the North Sea coastal region began migrating to Gaul and Britain, possibly because rising sea levels were making areas of their homelands uninhabitable at the same time as their populations were increasing; for many years they migrated only in a piecemeal fashion, in small groups with no overall cohesiveness. Called collectively **ANGLO-SAXONS** they began to establish kingdoms in southeastern Britain by the sixth century; thereafter they expanded northward and westward.

Romano-Britons were forced to fend for themselves against the Anglo-Saxons as Roman troops and officials were withdrawn from Britain in 410, both because of the fall of the city of Rome to Alaric and because of the terminal disaster that befell Roman control of Gaul in the early fifth century. In the winter of 406–407 warriors of the **VANDALS**, Suebi, **ALANS**, and **BURGUNDII** crossed the frozen Rhine looking for lands to settle and wealth to plunder. The Visigoths forced the Vandals and Alans out of Gaul and on to Spain, but the Burgundii, under their king, Gundohar, seized a large area of eastern Gaul and later attempted to expand into Belgica. They too were contained by Roman military forces, consisting of Germanics and led by a mixture of Germanic and Roman commanders (who by this time constituted the only meaningful Roman authority left in Gaul), and suffered diminution in their power through a devastating defeat by Huns; they were accorded federate status in 443 and fought against the Huns in 451. But the shocks of the fifth century in Gaul itself, which included the attempted assumption of control of the empire by Constantius, a usurper from Britain, who tried to make his capital at Arles, and those meted out in Italy by the Huns and oth-

ers, strained Roman power in Gaul to the breaking point in succeeding decades.

By the end of the fifth century the Visigoths had taken Aquitania; the **FRANKS**, another Germanic confederacy, ruled Belgica; and the Burgundii dominated the Middle Rhine. In the 420s the Vandals and allies plundered Spain. After running through the available wealth there they crossed to Africa and by 440 were in such complete control they were able to mount an invasion of Sicily. Rome's only option was to offer them the status of federates, which caused them to withdraw to Africa. Their rule there was truly worthy of barbarians, as we think of the term, and mainly consisted of ruthless plundering and confiscation of Roman lands. In 455 Vandal forces again ravaged Spain and Italy and sacked the city of Rome.

In 476 the Roman Empire in the West was officially dissolved when the boy-emperor Romulus Augustulus was deposed by Odoacer, commander of Germanic mercenaries in Italy.

Aftermath of the Western Roman Empire

Pressures from without joined with a sharply contracting economy within to bring about the collapse of the Western Empire. The West suffered from a trade imbalance with the Eastern Empire to the point that in some districts a money economy was abandoned for a barter system. The villa system had long been in decline, with falling productivity, and the taxes needed to fund the military, on which Roman society depended more with every passing year, drained the economy.

Ordinary citizens bore the brunt of the tax burden, while great landowners of senatorial rank, because of their imperial connections and private military means, found ways of avoiding paying taxes. Such individuals had little allegiance to the empire; for them being Roman meant cultivating an elite cultural tradition and preserving the privileges of their class. Such senators were perfectly willing to let barbarian soldiers and kings protect such privileges. Of the great shocks and momentous events of the time—Alaric's sack of Rome, even the dissolution of Roman authority in Gaul—wealthy senators, who had not been personally affected, remained sublimely ignorant.

The Visigoths, forced from Gaul by the Franks, achieved control of most of Spain by the early sixth century. Meanwhile the Ostrogoths under their king, Theodoric, invaded in 488 and took over much of Italy. However, after his death in 526 the Ostrogothic

hold in Italy weakened and they were unable to withstand efforts by the Byzantines of the Eastern Roman Empire to annex the former heart of the Roman Empire in the West. By 552 the Byzantines had gained control of Italy; shortly thereafter in 568 they lost much of their territory there to the Germanic LOMBARDS.

The Lombards carried out the final Germanic invasion of Roman Italy and the one that swept away almost all vestiges of imperial Rome. The Lombards had served in Roman military forces as mercenaries, and this experience had taught them how to deploy their military power more effectively. Thus when they entered Italy in 568 they swiftly took control of most of the territory north of the Po River and were able to resist a Byzantine and Frankish alliance in the 580s. In 605 the Byzantines ceded them a large territory in the northern part of the peninsula; much of the south was dominated by semi-independent duchies; the Byzantines had preserved for the Roman Empire only Rome and Ravenna, with a precariously held corridor connecting them, and coastal enclaves.

Unlike the Goths, the Lombards, perhaps unimpressed by the battered cities that were all that now remained of Rome's former glory, made no attempt to become Romanized or to include Romans in their governance. Their elite warriors took over lands and estates from their Roman owners and, engaged in the "vandalism" bemoaned by Pope Gregory the Great (see sidebar), who called them unspeakable for burning churches. That the cities had become largely depopulated by now had as much to do with the collapse of the Roman economic system as the actions of the Lombards.

CULTURE

Economy

Agriculture On the Mediterranean or Tyrrhenian coast the region Latium had a typically Mediterranean climate, dry with scrubby vegetation. Higher elevations were cooler; the Apennines and foothills sheltered the lowlands, providing a milder climate. Away from the coast were thick forests of oak, sycamore, elm, and chestnut for timber. The eruption of volcanoes in the southern regions of Latium left the soil fertile for farming. There was plenty of pastureland for sheep and goats to graze.

In the second century B.C.E. the practice of agriculture among the Romans began to shift away from its centuries-long basis on modest landholdings owned by patricians and the more prosperous plebeians and even smaller farms worked by peasants. Earlier even upper-class

Gregory I: Architect of the Medieval Papacy

Gregory I (also Gregory the Great), the great-grandson of Pope Felix III, was born in about 540 C.E. His father was a Roman senator. At the age of 30 Gregory renounced his title as a Roman prefect to become a monk.

Early in his career Gregory became Pope Pelagius II's representative in negotiations with the Byzantines in Constantinople. On being elected pope in 590 he negotiated a settlement with the Lombards, thus removing the threat to Rome. To counter the influence of the Eastern Orthodox Church he upheld Rome's traditional claims of ecclesiastical primacy over the patriarch of Constantinople, as well as over the other bishops of the church. He also strove to establish a politically independent papacy and to promote Christianity throughout Europe. He revitalized the monastic system; among his successes was a mission to England in 597 headed by Augustine, the first archbishop of Canterbury, along with 40 monks. Gregory gained support locally by offering protection and provisions to the population around Rome that was at risk because of the weakening of Roman civil administration due to the Lombard occupation of much of the Italian countryside. He also popularized the concepts of miracles and purgatory.

Gregory, known for his scholarship, compiled 14 books, most notably *Moralia* (Morals on the Book of Job), *Liber pastoralis curae* (Pastoral care), and *Dialogues*. He also took great interest in the liturgy, introducing a number of reforms—among them, tradition maintains, incorporating Gregorian chants into the liturgy. He died in Rome in 604 and was buried in St. Peter's basilica in Rome. He was probably canonized at his death (by public acclaim). His policy and reforms endured in the papacy through the Middle Ages.

This portrait shows Pope Gregory I in his vestments. (Library of Congress, Prints and Photographs Division [LC-USZ62-106737])

landowners took a personal interest in their farms. Cincinnatus, the fifth-century B.C.E. Roman consul who left his farm to lead the forces that defeated the Aequi and Volsci returned home without further ado to take up farming again as soon as the fighting was done, was the ideal. At the time of the first Punic War Regulus was disinclined to stay in Africa because the steward (a freedman) who looked after his property had run away and his wife was having difficulties managing the estate by herself. The patrimony must have been fairly small to be so affected by the loss of the services of a single individual.

This condition began to change after widespread land confiscations that followed the Second Punic War made large areas of public

land available for purchase. Much larger landholdings became more common, and the new farms were geared to commercial production. In addition the almost constant warfare over time depopulated the Italian countryside as small farmers and laborers were drafted into the army; even those whose service was completed often moved to the cities, disinclined to resume a rural existence. As a result land was increasingly in the hands of large estate holders, who depended on slave labor (the byproduct of war). Land was a major focus of investment among the aristocracy, who poured the spoils of their wars into developing their estates until Italy became widely farmed.

The very varied soils and ecological types in Italy made for a variety of crops. In the south there were *latifundia*, ranches on which sheep and cattle were grazed. Their wool and leather were much in demand by the military. In central Italy, especially Latium and Campania, the farms tended to be smaller and concentrated on cash crops, olives as well as grapes. In both cases they were now worked by slaves, who had been imported into Italy in such numbers that one estimate is between 2 to 3 million by the end of the first century B.C.E., over a third of the population. Slave labor was all the more attractive to landowners because slaves could not be called up for military service. Eventually the important families of the later republic and the empire, who made vast sums out of Rome's wars of conquest, owned vast estates, called villas, employing thousands of people.

Peasant farmers, unable to compete with the villas, were increasingly forced off their land, and the ready availability of slave labor lessened demand for their services as agricultural laborers. Their only recourse was to relocate to one of the cities to look for work; there, with paid-off veterans, they further swelled the teeming urban populations.

Impetus for the Roman Conquest of Gaul In addition to fear of the northern peoples and political ambition, several developments in Italy were involved in the Roman drive for empire that led them to Gaul in the first century B.C.E.; most immediately the Roman social hierarchy maintained itself through military adventures. In addition the increasing amount of land in Italy that was being devoted to growing grapes meant that the amount of wine being produced was far more than the domestic market could absorb, so that Roman wine merchants looked to the Gauls, whose passion for wine was legendary. At the same time the

Gauls became an important source of slaves, indispensable for working the large villa estates. The constant need for new military horizons, the growing population of increasingly restive war veterans in Italy needing lands on which to settle, and the need of merchants for stable markets in foreign lands all created a powerful trajectory for Roman arms in several directions, including the coastal strip of present-day southern France.

The Empire The economy of the Roman Empire continued to depend overwhelmingly on agriculture. Throughout the Roman period the staples of Mediterranean agriculture remained, as they had been in earlier times, olives and grapes, supplemented by cereal crops and cattle, sheep, and goats for meat, milk, wool, and leather. However, the main aims of agriculture now were to produce large surpluses for trade and to increase the wealth of great landowners, both in Italy and abroad. In the north of Europe in Gaul and Britain where summers are short and the soils are heavier, olives would not grow at all and grapes only on specially favored sites. Cereal and vegetable production was predominant there.

In many areas little was done to change the traditional mix of crops. In Egypt, for example, centuries-old methods of grain production continued as the emperors (who had direct control of agricultural affairs there) actively discouraged any economic development that might threaten the grain surplus with which they maintained the political stability of Rome and other parts of the empire. The cities of southwestern Asia had long established and successful agricultural methods that remained unchanged. In Britain the Celtic field systems were largely preserved intact (with some lengthening of the fields as plowing became more efficient). Many, however, were consolidated into large villa estates as elsewhere. Concentration on cereals, which had produced a surplus for export to mainland Europe even before the Roman conquest, continued. When Germanic lands were taken farmers there greatly expanded their cattle production to supply meat and, more important, leather for the military. Germanic farmers across the Rhine did this as well.

Literary sources give some information on farming. Marcus Porcius Cato's *De agricultura* of the second century B.C.E. and *De re rustica* of the first century C.E., both instruction manuals for large landowners, focus on producing products for local markets. They give advice not only on growing but also on processing of goods.

Government and Society

Early Kingdom Roman accounts of their earliest history are semi-mythical, with characters and events that should be seen in a partly symbolic or allegorical light. Roman tradition maintained that in the beginning, supposedly the eighth century, Rome was ruled as a kingdom by a king in charge of both military and civil affairs. Traditionally Romulus is regarded as having established certain political institutions in Rome. He created the senate, a council of elders (called after the Latin word *senex*, old). He established three tribes of Romans, called Tities, Ramnes, and Luceres, whose composition are unknown. Finally he divided the Romans into 30 clans, or *curia*. Romulus who with his twin brother Remus was supposed to have been suckled by a she-wolf, probably a symbol of Rome's primitive past.

The senate remained a powerful advisory council to the monarchy and comprised the heads of noble Roman families, though little is known about how they were chosen. In addition an assembly of the male Roman citizens was convened, first at the coronation of new kings and declarations of war. Each clan eventually obtained a single vote in issues of inheritance and adoption in the republic. Some think this assembly originally operated as a lawmaking body.

In the chaos that followed the sudden death of Romulus, who was drawn up by a whirlwind in a freak storm during a public sacrifice, the senate ruled until a king could be chosen from either the original Romans or the Sabines who now shared the city. The council members would alternate, each ruling for one day. The council finally chose Numa Pompilius to be king, conscious of seeming to turn Rome into an oligarchy.

Numa Pompilius, supposedly the second king of Rome, was called the lawgiver, for he ordered Roman life, moderating the excessive license of Romulus, which many had claimed had angered the gods. Numa symbolized the civilizing impulse that emerged among Romans as they developed into a city-state. After the founding two kings, legend has Roman kings alternating between those geared toward military expansion and those moderately emphasizing spiritual and civic growth.

Although the exact events are unknown, the evolution of Roman political structure indicates a degree of truth in the legends of Rome's governmental formation.

Early Etruscan Influences The social and political organization of early Rome leads many to believe it was founded as an Etruscan city. Two kings of Rome during its early period were Etruscan, and many of the early works in Rome are attributed to the Etruscans, including draining of the marshes to construct the Roman forum and the building of the city's first effective walls. Roman temples were decorated after the Etruscan style, and the religion associated with them was taken largely from the Etruscan model.

An important concept that the Romans seem to have borrowed from the Etruscans was *imperium*, divine authority discovered through divination by augurs when a prospective king had been chosen. A king's *imperium* gave him the authority to exercise power in political, military, and religious affairs. The symbol of *imperium* was the *fasces*, a bundle of rods bound around an ax, which was carried in front of the king. This, too, seems to have originated with the Etruscans.

Latin Alliances Issues of inheritance became increasingly important as Rome developed from a village of shepherds on the banks of the Tiber into an increasingly thriving city of 10,000, reaping rewards from its location along an axis of trade between the Etruscans and Europe and the Carthaginians and the southern Mediterranean. Because of their shared linguistic heritage with their fellow Latins, and as the Latin tribes turned toward each other against the threat of Etruscan dominance, the Romans shared communal rights with them. Citizens were allowed to move to other Latin communities, gaining citizenship in their new city; they had the right to intermarry freely with other Latins and, most important, commercial agreements and transactions were preserved across community boundaries.

Basis for Political Structure of the Republic Servius Tullius, who supposedly became king in the late seventh century B.C.E. after Tarquinius Priscus was assassinated, was said to have begun his life as a slave (hence the name Servius from *servus*, slave). Although Roman tradition credited to him the construction of stone walls around the city, during his long reign until 534 B.C.E., these were not built until the fourth century B.C.E. He is also said to have established the centuriate assembly, which replaced the assembly based on *curias*, or clans. The assembly was constructed out of

a division of the people into five classes. Each class was based on wealth, which was discerned by a census, and the divisions were used to assign military duty, with each class required to supply armor on the basis of its means. The classes were given centuries, or groups of 100 people; the richest were given the most centuries, and each century was given one vote. It is possible that this system was meant to grant the army votes in political matters. It also cemented the power of the wealthy.

When the monarchy ended the Romans established a republic in 509 B.C.E., consisting in main of the institutions that existed under the king: the senate and the assembly. The senate remained a council of elders, while the assembly became, or continued to be, a legislative body. The assembly was arranged in different ways throughout Rome's history but generally represented the citizens on the basis of property holdings.

The king was replaced by two officials called consuls, who held the *imperium*, the divine authority for their power, as kings formerly had. The Romans hoped each would check the other, giving each the power to forbid or veto the other's decisions. They were elected yearly by the assembly and together shared most of the powers of a king. The consuls could call up and lead armies. In the beginning of the republic the consuls were probably called praetors, which meant roughly "leaders." This term later became applied to "junior" consuls, officials who assisted the consuls in executing their duties. These praetors were responsible primarily for presiding over civil law cases.

Later more offices were created. There were two officials called censors, chosen from among former consuls, who were responsible for taking the census, especially accounting for holdings of property. The censors had the right to expel members from the senate, if they lacked sufficient financial or moral resources for the position. Lesser officials were the aediles, responsible for the upkeep of public buildings and involved in presentations at festivals and games, and the quaestors, who were accountants.

The need for a strong central ruler on occasion was recognized. In times of great need often due to a foreign invasion, the consuls could elect one magistrate who was called a dictator. The dictator served a limited term but exercised absolute power until the crisis had passed.

Roman Citizenship and Patriotism Romans took great pride in their citizenship. Their relation to the king during the monarchy and then to the state mirrored their relation as members of a family to the head of the household. The first-century B.C.E. poet Virgil, in his development of the idea of Roman and Italian patriotism, drew on this belief with the term *patria*, "fatherland," for the land of Italy, celebrating the land as a unifying element. Citizenship became more difficult to obtain as its benefits increased with Rome's expansion.

In overthrowing their Etruscan king the Romans asserted their unity, and the foundation myths of Rome attempt to draw together all the strands of different cultures that informed the Romans' way of life, to identify them as Roman traits. The Romans declared their loyalty to Roman gods and to the gods of their family, through ceremonies and ceremonial duties. They bound themselves together through festivals and other religious observances. This Roman patriotism colors their accounts of other peoples, such as the Etruscans, whom the Romans depicted as lazy, sensual, and effete, even though many of the Romans' most solid traditional values were adopted from the Etruscans.

Struggle between Patricians and Plebeians The Romans were divided into two classes, which they called patricians and plebeians. The patricians were landowning nobles and the plebeians their workers. The patricians were the only citizens allowed to hold offices and become priests and the two groups were not allowed to intermarry. The designation of plebian and patrician was inherited and could not be altered by attaining or losing wealth. The struggle between the patricians and plebeians (or plebs) over power and rights is referred to as the Struggle of the Orders.

The struggle probably began just after the conversion to a republic. Economic times were bad, as evidenced by reduced pottery imports and a slowdown in temple construction. Records show that a number of famines hit the city during the fifth century B.C.E. Hunger, the risk of enslavement due to debt, and a scarcity of land brought the conflict to a head. The plebeians tried to assert themselves by abandoning the city en masse in 494 and 450 B.C.E., denying the patricians their workforce. They also rioted.

During the first secession the plebeians elected two representatives they called tribunes, a number that later rose to 10. The tribunes could call a meeting of the council of

plebs, and a decision of the council was called a *plebiscitum*. The plebiscite was binding only on the plebeians. In 475 B.C.E. an Etruscan army prepared to attack Rome, and the plebeians took this opportunity to refuse to fight, unless their tribunes and council were recognized by the state. The patricians assented, and the people's tribunes gained veto power over the senate and assemblies.

In 450 B.C.E. the plebeians, outraged at the unwritten laws that the patricians used against them, persuaded the senate to publish the Roman code of law, known as the Law of the Twelve Tables. The Twelve Tables spelled out the basis for trials of crimes and remain the foundation for much of Western criminal and civil law. After 444 B.C.E. the consuls occasionally were replaced with military tribunes, a mechanism that allowed plebeians to obtain the rank of a consul without defiling the office.

Struggle continued between the patricians and plebs through the fifth and into the fourth century B.C.E. In 367 B.C.E. the proposals of two tribunes known as the Sextian-Licinian Rogations were enacted. The consulship was opened to plebeians, debt then held was reduced, and the amount of public land anyone could hold was diminished. By the end of the century plebeians who had held the office of consul and their families were granted the title of noble, and these noble families became the source of the office of tribune over the plebeians. Finally in 287 B.C.E. the decisions of the plebeian council became binding on the patricians as well, after a final secession by the plebeians, but by then the noble plebeians had aligned themselves with the patricians, and the economic interests of the plebeians at large were ignored.

During the first two centuries of the Roman Republic the conflict between the patricians and the plebeians was a driving force in expansionist tendencies, as Romans sought new land and new revenue to reduce the tensions, as well as in reform and expansion of the forms of republican government. The origin of the difference between the two Roman classes has been disputed but most likely arose out of a difference between those families whose members had been part of the Roman senate during the monarchy and those who had not: The senators had often been referred to as fathers, and the word *patrician* is obviously derived from the Latin word *pater*, "father." Furthermore plebeians were defined in only one way: those who were not patricians.

The formula that arose was a policy of aggressive expansion utilizing the plebeians as

armed forces who, by serving in the army, found ways to advance themselves by taking office as one or another of the many new officials that had been created. Additionally plebeians who had taken steps to work through the military and government were allowed to join many of the priesthoods whose membership had been restricted before. With debt reduction (which did nothing to allay the plight of those rural poor outside the city) and successful plunder and colonization economic problems were eased. Finally the rolls of the elite were expanded to allow influential or rich plebeians to join the nobility, thereby eliminating a source of power for the plebeians.

Creation of the First Provinces Once the Carthaginians evacuated Sicily, the Romans were faced with a new situation: how to rule foreigners overseas. In the east were towns such as Syracuse that were allied among themselves by equal treaties. In the west were both Carthaginian and Greek towns that the Romans had captured or that surrendered to the Romans under the peace treaty with the Carthaginians. The Romans had two choices: to incorporate these communities into the Roman military system as they had in Italy or to collect tribute from these communities, the earlier practice in Sicily.

The Romans opted for the latter. Sicilian communities were accustomed to paying tribute to the dominant power, whether Carthage or another Greek community. This procedure also precluded the difficulty of fitting the military resources of these communities into the Roman system and using them at a great distance from home.

But it soon became clear that to oversee this arrangement and to maintain order it was necessary to have a permanent Roman official on hand. The solution was to create two new positions of praetor, one each to be sent as a permanent governor to Sicily and Sardinia. In effect the internal political order in Rome was being adapted to meet the administrative and military needs of Rome's overseas possessions. Over time the needs put increasing pressure on the magistracies of Rome, and eventually it became apparent that the political system designed for a small city-state was incapable of ruling a vast empire and would have to be drastically changed.

The Province The original meaning of the word *province* (Latin *provincia*) is unknown. It literally means the sphere of operation given to a magistrate. The activity of governing a

province could be anything from guarding against banditry in mountain passes to commanding during a war. When particular geographical areas such as Sicily or Sardinia were regularly assigned to magistrates to oversee as provinces, the term came to acquire the concrete geographical sense of “governed territory,” which has passed on into English. Still throughout the republic it retained the broader meaning as well.

Promagistrates It was one of the basic tenets of the Roman state that a magistracy could only be held for one year. This was found to be inconvenient when Rome was waging prolonged wars far from the city. The solution was a procedure called prorogation, the act of extending the *imperium* of a magistrate who was operating away from the city and engaged in an operation that was considered inconvenient to disrupt through a change in command. A consul or praetor whose *imperium* was prorogued in this way was called a proconsul or a propraeator. The first proconsulship was created in 326 B.C.E. and propraeators are attested in the mid-third century B.C.E. At first a bill had to be passed by the people at the suggestion of the senate to authorize a prorogation, but eventually a decree of the senate indicating the need for prorogation was considered sufficient and no one bothered with the legal authorization.

The position of promagistrate added a great deal of flexibility to the Roman governmental system. Not only could promagistrates be used to maintain command in war, but also regular magistrates could be used as governors in times of stress. A governor could therefore be a regular magistrate during his term of office, or a magistrate whose term in a province was extended through prorogation as a promagistrate, or a magistrate from the city who was sent to a province as a promagistrate after his term of office expired in the city.

The increasing numbers of praetor positions necessitated by the growth of the empire led to complications in internal Roman politics. Before 242 B.C.E. there were one praetor position and two consul positions. As the inferior position the praetorship was normally held before the consulship. This meant that there were more than enough positions as consul to satisfy the ambitions of all the former praetors. This condition changed when the number of praetors exceeded that of consuls by a factor of 2, then 3, then 4. Although mortality somewhat reduced the disparity, there were soon far more qualified former praetors to seek the con-

sulship than there were available positions. Given the rewards to be gained from commanding a major war as consul, the competition greatly increased and various forms of electoral corruption arose.

Preservation of Roman Culture in Germanic Kingdoms By the time of the kingdom of the Frankish Merovingians in the early sixth century C.E. the Romans had lost control of Gaul. In the end, however, Gaul even under Frankish rule proved to be an important repository of Roman culture. The Frankish Carolingian emperor Charlemagne sought to make of his court a center of classical learning. Gallic writers long kept the classical Roman literary tradition alive. The greatest testimony to the stability of the culture of Roman Gaul is the survival of the Latin language as French. Many of the amphitheatres, aqueducts, and other structures the Romans built in Gaul still stand.

Visigothic Spain was notable for its unification of Germanic and Roman elements and as far as material culture is concerned was hardly “Gothic” or Germanic at all.

The Ostrogoths, who had taken northern Italy from Odoacer in 488 C.E., effected a considerable degree of fusion of Germanic and Roman cultural and political traditions, mostly because of the breadth of vision of their king Theodoric, who preserved Roman administrative organization and appointed Romans to high posts in his court, while employing Germanic traditions for his military.

The Holy Roman Empire Germanic rulers long cherished the wish to revive the Roman Empire. The first Germanic king to acquire power and territory on a scale approaching that of the former empire, the Frankish ruler Charlemagne, went to great lengths to have himself crowned Roman emperor by the pope in Rome. Even after his empire was divided among his three grandsons the Roman Empire as a concept survived; indeed its Carolingian proponents claimed that the supposed official end of the Roman Empire in 476 C.E. was merely a suspension. For centuries thereafter many Roman institutions, especially the church, endured under Germanic kings and Romans played important roles in government and politics. Because the Roman Church in the person of the pope had anointed a Roman emperor there had to be an empire. Arnulf was the last Carolingian to hold the imperial title, but a number of claimants to the empire in Italy and France kept the idea alive until 962, when Otto I of Germany was crowned emperor by Pope

John XII. Otto had partly reunified the Carolingian Empire by putting Italy, Burgundy, and Lotharingia under his rule. The term Holy Roman Empire only came into use some centuries after Otto's reign. From this time Germanic kings took the title of King of Rome, in this asserting their right to the imperial throne and implying that they were in effect emperors-designate until they should be crowned by the pope, an expectation that was not always realized.

Military Practices

Organization The Latin word *legio* signifies "selection," a carryover from early times when men were selected from among the populace to serve temporarily in the army. Legions became separate units when in the creation of the republic ruled by consuls each consul was assigned two legions with which to fight.

The military of the early and middle republic consisted of landowners. To serve, one had to be able to provide one's own weapons and armor. The five classes used distinctly different weapons and armor. The top three classes served as heavy infantry and the bottom two as more lightly armed troops.

In the beginning the legion was a temporary unit formed at the beginning of a campaign and disbanded at its end. During the long siege of Veii, pay was introduced. Presumably as Roman armies fought on extended campaigns, some legions remained on duty for more than a year (in 326 B.C.E. a magistrate's *imperium* was prorogued for the first time, and presumably his army continued in existence as well). Certainly during the long campaigns abroad that began with the First Punic War Roman armies remained overseas for years on end. When a commander returned in triumph he took his legionaries home with him and these legions were disbanded.

Each legion had six military tribunes. Those of the original four legions that were assigned to the consuls early in the republic were elected, but those of the other legions were appointed by the magistrate who raised them. At the Battle of Thermopylae in 191 B.C.E. the former consul Cato served as a military tribune, but the office thereafter declined in importance.

The backbone of the army was the centurion, on whose leadership, initiative, and experience success depended. Centurions were appointed from the ranks by the commander on the basis of bravery and merit. The centurion maintained close control over his legionar-

ies and directed them in battle, riding on horseback to have optimal maneuverability and oversight of his century. The centurion was assisted by a second in command called an *optio*, who carried a wax tablet on which to write the orders of the day.

There were theoretically 300 Roman cavalrymen attached to each legion, but as the Romans found over time that their own cavalry were not as good as that of various foreigners such as the Numidians and Gauls, cavalry soldiers were recruited from their allies. Similarly the Romans adopted into their forces auxiliaries from among the peoples they had conquered who had particular military skills the Romans lacked. Auxiliaries included archers, recruited from Syria, Scythia, and Crete.

The military pay provided was not great, and the major source of remuneration for the soldiers was in the form of plunder obtained from the enemy. Victorious generals often obtained large amounts of booty (the motive of many prominent men who wished to go to war), some of which they would give to the state and some spend on prestigious projects such as temple building. But some had to be shared with the soldiers.

In addition to fighting, legionaries built forts, roads, and bridges, as well as siege mounds and movable towers, as part of their military duty.

Tactics Rome's great innovation, which led to their military superiority over nearly all armies they faced, was the manipular system of organization. In the beginning the Roman army presumably used the hoplite tactics of the Greek world. The main force would then have consisted of a long line, five to 10 men deep, of heavily armed troops called a phalanx.

By the third century B.C.E. the Romans had replaced the old phalanx with a much more flexible arrangement. Each legion consisted of 4,200 infantrymen distributed mainly on the basis of age. The youngest (and those who could afford only the minimal equipment) served as *velites*, or skirmishes. They numbered 1,200 and fought in front of the main force to protect it against bowmen and slingers. When the experienced legionaries encountered the enemy, the *velites* retreated behind them.

The main force consisted of three parallel lines of troops. The youngest of the main body, 1,200 in number, were called *hastati* and formed the first line. The oldest 600 troops were placed in the last line and called the

A Roman praetorian is depicted in this detail of a relief carving. (Drawing by Patti Erway)

triarii. The remaining 1,200 were in the prime of life, more seasoned than the first line and younger than the last. These troops, called the *principes*, formed the steady “center of gravity” for the legion.

Each line was divided into 10 units called maniples, each maniple consisting of two centuries, which fought side by side. Thus when the three battle lines were drawn up for battle they did not form a continuous line like that of the phalanx, and the individual centuries, each under the command of a centurion, maintained considerable cohesion. This made the Roman line much more maneuverable than the phalanx, which tended to lose cohesion on rough ground. Furthermore the maniples could operate independently and seize an opportunity presented by an opening in the opposing line.

When the second line was drawn up behind the first its maniples were placed behind the gaps between the maniples of the first, and the third was drawn up behind the gaps in the second. This arrangement prevented the enemy from exploiting the gaps, because any attempt to break through the gap in front could be countered by the maniple drawn up behind it.

This three-line arrangement in effect meant that the Romans had an immediately available reserve in the *principes* and finally the *triarii*. The Romans had a saying that “matters had reached the *triarii*,” meaning that the situation had become desperate.

Weaponry and Other Equipment Roman soldiers wore armor over tunics, metal armor—either chain mail, or later, segmented plate armor—covering the torso and leather strips covering the shoulders and hung from the waist reaching to the knees. The tunics of common soldiers were red. Until the Common Era only officers wore greaves (armor for the leg below the knees). Many types of helmets were worn, often with red-dyed horsehair crests or plumes. Centurions were marked out by having transverse horsehair crests running from one side of the helmet to the other, rather than fore and aft. Most had a horizontal reinforcing ridge of metal projecting out from the front of the helmet (rather like a hat brim but higher than the front edge) to protect against sword or ax blows, and they flared out in back to protect the neck. Legionary shields were long and rectangular, reaching from the shoulder to below the knee and curved to cover the body as much as possible. Shields had a central iron boss that could be used as a weapon and were brightly painted.

The badge of office of the centurion was a twisted vine staff, which he would use to administer punishment. Legions maintained cohesiveness through the use of standards, poles topped with sculpted images borne by special functionaries. The standards had the practical function of being visible for all ranks to follow, either on the march or in the midst of battle. Beyond this the legion’s pride and honor were invested in its standards and men would give their lives to prevent them from falling into the hands of the enemy. They contributed to esprit de corps. The standard bearers wore animal pelts, heads attached, the head, facing front, worn over the helmet with the rest of the hide falling over the shoulders and the forelegs crossed over the chest. Wolf and bear pelts were commonly used for this purpose; the elite praetorian guard standard bearers wore lion skins. Each legion had one *aquilifer* (who carried the legion’s gold-colored eagle standard), one *imaginifer* (who carried an image of the emperor called the *imago*), and any number of lesser standard bearers for the various subdivisions of the legion. The eagle standard was never carried by detachments but only when the entire legion marched. Legionary trumpeters, also wearing animal pelts, carried instruments called *tubae* curved similarly to French horns but much larger, their tubes running down from the mouthpiece to the trumpeter’s side then curving up over his shoulder with the bell facing front above his head.

The standard weapon of the legionaries, which formed the heart of military strategy, was the *pilum*, a long spear with a wooden shaft tipped by a slim iron shank with a bullet-shaped point. Soldiers would hurl their *pila* at the shields of their opponents, hoping to pierce them. The bullet point of the *pilum* and the tendency for its iron shank to become bent made extricating it from a shield so pierced nearly impossible; holding it was awkward and difficult because of the *pilum*’s weight. The standard tactic, then, was for a rank of soldiers to hurl their *pila* at the enemy, disable their shields, then rush up and finish them off with swords. The ready bending of *pila* had the added advantage of making them useless after they had been thrown, so that enemy soldiers could not use them to hurl back at the Romans, a typical tactic in ancient warfare. (Celtic warriors were renowned for being able to pluck thrown spears from midair and turn them back on the enemy.) After a battle the *pila* would be collected from the battlefield and quickly straightened by the legion’s blacksmiths for reuse.

In addition to the *pilum* legionaries carried a short double-edged sword, which had been adapted from the Celtiberians during the Second Punic War, called a *gladius*. This was a thrusting rather than slashing sword type, adapted for use in tight formations where there was no room for slashing. Only near the end of the empire as the Roman army became increasingly “Germanized,” adopting Germanic tactics and practices, did the *gladius* give way to the long barbarian slashing sword, called by Romans the *spatha*, used particularly by cavalry and auxiliary cavalry troops.

Set-piece and siege weaponry included various types of catapults. One of them, the *carro-ballista*, had coils to tension a bow capable of propelling a foot-long bolt as much as 1,000 feet.

Germanization of the Roman Military The long struggle of the Roman military with the Germanic tribes began and ended with fundamental changes in the Roman way of war, it might be said in both cases making it similar to the Germanic way. When Romans first met Germanic warriors in battle and were sorely bested by them, they embarked on the development of professional standing armies, whereas before their armies had been manned by citizen soldiers, militia-fashion, who after the war ended went home to their farm. The standing army was the civilized equivalent of the Germanic warrior society, in which warriors’ primary activity was to make war.

From about the fourth century B.C.E. first the Roman Republic and then the Empire achieved and maintained success by constantly expanding; when expansion was halted by the Germanics in the first decades C.E. for the first time Romans switched to the defensive and established a garrison system along the borders. Over the next two centuries the Roman army steadily became less “Roman” in the makeup of its soldiers, as Germanics joined in great numbers, although preserving Roman methods of warfare. When the migration period began, however, severe defeats of Roman armies by Germanics brought about another Roman reorganization. The Battle of Adrianople, in which the emperor Valens was killed and his army annihilated by the Visigothic cavalry, convinced strategists that the Roman army, long primarily an infantry force, should focus more on cavalry. Mobile cavalry forces that could rush to a point of penetration and stop the enemy advance were established at key garrisons along the empire’s

borders. In addition to these the border fortifications were manned by native militias under their own commanders.

In basic organization, values, tactics, and weaponry the “Roman” army had become largely Germanic. Eventually localities with strong, well-led tribal militias, such as that held by the Franks, had become virtually autonomous polities within what was left of the empire.

Dwellings and Architecture

As in so much else the Romans derived their architectural styles and building types from other peoples. Influences from Greece entered Rome in somewhat altered form from the cities of coastal Campania, wealthy settlements along the Bay of Naples to the south of Rome. Campania’s sheltered coastline made it an ideal location for traders to land safely; as a result Greek and other Eastern influences were felt there sooner than in Latium. Thus when Romans began to refurbish and expand their city they looked to Campania for models. Here they found what became the typical Roman stone building types: the amphitheater, the theater (in its Roman form), and almost certainly the Roman bath, the market building, and the basilica. The style of the typical Roman house with its atrium (central court) and enclosed colonnaded garden was from Campania. The basilica, a long hall framed on each side by a colonnaded aisle, was developed in Greek cities of southern Italy. The Campanian port city of Pompeii near present-day Naples, which had

This late 19th-century photograph shows the exterior of the Colosseum in Rome. (Library of Congress, Prints and Photographs Division [LC-USZ62-94156])

been founded by the Greeks but acquired by the Samnites in the fifth century B.C.E., because of its preservation by the lava from Mt. Vesuvius's eruption in 79 C.E. has evidence of how much in advance of Rome the region was. By the second and early first centuries B.C.E. Pompeii had already acquired a full complement of urban buildings, including theaters, an amphitheater, bath-houses, and market buildings. Two of the bath-houses predate any in Rome by a century. Rome's first stone theater was not built until 55 B.C.E. by Pompey (and had to be disguised as a temple) and its first stone amphitheater was the Colosseum, dedicated in 80 C.E. Rome, for all its military and political prowess, long remained a rustic small town, architecturally speaking.

In the first century B.C.E. Rome began to undertake major building programs, with the construction of the great public buildings around the Forum: its temples, senate house, halls for the public assemblies, and state offices. There were market halls and great warehouses. However, the primary building material was brick, until Augustus transformed the city "from brick to marble." From this time on imperial patronage became an essential component of architectural development. The emperors had the resources to make a major impact on architecture, and their building programs increased their political influence. In other Roman cities, including those outside Italy, wealthy men and city leaders voluntarily undertook building projects as a means of acquiring political clout. The construction of towns and cities on the typical Roman town plan, with its grid of streets, central forum, and surrounding public buildings, was an important means of Romanization throughout the empire.

The promoter (if not inventor) of this plan was an engineer by the name of Vitruvius, who built a great basilica in the town of Fano on the Adriatic coast. He left a famous treatise, *De architectura*, written in about 40 B.C.E., in which he set out a list of buildings and urban accessories essential for a well-run and livable Roman town. These included paved streets and drains, an aqueduct to carry in fresh water for the public and private baths as well as for drinking, an amphitheater and a theater, a forum, temples, and basilicas for public business. City walls were to be built in some cases for defense but more often as a mark of civic pride, and the center of the town might be graced with commemorative arches and statues of its prominent citizens and benefactors.

Although the aqueduct was not a Roman invention (earlier examples have been found in Persia and Assyria), Roman engineers were expert in making them. The first aqueduct of Rome, the Aqua Appia, was constructed as early as 312 B.C.E. and was about 11 miles long. As the city grew, more aqueducts snaked out into the Campagna, the countryside around Rome. The Aqua Marcia of 144 B.C.E., for example, ran about 60 miles from the east of the city and is estimated to have carried a million liters of water an hour. The famous visible remains of aqueducts marching high across the countryside are misleading because for most of their length aqueducts ran underground to maintain the purity of the water and to protect it from poisoning by enemies. Construction of aqueducts was a favorite project of emperors. Augustus built a major aqueduct on the Campania to supply Naples and nearby cities.

A feature that distinguishes Roman architecture is the arch, much used for above-ground aqueducts; however, Romans did not invent it. The arch in principle was known to the Greeks but did not suit their aesthetic principles and was seldom used by them until about the third century B.C.E., when the Romans adopted it. With their invention of strong mortars and concrete using a natural Italian cement called *pozzolana* Romans were able to carry the arch form in architecture to its highest level. They devised intersecting arches to make groin vaults, parallel arches for barrel vaults, and finally the rotated arch system that allowed the building of domes. Because the earliest arches were employed in temples, this structural form became closely identified with religious uses.

One particularly powerful manifestation of the form is the triumphal arch, erected by emperors to commemorate their victories. The origins of this practice are uncertain, but may have been related to the custom of armies marching to war of passing through a temple to the god Janus, a rectangular building with arched openings at two ends. Janus was a god supreme in Rome until the advent of Jupiter. He later became the god of beginnings and endings, the past and future, and in 153 B.C.E. his name was used for Januarius, the first month of the year. He also became associated with gates, which, as doors do when opening and closing, poetically symbolize beginnings and endings in life. Also there is an etymological connection between Janus and gates. The Latin word *ianua* means "door" and a *ianus*, "archway." As Janus was the god of beginnings and endings, he was

represented by an image with two faces, back to back, usually bearded, sometimes not, and sometimes with only one of the faces bearded. Virgil in the *Aeneid* wrote that when war was declared by the Romans, the consuls led the army and all the men of military age in a solemn religious procession through the Janus Geminus, Janus's temple, on the path to war. It is probable that as Janus was also a god of endings returning armies would march through his temple as well. But as the custom of armies' carrying the spoils of war and marching their prisoners to show the populace arose, the constricted space of the Janus Geminus may have led to the building of freestanding arches.

The first of these arches dates from the reign of Augustus (the earliest example actually to survive, at Rimini in Italy, dates from 27 B.C.E.). Tiberius erected a particularly elaborate arch with three openings and a mass of decoration at Orange in southern France in 26 C.E. after he had suppressed a Gallic rebellion. In Rome the emperor Titus erected an arch (in concrete, faced with Pentelic marble) to celebrate his conquest of Jerusalem. Another elaborate example in Rome is the arch of the emperor Lucius Septimius Severus, built in 203 C.E. The form of the triumphal arch became a symbol of Roman imperialism that spread throughout the empire and was adopted with particular enthusiasm in the eastern and north African provinces.

Clothing

As in other societies in the ancient Mediterranean Roman clothing basically consisted of pieces of cloth, usually wool or sometimes linen, wrapped around the body and held in place with pins or brooches. The lack of fine needles precluded the making of buttonholes or clothes fitted to the body until late in the Roman period. The simplest garment for men, but the one that denoted citizen, and not slave or working-class status, was the toga, basically a large circular cloth hung over the left shoulder, wrapped around behind the body and then in front, with a corner then fastened to the left shoulder again, leaving the right shoulder and arm free. No doubt it was the impracticality of such a garment for work or activity that made it symbolic of the citizen engaged in affairs of state. In earlier times the toga was worn next to the skin. Later on men would wear a tunic underneath. Boys only donned a toga when they came of age—thus its name, *toga virilis*.

The tunic worn without toga was the garment of children, the poor, and slaves. In its

simplest form it was a rectangular piece of cloth with an opening for the head, hung before and behind and fastened at the middle with a belt and sometimes at the sides with pins. Tunics were of various lengths, hanging to the knees or lower. In winter a number of tunics would be worn in layers. Sleeved tunics were only adopted by men in the late Roman period after the third century C.E., because they were considered effeminate earlier. The long-sleeved tunic of the late period was called the *tunica dalmatica*. For men the decoration of tunics denoted social status, distinguished by a vertical purple stripe along one edge of the garment, of varying widths, called a *clavus*. The *latus clavus* (or *laticlavium*) was worn by senators. The *angustus clavus* was the mark of the equestrian order. The *tunica palmata* was embroidered with palm leaves and was worn by the *triumphator*, "victorious general," during his triumph, the celebration of his victory, or possibly at other special events.

Women wore a garment very like a toga, called a *stola*, which chiefly differed in being a rectangular cloth wrapped around the body and in falling closer to the ground than the toga. In the early days of the republic women wore as an overgarment *ricinium*, a simple square cloak covering the shoulders, later replaced by the *palla*. In the late period women, too, adopted the *tunica dalmatica*, the long-sleeved tunic.

Various kinds of cloaks were worn against inclement weather, made of heavy felt or leather. Cloaks ranged from simple blanket types, to poncholike garments with a hole for the head, to a type called a *caracalla*, which had a hood. The emperor Marcus Aurelius Antoninus, more commonly known as Caracalla, acquired this nickname because he always wore this type of hooded cloak. The *caracalla* was adopted from the Gauls. The cloaks of the wealthy were often brightly colored. The military cloak worn by the legions was called the *sagum*.

There were three main types of footwear. The *calcei*, soft leather shoes midway between shoes and sandals, were the standard outdoor footwear for Romans and formed part of the national dress with the toga. Sandals (*soleae* or *sandalia*) were generally regarded as indoor footwear, and to be seen outside wearing sandals was considered scandalous. However, it was discourteous to appear at a banquet in anything other than sandals. As a result wealthy Romans had slaves who accompanied them to banquets carrying their sandals. Stoutly made sandals, however, were the standard wear of

soldiers for much of the Roman period. The third general type of shoe were simply stitched leather slippers (*socci*), which were also meant for indoor use.

Transportation

Essential to the Roman military and colonizing success was the building of roads throughout the empire, often carried out by the legionaries. These allowed for rapid deployment as well as maintaining of trade contacts. The main public roads were funded by the state. The military roads were built at the expense of the army; they became part of the public road system. Local roads helped interconnect main public roads. Private roads were built and maintained by the owners. Varying materials, such as sand, gravel, clay, crushed stone, slabs of lava, large stones, and even iron slag, were utilized for the foundation and surfacing, depending on availability as well as the firmness of the subsoil.

The primary vehicles used for hauling were two-wheeled and four-wheeled carts pulled by horses and oxen. Where practical galley ships were more probably used for transport and trade.

Literature

Whereas in most artistic media—the visual arts and architecture—the Romans did not far exceed the strong influences of other cultures such as those of the Etruscans and Greeks in literature they transformed past influences. They adapted the Greek models Theocritus (fourth–third century B.C.E.), Hesiod (eighth century B.C.E.), and, above all, Homer (ninth to eighth century B.C.E.), to create a literature that fulfilled distinctly Roman purposes and brought to fruition a distinctly Roman worldview—one that in some respects continues to inform the worldview of the West to this day. The poet Virgil (first century B.C.E.) developed a Roman literary style possessed of the flexibility and range to encompass these goals. Already in his lifetime it was recognized that “the glorious birth” of a great new literary tradition was under way. His greatest masterpiece, the epic poem the *Aeneid*, became known before it was completed or published, as Virgil gave readings from it to the emperor Augustus and his family and court while he was still at work on it. Virgil’s younger contemporary Propertius heralded the new work when he said that with the *Aeniad* a greater work than the *Iliad* was being born.

The *Aeneid* became an instant classic in the Roman world and beyond, studied in schools and annotated and analyzed by commentators

and critics over the centuries. Still extant is the voluminous commentary compiled by one Servius in the fourth century C.E.; this was but the forerunner of a huge proliferation of exegesis, criticism, and controversy that began with the first printing of Virgil’s poems around 1469.

Virgil’s poetic style can encompass both impassioned rhetoric and pastoral tranquility, love songs and rude jokes of simple shepherds; it can bring to life the fire and slaughter of the sack of Troy. With it the poet did nothing less than forge a Roman sense of nationhood—indeed, the very concept of nationhood, of a national cohesion born of a shared history and a shared land, which informs the modern concept of nationhood today. This concept was only uncertainly held by the Greeks, with their focus on the city-state, and by the Romans before Virgil’s time.

His influence was enormous not only on later Latin poets such as Ovid (first centuries B.C.E. and C.E.), Lucan (first century C.E.), and Statius (first century C.E.), but far beyond the demise of the Greco-Roman world. The medieval Italian poet Dante not only used paraphrases of lines from Virgil at important moments in his *Divine Comedy*; he made Virgil a character in his poem, his conductor through the Inferno, the sweet and harmonious lucidity of Virgil’s verse a bright talisman able to carry himself and Dante safe through the darksome and sulfurous depths of Hell. Dante even invented a region of the underworld just outside the gates of the Inferno for virtuous pagans who had lived before the time of Christ, who were worthy of heaven but barred from it because they had not been baptized Christians. It seems possible that Dante invented this region primarily because he could not bear the idea of Virgil’s suffering the torments of hell. English poets of the 17th-century Augustan Age revered Virgil, and one of them, John Dryden, made among the most successful English translations of Virgil’s works in the 17th century. Alfred Tennyson in the 19th century and T. S. Eliot in the 20th both acknowledged Virgil’s preeminence, Tennyson describing his line as the “stateliest measure / ever moulded by the lips of men,” and Eliot calling him “the classic of all Europe.”

Modern scholars see Virgil and Lucretius, his predecessor of the same century, as the promoters of a revolution in sensibility, of a wholly new attitude toward nature. In their works can be found the culmination of the tendency to ascribe human emotions to nature. In Homer and the works of other Greek and

Roman writers emotions are ascribed to natural phenomena only in response to the presence of a god, such as the rejoicing of the waves at the presence of Poseidon in the *Iliad* or the intoxication of all nature when Dionysos approaches in Euripides's *Bacchae*. Lucretius heralds the new attitude in a description of Venus that shows her not simply as acting on nature but as being the very embodiment of nature. The gods no longer dwell apart in their immortal realm indifferent to human fate and suffering but, imbuing and imbued with nature, commune with us. Venus's sexuality becomes a creative physical principle that flows through all of nature, the first cause of all growth, budding, flowering, fruition, and of the impulse to procreation in humans as in all living things.

This creative force or principle replaces as the fundamental principles of material existence the atoms of Greek philosophy (of the Epicurean school), indivisible but essentially lifeless particles whose mixture and separation give rise to the variety of the universe. With his creative force Lucretius approaches the teachings of the sixth–fifth century-B.C.E. Greek philosopher Heraclitus, who saw the essence of being as a dynamic eternal becoming, an oscillation from being to not being, and back again. Humans, through making love and procreating; through being born; through growing, aging, and dying; then being reborn, join in the continual cycling of nature's creative principle, of which Venus is the embodiment. In this way nature is saturated with our emotions; in nature's embrace we find a deep sense of belonging.

Virgil took this new way of experiencing nature and expanded it beyond the individual sensibility to that of a nation as a whole. His depictions of the Italian landscape evoked a sense of belonging to the land as part of a nation beyond Rome or any one city but Italy as a whole. In Virgil *patria*, “the fatherland,” became imbued with the idea of ancestry: that the landscape of one's ancestors rooted one in a deep past. The shared experiences and historical events that took place on the land of Italy, the blood shed there in war and the sweat shed in peaceful labor, joined all its peoples into a unity that transcended and comprehended their diversity. Scholars consider that this complex of ideas, fundamental to the modern mind, had its inception with Virgil.

This new conception of nationhood inspired the *Aeneid*, the epic poem that tells the story of the founding of Rome by the Trojan hero Aeneas. Virgil's *Aeneid* virtually foreclosed

Pliny the Elder: Encyclopedist of the Real and the Fantastic

Gaius Plinius Secundus was born near Lake Como in Cisalpine Gaul, present-day northern Italy, in about 23 C.E. He went to Rome as a young man and embarked on a military career in which he served as a cavalry officer in Africa and Germany. He is known as Pliny the Elder to distinguish him from his nephew and adopted son, the Roman orator and statesman Pliny the Younger. He studied Roman law but gave it up to devote himself to scholarly studies. Among his works were a 20-book history of the Germanic wars and 31 books on Roman history from 41 to 71 C.E. He later served as government official, a *procurator*, collecting imperial revenues. He died of asphyxiation near Mt. Vesuvius during a visit to observe the volcano's eruption in 79 C.E.

The only one of Pliny's works that has survived to modern times is his *Historia naturalis* (Natural History), an encyclopedia of science and art in 37 volumes, in which he set out to describe the known world. He completed it in 77 C.E., two years before his death.

Pliny seems to have accepted everything he heard uncritically, and his book catalogues fantastic creatures. Among the human races of the world listed in his book are dog-headed people who communicate by barking and headless people with eyes in their shoulders. Animals include snakes that launch themselves skyward to catch high-flying birds, the Hyperborean mares that conceive by turning their hindquarters to the North Wind, and the “basilisk serpent” of Africa, which kills bushes on contact and explodes rocks with its venomous breath.

Yet Pliny's work is also filled with accurate geographical and ethnological information about the Mediterranean world and western and northern Europe. He is the first known writer to have referred to present-day Norway and Sweden as Scandinavia (depicting the region as an island, not a peninsula). He also makes one of the earliest references to the Silk Road—the caravan route between the Black Sea and central Asia—the primary link for centuries between the East and the West.

the epic poem on his predecessors, except for crude imitations by hacks. The best poets sought other realms in which they could escape Virgil's influence. The only poem similar in length to the *Aeneid* is Ovid's *Metamorphoses*, which, however, is not a connected narrative but a series of narratives held together by the concept of metamorphosis—they are all myths in which people are transformed into animals or trees, usually by gods—and by Ovid's creative wit. Horace, Virgil's contemporary and friend, invented the Latin lyric, and later poets of the first century B.C.E., Albius Tibullus and Sextus Propertius, wrote love elegies.

Other important writers of the first century B.C.E. include the encyclopedist Marcus Terentius Varro, the statesmen and prose masters Julius Caesar and Cicero, the poet Gaius Valerius Catullus, and the historians Sallust and Livy.

Important writers of the next century were Lucan, Persius, Seneca (the Younger), and Statius. Martial and Juvenal were celebrated for

Tacitus: Psychological Historian

Cornelius Tacitus was born around 56 C.E., probably in Rome. Little is known of his early life other than that he married the daughter of Gnaeus Julius Agricola, who served as the governor of Britain in 77–84 C.E., and became a friend of the statesman Pliny the Younger. From Pliny's letters it appears that Tacitus held a variety of governmental positions in the 70s–90s C.E. and perhaps served as governor of the Roman provinces in Asia in 112–113 C.E. He died after 117.

During and after his career in government Tacitus devoted himself to writing. His works, less than half of which have survived to modern times, include *Dialogus de oratoribus* (Dialogue on Orators; c. 81); *De vita Iulii Agricolae* (Life of Agricola; c. 98); *De origine et situ Germanorum* (Concerning the Origin and Location of the Germans; c.98), commonly called *Germania* or *Germany*; *Historiae* (Histories; c. 104–109); and *Annales* (Annals, c. 115–117), possibly originally titled *Ab excessu Diui Augusti* (From the Death of the Divine Augustus).

The *Histories*, chronicling the Roman emperors from 69 to 96 C.E., and the *Annals*, chronicling the period from 14 to 68 C.E., are considered his chief works and are a valuable source of information about the Roman Empire in the first century C.E. Yet the so-called minor works *Life of Agricola* and *Germania* are critical to our knowledge of the ancient Britons and Germans.

Tacitus writes with a personal bias, glorifying and justifying the actions of his father-in-law, Agricola, in his military campaigns in Britain, as well as using the Germanic tribes as a model of a vigorous and moral way of life compared to the corruption and decadence of the Romans of his day. The ideals of the old Roman Republic are a theme that runs through all his works. But his character portrayals of individuals demonstrate great psychological insight into human behavior. He is also known for the richness and precision of his writing style.

their satiric writings. Pliny the Elder (see sidebar, p. 655), Pliny the Younger, Tacitus (see sidebar), and Petronius were the chief writers of prose; Suetonius Paulinus excelled in historical and biographical writing, and Quintilian in literary criticism.

Religion

The early Italic peoples worshipped spirits, called *numina*, instead of gods. Some of the gods worshipped by Romans may originally have been *numina*. The Romans' household gods, the lares and penates, protectors and nourishers of each family, probably had their beginnings as *numina*, spirits that dwelled in rivers and trees, groves, fields, and buildings. Belief in a multitude of spirits surrounding humankind on every hand, which each person encountered by day or night, waking or sleeping, gave rise to the complex system of rituals of placation that pervaded every aspect of Roman life, even after the tribal past had been left behind. Romans were guided in their every action by the principle, probably derived from the ancient worship of *numina*, of *pietas*, "duty." This duty consisted of proper worship and sacrifice to the gods, in return

for which the gods would bless them with good fortune. Some of the gods worshipped in Rome in republican and imperial times came from abroad; others must have existed among the Italic peoples from much earlier times. The worship of Ceres, the goddess of grain, probably had its roots in placation of the spirits of growing things. Vesta, goddess of the hearth, probably originated in a spirit, perhaps incarnate in the hearth fire, who protected dwellings. Ceremonies involving fire were central to the ritual of the vestal virgins, a college of priestesses who spent their life in the service of Vesta.

With the rise of the Roman state Rome's tutelary deity, Jupiter, a sky god introduced to the Romans by the Etruscans, rose to paramount importance. The first meeting of the senate each year took place at his great temple on the Capitol, magistrates offered him sacrifice on taking office, and the spoils of war were taken to the temple to be dedicated to Jupiter. Jupiter was joined by Juno, an ancient goddess associated with the needs of women, fertility, and the sanctity of marriage, as his consort. Jupiter and Juno, together with Minerva, of old a goddess of crafts who had grown to rule over all learning and wisdom in general, formed what was called the Capitoline Trinity, whose temple on the Capitol was the physical locus or center of Roman religion.

The rituals of Roman religion were overseen by priests chosen from members of the aristocratic families. Rituals were prescribed throughout the year by the Roman calendar and had to be observed with strict precision to be efficacious. The rituals both preserved the safety of the state and formed the basis for its cohesion. Ambitious politicians vied to be elected to religious office. A crucial step in Julius Caesar's rise to power was his election as *pontifex maximus*, high priest, in 63 B.C.E. according to his enemies through the use of massive bribes. After the establishment of the office of emperor the role of *pontifex maximus* was subsumed in that of the emperor. Over time emperors began to be accorded divine honors as the living center of the state religion. The cult of the emperor, disseminated all over the empire through building of shrines and temples, served as a focal point for Romanization of the wide variety of peoples whom the Romans conquered.

On the other hand the Romans attempted to bridge the gap between themselves and their conquered subjects by giving the gods of the latter official recognition and worship: identi-

ifying native gods with their own. Thus they identified the important Celtic god Lugh with the Roman god Mercury, conductor of the souls of the dead and patron of travelers and merchants. The British goddess of healing waters, Sul, whose most important shrine was at Aquae Sulis (modern Bath) in England, was called Sul-Minerva. The same was done with many other foreign gods.

Divination Divination was widely used to predict the future. The importance for the Romans of augurs, priests schooled in dividing the will of the gods by reading omens, such as the flight of birds or lightning bolts, probably derived from the ancient belief in the *numina*. This belief may have given rise to efforts to have contact with these ubiquitous spirits both to learn their will and to gain their knowledge of the unseen, including the future. Augurs were consulted for everyday matters as well as at moments of crisis or war.

Etruscan augurs, whom the Romans imitated, made their divinations from within a sacral space, usually on high ground. By about 600 B.C.E. the Etruscans began building temples adjacent to this sacred space (called by Romans the *templum*, the origin of the word *temple*), with very high podia (the bases on which temples were build). Augurs may have stood on the edge of a temple's podium, the better to gain contact with the flying spirits. The Roman temple to Jupiter, Juno, and Minerva on the Capitoline Hill, begun in the late sixth century B.C.E. when an Etruscan king still ruled Rome, was modeled on Etruscan temples. The Romans used the Etruscan rules of divination, the *disciplina*, which they took care to preserve unaltered.

Mystery Cults As did the Greeks Romans participated in mystery religions, which originated outside the Greco-Roman world. These cults differed markedly from those of the Greco-Roman pantheons of gods by being focused on a single deity or pair of deities and by involving worshippers with their god far more directly than through the simple quid pro quo of sacrifice. The hallmark of the mystery cults were the elaborate and protracted ceremonies of purification and initiation by which the worshipper dedicated or devoted him- or herself to the god or goddess. During these rites, usually completed over many days, the observances were aimed at giving initiates a sense of entering the actual presence of the deity and of joining with his or her essence. Fasting, sleep deprivation during all-night rituals, torchlight dancing, and

probably the use of stimulants intoxicated the worshipper and induced ecstatic visions, such as that recorded by the second-century C.E. writer Lucius Apuleius as the climax of his participation in the rites of the Egyptian goddess Isis. His words attest to the intense mystical experience that could be produced. He believed that he had approached death and had a vision of Isis herself who said she was Nature, the universal mother.

People who had gone through such initiations as that of Isis, or the cult of Cybele and Attis from Anatolia, were believed to be holy and privileged in this life and in the next. According to the Greek orator Isocrates of the fifth and fourth centuries B.C.E., initiates of such mysteries hoped for immortality.

Christianity The growing importance of mystery cults in the Roman world paved the way for the mystery cult that would supersede all of them: Christianity. Many aspects of other mystery cults find parallels in early Christian belief, probably because the first Christians saw Christ as the fulfillment and culmination of all of them, alpha and omega both. It was said that Mithras had been incarnated and visited by shepherds after his birth in a cave. Stories of miraculous healings, shared meals of believers, and even resurrections (in the legends surrounding Cybele her beloved Attis, a shepherd, is mutilated, dies, but is reborn to be reunited with the goddess) and the promise of an afterlife for the initiated would have been commonplace for anyone who had contact with mystery religions. The development of the cult of Mary, the mother of Jesus, had parallels with the worship of other mother figures in these religions (although the most influential development was to be the cult of Mary's perpetual virginity). Many of the procedures of the mystery religions (initiation into the cult, for instance) were to act as important influences on Christian practice.

Initially Christianity was viewed with deep mistrust by Romans because it detracted from the state religion and because it was not practiced in public and excluded prayers to the emperor and state gods. Garbled accounts of the Eucharist were interpreted as evidence of cannibalism. Persecutions of Christians were known to have taken place in the first century B.C.E. The letters of the emperor Trajan to Pliny show that the punishment of Christians who came to the notice of authorities and who refused to repent was already common in the early second century C.E.: Emperor Decius ordered the first official

persecution in 250 C.E. In its first centuries Christianity was preeminently the religion of the poor and oppressed in society, and women, especially widows and the unmarried, were large proportion of the early communities (although wealthy aristocrats also took part). Yet by the fourth century it had made enough headway that the bishops of Rome began to wield increasing political power (in inverse proportion to the waning of imperial power in the West). In the Eastern Empire with the Edict of Milan of 313 Emperor Constantine I announced toleration of Christianity. It soon became the official religion of the empire, with the emperor as its highest proponent, a circumstance later enshrined in the laws of the sixth-century Byzantine emperor Justinian.

The Romans took many trends that had long been at work in the ancient world to their culmination. The expansion of the city-state model of government into empire, repeatedly attempted by Greek states, including Athens, Sparta, and Macedon under Alexander the Great, was finally achieved by the Romans. At the same time this evolution brought to an end the democratic experiment of the ancient Mediterranean world. Roman culture was an amalgam of influences from other cultures of the Mediterranean, particularly the Etruscans and the Greeks, and through their empire the Romans spread this European Mediterranean culture to Africa, the Near East, eastern Europe toward Eurasia, and western Europe.

Yet even as they accomplished these achievements they were setting in motion the forces that ultimately would end the empire and the world of antiquity. When the Romans subsumed Europe north of the Alps in their economic sphere, and the region west of the Rhine in their empire, Germanic peoples began an evolution away from a simple tribal warrior society into a far more stratified one in which material wealth and the warfare consequent on its possession became an ever more important force, one that increasingly impinged on the imperial provinces of the West. Roman wars against the Germanics greatly accelerated these trends, which finally led to the destruction of the empire in the West. The great migrations of Germanic peoples to and into imperial territories in the south and west left a political and cultural vacuum in eastern Europe that made possible the rise of the SLAVS. Some Germanics, notably the

Franks and Visigoths, accomplished a fusion of Roman and Germanic cultures in Latin cultures of France and Spain. Even SCANDINAVIANS felt the pull of the Roman economic sphere, which was ultimately responsible for the emergence of the VIKINGS. The influence of Greek and Roman trading activities in the Near East would ultimately lead to the rise of Islam, which swept away the Eastern Roman Empire of the Byzantines. Medieval Europe was profoundly shaped by the historical forces awakened by the Romans.

At the same time much of the culture of antiquity survived the fall of the Roman Empire, in large part through the agency of the Christian Church the Romans founded. Christianity quickly spread into most of the territories that were or had been part of the Roman Empire, and its institutions were strongly influenced in many ways by Roman ones. Christian monks, first those in Ireland and later others, preserved a significant portion of the literary, philosophical, and scientific legacy of antiquity. Furthermore, if Christianity is the single most influential and coherent modern legacy of the ancient Mediterranean world, its survival and growth into a world religion are perhaps the Romans' greatest legacy.

Roxolani (Roxolanae; Rhoxolani; Roxolans)

The Roxolani were an Iranian-speaking tribe, their nomadic ancestors originally out of Asia; they are classified as SARMATIANS. By the early second century C.E. Roxolani had begun settling in present-day Moldova and Romania, east of the LAZYGES. They abandoned this region by the end of the third century, perhaps migrating westward to present-day Hungary with the lazyges, among whom it is thought they lost their tribal identity.

Rroma (Roma; Rom; Romani; Romany; Romanies; Romanes; Gypsies; Gipsies; Tsigani; Tziganes; Ciganos; Zigeuners)

The Rroma, Roma, or Romani are a people spread throughout Europe and in other parts of

the world who have maintained a unique language and generally uniform way of life throughout history even as they have formed distinct groups in different countries. Large numbers live in central Europe, especially in the Slavic-speaking lands of the Balkans, including Bulgaria, Czech Republic, Hungary, Romania, Serbia and Montenegro, and Slovakia. But Rroma are found in every European nation. They are traditionally nomads, although the majority now live in permanent communities. In the course of their wanderings they have mixed with the non-Rroma (or *gadje* as Rroma refer to non-Rroma in their language—something akin to barbarians), but their bloodlines have remained intact compared to those other peoples of the European melting pot.

The double-*r* spelling Rroma is being used increasingly instead of Roma or Romani—in part to distinguish the name from Romans and Romanians, with whom the Rroma have no ancestral connection. Rom in the Rroma language (known as Romany or Romani) means “married man” or simply “male Rroma” (from the Sanskrit word for low-caste musician). The name Gypsies—from Egyptians or ‘gyptians—evolved because the British mistakenly believed these itinerant people had migrated to Europe out of Egypt. The French, who thought the wandering people had migrated from Bohemia, dubbed them Bohemes (leading to the usage of Bohemians for people who living unconventionally). Rroma are known by many other names locally, determined by geography and occupation as well as kinship.

ORIGINS

Rroma originated in northwestern India, migrating westward first probably in the ninth and 10th centuries C.E. Knowledge of their lineage is based on blood groupings as well as languages which coincide with those of southern Himalayan peoples. Their migrations can be traced by foreign loanwords in their language—among them words from Persian, Kurdish, and Greek—as well as written records (a fact that was recognized after 1753–54, when Stephan Valyi, a Hungarian student at the University of Leiden, discovered the Indian roots of the Romany language by comparing words spoken by university students from India to European Rroma vocabulary). It is not known whether Rroma comprised various tribal groups in India or whether they were Hindus and members of one or more Hindu castes. It is believed that Rroma groups departed India in a series of migrations and after

traveling through Afghanistan reached Persia (modern Iran) and Armenia and parts of the Byzantine Empire (Turkey and Greece) by the 11th century; the Balkans (recorded in Serbia, Croatia, Bulgaria, Romania, and Hungary) by the beginning of the 14th century; and western Europe (recorded in Germany, Switzerland, France, Belgium, Holland, Italy, and Spain) by the 15th century; in Russia, British Isles, and Scandinavia by the early 16th century. (Some Rroma followed a route through Syria to North Africa, then continued into Europe across the Strait of Gibraltar.)

One theory maintains that the Rroma were originally low-caste Hindus recruited as mercenaries and granted warrior caste status to battle Muslims who were expanding eastward toward India. Others believe that they were taken as slaves, by Afghans and Iranians who invaded northern India, and then remained in Afghanistan and Persia. Both may be true. And some Rroma may have left India of their own accord. Yet, however likely such theories may be, they do not explain why the Rroma never returned to India but proceeded westward into an unwelcoming Europe.

Roma Groupings

Some scholars divide the Roma into three main tribal groups, some of which perhaps may have formed in Persia in the course of their early wanderings: Gitanos, Kalderash, and Manush. The Gitanos lived mostly in southern France (where they are known as Gitans); Spain, Portugal, and North Africa (known as Gitanos or Calé); and North Africa. The Kalderash (the largest group) lived mainly in the Balkans and other parts of central Europe. The Manush lived mostly in central and northern France (known as Manouches) and in Germany (known as Sinti). Others migrated mainly to Great Britain and North America. Some Roma still live as far east as Iran but there are no recognizable groups in India.

Other scholars, on the basis of language, classify Roma into three groups: the Domari, or Dom; the Lomarvren, or Lom; and the Romani, or Rom. The Roma define four “tribes” or nations (*natsiya*): the Kalderash, the Machavaya, the Lovari, and the Churari. Yet not all tribes have the same definition of what constitutes being Roma. The Romnichal (Rom'nies) in the United Kingdom are also considered a grouping. The Sinti in Germany and Yenish (Jenische or Yéniche) in Switzerland and nearby countries both developed their own dialect with heavy German influence. (The Yenish are thought to include non-Roma who intermingled with Roma.) Other localized names are Bashaldé, Boyash, Churari, Lovari, Ludar, Luri, Machavaya, Romungro, Rudari, Ungaritzza, and Xoraxai. In Ireland and elsewhere a group of people known as Irish Gypsies or Irish Travelers exists; although not related to them and speaking a combined Gaelic-English language; they live much as Roma and have even borrowed some words from them.

LANGUAGE

The language of the Roma—Romany, Romani, or Rom—belongs to the Indo-Aryan subgroup of Indo-Iranian (the eastern branch of Indo-European) and is related to languages spoken in northern India, such as Hindi and Punjabi. Romany dialects vary considerably but all have some vocabulary in common. They also have many loanwords from other languages (which have allowed scholars to trace the Roma migration to the west). Most Roma, although not all, speak a dialect of Romany; most also speak the major language of the country where they live. Some speak a dialect combining two

languages. Caló of the Gitanos in Spain, for example, uses Romany vocabulary and Spanish grammar. Romany is primarily a spoken language, and no one written Romany language exists.

HISTORY

The absence of written language makes specifics of early Roma history hard to discern other than the actions and laws of nation-states over the centuries that were responses to a growing Roma presence. Their wide distribution also makes it difficult to generalize their history other than through persistent myths and centuries-long persecution. Their physical appearance—generally dark complexion, black hair, and short build (although with many exceptions)—their unique language, their nomadism, and their poverty have led to great prejudice against them. From the 15th century in the Balkan states Roma were typically slaves or serfs for many centuries. Also that century nation-states, Switzerland and Spain, began instituting anti-Roma laws. Between 1499 and 1783 the Spanish government enacted some dozen laws prohibiting Roma language, dress, and customs. In 1492 Roma became targets of the Spanish Inquisition.

In the 16th century actual expulsion became common: from France in 1504, from England in 1530, from Portugal in 1538 (to Brazil), and all nomadic Roma from Belarus in 1586. In 1589 Denmark ruled in favor of the death sentence for any Roma discovered there. Exile contributed to the real and perceived disposition to nomadism among the Roma. Many Roma migrated at least seasonally. They traveled along routes based on tribal links, rather than national boundaries; others who had settled in a nation became wanderers after exile. Another sign of early prejudice against the Roma was their treatment by churches: In 1560 Swedish Lutheran priests were forbidden to have any dealings with Roma, and in 1562–63 the Roman Catholic Church at the Council of Trent denied all Roma entry to the priesthood. Anti-Roma laws continued to be enacted in the 17th and 18th centuries.

An exception to the pattern of persecution was the rise to power of Stefan Răzvan, son of a Roma slave and a free woman, who ruled Moldova briefly in 1595 before being deposed as a result of court intrigue. In 1686 the Swedish Lutheran Church changed its laws to accept Roma in their congregation and christen their children. The Roma of czarist Russia were treated no differently than other peasants.

Those Rroma who converted to Islam in the lands ruled by the Ottoman Turks (*see* TURKICS) received special privileges and in 1874 were officially granted rights equal to those of other Muslims. In 1717 Spain established 41 localities as places of residence for Rroma. Rroma also became increasingly appreciated in the arts. For example in the 18th century Rroma bands played for the Austro-Hungarian court, and a Rroma woman by the name of Cinka Panna became renowned as a violinist in Slovakia and other countries. Anti-Rroma laws softened in 19th-century Europe. In 1856 Romania abolished slavery, the last European nation to do so, an event known to the Rroma as *Slobuzenja*. By 1864 no lingering instances of Rroma slavery were found.

Modern Discrimination

Discrimination against Rroma persisted to the present. During World War II (1939–45) the Nazis killed hundreds of thousands of Rroma in their concentration camps (the exact number is hard to determine because of lack of records). The Rroma holocaust is known as *O Porrajmos* (or *Porrajmos*), the Great Devouring. On August 2, 1944, an event known as *Zigeunernacht*, Gypsy Night, occurred, when some 4,000 Rroma were gassed at Auschwitz-Birkenau.

After the war the Communist countries of the Soviet bloc established programs of

enforced settlement to end Rroma migration and suppress Rroma customs. Even after the fall of Communism in the late 1980s and the founding of democracies with civil and political freedoms—enabling them to promote Rroma identity, for example—distrust of Rroma led to laws to alter migratory patterns, such as denying Rroma access to traditional campsites. Rroma remain segregated from much of mainstream society, and many of them live in isolated ghettolike or squatter settlements. They still encounter discrimination in every facet of society: education, housing, employment, health care, the criminal justice system, and the military. Many Rroma children lack proper health care and do not graduate from secondary schools. Acts of racist violence against Rroma still occur.

Political Activism

The Rroma have become increasingly active politically and culturally to campaign for civil rights and preserve their heritage. A number of organizations have formed over the years. Among them are the World Gypsy Community founded in France in 1959 (and its spinoff the International Gypsy Committee in 1965); the National Association of Gypsies, also founded in France, in 1962. In 1971 the First World Romani Congress was held in London with delegates from 14 countries; an international Rroma flag (green and blue with a red *chakra*, or spoked wheel, in the center—a link to the Rroma's Indian origins)—a motto (*Opré Rroma*, or *Rroma Arise*), and an anthem were approved. Also April 8 was proclaimed International Romani Day, and the International Gypsy Committee was renamed International Rom Committee. In 1976 the First Roma Festival was held at Chandigarh, India. In 1978 at the Second World Romani Congress in Geneva the name of the International Rom Committee was changed to International Romani Union. In 1979 the United Nations recognized the Rroma as a distinct ethnic group and granted the International Romani Union consultative status in the United Nations Social and Economic Commission (UNESCO). Other organizations, such as the Union Romani of Spain, *Phralipé* (Brotherhood) in Romania, and Democratic Union of Gypsies-ROMA in Bulgaria, work locally, sometimes in conjunction with the International Romani Union. The Linguistic Commission of the International Romani Union has attempted to codify a standardized Romany.

This late-19th-century photograph shows two Rroma women. (*Library of Congress, Prints and Photographs Division [LC-USZ62-108698]*)

CULTURE

Economy

There are a number of occupations associated with the Rroma. Among them are metalwork. Many, especially of the Kaldrash clan in Romania, have earned a living as coppersmiths and blacksmiths. Many of their occupations have been compatible with an itinerant life, such as peddling, tinkering (utensil repairs), horse and stock dealing, entertainment (especially music, dance, circus performance, acrobatics, animal exhibiting, concession operating), fortune telling and healing, and arts and crafts (especially wood carving and basketmaking). Some of these occupations are no longer in demand. The mass production of utensils has rendered the Rroma tinkerer obsolete, for example. In modern times many Rroma have found employment as car mechanics and auto body repairmen and car salesman as well as day laborers.

Government and Society

The closely knit family is at the center of traditional Rroma social structure. The archetypal Rroma core family consists of two couples and their children, an elder married couple and at least one married son and his wife. When the younger couple move away to manage their own family, a younger son and his wife might stay with his parents. Clans of extended families sharing patrilineal and matrilineal descent are known as *vitsas*. Families and clans form confederations or bands. They elect a chieftain (*voivode*)—sometimes known as a king—for life. He typically acts as the band's treasurer and spokesman and makes decisions about band movements. A council of elders advises him. The position is not heritable, and the extent of his authority varies from band to band. The women of a band are represented by a senior woman (*phuri dai*), sometimes called a queen. The bands are related to other bands through kinship, as well as in some cases geography and occupations, referred to as tribes (*natsiya*) even though there is no indication of a king or council of elders ruling the larger groupings as opposed to the bands. Rroma marriages, traditionally arranged, strengthen ties among families, clans, confederations, and sometimes tribes. The payment of a bride price to the bride's parents by the groom's parents has been a part of traditional marriage. The *kris*, an informal court of elders, often council members, settle disputes on the basis of unwritten laws and customs. Excommunication from the

A Roma mother sits with her baby on a roadside near Orsova, Hungary, in the early 20th century. (Library of Congress, Prints and Photographs Division [LC-USZ62-102897])

band is the most severe penalty. For minor offenses menial chores are a common sentence.

Transportation

Nomadic Rroma have typically traveled in caravans. In the past these were covered wagons that doubled as living quarters. Now the caravans consist of cars, trucks, and trailers.

Music

Of all the arts music has been the greatest Rroma contribution. They worked as court musicians in the past. Since at least the 16th century Flamenco music and dance of Spain have become part of the Rroma tradition. Rroma have also shaped Middle Eastern music and Jewish klezmer music with their own styles. Many have been folk performers in the past, and some performers became well known in popular music and jazz in more recent times. Rroma musical themes have also had a profound influence on non-Rroma composers from all over Europe.

Literature

Rroma contributions to literature are minimal because of the lack of a written tradition. Among Rroma authors are the novelist Mateo Maximoff, who wrote in French, and Papusza, a poet from Poland. More and more Rroma

Four Roma stand near a domesticated bear, probably in Bulgaria, in the 1930s. (*Library of Congress, Prints and Photographs Division [LC-USZ62-91817]*)

authors are emerging from Europe, many of them writing in Romany. Moreover Roma life-ways and folklore have had a great influence on the writings of other Europeans.

Religion

Roma are not identified with any particular religion and generally adopt the religion of their country of residence. It can be assumed that in ancient times some Roma practiced paganism or Hinduism. After reaching Europe many adopted Christianity—both Roman Catholic and Eastern Orthodox—as well as Islam and, in later years, Protestantism. There are a general belief in *Del* (God) and *beng* (the devil) and a belief in predestination. Many Roma choose to perform religious rituals apart from any organized church, combining them with their own folkways. Roma from all over the world participate in an annual springtime pilgrimage to Saintes-Maries-de-la-Mer in southern France.

It is difficult to determine exact population numbers of European Roma worldwide for a variety

of reasons, among them their geographical distribution and the different polling techniques of the host nations. Another reason is that because of past discrimination Roma tend to identify themselves as the nationality of the country in which they live, whether integrated into the host population or not. Still another reason is that other nomadic groups are often classified with them. Estimates of the worldwide Roma population range considerably, from 5 million to 10 (although some sources state much more), with 6 to 8 million in Europe, making them that continent's largest minority population.

Stereotypes of Roma persist, and they are still viewed as outsiders who are irresponsible or even criminals. Contributing to this phenomenon is the strong sense of unity among the Roma, who stress the value of their own traditions as opposed to those of the non-Roma. Although contact with the *gadje* has been the exception over the centuries, Roma are still subject to cultural erosion from outside influences and intermarriage. One result of intermingling has been the preservation of folkways of peasant groups, such as in music and dances, threatened by modernization since the Roma in some cases have adopted them as part of their own tradition.

There is a growth of Roma self-identification and pride, as the rest of the world learns to appreciate their fascinating history and great cultural contributions.

Rugians See RANIANS.

Rugii (Rugi; Ruges; Rugians; Rugarians)

The Rugii, a tribe of GERMANICS, lived at various locations in eastern and central Europe and played a part in the power struggle in Europe among other Germanic peoples, HUNS, and ROMANS.

ORIGINS

The name Rugii is thought to be derived from a possible place of origin, Rogaland, now a county in southwestern Norway. By the first century C.E. the Rugii were living across the Baltic Sea between the Oder and Vistula Rivers in present-day northern Poland and were competitors of the GOTHS (then called Gutones) living to the south, at times dominating them and at others allying with them. Other groups in the region with whom they competed were the VANDALS and the LUGII.

LANGUAGE

The Rugii spoke an East Germanic dialect.

HISTORY

With pressure from the BALTS the Rugii migrated southward from the Baltic Sea region to the Silesian uplands. At the end of the fourth century they migrated farther southward to the Upper Tisza River. Some Rugii settled in the region of Bohemia in the present-day Czech Republic, along with the MARCOMANNI and QUADI.

The Rugii were eventually under the rule and influence of the Huns and were part of the force under Attila that invaded western Europe in 451. In 455 they and Germanic allies under Ardaric of the GEPIDS defeated remnants of the

Huns in the Battle of Nedao in the Roman province of Pannonia (roughly modern Hungary).

The Rugii became *foederati* (federates) of the Romans and established a kingdom in the Roman province of Noricum south of the Danube, probably between present-day Linz and Vienna in northern Austria. Sometimes in the fifth century the Rugii are mentioned in an anecdote told about Saint Severinus of Noricum. While in the town today called Passau-Innstadt the saint was approached by some Roman merchants and asked to intercede for them with the king of the Rugii, Feletheus, so that they could engage in trade with his people. Severinus warned them, however, that soon this and all other towns in the region would lie abandoned, and there would be no more trade for there would no longer be any traders.

His prophesy was soon fulfilled. In 476 Odoacer, probably a SCIRI, leading an alliance of Sciri, Rugii, and HERULI, captured Ravenna, the capital of the Western Roman Empire, causing the deposition of the last Western emperor, Romulus Augustus. The subsequent unraveling of the Roman economic system, which was already well under way, depopulated the cities that owed their existence to the lucrative trading networks of the Romans. In 487 the Heruli and Sciri defeated their former allies, the Rugii, and the LOMBARDS moved into their territory—probably, as was their wont, ravaging it with fire and sword. In 489 a good number of Rugii joined the OSTROGOTHS under Theodoric in their invasion of Italy, instigated by the Eastern Roman emperor Zeno (see BYZANTINES), and defeated Odoacer.

By the mid-sixth century the Rugii as a distinct group disappeared from the historical record, in that all previous political alignments were done away with by the Lombard invasion. Their descendants probably were later part of the populations of Austria, the Czech Republic, and other countries in the region.

455 Rugii help defeat Huns.

476 Sciri, Heruli, and Rugii under Odoacer depose last Western Roman emperor.

487 Heruli and Sciri defeat Rugii.

489 Rugii invade Italy with Visigoths.

CULTURE (see also GERMANICS)

The Rugii were among the many Germanic tribes who, living close to the border of the Roman Empire, were extensively Romanized as Romans engaged in diplomatic relations with them to facilitate trade. The establishment of a kingdom in Noricum in the fifth century by the Rugii should be seen not as an encroachment on Rome, but as a last desperate means of preserving some semblance of stability, which the depleted Roman administration and army could no longer provide. This is apparent in the deputation of Roman traders who hoped the king of the Rugii could help them in their endeavors. But the Rugii became involved in the larger struggles of Germanic power blocs—those of Odoacer (who was a Roman army officer as well as king) and of the Ostrogoths, who in turn were being used by different factions of Romans in their own rivalries—until the juggernaut of the largely un-Romanized Lombards swept all before them.

As is that of many other East Germanic peoples Rugii history is entwined with that of the dominant Romans, Huns, and Goths.

Rumanians See ROMANIANS.

Rus (Ruser; Ruserna; Russes; Varangians; Varjager)

The Rus are a people of what is now eastern Russia, considered the founders of the first Russian state, which grew from the city of Kiev. They are associated with the VIKINGS, a subgroup of GERMANICS, known in eastern Europe as the Varangians and Varjager, and with the Eastern SLAVS. The Rus, and to a much greater degree the Slavs, are ancestral to modern-day Russians, Belarusians, and Ukrainians (see RUSSIANS: NATIONALITY; BELARUSIANS: NATIONALITY; UKRAINIANS: NATIONALITY).

ORIGINS

The origins of the Rus have long been a matter of controversy. Since the 18th century there has been debate about whether the Rus are descendants of the Vikings or whether they are a subgroup of Slavs. Many Russian scholars, especially during the Soviet regime, along with some Westerners, considered the Rus to be a Slavic tribe living along the Ros River who founded a tribal league; they maintained that the Kievan state was founded by Slavs and was attacked and controlled for a time by the Varangians. German scholars presented what is known as the “Normanist theory” (because Vikings in France founded Normandy and became known as NORMANS), based on the *Russian Primary Chronicle*. Also called *Chronicle of Nestor*, *Kiev Chronicle*, or *Povest vremennykh let* (Tale of bygone years), the *Russian Primary Chronicle* gives a detailed account of the period from 852 to 1110 C.E. It has been ascribed to a monk living in Kiev in the 11th–12th century by the name of Nestor, who probably compiled the material from a number of sources, including official documents of the Kievan state and oral sagas. Nestor’s chronicle is similar to many chronicles written or compiled in the early Middle Ages across Europe, composed at the behest of newly established (and newly literate) ruling dynasties to record their origins. Typically pre-literate tribal dynasties locate their origins in a semimythical past and have a founder hero. Chronicles partly based on such oral traditions have to be used with caution and sifted, using other sources of information, to find grains of fact amid much chaff. But this is not to say that they must be rejected out of hand.

The *Russian Primary Chronicle* states that the Rus, a Viking people, were invited to

Rus time line

C.E.

862	Rurik rules Novgorod.
882	Kiev becomes capital of principality of Kievan Rus.
907	Rus under Prince Oleg attack Constantinople.
922	Ibn Fadlan observes Rus in Bulgaria on Volga River.
941	Prince Igor of Kiev leads expedition against Constantinople.
945	Igor concludes commercial treaty with Byzantines.
980–1015	Vladimir I establishes dynastic seniority of his clan over all territories of Rus.
988	Varangian Guard formed by Emperor Basil II of Byzantium; Vladimir adopts Christianity.
1097	Members of Rurikid dynasty agree to divide Kievan territory among themselves.
12th century	Decline of Kiev as unifying power as major eastern Slavic regions develop distinct regional characteristics. <i>Russian Primary Chronicle</i> is written.
1240	Kiev is destroyed by Mongols under Batu Khan, grandson of Genghis Khan.
1610	Last Rurikiden, Vassilij IV Sjusjkij, dies; Romanov dynasty begins.

Novgorod by the local population to help end their violent feuding, then later extended their rule to Kiev. Russian scholars rejected the *Russian Primary Chronicle* as unreliable and insisted that the Eastern Slavs, before the entry of the Varangians, had evolved a sophisticated feudal state comparable to the Carolingian Empire in the West.

Another written source that gives further credence to Nestor's account and to the Normanist theory is that of the Arab traveler Ibn Fadlan, who was in Bulgar at the bend of the Volga River in the summer of 922. At the time Bulgar at the bend of the Volga, was an

important trading city. There the Rus met TURKICS and other people from the south. Caravans from China traveled there, carrying silk. Ibn Fadlan wrote of the Rus that they were tall and had white skin and blond or red hair. This in itself proves nothing one way or another about the ethnicity of the people Ibn Fadlan describes (a Byzantine source describes Slavs as being tall with reddish hair, though with dark skin). But other details from Ibn Fadlan's account—the ships of the Rus, their practice of ship cremation, the heavy gold and silver neck rings that both men and women wore, and other matters—have no correspondence with

Old Norse; then East Slavic; first written language Old Church Slavonic

anything known of Slavs (whose material culture was comparatively meager at this time) but accord well with Viking custom. Other early Arab writers had described the seat of the Rus as an island covered with woods and marshes; excavations of ninth- and 10th-century tumuli have confirmed the presence of Norse warriors in such a region around Lake Ilmen, near present-day Novgorod, and Lake Ladoga, where the Neva River has its origin.

On the other hand archaeological research has found no evidence whatsoever of the existence of a Slavic state in the area of Novgorod in the ninth century, when the Rus are said to have arrived. Any evidence at all of Slavs there before the ninth century is highly uncertain. There is good evidence of a modest Slavic presence by that time; therefore it is inferred that small groups of Slavs had been moving into the region for a century or so. They probably settled alongside the indigenous **BALTS** and **FINNO-UGRIANS**.

Meanwhile ancient **SCANDINAVIANS** had begun making trading contacts to their east along the Baltic coast as early as the first century C.E. They trafficked in slaves between Baltic tribesmen and the Roman Empire, for which slaves were an essential part of the economy. In the fifth century trading centers in southern Sweden and Gotland were obtaining gold coins, either by raiding or trading, from tribes to the east who were receiving subsidies from Byzantine Rome. By the eighth century Vikings (mostly from Sweden and Denmark) had penetrated deep into the Russian interior. They built settlements that are known archaeologically; **Staraia Ladoga** near Lake Ladoga was first settled in the eighth century, and another site near Novgorod in the mid-ninth century.

In light of the evidence, theories—most of them proposed by Soviet scholars with nationalistic agendas—of a Slav state in the Baltic region attacked by and ultimately absorbing Viking invaders are more likely the product of wishful thinking than of fact. Archaeological and other evidence tends rather to support at least some of Nestor's account and, in general, the Normanist theory.

In any case, the Slavic peoples who later made up tribes called **DREGOVICHANS**, **DREVLANS**, **DULEBIANS**, **ILMAN SLAVS**, **KRIVICHANS**, **POLIANIANS**, **RADIMICHANS**, **SEVERIANS**, **TIVERTSIANS**, **ULICHANS**, and **VYATICHANS** ultimately paid tribute to the Rus rulers and served in their armies. The Viking Rus were the first leaders of the polity that became the Kievan state and the ruling dynasty in all probability

was originally Norse. Later as commonly happened among the Viking Norse they lost their Norse culture and became absorbed into the prevailing culture of the region—that of the numerically dominant Slavs. The pattern of subjugation by a powerful warrior elite society that later absorbed many elements of Slav culture, a process sometimes called Slavicization, was repeated several times in the history of Slavic peoples.

The name Rus is possibly from the Norse word for “warrior-rowers” on Viking ships, or possibly from **Ruotsi**, a Finnic word meaning “Swedish.”

LANGUAGE

The Rus were originally a Germanic-speaking people, who used a variety of Scandinavian dialects. They eventually spoke Slavic dialects as well. The first written language among the Rus was Old Church Slavonic, which was also used by other Slavs who adopted the Eastern Orthodox Christian religion.

HISTORY

Early Leaders

The Viking who in about 862, according to Nestor, answered the call of the people of Novgorod was a prince by the name of Rurik from Jutland (Denmark) or from the Scandinavian Peninsula. Two brothers were said to have accompanied him. One theory holds that after he had established a stronghold at **Staraia Ladoga** near Lake Ladoga (which dates from the eighth century), Rurik led his followers southward along the **Volkhov River** and captured Novgorod. The town of Novgorod (New Town) actually did not exist at this time; it was built about a century later. A large settlement near the future site of Novgorod that dates from this time was called **Ryurikovo Gorodische** (Rurik's Stronghold). Whether Rurik and his followers built this town or simply took it over is unknown. However, the long-established Norse practice of building trading towns (and the absence of any such practice among the Slavs, Balts, or Finnic peoples of this time) supports the former. Another theory holds that Rurik was a leader of a group of mercenaries hired to guard the **Volkhov-Dnieper waterway** who eventually seized power from his employers. Again this theory has no support in the archaeological record and does not accord with what is known of the most developed Eastern Slavic societies of the ninth century, none of which

was more than a simple chieftaincy, probably owing allegiance to the KHAZARS of the Middle Don and the Lower Volga region. Although an exchange network of some kind seems to have been established through Slavic lands linking the Khazars with Baltic sources of amber and furs, it was limited in scope and most unlikely to involve mercenaries hired by the Slavs. The Slavs at this time were still an undeveloped warrior society who did their own fighting. Rather, Slavic chieftaincies—and only those far south of Novgorod in the region around Kiev—seem to have acted as tribute takers for the Khazars from nomads and traders passing through their territory. Only with the entry of the Rus did a full-fledged trade network begin to import large amounts of Islamic silver to the region.

Furthermore the presence in Sweden of large hoards of eighth-century Islamic coins from Baghdad demonstrate that Swedes had been tapping into a rich trade network long before any strong Slavic presence existed in the Novgorod region (again far richer than that moving through contemporary Slav lands to the southwest). Later Kievan tradition does not mention previous important trade centers that the Rus took over from earlier peoples, and the trading empire that the Rus built seems to have had little or no precedent. The first enclosed site at Kiev, built by Slavs (who had been building strongholds for only a century or so) in the early ninth century, had only limited importance, judging by the moderate amounts of Islamic silver found there. The *Russian Primary Chronicle* tells of a ferryman named Kiy after whom the city was named, a probably mythical tale that nevertheless may indicate the nature of Kiev's role in the Khazar exchange network. This compares to the enormous eighth-century coin hoards still being found at Birka, a Swedish trading town, and indeed to the rich trade in Byzantine gold that was entering to Scandinavia already by the fifth century C.E. (before the Slavs had even emerged as a coherent ethnic group). It was the accomplished Viking raiders and traders who opened up the highly lucrative trade between the Near East and the fur regions of the far north—they who had been engaging in wide-ranging trade links for centuries—not the still rustic and parochial Slavs. The kernel of truth in Nestor's account—whether or not Rurik himself actually existed and did all the things recounted of him—is the involvement of Vikings in the creation of the trade networks that would enable the founding of the Kievan state.

Rurik was the putative founder hero of what is known as the Rurikid dynasty. Swedish names are included in the earliest peace treaties that are quoted in their entirety in the Nestor chronicle. They have been misspelled slightly but can be read as Sven, Gunnar, Tord, Ulf, and Karl. These Swedes, as did Vikings in other regions, soon became assimilated with the natives and took Slavic names. The Rurikidernas dynasty ruled over the Volchov-Lovat-Dnieper area until the year 1610, when the last Rurikiden, Vassilij IV Sjusjkij, died and was succeeded by the Romanov dynasty.

On his death, said to have been in 879, Rurik was succeeded by his kinsman Oleg. Oleg went on to conquer Smolensk and Kiev. In 882 he made the latter the capital of the principality known as Kievan Rus, uniting Varangians, Slavs, and FINNS under him. In 907 he led an army against Constantinople (modern Istanbul), by way of the Dnieper and Black Sea, holding it for a time until negotiating a treaty with the BYZANTINES. Regular trade contacts were established between Constantinople and Kievan Rus. Oleg was succeeded as the grand prince by Igor (formerly Ingvar). In 941 Igor attempted another invasion of Constantinople. His army was routed, and in

Vladimir I: Nation Builder and Saint

Born in 956 C.E., son of the grand prince Svyatoslav of Kiev, Vladimir I is recognized for politically uniting Kievan Rus and establishing Eastern Orthodox Christianity as its official religion.

At the death of Svyatoslav a civil war broke out between Vladimir and two brothers, forcing Vladimir to flee to Scandinavia. He returned with a Viking army and managed to seize power from his now-feuding brothers. Vladimir continued campaigning in the region, uniting the Eastern Slavs as well as other peoples, and ultimately consolidated territory from Ukraine to the Baltic Sea.

The Byzantine emperor Basil II requested military aid from Vladimir to suppress a rebellion. The two negotiated on terms in which Vladimir, a fervent pagan with seven wives, converted to Christianity and took Basil's sister, Anna, as his wife.

Vladimir was baptized in 988 or 989 before his marriage to Anna. He henceforth spread Eastern Orthodoxy and culture throughout his reign, forcibly converting Kiev and Novgorod and ordering pagan idols to be thrown into the Dnieper River. He also introduced the Western custom of tithes as religious contributions, discouraged the practice of capital punishment, and met frequently with bishops on matters of state and security, thus endowing the church with important political powers such as settling family disputes and inheritances. On his deathbed Vladimir, who was known for distributing food among the poor, reportedly gave away all his possessions to friends and the needy. Russians, Ukrainians, and others today celebrate a feast in his name. He is also known as Vladimir Svyatoslavitch, Vladimir the Great, and Saint Vladimir.

945 he concluded a new commercial treaty with the Byzantines. He was killed by rebellious Drevlyans while attempting to collect tribute. His wife, Saint Olga, then served as regent for their son, Svyatoslav I.

Kievan power grew under Prince Svyatoslav, who engaged in victorious campaigns against other centers of Viking power in the region, against Khazars, and against Volga BULGARS. He also intervened in the Byzantine-Danube Bulgar conflicts of 968–971. But Svyatoslav was neither a lawgiver nor an organizer.

The role of state builder fell to his son, Vladimir I (see sidebar, p. 669), who established the dynastic seniority of his clan over the scattered territories of Rus. In 988 he converted to Christianity and invited or permitted the patriarch of Constantinople to establish an Eastern Orthodox see (a region under the authority of a bishop) in his territory. Vladimir extended the realm—the principality of Vladimir—to include the watersheds of the Don, Dnieper, Dniester, Neman, Western Dvina, and Upper Volga; destroyed or incorporated the remnants of competing polities; and established relations with neighboring dynasties. The newly established religion strengthened the upper class and wealthy merchants through the placement of influential leaders within administrative centers, religious schools, and the bureaucracy.

After Vladimir

The successes of Vladimir's long reign made it possible for the reign of his son, Yaroslav, in 1019–54 to produce a flowering of cultural life. But neither Yaroslav nor his successors in Kiev were able to provide lasting political stability within the enormous realm. The political history of the Rus, like that of their ancestors in Scandinavia, is one of competing trends toward independence and toward centralization, inherent in the contradiction between local settlement, on the one hand, and the hegemony of the clan elder, ruling from Kiev, on the other hand. As Vladimir's 12 sons and innumerable grandsons prospered in the rapidly developing territories they inherited, they and their retainers engaged in conflict both with one another and with the Kievan central authority. The conflicts were not confined to Slavic lands: The Turkic nomads who moved into the southern steppe during the 11th century became involved in the constant internecine rivalries, and Rurikid and Turkic princes often fought on both sides. In 1097 representatives of the leading branches of the dynasty, together with their

Turkic allies, met at Liubech, north of Kiev, and agreed to divide the Kievan territory among themselves and their descendants. Vladimir II later made a briefly successful attempt to reunite the land of Rus.

The Decline of Kiev

The primacy of the prince of Kiev depended on both the cohesion of the clan of Rurik and the relative importance of the southern trade, both of which began to decline in the late 11th century. The First Crusade in 1096–99 seems to have made the route from the Black Sea to the Baltic less attractive to commerce. At the same time conflicts among the Rurikid princes became more regional and separatist as a consequence of new patterns in export trade that diverted the focus of different cities in the region to trading interests in different directions. The unifying force of the Byzantine trade no longer existed. Novgorod, in particular, began to gravitate toward closer relations with the cities of the German Hanseatic League, which controlled the Baltic trade. Smolensk, Polotsk, and Pskov became increasingly involved in trade along western land routes, while Galicia and Volhynia established closer links with Poland and Hungary. The princes of these areas still contested the crown of the “grand prince of Kiev and all of Rus,” but the title had become an empty one. When Andrew Bogolyubsky of Suzdal won Kiev and the title in 1169, he sacked the city and returned to the Upper Volga, apparently seeing no advantage in establishing himself in the erstwhile capital. By the middle of the 12th century the major principalities, which had benefited from the prosperity of the Kievan period, had developed into independent political and economic entities. In the late 12th century the power of Kiev declined further in the face of constant nomad attacks and warfare with other Slavic princes, and in 1240 the city was completely destroyed by the MONGOLS under Batu Khan, the grandson of Genghis Khan.

After the Mongol invasion princes needed the approval of the khan to become grand prince. Rivalry developed among the princely houses, and Tver and Moscow became more influential than Kiev. The grand principality of Moscow was eventually formed.

CULTURE

Economy

During the Kievan Rus period trade was the most important economic activity. Rus society was hardly feudal in the Western sense, with

complex and clearly defined interrelationships among rulers of greater or lesser power; more important, the land and agriculture played only a minor role in the Kievan economy, which was based on trade.

Many hoards of Arab silver coins, minted in Baghdad in the eighth century, have been found buried in Sweden, suggesting that Russia was only a waystation en route to the Rus's real goal: the riches of the Arab world. It is thought that their furs were bartered for Arab silver. Rus traders set up a trade network between northern Russia—where Finnic tribes trapped coveted beaver, sable, and ermine—and Baghdad.

Government and Society

The early social and political institutions in Kievan Rus were rudimentary. Unlike the Normans, who had the example of the political institutions of the FRANKS and ANGLO-SAXONS to imitate, the Rus settled among tribal peoples. The Rus themselves until well into the 10th century had little interest in institutions more elaborate than those necessary for the exploitation of their rich new territory. The territory of Rus, moreover, was immense and sparsely settled. The scattered towns, some little more than trading posts, were separated by vast primeval forests and swamps. Early Rus leaders thought of their domains as clan possessions rather than as territorial or national states.

The government of the Rurikid dynasty, with a system of grand prince and regional princes that began in 1097, is thought to have evolved out of the necessities of maintaining unity, with power shared among the members of the ruling clan. Seniority passed from elder brother to younger brother and from the youngest eligible uncle to the eldest eligible nephew. Clan members served apprenticeships in the various territories of the realm, allowing control of trade and giving them knowledge of lands they might someday rule from Kiev.

Rurikid princes maintained military retinues led by boyars, an aristocratic order with special privileges second only to those of the princes. Princes and boyars collected annual taxes from the free peasant population. The earliest known law code, from 1016, known as the "Russian Law," dealt primarily with fines imposed by princes or representative boyars for offenses.

With the adoption of Christianity by Vladimir in 988 society became more regulated. Vladimir seems to have realized that one political element, the presence of an organized religion, distinguished both Byzantium and the

newly established principalities in Poland and Hungary from his own. The anointing of Vladimir as first Christian of the realm clothed him in a mantle of spiritual as well as temporal authority and he was further able to propagate Byzantine principles of imperial power.

Military Practices: The Varangian Guard

The Byzantines as a regular practice recruited barbarians into their armies; some among the Rus were invited to form the elite Varangian Guard, who protected the Byzantine emperor. The Varangian Guard was founded by Emperor Basil II in 988, with 6,000 Rus warriors, possibly sent by Vladimir to gain favor with the emperor. (In Byzantium the term Varangian applied not only to the Rus, but to anyone of a nationality other than "Greek"; there is reason to believe, then, that Varangian was a term used for a foreigner in the service of the Byzantine government.)

Rus warriors had been serving in the Byzantine army and navy for some time already when Basil formed them into a distinct regiment. They were known as the ax-bearing guard, from the enormous two-handed axes they carried. They served at the forefront of many of the empire's battles, fighting Normans, Bulgars, Turks, and various nationalities participating in the Crusades. They also performed garrison duty in the Byzantine Empire's cities.

The Varangian Guard were the best paid of all the Byzantine troops. It may have been common for Vikings to go to Byzantium from all over Scandinavia and Russia, spend time in the Varangian Guard, and return home rich. The guard were unusual in conspiracy-ridden Byzantium in their loyalty to the emperors; this trait was possibly a legacy of their Viking forebears, for whom disloyalty was one of the most shameful of transgressions.

Dwellings and Architecture

Most Rus buildings were of wood, although some were stone; streets were often paved in wood as well. Dwellings had multiple rooms—typically a main room, a hall, and an extra room, which was used for storage in the winter. At the center of the main room was a hearth (in later centuries a stove). Stories might be added; buildings might also be added and connected by a gallery, an enclosed walkway. Buildings were elaborately carved and painted. The dwelling was surrounded by wood or wattle fencing. Some buildings had windows of mica; oil lamps were used for lighting after dark. Furniture included carved wooden tables,

This church in St. Petersburg, Russia, is named after Vladimir I (St. Vladimir).
(Library of Congress, Prints and Photographs Division [LC-USZ62-101811])

chairs, benches, beds, and washstands with copper ewers and bowls. It is assumed that icons adorned the walls.

The ruling families had the largest dwelling, very likely of stone, with several interconnected multistoried buildings. After adopting Christianity the Rus built a great number of churches, which also served as libraries, warehouses, treasuries, and defensive structures if necessary. The 11th-century Cathedral of St. Sophia, modeled on Hagia Sophia in Constantinople, is known for its mosaics, frescoes, and icons. The ninth-century St. Vladimir Cathedral is famed for its murals.

Clothing

Materials and Dyes The clothing of the Rus in the beginning of their sojourn in Russia was probably similar to that of the VIKINGS. Later, during the Kievan period, the Rus wore bleached linen as well as the woven wool of their forebears. Cloth was interwoven with multicolor threads or printed. Remains of clothing found in burials show that at least by the 12th and 13th centuries a kind of checked wool fabric was worn. Wool was imported to Novgorod during the 13th century from England, Holland, and Flanders. Cotton was

also imported; some cotton was produced in the village of Zandana not far from Bukhara. The majority of the populace wore a local homespun wool for their outer garments.

The clothing of the nobility was made of fabric imported primarily from Byzantium, but also from Asia and Europe. These fabrics included *aksamit* samite (fabric with golden tracery), taffeta, brocade (silken fabric with monochrome patterned design), velvet with stamped designs, and golden velvet (with gold embroidery). The most common were gold brocade, velvet (with a pattern formed by gold or silver thread tied and woven into a dense silk warp), overall-gold *altabas*, and lightweight silken taffeta covered with a monochromatic pattern. These expensive imported fabrics were called *pavolok*. *Pavolok* generally had a typically Byzantine pattern of dark-red (cinnabar), crimson (carmine), purple, and azure. One princess owned dresses of fabrics ranging from silk to brocade to velvet to chiffon, called “cloth of air” because this cotton fabric was so light and thin.

The overgarment of princesses in the 10th to the 13th centuries was sewn of eastern embroidered silk or tightly woven fabric with gold or silver threads, similar to velvet. Ibn-Fadlan noted that noble women of the Rus wore *xilu* (Oriental robe), an upper silk garment. The chronicles mention such a garment as holiday clothing called *rizy*.

The Rus commonly wore fur. It was used in linings of winter clothing and as ornamental edgings and borders, especially on hats. Furs were worn in the winter by even the poorest. The wealthy had coats made of fox, ermine, sable, marten, lynx, otter, and beaver. The most expensive furs (such as ermine and sable) are mentioned in chronicles only in reference to princely women’s clothing. Poorer men and women wore wolfskins, sheepskin, fox, she-bear, hare, wolverine, and squirrel; the most accessible and durable was sheepskin. Unmarried women might wear rabbit or squirrel furs, which were considered too frivolous for married women.

Ancient frescoes show that the nobility wore multicolored clothing and used striking combinations of fresh, rich tones. Letters written on birch bark in Novgorod mention green and sky-blue clothing. Favored colors included various shades of red (crimson, magenta), blue (dark blue, sky blue), and sometimes green. The most popular color was red, as demonstrated in archeological finds, among which more than half are fabric of reddish brown

tones. Other colors were black, bluish, green, and light brown.

Fabrics were dyed mainly with vegetable dyes, but also with animal dyes. Blue dye was made from cornflower, blueberry/huckleberry, and bilberries. Yellow was from blackthorn and birch. Golden-brown was obtained from onion skins, oak, and pear bark. Red-brown dyes were made from buckwheat, St. John's wort, alder, and buckthorn. Linen worn by nobles was dyed, but unbleached linen predominated in peasant clothes, with bleached white linen appearing in separate costume elements.

Fabric was blockprinted by using black, dark blue, bright red, yellow, or white dye on unbleached linen, which was then dyed dark blue or green. This was used in peasant clothes and the everyday clothing for the nobility. Motifs include stylized plant forms, and animals such as horses, deer, and birds were common. The lower classes favored these styles as well, substituting simpler geometric patterns such as diamonds, triangles, stars, and sunbursts.

As with most medieval cultures in this period the various classes did not adopt different styles (except the parade costumes worn by princes), but exhibited their wealth through the quality of fabric and the amount of ornamentation. Underclothes for all classes were made of linen (from flax or hemp), the fineness of weave dictating the quality. Ukrainian and Russian embroidery still incorporate many motifs favored by the Rus. They were particularly fond of the combination of red thread on white linen, adding other bright colors to augment the designs of geometrics, animal, and plant motifs. As were the Byzantines, the Rus were fond of pearls and incorporated them into the embroideries, used them for borders, or seeded them all over a tunic.

Men The basic garment worn by men was the shirt. The wealthy would add multiple layers on top of the shirt; poorer people used it as the main layer of clothing. The shirt was commonly embroidered around the neck. Those who could not afford embroidery often substituted strips of red cloth.

Sleeves were cut longer than the arms so the wearer could tuck his hands inside for warmth. To keep the sleeves out of the way for everyday activity, the Rus either added a wristband or used bracelets. The shirt had no collar; there was a deep slit down the front, which was held shut with a button. The shirt fell nearly to the knees and was always worn

untucked, with a narrow belt of fabric or leather. The other essential garment was a pair of linen breeches. The rich added a pair of wool breeches over these, and princes sometimes wore silk breeches. They were held up by a belt or rope in drawstring fashion and were tucked into the tops of the shoes or boots.

Finally there was a traditional outer garment similar to traditional "Cossack style" coats of the Russians and Ukrainians today. This was cut nearly straight, with only a slight widening toward the bottom, of wider wool fabric. It fit the torso closely, with a slit to the waist area closed by three or four buttons, and fell between the knee and calf. The aristocracy often decorated these with horizontal strips of braid or cloth. The sleeves fit closely as well, tapering slightly to the wrist. The garment was often lined or trimmed in fur and worn with a wide belt of fabric.

Princes adopted modified Byzantine fashions for their parade dress. The very long Byzantine *talaris* favored by the upper classes was cut slightly shorter by the Rus. The princes also used the Byzantine *chlamys*, a semicircular robe hung over the left arm and fastened on the right shoulder with a brooch.

Women Women wore a shirt similar to that of the men, except longer. Two were usually worn together, one (sometimes called a *dalmatic*) slightly shorter than the other, belted at the waist. The edges of these garments were decorated as were those of the men, but women are often depicted with an additional strip of fabric or embroidery down the front of the garment. Sometimes a triangular "shawl" called a *superhumeral* was worn over the tunics. Empresses and other high-ranking ladies seem to have also worn separate jeweled collars.

Royal women also wore the *chlamys*. Jeweled mesh hairnets seem to have been common, along with the ubiquitous veil.

Transportation: The Trade Route

The route frequented by Vikings and Rus south from northern Russia to the Black Sea was some 2,000 miles through swamps, forests, and steppe. Much of the vast Russian interior was interlaced with rivers, not all of them connected. On one route from Staraja Ladoga the traders headed south across Lake Ilmen and had to row or sail upstream on the Lovat River. After a few hundred miles the Lovat narrows and eventually shrinks to a shallow stream. Here they would have to portage their boats;

those they used on these journeys were much smaller than long ships, probably only 40 feet long. Even so the Rus probably relied on local labor to carry boats and provisions over the long portages.

Settlements sprang up at these portage points, as local tribes joined to haul the boats. They would also take in food and other provisions for the Rus traders. Many of these settlements became important trading centers. Smolensk is situated near an important portage site between the Western Dvina and Dnieper Rivers.

Art: Icons

A characteristic art form in Russia dating from the time of the Rus was the icon, the pictorial representation of Christ, the Virgin, and the saints. Icons play an integral part in Russian Church ritual; processions through the church to kiss the icons are a part of the liturgy. Icons are expected to heal and work miracles.

The creation of icons had been strictly regulated since the Seventh Ecumenical Council in Nicaea in 787. The sanctity of icons derives from their high degree of stylization prescribed by church law, which arouses reverence for their prototypes that date from the time of Christ.

The earliest icons were introduced to Kievan Rus from Constantinople, and the first masters of icon painting who worked in the country were Greek. An icon created in Byzantium in the early 12th century, the *Vladimir Virgin*, is considered one of three images of the Virgin Mary painted by St. Luke himself and consequently one of the holiest objects by modern Russians. Yet the Rus eventually developed their own stylistic characteristics. The Byzantine style retains its roots in Greco-Roman art, with an emphasis on naturalism and spatial values, whereas the Russian eschews spatial masses in favor of a rhythmic use of line, perhaps a heritage of the decorative styles of the Vikings.

Music: *Byliny*

A *bylina* (pl. *byliny*) is a Russian folk song of epic or balladic character, sung in Old Russian or Russian. The oldest *byliny* relate a cycle of tales about Kievan Rus in the 10th to 12th centuries, centering on the deeds of Prince Vladimir I and his court, including warfare against the Mongols. *Byliny* endured as a tradition, for a time in the area around Kiev and now among peasants living in northwestern European Russia and northeastern Siberia.

Literature: Old Russian Literature

Russian literature is said to have begun with various texts from the oldest Kievan period, written for religious and sometimes utilitarian purposes, and is referred to as Old Russian literature, although Ukrainian and Belarusian literature also began with these texts.

Religion

The pagan Rus in all probability shared the Nordic gods and beliefs common to the people of Scandinavia. Pagan Slavs worshipped Perun, the god of lightning and thunder. The Rus probably identified him with Thor, the Viking god of rain and thunder. The Rus also believed in good and evil spirits among the wood and river spirits, known as the *rusalki*. They were typically depicted as female. The evil spirits lured travelers to become lost in the woods or drown.

The conversion to Christianity, which happened earlier in the south closer to Constantinople and in urban areas, did not mean cessation of all pagan practices. Many Rus maintained a double faith, attending church yet continuing to participate in pagan festivals, such as summer solstice celebrations. With time the two faiths merged into one, as pagan mythological became identified with Christian historical figures. Perun was identified with the prophet Elijah, depicted as riding a fiery chariot.

Vladimir reportedly chose the Eastern Orthodox religion over that of the church in Rome because of the beautiful liturgy practiced in Constantinople, designed to create an experience of "heaven on Earth."

The Vikings who became known as Rus had developed a prestige goods economy and a warrior society as a result of contact with the ROMANS. Slowly penetrating farther eastward along the Baltic Sea and then southward into and through the Russian interior, they completed the circle whereby the wealth of Arab civilization and the wealth of "Rome in the East" both reached "Rome in the West," that is, the Carolingian Empire of the Franks. In doing so the Rus linked the future Russian nation with both East and West. And in importing to Russia the Eastern Orthodox religion they helped foster elements of the advanced culture of Byzantium. Thus by putting the Slavic Russian interior into contact with the outside world the Rus helped set the stage for early

Russia's development into an early modern political state.

The Rus as a distinct people may always have been confined to the upper classes, descendants of the Vikings who had created the Kievan trading empire. With each succeeding generation distinctions between Germanic and Slavic peoples in the region faded more and more.

GEOGRAPHY

Russia is flanked to the north by extensions of the Arctic Ocean; to the east by extensions of the Pacific Ocean; to the south by China, Mongolia, Kazakhstan, Azerbaijan, Georgia, the Caspian Sea, and the Black Sea; to the southwest by Ukraine; to the west by Belarus, Latvia, Estonia, Finland, and the Gulf of Finland; and to the northwest by Norway. The Kaliningrad Oblast is a Russian enclave along the Baltic Sea that borders Lithuania and Poland. The total vast area of Russia is 6,592,800 square miles. The principal islands of Russia include Franz Josef Land, Novaya Zemlya, Vaygach Island, Severnaya Zemlya, the New Siberian Islands, Wrangel Island in the Arctic Ocean, and the Kuril Islands and Sakhalin in the Pacific Ocean. Vast plains lie to the west and north; mountain belts (notably the Ural Mountains) and plateaus (notably the

This portrait from the late 17th or early 18th century shows a young Peter the Great of Russia. (*Library of Congress, Prints and Photographs Division [LC-USZ62-121999]*)

Central Siberian Plateau) lie to the south and east, and mountainous terrain dominates Siberia to the west. The Ural Mountains separate European Russia from Siberian Russia. Within the Caucasus Mountains, which form the southwestern border with Georgia and Azerbaijan, lies the extinct volcano Elbrus (18,510 feet), Russia's highest peak. Northern Russia is marked by swampy flatlands and lakes; rich soils provide farmlands in southern Russia. Principal rivers include the Ob', the Irtysh, the Amur, and the Lena. Lake Baikal is the largest lake.

INCEPTION AS A NATION

Kievan Rus was founded in the late ninth century C.E. The power of the Rus declined in the 11th and 12th centuries as their holdings divided into separate principalities. In the early 13th century the MONGOLS and TATARS invaded, leaving the nation in anarchy. In 1301 the principality of Muscovy (Moscow) formed; Ivan III the Great expelled the Mongol Golden Horde. Throughout the 16th century Muscovy expanded its territory and autonomy by annexing surrounding lands, notably parts of Siberia.

In 1610 Poland invaded and occupied Moscow. Russian militia expelled the Polish in 1613, and Michael Romanov was elected czar, beginning a dynasty that lasted until 1917. During Peter I the Great's rule (1689–1725) Russia undertook massive modernization and

nation:

Russia (Rossiya); Russian Federation (Rossiyskaya Federatsiya)

derivation of name:

From Rus the name of a people

government:

Federation

capital:

Moscow

language:

Official language is Russian; more than 100 languages are spoken in the Russian Federation most notably Tatar, Ukrainian, Chuvash, Bashkir, Mordovian, Belarusian, and Ingush.

religion:

Over half of the population are Russian Orthodox Christians; Muslims are the largest religious minority; small numbers are Jewish Protestant, Catholic, and Buddhist.

earlier inhabitants:

Caucasians; Cimmerians; Scythians; Sarmatians; Goths; Huns; Avars; Turkics (Bulgars; Khazars; Kipchaks; etc.); Slavs; Vikings; Rus; Mongols; Tatars; Cossacks

demographics:

More than 80 percent of the population are Russian; more than 60 ethnic groups are recognized in Russia.

Russians: nationality time line**C.E.**

- 882** Kiev and Novgorod are united under state of Kievan Rus.
- 1240** Mongols invade Kiev; Mongols and Tatars establish Golden Horde near Volga River.
- 1405** Andrey Rublyov works on icons of Cathedral of the Annunciation in Moscow.
- 1480** Grand Prince Ivan III (Ivan the Great) of Moscow defeats Tatars.
- 1547** Czar Ivan IV (Ivan the Terrible) is crowned czar; during his reign he annexes two Tatar cities, Kazan and Astrakhan, and expands Russian territory to the south.
- 1598** Rurik dynasty ends with the death of Figodor I Ivanovich, starting period of anarchy with boyars (great nobles) attempting to seize power.
- 1613** Michael Romanov becomes czar, first of Romanov dynasty.
- c. 1672–75** Avvakum Petrovich writes *Zhitie*, first Russian autobiography.
- 1689–1725** Czar Peter I (Peter the Great) rules; founds capital of Saint Petersburg.
- 1700–1721** Russia defeats Sweden in Great Northern War; wins access to Baltic Sea.
- 1735** Vasily Kirillovich Trediakovsky writes treatise calling for transition from syllabic versification to metric verse, more suited to sound of Russian.
- 1747–50** Aleksandr Petrovich Sumarokov writes first Russian-language classical tragedy, *Khorev*, and first comedy, *Tresotinius*.
- 1755–57** Poet and scientist Mikhail Vasilyevich Lomonosov writes Russian grammar.
- 1762–96** Under Catherine the Great Russia gains north shore of Black Sea, Crimea, and part of Caucasus region.
- 1772–1814** Russia gains parts of Poland, Ukraine, Belarus, Moldavia, and Georgia.
- 1795** National Library (originally Imperial Public Library) is founded in St. Petersburg.
- 1803** Novelist Nilolay Mikhaylovich Karamzin is appointed court historian.
- 1812** Napoleon I Bonaparte of France invades Russia but his troops are forced to retreat.
- 1831** Poet Aleksandr Sergeyeovich Pushkin meets Nikolay Vasilyevich Gogol and influences his fiction writing.
- 1836** First Russian national opera, *Zhizn'za tsarya* (A life for the czar) by Mikhail Ivanovich Glinka, opens.
- 1853–56** Great Britain, France, and Turkey defeat Russia in Crimean War.
- 1856–64** Russia battles Caucasian tribes; North Caucasus is annexed.
- 1861** Emancipation Edict abolishes serfdom under Alexander II.
- 1862** *Otsy i deti* (*Fathers and Sons*), novel by Ivan Sergeyeovich Turgenev, is published.
- 1865–69** *Voyna i mir* (*War and Peace*), novel by Leo Tolstoy, is published.
- 1866** *Prestuplenie i nakazanie* (*Crime and Punishment*), novel by Fyodor Mikhaylovich Dostoyevsky, is published.
- 1868** Pyotr Ilich Tchaikovsky composes his first symphony.
- 1874** After previously rejecting it, Mariinsky Theater in St. Petersburg mounts production of Modest Petrovich Mussorgsky's opera *Boris Gudunov*.
- 1875–78** Russo-Turkish War is last in series of wars between Russians and Ottoman Turks from 18th century on.

Westernization. In a bid to make Russia a maritime power Peter launched the Great Northern War (1700–1721) successfully conquering

many lands along the Baltic, including Estonia and parts of Finland. In 1703 he founded St. Petersburg in the newly acquired Gulf of

- 1889** Nikolay Andreyevich Rimsky-Korsakov and Aleksandr Konstantinovich Glazunov finish opera begun by Aleksandr Porfiriyevich Borodin in 1869.
- 1897** Vladimir Ivanovich Nemirovich-Danchenko and Konstantin Stanislavsky found Moscow Art Theater.
- 1898–1903** Composer Aleksandr Nikolayevich Scriabin teaches at Moscow Conservatory.
- 1899–1904** Plays by Anton Palovich Chekhov—*Dyadya Vanya* (*Uncle Vanya*), *Tri sestry* (*The Three Sisters*), and *Vishnyovy sad* (*The Cherry Orchard*)—are performed at Moscow Art Theater.
- 1903** Bolshevik and Menshevik factions of Social Democratic Party are formed.
- 1905** Popularly elected assembly, or Duma, is formed under Nicholas II.
- 1908** Sergey Sergeyeovich Prokoviev debuts as pianist in St. Petersburg.
- 1909** Sergey Pavlovich Diaghilev organizes Ballets Russes in Paris; in subsequent years Igor Fyodorovich Stravinsky composes ballets for company.
- 1910** Wassily Kandinsky paints *First Abstract Watercolor*, considered first abstract painting.
- 1914** Germany and Austria-Hungary defeat Russia at beginning of World War I.
- 1917** Russian Revolution overthrows emperor and places Bolsheviks, led by Vladimir Lenin, in power. Winter Palace and Hermitage, built in St. Petersburg in 18th century, are declared state museums.
- 1918** World War I ends.
- 1922** Russia organizes Union of Soviet Socialist Republics (Soviet Union; USSR)
- 1924–25** Dmitry Dimitriyevich Shostakovich writes his first symphony.
- 1925** Sergey Mikhaylovich Eisenstein's silent film *Potemkin* recounts revolutionary activity in 1905, with famous sequence showing massacre of rioters and innocent bystanders by czarist troops on Odessa steps.
- 1933** Novelist Ivan Alekseyevich Bunin wins Nobel Prize in literature
- 1934** Aleksey Maksimovich Peshkov (Maxim Gorky) becomes first president of Soviet Writers' Union.
- 1941–44** During World War II Soviet Union is invaded by Nazi Germany.
- 1950** Physicist Andrey Sakharov, father of Soviet nuclear weapons program, begins work on development of hydrogen bomb; in 1953 first successful test is made; in 1975 Sakharov wins Nobel Peace Prize for his many years of human rights involvement in the face of repression by Soviet government.
- 1957** Soviet Union launches *Sputnik I*, the first artificial satellite into space.
- 1958** Poet and novelist Boris Leonidovich Pasternak wins Nobel Prize in literature.
- 1961** Yuri Gagarin becomes first human in space and first to orbit around Earth.
- 1963** Valentina Tereshkova becomes first woman in space; Alexei Leonov becomes first human to walk in space.
- 1965** Novelist Mikhail Aleksandrovich Sholokhov wins Nobel Prize in literature.
- 1966–71** Andrey Tarkovsky's film *Andrey Rublyov*, epic of medieval Russia, is banned in Soviet Union.
- 1970** Novelist Aleksandr Isaevich Solzhenitsyn wins Nobel Prize in literature.
- 1991** Soviet Union collapses; Russian Federation is formed.
- 1993** President Boris Yeltsin suppresses resistance of conservative legislators; new constitution is adopted.
- 1994–96** Warfare erupts between the Chechens and Russians over Chechnya's independence.
- 1999–2000** War again is waged in Chechnya.

Finland and made it his capital. Peter also had limited success in expansion toward the Black Sea, losing much of his conquest in that region

to the Ottoman Empire only to regain it and more during the Russo-Turkish Wars of the late 18th century.

This portrait from the mid- to late 19th century shows Catherine the Great of Russia. (*Library of Congress, Prints and Photographs Division [LC-USZ62-116782]*)

Successive Romanov rulers, especially Catherine the Great, further extended Russia's empire; at its height before the onset of World War I (1914–18) the empire included more than 8 million square miles.

The empire did not survive the war. After defeat at the hands of the Germans and Austrians in 1917 the Russian, or Bolshevik, revolution, led by Vladimir Ilyich Lenin, erupted. Most of Russia's lands were absorbed into the newly formed Union of Soviet Socialist Republics (USSR) in 1922. In 1991 the Soviet Union dissolved into 15 separate nations, and the Russian Federation was formed.

CULTURAL IDENTITY

Central to modern Russia's self-identification is its status as a great power, one moreover with a unique "mission" to mediate between East and West. This polarity formerly referred to Eastern and Western Europe, but the "East" now extends into Asia and includes Islamic and Asian countries to the east and south. During the Soviet era this image of Russia's unique mission (upheld by political theorists called "statists") provided legitimacy for Soviet Russia's bid to dominate territories beyond the bounds of Russia itself. As had the Slavophiles of the 19th century the statists argued that Russia's unique status made it a natural ally of

weaker peoples trying to protect themselves from the predations of the West.

The claim to a unique relationship between Eastern and Western Europe has an early historical basis in fact, as it is nearly certain that VIKINGS from Sweden, called the Rus, played a central role in the formation of the first Russian state in the ninth century and at least highly likely that the Rurikid dynasty that made early Russia great, founded in legend by Rurik, a Norse chieftain, was originally Norse. Russians, however, have tended to downplay or even deny the involvement of the Vikings in the rise of Kievan Russia, and some scholars claim that it was solely the achievement of indigenous SLAVS. What is not in doubt is that whatever the exact lineage of the Rurikids and their followers they quickly took on a largely Slavic cultural identity, and early Russia was preeminently a product of the Slavic Russian people. But the Viking Rus episode was the beginning of Russia's long relationship, if somewhat tenuous, with Western Europe.

The Russian Orthodox Church has been a crucial element in Russian identity, one that decisively moved Russians into the sphere of Christian Europe, but as part of the Byzantine Eastern or Greek Orthodox Church they were within what was for centuries a powerful opposite pole to Roman Catholic western Europe, and later a periphery to western Europe's core. Byzantine culture immeasurably enriched early Russian literature, music, and art, and the Byzantine church gave Russians its courtly and elaborate religious liturgy.

Mongol rule of medieval Russia isolated Russians from Europe, and laws and customs of the Turkic-speaking Tatars made their mark on the country. At the same time Sweden and the Germanic Teutonic Knights were putting pressure on the principality of Novgorod, which caused the Russian princes, following the lead of Alexander Nevsky, to cast their lot with the Tatars. The support of the Tatar khanate helped the princes of Muscovy to extend their power widely across Russia. When Muscovy ultimately threw off the Tatar yoke in the 15th century its rulers began to take the title of czar (tsar), a word Russians formerly used both for the Byzantine emperors and the Tatar khans, showing how the very concept of a Russian imperial state was powerfully influenced by the East. This was especially so in the great centralization of power in the hands of the czars at the expense of the class of nobles known as boyars, so different from the continual tug-of-war between kings and nobility that was more typical in the West.

Ivan the Terrible set the pattern of supreme czarist rule that would brook no opposition. So accustomed had Russians become to autocratic rule by a single czar that when the boyars exploited a period of disarray in the central government, the subsequent anarchy convinced many even among the boyars that a return to centralized leadership was essential. Russians thus voluntarily put themselves under the Romanov dynasty.

Absolute rulers, Eastern-style, the Romanovs nevertheless set about the reform of Russia on western European lines. It was a top-down reformation of Russia of which Peter the Great's forcible debarbing of his court and military to conform with Western style is only a mild and rather amusing example. But the Romanovs eventually succeeded in moving Russia into the wider European sphere of influence, and German, French, and other European cultural influences were of great importance.

The process of acculturation had mixed effects on Russian cultural identity as everything Russian was demoted in favor of foreign influences. By the early 19th century some children of the upper classes spoke only French; Russian had become a foreign language to them. In his greatest work, *Eugene Onegin*, Aleksandr Sergeyevich Pushkin portrays the "ridiculous" or "superfluous" man. Full of education and refinement, Western-style, the ridiculous man is full of energy and desire but without an outlet for his passion and wastes his time and energy on nothing of substance. Cut off from the heart and soul of the true Mother Russia he is superfluous to life; he is useless and spiritually empty. How is he to find fulfillment? Such dislocation became a common theme throughout the rest of Russian literature.

Meanwhile the inherent contradiction in an absolute government's promoting of Western ways and ideas—which by the 18th century included the ideals of freedom and democracy—gave birth to social tension and ferment, as Russian writers who had lived in France and conversed with French Enlightenment intellectuals began to examine their own country through an Enlightenment lens. They saw the vast inequalities of Russia, the inhuman treatment of peasants, the corruption of local government officials, and the like. As romanticism swept Russia writers began to promote the idea that society's problems lie in cultural disunity, with an educated class having strayed from Russian roots that still nourished the peasantry.

The problem of Russian cultural identity in some ways resembles that of the British, as a

A priest of the Russian Orthodox Church stands outside the Verkhoturskii Monastery in Russia in 1910. (*Library of Congress, Prints and Photographs Division [LC-USZ62-69729]*)

result of the centuries-long promotion and imposition of one language and culture—in their case Russian—on the weaker peoples who were under the umbrella of the Russian Empire. The process of "Russification" was worked out under the rubric of transcending individual ethnicities in the name of blending people into a great empire, for the greater good of all. To some extent this ideal may have diluted the specificity and distinctness of Russian ethnicity into something more general and international. Today many "Russians" have several identities. If they belong to one of the many ethnic minorities whose first tongue is not Russian (some 100 different languages are spoken there), language may be the basis of their identity. Religious affiliation may furnish another identity. Profession, political ideology, and other facets of modern life may provide others.

It is tempting to see in many of the artistic productions of Russians a character that arises out of the vastness of the Russian landscape, a sweep and a grandeur, and also a melancholy that is the product of an individual confronting the forces of nature, sometimes crushing, sometimes beneficent. Certainly the land, sometimes called Mother Russia, lies at the heart of what it means to be Russian. In the Russian imagination the land is imbued by spirituality.

Three Russian women offer berries to visitors outside their house near the Sheksna River. (Library of Congress, Prints and Photographs Division [LC-DIG-prok-11043])

Yet the forces of humankind, from Ivan the Terrible to Joseph Stalin, have also stalked that land with acts of almost unimaginable cruelty. The Gulag Archipelago, a country within a country imagined by the writer Aleksandr Solzhenitsyn as consisting solely of the forced labor camps known as *gulags*, forms an inextricable part of the Russian mental landscape. It is perhaps emblematic of the contradictions that have animated Russian society to the present that in the service of unbridled industrial development to promote the Communist agenda (itself based on an ideology introduced from the West), the Soviet regime presided over wholesale pollution of the Russian land, its rivers, and air, of which the Chernobyl nuclear disaster is only the most prominent example.

The new Russia since the breakup of the Soviet Union has maintained the tradition of an axis of East-West themes, with Western pop culture taking hold even as ancient Russian folklore is still celebrated.

Rusyns (Rusins; Rysin; Russniaks; Carpatho-Rusyns; Carpatho-Rusin; Ruthenes; Ruthenians; Ruthanians)

The name Rusyns has been applied to SLAVS who speak related dialects, with primarily Ukrainian and Slovak elements, in Transcarpathia, that is, the Carpathian Mountains and surrounding regions in present-day southwestern Ukraine, eastern Slovakia, western Poland, and northern Romania. Slavs have inhabited the region at least since the sixth century C.E.

The historical region known as Ruthenia, formerly a part of Czechoslovakia, is now the Zakarpats'ka subdivision in western Ukraine, and the alternate name Ruthenians (as is RUTHENES) is sometimes used for the people of this region. One also sees the name Galicians for some of the Rusyns, because the historical region known as Galicia included the upper valleys of the Vistula and Dniester Rivers in the northern Carpathians. Among the highlanders grouped as Rusyns are the BOIKOS, HUTSULS, and LEMKOS. A Rusyn national movement furthers their identity as a distinct ethnolinguistic group.

See also UKRAINIANS: NATIONALITY.

Ruteni (Rutheni; Rutenai; Rutini)

The Ruteni are classified as a Celtic tribe. They lived in Gaul around present-day Rodez in southern France and are discussed as CELTS or GAULS. They fought as allies of the ARVERNI

under Vercingetorix against the ROMANS under Julius Caesar in 52 B.C.E. Segodunum on the site of Rodez became a *civitas* capital in Roman Gaul; Rodez takes its name from the tribal name.

Ruthenes (Ruthenians; Ruthanians)

The name Ruthenes or Ruthenians has been used variously with regard to the SLAVS. It has been applied to all the Eastern Slavs, that is, those Slavic-speaking peoples living in present-day Ukraine, Belarus, and western Russia. Among them are tribes such as the DREGOVICHANS, DREVLANS, DULEBIANS, KRIVICHANS, POLIANIANS, POLOCHANIANS, RADIMICHANS, SEVERIANS, TIVERTSIANS, and ULICHANS. Most of these peoples were under the suzerainty of the RUS of the Kievan Rus principality in the second half of the ninth century C.E. The name has also been used in reference to all Ukrainians (see UKRAINIANS: NATIONALITY), or more specifically to peoples of the historical region Ruthenia, now the Zakarpats'ka subdivision in western Ukraine and formerly a province of Czechoslovakia. And finally the name Ruthenes or Ruthenians has been applied to the RUSYNS, an ethnolinguistic group of mostly Ukrainian peoples in the Transcarpathian region.

Saami (Saam; Sami; Sámi; Sǎmi; Same; Samis; Saami Sabme; Lapps; Laplanders)

The Saami people, widely known until recently as Lapps or Laplanders, are the indigenous people of Lapland, a region of northern Europe that includes, west to east, northern Norway, northern Sweden, northern Finland, and part of the Kola Peninsula of northeastern Russia. They are associated with reindeer herding, tentlike dwellings, and blue, red, green, and yellow clothing, although not all modern Saami live traditionally.

There are different opinions among scholars to the origin of the native name Saami (or Saam or Sami). It is theorized, as is the case with many Native American tribal names, that it means “human” or “person” or “first people.” The Swedish term Lapp refers to a patch of cloth for mending, a derogatory derivation, suggesting that the Saami wore only old clothing. The derivative term Laplander designates any person living within the geographical region of Lapland, including nonnatives. Moreover part of the Saami population have always lived to the south of the region known as Lapland. In Norway the Saami formerly were referred to as Finns.

ORIGINS

Saami origins are theoretical because of archaeological evidence. Some scholars theorize that Saami ancestors migrated from central Asia,

pushed to the northern reaches of Europe by migrating fellow FINNO-UGRIANS, GOTHs, and SLAVS. Or they may have migrated to the region by boat, following the coastlines. Another theory holds that they originated in the Alps. Still other scholars theorize that the Saami have been living on the Scandinavian Peninsula since before the last Ice Age, isolated from other European groups. In any case, it is surmised on the basis of archaeological evidence that Saami families populated the Scandinavian Peninsula along the Norwegian coast by about 9000–8000 B.C.E. and inland three-two millennia later. It is also theorized that Saami reached the Kola Peninsula in Russia before the Christian Era.

LANGUAGE

The Saami language, Lappish, is Finnic, of the Finno-Ugrian group, a subfamily of Uralic. Saami may have assumed their language in the last millennium B.C.E. through contacts with other peoples. Dialects vary from region to region, often mutually unintelligible; the three main subcategories are eastern, northern, and southern. Most Saami are presently bilingual; others no longer speak their native language.

HISTORY

Lapland

Lapland, or Sapmi to the Saami, includes the Norwegian provinces of Finnmark and Troms

and part of Nordland, the Swedish provinces of Norrbotten and Västerbotten, Lappi in Finland, and the Kola Peninsula in Russia. Most of Lapland is within the Arctic Circle. Winters are long and severe, with few hours of sunlight. For part of the winter the Sun never rises above the horizon and for part of the summer it never sets. To the northeast much of Lapland's environment is tundra, treeless rolling plains with only mosses, lichens, and stunted shrubs for vegetation; *tundra*, in fact, is a Saami word that has spread to several languages. Other parts of Lapland are mountainous, especially in Norway and Sweden; the highest point of 6,965 feet at Kebnekaise, Sweden. In the more southern parts of Lapland are extensive forests, as well as many lakes and rivers. Kirkenes and Narvik in Norway are the chief maritime outlets for Scandinavian Lapland, and Murmansk for Russian Lapland.

Ancient Saami

The oldest written mention of people in the far north who may be the Saami appears in a work of the Roman historian Tacitus from 98 C.E. He describes the "Fenni" as a people dressed in animal hides, who did not own anything or work the land, who slept on the ground, and who manifested wild behavior. The Germanic writer Jordanes of the sixth century C.E. mentions a people, the Adogit, living in the far north, land of midnight Sun, although he mistakenly classifies them as a Germanic people. In 555 the Byzantine historian Procopius referred to Scandinavia as Thule, and its inhabitants as Skridfinns. All of those descriptions may refer to other real or imagined peoples.

Modern Saami

Expanding populations from the south led the Saami to settle farther north. In 1500–1700 Norway, Sweden, and Finland actively promoted the settlement of their northern holdings (see NORWEGIANS: NATIONALITY; SWEDES: NATIONALITY; FINNS; NATIONALITY). In 1542 the Swedish king Gustav I Vasa declared, "All unused land belongs to God, us, and the Swedish Crown." Starting in 1635 with the discovery of silver in northern Sweden many Saami were forced into slave labor in the mines. In 1673 the government officially sanctioned settlement by non-natives in the Saami homeland.

Growing numbers of non-Saami villages in their midst and the creation of international borders led to greater restriction of movement over the years. Forced assimilation became governmental policy. After the Russian Revolution in 1917 the government took over

their reindeer herds and forced the Saami to become sedentary (see RUSSIANS: NATIONALITY). Yet Joseph Stalin later used them as living propaganda to demonstrate that the Soviet Union (USSR) actively supported a variety of cultures.

The Saami, a minority group in all four countries, number about 85,000, with more than half in Norway (one province is known as Finnmark because of the great number of Saami). There are 2,000 Saami people living in Russia. Saami have never had their own sovereign state. Because of economic development many Saami groups have been pushed to the northern extremes of Lapland. Yet in all four countries Saami live outside Lapland as well, having migrated in search of work. Many now live in major Scandinavian cities, such as Stockholm and Oslo.

Saami Identity

There are Saami political, cultural, and youth organizations in all four countries, as well as a Saami parliament in each of the three Scandinavian ones that serves as an advisory committee to the national parliaments. Despite the fragmentation there is a sense of a greater Saami nation among the various groups. The Saami flag, designed by a Norwegian Saami, with the four colors taken from traditional colors used in Saami clothing, was approved at the 13th Nordic Saami Convention in 1986. The flag is displayed outside Saami homes on certain days important in Saami history: February 6, Saami National Day; August 15, the day the Saami flag was adopted by the Nordic Saami Council in 1986; August 18, founding day of the Nordic Saami Council in 1956; October 9, founding day of the Saami parliament in 1989;

and November 9, founding day of the Finnish Saami parliament in 1973.

CULTURE

Economy

The earliest archaeological evidence indicates that the Saami were hunters and gatherers. They fished and hunted sea mammals in addition to land game. In about 200 C.E. they started to tame reindeer, originally using them as pack and decoy animals. In about 1500 reindeer husbandry became the primary source of subsistence for the Saami; large herds were kept and around them was shaped a nomadic way of life. In addition to every part of the reindeer's being used—for food, clothing, and artifacts—the animal is milked and used for transport.

Currently only about 10 percent of the Saami population actually derive their livelihood from reindeer, wintering in the lowlands and summering in the western mountains. The families of herders are likely to reside year-round in modern housing. Although individually owned, the reindeer are herded communally. About two-thirds of Norwegian Saami are coastal fishermen. Other Saami communities depend on freshwater fishing, hunting, farming, and forestry; many Saami now work in business, industry, government, and education. Most Saami do, however, have a relative involved in some capacity with reindeer. So the reindeer is still fundamental to Saami culture and society.

Government and Society

The nuclear family has been the predominant Saami social organization, with loose groupings of extended families sometimes forming larger bands and traveling together. Shamans traditionally played an important role as healers, advisers, and arbitrators.

Dwellings and Architecture

The traditional Saami dwelling is known as the *goahte*. The mobile, tentlike variety is constructed from poles and reindeer skins or textiles. The permanent variety is covered with turf. A campfire is built at the center of the dwelling for both light and heat, with a smokehole at the top. Wood is stacked just inside the opening flap. The dogs stay near the entrance, as do guests until invited farther in. It is considered a spiritual activity to sit by the fire. Among nomadic Saami as many as five or six families inhabited a *goahte*. The Saami also built longhouses for public gathering places. One of the various kinds of longhouses has a saddle roof.

Clothing

Saami traditional clothing utilizes four colors: blue, red, yellow, and green. Women weave the cloth for shirts, skirts, trousers, and hats. Reindeer skin and fur leather are also used, sometimes as rawhide or tanned as leather. Many of the contemporary reindeer herders wear traditional clothing.

Art

To the Saami art originally was part of religious practices or utilitarian in nature. The earliest-known Saami images are rock art painted with red ochre. In the coastal areas the most prevalent images were of the reindeer, small mammals, or fish; in the deep forest the most popular image was the elk. Saami also decorated objects used in daily life.

Today Saami craftspeople work in horn and leather from the reindeer and wood from the arctic birch. During the 20th century a number of skilled Saami artists made names for themselves, some in traditional media and others in fine art.

Religion

In the traditional Saami worldview reality can be separated into three realms: the heavens, the earth, and the underworld. Gods and spirit beings live in all three realms. The gods that created the world live in the heavenly realm; other gods that manifest themselves in natural phenomena live in the earthly realm, as do humans and animals; and the spirits of the dead inhabit the underworld. Saami demonstrate respect to gods through offerings. A shaman mediates between humans and the spirit world. People turn to this central figure in society in times of trouble. To connect with the other worlds he enters a trance through what is commonly referred to as *joika*, a type of singing without words that attempts to express the essence of nature. The term *joika* actually applies to only one of several modes of singing; the other modes, *lavlu/laavloevuelie*, have words and narratives. Accompanying the singing and chanting are drums, the bullroarer, and the flute. Through the music a soul travels with the help of protective spirits, typically a totemistic animal. Men's rites focus on the hunt and control of wind and weather; women's rites center on home and family.

As Lapland became colonized, missionaries settled among them. In 1603 Scandinavians built the first Lutheran Church in Saami territory. The Russian Orthodox Church also strove to convert the indigenous population in their

domain. The Saami people resisted the new religions in their midst, but by the mid-17th century Saami holy places were destroyed and drums burned. The majority were Christianized by the 18th century, mostly Lutheran, but Russian Orthodox in the east. There is, at least in most of the northern Saami communities, a strong Lutheran evangelical movement known as Laestadianism after the part Saami Lars Levi Laestadius, in which the Saami language is considered a holy language. Shamanistic healing rites are still performed among some groups.

The Saami people face political, economic, and cultural challenges. As for their political status the Norwegian government recognizes the Saami as an ethnic minority and separate people and is the only nation to observe the United Nations (UN) Declaration for Indigenous Peoples and Human Rights. Saami language is taught in schools and Saami institutions and museums have been created. Sweden recognizes the Saami as an ethnic minority but has not signed the UN declaration. A separate education organization does, however, exist. Sweden's Reindeer Husbandry Law of 1971 allows the Saami some special protective rights for economic life within the native communities. Only those Saami who practice reindeer herding have any native land and water rights. Saami fishermen and hunters have never been covered by law. According to Finnish law the Saami have no special rights to land and water.

Economic development is altering the Saami homeland: the clear cutting of forests; the mining of iron ore in Sweden, of copper and nickel in Norway, and of apatite in Russia; the drilling for oil in Russia; and the construction of hydroelectric power plants. Industries are polluting the tundra with heavy metals that pass through the food chain to be consumed by humans. Acid rain is defoliating the local forests. Maintaining the traditional Saami way of life is becoming more difficult. In 1986 as a result of the Chernobyl nuclear disaster in the Ukraine some 73,000 reindeer in Sweden alone had to be destroyed. Tourism is also growing in Lapland, leading to some commercialization of native crafts.

Sabines (Sabini; Sabaens)

The Sabines, classified as a tribe of ITALICS, lived east of the Tiber River in the western Apennines in parts of the present-day regions of Lazio, Abruzzi, and Umbria in west-central Italy. Their immediate neighbors to the north were the LATINs and to the south the UMBRIANS, possibly distant relatives. They had early contacts with the ROMANS and perhaps played a part in the founding of Rome. They were possibly the parent group of the SAMNITES. One of their oldest towns was Amiternum (modern San Vittorino).

ORIGINS

The Sabines may have lived in their homeland as early as the ninth century B.C.E. One theory maintains that they migrated to the Italian Peninsula from along the Sava River in the homeland of the ILLYRIANS.

LANGUAGE

The Sabine language was probably one of the Sabellian subgroup of the Oscan branch of Italic languages, related to Aequian, Marrucian, Marsian, Paelignian, Vestinian, and Volscian. The Sabines are thought to have adopted writing from the ETRUSCANS.

HISTORY

The Sabines are associated with the founding of Rome—the date, perhaps legendary, given as 753 B.C.E. One tradition maintains that the Sabines settled on the Quirinal and Esquiline Hills and eventually joined with the Latins on the Palatine Hill to form Rome. Another speaks of the capture of Sabine women by the followers of Romulus, supposedly the first

753 Legendary founding of Rome, perhaps with Sabine involvement

290 Romans defeat Samnites and Sabines.

268 Sabines gain Roman citizenship.

king of Rome. In the legendary event, as told by the Roman historian Livy of the first centuries B.C.E. and C.E. and the Greek historian Plutarch of the first and second centuries C.E., the Romans, in need of women to procreate and populate their newly built town, attempted to intermarry with neighboring tribes. After they were being refused, they invited the Sabines to attend a feast in honor of the god Neptune, whereupon they abducted and raped Sabine maidens. Romulus personally assured the women that the Roman husbands, sympathetic to their wives because they had left their homes, would live in honorable wedlock and that they would be the mothers of free Roman citizens. When the Sabine men returned to rescue their women, the legend goes, the now-wed women interceded and prevented war. The story, whether true or not, indicates a connection between the early Romans and Sabines.

The period of Sabine expansion was probably the sixth–fifth centuries B.C.E. The rise of Rome as the dominant power in the region, after the Romans eliminated the occupying Etruscans in 509 B.C.E., curtailed this growth. Intermittent warfare between the Sabines and Romans occurred in the fifth century B.C.E., with a major Roman victory in 449. One Sabine subtribe requested permission to move their entire population onto Roman territory and become Romans, forming the Claudian family, who were important in Roman history.

In the fourth century the Sabines became caught up in the struggle for power in the region involving the Samnites. After what is known as the Third Samnite War in 295 B.C.E. the Roman general Manius Curius Dentatus conquered the Sabines. In 268 B.C.E. the Sabines were granted full Roman citizenship; they eventually lost their identity as a distinct people. They did not take part in the Social War, a revolt of many of the Italics in 90–88 B.C.E.

CULTURE (see also ITALICS)

The Sabines were a farming people. The majority of their population lived in small villages in the mountains; there were a few large towns in the valleys.

Because the Sabines inhabited land so close to Rome, it is difficult to distinguish their ruins from those of the Romans who moved to their lands. They were known in the ancient world for their religious cults, especially animal worship, which influenced

the Romans. The principal Sabine deity was Sabo, or Sabino, thought to be their original ancestor.

Because of the story of the Sabine women the Sabines are among the best known of the ancient peoples of the Italian Peninsula. Numerous artists have depicted the “Rape of the Sabine Women,” including the Flemish sculptor Giovanni da Bologna in the 16th century, the French painter Nicolas Poussin and Flemish painter Peter Paul Rubens in the 17th century, and the French painter Jacques-Louis David in the 18th century.

Sacae See SCYTHIANS.

Saii See ESUVII.

Salasses Saliensienses

The Salasses Saliensienses are classified as a Celtic tribe. They lived in Gaul near the Mediterranean around present-day Castellane in southern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Salentini See MESSAPI.

Salian Franks See FRANKS; SALII.

Salii

The Salii are classified as a Germanic tribe. Their name is thought to mean “salty.” They lived east of the Rhine in present-day western Germany. In the fourth century C.E. they were settled by the ROMANS west of the Rhine in present-day Netherlands and Belgium. The Salii and other GERMANICS in the region—the AMSIVARII, BRUCTERI, CHAMAVI, CHATTUARI, and TUBANTI—became known as Salian FRANKS as distinct from the Riparian Franks.

Saluvii (Salluvii; Sallurii)

The Saluvii are classified as a Celtic tribe. They lived in Gaul near the mouth of the Rhône in southeastern France and are discussed as CELTS or GAULS. The ROMANS conquered them in 124 B.C.E. and soon established a province in the region, known as Provincia Romana (modern Provence).

Salyens

The Salyens are classified as a Celtic tribe. They lived in Gaul around present-day Arles in southeastern France at least by the first century B.C.E. and are discussed as CELTS or GAULS. The Albioci were a subgroup.

Sami See SAAMI.

Samnages

The Samnages are classified as a Celtic tribe. They lived in Gaul near the Lower Rhone in present-day southeastern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Samnites

The Samnites, classified as ITALICS, lived in the Apennines in the present-day region of Abruzzi and part of Campania in central Italy, a territory formerly known to them as Safinum and to the ROMANS as Samnium, south of Roman-controlled Latium (part of modern Lazio). The Samnite capital was Maleventum (modern Benevento), east of modern Naples. The Samnites resisted Roman expansion from the fourth to the first century B.C.E., and several wars are named after them.

ORIGINS

The Samnites displaced earlier peoples, known as the OPICI, in the mountainous country of Samnium. Some writers claim they were descendants of the SABINES, out of the northwest. By the late fifth century B.C.E. they were organized into the Samnite League of four subtribes, the Carecini (Caraceni), Caudini, Herpini (Hirpini; Erpini; Irpini), and Pentri.

LANGUAGE

The Samnite language was part of the Oscan grouping of the Osco-Umbrian branch of Italic. The Samnites had no written language until the late fifth century B.C.E., when they penetrated western Campania and had contact with the Greek colonists in Neapolis (modern Naples) and learned the Greek alphabet.

HISTORY

The first official contact of the Samnites and Romans was a treaty signed between them in 354 B.C.E., perhaps because of outside threats from the CELTS who had attacked Rome. Peace lasted just over a decade, however; the intermittent struggle between the Samnites and Romans

for dominance of central and southern Italy is discussed as three wars in the fourth–third centuries B.C.E., yet Samnite resistance continued into the first century B.C.E.

First Samnite War

In 343 B.C.E. the First Samnite War erupted over a dispute between the Samnites and the SIDICINI, allies of the CAMPANI. The Samnites invaded Campania and defeated the Campani near modern Capua on the Volturno River. The Campani requested help from the ROMANS, who defeated the Samnites in 341 B.C.E., ending what is known as the First Samnite War. The next year some Samnites joined the Romans in a campaign against the LATINS, which led to the dissolution of the Latin League in 338 B.C.E.

Second Samnite War

In 328 B.C.E. the Romans established a colony at Fregellae (a town originally of the VOLSCI) on the Liris River in territory claimed by the Samnites. The next year the Samnites gained control of Neapolis and installed a garrison there. Although the poor Neapolitans generally supported the Samnites, some wealthy citizens sought help from Rome, which sent a force to remove the garrison in 326 B.C.E., considered the start of the Second (or Great) Samnite War.

Over the next years the Romans, who had a treaty with the Neapolis inhabitants, carried out a series of indecisive border raids in an attempt to limit Samnite power. In 321 B.C.E. they organized an invasion of Samnium and moved on Maleventum, but the Samnites managed to trap them in a valley at Caudine Forks and attack successfully from the slopes above, bringing about one of the greatest military

defeats in Roman history. Roman prisoners were spared after a treaty agreement in which the Romans agreed to give up border colonies, but they were forced to march out of the valley under a “yoke” of spears, a sign of humiliation.

The Romans invaded new lands and forced new alliances with the APULI to the east and the LUCANI to the south in the hope of surrounding the Samnites. The Samnites meanwhile expanded their lands toward Rome. Hostilities again erupted in 316 B.C.E. The next year the Romans were defeated at Lautulae, whereupon the Samnites plundered southern Latium. Yet the Romans soon regained control of the Upper Liris and founded colonies there. They also constructed the Via Appia from Rome to Campania in 312 B.C.E. Other tribes in the region saw Rome as a threat to their security and joined the Samnite cause. In 309 B.C.E. a confederacy of the MARRUCINI, MARSI, PAELIGNI, and VESTINI backed the Samnites. Other tribes—the AEQUI, FRETANI, and HERNICI—also offered some support. All were pacified by 304 B.C.E. Meanwhile in 311 B.C.E. the ETRUSCANS in the north joined the anti-Roman cause but with little success.

Third Samnite War

The tenuous peace endured until 298 B.C.E. and new campaigns. The Samnites, once again to counter the Romans, sought an alliance with the Celts, Etruscans, and Umbrians. Roman legions under Quintus Fabius Maximus Rullianus met the coalition in battle at Sentinum (near modern Ancona) in Umbria in 295 B.C.E. The Romans were victorious. Five years later when they invaded Samnium the Samnite resistance had weakened, and they became unwilling *socii* (allies) of the Romans.

Later Conflicts

The Samnites supported the GREEKS under Pyrrhus, king of Epirus, who led a force to Italy to protect Tarentum and other Greek colonies of Magna Graecia in 280 B.C.E. in the Pyrrhic War. After earlier victories the allied force was defeated by the Romans at Maleventum in 275 B.C.E. The town became a Roman colony in 268 B.C.E. and was renamed Beneventum (that is, changed from ill wind to good wind). In the Second Punic War of 218–201 B.C.E. the Samnites at first opposed the CARTHAGINIANS under Hannibal, even defeating them in battle in 217 B.C.E., but later joined them against the Romans.

Final Defeat and Dispersion

During the Social War of 90–88 B.C.E. the Samnites joined other Italic tribes in revolt

against Rome to achieve equal rights as citizens. In 87 B.C.E. the Italics were granted citizenship. In 82 B.C.E. Lucius Cornelius Sulla, who considered the Samnites a continuing threat to Roman interests, invaded Samnium and overcame them. To ensure the end of resistance he slaughtered thousands of prisoners and dispersed the remaining Samnites; afterward the Samnites disappeared from history as a distinct group.

CULTURE (see also ITALICS)

Economy

Although they grew crops in the sparse soil of their homeland, the Samnites were known more as herders of livestock and as hunters. They were proficient with slings for hunting birds. With expansion and increasing contacts with other peoples they grew to depend also on trade.

Government and Society

Samnite society was structured around tribes, clans, and families. Confederations of towns formed for both economic and military reasons. Yet the isolated and fortified mountain villages remained politically autonomous. (One such remote village, Pietrabbondante, now an archaeological site, was situated in the mountains of the province of Isernia.)

Military Practices

In the early stages of their history the Samnite typical weapon was a light, crooked javelin. They also used slings to hunt birds. Yet even so the Romans considered the Samnites among the most warlike people of the Italian Peninsula—hence the Roman name *belliger Samnis* for them, which translates as “warrior Samnites.” They eventually organized their armies into cohorts and legions, like the Romans’, and some of them fought from horseback. They built polygonal fortifications on hilltops.

Clothing

The Samnites wore bearskins for warmth.

Of all the peoples on the Italian Peninsula, the Samnites sustained the longest resistance against Rome to the point that even after two centuries of occupation of their lands the Romans still felt the need to exterminate them. The Roman historian Livy of the first centuries

B.C.E. and C.E. wrote, “Only death could conquer their resolution.” Moreover the Roman defeat at Caudine Forks resonated throughout Roman history; the modern Italian expression *le forche Caudine* means “downfall.”

Samogitians (Samogytians; Zemaitians; Zemaiciai; Zhmud; Zsnudz; Zcnzailcy)

The Samogitians were a tribe of BALTS who inhabited the region known as Samogitia (Zemaitija) in present-day western Lithuania. Their name means “lowlanders”; they lived to the west of the Aukstaiciai, or “highlanders,” the latter tribe sometimes referred to as LITHUANIANS proper. (Although the Samogitians are known as lowlanders, some among them lived in the Zemaiciai Upland, separating the coastal region from the Baltic Highlands, with the Middle Lithuanian Lowland in between.) To the northwest of the Samogitians lived the CURONIANS and to their south and southwest the SKALVIANS.

The Samogitians are considered among the ancestors of modern Lithuanians (see LITHUANIANS: NATIONALITY), as well as of those peoples living in the Kaliningrad Oblast, an enclave of Russia to the south of Lithuania and to the north of Poland (see RUSSIANS: NATIONALITY).

ORIGINS

Baltic-speaking peoples migrated westward to the Baltic Sea region by about 2000 to 1500 B.C.E. By the ninth century C.E. identifiable tribes had coalesced.

LANGUAGE

The Samogitian dialect, or Low Lithuanian, is one of the two major speech patterns of the

Lithuanian language; the other is Aukstaitich, or High Lithuanian.

HISTORY

By the 13th century Lithuania was ruled by local noblemen. The Samogitians played a central role against the Germanic crusaders. Their resistance prevented the two primarily Germanic religious and military orders—the Knights of the Sword in the region of Livonia (part of modern Latvia and Estonia) to the north and the Teutonic Knights of the Cross in the region of East Prussia (now part of Poland and Russia)—from uniting their occupied lands.

In the 13th century the Samogitians competed with the Lithuanians for control of the region. The Samogitian Vykintas competed against the Lithuanian Mindaugas, who was in the process of uniting different Lithuanian principalities under his banner. Vykintas died in battle in 1251. In 1263, Treniota, possibly the son of Vykintas, took part in the assassination of Mindaugas and succeeded him as Lithuania’s ruler until his own death the next year. No other Samogitian prince ever ascended the Lithuanian throne.

After their fortresses were attacked and their farms and crops burned by crusaders, many Samogitians took refuge in the forests and marshes. In 1329 crusaders managed to take the fortress of Medvegalis, in which several Samogitians had taken refuge. But the resistance continued. Between 1345 and 1382 the Teutonic Knights out of Prussia carried out some 70 forays against the Samogitians and their allies from other tribes; the Livonian Knights of the Sword made 30 military forays. The allied Balts retaliated with 31 expeditions into Prussia and 11 into Livonia. Samogitia was

surrendered in 1382, 1398, and 1404, but the Samogitians revolted in 1401 and 1409. Allied Lithuanians and POLES defeated the Teutonic Knights at Tannenberg (modern Stebark in northern Poland) in 1410. In 1413 the Samogitians officially accepted Christianity. In 1422 Samogitia became part of the Lithuanian Grand Duchy.

CULTURE (see also BALTS)**Government and Society**

Samogitians developed a social and political structure different from that of the rest of Lithuania, with more free farmers and fewer big estates than in eastern Lithuania.

Clothing

The Samogitian women favored bright colors, wide striping divided into checks, and fancy scarves. Their costume consisted of a white blouse with long sleeves, a long wide bright-colored skirt, and an apron. Skirts were mostly striped lengthways; Aukstaiciai skirts were checked. Girls used to cover their heads with wreaths or ribbons; married women wore white linen kerchiefs called *nuometas*. All women, young and old, liked to wear amber necklaces as well as glass and metal trinkets.

Men's clothes were of a more simple fashion—gray overcoats of coarse heavy cloth, while linen shirts, and striped or checked trousers. They wore broad colorful sashes. The traditional footwear called *nagines* was made of leather at home. The chief footwear in Samogitia, wooden sabots called *klumpes*, were often decorated with floral or herringbone patterns.

Art

Samogitia was famous for its woodcarving. The statuettes of the saints made by rustic artists were used to decorate churches, wayside chapels, and crosses. Such folk artists were called *dievdirbiai* (god makers).

In the early 19th century, descendants of the Samogitians were central to a Lithuanian revival, opposing influences of Russians and Poles and promoting the native Lithuanian language. Samogitia is now perceived as an ethnographic and historic region in Lithuania and is not defined administratively.

Samoyeds See NENETS.

San Marinians: nationality

(Sammarinese; Sammarinesi; people of San Marino)

GEOGRAPHY

San Marino is an enclave of Italy. It lies in the eastern foothills of the central Apennines, southwest of Rimini. San Marino's area is 23.4 square miles. The three peaks of Mount Titano (2,425 feet) make up most of the terrain. Principal streams include the Ausa, the Marano, and the San Marino.

INCEPTION AS A NATION

The region that became San Marino was originally inhabited by ITALICS, ILLYRIANS, and CELTS. According to legend a Christian stonemason, Marino, settled on Mount Titano around the fourth century C.E. Within the next century an isolated sovereignty formed. San Marino expanded in 1463 when given the cities of Fiorentino, Montegiardino, and Serravalle by the pope. The next year the town of Faetano became part of the state, establishing its present-day boundaries. The Roman papacy recognized San Marino as an independent nation in 1631.

CULTURAL IDENTITY

San Marino is completely surrounded by Italy and consequently has strong cultural and ethnic ties to it. Yet San Marino also has a long tradition of independence, which is due to its long legacy of political autonomy, and the Sammarinese, as they call themselves, have a strong sense of national identity that dates to the founding of the nation in 301 C.E. The commune has been able to remain independent despite encroachments by neighboring bishops and lords largely because of its isolation and its mountain fortresses. San Marinians are proud of their long history as a republic and are today in the forefront of European initiatives to promote democracy in developing countries all over the world. Many international conferences are held there.

SARACENS**location:**

Mediterranean islands and coastal regions

time period:

Seventh to 15th century C.E.

ancestry:

Arabic; Berber

language:

Semitic; Hamitic

**Santones (Santoni; Santonae)**

The Santones are classified as a Celtic tribe. They lived in Gaul around present-day Saintes in western France and are discussed as CELTS or GAULS. They were perhaps related ancestrally to the TOLOSATES. Santones fought as allies of the ARVERNI under Vercingetorix against the ROMANS under Julius Caesar in 52 B.C.E. Mediolanum Santonum on the site of Saintes became a *civitas* capital in Roman Gaul; Saintes takes its name from the tribal name.

Saracens (Sarraceni)

The term Saracens (from the Greek Sarakenoi) originally was used by GREEKS and ROMANS in the early centuries C.E. in reference to an Arab tribe of the Sinai Peninsula in present-day northeastern Egypt, perhaps an adaptation from the Arabic word *sharqiun* for “easterners.” Over time it was used to designate any Arab tribe.

After the rise of Islam in the seventh century the BYZANTINES applied the term to all Muslims, whether Arabs or TURKICS. It was commonly used by Europeans for the Arab corsairs (pirates) active in the Mediterranean

Sea, who raided European islands, including the Balearics, Corsica, Sardinia, and Sicily, as well as Mediterranean coastal settlements, especially in southern Italy. After establishing a base on the Bay of St. Tropez in present-day southeastern France they carried out raids inland. Otto I, king of Germany and Holy Roman Emperor, destroyed the base in 972. The MOORS of North Africa, a combined Arab and Berber people who invaded the Iberian Peninsula in the eighth century, were known as Saracens to some Europeans. During the Crusades of the 11th to 13th century when Europeans sought to liberate Near Eastern lands from Muslims the term was also widely used.

The name Saracens carried through the era of the Barbary pirates, or corsairs. The countries that became known as the Barbary states—independent states controlled by Muslims—were Morocco, Algeria, Tunisia and Tripolis (also known as Tripolitana). Barbary was named for Barbarossa (“redbeard”) or Khayr ad-Din, a Turkish pirate. Active in 1516–46, he regularly plundered the shores of Greece, Spain, and Italy. In 1518 Barbarossa captured the port city of Algiers from Spain

and turned it over to Turkish control. His pirates would sail from their protected harbors into the Atlantic Ocean and take gold, silver, slaves, and other plunder from the Spanish treasure ships returning from the Americas. Their piracy was so costly that most countries found it less expensive to pay them tribute than to suffer a complete loss of their cargoes. The tribute and the goods of the pirate industry became the basis of the economy in North Africa.

Sardinians (people of Sardinia)

The name Sardinians refers to people living in an autonomous island of Sardinia, situated in the Mediterranean Sea. PHOENICIANS, GREEKS, and CARTHAGINIANS all occupied the island in the centuries B.C.E. Sardinia was conquered by the ROMANS in 238 B.C.E. The VANDALS annexed the island in the fifth century C.E., the BYZANTINES ruled it as of the sixth century. The Arabs frequently invaded Sardinia from the eighth to the 11th century. The country was then alternately controlled by Austria, Italy, and Spain, until it joined Piedmont and Savoy to form the Kingdom of Sardinia in 1720. The Kingdom of Sardinia united with other Italian states to form the Kingdom of Italy in 1860 (see ITALIANS: NATIONALITY).

Sardones

The Sardones are classified as a Celtic tribe. They lived in Gaul in the northern Pyrenees near present-day Perpignan in southern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Sarmatians (Sarmatae; Sarmats; Sauromatae)

The Sarmatians were a nomadic Indo-Iranian people. They included the ALANS, AORSI, LAZYGES, ROXOLANI, and SIRACES as well as other peoples, the names of some of whom did not survive history. They were originally associated with the plains north of the Caucasus Mountains between the Black Sea and Caspian Sea, but they spread westward and southward in the late centuries B.C.E. and early centuries C.E., when their history converged with that of the GERMANICS. Some among them, the ALANS in particular, settled in western Europe.

ORIGINS

By the fifth century B.C.E. the nomadic Sarmatians, known for their riding skills and horse breeding, lived on the Eurasian steppes, between the Volga River and Aral Sea, after they had branched off from other Iranian-speaking peoples. By the second century B.C.E. some among them lived west of the Don River. Some eventually settled in the Balkans; others settled in the Caucasus.

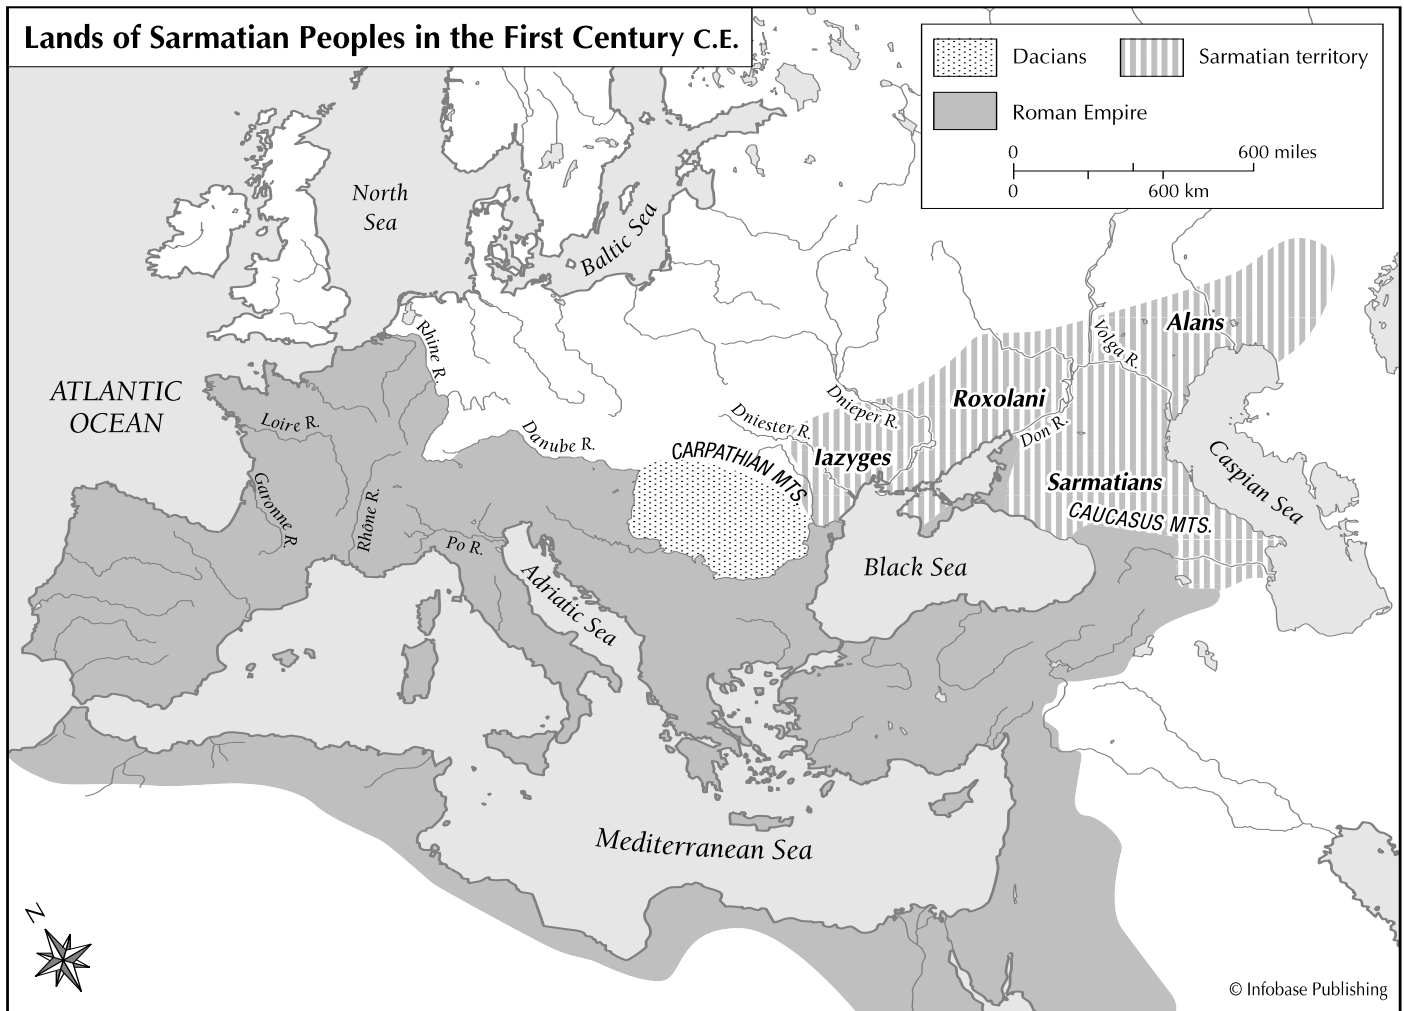

LANGUAGE

The Sarmatians spoke an Iranian language, part of the Indo-Iranian family (the eastern branch of Indo-European). One of the Sarmatian dialects, Ossetic of the Alans, survives to this day among the OSSETS. The Sarmatians and SCYTHIANS of the same language family have been referred to as European Iranians.

HISTORY**From Sythia to Sarmatia**

The first mention of a people who were probably Sarmatians is by the ancient GREEKS. The historian Herodotus mentions a people, the Sauromatae, living east of the Don River (which, according to the ancients, was the dividing line between Europe and Asia) in the fifth century B.C.E. To the west of the Don were the Scythians. Greek texts of the fourth century B.C.E. mention the Sarmatae west of the Don, competing with the Scythians, earlier nomads from the Eurasian steppes, for territory. Archaeological findings indicate that the Sarmatians controlled much of Scythia (a general term referring to Scythian territory in eastern Europe) by the third century B.C.E. Much of this territory was referred to as Sarmatia. Inhabitants of present-day Ukraine who had been known as Royal Scyths became part of the Sarmatian coalition.

Allies against Rome

West of the Dniester in present-day Moldova and Romania the Sarmatians displaced, absorbed, or made alliances with GETAE and DACIANS. The BASTARNAE, considered the easternmost of the GERMANS, who settled in Sarmatia by the third century B.C.E., probably consisted of Sarmatians as well as Germans and CELTS.

Early Sarmatian names known from the second century B.C.E. are those of King Galatus and Queen Amage, who signed a peace treaty in about 179 B.C.E. with the king of Pontus, a civilization in Asia Minor in present-day Turkey. The next century Sarmatians, recorded as Iazyges, joined King Mithridates VI Eupator (Mithridates the Great) of Pontus in his wars against Rome. The allied forces were forced to retreat to the Crimea in present-day Ukraine by a Roman force under Pompey in 66 B.C.E. Mithridates, facing capture, ordered a slave to kill him. The Sarmatians continued to fight under Mithridates' son, Pharnaces II, but the allies were defeated by

Julius Caesar in 47 B.C.E. at Zela (modern Zile in north-central Turkey). After this victory Caesar sent back to the Roman senate his famous message *Veni, vidi, vici* (I came, I saw, I conquered).

Sometime after 20 C.E. the Iazyges crossed the Carpathian Mountains and settled on the Hungarian Plain in present-day Hungary along the Tisza River. Later, in alliance with Dacians, Sarmatians carried out attacks on the ROMANS, whose legions guarded the Danube *limes* (border). They were known to have penetrated present-day Bulgaria south of the Danube during the reign of the Roman emperor Nero.

Sarmatians and Germans

In the second century C.E. Sarmatians also became allies of Germanic peoples against Rome. In 168–175 the Roman emperor Marcus Aurelius waged successful warfare against the MARCOMANNI, QUADI, and Sarmatians, mostly Iazyges, restoring the Danube frontier. Aurelius, who took the name Samarticus, conscripted 8,000 Iazyge cavalry and sent 5,500 of them to

This archer, possibly Sarmatian, dates to about 6500 B.C.E. (Drawing by Patti Erway)

reinforce Roman forces in Britain in frontier units of 500, some of them along Hadrian's Wall (see BRITONS).

In the third century the GOTHs expanded their presence in occupied Sarmatian lands. More and more Sarmatians migrated southward. The Alans migrated to the southeast to the northern foothills of the Caucasus and the Roxolani, probably to the Hungarian Plain with the Iazyges.

In 332 when the Iazyges were attacked by the Goths the Roman emperor Constantine I went to their aid. During this period Sarmatian slaves (Sarmati Limigantes), who had been armed by the ruling class (Sarmati Argarantes) against the Goths, revolted and drove them from their homes. Constantine helped them by establishing Sarmatian communities in the Balkans, in present-day Italy, and in Germany on the Rhine as buffers against the Germans. Constantine's son, Constantius II, also settled Sarmatians in parts of the Roman Empire as allies.

Some among the Sarmatians became allies of the VISIGOTHs and QUADI, however. The Roman emperor Valentinian I waged successful war against an allied force in 373–375. In 378 Theodosius I defeated the Tizra Sarmatians, who had continued their resistance against Rome.

By the late fourth century the HUNS, advancing from the east, were seizing lands held by Sarmatian and Germanic groups; the period is considered the end of Sarmatia. Some Sarmatian peoples maintained independence, while others fell under Hunnic control. Sarmatians were part of the great army assembled by Attila that invaded Gaul in 451. Some Alans, who had earlier invaded Gaul with VANDALS and SUEBI, fought against them as allies of the Romans and Visigoths. In the sixth century some Iazyges merged with the LOMBARDS and settled northern Italy with them.

CULTURE

Economy

The nomadic Sarmatians kept herds of horses and other livestock and were known in ancient times for their horse breeding but did not practice agriculture. They hunted and raided other peoples for food, sometimes enslaving farmers and living off their produce.

Government and Society

Sarmatian society was originally matriarchal, and women took part in the governing process. Male chieftains ruled the migrating tribes. Later in their history after settlement in eastern

Europe the Sarmatians were ruled by kings and classes of society developed.

Military Practices

The Sarmatians typically fought from horseback. Unmarried women sometimes fought alongside men and may have helped inspire the Greek legend of the Amazons, a tribe of warlike women who supposedly inhabited Asia Minor. Weapons included long spears, long and short swords, and daggers. An original long sword design featured a hilt of wood with gold lacing, topped with a knob of agate or onyx.

Transportation

The Sarmatians, known for their horsemanship, rode bareback, directing their horses with knee pressure and shifting of weight.

Personal Habits

Some of the Sarmatians, as did the Scythians and Huns, practiced cranial deformation, elongating the head of newborns through hand pressure and bandaging.

Art

In addition to brightly colored geometric patterns the Sarmatians were known for animal and floral motifs in their decorative art. Horses were a common theme, as well as other animals, such as deer and dolphins. Sarmatian jewelry included bracelets, rings, diadems, brooches, buckles, and buttons.

Literature

No Sarmatian written texts have survived to modern times. The only ancient Sarmatian words to have survived in writing are tribal names, personal names, and place-names.

Religion

The Sarmatians worshipped a god of fire to whom they sacrificed horses. They practiced inhumation. The earliest burials included no artifacts. In later times the men were typically buried with weapons; the women, with jewelry; and the children, often with bells of bronze.

The history of the Sarmatians, actually a number of different ancient steppe tribes who migrated westward, is related to that of the Scythians and Huns, fellow steppe peoples originally out of Asia, as well as that of the Romans and various Germanic tribes of Europe.

Saxons (Saxones)

The Saxons, a Germanic tribe, originally occupied territory on the southern Jutland Peninsula in present-day Denmark and Germany and on several neighboring islands. They were among the GERMANICS—the Angles, FRISIANS, and JUTES—who in the fifth and sixth centuries C.E. migrated to Britain and eventually became known as ANGLO-SAXONS (the name Saxons also being applied to all these peoples). Those who remained on mainland Europe—the Old Saxons, as they were called—held extensive territory in present-day northwestern Germany. The term also has been used for inhabitants of different regions of Germany known in its history as Saxony. The name Saxons (possibly from *scramasax*, a single-edged sword used by Saxons, or possibly from *seax*, a two-edged dagger) was also applied to German settlers who migrated during the 13th century to southeastern Transylvania in present-day Romania.

LANGUAGE

The Saxons spoke Old Saxon (or Old Low German), a now-extinct Low German dialect. After their migration to Britain the dialects of the Saxons, Angles, and Jutes grew grammatically closer to one another and out of them English emerged. The modern Low German dialects developed from Old Saxon. During the medieval period the language of the Saxons on the mainland grew closer to High German.

ORIGINS

The peoples near the North Sea had long been impacted by their proximity to the sea-

ways, which allowed contact with distant cultures. During the Neolithic Age people along the Atlantic coastal zone constructed megalithic burial monuments. As did other northern peoples after the beginning of the Bronze Age ancestors of the Saxons experienced rapid introduction of innovations, iron making soon after bronze making, that caused profound changes in society. The Saxons had early contacts with the FRANKS of the Rhineland and the THURINGI farther south, as attested by grave goods that include Frankish metalwork and glass and brooches from Thuringia. Such artifacts may be evidence of intermarriage as well as trade.

HISTORY

The first recorded mention of the Saxons is that of the Alexandrian geographer Ptolemy in the second century C.E. In competition with other Germanic tribes of Jutland, such as the CIMBRI, the Saxons expanded southward in the third and fourth centuries along the Elbe and Weser Rivers in present-day northwestern Germany and eventually absorbed the CHAUCI and other small tribes. They also competed for territory with the BURGUNDII and CHERUSCI to the south and FRISIANS to the west. The Saxons pressed into territory held by the ROMANS, especially after the withdrawal of the legions in the fifth century.

Saxon Raids in the West

From around the third century Saxons, along with Frisians, Angles, and Jutes, carried out piratical raids along the North Sea coast, especially during the period of Roman decline. The Romans, who indiscriminately called all these raiders Saxons, for this reason referred to the coastal regions where they erected defenses against them—in Gaul between the mouth of the Scheldt River in the present-day Netherlands and the Loire, in present-day France, as well as the southeast coast of Britain—as *litora Saxonica* “Saxon shores.”

According to a traditional story recorded by the Briton writer Gildas and the Anglo-Saxon Bede in the sixth century and afterward Vortigern, a king of the BRITONS, invited the Saxons to Britain, along with the Angles and Jutes, to help fight the PICTS. The time frame given for their arrival is 446–454, although Germanics had migrated there earlier after governance by the Romans ended in 410. The impetus for the Saxon migration were the conditions in their homeland, however; there is

evidence that flooding along the coast had eroded arable land. The inherent instability of the aggressive warrior society of the Saxons, which required war to maintain it, and population increases were important causes. The migration of the Saxons should be seen in the light of the Germanic migrations that began in winter 406–407, when they crossed the Rhine frontier and overran Roman Gaul. The Saxons were not a direct part of this movement, but they must have been affected by it. During the years 446–454 perhaps the greatest number of Germanics crossed from the mainland to Britain.

The Saxons and other Germanics seem not to have had a major impact on Britain in terms of conquest and migration until the sixth century, possibly because the Romano-Britons were able to hold them off until then. Saxons occupied much of present-day southern England, founding the kingdoms of Essex, Wessex, and Sussex. The Venerable Bede classified the inhabitants of each the East, West, and South Saxons, although he may have grouped the Angles and Jutes among them. Wessex eventually became dominant. The Saxons, Angles, and Jutes in Britain collectively became known as the Anglo-Saxons as early as the seventh century.

Old Saxons

The scholar Bede referred to the Saxons of continental Europe as the *Antiqui Saxonnes*, “Old Saxons.” There were early Saxon migrations to parts of the mainland in addition to the British Isles.

In 531 Saxons conquered the kingdom of Thuringia in central Germany. Some Saxons also settled in coastal Gaul, near Bayeux in present-day Normandy, the Calvados region in the Somme basin, and the Pas de Calais, as well as on the west coast around the mouth of the Loire.

The Old Saxons competed with the Franks for territory and were forced to pay tribute to them in 566. Two years later some Saxons joined the LOMBARDS in their invasion of Italy across the Alps. Yet, rather than live under Lombard laws, this group returned to southern Germany, where they continued to compete with the expanding Franks.

King Pippin III of the Franks waged war against the Saxons; in 772 his son, Charlemagne, campaigned against them, and by 782 he had annexed Saxon lands in northern Germany as a province in his empire. His order to convert the Saxons to Christianity resulted in

rebellion under a leader named Widukind. During this rebellion Charlemagne is said to have executed 4,500 Saxon prisoners. Although Widukind fled to Denmark, the Saxons continued fierce resistance. In 785 Charlemagne offered Widukind safe conduct to negotiate peace; Widukind's submission to the emperor and conversion, with Charlemagne's standing as sponsor, pacified most of the Saxons, although sporadic resistance continued until 804.

In 843 the Treaty of Verdun divided Old Saxon lands; Saxony became a duchy under Frankish sovereignty, part of the East Frankish kingdom, the foundation of modern Germany. The duchy of Saxony was composed of lands conquered between about 200 and 700 by the Saxon tribe. This territory included Holstein and the area west of the lower Elbe River, in what is now the German Land (state) of Lower Saxony. In the early 10th century the dukes of Saxony became rulers of all of Germany; their royal line, known as the Ottonian dynasty, held the German Crown until 1024. Under the Holy Roman Emperor Frederick I Barbarossa the duchy was broken up in 1180, and only two small and widely separated territories retained the Saxon name: Saxe-Lauenburg, southeast of Holstein, and Saxe-Wittenberg, along the Middle Elbe (now north of Leipzig). The duchy was dissolved in the late 12th century. In the 15th century the duchy of Saxony was bestowed on the Wettin dynasty, whose lands were in central and eastern Germany, far from the original homeland of the Saxons.

CULTURE (see also GERMANICS)

Economy

The impact of the Romans on the economy of the Saxons, along with those of the other tribes in the region, can be seen archaeologically near the village of Flogeln in Lower Saxony, where the number of workshops began to increase in the early third century C.E. Metalworking and probably tanning were practiced on a larger scale.

Government and Society

The Saxons were ruled by chieftains, but all classes except slaves were represented in their assemblies, where issues of war and peace were discussed. There is evidence that the Saxons served as soldiers under their Carolingian Frank overlords.

Military Practices: The *Scramasax*

The weapon called the *scramasax*, from which the name Saxon may have been derived, was

actually a sword type common to many Germanic tribes. Its shape was similar to that of a machete, slightly curved and tapering to a point, with only the outer curve having a sharpened edge. The length of the *scramasax* could range from as little as half a foot to a full yard. It was customarily carried by Lombard warriors from the fourth to the ninth centuries as an adjunct to other weapons, to be used as a last resort, and as a sign of rank.

Transportation: Road Building

The wet, boggy land of parts of Lower Saxony—and of the homeland of the Angles, Jutes, and Frisians—necessitated and then preserved timber trackways laid across marshlands. They were built of brushwood pegged into place, sometimes supplemented with planking.

Literature

Few works in Old Saxon have survived. A life of Christ in alliterative verse, known as *The Heliand*, was written in about 830, along with a fragment of a translation of the biblical book of Genesis.

Religion

The Liebenau cemetery in the Weser valley provides evidence of the timing of Saxon conversion to Christianity, since it was in continuous use from the fifth to the ninth centuries C.E. Pagan burials with grave goods predominated until the eighth century. Horses were buried here as well. Coinciding with the conversion of Widukind in 785 Christian burials without grave goods began, although the inclusion of grave goods did not cease completely for many years.

The conversion of the Saxons was as much a political as a spiritual process, as signaled by the felling of Irminsul, the sacred oak of the Saxons, at the start of Charlemagne's campaign of conquest in 772. The Carolingian Franks used Christianity as a means of pacifying, and later civilizing, the Saxons. Baptism was considered a test of submission to Frankish rule, and in 785 Charlemagne decreed the death penalty for any Saxon who refused baptism or who transgressed against the sacraments—for example, eating meat on Friday. The ruthlessness of the Franks naturally caused the Saxons to despise them, and it was Anglo-Saxon missionaries, who could distance themselves to some extent from the Franks (and spoke a language close to Old

Saxon), who were ultimately successful in converting the Saxons.

The Saxons, whose kingdom of Wessex in England became the foundation of the English monarchy, are considered to be among the most influential of the many Germanic tribes whose migrations broke up and transformed the Roman world, setting the stage for the shift in European dominance from south to north, which has continued to the present. They, with the other Anglo-Saxon tribes, were the only Germanic people to replace the culture of their new territory with their own; the original Celtic culture of Britain was subsumed or displaced by the Saxons' own Germanic culture, a process unmatched in the French-speaking Frankish kingdom, in Visigothic Spain (see VISIGOTHS), or in Ostrogothic Italy (see OSTROGOTHS). They also contributed to the history of modern-day Germany (see GERMANIC NATIONALITY).

Scandinavians (people of Scandinavia)

The name Scandinavians refers to people who inhabit the Scandinavian Peninsula in northern Europe, which comprises present-day Sweden to the east and Norway to the west, in addition to people on the Jutland Peninsula, which comprises present-day Denmark to the south. A number of islands are grouped with them and thus include Scandinavians. The geograph-

ical region of Scandinavia in some usage includes Finland across the Gulf of Bothnia from the great peninsula and even Iceland in the North Atlantic because of its historical connection to Norway and its current political union with Denmark. Scandinavians who were active as traders and raiders in other parts of Europe from the late eighth to the 11th century are referred to as VIKINGS.

Sciri (Schiri; Skiri; Scires; Scirians; Skirians)

The Sciri were a tribe of GERMANICS. They lived at various locations in eastern and central Europe, their history entwined with that of the OSTROGOTHS, ROMANS, HUNS, and HERULI. Odoacer, who ruled Italy for a time in the fifth century C.E., is thought to have been Scirian.

ORIGINS

Little is known with certainty about early Scirian history. The Sciri are thought to have originally lived on the Vistula River and its tributaries in present-day northwestern Poland with other Germanic peoples. According to the sixth-century Byzantine historian Procopius the Sciri were a Gothic nation, that is, part of the large confederacy of tribes called collectively the GOTHs. Their name may mean "pure ones."

LANGUAGE

The Sciri spoke an East Germanic dialect.

HISTORY

By the third century C.E. some among the Sciri had migrated to the Black Sea in present-day southern Ukraine. There they met and mingled with a heterogeneous population, many of whom eventually joined in a large confederation dominated by the Goths, probably Sciri among them. In the fourth century because of pressure from the Ostrogoths the Sciri migrated to the Carpathian Mountains to the northwest. They eventually were ruled by the Huns and served among them.

In 455 Sciri and Germanic allies under Ardaric of the GEPIDS defeated remnants of the Huns in the Battle of Nedao in the Roman province of Pannonia (roughly modern Hungary). The Sciri settled along the Middle Danube. In 469 the Ostrogoths defeated the

- 493** Odoacer killed by Ostrogothic king Theodoric.

Sciri, who then scattered to both the Western and Eastern parts of the Roman Empire; many served as mercenaries in Roman legions. Some reportedly were settled in the Roman province of Lower Moesia (modern northern Bulgaria).

Odoacer

Odoacer (see sidebar), who defeated and deposed the last Western Roman emperor, Romulus Augustulus in 476, was probably Scirian. Many of his soldiers were Heruli. Odoacer was a Roman general whose coup d'état was only one of many such depositions of Roman emperors by Roman generals throughout Roman history. The great difference in this case was of course that Odoacer was a German. However, by this time the distinction between Roman and Germanic had dwindled considerably. A portrait of Odoacer shows him clean shaven with a short Roman haircut and wearing a toga. It was in Rome's interest to have a stronger ruler than Romulus Augustulus had shown himself to be. Perhaps with this in mind the Roman Senate approved Odoacer's claim to be king. Odoacer communicated with the Byzantine imperial government in Constantinople (modern Istanbul), advising them that because Western Roman authority no longer extended beyond Italy, there was no longer need for a Western emperor, and that he, Odoacer, claimed to rule only Italy. Odoacer's accession did then in this sense bring about the end of the Roman Empire in the West, but the idea that it resulted from a barbarian invasion and takeover was promoted by the writer Jordanes, working in Constantinople in the 550s.

In any case there is actually considerable uncertainty as to Odoacer's ethnic identity, and the forces he led were ethnically mixed. He had risen to power in Attila's diverse court, where Huns rubbed shoulders with Goths, Gepids, and many others. Odoacer's father, Idico (Edeco), had established the small Scirian kingdom on the Middle Danube. When it was shattered by the Ostrogoths, Odoacer went to Italy and entered imperial service; he rose to the command of the federate armies of Italy, made up of a diverse mix of peoples.

Odoacer's followers settled in Italy largely peacefully, with only a brief flare of conflict with the indigenous inhabitants in 477–478. Odoacer allowed the Roman administrative machinery to function with little interference. He was even able to extend Roman control to Dalmatia in present-day Croatia and was successful against the VANDALS in Sicily.

Odoacer: First Germanic Ruler of Italy

Odoacer, the son of Idico (Edeco), thought to be of the Sciri tribe, was born in 435 C.E. His name, also spelled Odovocar, is derived from the German *Audawaks*, meaning “watchful of the wealth.” He is known as the chieftain of the allied Heruli and Rugii, as well as the Sciri.

Odoacer joined the Roman army in Italy and soon earned the rank of commander. When the Western Emperor, Julius Nepos, was overthrown by General Orestes, who then failed to distribute promised land to tribal leaders, Odoacer led a revolt. He soon won the favor of his troops and followers, who in 476 declared him king. Odoacer soon executed Orestes; overtook Ravenna, the capital of the Western Romans; and deposed Orestes's son, Romulus Augustulus. The Eastern Emperor Zeno was subsequently forced to recognize Odoacer, who tactically decided to rule Italy as a representative of the empire, under the overlordship of the emperor. Zeno reluctantly granted him the title of patrician, although Odoacer still acknowledged himself as king.

As a leader of almost the entire peninsula of Italy Odoacer gained the support and favor of the Roman senate, who allowed him to distribute lands to his followers. Though an Arian Christian, he did not intervene in church affairs and kept the government and church separate. He expanded his domain into Dalmatia.

Threatened by Odoacer's growing power, Zeno appointed Theodoric, leader of the Ostrogoths, as king of Italy. Conquered by Theodoric, Odoacer was forced to surrender the Italian Peninsula. In 493 after a period of joint rule Theodoric invited Odoacer to a banquet feast, where he assassinated him, according to legend with his own sword.

Odoacer is hailed as the first ruler of Italy after the fall of the Western Roman Empire.

Odoacer was in turn deposed by the Ostrogothic king Theodoric, who invaded Italy in 489. After four years of struggle Odoacer's last stronghold was Ravenna. The besieged city fell on March 5, 493; 10 days later, on the Ides of March, Theodoric, in an apparent peace-making gesture, invited Odoacer to a banquet, where he killed him. After Odoacer's death the Scirian identity disappeared from history. Scirian descendants probably contributed to the mix of peoples in northern Italy, the Alps, and the region between the Alps and the Danube. They have been mentioned as one of the tribes ancestral to the BAVARII.

CULTURE (see also GERMANICS)

It is probable that the Sciri were not a “tribe” in the ancient Germanic sense of a more or less sedentary grouping of familial clans, but rather a group that emerged out of the contest for power in the Black Sea region. The rate of ethnogenesis—the birth of new peoples—tended to increase among Germanic peoples in times of stress, and the arrival of the groups that would form the Sciri in a new region inhabited by a bewildering mix of other peoples of many different ethnicities would have been such a time.

SCLAVENI**location:**

Balkan Peninsula

time period:Sixth to seventh century
C.E.**ancestry:**

Slavic

language:

Slavic

Certainly by the period of Odoacer Scirian social organization was different from that of their ancient Germanic tribal forebears, who had no permanent war leaders or kings.

Although the identity of Odoacer is uncertain and many of his followers were in fact Herulian, his probable Scirian roots make the Scirians an important people in the history of Italy as well as of the Germanics in general.

**Scлавени (Sclavenes; Sclavini;
Slavesians; Sclavenoi, Sklavenoi;
Sklavoi; Sclaci; Slovonici)**

Scлавени is the name applied by ancient historians to those SLAVS who migrated to the Balkan Peninsula from a homeland as yet undetermined, probably somewhere in the region bounded by the Lower Danube River on the southwest, the Ukraine on the east, and the Pripet Swamp on the north. Claims for a homeland in present-day Poland were based on unreliable dating of archaeological material; the Slavic material found there is now thought to be considerably later than that found along the north bank of the Danube and in the Ukraine.

The name Scлавени dates at least to the sixth century C.E., when Jordanes, the historian of the GOTHs, as well as historians among the BYZANTINES, used it. The earlier name VENEDI used by the ancient GREEKS and ROMANS for people of much earlier times is probably the etymological source. (Slavs who settled to the west were called WENDS by scholars who derived the name from Venedi, and those to the east as ANTES, although the exact makeup and geographies of these classifications are uncertain).

Some of those peoples who became known in the sixth and seventh centuries as the Scлавени, a general term applied by some writers to all the Slavs (and from which is derived the name Slavs), may have branched off from the groups originally referred to as Antes or Wends. It is believed that the HUNS had Slavic-speaking peoples among them in their expansion westward in the fifth century. The “crystallization” of the Slavic ethnicity may have occurred during this time under Hunnic influence. Those groups identified as Balkan Slavs, Macedonian Slavs, and Pannonian Slavs relate to those peoples grouped as Scлавени as do all the Southern Slavs. Their various Slavic dialects evolved into Bosnian, Bulgarian, Croatian, Macedonian, Serbian, and Slovenian.

Scordisci (Scordisii)

The Scordisci are classified as a Celtic tribe. They lived around present-day Belgrade in present-day Serbia. The ancestors of the Scordisci settled the Danube basin in the fourth century B.C.E. and were among those CELTS, referred to as GALATOI, who invaded Greece in 279 B.C.E. After being repelled some returned to the Danube. One group, led by Bathanatos, settled on the site of present-day Belgrade, and became known as the Scordisci, one of the powerful groups in the region. The Scordisci were probably a confederation of smaller groups. In about 60 B.C.E. along with the BOII and TAURISCI they were defeated by the DACIANS invading from the east.

**Scots (Scotti; Scoti; Scotch; Scottish;
Caledones; Caledonians; people of
Scotland)**

The name Scots is applied to all the peoples of Scotland, a region in northern Britain. It is derived from Scotti, or Scoti, an Irish Celtic word meaning “pirates” or “raiders,” a name given by the ROMANS to raiders from Ireland, CELTS who increasingly settled in western Scotland in the fourth and fifth centuries C.E. (A tribe of the name Scoti may have originally lived in parts of present-day Northern Ireland and parts of the Republic of Ireland.) The Romans referred to all the tribes in Scotland as CALEDONIANS; some of them were Celts and others PICTS.

After the ninth century C.E. the descendants of the Celtic Scots were united with the Picts in a kingdom called Alba. The kingdom was soon called Scotia, because the Scots and their language were dominant, and the distinct identity of the Picts, as well as their language, disappeared. In the ensuing centuries within a few generations the kingdom of Scotia expanded to include most of present-day Scotland. The Scots, as inhabitants of the island of Britain, can be classified as BRITONS, although a distinction based on language differences is generally made between the Scots and the Britons. With Scotland now part of the United Kingdom of Great Britain and Northern Ireland modern Scots can be said to be British subjects (see BRITISH: NATIONALITY), but they have maintained their own cultural traditions.

ORIGINS

People living in Scotland in the Bronze and Iron Ages had a culture broadly similar to that in the rest of Britain, of Ireland, and across a large area of temperate Europe. Elements of

Bell Beaker culture along with bronze making arrived in Scotland around 2000 B.C.E. These included the increasing importance of single graves—in Scotland lined with stone—containing finely wrought clay pots called beakers, for women as well as men, as well as daggers and barbed flint arrowheads for men alone. Fortified sites began to appear during the Bronze Age, showing that warfare, although apparently on a limited scale, was becoming a common occurrence in people's lives. As in the rest of what in the Iron Age would become

“Celtic” Europe a cultural complex that would change only slowly until the last part of the Iron Age was largely established by the end of the Bronze Age. This complex probably included a local variant of the language called Common Celtic.

In about 750 B.C.E. the use of iron began to become important in Scotland, although it never completely replaced use of bronze. It may have been at this point with the change from bronze to iron that tribal chiefs began to emerge: Chiefdoms and fortified settlements

are typical of the Iron Age. Bronze and iron objects show that Scotland continued to receive influences from the Continent by way of Britain and also Ireland. In common with Britons to their south craftsmen in Scotland adopted elements of the Hallstatt and later La Tène cultures associated with Celts in areas of what are now Germany, France, Poland, and neighboring countries. These influences on people in Scotland were much less than on southern Britons, however.

This bronze collar was worn by a Scot in the first or second century C.E. (Drawing by Patti Erway)

LANGUAGE

Scottish Gaelic evolved from the Irish Gaelic of the ancient IRISH, who settled in western Scotland mostly in what is now Argyll in the middle of the first millennium C.E. The Gaelic (or Goidelic) languages are distinct from the Brythonic Celtic dialects spoken in Britain during Celtic times. Irish and Scottish Gaelic are

very similar; the differences between them are mainly the result of the influence of VIKINGS, who settled in Scotland after the eighth century C.E. Scottish Gaelic did not truly diverge from Irish Gaelic until about the 13th century.

HISTORY

Agricola's Invasion: 79–84 C.E.

In 79 C.E. Gnaeus Julius Agricola, the Roman governor of Britain, sent a fleet to survey Scotland's coast. His attention had been on northern Britain (or Caledonia, the name given by the Romans to the territory north of the firths of Clyde and Forth) because of unrest and rebellion there throughout the 70s C.E., particularly among the BRIGANTES in Yorkshire. This had been quelled by his predecessors by 74 C.E., but either as a measure to prevent Caledonian tribes from aiding the Brigantes or from motives of personal political ambition, he determined to lead an expedition deep into Caledonian territory. The details of this campaign are supplied by Agricola's son-in-law, the Roman historian Tacitus, in the *De vita Iulii Agricolae* (Life of Julius Agricola), published in 98 C.E.

Agricola led his legions slowly northward, building roads and fortifications as they went. Unsurprisingly the Caledonians responded by skirmishing and harassing the Roman troops with increasingly large forces. Finally in a surprise night attack the Caledonians very nearly wiped out the whole Ninth Legion, which was only saved by Agricola's cavalry.

Agricola continued his advance until in the summer of 84 C.E. he had reached the Caledonians' stronghold in the northeast, hoping to force them into a major battle that would allow him a decisive victory. Somewhere on this march at a place called Mons Graupius (the Grampian mountain, perhaps at Bennachie near Inverurie) the Caledonians confronted them.

Occupying the high ground 30,000 Caledonians faced a Roman army about half that size. Roman discipline and tactics, however, made the most efficient use of every soldier, whereas the Caledonians, as did other Celtic warriors, fought more as a mob of individuals, so that the difference in numbers mattered little. At one point the Caledonians, using their greater numbers, outflanked the Romans only to meet hidden Roman cavalry suddenly closing in on them.

When the trap closed on them the Caledonians were subjected to a merciless bloodbath in which 10,000 were slaughtered.

Many fought valiantly to the end; more fled into the surrounding woods and hills, burning their houses or in fear of Roman reprisals, according to Tacitus, even killing their own wife and children.

Despite this victory Agricola was recalled from Britain by the emperor Domitian the following year, and his successful campaign was not pursued further.

The Hadrian and Antonine Walls

Continued raiding by tribes in southern Caledonia incited the emperor Hadrian in the year 122 C.E. to build a fortified wall 73 miles long, reaching from Solway Firth on the Irish Sea to the mouth of the Tyne River. This was followed 20 years later by the construction of another wall to the north, called the Antonine, across the narrowest part of Scotland, from the Firth of Forth to the Firth of Clyde. Roman legions used Hadrian's Wall to stage incursions into southern Scotland as shows of force to discourage the tribes there from raiding. Recently rows of stake holes have been found against the north face of the wall. They are thought to have held sharpened forked posts, designed to fend off heavy attack. Because such holes have been found in parts of the wall far from one another, they may have been a common feature of its construction. This indicates that the Romans considered the Caledonian tribes a serious threat.

The Campaign of Lucius Septimius Severus: A Caledonian Genocide?

A different strategy was attempted by the emperor Lucius Septimius Severus and his son, Caracalla, in Scotland between 208 and 211 C.E. Recent archaeological research suggests that Severus had adopted a scorched-earth strategy tantamount to genocide, accomplished by a systematic devastation of crops and livestock. His policy, moreover, seems to have been successful, as peace beyond the northern frontier lasted for most of the following century.

The principal evidence consists of military bases dating from the time of Severus's campaign. At South Shields, overlooking the Tyne estuary, a fort dating from Hadrian's time was reconstructed as a gigantic provisions depot. Upriver the great base at Corbridge underwent major refitting that included the building of granaries. Far to the north on the south banks of the Forth and Tay estuaries forts were established at Cramond and Carpow. The purpose of these appears to have been to provision by sea large armies campaigning north of the Forth,

thus avoiding the long and vulnerable lines of communication through southern Scotland used in earlier Roman incursions.

Several linear series of Roman camps are known in eastern Scotland beyond the Forth. They trace lines northeastward through Strathmore toward Aberdeen, along the Angus coastlands, and into Fife. A similar pattern is followed by another line of camps, which thrusts inexorably from the Forth to the head of Strathmore. The camps are set on average 10 or 12 miles apart, a comfortable day's march for a large army.

This pattern is unknown elsewhere in the Roman Empire and contrasts with the Romans' usual practice, which was to crisscross a territory with a network of roads and strong points to rout native armies and establish control, imposing the Pax Romana on the local population, which could then be incorporated in the Roman economic and governmental system. In contrast Severus's lines of camps run through Caledonia's primary agricultural regions, suggesting the possibility that his plan was to destroy all crops and livestock, thus subjecting the native population to starvation. In any event peace ensued in the region, although one perhaps resembling that prophetically described by a British chieftain quoted by Tacitus 200 years before: "They create a desolation and call it peace."

Raiders from Ireland

By the fourth century and perhaps earlier, raiders from Ireland were carving out territories for themselves in southwestern Caledonia and entering into conflict with earlier inhabitants called by the Romans PICTS (painted people). These people were identified by later historians with a line of kings traced in pseudo-historical medieval Irish annals and called the DÁL RIATA or Dalriada, whose territory roughly corresponded with the modern county Antrim in Ireland. The region was named as the territory of the ROBODI by the Alexandrian geographer Ptolemy in the second century C.E. on his map of Hibernia. The continuing tensions between these two groups finally spilled south, and in 367 Picts overran southern Caledonia, forcing the Romans to retreat behind Hadrian's Wall. In 410 the Roman political and military apparatus left Britain permanently.

The raiders continued to consolidate their hold on western Scotland. Their main stronghold may have been a hill fort in Argyll known as Dunadd, which had been a fortified site possibly as early as 400. Angus, one of the most

The so-called Monymusk reliquary was used by Scots in the eighth century C.E. (Drawing by Patti Erway)

Kenneth I MacAlpin: Unifier of Scotland

Kenneth MacAlpin succeeded his father, Alpin of Kintyre, a member of the Gabhran clan, to the throne of the Scots of Dalriada in about 834 C.E. He eventually became king of the Picts as well. The exact events leading to his unification of the two kingdoms are not known. It is thought that because his mother was descended from the Pictish royal house of Fortrenn, Kenneth claimed the Pictish throne and began a military campaign to seize power.

According to tradition the last Pictish resistance was eliminated when Kenneth invited their leaders to a feast at Scone. In the middle of the feast the Scots removed the pegs in the Picts' chairs, which had been loosened beforehand, so that the Picts all fell to the floor, allowing the Scots to slay them in great numbers in the ensuing confusion. This event is referred to as MacAlpin's Treason. The Stone of Destiny, used in coronation rituals at Dunadd, was subsequently moved from Dunadd to Scone, signaling the creation in 843 of the new united kingdom called Alba, comprising all the territory north of the Firths of Forth and Clyde.

Because of attacks by Vikings on the island of Iona Kenneth transferred the remains of the sixth-century missionary Saint Columba to Dunkeld on the river Tay, the center of the Scottish Columban church. He died at Forteviot near Scone in about 858, and his brother, Donald I, succeeded him.

powerful Pictish kings of the eighth century, is said in the annals to have conquered Dunadd.

Angus's seizure of Dunadd must have been only a temporary victory, as the Scots maintained their hold on Argyll and made repeated efforts to extend their power eastward during the ensuing centuries, despite temporary setbacks. One setback was the defeat of one of their greatest kings, Aidan, by the ANGLES, Germanic-speaking invaders from across the North Sea, in 603 at Degsastan near the later Scottish border.

In 841 Kenneth I MacAlpin (see sidebar), the son of a Scottish king and a Pictish princess, became the 36th king of the Dál Riata. Because the Picts were matrilineal, tracing descent through the mother rather than the father, Kenneth claimed lordship over Picts as well as Scots. His military campaigns against the Picts to make good his claim were aided by the fact that the Picts were also being attacked from the east by Vikings. In 843 he founded the united kingdom known as Alba (from the Irish Gaelic word for Britain). The culture of the Scots was dominant, and the Pictish language all but disappeared by the 10th century.

By 1034 through a combination of conquest and intermarriage Alba was united with the territories of Lothian, Cumbria, and Strathclyde into a region that approximately constituted modern mainland Scotland. By the 14th century the name Scotland referred to the whole land, and all its inhabitants were called Scots, whatever their origin.

Fragile Unity

In the 11th century Scotland continued to be divided between the kingdom of Alba in the north, itself composed of the kingdoms of the Picts and the Scots that had been unified in the ninth century by Kenneth MacAlpin, Lothian in the southeast, and Strathclyde in the southwest. These three parts were joined by Malcolm II, king of Alba, after he conquered Lothian at the Battle of Carham on Tweed in 1018. Although Norse leaders ruled areas of present-day Scotland and the Orkney and Shetland Isles, the Scottish kings of Alba became the most powerful rulers in northern Britain.

For some three centuries after the unification of Scotland in the 11th century the various groups in Scotland—the Scots of Alba, the ANGLES of Lothian, the Britons of Strathclyde, the Vikings in the west, and the NORMANS (who invaded England in 1066)—were led by the strong and increasingly powerful monarchs of the Canmore dynasty, founded in 1058 by Malcolm Canmore and his wife, Margaret. Malcom Canmore was the Malcolm in Shakespeare's play *Macbeth*, son of King Duncan, whom the real-life Macbeth had murdered to attain the throne. Although Shakespeare portrays Duncan's murder as an unnatural act that visits on the guilty Macbeth both natural and unnatural disasters, in reality Macbeth's deposition of Duncan by murder was typical of Scottish dynastic politics at the time.

Over time the Viking Norse areas of Scotland, which nominally had been ruled from Norway, were increasingly under the influence of Scottish kings. By the late 12th century only the Western Isles (the Outer Hebrides), the Orkneys, and the Shetlands were still in Norse hands. King Magnus III of Norway traveled to the isles to subdue the chieftains there and in 1098 persuaded the Scottish Crown to recognize his rule over them. Close cultural ties between the isles and Norway may be indicated by Magnus's nickname of Barelegs, earned because he wore the customary garb of the isles, a linen shirt falling to the knees and no leg coverings. In the 12th century Somerled, a Gaelic chieftain about whom little is known, led a Celtic rebellion against the Norse in the West Highlands, winning control of Kintyre and Argyll and later wresting the Hebrides from the Norse kingdom of Man. His exploits ended only after he went to war against the Scottish Crown and was killed in battle in 1164. After a victory in 1263 Scotland gained control of the Western Isles, but the Norse still controlled the Orkneys and Shetlands until 1472.

Scotland's independence was repeatedly threatened during this period by the aggressive and ambitious monarchs among the ENGLISH of Norman descent, who tried to assert their sovereignty over Scottish kings. In the 13th century the death of the heiress to the throne, who had been betrothed to Edward I of England, gave the English leverage in Scotland, and when the claimant to the throne backed by Edward, John de Baliol, was victorious, he accepted Edward as overlord. A series of strong Scottish war leaders, notably William Wallace and Robert Bruce, led revolts against English sovereignty. The latter, crowned Robert I in 1306, finally defeated Edward II at the Battle of Bannockburn in 1314.

The long-lasting royal dynasty of the Stuarts (or Stewarts), of Norman descent, formerly a hereditary lineage of stewards of Scotland, began with Robert II, who ascended the throne in 1371. The first Stuart monarchs ruled over a country thrown into socioeconomic chaos by the Black Death epidemic, which killed nearly a third of the population. A succession of kings who were plagued by ill health or who had gained the throne in their minority prevented the Stuarts from exerting strong control over the country, as did wars over the succession, with unruly nobles or with the English.

Yet for all of the turmoil of royal politics, the economy slowly recovered, as the burghs proved resilient; many Scottish nobles administered their estates well and prospered. Perhaps as telling an event for Scotland's future as any of the wars of the time was the founding of Scotland's first university, St. Andrews, in 1412. Other universities founded in the 15th century were Glasgow (1451) and Kings College in Aberdeen (1495).

With James IV the Stuarts finally gave Scotland a strong leader. James was able to control the nobility; in the ensuing period of peace and stability he worked to improve the administration of his government and to promote manufacturing and shipbuilding. James's marriage in 1503 to Margaret Tudor, the daughter of Henry VII of England, began a succession that would put the Stuarts on the English throne exactly a century later, in 1603. Yet James was not immune to the temptations of power politics, and his marriage to Margaret was preceded by seven years of war with Henry VII to depose him in favor of a pretender to the English Crown whom James supported. And in 1513 James's attempt to invade England (in support of France, which had been attacked by

England the same year) ended in the disaster of Flodden Field, in which James was killed and the flower of Scottish nobility was decimated.

Under Mary, queen of Scots, French influence in Scotland increased after she married Francis, dauphin (heir to the throne as Francis II) of France, and actually signed over Scotland's sovereignty to France should she predecease her husband. Her reign saw suppression of the emerging move to Protestantism in Scotland. In the 1550s tensions between Catholics and Protestants in Scotland had flared into an open civil war in which both sides were backed by foreign powers—Catholics by the French at the behest of Mary's mother, the French-born Mary of Guise, and Protestants by the English. John Knox, founder of the Protestant church, was recalled from exile by Protestant nobles to serve as moral leader. The war was ended by treaty in 1560, but on the death of Mary of Guise the Protestants had a clear field in which to act, and that year the parliament abolished papal jurisdiction over Scotland and approved a Calvinist Confession of Faith drawn up under Knox's leadership. Because the parliament had met without the authority of the Crown Queen Mary refused to ratify the acts on her return to Scotland after Francis died in 1560. However, she made no move to abolish Protestantism and accepted its legitimacy in the realm as long as she and fellow Catholics were free to worship according to their own tenets. Not content with this Knox thundered against Mary and her religion, both from the pulpit and in personal confrontations.

Mary's Catholicism and her French culture (she had lived in France from the age of five) and retainers revived the animosities that had led to the civil war just ended, and her political ineptitude and questionable judgment and personal probity made her a flash point of intrigue and violence, exacerbated by Knox and his followers. By 1567 she was deposed as queen by the Protestants, and her young son, James VI, a committed Protestant, was crowned in her stead. The parliamentary acts of 1560 establishing Calvinism in Scotland were finally ratified.

Her son, James, managed to impose his will on the Scottish nobility; after he succeeded Elizabeth in 1603 to become James I, king of England, the Scottish and English Crowns were united, leading to a period of peace between the two peoples. Many of the nobility followed James to England as the center of national political gravity shifted to London. This union of the Crowns was deeply unpopular among

Scots, especially since James seemed to be placating the English by trying to Anglicize Scotland.

Although ostensibly Protestant, James's son, Charles I, instituted policies aimed at making the Scottish and Anglican Churches more like the Catholic Church. Yet Charles's true goal was power, and his government persecuted Catholics and nonconformists—Puritans in England and Presbyterians in Scotland—alike, causing large emigrations of both groups to America. His main efforts against the Scottish Presbyterians were directed toward establishing an episcopacy, a church organization led by bishops, which would have displaced the presbyters (elders) as leaders of the church. Once again Charles's goal was to gain more control over the Scottish Church by imposing on it his own appointed bishops. His efforts were bitterly resented by Scots, including the nobility, who saw king's bishops as trespassing on their own traditional prerogatives, and when a National Covenant of mutual support, in opposition to Charles's policies, was drawn up in 1638, many signed it in their own blood. A prayer book he attempted to institute in Scotland caused riots. The signers of the Covenant (often called "Covenanters") openly rebelled against Charles in 1639 and again in 1640, gaining significant concessions from him, including the right to a free church assembly and a free parliament. The successful seizure by Scots of territory in northern England in 1640 and Charles's need for funds with which to pay the Scots an indemnity he had promised them forced him to convene what became known as the Long Parliament, so-called because it issued the declaration that it could not be dissolved without its own consent and consequently sat without adjournment for years.

When Charles's inability either to compromise with or to control the English Parliament politically led to the outbreak of civil war the parliamentary side had much support in Scotland, in part because of the Puritan leadership in Parliament, in spite of Charles's concessions to the Scottish Presbyterians. Yet Charles had supporters among the Scots, most prominently James Graham, earl of Montrose, who led Highland troops and through brilliant leadership almost succeeded in winning Scotland for the king in 1644–45. The increasing radicalism of the Presbyterians alienated many among the nobility, who began to see in them at least as great a threat as the king.

After initial success in the war Charles's armies suffered a series of defeats until in May

1646 Charles surrendered himself to a Scottish army; a year later because Charles refused to compromise with the Covenanters and accept Presbyterianism, he was given into the custody of the English Parliament, although after a few months he escaped to the Isle of Wight. Perhaps because of the Covenanters' action in surrendering Charles, who after all was a Scot, sympathy for him began to grow among many in Scotland, and most of the Scottish nobility repudiated the Presbyterian Kirk (Church) and sided with the king in what was called the Engagement. In 1648 a Scottish army invaded England but was soon defeated by Oliver Cromwell and Charles was recaptured.

The defeat of the Engagers gave nearly total power to the radical Presbyterians of the Kirk, who declared that henceforth Scotland would be under the "Rule of Saints." They imposed tight social discipline, with adultery punishable by death. Nobles were called before Kirk sessions and humiliated for their moral lapses, and those who had supported the Engagement were excluded from office, parliament, and the army.

The execution of Charles in 1649 caused a wave of revulsion in Scotland, and the Scottish parliament retaliated by appointing Charles's son as Charles II, king of Scotland, England, and Ireland on condition that he accept the Covenant, and he did. This situation was intolerable to the English, and Oliver Cromwell, leader of the parliamentary regime, quickly invaded Scotland. By 1651 he had utterly defeated the Scots; parliament was abolished and Scotland became an occupied country, forcibly unified with England. Fortifications were built in Ayr, Leith, Perth, Inverness, and Inverlochy. For the first time in its history the nation of Scotland had been conquered.

Cromwell's rule over Scotland was harsh and humiliating to Scots, with occupation forces and only token Scottish representation in the London Parliament (most "Scottish" members were actually Cromwellian soldiers), making Scots feel that taxation imposed on them was in effect foreign tribute. The situation improved dramatically when Cromwell's regime collapsed after his death in 1658, Charles II was restored to the monarchy, and Scotland's parliament was reconvened.

The Killing Times

The excesses of the Rule of Saints caused a counterrevolution; bishops were once more imposed on the Presbyterian Kirk to put it under royal control and parliament was made

more subservient to the king, Presbyterian ministers who refused to renounce the ideals of the National Covenant of 1638 were purged from their parishes. The new regulations caused thousands in the Lowlands to abandon their churches and meet with their ministers in secret, often open-air locations; such meetings were called Conventicles. Government forces hunted down renegade preachers and imprisoned them. In retaliation many Covenanters armed themselves and resisted government forces; in 1678 Presbyterian risings occurred across the south and west of Scotland in a general rebellion. The rebels were defeated in the Battle of Bothwell Brig in 1679; as many as 1,200 Covenanters were taken prisoner, many of them were shipped to penal colonies in the West Indies. The period following this became known as the Killing Times, as government troops hunted down the remaining rebel preachers and in some cases shot them on sight. Their congregations were administered an oath acknowledging the king as supreme in matters of religion, with refusal punishable by execution on the spot. These measures increasingly marginalized the few remaining radical Presbyterians, whom most of the population considered fanatics.

The accession in 1685 of Charles's brother James II (James VII of Scotland), deeply troubled even mainstream Scots Protestants, because James was Catholic. His deposition by the Protestant William of Orange was welcomed by many, and Presbyterians who had fled the Killing Times returned. A convention drafted the *Claim of Right*, which demanded the return of a free parliament and Presbyterian Kirk. The exiled James VII ordered the convention to obey their rightful king, but parliament proclaimed William king of Scots and reclaimed their political power.

Massacre of Glencoe

The ouster of James was divisive and he continued to have many supporters (called Jacobites), especially in the Highlands. The Scottish parliament had agreed to support William on condition that the Scottish government remain strictly separate from that of the English and that William refrain from interference with the Scottish Kirk. William agreed to this, but because of continued sentiment in favor of James William's government instituted a policy whereby all clan chiefs in the Highlands were required to sign an oath of loyalty to the Crown or be subject to punitive measures by the military.

William had little understanding of or interest in the intricacies of Scottish politics; in spite of his occupation of the British throne his main focus continued to be his war in defense of his homeland against Louis XIV. What he wanted from his ministers in Scotland was that they produce a peace as quickly as possible. Thus a blunt ultimatum took the place of the delicate and time-consuming negotiations begun previously. Although most of the chiefs complied and took the oath, William's chief adviser in Scotland, Sir John Dalrymple, determined that an example should be set. He had had his eye on the Macdonalds of Glencoe, because they were Catholic, but also because they were a small clan whose narrow, steep-sided glen could easily serve as a trap. When Alasdair of Glencoe took his oath too late to meet the prescribed deadline, Dalrymple moved quickly and ordered that the Macdonalds of Glencoe be rooted out. In January 1692 a force of soldiers, who had been billeted among the Macdonalds in Glencoe for two weeks and received their cordial hospitality, attacked their hosts, killing 38 people outright and forcing countless others to flee into the deep snow of the mountains, where many perished. Among the soldiers were members of the Campbell clan, who had feuded with the Macdonalds for many years. Their regiment may have been chosen with the purpose of passing the incident off as a product of clan rivalry—as many Scottish Lowland historians subsequently did. But the evidence is that some of the Campbell soldiers (who were regulars in the British army acting under orders), perhaps feeling Gaelic loyalty to the Macdonalds, helped some of them escape.

In fact Dalrymple, as attested in a letter written shortly after the massacre, felt no scruples at all about it, saying his only regret was that any of the Macdonalds got away. By this time many Lowland Scots considered the Highlanders wild, semibarbarous thieves who deserved to be exterminated. Nevertheless Scots in general were appalled by the massacre (particularly the cold-blooded way in which the soldiers had received the hospitality of the Macdonalds before turning on them), and the Jacobites made good use of it for propaganda purposes, publishing Dalrymple's orders to the troops who carried out the killings, countersigned by King William himself. The Scottish parliament declared the affair an act of murder and Dalrymple lost his office. This incident deepened the distrust of many Scots of William and the British Crown for years and helped the Jacobite movement to remain alive.

Union with England

The Act of Union of 1707 by which the Scottish parliament was absorbed by the English Parliament in London was achieved only after the English government resorted to strenuous measures, ranging from threats, such as a boycott of all trade with Scotland, to an outright bribe of more than 300,000 pounds. The Scottish poet Robert Burns gave voice to the feelings of the Scots over the union in his song "Parcel o' Rogues." The move to unify the governments occurred after the Scottish parliament refused in 1701 to ratify the succession of Hanoverian monarchs to the English throne. The union was meant to secure the succession and put an end to Stuart pretensions to the throne. The deal was sweetened for Scots landowners with several provisions favorable to them, but for most people it only added a new tax burden and failed for decades to improve the struggling economy. The east coast towns actually suffered famine, and food riots occurred. The suffering and dislike of "German Geordie," as George I, the first Hanoverian, was called in Scotland, attracted some but by no means all Scots to the Jacobites. The fact that they were viewed as favoring Catholicism weighed more with many Protestant Scots than any other factors.

Stuart "Pretenders"

The son of James II, James Edward Stuart, also called the Old Pretender, became the focus of Jacobite aspirations after the accession of George I. In 1715 a year after George became king, the first in a series of Jacobite rebellions occurred, none of them at all successful. Another attempt was made in 1719, and others through the 1720s. But a serious Jacobite threat only emerged under the leadership of James's son, Charles Edward, "the Young Pretender" or "Bonnie Prince Charlie." He arrived in Scotland in 1745 and led Scottish troops, mostly Highlanders, to two victories over unprepared government forces, taking Edinburgh and marching into northern England, despite the fact that Charles had been unable to convince France to give him any support. When a government army (which included many Scots in its ranks) met Charles at the Battle of Culloden, however, he was soundly defeated and afterward fled to France. Because Highlanders were the locus of remaining Jacobite sentiment in Scotland, severe reprisals were enacted against them. The wearing of tartans and playing of bagpipes was forbidden. Legislation of 1746 and 1747 was passed to weaken the independ-

ence of the Highland lairds and their absolute power over their clans.

The Highland Clearances

Meanwhile an agricultural revolution was under way in Scotland, with the development of new breeds of sheep that produced valuable wool. Many lairds and tacksmen, because of economic hard times, were falling into debt. A tempting solution to this was to convert their lands into sheep grazing grounds, clearing the tenantry from their small farms to do so. Sometimes lairds or their lands, sold for debts, fell under the influence or into the possession of Lowlanders, who were untroubled by feelings of clan loyalty and in fact subscribed to utilitarian ideas that the pursuit of economic self-interest was in the best interest of society as a whole. For such reasons a deliberate policy of eviction of Highlanders from their farms by force was carried out all over the Highlands and the islands for over a hundred years, from the mid-18th to the mid-19th century. A harbinger of what was to come took place on Skye in 1739, when crofters were lured aboard a ship and then imprisoned for the purpose of transporting them as slaves to American plantations. Although the plan failed and its perpetrators were arrested, the later legal clearances were equally brutal: People were forced aboard ships, their houses and crops destroyed so that they had no option but to emigrate; others were compelled to leave their home because of impossibly high rents.

In spite of the poverty they endured most Highlanders resisted being cleared—many escaped to the hills, and others rioted—as so many had earlier refused to emigrate voluntarily, considering that to leave Scotland was the worst fate that could befall anyone. But resistance was sporadic; full-blown rebellions did not occur, in part because of lack of leadership—after all it was their own laird, their natural leader, who required their eviction, and the habit of obedience to him ran deep, as did the belief that the laird would ultimately relent. In general ministers of the Kirk condoned the clearances, preaching to their flocks obedience "to the laws of God and men" on pain of damnation, though some criticized excesses of brutality in removing people and destroying their dwellings.

Not all lairds sent their former tenants abroad; in some cases they encouraged them to settle along the coasts on what had formerly been wasteland, supplementing their income with fishing. As a result of this practice and of

agricultural innovation land in Scotland that had never been farmed was in some cases astonishingly productive. One innovation was a method of removing peat from bogland by pouring flowing water into a bog and using it to float away cut peats. The soil uncovered in this way was often highly fertile.

Radicalism and Cultural Identity

Many Scots, still smarting over the enforced union with England, viewed the American Revolution with intense interest; Scotland's long struggle to maintain its independent parliament gave them a perspective different from that of the English on the Americans' fury at being taxed without representation in the English Parliament. Because of the Scottish Enlightenment Scots were in touch with the latest thinking in France, and revolutionary assertions on human rights found favor among many in the growing Scottish middle class. Perhaps because Scotland had recently undergone such radical changes in such a short time, many Scots were more disposed to contemplate radical change than many in England.

After the French Revolution Scots planted Liberty Trees (symbol of the Revolution) and openly debated revolutionary ideas. In 1792 in Edinburgh in what became known as the King's Birthday Riots thousands protested for three days, burning effigies of British officials, and attempted to burn down the lord advocate's house. Only when soldiers opened fire on the mob were authorities able to suppress the riot, and they worried that rioting might lead to revolution as in France. The "Terror" in France in 1793, in which many aristocrats and priests were guillotined, further hardened the British government's response to the Radicals. Measures restricting freedom of speech were passed, and many leading Radicals were arrested and transported to the penal colony of Botany Bay in Australia. Radicalism became an underground movement, only resurfacing after the Napoleonic War, when an economic downturn caused widespread unemployment and inflation. In 1820 tens of thousands marched across the west of Scotland in support of reform; government forces retaliated with mass arrests, including that of a band simply for playing Burns's song "Scots Wa' hae," a stirring call to arms in defense of liberty thinly veiled as a war song of the 13th-century king Robert Bruce. In response to Radical leaders' calls for a general strike to sweep away the government and assert human rights and universal male suffrage, work in factories stopped for days

until the organizers were arrested; after their execution the impetus for the Radical movement died away.

Increasingly after the union with England when the united nations became Great Britain the political history of the Scottish was intertwined with that of the English, and the Welsh and Irish. Similar socioeconomic trends occurred in industrializing Scotland and England. Corrupt and outmoded local institutions were reformed. The great changes in society produced stresses leading to outbreaks such as the Crofters' War of hard-pressed tenant farmers in the 1880s. From Scotland's mines emerged some of the first of Britain's labor leaders. A powerful miners' union developed in the 1860s, and as a result the first labor representatives in Parliament were from Scotland.

The potato famine of the 1840s affected Scotland both directly and indirectly, as Highlanders suffered the same crop losses as did the Irish, and many Irish emigrated to Scottish industrial areas in search of a better life. The Catholicism of the Irish caused tensions with Scots similar to those felt in Northern Ireland.

The revival of interest in Scottish culture had begun during the romantic movement of the late 18th and early 19th centuries. Tartans and bagpipes, whose proscription had ended in 1782, as well as Scottish Highlands music and dances became very popular.

By the end of the Victorian era Scotland had become one of the most heavily industrialized countries in Europe. The country's products included steam locomotives, textiles, and ships; Scotland's expanding industries were fueled by its coal reserves. After World War I, however, rivalry with the English industrial Midlands reduced Scottish industry to regional importance. Scotland felt the depression of the 1930s more acutely than the rest of Britain. Meanwhile the Labour Party rose to power, promoting issues such as land reform, housing, education, free trade, and Scottish Home Rule.

The early 20th century saw a massive emigration of Scots, many of them the skilled and educated, causing the country a loss of confidence. Between 1904 and 1913 a total of 600,000—almost 13 percent of the population—emigrated for North America and other parts of Britain. A further 400,000 people left in the decade between 1921 and 1931.

When demobilized soldiers returned from World War I (1914–18) to find poor housing and job prospects, labor unrest escalated,

culminating in massive demonstrations and strikes in January 1919 that were put down by troops and tanks sent to Glasgow by Prime Minister David Lloyd George. Labour militants in this period subscribed to Marxist ideas, earning them the nickname Red Clydesiders (for Glasgow's river, the Clyde).

In 1924 the Scottish Labour leader Ramsay MacDonald formed Labour's first administration in the British Parliament, but fears among moderate Britons about Marxist ideologues in the Labour ranks strengthened the Conservative Party, and MacDonald's first government fell.

Scottish industrial zones were heavily bombed by the Germans in World War II (1939–45), a testament to their continuing importance for Britain. The Clyde took over from the Thames as Britain's main port. A blitz of the Clydebank, an industrial center, in 1941 almost totally destroyed the town and its factories, but within six weeks some production had resumed and by the end of the year nearly full levels of production had been reached. Factories here made the Mulberry Harbors, the mobile pierheads that made possible the Allied invasion of Normandy in 1944.

The postwar period saw great changes in Scotland. The political will existed to address Scotland's economic ills and successive governments invested large amounts of money and resources to improve the country's infrastructure, industry, and standard of living. In politics the emergence of the Scottish National Party (SNP), with its focus on winning inde-

pendence from Great Britain, showed a growing belief that the status quo, which had led to ruinous world wars and economic decline for Scotland, needed to be changed. Eventually a majority of the people of Scotland came to accept the idea of devolution, separation from Britain's Parliament. The boom in the electronics industry of the 1980s and the discovery of North Sea oil reserves in Scottish waters further fueled Scots' sense that it was time to go their own way as a nation.

Legislative Independence

In a referendum in 1979 Scotland voted "yes" for devolution: 75 percent for an independent Scottish parliament and 64 percent that it should have taxation powers. Thus by the end of the 20th century Scotland, along with the other non-English nations of the British archipelago, who had maintained remarkably distinct cultures and identities, had gained legislative independence from the United Kingdom.

CULTURE (*see also* CELTS)

Economy

Ancient Farmers Scots farmers in the Iron Age grew much the same crops as did their counterparts in Europe. They kept cattle, sheep, goats, and pigs and produced dairy products, including butter. The typical Celtic practice of keeping cows for milk rather than meat is considered an advance over herding of meat cattle,

since it requires greater understanding of the cow's reproductive cycle and sophistication in handling animals, separating cows from bulls and from their calves. But even in remote regions such as the Outer Hebrides of the Western Isles there is evidence that the inhabitants were farming animals for milk as early as 500 B.C.E., despite the islands' harsh environment. Traces of cow's milk were detected in fragments of 2,500-year-old cooking pots at Cladh Hallan, South Uist. Bones of calves were also found at the site, suggesting that the Iron Age farmers were slaughtering the young animals to maintain milk production. Milk may have been mixed with barley in a sort of porridge; oats were not grown at that time.

This evidence illustrates the wide-ranging nature of the Celtic way of life and the processes in which inhabitants of regions different from central temperate Europe, where many aspects of Celtic culture seem to have originated, made that way of life their own at a very early date, with little apparent sign of coercion by invading peoples.

Cottage Industries In common with peoples in the rest of Celtic Europe Iron Age Scots engaged in "cottage" industries in population centers. Such industries included turning wooden objects, such as bowls and wheel spokes, and making clay pottery on lathes.

Government and Society

Early Settlement Patterns in Scotland A window on the life of ordinary Scottish Iron Age farmers is provided by the island dwellings called crannogs, where aquatic conditions preserve much organic material. More than 400 crannogs are known in Scotland, and the more than 30,000 lochs (lakes) in Scotland suggest that a sizable proportion of the population could have lived the crannog life, making it a typical lifestyle of the Scots in some regions.

At Oakbank Crannog in Loch Tay, Perthshire, surviving structural remains include the original pointed alder posts of the supporting platform, floor timbers and hazel hurdles forming walls and partitions, as well as the posts that once provided a walkway to the shore. The finds from the site include wooden domestic utensils, finely woven cloth, beads, and even food and plant remains. We know that the crannog dwellers kept cattle, sheep, goats, and pigs and produced dairy products that included butter, which in one instance was found still adhering to a wooden dish that was probably only discarded because it had split.

Most crannogs are located near good agricultural land, and the discovery of a wooden cultivation implement at Oakbank Crannog, together with grain and pollen evidence, indicates a local population of peaceful farmers. They grew a range of cereal crops including spelt, an early form of wheat previously thought to have been imported by the Romans. These loch dwellers also used parsley, which is not indigenous to Scotland, and therefore perhaps is indicative of trade with people farther south or on the mainland.

The loch dwellers supplemented their diet with a range of nuts and berries, including hazelnuts, wild cherries, sloes, and cloudberries, which only grow up on the mountains, showing that they made extra effort to obtain desirable foods. They also made special trips to higher ground to collect branches of pine to make tapers or "fir candles." All this suggests a lifestyle, even among common folk, that exceeded mere subsistence.

How Irish Were the Dál Riata? The information that the Dál Riata were originally from Ireland appears in the writings of the Anglo-Saxon of the seventh–eighth centuries known as the Venerable Bede and in the *Irish Annals*, a compilation of early Irish historical writing, and the *Senchus Fer nAlban* (History of the Men of Scotland), both of which derive from seventh-century sources that were compiled and augmented in the 10th century. The language spoken in Argyll in the early medieval period was Irish Gaelic; however, both at that time and centuries earlier during the Iron Age the cultures of Argyll and eastern Ireland differed significantly. The invasion of the Robogdi from Ireland could have been a legend used for propaganda purposes by early medieval Scottish kings to legitimize their dynasty by calling themselves descendants of the royal Dál Riata. The existence of the older Irish language in western Scotland may reflect only the isolation of this region from language developments in Britain. This could represent a form of "language conservatism" similar to that which has preserved Scottish and Irish Gaelic in remote areas to the present day, rather than a large-scale migration of people from Ireland. The Irish Gaelic language could have come to western Scotland much earlier than the fourth century when raids known to history began, and could have been brought by peaceful means, perhaps through settlement and intermarriage. There had clearly been much contact between Scotland and Ireland from as early as the

Neolithic Age, which may account for the language similarity, even as people on each side of the 12-mile sea barrier maintained distinct cultures in other ways.

Canmore Dynasty The Canmore dynasty sought to integrate Scotland in the sphere of European culture and politics, and under them the Scots experienced many of the same trends and developments as did other medieval kingdoms. Queen Margaret, who had fled England after the Norman invasion and defeat of the ANGLO-SAXONS, was deeply religious and fostered Christianity in Scotland; after her death she was made a saint. Scottish kings sought to promote foreign trade by inviting FLEMINGS to develop trading centers called burghs. Burghs were granted a royal monopoly of trade in their regions in return for duties paid to the Crown. Later Canmores employed Norman knights to fight for them to Scotland and gave them lands in return, in feudal fashion.

Lowlands and Highlands: Differing Worlds The differentiation between the societies of the Lowlands and Highlands of Scotland grew marked in the 11th and 12th centuries as Lowlanders increasingly adopted the feudal system with feudal property laws, while the Highlanders retained the clan system, based on blood relationships and personal loyalty to a chieftain.

The increase of literacy brought about by the advent of printing fostered the spread of new ideas among ordinary Scots as pamphlets, tracts, and books crossed the border, giving them news about the travails of fellow Protestants in England. Lowlands Scots in the cities were more affected in this way than the Highlanders isolated in their glens. The cultural and socioeconomic differences between Lowlanders and Highlanders that had begun in the feudal period, marked especially by language, as Lowlanders spoke a dialect of English and Highlanders spoke Gaelic, were now greatly exacerbated by religious differences. The Lowlanders were predominantly Presbyterian and the Highlanders tended to adhere to the “Auld Religion” of Catholicism.

The 18th century saw the deepening of the socioeconomic divide between the Highlands and Lowlands of Scotland. During the first half of the century economic and industrial development took place mostly in the Lowlands, while the continued Jacobite unrest kept alive the fierce clan loyalties of Highlanders and the warrior ideal that had its roots in the remote Celtic past. With the weakening of the clan sys-

tem after Culloden, many Highlanders left Scotland for Canada and America. Many of the emigrants were large farmers or “tacksmen,” who held a portion of land from their laird, which they in turn sublet. As former chiefs were reduced to mere lairds, some of them began to demand more than a nominal rent from their tacksmen; such demands had seldom been made before. In clan tradition the chief was considered the father of his people, bound to them by moral and emotional bonds and obligations. It came as a deep shock to people that the laird should ever think of anything so mercenary as rent, or of letting his farms to the highest bidders. Because of all the interference with the old ways of the Scottish parliament Highlanders considered it an alien government; that their own chiefs, the heads of their race, for whom they were ready to lay down their life, had turned against them they found inexplicable and unbearable: a world turned upside down. In the 1760s and 1770s possibly as many as 20,000 people left the Highlands.

The population in the Highlands had for a long time far exceeded the capacity of the land to maintain it; clan loyalty alone had kept people on their traditional lands; in many cases only the indulgence of lairds who made minimal demands of rent and services from their tenants prevented their starvation. Perhaps because of their physical and linguistic isolation from the economic progress in the rest of Scotland many Highland crofters, as they were known, were content to eke out a miserable way of life according to modern and even contemporary ideas, knowing nothing else.

As Highlanders during the Clearances were engaged in the struggle—willingly or unwillingly—to give up a social organization little changed from that of the Iron Age before the Common Era Lowland Scots were creating an industrial revolution that rivaled that of the English. Scotland had begun to gain an international banking reputation after the creation of the Bank of Scotland in 1695. Over succeeding centuries banks to encourage particular industries, such as the British Linen Bank, and savings banks were important in fostering the industry in Scotland.

Scotland had abundant iron and coal deposits, and an important source of capital was the American tobacco trade, which Scotland dominated. As in England a massive population shift from rural to urban areas took place. In the space of a generation after 1750 lowland Scotland was transformed into a mod-

ern, capitalist society through scientific and technological breakthroughs. Through its universities Scotland had become one of the intellectual centers of Europe, where crucial steps in the development of Enlightenment philosophy were in progress, especially in the work of David Hume and of Adam Smith and James Hutton; the latter decades of the 18th century have been called the Scottish Enlightenment.

Dwellings and Architecture

Neolithic Age In 1850 a violent storm in the Orkney Isles to the northeast of mainland Scotland tore away the sand dunes to reveal the Neolithic village of Skara Brae, located by the Bay of Skaill, which had been buried beneath the sand. Dated to between 3100 and 2450 B.C.E., it is the best-preserved Neolithic village in northern Europe. Skara Brae's remarkable survival through the ages is due to the design of the original builders who buried the stone-slab walls up to roof level in clay soil and waste material to provide insulation and protection from the elements. Unlike most Neolithic dwellings, those in Skara Brae village adjoined one another in a single complex, each dwelling area laid out in much the same way as all the rest, with a stone central hearth, stone beds that would have been filled with bracken and woolen and skin bed coverings, and a large stone structure resembling a dresser opposite the entryway, which may have been used for display of prized objects or as an altar.

Hill Forts and Brochs As in the rest of Celtic Europe hill forts in Scotland were centers for the control of trade and metalworking, which produced wealth, power, and status for their elite owners. Hill forts are most commonly found in the south and east of Scotland. An example is Traprain Law in East Lothian. Often located on hilltops or coastal promontories they were powerful fortresses surrounded by earthen ditches with wooden palisades or stone walls.

Some regions of Scotland are dominated by a few of the large stone towers known as *brochs*, rather than the many single-story stone roundhouses found elsewhere, suggesting a different, more stratified social organization. These roundhouses stood two, three, and even more stories high. Inside their double walls were galleries on different levels from those of the stories inside, reached by stairs. Though the primary function of the space between the double walls was probably insulation, the galleries suggest some supple-

mentary use, which so far is unknown. At places such as Gurness in Orkney villages grew up around *brochs*. Fragments of pottery found there show that the owners imported wines and olives from the Mediterranean. In about 100 C.E. *broch* building declined, though the communities and settlements around them continued to flourish after the *brochs* were no longer inhabited.

Atlantic Roundhouses Dwellings of the Scots, as of other Celtic peoples, were typically round. Because of a scarcity of trees in Scotland, houses were often made of stone. Many remains of these dwellings, called Atlantic roundhouses, still exist. They were built of two concentric windowless stone walls with a conical, probably thatched roof. The double walls are thought to have provided insulation. Despite their resemblance to castles, the fact that such dwellings are found evenly spaced across the countryside, often located in the midst of moderately sized blocks of arable land, suggests that their inhabitants were ordinary farmers.

Duns *Duns* were similar to *brochs* but smaller. They are circular or oval dry-stone structures most often built on rocky outcrops or natural defensive positions. Their walls were usually built of two thick dry-stone walls, with a solid core of rubble used as infill between them. Some used timber to lace the structures together. They are located across southwestern and western Scotland, with the greatest concentration in Argyll.

Although some earlier timber-laced duns have been dated to the sixth or fifth century B.C.E., most appear to have been built during the period after the Romans entered Scotland, during the second and third centuries C.E. They may thus be a response by natives to the incursions by the Dalriadic Scots from Ireland that may have begun by this time. Some show evidence of occupation, abandonment, and reoccupation, suggesting that they were used only in times of danger and then were abandoned for more spacious settlements nearby. They also show signs of a far longer occupation than do the *brochs* to the north or the hill forts to the south and east. Dun Cuier on Barra was used until around 500 C.E., Kildalloig in Argyll appears to have remained in use as late as the eighth century, perhaps having been adopted by the Dalriada for defense against the Picts. Unlike the *brochs* or hill forts, most *duns* appear to have been little more than fortified homesteads or farms.

Atlantic Wheelhouses Atlantic roundhouses ceased to be built sometime between the first centuries B.C.E. and C.E. In some areas they were replaced with a distinctive new form, called the Atlantic wheelhouse. The name refers to the radiating stone walls similar to the spokes of a wheel, thin at the base and thickening as they rose up, before arching over to support roofs 20 feet or more above the floors. Wheelhouses were sunk into the ground, only their thatched roofs and upper walls visible from the outside. In contrast to the earlier roundhouses the wheelhouses were used for ritual activity, attested by animal and, more rarely, human remains that were deposited between the walls. Wheelhouses are found only in the Western Isles and Shetland, but not in Orkney.

Crannogs As in Britain the crannog, an artificial island linked to the shore by a stone causeway or timber gangway, was a common construction type. The remains of crannogs are found in many Scottish lochs, particularly in the Highlands. Prosperous farms were located on crannogs, though whether for defensive purposes or for reservation of scarce arable land for farming rather than settlement purposes is unclear. The settlement would have consisted of a single roundhouse, with cattle and crops tended in nearby fields, and sheep on hill pastures. Remains found on a crannog in Loch Tay, dating from 500 B.C.E., show that the crannog dwellers were skilled weavers who could make woolen and leather items. It had a circular timber platform, built on oak piles driven deep into the loch bed, supporting a large timber roundhouse. The walls were made of hazel rods woven together and a thatched roof. Inside, the floor was probably covered with bracken and ferns. A stone fireplace stood in the center. The fire would have been kept burning continuously and would have been the focus of family life.

Clothing: History of the Kilt

The kilt as known today actually dates only to the 18th century, when displaced Highlanders found themselves working in factories such as iron foundries or joined the British army. Their garb at this time, called a great kilt, consisted of a large rectangular piece of cloth, part of which was folded into pleats and belted around the waist, with the rest passed over one shoulder and pinned in place. Such a loose garment was probably found to be dangerous in settings with open fires and molten metal and incon-

venient to work in; therefore a smaller kilt was devised, lacking the shoulder sash and with its pleats sewn into place. Even the great kilt developed relatively recently; as late as the 16th century the basic garments of Highlanders were a long, loose linen shirt, sometimes dyed with saffron (hence its name, saffron shirt) and a mantle or cloak called a plaid that seems to have been belted around the waist into pleats and pinned over the shoulder in a fashion similar to that of the great kilt. The disappearance of the saffron shirt in the 17th century in favor of a sort of waistcoat led to the great kilt's being the primary garment of Highlanders. The great kilt could be used as a cover when sleeping on campaign or hunting.

Personal Habits: Tartans

The identification of tartans with particular clans, which became well known, was not an ancient practice. It had largely begun during the proscription period (1745–82) as a means of preserving a sense of national identity; even then, however, tartans were mostly identified with districts rather than clans. The practice of weaving woolen cloth with perpendicular bands and stripes of different colors dates from earliest Celtic times. One of the earliest written references to a tartan is that of the Lennox district, worn in the 16th century by the mother of Queen Mary's second husband. Another early reference, dated 1703, mentions only that one could tell where a man lived by his plaid, and that each island and region had its own tartan. In some cases the colors of tartans reflected the plant dyes available in given districts; plants used included alder, willow, lichen, and certain roots. But judging by documents written after the Battle of Culloden, men identified their clan membership by the sprigs of plants worn in their bonnet (for example MacDonalds wore heather)—the means by which Jacobite clansmen among the dead and wounded were distinguished from British soldiers in Highland regiments who were also wearing kilts. There is some evidence, however, that as early as the 17th century some clan chiefs were encouraging uniformity in the tartans worn by their men (perhaps in imitation of the uniforms being adopted at the time by the armies of many European countries).

The prowess of the Highland regiments in Britain's wars overseas had changed British attitudes toward Highlanders. The Black Watch regiment, founded in the mid-18th century from a collection of independent companies composed of members of many different clans,

adopted an entirely new tartan for its soldiers in order not to offend clansmen by using an existing design of any one clan or district. The Black Watch and other regiments with their own tartans reinforced the idea of tartan as a means of identification. The military use of tartan cloth led to the establishment of tartan manufactories in the Lowlands, of which the largest was Wilson's of Bannockburn.

Meanwhile Highland societies were founded in London in 1778 and in Edinburgh in 1780 by gentlemen who had Highland connections—most were absentee landowners—but little actual knowledge of the Highland clans. Possibly to reinforce their sense of ownership of their Highland possessions members of the Highland societies became interested in tartans. The London Society was one of the foremost promoters of clan tartans, and in about 1815 the society compiled a collection of tartan patterns, many of them obtained by Wilson's. Wilson's had gone to great lengths to obtain the most authentic patterns possible, sending agents to the Highlands and writing to clan chiefs asking for their clan designs. In many cases Wilson's inquiries caused clan chiefs to establish their clan tartan for the first time. In others chiefs wrote to Wilson's to ask what their tartan was, an answer the manufacturer was only too eager to supply, seeing it as an excellent marketing opportunity. The attribution of tartans was often arbitrary, as shown by the pattern books, in which the same tartans were attributed to different clans at different times.

The movement to adopt clan tartans gained great momentum after the 1822 visit to Scotland of King George IV, the first king to visit the country since Charles II. Masterminded by Sir Walter Scott, whose novels had played a great role in romanticizing Scottish history, George's visit, during which he wore full Highland regalia, resulted in the design of 150 new tartans by Wilson's. George had commanded a great number of Highland chiefs to attend him wearing their tartans; those who lacked a tartan turned to Wilson's to supply one.

Other Technologies

The technology of people in Bronze and Iron Age Scotland was similar to that in other regions of Europe.

Chariots were in use in Scotland during the Iron Age, as attested by the remains of a chariot, including the two wheel rims and hub hoops, yoke fittings, harness, and horse bits

that were found buried with its owner in a grave near Edinburgh.

Despite their remoteness craftsmen in Scotland received technological innovations at an impressively rapid rate in prehistoric terms. An example of this is a find from the Oakbank Crannog in Loch Tay, Perthshire. A wooden disk found there, preserved in the watery conditions at the site, seems to have been waste material from a bowl or plate that was manufactured on a lathe. Oakbank was occupied from about 800 to 400 B.C.E. The disk could date from as early as 700 B.C.E., the date of the earliest wheel-turned object found in Europe, a complete bowl from Corneto in Italy.

Turned wooden objects, such as bowls, spindles, tool handles, spoons, wheel hubs, and spokes, are more frequent later in the Iron Age from about 300 to 200 B.C.E. The Oakbank disk shows that the bowl was lathed at the crannog. Lathes allowed a single worker to make a bowl in minutes rather than half a day.

Torcs (torques) were neck rings made of metal wires twisted together so as to resemble a rope or cord, with an opening in the front and molded terminals welded to the ring ends. Some found in Scotland are very different from those elsewhere in the Celtic world. An example found in a peat bog near Cumlangan Castle in southwestern Scotland in the 1840s is a beaded angular torc made from brass, found inside a bronze bowl. One half of the torc is a solid, heavy bar cast in one piece; the other half is made of hollow brass beads threaded onto a bronze or iron wire. The collar could be worn with either the decorated plaque or the beaded section showing at the front. The torc was made sometime between 50 and 200 C.E.

Massive armlets are a distinctive type of ornament found almost exclusively in northeastern Scotland. Of only 21 that have been found 20 are from Scotland and one from Ireland. Although they are usually called Iron Age armlets, most were probably made between 43 and 200 C.E.

Such armlets would have been worn on the upper arms; they are sometimes found in pairs. Some examples are so heavy that it has been suggested that they could not have been worn by people, but instead might have been intended for the statue of a god, which must have been made of perishable wood, no life-size statues are known.

Art

Although in the European La Tène tradition, metalwork produced in Scotland between the

sixth century B.C.E. and 100 C.E., as in the rest of the British Isles, has its own distinctive style.

Coronation Carvings at Dunadd A unique group of rock carvings is found at Dunadd, just below the summit fort. They include a rock cut “basin,” two carved footprints (in separate locations), the incised outline of a boar or pig, and an inscription in the Irish linear script known as ogham, a combination unparalleled anywhere in Britain or Ireland. The footprints are thought to have been used in coronations, marking the place where the new king would stand during the ritual and where his subject nobles would stand to swear loyalty to him. The basin may have held some anointing substance. Boars appear often in Celtic mythology and art and seem to be associated with fertility, wealth, courage, and success in battle—all qualities important to kingship.

The Celtic Cross A distinctive form of monumental freestanding stone cross was developed on the island of Iona and others of the Western Isles during the eighth century C.E. It may have derived from a combination of inscribed stone pillars made by the Picts with Christian symbolism. Such monuments typically were large slabs with gable-shaped tops having a high-relief cross on one face and narrative scenes on the other. Such monuments often have complex ornamentation of interlaced snakes and spirals similar to that of the *Book of Kells*, part of which was created on Iona. Celtic knotwork, a development of earlier linear styles in which lines are plaited to form knots, is used extensively on these stones. When the St. Columba monastery was transferred to Kells in Ireland at the beginning of the ninth century because of Viking raids, the stone cross tradition underwent an evolution into the ringed stone cross type known as the Celtic Cross.

Music

Musical instruments used in Scotland were similar to those in the rest of Celtic Europe. The boar-shaped bell of a bronze horn called the *carnyx* dating from the first century C.E. and found in northeastern Scotland is similar to those of the *carnyxes* shown in the Gundestrup Cauldron, a large silver vessel made for Celts in central Europe. The *carnyx* was held vertically over the player's head, the bell curved and facing forward. Experiments with surviving instruments show they were capable of tremendous sound. The *carnyx* was used in battle. Scots also used harps, lyres, and double flutes and pipes. No examples or illus-

trations have been found of the bagpipes so broadly associated with Scots—until the medieval period this was a wind instrument consisting of a reed melody pipe and from one to five drones with air supplied continuously either by a bag with valve-stopped mouth tube or by bellows.

Triple pipes were used with the *clarsach*, the brass-stringed asymmetrical Gaelic harp, and probably drum, in early Christian worship. Central to that worship were the Psalms of David, the shepherd king and musician. The “*Altus Prosator*” is a famous Latin poem by Saint Columba, which vividly describes the Last Judgment. Adomnan, an abbot and the biographer of Saint Columba, writes that he sang a psalm so loudly, sounding like thunder or a melodious lion, that he terrified the Druids of King Brude. It is thought that he may have been using a technique called subharmonic or throat singing, which can produce two pitches, a fundamental drone sound and a whistle-like harmonic that resonates high above the drone.

Iron and bronze bells were also used by Christian missionaries in the eighth and ninth centuries. One type is the Scottish quadrangular bell, which is capable of producing three different notes from three of its four faces, perhaps symbolizing the Holy Trinity.

Literature

Scots in Arthurian Legend Several sources, including the *Life of Columba* (c. 700) by Abbot Adomnan, and the *Annals of Tigernach*, written in the 12th century by Tigernach, abbot of Clonmacnoise and Roscommon in Ireland, mention a Dál Riata prince named Artur, son of Aedan (or Aidan), who lived in the latter sixth century C.E. Artur participated in the Dál Riata Scots' wars with the Picts. Adomnan tells a story of how the Irish missionary Saint Columba of the sixth century predicted that Artur would die fighting his father's battles. His prophecy was fulfilled soon after as Artur was killed in a battle against the Miathi, possibly a Pictish or at least southern Caledonian people known to the Romans as the MAEATAE.

In Artur's lifetime the legend of King Arthur was beginning to take shape; the Welsh poem “*Y Gododdin*” (c. 600) contains the earliest known reference to Arthur. Encircling the Firth of Forth, the kingdom of Gododdin was divided into Manau and Lothian. The poem concerns a failed attempt by forces from Gododdin to take Catraeth (modern Catterick) from the invading SAXONS. Gildas, who was

born in Dumbarton, the capital of the British kingdom of Strathclyde in southern Scotland, mentions a great battle that took place at Badon Hill at which the British won a historic victory against the Saxons; there was a Badon Hill in Scotland. Later writers on Arthur, including Nennius, say that he was the victor of this battle and that he fought campaigns against the Picts and the Scots. In one version of the Arthurian legend he was slain at a battle sometimes called Manaán, which may refer to the Gododdinian province of Manau, and the leader of the Pictish and Scots forces arrayed against him was Modred or Medraut, variously his own illegitimate son or the son of Lot (recalling Lothian), king of the Picts. Modred is sometimes said to have been born or at least brought up in Orkney, which was a Pictish territory. It seems the existence of a Dál Riata prince named Artur around the time the Arthurian story was developing conflated some of Arthur's history with that of Artur, although Arthur was supposed to have lived a century earlier.

Robert Burns The 18th-century poet Robert Burns has had an importance for the Scots as a people unusually deep and intimate even for a great artist. An important reason for this is the fact that Burns nearly single-handedly introduced the Scots language into mainstream literature. A dialect of English, Scottish in Burns's time was falling into disuse among educated people and certainly was seldom used for formal writing or literature. But inspired by a recent movement among several poets to revive the vernacular, Burns composed many poems in Scottish, among them his greatest works. His poetry in English tends to be stilted and imitative; Scottish seems to have unleashed his originality and genius.

His brilliance first took fire in composing satires, a number of them directed at the extreme Calvinism of the Scottish Church; these ultimately became an important force in the theological liberation of Scotland. His contributions to the Radical movement have already been mentioned.

Burns is also beloved by Scots for his role in collecting Scottish folk tunes and ensuring their immortality by writing lyrics to them. Burns worked in collaboration with several collectors, including George Thomson, who had formed remarkable connections with the first composers of the day, including the German Ludwig van Beethoven, engaging them to compose accompaniments for the Scottish tunes.

Ossian The beginnings of the Victorian Scottish craze lay in literature of the romantic movement of the late 18th and early 19th centuries. Among the first and most important manifestations in Scotland of the Romantic interest in the folk roots of national cultures (which in Germany, for example, would cause the Grimm brothers to compile German folk tales) were the poems of "Ossian," purportedly a warrior bard of the third century C.E. whose works were translated from the Gaelic in the 1760s by the poet James Macpherson, but in actuality were composed by Macpherson himself. Macpherson composed some 80,000 lines of epic poetry, based on genuine fragments of Gaelic poetry, telling of the exploits of the Irish heroes Finn mac Cumhail and Cu Chulainn. The eloquent descriptions of wild Highland scenery and the prevailing atmosphere of melancholy were highly influential on the romantic poets of England and of Germany. The Ossian poems create a heroism of sentiment in which the action—battle, death, victory—is less important than the hero's feelings about it. The hero's compassion for his slain and defeated enemies was greatly moving for Ossian's 18th-century readers. Yet the poems are as stylized and artificial as the 18th-century genre of pastoral (which prompted aristocrats of the French royal court to play at farming—great ladies dressing as milkmaids and lords building faux dairies for them to frolic in). Their passion for the outdoors is that of one who has never really experienced the rigors of camping; their longing for solitude is that of the city dweller who has known only the quiet of city parks, not the profound isolation of Highland glens. Violence becomes merely the occasion for emotion, its attendant agonies, gore, and death details for the hero to overcome. Heroism is presented in shining armor and the ignorance and hatred that energizes war is forgotten. The immense popularity of Ossian shows just how far the Scots had moved away from the realities of their violent and turbulent past.

Religion

The religious practices of the Scots were very similar to those elsewhere in Celtic Europe. They were affected by Beaker burial practices and the Urnfield shift from inhumation to cremation in the Bronze Age; at that time they also began the typical Celtic use of pools and springs as sites for worship. Christian missionaries began to work in Scotland after 500 C.E.

Burials In the Early Bronze Age the single-tool-and-pot-furnished burial typical of the Bell Beaker culture became fairly common in Scotland, showing both an increased emphasis on the importance of the individual and a clear belief in an afterlife in which the implements accompanying the deceased would be useful. Only some of the people were buried in Beaker graves.

In Scotland as well as in much of Europe during the second millennium B.C.E. cremation became the burial method of choice. Pottery vessels of a shape different from that of the beakers—which accompanied inhumations earlier in the Bronze Age and held the ashes of the dead—have been discovered in the Lothians, Fife, Perthshire, and Aberdeenshire, dating from about 1600 B.C.E.

The use of pools, springs, and other watery sites for ritual, important in the Celtic Iron Age in Britain, had begun in Scotland by the Early Bronze Age. At the head of the Kilmartin Valley in Argyll, site of one of Scotland's richest concentrations of prehistoric ritual monuments, an Early Bronze Age timber circle containing an inner ring of what are thought to have been totem poles was set around a deep sacred pool. At the base of one of the poles beside the posthole that is all that remained of it was a cremation burial under a stone. No metal votive deposits have been found in the peat bog that is all that remains of the pool, but organic deposits could have been made. From the outer ring of 30 oak posts some 154 feet in diameter a timber-lined processional avenue appears to have led down to the valley floor. In and around the timber circle were six contemporary cyst burials. In one a woman in her 20s or 30s was buried with a decorated food vessel. The decoration on the pot had been created by pressing a fingernail repeatedly into the wet clay. Farther down in the Kilmartin valley there was a line of Bronze Age cairns, called a linear cemetery.

Stone Circles and Their Astronomical Alignments Stone circles were built in Scotland long before the Bronze Age, yet continued to be built for centuries thereafter, showing that the arrival of Bell Beaker values and practices did not completely displace older ones. From the middle of the Neolithic Age stone circles that had significant astronomical alignments were built. An example is the circle at Callanish on the island of Lewis, built sometime around 2900 to 2600 B.C.E. Set in a landscape of Neolithic fields and houses its central ring of stones is built around a small cham-

bered cairn and has four avenues of standing stones roughly aligned on the points of the compass. The northern avenue also points to a burial cairn, and from the southern avenue the Moon can be seen to skim along the top of the hills every 18.6 years, a significant astronomical (and apparently religious) period: the period required any given relationship between lunar and solar cycles to recur. At Balnuaran of Clava near Inverness, built sometime around 2000–1700 B.C.E., a chambered cairn enclosed in the stone circle is oriented to the midwinter Sun.

Recumbent Stone Circles A type of stone circle peculiar to northeastern Scotland, the recumbent stone circle has the distinguishing characteristic of a massive slab, laid on its side in the southwestern or southern arc of the ring and flanked by the two tallest stones of the circle. It is believed that the recumbent and flanking stones form a kind of false horizon or frame through which to view the setting of the Moon. Recumbent stone circles were probably primarily communal, seasonal ritual centers, some of which were subsequently adapted to cremation burial.

Arrival of Christianity An important early Christian missionary in Scotland was Saint Ninian, or Bishop Ninian, who founded the first monastery in Scotland at Whithorn around 397 C.E. Ninian was probably a Briton. He seems to have been an exponent of the Roman Church, perhaps after receiving training in Rome, rather than the early Celtic Church founded by his fellow Briton, Saint Patrick.

The Irish monk Saint Columba was enormously influential in promoting Celtic Christianity, with its emphasis on monasticism and the rule of abbots, as opposed to bishops in Scotland. Saint Columba arrived at the island of Iona in 563 with 12 companions, having crossed the sea in a curragh of wickerwork covered with hides. The island, according to medieval Irish sources, was granted to the monastic colonists by King Conall of Dalriada, Columba's kinsman. For 32 years Columba traveled through Scotland preaching, his words often attended by miracles, and founding numerous churches and monasteries. He helped raise Aidan, Conall's successor, to the kingship of the Dál Riata in 574.

Saint Kentigern of the sixth and seventh centuries performed important missionary work and may have founded a monastery at Govan and another at the site of Glasgow

Cathedral. He may have established a bishopric for the kings of Dumbarton. Kentigern was also known as Mungo, meaning “very dear one.” Myths and tales surrounding him reflect a special concern for the common people.

Arrival of Protestantism During the 16th century Protestant ideas became influential in Scotland. Their most powerful champion was John Knox, who founded the Presbyterian Church of Scotland in 1557. Knox may have learned about Protestant thought at St. Andrew’s University and was converted from Catholicism by George Wishart in 1545. The next year Wishart was tried and burned at the stake for heresy, and his followers retaliated by murdering the cardinal who had had Wishart arrested. Knox joined the conspirators when they took refuge in St. Andrew’s castle. After he was captured Knox served for 19 months in French galleys before his release in 1549 through the efforts of the English government of Edward VI. During the interlude in the 1550s of a return to Catholicism under Mary I of England and Mary of Guise, regent for her daughter, Mary, queen of Scots, Knox wrote *First Blast of the Trumpet against the Monstrous Regiment [Reign] of Women* from voluntary exile in Geneva, Switzerland, where he was much influenced by the ideas of John Calvin, a French Protestant theologian.

Although the name Scots is from the Irish Celtic group that furnished part of Scots’ lineage, the Scots may perhaps more clearly be seen as a protonational grouping that emerged from the intertribal struggles let loose all over Europe by the collapse of the Roman Empire. The centuries-long rivalry between the Scots and the Picts, later joined by Britons and by Germanic ANGLO-SAXONS and Vikings, was analogous to similar conflicts in the former Gaul, for example, that culminated in dominance for the FRANKS. The importance of the Germanic groups in Scotland, particularly the Vikings who drew Scotland into their North Sea–North Atlantic hegemony, cannot be overstated. The emergence of the Scots occurred at a time when the history of peoples in the territory of Scotland was poised between a tribal past and a nationalist future.

Scythians (Scyths; Scythae; Skythians; Skythai; Sai; Sakā; Sacae)

The name Scythians is applied to the earliest known nomadic people from the steppes of Asia to enter Europe. Some among them reached the region north and northeast of the Black Sea by the eighth century B.C.E. and established an extensive empire, centered in present-day Ukraine. They are also known as among the first people to use their highly skilled horsemanship in warfare.

ORIGINS

From royal inscriptions it is known that the Persians of present-day Iran identified at least six different groups of nomadic steppe peoples whom they called Sakā, who lived to the north in western Asia and eastern Europe north of the Caspian Sea and Black Sea at varying times. (Their name for themselves

was Skudat, thought to mean archers, evolved into Sakā or Sacae among the Persians; the Chinese knew them as Sai.) One of these groups, who migrated to lands controlled by CIMMERIANS north of the Black Sea in Ukraine as early as the eighth century B.C.E., were known to the Greeks, such as the historian Herodotus of the fifth century B.C.E., as Skythai. Their homeland was known as Scythia. The Romans later applied the name Scythians to the Germanic GOTHs, who absorbed steppe peoples among their tribes.

LANGUAGE

The Scythians spoke an Iranian language, part of the Indo-Iranian family (the eastern branch of Indo-European). They and the SARMATIANS,

who spoke a related language, have been referred to as European Iranians.

HISTORY

In the eighth century B.C.E. there occurred on the Eurasian steppe a domino effect as people dislodged other peoples. According to Chinese accounts a group of steppe pastoralists from Mongolia (the Hsiung-Nu, who may have been ancestors of the HUNS of the first millennium C.E.), impelled to leave by severe drought, tried to enter China but were repulsed. Near Eastern and Greek accounts from the same period tell of the Massagetae, perhaps dislodged by the Hsiung-Nu, who moved into what was Scythian territory around the Aral Sea. The Scythians also migrated in this period, entering Cimmerian territory to the west. After some 30 years of warfare the Scythians defeated the Cimmerians, absorbing some and driving others across the Caucasus Mountains into Asia.

Scythian and Cimmerian warriors were known to have fought against the Assyrian king Sargon II soon afterward. He is reported to have been killed in combat with them in 705 B.C.E. Assyrian accounts also tell of the marriage in about 674 B.C.E. of an Assyrian princess to the king of the Aš-ku-za (Scythians), Bartatua. Several decades later this group, possibly in alliance with the Assyrians, destroyed the kingdom of Urartu in eastern Asia Minor and annexed the kingdom of Media in present-day northwestern Iran and beyond along the eastern Mediterranean.

In the seventh century B.C.E. the Medes drove the Scythians out of Asia back north of the Caucasus Mountains. In about 513 B.C.E. Darius I of the Persians launched a campaign against the Scythians living in Ukraine, but his forces were repelled.

In the fifth century B.C.E. the royal family of Scythia first intermarried with Greeks. By the fourth century B.C.E. Kamenka, a fortified settlement on the Dnieper River, became the center of the Scythian kingdom, ruled by Ateas. The Crimea was also a focal point of their civilization. Ateas was killed in a battle against the MACEDONIANS under King Philip II in 339 B.C.E.

From the fourth to the second century B.C.E. the Sarmatians, also Iranian speaking, became competitors in the region, originally occupying territory east of the Don before making inroads westward. The Scythians were eventually absorbed by the Sarmatians; some among the Royal Scyth, the Scythian ruling class, constituted one of their tribes. In the late

second century B.C.E. Palakus, who was the last Scythian ruler known to history, battled Mithridates VI Eupator (Mithridates the Great), the king of Pontus in Asia Minor, on behalf of the Sarmatians.

The Parthians, who created a kingdom in present-day northeastern Iran from the third century B.C.E. to the third century C.E. and whose empire expanded into additional territory by the first century B.C.E., may have been of Scythian stock. They too were famous as horsemen and archers.

CULTURE

Economy

Although originally a pastoralist (nomadic) people who lived by herding, some of whom had taken up raiding, the Scythians became farmers and traders, trading grain to Greek cities. They are also known for introducing the chicken to Europe. Burials and hoards of steppe elites demonstrate the enormous range of their exchange networks. Grave goods could include furs from the Arctic—in one case used to edge a Persian carpet—bronze and iron weapons of the CAUCASIANS, and commodities from China including silk. One grave contained cheetah fur and coriander from the Near East. Metal hoards contained metalwork from Greece, Persia, Celtic lands, and India.

Government and Society

New Metal, New Elites The Scythian conquest of the great swathe of territory north of the Black Sea benefited from the shift from bronze to iron use in eastern Europe that took place sometime around the turn of the second and first millennia B.C.E. This shift in metal use had profound social consequences. For thousands of years reliance on bronze had been made possible by trade routes that carried both tin and copper, usually from widely different regions, which could be alloyed into bronze. The elites who controlled these routes and thus the supply of tin and copper emerged for the most part early in the Bronze Age and retained their control over many generations, never moving far from their established trade routes. Bronzsmiths were dependent on the chiefs, who alone could supply them. Societies stabilized around such small-scale chiefdoms in which social stratification was not great and, because status was inherited, there was little need for personal ostentation. Pottery from the Bronze Age found in eastern Europe shows considerable regional differences in

shape and ornamentation, used as a means of ethnic identification for peoples who never strayed far from their tribal homeland.

The adoption of iron, the ore of which was much more readily available over a wide region, broke these age-old social ties in a process of detribalization, as artisans became independent of their local chiefs and the sources of wealth were more widely distributed. This trend fostered the emergence of new, mobile elites whose control of wealth was no longer dependent on place but rather on their prowess as warriors who could force their control on artisans and farmers. Pottery became plainer as the locus of ethnic identity shifted from place to the human body, both in life—with the development of styles of dress and jewelry—and in death—using increasingly more ostentatious burial rites and grave goods. As in all warrior elite societies successful warriors gathered followers around them by bestowing on them booty from raids. The more followers, the more powerful and successful these warriors-cum-chiefs would become in an ever increasing feedback loop.

In the region that was to be under domination by the Scythians the social changes caused by the adoption of iron created a fertile field of operations for mobile warrior elites; not only indigenous groups exploited this opportunity but incomers from the eastern steppes.

Steppe Pastoralists and Their Elites For millennia nomads in the vast steppe lands of central Asia had lived in a symbiosis with more sedentary groups in adjacent forest and mountain areas, trading horses, livestock, and milk products for metals, wood and other forest products, and agricultural produce. Even on the steppes nomads engaged in a certain amount of agriculture in sheltered river valleys. Meanwhile the supreme skill in horseback riding of the herders gave those among them with a bent for warfare a mobility that allowed raiding far afield, outside the home territory. Rather than trading for them, warrior bands tended to take commodities they wanted from sedentary populations, often in the form of tribute in exchange for protection against other warrior groups. In this way Scythian society became dominated by rich warrior elites and finally kings. Herodotus believed that the name Scythian itself derived from the name of a king, perhaps founder of the ruling dynasty.

The Scythians had a class of chieftains known as Royal Scyths (known from their elaborate graves). One Royal Scyth was sovereign,

his authority inherited. Farmers, who grew wheat for sale, formed a class of their own.

Arrival of Scythians in the Caucasus and Eastern Europe The archaeologically identified Srubnaya-Khvalynsk culture of the Caucasus has been identified with the Scythians. Around 700 B.C.E. burials of a completely different type from those made earlier appeared in cemeteries in Nagorno-Karabakh, featuring rich grave goods and bodies of sacrificed retainers of a different physical type from the deceased. Farther west in eastern and central Europe Scythian-style burials from this time have been found. The Hungarian plain seems to have attracted Scythians for its resemblance to the steppe. Burials have been found in Transylvania and Poland.

Real Scythians versus Scythian-Type Elites The artifacts in Europe west of the Caucasus are often called “Scythian-type” since there is disagreement as to whether they belonged to “real Scythians” from the steppe or to natives who had taken up a Scythian lifestyle. Scythian horses traded to Europe by the mid-first millennium B.C.E. could have fostered the emergence of local warrior bands. New iron sources had been found around this time in the Transylvanian Alps, and warrior burials that have been found in the southern Carpathian piedmont near important routeways to the iron mines show signs of being those of local people who had adopted the Scythian lifestyle. Pottery found in the graves has affinities to earlier pottery cultures in the region; the graves also contained Scythian-style weapons (including a copy of a Scythian-style sword) and horse accoutrements. The cultural group here (the Ferigile-Bîrsești culture) engaged in clearance of upland pastures for summer grazing as well as in mining.

Ancient sources such as Herodotus shed little light on the question of “real” versus “imitation” Scythians, because their tendency was to identify all steppe nomads as Scythians. Greeks thought of Scythia as a discrete tract of land, sandwiched between Thrace on the west and the Sea of Azov on the east. Because Herodotus believed in a theory of geographical symmetry, he thought the mouth of the Danube, the western limit of Scythia, must be due north of the Nile delta and thus much farther east than it really is. This idea caused him to shrink the area of Scythia and to believe that Thrace was much larger than it was. Thus some of the peoples he called Thracian because of their location may actually have been Scythian or have lived under Scythian rule.

Herodotus on Scythian Society Herodotus did try to distinguish among different groups of Scythians. He mentions a group called Agathysae who lived in Transylvania, saying they were an indeterminate mix of Thracian and Scythian. He also tells us that Thracians and Scythians, including their elites, intermarried. This, with the cultural similarities between elite burials in Scythia and Thrace, seems to document a warrior elite ethnicity that transcended geographical and socioeconomic differences. (Thracians were not nomads as the Scythians were.) The mobile elites of Scythia and Thrace may have had closer relations with one another than with other social entities in their respective territories. Such other entities probably included tribal groupings of agriculturalists—herders and farmers—and “service” ethnic groups consisting of “guilds” of craftsmen and traders.

One of the crafts that Herodotus mentions was the making of drinking cups from skulls; elsewhere he reports that Scythians sawed off the skull top of their worst enemies and had it gilded inside. There may be some relation between this practice and another, that of warriors’ making sworn agreements with one another by drinking from a bowl of wine into which they had let some of their own blood—a form of “blood brotherhood.”

Herodotus’s picture of Scythian government is a complex one, and he mentions administrative districts, showing that Scythian control of their territory exceeded a loose alliance of elite groups. The importance of the Royal Scyths implies a fairly tight central control of matters in Scythian territory.

Contacts with Greeks From the seventh century B.C.E. Greek traders opened up trade in the Black Sea region chiefly for grain and slaves in exchange for wine and olive oil. As in the case of the Celts and GERMANICS contact with Mediterranean civilization had a profound effect on the Scythian elites who became rich beyond anything they had known before. As did the Hallstatt Celts, the Scythians quickly developed a great enthusiasm for wine, which, however did not replace the cannabis they used. Herodotus says that they did not water their wine (the Greek practice) and often were drunk, a state that probably much eroded their warrior prowess in both the short and the long term as they fell out of condition and practice in the exacting skills of cavalry warfare. Luxuries from the Mediterranean must have tempted many to settle into a more sedentary life. The resounding defeat of Ateus by Philip

of Macedon (whose military machine was the most powerful in the Mediterranean world at this time, however) may attest to the dwindling of the Scythians' war capacities. By the next century the Scythian elite had lost control of the steppe to a new martial elite, the Sarmatians, and their power was centered on their capital of Neapolis in the Crimea.

Amazons, Enarees, and Gender Roles There is ambiguous evidence as to the role of women among the Scythians. In nomadic societies the status of women tends to be low because the nomadic lifeway, in which agriculture, often the women's province in subsistence societies, is little practiced, puts them at a disadvantage. The constant travel of nomads makes child rearing difficult and places women in a position of total reliance on men for protection. However, there is both textual and archaeological evidence of women among the Scythians (albeit a minority) who enjoyed a fairly high status.

The textual evidence consists of the famous Amazons, whose name is from the Greek *a-mazos* (without a breast), from their alleged custom of arresting the development of one breast to facilitate using the bow. Although the Amazons are featured in Greek myth, Herodotus, when he traveled in the Black Sea region, heard tales of actual women who had been warriors and war leaders.

A significant number of burials of warrior women have indeed been found, some with evidence of battle wounds. In the Scythian region west of the Don 40 such burials had been found by the late 1990s, some in conjunction with royal grave mounds, and in the region Herodotus called Sauromatia, east of the Don, some 20 percent of excavated warrior burials from the fifth and fourth centuries B.C.E. were of women.

Herodotus connects the Amazons, whom the Scythians called Oiorpata, "man-slayers," with the Sauromatians, who he says were a mixture of Scythians and Amazons and spoke Scythian. Herodotus's Sauromatians seem to be distinct from the Sarmatians who later displaced the Scythians from the western steppe (and for whom there is no evidence of warrior women). Herodotus says that Sauromatian women had to kill three of their enemy before they were allowed to marry. The appearance of warrior women in Scythian society appears to be a late phenomenon, judging by the age of burials, and may have been a reaction of some sort to the great change in Scythian society brought about by contact with Greek civiliza-

tion, or, on the other hand, by social changes set in motion among indigenous peoples in the Black Sea region by the arrival of the Scythians. Such a change would be unlikely for the "real" Scythians from the steppe, among whom male dominance was already great when they arrived in the Black Sea region. The Sauromatians, however, might have been indigenous people, among whom there was relative gender equality, which led some women to become warriors.

On the other side of the coin Herodotus also writes of gender reversal among Scythian men. A class of Scythians called Enarees were, he says, "androgynes"—"men-women" who suffered from the "female sickness." Although the Scythians themselves said that this ailment was inflicted on the Enarees by a goddess whose temple Scythian warriors had once pillaged, Herodotus, following a theory of Hippocrates, believed that jolting from constant riding and wearing of trousers was to blame. It is known that jolting and constriction of the genitals can cause erectile dysfunction and that trousers can raise the temperature of the testes, causing infertility. The affliction affected elite Scythians who did the most riding. The Enarees wore women's clothes and did women's work, claiming to have lost their manhood.

They also, however, became seers who practiced divination, a circumstance that points to a quite different motivation for becoming an Enaree. Peoples across central Eurasia have practiced shamanism from earliest times, and a feature of shamanism in some societies was that male shamans dressed and behaved in all ways as women. In the recent past shamans of a number of Siberian nomadic tribes were mostly or all women, and people in these tribes theorized that men who felt called to become shamans took on the identity of women in the hope of either being as successful as the women shamans or protecting themselves from impotence.

Military Practices

Scythian warriors were freemen who were provided with food and clothing and earned booty through victory. Scythians who arrived in the Caucasus quickly adopted the superior Caucasian weapon types, double-curved bow and bronze trefoil-shaped (trilobate) arrows capable of piercing armor, iron sword (called an *akinakes* sword type with butterfly-shaped pommel), and heavy iron spears. After the Scythians were established in Europe warriors typically wore Greek-style bronze helmets and chain-mail jerkins and carried a Persian-style sword. Some groups were also known to use

Scythians crafted this leopard, perhaps the centerpiece of a shield, in the seventh to sixth century B.C.E. (Drawing by Patti Erway)

battle-axes. Each warrior had at least one horse; the wealthy owned large herds.

Herodotus wrote that the Scythians kept the scalps of their enemies for use as napkins, which were hung on the bridle rein, or even as cloaks. This use may have had the purpose of demonstrating one's prowess as a warrior, as the more scalps a warrior had the more highly he was esteemed by his fellows.

Dwellings and Architecture

The Scythians lived in tents for which they made felt rugs.

Clothing

The Scythians against whom Darius I of Persia campaigned were called by the Persians "pointed hat Scythians." Articles of clothing were decorated with embroidery and appliqué; some had attached small gold-embossed plaques.

Personal Habits

The Scythians, as did other steppe peoples, practiced cranial deformation, elongating the head of newborns through hand pressure and bandages.

Transportation

The Scythians, who had a highly developed horse culture, were known to use saddles, unlike the Sarmatians, who reportedly rode bareback.

Technology and Art

The Scythians worked in silver, bronze, iron, electrum (a natural alloy of gold and silver), wood, leather, bone, and appliqué felts (for wall hangings). They produced elaborate gold-work, including gold figures representing recumbent stags (known as Animal Art), measuring some 12 inches, perhaps used as orna-

ments on shields. They also crafted jewelry, along with trapping for tents, wagons, and horses. Their artwork fused the styles of varying cultures of Asia and Europe. The Animal Art style grew out of the Scythians' adoption of Near Eastern metalworking techniques and motifs (such as the winged lion-griffin).

Religion

Funeral Rites and Burials The Scythians practiced funeral rites that seem to have been common throughout the Eurasian steppes and were practiced in later centuries by HUNS, MONGOLS, and others. Herodotus mentions the custom of gashing arms, forehead, and nose in honor of the deceased, and the immolation and burial of servants and horses around the corpse.

Herodotus described in dramatic detail the funeral rites of a Scythian king. The king's body was stuffed and waxed and taken on a procession around his vast territories. Returning to the burial place, he was buried with his courtiers, who had been strangled, and the grave was covered with a large mound. A year later 50 more of his retainers were strangled and their horses killed. The bodies of these were stuffed and mounted in a circle around the mound. The funeral rites included the use of cannabis for purification; the deceased's relatives inhaled the fumes of seeds thrown on hot stones in small hemp tents.

Archaeology has confirmed and supplemented this picture of Scythian funeral rites. The greatest concentration of burial mounds has been found in the Lower Dnieper valley. Excavation has shown that they had been made in a conical shape with steep sides of extremely compacted earth to foil robbers, covered with turves of grass, perhaps symbolizing an entire world covered with grasslands where the dead could ride freely forever. One mound excavated in the northern Caucasus contained one layer with the skeletons of 360 horses, and many more, along with skeletons of masses of donkeys, sheep, and cattle, in higher layers that had probably been buried later, as Herodotus recounts.

Evidence for stuffing of bodies, which seems to have been a custom in many regions of the steppe, is from burials in the Altai Mountains in southern Siberia. Bodies were freeze-dried in the permafrost, their intact skin showing elaborate tattoos and signs of skillful taxidermy with removal of muscle and other tissue. (The muscle might have been ritually eaten, as Herodotus records of the Issedones.) They were stuffed with many of the herbs Herodotus mentions. One grave contained a

fur bag with cannabis seed, a censer filled with stones, and the frame of an inhalation tent.

Enarees The Enarees, Scythian shamans, practiced divination using the bark of a lime tree. They split the bark into three parts and somehow achieved their prophetic visions through braiding and unbraiding the pieces of bark.

Although originally a nomadic people, the Scythians, as did other steppe peoples over the following centuries, developed a localized European empire with permanent settlements and sophisticated artwork.

Sea Peoples

The term *Sea Peoples* has been used for a number of peoples on the move in the Mediterranean Sea, especially in the 13th century B.C.E. The Sea Peoples may originally have been small-scale raiders on the trade network of the MYCENAEANS who joined forces into armies when the latter attacked them. (They may have been similar in this way to the multiethnic confederacies of GERMANICS, who banded together to fight the ROMANS in the first half of the first millennium C.E.) The theory that a wave of migrations occurred before and around 1200 B.C.E. results from archaeological evidence of a pattern of destruction in the eastern Mediterranean, on mainland Greece, and on Crete, that led to the collapse of the Bronze Age civilizations of the Mycenaeans and MINOANS. These attacks are associated with small war bands who may have

been ancestors of a general grouping of Hellenic peoples known as the DORIANS in ancient texts. These proto-Dorians, who probably came from north of the Balkans, may have joined with the Sea Peoples in their raids.

The Hittites, who controlled much of Asia Minor and the Near East at the time, also lost cities to Sea Peoples, as did the Egyptians, who documented the attacks with inscriptions and reliefs in the reigns of the pharaohs Merneptah and Ramses III.

The names of some of the peoples cited relate to known place-names of the ancient world; for example, the Shardana have been associated with the ITALICS on the island of Sardinia west of the Italian Peninsula, and the SHEKELESH with the island of Sicily, and the ELYMI, SICANI, and SICULI. Bronze figurines made in Sardinia in the Late Bronze and Early Iron Ages have horned helmets much like those of the sea raiders depicted by the Egyptians. One theory maintains that after being repelled by the Egyptians, the Shardana eventually settled on Sardinia. The Shardana may have been mercenaries from Sardinia.

Other peoples classified by some as Sea Peoples are the Danya, who are identified with the Danaoi mentioned in the *Iliad* (presumably written by Homer in the ninth or eighth century B.C.E.); the Ekweh; the Lukka, who may have originated in Lycia in Asia Minor; the Peleshet; the Tjeker, identified with Teuceri of northwestern Asia Minor, who, after raiding Egypt, finally settled in northern Palestine; the Tyrsennoi; and the Weshesh. Some scholars have maintained that these groups possibly sailed out of the northern Aegean. What is not in contention among scholars is that the period in question was one of upheaval.

Seduni (Sedunni; Sedunes)

The Seduni are classified as a Celtic tribe. They lived in the western Alps around present-day Sion (Sitten) in southwestern Switzerland at least by the first century B.C.E. Julius Caesar battled them to open an Alpine pass before campaigning in Gaul against other CELTS in the 50s B.C.E. The name Sion (Sitten), known as Sedunum during the occupation by ROMANS, is derived from the tribal name.

Segontiaci

The Segontiaci are classified as a Celtic tribe. They lived in Britain probably north of the ATREBATES in present-day southern England and are classified as CELTS or BRITONS. According to Julius Caesar the Segontiaci surrendered to the ROMANS in 54 B.C.E., along with the ANCALITES, BIBROCI, CASSI, and CENIMAGNI.

Segovellauni (Segovellaunes; Segouellauni)

The Segovellauni are classified as a Celtic tribe. They lived in Gaul around present-day Valence in southeastern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Segusiavi

The Segusiavi are classified as a Celtic tribe. They lived in Gaul on the Saône River around present-day Feurs in eastern France at least by the first century B.C.E. and are discussed as CELTS or GAULS. They were allies of the AEDUI. Forum Segusiavorum on the site of Feurs became a *civitas* capital during the occupation by the ROMANS.

Selgovae

The Selgovae are classified as a Celtic tribe. They lived in Britain in present-day southeastern Scotland and are discussed as CELTS, BRITONS, or SCOTS. The Selgovae, whose name is thought to mean “hunters,” were possibly allied with the VOTADINI, a confederation of smaller tribal groups. They were defeated by the ROMANS under Gnaeus Julius Agricola in the 80s C.E.

Selonians (Selones; Selians; Selijans; Selen; Selhen; Seli; Sels)

The Selonians were a tribe of BALTS, who lived along the Western Dvina (Daugava) River and its tributaries, especially the Dubna in present-day west-central Latvia, by the ninth century C.E. The Selonian dialect may have been closer to dialects of the western Balts, who lived near the coast, than of the inland people they are most often associated with historically and culturally, the LETTS. (The Selonians are even classified as a subgroup of Letts by some scholars. Selonian lands bordered on the territory of the Letts who lived to the north and northeast; of the SEMIGALLIANS to the west (and beyond the Semigallians along the coast, the CURONIANS); and of the LITHUANIANS in the south.

In the early centuries C.E. ancestors of the Letts and Selonians were living in the region known as Latgale (eastern Latvia). They were pushed farther east and north by the expansion of SLAVS.

By the 12th century the Selonians had settled lands along the Western Dvina, which they farmed. In 1209 the military and religious order Brothers of the Sword defeated them. In 1254 Pope Innocent IV confirmed the order's right to Selonian land.

The Selonians are among those peoples considered ancestral to contemporary Latvians (see LATVIANS: NATIONALITY).

Semigallians (Semigalleons; Semigalls; Zhemgala; Zemgali; Zemgalians; Ziemgalians; Hellespontians; Daugavians)

The Semigallians were one of the tribal entities to evolve out of the ancient BALTS, Baltic-speaking peoples living in north-central Europe. They lived in present-day central Latvia and northern Lithuania. Many of their homes were situated along the Western Dvina (Daugava) River (an alternate name for them was Daugavians). Their territory, known as Semigallia, extended to the Gulf of Riga around present-day Riga. To the west were the Curonians, whose homeland became known as Courland. With the Curonians, LETTS, SELONIANS, and assimilated Finnic-speaking peoples (such as from among the ESTHS, LIVS, and VOTES), they are among those peoples considered ancestral to contemporary Latvians (see LATVIANS: NATIONALITY).

ORIGINS

Identifiable tribes coalesced in the Baltic region by the ninth century C.E. The Semigallians, although they are thought to be close relatives of other tribes of the Baltic language family, are associated with other peoples on the basis of their names. The Danish historian Saxo Grammaticus (who wrote in the 13th century) mentions “Daugava town” of the Hellespontians, which corresponds with the Semigallian hill fort Daugmale. According to one explanation the name Hellespontians was applied to the inhabitants of the shores of the Daugava (Western Dvina) because the river was an important trade route to Greece, connecting the Baltic Sea with the Hellespont (the Dardanelles). Thus it is possible that the term Hellespontians refers not to the place inhabited by the Semigallians, but to their possible origin. Bartholomew, an English writer of the 13th century, theorized that the

Semigallians—that is, semi-Galats—originated from the Galatians, Celtic peoples who had migrated to Asia Minor beyond the Hellespont (see GALATOI), the name could have been from semi-Gauls, that is, another tribe of CELTS. (The fifth-century B.C.E. Greek historian Herodotus mentioned Gelons, supposedly SCYTHIANS, a name also associated with the Semigallians.)

LANGUAGE

The Semigallian language was related to other Latvian dialects, such as Curonian.

HISTORY

The VIKINGS had contacts with the Semigallians by 950, as indicated by written Danish sources that mention Semigallia. The name of Semigallia appears on several Swedish rune stones from 1001. Two centuries later in 1201 the German prelate Albert von Buxhoevden began the construction of Riga in Semigallian territory at the southern extremity of the Gulf of Riga, which, because of its location, became the center of trade and military expansion in the Baltics.

In Semigalia in the 13th century seven major regions existed—Dobe, Dobele, Rakte, Spārnene, Silene, Tŗrvete, and Upmale—each with at least one heavily fortified castle. The importance of the Tŗrvete castle reached beyond frontiers of that specific territory in that its ruler, Viestards, raised his army from other regions as well to combat the Germans.

In 1236 the Brothers of the Sword suffered a crushing defeat at the hands of LITHUANIANS and Semigallians at Saule, not far from present-day Siauliai. Eager for conquest new German recruits ventured into the southern regions of the Semigallians. In summertime the marshlands made passage difficult and facilitated guerilla-style warfare. The Germans suffered catastrophic losses. This defeat brought about the end of the Brothers of the Sword. The remnants of the order reorganized as the Livonian Order of the Brothers of the Sword, a branch of the Teutonic Knights.

Another leader who sought to unify all of Semigallians later in the 13th century was Nameisis, the last Semigallian chief named in medieval chronicles. The Semigallians rose up against the Brothers of the Sword, now united with the Teutonic Knights, in a number of engagements between 1259 and 1272. In 1290 the Brothers of the Sword and Teutonic Knights pacified the majority of Semigallians, although some resistance persisted. The dominant Letts also managed to assimilate some Semigallians.

Semigallians time line

ninth century Identifiable Baltic tribes coalesce.

950 Viking contacts with Semigallians

1201 City of Riga founded by Bishop Albert von Buxhoevden.

1202 Bishop Albert establishes military and religious order Brothers of the Sword to Christianize Baltic lands.

1236 Lithuanians and Semigallians defeat Brothers of the Sword at Saule in northern Lithuania.

1259 to 1272 Semigallians resist Livonian Order.

1290 Brothers of the Sword occupy Semigallia.

1561 Brothers of the Sword dissolve their order and combine Courland and Semigallia into duchy of Courland, which becomes Polish fief.

The Rhyme Chronicle of Livonia (the history of the Order of Livonia in two volumes written in rhymes) from 1300 records that many Semigallians left their homeland to join the Lithuanians against the crusaders and that some of their lands were then populated by people from surrounding regions, including the Letts.

The name of the Semigallians disappeared by the 16th century; the name Semigallia (or Zemgale) was thereafter used only to describe the territory that they had once inhabited. In 1561 the Brothers of the Sword dissolved their order and combined Courland and Semigallia into the duchy of Courland, which became a Polish fief.

CULTURE (see also BALTS)

Rich soils of their lands provided Semigallians with surplus agricultural products, which they traded with their neighbors.

In Semigallian burials have been found short one-edged swords; spears; bronze ornaments, including headbands and pins; and farming tools.

The location of the Semigallians along the Western Dvina River and the Gulf of Riga led to numerous contacts with outside peoples.

Semnones (Semoni)

The Semnones are classified as a Germanic tribe, a subgroup of the SUEBI. They lived around the Elbe River in present-day north-eastern Germany in the first century C.E. and were allies of the MARCOMANNI. Some of them

SENONES**location:**

moved south and west to the Rhine-Danube area and became caught up in conflicts with the ROMANS and shifting alliances of GERMANICS. Some thought to have merged with the ALAMANNI in the third century. Those who stayed in their ancestral homeland became known after 534 as the Norsavi for North Suebians. In the seventh century they joined the SAXONS against the SLAVS.

Senones (Senonians; Serones)

The Senones are classified as a Celtic tribe. They lived on the Adriatic Sea south of the Po River in present-day northeastern Italy in the fourth century B.C.E. They became allies of the non-Celtic ETRUSCANS, SABINES, and UMBRIANS against the ROMANS. Senones reportedly captured and held parts of Rome in about 390 B.C.E., until they were paid off by an offer of 1,000 pounds in gold. The Senones were defeated in 283 B.C.E., the first of the CELTS to be defeated by the Romans.

Another group with the same name, possibly related ancestrally, lived in Gaul along the Loire around present-day Sens in north-central France and are discussed as Celts or GAULS. Some among this group fought as allies of the ARVERNI under Vercingetorix against the Romans under Julius Caesar in 52 B.C.E. Agedincum on the site of Sens became a *civitas* capital in Roman Gaul; Sens takes its name from the tribal name.

Sequani (Sequoni)

The Sequani are classified as a Celtic tribe although they probably had some Germanic ancestry as well. They lived in Gaul around present-day Dole in eastern France and are discussed as CELTS or GAULS. They were traditional enemies of the AEDUI and HELVETII and allies of the Germanic SUEBI. In 60 B.C.E. tribal members joined the Suebi under Ariovistus in a successful attack on the Aedui. Some among them also supported the ARVERNI under Vercingetorix against the ROMANS under Julius Caesar in 52 B.C.E.

Serbs (Serbians; Serbi; Serboi; Sirboi)

The ancient Serbs were a tribe or tribes of Southern SLAVS who settled in the central and western Balkans by the seventh century and perhaps as early as the sixth century C.E. They are ancestral to the Serbs presently living in Serbia and parts of present-day Bosnia, Herzegovina, Croatia, and neighboring parts of the Balkans.

ORIGINS

A mid-10th-century C.E. account by a Byzantine writer, Constantine Porphyrogenitus (Byzantine emperor Constantine VII), one of whose informants lived in Dalmatia (Adriatic coastal parts of modern Montenegro, Bosnia and Herzegovina, and Croatia), says that Serbs and CROATS settled there in the reign of Heraclius in the first half of the seventh century; Heraclius invited them to migrate there, provided they convert to Christianity, as allies against the AVARS. There are several problems with Constantine's account, however. A settlement of Croats and Serbs at this time would antedate any known Slavic archaeological remains in the Balkans. Given the scarcity of any signs at all of the Slavs in the Balkans in this century, however, this early settlement by Croats and Serbs is not impossible. Yet there is not enough archaeological evidence of early Serbs to know when and where they lived, and it is still uncertain when they arrived at the territory that would later become the Serbian state.

Some of the material in Porphyrogenitus's text appears more legend than straightforward account, with elements characteristic of Slavic folktales, such as the tale of the five Croat brothers, and there are duplications suggesting it may have been simply a compilation of earlier material—different versions of the same story as in many medieval annals and histories, which often are collections of oral traditions—with no attempt at verification. Second versions of the story are given for both the Serbs and Croats, and each of these is similar to the other; some sentences of the Serbian account seem to be copies drawn from the Croat account.

Both versions emphasize that the Croats' and Serbs' settlement was at the behest of the emperor; this material may be from a Byzantine source, and the emphasis may have been for the purpose of promoting imperial claims of suzerainty over the Croats and Serbs, a political motivation that casts some doubt on the veracity of the account. Each story also locates the homelands of the Serbs and Croats in, respectively, White Serbia and White Croatia, both located near Bavaria on the border of the Frankish kingdom. The Serbian account mentions that the region was called Boiki, which could be Bohemia. However, no such people are known in this area; there was a tribe called the SORBS north of the Carpathian Mountains in western Poland. White Serbia may be no more than a literary fantasy. If Serbs (or their antecedents not yet calling themselves Serbs)

SERBS**location:**

Southern part of Balkan Peninsula

time period:

Sixth century C.E. to present

ancestry:

Slavic

language:

Serbian (South Slavic)

entered the Balkans from near Bavaria, their sojourn in the latter area must have been brief, since Slavic expansion westward from the Lower Danube region into southern Austria toward Bavaria had only begun sometime in the sixth century. It is entirely possible that Serbs and Croats were initially part of this movement, but then for unknown reasons broke away and headed south into the Balkans. The movements of early Slavic groups are too little understood either to rule this out or to provide evidence for it.

In particular there is little archaeological evidence and no consensus on when or where the Serbs' first settlement in the Balkans took place. It is also unclear when they first settled the later Serbian heartland in the Upper Drina watershed. A number of tribal names in this region are known from Constantine's time, including the Zachlumianie (in behind the hills); some of these could later have formed a tribal confederacy calling themselves Serbs. Current political considerations—an attempt to legitimize Serbian territorial rights after the Bosnian war—very probably underlie assertions by Serbian scholars that Serbs were invited to this area by a Roman emperor in the fourth century (long before any Slavs at all are thought to have emerged as a distinct ethnic group) or that Serbs constructed early burial mounds (called *gromilas*) that are found here.

LANGUAGE

The Serbian dialect is part of the South Slavic branch, which includes Serbo-Croatian, Bulgarian, Macedonian, and Slovenian. Serbo-Croatian consists of three dialects: Croatian, Serbian, and Bosnian.

HISTORY

In the late eighth century C.E. Serbian tribes were united under a grand *zhupan* (leader) under Byzantine suzerainty, with territory as far north as the Sava River. Cemeteries from the early ninth to 11th centuries provide the first unambiguous evidence of the Serbs. The first organized Serbian state, known as Rascia (or Raska), is thought to have been founded in the early ninth century in the mountains of Bosnia, whence it expanded into Serbia. The expanding influence of the BYZANTINES and BULGARS, as well as internal disputes, countered Serbian growth. Bulgarian weakness after Khan Simeon's reign allowed the Serbian tribes to achieve a short-lived independence in 933, but after the collapse of the Bulgarian empire

1389 Kingdom of Montenegro founded.

the Byzantines moved in and subjugated them later in the 10th century. The Serbs thus fell under the influence of Byzantine culture and the Eastern Church and adopted the Cyrillic alphabet.

In the ninth century a kingdom was formed near the Adriatic in present-day Montenegro, southern Bosnia, and Herzegovina by an alliance of Slavic tribes. Known as Doclea (Duklianie or Duklja), it was known as the kingdom of Zeta from the 11th century.

In 1167 Stefan Nemanja founded the Nemanjic dynasty of Serbian princes, which made Serbia the dominant power in the southern Balkans, achieving the status of an empire until it was under the hegemony of the Ottoman Turks (see TURKICS) in the 14th and 15th centuries. Montenegro evolved out of Zeta in 1389, when Serbs took refuge from the Ottomans in the region and founded a new kingdom (see MONTENEGRINS).

language:

Official language is Serbian (Serbo-Croatian); Albanian and Hungarian are also spoken.

religion:

About 70 percent of the population are Eastern Orthodox Christian; Muslims are the largest religious minority; Protestants, Catholics, and those who adhere to no religion make up remaining minorities.

earlier inhabitants:

Thracians; Illyrians; Celts; Romans; Heruli; Gepids; Slavs (Serbs etc.); Bulgars; Byzantines

demographics:

About 60 percent of the population are Serbs; Albanians make up about 17 percent; Montenegrins, Yugoslavs, Hungarians, and Muslims are other minorities.

Enduring Identity

In part because of the regionwide hegemony of the Serbs in the Balkans before the entry of the Turks, and because of movements, both voluntary and forcible, in ensuing centuries, people who consider themselves Serbs live in a number of the modern states in the Balkans in addition to Serbia and Montenegro (see SERBS and MONTENEGRINS: NATIONALITY). In order of Serbian population size these are Bosnia and Herzegovina, Croatia, Slovenia, and Macedonia. Smaller numbers of Serbs also live in Romania and Hungary.

CULTURE (see also SLAVS)

According to their folk belief the Serbs, as were other Southern Slavs, were sometimes visited by demons or spirits called *vila*, beautiful naked warrior maidens armed with bows and arrows. The *vila* danced on mountaintops as did witches and earlier the Valkyries in Germanic lands. As late as the 13th century men left offerings for the *vila*, who lived in springs and caves and under trees and stones.

A divisive factor between the Serbs and the Croats to their west has been their religious affiliations: The Serbs adhere to the Eastern Orthodox Christian creed and liturgy and the Croats are Roman Catholic.

It is possible (although there is no evidence for it) that a precursor Slavic group or groups had made their way to the Upper Drina watershed in the Balkans in the fourth century, a hundred years and more before the Slavs as we know them had "crystallized" into an ethnic group speaking the ancestor (proto-Slavic) of all modern Slavic tongues. The whole of central and eastern Europe had been a boiling pot of peoples of all ethnicities forming, migrating, settling, moving on again, grouping together, then breaking apart, for centuries and continued in this manner well into the era of the Slavic expansion. There probably will never be much certainty about the details of these processes. Even if this precursor group called themselves Serbs, it seems unlikely that they had, in any meaningful way, more than a tenuous connection to modern Serbs in terms of their national territorial aspirations or even genealogical background. In nearly all sociopolitical, religious, and cultural characteristics, as well as language, the ancestors of the first Serbs (wherever they may have lived) are divided

from modern Serbs by more than 1,500 years of great social change and turbulent history. The ideological constructs held in common by modern Serbs (importantly based on the pride of power of the medieval Serbian empire and its subjugation by the Ottomans) would therefore have been largely unknown to them.

Serbs and Montenegrins: nationality (Serbians; people of Serbia and Montenegro)**GEOGRAPHY**

Serbia and Montenegro border Hungary to the north, Romania and Bulgaria to the east, Albania and Macedonia to the south, Croatia and Bosnia and Herzegovina to the west, and the Adriatic Sea to the southwest. The total area is 39,449 square miles. Fertile plains are situated in the north; the Dinaric Alps lie in the southwest; and basins of the Carpathian and Baltic Mountains lie in the east. Mount Daravica (8,714 feet), the highest peak, is located along the Albanian-Montenegrin border. Principal rivers include the Danube, Drava, Sava, Drina, and Tisza. Lake Scutari is the country's largest lake.

INCEPTION AS A NATION

Tribal SERBS first occupied the Balkans during the sixth and seventh centuries C.E. and were unified in a Serbian nation, Rascia, around the ninth century. Rascia expanded its territory during the 10th century although subject to the BYZANTINES. Serbia continued to expand in the 13th and 14th centuries, notably under the leadership of Stephen Dušan. Ottoman Turks (see TURKICS) invaded the territory, and in 1459 Serbia lost its independence to them. For centuries Serbia was a Turkish province ruled by local Turkish officials out of Belgrade. Serbs won brief independence under the Treaty of Bucharest in 1812, ending the Russo-Turkish War, and in 1817, after a successful rebellion, Miloš Obrenović declared himself Prince of Serbia.

By the Treaty of Adrianople in 1829 Russia forced Turkey to recognize an autonomous

2003	Federal Republic of Yugoslavia becomes Serbia and Montenegro.

Serbia. Serbia declared war on Turkey in 1876, once again drawing Russian aid into the conflict. By 1878 the Congress of Berlin recognized a completely independent Serbia and expanded its borders.

Austria-Hungary annexed Bosnia and Herzegovina in 1908. The various Balkans powers struggled over territory in the two Balkan Wars (1912–13). The assassination of the Austrian archduke Francis Ferdinand by a Serbian nationalist in 1914 led to the outbreak of World War I. At the end of the war, in 1918, Serbia's former territory became the Kingdom of the Serbs, Croats, and Slovenes, which became known as Yugoslavia in 1929.

The German invasion of 1941 led to the dissolution of Yugoslavia; at the end of World War II in 1945 it was reconstructed; it changed its name to the Socialist Federal Republic of Yugoslavia in 1963. In 1991–92 Yugoslavia broke up when Croatia, Slovenia, Macedonia, and Bosnia and Herzegovina declared independence. In 1992 Serbia and Montenegro formed the Federal Republic of Yugoslavia. Internal tensions between the two republics led to a pact in 2002, giving greater autonomy to each side yet retaining shared foreign and defense policies. The state union of Serbia and Montenegro was officially recognized in 2003.

CULTURAL IDENTITY

The peoples of the state of Serbia and Montenegro, formerly the Federal Republic of Yugoslavia (FRY), a recent political construct (or rather the remnants of an older political construct), do not share a common cultural identity. By far the most numerous people in the country, who constitute two-thirds of the population (about 10.5 million), are Serbs. The next most numerous group is made up of Albanians, 17 percent of the population. Montenegro has a

population of somewhat less than 700,000, 60 percent of these MONTENEGRINS (largely ancestrally Serbs but with a different historical tradition) and the rest Serbs, Albanians, and Muslims. The FRY was the remnant of the former Yugoslavia after its constituent republics of Slovenia, Croatia, Macedonia, and Bosnia and Herzegovina, reacting to attempts at domination by the Serbs, all declared their independence. The makeup and indeed the very existence of the FRY were a consequence of modern Serbian aggression, and for many years among its most important objectives as a nation was active support of extreme Serbian nationalist aims in the neighboring countries of Bosnia and Croatia, support that led to war and a return to the genocidal tactics of World War II in what was infamously called “ethnic cleansing” of other groups by Serbs. The Serbian-dominated government engaged in human rights violations against minorities in the FRY, especially Albanians in Kosovo, who have resisted the Serbian government since the province lost its autonomy. A guerrilla group called the Kosovo Liberation Army (KLA) formed in the mid-1990s and targeted Serbian police repeatedly in late 1997 and early 1998. Actions of Serbian forces in their crackdown on Albanians in Kosovo were so severe that they were deemed war crimes by the International Criminal Court, and the Serbian president, Slobodan Milošević, was indicted and tried in the Hague. After a peace accord was reached a United Nations peacekeeping force was stationed in Kosovo to protect returning KOSOVARs from the Serbians.

Montenegrins in the FRY distanced themselves as much as possible from the Serbs, splitting off from the Serbian Orthodox Church to form their own, and as a result of political power plays by Milošević in the federal government Montenegrins began to regard the federation as

an illegitimate institution. Negotiations between Serbia and Montenegro in 2002 led to the creation in 2003 of a much looser federation of the two republics, one that could be dissolved by referendum by either republic after three years.

Given this historical context it is hardly surprising that the only national cultural identity most of the population in the federation maintain is the Serbian historical identity, recognized by Serbs. The atrocities fomented by the Serb-dominated government put great pressure on the self-identity of many Serbs who recognize that the actions of their government have been driven by a process of national cultural identification and promotion gone badly awry. The extremity of Serbia's actions has generated international discussion in the Balkans, one that seeks means of developing, instead of a national cultural identification, a multicultural outlook that values differences among peoples instead of attempting to eliminate them by force and oppression.

Setantii

The Setantii are classified as a Celtic tribe. They lived in Britain around present-day Liverpool in northwestern England at least by the first century B.C.E. and are discussed as CELTS or BRITONS. They are considered a subgroup of the BRIGANTES.

Severians (Severyane; Severiane; Severyans; Siveryans; Siverianians)

The Severians were a tribal confederation of Eastern SLAVS, who lived between the Dnieper

River and its tributary the Desna in present-day northern Ukraine, southeastern Belarus, and eastern Russia. They were related to the ILMEN SLAVS living nearby. Sometime in the eighth or ninth century C.E. they established a principality with the capital Chernigov. In the second half of the ninth century with other Slavic peoples they were under the suzerainty of the RUS of the Kievan Rus principality, paying tribute to them and serving under their princes in military campaigns, including the attack by Oleg on the BYZANTINES of Constantinople (modern Istanbul) in 907.

Sexovii

The Sexovii are classified as a Celtic tribe. They lived in Gaul in present-day northwestern France and are discussed as CELTS or GAULS. The ROMANS referred to them along with other tribes as Armoricans, that is, tribes living between the Seine and Loire near the Atlantic Ocean in the region of Armorica (roughly present-day Brittany and eastern Normandy), occupied by forces under Julius Caesar in 55 B.C.E.

Sibusates

The Sibusates are classified as a Celtic tribe. They lived in Gaul around present-day Sobusse in southwestern France and are discussed as CELTS or GAULS. Sobusse takes its name from the tribal name. They surrendered to the ROMANS under Julius Caesar with the fall of Aquitania in 56 B.C.E.

Sicambri See SUGAMBRI.

Sicani (Sicans; Sicanians)

The Sicani, along with the ELYMI, are the oldest known inhabitants of the island of Sicily south of the Italian Peninsula. They are often confused with the SICULI, because of the similarity of their name and the lack of clear archaeological evidence distinguishing the

fifth–fourth century Sicani caught up in conflict between Greek and Carthaginian colonists on Sicily.

two. Ancient historians, however, were emphatic in classifying the two peoples separately, the Sicani living to the west and the Siculi to the east.

ORIGINS

The fifth-century B.C.E. Greek historian Thucydides wrote that the Sicani were from the east coast of Spain, and archaeological digs place their arrival in western Sicily sometime in the third millennium B.C.E. Most modern scholars associate the Sicani with the Late Bronze Age Fossa Grave culture of southern Italy, theorizing that they migrated from Italy to Sicily across the Strait of Messina.

LANGUAGE

Hardly anything is known of the Sicani language, but it is generally regarded to be from non-Indo-European.

HISTORY

About a millennium after the arrival of the Sicani on Sicily their relatives, the Siculi, also arrived from the mainland, driving the Sicani west and south (and defeating them, it is said, in a large pitched battle).

The principal Sicani centers were Hyccara, Omphake, and Camicus. Camicus was the mythical seat of King Cocalus, whose palace was legendarily constructed by the Minoan architect Daedalus.

There is ample evidence of contact between the Sicani and the MINOANS and MYCENAEANS of the eastern Mediterranean. Dated around 1500 B.C.E. Mycenaean trading posts are to be found on Sicily along with a ready supply of Mycenaean goods.

The Sicani were enemies of the early Greek settlers, who arrived in Sicily around 800 B.C.E. They were pressured by the continual establishment of Greek settlements, which ended in 580 B.C.E. The Sicani city of Hyccara was pillaged by the Athenians in 415 B.C.E. During much of the fifth century B.C.E. the Sicani were caught up in and eventually swallowed by the conflicts between GREEKS and CARTHAGINIANS for control of the island.

CULTURE

The Sicani lived in small independent towns, based on agriculture. Trade was important to their culture. Sicily and the Sicani were an important link on the trade route between Spain, with its rich supply of copper (an impor-

tant part of the manufacture of bronze), and the eastern Mediterranean.

The fact that the Sicani were active traders might have been one reason the ancients identified Spain as the origin of the Sicani.

Sicels *See* SICULI.

Sicilians (people of Sicily)

The name Sicilians refers to people living on the Italian island of Sicily, situated in the Mediterranean Sea. Ancient tribes included SICANI, SICULI, and ELYMI. GREEKS settled the island in about 800 B.C.E. CARTHAGINIANS invaded the island in the fifth and fourth centuries B.C.E. In the third century B.C.E. Sicily was conquered by the ROMANS and became the first Roman province. The VANDALS and OSTROGOTHS seized the island in the fifth century C.E., after which it was ruled by the BYZANTINES. The SARACENS (Arabs) invaded the island in the course of the ninth and 10th centuries. The NORMANS claimed the island in the 11th century, uniting it with Naples, to form the Kingdom of the Two Sicilies. Over the next centuries the island was alternately controlled by the Holy Roman Empire, France, Spain, and Austria. In 1734 Spanish Bourbons reestablished the Kingdom of the Two Sicilies. Sicily became part of the Italian kingdom in 1860 after its invasion by the Italian patriot Giuseppe Garibaldi. Sicily became an autonomous region of Italy in 1947 (*see* ITALIANS: NATIONALITY).

Siculi (Sikeloi; Sicels; Sikels)

The Siculi were the native inhabitants of the eastern regions of the island of Sicily south of the Italian Peninsula; the island takes its name from the tribe. The GREEKS encountered them when they colonized Sicily in the eighth century B.C.E. Modern archaeologists have had difficulty differentiating the Siculi from the SICANI, another group of natives the Greeks encountered. Ancient accounts assert that the Siculi and Sicani were distinct, however.

ORIGINS

Both the Siculi and Sicani are similar in physical culture to the third native population of Sicilians, the ELYMI. The physical remains of Sicilian settlements tie them to the Late Bronze Age Fossa Grave culture of the mainland of

southern Italy, which is characterized by trench graves lined with stone slabs and a certain kind of ax called the shaft-hole ax. The pottery of the Fossa Grave culture is handmade, plain, dark, and burnished with forms similar to those of the Apennine culture from which developed the Italic tribes, such as the SAMNITES.

Origin Myth

The archaeological evidence lends credence to the legendary history of the migration of the Siculi to Sicily in 1050 B.C.E., about 300 years before the arrival of the Greeks, as told by Thucydides in the fifth century B.C.E. and other Greek historians. The Siculi supposedly took their name from their ancestral king, Siculus, brother of the king Italus from whom Italy took its name. At the time the Siculi were said to live in Campania and northern Calabria but were supposedly driven south and west by ITALICS, and further pushed by Greek colonization until they crossed the Strait of Messina on rafts. Legend has it that the Siculi met the Sicani and defeated them in a large pitched battle.

LANGUAGE

Evidence of the Siculi language comes in the fifth or sixth century B.C.E. Possibly a drinking song, the incomplete inscription in the Greek alphabet from a wine vessel, as well as small fragments preserved as glosses by ancient writers show an Indo-European language—perhaps related to the Italic languages (see ITALICS)—which has yet to be deciphered.

HISTORY

By the eighth century B.C.E. the Siculi were restricted to eastern and southern Sicily, though there were isolated settlements on the Aeolian islands to the north of Sicily, notably Lipari, which was reported by the first-century B.C.E. Greek historian Diodorus Siculus to have a population of about 500 Siculi when the Greeks arrived in 580 B.C.E. The Siculi lived in completely independent towns. The main Siculi settlements were Agyrium, Centuripa, Henna, and three cities named Hybla—Hybla Major on the Symaethus River; Hybla Minor on the east coast, north of modern Syracuse; and Hybla Heraea in southern Sicily.

Greek colonization drove the Siculi into the central regions of Sicily. The battle between the Greeks and CARTHAGINIANS for control of Sicily in the fifth century B.C.E. further

squeezed the Siculi until they, along with the Sicani, had been completely absorbed.

CULTURE

The three cities called Hybla were named for one of the principal deities of the Siculi. Siculi gods were primarily of the underworld, perhaps resulting from the dependence of the Sicilians on agriculture for sustenance and from the heavy volcanic activity on the island. The divinities called Palici, protectors of agriculture and sailors, had a temple and a lake, devoted to them along the Symaethus River, as well as a temple to Hybla. Adranus, another god, a volcanic god, like the Greek Hephaestus, who had in his temple a constantly lit flame. The cult of the goddess Phersephatta, combining elements of the worship of Demeter and of Persephone, found at the Greek settlements of Syracuse, Naxos, and Selinus, was probably adopted from the Siculi and ties them to the same cults on the Italian mainland in Calabria, at Locri, Medma, and Hipponion.

Because the Siculi defeated the Sicani, legend has it, their island home bears the name Sicily instead of Sicania.

Sidicini

The Sidicini were a tribe of unknown language affiliation, living in the southern part of Latium (part of modern Lazio), a region in present-day west-central Italy. It is assumed that they were living there before the Indo-European-speaking ITALICS settled the region. Their principal city was Sidicum, and they were a farming people, who raised livestock.

In 343 B.C.E. the First Samnite War erupted over a dispute between the SAMNITES and the

Sidicini, allies of the CAMPANI. The Samnites invaded Campania and defeated the Campani near modern Capua on the Volturno River. The Campani then requested help from the ROMANS, who defeated the Samnites in 341 B.C.E.

That same year the Sidicini joined the confederation known as the Latin League in a revolt against the Romans; in addition to the Campani their partners were the AURUNCI, LATINS, and VOLSCI. The alliance collapsed by 338 B.C.E. under both Samnite and Roman pressure.

Silesians

The Silesians were a tribe of Western SLAVS, who lived along the Upper and Middle Oder River in present-day western Poland by the beginning of the ninth century C.E. As were all Western Slavs they were called WENDS by early medieval FRANKS.

Along with the POLANIANS, who gained hegemony over other area tribes in the 10th century, the Silesians are among the ancestors of the POLES. The name of the region known as Silesia in southwestern Poland and adjoining parts of the Czech Republic and Germany probably evolved from the name Silings, a subgroup of the Germanic VANDALS, who lived there centuries before; the name later was applied to the Slavs who migrated there.

The name Silesians is also applied generally to inhabitants of Silesia, the name of a duchy established as part of the kingdom of Poland in the 12th century, and the name Silesian is also applied to a West Slavic dialect still spoken in the region.

Siling Vandals See VANDALS.**Silures (Silurians)**

The Silures are classified as a Celtic tribe. They lived in Britain in present-day southern Wales and are discussed as CELTS, BRITONS, or WELSH.

Because of their shorter stature and darker and curlier hair than that of other Britons, the first-second-century Roman historian Tacitus thought that they were descended from peoples of the Iberian Peninsula. Modern scholars now believe that there was movement of peoples and cultural practices as well as trade along the Atlantic seaways from Iberia to Brittany, Cornwall, and Wales and back again. The position of the Silurian territory along the Severn estuary makes such contacts feasible, although the Silurians seem not to have engaged in trade

on a large scale. But their pastoral way of life was in many ways similar to that of the CELTIBERIANS.

The Silures offered resistance to the ROMANS for years, for a time allied with the CATUVELLAUNI under Caractacus (Caradoc) and the ORDOVICES, but were subdued during the governorship of Sextus Julius Frontinus in the mid-70s C.E. Venta Silurum on the site of present-day Caerwent became a *civitas* capital during the Roman occupation until 410 C.E.

Silvanecti (Silvanectes)

The Silvanecti are classified as a Celtic tribe. They lived in Gaul around present-day Senlis in northwestern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Siol Gangain See GANGANI.**Siraces**

The Siraces were an Iranian-speaking tribe among those classified as SARMATIANS. They lived along the Kuban River and on the steppes to the northeast of the Black Sea and northwest of the Caucasus Mountains in present-day southwestern Russia by the first century C.E. The Greek geographer Strabo of the first centuries B.C.E. and C.E. recorded that in about 65 B.C.E. they had 20,000 horsemen serving under King Abeacus, a much smaller cavalry than that of the AORSI, fellow Sarmatians living to their north.

Skalvians (Scalovians)

The Skalvians were one of the tribal entities to evolve out of the ancient BALTS, Baltic-speaking peoples living in north-central Europe, by the ninth century C.E. Like the NADRUVIANS living to their south, they are thought to have been linguistically related to the BORUSSIANS, but it is possible that their dialects were closer to those of the LITHUANIANS, who bordered their territory on the east. The Skalvian homeland stretched inland from the Baltic Sea on both sides of the Neman River in present-day western Lithuania and the northern part of the enclave of Russian territory around Kaliningrad.

The territory of the Skalvians and that of the Nadrivians lay between lands seized by Germanic military and religious orders, the Livonian Knights of the Sword in the north and the Teutonic Knights to their south. In 1274 the united orders occupied this region. Along with other Baltic peoples of the region the Skalvians were ancestral to inhabitants of the modern nations of Lithuania and Russia (see LITHUANIANS: NATIONALITY; RUSSIANS: NATIONALITY).

Slavs (Slays; Slaves; Sclavi; Sklavoi; Sclaci; Slaveni; Slovani; Slovonici; Sclaveni; Sclavini; Sclavenoi; Sclavenes; Sclavesians; Sklaveni; Sklavini; Sklavenoii; Sklavenes; Sklabenoi; Sthlaboi; Sporoii; Esklabinoii; Antes; Venedi; Vinadi; Vinades; Wends; Welatabians; Slavic peoples)

The name Slavs applies to all those European peoples speaking the Slavic language throughout history, known by a variety of names. There

were many ancient tribal groups, some among whom have endured to modern times, maintaining an ethnic identity despite extensive intermingling among fellow Slavs and among other groups as well. Like the CELTS and GERMANICS before them the Slavs spread through a vast portion of Europe.

ORIGINS

Perhaps for no other of the major peoples of Europe has the process of identifying how and

Slavs time line	
C.E.	
late fifth century	Slavs possibly living on eastern flank of Carpathian Mountains along Dniester, Prut, Seret, and Southern Bug Rivers.
520–550s	Slavs from north bank of Lower Danube raid south in Byzantine territory as reported in first historical mention of Slavs.
531	Byzantine commander Chilbudius halts raids and invades across Danube homelands; Chilbudius is killed.
545	Lombard prince Ildigis leads Slavs and Gepids across Middle Danube.
547–549	Large Slavic forces raid Illyria and Thrace, taking town of Topir near Constantinople, massacring 15,000, and taking thousands of slaves.
559–561	Avars settle along north bank of Danube, subjugating Slavs.
599 and 600	Byzantine forces defeat Slavic armies.
590–602	Byzantines drive Avars and Slavs from Balkans and crush Avars.
late sixth century	Slavs, possibly from Ukraine or Danube region, have reached Moravia, Bohemia, and Poland.
late sixth–seventh century	Avars and Slavs engage in large-scale raids in Balkans, attacking rich coastal towns on Adriatic, Aegean, and Black Seas; Slavs begin settlements in Balkans; second phase of Slavic expansion in Ukraine and northern areas (Poland, Czechoslovakia, eastern Germany).
seventh century	Avars and Slavs return to Balkans and northern Greece; Byzantines abandon Balkans to Slavs; Bulgars arrive in Lower Danube region and conquer Slavs there.
623	Frankish merchant named Samo leads Slavs in successful revolt against Avars on Middle Danube; he creates kingdom that lasts until 658.
680	Bulgars overrun Slavic territories in Balkans, subduing tribe of Seven Clans and Sieverzane.
seventh–eighth century	Byzantines subjugate Slavic tribes in eastern Balkans.
793–796	Avars crushed by Carolingian Frank-Bulgarian alliance, giving Bulgarians control over large areas of Transylvania and part of Carpathian basin.
eighth–ninth century	Carolingians launch campaigns against Slavs in modern-day eastern Germany.
ninth century	Moravian state founded; Moravians subjugate Bohemians.
876–879	Croatian state formed.
906	Magyars overrun Moravia.
10th century	Bohemian state rises to power, and Polish and Kievan Rus states founded.
933	First Serbian state founded, annexed by Byzantines.
972	First Bulgarian Khanate destroyed by Byzantines.
11th century	Slavic state of Doclea in region of present-day Montenegro, southern Bosnia, and Herzegovina gains independence; Polabian state formed in eastern Germany.
12th century	Serbs gain independence from Byzantines; Polabian state conquered by Saxony.
1102	Croatian state conquered by Hungary.
13th century	Precursor to modern Bulgarian state emerges.

when they emerged as a distinct ethnicity been more shrouded in uncertainty and controversy than for the Slavs. Slavic identity is importantly based on linguistic ties; the first Slavs emerged in part as a communication communi-

ty all speaking the same language, a fact stressed by one of the models for the meaning of the Slavs' name, that it derived from the word *slovo*, meaning "word" or "speech"—that is, that the Slovani, in contrast to their neigh-

bors, the Germanics, whom they called Nemcy (the dumb, mute), were the people of the word or of commonly intelligible speech. (Another theory maintains that Slavic is derived from *Slava* for honor or glory.) But a common language is not enough to establish a common ethnic identity, especially in the ancient world in which the Slavs emerged. It was common for ancient peoples, especially those living in border regions with many ethnicities, to speak a number of tongues. In the Western Roman Empire (see ROMANS) most people spoke Latin in addition to their native tongue. Slavs who migrated into the Balkans during the sixth century and later probably spoke Greek as well as Slavic, and possibly the language of the AVARS. Other elements than language are needed to knit a group together in an ethnic entity.

Modern concepts of what is meant by an “ethnic group” have evolved as a result of archaeological and ethnographic study. The latter widened the term beyond the meaning it was given early in the 20th century as being based on types or assemblages of archaeological material, conceived of as “cultures.” The concept of “communication communities” enlarged but did not replace the archaeological culture model, because material culture is, of course, another kind of communication between people and a potent means of self-identification, of belonging to a specific group. Additional components of what goes to create an ethnic group in current thinking include a collective name, a common myth of descent, a shared history, an association with a specific territory, and a sense of solidarity. Among tribal societies such as that of the Slavs the sense of solidarity and the myth of common descent were often provided by the tribal leaders and their dynasties, who in a sense formed the core family or clan linked (more in a mythic than an actual genealogical sense) to all the other clans in the tribe. The thrust of current thinking about ethnicity is that it is created rather than inborn, more a cultural construct than something inherited or “in the blood.”

It is obvious that none of these components can be seen directly in the archaeological record, but only, very tentatively, inferred. The realities behind what are used as “markers” for given ethnic groups—such as Early Slavic pottery or Lombard fibulae—were probably far more complex and are very uncertainly known. A piece of broken pottery tells us, by itself, absolutely nothing about its user’s language, for example. It has to be said that many scholars of the early Slavs (especially Polish and

Ukrainian ones) have seriously overinterpreted the available evidence and even indulged in wishful thinking on occasion.

This is certainly the case for claims that the origins of the Slavs can be seen in cultures of the distant past, for example, the so-called Pit Grave or Kurgan culture of the fifth millennium B.C.E. Questionable also is the claim that by about 2,000 B.C.E. the Slavs occupied the whole basin of the Vistula and most of the Oder, in addition to their eastern settlements between the Pripet Marshes and the Black Sea. Beyond the fact that the uncertainties noted in postulating the existence of an ethnic group from material remains alone are multiplied many times over when studying people so far distant in the past, it is nearly certain that the common ancestor of modern Slavic languages, which constitute such an important part of the Slavic identity, emerged thousands of years later, in the middle of the first millennium C.E. This proto-Slavic may well have emerged from precursors bearing a resemblance to modern Slavic languages, but these too must have been of relatively recent date and can have had only the most distant of relations to languages spoken by people several millennia earlier, according to the rate of language change over time known to linguists. Since the makers of the Pit Grave culture must have spoken a language (or languages) with only the remotest resemblance to proto-Slavic, it is hard to see that they or any other people of their time can be claimed as being “Slavs.” (It is not even certain that they spoke an Indo-European language.)

Such misconceptions are fueled by the assumption that people today assume and think of their own ethnicity in the same way peoples in the distant past did. Citizens of modern nation-states are assigned their ethnicity from birth and are “socialized” to think of themselves as a nationality. The process of group identification in tribal societies was far different and more fluid, particularly in the case of the mobile warrior societies that dominated central and eastern Europe after the Neolithic Age. Warriors with their families could choose to belong to a tribe or decide to leave it for another—a decision often based on the success of a tribe or group of tribes in waging war and obtaining plunder, and in providing security for lands and herds. In the tumultuous period when the historically known Slavs first appeared tribes had become less important than large multiethnic confederacies open to any warrior bands who wished to join them. Furthermore central and eastern Europe, on the edge of the great central steppe lands

crossed for ages by tribes of mobile warriors and nomads from the time of the Pit Grave culture and before, were a meeting place of peoples from all over a vast region. For this reason the idea that groups there, living in periods some 4,000 years apart from one another, had any beyond the faintest of links is highly improbable.

Part of the problem in identifying the first Slavs lies in the great simplicity of their material remains. Their pottery especially is so plain and simple in shape that it provides few easily read distinguishing characteristics. The earliest claimed Slavic pottery, called the Korchak type, is actually quite similar to pottery made earlier over a wide region of central and eastern Europe, in places where there is no reason to believe Slavs lived at the time. This has made finding an original homeland of the Slavs an extremely difficult and contentious issue. Tracking the emergence and development of Slavic culture by using pottery has by necessity been an esoteric pursuit carried out by specialists. And here nationalist agendas, endemic among Slavs of different countries for centuries because of their long and troubled histories, can find a foothold. For it is all too easy for claimed affinities between different pottery assemblages found in different areas to be “in the eye of the beholder”—a scholar with the agenda to claim his country as the original homeland of the Slavs, for example, may see his pottery assemblage as more closely related to Korchak pottery than that from another country. Problems of dating also have plagued archaeological studies of Slavic material.

The archaeological remains of the earliest Slavs have been identified by excavating areas where the earliest of written sources place them—along the Danube in the sixth century C.E. and somewhat later in the Balkans. There is linguistic evidence that early Slavs may have lived in Moravia (modern Slovakia) and Bohemia (the modern Czech Republic), Ukraine, and other areas, and these places have been excavated as well. The material found in all of these regions shows enough similarity to assume, tentatively, that the Slavs at this time had “crystallized” into a group with a consciously shared ethnicity based on language, a common material culture, and possibly a shared ideology and religion. Before this period the existence of a distinctively Slavic ethnic group becomes a matter of increasingly tentative speculation.

The crystallization of Slavic identity may have taken place in the context of the conquest of the GOTHs, a German-led multiethnic confederacy north of the Lower Danube and the Black

Sea, and by the HUNS, a Turkic steppe people, in the fifth century. It is thought that part of the process of forging a Slavic identity involved the Huns. The latter's disruption of the previous Gothic power structure may have opened opportunities for the first Slavs; some among them very probably joined the Hunnic forces, learning from them how to fight on horseback and thus becoming formidable and mobile warriors. Slavs may first have entered the Middle Danube region to the west, where they later lived, as part of the Hunnic hordes. The Huns' example may have served the Slavs well as they began in the sixth century to spread quickly over a wide area of eastern and central Europe into most of the countries where Slavic peoples live today.

This expansion was probably not a wholesale migration, because there is little evidence of depopulation in the areas inhabited by the earliest Slavs, nor of a reason why large groups would travel to lands far distant to settle. More likely, small bands of young Slavic warriors made such journeys into lands formerly held by Germanic elites, such as the VANDALS and LOMBARDS, who had departed to take advantage of the crumbling of Roman power in the south and west. These Slavic warriors may have been followed by small farming groups who were taking advantage of lands vacated by migrating Germanics and others.

LANGUAGE

All modern Slavic languages are thought to have diverged from a common language no longer in existence (and thus called proto-Slavic). Features of this hypothetical language have been reconstructed by comparing modern Slavic languages, but attempts through linguistic study to discover where and when proto-Slavic was first spoken have not yielded a theoretical consensus. Various places of origin proposed center on the general area between the Danube delta and the Pripet Swamp and from the Oder River in the west to the Dniester in the east. The fact that the different modern Slavic languages, even those geographically distant from one another, are similar enough that their speakers today can roughly understand one another strongly suggests that they diverged from proto-Slavic in the recent past, probably not long after the earliest evidence for the emergence of Slavic ethnicity around the late fifth and early sixth centuries C.E., when archaeological evidence of these early Slavs appears in the different regions of Slavdom.

There are three basic groups of Slavic languages. East Slavic languages are Ukrainian

and Belarusian, and Russian. South Slavic languages include Bulgarian, Serbo-Croatian (with separate Serbian and Croatian dialects), Macedonian, and Slovenian, Bosnian, and Montenegrin, also of the Serbo-Croatian group, have recently been cited by their national groups to be separate languages. West Slavic languages include Polish, Kashubian, Sorbian, Czech, and Slovak. Old Church Slavic (Slavonic) is an archaic form of the South Slavic language that was spoken in Bulgaria and Moravia; it was adopted in Bulgaria for use in Christian liturgy in the ninth century and is still used in the ritual of the Eastern Orthodox Church. Polabian is a Slavic language, now extinct, that was spoken in the region around the Elbe River east to the Oder. It is probable that there were other Slavic tongues, which have disappeared, especially in the isolated valleys of the Balkans.

HISTORY

First Phase of Expansion:

The Problem of a Slavic Homeland

Problems of dating the earliest Slavic archaeological finds have made it extremely difficult to identify a single homeland from which the Slavs expanded into the territories where they later dominated. Slavic material dating from the sixth century has been found, as noted, in Russia, Ukraine, Poland, and elsewhere.

By using early manifestations of pottery of the Slavic Korchak culture, named for a region in Ukraine where it was first identified, and of the small, sunken-floored dwellings that are typical of Slavs, four important movements of early Slavs have been identified: first, along the east flank of the Carpathian Mountains toward the Danube plain and the Balkans; second, along the north flank of the western Carpathians through southern Poland; third, along the southern flank of the western Carpathians toward the Middle Danube and the Elbe; and fourth, eastward in Ukraine. These movements, perhaps emanating from two separate centers, one in Ukraine and the other along the Danube, or possibly all from Ukraine, are too little understood to resolve fully the question of the original Slavic homeland.

Danube Plain and the Balkans

The appearance of Korchak pottery of the late fifth and early sixth centuries near the Lower Danube and the Balkans may have resulted from the crystallization there of a Slavic cultural identity possibly by a process such as that outlined previously. It could also have been carried there by peoples who were taking advantage of the depopulation of this region

north and south of the northern Roman imperial frontier. If this happened, the most natural route would have been from the western Ukraine along the arc of a forest steppe beside the eastern and southern Carpathians, through Moldova and Romania, open country making for ease of movement. This scenario would furnish a strong argument for Ukraine as the homeland of the Slavs, because the other known Slavic movements consist of an expansion from the Lower Danube upriver, an expansion into Poland that could have originated in either the Danube region or Ukraine, and an expansion from the western Ukraine eastward. On the other hand, if the dating of Slavic sites along the Danube to the late fifth century is correct, they would predate Ukrainian Korchak pottery by more than half a century.

It is the Slavs along the Danube border with the Roman Empire who first appear in records written by the BYZANTINES of the Eastern Roman Empire, referring to raids by a people they called SCLAVENI, who were also joined by another group called ANTES. The sixth-century Roman writer Procopius says that the Antes were once a single people called Sporoi, a word that is close to a proto-Slavic word meaning "multitude." He describes their raiding in the 550s, which they had begun in the 520s. Thus the Slavs who had arrived in the previous century may have been peasant communities rather than war bands, and indeed this accords with the character of their material culture. Several Germanic groups, probably including the Lombards, GEPIDS, and HERULI, remained in the area at this time. The Slavs settled away from these groups but met and mingled with the complex mix of other peoples in the area, natives of the region, people attracted by the lucrative Roman trade, and others introduced there as part of the multiethnic confederacies that had long impinged on this area so close to the Roman border. When the Slavs later began to raid Roman territory, it is thought that they probably took enough slaves with them back over the Danube to make a significant contribution to the population there. These and all but the Germanic groups soon adopted the Slavic Korchak pottery and house types, indicating that the Slavs were the most dominant non-Germanic group in the region.

Along the North Flank of the Carpathians into Poland

A variant of Korchak-type pottery is thought to represent the Slavs who moved along the Carpathians into Poland. When it was first

made is unclear, but its later phase has been dated to the turn of the sixth and seventh centuries. Dates have been claimed for earlier such pottery found in Moravia as early as the late fifth century, but the most reliable dating is for the middle or later sixth century. Procopius, describing the migration of the Germanic Heruli north to Scandinavia in 512, writes that they passed through territory of the Sclaveni, but his account is ambiguous as to where this was. The Olsztyn culture (named for a region in northern Poland) shows substantial signs of change that began just before the middle of the sixth century and lasted for about a hundred years, its cemeteries containing what appear to be Slavic fibulae from the Lower Danube delta, and at least one site containing possibly Slavic pottery. The Olsztyn culture from this period seems to be a mixed one, with both Germanic and Slavic elements. The change in this culture may document the arrival of the Slavs, but whether from the Danube region, where the earliest historical accounts document the presence of Slavs, or from the western Ukraine, which is closer to Poland, is uncertain (although the Danubian Slavic fibulae suggest that they originated there).

Most signs of Germanic culture had disappeared from Poland by the early sixth century, but BALTS continued to live in the northeast.

Expansion Eastward in Ukraine

Korchak pottery first appears at its type site in Ukraine around the middle of the sixth century. By the end of the century Korchak pottery makers seem to have expanded over large areas of the western Ukraine to the Dnieper in the east. Villages were built on terraces just above river floodplains, consisting of five to 10 huts. These were built in the Slavic style—of timber, square with sunken floors and a stone-built oven in one corner. Their dead were buried in small cremation cemeteries, some in urns and some not. On the basis of a text by Jordanes, a sixth-century historian of the Goths, some Russian scholars believe these to have been the Antes, whom Jordanes places from the Dniester to the Dnieper, but also near the Black Sea, a region that is steppe land different from the forest steppe and deciduous forest regions to the north where the makers of Korchak pottery lived. This region was probably a route frequented by warlike steppe nomads, therefore a dangerous area for settlers. Jordanes's account of the Slavs is considered suspect because of his uncertain geography, which in some instances is nonsensical.

Early Slavic Expansion

The timing of this initial phase of Slavic expansion is highly uncertain; it could have taken as little as 50 years or more than twice as long. In either case the expansion was remarkably rapid, whether accomplished by a large movement of people or by influences exerted by Slavic warriors on the natives in the new lands. Written sources suggest that the latter was accomplished, at least in part, by the Slavs' practice of allowing prisoners taken in war to join their ranks and become Slavs. However it was achieved, by about the middle of the sixth century Slavic culture was established in an area several thousand kilometers in extent, with a population density estimated at several people per square kilometer.

Procopius writes that the Antes began raiding Byzantine territory in the reign of Justin I (518–527), when they were decisively defeated. When Justinian I ascended to power in 527 he turned much of his attention to regaining the territory of the Western Roman Empire. The Slavs' many raids in the 530s may have benefited from undermanning of the empire's frontier along the Danube as a result of Justinian's campaigns in the west. Procopius mentions that the Slavs and Antes were joined in these raids by Huns. In 531 the commander Chilbudius halted the raids and carried the war into the raiders' homelands, so that the Slavs and Antes assembled in massed armies. A large Sclaveni army met Chilbudius, who was killed in the melee.

The Sclaveni and Antes were not firm allies and sometimes even fought one another. The Byzantines probably exploited this friction to divide and conquer the raiders by enlisting the Antes as *foederati* (federates), or allies. This possibility is suggested by the fact that in the middle of the sixth century after their war with the Sclaveni had been resolved Justinian offered the Antes an abandoned fort and surrounding lands on the northern bank of the Danube, and a large sum of money to protect that part of the frontier, ostensibly against the Huns, but possibly against their brother Slavs, the Sclaveni. The Antes accepted the offer; 300 of them even joined in a war against the OSTROGOTHS, formerly part of the Gothic confederacy that had taken Italy.

Justinian took steps to strengthen the Danube border against the Slavs, restoring many forts and building new ones; he also seems to have brought all trade across the border to a halt, judging by the lack of coins of his reign in the territories beyond the Danube. The large imperial armies were unsuccessful against the small mobile war bands of the Slavs, and

the Byzantines' countermeasures only encouraged the Slavs to become more organized.

In about 545 the Lombard prince Ildigis led a group of Slav and Gepid warriors across the Middle Danube possibly from southwest Slovakia or northeastern Austria. Procopius describes a Slavic army as large as 3,000 men raiding Illyria in 547–548; a Byzantine army of 15,000 in the area failed to engage with them, for unknown reasons. The Slavs raided Illyria again the next year and moved into Thrace as well. Their incursions placed them close to Byzantium itself when they took the fortified town of Topir nearby. Procopius writes that they massacred most of the men, some 15,000, leaving the area covered with unburied corpses, and took all women and children into slavery. According to Procopius their methods of killing were brutal (at least by modern standards, perhaps less so by theirs), including impaling the enemy through the anus on sharp stakes, beating them, and burning them alive. There seems little reason to doubt that Procopius's account had at least some grounding in fact. The fruits of these raids for the Slavs included huge numbers of slaves, cattle, and sheep—too many of the latter to take away with them so that some were shut up in huts with their masters and burned to death. Numbers of the slaves taken north across the Danube were later ransomed and allowed to return home; some of these chose to stay and were accepted into Slavic society.

The Slavs were not always successful, and a raiding party on Thessalonica on the Greek Peninsula in 550 called off their attempt when they heard of the proximity of an imperial army led by Germanus. The Byzantines are known to have defeated Slavic forces in 599 and 600, according to letters of congratulation from Pope Gregory I.

There was an apparent cessation in raiding from the 550s to the 570s; then at least in part under the influence of the Avars, nomads out of Mongolia, raiding began again, now deep into the Balkans. The Avars had arrived and settled on the north bank of the Danube in 559–561, absorbing the Slavs as subject allies into their probably multiethnic confederacy made up of peoples the Avars had swept into their train as they moved across central Eurasia. They stopped for a time on the Pontic steppe, before continuing westward. Slavs from the east probably also accompanied the Avars.

The Byzantines again attempted their divide-and-conquer tactic, paying the Avars large amounts of gold to fight the Slavs and to desist from attacking Byzantium; the Avars were

allowed to settle in Pannonia. Accordingly the Avars attacked Slavs living along the Lower Danube and an intense struggle ensued. Meanwhile in 578 after Avar forces were ferried across the Danube they began making incursions onto Byzantine lands ostensibly for the purpose of furthering their war against the Slavs. These led to a series of raids deep into Byzantine Greece, attacking rich coastal towns on the Adriatic, Aegean, and Black Seas. Slavs later followed in the wake of the Avar raids, which made their penetration easier, raiding in their turn and then settling lands depopulated by war and by an outbreak of bubonic plague that had decimated the population in the 540s. In addition Justinian's legislation and fortification program seems to have destroyed the peasant economy of the Balkans. By the early seventh century the Avars had established a powerful hegemony in central Europe, from the eastern Carpathians to the eastern Alps. The Slavs participated in this by way of tribute and service provided to their Avar overlords, but some of them also in time became members of the Avar warrior elite. In this their earlier experience with the Huns may have helped them; at least some among the Slavs probably became masters of steppe-style warfare.

In all probability it was at first as part of the Avar order that the Slavs eventually spread their culture throughout the Balkans. From the end of the sixth century to the middle of the seventh a large-scale Slavic settlement of the Balkans occurred. These Slavs made no attempt to use abandoned Roman forts, suggesting that they were peasant farmers rather than warriors. But even while this peaceful migration occurred, Slavic warriors continued to conduct destructive raids on Byzantine cities at will, taking plunder.

It is unclear to what extent Slavs settled in Greece in these centuries; there is little archaeological evidence of them there at this time or in the southern Balkans. Few of the typical Slavic sunken-floored huts, pottery types, and burials have been found. Written sources claim that Slavs displaced Greeks in the western Peloponnese, sending them fleeing to Sicily; the region around Thessalonica became known as Macedonian Sclavinia. There is strong linguistic evidence for their presence at least by the seventh century in the number of Slavic place-names in the southern Balkans. It may be that at this time Slavs in Greece and the southern Balkans had abandoned their simple material culture, a strong likelihood if the accounts of their becoming rich through raiding are true.

The former province of Dalmatia (in modern Croatia), where Slavs began raiding in about

550, had been the last surviving Western Roman province and was currently part of the Eastern Empire. By the time of the arrival of the Slavs a significant number of the Romanized but multi-ethnic population had remained there. Over time as rapprochement between the Slavs and the Dalmatians took place the latter's culture had a strong effect on the Slavs, perhaps greater than in any other Slavic territory, and was important in the development of Moravian culture. Slavs and Avars increasingly penetrated this area after the fall of Sirmium gave them access to the western Balkans, from the 570s to the 590s destroying towns and settlements all the way to the coast.

The Byzantines concluded a peace treaty in 590 with their great enemy, the Persians, which allowed them to divert a large part of their military resources from the east to their northern border. There they began a full-scale war on the Sclaveni and Avars, aided by their allies, the Antes, who had been attacking Slavene settlements since the 580s. The Byzantines mounted a massive invasion across the Danube, defeating the Avars and killing the Avar khan's four sons along with possibly as many as 30,000 Avar warriors. After the emperor Maurice Tiberius was assassinated in 602 in a military revolt provoked by the hardships of the war against the Avars, under his weak successor Phocas internal strife prevented the Byzantines from maintaining pressure on the Avars. They in turn recovered and attacked the Antes, who may have been destroyed or driven them from the region, for they are never mentioned in written sources again.

Byzantine disorder allowed the Avars and Slavs again to raid deep into the Balkans and Greece, concentrating on Dalmatia. In the period from 612 to 614 Slavs attacked Salona, the capital of Dalmatia, and its populace sought shelter inside Diocletian's walled palace at Split. They then turned to Thessalonica on the east coast, using siege machines, an indication of the increasing sophistication of the Avar and Slav fighting forces. The chronicler Isidore of Seville in Visigothic Spain writes that in the fifth year of the rule of the emperor Heraclius (615) the "Slavs took Greece from the Romans." During this period Slavs settled in abandoned countryside in the Balkans, where there is evidence of extensive soil erosion at this time (the thick deposition of soil in rivers that occurred is called the Younger Fill), which could have been caused by overgrazing or climate change and probably contributed to the collapse of the Byzantine economy in the 650s, when use of coins was abandoned for barter.

The weakening of the Byzantine military through lack of funds caused Heraclius to roll back the northern frontier and withdraw all troops from the Balkans, making a virtue of necessity and opening up the area to Slavic settlement, which continued to be sparse, in part because of the degradation of farmlands through the great erosion event of the Younger Fill.

Slavs were part of the siege of Constantinople (modern Istanbul) by combined Avar and Persian forces in 626, serving mainly as infantry but also manning dugout boats to ferry Persians across the Bosphorus to the western side. The Byzantines were able to sink many of these and many Slavs drowned; this reverse caused most of the Slavs to leave the battle, which turned into a disaster for the Avars and Persians. The defeat and the Slavic loss of life seem to have caused a crisis of confidence among Slavs concerning the Avars, whose influence on the Slavs declined for several decades.

Slavic settlement of the Balkans continued throughout the seventh century, in Macedonia; near Thessalonica, Dalmatia, northern Thrace; and elsewhere until large areas were in Slavic hands. Local groups began to organize into tribes during this period, as their settlements stabilized. The former province of Lower Moesia along the Danube, which was probably one of the earliest areas settled, became known to the Byzantines as Sclavenia. Tribes here known from Byzantine sources include one called the Seven Clans; another was called the Sieverzane. A large number of tribes emerged in Macedonia in the region of Thessalonica (which remained in Byzantine hands). The mountainous interior of the Balkans seems to have been avoided by Slavic settlers—as few tribal names here are known. Only a few clearly Slavic archaeological sites in the Balkans in general have been found from this period, but several of those found were fairly large, comprising as many as 60 and more than 100 of the typical Slavic huts; these settlements had no defensive walls. They were not towns, however, and Byzantine towns and forts were mostly abandoned. Excavation of these has yielded coin and silverware hoards and destruction layers dating to the time of the Slavic raids.

Contrary to Isidore's comment, important areas of Greece remained in Byzantine hands, particularly coastal areas near ports, as well as areas of the southeastern Balkans. Athens and the surrounding regions of Attica and Boeotia were still controlled by Greeks, and Athens remained a cultural center where scholarship and education thrived. The Byzantine theme

(administrative region) of Hellas, which included Athens and surroundings, was established by the end of the seventh century. The region of Thrace surrounding Constantinople also continued under Byzantine control.

Gradually the Byzantines imposed their control on Slavs in the eastern Balkans, partly driven by the impoverished empire's need for revenue. Tribes here were subjugated by the emperors Constans II in 656–657 and Justinian II, who consolidated control in campaigns in 688–695 and 705–711. A Thracian theme was created in 680–687, and Slavs there were obliged to pay tribute and supply military aid, including grain. Slavs in Macedonia and Greece were more resistant against expeditions sent against them in 656 and 686. Numerous Slavs were taken prisoner in these campaigns; some of these were recruited into the Byzantine army; others were resettled in Bithynia in Asia Minor. The subjugated Slavs revolted repeatedly. In areas where Slavic tribes remained independent, some developed new, more organized political institutions, probably to mount more effective resistance to any Byzantine attempts to subjugate them. As in the case of Germanic tribes near the Roman borders in the first centuries C.E. Slavs soon became influenced by Byzantine civilization and its governmental and military system, whether they were part of the empire or not.

In the western Balkans Slavs expanded up the valleys of the Drava, Sava, and Mura Rivers into the flanks of the eastern Alps and had settled large areas of Dalmatia, including coastal regions and islands, by 642. Slavs ransomed prisoners and religious relics to Pope John IV around this time. As elsewhere archaeological remains of the Slavs from the seventh century here are sparse. Those in the eastern Alps apparently joined with indigenous populations, including Germanics, to develop the Carinthian culture of the seventh and eighth centuries, which has Germanic elements as well as elements rooted in the culture of late antiquity (see CARANTANIANS).

According to a mid-10th-century account by a Byzantine writer, Constantine Porphyrogenitus (the emperor Constantine VII), one of whose informants lived in Dalmatia, CROATS and SERBS settled in the eastern Alps in the reign of Heraclius in the first half of the seventh century. This would antedate any known Slavic archaeological remains in the Balkans; yet, given the scarcity of any signs at all of the Slavs there in this century, this early settlement by Croats and Serbs is not impossible. Yet some of the material in this text has features that make it appear more

a legend than a straightforward account, with elements characteristic of Slavic folktales, and there are duplications suggesting that it was simply a compilation of earlier material—different versions of the same story, as in many medieval annals and histories, which often are collections of oral traditions—with no attempt at verification. Along with factual errors and other problems, this makes it difficult to assess how far Porphyrogenitus's account can be trusted.

Slavic Expansion beyond the Balkans

In the latter sixth and seventh centuries Slavic societies elsewhere continued to expand their territory and to consolidate settlement in lands already occupied; their social organization also stabilized. Some archaeologists identify a “second wave” of Slavic migration to the area north of the Danube, possibly from Ukraine, in the middle of the sixth century; these settlements have much less material from other cultures and are more “purely” Slavic. The new territories elsewhere were mostly located in the forest zone of central and eastern Europe, marking a break in the former Slavic concentration on forest steppe lands. In spite of the new ecology the Slavs confronted, which probably necessitated new methods of subsistence, Slavic material culture remained remarkably uniform over its whole extent.

A puzzle in this uniformity is the question of why the huge quantities of plunder that the Danubian Slavs took in the raids on Byzantine territory seem to have made so little impression on Slavic culture until the mid-seventh century. Where did all of the gold and silver go? Where are the great stores of weapons taken from Byzantine cities? Why indeed are iron weapons not found in Korchak sites? And again, if theirs was a deliberately simple culture in terms of material goods as some scholars have suggested, why did they raid at all? Even though only the Danubian Slavs took part in raids, it would seem likely that given that people over a wide area seem to have become part of a pan-Slavic culture, some of this loot would circulate through the Slavic lands, to Ukraine, Poland, and elsewhere. This is one of the many mysteries that shroud early Slavic history, which may in time be elucidated with more archaeological finds and the secure dating provided by the recently developed science of dendrochronology (tree-ring dating).

Slavic sites found in the Middle Danube in southwestern Slovakia and northeastern Austria may date from the mid-sixth century, because an incursion by Slavs and Gepids into

Byzantine territory noted by Procopius, which took place in about 545, seems to have originated here.

In Ukraine the second wave of Slavic expansion involved the Penkova culture, named for a site near the village of Penkova. Penkova sites occur in a zone distinct from that of the Korchak culture, located to the southeast over a wide area from the edge of the Pripet Marshes across the Dnieper into eastern Ukraine. Some Penkova huts had hearths free-standing rather than in one corner, and the pottery is more varied in form and sometimes decorated with pinched rims to give a frilled effect. The general impression given by Penkova pottery—to the nonspecialist, however—is that it is nearly identical to Korchak pottery. Abandoned iron tools have been found in Penkova contexts, in contrast to Korchak sites, and some decorative metalwork.

Further expansion in Poland beyond the rich farmlands in the southeast during this time was limited, mostly following the major river valleys, and the culture remained largely unchanged here. Material from the latter sixth century in southern Slovakia, Moravia, and Bohemia is very similar to that from contemporary Poland to the north, and the Czech and Slovak languages in their early stages were similar to South Slavic languages, making the origin of the Slavic groups here uncertain. Material in Bohemia has been called the Prague Culture, although it is very similar to that found in Ukraine and elsewhere.

Prague-type pottery from the latter seventh century (dated by dendrochronology to the 660s) is found in former Germanic areas near the Elbe, Saale, and Havel Rivers, in the later territory of a tribe called the SORBS (whose language has survived to the present). Slavs here moved into areas formerly settled by Germanic peoples that were reverting to forest. In the northern part, north of Brandenburg in Mecklenburg and Pomerania, where until the 19th century a now extinct Slavic language called Polabian was spoken, a distinct culture, named for the town of Sukow in Mecklenburg and Dziejzice in Pomerania, has been identified. The Sukow-Dziejzice culture differed from that of most Slavs in having ground-level rather than sunken-floored dwellings and almost no cemeteries, and their pottery is more varied. The Sukow-Dziejzice culture also occurs over much of northwestern and western Poland. This distinct tradition may have resulted from assimilation of native Germanic peoples with incoming Slavs.

Arrival of the Bulgars in the Danube Region

In the seventh century the Slavs in the Danube frontier region were under the control of the BULGARS, a Turkic-speaking people who had emerged as a power in the steppe region near the Sea of Azov; their coalition may have included Hunnic remnants, Avars, and possibly ALANS. The breakup of a powerful confederacy of Bulgars on the Don and Caucasus steppe (sometimes called the Khanate of Great Bulgaria) caused one group of Bulgar horsemen to ride westward, they reached the eastern fringes of Avar territory on the north bank of the Danube, where they established hegemony over the Slavs.

These Danubian Bulgars, led by Khan Asparukh, began attacking the Byzantine frontier and imperial territory in Thrace. In 680 they overran the former Lower Moesia, now the largely Slav-settled “Sclavenia,” subduing the Seven Clans and the Sieverzane. Emperor Constantine IV (Pogonatus) could do no more than cede the Bulgars this territory, although the Bulgars agreed to pay tribute.

Continuing Slavic Expansion

A third phase of Slavic expansion was marked by relative stability in Slavic territories, and by a slow development away from the simple egalitarianism of the past, as Slavs began to accept non-Slavic influences, especially from the Byzantines, the Lombards in Italy, and the Avars. The pace of this change increased greatly in the mid-seventh century, as new pottery types developed, made more regular in form apparently through the use of a kind of turntable (not a potter’s wheel), and the use of mounds to cover burials was adopted.

Developments North of the Carpathians

In the Polish region north of the Carpathians significant changes in material culture, from the mid-seventh century, seem to signal a departure from the simple Slavic culture of the past. In southern Poland more accomplished pottery was made, finished on what is called a “slow wheel” that allowed for a more regular shape. Pottery was decorated and made in a greater variety of shapes; influences from south of the Carpathians are apparent. Dwellings continued to be of the familiar sunken-floor type, but burials of cremated remains now were commonly covered with earthen barrows and placed in small cemeteries, possibly for clan or family members. Such burials, memorials to the dead that would have been visible in the landscape, may signal a deeper connection

with place than the mobile Slavs had ever had. In eastern Poland hilltop strongholds (albeit with relatively weak defenses) were first built in the early seventh century. Rich ornamental metalwork has been found in these strongholds, showing mixed influences of Byzantine, Lombard, and Avar cultures.

The impetus for some of these changes seems to have been the Avar khanate, where pottery similar to the southern Polish type was made. The change to barrow burial started south of the Carpathians, moving first to Moravia and Bohemia and then northward, but because Avars themselves did not make barrow graves, this change was not a matter of direct influence. It may be that the raising of barrows commemorating the dead was of a piece with the Slavs' new interest in a more elaborate material culture. Personal ornaments and barrows may signal the rise of a sense of pride and individualism among elites, similar to that of the Germanic elites. The style of Slavic metalwork at this time shows influences from the late Cherniakhovo culture, the Ostrogoths in Italy, and the Gepids in the Carpathian basin. A type of fibula particular to the Slavs (called the Slavic fibula) was made in a considerable variety of forms, thought to have symbolic significance and to announce group affinities. Slavic fibulae are found from the Mazurian Lake district in northeastern Poland to the lower Danube and Crimea, in Southern Slavic areas, in Penkova lands in eastern Ukraine, but rarely in the former Korchak territories on the west bank of the Dnieper, where a distinct style of fibula developed, or in Western Slavic areas. Fibulae in parts of the Balkans derived their form from Late Roman models.

Another common ornament whose variants seem to show relationships between groups in different regions was the temple ring; numbers of these were worn by women attached to a leather headband (hence the name temple). Similarities in temple rings from the Danubian area and Penkova lands may suggest cultural links between these two areas. By the eighth century temple rings here were being influenced by Byzantine fashions. Temple rings are found in Western Slavic areas sporadically in the seventh century and more commonly in the eighth.

Avar Influences in the Seventh Century

A zone between the Danube and the southern Carpathians east of Bohemia has cemeteries where both Avars and Slavs were buried. Some of these are large; one near Bratislava has a thousand graves. Most of these were inhumations. Some burials had grave goods, either Avar or

Slav; a typical artifact of the latter were S-shaped temple rings. Pottery was decorated by incising the wet clay with a comb-shaped implement to make parallel lines, either straight or in "squiggles," or by stamping. Some pots were wheel-thrown. In general Slavs here had reached a higher state of development, under Avar influence, than had their brethren elsewhere. The wide-ranging Avar society combined traits from Byzantine and Frankish Merovingian cultures.

This Slavo-Avar culture is found in present-day Slovakia and Hungary, where large cemeteries attest to the stability of settlements. There is major disagreement between Hungarian and Slovakian researchers as to the ethnic affinities of the deceased in these cemeteries. Although there are graves with clearly Slavic material and others with Avar artifacts—one of the markers of difference is the presence or absence of the Avar stirrup—Slovakian scholars claim that some of the apparently Avar graves are of Slavs who had adopted Avar dress and equipment, whereas Hungarians believe them to be foreign nomads. Skeletally Mongol or Asian features are claimed for some of the bodies, possibly evidence of a new wave of steppe nomads. Artifacts of late Avar type from the eighth century found in these cemeteries could have been introduced in this migration, although they could also have been the products of a local development. In any case the material culture here was rich by Slavic standards; there are even glass vessels, probably imported from Francia.

Avar-style belt mounts are found in many male Slavic graves south of the Carpathians, the material expression of elite status and allegiance to the Avar power bloc.

Kingdom of Samo

The importance of Frankish influence south of the Carpathians is shown by the activities of a Frankish merchant named Samo, who in 623 according to a Frankish account written in the 660s led Slavs living somewhere on the Frankish borders in a successful revolt against the Avars. Fredegar, the writer of the account, says that Samo became *rex* (king) of his Slavic followers, adopting Slavic customs (including the taking of 12 wives). Samo's polity is unlikely to have been worthy of being called a state in any medieval or early-modern sense of the term, for when he died it vanished without a trace. The most notable event of Samo's reign was a victory over forces sent against him by the Frankish king Dagobert in 631. There has been considerable controversy over the location of Samo's kingdom; no archaeological trace of such a political

organization has been found. It may have been in the region of Vienna on the fringes of the Slav-Avar territory, far enough away from Francia to have stretched Dagobert's military to its limits; if it was, that could explain how the Slavs were able to prevail over the most powerful and successful of Merovingian kings since Clovis. Wishful thinking and national pride of some archaeologists have led to claims, without concrete evidence, that Samo's kingdom was located in the Morava River valley (in the present-day Czech Republic and Slovakia) or present-day Slovenia; this is unlikely because these areas were not under Avar control. Samo's reign lasted until 658.

Slavs in Ukraine

There is not enough evidence to assess how Slavic culture may have developed in present-day Ukraine in the seventh century. An important development that would affect the Slavs later was the rise in power of the KHAZARS, an ancient Turkic people who had emerged in the Transcaucasus in the second century C.E. By 650 they dominated the steppes from north of the Caspian Sea, over much of Caucasia, and north of the Black Sea between the Dniester and Don Rivers. They absorbed the Bulgars who had remained in the steppe lands and the Alans. Their influence on peoples living in the forest zone north of the steppes crystallized the ethnic identity of the MAGYARS, who would later invade and take control of the region of present-day Hungary.

Separation of Early Slavic Unity into Regional Zones

During the eighth and ninth centuries three major and discrete Slavic traditions that paved the way for the development of the medieval Slavic states emerged. In the region north of the Carpathians people in Poland and Slavic regions to the west became part of the Western Slavic zone. East of Poland Slavs living in modern Belarus, Russia, and Ukraine made up the Eastern Slavic zone; south of the Carpathians Slavs from the head of the Adriatic, through the Balkans and northern Greece to the western Black Sea coast, became part of the Southern Slavic group. Major revisions in dating of the Slavic material that documents these new traditions, some of it as much as 200 years later in date than had been thought (now believed to be eighth century rather than sixth), have led to a telescoping of developments, and to the realization that this division happened much more swiftly and dramatically than had been thought.

There is evidence that at least in Western and Eastern Slavic regions the eighth and ninth centuries saw an increase in Slavic populations. In Poland detailed field-walking surveys to locate and measure the size of archaeological sites have documented that by the end of the ninth century settlements and dwellings had increased to a number that could have supported a population three times that of the sixth century. Larger populations were probably among the factors that led to a more complex and organized society.

Slavic societies had closer relations with more advanced neighboring cultures in this period; to a great degree (although not entirely) these took the form of what is called a core-periphery relationship, with most influence moving from the more developed core outward, as in the case of the Roman Empire and the Germanic peoples along its borders. The Southern Slavs (Bulgars, Serbs, and, at first, Croats) were in the Byzantine sphere of influence. The Eastern Slavs were affected by the Khazars and other steppe cultures, and by the Islamic states of central Asia. In the ninth century raiders and traders from Scandinavia played a crucial role in the formation of the Kievan state (*see* RUS; VIKINGS). The expansion of the FRANKS under the Carolingian dynasty influenced the Western Slavs.

Southern Slavs

Slavs south of the Danube were at the forefront of developments over all Slavic lands from the eighth century. The scarcity of Slavic material remains in the Balkans ends for the latter seventh century and beyond as villages or hamlets of that age and later have been uncovered. They consisted of a few sunken-floored huts that were being replaced as they deteriorated, so that the same settlement sites were used for several centuries. This stabilization of settlement coincides with the emergence of tribes documented in Byzantine sources. Perhaps because the Slavs first crystallized as an ethnic group in the context of larger confederacies of groups, first on their own and then as part of the Hunnic and then Avar confederacies, the new tribes south of the Danube soon formed larger coalitions, such as the Seven Tribes (or Clans), who lived along the southern bank of the Lower Danube. The name given by the Byzantines to Slavic lands in the Peloponnese of Sclavonia terra may document an organization of tribes that had joined to combat the Byzantines.

This self-organization ended as the Bulgars overran the territories of the Seven Clans and

the Sieverzane in the process of creating a powerful khanate. However, as they had with the Avars, the Slavs were able to retain their cultural identity under the Bulgars, possibly because of the usefulness of their language as a lingua franca for all the groups that were under Bulgar domination. Slavic elements played an important role in the distinctive Bulgarian ethnicity that later emerged.

Not until the mid-eighth century as internal political turmoil ended were the Byzantines able to mount a serious attack on the Bulgars. In 756 they launched the first in a series of bloody campaigns over several dozen years that ultimately failed. The continued strength of the Bulgar khanate allowed the Bulgars to participate in the war of the Franks against the Avars in 793–796. The collapse of the Avar hegemony gave the Bulgars control of large areas of Transylvania and part of the Carpathian basin, while the Carolingian Franks' power stopped short of the great bend of the Danube east of Vienna. The Bulgar polity became increasingly centralized under Khan Omurtag in the ninth century. The enormous territory of the khanate was divided into 11 areas, each with its own governor appointed by the state.

Although many Slavs were resettled in territories apart from their tribal homelands, breaking up earlier groupings, their continuing importance to the Bulgar rulers made their culture increasingly dominant in the khanate until in the ninth century a Slavic language (Old Bulgarian) became the state language. The government of the khanate was modeled on that of the Byzantines, and Bulgars adopted many elements of Byzantine culture. Thus the Bulgarian state lost its nomadic character—large urban centers, as with the Byzantines, played a central role in society.

Contacts of Khan Boris with the Frankish king Charles the Bald and with the East Frankish kingdom seem to have impressed him with the benefits of religious unity in states; religious dissension in his realm had become troublesome, and he accepted Christianity, ultimately of the Byzantine creed. The liturgy was conducted, however, in the Slavic language. Boris then forcibly converted his subjects, including the polytheistic pagan Slavs.

Southern Slavs outside the Bulgarian Khanate

The rejuvenated strength of the Byzantines in the eighth century, although it proved inadequate against the Bulgars, did enable them to retake lands in southern Greece from the Slavs.

In 782 Constantine VI reconquered Hellas and then took the Peloponnese, creating a new theme there. In spite of this some Slavs were able to retain their autonomy and culture.

Slavic areas in the northwest Balkans were the scene of a power struggle between the Byzantines and the Franks from the end of the eighth century and fell under the domination of the Carolingian Empire, although indigenous leaders were allowed to continue to rule semiautonomously, subject to Frankish colonization. Carinthia in the eastern Alps, in which Slavs and indigenous Germanic peoples had joined into a distinct ethnicity, were under the domination of Bavaria and in the ninth century of the Carolingian Empire. The name of modern Slavs in this area, *SLOVENES*, was not used until the 16th century; earlier names given them in medieval Latin documents include *Sclavi* and *Sclavini*, as well as *Vinadi* and *Vinades*.

Another group in the Balkans who lived alongside Slavic groups without joining them were the Albanians, apparently the remnants of the *ILLYRIANS* who had lived there long before the invasion of the Romans, since at least the middle of the first millennium B.C.E. The Albanians lived scattered throughout the Balkans in small settlements, where the centuries of invasions had driven them.

With the final collapse of Avar power in the 790s Slavs moved into Lower Pannonia in the great bend of the Danube, among them Croats and *OBODRITES* from the region of the Elbe River. Upper Pannonia to the west, the region around Vienna, remained under Frankish domination. By the latter half of the ninth century the Slavs there had organized themselves into a polity under Prince Pribina, who was in effect a vassal of the Carolingian king Louis the German, who had given him lands along the Zara River. Pribina encouraged colonization of forest and swamplands and showed his allegiance to Louis by accepting Roman Christianity and becoming part of the diocese of Salzburg. His son, under the influence of Slavic missionaries, accepted the Slavic rite of the Byzantine Church. This area was devastated by the Magyars in the 890s and later became the core of the Hungarian state.

Eastern Slavs

The distinction between Eastern and Western Slavs has received much attention. But before the ninth century the cultures east and west of the usual dividing line drawn along the border of Poland and the former Soviet Union were

This pagan obelisk was constructed by the Slavs. (Drawing by Patti Erway)

relatively uniform. The division seemed more of a “back-projection” into the past based on subtle differences in pottery types that are often more in the eye of the beholder than real. Soviet and Polish archaeologists working together to interpret material from this period agreed to demarcate the boundary between cultures as being along the Bug River—the modern boundary between their two countries, which again raises the question of how valid a division this was in the period of the early Slavs.

The expansion of the Germanic-led Rus, from the end of the ninth century, began to foster a markedly distinct cultural pattern in the east. Earlier, in the eighth century Slavs in the region that would become the Kievan state lived in forest steppe zones west and east of the Dnieper. These territories on each side of the river differed in their settlement patterns, and the region to the west seems to have become Slavic several centuries earlier than that to the east. The forest zone to the north had more sporadic Slavic settlement.

More strongholds were built in Ukraine after the eighth century. At least 25 have been identified, most of these along the periphery, the Pripet swamplands, and by the edges of the Carpathians. The earliest enclosure at Kiev in the center of the region was constructed at this time, and eight other sites were clustered around Kiev. This may suggest the development of a sense of political cohesion and of the need to defend it from the outside world.

Villages in the eastern Ukraine were larger than earlier, although still made up of sunken-floored huts. Some of them were fortified. Barrow graves were common in cemeteries that were sometimes large, with rich grave goods, but people were still also buried in more inconspicuous flat graves. A considerable amount of Islamic silver, by Slavic standards, in the form of both ornaments and coins, entered the area in the eighth century, particularly east of the Dnieper, and was buried in hoards and graves. Northeast of the Dnieper in a region that had previously had a Baltic culture a Slavic culture appeared in the eighth century, associated with fortified settlements perhaps attesting to tensions accompanying the changeover. Slavs seem to have gone upstream following tributaries of the Dnieper, and their settlements are found along them. The distribution of finds of this group accords with the territory of a tribe mentioned in sources called the SEVERIANS, which means “northern people” (possibly with reference to the Khazars to the south). Another group settled on the Upper Don around

Voronezh and Lipetsk in Russia, also making strongholds—one site had ramparts made of limestone. It is unclear how much of a Slavic component this group had, and some of its sites are located within an area characterized by the culture of the FINNO-UGRIANS. Recent study suggests that this group may have been the CHORVATI, whose name may be the root of the word Croat. It is unclear what relationship these Chorvati may have had to Croats in Southern and Western Slavic lands.

To the southeast of the Slavic regions from the Middle Don to the Lower Volga was a zone dominated by the culture of the Khazars. Sites here contain wheel-made pottery and high-quality metalwork, with nomadic types of horse harnesses and weapons. This region seems to have had an important influence in the development of the Slavic cultures to the north. The interface between the Slav and Khazar zones is marked by a line of what are called white stone fortresses built around the turn of the eighth and ninth centuries. The people in the Severian and Chorvati areas may have gained their (albeit modest) wealth by controlling long-distance exchange routes passing through their territories from the Khazars perhaps to the BALTS, for amber and the furs that abounded in the north. This accounted for the rise of the Kievan Rus in the latter ninth century. However, Kievan tradition does not mention previous important trade centers that the Rus took over from earlier peoples, and the trading empire that the Rus built seems to have had little or no precedent. The flow of Islamic silver from the Khazars into the region around Kiev was limited before the Rus entered, even with the large enclosure on the future site of Kiev. It has been suggested that the Slavic Kievans of the earlier ninth century were acting as tribute takers for the Khazars, and that the enclosures in the region were for the purpose, not of defense, but of rounding up and holding herds and traders with their goods to collect and store this tribute. At the end of the ninth century a huge enclosure the size of a town was built near Kiev.

In the regions northeast of clearly Slavic lands were cultures with many similarities to Slavic culture (and vice versa). Some Slavic archeologists see them as Slavic, whereas according to linguistic evidence (place-names) these should have been Baltic lands. Here again the great simplicity of the material culture of peoples throughout northeastern Europe makes it very difficult to find strongly characteristic traits with which to make such distinc-

tions. Furthermore, it is likely that proto-Slavs, before the crystallization of Slavic culture in the early sixth century, intermingled with proto-Balts. Soviet scholars postulated, with little evidence, that a Slavic culture had arisen in these regions in the Iron Age. The pottery here from Korchak-Prague-Penkova times has many similarities with these and dwellings were sunken-floored huts with, however, central clay hearths rather than the typically Slavic stone corner oven. There were few strongholds here, flat rather than barrow burials, and some communal pit graves; altogether the people seem to have lived in a different world from that of the Slavs, a circumstance perhaps due to the very different forest ecology they experienced. Deeper into the forest zone to the north the pottery becomes different from the Korchak type, and the only pits found are irregular in shape; they seem to have been cellar holes of above-ground structures. These were probably built by Finno-Ugrian peoples, despite claims to the contrary.

At least by the ninth century there clearly was some form of Slavic penetration of these areas; the timing of the beginning of this process is as yet unclear. Slavs moved farther up the Dnieper and its tributaries, and up other rivers. Tribes that later formed in the northeast included the DREGOVICHANS, RADIMICHANS, VYATICHANS, and, farthest north, the SLOVENIE.

Western Slavs

Early medieval writers sometimes discussed the Western Slavs as VENEDI (a name derived from ancient Greco-Roman texts and originally applied to peoples living east of the Germanics in the early centuries of the Roman Empire; the Franks, emulating the imperial Romans in so many ways, likewise called the peoples to the east Venedi). Several new features appeared in Western Slavic cultures during the eighth and ninth centuries, while there was considerable continuation of what had gone before. For unknown reasons the stone ovens of the past were replaced by clay ones; some huts had no ovens at all. Stronghold building continued but intensified, evidence both of development of social organization and of unrest, probably at least in part caused by the increase in material wealth that also occurred. Trading centers were established on the Baltic coast.

The style of pottery made during this time, especially in the west, seems to have been influenced by that of contemporary Frankish pottery. In general the quality of pottery improved during the period, although the potter's wheel had

not been adopted; instead the slow wheel continued in use. In spite of an increasing tendency toward regionalization, certain pottery features continued over the whole region, documenting contact of widely scattered communities.

Long-distance trade is documented by the increasing flow of Islamic silver to the region from the early ninth century. The coastal strip of Pomerania (named for the Slavic POMERANIANS) between the Oder and Vistula Rivers shows signs of social changes that must have been caused by this trade. Localized cultures with different settlement patterns seem to have been subsumed into a regionwide culture characterized by many small, circular enclosures covering the countryside and an increasing density of settlement as well as settlement of new areas. These signs of a more centralized sociopolitical structure did not result in the formation of a state at this time, however. Northern Polabia, to the west of Pomerania, had a distinct culture; POLABIANS built hilltop sites with multiple enclosures with dense settlements. By the latter ninth century several large trade and production centers had been built in Slavic areas along the Baltic coast. The impetus for these may have been the PRUSSIANS east of Pomerania, people related to the Baltic LITHUANIANS, who had built a trading emporium at Truso near the mouth of the Vistula by the early ninth century. A number of silver hoards near the mouth of the Vistula attest to the rich trade carried out. As the ninth century progressed, however, activity shifted west to the mouth of the Oder, where sites from this time have been found. Polabia became the locus of trade in Islamic silver on this part of the Baltic coast.

Increased centralization of power elsewhere in Western Slavdom developed under the influence of the Carolingian Empire, particularly with Charlemagne's wars against the Saxons, in which Slavs became involved. Different groups became allies of the Saxons and of the Franks, developments that increased Frankish interest in the Slavs. The *Royal Frankish Annals*, a yearly recounting of events, after the year 780 mentions the name of Slavic tribes, including the Linones, Nordliudi, Smeldingi, Sorbs, and Wilzi (VELETIANS). The most important tribe for the Franks were the Obodrites. As the Byzantines had, Charlemagne made some tribes his allies against their fellow Slavs. The thrust of (or the pretext for) Charlemagne's campaigns in Saxon and Slavic territories was to draw peoples into the Christian fold, efforts that reinforced his legitimacy as the church-anointed emperor, and some of his Slavic allies converted, at least

Cyril and Methodius: Apostles to the Slavs

Cyril and Methodius made possible the birth of a Slavic, distinctly eastern European civilization. They did this by providing the means for Slavs to partake of Christian religious worship in their own language, through both liturgy and scripture, and to embody their culture and ethnicity in works of literature. Before they began their work, all literate persons in Europe wrote in one of the languages sanctioned by the “Three Languages” theory—the languages of the inscriptions on the Cross at the time of Christ’s crucifixion, Hebrew, Greek, and Latin.

In the ninth century C.E., when in German lands it was unthinkable to use the vernacular for religious or literary productions, Moravia’s chief prince Rostislav appealed to the pope in Rome to send missionaries conversant in the Slavic language. In his appeal, Rostislav mentions the simplicity of the Slavs as the reason they needed translators to learn about Christian truth. But Rostislav’s motivation was probably to some extent political, to counter the missionary efforts of the Germanic Franks. And St. Cyril himself insisted upon the equality of all peoples (on whom sunshine and rain fell all alike, he said) and their languages, an assertion of the importance of cultural identities other than the Greco-Roman civilization that had dominated Europe for so long.

The emperor Michael III of the Byzantine Macedonian dynasty received Rostislav’s embassy gladly. The Byzantines saw the Christianization of the Slavs as a way of gaining them as allies and also as a counterweight to expansion of Arab Muslim power. They chose for the mission Constantine the Philosopher, of Thessalonika, better known by the name that he assumed on his deathbed, Cyril, a missionary, linguist, and philologist of renown. There is disagreement as to whether Cyril and his brother Methodius were Greek or Slavic, but they knew the Slavic dialect spoken in Macedonia, adjacent to Thessalonika. The alphabet they devised was similar to the Greek alphabet, with aspects of Hebrew. Eventually, two separate alphabets, the Cyrillic, which has survived in most Eastern Orthodox countries, and the Glagolitic, came to be ascribed to Cyril. He may have devised the latter, which is less like Greek, to placate suspicion in Moravia about Byzantine Greek motives. Cyrillic may actually have been devised by the brothers’ followers.

The brothers’ mission to Moravia starting in 863 was successful at first but soon attracted the animosity and rivalry of German ecclesiastics. In response Cyril and Methodius traveled to Rome to ask for the pope’s blessing on their efforts, which they received. The pope sanctioned their use of the vernacular as well. Cyril died in Rome in 869. Methodius returned to Moravia, where he was made archbishop of Sirmium. Nevertheless, German prelates there blocked his efforts, imprisoning him for a time. After his death in 884 his followers fled to Bulgaria, where they were welcomed by Boris I, sovereign of Bulgaria, who had decided to Christianize his country. The legacy of Cyril and Methodius was later embraced by Boris’s son Simeon, a great lover of learning, who inaugurated a project of translation of many works into the Slavic language used in the khanate, which became known as Old Church Slavonic. Church Slavonic became medieval Europe’s third lingua franca after Greek and Latin.

The feast day of Sts. Cyril and Methodius, May 11th (24th New Style), is still celebrated in Bulgaria as the Day of Culture, Public Education, and Slavonic Writing and is in general a national holiday. In many Slavic countries the brothers are hailed for their role in the birth of Slavic literature.

nominally. The Wilzi (Weltabi) were enemies of the Franks, and Charlemagne mounted a major expedition against them, his army crossing the Elbe on fortified wooden bridges and laying waste to their lands. An edict of Charlemagne

that forbade the export of Frankish swords to the Slavs suggests an appreciation of the dangers they posed to his empire. (Nevertheless, a number of Frankish swords have been found in Slavic areas.) Ongoing Frankish interest in the Slavic tribes and their territories is documented by a report on the tribes and the numbers of their strongholds from about 840, by a writer known as the Bavarian Geographer, entitled *Descriptio civitatum et regionum ad septentrionalem plagam Danubiae*—“Description of fortified towns and regions north of the Danube.” The main interest of this document lies in its having been written at all, rather than in its reliability.

A major phase of stronghold building by Slavs, with concentrations along the Frankish frontier, took place from the ninth through the end of the 10th century. The largest of these strongholds, however, are in the northern Polabian–eastern Pomeranian area away from the frontier. This could document the emergence, either because of or despite the Carolingians, of strong leaders who promoted the building of fortifications on the fringes of Frankish power and built large centers for themselves in the interior. Slavic leaders could have consolidated power either through association with the Carolingians or through success in fighting them (or through a combination). When Frankish power was at its height under Charlemagne alliances with them must have been advantageous, whereas during periods when their power waned under weaker rulers Slavs in all probability took the opportunity to raid Frankish territory, such as the eastern march territories of Saxony and Thuringia. One such period of weakness began with the Treaty of Verdun (843), by which the Carolingian realm was divided among Charlemagne’s grandsons, and lasted to the reign of Henry the Fowler (918).

Moravia: The First Western Slavic State

The Moravian state formed in the early ninth century in the region northeast of the Danube’s great bend and southwest of the Beskid Mountains (modern Slovakia) centered on the Morava River valley. The Avaro-Slavs of the lower Danube region influenced Moravian culture, and the power vacuum created by the collapse of the Avar khanate gave Moravians scope for expansion both east- and westward through the ninth century; the extent of this expansion is a matter of controversy (former claims of Moravian annexation of Silesia and even Pannonia have come into question). The Moravian prince Rostislav gained legitimacy for the state by founding a Moravian Christian

church with the help of two Slavic brothers from Thessalonica, Cyril and Methodius (see sidebar, p. 752). Moravian power was repeatedly challenged by the Franks, and Louis the German on capturing Rostislav is said to have caused him to be deposed by having him blinded. The brief flourishing of the MORAVIANS ended in 906 with an invasion by the Magyars (see SLOVAKS).

Bohemia

While the Moravian state was coming into being a number of strong but independent tribes had emerged to the west of Moravia centered on the valley of the Moldau in the Bohemian basin. Among these were CZECHS, Lucane, Lemuzi, Zlicane, Croats (probably these were the CHORVATI or White Croats who figured in the southern Croats' origin story), and DULEBIANS. Their strongholds were large, with inhabited outer enclosures; some of the inhabitants were craft workers. The tribal ruler Lecho (or Becho) fought Charlemagne in 805. In the 840s and 850s forces of Louis the German conducted raids on Bohemia. Moravia annexed Bohemian territory in the 880s and fostered the rise of the Premyslid dynasty, which accepted Christianity in 884. The Premyslid ruler Borivoj made Prague his capital, building there a church dedicated to St. Mary. The collapse of the Moravian state freed Bohemia of its domination, and its rulers augmented Bohemia's natural defenses—its wall of mountains—by building an ingenious system of strongholds that formed a circle around Prague, itself heavily fortified. In this way the BOHEMIANS avoided the fate of Moravia, and by the 10th century their state had become one of the most highly developed regions of Europe.

State Formation Elsewhere in Slavdom

In the ninth and 10th centuries Slavic states emerged in other locations where Slavic ethnic groups had settled in the previous centuries. Since their formation most of these polities based on ethnicity have endured to the present (although the histories of many have been turbulent). The process of state formation among the Slavs, then, provided the basis for the modern political map of central and eastern Europe.

States among the Southern Slavs

The First Bulgarian Khanate was destroyed by the Byzantines in 972; a remnant of the Turkic Bulgar state located in the Macedonian mountains, the West Bulgarian empire, was crushed in 1018. The precursor to the modern Bulgarian state emerged in the 13th century.

These playing cards from the 1920s represent historical figures of Bohemia (now the Czech Republic). (*Library of Congress, Prints and Photographs Division [LC-USZ62-76009]*)

The Serbs' first state came into being in 933 but was annexed by the Byzantines in the 10th century; the Serbs achieved independence in the 12th century.

Slavic tribes in the region of present-day Montenegro, southern Bosnia, and Herzegovina—the DUKLIANES, centered on the abandoned Roman town of Dioclea, and the Travunianie to the west—together formed the state of Doclea (Duklianie) at the turn of the 10th and 11th centuries. Doclea was conquered in turn by the Serbian kingdom, the Byzantines, the Western Bulgarians, and the Byzantines again and gained independence in the mid-11th century.

Farther to the west on the coast of the Adriatic the Croatian state was formed in 876–879 and united with the inland province of Slavonia in the early 10th century. Later in the 10th century internal dissension caused some regions of Croatia, including Bosnia, to secede. Croatia was conquered by Hungary, the state formed by the Magyars, in 1102.

The Carantanians (or Carinthian Slavs) occupied Austria and Slovenia during the seventh and eighth centuries. The western part of Carinthian territory was annexed in the late eighth century by Charlemagne and with Pannonia joined to form the province of Ostmark. The German emperor Otto I incorporated this region into the Duchy of Carinthia (later Carinthia, Carniola, and Styria).

At the turn of the ninth and 10th centuries the Magyars conquered Slavs in the Carpathian basin in present-day Hungary (including the

Avaro-Slavs with their mixed steppe-Slavic ethnicity) and settled there, in Slovakia, and in part of Transylvania. The Hungarian state was created in the 10th century.

States among the Eastern Slavs

The medieval Russian Kievan state was rooted in the Slavic tribal confederacy known as the POLIANIANS (people of the field) centered on the massive stronghold that had been built at Kiev in the eighth or ninth centuries; by the 10th century a number of other fortified towns had been built nearby in the valley of the Dnieper, possibly by other tribes that had joined the Kievan confederacy. At some time around the turn of the ninth and 10th centuries a war leader named Oleg—claimed by a chronicle written a century or more later, under the aegis of the rulers of the Rus state, to have been a kinsman of Rurik, a possibly legendary Scandinavian founder of their dynasty—subjugated the Eastern Slavic tribes that had been under Khazar domination. These included the Polianians, the Severians, and the DREVLANS (people of the forest). Oleg thus ejected Khazar power from the region. After this the Kievan state quickly grew to be the dominant power of a wide region, and Kiev grew wealthy from trade previously controlled by the Khazars.

Territories north and east of the Kiev region known as Outer Russia, where Slavic groups had begun migrating before the ninth century to join the Baltic and Finno-Ugric people already there, were nominally part of the early Russian state. They included the regions around Novgorod, Pskov, Ladoga, Rostov, Vladimir, and Smolensk.

States among the Western Slavs

In about 840 a Polabian prince by the name of Chroscizsko founded the Piast dynasty, which would create the first Polish state in the late 10th century. At this time in Polabia Slavic tribes joined in a confederacy to drive out the German elite who had ruled there since the reign of Otto I in the mid-10th century. The tribes involved included the Obodrites, Redari, Lutize, Stodorane, and Brzezani. By the 11th century these tribes had formed an independent Polabian state. In 1160 Henry the Lion, duke of Saxony, in a crusade against the pagan Polabian Slavs (whom they called WENDS) defeated them; afterward German settlers and missionaries settled the region.

South of Polabia the Sorbs, whose territory lay between the Saale River, a tributary of the

Elbe, and the Neisse River, a tributary of the Oder in present-day eastern Germany, had been annexed by the Ottonian German Empire. In the 10th and 11th centuries instead of forming an independent state they were being absorbed into the social and political system of the German Empire. To the north coastal Pomerania in the eastern part of Polabia remained free of German domination for several more centuries and successfully resisted Polish expansion into their region; in the 11th century they broke away from the Polish state. Only in the mid-12th century was Germany able to take the region and to colonize it.

In the 10th century the POLANIANS, a tribe that had emerged along the Warta River in the seventh century, became a dominant political entity under their leader Miesko I, gaining hegemony over other tribes in the Oder-Vistula region (which includes most of present-day Poland), among them the GOPLANIANS, KUYAVIANS, LEDZIANIANS, MAZOVIANIANS, SILESIAIANS, VELETIANIANS, VISTULANS, and WOLINIANS, and founding the Polish state. The various tribes became known as POLES. In 966 Mieszko was christened as a Catholic.

CULTURE

Economy

Early Trade Trade in Baltic amber, which had been important in central Europe for centuries, initially halted with the collapse of the Western Roman Empire. By the seventh century, when the Slavs and others in their regions began to value luxury goods, West Balts began exporting small amounts of amber, a trade that would increase after the seventh century. The geographical position of many Slavs, particularly those living in present-day Russia, Ukraine, Belarus, and along the Baltic coast, was on a crossroads of great trade routes: one between Byzantium and the Islamic Near East, and the other on Baltic seaways connecting the fur regions in northeastern Europe to Scandinavia and ultimately the Carolingian Empire. This strategic location made the Slavs middlemen in an increasingly lucrative trade, which probably had its most lucrative base in furs. This trade is documented by the gold and more common silver coins from Byzantium and the Islamic states that have been found here. Silver in other forms, jewelry and hacksilver (pieces from silver objects that had been cut up), was also used as a medium of exchange. Coins were not used as in the modern world, according to a valuation set and agreed on by states, but as barter, based on weight.

The trade of the early Slavs was similar to the gift-exchange process of most tribal societies, in which gifts were given to fulfill social obligations and a gift placed an obligation on the recipient. Such a network, dependent on common goodwill and enforced by fear of society's disapproval of ingratitude or miserliness, served to bind members of an egalitarian society. Later, with the rise of warrior elites, gift giving furnished the means by which leaders and followers were bound for mutual support. In response to the demand for gifts merchants traveled to foreign lands seeking goods whose exotic character would increase their desirability and value.

The inverse of gift giving in warrior societies, of course, is the taking of plunder, and leaders were created also by their ability to lead successful raids in which their followers could enrich themselves with loot. This aspect of the use of material goods as a means of social cohesion no doubt led to social inequality, for the ability to lead in battle, the possession of sufficient will, charisma, and self-certainty to draw men to follow one, is not a common trait. And once a leader had proved himself successful, drawing more followers into his orbit, his power was likely to increase in a sort of snowball effect: The more retainers he attracted, the greater his likelihood of military victory in the future, and the greater the personal wealth he could confer on his followers.

This form of economic activity led directly to the expansionism displayed by Slavs and virtually all of the societies with which they had contact. It lay behind the expansion and great migrations of Germanic peoples in the first half of the first millennium C.E. and the migrations of Celtic peoples a thousand years before that. Raiding and counterraidering tended to increase in scope over time, at least in part because of the snowball effect mentioned, as war bands were replaced by larger forces and finally armies, placing an ever greater burden on the economy of a region. Warrior societies' most frequent means of dealing with this was to expand the war into another territory, thus obtaining plunder as well as tribute from subject societies.

Appearance of Trading Centers With the rise in importance of trade, trading towns were built in Slavic areas. Many such emporia were constructed on the south Baltic coast in the eighth and ninth centuries. They were used not only for trade but also for craft production. These centers were not urban at this time and show little sign of the presence of a centralized administration regulating activities. Instead they appear to have been "contact zones" for people of many

ethnicities from all over a vast region. Such emporia were controlled to some extent by local rulers, whose military strength kept the peace and who exacted tributes or tolls from traders. But the writ of local authority extended little beyond this until after the ninth century.

It is difficult to determine the extent to which trading towns along the Baltic and those penetrating the Russian interior along rivers in the eastern Baltic region were built solely by Slavs or by the Scandinavian Norse who had been trading in the region for centuries before the Slavs arrived. It seems probable that Scandinavians played an important role in the development of trade in the region. Here as elsewhere (for example, Ireland and Britain) Scandinavians probably pioneered the creation of trading towns, with local Slavs soon and eagerly taking part. Scandinavian burials are found near many trading emporia, and contemporary Norse rulers were taking an increasingly active role in regulating trade, founding and organizing the layout of trading towns, and, from the ninth century, minting coins. The *Frankish Annals* record that the Danish king attacked and destroyed the emporium of Reric in the territory of the Obodrites, deporting the craftsmen and traders there to Denmark, where he settled them in his newly built town of Hedeby.

Some Slavic scholars have assumed that the people carried off by the Danes were Slavs. It seems unlikely that the Danes, who had been highly accomplished traders and craftsmen for centuries (the latter for over a thousand years), had any need for Slavic traders and craftsmen. If this incident occurred, its cause could have been an attempt by the Danish king to curb the growing competition between the Slavic trading towns and his own traders, who had previously completely dominated the region. It may even be that the traders and craftsmen he deported were Danes who had taken up residence in Reric. In assessing events of early medieval times it is important to avoid thinking in terms of nation-states and national territories. Many of the areas where Slavs lived in this period cannot be considered wholly and simply "Slavic," as today's Poland is Polish. There were no firm national borders at this time (even strong states such as Carolingian Francia and Anglo-Saxon England had "march" lands with mixed populations to act as buffers between them and rival polities), and many regions where Slavs had settled—the Baltic coasts, the Ukrainian steppes, and others—had much of the character of march lands, with no single power in control. Only

with the rise of Slavic states from the 10th century can we begin to speak of strongly “national” regions in their territories.

Trade in Slaves Slavery existed among the Slavs as among other pagan warrior societies; the nature of slavery among them was different, however, from the chattel slavery practiced, for example, in America until the Emancipation, in which a slave was considered a commodity and evaluated in numerical, monetary terms. (It can be argued that this form of slavery is far more unethical than that practiced by the Slavs and others, because it transgressed the most fundamental religious and moral tenets of society, whereas slavery among the Slavs did not.) In contrast the status of slaves among the Slavs was far more fluid, and they apparently were able to join Slavic society with little difficulty. Often they were taken simply for ransom and were released as soon as that was paid. Slaves seem to have been considered as less the possessions of any individual than assets of the tribe as a whole, working alongside their Slavic captors. Later with the rise of elites, however, slaves were kept in some households.

In the eighth century, with the rise of the Islamic Empire the slave trade became an important component of the economy in a number of Slavic areas. Because Muslim law forbade the enslavement of any Muslim or any non-Muslim who was a citizen in good standing of the Islamic Empire Muslims obtained slaves from elsewhere. So many were from Slavic lands that in both Arabic and Latin the word for “slave” became conflated with the name for Slavs (*al-Saqlabi* in Arabic meant both Slav and slave). Enslaved Slavs served as the praetorian guards of Umayyad caliphs of Córdoba in Spain (although these may have been captured by Carolingian forces); slaves from Slavic lands passed through Venice, located on the fringes of Slavdom.

Farming In spite of the importance of trade, agriculture was the basis of the economy of the early Slavs, without which no other social activity would have been possible. The Slavs were no different in this from any other European society since the Neolithic Age. They had a mostly pastoral farm economy supplemented by hunting and fishing. In the forest steppe and forest zones in Ukraine, Belarus, and Russia hunting of fur-bearing animals was especially important, both for domestic use and, at least by the eighth century, for export.

Pseudo-Maurice (so-called because he ghostwrote a report for the Byzantine emperor

Maurice), wrote that the Slavs had all kinds of animals and agricultural produce in abundance, indicating their success as farmers and the importance of agriculture for them. After Slavs had migrated into their new lands in the sixth century their agriculture steadily improved with the development of new techniques and new and improved tools. Over time they began to produce surpluses. They used the alternating fallow system, in which, in alternate years, fields would be worked or left fallow. Even this system led eventually to the complete exhaustion of the soil, however, leading people to move away, resulting in the land reverting to forest. This method was possible because population densities continued to be low for several centuries.

Forest clearance in the lands abandoned by Germanic tribes and others, such as in the Balkans, as well as land not worked before, such as north of the Carpathians and north of Ukraine, was accomplished with fire, and the ash produced contributed to soil fertility. There is evidence that Slavs used manure for fertilizer. During the initial migration period Slavs settled in the best lands, usually along river valleys. Only in later centuries as populations grew was it necessary to clear the more heavily forested lands and work less ideal soils.

The crops of the Slavs were little different from those that had been cultivated from at least the Late Bronze Age across most of Europe, perhaps an indication that the ancestors of the peoples who formed the Slavic ethnicity had been living and farming in central and eastern Europe for centuries. Millet was an important crop because of its hardiness; barley, rye, oats, and several kinds of wheat were also grown. Vegetables included onions, carrots, radishes, turnips, parsnips, cucumbers, pumpkins, and cabbage. Legumes included peas, broad beans, lentils, and vetch. The Slavs grew fruit trees—cherry, apple, pear, several kinds of plums, and peaches. Cultivation of vines spread north into Western Slavic lands as the climate improved toward the so-called Medieval Warm Period, which seems to have begun around the ninth century. Oil-producing plants grown were flax and hemp; flax also provided linen and hemp used to make rope.

Livestock had multiple uses, one of which was to fertilize fallow fields as they grazed on them. They were used for meat, milk, and leather. Oxen were also used as draft animals, pulling wagons or the light plows the Slavs used. As did the Celts, Slavs prized their pigs and often let them roam free to forage in the

forest. Beyond the steppe regions Slavs kept few sheep or goats, but on the steppes herders had large numbers of cattle and sheep, probably for elite masters, members of the Avar, Bulgar, or Magyar aristocracy.

There are a number of regional variations in the proportion of different animals that were kept. In Pomerania, for example, pigs predominated, perhaps because forests there were denser than in the region to the east, where more cattle were kept. Horse meat was rarely eaten. As in the case of Celtic and Germanic people, Slavs practiced little selective breeding and their animals were small. Herds do not seem to have been kept in barns, but rather in some cases in ditched compounds. Selective culling of the herds took place in the autumn. The presence of long scythes in some settlement sites has been interpreted to mean that these Slavs cut hay and cured it to use for winter feed. Meat was smoked or salted.

Slavs also kept chickens, and probably ducks and geese (although this is difficult to determine from bones, since domestic ducks and geese differ little from their wild cousins). Written sources mention that Slavs obtained wax and honey from bees, but whether these were wild or domesticated is unknown.

Hunting continued to provide a small amount of meat—rarely more than 10 percent of bones found in excavations are of wild game, such as boar, deer, hare, elk, bear, and aurochs. Game was more important for furs, and Slavs hunted beaver, marten, ermine, sable, lynx, weasel, squirrel, and fox for their fur.

Government and Society

Earliest Slavic Society The early Slavic material is far simpler in style and technique than that of the Cherniakhovo culture (probably created by the Goths) and other cultures that it replaced in much of central and eastern Europe. They used few metal ornaments. Their pottery was crude, hand-made rather than wheel-made, fired in bonfires rather than kilns, with a gritty surface, little or no ornamentation, and a restricted range of shapes. Their dwellings were small, insubstantial timber huts, in some areas with sunken floors and stone ovens, built to last no more than 10 or 15 years, in undefended settlements. Few burials are found; in Ukraine there are about six burial sites to every 100 settlements, most of them simple urned cremation cemeteries. The world of the early Slavs was a far cry from the complex, highly stratified societies of earlier peoples in central and eastern Europe, for whom a rich material

Slavic people haul flour in an ox-drawn cart in the early 20th century. (Library of Congress, Prints and Photographs Division [LC-USZ62-92364])

culture formed the basis of society—the “glue” that held everything together. The Slavs’ pottery is similar to earlier pottery found across central Europe and in Ukraine, and sunken-floor huts were made during the Cherniakhovo period in the Cherniakhovo culture zone, suggesting that the earliest historical Slavs and their prehistoric precursors had been living alongside the Goths but not taking much part in Gothic society or the other elite societies in central Europe. (Late Cherniakhovo fibulae and other metal objects have been found in Slavic huts, however.)

The undistinctive simplicity of their pottery shapes has made it difficult to identify where the Slavs originated—to pinpoint which assemblage of earlier pottery was ancestral to that of the Slavs. Archaeologists in a number of modern Slavic countries have found similarities between early Slavic pottery and older pottery, usually that found in their own countries. Thus the honor of being the original Slavic homeland has been claimed for their countries by Russians, Ukrainians, Poles, and others. The truth may be that the historically known Slavs emerged from a mix of ethnicities, from among the peoples from all over central and eastern Europe and beyond who had been impelled toward the border of the Eastern Roman Empire along the Danube by a variety of historical and economic forces. These possibly included invasions, the lure of trade with the Romans, and, for steppe peoples who migrated there, a crisis caused by the harsh steppe climate—drought, or a severe winter. Thus the peoples who would become the Slavs may have had many homelands.

Recent work has found Slavic pottery tentatively dated to the fifth century, making it the

earliest found, which seems to be associated with the last manifestations of the probably Gothic Cherniakhovo culture on the eastern flank of the Carpathian Mountains along the Dniester, Prut, Seret, and Southern Bug Rivers. This region is a forest steppe zone north of the former Cherniakhovo area, which by now was occupied by the Huns, steppe people who invaded Gothic territory in the fourth century. There are Cherniakhovo burial mounds here with Cherniakhovo grave goods, but also Slavic-style square, sunken-floor huts containing wheel-made pottery, which is much easier to date than the Slavic pottery also found there; these huts also had some Cherniakhovo fibulae and metalwork. Similar assemblages of the same date have also been found in Moldova and Romania; one site in Moldova yielded a bronze mirror similar to others found in Hunnic contexts. Fibulae and belt buckles of the late fourth and early fifth centuries that have been found in apparently Slavic graves along the north bank of the Danube suggest that at least initially peoples living a Slavic lifestyle were experiencing a rapprochement of some kind with their Gothic neighbors. This rapprochement lasted only until the collapse and disappearance of the Cherniakhovo culture, when the more monotonous material culture of the earliest historically known Slavs took hold.

Puzzles Concerning Slavic Expansion The Slavs' rapid expansion over a wide region seems to have been accompanied by an expansion of the Slavic language that has posed a conundrum to linguists: How could a few war bands impose their language on peoples over a vast region in such a short time? Linguistic theory suggests that even though the first speakers of the earliest Slavic language (called proto-Slavic) were few, in a short time most people in the lands where they settled had begun to speak proto-Slavic as well. This rapid expansion of the language is assumed because modern Slavic languages are similar enough that their "common ancestor" must have been of fairly recent date. According to linguistic theory when peoples sharing a common language live far from one another their local languages gradually diverge from one another into dialects and finally fully independent new languages with only a family resemblance to their common ancestor. These divergences take place at a fairly steady rate known to linguists; thus the resemblance between modern Slavic languages, close enough that speakers of Polish can roughly understand Serbian and Croat, implies that all Slavs spoke a common tongue in fairly recent times.

Another puzzle is that this apparently recent origin seems to negate the idea that a Slavic language group had emerged in a large area of central and eastern Europe in earlier times, in parallel with the Celtic and Germanic language groups in western and northern Europe, respectively, whose common ancestor may have emerged as long ago as the second or third millennium B.C.E. Yet competing linguistic theories have assigned the claimed birthplace of proto-Slavic to different places over a wide area—ranging from the region west of the Middle Dnieper to that south of the Carpathians and elsewhere—that roughly comprises the region where Slavic languages are spoken today. This seems to imply that Slavic languages had indeed been spoken throughout this wide region before the emergence of proto-Slavic and thus must have had an earlier common ancestor.

A possible solution to this problem arises from considering what might have happened to the earliest Slavs and other peoples in their region in the context of the tumultuous events in the century or so before the Slavs first appear in historical accounts. It seems possible that Slavic-speaking groups and others in the region could have formed a confederacy similar to that of the Goths, which had arisen out of troubled times for the mutual protection of its members. There could have been a core Slavic group around which all the rest coalesced, even as the Germanic tribe of the Gutones formed the core group of the Goths. And as the Germanic language spoken by the Gutones became the lingua franca for all members of the Gothic confederacy, including those who had their own local Germanic dialects, evolving into the pan-Gothic language, so the language of the core group of the Slavic confederacy could have become their lingua franca.

In this way we can resolve the apparent paradox of a single proto-Slavic language dating only from about the mid-first millennium C.E., ancestor of all modern Slavic languages, holding sway over a wide region that seems to have had a degree of cultural commonality before then, which commonality may have been embodied in a Slavic language family with individual languages possibly as different from one another as Germanic languages spoken in ancient Scandinavia were from those in the North European Plain. According to this theory members of the Slavic confederacy speaking their lingua franca, proto-Slavic, in their war bands quickly spread far and wide over central and eastern Europe and took control of lands held by locals, chiefs and commoners, many of whom spoke their

own local version of Slavic. (They also moved into areas vacated by Germanic tribes during the latter's migrations south and west.) The first known documents written in a Slavic language—Church Slavonic—would have used the language of these warrior bands, while the older Slavic tongues spoken by the common people remained unwritten. Gradually the Slavic *lingua franca* would have been adopted by local chiefs and common people in the various territories—a process made quicker and less difficult because of its kinship with their own languages. (The modern Slavic language group survived while Gothic did not, because the Gothic peoples lost their cohesion and were subsumed into other groups.)

It should be stressed, however, that evidence for the existence of an ancient Slavic language family parallel to, for example, the Celtic language family, is sparse and speculative. It may even be that the region where the Slavic peoples emerged after about the fifth century C.E., located on the edge of the steppe zone with its mobile populations, had from prehistory been too turbulent a meeting place of peoples to allow the culture and language of any one large group to mature; that peoples here lacked the relative isolation and peace, experienced by peoples in western and northern Europe, needed to develop a regionwide culture on a par with the pan-Celtic culture that in the Iron Age spanned modern-day southern Germany, France, Britain, and northern Spain, or the ancient Germanic culture of Scandinavia and the North European Plain. However, it is possible that languages related to Slavic had been spoken for a long time before proto-Slavic emerged in isolated pockets of the Balkans or by small, inconspicuous groups in the forest steppe regions of eastern Europe, whose very vastness protected them from marauding steppe warriors, or in the Pripet swamp area claimed as the homeland of the Slavs by some theorists.

Although the evidence for the spread of proto-Slavic is indirect, that for the spread of their culture—their unimpressive pottery and the rest—is not. The problem of why people over a wide region would in a short time abandon their traditional culture for a new one may in part be answered by this linguistic commonality between at least some of them and the newcomers. (The problem of how they were able to do so is not great, given the low level of technology needed to make Slavic-style objects.)

Analysis of Slavic culture in the new territories together with anthropological research and linguistic studies of loanwords in Slavic lan-

guages all demonstrate that the indigenous populations remained in the region and contributed to the biological and cultural makeup of later populations, including areas that had formerly been Germanic. But even in Germanic areas most traces of distinctively Germanic culture disappeared after the Slavs arrived.

Byzantine Attitudes toward the Slavs Byzantine descriptions of early Slavic society cannot be taken at face value; as in the case of Western Roman writings on the barbarians beyond their borders the Byzantine Greek worldview has to be taken into account. Some modern historians (especially in modern Slavic countries) have uncritically accepted the Byzantines' description of the Slavs' form of government as being a democracy. But this word had a pejorative sense for the Byzantines (as it would not have had for the Athenians of classical Greece) referring to the lack of firm government or the apparent disorder—*ataxis*—that prevailed among the barbarian Slavs, the very antithesis of that *taxis* or order flowing from high to low—from the emperor down to all of his people of every degree—that lay at the heart of and made possible the *oikoumene*, the civilized world.

It is more probable that the warrior society of the early Slavs, although far more egalitarian than that of the Byzantines or many contemporary Germanic societies, was organized into different ranks, with warriors and their leaders at the top of the social order (especially after they began to assemble in large armies, which of necessity have to be led by overall commanders) and common farmers beneath them. Procopius, describing the Slavs' raids in the sixth century, wrote of their being governed by "democratic" decisions. His account was probably based on reports given to him by Byzantine soldiers, and it may well have been the striking contrast between the Slavic forces and their own highly hierarchical Byzantine Roman army that gave them an impression of Slavic democracy. Slavic forces, as in most relatively undeveloped warrior societies, were probably governed through the means of a give-and-take between leaders and common warriors, the former leading partly by persuasion and promises of booty to their followers. One can imagine a Byzantine soldier, accustomed to the strict discipline of his own military, witnessing a Slavic war leader giving his men a rousing speech—they replying with a roar of approval (or disapproval)—and concluding that the Slavic army was like a mob of citizens being addressed by an orator seeking their votes (as in ancient days in Athens). In

this, Slavic society had one but not all of the elements that constitute *democracy* as we mean the term today.

Indeed some Byzantine accounts of the Slavs should be viewed with great skepticism, such as one by Theophylactus Simokattes about three men presented to the emperor Maurice Tiberius in about 591 who said they were a people from the Western Ocean (the Greek term for the Atlantic); they bore no weapons but carried only citars (an instrument ancestral to the guitar) because, they said, they were not a warrior nation, and they had even refused rich gifts from the Avars to induce them to join their army. Their land had no iron, they said. This obvious tall tale (refuted in every detail by archaeological evidence as well as other contemporary accounts) has nevertheless been used by many modern scholars in Slavic countries to demonstrate that early Slavic society was a peaceful utopia, and to claim that the reference to the Western Ocean meant that the Slavs had settled at this time on the Baltic coast.

A military manual written around the turn of the sixth and seventh centuries by Pseudo-Maurice, the *Strategikon*, is more probably accurate because it was written to aid Maurice's war against the Sclavenes. In this account the Sclavenes and Antes are said to live hidden in forests and swamps, from which they emerge to raid neighbors. The author describes their weapons and says that they were led only by petty chiefs and were constantly feuding among themselves, a situation that accords well with what is known of other undeveloped warrior societies, such as those of the Celtic and early Germanic tribes.

By the early seventh century the Slavs in the Danube area had become fully absorbed into the culture of the steppe nomadic Avars; archaeology demonstrates a mixed Slav-Avar material culture, with the Slavic elite emulating aristocratic Avar dress. Proto-Slavic may have served as a lingua franca for the mixed Avar confederacy, a circumstance that would have been facilitated if, as theorized, the language had emerged as a lingua franca for the groups that formed the earliest recognized Slavic culture. Many of the Avars' allies probably spoke or understood either proto-Slavic or one or more of the Slavic languages that may have preceded it.

However, the material culture of most Slavs continued to be simple, and in many areas they continued to build their sunken-floored huts, each with an oven in one corner. The presence of a warrior elite in Slavic society is eloquently demonstrated by the fact that the typical Slavic

type of spur is rare and almost never found in unfortified villages but more usually in strongholds.

Hoard of Plunder in the Seventh Century Hoards dating from the seventh century found in Ukraine contain a wide variety of metal objects, including Byzantine silver vessels, some stamped as being made in the reign of Justin II (565–578). These hoards finally end the puzzling absence in earlier Slavic settlements of the fruits of the documented Slavic plundering forays of the sixth century. Objects found in some of these hoards give a sense of the wide-ranging contacts of their owners: with the Byzantines and with peoples in the Volga area, the Azov and northern Caucasus region, and Sassanian Persia.

The hoards fall into one of two groups: Those dating from the mid-seventh century document the appearance of Byzantine prestige goods in Ukraine, possibly evidence of an alliance of Ukrainian Slavs with the empire. They also coincide with the end of the Penkova cultural tradition. A second group dates from the latter part of the seventh century and has affinities with new cultural traditions that may have emerged in response to the rise of Khazar power. The new Khazar hegemony created trade networks that introduced to Slavs, especially those in the east living near the north Pontic steppe, influences from a far wider world than ever before.

First Strongholds Problems of dating have caused some stronghold sites to be attributed to the sixth century; new, more secure dating techniques have revised these estimates, and few sites have been reliably dated to earlier than the seventh century. This shows that the conditions the Slavs encountered during their initial expansion and migration did not cause them to build fortifications. Only with the appearance of a more clearly stratified society that valued prestige goods and a more sedentary way of life did strongholds become necessary and/or desirable.

There seem to have been more strongholds in Western Slavic areas than in the east at first. Known sites of strongholds cluster in the northern and northwestern parts of Slavic territories; many are in northern Poland near the Baltic coast, west of the Vistula, whereas east of the Vistula only a few have been found. (This distribution makes it unlikely that the innovation of building fortifications was introduced by the Balts of the northern forest zone northeast of Poland, as has been claimed.) Sites were chosen with an eye for natural defenses—boglands, precipices—which were augmented with earth

and/or timber ramparts. Many of these strongholds were weakly defended, however, and even had open sides, which suggest that they were made to help defend against small-scale raids rather than large armies. It may even be that the principal purpose of these constructions, which must have been made with considerable labor probably under the direction of elite leadership, was as much prestige and show as actual defense. Fine metalwork in Slavic lands is found mostly in strongholds, indicating its association with nobility. The buildings may also have had a religious function, serving as centers for ritual, in which the finely worked objects found within their precincts were offered to the gods. This function in no way rules out their social and political significance, any more than in the case of the great Christian churches built by Frankish kings. Some strongholds have yielded large quantities of metalworking waste, showing that production levels greater than in the past were made at the behest of elites.

An important site is at Pastyrkoe in the Middle Dnieper valley, one of the few in a large area. It consisted of a circular enclosure 60 meters in diameter with internal subdivisions. An ornament hoard and other metalwork found there have affinities with other seventh-century hoards in Ukraine. The fine quality and the quantity of the metalwork here suggest that this may have been the stronghold of a powerful leader in the region. Interestingly, the layout of the enclosure and its ramparts are similar to fortifications built by the Scythians a thousand years earlier. In this case the Slavs may have reused an ancient site for their own purposes.

Status of Women A Byzantine account of Slavs who lived north of the Lower Danube at the turn of the sixth and seventh centuries says that their womenfolk were “chaste beyond measure” and so devoted to their husband that many regarded widowhood as “no life at all,” and some willingly killed themselves on the loss of a husband. Slavic men could take multiple wives, possibly as many as 12. All of this attests to the low status of women (compared to, for example, the status of women among the Celts). This seems to be a feature of peoples living a mobile, nomadic lifestyle, a difficult one for women with children. The dangers of traveling through a wide-open landscape full of roving warrior bands made women in such societies more than usually dependent on their men for protection. The nomadic world was ideally a man’s world. Although the Slavs were not nomads, their flimsy huts bespeak a rootless existence, as they moved their settlements perhaps to prevent

detection by more powerful steppe groups who periodically swept through their territories; in addition their method of farming forced them to leave exhausted lands behind from time to time. They may have been influenced by nomadic ideas on the role of women in society under the hegemony of the Huns and Avars.

In Celtic societies, for example those in Ireland, the role and status of women were symbolized by the importance of Celtic goddesses, some of whom were directly connected to the land, with features in the landscape named for them. For the IRISH who had lived for generations in the region overlooked by the twin hills called the “Paps (breasts) of Anu” the landscape may have been charged with a feminine force in a way the harsh central Eurasian steppe lands were not for their people; the longer lasting settlements of Celts could also have given women the security they needed to take a more important role in society. Certainly there is no known equivalent among the Slavs of Queen Mebh of Irish literature or Queen Boudicca of the ICENI.

Dwellings and Architecture

As mentioned, the Slavs in most areas built small, sunken-floored huts or cabins of logs, probably with thatched roofs, and a stone oven in the coldest corner. In some Slavic areas, such as eastern Ukraine and the region south of the eastern Baltic, they built freestanding hearths, and in the region of modern Mecklenburg and Pomerania the huts were built on ground level. The huts were not substantial and probably lasted no more than 10 or 15 years. The Slavs’ settlements were small and undefended until late in the Early Slavic period, after the seventh century, when strongholds began to be built. Instead of building defenses, Slavs located their hamlets in forests or marshes where they were hard to find.

Military Practices

Byzantine sources describe the weapons and tactics of the Slavs. There is some ambiguity in Procopius’s account as to whether or not the Slavs fought from horseback; in one passage he writes that they fought on foot, but elsewhere he seems to refer to cavalry. Possibly only elites were horsemen; spurs are found in some Slavic burials. Procopius writes that they used spears, and many spearheads have been found, but little evidence of the small shields he also mentions. These may have been made of wood or leather and thus not been preserved. They wore neither body armor nor helmets; other sources say they used bows, slings, and axes. Both Slavs and

Avars learned the use of siege machines from the Byzantines.

The *Strategikon* of Pseudo-Maurice is probably reasonably accurate, because it was written to help Byzantine forces to defeat Slavs; its information probably was assembled from eyewitness accounts, on whose accuracy the safety of Byzantine troops depended. It says that Slavs north of the Danube lived in hidden places difficult of access—in forests, swamps, and wetland, or by rivers, and that they built more than one entrance to their settlements. They also hid their produce and goods. This seems eloquent testimony on the Slavs as survivors in a region that had been crossed by great hordes of fearsome warriors and powerful armies for many centuries. Although it may only be legend that the original Slavic homeland was the Pripet swamp region, the basis of this belief may lie in the defensive strategies of the weaker peoples of central and eastern Europe, whose only recourse lay in becoming invisible.

A good part of this hiding may have been from each other, however, because of the intertribal feuding characteristic of warrior societies. The *Strategikon* indicates that the Slavs' favorite tactic was to attack from a hiding place in forests or on steep places. They used other classic guerrilla strategies, luring soldiers away from fortified camps or lying in wait for a successful invading force as it marched away in order to retrieve some of the plunder taken. The *Strategikon* advises clearing away the forest from the sides of an army's retreat route. They used poisoned arrows, the immemorial recourse of weak forces confronting their superiors.

It seems likely that at least Slavic elites became expert cavalymen during their involvement with the Huns and Avars. The Avars introduced the innovation of the stirrup, which makes a significant difference to a rider's stability in the saddle and ability to fight. However, the Slavs did not immediately adopt stirrups, judging by the lack of them in burials of the seventh century in Slav-Avar territory in Hungary and Slovakia. (Possibly stirrups were too few and precious to be interred with the dead.) Graves with other typically Slavic equipment and artifacts, including hooked spurs, do not contain stirrups, and other graves in the same cemetery with stirrups contain clearly Avar metal harness ornaments. There is considerable disagreement as to the ethnic affinities of the deceased in these burials.

The spurs of the Slavs are distinct from those of Franks, for example, in that the hooks

by which they were attached to the foot curved inward rather than outward.

The Military Confederacy in Slavic Identity Formation In a sort of "arms race," the Byzantine response to the Slavs' raids on their territory—that of sending armies north across the Danube—only resulted in Slavs' forming larger forces, the same phenomenon that occurred among Germanic tribes in response to Roman attempts to conquer them at the beginning of the first century C.E. The first crystallization of Slavic identity may have come about in the context of this formation of a multitribal confederacy whose most important shared value was that of opposition to a common enemy (the Slavic language would have been not simply a useful lingua franca, but also a symbol of this commonality born of opposition to the outsider).

Technology and Art

Pottery A defining characteristic of the early Slavs as we know them was, as we have seen, their pottery. Not only is pottery among the most abundant of their remains, but its great simplicity and rustic quality, which continued for some time even after they had had contact with cultures who used more advanced techniques such as the potter's wheel, seems to tell us something about Slavic society and its priorities. (Wheel-turned pottery is found in some early settlements, but whether these were made by Slavs or imported is difficult to tell.) For a long period Slavic pottery production seems to have been a domestic affair, not given over to craftsmen or specialists. Clay mixed with some gritty material, often sand, to make it easier to work was formed into strips coiled or built up to make a vessel's wall, then smoothed. Pots were fired at low temperatures achievable in open fires, making kilns unnecessary. The coloration of these pots seems to have been left to chance, dependent upon the natural colors of the clay—blacks or browns, sometimes mottled with orange-brown. The "execrably bad quality" of some early Korchak pots, as one specialist describes it, attests to the "amateur" status of their makers.

Gradually Slav-made pottery improved, first through the use of a slow wheel (beginning in the seventh century) to aid in making the shape of pots more regular and in smoothing their surfaces. Firing was done at higher temperatures that were controlled to achieve desired colors. These factors seem to suggest the emergence of craftsmen. In the ninth and 10th centuries pot-

tery improved dramatically, and Slavic craftsmen were obviously much influenced by pottery produced in the Carolingian Empire. By the end of this period thin-walled pottery was being made on a potter's wheel in part of Poland (Wielkopolska).

Iron and Metal Production Iron production in some places in central Europe reached industrial proportions in Roman times, often in Germanic areas, but with the departure of these societies presumably the technical skills to produce large quantities of iron left with them. (Elsewhere in Germanic lands before the Slavic period, however, iron objects were not abundant.) Iron seems to have been prized as a rare material, because broken tools were reworked and rarely discarded or buried in graves. High-quality steel was made in some Slavic areas, however simple the pottery.

Nonferrous metals worked by Slavs included copper alloys and silver. Gold was rare in Slavic lands. The techniques used with these metals were fairly advanced. The Slavic fibula, which was first made in the early seventh century and possibly somewhat before, developed from a type of fibula of the Cherniakhovo culture. It consisted of a plate of cast metal, to be pinned to the clothing, with radiating spokes or "fingers" that served to hold the cloth more securely. Fibulae often had a knob at the top in the shape of a human head or merely decorated with lines, circles, and other motifs. Fibulae of the Penkova culture, found near the Dnieper, had animal-head terminals below a human-headed knob at the top.

Another typical Slavic ornament, worn by men and women both, was a bracelet made of a cylindrical rod with expanded ends bent into a hoop. Plaquettes of sheet metal in exotic animal forms, such as lions and hippopotami, were probably fastened to clothing.

After the eighth century larger amounts of silver began to enter Slavic lands than ever before, in the form of Islamic coins (dirhams); this led to an explosion of silver working, since the coins were melted down especially for making women's headdress ornaments called temple rings. Among the Western Slavs ornaments bear the influence of Byzantine styles; the same is true for those made by the Kievan Rus. Such metalwork has been found in Scandinavia; whether it was created by Slavs or by Norse imitators is hard to say. Metalwork from this period shows a great advance in technical skill.

Slavic artifacts from Ukraine show much influence from the animal art and styles of geo-

metric appliqués that had been characteristic of steppe peoples for centuries.

Nonmetal Crafts Although wood rarely survives, Slavic woodwork that has been found suggests to archaeologists that wood was a primary material for them. Examples show a high quality of workmanship, whether in building houses or carving implements such as buckets, bowls, and ladles. Leather making and the production of furs were important crafts. Textile production, probably mostly domestic, seems to have had a specialist component, judging by the complex weaves of some surviving examples. Silk entered Slavic lands along the silk routes from eastern Asia and from Syria. Bone and antler were used to make combs. At many Baltic coastal trade centers production of glass beads, using scrap imported from the Franks, was an important activity. Glass beads were used as a medium of exchange in trade. Glass, amber, and coral beads have been found in burials in Ukraine.

Religion

Most written accounts of pagan Slavic religion by people with firsthand knowledge are those of Christian missionaries determined to do away with it. The bias of Byzantine Christians concerning Slavic religious practices is clearly revealed in accounts that describe them as works of Satan. Other sources are from late in the early Slavic period, just before state formation and the adoption of Christianity in the seventh through 10th centuries, when the Slavs' religion probably had evolved and changed. Religious belief can be inferred—although only very uncertainly—by archaeological material from burials, votive hoards, and cult places. Ethnographic study of folk customs of Slavs in the recent past (the 19th century) has been used to try to unravel ancient belief. This, too, is an exercise fraught with difficulty, however. Analogies with other Indo-European religious practices can be helpful in piecing together the fragmentary evidence we have.

It is most unlikely that there was a pan-Slavic religion with a large, uniform pantheon of deities on a par with, for example, that of the Romans, any more than there was among Celtic peoples, whose society had much in common with that of the Slavs. Only three gods are known to have been worshipped across a wide area of Slavdom. The Slavs seem not to have had cult statues or temples until later in their history, because there are no words for these in proto-Slavic. Tribal societies more commonly had local and tribal deities, the latter often closely bound

with the families of ruling elites. However, although the names of these gods and goddesses may differ from place to place, these deities often have certain attributes across a culture, and their names, too, may be discernibly related. And as such societies change their religious beliefs and practices change as well. This must have occurred among the Slavs as they migrated to the different regions of Slavdom, the older deities of the proto-Slavic past evolving as they went.

What is known from written sources indicates that Slavic religious belief was influenced by that of other peoples. Some features are similar to those documented in Icelandic sagas, an important source for pagan Germanic religion; the Slavs may have learned about these while in contact with Goths and other German groups and later, along the Baltic and in Eastern Slavic lands, from Scandinavian settlers. There is evidence of Baltic (Lithuanian) influence. The names of several Slavic gods—indeed, the Slavic word for *god*, *bog*—are close to those of the SARMATIANS.

Spirits and Demons Slavic folk tradition of later times held that spirits or demons in great numbers existed alongside humankind, in nature and in hearth and home. Demons dwelled in springs, rivers, and trees. Particular copses, holy springs, and stones had indwelling demons to which humans owed ritual, prayer, and offerings. Evil spirits were said to haunt the edges of bogs, bodies of water, and forests. The negative character given these demons (indicated by the word *demon* itself) may be due to the influence of Christian belief on the peasants whose tales of them have been recorded. Earlier Indo-European peoples—ancient Celts and Germanics, for example—had worshipped deities of water in the Iron Age, attested by votive deposits and burials in rivers, bogs, and other watery places, and what is known about their belief does not indicate that these spirits were considered evil or intrinsically harmful, but instead were held in awe as powerful but potentially beneficent beings if accorded their proper worship. This may have been the case for the early Slavs as well. A world teeming with unseen spirits is the world of primitive peoples subject to powerful forces beyond their understanding or control.

Ancestor Worship The realm of spirits grades into that of the souls of ancestors, the line of demarcation between the two unclear and permeable. The very earliest farming communities in central and eastern Europe where Slavs would

later emerge from the seventh millennium B.C.E. in the Balkans, the Danube region, and onto the Hungarian Plain are thought to have had an ancestor cult. The Balkan Painted Pottery cultures often buried their dead in the midst of their settlements, many of which remained on the same sites for so long that decayed building material and other detritus built up mounds (tells), sometimes many meters high. This sedentary existence may have been another expression of ancestor worship, of the need to remain close to where the ancestors were buried in order to benefit from their intercession with the spirit world on behalf of their descendants. Many small figurines, usually female, have been found in these settlements, and some scholars contend that these were used in ancestor worship. (The theory that they document goddess worship has fallen into disfavor among many archaeologists.)

The arrival in this region of horse riding among pastoral steppe nomads in the fifth millennium B.C.E. gradually brought about the end of sedentary life, as cultures in what would be the Slavic regions took up a more mobile, pastoral lifestyle that would last to the time of the Slavs. However, such is the conservatism of the religious impulse that ancestor worship continued, and somehow a compromise was reached between the new mobility and the desire to keep ancestors close to community life. It is possible that the use of cremation, common among the Slavs, formed part of that compromise, as the souls of the dead were freed from their physical body in the smoke of burning and thus able to follow their descendants on their travels.

The spirits of the dead among the Slavs assumed both benign and malevolent forms. The former were the familiar spirits of hearth and home who even helped with necessary tasks. Malevolent spirits took the form of small, naked, hairy, dark- or red-skinned creatures, often malformed, who had extra fingers or toes or a limp and were large-headed with thick eyebrows, odd teeth, thick lips, long nipples, and no sex organs. They could send out sparks or shriek and squeal to announce their presence but also make themselves invisible. They conferred ills of all kinds, from simple fright all the way to sickness, accident, and death.

That most famous demon of the Slavs, the vampire, a male blood-sucking creature (called a *stryg*), is thought to have originated in the Balkans, possibly from Greek antecedents. The ancient Greeks believed in female demons called Keres (related to a similar type called Lamia) who haunted battlefields especially, tearing apart the dying to free the soul, then feasting on their

flesh and blood. Over the course of the many battles Slavs fought with Byzantine Greeks some apprehension of such creatures could have transferred to them, perhaps from ordinary soldiers who, though Christian, continued to harbor such beliefs. Vampire tales are known from Eastern and Western Slavic areas as well. Russians made offerings to vampires. In later tales, however, it is not fallen warriors who attract vampires, but victims of other kinds of death—drowning, suicide, hanging, and childbirth.

In a concept probably of great antiquity Slavs thought of many bodies of water and streams as connecting the living to the dead. This association took its simplest form in the belief held in Russia, Bohemia, and Slovakia that certain streams were haunted by demons, the souls of humans who had drowned in them, who lay in wait to drag unwary passersby underwater to their death. Again in pre-Christian times waters were probably generally considered portals between the realms of the living and of spirits, both human dead and deities. Thus water could be used in purification; in some places they had the custom of “feeding the waters” with offerings of salt, bread, or fowl.

In Ukraine and Belarus female demons called *rusalki* took the form of pretty girls, nude, wearing only wreaths and garlands of flowers, who haunted waters in winter and then repaired to forests and meadows in the spring. They tempted passersby to join them in dancing under the new Moon, teasing and tickling them until they laughed themselves to death. They were most prevalent and dangerous in May, especially around Whitsunday, possibly because this was the time they were migrating from their winter to their summer haunts. (May was a time when bodies of water, especially springs and wells, were considered dangerous across Europe; for example, in Ireland, on St. Monica’s Day, May 4, hawthorn trees near certain wells were decorated with strips of cloth to placate their spirits; and the decorating of wells, was practiced elsewhere in Britain, Germany, and other countries.)

Among the Southern Slavs were the *vila*, beautiful naked warrior maidens armed with bows and arrows. They bear a great similarity to the Amazons of Greek myth, who, it is thought, had a basis in reality among tribes of the Pontic steppe in the first millennium B.C.E. They are also similar to the Germanic Valkyries in that they danced on mountaintops. As late as the 13th century men left offerings for the *vila*, who lived in springs and caves and under trees and stones.

In contrast to water spirits those of the forest were not human dead but derived from a world apart and independent of humankind. The forest spirits of later Slavic folk belief are closest to pre-Christian deities. The ruler of the forest and its animals, called the *lešij*, had many epiphanies—wolf, owl, whirlwind. He was generally hostile to humans, his character perhaps expressive of the awe the Slavs felt on leaving behind the open forest steppe lands of their original homelands for the dark forests of the north. His consort was Baba Yaga, mistress of the forest. Slavs in formerly Germanic lands adopted the worship of trees; as late as 1156 near Lübeck on the northwest frontier of Obodrite territory people set up a cult place for a god they called Proven, consisting of an oak tree surrounded by stakes.

Agricultural Festivals Slavs also had deities involved with crops and fertility, probably worshipped in seasonal festivals that may underlie later Christian observances. All of these festivals known from Christian times featured singing and dancing, as in folk traditions over most of Europe thought to promote fertility, and the bountiful consumption of alcoholic drink. Rituals with fire and water were performed, both for purification and for invocation of the pair of elements essential for growth: Sun and rain.

A spring ritual still performed in several Slavic countries consists of dressing a straw figure in clothing and, after carrying it in a procession through the village, taking it out to a stream or pond and throwing it into the water. In Poland the figure wears women’s clothes and is called Marzanna (after the month of March, when this ritual takes place, on the spring equinox). In Russia the effigy is male and called Kostroma. The fact that in villages in the former Yugoslavia the effigies, which are made to appear to be elderly persons, are said to have been drowned may suggest that such rituals once involved an actual sacrifice. Alternately the effigies of straw may have been considered an offering of last year’s growth to promote growth in the coming season. Such effigies often featured in Shrove Tuesday (Carnival or Mardi Gras) and other Lententide festivities across Europe. In these contexts the effigies often play the role of scapegoats, with all of the past year’s ills and bad luck laid upon their head, whereupon they are driven out of the village, then drowned or burned. In some places they are considered to represent winter, banished to make way for the spring.

Bathing or being drenched in water in the spring has been a ritual across Europe, probably for purposes of purification, perhaps from

“infection” by the demons of the past winter. In Poland boys throw water over girls on Easter Monday.

Spring festivals culminated with celebration of the longest day of the year, the summer solstice, on one of the church holidays that fell near it, Whitsunday in southern Poland and St. John's Day in Russia. There the festival was known as Kupale; huge bonfires were lit on hilltops (as elsewhere in Europe, for example, Scotland and over much of Britain and in Germany), and people danced around the fire. An important rite (also featured in Britain and thought to be of Celtic origin) was to leap over the fire, getting as close to the flames as possible. Betrothed couples often did this together. People also gathered certain plants and garlanded themselves. Among Eastern Slavs a straw effigy with the head of a horse or ox was burned in the fire. Elsewhere a wheel was set ablaze and rolled downhill, something done in parts of Germany at Easter. Accounts by churchmen allege that the evening ended in an orgy around the fire, but in saying this they may have been trying to rally society's disapproval of a festival that they were trying to abolish; other church accounts claim that such observances were inspired by the devil. (The penalties in village communities, especially to women, of engaging in premarital sex make it unlikely that full-blown orgies were a common occurrence.)

The harvested grain was personified in Slavic lands (again as elsewhere in Europe) by garlanding the last sheaf of corn (a general term meaning any kind of grain crop) and calling it a name such as Grandpa or Old Woman. At the autumn equinox many Slavs still celebrate All Souls' Day by visiting the graves of relatives and ancestors, cleaning them, and lighting candles and having a meal there. A similar practice among Celtic peoples took place on the Roman Church festival of All Souls' Day on November 1, the former Celtic festival of Samhain. It is possible that Celtic customs survived in some areas of Slavdom, such as Poland, that before settlement by Germanic peoples were inhabited by people who were part of the Celtic Hallstatt culture. Alternately they and many of the customs mentioned may be the common heritage of all speakers of Indo-European languages; indeed their primal nature may point to an origin in the earliest Neolithic Age.

Slavic Gods The names of several important Slavic gods were the same or closely related over most of the widely scattered Slavic territories, demonstrating that Slavic religion at the time of the crystallization of Slavic identity in the late

fifth and sixth centuries had begun to develop beyond ancestor worship and belief in a multitude of spirits, even though these gods are known only from relatively late sources centuries later, when their religion presumably had developed further as their society changed. Procopius (writing in the sixth century) does provide several details of Slavic religion that correspond to later writings. In particular he writes that they had a god who was the creator of lightning and one supreme ruler over everything, and the god most mentioned in the late sources is Perun, a thunder-and-lightning deity (in Polish, lightning is *piorun*). In addition Procopius mentions that the Slavs worshipped rivers and nymphs.

Perun was associated with oak trees, perhaps because their height attracted lightning—lightning-struck trees were considered holy. Because he provided rain he was also the guardian of fertility. He was the tutelary god of the Kievan Rus dynasty (perhaps identified with the Norse god Thor, if the Rurikids were truly descended from Scandinavians). He may also have been related to the Lithuanian lightning god, Perkunas.

The god Proven, whose sanctuary was made around an oak tree near Lübeck, may have derived from Perun. A statue of Perun was erected in Kiev in 980; he had one also in Novgorod. Perun may have been the original of St. Elias, who in Slavic folk tradition rode through the skies in a fiery chariot. It is not certain what Perun's rites were, but the connection of the oak with midsummer festivities in many places in Europe, where the bonfires were often of oak wood, makes it probable that the St. John's Day fires among the Slavs originated in the cult of Perun. There was a Slavic Sun god, Svarog, but the importance of Perun's lightning bolts would have been that they carried the Sun's fire and fertilizing power directly to humans. In Celtic Druidic tradition mistletoe found growing on an oak tree was a sign that it had once been struck by lightning, and this mistletoe was considered the oak's genitals containing the Sun's fertility. (Balder, the Germanic Sun god, was blinded with a stake of mistletoe.) Among the Celts this concept gained its meaning from the fact that they also worshipped an earth goddess who received this fertilization. Because no information about a Slavic earth goddess (or any important goddess at all) has survived, any such belief among them is uncertain, however.

Folk traditions in southern Poland, Belarus, and Ukraine preserve prayers to the rising and setting Sun, which probably originated in prayers to Svarog, who was also a god of fire,

particularly that of the domestic hearth. An important feature of the summer solstice celebrations were the extinguishing of the family hearth—the only time this was done—and its rekindling using fire from the communal bonfire, which was lit in a ritual way, in Poland by using friction created by spinning a wheel on top of a pole (its height perhaps symbolic of the height of the Sun at this time, and the wheel a symbol of the turning year). Thus Svarog may also have been worshipped at midsummer. He had a major temple in Polabia in the 12th century, with a statue of the god wearing a helmet and cuirass, covered in gold with purple hangings around it.

A third important god mentioned in sources, mainly from Russia, was Volos, god of the cattle herds and possibly in general the god of wealth (of which the herds were a major source). There is some reason to believe Volos was also connected to the cult of ancestors and with the underworld, possibly because the crops (the other source of wealth) rise up from there. The Pomeranian port of Wolin (its Slavic name) may have been named for Volos, perhaps in his function as god of wealth. His connection with wealth and the underworld may be analogous with the Greek god of the underworld, Hades, who had as one of his titles Plutos (wealth). Volos was identified with St. Blasius (who was called Vlas or Vlah in Slavic), patron saint of cattle. The ox-headed straw effigies burned in the midsummer fires may derive from offerings to Volos. Slavic All Souls' Day customs, too, may have originated in his worship.

Other Slavic deities are known by little more than their name. A female deity named Mokosh seems to have been little more than a demon or water spirit, who presided over domestic tasks such as spinning and weaving and over childbirth, her minor character perhaps expressive of the low status of women among the Slavs, as is the practice, mentioned by Pseudo-Maurice and also attested by excavated graves, of widows' being killed, willingly or not, to be buried with their husband.

Conversion to Christianity Attempts to convert the Slavs entered from both east and west, in the context of a further expansion of Christianity, in the seventh and eighth centuries, beyond the realms where it had been established originally under the aegis of the Roman Empire. Hitherto with the exception of Ireland and parts of Germany beyond the former Roman *limes* (boundary) along the Rhine River Christian lands were those that had been part of the empire. Now in these countries—

the Germanic kingdoms of western Europe and the Byzantine Empire—which had been Christian for centuries and were now economically and politically well developed religious fervor (but also a drive for political expansion) resulted in determined campaigns of conversion among the Slavs and others. As in the case of the Bulgarian khanate, Slavic rulers often saw conversion as a means of consolidating their legitimacy and achieving the political stability they observed in Christian states. It also opened access to acceptance for a new state by the civilized world, which despised paganism. (The Frankish king Dagobert is recorded to have rejected the Slavic ruler Samo's offer of an alliance by saying that it was not possible for Christians to treat with “dogs.”)

The first to experience efforts at conversion were the Southern Slavs in the ninth century, when the Bulgar khan Boris forcibly converted his subjects. The Polabian Slavs were converted in the context of their conquest by the Carolingians in the 920–960s. By the later 10th century Poland, Russia, and most of Slavdom had become Christian.

Some scholars have made the intriguing suggestion that the simple and austere material culture of the early Slavs expressed a conscious condemnation of the luxury goods culture of the Goths and other Germanic tribes who had been heavily affected by trade and other relations with the Romans, and a deliberate renunciation of such “conspicuous consumption” by elites in favor of a more egalitarian society. Even in the German lands where Slavic culture became dominant the violent events and social disorders that had set the Germanic tribal migrations in motion centuries before many of them caused by the militarization of Germanic societies under Roman influence, could have caused many Germanics to long for their own simpler and more egalitarian past, this longing being symbolized by their abandonment of Germanic cultural markers. In particular Germanic and other central European tribes' involvement in the Roman slave trade, their centuries of raiding on simple villages to capture slaves for the insatiable Roman market, may have made the new, simpler Slavic way of life attractive.

A problem with this view is that in about a century or less the Slavs in their turn had developed a warrior elite society, perhaps in emulation of the Huns and Avars, and had begun engaging in savage raids to plunder Byzantine

territory, on a par with any carried out by the Germanic Vandals. Their material culture became more complex as they began decorating their pottery and making richly inventive fibulae, horse trappings, women's jewelry, and other metal objects. By the eighth century they were engaging in a luxury trade that deposited numerous silver coins into Slavic lands. It seems unlikely that if the Slavs had such an ideology they would have abandoned it so quickly, since traditional societies tend to be conservative and resistant to change. Their reaction to Byzantine civilization probably paralleled that of Celtic and Germanic peoples when confronted with the earlier Roman Empire.

More plausibly their culture arose out of the circumstances of their life. The collapse and disappearance of the Cherniakhovo culture in central and eastern Europe resulted from the Hunnic invasion, which drove many Goths from the region and pulled others into invasions of Roman territory to the west and south. Most of the Germanic groups, particularly their elites, were drawn as moths to the candle to the guttering Roman Empire with its wealth and its civilization (treasured by many Germanics at least as greatly as its gold). The highly accomplished craftsmen of the Goths and others must have followed the elites, who were their only audience and market. It may well be that the Slavs' pots were crude because no one was left who knew how to make them any better. And this may speak to the nature of early Slavic society in general. The Slavs and those who joined them were perhaps the common people who had always lived in these regions and who remained behind when the great pageant of war, conquest, legendary victories, and the fabulous wealth these introduced, passed into history.

Slovaks

The ancient Slovaks were a tribe or tribes of Western SLAVS, centered in present-day Slovakia near the CZECHS. They are ancestral to Slovaks (modern) now living in Slovakia and neighboring countries (see SLOVAKS: NATIONALITY). The name Slovak is derived from the same root as Slavic.

ORIGINS

The earliest material evidence of Slavic settlement in the region of present-day Slovakia dates from the middle to latter sixth century. Our knowledge of Slavs in this region at this time is mostly gained from archaeological finds, pottery, house types, and other artifacts. Pottery here has affinities with Korchak pottery in present-day Ukraine and a pottery type found in southern Poland (Mogila). As does the latter it consists of tall vessels—as was all early Slavic pottery, crudely made by the standards of the time elsewhere in Europe. As elsewhere in Slavdom the

precursors of the Slovaks had a very simple culture, living in small, square, sunken-floored huts and burying their dead in small, flat (lacking in mounds or tumuli), urned cremation cemeteries.

The material culture characteristic of Slovakia at this time had affinities with that in contemporary Poland; in its early stages the Slovak language was similar to South Slavic languages; thus the question of where Slavs here originated—Poland, the Danube valley to the south, or elsewhere, possibly Ukraine or Moldova—is difficult to answer, and no consensus has yet been reached.

The migration of Slavs here coincides in time with Slavic migrations across a wide region of central and eastern Europe, known to have taken place during the sixth century C.E., into many of the lands that have Slavic populations today. The impetus for this widespread migration is not known with certainty. It may have begun as part of a twofold process, Slavs moving into territory without rulers as elites among the GERMANICS moved out of central and eastern Europe toward the toppling empire of the ROMANS, some hoping for plunder, others hoping for lands where they could settle away from the HUNS and other steppe peoples invading at this time; at the same time tribes who formed a Slavic confederacy somewhere between the Lower Danube and western Ukraine in the late fifth and early sixth centuries developed a warrior elite, probably in part under Hunnic influence, which began to move into lands vacated by Germanic groups, including areas of Slovakia.

LANGUAGE

The Slovak language is part of the West Slavic branch, which includes Czech and Polish as well as a number of other less widespread languages. Modern Slovak has three main branches: That in the west has strong Czech influence; in the central region the language is influenced by the South Slavic languages Serbian and Croatian; and in the east there is a Polish influence.

HISTORY

In about 545 C.E. Ildigis, a prince of the LOMBARDS, led a group of Germanic and Slavic warriors across the Middle Danube possibly from southwest Slovakia or northeastern Austria.

In the seventh century in southwestern Slovakia along the Danube basin, the Slavic culture had blended with that of the AVARS, steppe warriors who in the latter sixth century had arrived in the Lower Danube region and created a powerful hegemony there. Slavs there and in

Slovakia were absorbed into the Avar khanate and joined them in major episodes of raiding throughout a wide region of central Europe.

Emergence of the Moravian State and the Annexation of Slovakian Territory

In the ninth century centralization of power led to the construction of major strongholds in the Morava River valley west of Slovakia in the present-day Czech Republic, in part because of events in the Avaro-Slavic zone to the southeast. The destruction of the Avar polity by Emperor Charlemagne of the FRANKS and by the BULGARS, Turkic steppe peoples, in 793–796 probably furnished the impetus for the rise of powerful leaders in this region, both to provide defense and to take advantage of the power vacuum created by the Avar collapse. Early in the next century leaders from here met with Carolingian Frankish emperors at Aachen in 811, Paderborn in 815, and Frankfurt in 822. During this period a Slavic tribe in the area, known as the Marharii, began to be called MORAVIANS.

Expansion was led at first by the Moravian prince Mojmir, eastward into the Slovakian mountains in the 830s, taking territory of the Slovak tribe, and continued under Prince Rostislav. From then until the demise of the Moravian state Slovak tribes were under Moravian hegemony. Under Rostislav a crucial component of state formation in the early Middle Ages was accomplished when he converted to Christianity and made it the religion of his polity. To avoid the Roman Catholic Frankish sphere of influence, Rostislav looked to Byzantium's Eastern Church for guidance, and in 863 two Slavic brothers from Thessalonica, Cyril and Methodius, entered Moravia to found a church there. The brothers translated the Gospels and liturgical books into Old Church Slavonic in a precursor, devised by Cyril, of the Cyrillic alphabet.

The rise of Moravia was seen by the Franks as a serious threat, especially with the founding of the Moravian Church. When Rostislav was captured by the Frankish king Louis II the German in 869, Louis had him blinded, making him unfit to rule. But Louis recognized Rostislav's nephew, Svatopluk, as his successor of a legitimate kingdom. After the death of Methodius in 885 Svatopluk took care to appease Louis by banning the Slavic liturgy.

Expansion continued both east and west through the ninth century, although its extent is a matter of controversy (former claims of Moravian annexation of Silesia and even Pannonia have come into question). But it is likely that the Moravians took Bohemia into their

control. The Moravian state had only a brief existence; it was swept away by the MAGYARS, raiders from the forest zone north of the eastern steppe lands, some of whom Rostislav had invited to raid against the Franks in 862. The Magyar leader, Árpád, gained political power through this experience (and no doubt was tempted by Moravian wealth). In 894 Magyars helped the Moravians against a Bulgar-Frank alliance. With the death of Prince Svatopluk in 894 dissension among his three sons was further stirred up by Arnulf, king of the East Franks. When PECHENEKS began invading the Magyars' homeland, clans under Árpád moved west into Pannonia. The East Franks decided to turn the weapon used against them back on the Moravians and urged the Magyars to attack Moravia. In their now much greater numbers the Magyars succeeded in destroying the Moravian state by 906. The Moravian strongholds lay abandoned for some one hundred years.

In about 936 Boleslav I of Bohemia apparently sent forces into northern Moravia. At the beginning of the 11th century Boleslaw I the Brave of Poland arrived in Moravian territory and annexed it and part of present-day Slovakia. He seems to have found the territory depopulated, because the fortifications he built there and pottery remains of his occupation look like those in Poland, as though he had had to take his own artisans with him. Bohemia drove the POLES from Moravia in 1019. Parts of Moravia and Slovakia were taken by Germans in 1034.

Enduring Identity

From this time until the 20th century Moravia was attached to Bohemia (both passed into the hands of the Austrian Hapsburgs in 1526). Slovakia was linked to Hungary and, after the Ottoman Turks took the rest of Hungary in the 16th century, to Hapsburg Austria. The two regions were united as Czechoslovakia in 1918; Moravia lay between the Czechs on the west and the Slovaks on the east. Inequality of socioeconomic status between the Slovaks and Czechs (Czech territory was more developed, urban, and wealthy than the mountainous Slovak territory) provoked resentment and friction between the two groups. In 1992 the union of Slovakia with the Czech Republic (the former Bohemia and Moravia) was peacefully dissolved.

The overwhelming majority of people who consider themselves Slovaks live in Slovakia, but small numbers of Slovaks live elsewhere in central Europe. These countries, in order of Slovak population size, are the Czech Republic, Hungary, Serbia and Montenegro, Romania, Poland, Austria, Ukraine, and Croatia.

CULTURE (*see also* SLAVS)

Government and Society

Avaro-Slavic Culture Archaeologists have found evidence of a mixed Avaro-Slavic culture in present-day Slovakia and Hungary. Slavs here buried their dead in large cemeteries attesting to stability of settlements. However, there is major disagreement between Hungarian and Slovakian researchers as to the ethnic affinities of the deceased in these cemeteries. The graves fall into two categories, those with clearly Slavic material and others with Avar artifacts, the most prominent being the Avar stirrup. Yet Slovakian scholars claim that graves with Avar artifacts belonged to Slavs who had adopted Avar dress and equipment, while Hungarians believe them to contain remains of foreign nomads, based on skeletal traits, possibly evidence of a new wave of steppe nomads. National bias on the part of the Slovaks and the Hungarians with their steppe nomad heritage seems to have entered into the debate. Thus it is uncertain whether these artifacts of late Avar type from the mid-eighth century were brought in this migration or were the products of a local development. In any case, the material culture here was quite rich by Slavic standards; there are even glass vessels, probably imported from Frankia.

Both Avars and Slavs were buried in western Slovakia in an area between the Danube and southern Carpathians. Cemeteries here are quite large, one near Bratislava having a thousand graves. Some of the burials had grave goods; typical artifacts of Slav graves were S-shaped temple rings. Pottery found in these cemeteries was decorated by incising wet clay with a comb-shaped implement to make parallel lines, either straight or curving, or by stamping. Some pots were wheel thrown. In general, Slavs here had reached a higher state of development, under Avar influence, than Slavs in other regions.

Rise of the States The Moravians during the height of their power built the first Slavic urban centers, massive strongholds sited on river crossings, with stone churches. The rise of the state was accompanied by a marked increase in wealth among the elite, documented by the fine silver jewelry, influenced by Byzantine designs, that has been found.

Dwellings and Architecture

Strongholds built in Slovakia as Moravian power was increasing have a distinctive structure. Outer drystone walls were backed by timber structures filled with earth. The central areas were surrounded by a series of contiguous enclosures, the

central areas of elite dwellings, the external enclosures inhabited, perhaps, by craft workers.

As Moravian power grew the form and siting of strongholds changed. Now they were built not on hilltops as earlier but on river crossings. The multiple enclosures were no longer contiguous, but in clusters. The massive buildings were accompanied by churches, either rotundas or basilicas.

Religion: Folk Beliefs

According to their folk belief the Slovaks, as were other nearby Slavs, were sometimes visited by demons or spirits called *vila*, beautiful naked warrior maidens armed with bows and arrows. The *vila* danced on mountaintops as did witches, earlier the Valkyries in Germanic lands, and the Amazons of Greek mythology. As late as the 13th century men left offerings for the *vila*, who lived in springs and caves and under trees and stones.

The Slovakian journey from a tribe identified as Slovaks to the modern nation called Slovakia lasted a millennium and a half. During that time the Slovakian homeland has been a part of the history of many peoples and cultures.

Slovaks: nationality (Slovakians; people of Slovakia)

GEOGRAPHY

Slovakia is landlocked by Hungary to the south, Austria to the east, Czech Republic to the northwest, Poland to the north, and Ukraine to the east. The total area is 18,933 square miles. The Little Carpathians, the White Carpathians, and the Tatry, all part of the Carpathian Mountains, make up northern Slovakia. Gerlachovský is the country's highest point, measuring 8,711 feet, and is found in the High Tatry Mountains. The Low Tatry Mountains make up central Slovakia, and the Lesser and Greater Fatra Mountains lie to the west. The arable Danubian lowlands lie to the southwest. Unique caves mark the country; the Demänovská caves are found in central Slovakia, and the Domica are near the Hungarian border. The Danube, forming the border with Hungary, is the principal river.

INCEPTION AS A NATION

SLAVS, in particular tribal SLOVAKS, migrated to present-day Slovakia in the sixth century C.E. In 830 the Slavic ruler Mojmir I formed Greater Moravia, encompassing Bohemia, Slovakia, southern Poland, and western Hungary.

By 906, the MORAVIANS fell under Hungarian rule. The dynasty known as Premyslids united the CZECHS of Bohemia and expanded territory under supervision of the Holy Roman Empire. By 1212 Holy Roman Emperor Frederick II organized an autonomous Bohemian state within the Holy Roman Empire. Bohemia was expanded in 1335 to include part of Silesia. Jogaila (Vladislav II), king of Poland and Hungary, ruled Bohemia in the 15th century. The Austrian Hapsburg Ferdinand I ruled over Hungary and Bohemia from 1526.

At the end of World War I in 1918 Austria-Hungary disbanded; Czechs and Slovaks united in the independent state of Czechoslovakia. Bohemia, Moravia, portions of Silesia, Slovakia, and later Ruthenia were part of Czechoslovakia. By the terms of the Munich Conference of 1939 Czechoslovakia ceded Sudetenland to Germany; Hungary and Poland later divided parts of Czechoslovakia between them. Under pressure from Hungary and Poland, Slovakia separated from the country, declaring a short-lived independence.

During World War II (1939–45) Nazi Germany occupied Bohemia and Moravia, forming a protectorate. At the end of the war, Czechoslovakia's republic was reestablished, aided by the Soviet Union (USSR), which then annexed Ruthenia. In 1993 Czech and Slovak leaders agreed to partition Czechoslovakia into two independent states, the Czech Republic and Slovakia.

CULTURAL IDENTITY

The national cultural identity of Slovakia is something of a self-conscious intellectual construct, although rooted in genuine differences between Slovaks (the people who live in the territory of what was once the medieval Moravian state) and Czechs. In the late 18th century a national movement began in Slovakia, with the aim of fostering Slovak culture and identity. One of its leaders was Anton Bernolák, a Jesuit priest who codified a Slovakian literary language based on dialects used in western Slovakia. The famous classical poet Ján Holly of the first half of the 19th century wrote epic poems in alexandrine verse in order to prove the Slovakian language malleable enough to be equal to complex forms of ancient poetry.

SLOVAKS: NATIONALITY

1969	Soviet Union (USSR) establishes Socialist Federal Republic, which includes Czech and Slovak constituent republics.
1976	<i>Obchod na korze</i> (<i>The Shop on Main Street</i>), directed by Ján Kadár and Elmar Klos, wins Academy Award for best foreign-language film.
1989	Velvet Revolution ends, terminating Communist regime.
1992–93	Czechoslovakia is divided into Slovakia and Czech Republic.
1995	Slovakia and Hungary sign Treaty of Friendship and Cooperation, reaffirming borders.
1999	Rudolf Schuster, directly elected by people, becomes president.
2004	Slovakia joins North Atlantic Treaty Organization (NATO) and European Union (EU).

Also in the 19th century the Protestant scholars and leaders Ján Kollár and Pavel Josef Šafárik developed a form of written Slovak that combined the dialects used in central Slovakia

and the Czech lands. Both writers adopted the 18th-century German philosopher Johann Gottfried von Herder's concept of the glorious future reserved to Slavs, and they became the

most important promoters of pan-Slavism. Hollý, Kollár, and Šafárik greatly helped to awaken national conscience and showed the way to the creation of native literature.

The linguist and Slovak nationalist Ľudovít Štúr, a contemporary of Kollár's and Šafárik's, rejected the Czech influence. Inspired by the philosophy of German Georg Wilhelm Friedrich Hegel, he developed the concept of Slovakian romanticism, whose main characteristics are the preeminence of patriotic thought and the attachment to popular traditions. Štúr set out to develop a more authentic literary Slovak; his language was adopted by a group of Slovak poets, whose work dealt largely with national Slovakian themes. Poetry remained an important literary form into the 20th century, used by some Slovak writers to address the experience of World War II and the rise of Communism. During the Communist period Slovakian literary culture suffered from heavy governmental control. The works of Dominik Tatarka, Ľuboš Jurik, Martin Butora, Milan Šimečka, and Hana Ponická were exceptions to the pattern of politically influenced works.

The development of Slovakian culture reflects the country's rich folk tradition, in addition to the influence of broader European trends, particularly from France. Folk arts and crafts, which include wood carving, fabric weaving, and glass painting, have a long and popular tradition in Slovakia, especially in rural areas. Examples of folk architecture, such as wooden churches and brightly painted houses, are found throughout the country. The impact of centuries of cultural repression and control by foreign governments is also evident in much of Slovakia's literature, art, and music, in the recurring theme of defending the very existence of the nation.

Slovenes (Sloveniani; Slovenians)

The Slovenes are descendants of a tribe or tribes of Southern SLAVS who settled in the eastern Alps by the late sixth or early seventh century C.E. They are among the ancestors of the Slovenes

now living in Slovenia and neighboring countries (see SLOVENES: NATIONALITY). A tribe known as the SLOVIENIE has a different tradition.

ORIGINS

The peoples who became known as Slovenes probably first migrated westward across the Hungarian Plain to the eastern Alps from present-day Romania in the sixth century. Some of them may be descendants of Slavic peoples referred to by ancient writers as ANTES and SCLAVENI. The name Slovenes did not appear in written sources until the 16th century.

The migration of Slavs to the eastern Alps was part of a "second wave" of the Slavic migrations across a wide region of central and eastern Europe, known to have begun during the sixth century, into many of the lands that have Slavic populations today. The impetus for this widespread migration is not known with certainty. It may have begun as part of a twofold process; Slavs moving into abandoned territories as tribes and tribal confederacies of GERMANICS, such as that of the GOTHs, moved out of central and eastern Europe toward the toppling empire of the ROMANS, some hoping for plunder, others hoping for lands where they could settle away from the AVARS and other steppe peoples invading at this time; also at the same time tribes who may have joined into a Slavic confederacy somewhere between the Lower Danube and present-day western Ukraine in the sixth century developed a warrior elite, probably in part under Avaric influence, which began to move into lands vacated by Germanic groups, including areas of Slovenia.

In the mid-seventh century Slavs expanded up the valleys of the Drava, Sava, and Mura Rivers into the flanks of the eastern Alps and had also settled large areas of the Roman coastal province of Dalmatia (which includes parts of modern Montenegro, Bosnia and Herzegovina, and Croatia) by 642. Those in the eastern Alps apparently joined indigenous populations, including Germanic groups, to

develop the Carinthian culture of the seventh and eighth centuries in present-day southern Austria and surrounding areas, which has Germanic elements as well as elements rooted in the culture of late antiquity. Slovenian scholars consider modern Slovenes to be descendants of the CARANTANIANS (Carinthian Slavs).

LANGUAGE

The Slovenian dialect is part of the South Slavic branch, which includes Serbo-Croatian, Bulgarian, and Macedonian. Slovenian is written in the Latin alphabet, unlike Serbian and many other Slavic languages, which are written in the Cyrillic alphabet.

HISTORY

Migrations

It is thought that Slavic groups migrated westward in response to the arrival of the Avars on the Lower Danube River in 561 C.E. and probably arrived in the Alps by the early seventh century. The early history of Slovenia is uncertainly known. A Frankish merchant named Samo, in 623, according to a Frankish account written in the 660s, led Slavs living somewhere on the Frankish borders in a successful revolt against the Avars, founding a kingdom there. It is plausible that Samo's kingdom was located in present-day Slovenia, closer to the Avars. In any case it is thought that some among its inhabitants founded the state of Carantania, but it was at the mercy of the Avars.

Power Struggle

Around 740 the Carantians rebelled against Avar rule and invited the duke of Bavaria to protect them. They became Christianized under Bavarian influence. The Carantians came under the rule of the FRANKS in 788 when Charlemagne overthrew the duke of Bavaria. They are thought to have gained significant territory in present-day Austria as well as Hungary and Slovenia. The Carantians were also pressured by the MAGYARS, who settled Hungary in about 895. Otto I, king of Germany and Holy Roman Emperor, incorporated most of these lands into the duchy of Carinthia in 952.

Enduring Identity

Over the centuries the Slovene identity took shape. Carinthia, with its mixed population of Germanic and Slavic groups, remained part of the Holy Roman Empire until in 1918 it became part of a new state, the Kingdom of the Serbs, Croats, and Slovenes (renamed the

Kingdom of Yugoslavia in 1929), a federation largely spearheaded by SERBS who expected to dominate their fellow southern Slavs. Slovenes, like other non-Serbs in the kingdom, resisted this. In April 1990 as Communist power crumbled throughout eastern and central Europe Slovenia held the first multiparty elections in former Yugoslavia since World War II. The winning coalition called for independence, and nearly 90 percent of Slovenia's population voted for independence in a referendum in December 1990. The independent Slovenian state was recognized by the European Union in 1992. The name Carinthia has endured as a state in southern Austria (see AUSTRIANS: NATIONALITY).

The overwhelming majority of people who consider themselves Slovenes live in Slovenia, small numbers of Slovenes live elsewhere in central Europe; in order of Slovene population size, Italy, Austria, Croatia, Serbia and Montenegro, and Hungary.

CULTURE (see also SLAVS)

In the ninth and 10th centuries a rich culture developed in Carinthia, characterized by richly enameled jewelry.

From the eighth century the Slovenes were converted to Western Christianity by Italian and German missionaries. In the ninth century monks trained in the Eastern Orthodox Slavic

A Slovenian woman poses in traditional clothing in this 1897 photomechanical print. (*Library of Congress*)

rite in Moravia were expelled and sought refuge in Slovenia.

The Slovenes have retained many elements of their traditional culture to modern times. Austrian Slovenes struggled to do so in the face of accusations by other Austrians that this made them unpatriotic. Both the long dominance of German culture in western Slavic lands and “pan-Slavism,” a movement championing Slavic identity first spearheaded by Russians in the 19th century, which Slovenian intellectuals embraced as a means of opposing German dominance, have tended to polarize people of Slavic and Germanic descent, especially those who live close to one another.

Sea) to the west. Slovenia has an area of 7,820 square miles. The terrain is generally mountainous and forested. The Karst, a limestone plateau, lies in the east, occupying a third of Slovenia. The Julian Alps lie to the northwest, where the highest peak, Mount Triglav (9,393 feet), is found. Principal rivers include the Mura, the Drava, and the Sava.

INCEPTION AS A NATION

Tribal **SLAVS** settled the region that would become Slovenia in the sixth and seventh centuries C.E. In the early eighth century some of them became a part of the state of Carantania. In defense against the **AVARS**, the **CARANTANIANS** put themselves under the protection of Bavaria in about 740 C.E. Carantania was later subjugated by the **FRANKS**.

The region was recognized, reorganized, and expanded as a duchy under the Holy Roman Empire in 952. In 1335 Slovenian lands became part of the Austro-Hungarian Empire. The region was briefly part of the Napoleonic Empire from 1809 to 1814, before Austro-Hungarian domination resumed.

Slovenia became part of the Kingdom of the Serbs, Croats, and Slovenes when the Austro-Hungarian Empire fell at the end of World War I in 1918; it became known as Yugoslavia in 1929. After the Germans invaded in 1941 Yugoslavia was reorganized. When World War II ended in 1945 a Communist Yugoslavia was reestablished. Slovenia added Slovenian-speaking areas along the Adriatic to its territory in 1947.

The Slovenes were increasingly dissatisfied with Serb-dominated Yugoslavia during the 1980s and, after the dissolution of the Soviet Union (USSR) and end of Communist power in the region, they declared their independence in 1991.

CULTURAL IDENTITY

Because of Slovenia's location on one of the crossroads of Europe and its varied terrain, creation of a common cultural identity has not been easy. The geographical location between two very strong cultural and political regions, Italian and German, has had significant influence on the way of life in Slovenia. With a population of only 2 million the Slavic people have always had to struggle to maintain their cultural identity surrounded by more dominant cultures and until recently without their own state. Cultural identity has been preserved mostly through a strong commitment to the arts.

In recent years Slovenians have increasingly focused on the very variety of their cultural tra-

ditions as perhaps being the essence of Slovenian identity, rather than seeking a single tradition around which the people can unite. A country whose landscape includes high alpine fastnesses, a warm Mediterranean coastal region, and the harsh Karst plateau was bound to develop differing traditions, and Slovenians are seeing this as a reason to celebrate, those from each region looking to the traditions of others with fascination and appreciation.

In such a small country important cultural institutions loom large as a focus for national and cultural pride. Perhaps the most important such institution in Slovenia is the Slovenian Philharmonic, which recently celebrated the 300th anniversary of its predecessor, the *Academia Philharmonicorum Labacensis*. The official reopening of the renovated 110-year old building was attended by the country's president.

Slovenie (Slovenians)

The Slovenie are classified as a tribe of Eastern **SLAVS**. They migrated north from the Ukraine into a territory south of St. Petersburg and west of the Volga River (near the Sopki mounds) in present-day northwestern Russia in about the ninth century C.E. They took over an area previously inhabited by **BALTS** and **FINNO-UGRIANS**.

Slovintziq *See* KASHUBES.

Smertae

The Smertae are classified as a Celtic tribe. They lived in Britain in present-day northern Scotland at least by the first century C.E. and are further discussed as **CELTS**, **CALEDONIANS**, or **SCOTS**. It is possible that they were **PICTS** and not Celtic speaking, however.

Sorbs (Sorbian; Lusatian Sorbs; Lusatians; Serbs of Luzice; Wends)

The Sorbs are a former tribe and a current ethnolinguistic group of Western **SLAVS**, living between the Saale River, a tributary of the Elbe, and the Neisse River, a tributary of the Oder, in present-day eastern Germany (*see* **GERMANS**:

NATIONALITY). The name Sorbs is used interchangeably with WENDS a name given to Western Slavs by the FRANKS to apply more generally to Slavic peoples living between the Elbe and Oder Rivers, including the Lusatian Sorbs (the name Lusatian derived from a possibly tributary tribe of the Sorbs, the VELETIANS), as well as tribes once living to their north, such as HAVELIANS, OBODRITES, POLABIANS, and RANIANS. The whole region is sometimes referred to by Slavic scholars as Polabia, after the Polabian language that was spoken in the north until the 18th century.

ORIGINS

The earliest evidence of Slavic settlement of Sorb territory dates from the second half of the seventh century C.E. (dated by dendrochronology to the 660s). This is pottery considered to be of the Prague culture that had emerged in Bohemia (modern Czech Republic) the previous century. Prague pottery in Sorb lands is found in areas formerly settled by tribes of GERMANICS near the Elbe, Saale, and Havel Rivers, and its makers could have migrated there from Bohemia.

The Prague culture replaces the earlier Germanic material, as Slavs seem to have moved onto lands that had previously been cleared, although pollen evidence shows that in some places the forest had begun to regenerate. Thus the appearance of the Prague culture coincides with the disappearance of Germanic cultural markers both in Bohemia itself and in adjacent areas of eastern Germany, either because Germanic peoples left the area, because they had adopted Slavic culture, or because both occurred. Prague Culture material differs from that of earlier Slavs in Bohemia; this could have come about through contributions from Germanic peoples who had joined the Slavs. In Polabian territory north of the Elbe-Saale region the culture is even more distinct from that of most Slavs, making a rapprochement between incoming Slavs and indigenous Germanic peoples even more likely. As elsewhere in Slavdom the Sorbs and Polabians had a very simple culture, living in small, square, sunken-floored huts (although in Polabia huts were built with ground-level floors) and making pottery that, by the standards of the time elsewhere in Europe, was no more than crude.

The migration of Slavs here coincides in time with Slavic migrations across a wide region of central and eastern Europe, known to have taken place during the sixth century, into many of the lands that have Slavic populations today. The impetus for this widespread migration is not

known with certainty. It may have begun as part of the twofold process mentioned: Germanic tribes and tribal confederacies, such as that of the GOTHs, moved out of central and eastern Europe toward the toppling empire of the ROMANS, some hoping for plunder, others hoping for lands where they could settle away from the AVARS and other steppe peoples invading at this time; at the same time tribes who formed a Slavic confederacy somewhere between the Lower Danube and western Ukraine in the late fifth and early sixth centuries developed a warrior elite, probably in part under Avaric influence, which began to move into lands vacated by Germanic groups, including in the Elbe-Saale region.

LANGUAGE

The West Slavic dialect still spoken by the modern-day Lusatian Sorbs is known as Sorbian, Lusatian, or Wendish. There are two Sorbian dialects, Upper and Lower. Upper Sorbian resembles Czech; Lower Sorbian resembles Polish. Both have a Germanic influence. Sorbian is a distinct dialect from the now-extinct Polabian of the Western Slavic tribes who once lived to the north.

HISTORY

The emergence of a tribe called the Sorbs is documented by Frankish sources from the seventh century C.E. The Sorb ruler, Derevan, called in Frankish sources a *dux* (duke), was allied in the 660s with Samo of the Franks, who led a Slavic revolt against the Avars, steppe warrior nomads who had subjugated Slavs and others over a wide area in the Middle Danube region south of Sorbian territory.

Sorbs and Franks

The Sorbs, along with other Slavs in their region, had increasing contact with the Franks as a

result of Charlemagne's wars in 772 to 804 against the SAXONS. Charlemagne established the Sorbian (or Lusatian) Mark as one of a number of frontier or buffer regions between Frankish territory and that of Slavs to the east. These included the tribes that, led by the CZECHS, would establish the Bohemian state during the ninth and 10th centuries. The Sorbian Mark, established to defend against the Sorbs northwest of Bohemian territory, was bounded by the north-flowing Saale River, with Sorbian territory along the river's east bank. The Franks referred to those Slavic tribes between the Oder and Elbe Rivers as Wends and their territory as Wendenland. These included the other Western Slavic tribes, such as the Havelians, Obodrites, Polabians, Ranians, Veletians, and the group now known as Sorbs or Lusatian Sorbs.

Sorbs, Magyars, and Czechs

In the 10th century MAGYARS, raiders from the forest zone north of the eastern steppe lands, attacked tribes along the Elbe and Saale Rivers, including the Sorbs. It is probable that with the formation of the Bohemian state at this time by the Czechs, Sorbs were under Bohemian influence of some kind, although details of this influence are not known.

Sorbs and the German Empire

Sorbs clearly were influenced by the German Empire, as attested by pottery that has been found. Strongholds were built along the Sorbs' western frontier; as the Sorbs were not nearly organized or powerful enough to withstand German might directly, these strongholds probably belonged to Sorbian leaders who were allies of the Germans and who had become wealthy through German diplomatic gifts.

By mid-century, however, as part of the German *Drang nach Osten* (drive to the east) begun in 928 and continued by Otto I after 948 the Sorbs' Elbe-Saale and other Slavic territories were annexed in German military campaigns that pushed the German frontier to the east with a new frontier along the Middle and Lower Oder River. Territories were organized around the former tribal territories, and the Lusatian Mark now included the whole of the Sorbs' lands. Part of the motivation for the *Drang nach Osten* was the same as that for Charlemagne's Saxon wars: conversion of pagans to Christianity. This was of a piece with drawing them politically into the German Empire. What seems crass calculation pure and simple may therefore well have been sincere. At this time nothing like the modern concept of the separation of church and state

existed. The Germans modeled their empire, which later became known as the Holy Roman Empire, on that of the ancient Romans; documents of the time referred to subjects of the empire, wherever they lived, as Romans, the faithful of the Roman Catholic Church. The empire was the God-appointed earthly realm of Christians, and the German emperors ruled with the sanction of the papacy. In their eyes it was part of their duty as rulers to draw pagans into the fold.

In Polabian and Obodrite territories the campaigns of this time were bloody and violent, as the population resisted fiercely. Whole tribes were nearly exterminated. Part of the impetus for resistance here was a resurgent paganism, as pagan priests instigated revolt. By the end of the 10th century the Germans had been driven out of the Polabian and Obodrite territories, which remained independent until the late 11th century. In Sorbian territory there was much less resistance, and after their annexation in the 10th century they became absorbed into the social and political system of the German Empire.

Modern Lusatian Sorbs

A number of communities of Lusatian Sorbs still exist in eastern Germany, mostly in the states of Saxony and Brandenburg. Although the Sorbs were persecuted by the Nazis before and during World War II (1939–45) after the partition of Germany Soviet Russian influence in East Germany ensured that the Slavic Sorbs were well treated (because of the pan-Slavism that has been important in Russia since the 19th century). They received generous subsidies from the state. Despite fears that after the unification of Germany Sorb ethnicity would be endangered, the German government through treaty and laws has guaranteed the Sorbs' language and other rights. Some Germans who settled in Lusatia after unification have attempted to reach a rapprochement with the Sorbs there by attending evening classes in Upper or Lower Sorbian and by sending their children to bilingual schools. All Sorb speakers currently live in Germany, and the Sorbian language is maintained in schools. The towns of Bautzen (Upper Lusatia) in Saxony and Kottbus in Brandenburg (Lower Lusatia) are centers of the Sorb community

CULTURE (see also SLAVS)

The Sorbs and neighboring tribes were converted, mostly by force, to Christianity during the 10th century primarily through the efforts of the German emperor Otto I. Otto established the bishopric of Magdeburg in 958 to administer the

church of the Slavs. The first archbishop, Adalbert, was named metropolitan of the Slavs and had in his diocese the Sorbs and neighboring tribes. This situation contrasts with that of other West Slavic polities of the time, such as Bohemia and Poland, that were allowed to establish their own bishoprics (Prague and Poznań, respectively) in their own territories, a crucial step in the formation of independent states. The Sorbs' lack of a native bishopric foretold their absorption into the German Empire.

The Lusatian Sorbs are the only Slavs to have survived to modern times as a geographic and ethnolinguistic group in Germany.

Sotiates (Sotiades)

The Sotiates are classified as a Celtic tribe. They lived in Gaul around present-day Sos in south-western France and are discussed as CELTS or GAULS. Sos takes its name from the tribal name. They were allies of the ELUSATES. They surrendered to the ROMANS under Julius Caesar with the fall of Aquitania in 56 B.C.E.

Spanish: nationality (Spaniards; people of Spain)

GEOGRAPHY

Spain is situated along the Bay of Biscay, France, and Andorra to the north; the Atlantic Ocean to the south and west; the Mediterranean Sea to the south and east; and Portugal to the west. The Balearic Islands in the Mediterranean Sea and the Canary Islands in the Atlantic Ocean are also Spanish territory. The total area of the mainland is 190,190 square miles. The Pyrenees lie in the north, forming the border between Spain and France. The Strait of Gibraltar divides Spain and Africa in the south. The Meseta Central, a plateau, dominates central Spain. The Sierra de Guadarrama, the Sierra de Gredos, and the Montes de Toledo are notable mountain ranges found within the plateau. The Mulhacen (11,407 feet), Spain's highest peak, is found in the Sierra Nevada in the south. The coast is generally made up of broken mountains, especially along the Mediterranean. Principal rivers include the Douro, Miño, Tagus, Guadiana, and Guadalquivir, the most navigable.

INCEPTION AS A NATION

The Iberian Peninsula was the homeland of the IBERIANS and CELTIBERIANS in ancient times. Over the centuries PHOENICIANS, GREEKS, CARTHAGINIANS, ROMANS, VANDALS, VISIGOTHS, and MOORS all established a presence.

The region that would become Spain existed as a number of smaller kingdoms, each intent on regaining lost territory from the Moors in the eighth century C.E. During the Christian Reconquest the kingdoms of Castile and Aragón controlled the regions of Catalonia, Valencia, Mallorca, Minorca, Sardinia, Sicily, southern Italy, and Tunisia. Isabelle of Castile married Ferdinand of Aragón, uniting Castile and Aragón, in 1479. The conquest of Granada in 1492 rid Spain of Moorish rule, and the formation of the Spanish Inquisition ensured a Christian populace. In 1512 Spain acquired Navarre.

Under Charles I, a Hapsburg, in the first half of the 16th century Spain added Belgium, the Netherlands, Luxembourg, Austria, Germany, and American colonies to its control. In 1519 Charles was crowned Holy Roman Emperor. On his abdication in 1556 he divided the empire in two; his son Philip II ruled Spain, the Netherlands, and those

1993 Spain becomes one of original 12 members of European Union (EU).

more colonies during the Spanish-American War in 1898.

In 1931 after the reign of King Alfonso XIII Spain was made a republic. Civil war erupted in 1936; a dictatorship under General Francisco Franco was established by 1939. With Franco's death in 1975 Spain adopted its present constitutional monarchy.

CULTURAL IDENTITY

The formation of the Spanish national identity, as in the case of British nationality, involved a process of the imposition of a single dominant culture and language—those of Castile—on the very distinct cultures and languages of other regions of the Iberian Peninsula, which included the Muslim Kingdom of Granada, the Kingdom of Navarre, and the Crowns of Aragón (a federation of the Aragonese, the Catalanians, the Valencians, and the Balearic Islanders). Castile itself included Asturias, Cantabria, León, the Basque country, Estremadura, and Andalusia. This formation occurred in the context of the building of a great empire.

In 1492 three events that made an indelible mark on the character of Spain as a nation occurred: the triumph of Castilian royal power in overturning the Muslim rule of Granada, thus completing the Christian Reconquest; the expulsion of Spanish Jews in the name of religious conformity; and Columbus's voyage to the Americas, which he claimed for Spain. Christian religious fervor coupled with the fabulous wealth of the Americas drove the building of the Spanish Empire. Sixteenth-century Castilians

saw themselves as successors to the Romans, a chosen people, entrusted with a divine mission, the creation of a universal Christian empire. The seemingly inexhaustible gold from the Americas, which was reserved almost entirely to the Crown, allowed the monarchy to pursue its goals without building a self-sustaining economic infrastructure for the country. The gold acted as an artificial stimulant to imperial dreams of glory long after the international political and economic situation had changed, and Spain's real position of power in the world, aside from its military might, was waning.

Spain fell further and further behind developments elsewhere in Europe that were bringing about the evolution of modern states. In the 18th century despite the challenge of new political ideas from abroad, notably liberalism, Spain remained united beneath and loyal to the Crown and the church. By the 19th century Spain's top-heavy bureaucratic government and its isolation from new ideas contributed to slow economic and industrial development. Insufficient wealth led to persistent regionalism and finally separatism, as the CATALANIANS and BASQUES strove to establish independent states. The GALICIANS also maintained their traditional identity. Economic instability led to years of political turmoil culminating in the Spanish civil war, from which emerged the Franco regime. Under Franco Spain took a giant step backward to a state aimed at restoring the illusory glories of the past. A claustrophobic, conservative Catholicism provided the social orthodoxy of Franco's Spain. In the doctrine of the ruling ideology the progressive forces that were bringing about modernism in the rest of Europe were rejected according to the construct that Protestantism led to the Enlightenment, which led to liberalism, which led to Marxism. The Catholic unity of Spain had been re-created by the victory of Franco. Franco's government even tried to revive the Spain of Philip II as reflected in an architectural style based on that king's monastery palace, the Escorial.

In spite of the government's reactionary policies rapid industrialization and urbanization took place during the 1960s. In other Western societies industrialization, with its associated social, psychological, and environmental ills, had developed gradually over a long period. In Spain the final stage of the industrial revolution, cut short by the civil war, and the advent of the consumer society took place in a country still officially committed to traditional Catholic values, in many ways at odds with the modern world. After the demise

Spaniards stand on a beach with fishing boats in the background in the late 19th century. (*Library of Congress, Prints and Photographs Division [LC-USZ62-108731]*)

of Francoism the loss of official status of the church left many Spanish in a sort of religious and moral limbo that made adjustment to changing times more difficult.

Recent history has caused many Spanish to think of their country as having fallen “behind” the rest of Europe. Many Spanish feel that they have an opportunity and a responsibility to put their country back where they believe it belongs, giving them a sense of national purpose, a sort of instinctive patriotism not found elsewhere in Western Europe.

In post-Franco Spain there has been a concerted effort has been made to undo centuries of cultural oppression of regions by the central government. With the Constitución de 1978 Spain was defined as a culturally pluralistic society, creating “Autonomous Communities” in the various regions and officially recognizing languages other than Spanish. The “national” Spanish cultural identity thus engages in dialogue with the regional cultural identities, notably the two most dominant of Spain’s “historical nationalities,” Catalonia (Cataluña) and Basque country.

Spain today presents a curious mixture of old and new, in part the product of living so long in the “time capsule” of the Franco regime. The status of women has improved, but much more slowly than in the rest of Europe. Only a short time ago women’s working outside the home—especially married women—was regarded as unnatural. Even today in villages women’s work outside the home is regarded as “ugly”; nevertheless it is now a common practice. In the cities the lifestyle is approximately the same as in other European countries. But in the countryside people preserve attitudes and rituals that would have been completely familiar to Europeans centuries ago.

There is growing concern in the rest of Europe, over the degree of cruelty to animals at village fiestas in Spain. Such practices are perhaps holdovers from the distant pagan past. The bullfight probably has its roots in sacrifices of antiquity. Flamenco music is an amalgam of the music of many peoples, among them the Moors, Sephardic JEWS, and RROMA.

Suebi (Suebii; Suebians; Suevi; Sueves; Suevians; Swabians; Swabs)

The tribal name Suebi or Suevi has been used variously in reference to GERMANICS. It has been applied to a tribe with political unity living along the Elbe River in the present-day Czech Republic and Germany in the centuries before 100 B.C.E. It has also been applied to a number of tribes spread out over a wider area, especially to the west as far as the Rhine, who manifested cultural unity in the first century B.C.E. and first century C.E. and afterward. These include the ALAMANNI, HERMUNDURI, MARCOMANNI, NARISTI, NEMETES, QUADI, SEMNONES, TRIBOCI, and VANGIONES. During and after the HUNS’ tenure in Europe in the fourth and fifth centuries the term was applied to Elbe River tribes, and those Germanics, in particular the Quadi, who joined the VANDALS and ALANS in their migration to the Iberian Peninsula, where they established a

kingdom. Those Suebi who remained behind settled in southern Germany and gave their name to the medieval duchy known as Swabia. They also gave their name to their typical hairstyle, the “Suevi-knot,” which became common among the Elbe River Germanic tribes.

ORIGINS

It is thought that the ancestors of the Suebi lived near the Baltic Sea in present-day Germany, which was known to the Romans as the *Mare Suebicum*, and from there spread southward, especially along the Elbe River. The Roman historian Tacitus of the first and second centuries C.E. described the Suebi as inhabiting all of central Germany, and the name Suebi can thus be considered synonymous with Germans during the early centuries C.E.

LANGUAGE

The Suebi spoke a Germanic language. The modern dialect known as Swabian is assumed to have evolved at least in part from it.

HISTORY

Ariovistus

The Suebi became a threat to the ROMANS in the first century B.C.E., as recorded in the writings of Julius Caesar, when they invaded Gaul (roughly modern France and Belgium) to aid the SEQUANI, considered predominantly a Celtic people although perhaps part Germanic. The leader of the Suebi at the time was Ariovistus, who is referred to by the term Suebian rather than by the name of a particular tribe in historical texts. The main Suebian towns at the time were reportedly Argentorac on the Upper Rhine and Manching on the Upper Danube. It is known that the Nemetes, Triboci, and Vangiones were part of his campaign. The allied Germanic force first crossed the Rhine into Gaul in 71 B.C.E. and aided the Sequani against the Celtic AEDUI, allies of Rome. After his campaign against the HELVETII Caesar defeated Ariovistus's army somewhere in present-day northeastern France in 58 B.C.E. Then he turned to the conquest of Gaul.

Although Rome had at first tried diplomatic means of containing the Suebi by making Ariovistus an ally in 60 B.C.E., Caesar in 55 B.C.E. convinced the Senate that the Suebi were a continuing threat and had to be reduced by force, and further that the only means of containing them and other Germanic tribes was to seize control of the whole of Gaul. He raised the specter of Italy and Rome's being overrun by

Germanics as they had earlier been by the CELTS. It seems clear that at least part of Caesar's insistence on conquering Gaul derived from personal ambition. In any case the Suebi furnished Caesar with his excuse to extend vastly the reach of Roman hegemony.

It was not only the Suebi under Ariovistus who were pushing out of Germania; Suebian tribes were trying to move from all along the Elbe due west toward Gaul and southeast toward the middle Danube region. To counter this in the decades after the mid-first century B.C.E. the Romans expanded through the Alps to take control of the Upper to Middle Danube.

Early Centuries C.E.

After the empire's boundaries were secure Romans began trading extensively with many Germanic tribes, including the Suebi. By the second century C.E. the Marcomanni and Quadi were foremost among the Suebi and battled the Romans in what are known as the Marcomannic Wars of 166–180. The Roman emperor Marcus Aurelius led the Roman legions in their eventual defeat.

By 300 Suebian territory was under the control of the Alamanni, a large confederacy of tribes that had formed after the Marcomannic Wars. Roman victories in those wars caused the Suebian tribes and other groups to unite for greater strength, and in their Alamannic organization tribes had become more aggressive than ever before. During the fourth century they moved westward into Alsace, then part of Gaul, in northeastern France and later into the Black Forest and northern Alps.

Dispersion by the Huns

The invasion of Europe by the Huns that started in 370 led to dispersion and relocation of many of the Germanic tribes. By this time the names of some of the groups classified as Suebi had already disappeared from the historical record. Others followed. After the Marcomanni fell under Hunnic control they are no longer recorded as a distinct political entity. Some Suebi, mostly Quadi, migrated into Gaul as allies of the VANDALS and ALANS, part of the great invasion over the frozen Rhine in 406, and three years later migrated onto the Iberian Peninsula. Some Suebi settled in northern Austria. Others, identified as Danubian Suebi, invaded Gaul with the Huns under Attila in 451. Suebi may have been among those people who became known as the BAVARII in present-day southern Germany by the sixth century. In the late fifth and early sixth century the FRANKS

extended their domain eastward, conquering the Alamanni and other Suebian peoples.

Suebi in Spain

The Suebi who migrated to the Iberian Peninsula in 409, led by Hermeric, settled mainly in present-day northwestern Spain, and eventually established an independent kingdom known as Gallaeci (from the tribal name GALLAECI, a presumably Celtic people living there in the early centuries B.C.E.) By 447 under Rechila they had extended their rule southward into the Roman provinces of Lusitania (roughly modern Portugal and the Spanish provinces of Salamanca and Cáceres) and Baetica (roughly western Andalusia). The Suebi in Spain converted to Christianity under Rechiarm, who assumed power in 448. Eight years later they were attacked by BURGUNDII as federates of Rome and finally defeated by the Visigoths under Theodoric II. Although weakened the Suebi maintained their kingdom in Spain until the late sixth century. The last Suebian king, Andeca, surrendered to the Visigoths under Leovigild in 585.

Swabia

The region called Swabia (Schwaben in German), derived from the old tribal name, was a duchy in the Middle Ages—from sometime in the 10th century to its division in 1268. Its territory included roughly present-day Baden-Württemberg, Hesse, and southwestern Bavaria. Some parts of it were known for a time as Alamannia. The mountainous region known as the Black Forest is located there. In the early 19th century people of the region began to discuss the Alamanni and Suebi as separate groups, the inhabitants of the regions of Baden claimed Alamanni ancestry, and those of Württemberg claimed Suebian ancestry. The two regions became merged into one state, Baden-Württemberg, in 1952 (see GERMANIS: NATIONALITY).

CULTURE (see also GERMANICS)

Economy: Trade with the Romans

The Suebi according to a contemporary account were willing to admit traders to their country to exchange their booty from raids more than to receive foreign goods. This may refer to their reputed dislike of wine, which they thought made men effeminate. Or it may have been a proud disdain for the products of Roman civilization. In this the Suebi were different from many of their Germanic counterparts, who eagerly sought Roman luxury goods, including wine. Even their fellow Suebians the

Marcomanni and Quadi were not averse to such goods, and trade with Rome soon had a profound effect on their society. It gave their elites a taste for luxury and awakened in them a spirit of acquisitiveness and competition that gave rise to tensions as warriors resorted to raiding for booty.

Government and Society:

Formation of Tribal Groupings

The history of the Suebi—and that of their tribal name—illustrates both aspects of ethnogenesis (tribal formation) among the Germanic peoples and Roman tendencies in classifying or pinning down the teeming mass of Germanic tribes east of the Rhine. The Suebi were first known to history as a group with a single war leader, Ariovistus; thus their organization then may have been what is called a *comitatus*—war band—rather than a tribe that comprised a whole people, including women and children. By Tacitus's time over a century later the name Suebi was given to people living in a wide region of central Germany, either because the original war band of the Suebi had expanded to become a full-fledged tribe or because the Romans habitually lumped together different peoples under a single name, more for the sake of clarifying classification than of reflecting reality (as in their classification of all peoples west of the Rhine as Celts and all peoples east of the Rhine as Germanics, a vast oversimplification).

Gradually it became clear that a number of tribes, including the Marcomanni and Quadi, were in some sense part of the "Suebi," although it is unclear whether this was the result of Roman classification or whether the name Suebi was being used for one of the militant confederations of tribes that were developing in the second century C.E. The great aggressiveness of the Marcomanni and Quadi argues the latter. Whether the Alamannic confederation was made of tribes that invaded Suebian territory from elsewhere or whether it was simply a reorganization of former Suebian tribes under different leadership is not known.

After the great disruption of the Germanic world by the Huns some tribes formerly named Suebi—such as the Quadi—continued to be known and named in contemporary accounts, for example, of the Quadi's invading Spain. Whether the name Suebi still had any meaning for the Quadi is unknown; Quadi in Spain were called Suebi.

The derivation of the name of Swabia from the tribal name Suebi may mean no more than that

Germanic

scholars of the Middle Ages used a name from Roman sources for a certain territory. The many and varied incarnations of the name Suebi through history illustrate both the great fluidity of ethnic identity among Germanic tribes and the staying power that names recorded in historical literature by Romans and others can have, sometimes taking on a life of their own that may follow paths quite different from those of the people who first bore them.

Suessiones (Suessons)

The Suessiones are classified as a Celtic tribe. They lived in Gaul around present-day Soissons in northern France and are discussed as CELTS or GAULS. They were among the BELGAE who migrated to present-day southern England in 100 B.C.E. Gallic tribal members surrendered to the ROMANS under Julius Caesar in 57 B.C.E. but five years later fought as allies of the ARVERNI under Vercingetorix against the Romans. Augusta Suessionum on the site of Soissons became a *civitas* capital in Roman Gaul; Soissons takes its name from the tribal name.

Suetri

The Suetri are classified as a Celtic tribe. They lived in Gaul in the western Alps around present-day Draguignan near Toulons in southeastern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Sugambri (Sigambri; Sicambri)

The Sugambri are generally classified as GERMANICS, although they probably had Celtic ancestry as well and had a culture similar to that of those CELTS who lived to their west. They lived east of the Rhine between the Sieg and Lippe Rivers in present-day western Germany. The name of the Sugambri is related to the Old High German word *gambar*, for “vigorous.” A tribe mentioned only by the Greek geographer Strabo (first centuries B.C.E. and C.E.), the Gambrivii (Gambrians), may have been related to the Sugambri.

The ROMANS under Julius Caesar crossed the Rhine in 55 B.C.E. and made war on the Sugambri and on their allies living to the north, the USIPETES and beyond them the TENCTERI. The Sugambri, however, remained powerful for years, carrying out raids across the Rhine, such as against the Celtic EBURONES in 53 B.C.E.

In 8 C.E. Tiberius defeated the Sugambri, relocating most tribal members to the west bank of the Rhine at Cibernodorum (modern

Xanten), “marketplace of the Ciberni,” in territory defined as Gaul. This group became known as the Ciberni (also spelled Cuberni or Cugerni); many of their men served in the Roman army. Some MARCI may have been among them. By the early second century C.E. they became known as Traianensis after their new colony name, Ulpia Traiana, for Emperor Trajan. In 69 C.E., some Sugambri joined the BATAVI in an unsuccessful revolt against the Romans.

Suiones See SVEAR.

Svear (Suiones; Sueones; Sweonas)

The Svear are classified as a Germanic tribe. They lived around Lake Mälaren near present-day Stockholm and Uppsala on the east coast of Sweden at least by the first century C.E. Their first mention in the historical record is by the Roman historian Tacitus of the first and second centuries C.E., who referred to them as the Suiones and described their ships with prows on each end.

In the fifth century the ruling dynasty of the Svear was founded. By about 600 the Svear had expanded their domain to include much of Sweden absorbing other tribal groups. The name Svear is derived from Svith, an Old Norse name. In the Old English epic *Beowulf* the tribal name is written as Sweonas.

The Svear were, like other GERMANICS from the area, active raiders and traders. In the Baltic hinterland they encountered SLAVS and BALTS without enough wealth to provide an incentive for raiding. Thus contact with them took the form of trade, mostly in slaves for the Roman Empire, beginning in the first century C.E. By the fifth century gold coins from Byzantium, probably paid as subsidies to the HUNS and OSTROGOTHs, who were menacing the Roman Empire, had filtered north to the Baltic region. Many of these found their way to Sweden, possibly as a result of raiding by the Svear on the weaker local tribes to wrest the gold away from them or possibly in return for furs.

The Svear and tribes they absorbed are considered ancestral to Swedish VIKINGS and the early RUS.

Germanic

language:

Germanic

Swedes: nationality (Swedish; people of Sweden)

GEOGRAPHY

Sweden is situated on the eastern part of the Scandinavian Peninsula; Norway lies to the north and west and Finland to the northeast. The Skagerrak, Kattegat, and Oresund Straits are to the southwest, and the Baltic Sea and the Gulf of Bothnia lie to the east. The Gotland and Oland islands in the Baltic Sea also belong to Sweden. There are 24 provinces in the nation's 173,665 square miles. The mountainous region in northern Sweden (Norrland) occupies two-thirds of the country; lowlands make up the south (Svealand and Gotaland). East of the mountains lies a long plateau that ends at the coastal plain along the Gulf of Bothnia. The plains of Skåne are found in the southeast. More than half of the country's terrain is covered in forests, and less than 10 percent of the land is used for agriculture. The Kjolen Mountains are in the northwestern part of Sweden, forming part of the boundary with Norway. Mount Kebnekaise (6,926 feet) is the highest point. Principal rivers include the Umealven, Angermanalven, Dalalven, Tornealven, and Trysilelya. The two largest lakes, Lake Vanern and Lake Vattern, are found in the south central lowlands. Småland highlands are south of the central lowlands.

INCEPTION AS A NATION

Within the eastern Scandinavian peninsula the SVEAR occupied northern Svealand while the GOTHS lived in southern Gothia. Tribal conflict prevented a unified state and led to migration of VIKINGS until the 12th century C.E. From 1150 to 1160, Erik IX Jedvardsson strengthened and expanded Sweden, notably crusading against pagan Finland.

The 13th and 14th centuries were marked by feudalism until a growing aristocracy removed Albert of Mecklenburg from the throne in 1389. The Danish queen Margaret I united Denmark, Norway, and Sweden into the Union of Kalmar in 1397. A rebellion for Swedish autonomy succeeded in 1523; Gustav I Vasa was declared king and Sweden pulled out of the union, gaining independence as a hereditary monarchy.

Sweden expanded throughout the 16th century, notably gaining Estonia and Livonia after the Livonian War (1557–82). War with Russia in 1617 gave Sweden East Karelia and Ingria, and war with Poland in 1648 gave Sweden part

of Pomerania, the island of Rügen, Wismar, the sees of Bremen and Verden, and other German territories. Sweden lost its power and territory, including Livonia and Estonia, to Russia in the early 18th century.

The beginning of the 19th century was marked by a new constitution, Riksdag, that held until 1975. A treaty signed with Russia in 1809 ceded most of Finland and the Åland Islands to Russia. The Congress of Vienna, marking Napoleon I Bonaparte's defeat, recognized the official union of Norway with Sweden, the latter having the upper hand. Norway became independent of Sweden in 1905.

CULTURAL IDENTITY

Swedes see themselves as having a certain set of social characteristics that make them different from other peoples. In the past Swedes observed a certain formality of behavior in social relations. Like Germans they had two forms of the word *you*—*Ni* for strangers or for people to whom one owed respect, such as elders or superiors, and *du* for intimates, relatives, and friends. They now use *du* almost exclusively as egalitarianism has been on the rise. Their egalitarianism, however, does not mean that disrespect for others is acceptable or that relations with others are entirely casual, but that all should receive equally respectful treatment. An example of respectful treatment of others that Swedes cite is not being late for appointments, because lateness is a form of disrespect. Also it is expected that people will make formal arrangements for visiting rather than arriving at a Swedish home unannounced;

Swedes plant crops on a farm near Jönköping, Sweden, in the early 20th century. (*Library of Congress, Prints and Photographs Division [LC-USZ62-99699]*)

SWEDES: NATIONALITY

nation:

Sweden (Sverige); Kingdom of Sweden (Konungariket Sverige)

derivation of name:

Meaning "Svea people"; derived from Svithjoth, an Old Norse name; *thjoth* is a Germanic root meaning "people"

government:

Constitutional monarchy

capital:

Stockholm

language:

Official language is Swedish; English, Finnish, and Saami (Finnic dialect) are also spoken; about 65 percent of Swedes speak Schwyzerdütsch (a Germanic dialect).

religion:

About 68 percent of the population are Evangelical Lutheran; minorities include Roman Catholics, Muslims, and Orthodox Christians; about 18 percent of Swedes do not adhere to a religion.

earlier inhabitants:

Tribal Germanics (Svear; Dani; Goths; etc.); Vikings

demographics:

Sweden's population consists of Swedes, Saami, Finns, Tornedalians, Yugoslavs, Danes, Norwegians, Greeks, Turks, and Roma.

Swedes: nationality time line**C.E.**

800–1000 Swedish Vikings establish colonies in other countries.

1397 Queen Margaret I unites Denmark, Sweden, and Norway in Union of Kalmar under one monarch.

1523 Sweden gains independence under King Gustav I; Vasar dynasty begins.

1558–82 In Livonian War Sweden, Poland, and Russia struggle over region; Sweden wins Estonia.

1617 Sweden acquires East Karelia.

1618–48 Sweden takes part in Thirty Years' War.

1621–29 After war with Poland Sweden acquires Livonia.

1660 Sweden expands, annexing parts of Denmark and Norway.

1661 Royal Library, Sweden's national library, is founded in Stockholm.

1700–1721 Poland and Russia defeat Sweden in Great Northern War; Russia annexes Karelia.

1731 Johan Helmich Roman produces first public concert in Stockholm.

1735 *Systema naturae* by botanist Carolus Linnaeus is published.

1739 Royal Swedish Academy of Sciences is founded.

1745 Carl Gustav Pilo is appointed court painter.

1767–79 Sculptor Johan Tobias Sergel studies in Rome.

1768 Alexander Roslin paints *The Lady with the Veil*, portrait of his wife.

1782 Royal Opera House opens in Stockholm and houses Royal Opera and Royal Ballet.

1786 Swedish Academy and Royal Swedish Academy of Letters, History and Antiquities are founded.

1788 Royal Dramatic Theater opens in Stockholm.

1792 Royal Museum is founded; in 1866 it moves to new building and becomes Nationalmuseum.

1809 During Napoleonic Wars Sweden loses Finland to Russia; Sweden becomes constitutional monarchy.

1811 Historian and poet Erik Gustaf Geijer helps found Gothic Society.

1814 Sweden wins control over Norway from Denmark.

1825 *Frithiofs Saga*, epic poem about love and honor among Vikings by Esaias Tegnér, is published.

this demonstrates both respect for others and a certain social reticence.

There is a strong tendency among Swedes to strive for sociocultural homogeneity. This arises from another typical Swedish characteristic: the desire to avoid conflict (despite their valuing the history of their ancestral Vikings). Heated discussions are rare, and Swedes tend to resort to rational persuasion rather than aggressiveness to make a point. They also seek consensus rather than zealously insisting on their fixed opinions. For this reason foreigners sometimes think Swedish people are cool and formal. But this tendency toward rationality and objectivity is a product of the barriers Swedes erect between public or professional life on the one hand and

the private sphere of home and family on the other. Emotional expression is usually reserved for the latter. Emotions are considered one's own affair and not important enough to warrant bothering other people.

The aversion to conflict leads many Swedes to avoid socializing with anyone other than like-minded people. Swedes and Nordic people in general rarely have allowed curiosity to outbalance this fear of the different (although this is changing). Many Swedes also do not believe themselves to be interesting enough to stimulate or entertain others in social situations and thus compensate for this with often bountiful food—the smorgasbord—and beverages (the latter often alcoholic), and perhaps special activities.

- 1864–68** Composer Franz Adolf Berwald is professor at Stockholm Academy and Stockholm Conservatory.
- 1873** Carl Fredrik Hill relocates to Paris to paint.
- 1879** *Röda rummet (Red Room)*, novel by August Strindberg, brings author fame.
- 1882** Painters Carl Larsson and Karin Bergöö meet; they marry the next year.
- 1888** Painter Ernst Josephson suffers mental breakdown, after which he experiments with new forms that later inspire modernists.
- 1897** Anders Leonhard Zorn paints *Midsummer Dance* with influence from French impressionists.
- 1900** Nobel foundation is established based on will of Alfred Bernhard Nobel; in 1901 Nobel Prize is instituted, international awards given by Swedish Academy for achievements in physics, chemistry, medicine, literature, and for peace; in 1968 Bank of Sweden institutes prize in Economic Sciences in Memory of Alfred Nobel, founder of the Nobel Prize.
- 1905** Norway becomes independent of Sweden.
- 1909** Novelist Selma Ottilia Lovisa Lagerlöf wins Nobel Prize in literature.
- 1910–39** Composer Hugo Alfvén is musical director at University of Uppsala.
- 1914–18** During World War I Sweden remains neutral.
- 1916** Poet and novelist Carl Gustaf Verner Von Heidenstam wins Nobel Prize in literature.
- 1920–31** Sculptor Carl Milles is professor at Stockholm Art Academy.
- 1924** National Museum of Science and Technology is founded in Stockholm.
- 1931** Poet Erik Axel Karlfeldt wins Nobel Prize in literature.
- 1939–45** During World War II Sweden remains neutral.
- 1946** Sweden joins United Nations (UN).
- 1951** Poet and novelist Pär Fabian Lagerkvist wins Nobel Prize in literature.
- 1959** Sweden is founding member of European Free Trade Association.
- 1970** Filmmaker Ingmar Bergman wins Irving Thalberg Memorial Award, presented by Academy of Motion Picture Arts.
- 1974** Novelist Eyvind Johnson and Harry Martinson share Nobel Prize in literature.
- 1975** New constitution reduces monarch's powers.
- 1995** Sweden joins European Union (EU).

Swedes (and for that matter other Scandinavians) self-deprecatingly point to what is called the “Jante Law” as embodying social relationships. A fictional “law code” invented by the 20th-century Norwegian/Danish author Aksel Sandemose that, although unwritten, governs attitudes in a small Danish town, the Jante Law is based on mistrust of strangers or of people deemed pretentious or snobbish. Some of its precepts are not to presume that you are important (or intelligent, or knowledgeable), not to presume that you are as good as we are, and not to presume that you are going to amount to anything. A related Swedish characteristic is the assumption that everything one says will be remembered forever.

Reticence about emotional expression and a preference for the rational carry into Swedish art and design as “Functionalism,” which inspired the works shown in the Stockholm Exhibition in 1930, conceived by the architect Gunnar Asplund and the writer Gregor Paulsson. Design, whether of architecture or furniture and household goods, should aim to achieve beauty only through elements that serve the function of the building or object, avoiding anything extraneous, such as elaborate decoration. Swedish concern for egalitarianism also played a role here: The idea was to make ordinary objects that were affordable by all as beautiful as objects of the wealthy. This stance was formulated in an 1899 essay by the feminist Ellen

SWISS: NATIONALITY**nation:**

Switzerland (French, Suisse; German, Schweiz; Italian, Svizzera; Romansh, Helvetica); Swiss Confederation (Latin, Confoederatio Helvetica; German, Schweizerische Eidgenossenschaft; French, Confédération Suisse; Italian, Confederazione Svizzera)

derivation of name:

Possibly from Schweiz, a Germanic root meaning "swamp"

government:

Federal republic

capital:

Bern

language:

Official languages of Switzerland are German, French, and Italian; about 65 percent of Swiss speak Schwyzerdütsch (German dialect); Romansh (Rhaeto-Romanic dialect) is semiofficial.

religion:

About 45 percent of the population are Roman Catholic; about 40 percent are Protestant; religious minorities include Muslims, Orthodox Christians, and Jews; about 10 percent of Swiss do not adhere to a religion.

earlier inhabitants:

Celts (Helvetii etc); Romans; Alamanni; Burgundii; Franks

demographics:

About three-quarters of the population are German; about 18 percent are French; about 10 percent are Italian, and 1 percent are Romansch.

Keys entitled "Beauty for All," in which she called for an equally high level of design for all people, not just the wealthy. Swedes therefore embrace as fine art ordinary objects such as stoves with beautiful porcelain tiles, crystal glassware, and well-designed furniture. One of the most famous Swedish artists was Bruno Mathsson, a designer of chairs. It also seems typically Swedish that one of the greatest Swedish painters was Carl Larsson, whose work is largely a celebration of idyllic family life. Anders Leonhard Zorn is known for his depictions of peasant life.

Modernism in Sweden defined itself as the product of an "other" on the periphery opposed to the modernism of France, Germany, and Britain. Swedish artists sought solidarity with other cultures on the periphery. Crafts became an important expression of Swedish modernism, and Swedish craftspeople looked to African colleagues for inspiration.

A characteristic feature of the Swedish arts scene, a product of the penchant of Swedes for organizing themselves in groups rather than "going it alone" as rugged individualists, is the large number of art associations (about 1,800). Most of them are formed by art-loving employees at companies or institutions. The members of such an association may visit art galleries or museums together, and the associations sometimes acquire works of art directly from the artists to be used as prizes in lotteries. The musical equivalent are the great number of symphony orchestras supported in Sweden, including many amateur groups, and the popularity of choirs as a form of social activity. Many Swedes listen to and play traditional folk music, and nearly every Swedish community of any size has its "People's Park," an amusement park where musical performances take place all summer long. Swedes have embraced jazz, rock, and pop music, and the country has produced highly successful performers in all three genres.

Swiss: nationality (people of Switzerland)**GEOGRAPHY**

Switzerland is landlocked, with France to the west, Germany to the north, Austria and Liechtenstein to the east, and Italy to the south. The total area is 15,940 square miles. More than 70 percent of the country is mountainous; the Swiss Alps dominate central and southern Switzerland, and the Jura Mountains, the northwest. Important ranges within the Swiss Alps include the Pennine Alps forming the southwestern border with Italy, the Bernese Alps in the southeast, and the Rhaetian Alps forming the Italian-Swiss border into the east. Dufourspitze (15,203 feet), Austria's highest peak, is located in the Pennine Alps. The Jura Mountains are forested and mostly rounded; cleared areas are used for pastureland. Mittelland, a plateau, lies in central Switzerland between Lake Geneva in the southwest and the Lake of Constance in the northeast. Principal rivers include the Rhine, Rhône, and Ticino.

INCEPTION AS A NATION

Tribes of CELTS and GERMANICS, as well as the ROMANS, all once inhabited the territory that would become Switzerland. In the ninth century C.E. the territory was divided into Swabia and Transjurane Burgundy. In 1033 the two regions were united under the Holy Roman Empire. Tribes in Schwyz, Unterwalden, and Uri united to defeat the encroaching Hapsburg Empire in the late 13th century. Switzerland conquered Aargau, Thurgau, and Ticino, which became subject territories until 1798.

Switzerland defeated Burgundy in 1476–77, leading to an independent Switzerland, recognized by Emperor Maximilian I in 1499. By 1513 Switzerland consisted of 13 cantons.

Switzerland and France formed an alliance of perpetual neutrality after Switzerland's defeat in 1515 during the Italian Wars. Because of religious differences among loosely knit cantons a united Switzerland was not conceived until the Peace of Westphalia in 1648, which ended the Thirty Years' War. The Treaty of Paris in 1815, ending the Napoleonic Wars, established perpetual neutrality for Switzerland. In 1979 Jura became the 23rd canton of the Swiss Confederation.

Swiss: nationality time line**C.E.**

- 1291** Forest Cantons, Schwyz, Unterwalden, and Uri sign treaty of mutual defense, forming Swiss Confederation.
- 14th century** Lucerne, Zurich, Glarus, Bern, and Zug are annexed by Swiss Confederation.
- 15th century** Solothurn, Fribourg, Basel, and Appenzell join confederation.
- 1497–1519** Ludwig Senfl becomes composer to court of Holy Roman Emperor Maximilian I.
- 1515** Switzerland declares neutrality after France stops Swiss expansion into Italy.
- 1522** Huldrych Zwingli helps establish Protestant Reformation in Switzerland.
- 1648** Holy Roman Empire recognizes Swiss independence.
- 1750** Philosopher Jean-Jacques Rousseau's essay *Discours sur les sciences et les arts (Discourse on the Sciences and the Arts)* wins Academy of Dijon award.
- 1752** Statue is erected to physician and scientist Philippus Aureolus Paracelsus in Salzburg, year after his death.
- 1794** Madame de Staël opens salon in Paris for intellectuals.

CULTURAL IDENTITY

The geographical location of Switzerland practically in the center of Europe combined with its mountainous terrain to create the unique character of the Swiss nation, a combination of contrasting traits, ethnic tolerance, and ethnic pride. It resembles other countries in Europe in having been a crossroads of culture from earliest times. But unlike them, it has benefited from its isolating mountains, which have protected the mountain Swiss from foreign domination to a great extent. Although the fertile plain between the Alps and the Jura and the mountain passes were the focus of conquest by the Romans, the Carolingians, and the Holy Roman Empire, Switzerland experienced nothing like the kind of repeated mass movements through eastern Europe of vast tribal confederacies that resulted in centuries of turmoil, instability, and complex intermingling of peoples. The different peoples who made up the Swiss multiple ethnicity—the Celts, such as the HELVETII; the Romans; and the Germanic BURGUNDII and ALAMANNI—occupied

their territories with much less friction. After the end of Roman authority in 400 C.E. the Alamanni slowly trickled down from the north into the less hospitable thick forests of the central and north-eastern parts of Helvetia to build new villages and agricultural settlements, generally doing so without displacing previous inhabitants and halting their advances at points where the land was already populated by Burgundii. Meanwhile on the south side of the mountains and in the closed Alpine valleys of Rhaetia LOMBARDS and Rhaeto-Romanic peoples (see LADINS; FRIULIANS) retained close cultural links with their former Roman overlords, the latter adapting Vulgar Latin into their own unique language. The Burgundii in the west largely adopted the Gallo-Roman culture of their territory. After this point each group, especially the common people in the countryside, developed a distinct culture.

When around 1220 the road over the great St. Gotthard Pass was opened for traffic, the regions adjacent to it assumed enormous importance because of the trade network that quickly developed. When accordingly the Austrian house of Hapsburg extended its control over much of Switzerland, the proud independent people farming the remote high valleys of Uri and Schwyz and their neighbors in forested Unterwalden remained self-reliant and more or less free. The Swiss soon engaged in rebellion against Hapsburg authority of a kind that would not be seen elsewhere in the empire for centuries. The legendary founding of the Swiss Confederation on the Rütli meadow on August 1, 1291, by representatives of Schwyz, Unterwalden, and Uri, based on an earlier agreement of unknown date declaring that an attack on any one of the partners was an attack on all, was an event that crystallized Swiss cultural identity, the basis of which was freedom from outside interference.

The name the members of the confederation gave themselves after 1291—Eidgenossen—means approximately “comrades bound by oath into a cooperative.” It has a special significance even today. Switzerland still calls itself the

This photo shows a scenic view of the Swiss Alps. (*Library of Congress, Prints and Photographs Division [LC-USZ62-83235]*)

Swiss stand by a boat on the shore of Lake Brienz in Switzerland in the late 19th century. (*Library of Congress, Prints and Photographs Division [LC-USZ62-108890]*)

Eidgenossenschaft, and the word Eidgenosse is listed in dictionaries as a synonym for Swiss. Swiss neutrality and its laws of political asylum that have made the country a magnet for many creative persons during times of unrest or war in the rest of Europe should be understood on the basis of the values that permeated the formation of the confederation. Among these is the importance placed on maintaining the distinctive French, Italian, German, and Rhaeto-Romanic cultures. In a real sense the four parts of the country represent a definite resistance to leveling or homogenizing influences, political or cultural. At the same time Switzerland, using its status as a neutral country, has important institutions that function internationally, such as the Red Cross, the banking system, and a number of respected newspapers. The mission of Helvetia mediatrix (Switzerland the mediator) is revealed not only in the foreign assistance programs oriented toward self-help that are carried out in sev-

eral small and developing nations but also in the unusually high number of literary translators within the country.

Sryenians See KOMI.

Taexali (Taezali)

The Taexali are classified as a Celtic tribe. They lived in Britain near Kinnairds Head in present-day northeastern Scotland and are discussed as CALEDONIANS or SCOTS. They were defeated by the ROMANS under Gnaeus Julius Agricola in the 80s C.E.

Taifali (Taifals)

The Taifali are classified as a Germanic tribe. It is not known where they originated. They may have been related ancestrally to those GERMANICS who became known as GOTHs. In 248 C.E. they participated with the Goths in raids in Roman-held territory in the Black Sea region. The Taifali lived in the regions of Banat and Walachia in the Roman province of Dacia (roughly modern Romania) as of 271 C.E. after the ROMANS had evacuated it. They are thought to have merged with the Goths in later centuries.

Tarasconiens

The Tarasconiens are classified as a Celtic tribe. They lived in Gaul around present-day Tarascon in southeastern France at least by the first century B.C.E. and are discussed as CELTS or GAULS. Tarascon takes its name from the tribal name.

Tarbelli (Tarbelles)

The Tarbelli are classified as a Celtic tribe. They lived in Gaul north of the Pyrenees around present-day Dax in southwestern France and are dis-

cussed as CELTS or GAULS. They surrendered to the ROMANS under Julius Caesar with the fall of Aquitania in 56 B.C.E. Aquae Tarbellicae on the site of Dax became a *civitas* capital in Roman Gaul.

Tartars *See* TATARS.

Tartessians

The Tartessians are classified as an Iberian tribe (or collection of tribes). They lived on both sides of the Guadalquivir River in western Andalusia in present-day southern Spain. They were organized into the kingdom of Tartessos, a name recorded by the GREEKS, who had colonies along coastal regions of the Iberian Peninsula in the seventh century B.C.E. The PHOENICIANS, who founded Gadir (later Gades; modern Cádiz) among the Tartessians, established trade relations with IBERIANS in the region before the Greeks, as early as the 11th century B.C.E. The Tartessians were active traders as well and supposedly knew of the British Isles. They are believed to have been ancestral to the TURDETANI and TURDULI, who later inhabited the region.

Tarusates

The Tarusates are classified as a Celtic tribe. They lived in Gaul around present-day Tartas in southwestern France and are discussed as CELTS or GAULS. Tartas takes its name from the tribal name. They were possibly the same people as a

group known as the Aturenses. They surrendered to the ROMANS under Julius Caesar with the fall of Aquitania in 56 B.C.E.

Tatars (Tartars; Turko-Tatars; Turko-Mongols)

The name Tatars was once applied by Europeans to almost any Asian nomadic invaders, most often a combination of MONGOLS and TURKICS. In fact lands west of the Ural Mountains in Siberia were once known as Tartary. Yet the name is still used in modern times. Modern-day Islamic Turkic-speaking peoples in Russia and elsewhere—those Turkic peoples who never formed part of the Seljuk or Ottoman Empire—are sometimes grouped together as Tatars (or Turko-Tatars). The name is also associated with specific historical groups in eastern Europe, such as the Crimean Tatars in Ukraine and Turkic peoples in Russia, including the BALKARS, BASHKIRS, KARACHAY, KUMYKS, and NOGAY, as well as specific groups in Asia (see RUSSIANS: NATIONALITY; UKRAINIANS: NATIONALITY).

ORIGINS

The name Tatars, as Ta-ta, first appeared among nomadic Turkic-speaking tribes living in Asia in northeastern Mongolia and later was used in association with Turkic peoples around Lake Baikal, such as the PECHENEGS, KIPCHAKS, and BULGARS, who participated with the Mongols in the conquest of eastern Europe in the 13th century C.E. Other peoples intermingled with them, such as FINNO-UGRIANS and NENETS, who have also been referred to as Tatars.

LANGUAGE

People known as Tatars throughout history spoke a variety of Turkic or Mongolic dialects. A specific Turkic dialect known as Tatar developed, part of the Uralic (from the Ural Mountains) subgrouping in the Northwestern (Kipchak) language family. The Crimean Tatars spoke a distinct Ponto-Caspian dialect. And the BALKARS, KARACHAY, and NOGAY, sometimes classified as subtribes of Tatars, spoke Aralo-Caspian dialects.

HISTORY

The Golden Horde

In the 1230s–40s the Mongols and Tatars, led by Batu Khan, the grandson of Genghis Khan, campaigned in eastern and central Europe, and in 1243 after Batu Khan had laid the groundwork, the Kipchak khanate was founded, its territory including lands between the Volga and Danube

Rivers. It also became known as the Empire of the Golden Horde. Over the next decades those peoples grouped as Tatars carried out raids as far south as the Balkan Peninsula.

Tatar Khanates

In the 1440s the Kipchak khanate broke into independent Tatar khanates: Kazan near the bend of the Volga River; Astrakhan on the Lower Volga near the Caspian Sea; Sibir in western Siberia (Asia); and the Crimea in present-day Ukraine. The Crimean khanate became a vassal state of the Ottoman Turks, expanding from the south in Asia in 1478. As vassals the Crimean Tatars, centered at Sary Krym and at Bakhchisarai, had influence throughout Ukraine, southwestern Russia, and eastern Poland. They carried out raids to the north, including to Moscow, as late as 1572. The Russian SLAVS conquered Kazan, Astrakhan, and Sibir in the 16th century. COSSACKS participated in the fighting against the Tatars and absorbed some groups. The Russians first invaded the Crimea in 1736 and annexed it in 1783. In the 19th century because of wars in the region—among them the Crimean War of 1854–56 with Russia pitted against Turkey, England, France, and Sardinia—many of the Crimean Tatars moved to Turkey.

During the 18th and 19th centuries Tatars earned a favored position within the expanding Russian Empire in positions of authority.

Modern Tatars

In 1921 the Crimean Autonomous Soviet Socialist Republic was established as part of the Soviet Union (USSR). This republic was dissolved in 1945, however, when the Soviet leader Joseph Stalin accused the Crimean Tatars of collaboration with the Nazis during World War II (1941–45) and had them deported to Kazakhstan and Uzbekistan, where the use of Tatar dialects was forbidden. Although they regained their civil rights in 1956, they were not allowed to return to the Crimea, which had become part of the Ukrainian Soviet Socialist

Republic. Finally in the early 1990s after the breakup of the Soviet Union many Crimean Tatars returned to the Crimea.

The disintegration of the Soviet Union meant increased rights for Tatars in the former Tatar Autonomous Soviet Socialist Republic, now known as Tatarstan, with a capital at Kazan. Other Tatars live in various republics of the Caucasus region as well as in the Ural region. Some Tatars also live in Bulgaria, Romania, and Poland. The Siberian Tatars are scattered in western Siberia, part of Asian Russia. Other people considered Tatars live in Azerbaijan, Kazakhstan, Uzbekistan, and other Asian nations.

CULTURE

Originally nomads, the Tatars traveled over the Asian and Russian steppes with herds of horses, cattle, and sheep. They eventually became seminomadic, their economy based on mixed farming and herding as well as trading.

Tatar society was traditionally stratified, with a khan as supreme leader, nobles as civil and military leaders, and commoners as merchants and farmers. The Tatars have been known throughout history for their craftsmanship in wood, ceramics, leather, cloth, and metal. They are associated with Islam, although some practice Christianity.

The Tatars have played a significant role in Russian and Ukrainian history, as well as in that

of other nations, as leaders as well as subgroups. Some Tatars or part Tatars became Russian nobility, and Tatar institutions helped shape those of the original Muscovite state.

Taurisci (Tauriscii; Teurisci)

The Taurisci are classified as a Celtic tribe. They lived in the northern Alps south of present-day Vienna in northeastern Austria. In the second and first centuries B.C.E. they were part of a powerful coalition of CELTS, which included the AMBIDRAVI, NORI, and RAETI. In the 140s–130s B.C.E. there occurred a gold rush to Taurisci territory, with an influx of ROMANS. In 113 B.C.E. their territory was invaded by the Germanic CIMBRI and TEUTONES, who defeated a Roman army defending the Taurisci. In about 60 B.C.E. along with the BOII and SCORDISCI the Taurisci were defeated by the DACIANS invading from the east.

Tectosages (Tectosagi; Volcae Tectosages)

The Tectosages are classified as a Celtic tribe. They lived in Gaul around present-day Toulouse in southern France, south of the VOLCAE, considered a parent tribe of CELTS or GAULS. It is assumed that this region was their ancestral homeland from the early centuries B.C.E. after migration there from central Europe with the Volcae.

Some among the Tectosages invaded the Greek Peninsula; the ancient GREEKS referred to them as GALATOI. In 279–278 B.C.E. tribal members, along with TOLISTOBOGII and TROCMI, migrated from Greece to northern Phrygia in

Gaulish (Celtic)

Anatolia (Asia Minor), where they founded Galatia.

The group in Gaul possessed a vast treasure of gold and silver that was plundered by the ROMANS in 106 B.C. Those in southern Gaul later had contacts with the Romans under Julius Caesar in the mid-first century B.C.E.

Tectoverdi

The Tectoverdi are classified as a Celtic tribe. They lived in Britain in the Tyne Valley of present-day northern England at least by the first century B.C.E. and are discussed as CELTS or BRITONS. They are considered a subgroup of the BRIGANTES.

Tencteri (Tencheri; Tenchtheri; Toncteri)

The Tencteri are classified as GERMANICS, although they probably had Celtic ancestry as well and a culture similar to that of tribes of CELTS living to their west. They lived east of the Rhine in present-day western Germany, north of the USIPETES, SUGAMBRI, and UBII. They were traditional enemies of the SUEBI living to their east. In 55 B.C.E. the Tencteri allied themselves with the Sugambri against the ROMANS under Julius Caesar, who crossed the Rhine and invaded their homeland. They were known for their cavalry. Because of pressure from the expanding Suebi in the first century C.E. allied Tencteri and Usipetes crossed the Rhine to the lands of the Celtic MENAPII, some of whom they displaced.

Teutones (Teutons; Teutoni)

The Teutones, a Germanic-speaking tribe, originally inhabited the southern Jutland Peninsula in present-day Denmark. In the late second century B.C.E. they migrated southward throughout much of western Europe with their allies the CIMBRI. The two tribes were the first known GERMANICS to invade territory held by the ROMANS.

ORIGINS

Despite their Scandinavian homeland, which indicates a connection to other Germanic-speaking peoples around them, Cimbri and Teutones are thought to have been CELTS by some scholars. The Greek philosopher Poseidonius of the second and first centuries B.C.E. indeed classified them and the Cimbri as Celts. But the Greek geographer Strabo of the first centuries B.C.E. and C.E., interpreting Poseidonius's work, said that they were

Germanics who migrated from across the Rhine. They differed from the Celts to the west, he claimed, only in that they were larger and had yellower hair. The Romans who lived in Gaul called them Germani because they wanted to indicate that they were the authentic, that is, the real Celts. Germani means in their language "genuine" in the sense of "original." In general the Romans labored under considerable confusion when trying to identify and classify those "barbarians" who lived in northern, central, and eastern Europe beyond the bounds of their empire. They may have seen the Teutones as Celts in the sense that their society and culture were in many ways similar to those of the Celts, particularly in having a prominent warrior class. The Germani across the Rhine, including the Teutones, were "genuine" and "original" in the sense that their societies had felt as yet little of that influence from the Greco-Roman world that had altered Celtic societies so greatly.

HISTORY

In about 120 B.C.E. the Teutones and Cimbri dispersed out of Jutland. It has been theorized that an Atlantic high tide destroyed their coastal villages, forcing the departure of most families. According to ancient sources most migrants headed southward first through Moravia and Hungary and eventually reached the Middle Danube River, where they attacked the Celtic SCORDISCI. In 113 B.C.E. they invaded the territory of the Celtic TAURISCI, allies of the ROMANS, south of present-day Vienna, Austria, in the province of Noricum. They defeated a Roman army sent to defend the Taurisci, then proceeded westward, gaining allies from among Germanic and Celtic peoples both. Although their defeat of the Roman army left Italy defenseless before them, causing fear and panic in Rome, for unknown reasons they continued westward and looped through Gaul. An alliance of Celtic BELGAE in northern Gaul repelled them, but they generally were unimpeded as they moved southward again, through the province of Gallia

102 The Romans under Gaius Marius defeat Teutones in southern France.

Transalpina, destroying town after town and again inflicting disastrous defeats on Roman armies sent against them in 109, 107, and 105 B.C.E. The continuing migration took some of them across the Pyrenees onto the Iberian Peninsula.

By 102 B.C.E. those tribal members who had been in Spain returned to join with tribal members in a two-pronged invasion of Italy—the first such Germanic invasion—most of the Teutones along the Mediterranean coastal route. The Cimbri meanwhile reached the Po valley in northern Italy by way of the Alps. The Roman consul Gaius Marius (c. 157–186 B.C.E.) defeated the Teutones at Aquae Sextiae (modern Aix-en-Provence) in southeastern France in 102 B.C.E. and the Cimbri near Vercellae (modern Vercelli) in northwestern Italy in 101 B.C.E.

So deep was Roman fear of the northern barbarians, of whom the Teutones and their allies were but the latest representatives whom they had faced, that Roman society embarked on a process of greater militarization, and when in the next century Julius Caesar determined on the conquest of Gaul, he had only to play on this fear in the Senate to have his way. It can be said that the Cimbri and their allies contributed greatly to the impetus that led to the creation of the Roman Empire.

According to the writings of Julius Caesar the ADUATUCI of Belgium claimed to be descendants of the Teutones and Cimbri, although they are generally classified among Celtic-speaking peoples.

CULTURE (see also GERMANICS)

Little is known about the means by which the Teutones and the Cimbri marked their particular tribal identities. Germanic tribes were essentially groupings of clans, bound by shared histories, traditions, and institutions. As such commonalities inevitably changed through time so did tribes, splitting apart, expanding and absorbing new groups, or being themselves absorbed into larger groups. It has been said that the tribe was more process than stable structure; ethnogenesis, the birth of new tribal groupings, was constant. And under the contingencies of historical forces at certain times the process of ethnogenesis was accelerated. The Teutones and Cimbri may have become tribes as a direct result of the disaster that befell their homeland, as clans grouped together to face the dangerous course of migration through

other tribal territories bristling with warriors eager to test themselves against the newcomers. It is likely that both had only a fleeting existence and that their eventual defeat by the Romans caused them to break up and disappear from history.

The history of the Teutones and Cimbri with regard to the Romans represents a foreshadowing of events over the next centuries, with Germanic tribes battling the Romans throughout Europe. The name of the Teutones is sometimes used to refer to all of the Germanic peoples, typically spelled Teutons; Teutonic is the adjective form, often appearing in the phrase “Teutonic tribes.” Teut is cognate with the German *deutsch* and the Swedish *thjod*, meaning “folk” or “people.”

Thracians (Thraci)

The Thracians, a Thracian-speaking people, occupied territory north and west of the Black Sea, including present-day Bulgaria, Romania, and Moldova; eastern Serbia; northern Greece; and northwestern Turkey. They were associated with ancient Thrace, defined by the ancient GREEKS as that part of the Balkans bounded by the Sea of Marmara and the Black Sea to the west, the Danube River to the north, and the Aegean Sea to the south; on the east by the Black Sea and the Sea of Marmara and on the west by the Morava and Vardar Rivers. The ROMANS later defined Thrace as a province extending only as far as the Balkan Mountains in the north and the Rhodope Mountains in the west.

The geographical term Thrace is still used for the Greek province of Thrace; and the name Eastern Thrace for European Turkey, including the Gallipoli Peninsula, and southern Bulgaria. The Maritsa River separates the Greek and Turkish parts; the Turkish part is sometimes called Eastern Thrace. About one-tenth of Thrace lies in Greece, about one-fourth in Turkey, and the rest in Bulgaria. Thracian can thus refer to a language family or people of a geographical region.

ORIGINS

The Thracians perhaps were in the Balkans by the end of the second millennium B.C.E. The Greek poet Homer of the ninth or eighth century B.C.E. wrote about the Thracians as participants in the Trojan War. The GETAE and DACIANS, perhaps the same people at different

points in history, were among the more than 200 Thracian tribes. To the west of the Thracians, separated by the Morava and Vardar River valleys, were the ILLYRIANS.

LANGUAGE

The Thracians never developed an alphabet of their own. On the basis of proper names, Greek writings, and inscriptions on coins and other artifacts from as early as the sixth century B.C.E. it is generally assumed that Thracian was an Indo-European language. It is possible that elements of it have survived in modern Armenian by way of the Phrygians, an ancient people of Asia Minor.

HISTORY

Thrace under Siege

From the eighth century B.C.E. the Greeks settled coastal cities on Thracian lands along the Aegean and Black Seas. Many Greek city-colonies had Thracian names, including Byzantium—named after Byzas, a Thracian—which eventually became the capital of Byzantium (see BYZANTINES). The Greek historian Herodotus of the fifth century B.C.E. describes the Thracians as the most numerous people in Europe. Yet their continuing dynastic struggles made them vulnerable to invaders.

In about 516–510 B.C.E. most Thracians were subjects of the Persians out of present-day Iran. By the beginning of the fifth century, a number of Thracian tribes had united into the state of Odrys in the Rhodope region with a capital along the Lower Maritsa River. In the mid-fourth century B.C.E. this state broke up into three smaller confederacies. In 356 B.C.E. the MACEDONIANS under Philip II of Macedon began a campaign against the Odrysae (or Odrisi); although eventually pacified, they continued to be a political factor in the region. Philip's son, Alexander, defeated the Getae soon after his ascendancy in 336 B.C.E. Other peoples occupied some Thracian territory, including the SCYTHIANS in the fifth century, the SARMATIANS in the fourth century, and the CELTS in the third century B.C.E.

Roman Thrace

By the second century B.C.E. the Romans became dominant in the region, assigning parts of Thrace to the kingdom of Pergamum in Asia Minor and the province of Macedonia. A Thracian tribe referred to as Odrisi battled the Romans in 26 C.E. In 46 C.E. the emperor Claudius I annexed the Thracian kingdom,

making it a Roman province. During their reigns in the first half of the second century the emperors Trajan and Hadrian founded cities in Thrace, including Sardica (modern Sofia) and Hadrianopolis (modern Edirne, Turkey). In about 300 C.E. Emperor Diocletian reorganized the area between the Lower Danube and the Aegean into the diocese of Thrace.

Thrace was invaded by numerous peoples over the ensuing centuries, including the GERMANICS, HUNS, SLAVS, and BULGARS.

Slaves, Mercenaries, and Emperors

The Thracians also played a part in ancient history as individuals. One of these was Spartacus (see sidebar, p. 800), a Thracian who had been captured and trained as a gladiator and had escaped to lead a slave uprising, referred to as the Gladiatorial War, against the Romans in 73–71 B.C.E. Many of his followers were Thracians and GAULS.

Known as brave and skilled warriors, many Thracians served as mercenaries in the armies of the region. Some of them rose to high rank among the Romans. One of them, Maximinus Thrax, known for his size and strength, was made emperor by his troops on the Rhine (after the murder of Emperor Alexander Severus by his own soldiers) and served in 235–238 C.E. before being deposed by the senate.

Possible Decendants

A Thracian tribe known as Agrianes of the Rhodope Mountains are cited by some as ancestral to the POMAKS.

235–238 Alexander Severus, a Thracian, serves as Roman emperor.

300 Romans reorganize Thrace.

Spartacus: Freedom Fighter

Spartacus was born in Thrace in about 109 B.C.E., possibly of the Medi tribe living along the Strouma River. He was captured and sold as a slave to a gladiatorial training school at Capua. In 73 B.C.E. he and about 70 fellow gladiators successfully revolted against enslavement and escaped to Mt. Vesuvius. The rebels grew in numbers and pillaged their way across southern Italy, twice defeating Roman armies. Spartacus intended to lead his followers across the Alps out of Italy to the homelands of many of them, but they chose to continue the campaign of plunder, apparently with the hope of marching on Rome itself. They returned to southern Italy and captured the town of Thurii on the Gulf of Taranto. The Roman army, commanded by Marcus Licinius Crassus and Pompey, finally defeated Spartacus and his men. Spartacus died in battle in 71 B.C.E. Supposedly 6,000 captured prisoners were crucified along the Appian Way as a warning to other rebellious slaves. Because of his quest for freedom and his humane leadership, Spartacus has been glorified as a social revolutionary.

CULTURE

Economy

In their early history the Thracians' economy was based on the production of foodstuffs and raw materials, for sustenance as well as for export to peoples of the Aegean Sea, Asia Minor, and the Near East. They also kept livestock. In later years the Thracians carried out extensive trade in artifacts, especially metalwork.

Government and Society

The Thracians lived in open villages of free community farmers and artisans, organized tribally. A council of tribal representatives met for group decisions. When united, the tribes were under a supreme ruler who was also the supreme priest (called *basileus* by the Greeks; the Thracian word is not known). Taxes were collected from citizens in the form of gold, silver, bronze, cloth, and artifacts. A dragon decorated the standard of the Thracians. The Thracians practiced slavery but on a smaller scale than did the other powerful civilizations with which they had contact.

Military Practices

The Thracians were considered both skilled horsemen and masters of light infantry and were valued as mercenaries by the Greeks, Persians, Macedonians, and Romans.

Art

The period from the end of the sixth century until the early third century B.C.E. is considered the Golden Age of Thracian state and culture, its objects revealing a high level of workmanship. Yet Thracian gold masks are known to date to the fourth millennium B.C.E. Some ancient Thracian tomb paintings have survived.

Music and Literature

The Thracians were known throughout the Mediterranean region for their music and poetry.

Religion

The Thracians had numerous cults, celebrating many different deities. Many bronze statuettes represent the Horseman and his female counterpart, Bendida. Known as Heros in many Greek reliefs and inscriptions, the Horseman was a god of hunting and fertility, but in a larger sense, of life itself and death. The Dionysian cult originated in Thrace, where Dionysus was considered the god of nature and of infinite creativity; then spread to the Greek world, where Dionysus was the god of fertility and wine and became associated with drunken and orgiastic worship. The god Orpheus, at the center of the Orphean cult, was celebrated in Greek mythology as a Thracian musician.

After 313 C.E., when Christianity became the official religion of the Roman Empire, some Thracians also converted.

In the shadow of the Greek and Roman Empires the Thracians do not receive the same degree of attention in studies of European history and culture. Yet they played a major role in the shaping of the ancient world, in the eastern Mediterranean and beyond.

Thuringi (Thurungii; Thuringians)

The Thuringi, a Germanic tribe, lived in the highlands of present-day central Germany in the fourth century C.E. Some of their territory had been the homeland of the ALAMANNI, who had since migrated southward. Some Alamanni may have been ancestral to the Thuringi, along with other GERMANICS, the ANGLES, HERMUNDURI, and VARINI.

In about 430 C.E. the HUNS conquered the Thuringi, but after the Huns retreated eastward in 453, the Thuringi formed a kingdom. At the height of its power in the early sixth century Thuringia (as part of the region is still known) extended from the Weser River in the west to the Elbe in the east and the Danube in the south. After defeating the Thuringi at the Battle of Scheidungen in 531 the FRANKS and SAXONS divided the region. Chlotar I made the Thuringian princess Radegunda his queen. She went on to oversee the building of a convent at Poitiers in present-day France and lived out her life as a nun (and was later canonized as a saint by the Roman Catholic Church).

In the eighth century under the Frankish ruler Charlemagne Thuringia became the Thuringian Mark (a mark or march signified a border) to defend against the MAGYARS and SLAVS to the east, yet the Thuringians still had political autonomy. In the 10th century the region was under the control of the dukes of Saxony.

Tigurini

The Tigurini are classified as a Celtic tribe although they probably had Germanic ancestry as well. They lived in present-day Switzerland. They are considered a subgroup of the CELTS known as the HELVETII. Some among them invaded present-day southern France and northern Italy, along with the TOUTONES, another Helvetian subgroup, and the CIMBRI, who were GERMANICS, between 111 and 101 B.C.E. Their ruler, Divico, is said to have been one of the leaders of the failed migration westward in 58 B.C.E. of the Helvetii, who were driven back to Switzerland by the ROMANS under Julius Caesar.

Titti (Titos)

The Titti are classified as a Celtic tribe. They lived in the Jalón valley in present-day north-central Spain near the BELLII at least by the first century B.C.E. and are discussed as CELTS or CELTIBERIANS.

Tivertsians (Tivertsi; Tivertsy; Tiverts; Tivertians; Tiverians; Tiverchy; Tolmachians)

The Tivertsians are classified as a tribe of Eastern SLAVS. They lived between the Prut and Dniester Rivers in present-day Moldova and Ukraine, south of the POLIANIANS, in steppe country. During the ninth century C.E. their territory reached the lower stretches of the Danube River in present-day eastern Romania. With other Slavic peoples they fell under the suzerainty of the RUS of the Kievan Rus principality, paying tribute to them and serving under their princes in military campaigns, including the attack by Oleg on the BYZANTINES of Constantinople (modern Istanbul) in 907.

Tolistobogii (Tolistoagii)

The Tolistobogii are classified as a Celtic tribe, who invaded present-day Greece in the early third century B.C.E.; they are discussed as CELTS or GALATOI. In 279–278 B.C.E. some among them, along with TECTOSAGES and TROCMI, migrated from Greece to northern Phrygia in Anatolia (Asia Minor), where they founded Galatia. In 189 B.C.E. when the ROMANS defeated the Galatians, Chiomara, the wife of a Tolistobogii chieftain, was kidnapped, raped, and ransomed, as described by the first–second-century Greek writer Plutarch.

Tolmachians *See* TIVERTSIANS.

Tolosates

The Tolosates are classified as a Celtic tribe. They lived around present-day Toulouse in southern France and are discussed as CELTS or GAULS. Toulouse, formerly known as Tolosa, takes its name from the tribal name. They were perhaps related ancestrally to the SANTONES. Toulouse was captured by the ROMANS in 106 B.C.E.

Torks (Uzes)

The Torks were ancient TURKICS probably from a number of different tribes who in the 11th century C.E. migrated into eastern and central Europe. Their movement into Europe followed that of the fellow Turkic-speaking PECHENECS.

Some Pechenegs joined the Torks in a confederacy in Russia called Chenrye Klobuki (Black Hoods). The Torks became known in the region as merchants. In 1036 people identified as Torks helped the RUS defeat the Pechenegs.

ancestry:

Finno-Ugrian

language:

Meänkieli (Finnic)

The Torks and related Oguz Turks (Southwestern Turkic-speaking groups) are thought to be ancestral to the GAGAUZ and Crimean Turks. Some among the Oguz tribes, possibly including Torks, migrated into southern Asia and there formed the Seljuk Empire stretching from the Mediterranean Sea to the Indus River from the 11th through the 13th century.

Tornates

The Tornates are classified as a Celtic tribe. They lived in Gaul around present-day Tournai in southwestern Belgium at least by the first century B.C.E. and are discussed as CELTS or GAULS. Tournai takes its name from the tribal name. They were among the tribes Julius Caesar considered BELGAE.

Tornedalians (Tornedalens;**Tornedalicans)**

The Tornedalians live in the Torne valley, part of which forms the lower boundary between northern Sweden and Finland near the Gulf of Bothnia. Their homes are mostly on the Torne River's western side in Norbotten Province, Sweden. It is not known for certain how early the Tornedalian ancestors broke off from other FINNO-UGRIANS and first settled the region. As early as the first century C.E. tribal groups of ancient FINNS had distinct identities in the region, some of which endured into the Middle Ages.

The Tornedalians speak Meänkieli (Our Language), also called Tornedalsfinska (Tornedalian Finnish), a different dialect from that of the Finns of Finland or that of other Finnic speakers in Sweden, known as Swedish Finns. In 2000 both the Swedish Finns and Tornedalians gained recognition as minorities in Sweden. Meänkieli, with elements of the Finnic language of the SAAMI, as well as Swedish and Norwegian, is protected as a national minority language.

The Tornedalians have traditionally lived off the soil and waterways as farmers, hunters, and fishermen. Although they are experiencing a cultural revitalization around their language after years of being oppressed and forbidden to use it, the rising unemployment resulting from modern technologies' replacing the traditional economy has led people to leave Tornedalia.

Toutones

The Toutones are classified as a Celtic tribe, although they probably had Germanic ancestry

as well. They lived in present-day Switzerland. They are considered a subgroup of the CELTS known as HELVETII. Some among them invaded present-day southern France and northern Italy, along with the TIGURINI, another Helvetian subgroup, and the CIMBRI, who were GERMANICS, between 111 and 101 B.C.E.

Treveri (Trevires)

The Treveri are classified as a combined Celtic-Germanic tribe. They lived around Trier (Trèves) in present-day western Germany and claimed to be descended from GERMANICS. The Roman general Julius Caesar grouped them among the BELGAE, a subdivision of the GAULS, that is, CELTS living in Gaul. The Treveri held territory in present-day eastern Belgium and northern France as well.

Ancestors of the Treveri reportedly migrated across the Alps into northern Italy as early as 400 B.C.E. The ROMANS under Julius Caesar invaded their homeland in Gaul and defeated them in 57 B.C.E. Caesar described them as having the most powerful cavalry among the Gauls. They joined the AEDUI in a rebellion against the Romans in 20 C.E.

Augusta Treverorum on the site of Trier became a *civitas* capital in Gaul during the Roman occupation lasting until the fifth century C.E.; Trier (Trèves) takes its name from the tribal name.

Triboci (Triboces; Tribocians)

The Triboci are classified as a Germanic tribe, a subgroup of the SUEBI. They migrated from present-day central Germany, settling on the Rhine River in present-day northeastern France. They were one of the tribes of GERMANICS that fought under Ariovistus in 60 B.C.E. against the AEDUI, allies of the ROMANS. Some of them may have settled to the east in the homeland of the MEDIOMATRICI about this time. Under the Roman occupation the main town of the Triboci became known as Argentoratum (now Strasbourg) for "silver fort."

Tricassi (Tricasses; Tricasi)

The Tricassi are classified as a Celtic tribe. They lived in Gaul around present-day Troyes in northern France at least by the first century B.C.E. and are discussed as CELTS or GAULS. They were allies of the SENONES. Augustonono on the site of Troyes became a *civitas* capital in Roman Gaul; Troyes takes its name from the tribal name.

Celtic and Germanic

Tricastins

The Tricastins are classified as a Celtic tribe. They lived in Gaul in the present-day department of Drôme in southeastern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Tricorii (Tricori; Tricores)

The Tricorii are classified as a Celtic tribe. They lived in Gaul in the western Alps around present-day Gap in southeastern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Trinovantes (Trinobantes)

The Trinovantes are classified as a Celtic tribe. They lived in Britain in present-day Essex and Suffolk counties in eastern England and are discussed as CELTS or BRITONS. In the mid-first century B.C.E. they became allies and trading partners of the ROMANS, supporting them against the CATUVELLAUNI, who controlled their territory. Their town of Camulodunum (modern Colchester) was the first capital in Roman Britain. In 60–61 C.E. some among them supported the revolt of the ICENI under Queen Boudicca (Boadicea).

Trocmi (Trocmes; Trocini)

The Trocmi are classified as a Celtic tribe, who invaded present-day Greece in the early third century B.C.E.; they are discussed as CELTS or GALATOI. In 279–278 B.C.E. some among them, along with TECTOSAGES and TOLISTOBOGII, migrated from Greece to northern Phrygia in Anatolia (Asia Minor), where they founded Galatia.

Tubanti (Tubantes)

The Tubanti are classified as a Germanic tribe. They lived east of the Rhine and north of the Danube in present-day western Germany. By the third century C.E. they had become allied with other GERMANICS—the AMSIVARII, BRUCTERI, CHAMAVI, CHATTUARI, and SALII—as the FRANKS.

Tulingi

The Tulingi were either a Celtic, a Germanic, or a mixed tribe. They lived in present-day Schaffhausen in northeastern Switzerland and are discussed as CELTS or GAULS (or possibly GERMANICS). Along with the BOII, LATOVICI, and RAURICI they joined the HELVETII in their migration to the west in 58 B.C.E. The ROMANS under

Julius Caesar defeated them at the start of his conquest of Gaul.

Tungri

The Tungri are classified as a Germanic tribe. Their first historical mention appears in the work of the Roman historian Pliny of the first century C.E., who lists them among the tribes of northeastern Gaul, living around present-day Tongeren (Tongres) in present-day northeastern Belgium; Tongeren is derived from the tribal name.

The Roman general Julius Caesar, who reported on the tribes of that region in the prior century, mentions the ADUATUCI, CONDRUSI, and EBURONES in that area, probably combined Celtic-Germanic peoples. It is possible that the Tungri consisted of descendants of these earlier peoples and possibly another group of GERMANICS who migrated from across the Rhine. The Roman historian Tacitus of the first–second centuries C.E. cites the name Tungri as that by which the Germani were known to the ROMANS. The name also is associated with a number of foreign cohorts in the Roman army who served on the mainland and on the British Isles, from the beginning of the second century onward.

Turboletas

The Turboletas are classified as a Celtic tribe. They lived in present-day north-central Spain at least by the first century B.C.E. and are discussed as CELTS or CELTIBERIANS.

Turdetani (Turditani; Turdetanians; Turditanians)

The Turdetani are classified as an Iberian tribe. They lived north of the Guadalquivir River in Andalusia in present-day southern Spain and were probably a subgroup or descendants of the earlier TARTESSIANS. They were one of four tribes that the second-century C.E. Alexandrian geographer Ptolemy recorded as situated in Baetica, along with the BASTETANI, BASTULI, and TURDULI.

Probably as early as the eighth century B.C.E. the Turdetani had contacts with the GREEKS, and as early as the sixth century B.C.E., with the CARTHAGINIANS. Both peoples established trading colonies along the coast and influenced many of the IBERIANS culturally. The ROMANS established their first colonies on the Iberian Peninsula at the start of the second century B.C.E. The Turdetani resisted them at first but were defeated in 195 B.C.E. by legions under Marcus Porcius Cato, consul of Iberia, after he had pacified

tribes to their north. In the early centuries C.E. the Iberian Peninsula was part of the provincial system of the Roman Empire.

The Turdetani had a written language and used it to record thousands of laws in verse.

Turduli

The Turduli are classified as an Iberian tribe. They lived inland from the south coast of the region of Andalusia in present-day Spain and were probably a subgroup or descendants of the earlier TARTESSIANs. They had early contacts with the PHOENICIANS, GREEKS, and CARTHAGINIANS, but not as many as their fellow IBERIANS to the south the BASTETANI, BASTULI, and TURDETANI, who were considered part of the province of Baetica, governed by the ROMANS, as recorded by the second-century C.E. Alexandrian geographer Ptolemy.

Turkics (Turkic peoples)

The Turkics, or Turkic-speaking peoples, are various peoples speaking languages belonging to the Turkic subgroup of the Altaic language family. They are associated primarily with Asia, where they established a number of empires over the centuries, starting in the sixth century

C.E.; however, some among them migrated westward into Europe and played a part in European history, especially with regard to the Ottoman Empire, which extended deep into Europe. The extreme western portions of two nations founded by Turkic peoples, Turkey and Kazakhstan, are located in what is considered Europe (see TURKS: NATIONALITY).

ORIGINS

Little is known about the origins of the Turkic people, which presumably occurred in Asia. The apparent linguistic connection between Turkic and Mongolic indicates possible origins in north-central Asia. Some scholars maintain that the Turkic language itself first split into different languages in about 300 B.C.E. The name Turkics is possibly derived from the Chinese T'u-chuëh.

LANGUAGE

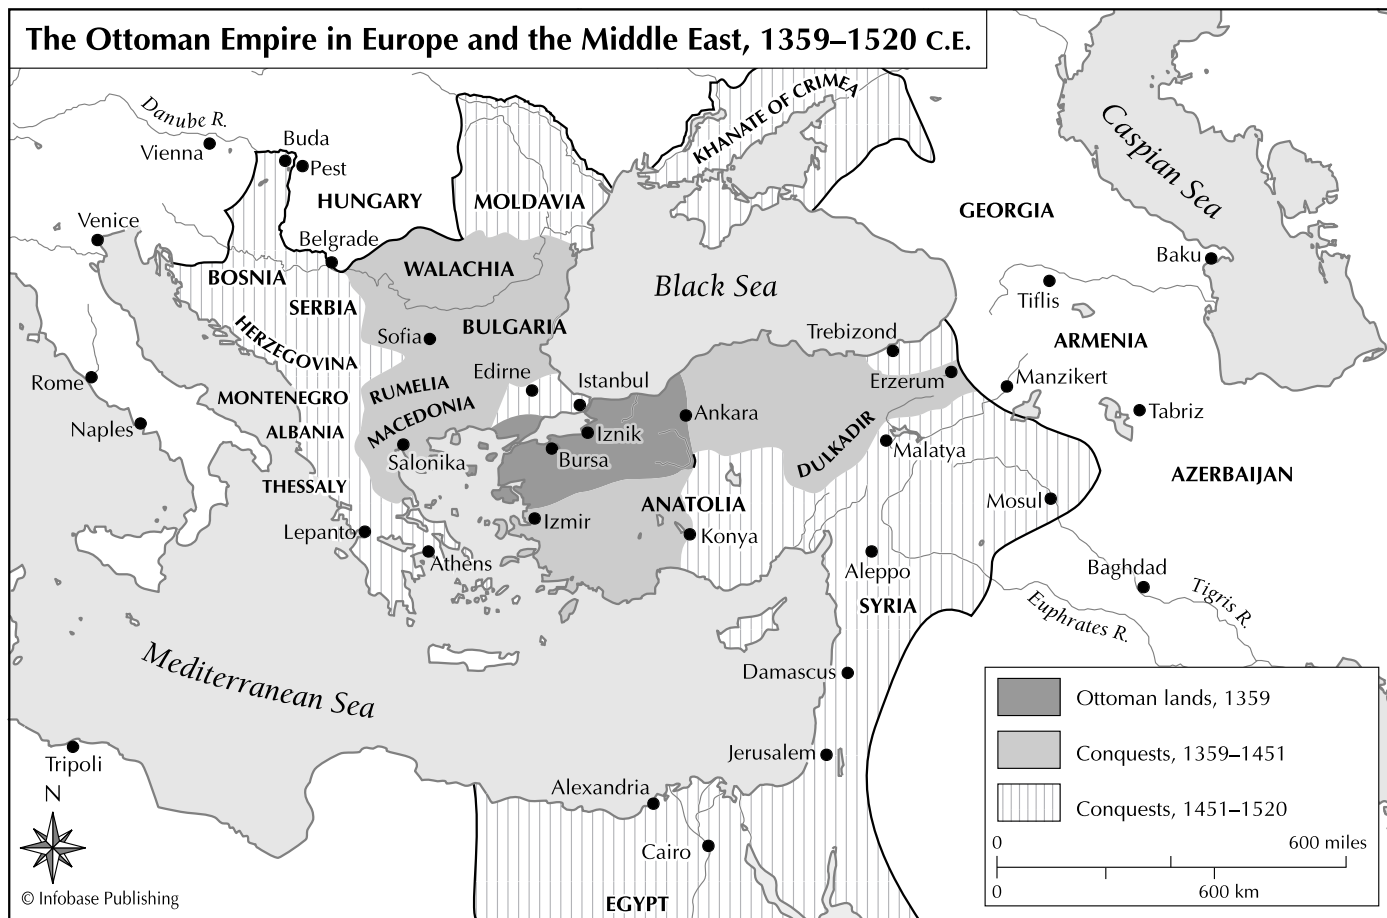

The Turkic and Mongolic languages make up the Altaic language family (a non-Indo-European family). Hundreds of Turkic tribes and their languages have mixed with one another over the centuries and classification is difficult. According to one system of classification, there are four branches of Turkic: Northwestern, Southwestern, Northeastern, and Southeastern. The Northeastern (also called North or Siberian) and Southeastern (also called East or Uighur-Chagatai) branches comprise languages spoken in Asia. A number of Northwestern (also called West, Kipchak, or Ogur) and Southwestern (also called South or Oguz) languages and dialects were spoken in Europe, some of them now extinct. Some scholars classify Chuvash as Northwestern Turkic along with Bulgar and Khazar; others classify them as their own branch of Altaic. The oldest historical records regarding Turkic culture—the Orhon inscriptions comprising texts found at Kosho-Tsaidam on the Orhon (Orkhon) Gol (River) in Mongolia—date only to the early eighth century C.E. They reveal the earliest known Turkic alphabet, the Gokturk alphabet (similar to a runic script), developed by the Gokturks, a confederation of Turkic tribes in the sixth to eighth centuries. With the spread of Islam a majority of Turks began to use the Arabic alphabet. The Turkic tribes who played a direct part in European history were of the Northwestern or Southwestern groups.

HISTORY**Early Turkic Migrations into Europe**

Among those considered the earliest Turkic peoples to migrate to Europe were the BULGARS, in

Turkics time line**C.E.**

fourth century	Turks part of Hunnic confederation
552–745	Gokturk Empire in Asia
seventh century	Greater Bulgaria thrives in western Russia.
679	First Bulgarian Empire founded in Bulgaria.
eighth century	Khazar Empire in western Russia and Ukraine.
eighth–12th century	Uygurs dominant in central Asia
10th century	Pechenegs control territory north of Black Sea in Ukraine and Russia.
1071	Seljuks defeat Byzantines at Manzikert.
12th century	Kipchaks dominant power on eastern European steppes
1239	Mongols break up Kipchak confederation.
1243	Mongols found Kipchak khanate.
1245	Cumans settle in Hungary.
1290	Osman I proclaims Ottoman Turk independence from Seljuks.
1362	Murad I defeats Byzantines at Adrianople.
1402	Tamerlane (Timur) defeats Ottoman Turks at Ankara.
1453	Ottoman Turks capture Constantinople.
mid-16th century	Ottoman Empire reaches its greatest extent under Suleiman.

the latter part of the fourth century, who entered Europe with the HUNS. The Huns themselves were possibly a Turkic-speaking people as well, although they may have originally been Mongolic-speaking. The AVARS, who created a European empire in the sixth century, were also possibly Turkic by origin.

Early Turkic Powers

Medieval Chinese texts relate that by the sixth century a nomadic Turkic people had established an empire in central Asia stretching from Mongolia to the Black Sea (thus including part of Europe). Known to the Chinese as T'u-chüeh (or Tujue) and in other texts as Gokturks or Kokturks (Gök-Turks or Kök-Turks, for celestial Turks), they maintained a confederation of nomadic tribes from 552 to 745. At times during this period the Gokturks were under Chinese sovereignty.

After the breakup of the Gokturk Empire, largely as a result of internal conflict, other Turkic peoples rose to dominance in central Asia and eastern Europe. Among them in the east were the Uyghurs (or Uighurs, known to the Chinese as Huihe), who became dominant in

central Asia in the eighth century and, retained their power until the end of the 12th century, when they were overrun by the MONGOLS.

Meanwhile the western Gokturk Empire split into two—some among the Bulgars, led by the Dulo clan, and the KHAZARS, led by the Asena clan, who had previously ruled the Gokturk Empire. By 670 the Khazars had dispersed the Bulgar confederation; some among the Bulgars migrated to central Europe and founded the First Bulgarian Empire in 679, becoming ancestral in part to modern Bulgarians (see BULGARIANS: NATIONALITY). By the second half of the eighth century the Khazar Empire extended from the Caspian Sea and Black Sea (including the Crimean Peninsula) as far north as the Ural Mountains and as far west as the Dnieper River and Kiev in present-day Ukraine. In the late ninth century the PECHENECS, pressured by the Khazars and other steppe peoples, migrated westward. In the 10th century, they controlled the territory north of the Black Sea between the Don and Dnieper Rivers in present-day southwestern Russia and eastern Ukraine, including the Crimean Peninsula. In the 11th century some Pechenegs lived along the Lower Danube

in present-day Romania. From the late 11th through the 12th century the KIPCHAKS were the most powerful people on the eastern European steppes. That name was also applied generally to all the Northwestern Turkic-speaking groups. Some of them migrated to central Europe, especially to present-day Hungary in 1245, where they were known as CUMANS.

Advent of Islam

After the founding of Islam in Arabia by Muhammad in the seventh century, Arab armies, traders, and missionaries began spreading the new religion to neighboring peoples. Many Turkic peoples were introduced to Islam in the eighth–ninth centuries. Over the centuries Islam became the dominant religion among them. Some Turkic groups converted from their pagan religion to Christianity, however, and others, notably the Khazars, to Judaism.

Seljuk Turks

At the beginning of the 11th century the Seljuk Turks began consolidating their power. The Seljuks were Oguz Turks (that is, of the Southwestern Turkic-speaking group), related to Turkic peoples known as TORKS who had migrated to eastern Europe. The Seljuks had been employed as mercenaries by the Abbasids, an Arabic dynasty, but eventually rebelled. They conquered both present-day Iran and Iraq, entering Baghdad in 1055, and overran Syria. In 1071 the Seljuks defeated the BYZANTINES of the Eastern Roman Empire at the Battle of Manzikert, after which waves of Oguz tribesmen settled in Asia Minor; they eventually occupied most of it and conquered surrounding areas as well. By the late 11th century the Seljuk Empire stretched from the Amu Darya, a river in central and western Asia, south to the Persian Gulf and from the Indus River west to the Mediterranean Sea. The Seljuk ascendancy and harassment of Christian pilgrims to Jerusalem and their threatening of Constantinople (modern Istanbul), the seat of the Eastern Roman Empire, helped prompt the Crusades, the military expeditions by European Christians to the Near East through the late 13th century.

Mongol Expansion

In the early 13th century the MONGOLS united under the leadership of Genghis Khan, and subsequent khans carried out campaigns of conquest throughout much of Asia, seizing all the Seljuk state in Asia. They also broke up the Kipchak confederation in 1239. The Mongols established the Kipchak khanate four years later.

The Mongol conquests set in motion migrations and realignments of Turkic people that continued for several centuries. One of the outcomes was a merging of Mongol and Turkic cultures; Turkic elements, including the Islamic religion, became dominant among various groups in eastern Europe and central and western Asia, and some of them became known as TATARS.

Mamluks

Turkic peoples, in their weakened state, along with other Eurasian peoples, became a source of slaves for the expanding Muslim world. Known as Mamluks (or Mameluks or Mamelukes, Arabic for one who is owned), they served in Arabic armies, in which eventually they earned positions of authority. They became influential in the Near East and North Africa, especially in Egypt, and founded a state that endured from 1250 to 1517. At its greatest extent it stretched from Arabia, Syria, and Egypt to parts of Libya and Nubia. The Mamluk presence in Arabic history led to the compilation of Turkic-Arabic dictionaries.

Tamerlane

By the 14th century the Mongol Empire had weakened as a result of internal conflicts as well as resistance from conquered peoples. One Turkic provincial governor at Samarkand in the region of Turkestan (part of present-day Uzbekistan), Tamerlane (Timur the Lame), who claimed descent from Genghis Khan (to increase his influence, it is thought), with an army composed of Turks and Turkic-speaking Mongols, created an empire in southern and southwestern Asia in the late 14th and early 15th centuries. In the 1390s he captured European territory between the Caspian and Black Seas as well as Russian territory and eventually even occupied Moscow. In 1398 he abandoned his western conquest to invade India. In 1402 he returned to the west to battle the Ottoman Turks, a subgroup of Seljuks, at Angora (modern Ankara) in Asia Minor, forcing them to end their siege of Constantinople (modern Istanbul), ruled by the Byzantines. Tamerlane died in 1405 during an expedition to conquer China.

The Ottoman Empire

The tribal ancestors of the Ottoman Turks were among the last Turkic peoples to migrate to Asia Minor from central Asia. In time they became subjects of the Seljuks, who employed them as frontier guards against the Byzantines. In 1290 Osman I proclaimed Ottoman independence from the weakened Seljuks (hence the alternate

Murad (Amurath) IV, sultan of the Turks, 1612–40, surveys the building of the obelisk in this 17th-century portrait. (*Library of Congress, Prints and Photographs Division [LC-USZ62-98779]*)

tribal name Osmanli) and began a concerted campaign in Asia Minor against the Byzantines, capturing Bursa shortly before his death in about 1326. In 1362 Murad I triumphed against the Byzantines at Adrianople (modern Edirne, Turkey, in Europe). Under Bayezid Murad's son the Ottomans defeated the SERBS and their allies at Kosovo in present-day southwestern Serbia and, in 1396, the Hungarians and their allies at Nicopolis (modern Nikopol) in present-day northern Bulgaria. In 1397 Bayezid besieged Constantinople (when Tamerlane's invasion out of the east changed the outcome).

The Ottoman Empire was fragmented for a time, but Mehmed, Bayezid's son, reunited it, and his successors, Murad II and Mehmed II, secured additional territory. In 1444 Murad II defeated a European army of crusaders at Varna in present-day eastern Bulgaria. In 1453 Mehmed led an attack on Constantinople, taking the city, which the Ottomans renamed Istanbul. By the end of the 15th century the Ottomans had secured other Byzantine outposts. In the early 16th century they had also defeated the Mamluks and secured Syria and Egypt. By the mid-16th century under Suleiman (see sidebar), who expanded the empire into Hungary, northern Africa, and Mesopotamia (modern Iraq), the Ottoman Empire included much of

southeastern Europe, western Asia, and northern Africa—from Vienna in Austria to the Indian Ocean and from Tunis to the Caucasus Mountains.

In the 17th and 18th centuries the Ottomans fought a series of depleting wars against Poland, Austria, and Russia and lost holdings in Hungary and north of the Black Sea in Ukraine and Russia. Russia continued to expand southward, leading up to the Crimean War of 1854–56, in which Great Britain and France supported the Turks against the Russians. Meanwhile, African nations regained territory. In two successive Balkan Wars in 1912–13 Turkey lost more European territory to Bulgaria, Serbia, Greece, and Albania. The empire continued to decline until its dissolution after World War I (1914–18). The republic of Turkey was formally proclaimed in 1923, with only a tiny portion remaining in Europe.

Modern Turks

Citizens of the nation of Turkey, which is situated in both Asia and Europe, consist of Osmanli and Seljuk descendants as well as descendants of other groups who made up the Ottoman Empire.

The KAZAKHS, thought to be mostly descendants of Kipchaks, also became the principal

Suleiman: The Lawgiver

Suleiman (also Süleyman) was born at Trabzon in present-day Turkey in 1494, the son of Selim I. He became emperor as Suleiman I.

In 1521 Suleiman captured Belgrade, at that time a Hungarian city, and the next year he forced the Knights of Saint John of Jerusalem, a military and religious order, from the island of Rhodes in the Aegean Sea. In 1526 in another invasion of Hungary he killed King Louis II and defeated his forces at the Battle of Mohács, and then in 1529 he unsuccessfully besieged Vienna. Among his later conquests were the cities of Tabriz and Baghdad in present-day Iran. Suleiman concluded a treaty with Francis I of France against the Holy Roman Emperor Charles V, which allowed French access to commerce with the eastern Mediterranean countries. The Ottomans, with an expanded navy, eventually dominated the Mediterranean Sea. Suleiman again invaded Hungary in 1541, making central Hungary a part of the Ottoman Empire. He had additional military successes in Persia. His navy also partnered with France to pillage Nice and the Italian coasts. Over the next years he continued to lead campaigns to secure and expand his holdings in the Near East, the Balkans, and northern Africa. He died in Hungary in 1566 in an attempt to seize Szegedvár.

Suleiman was an excellent military strategist, administrator, and diplomat, whose legislative reforms earned him the title Kanuni, or "Lawgiver." He was a patron of the arts and architecture who built strong fortresses and embellished Islamic cities. Sinan, the great Turkish architect, worked under his orders. The sciences also flourished during his reign. His favorite wife was Roxelana (or Khurems); her son, Selim II, succeeded Suleiman, known as the Magnificent, on his death in 1566.

inhabitants of a nation in both Asia and Europe, Kazakhstan. Other Asian nations consist of large Turkic populations: Descendants of the Kyrgyz live in Kyrgyzstan; descendants of the Uzbeks live in present-day Uzbekistan (along with Karakalpaks in Karakalpakstan, part of Uzbekistan); descendants of the TURKMENS in Turkmenistan (and some in Russia and Turkey); and descendants of the Seljuks in Azerbaijan. These nations were republics of the Soviet Union (USSR) for part of their history and gained independence in 1991. Descendants of the Uygurs live in Sinkiang (the Xinjiang Uygur Autonomous Region) in China. Uzbeks, Turkmens, Kyrgyz, and other Turkic peoples also live in Afghanistan.

Numerous other Turkic peoples are dispersed throughout Asia; the majority are Muslims. Modern European Turks—living mostly in Russia but also in Bulgaria, Moldova, Ukraine, and other nations—are the Tatars, BALKARS, BASHKIRS, CHUVASH, GAGAUZ, KARACHAY, KARAIM, KUMYKS, and NOGAY.

CULTURE

Economy

Many of the ancient Turkic tribes lived as nomadic herders on the steppes. Others sowed grains and other crops in steppe regions favorable to agriculture. In some communities Turkic families had specific plots of irrigated and sowed land.

When states formed the Turkics had a system of collecting tribute. Among the Gokturks and Oguzes tax officials known as Amga (or Imga) were responsible for collecting goods in their region. The Khazars were known to demand a sword or pelt of ermine from each family of SLAVS on a regular basis.

Turkics traded with one another and with other peoples. Arabic traders traveled to Turkic lands—even those far from the main trading routes—to set up bazaars.

Government and Society

Turkic tribes, as were ancient steppe peoples in general, were organized hierarchically along lineage, clan, and family lines. All tribal members were expected to be loyal to the tribe first. Tribal elders played a central role in enforcing traditional laws and customs—known to some Turkic peoples as the *Töre*—settling disputes, making decisions to protect the tribe. Nevertheless individuals had freedom in managing their private property, in particular land and herds. In tribal confederations the various tribes

retained a great degree of autonomy. In the various Turkic empires, especially those extending over vast expanses, provincial governors had great authority.

Dwellings and Architecture

Nomadic Turkics lived in yurts, light circular tents made of felt stretched over a lattice framework, similar to those of the Mongols. Turkics rarely built fortifications and surrounded cities with walls rarely. After the settling of agricultural villages, which resulted in a sedentary life, fortified cities were constructed.

Transportation

Many of the steppe Turkic people were master horsemen.

Music

Turkics had a variety of stringed, wind, and rhythm instruments. Among them were the *kemençe*, a small violin played as a cello is; the *kabak kemane*, a three-stringed violin; the *ud*, like a lute; the *tambur*, like a mandolin; the *kanun*, like a zither; the *santur*, like a dulcimer; the *zurna*, like an oboe; the *kaval*, a type of flageolet; the *dümbelek*, a small drum; the *daire*, a tambourine; the *kudüm*, a small double drum; the *zil*, a cymbal; and the *çalpara*, castinets.

Literature

A long-standing literary form among Turkics is the *destan*, a poetic account of personalities and events from tribal history, often filled with details about Turkic lifeways.

Religion

Before the great majority of Turkics adopted the Islamic religion they practiced a pagan religion in which the sky itself was perceived as a god figure, sometimes referred to as God-Sky.

Turkmen (Trukhmens; Türpen)

The Turkmen are a Turkic-speaking people around Stavropol north of the Caucasus Mountains in present-day southwestern Russia. Their dialect, of the Oguz group of the Southwestern Turkic language family, has been influenced by that of the NOGAY. Their literary language is Russian. Originally nomads the Turkmen separated from other TURKICS and migrated to the area in the 17th century. Turkmen now live mostly in Turkmenistan in Asia. Subgroups include the Chaudorov (Chavodur), Ikdir, and Sonchadj tribes.

See also RUSSIANS: NATIONALITY.

Turks: nationality (Turkish; people of Turkey)

GEOGRAPHY

Turkey borders the Black Sea to the north, Georgia and Armenia to the northeast, Azerbaijan and Iran to the east, Iraq and Syria to the southeast, Greece and Bulgaria to the northwest, the Aegean Sea to the west, and the Mediterranean Sea to the southwest. The total area is 300,948 square miles. Anatolia, or Asian Turkey, is characterized by highlands and mountains and includes 97 percent of the country. Eastern Thrace forms European Turkey. The Bosphorus, the Sea of Marmara, and the Dardanelles divide Turkish Thrace from Asian Turkey and connect the Black Sea to the Mediterranean Sea. Agricultural lowlands drained by the Ergene River make up European Turkey. Mount Ararat, measuring 16,853 feet, is the highest peak, located on the border of Armenia and Iran. Principal rivers include the Tigris and the Euphrates, flowing in the eastern part of the country.

INCEPTION AS A NATION

TURKICS invaded Asia Minor in the 11th century C.E., defeating the BYZANTINES and establishing the Seljuk dynasty. The MONGOLS under Genghis Khan replaced the Seljuk dynasty in the early 13th century. By the late 13th century the Ottoman Turks gained further territories from the weakening Byzantine Empire and expelled the Mongols.

The Ottomans annexed territory to the west and acquired Turkish principalities in the east. By the 16th century under Sultan Suleiman I the Magnificent they ruled much of the Near East, great portions of Eastern Europe, and almost the entirety of North Africa. Internal corruption within the ruling class and a series of wars with Europe, notably the Russo-Turkish Wars of 1768–92, led to major territorial losses.

The Ottoman Empire collapsed at the end of World War I (1914–18). The Treaty of Sèvres in 1920 greatly reduced the size of Turkey to little more than northern Asia Minor. It also established a permanent Allied presence in the region. Although the sultan accepted the terms of the treaty, Turkish nationals under Kemal Atatürk organized resistance to the treaty and began a program of reconquest, aided by the Soviet Union (USSR) in 1921. By 1923 the Treaty of Lausanne recognized Turkey's current borders, guaranteeing full autonomy, and Turkey was declared a republic later that year.

CULTURAL IDENTITY

The Turks' history, most importantly as the builders of the Ottoman Empire, which is now gone, and their status as the only major Muslim nation in Europe give rise to contrary ideas of cultural identity. Turks themselves do not all hold to the same ideas on this subject. What are their historical allegiance and geographical orientation? Are they an eastern European or western Asiatic people? Is their primary identity their Muslim religion? Should they consider themselves a product of the culture of Asia Minor, or should they stress their ancestry among nomadic hordes from the Turanian steppes of Asia? Are they descendents of ancient people from Hittites to ROMANS or the last surviving mercenaries of Genghis Khan of the Mongols? Are they despotic rulers who oppressed minorities, such as the Armenians and the Kurds, or freedom fighters who have defended their lands against others, such as the British? Are the Turks the orphans of the Ottoman dynasty, defending the Muslim faith against a new "crusade" led by the United States

C.E.	
330	Roman Emperor Constantine the Great establishes Constantinople, capital of Roman Empire, at Byzantium; Anatolia and Thrace become part of Eastern Roman Empire (Byzantine Empire).
1096–1204	Crusades lead to decline of Byzantine Empire.
c. 1321	Poet Yunus Emre dies; his work, drawing on Anatolian folk poetry, influences later Turkish poets.
1326	Ottomans capture Bursa and found Ottoman Empire.
1453	Byzantine Empire ends when Ottomans capture Constantinople (renamed Istanbul).
1520–66	Sultan Suleiman I the Magnificent rules Ottoman Empire.
1836	Presidential Symphony Orchestra is initiated.
1829	Greece gains independence from Ottoman Empire.
1853–56	Turkey, Great Britain, and France defeat Russia in Crimean War.
1872	Namik Kemal's play <i>Vatan yahnut Silistre</i> (Fatherland, or Silistria) receives public acclaim, leading to his imprisonment in 1873–76 by Ottoman government.
1909	Last sultan, Abdul Hamid, is deposed.
1912–13	During Balkan Wars Ottomans lose most of European holdings.
1914–18	During World War I Ottoman Empire sides with Germany, losing many territories at end of war.
1920	British occupy Istanbul.
1921–22	Turkey defeats Greece in Second Greco-Turkish War.
1923	Republic of Turkey is founded by Kemal Atatürk.
1927	Museum of Turkish and Islamic Works of Art is founded in Istanbul.
1934	Turkey joins Balkan Pact.
1936	<i>Seyh Bedreddin destani</i> (The epic of Shaykh Bedreddin) and <i>Memleketimden insan manzaralari</i> (Portraits of people from my land), epic poems by Nazim Hikmet, are published.
1939–45	During World War II Turkey remains neutral.
1946	Turkey becomes member of United Nations (UN). National Library is founded.
1950	Poet Orhan Veli Kanik becomes editor of literary review <i>Yaprak</i> (Folio).
1952	Turkey joins North Atlantic Treaty Organization (NATO).
1955	<i>Ince Memed</i> (Thin Memed or Memed, my hawk), novel by Yashar Kemal, is published.
1960	Turkey experiences military coup, including execution of prime minister.
1964	Turkey achieves associate status in European Union (EU).
1964–72	Composer Adnan Saygun teaches at Ankara State Conservatory.
1974	Turkey invades northern Cyprus to condemnation of international community.
1980	Ankara State Museum of Fine Arts is founded in Ankara.
1980–83	Turkey experiences second military coup.
1984	Turkey recognizes Turkish Republic of Northern Cyprus.
1993	Tansu Çiller becomes Turkey's first female prime minister.
2002	Turkish women win full legal equality.

essential identity as being villagers, living peacefully where their ancestors have lived time out of mind. People in towns, where Islam has a strong hold, consider themselves true Muslims, defending their faith against the infidels. Nomadic tribesmen who still exist in Turkey look to their Turanian roots, considering themselves the bearers of a noble tradition in contradistinction to that of settled peasants. Members of the business community tend to stress ties with Western civilization. Their status as urbanites is most important, making them genuine Westerners, they feel. Politicians consider themselves guardians of the Turkish Republic, entrusted to them by the late, great general and president Kemal Atatürk.

The great differences between the regions of Turkey (Eastern, Western, Black Sea, Southern, etc.) and the many ethnicities and languages (Abhazian, Albanian, Aegean, Arabic, Armenian, Azeri, Bosnian, Bulgarian, Circassian, Georgian, Greek, Kurdish, Laz, Persian) and religious denominations of Muslims (Sunnites, Shi'ites, Alawis, Bektashis, Mawlavis, Nakshibendis, Tahtajis, etc.) and non-Muslims (Christians, Jews, etc.) make the existence of a single overriding Turkish cultural identity problematic.

Many Turks believe in the importance of a broad worldview but with a unified national identity. They hope to overcome economic problems and join the family of developed nations as Turks with a distinct political and cultural tradition. A recent opinion poll taken in Istanbul found that the great majority of people, 69 percent, identify themselves as Turks as against 21 percent who call themselves Muslim Turks and

much smaller percentages who consider themselves other identities.

Turmogi (Turmogos)

The Turmogi are classified as a Celtic tribe. They lived in present-day north-central Spain at least by the first century B.C.E. and are discussed as CELTS or CELTIBERIANS.

Turones (Turoni; Turons)

The Turones are classified as a Celtic tribe. They lived in Gaul around present-day Tours in central France and are discussed as CELTS or GAULS. They fought as allies of the ARVERNI under Vercingetorix against the ROMANS under Julius Caesar in 52 B.C.E. Caesarodunum on the site of Tours became a *civitas* capital in Roman Gaul; Tours, formerly Turoni, takes its name from the tribal name.

Uaithne (Auteini)

The Uaithne are classified as a Celtic tribe. They lived in the present-day counties of Limerick and Tipperary in southwestern Ireland at least by the first century C.E. and are discussed as CELTS or IRISH. It is assumed they were the same people cited by the second-century C.E. Alexandrian geographer Ptolemy as the Auteini.

Uberi

The Uberi are classified as a Celtic tribe. They lived in the present-day region of Valais in southwestern Switzerland in the early centuries B.C.E. They were perhaps a branch of the CELTS known as LEPONTI.

Ubi (Ubians; Utii)

The Ubi are classified as a Germanic tribe. They originally lived east of the Rhine in present-day western Germany south of the SUGAMBRI. Traditional enemies of the SUEBI, the Ubi became allies of the ROMANS under Julius Caesar in the first century B.C.E. In 39 B.C.E. Marcus Vipsanius Agrippa established a Roman colony for them, Oppidum Ubiorum, which was later named Colonia Agrippina, after his daughter, Vipsania Agrippina. She became the wife of Germanicus Caesar and accompanied him on his campaigns in the region against other GERMANICS. The Ubi, who referred to themselves as the Agrippenses (Agrippinensians), helped guard the boundary of Gaul against

other Germanic tribes and endured as Roman *foederati* (federates) into the fourth century C.E. Colonia Agrippina evolved into modern-day Cologne (Köln).

Ubyks (Ubyx)

The Ubyks were a Caucasian-speaking people, who once lived around Sochi along the Black Sea in the northwestern Caucasus Mountains of Krasnodar Kray, a territory in southwestern Russia. Their language is classified as part of the North-West (Abkhazo-Adygheian) branch of North Caucasian and related to the dialects of the neighboring CIRCASSIANS. Like other CAUCASIANS the Laks are considered indigenous to the region, perhaps maintaining tribal identity since the second millennium B.C.E. Their economy, as was that of their neighbors, was built around herding, farming, and trading. Living along the Black Sea, they also were skilled fishermen.

For much of the medieval period the Ubyks were ruled by TATARS. In 1864 after the Russian SLAVS seized the region they expelled many of the Muslim inhabitants; others chose to leave. All Ubyks reportedly left their homeland, relocating to different parts of Turkey. Tevfik Esenç of Turkey, who died in 1992, was considered the last native Ubyk speaker. In the last years of his life he worked with linguists to make a record of the now-extinct language, which is characterized by a great number of consonant sounds.

See also RUSSIANS: NATIONALITY.

Uceni (Ucenni)

The Uceni are classified as a Celtic tribe. They lived in Gaul in the present-day department of Val d'Oise in northwestern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Udmurts (Udmorts; Odmorts; Ukmorts; Vudmurts; Udmurtjoz; Votyaks; Votyaki; Votiak; Ari; Arsk people; Chud Otezkaya)

The Udmurts are a Finnic-speaking people, who live mostly between the Vyatka and Kama Rivers in the Republic of Udmurtia in present-day east-central European Russia (see FINNO-UGRIANS; RUSSIANS: NATIONALITY). Their ancestral territory includes the western forested foothills of the Ural Mountains. Other tribal members live in neighboring regions of European Russia—especially Bashkortostan, Mari El, Perm, Tatarstan—and some in central Asia and Siberia. The name Udmurts is Finnic for “people of the forest.” They were formerly known in Russian as the Votyaks, a name that they consider disparaging. In its native form Udmurt is singular and Udmurtjoz is plural.

ORIGINS

The Permic branch of the Finnic populations of Russia is considered to have split from other groups in ancient times, perhaps between 2500 and 2000 B.C.E. It is believed that the Udmurts of the eighth–third centuries B.C.E. were connected with indigenous peoples of the Vyatsko-Kamski region, representatives of the Ananian archaeological culture.

LANGUAGE

The Udmurtian language is in the Permic group of Finnic in the Finno-Ugric language family. The closest linguistic relatives of the Udmurts are the KOMI. The Udmurtian written language was developed in the 18th century using the Cyrillic alphabet, and the first Udmurtian grammar was published in 1775. Some 500 words used by ancient Finno-Ugrics have been preserved in the Udmurtian language, among them *blood, butter, fire, son, snow, and tree*.

HISTORY

Ancestors of the Udmurts may have been in contact with steppe peoples who invaded their homeland, such as the SCYTHIANS, judging by place-names that seem to be of Scythian origin, and the SARMATIANS, who arrived in the fourth century B.C.E. They also had trade contacts with the indigenous CAUCASIANS to their south and with peoples as far south as Egypt and as far east as India.

Later in their history the Udmurts paid tribute to the BULGARS, who arrived in the fifth century C.E.; the AVARS in the sixth century; and the MONGOLS in the 13th century. After the breakup of the Mongol Empire in the 14th century the Udmurts were tributary to the TATARS of the Kazan khanate. Russian SLAVS first reached their homeland in about 1190. In 1490 northern Udmurts were under the suzerainty of the Russian state (Grand Duchy of Moscow); with Ivan the Terrible's capture of Kazan in 1552, southern tribal members also were under Russian rule.

In 1920 after the Russian Revolution the Udmurt (Votyak) Autonomous Province was formed. With the subsequent civil war in Russia famine broke out the next year, and many Udmurts migrated to Siberia. In the 1930s during the era of the Soviet Union (USSR) the Udmurts experienced forced collectivization and deportation to Kazakhstan and other Asian lands. During World War II (1939–45) Russian industry was relocated to Udmurtia and, along with it, many Russian workers. The 1950s–60s saw a continuing dissolution of Udmurtian communities. Since 1991 Udmurtia has been a republic within the Russian Federation, and Udmurt communities there as well as in other areas have made renewed efforts to preserve their traditional culture.

CULTURE (see also FINNO-UGRIANS)

Economy

For the Udmurts “the people of the woods,” the forests have been central to their economy for hunting and material culture. Yet the Udmurts are known to have farmed since the Bronze Age. Udmurts planted mainly rye as well as oats, barley, millet, hemp, flax, and later wheat, buckwheat, potatoes, and corn. Cattle breeding has also been a traditional activity.

The homeland of the Udmurts between the Kama and Vyatka Rivers has facilitated trading through river shipments on the Volga River and

**UKRAINIANS:
NATIONALITY****nation:**

Ukraine (Ukraina, the Ukraine)

derivation of name:

From a Slavic root meaning "border territory"

government:

Republic

capital:

Kiev

language:

Official language is Ukrainian (Slavic); Russian is also spoken.

religion:

Most Ukrainians belong to the Ukrainian Orthodox Church (or the Ukrainian Autocephalous Orthodox Church); about 10 percent belong to the Ukrainian Catholic Church; Roman Catholics, Jews, Muslims, and Baptists form religious minorities.

earlier inhabitants:

Germanics (Bastarnae; Goths; Sciri; etc.); Huns; Avars; Khazars; tribal Slavs (Dulebians; Drevlyans; Polianians; Severians; Tivertsians; Ulichians; Volhynians; etc.); Rus; Lithuanians

demographics:

About three-fourths of the population are Ukrainian; about 20 percent are Russian; minorities include Belarusians, Hungarians; Moldovans, Cossacks, Jews, Poles, and Romanians.

to the sea. A main Udmurtian product has been furs, squirrel in particular. The word for "money" in Udmurtian is *kondon*, meaning "the price of a squirrel."

In the early 16th century the first arms-smithy factories were built on the banks of the Izh and Vyatka Rivers. This Udmurtian tradition has endured with tribal members involved in the production of a wide range of arms: from small arms and combat guns to missiles and space equipment.

Personal Habits

The Udmurts greet guests with bread, honey, and butter. *Pelmeni* (dumplings), originally used by hunters as preserved meal and later as a guest dish, has become well known all over the world. Their bread *pelnyan*, for "ear-shaped bread" is also known among other peoples.

Art

The Udmurts produced high-quality domestic handicrafts; the men processed wood, leather, and wool. Early Udmurtian decorative art is complex and rich in color and pattern. Udmurtian women are still renowned for their weaving and embroidery, with geometrical ornamentation using the traditional Udmurtian colors of red, black, and white. The tradition has continued into modern times, and Udmurtian seamstresses display their works at exhibitions in Paris, St. Petersburg, and other cities.

Music

The Udmurts had no written language, but a strong oral tradition has preserved many myths, legends, and fairy tales. Much of Udmurtian folklore, history, and daily life is preserved in song and the Udmurts are known for their singing ability. The Udmurt say that "to sing is as natural as to speak."

Religion

The ancient Udmurts were animistic, with a religion based on idolization of nature and a number of patriarchal gods. In the 18th century the Udmurts were nominally converted to Eastern Orthodox Christianity but retained many of the rituals of their pagan religion. Some of the physical structures used in the old religion remain and are the sites of modern folk holidays.

Despite the various peoples who have invaded their homeland, situated between Europe and Asia and between woods and steppe, and have imposed alien customs, the Udmurts have man-

aged to preserve their language and culture. Even so the sphere of usage of the Udmurtian language has been much reduced. In an attempt to keep young people using Udmurtian the parliament of the Republic of Udmurtia has declared it the official language, parallel to Russian, and expanded its usage in schools.

Ukrainians: nationality (people of Ukraine)**GEOGRAPHY**

Ukraine is flanked by Poland, Slovakia, and Hungary to the west; by Romania and Moldova to the southwest; by the Black Sea and Sea of Azov to the south; by Belarus to the north; and by Russia to the east and northeast. The Crimean Autonomous Republic, a peninsula to the south of the country that juts into the Black Sea, is also Ukrainian territory. The total area of the nation is 233,100 square miles. Fertile upland plains and steppes make up most of central and southern Ukraine. In the north lie the Pripet marshes; in the south lie the rolling plains of the Dneiper River basin. The Volhynian-Podolian ranges and the Caparthian Mountains lie in the west, where Mount Hoverla (6,762 feet), the country's highest peak, is found. The Crimean Mountains are in the south, and the Donets Ridge provides uplands in the southeast. Principal rivers include the Dnieper, Dniester, Bug, and Danube; the Danube forms part of the border with Romania.

INCEPTION AS A NATION

The region that would become Ukraine was once the homeland of GERMANICS as well as steppe peoples such as the HUNS, AVARS, and KHAZARS. The SLAVS made inroads by the late fifth century C.E. Kievan Rus, an organized Slavic state originally with rulers from among the VIKINGS, emerged in the late ninth century C.E. under Prince Oleg of the RUS. Kievan Rus declined by the 12th century, dividing into separate principalities. MONGOLS and TATARS soon invaded the region, only to be driven out by the LITHUANIANS in the 14th century. Lithuania united with Poland, allowing Polish expansion into the Ukraine in 1386.

In 1569 by the Union of Lublin Ukrainian lands, except Polissia and Beresteyschyna, were passed to Poland. By 1648 rebellions by COSSACKS, assisted by Russia, ended Polish rule. Ukraine was placed under Russian protection in 1654. Although the treaty signed with Russia negotiated Ukrainian self-rule, Russia

1930	Oleksander Dovzhenko draws on Ukrainian folkore for his film <i>Zemlya (The Earth)</i> .
1932–33	Stalin's grain taxes result in famine.
1937	National Symphony Orchestra of Ukraine (formerly Ukrainian State Symphony Orchestra) is founded.
1941–44	During World War II Nazi Germany occupies Ukraine.
1945	Soviets annex western Ukraine; Ukraine joins United Nations (UN).
1964	Serhy Paradzhanov's film <i>Tini zabutykh predkiv (Shadows of Forgotten Ancestors)</i> is released, winning international acclaim.
1991	Soviet Union breaks up; Ukraine declares its independence.
1996	New democratic constitution is adopted.
1997	Friendship treaty is concluded with Russia.
2004	The Orange Revolution leads to a political victory for Viktor Yushchenko, a West-leaning candidate for president.

soon dominated the country. Poland aided Ukraine in attempts to regain autonomy, leading to the Russo-Polish War and the division of Ukraine between the two countries. Ukraine failed to gain independence under Hetman Ivan Stepanovich Mazepa in 1709, aided by Sweden.

During the Russian Revolution of 1917 Ukrainians briefly won independence. In 1918 Romania and Czechoslovakia conquered the newly formed Ukrainian state. In 1921 Ukraine was reformed as a Soviet Socialist Republic and eventually annexed by the Soviet Union (USSR). Ukraine did not regain independence until the breakup of the Soviet Union in 1991.

CULTURAL IDENTITY

A formative period of history for Ukrainian cultural identity were the 16th and 17th centuries, when Ukraine was under Polish control. During

this period extensive colonization of the steppe lands took place, spearheaded by the social class called the Cossacks, the frontier settlers whose prowess in war eventually caused them to engage in a massive uprising against the Polish overlords and accept overlordship from Russia. The Cossack freedom fighters have been an important symbol of Ukrainian autonomy and freedom.

In Ukraine since the fall of the Soviet empire a debate has been conducted among intellectuals as to the nature of the Ukrainian national identity. These discussions have been largely fashioned by the heritage of Soviet imperial domination. Three main cultural orientations are prevalent in Ukraine today: European or pro-Western; nativist or “pronation”; and pro-Eastern, which most researchers and participants in the debate equate with pro-Russian. In addition to cultural themes the Eastern and Western factions are separated by geography—those closer to Russia and those closer to Europe—as well as by religion—Eastern Orthodox versus Roman Catholic. The debates became particularly intense in the late 1980s and early 1990s, coinciding with attempts to reclaim specific cultural symbols that had been banned by the Soviet regime. Literary life in Ukraine in the following years was injected with an extreme dynamism, and young writers, as well as those who had been banned in Ukraine by censorship, were publishing their works for the first time.

It is unclear to what extent the Ukrainian nation exists independently of the consciousness of its intellectuals. It may be that the national discourse of the Ukrainian in and of

Ukrainian women with hoes farm a field in the early 20th century. (Library of Congress, Prints and Photographs Division [LC-USZ62-97672])

itself—the value of free expression—provides Ukrainians with a sense of community. The discourse includes such issues as the balancing of folklore and modernity, the status and role of the Ukrainian language, and the concept of “nation” as a political unit and “nation” as an ethnic and cultural entity. The impact of Russia on identity in Ukraine is obvious, and it was widely discussed in the 1990s. However, scholars from outside the country have noted the absence in these discussions of the fact of Russia’s colonial dominance. Despite ideological differences, the “nativist” position, which sets aside the question of whether Ukraine should orient itself to the East—meaning Russia—or to Western Europe, and the “post-Soviet” position, which holds that the East-versus-West debate must in part shape Ukrainian identity, both ignore Ukraine’s colonial past. It remains unclear how this aspect of life in a country dominated by Russia for so many years could remain “invisible” to the Ukrainians.

The events in Ukraine in late 2004 perhaps are an indication of the nation’s long-term political future. Viktor Yushchenko, campaigning on a platform that advocated greater ties with the West, was elected president. He managed the victory after a dispute over the corruption of an earlier election, and the so-called Orange Revolution—named for the thousands of protestors wearing the adopted color of the Yushchenko campaign—resulted in a new election. Yet the narrow margin of his victory—and the passions attached to it on both sides—also may indicate continuing intellectual fervor over the issue of Ukrainian identity.

Ulaid (Ulaidh; Uladh; Ulunti; Volunti; Voluntii)

The Ulaid are classified as a Celtic tribe. They lived in northeastern Ireland (the present-day county of Louth in the Republic of Ireland region of Ulster in Northern Ireland) and are discussed as CELTS or IRISH. It is assumed they were the same people cited by the second-century C.E. Alexandrian geographer Ptolemy as the Volunti. In the fifth century C.E. the Ulaid were displaced by tribes of the dynasty known as the Ui Néill.

Ulichians (Ulich; Uliche; Ulychians; Uhlychians; Uliuchany)

The Ulichians are classified as a tribe of Eastern SLAVS. They lived along the Middle and Lower Southern Bug River in present-day Ukraine and Moldova. Some scholars consider them a branch tribe of the DULEBIANS who lived to the northwest. The Ulichians lived to the south of the POLIANIANS in steppe country. The name Ulichians is derived from a Slavic word for beekeeping; they were known for trade in honey. In the second half of the ninth century C.E. with other Slavic peoples the Ulichians were under the suzerainty of the RUS of the Kievan Rus principality, paying tribute to them and serving under their princes in military campaigns, including the attack by Oleg on the BYZANTINES of Constantinople (modern Istanbul) in 907.

UMBRIANS**location:**

Northeast-central Italy, between Apennines and Adriatic coast

time period:

before 1000 to 87 B.C.E.

ancestry:

Italic

language:

Umbrian (Italic)

Umbrians (Umbri; Camertes)

The Umbrians, an Italic-speaking people, inhabited the area of present-day north-central Italy from the Apennines to the Adriatic coast, an area bordered on the southwest by the Tiber River, to the northwest by the Po River, and to the south by the Piceno River. They are thought to have been closely related to other ITALICS in the region—the AEQUI, HERNICI, SABINES, and VOLSCI—early enemies of the ROMANS.

ORIGINS

Little is known about the Umbrians until the first Roman interactions with them, which occurred in the fourth century B.C.E. Before that time archaeological evidence indicates they arose sometime in the second millennium B.C.E. as nomadic herders. They possibly emigrated from central Europe but more likely were descended from indigenous populations, possibly living in the Apennines, and were influenced by overland and Adriatic trade from the north. The ETRUSCANS living to their west became the Umbrians' principal influence along with the GREEKS during the

fifth century B.C.E.; at that time the Umbrians began to develop city-states and adopt their luxurious lifestyle.

Origin Myth

Ancient tradition has it that the Umbrians and related groups began to spread from the central Apennines sometime before 1000 B.C.E. and that they spread because of a tradition called Ver Sacrum, or Sacred Spring. Each living thing was identified by the spring where it was born. In times of overpopulation, everything born at a certain spring was dedicated to a god and sacrificed, except children. When these children reached the age of 20 they were required to go out on their own to settle a new area. The children often followed a sacred animal, from which the name of the new people was derived. This story shares common features with origin stories for many Italics and other peoples.

LANGUAGE

The Umbrians spoke an Italic language, known as Umbrian, part of the Osco-Umbrian branch and related to Latin. They adopted an alphabet based on the Etruscan alphabet. They eventually used Latin as the official language in their homeland.

HISTORY

Around 700 B.C.E. the Umbrians, who had lived as nomadic herders, settled down to farm and raise cattle in the fertile, well-watered valleys of Umbria. By 500 B.C.E. the Umbrians were living in small fortified and independent villages on hilltops. The rise of Etruscan power to the west, Greek settlements in southern Italy, and increased Mediterranean trade began to influence Umbrian culture. The Umbrians adopted many Greek and Etruscan characteristics around the mid-fifth century B.C.E. This influence occurred even as the power of the Etruscans forced the Umbrians into conflict. The Umbrian villages became city-states in the Greek and Etruscan style at Todi, Amelia, and Terni, among other places.

The first interaction between the Romans and Umbrians is recorded in the history of Rome written by Livy in the first centuries B.C.E. and C.E. In 311 B.C.E. while advancing into the territory of the SAMNITES General and Consul Quintus Fabius Maximus Rullianus sent his brother to scout into the Ciminian Forest in Umbria. The consul's brother made the first

Umbrians time line**B.C.E.**

- before 1000** Umbrians migrate into northern Italy from central Europe or develop from indigenous population.
- c. 700** Umbrians establish settled agriculture and cattle farming, as well as some mining and manufacture of metals.
- c. 500** Umbrians settle in small fortified villages atop hills.
- c. 450** Start of increased influence from Etruscans and Greeks; Umbrians found city-states; Etruscans threaten and annex parts of Umbria as their power grows.
- 311** Roman military advance primarily against Etruscans; first reports of Umbrians.
- 308** Umbrians promise aid to Samnites against Roman invaders.
- 298** Roman fortress established at Narnia interrupts communication between Umbrians and Samnites.
- 295** Battle of Sentium in Umbria; Romans defeat Samnites and their Etruscan and Gallic allies; Umbrians provide no real aid.

reports of Umbrian civilization. In 308 B.C.E. the Umbrians entered into an alliance against the Romans alongside the Etruscans and CELTS, but the establishment of a Roman fortress at Narnia in Umbrian territory in 298 B.C.E. ended effective communication with the Samnites. The threat of the Etruscans to the Umbrians also probably contributed to the Umbrians' nonaggressive stance toward the Romans. In 295 B.C.E. Rullianus defeated the Samnites and their allies at Sentium, a major milestone in the Romans' efforts to conquer Italy. The Umbrians are reported not to have helped the Samnites in the battle.

In 220 B.C.E. the Romans constructed a road through Umbria called the Via Flaminia, to continue their advance. The Umbrians, who built high polygonal walls around their cities, managed to remain independent, however. In 200 B.C.E. the Romans, who had conquered territory north of Umbria, granted the Umbrians Ager Gallicus, part of Cisalpine Gaul that bordered Umbria's northern side. By that time all of central Italy was under Roman control, and the Umbrians, Etruscans, Samnites, and others were Roman allies, or *socii*. The allies were forced to provide troops for Roman military endeavors but were excluded from the decision-making process.

During the second century B.C.E. Roman demands for troops put a great strain on the allies. Finally in 91 B.C.E. many revolted, sparking what is called the Social War of 90–88 B.C.E. The Umbrians were the last of the *socii* to join the revolt and were the first to capitulate when the Romans offered them full citizenship. After the war in 87 B.C.E. the Romans granted full citizenship to all peoples south of the Po River. The incorporation of the Umbrians into Rome led quickly to a decline in the Umbrians' independent identity, and although the Umbrian language had a dialectal effect on Latin, Latin was quickly adopted as the language of the Umbrians.

CULTURE (see also ITALICS)

Economy

The Umbrians began as nomadic herders but settled down to an agricultural lifestyle that was prosperous because of the abundant fertility of Umbria. The Umbrians raised cattle and grew olives, vines, and spelt. They hunted boar, which were numerous in the northern uplands. They were relatively prosperous because of the fertility of Umbria. Part of their wealth was derived from their location on overland trade routes between Italy and central Europe, as well as on the Adriatic.

Government and Society

The early Umbrians, before heightened Greek and Etruscan influence, lived in small isolated settlements on the tops of hills. They were independent, but groups of communities gathered together to mark occasions and festivals and to make collective political decisions. The later Umbrians organized themselves into city-states on the Etruscan and Greek models.

The first Roman encounter in 311 B.C.E., as recorded by the Roman historian Livy, tells us that the Umbrians were divided into tribes, or *trifus* in Umbrian, and that some communities were led by two officials called *marones*. The Iguvium Tables tell us more about the organization of the Umbrians in the second and first centuries B.C.E. These tables are seven inscribed bronze tablets that were discovered during the Renaissance. They detail the activities of a group of priests called the *Fratres Atiedii* and explain that the citizens of Iguvium were divided into 10 different groups, much as the Romans were. In historical times the Umbrians typically settled legal disputes by a physical contest between the claimants. Whoever survived the bout was deemed to have justice on his side.

Technology

Evidence mainly from funerary sources shows that the early Umbrians used a variety of pottery of the region around Italy, including that of the PICENES and VILLANOVANS. The early Umbrians also mined and manufactured some metal near Terni, but to a much lesser extent than the Etruscans. They wielded a short iron sword, characteristic of the Iron Age, and a socketed spearhead.

Religion: Burials

The Umbrians practiced both inhumation and cremation of their dead.

The Umbrians managed to survive as a distinct culture apart from the more powerful Romans for centuries through both resistance and diplomacy.

Unelli (Unelles; Venelli)

The Unelli are classified as a Celtic tribe. They lived in Gaul around present-day Coutances in northwestern France and are discussed as CELTS or GAULS. They were allied with the AULERCI and the ESUVII. The ROMANS referred to them along with other tribes as Armoricans,

that is, tribes living between the Seine and Loire on or near the Atlantic Ocean in the region of Armorica (roughly present-day Brittany and eastern Normandy). The region was occupied by forces under Julius Caesar in 55 B.C.E.

Usdiae

The Usdiae are classified as a Celtic tribe. They lived in southern Ireland at least by the first century C.E. and are further discussed as CELTS or IRISH.

Usipetes (Usipeti; Usipii; Useppi; Usipians)

The Usipetes are generally classified as GERMANICS, although they probably had Celtic

ancestry as well and had a culture similar to that of those CELTS who lived to their west. They lived east of the Rhine in present-day western Germany, north of the SUGAMBRI and south of the TENCTERI. They were traditional enemies of the SUEBI living to their east. In 55 B.C.E. the Usipetes allied themselves with the Sugambri against the ROMANS under Julius Caesar, who crossed the Rhine and invaded their homeland. They were known for their cavalry. Because of pressure from the expanding Suebi in the first century C.E. allied Usipetes and Tencteri eventually crossed the Rhine to the lands of the Celtic MENAPII, some of whom they displaced. They were also known to carry out raids by ship on the BRITONS of the British Isles.

Uterni See IVERNII.

Vaccae

The Vaccae are classified as a Celtic tribe. They lived in present-day northwestern Spain at least by the first century B.C.E. and are discussed as CELTS or CELTIBERIANS.

Vacomagi

The Vacomagi are classified as a Celtic tribe. They lived in Britain in present-day northern Scotland and are further discussed as CELTS, CALEDONIANS, or SCOTS. They were defeated by the ROMANS under Gnaeus Julius Agricola in the 80s C.E. The Vacomagi were possibly part of a confederation of tribes formed by about 200 C.E. and referred to as the MAEATAE.

Vadicasses (Vadicassi)

The Vadicasses are classified as a Celtic tribe. They lived in Gaul along the Loire in north-central France near the SENONES at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Vandals (Vandali; Vandili)

The Vandals were a tribe of ancient GERMANICS whose migrations over the centuries took them farther than any other Germanic people, except the Vikings: from eastern Europe, through central and western Europe, all the way to North Africa in the fifth century C.E. They were among

the principal enemies of the ROMANS, sacking Rome in 455.

ORIGINS

The Vandals are thought to have originated on the northern Jutland Peninsula in present-day Denmark, although some scholars, on the basis of similarity of place-names, place the ancestral group in Norway or Sweden. At some point, possibly as early as the fifth century B.C.E. but more likely in the second century B.C.E., the Vandals crossed the Baltic Sea to present-day northern Poland. They are associated by archaeologists with the Przeworsk culture of the Vistula-Oder region, characterized by burials of warriors with their full war panoply, including spurs, showing that, unlike many Germanic groups, Vandals, considered cavalry an important part of warfare. They perhaps were descended from the same ancestral group as the LUGII. By about 120 B.C.E. the Vandals made their home in the Sudeten Mountains of Silesia, a region mostly in what is now southwest Poland, with parts in the adjoining present-day Czech Republic and Germany. Two major groups eventually formed among them: The Siling Vandals remained in Silesia. The other major subgroup, the Asding Vandals (Hasdingii, or long-haired), lived to their east in present-day Slovakia.

LANGUAGE

534 Vandals defeated by Byzantines.

tribes, began important mass movements toward the empire, which led to clashes with the Roman army. Many Germanic groups closer to the Imperial border were becoming Romanized, whereas the only effect Rome had on the Vandals was through the slave trade they conducted with Germanic tribes. The role of the Vandals in this trade was to supply the slaves, whom they captured in war. As a result war became increasingly important in their society. Thus when the Vandals began to attack Roman territory they were among the most ferocious and ruthless of the Germanic tribes, their name a byword for wanton destruction.

In 171 C.E. the Asding Vandals, under the dual kings Raus and Rapt, requested permission of the Romans to enter the province of Dacia (roughly modern Romania), where they became influenced by the steppe peoples and adopted an equestrian way of life. By 270 C.E. some Asdings had settled in the Roman province of Pannonia (roughly modern Hungary). Siling warriors during that period reportedly supported both the GOTHs and the BURGUNDII in battles against Romans. Both groups raided the Balkan Peninsula.

At some point in the third century some Silings settled in present-day south-central

HISTORY

Early Contacts with Romans

The Vandals had no direct contact with the Romans until the mid-second century C.E., when they, along with many other Germanic

Movements of the Vandals in the Fifth Century C.E.

Germany. The Asdings were traditional enemies of the VISIGOTHS competing for territory in Dacia and suffered at least one major defeat in the mid-fourth century.

During this period some Vandals began to convert from their pagan religion to Arian Christianity. Unlike the Visigoths and OSTROGOTHS, many of whom also converted to Arianism in the fourth century, the Vandals did not convert to Orthodox Christianity later in their history.

Migration to the West

In about 400 Asding Vandal lands could no longer support the population, and they decided to migrate westward under Godigisel. Pressure from the Visigoths and the HUNS, recently arrived in Europe, also was a factor. The Asdings were joined by neighboring groups—the Germanic SUEBI (in particular the QUADI) as well as the Sarmatian ALANS. In 401 they were defeated in Raetia by the Romans commanded by Flavius Stilicho, a Roman general—ironically of Vandal ancestry—who fought for Flavius Honorius, emperor of the West, preventing their advance southward onto the Italian Peninsula. For more than a decade until he was murdered by Honorius's orders, Stilicho was remarkably successful in stemming the Germanic tide all over the Western Empire. A statue was erected in his honor in the Roman Forum, with a dedication praising his bravery and fidelity, telling of the “exceptional love” the Romans held for him.

In the course of their continuing journey westward along the Danube the Asdings and allies were joined by the Silings who had settled along the Main River. Italy was under attack by the Ostrogoths, along with some Asdings and Quadis, under Radagaisus and by Visigoths under Alaric I. As a result Stilicho withdrew Roman legions from the Rhine frontier, leaving it dangerously underprotected. Yet, on reaching the Rhine at the mouth of the Main the Vandals and their allies were confronted by forces of the FRANKS, who as auxiliary with militia units were guarding the border for Rome. They managed to defeat the Franks, but Godigisel was killed. His son, Gunderic, assumed power. On December 31, 406, the Vandals and their allies crossed the frozen Rhine into Gaul. They proceeded west and south, plundering cities and towns along the way, including the imperial city of Trier (Trèves), which they burned, and Boulogne, which they occupied. This invasion that spelled the beginning of the end of Roman control of Gaul.

In October 409 after three years of raiding in Gaul the allied tribes crossed the Pyrenees

Gaiseric: King of the Vandals and Alans

Gaiseric (also Genseric) born in about 400 C.E., known as the king of the Vandals and Alans, is notorious for the sacking of Rome in 455. As the illegitimate son of Godigisel he succeeded his half brother, Gunderic, and took command of an army of as many as 80,000 Vandals and Alans. Along with some Visigoths and other allies he invaded Africa, reportedly at the invitation of the Roman general and governor of Africa Bonifacius, who hoped to strengthen his own position. After he betrayed and defeated Bonifacius, Gaiseric advanced from the Strait of Gibraltar across North Africa, pillaging territories. In 439 he conquered Carthage, established it as a new capital of his African empire, and dismantled the Romans overlordship and imperial power.

In negotiations with Rome in 442 Gaiseric gained the territories of Mauretania, Numidia, and Byzacena. He then annexed the Balearic Islands, Sardinia, Corsica, and Sicily. With these gains and the death of Emperor Valentinian III Gaiseric strategically took advantage of an undefended Rome. In 455, during a two-week pillaging of Rome, he enslaved the emperor's wife, Eudoxia, and daughters. He then conquered parts of Greece and Dalmatia without opposition by Eastern Emperor Zeno.

Gaiseric is recognized as a military mastermind and negotiator. Yet he was more concerned with immediate conquest than establishment of a lasting empire. Sources indicate that his ruthless pillaging was inspired by a loathing of the Catholic Church. Churches and priests were often victimized by the Vandals with humiliation and violent death. Gaiseric died in 477, succeeded by his son, Hunneric.

into Spain. There they received land from the Romans: The Asdings under Gunderic and Suebi settled for the most part in Gallaecia in northwestern Spain; the Silings under Fredbal in Baetica in southern Spain; and the Alans under Addac in Lusitania (roughly modern Portugal). The name of a region in present-day Spain, Andalusia, was Vandalusia, derived from the name of the Vandals. In these Vandal territories brigandage and sea piracy were the main providers of wealth; the Vandals preyed on society as wolves rather than creating new wealth; those conditions could not prevail indefinitely.

The Vandal tenure in Spain was contested. The Visigoths, allies of the Romans, crossed the Pyrenees in 412 under Ataulf. Over the next years his successor, Wallia, campaigned successfully throughout much of the Iberian Peninsula. The Alans, upon defeat in 416–418, took refuge among the Asdings.

Vandals in Africa

Gunderic's half brother, Gaiseric (see sidebar), one of the most able and ruthless of all Germanic kings, assumed power in 428. A towering authority as a war leader, he also had considerable skill as a politician, having a reputation long after his death as the cleverest of men. Because the wealth of Spain was beginning to be depleted, as king of the Vandals and Alans he led

his people into North Africa the next year. His army, perhaps as much as 20,000 strong, moved eastward with amazing speed, winning territory in present-day Morocco, Algeria, and Tunisia, including Roman-held cities that produced grain for the empire. In two years the Vandals held the provinces of Mauretania and Numidia. In 431 the Vandals defeated the Romans commanded by Bonifacius at Hippo and its port Aphrodisium (south of present-day Annaba in northeastern Algeria). But even this did not satisfy Gaiseric, and he attacked the province of Africa, among the wealthiest in the empire. By 439 the Vandals had taken Carthage, the capital city of Africa in present-day Tunisia, the ancient city founded by the CARTHAGINIANS but controlled by the Romans since 29. The province of Africa was Rome's "breadbasket"—the principal supplier of grain. The Vandals' control of Africa allowed them to cut off grain supplies to Italy, furthering the disintegration of Roman government and society.

Before and during Gaiseric's reign the Vandals also built up a fleet that dominated the western Mediterranean, carrying out acts of piracy. In addition to settlement along coastal North Africa the Vandals conquered Sicily, Sardinia, Corsica, and the Balearic Islands. In their campaigns of conquest, they, as Arians, dealt harshly with Orthodox Christians. In 455 the Vandals plundered Rome. In 468 they defeated a Byzantine fleet sent against them.

After the death of Gaiseric in 477 Vandal power gradually declined. The Eastern Roman emperor, Justinian I, declared war on the Vandals; Belisarius was his general in the field. In 533 he captured Carthage. The next year the BYZANTINES defeated the last resisting Vandal army under King Gelimar and captured Hippo, ending the kingdom of the Vandals and Alans. Their lands became part of the Eastern Roman Empire.

The Vandals played no major role in history after their defeat, although it is known that some of them returned to eastern Germany and southwestern Poland, where they maintained their identity as Vandals into the ninth century.

CULTURE (see also GERMANICS)

Compared to other Germanic tribes located closer to the border of the Roman Empire the Vandals had for centuries only distant contacts with the Romans. Their part in the extensive trade between Germanic tribes and Romans, which began after the Rhine border was established early in the first century C.E., may have consisted mostly in providing slaves for export

to Rome via tribes to their south and west, closer to the border. These tribes grew extremely wealthy in this trade, acting as middlemen, while tribes such as the Vandals received comparatively little for their efforts, judging by their burials, which contain only a few oddments of Roman goods, here and there gold or silver fibulae at the most.

The main, indirect effect the Romans had on the Vandals was to exacerbate greatly the instability of their society by making warfare increasingly important to it. The raiding by which Vandal warriors obtained slaves for the Roman market probably escalated over time, until Vandal society had become highly militarized. This, together with their awareness of the great wealth that existed among the "middleman" tribes and within the empire itself, would have furnished the Vandals and other tribes like them with an ultimately irresistible temptation to embark on an armed migration south. The precise reason they and other Germanic tribes began to move in the mid-second century C.E. will never be known in detail—which tribes went to war with one another, who won and who lost—but the general underlying cause was very probably the Roman trade.

The majority of the Vandals settled in and around Carthage, confiscating the lands of many wealthy Romans. Other Romans, however, were left in peace, and some Vandals adopted a Roman lifestyle; some elements of the Roman administrative system were allowed to function relatively intact. On the whole, however, most Vandals maintained their warlike ways, their strongholds used as bases for raiding and plundering.

The Vandals in their reputed "vandalism" furnish the most common image of the contribution of Germanic tribes to the demise of the Roman Empire. Yet their effect on this collapse may have been more in the nature of a coup de grâce, for they arrived on the scene relatively late: after Germanic peoples had impacted Rome in various ways for centuries (for example, as Julius Caesar's justification for greatly extending the empire in the last century B.C.E.). The Goths, Visigoths, and Ostrogoths had done far more to weaken, and to transform, Rome before the arrival of the Vandals. Romanized Germanics such as these tribes and the Franks had created the groundwork for the largely German-led kingdoms of medieval Europe, which would slowly restore civilization to the continent while

the violent, improvident Vandals disappeared from history. It is not just an irony but a sign of things to come that the most famous Vandal was Stilicho, who had the “exceptional love” of the people of Rome.

Vangiones (Vengiones)

The Vangiones are classified as GERMANICS, a tribe of the SUEBI group. They lived on the Rhine around present-day Worms in western Germany near the TRIBOCI. In the first century B.C.E. they were enemies of the ROMANS, allied under the Suebian leader Ariovistus and part of the attack on the Celtic AEDUI. Worms, formerly Borbetomagus, had been a Celtic town before the migration there of the Vangiones from somewhere to the east. The Romans built a fort there in 14 B.C.E., and the town became known as Augusta Vangionum. In 413 C.E. the BURGUNDII under Gundicar made the town the capital of their new kingdom. Sacked by the HUNS in 436 it was rebuilt by the Merovingian FRANKS as Wormatia.

Varangians See *RUS*; *VIKINGS*.

Varchonites See *AVARS*.

Varini (Werini; Warni; Warmes; Warnawi)

The Varini are classified as GERMANICS. They are thought to have originally lived on the Jutland Peninsula, perhaps a client tribe of the SAXONS, and eventually migrated to the Warnow River in the Mecklenburg region of present-day northeastern Germany; the name of the river is derived from the tribal name. By the fifth century C.E. some among them lived between the Saale and Elster Rivers in central Germany and had joined the THURINGI as part of the kingdom

known as Thuringia. Thuringia was divided by the FRANKS and SAXONS in 531. In about 595 the Varingi, after continuing resistance, were virtually exterminated by the Franks.

Varisti See *NARISTI*.

Vasates

The Vasates are classified as a Celtic tribe. They lived in Gaul around present-day Bazas in southwestern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Vascones (Vascons; Vasconi)

The Vascones were a tribe living in ancient times south of the Pyrenees in the present-day province of Navarre in northern Spain. They are thought to be a distinct linguistic group from IBERIANS. CELTIBERIANS settled to their south along the Ebro River. They had extensive contacts with the ROMANS in the second and first centuries B.C.E. The Roman general Pompey founded the city of Pamplona among them in 75 B.C.E., after the Roman occupation ended in the fifth century C.E. it was held for periods of time with surrounding territory by the VISIGOTHS, FRANKS, and MOORS. Some of the Vascones may have assimilated, but the majority managed to retain their identity over the centuries and expanded throughout the western Pyrenees and foothills in both northern Spain and southwestern France, evolving into the modern-day people known as BASQUES. The name Gascony is derived from the tribal name.

Vediantii (Vedentii)

The Vediantii are classified as a Celtic tribe. They lived in Gaul in the western Alps around present-day Vence in southeastern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Veletians (Veleti; Wieletes; Wilzi; Wiltzi; Wilti; Wilts; Liutizians; Luticians; Lutize; Lutitzes; Lituians; Ljutii)

The Veletians are classified as a tribe of Western SLAVS. They arrived in the Baltic Sea region west of the mouth of the Oder River in present-day northern Germany by the seventh century C.E. The FRANKS referred to them and other Western Slavs as WENDS. The RANIANS lived on Rügen Island opposite them; neighbors on the mainland to the west were the OBODRITES, to the east the POMERANIANS, and to the south the POLABIANS.

In 929 the Veletians, along with neighboring tribes, were defeated by Henry I, duke of Saxony and king of Germany. Later that century the POLANIANS invaded their lands. In the 11th century a number of tribes were part of what is referred to as the Veletian Union. In 1160 Henry the Lion, duke of Saxony, defeated the Veletians; afterward German settlers and missionaries settled the region (see GERMANIS: NATIONALITY).

Velioasses (Velioassii)

The Velioasses are classified as a Celtic tribe. They lived in Gaul around present-day Rouen in northwestern France and are discussed as CELTS or GAULS. They were defeated by the ROMANS under Julius Caesar in 57 B.C.E.

Vellabori (Vellibori; Velabri)

The Vellabori are classified as a Celtic tribe. They lived in the present-day county of Kerry in southwestern Ireland at least by the first century C.E. and are discussed as CELTS or IRISH.

Vellavii (Vellavi; Vellaves)

The Vellavii are classified as a Celtic tribe. They lived in Gaul around present-day Saint-Paulien in southeastern France at least by the first century B.C.E. and are discussed as CELTS or GAULS. They were allies of the ARVERNI.

Venedi (Veneds; Venedes; Venedae; Vendi; Venets; Veneti; Venethi; Vinedi; Venetkeni; Venetkini; Wenets; Wenetes; Winidi; Enetoi)

Venedi is the name applied by ancient historians among the GREEKS and ROMANS to peoples who lived to the east of the north-central European GERMANICS in the first and second centuries C.E. It is not known whether these people spoke languages related to modern Slavic. If so those would have been precursors of the languages of the SLAVS, proto-Slavic, which is thought to have developed much later, possibly in the late fifth century C.E. It is more probable that the ancient Venedi were of multiple ethnicities, derived from the complex mix of peoples living in eastern and central Europe who had for centuries been impacted by waves of nomadic peoples from the Eurasian steppe lands to their east.

The name Venedi was later applied to Slavs by early medieval writers (particularly FRANKS), who used the Greco-Roman term for Western Slavs, that is, those Slavic tribes who settled east of Frankish lands—from the Vistula River west-

ward into present-day eastern Germany and the Czech Republic. It was typical of Frankish scholars, unaware of the great population and ethnic shifts that had taken place after the collapse of the Roman Empire, to accept uncritically the scholarship of the Romans whom they so emulated.

Although migrations by Slavs were under way at least by the sixth century, the Western Slavs were not firmly established west of the Vistula until the seventh century, settled in the homelands of Germanic tribes. Other names applied to Slavic peoples in later centuries, SCLAVENI and WENDS, are probably derived from the name Venedi. The use of this name for ancestors of historically known Slavs is a device of modern Slavic scholars who have a nationalistic agenda to claim more ancient antecedents for the Slavs than they actually had.

Venelli See UNELLI.**Veneti (Venetii; Venethi; Venetians)**

The Veneti, an Illyrian-speaking people, lived at the head of the Adriatic Sea from Trieste to the mouth of the Po River in present-day northeastern Italy. The Adige River ran through their territory. To their east were other ILLYRIANS in present-day Slovenia and Croatia.

ORIGINS

The Veneti reached their homeland about 1000 B.C.E. They are associated archaeologically with the Este culture of the Iron Age on the basis of ruins between the Adriatic and the Alps. Some scholars, partly because of a similar name of the Slavic peoples listed in this book as VENEDI, have hypothesized that the Veneti were related to Slavic-speaking peoples and possibly descended from Enetoi, mentioned in the *Iliad* as living near Troy, presumably by the Greek poet Homer, in the ninth or eighth century B.C.E., although archaeological and linguistic studies indicate otherwise. A Celtic tribe of present-day northwestern France also bore a similar name, listed in this book as VENETIL.

LANGUAGE

The Veneti language, known as Venetic, is Indo-European and perhaps related to Illyrian languages, although some scholars classify it as related to Italic and others as a distinct language (and some suggest that it is a parent language of Slavic). More than 400 inscriptions have been

VENETI**location:**

ancestry:

Illyrian

language:

Venetic (Illyrian)

discovered from the last four centuries B.C.E., some in the Latin alphabet, others in a native script derived from Etruscan.

HISTORY

Venetian culture became distinct in the 10th or ninth century B.C.E., reaching its peak in the sixth to fourth centuries. The principal cities were Ateste (modern Este) and Pataviuan (modern Padua). As were other coastal Illyrians, they were skilled mariners and had trade contacts throughout the Adriatic. They had early contacts with the ETRUSCANS and VILLANOVANS and later the CELTS. Advances into the Po valley by Etruscans in the sixth century B.C.E. by Celts in the fourth century B.C.E. pushed the Veneti northeastward. The Veneti generally maintained good relations with the ROMANS, forming an alliance with them in the third century B.C.E. and resisting Celtic expansion. The Romans established a colony at Aquileia in 181 B.C.E. and over the next decade built roads to the region. The region quickly became Romanized, with Latin adopted as the primary language. Inscriptions in the Venetic language end in the late second century. The Veneti were given rights as nonvoting Roman citizens in 89 B.C.E. and full citizenship status in 49 B.C.E.

CULTURE (see also ILLYRIANS)

The Veneti had trade contacts throughout the Adriatic, as well as with people of the Alps and northern Europe. For part of their history they controlled the amber route from the Baltic. They were also known for horse breeding, their horses famous among the GREEKS.

The Veneti worked in bronze. Embossed bronze conical vessels, known as *situlae*, probably wine buckets, are among their more distinctive artifacts.

Este apparently served as the center of a cult to the important Venetian divinity Reitia, possibly a goddess of childbirth.

The modern city of Venice (or Venezia in Italian and Venetia in Latin) takes its name from the Veneti tribal name (see VENETIANS).

Venetians (people of Venice)

The name Venetians refers to people living in the city of Venice in present-day northeastern Italy. The VENETI, an Illyrian people, originally inhabited the region, with incursions by ETRUSCANS and CELTS. In 181 B.C.E. the ROMANS founded the

49 Veneti gain voting rights.

town of Aquileia. After the invasion of the HUNS in 452 C.E. and the destruction of Aquileia the inhabitants fled southward to lagoons and founded Venice. It briefly fell under the dominion of the OSTROGOTHS, then that of the BYZANTINES until the 10th century. Venice emerged as an important commercial capital; it controlled colonies on Crete, Euboea, the Cyclades, and the Ionian Islands. By the 15th century the Venetian Republic formed as a state, absorbing cities such as Verona, Genoa, and Polesine in its domain. Invading Ottoman Turks (see TURKICS) eventually acquired many Venetian territories from the 15th to 18th centuries. With its decline the Venetian Republic was annexed by Austria in 1797, then was ruled by France under Napoleon in 1805–15, after which it was restored to Austria. In 1866 Venice was under Italian rule (see also ITALIANS: NATIONALITY).

Venetii (Venites; Veneti; Veniti)

The Venetii are classified as a Celtic tribe. They lived in the Atlantic coast around present-day Vannes in Brittany in northwestern France; they can thus be discussed as CELTS or GAULS. The ROMANS referred to them along with other tribes as Armoricans, that is, tribes living between the Seine and Loire on or near the Atlantic Ocean in the region of Armorica (roughly present-day Brittany and eastern Normandy).

A maritime people, the Venetii acted as middlemen in the trade between the Mediterranean, especially of Mediterranean wine, and Britain. In 56 B.C.E. they were defeated in a sea battle in Quiberon Bay by galley ships under Julius Caesar, the first recorded sea battle in northern waters. Warriors from some Armorican tribes, perhaps of the Venetii, fought as allies of the ARVERNI under Vercingetorix against the Romans under Julius Caesar in 52 B.C.E. Darioritum on the site of Vannes became a *civitas* capital in Gaul during the Roman occupation until the

Venicones (Venniconii; Vennicnii)

The Venicones are classified as a Celtic tribe. They lived in the present-day county of Donegal in northwestern Ireland at least by the first century C.E. and are discussed as CELTS or IRISH. Some among them, classified as CALEDONIANS, settled in Britain north of the Firth of Forth in present-day eastern Scotland.

Veps (Vepses; Vepsa; Vepsians; Ves; Vepslaine; Chukhar; Chukhna; Chuhonets; Chudes; Northern Chuds)

The Veps are a Finnic-speaking people, who live in present-day northwestern Russia (see FINNO-UGRIANS; RUSSIANS: NATIONALITY). Their ancestral territory was around Lake Onega and the headwaters of the Oyat River. There now exist three defined groups: The Äänis-Veps, or Northern Veps inhabit Karelia near Äänisjärvi, to the south of Petroskoi; the Central Veps, the largest group, live on the River Oyat in the St. Petersburg region. The Southern Veps live on the Leedjögi River in the eastern part of the St. Petersburg region on the northwestern edge of the Vologda Oblast. In Russian texts the Veps are sometimes called Chuds (or Northern Chuds), a name also applied by the Russian SLAVS to the VOTES (or Southern Chuds) and other Finnic tribes. To the south and east of the Veps lived the MERYA, occupying the territory between the Oka and the Upper Volga.

ORIGINS

Jordanes wrote about the Vasina, possibly the Veps or an ancestral people, in the context of

their relations with the GOTHS in the sixth century C.E. It is known with certainty that by the ninth century the Veps were one of the more powerful Finnic tribes in the country around Lake Ladoga and Lake Onega.

LANGUAGE

The Vepsian language is in the Balto-Finnic group of Finnic in the Finno-Ugric language family. The three surviving dialects correspond to the northern, central, and southern tribal groupings. The extinct language of the Merya is thought to be related to Vepsian.

HISTORY

The Veps, as did other Finnic peoples, had contacts with the VIKINGS in the ninth century C.E. and most certainly before. They are known to have served under Prince Oleg of the RUS in his various campaigns of the late ninth and early 10th century, in 907 he attacked Constantinople (modern Istanbul). In the 11th century the principality of Novgorod had hegemony in the region, and the Veps and other Finnic became caught up in its struggle over the region with Sweden. The Treaty of Nöteborg, signed in 1323 by Novgorod and the Swedish kingdom, had no clear delineation of the borders between the countries. The major powers of the time, including Denmark, Sweden, Novgorod, and Kievan Rus, all claimed the right to levy taxes on the Vepsian territory. In 1478 Vepsian lands were annexed by Russian SLAVS to the Grand Principality of Muscovy.

Over the centuries under Russian rule the Veps have had to endure increased Slavic presence in their homeland, decimation of their forests for lumber, and forced conversion to Eastern Orthodox Christianity. Economic hardship and loss of traditional culture continued into the 20th century during the era of the Soviet Union (USSR). In the 1920s–30s to avoid collectivization many Veps migrated to the Kemerovo region of Siberia. In 1937 the USSR initiated a policy of suppression of minorities, causing further loss of identity.

During World War II (1939–45) Finland, supporting Nazi Germany against the USSR, occupied the homeland of the Northern Veps. Some Veps joined the Finnish army, forming the volunteer Kindred Battallion. During and after the war Soviet authorities severely punished anyone who had collaborated with the Finns.

Even before the breakup of the Soviet Empire in 1991 the Veps had begun to experi-

CULTURE (see also FINNO-UGRIANS)

Economy

Veps have always engaged in farming and herding, as well as hunting in the forests and fishing in lakes and rivers. In 1703 Peter the Great of Russia founded a metalworking and munitions factory on Vepsian lands near Äänisjärvi, where Veps found employment. The Veps are also known for stone cutting, working in quarries, as well as stone polishing. Many have traditionally been migrant workers in Finland, Sweden, Estonia, and Lithuania in times when international travel was permitted.

Transportation

The Veps used sleighs, sledges, toboggans, and a type of springless carriage known as a *barouche-tarantas*.

Other Technologies

Birch bark was utilized in many capacities by the Veps—for horns, bags, boxes, and various food containers. The only traditional craft that has widely endured among the Veps, however, is pottery.

Religion

The Vepsian pagan religion celebrated animals, such as the bear and the pike (a fish). Wood was favored for ceremonial objects, such as staffs made of alder used by a *noid* (shaman) in weddings and other rites. They had spoken charms for healing. Omens govern much of their behavior, such as in the building of their homes.

Some of the ancient beliefs carried over into their interpretation of Christianity. A Vepsian house traditionally has a *yumalchog*, “holy corner,” where icons are hung and other revered objects are kept on a blue table. An ancient belief maintains that a goblin *Pertyizhand* lives under the household stove.

Surviving Veps, many of whom have departed from their ancestral villages and have been assimilated into mainstream Russian society, are at a crossroads. Political cohesiveness and cultural awareness have been diminished by the forces of history. It will take great efforts by

parents and educators to pass on their native language and traditional lifeways to future generations.

Veragri

The Veragri are classified as a Celtic tribe. They lived in the western Alps around present-day Martigny in western Switzerland at least by the first century B.C.E. The ROMANS under Julius Caesar battled them along with other CELTS to open Alpine passes.

Verodunenses

The Verodunenses are classified as a Celtic tribe. They lived in Gaul around present-day Verdun (formerly Verodunum) in northeastern France at least by the first century B.C.E. and are discussed as CELTS or GAULS.

Verturiones

The Verturiones are classified as a Celtic tribe. They lived in Britain north of present-day Glasgow in central Scotland and are discussed as CELTS, CALEDONIANS, or SCOTS. They were defeated by the ROMANS under Gnaeus Julius Agricola in the 80s C.E. They were possibly part of a confederation of tribes formed by about 200 C.E. referred to as the MAEATAE.

Vervians See DREVLANS.

Vestini

The Vestini are classified as an Italic tribe. They lived along the Aterno River in the present-day region of Abruzzi in east-central Italy in the valleys of the Apennines. Their origins are unknown. They were perhaps descendants of migratory ILLYRIANS who fused with ITALICS; the Vestinian language was one of the Sabellian subgroup of the Oscan branch of Italic languages, related to Aequian, Marrucian, Marsian, Paelignian, Sabine, and Volscian. Pinna (modern Penne) was their principal town; they shared Aternum (Pescara) with the FRENTANI, with whom they were allied.

The Vestini are mentioned in historical accounts as part of a confederacy of MARRUCINI, MARSI, and PAELIGNI that supported the SAMNITES against the ROMANS in 309–304 B.C.E. during the Second Samnite War and as a result are sometimes discussed as Samnites themselves. In 301 B.C.E. they signed a treaty with Rome, after which they issued their own coins. They are also associated with the SABINES.

Some among the Vestini joined an alliance against Rome in the Social War of 90–88 B.C.E. One theory maintains that the name Vestini is derived from that of Vesta, goddess of the hearth and home in the religion of the Romans and other Italic peoples.

Vettones

The Vettones are classified as a Celtic tribe. They lived in present-day western Spain and eastern Portugal at least by the first century B.C.E. and are discussed as CELTS or CELTIBERIANS. They rebelled against the ROMANS in 155–154 B.C.E.

Viducasses (Viducassi; Viducesi)

The Viducasses are classified as a Celtic tribe. They lived in Gaul around present-day Vieux at least by the first century B.C.E. and are discussed as CELTS or GAULS. They were possibly a subgroup of the ESUVII.

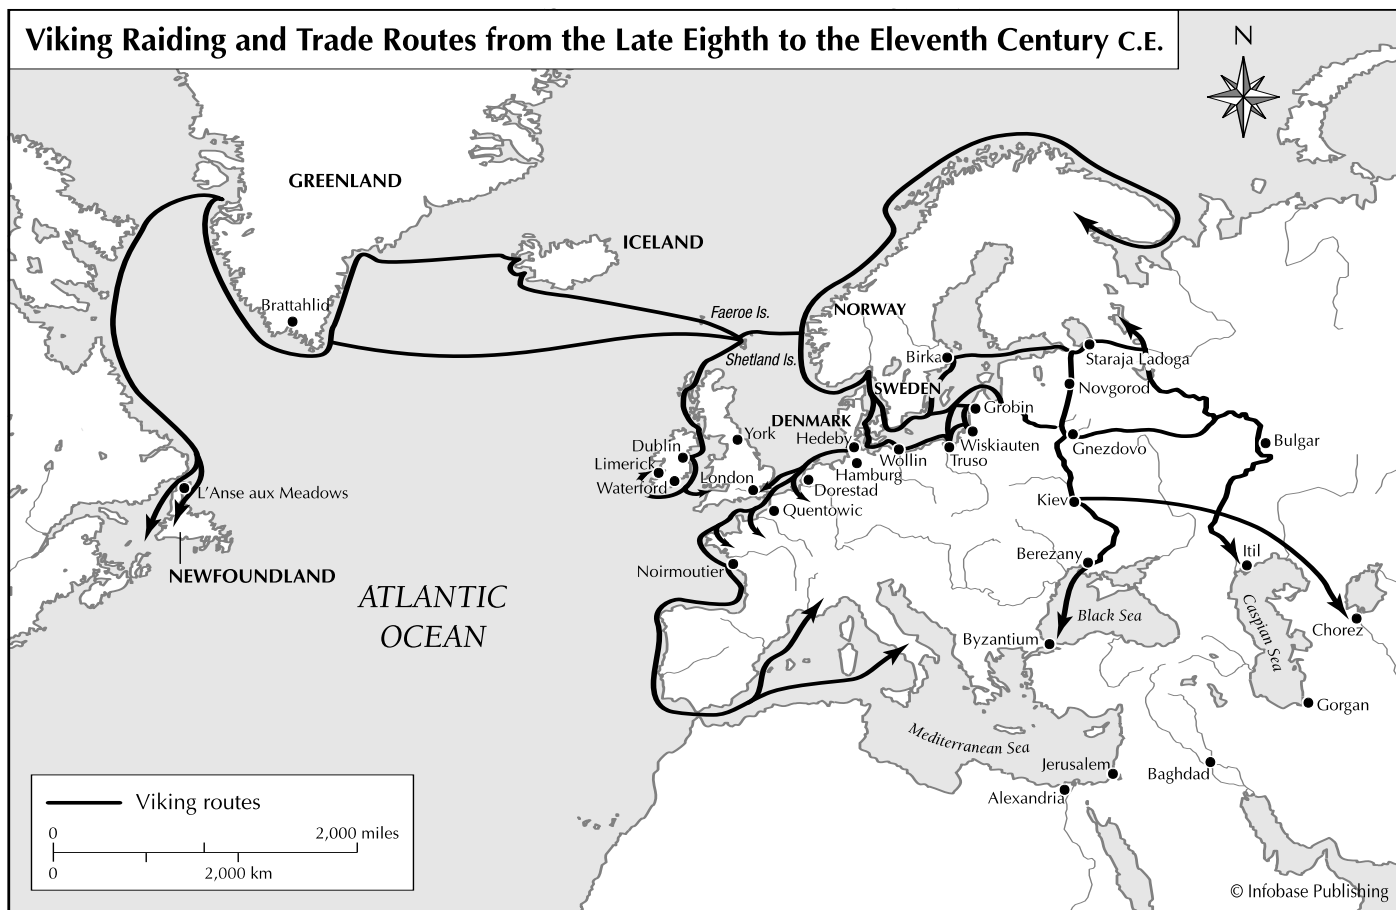

Vikings (Norse; Norsemen; Northman; Nordmanni; Varangians; Varjager; Danes; Norwegians; Swedes)

The Vikings, known by a number of different names, the most prevalent alternate name Norse or Norsemen, were related to GERMANICS, that is, other Germanic-speaking peoples. Grouped together as SCANDINAVIANS they are also described as Danes, Swedes, and Norwegians, depending on the part of Scandinavia in which they originated (see DANES: NATIONALITY; NORWEGIANS: NATIONALITY; SWEDES: NATIONALITY). Developing great shipbuilding and navigational skills, Vikings traveled far beyond their own shores and settled throughout Europe and beyond and became ancestral to many other European peoples, the most influential of whom were the NORMANS and the RUS. Norse, Norsemen, and Norman all are derived from the Old Norse words for “north” and “men.” Vikings is possibly from *Vik*, a gathering place for raiding fleets, or a bay or harbor.

Most Germanic tribal societies in Denmark and southern Sweden were remarkably stable from the Neolithic period when farming first arrived in 4000 B.C.E. until the first centuries C.E. and consisted largely of isolated village economies. Change began during the first half of the first millennium C.E. under the influence of the Roman Empire. After their wars of conquest were largely over and their empire's borders had become relatively fixed the ROMANS turned to trade with peoples outside occupied lands in order to supply the large number of slaves needed to keep their economy going. Probably as a result of trade in slaves and in iron, leather, and amber, a prestige-goods economy began to flourish in Denmark—with artifacts of gold and silver, for example—as attested by rich burials that began in the first century C.E.

Archaeologists have determined concentric zones of differing burial types among the pre-Vikings, affected by their distance from the Roman frontier. Most of present-day Denmark lay within the zone of rich burials, where people prospered by trade with Romans. To the north in Sweden and east along the Baltic coast was a zone of warrior burials containing fewer prestige items. The warriors of this zone may have provided captive slaves to the “middlemen” of Denmark. The presence of such wealth in Denmark must have provoked raids from the more northern peoples.

Danes and Swedes had begun a trade between the east and west of Europe, from as early as the first century C.E., which consisted in part of acting as middlemen in a slave trade between the **BALTS** and **SLAVS** along the Baltic coast to the east and the Roman Empire. This was supplemented by trade in iron and finely crafted metal goods wrought by Danish and Swedish smiths. Craftspeople also worked on leather and amber.

By the third century there is evidence of the disruption of trade, probably by pirate attacks from the warrior periphery. By the fourth and fifth centuries substantial settlements of long-houses organized along street grids were being built in Denmark, the sign of centralized political power. At the same time small strongholds, many consisting of a single fortified wall, were scattered across southern Sweden, a sign of the need to defend against attacks. Votive deposits in bogs have been found from this period, many of them of elaborate weaponry, suggesting the presence of a warrior elite.

By the fifth century trading centers in southern Sweden and on the island of Gotland were engaged in a rich commerce with peoples to the east who were receiving subsidies from

Byzantine Rome. Gold coins streamed to southern Scandinavia to be turned into ornaments by the increasingly sophisticated metalworkers. In the fifth century the ruling dynasty of the **SVEAR**, the dominant tribe of southern Sweden, was founded. But an independent warrior elite continued to be a factor in the sixth and seventh centuries, as indicated by elaborate burials of whole ships with richly ornamented swords and other battle gear.

LANGUAGE

The Vikings were Germanic-speaking peoples, who had a variety of Scandinavian dialects, as were as dialects based on the languages spoken in the lands they settled.

HISTORY

Causes of Viking Expansion

The tension between increasingly centralized groups and independent warrior societies may have furnished part of the impetus behind the Viking raids and the Scandinavian migrations to other parts of Europe that began in the late eighth century, as warriors sought to expand their territorial holdings and were unable to do

so in neighboring lands. Although the main bases for Scandinavian economy were farming and trade, Scandinavians had social and political organization in which warfare played a central role, similar to that of ancient CELTS and to that of other Germanic peoples. The spoils of war were desired at least as much as proof of warrior prowess and bravery as for material gain. Launching raids to distant lands was a way to build political power.

Rapid population growth is thought to be another cause of Viking expansion. There is archaeological evidence of increasing populations on Scandinavian farmsteads during this period. The use of iron tools, more durable than bronze ones, led to more efficient farming and the ability to support larger communities in a given region. The favorable climate of what is known as the Medieval Warm Period probably also contributed to population growth in Scandinavia.

At the dawn of the Viking Age in the eighth century, Scandinavia, as it had been earlier, was a crossroads of trade. Scandinavian merchants were active in the eastern Baltic, collecting furs from FINNO-UGRIANS who had trapped them for export west to the European power of the day, the Carolingian Empire of the FRANKS under Charlemagne, based in what are now northern France and the lower Rhineland basin of present-day Germany, Belgium, and the Netherlands. As Scandinavian merchants penetrated into Russia and beyond, they tapped into a trade network transporting vast amounts of silver from the Abbasid Empire in present-day Iraq. The merchants may have acted as a pipeline to carry this silver to Charlemagne's kingdom, where it stimulated the economy and helped finance Charlemagne's church-building enterprise. Political troubles in the Abbasid Empire dried up the flow of silver in the 820s and 830s, a possible reason that Scandinavian silver traders turned to piracy and raiding. Traders' tales of the great wealth of the Carolingians, the most powerful group in Europe since the Romans, no doubt also encouraged raids for plunder. The brutal campaign the Carolingians waged against the SAXONS of the Lower Elbe River region adjacent to Denmark in the latter eighth century may have also led to a call to arms against foreigners.

The Era of Great Raids

The period of frequent Viking raids on settlements throughout Europe began at the end of the eighth century and lasted into the 11th century. The earliest recorded Viking raids were directed against the British Isles in the 790s,

with others against the Frankish kingdom on the mainland soon afterward.

But raiding may have been unrecorded long before that time; as mentioned, raids seem to have disrupted Danish trade with the Romans in the third century. As soon as lucrative trade networks appeared along the Baltic–North Sea axis in all probability raiders from among the Scandinavian warrior class sprang into action to take advantage of them. The relationship of Viking raiding to Viking trading may have been that of a power struggle to control lucrative trade routes.

The British Isles

On June 8, 793, a monastery on Lindisfarne, an island off the northeast coast of Britain, was sacked by the invaders, as recorded in the *Anglo-Saxon Chronicle*, English monastic writings in the Anglo-Saxon language. Trade between England and the Continent along the English Channel and the North Sea had been expanding throughout the eighth century, a great temptation to raiders. Raids in this area became more frequent as well as more penetrating after the 830s. In 867 the Danes captured York; by about 870 the Earldom of Orkney was established. In about 880 the Viking leader Guthrum signed a treaty with King Alfred of the ANGLO-SAXONS, which granted Guthrum rule over a large area of East Anglia, called the Danelaw.

The territories the Vikings conquered in Ireland, first in 795, were small but strategically placed. The Viking Age, through trade, introduced great wealth to the kingdoms as well as an increased means of communication, as always an effective power of change in a society. Ireland had closer contact with Britain and the European mainland, which created new influences in the political system as well as in the church and the commercial aspects of the society. The native IRISH defended themselves strenuously against the Vikings, mostly Norwegians, and in 902 temporarily expelled them from the site of present-day Dublin. But the Vikings became so well established there that they began launching raids against England. In 1014 Danes under Sweyn I conquered a large territory in England. The Vikings lost their influence when their cities fell to the Normans, who had been invited to Ireland as allies of a rival claimant to the Irish Crown in the 11th century, and they were eventually absorbed into the Anglo-Norman colony in Ireland.

France and Germany

The *Royal Frankish Annals*, or *Annales regni Francorum*, an anonymous account of the polit-

ical and military history of the FRANKS from 741 to 829, record the first raid in Frankish lands as taking place in 799. The city of Rouen was attacked in 841. The first area to experience the Viking raids in all their intensity was the Seine basin, first during the attack on St. Wandrill in 841. The first attack on Paris occurred in 845. The second region to feel the impact of the Vikings was Aquitaine. The raiders went as far as Spain in 844 and Bordeaux was under Viking influence by 848. The third zone of activity was Brittany and Neustria from the 840s; Brittany was finally conquered in 914. The fourth zone of activity was the Meuse–Lower Rhine area. In 845 both Hamburg and Paris were sacked. The Vikings repeatedly sailed up French rivers, looting and burning. The raids caused severe disruption of French commerce and society, threatening to plunge the area back into a condition like that of the medieval period that followed the collapse of the Roman Empire.

The design of Viking ships—which allowed them to travel up shallow rivers, far inland—enabled them to make surprise raids on inland strongholds and settlements that had experienced only assault by slowly approaching land armies. Typically, mounting several hit-and-run style raids the Vikings would establish semipermanent staging areas near the mouth of rivers from which to launch raids further inland. These would also serve at times as camps where they could wait out the winter when the stormy Scandinavian seas became impassable. In the ninth century the war bands had begun to increase in size to the scale of armies, the result of attempts in Scandinavia of kings such as Harold I of Norway to consolidate political power. More elaborate defensive structures were being built in Scandinavia, such as the Danevirke, which protected the southern border of Denmark; the Danish king Godfred completed its second stage in 804. A new phase of attacks started in 885 on Paris and its surroundings.

The might of the Carolingian Empire prevented Viking settlement on the scale of that in the British Isles, and raids on the mainland occurred only sporadically. The exception was the area around the mouth of the river Seine, where the staging areas for attacks farther upriver became the basis for the duchy of Normandy, granted to a Norwegian Viking chief (whose followers were Danes) named Rollo in 911. He is considered the founder of Normandy.

Organized defense against the Vikings awaited the emergence of strong leaders such as Charles II in France and Alfred the Great in England, who were able to organize the fortifica-

tion of towns, station fleets, and naval patrols along the coasts and to marshal more mobile military forces. Other Christian leaders could do no more than to pay ransom, called *danegeld*. In 845 the first *danegeld* was paid to Vikings by the Franks. In return for sufficient ransom, as well as in the presence of a strong army, the Vikings were often willing to declare peace and begin trading.

Through the Strait of Gibraltar

From their new staging areas or homes on the British Isles or on the coastal mainland the Vikings launched expeditions farther south. In about 858 Bjorn Ironside, the son of a Danish king, and his lieutenant, Hastein, led a fleet of 62 longships in raids from the mouth of the Loire River in France along the Iberian Peninsula through the Strait of Gibraltar and into the Mediterranean Sea, where they reached coastal North Africa, the Balearic Islands off Spain, and coastal southern France. A fleet of MOORS eventually drove them back to the Atlantic, and they returned to France four years after departure.

The Faeroe Islands

The Vikings were not only raiders but settlers, who engaged in the first great era of overseas expansion in the history of Europe. Their colonization in the 860s of the Faeroes, 300 miles to the west of the coast of Norway, was the first step in this expansion. It is thought that the Vikings learned much about the waters to the west from Irish monks, who had pioneered navigation there in the seventh century. Accounts of the earliest Viking voyages to the Faeroes and Iceland say nothing about their “discovery,” suggesting that this was already a *fait accompli* by the Irish. That the early voyages of the Vikings to Iceland took them directly to the southwest coast, where the Irish monks were settled, seems to imply that they were following the sea route pioneered and plied by the Irish. The Vikings’ large-scale settlement of the Faeroes, involving transportation of families, gear, and animals across 300 miles of open water, began a period of wide-ranging Viking navigation.

Iceland

The colonization of Iceland began in the ninth century. The main source of information about the settlement period in Iceland is the *Landnamabok* (Book of settlements), written in the 12th century, which gives a detailed account of the first settlers. According to this book Ingolfur Arnarson, a chieftain from Norway, was the first Viking settler of Iceland. He arrived in Iceland with his family and dependents in

Harold I: First King of a United Norway ✦✦✦

Harold I has been referred to in English texts as Harold Fairhair or Finehair or the Fairhaired. The Norwegian version of his name is Harald Fårhager. As the Viking sagas tell it, he vowed not to cut or comb his hair until he had become sole ruler over Norway. His descriptive name is also translated as Shockhead. Little is known of his early life. He was said to have been born in about 860 C.E. to Hafdan the Black and his second wife, Åsa of Agder. At his father's death Harold inherited three small domains in Norway, whereupon he began his campaign of conquest over rival chieftains.

The series of battles in his homeland culminated in a naval battle at Hafsfjörd, which probably occurred between 885 and 890. Harold gained control of Norway's coastal regions, although not all inland territories. Continuing raids by chieftains who had previously settled in or fled to the western British Isles and neighboring islands—the Orkneys, Shetlands, and Hebrides—prompted Harold to lead his fleet of longships across the North Sea to dislodge them. Many of the defeated Vikings then migrated to Iceland. Harold also allied himself with the Anglo-Saxon king Athelstan to counter other Vikings living on the British Isles. He died in about 940.

Viking culture flourished during Harold's unifying reign, as did Viking expansion through Harold's encouragement of settlement of European lands to the south and in Iceland. On his death his son, Eirik Bloodyaxe, gained power, but because of misrule he was deposed by his half brother Hákon the Good.

874. He built his farm in Reykjavík, the site of the modern-day capital. The *Landnamabok* describes the land at this time as being covered in forests between the coastline and the interior mountains. Irish monks, whom the Vikings called *papar* (popes), were living there, although they soon left. This newly settled land offered plentiful opportunities for farming and hunting. By the final decade of the ninth century immigrants were voyaging to Iceland in great numbers, most from coastal Norway; and many from Ireland and the Scottish Isles. The conversion to Christianity took place in Iceland about the year 1000, when King Olaf I of Norway sent out missionaries to convert the islanders.

Many of the immigrants were Viking chieftains; written accounts mention such names as Naddod the Viking, Raven-Flóki, and Geirmund the Swarthy. Many chieftains immigrated as a direct result of Harold I Fairhair's (see sidebar) campaigns during the 880s to unite Norway under his rule, in particular his decisive naval victory in about 890 at Hafsfjörd. He then took a fleet across the North Sea to the Scottish Isles to expel his enemies there; these refugees also made their way to Iceland. Many of them remained in Iceland only during the winter months and returned in the summer to the coast of Norway to conduct raids. Other chiefs who had been Harold's allies also emigrated on the king's advice. Many of the freedmen and slaves who migrated to Iceland were Irish, and some of

the chieftains were of mixed Irish and Viking stock. In 930 the Vikings established a traditional council to govern Iceland, known there as the Althing.

From Iceland in about 985 the Viking Eric the Red ventured to the island of Greenland across the North Atlantic, followed the next year by the first of many settlers. Soon afterward others, such as his son, Leif Ericsson, proceeded farther to coastal North America. The Greenland settlement lasted for some 400 years before a worsening climate caused its demise.

Russia

The Viking invaders of Russia were mostly of Swedish origin, primarily descended from a tribe called the Svear who lived in central southern Sweden, but also from people of Norway and Denmark. A common name for the Vikings in Russia was Rus or Ruser or Ruserna. Another was Varangian, perhaps a variation of the word Scandinavian. Many scholars believe that the name Rus is a conflation of the word Ruotsi, which means "Sweden" in Finnish, and Rhos, a word found on Viking rune stones, which means "rower." Another source states that Rus, the name of the eastern Vikings, referred to the military crew who rowed the ships on which the Viking arrived.

Seeking to expand their trading links the Swedish traders sailed east along the Baltic coast to the Neva River and followed its course farther and farther eastward, founding settlements from which they launched expeditions south into Russia. An important Viking route to the south was through the city Starja Ladoga on the river Volchov. From a trading station there known as Aldeigjuborg the Vikings could make their way to Novgorod, which they called Holmgård.

Hoardings of Arab silver coins, minted in Baghdad in the eighth century, have been found in the soils around Birka, a large Swedish trading settlement in the Baltic area, suggesting that Russia was only a waystation en route to the Vikings' real goal, the riches of the Arab world. Only a few Vikings actually traveled all the way to Baghdad; rather they focused on opening up trade routes through Russia and maintaining control over them, by force if necessary. The Viking trade routes connected the fur trappers of Finland with the Arabs of Baghdad. During the Viking Age furs were a highly valued commodity.

An important source for the history of the Swedish Vikings in Russia is the chronicle now known as the *Primary Russian Chronicle*, written by a monk called Nestor, who lived in Kiev in

the 11th–12th centuries. According to Nestor the Vikings were asked to send a king to establish justice among the SLAVS. Three brothers of a tribe called the Rus agreed to rule. Nestor writes, “It’s after these Varjager that the country of Novgorod now bears the name ‘land of Rusers.’”

Though Nestor’s story is considered partly apocryphal its kernel of truth consists of the Vikings’ domination of the trading routes through Russia. They collected tribute from local tribesmen in the form of furs and slaves and exchanged them with Arab traders for valuable Baghdad silver; this may have been the method by which they had earlier obtained the Byzantine gold coins. Their trading networks helped to unify the region that would become Russia; in a real sense, then, Nestor’s story was true.

Kiev was an important waystation en route to Constantinople (modern Istanbul), the capital of the Byzantine Empire. During the Viking Age Constantinople was the largest and richest city in Europe. By 912 Viking raiders had penetrated south to the Caspian Sea.

As the Romans had before them the BYZANTINES recruited barbarians into their armies; in the 980s some among the Rus were invited to form the elite Varangian Guard who protected the person of the emperor. One of the duties of the Varangians was to guard the Byzantine emperor during the elaborate religious services that took place in the majestic Hagia Sophia cathedral.

End of the Viking Age

The trend in Scandinavia toward consolidation of power and land in a few hands that had sent Viking raiders abroad in the ninth century began to confront them in the lands they attacked during the latter part of the century. In the England of Alfred the Great and in Ireland and France they met an increasingly determined resistance. The Viking raids are thought to have been a primary motivating force in the development of feudalism, as the need to maintain armies of highly skilled and heavily armed soldiers caused rulers to engage in an exchange of lands for service with followers called vassals. The Normans, descended from Vikings, were in the forefront of this development, quelling indiscriminate raiding by their subjects as strenuously as they had themselves once raided. In the Scandinavian homeland during the 11th century royal power was growing, as evidenced by the many new trading centers that were built. Almost all of these new towns still exist as important centers: in Norway, Trondheim, Bergen, and Oslo; in Sweden, Sigtuna, Lund, and

Skara; in Denmark, Aalborg, Odense, and Roskilde, among others. Some of these new towns were the seats of bishoprics and royal mints, the symbols of a new age. At the same time the readiness of former Vikings in new lands to adopt Christianity, though at first in a blend with paganism, and new customs and language meant that the characteristic Viking way of life would not long endure. The Viking Age is considered to have ended by around 1050, the year when the earliest extant Danish crucifix was made, although in some parts of Scandinavia and in Viking colonies, particularly Scotland and Iceland, Viking culture and influences persisted longer.

CULTURE (see also GERMANICS)

Economy

The Vikings farmed, fished, and hunted to support their communities. During the Iron Age their agricultural methods became more refined through the use of new iron tools. They also made increasing use of the technique of strip parceling, arranging fields in long strips, and that of two-course rotation, planting different crops from season to season or leaving fields fallow in alternate years. The length of the growing season and the types of crops planted varied with latitude. In southern parts of Scandinavia a seven-month growing season allowed for a variety of crops, but to the north wheat and rye were the staples, with few fruits and vegetables grown. Animal husbandry was more important than crop farming in many areas. Cattle raising was most important, often supplemented by pigs, but goats and sheep were also raised.

Periodically Viking hunters would travel in boats northward in search of walrus for their meat, skins, and ivory. They also trapped furbearing mammals, such as sable and ermine, for trading purposes. According to King Alfred, the ninth-century king of Wessex in England, who wrote an account of the voyages of a Norwegian named Ohthere, the Vikings, skilled fishermen, were also known to hunt whales.

The Vikings traded a wide range of goods, transporting them over great distances. They engaged in internal trade and had access to many natural resources. The more prosperous Vikings in Denmark and southern Sweden traded with groups inland and to the north. Dried fish, down, furs, sheep, cattle, goatskins, leather, hawks, honey, wax, nuts, grain, amber, iron, swords, and armor were some of the items traded in eastern European markets. They also traded in silver from the Abbasid Empire in present-day Iraq.

Vikings carved this plaque in whalebone. (Drawing by Patti Erway)

As mentioned, the impetus for the great era of Viking raiding may have been the tension that arose as chieftains striving to become kings struggled to consolidate and increase their power by ending the constant destabilizing influence of free-roving warriors of lesser status, such as the chiefs Harold Fairhair chased off to Iceland. Such rulers also sought to organize and regularize trade by establishing trading centers such as Birka in Sweden and Hedeby in Denmark. These were planned towns with regular street grids and, no doubt, designated marketplaces, warehouses, and depots.

There seems to have been no clear-cut distinction for the Vikings between trading and raiding. Trade could involve violence as the Vikings sought to wrest control of trade routes, for example, in eastern Europe. If they encountered unwarlike people, such as monks in rich monasteries, whose possessions they coveted, they took them by force. If they encountered forces too strong for them, they negotiated treaties and began trading.

Iron Production Parts of Scandinavia are known for iron deposits, and the Vikings engaged in iron production, establishing large encampments for mining. They used iron for farm implements, weapons, and nails in building and in reinforcing ships. Iron axes allowed the harvesting of timber from the extensive forests in the region.

Government and Society

The Vikings manifested a strong sense of community, with strong kinship ties. They also demonstrated a sense of social organization in warfare, iron production, boat building, and sailing. This high level of organization allowed relatively small groups of people to travel great distances through wilderness on land and sea and through often hostile territory to trade or make highly successful attacks.

With agriculture central to the Viking way of life social standing was partly determined by land ownership. Yet a warrior elite also gained status through success in raiding. Power tended to concentrate in the hands of a few as successful war leaders attracted more and more followers and exerted influence based on the size of their entourage and their ability to bestow patronage in the form of booty. As chieftains emerged from among warriors, then higher nobility from among chieftains, and finally petty kings and kings, the tendency was for the most powerful to preserve power by minimizing warfare and establishing means of achieving social stability. Constant threats to stability were the

individual freedom of all members of the warrior class and the ability of any warrior of whatever status to attract followers if he was successful in war.

Although familial ties remained the strongest bond of loyalty, the emphasis shifted eventually from kinship community to powerful individuals. In the past the legal system considered the basic social group to be those related by a common ancestor four generations back, for example, a great-great-grandfather. Members of this group were obliged to support each other. By the end of the Viking era, however, a hierarchical system of fealty between persons of greater and lesser wealth and power, from kings and nobles down to lesser chieftains and their warriors, had become a more important binding force in society.

The three general classes during the Viking Age were the chieftains, freemen, and slaves. There was mobility among the classes; slaves could work for their freedom. Freemen owned and worked the land. Professions, such as religious leaders, healers, merchants, craftsmen, and house *karls* (armed retainers of chieftains), were not class-based. Women had considerable influence and independence for the age, as indicated by the fact that they commissioned a great number of rune stones to memorialize the dead. They also reportedly could declare divorce from their husbands. To make public decisions Vikings met in a council known as the Thing. Leaders and freemen met at a Thingstead, a sacred or historic place, to hear opinions and grievances, vote on leaders, settle disputes, banish wrongdoers, and determine policy and strategy. (Norway's parliament is still known as the Storting; Denmark's, as the Allting; Iceland's, as the Althing.)

Military Practices

During the first years of raiding the war bands of Vikings or Northmen, as they were known in western Europe, were small, often carried by a single ship, rather than royal expeditions or large invasions. Vikings were mostly foot soldiers because their horses were small (the result of inbreeding within a small gene pool caused by the isolation of Scandinavian horse herds from those of the Continent). Each warrior carried an ax, a sword, a long knife, a spear, and a round shield. Bows and arrows were also used. Only leaders wore armor of chain mail and helmets (which during the Viking Age did not have horns, though Bronze Age helmets with long, stylized bronze horns made by Danish smiths have been found); common warriors sometimes

wore reindeer hide, which may actually have been more effective than chain mail.

Battle tactics were rudimentary and the bonds of personal loyalty between warriors and chiefs counted for much in maintaining cohesion. Bands of warriors would erect a defensive “shield wall” of overlapping shields and, after hurling a single spear to dedicate or devote the foe as a sacrifice to Odin, let loose a swarm of spears and arrows. The fighting would devolve into more of a gang raid than a pitched battle, with warriors engaging one another in single combat. Warriors’ skills involved considerable athletic ability; they could hurl their spears with deadly accuracy, sometimes two at once, and even catch spears thrown at them in midflight to throw back again. The ferocity and resolution of the Viking warriors may have stemmed from their belief that on dying a heroic death they would be transported in the arms of warrior maidens, the Valkyries, to Valhalla, the realm of the gods. Some warriors would transform themselves into “berserks” devoted to the god Odin, in which state they believed they would have superhuman strength and protection in battle, somehow working themselves into a frenzy or trance in which they could feel no pain.

Sometimes the only way to decide a battle was for one side to capture the leaders of the other. This would be attempted by 20 or 30 men forming themselves into a wedge known as the *svinfylking*, or “boar formation” and forcing their way through enemy lines.

After the ninth century as power began to be consolidated in the hands of great chieftains and kings large armies were assembled. Armies may have numbered as much as 7,000 for a particular battle or campaign. After the campaign the warriors would disperse to their normal occupations of farming or trading. In the late 10th century in Scandinavia the earlier numerous scattered small forts gave way to larger ring forts, all built to a similar design and able to house 6,000 to 9,000 men. They may have been royal defensive and administrative centers, possibly built by Harold II, king of Denmark, as a defense against the German Empire. They appear to have been used for only 30 years or so. The Vikings also built extensive defensive works, which comprised a system of linear earthworks—one main rampart and a complex of related ramparts.

Dwellings and Architecture

The typical dwellings of the Vikings of the Viking Age were built according to a plan that had changed little since the Neolithic Age. The

earliest farmers on the north-central European plain lived in longhouses built of timber with peaked roofs held up by transverse and longitudinal beams supported by two parallel lines of timber uprights, and this style persisted into the Viking Age. Roofs were of thatch; the sides of houses, often made of sod or of wood, were typically bowed or curved outward at the center and had curved roof ridges, making them resemble upside-down boats. Inside each house was an elongated central fire pit. The interior was often subdivided into rooms, one of which housed animals. Later in the Viking Age, animals would be housed in separate structures. Low benches ran along the walls of the house. People slept covered with quilts filled with down from geese and eider ducks. Around the 10th century the Vikings began to build log houses, perhaps a design introduced from Russia. Viking farmsteads usually included outbuildings in addition to the main longhouse. Outbuildings were used for cooking, spinning, weaving, and other crafts as well as for food and fodder storage.

House types common in Scandinavia during the Viking Age were also built by settlers on the North Atlantic islands. On Iceland in the early stages of Viking settlement so-called Hiberno-Norse house types were also built, such as ancient Irish traditional lodges; or *bruiden*, built at crossways where refreshment was freely offered to travelers.

Clothing

Knowledge of Viking clothing is obtained from depictions on picture stones as well as burials. Bits of cloth in graves have been preserved along with jewelry people wore; cloth attached to brooches is one example. Viking textiles were made of worsted wool in twill patterns and dyed in bright colors, sometimes in plaids. There seems to have been a preference for certain colors in different regions: reds in the Danelaw, purples in Ireland, and blues and greens in Scandinavia proper. Other textiles used included linen and silk.

In general the cut of clothing changed little during the Viking Age, though styles of decoration did change. Men wore long trousers, tunics covered with a coat or jacket, and a cloak pinned at one shoulder, usually with a ring-shaped brooch. Women wore long gowns covered with a sort of apron fastened at each shoulder with an oval brooch; these brooches were often elaborately decorated and made of precious metals. More than 50 styles of brooch have been identified; this great diversity may mean that brooches

Vikings crafted this hogback in the mid-10th century C.E. (Drawing by Patti Erway)

were a way of announcing the wearer's regional affiliation or social class. Married women wore a white cloth over their head fastened behind each ear with a knot. Men's and women's clothes often had elaborate woven decoration in the convoluted animal styles that changed over time. The Vikings who were in the Varangian Guard unit in Byzantium probably wore a cotton padding garment, the *bambakion*, which was standard among Byzantine soldiers.

Transportation: Shipbuilding and Navigation

The advent of the Viking ship had an impact as great as the arrival of horse chariotry in the Bronze Age. Viking ships allowed a mobility unmatched in Europe until that time.

Shipbuilding was greatly facilitated by the development of the iron industry and the making of iron tools. By at least the eighth century true oceangoing vessels were being built with mast and sail and a keel that allowed them to maintain their course in heavy seas and even sail windward.

The evolution of Scandinavian watercraft can be traced by studying specimens buried with their owners. They evolved from plank boats sewn together with cord and pitched with resin, propelled by paddles only, to ships in the fourth century as much as 76 feet long and 10 1/2 feet wide, built with iron nails. In the early eighth century ships had become much sturdier and wider relative to their length, their proportions allowing greater stability. At least by the end of the century true sailing vessels were being built,

as attested by memorial stone carvings on the island of Gotland, which show the familiar double-ended Viking ship with square sail and side rudder. A ship uncovered in Gokstad dating to the mid-ninth century was 80 feet long, almost 17 feet wide, and seven feet deep, built entirely of oak and equipped with a deep external keel. It was clinker-built—meaning that the planks, typically of pine, overlapped, providing multiple places for caulking by twisted animal hair soaked in tar, a method of construction that dates to the earliest craft. The Gokstad ship had two pairs of pine blocks affixed to its sides abreast of the mast; these were used to hold a special pole, called a *beitiáss*, meaning “sprit pole,” which could be attached to the square sail to hold it out to catch the wind more efficiently.

The planks of the hull were cut in varying thickness, to provide strength in the appropriate places while limiting weight in the others. The notches in the planking were cut so skillfully that the boards fit together nearly flush. The notches were fastened with iron rivets, which were stronger and caused less drag against the water than lashings. Water resistance was further reduced by a prow built on each end of the ship. Moreover the planks were fastened to one another rather than to a rigid skeleton of ribs, making them flexible. As a result, although relatively light, they could withstand a great deal of battering in heavy seas. The ships were steered by a rudder that was fastened on one side of the ship to give greater stability than a center-mounted rudder.

The Viking ships were wonderfully versatile, able to go on long ocean voyages but also to sail on rivers; with their shallow draft they could negotiate small rivers and their light weight made dragging them upstream and even overland when necessary easy. When the wind was contrary, they could be propelled with oars. It is estimated that some of the boats built for speed and maneuverability were capable of speeds of 10 or 11 knots and more in short bursts.

A number of distinct types of ships were built by the Vikings and used for different purposes. The one that has received the most attention is the longship, or *langskip*, also known as the *drakkar*, the “dragon ship,” long and low with fearsome heads glowering from stem and stern, built for war, with shields hung from end to end. The longships carried raiders to the coasts and inland waterways of Europe. However, they did not carry Viking settlers to the Faeroes, Iceland, Greenland, or to the shores of North America. This type of vessel, also called the *hafskip* or *knörr*, wider and more stable than

a longship, with a much higher freeboard (height of a ship's sides that ride above water), was the only Viking ship type capable of making long ocean voyages. Such ships could carry three or four dozen men, a herd of cattle, and the timber for building a new farmstead hundreds of miles across open water. The *hafskip* was typically shorter than a longship and in strong winds was a faster sailor. It was open, as a longship was, its cargo covered with ox hides. It used walrus-skin rigging. It had fewer oars than a longship, which were used primarily as an aid to getting in and out of port.

The Vikings' personal attachment to their ships was more than a little mystical. The ship was often highly decorated on the sides, the prow, and especially the sail. Women participated in the decorating. The Viking saw his ship as the means to his worldly achievements, as well as his reward in the afterlife. Young men would be given command of a ship to establish their manhood and prove their viability as leaders. These ships would be well cared for and given lyrical names.

The Atlantic fishery was an all-important factor in fostering seamanship and navigation. Generations of Viking fishermen plying the coast built up a great store of knowledge about landmarks that could guide one to the fishing banks, the local tidal streams and currents, the positions of rocks and shoals, and the habits of fauna—fish as well as sea birds. The habit of reliance on this knowledge base, as well as of close observation and memorization of one's surroundings in ventures into less well known waters, would prove crucial in the longer voyages of the Vikings.

The color of water could tell mariners when they were in a current or particular sea channel or over a fishing bank. The kind of waves, long and rolling or short and sharp, could give them an idea of direction based on knowledge of how, for example, westerly or northerly winds in a given region impact the sea as a result of the positions of surrounding landmasses and of ocean depth. Landmarks such as certain peaks could serve as the fix for the starting point of a voyage, with traditional sea lore to tell them what to expect when they sailed in a given direction from that point.

The Vikings used the shorelines of Scandinavia as an approximate north-south reference for bearing, with east-west determined by sunup and sunset. They referred to lands to the east as Land-North or Land-South, corresponding to northeast and southeast, and seas to the west as Out-North and Out-West, corresponding to

northwest and southwest. They also used a type of sundial known as a sun-measuring disk or shadow board, which floated in a tub of water to keep it level. It was marked with concentric circles and had an adjustable center pin that would be raised or lowered in relation to the position of the Sun in the sky at different times of the year. The shadows cast on the circles on which were marked the directional points would help determine latitude.

Art

Viking art was intimately intertwined with religion. The Vikings believed that the spiritual world surrounded and pervaded every aspect of their life. The elaborate decorations of even everyday objects are both an expression of this orientation and an actual practical application, as indicated by the snarling animal heads on ships' prows that were used to ward away evil spirits. Much decoration depicts Viking myths. The twining, spiraling motifs on both jewelry and practical objects embody this sense of the invisible pervading the visible and the belief that every act, however mundane, required the blessing of the gods. A number of ornamentation styles evolved over the centuries: some creatures depicted as curvaceous and others as ribbon shaped, and so on. The various styles are named after archaeological sites, such as Oseberg/Broa, Borre, Jelling, Mammen, and Urnes.

Literature

Inscriptions by the Vikings themselves in their own runic writing, often on stones memorializing the dead that sometimes mention their battles or raids, provide glimpses of historical events, but writing played nothing like the important role that it had among Christian Europeans. Only after the Vikings adopted Christianity and writing in the Roman alphabet did they begin to write their sagas, which are rich sources of information.

The oldest Viking poems date from about 850 and are known because later Viking poets, such as Snorri Sturluson of the 12th–13th centuries, recorded them; earlier poetry was transmitted orally; the runic alphabet was not used for literary writing. After the advent of Christianity the Vikings began to create literature written in Latin, from around the 12th century. Most of the manuscripts date from the 13th and 14th centuries.

Old Norse poetry, as is all ancient Germanic poetry, is alliterative; that is, it uses series of words that begin with the same consonant. It differs from Old English and Old High German

This rook, one of the so-called Lewis Chessmen (because they were found on the Isle of Lewis in Scotland), was crafted in Norway out of Walrus ivory and represents a Viking. (Drawing by Patti Erway)

poetry in being strophic, that is, written in stanza form, rather than in the epic long line.

The oldest and most important monument of Old Norse poetry is the *Edda*, called the *Poetic Edda* to differentiate it from Snorri Sturluson's *Prose Edda*. The meaning or derivation of the word *Edda* is not known, though there are several theories, one that it is from the word for *great-grandmother*, possibly a reference to the source of old tales. From this original meaning it may have evolved to refer simply to poetics. The *Poetic Edda* is a collection of tales from Viking mythology and a series of heroic lays (narrative poems) written by an anonymous author around 1250.

Another style of Viking poetry is that of the *skalds*, poets who composed works in praise of kings and great warriors. Whereas the Eddic poems are anonymous, the authors of Skaldic poems are named; they deal with historic personages or events. Skaldic poetry was essentially an art of royal courts, in the latter part of the Viking Age, when kings grew increasingly powerful, whereas the Eddic poems are rooted in the simpler societies of the past. Whereas the Eddic poems are relatively straightforward and natural, the Skaldic poems are extremely artificial in structure and language, employing alliteration and assonance, as well as making elaborate use of such rhetorical devices as *heiti* and *kenningar* (metaphors and figurative paraphrases). The most pretentious style of Skaldic poem was the *drapa* (literally, fall of men).

Icelanders created the literary form known as the *saga*, prose narratives of historical events, especially biographies of prominent individuals. Sagas enrich and enliven objective description with dialogue and poetic citations, as do Old Irish prose narratives. Because many of the first settlers of Iceland were of mixed Viking and Irish stock, direct influence in the establishment of the *saga* tradition is possible. The sagas are a rich source of information about the settlement of Iceland and Greenland and the Viking voyages to North America, for example, *Groenlendinga* (or the *Saga of the Greenlanders*) and *Eiriks saga* (or the *Saga of Eric the Red*). These stories had been passed down by word of mouth for centuries before they were written.

Religion

The Germanic peoples, including the Viking Norse, seem to have shared a pantheon of gods, which changed over time. Snorri Sturluson's *Prose Edda* gives a rich and detailed account of Germanic mythology and gods as they existed just before paganism slowly yielded to

Christianity. The existence of the Vanir, an older group of agrarian gods, who had been usurped of much of their power by the newer and more warlike Aesir, gives the sense that Germanic religion evolved over time. The Norse during the Viking Age entered fully into the worship of the Aesir, who may have emerged in reaction to the *Sturm und Drang* (Storm and Stress) of the migration period during the first millennium C.E.

The Vikings sacrificed to Odin in time of war, Thor in times of famine or plague, and Frey before wedding celebrations and possibly at funerals.

Viking religion held that slain warriors were carried to the realm of the gods. In Valhalla they would then fight battles during the day in preparation for the battle of Ragnarok (Doom of the Gods) and feast at night on boar meat and mead, an alcoholic drink made from honey. Those warriors who did not die in battle supposedly rotted in the cold north.

Sacred Sites Place-names in Scandinavia contain clues to the location of sacred places. *Vi* seems to refer to an outdoor ritual site enclosed with poles or stones; place-names containing this syllable may indicate the location of such sites. *Hof* and *harg* refer to sacred buildings.

Funeral Practices Both cremation and inhumation were practiced during the Viking Age. The death of the god Balder, as recorded by Snorri Sturluson, was followed by a boat funeral for a god. A pyre was built around the body of Balder and his wife, Nanna. Then many treasures were placed into the boat—buckles, brooches, rings, clasps, and pins. There were not only treasure but implements of ordinary life such as knives, buckets, and scissors. Odin, Balder's father, stood vigil over him for a time, then took off his magic gold arm ring, *Draupnir*, and slipped it onto Balder's arm. After leaving the ship Odin gave the order to set it alight and it was released to drift out over the water as the mourners wept and recalled Balder's deeds.

Conversion to Christianity Religious conversion was a slow process in the Scandinavian homeland, although abroad in England, for example, as we have seen, it was quick enough that few clearly pagan burials have been found. As with Guthrum in the *danelaw*, kings often led the way; the Danish king Harald Bluetooth claimed on a stone monument erected around 960 to have Christianized the Danes. A runestone in Norway of the 1020s, covered with Christian symbols, documents the acceptance of the new faith there. At the end of the 10th century coins

with Christian symbols were issued in three Scandinavian countries. However, there is evidence that initially the Vikings considered Christ to be simply a new god to add to their pantheon; a character in Viking literature, Helgi the Thin, believed in God but prayed to Thor when there was a storm at sea. Graves often contain a mixture of pagan and Christian elements. A cross in Yorkshire, England, depicts a mythic hero called Sigurd the Dragon Slayer wearing a bishop's ring while a priest below him celebrates the Eucharist, a Nordic symbol for the moment of salvation when the dragon of sin is slain. Among rural folk in Scandinavia, the Orkney Islands, and Iceland belief in many Viking mythic figures continued to the end of the 19th century. Even today in Iceland roads are not built in certain areas lest they disturb local earth spirits.

Despite the familiarity of the name Viking with all its associations, surprisingly little is known in detail and with certainty about the impact of the Vikings on the countries where they raided. Until recently the main source of information were the medieval chronicles such as the monastic *Anglo-Saxon Chronicle*, written by several authors in the ninth century in Wessex, England, and the *Frankish Annals*, the anonymous history of the Franks, in the eighth and ninth centuries. During the Viking Age most if not all educated people were churchmen and the modern sense of the rigorous separation of the sacred realm of the spirit from the secular realm of facts hardly existed. The writing of history was as much a matter of recording the acts of God as of humans, and the Bible was considered to contain literal truth. The tendency of Christian writers such as Alcuin of York, an eighth-century Anglo-Saxon scholar at the court of Charlemagne, and Wulfstan, the 11th-century bishop of York who wrote the *Sermon of the Wolf*, was to portray the Viking raids as a judgment sent from God. In general religious writers understandably were biased against these raiders, who plundered Christian monasteries and churches; therefore, the reliability of their accounts is suspect. Many a Christian noble and king of the time engaged in warfare as destructive and brutal as that of the Vikings without receiving the excommunication of the church. The clerics' idea that the Vikings were brutish barbarians probably derives as much from their pagan religion as from their actions. This characterization does not square with the fact that the Vikings had created a vibrant literature, that they were highly skilled metalworkers and had devel-

oped a sophisticated art style, and that their ships and their knowledge of navigation and the sea represented a high point of the technology of the time.

Evidence of the extent to which Viking settlement in new lands altered the social, cultural, and political landscape is found through archaeology, the distribution of towns and physical features such as rivers that have Viking names, and even deoxyribonucleic acid (DNA) analysis identifying similarities in the genetic makeup of modern-day people in Britain and France, for example, with that of Scandinavians. None of these sources can provide more than an estimate of their impact (for example, a Viking place-name can only show Viking influence, perhaps derived from the rule of a Viking chieftain over an area, not the presence of many Viking inhabitants), and it is still unclear whether Vikings settlers numbered in the hundreds or in the thousands, whether they were mostly warriors or whole families, and whether chieftains alone immigrated permanently or whether they took with them large numbers of tenants and retainers.

Villanovans (Italici)

Villanovan is the name given by archaeologists to a prehistoric culture found primarily in present-day north-central Italy. Villanovans are known primarily from their cemeteries, which contain distinctive urns of usually cremated remains, accompanied sometimes by bronze decorations and iron weapons and tools. The civilization of the ETRUSCANS developed from the Villanovan culture, many Etruscan cities being sited on Villanovan towns.

VILLANOVANS

Villanovan

Villanovans time line**B.C.E.**

c. 1200–900 Proto-Villanovans, people of a Late Bronze Age culture, live around Po valley; inhabitants of small agricultural villages in Italy develop into Villanovans.

c. 900 Early Iron Age culture agricultural villages grow larger; iron tools and mining of metal ore develop; bronze becomes adornment; trade from eastern Mediterranean increases.

eighth century Etruscan city-states form loose federation.

ORIGINS

The Villanovans were first discovered by the excavations at a villa known as Villanova, outside Bologna, in 1853. A cemetery brought to light the Villanovans' burial practices. Throughout the 19th and early 20th centuries archaeologists considered the Villanovans as invaders from central Europe, identifying their burial practices and metal objects first with the Hallstatt culture of the eastern Alps, and with other Iron Age cultures around the Danube River in central Europe. Later discoveries and the presence of undisturbed continuity through the Bronze Age into the Iron Age at Villanovan sites indicated that the people themselves were not invaders, and that the culture developed indigenously, with the aid of trade from central Europe and the East.

It is now believed that by about 1200 B.C.E. a Late Bronze Age people centered around the Po valley in north-central Italy, defined as proto-Villanovans, had developed out of the earlier Pianello culture. The proto-Villanovans lived in small agricultural villages and used bronze weapons and tools. By about 900 B.C.E. the small villages had grown larger, the process for smelting iron had been discovered or introduced from central Europe, and the area began to receive trade from the eastern Mediterranean. With these influences the proto-Villanovans evolved into those people defined as Villanovans, and their urban centers developed around the mining of metal ores in the ore-rich hills of Italy.

HISTORY

The Villanovans developed new manufacturing techniques for making bronze decorations and iron implements, and their economy flourished through trading of these items. The Villanovans spread from the Po valley through present-day Tuscany, into Latium (part of modern Lazio) and the Adriatic coast, and south of modern-day Salerno in Campania.

The Villanovans developed under the influence of foreign cultures, having contacts with the PHOENICIANS on the west coast and in the eighth century B.C.E. encountering the GREEKS who settled southern Italy. By that time inhumation began to replace cremation in Villanovan burials, and the larger Villanovan towns developed into city-states.

CULTURE**Economy**

The Villanovan economy ran on the manufacture and trade of metal items. The Villanovans controlled several important copper and iron mines in Tuscany.

Dwellings and Architecture

What is known of Villanovan architecture is derived from the burials of the Villanovans in Latium, sometimes differentiated as the Latial culture. From these depictions it can be discerned that they lived in wattle-and-daub huts on pole frames. These huts were rounded or oval and had smoke outlets and a door that opened. The roofs were gabled and sloping. Decorations on the urns suggest that there were windows.

Because their houses were constructed almost entirely of perishable materials, only trace evidence of their villages has been found, indicating collections of such huts constructed on hilltops.

Other Technologies

The Villanovans made and used short iron swords, some of which found their way through the Greeks to Olympia. The Villanovans also made and wore bronze fibulae, a kind of decorated brooch, the ancient equivalent of the safety pin used to fasten clothing. They were also skilled at making flat sheet bronze, from which they crafted *situlae*, bucket-shaped vessels, and made pottery.

Art

Villanovan urns are decorated with painted meanders, double slings, swastikas, and roses. Villanovan art reveals little representation of the human figure, but small terra-cotta animals were crafted, possibly for use as votive offerings. Artifacts in bronze are plentiful.

Religion: Burials

The characteristic Villanovan burial was cremation, with the ashes deposited in a decorated multistoried biconical urn, capped by a

bronze helmet, or a pottery helmet or cup. The helmet was often crested, or in the knob and bell style, similar to those found in northern and central Europe. Other urns contained bronze and iron artifacts, decorations, tools, and weapons. The urns for a burial were placed in a deep shaft called a *pozzo* and covered with a stone slab. The principal Villanovan cemeteries are at Bologna, Este, Golasecca, Oppiano, Rivoli, Trezzo, and Villanova. From the eighth century B.C.E. on the Villanovans practiced inhumation instead of cremation, following the custom of the Greeks.

The fact that peoples in ancient Tuscany have been given different names at different times has obscured the continuity of their development from Villanovan to Etruscan times. The two names illustrate how practitioners of different disciplines, observing people from different perspectives, may give an impression of distinctions that do not exist. The Villanovans, named as is common practice among archaeologists for the village near where their material culture was first identified, are known only for objects. The picture of Etruscans, derived in part by accounts from ancient writers, is much more fully developed and vivid than archeology alone can provide.

Vindelici

The Vindelici are classified as a Celtic tribe. They lived in the northern Alps in present-day northern Italy and southern Switzerland by about 100 B.C.E. They were among those CELTS who had early contacts with the ROMANS.

Vinderii

The Vinderii are classified as a Celtic tribe. They lived in the present-day district of Armagh in northeastern Ireland (present-day Northern Ireland) near the ULAID at least by the first century C.E. and are discussed as CELTS or IRISH.

Vinnili *See* LOMBARDS.

Viromandui (Viromandues; Veromandes; Veromandui)

The Viromandui are classified as a Celtic tribe. They lived in Gaul around present-day Saint-Quentin in northwestern France and in Belgium near the ATREBATES and are discussed as CELTS or GAULS. They were among the tribes Julius Caesar considered BELGAE. The Viromandui were allied with the NERVII against the ROMANS in the 50s B.C.E.

Visigoths (Visigothi; Wisigoths; West Goths; Tervingians; Tervingi)

The Visigoths were one of the two major groupings of GOTHs—a people classified as GERMANICS—the other the OSTROGOTHs (“eastern Goths”). From the late third century C.E. their histories separated, and the Visigoths (“good Goths”) originally inhabited the region northwest of the Black Sea from the Dniester to the Danube (part of modern Moldova and Romania). The Visigoths had a variable relationship with the ROMANS over time, alternately attacking Roman territories and then making treaties with Rome and being given territories within the empire. They sacked Rome in 410, after Roman authorities failed to satisfy their perceived needs, but later formed an alliance with them to counter the HUNS. They established a kingdom in Aquitaine in Gaul (present-day

France) and then, after they were driven from Gaul by the FRANKS, on the Iberian Peninsula, where they maintained a presence from the fifth to the early eighth century.

ORIGINS

The tribe from which the Goths probably took their name, the Gutones, are thought to have originated in Scandinavia before migrating southeastward into eastern Europe. The approximate date given for the start of two distinct Gothic traditions is 290, after defeat by the ROMANS in 271. The family of Balthi (Balthas or Balt) were the founders of the Tervingian Gothic kingdom centered along the Lower Danube. They were a polyethnic group, including steppe peoples originally out of Asia. This confederation would later become known as the Visigoths.

LANGUAGE

The Visigoths spoke Gothic, a dialect of the East Germanic language group, which had become distinct by about the fourth century. Gothic became extinct as the Visigoths and their kin the Ostrogoths lost their distinctive identities and were absorbed by other peoples during the Middle Ages.

HISTORY

Early Relations with the Romans

From their homeland northwest of the Black Sea the Tervingi (Tervingian Goths), the group that would evolve into the confederation known as the Visigoths, carried out raids on Roman territory south of the Danube during the reign of Constantine I in 306–337. In 332 Tervingians under Ariarich signed the first of several treaties with the Romans. Some among them who settled in Dacia (roughly modern Romania) lived as agriculturalists and adopted Christianity as taught to them by Ulfilas, who was appointed bishop of the Gothic Christians and led a congregation into Moesia (modern Serbia and Montenegro and northern Bulgaria) in about 348.

In 364 Athanaric and other chiefs in Dacia led raids on settlements in Thrace along the northern Aegean Sea. Valens, Roman emperor of the East, successfully warred against them in 367–369. In 376 the Huns arrived in Visigothic territory, after their defeat of the Visigoths on the Dniester River. Valens then allowed the Visigoths under Fritigern, a rival of the Hunnic leader Athanaric, to settle in Thrace as allies. A group of ALANS joined them.

Mistreatment of the settlers by the Romans resulted in a revolt.

The Balkan territory was a far cry from the productive lands near the Black Sea they had left. They were badly mistreated by the Romans, who would only sell them meat, and dog meat at that, at the price of selling one of their number into slavery—that is, one dog for one Goth. Conditions were so desperate that in 378 the Tervingi had a violent confrontation with a Roman army at Adrianople (Adrianopolis; modern Edirne), which they crushed, killing Emperor Valens. The Visigoths' superior cavalry carried the day over the Roman infantry, a victory that would shape later warfare, as the Romans put greater emphasis on cavalry. For years thereafter through a combination of attacks and negotiation these Goths tried to induce the Romans to cede them a new territory. In a treaty in 382 with the emperor Theodosius I, Valens's successor, they are named for the first time as Visigoths. The treaty granted the Visigoths as a whole permission to settle in lower Moesia as *foederati* (federates), the first time an entire people had been allowed to settle within the borders of the Roman Empire.

Visigoths in Italy

Alaric (see sidebar) became leader of the Visigoths the year Theodosius died, 395; he was the first leader considered a true king. Their new territory was little better than the Balkan lands they had left behind. Because of their hardship and also because of his desire to be named as supreme military commander of the Roman Empire, Alaric began new attacks on Roman-held lands. In 397 he was granted his wish for high command by Theodosius's weak successor, Arcadius, who named him commander of the eastern Illyrician prefecture. This formed a precedent for future Roman relations with "barbarian" peoples within the Roman Empire. However, that same year Stilicho, a Roman general of Germanic ancestry who had been forced to relinquish his command in 395 through political intrigue, resumed command. He repelled Alaric's invasion of first the southern part of the Balkan Peninsula, then the Italian Peninsula, driving him back into the mountains. The Visigoths' continued need for a viable territory that could provide them subsistence motivated Alaric to return to the offensive in 401. Stilicho fought Alaric at Pollentia (402) and at Verona (403) but was murdered on Honorius's orders in 408. On his death the Visigoths advanced on Rome and sacked the city in 410; Alaric allowed

Alaric: Roman Soldier, Germanic Invader

Alaric was born into the Balthi royal family of Visigoths at the mouth of the Danube on the Black Sea, where his people had fled the invading Huns in the 370s C.E. While a young man he was a student at a Roman military academy. He was soon acknowledged for his military achievements as a superior swordsman, rider, and leader and rose to the rank of commander in the Roman *foederati* troops. Serving under General Flavius Stilicho he led the Visigothic contingent in battle against the Huns at the Battle of River Frigidus, furthering his reputation.

On the death of Emperor Theodosius I in 395 the Roman Empire was divided between his incompetent sons, Arcadius and Honorius. Visigoth troops soon renounced their alliance with the Romans because of insufficient subsidies and elected Alaric as chief of the Visigoths. Alaric began a campaign against Roman holdings. As a bribe to prevent attacks the Eastern Roman emperor, Arcadius, subsequently appointed him governor of Illyricum. Alaric led an invasion of Italy in 401 but was checked by Stilicho, who took Alaric's wife hostage for a time but allowed Alaric to retreat, perhaps because of their friendship or a bribe.

In 408 Stilicho arranged to buy Alaric's alliance to Rome, but Emperor Honorius, threatened by Stilicho's growing influence, had the general executed. That same year Alaric again invaded Italy and laid siege to Rome, then withdrew after an agreement with the Roman senate. He laid siege again in 409 and forced the city to accept Attalus as a puppet emperor, whom he himself deposed the next year. In 410 after the failure of renewed negotiations with Honorius at Ravenna Alaric stormed Rome. Because of his devotion as an Arian Christian he let his troops pillage the city but limited the burning of buildings and treated the inhabitants well. He reportedly spared churches and religious artifacts that "belonged to St. Peter." Yet it was the first time in 800 years that Rome had been occupied by a foreign invader. Alaric afterward set out by ship to conquer Sicily and North Africa, but a storm destroyed his fleet. On the return journey northward he died of an illness. His brother-in-law, Ataulf, was elected his successor. It is said that Alaric was buried with some of his treasures near Cosenza in the bed of the Busento River, which was temporarily diverted from its course to hide the site.

Although Alaric wished to gain recognition as a noble leader and was superior in leadership skills to many of the Roman leaders of his day, he is remembered most for his sacking of Rome.

his warriors three days of plunder, a standard practice at the time.

The sack of Rome, the first in eight centuries, horrified Romans everywhere. The great Christian leader, Saint Jerome, wept in his cell in Bethlehem when he heard the news. As it happened little was changed by Alaric's feat. More interested in the wealth and abundant food of Africa, he began preparations to mount an invasion there but died before he could carry them out.

Visigoths in Gaul and Spain

Alaric's successor was his brother-in-law, Ataulf. Ataulf concluded a treaty with Honorius to defeat a usurper for rule of the empire whose stronghold was in Gaul. In 413 he led the Visigoths as a Roman army into Aquitania (Aquitaine) in present-day southwestern

France. The fact that the Visigoths were still willing to abide by a treaty with Rome, after what must have seemed to them repeated betrayals by Roman authorities in failing for so long to provide for their welfare, may speak to the continuing allure Rome had for these Germanics. In 414 Ataulf married Galla Placidia, daughter of Emperor Theodosius, hoping in this way to gain support from the Roman aristocracy in Aquitania for his rule over the whole region, non-Goths as well as Goths. Some of his holdings were in northern Spain. His murder in 415 ended these efforts, and his successor, Wallia, led his people out of Gaul deeper into Spain, hoping to reach North Africa. The Visigoths inflicted a crushing defeat on the Alans in 416 and might easily have conquered the entire peninsula if the emperor Honorius had not secured their withdrawal by giving them Aquitania Secunda (the western part of Aquitania). After forcing the Vandals out of Gaul, they contested with them for territory in the Iberian Peninsula and expanded their power north to the Loire valley. Toulouse in southern France became the capital.

Wallia was succeeded in 419 by Alaric's son, Theodoric I. Little is known about the history of his long reign, possibly testimony to the stability he achieved—"history" as reported typically comprises events of a violent nature. Visigothic forces fought the VANDALS in Spain, who under this pressure finally evacuated for North Africa by 429. In 451 Theodoric was killed in the Battle of the Catalaunian Fields south of modern Châlons-sur-Marne in northeastern France, in which the allied Romans, Visigoths, BURGUNDII, and FRANKS defeated Attila's Huns, whose allies included Ostrogoths, GEPIDS, and other groups. Theodoric's son, Thorismond, succeeded him but was assassinated by his brother, Theodoric II, who in turn was assassinated by another brother, Euric. Under Euric the Visigoths reached the height of their power, unmatched in the West at this time, seizing more territory on the Iberian Peninsula. Euric also introduced Roman elements into the Visigothic way of life.

In 506 Euric's son and successor, Alaric II, in order to achieve greater Visigothic unity and to placate a Roman aristocracy that retained much political influence, issued an abstract of laws known as the *Lex Romana Visigothorum* (Roman law of the Visigoths) or *Breviarum Alaricianum* (Breviary of Alaric). The Roman senators, the main remaining symbol of imperial legitimacy, had decidedly

mixed views of the Visigoths. The scholar Apollinaris Sidonius admired a Visigothic king who played backgammon, while resenting deeply the barbarian warriors billeted on his estate, calling them gluttons "who spread rancid butter on their hair." Sidonius later found an outlet for his frustration when he became bishop of Clermont—the support of Roman clerics for the Roman Catholic Frankish king Clovis I helped undermine the power of the Visigoths.

It is thought that Clovis had seen Euric's death in 484 as creating a power vacuum in the Visigothic kingdom, leading him to begin plans to overthrow them. His conversion to Roman Catholicism around the turn of the fifth and sixth centuries may have been inspired in part by the desire to gain support from the Roman Catholic majority in the Visigothic kingdom, to whom the Arianism of the Visigoths was anathema. After a series of campaigns to strengthen his position Clovis finally confronted Alaric II in the Battle of Vouillé northwest of present-day Poitiers, France, in 507. Clovis defeated the Visigoths and Alaric was killed. The Visigoths retreated to Spain and moved their capital to Toledo. Those who remained in Gaul were forced to convert from Arianism to Roman Catholicism.

Over the next centuries the Visigoths competed with the Franks, Byzantines, and BASQUES, and for a time their hold on power was tenuous. In the late sixth century King Leovigild reinvigorated the kingdom, managing to unite his Visigothic and native subjects. He also conquered the SUEBI, other Germanic settlers on the Iberian Peninsula. His son, Hermenigild, married a Catholic by the name of Ingunthis and converted, renouncing his father's Arianism. His father defeated him in battle and had him executed; his martyrdom resulted in his canonization by the Catholic Church. Yet Recared, another son and the successor of Leovigild, converted in the 580s; thereby helping to unite the kingdom, as did King Recceswinth with his imposition of Visigothic common law on both Gothic and Roman subjects in 654. Continuing unrest over the years led to a weakening of Visigothic power, and the church became the dominant political force. When Roderick seized power in 710 his rivals sought help from the MOORS under Tariq ibn Ziyad, who defeated Roderick in the Battle of Rio Barbate in 711. The Moors went on to conquer much of Spain by 713. Some Visigoths managed to hold out in the kingdom of Asturias, founded by their chief-

tain Pelayo in northwestern Spain. He was the first Christian king in the region. Asturias later became part of the kingdom of León and Castile.

CULTURE (see also GERMANICS)

Government and Society

The Visigoths were the first Germanic people whose governmental and military systems were transferred en masse into the Roman Empire. The Visigothic people, organized along military lines, became in effect a Roman army, with their leaders considered properly appointed Roman officers. In the formation of the Visigothic state their “Gothic system” of governance centered on their king was incorporated within the Roman administrative and military system. This was a model that other Germanic groups, notably the Franks, followed in later years.

Dwellings and Architecture

The Visigoths (not the Moors, as is commonly believed) introduced the horseshoe arch to Spanish architecture.

Religion

The Arian Christian faith of the Visigoths dated to the time of Fritigern, who probably adopted the Arian creed because it was the faith of Emperor Valens. Although the fate of Arianism was still being debated by church leaders at this time, ultimately it was decreed a heresy. The Visigoths’ Arianism stood in the way of their rapprochement with Romans in Gaul and caused the Gallo-Romans to support the orthodox Roman Catholic Frankish king Clovis in his bid to overthrow the Visigothic kingdom.

The 40 years of repeated migrations, conflict, and suffering the Visigoths had endured before reaching Aquitaine led them to compare themselves to the biblical Hebrew people wandering for 40 years in the Sinai Desert.

According to Apollinaris Sidonius, bishop of Clermont, during the reigns of Theodoric I and Theodoric II in the fifth century Catholics were allowed to worship in peace. Euric, however, was of a different bent and sent many of the Catholic bishops of his kingdom in Spain into exile, so that in many places the churches were without the services of a priest and soon became dilapidated.

Alaric II reversed this policy, allowing the bishops to return. His new law code, the *Lex Romana Visigothorum*, restored to the church much of the position it had under the Roman Empire.

With the conversion of the Visigothic ruler and nobles to Catholicism in the 580s, the principal cause of friction between the Visigoths and the natives of Spain disappeared.

The Visigoths set an important precedent for relations with the Romans in 397, when their king, Alaric I, was named commander of the eastern Illyrician prefecture, a first for the leader of a barbarian people within the Roman Empire. (Germanics and other peoples had long served as generals and high commanders, but from within the Roman army, not while retaining leadership of their own people.) Later in the fifth century as the Franks became more unified, their leaders were given similar charges: military command over their own people and the use of their own troops to defend their sector of the imperial border. The Visigoths’ failure to create a lasting kingdom, for all their loyalty to Rome, while the Franks succeeded may in part have been a matter of timing. The period of Visigothic ascendancy occurred when Rome still retained a sufficient measure of power and cohesion to spurn Alaric’s ambitions for high Roman military office for many years. A century later the Roman defense system had changed from heavy use of the Roman army to border fortifications manned by native militias under their own commanders, a situation ideal for Frankish leaders such as Childeric and Clovis. The Visigoths’ travails also resulted from their proximity to the centers of Roman power in Constantinople and Rome, on the one hand, and their exposure to the incursions of steppe invaders, on the other. The Franks, in contrast, living in a backwater of the empire, had time to develop a true fusion of Roman and Germanic elements that helped them go on to triumph after triumph.

Vistulans (Vistulanes; Vistulians; Vistulanians; Vislanes; Vislanians; Wislanie)

The Vistulans were a tribe of Western SLAVS, who lived along the Upper Vistula River in present-day southern Poland by the beginning of the ninth century C.E. Kraków was a principal fortified town. Like all Western Slavs they were called WENDS by early medieval FRANKS. Along with the POLANIANS, who gained hegemony over other area tribes in the 10th century, the Vistulans are among the ancestors of the POLES.

Vlachs (Wlachs; Walachs; Wallachs; Walachians; Walasians; Olachs; Aromani; Romani; Romeni; Roumani; Rumeni; Rumans; Romanians)

The name Vlachs has been used variously throughout history. From the 12th century C.E. it was applied (as Volokh) in a general sense by the SLAVS to any peoples of the Balkan Peninsula who spoke a language related to Latin. It also has been applied more specifically to the people who settled Romania, especially the region Walachia, in the 13th century and evolved into modern Romanians (see ROMANIANS: NATIONALITY). After the founding of Romania in the 19th century the name began to be applied to Romanian-speaking peoples living elsewhere, especially in nations south and west of the Danube, such as Albania, Bulgaria, Greece, Macedonia, and Yugoslavia, in nations such as Moldova, Hungary, and Ukraine. Other names applied to various groups considered to be Vlachs are Kutzo-Vlachs (or Aromanians), Macedo-Vlachs (or Tzintzars), Istro-Romanians, Megleno-Romanians, Morlachs (or Mavrovlachi), Cici, and, in Bulgaria, Karakacani and Tsintseri.

ORIGINS

The origin of the Vlachs has been in dispute. One theory, the Daco-Roman continuity theory, is that they were descendants of Romanized THRACIANS, especially DACIANS, or of ROMANS themselves living in what was once the Roman

province of Dacia. After the Romans evacuated Dacia in 271 C.E. the area was subjected to a series of invasions from the fourth to the 12th century by HUNS, LOMBARDS, AVARS, SLAVS, BULGARS, MAGYARS, PECHENEGS, CUMANS, and MONGOLS. The BYZANTINES also nominally ruled these lands during some of these centuries. It is thought that some Daco-Romans took refuge in the Carpathian Mountains and only returned to the Transylvanian plateau by the 13th century. Before long they were also reestablished to the south in the lands near the Danube, which became known as Walachia (in present-day Romania) for Land of the Vlachs and Moldavia (present-day Moldova), which later evolved into principalities. Other Daco-Romans in the meantime took refuge south of the Danube in mountainous regions of the Balkans, such as those of Thessaly. These people emerged as shepherds in the 10th and 11th centuries and wandered in parts of the Balkans.

Another theory maintains that the Dacians themselves spoke a Latin language rather than a Thracian one and that peoples who settled the Italian Peninsula shared the same ancestors, yet no ancient texts indicate that the Dacian language was similar to that of the Romans.

A third theory maintains that the Vlachs originated south of the Danube and migrated to Walachia and Transylvania at a much later date in the Middle Ages, yet no medieval chronicle mentions a migration of Romanian-speaking peoples from the Balkans northward.

These various theories have modern-day political implications, because Transylvania has been a region in dispute between Romania and Hungary; the first and second theories support a Romanian claim, and the last a Hungarian claim. It is impossible to use language as proof here because Romanian speakers were not reported in the region until the 14th century, and texts in the Romanian language date only from the 16th century.

LANGUAGE

The Vlachs traditionally have spoken a Romanian language, rooted in late Latin. It has been heavily influenced by a variety of Slavic dialects, depending on the region and contacts between the Vlachs and various Slavic groups.

HISTORY

Events surrounding the Vlachs are shrouded in mystery, because tracking their various movements is impossible other than through lan-

Vlachs time line**C.E.**

271 Romans abandon Dacia, probably leaving Latin-speaking peoples behind.

12th century Slavs refer to Romanian-speaking peoples of Balkans as Vlachs.

1290 Vlachs found principality of Walachia.

guage. Those people considered Vlachs served in Byzantine armies. To many other peoples they were simply communities of shepherds moving with their flocks from winter pastures to summer pastures.

Some among the Vlachs perhaps played a direct or indirect role as allies of the Bulgars on the founding of the Second Bulgarian Empire in 1185. According to the 12th-century Byzantine historian Anna Comnena (daughter of Eastern Roman Emperor Alexius I Comnenus) Vlachs founded the independent state of Great Walachia, from the Pindus Mountains in northwestern Greece into Macedonia. Another Vlach settlement, called Little Walachia, was located in Aetolia and Acarnania in central Greece.

The events that led to the founding of Romania are better known. In 1310 the *vaivode* (military governor) Radu Negru founded the principality of Walachia in southern Romania, under the control of the Hungarians. In 1330 Basarab I (see sidebar), presumably a Vlach, defeated the Hungarian king Charles I (Charles Robert of Anjou) and won independence for the WALACHIANS, as all the inhabitants of the region were called. The earliest capital of Walachia, Cîmpulung, was later replaced by Curtea de Arges.

From the 15th to the 19th century the region was ruled by the Ottoman Turks (see TURKICS), and then for a time in the 19th century, as the Danubian Principalities (Walachia and Moldavia), by the Russians and, for a shorter time, by the Austrians. The two principalities were united as Romania in 1859–61. Bucharest became the new capital in 1862 and became a kingdom in 1881.

CULTURE

The Vlachs are traditionally a pastoral people, whose herding routes depend on the seasons and available pasturage.

Slavs introduced Christianity to the region in the fourth century. In the ninth century the BULGARS introduced Eastern Orthodox Christianity to the Vlachs.

The story of the Vlachs as both pastoral wanderers and founders of nations is fascinating. It is a story of how language endures and informs us, even if only partially, of the past. It is most likely that the various groups known as Vlachs, who have maintained a linguistic

Basarab I: Father of Romania

Little is known with certainty about the childhood of Basarab, although he presumably had Vlach ancestry. In 1290 Walachia, part of present-day Romania, had been founded by Radu Negru (Rudolf the Black), a Vlach, who became military governor under the Hungarians. Forty years later Basarab took advantage of a Hungary weakened by Tatar invasions and in 1330 defeated the Hungarian king, Charles I (Charles Robert of Anjou), at Posada in the Walachian Mountains, thus winning independence for Walachia. Basarab died in 1352; the Basarab dynasty ruled what evolved into modern Romania until 1658, although under the suzerainty of the Ottoman Turks for much of the time. The painting known as “The Cronicon Pictum of Vienna” (The Painted Chronicle of Vienna), depicts the Battle at Posada, showing Romanian fighters wearing headdresses of sheep wool rolling boulders and firing arrows down on Hungarian knights trapped inside a gorge.

identity, represent a composite ethnic mixture as much as a diverse political one.

Volscian (Italic)

Carpathian Mountains along the Upper Pripyat and Southern Bug Rivers, in western Ukraine and southern Belarus (*see also* BELARUSIANS: NATIONALITY; UKRAINIANS: NATIONALITY). They are assumed to be descended from SLAVS—the BUZHANIANS and DULEBIANS—who lived in the same region in the 10th century C.E. The Volhynians have maintained many of their traditional customs, including lyre playing and singing of centuries-old songs.

Volinians *See* WOLINIANS.

Volsci (Volschians; Volusci)

The Volsci are classified as an Italic tribe. They inhabited the hill country of southern Latium (part of modern Lazio) in present-day west-central Italy by the sixth century B.C.E. The Volsci and the Romans fought nearly continuously for the 200 years after the founding of the Roman Republic in about 509 B.C.E., and what little is known about them is taken from ancient historians' accounts of the warfare. They are associated with neighboring fellow ITALICS, the AEQUI, AURUNCI, HERNICI, FALISCANS, LATINS, and MARSII.

ORIGINS

By about 600 B.C.E. the Volsci lived in the Upper Liris valley in Latium. As are many of the related tribes, they are thought to have migrated from the Apennine Mountains to the west, settling along the river and toward the Tyrrhenian

Sea. The name Volsci, or Volusci, is probably related to the Indo-European root of the Roman word for "marsh." The area of southern Latium that the Volsci inhabited was partly hilly and partly filled with marshes.

LANGUAGE

The Volschian language, known from a single inscription from the third century B.C.E., was one of the Sabellian subgroup of the Oscan group of Italic languages, related to Aequian, Marrucinian, Marsian, Paelignian, Sabine, and Vestinian.

HISTORY

By about 509 B.C.E. the Volsci had occupied territory as far north as the Alban Hills. The Romans responded to the movement of the Volsci by establishing extended colonies in Latium, such as at Signia in 495 B.C.E. Around 493 B.C.E. the Romans aligned themselves with the Hernici and Latins, probably in response to the alignment of the Volsci with the Aequi. The Romans' continuing to establish colonies for defense in Latium, at Norba and Ardea, reflects the threat the Volsci and Aequi posed.

The tides turned in 431 B.C.E., when the Aequi were resoundingly defeated by the Romans' allies. The Volsci were put to flight. The hostilities continued until 396 B.C.E., when the Volsci signed a peace agreement with Rome. After the invasion and sack of Rome by CELTS in 390 B.C.E. the Volsci reneged on their agreement. This time the Romans and Latins advanced into the territory of the Volsci.

In 354 B.C.E. the Romans aligned themselves with the SAMNITES, who had been their enemies, primarily to drive out the Celts, but the Samnites and Romans both pressed into the territory of the Volsci, occupying more and more important towns. In 345 B.C.E. the Romans took Sora, an important city of the Volsci. The Samnites joined the Romans when the Latin allies of Rome (the Latin League) revolted in 341 B.C.E. The Volsci supported the Latins. The Latins and Volsci were defeated in 338 B.C.E. by the Roman general C. Maenius. The chief city of the Volsci, Antum, was captured, and the Volsci again submitted to Rome.

By 329 B.C.E. the Romans had further taken control of the Volschian towns of Fabrateria and Luca. The Samnites took Ineramna, Casinum, Ardinum, and Fragellae. The Volsci revolted in 318 B.C.E. and were defeated at Satricum a year later. By 304 B.C.E. the Volsci were utterly defeated and soon afterward Romanized.

Volsci time line**B.C.E.**

- c. 600** Volsci in Upper Liris River valley, where they migrated sometime earlier from Apennines in central Italy
- c. 509** Volsci as far north as Alban Hills
- c. 493** Romans sign treaty with Latins and Hernici in response to Volsci alliance with Aequi.
- 431** Roman allies defeat Aequi and send Volsci into retreat.
- 396** Volsci enter into peace agreement with Romans.
- c. 390** Celtic tribes from north attack city of Rome; Volsci use this advantage to begin aggression anew.
- 354** Romans align themselves with Samnites to repulse insurrection of Gauls; Samnites and Romans begin to settle and divide Volsci territory.
- 345** Romans take Volsci town of Soma.
- 341–338** Volsci join Latins in rebellion against Roman rule; Romans take Antum.
- 318–304** Volsci again rebel against Roman rule.

Coriolanus

A story of the Volsci is taken from Roman sources that may or may not be based in fact. The legend tells of a Roman general and statesman by the name of Gnaeus Marcius who was possibly active in the 490s B.C.E. On learning that the Volsci were planning to attack Rome, he led the Romans in a successful siege of the Volscian city Corioli; after his victory he became known as Coriolanus. Coriolanus returned to be elected consul, but two tribunes convinced the people to reject him. Coriolanus was also accused of treason and departed Rome, bent on revenge. He took refuge among the Volsci and later led an army against Rome. At the last moment he relented in his campaign, however, and was executed by the Volsci. This legend is the basis for the play *Coriolanus* (early 17th century) by the English playwright William Shakespeare as well as music written for a German play by Ludwig van Beethoven.

CULTURE (see also ITALICS)

The Volsci moved under pressure from other tribes into the fertile regions of the Liris valley, probably to farm. They were warlike, as indicated by their stands against the Romans. The Volscian towns of the Liris valley were independent of those along the Tyrrhenian coast, with apparently minimal contact. Regarding their religion only an inscription on a votive offering dedicated to the god Declunus, or goddess Decluna, sheds light.

The story of the Roman general Coriolanus who is supposed to have led the Volsci in revolt, then was killed by them, which served as inspiration for Shakespeare and Beethoven, demonstrates how legend and history are entwined regarding ancient peoples.

Volunti See ULAID.

Votadini

The Votadini are classified as a Celtic tribe. They lived in Britain in present-day southern Scotland and are discussed as CELTS, BRITONS, or SCOTS. They were a confederation of smaller tribal groups, among them possibly the SELGOVAE to their south. The Votadini were defeated by the ROMANS under Gnaeus Julius Agricola in the 80s C.E. along with other tribes of the region. By the sixth century descendants in the original homeland known as the Gododdin were part of a kingdom known as Strathclyde.

Votes (Vodes; Vods; Vadja; Vaigaian; Vadjalain; Vaddalain; Vadjakko; Vatjalaiset; Maavätchi; Chuhonets; Southern Chuds; Southern Chudes)

The Votes are a Finnic-speaking people, a few of whom still live in the present-day St. Petersburg region near the Gulf of Finland in northwestern Russia (see FINNO-UGRIANS; RUSSIANS: NATIONALITY). Because their homeland was formerly known as Ingria, they are sometimes referred to as INGRIANS, as are the IZHORIANS, their neighbors near the gulf, and the Ingrian FINNS, who migrated to the region from Finland. The Votes' native name is Vadjalain, spelled variously, or Maavätchi for "Votic people." Along with other Finnic peoples, they have been referred to as Chuds, or Southern Chuds, by the Russian SLAVS; the VEPS are sometimes called Northern Chuds. The name Votes is from the Balto-Finnic word *vakja*, meaning "peg" or "wedge."

ORIGINS

The earliest archaeological findings concerning the Votes are from the Izhorian plateau, between Kingissepp and Gachina (fourth–seventh centuries C.E.). Sometime in the first millennium they separated from the northern ESTHS, who remained on the east side of the River Narva and Lake Peipus. They never formed a separate nation or administrative unit although they were located near major east–west commercial routes and were involved in trade.

In literary records the Votes (Vods) are considered the oldest people in Ingria.

Votes time line

C.E.

859 Encroaching Slavic tribes found Novgorod; begin forced tribute of Votes.

11th century Votes mentioned in writings by Slavs.

13th century Votes fight as part of Novgorod military against Swedes and Teutonic Knights.

1323 Treaty of Pähkinäsaari (Oreshek) between Russia and Sweden creates peace in Ingria.

1478 Grand Principality of Muscovy defeats Novgorod; conquered principality is divided into five parts, of which northern is called Votic Fifth.

1484 and 1488 Large numbers of Votes deported to central Russia and replaced by Russian colonists.

1703 Peter I the Great of Russia annexes Ingria.

1939 Votes last mentioned in Russian census.

LANGUAGE

The Votic language is in the Balto-Finnic group of Finnic in the Finno-Ugric language family. Of the various Finnic languages, it most resembles Estonian. The main dialects are classified as Western and Eastern, but Kukkusi and Kreevin dialects are also distinguished.

HISTORY

The Votes along with other Finnic became tributary to the SLAVS of Novgorod in 859 C.E. An early written mention of the Votes dates to the 11th century, when Prince Yaroslav the Wise, the ruler of Novgorod, recorded their name in an order concerning roads and bridges. The ancient Novgorodian land Vod was called Ingermanland by the Swedes, Anglicized to Ingria. It is said to be named after Ingegard (Ingigerd), the daughter of the Swedish king Olof Skotkonung; she married Yaroslav the Wise in 1019.

In Livonia the whole northwestern part of the Novgorod principality was called Watland, and all the related peoples there were called Votes. The expression *pagani Watlandiae*, or “Watlandian pagans,” appeared in Roman Catholic writings of the 12th–13th centuries. They were also mentioned by Pope Alexander III in his papal bull to the bishop of Uppsala and by Gregory IX to the archbishop of Uppsala and the bishop of Linköping.

In the 12th century some of the Votes merged with the Baltic-speaking LETTS. In the 13th century in 1240 and 1248 the Votes, along with the Izhorians, were forced to fight on behalf of Novgorod against Swedish forces and the mostly Germanic military and religious order the Teutonic Knights. In doing so they fought fellow Finnic-speaking peoples—Finns fighting for the Swedes, and ESTHS for the Teutonic Knights.

In 1323 the Treaty of Pähkinäsaari (Oreshek) between Russia and Sweden defined boundaries in the region, creating peace for the Votes for a time. In 1478 the Grand Principality of Muscovy defeated Novgorod, whose territory was divided into five parts, of which the northern was called the Votic Fifth. Its border ran in the west along the river Lauga to the Bay of Narva, and in the east along the Olkhava to Lake Ladoga. Over the next years in 1484 and 1488 large numbers of Votes were deported to central Russia and replaced by Russian colonists.

In the 15th century, in an attempt to Christianize the pagan Votes, Eastern Orthodox missionaries destroyed sacred groves and sacrifi-

cial places and performed mass baptisms. Because Votic parents were still naming their children after pagan gods and heroes the Orthodox Church caused Votic ethnic first names to be dropped from usage and replaced by Russian Christian names. However, regional church representatives reported in the 16th century that the Votes were obdurate pagans.

In 1703 Peter I the Great annexed Ingria to the Russian Empire; in 1712 St. Petersburg became Russia’s capital. Russification before and during the existence of the Soviet Union (USSR) in the 20th century led to relocation and loss of traditional culture, and the Votes population diminished. After 1939 the Votes were not recorded in the censuses, and even since the dissolution of the Soviet Empire in 1991 few individuals claim Votic ancestry.

CULTURE

Economy

Votes were traditionally farmers, herders, fishermen, sailors, and traders. The making of tar, charcoal, and lime played an important part in the economy of many, as did transport work.

Art

Crafts such as making wooden vessels and earthenware, blacksmithing and shoemaking were essential parts of Votic life. They were also known for their work in wood and birch bark.

Religion: Burials

Many omens were observed during Votic funerals. If the horse pulling the casket started walking with the left leg, the next person to die would be a woman. Living men never put their left sock or shoe on first, as that sequence was reserved for dressing the dead for burial. The condition of the body in the coffin was a sign of when the next death could be expected. A stiff body indicated an interval before the next burial unless the sleigh or horse cart toppled over when returning from the graveyard, in which case another death would follow soon. A copper coin thrown into the grave would help the dead person gain a better place in the next world. There was also a custom of removing nothing from cemeteries; even the berries growing there belonged either to the dead or to the god’s birds.

At home the places that the dead body had touched were washed with soap and a rag, which was subsequently destroyed. All objects that had touched the corpse were thrown into a fire or water. Tubs where the deceased was washed were broken and thrown away as well.

The straw on which the dead body had been lying was burned on a field where people jumped over the fire singing, "Fear [go] that way; love [come] this way." Yet there were good omens associated with a corpse in the house. Anyone who had a cyst on the arm or leg had only to touch the same spot on a dead body to promote recovery.

Throughout their history the Votes found themselves in the midst of struggles between various national powers. Although their numbers have been reduced to near extinction, a rich folk culture is still associated with them.

Votiaks *See* UDMURTS.

Vyatichans (Vyatichi; Vyatichy; Viatitches; Viatiachi; Viatichi; Viatichians; Viachians; Vjatichians)

The Vyatichans are classified as a tribe of Eastern SLAVS. They lived on the Oka River, a tributary of the Volga, near present-day Moscow in western Russia probably at least by the sixth century C.E. In the second half of the ninth century with other Slavic peoples they were under the suzerainty of the RUS of the Kievan Rus principality, paying tribute to them and serving under their princes in military campaigns, including the attack by Oleg on the BYZANTINES of Constantinople (modern Istanbul) in 907. The Vyatichians are considered ancestral to modern Russians (*see* RUSSIANS: NATIONALITY).

West Slavic

Wagrians (Wagri; Vagri)

The Wagrians were a tribe of Western SLAVS who lived in what for a time was known as Wagria, then later as Holstein, just south of the Jutland Peninsula in present-day northern Germany. Some scholars classify them as a branch of the OBODRITES, who occupied territory to the east and migrated into Wagria by the eighth century C.E. As were all Western Slavs, they were called WENDS by early medieval FRANKS, who derived the name from a collective term, VENEDI, that had been used by ancient GREEKS and ROMANS for all peoples living to the east of the GERMANICS, centuries earlier than Slavs as a distinct ethnic group had emerged.

In the mid-11th century a Wagrian by the name of Gottschalk, who had been educated as a Christian among the SAXONS, rose to power over both peoples and promoted Christianity by building churches, establishing monasteries, and welcoming German priests into his principality. In 1143 after the Wagrians were defeated Wagria became the county of Holstein in the Holy Roman Empire and later part of Germany.

Walachians (Wallachians; people of Walachia)

The name Walachians refers to people who lived in the former principality of Walachia, situated between the Danube River and the Transylvanian Alps, a part of present-day Romania. It was occupied by the VLACHS in

1290 C.E. and then established as a principality by the Hungarian vassal Radu Negru in 1310. It became tributary to the TURKS in the 15th century. Michael the Brave united Walachia, Moldavia, and Transylvania in the late 16th century. Its rulers for a time were appointed by BYZANTINES. The area was contested in the Russo-Turkish Wars; Russia invaded the region in 1774, although Turkey maintained control. In 1829 Moldavia and Walachia were united as the Danubian Principalities under Russian rule. In 1854–56 Austria controlled the principalities. In 1858–61 they became known as the United Principalities of Moldavia Walachia. Alexander Cuza was elected prince of both principalities in 1859 and united them as Romania in 1861 (see MOLDOVANS: NATIONALITY; ROMANIANS: NATIONALITY).

Walloons (Wallonians; people Wallonia)

The Walloons are a French-speaking people who primarily inhabit southern and eastern Belgium; the nation is divided along ethnolinguistic lines. The Flemish (Dutch)-speaking FLEMINGS live to their north and west in Belgium. The Walloons make up about one-third of Belgium's population (see BELGIANS: NATIONALITY). The name Walloons is also applied to any of the modern inhabitants of the region of Wallonia—mostly the provinces of Hainaut, Liège, Luxembourg, Namur, and

southern Brabant—despite ancestry; in this application the name Wallonian is more likely used. Walloon is probably derived from *wealas*, an Anglo-Saxon word for foreigner, the same derivation as the name Welsh.

ORIGINS

Present-day Belgium was originally inhabited by GAULS, among them the BELGAE. The Walloons are primarily descended from Celtic peoples who stayed in the region despite occupation by the ROMANS in the first century B.C.E. to fifth century C.E., and then the arrival of Germanic peoples, primarily the FRANKS, in the third–fourth centuries C.E. The division line between Germanic descendants and Celtic (and some Gallo-Roman) descendants started out as a natural boundary of dense forests running generally roughly east–west across present-day north-central Belgium just south of Brussels, the nation's capital. In the fifth century with the withdrawal of Roman garrison, Frankish peoples expanded farther southward into present-day France. But the ancestral Walloons maintained a relatively intact population in spite of the development of Germanic-controlled kingdoms around them.

LANGUAGE

Those peoples living in the south in Belgium spoke the language of the Romanized Gauls, which evolved into what is known as Walloon, considered a regional indigenous language related to French. Those peoples in the north in Belgium (the region of Flanders) and present-day Netherlands spoke Germanic dialects that evolved into Flemish and the closely related Netherlandic (Dutch). Some scholars classify Walloon as a dialect of French; others, as a separate Romance language close to French. In the 20th century a French close to that spoken in France largely replaced it, and now only about one-third of Walloons speak their ancestral language. Efforts are being made in schools to preserve Walloon dialects. Some of Belgium's citizens can be considered trilingual, speaking Walloon, French, and Flemish.

HISTORY

In 1830 at the time of the successful Belgian revolt from the Netherlands (and after involvement in the region of France, the Holy Roman Empire, Burgundy, Spain, and Austria) the Walloons, despite being outnumbered by Flemings, were the dominant political force. They established French as the only official language and controlled most of the wealth. Much

of subsequent Belgian history relates to the movement toward increased suffrage for the Flemings. By the end of the 19th century government and courts in Flemish areas utilized Flemish in official proceedings. In 1898 Flemish was made Belgium's second official language, and in the 20th century it was given primary status in Flanders.

In 1993 in a constitutional revision Belgium was made a federalist state with three separate and autonomous regions: Flanders, Wallonia, and Brussels. The current linguistic boundary between Wallonia and Flanders, demarcated by law, generally follows the ancient line that once separated Germanic peoples from Gallo-Roman peoples. The elected assemblies of both Wallonia and Flanders form regional governments that have broad authority over social and economic policy and administration. Brussels, the nation's capital, is officially bilingual. Although sharing ancestry with Wallonians, the French-speaking inhabitants of Brussels do not generally see themselves as Walloons.

CULTURE

Economy

Much of Belgium's heavy mining and industry occurred first in Wallonia. The traditional activities of agriculture, shipping, and textile manufacturing have persisted in Flanders.

Literature

From the ninth to the 11th century Latin was the primary literary language of the region, as recorded by monks in abbeys. Belgian literature had three distinct traditions—Flemish, French, and Walloon. In the mid-12th century some local chronicles and religious dramas were written in Walloon, and in the 17th century poems known as *pasquèyes* on local themes used the

Primarily Celtic

language:

Welsh (from the Brythonic branch of Insular Celtic) and English

native tongue. In the 18th and 19th centuries in addition to poetry Walloon was utilized in librettos, songs, and plays. In 1856 the Société Liègeoise de Littérature Wallonne was founded at Liège. Works written in other languages were increasingly translated into Walloon. In the 20th century scholars studied the various Walloon dialects and standardized spelling and grammar for literary purposes, although many modern Belgian authors have chosen to write in French.

Religion

The majority of Walloons are Roman Catholic.

The evolving Walloon identity demonstrates varying concepts of a people. In ancient times the Walloons shared ancestry to a greater extent. Over the centuries as other peoples intermingled with them language and culture became the greatest unifying factors. With the use of the Walloon language now waning and culture more uniform throughout Europe the ties among those who consider themselves Walloon are based increasingly on geography.

Walsers (people of Valais)

The name Walsers refers to people living in the canton Valais (Wallis) of present-day southern Switzerland. CELTS originally inhabited the area, which was conquered by the ROMANS under Julius Caesar in 57 B.C.E. It became part of the kingdom of Burgundy (see BURGUNDII) in 888 C.E. By 999 King Rudolf III of Burgundy gave the kingdom to the bishop of Sion, who became count of Valais. Valais became part of the French-organized Helvetic Republic in 1798, then became the independent Rhodanic Republic in 1802. It was incorporated into France in 1810, then entered the Swiss Confederation five years later (see SWISS: NATIONALITY).

Warni See VARINI.

Welsh (Cymri; people of Wales)

The Welsh are the inhabitants of the broad peninsula of western Britain, bounded on the south by the Severn River estuary and the Bristol Channel and on the north and west by the Irish Sea. The ancient Welsh are thought to be descended from the CELTS and related to other BRITONS on the island, although pre-Celtic peoples may have been ancestral to some of them. The name Welsh is derived from *wealas*, an Anglo-Saxon word for “foreigner.” An alternate name for them is Cymri, a Welsh word that means “comrades.” Because Wales is now part of the United Kingdom of Great Britain and Northern Ireland modern Welsh can be said to be British subjects (see BRITISH: NATIONALITY), but they have maintained their own cultural traditions.

ORIGINS

Through most of their prehistory the inhabitants of the region in Britain that comprises present-day Wales differed relatively little in language or culture from the inhabitants in the rest of Britain. People arrived in much of Wales after the glaciers receded during the Mesolithic Age around 7000 B.C.E. and lived a foraging lifestyle. However, a burial in a cave in Paviland on the south coast of Wales, nicknamed the Red Lady of Paviland because its bones were covered in red ochre, has been dated to 24,000 B.C.E. (The Lady has since been discovered to have been male.) Because it is believed that this part of Britain was not covered with glaciers after that time, it is possible that the Red Lady’s people are the ancestors of some of the present-day Welsh. After the Neolithic period the region had increasing contact with Europe, in part because it had rich copper deposits and because copper and gold from Ireland were carried through Wales on their way to the mainland. Around 2500 B.C.E. as elsewhere in Britain the Bell Beaker ideology began to challenge the communal Neolithic way of life with a new emphasis on individualism. This influence is seen in individual graves featuring daggers, bows and arrows, and beakers for the consumption of mead in rituals of hospitality meant to forge bonds among warriors and, probably, to celebrate their deeds. The Beaker way of life foreshadowed that which would come to full flowering during the Celtic Iron Age.

Toward the end of the second millennium B.C.E. again as elsewhere in the British Isles the

climate seems to have worsened, becoming cooler and moister and leading to the loss of much formerly arable land to peat bogs. This condition coincided with the change to building more substantial dwellings and settlements, often on hilltops and uplands, both for defense as scarcer resources fomented competition and warfare and as a means to reserve more fertile valley areas for cultivation.

The Iron Age began in Wales around 750 B.C.E. The main tribes in Wales—grouped as BRITONS—were the DECEANGLI of the northeast, the CORNOVII of the central borderlands with the rest of Britain, the ORDOVICES and DEMETAE on the northwest and west coasts, respectively, and the SILURES along the great Severn estuary and the uplands farther inland. The GANGANI were a smaller group, who lived for a time on the Lley Peninsula.

The Iron Age Welsh produced finely crafted metalwork, and their building techniques showed considerable sophistication. On the other hand they produced only a small amount of pottery, and that scarcity has made study of their material culture more difficult.

LANGUAGE

The Welsh language evolved from the Insular Celtic language called Brythonic (the other Insular tongue is Gaelic, ancestral to Irish Gaelic of the ancient IRISH and Scottish Gaelic of the ancient SCOTS), which was spoken in most of Britain. During the Roman occupation Latin never replaced the native Brythonic but was influential, contributing words for things new to the native inhabitants of Wales, such as *window* and *book*. By the fifth century C.E. in the western part of Britain Brythonic had diverged into two forms, the western and the southwestern. Southwestern Brythonic developed into Cornish and later, after people from Cornwall migrated to Brittany. By about 700 C.E. Western Brythonic had developed into Welsh, which was spoken not only in Wales but also in the Brythonic kingdoms of Elmet in the Pennines, Rheged in Cumbria and Dumfries, Strathclyde in the Clyde Valley, and the lands of the VOTADINI along the Firth of Forth. The earliest known public inscription in Welsh is carved on the ninth-century Tywyn Stone.

HISTORY

The Welsh tribes had had considerably less contact with the ROMANS before the invasion than had some of the ancient tribes to the southeast, notably the BELGAE, CATUVELLAUNI, and

TRINOVANTES. Many Welsh were relatively backward uplanders, culturally speaking, compared to the more urbane eastern tribes. Yet their pastoral economy had led to considerable political cohesion, through the bonds forged among the members of warrior bands needed to protect the flocks from raiders and possibly through the network of territorial alliances necessary to allow their seasonal movement through a relatively large territory.

The Romans in Wales

The Romans launched their campaign in Wales in 48 C.E. Despite early success against the

Deceangli for some 30 years the guerrilla tactics of the Ordovices and Silures prevented a complete Roman takeover. Perhaps the Silurian reputation for toughness as warriors led Caractacus, the Caradog of Welsh tradition, to seek refuge among them after the defeat of his own tribe, the Catuvellauni of Essex. He joined the Silures' fight against the Romans but was captured by the latter in 51 C.E. and taken in chains to be paraded in a triumph in Rome.

The resistance of the Silures continued, however, and in 52 C.E. they defeated a Roman legion. The Romans were hampered in their campaign by the rise of Queen Boudicca (Boadicea) of the ICENI of Norfolk in 60 C.E. By the 70s C.E. the Silures had been defeated, and in about 75 C.E. one of Britain's three legionary fortresses was built in the heart of their territory at Isca Silurum (Caerleon). In about 120 they were granted *civitas* (independent and self-governing) status, and a Roman-style capital was built at Venta Silurum (Caerwent), evidence of the political sophistication of the tribe. After the collapse of the Roman Empire the core of the territory of the Silures constituted the kingdom of Gwent, and the name Caradog features frequently in the genealogies of its rulers.

The territory of Britannia was divided into two basic zones, based on geography and terrain, which forced the Romans to adopt different strategies of pacification. The lowland zone—southern, eastern, and midland England—which had had extensive trading contact with the Romans before the invasion and now had some tribes allied with the Romans, was organized as a civilian territory with cities and villas. The highland zone—Wales and southwestern and much of northern England—was organized as a military territory. Fortresses were established at York, Chester, and Caerleon. In Wales there were at least 30 auxiliary forts linked by straight roads and situated a day's march apart. Over time these forts became unnecessary as the Welsh population accepted the Roman presence, a process facilitated by the fact that they, or at least the aristocracy, were allowed a measure of self-government. The tribal leaders who were magistrates began to consider themselves Romans, especially after 214, when all free men throughout the empire were granted Roman citizenship. Further Roman influence and the use of Latin were reinforced by Christianity, which gained many adherents after Christians were allowed to worship freely in 313.

By the late fourth century Roman power in Wales had fallen into severe decline. Even the populous Caerwent, where no Roman coins

dated later than the 390s have been found, did not long survive the Roman departure from Britain in 410 and became a depopulated ruin. On the other hand, the Roman city of Wroxeter in Cornovii territory, according to archaeological evidence, continued to be occupied until the seventh century.

The decline of Roman military power in Britain was accelerated by Magnus Maximus, a Roman general of Spanish descent who marshaled most of the Roman troops in Britain in his failed attempt to wrest power from the emperor Gratian in 383. Maximus, it was claimed by Romano-Britons in succeeding centuries, had as self-proclaimed emperor set the imprimatur of Rome on the legitimacy of leaders such as the Silurian magistrates of Venta Silurum, giving them the right to self-rule as Roman citizens. Maximus was long remembered in Wales after he had been forgotten in other parts of Britain. It was believed that he had proclaimed himself emperor in Britain, and after Germanic tribes had overrun most of the former empire in Europe, a sense that western Britain was the last true bastion of Rome, fertilized by the Celtic imagination, lingered long. In Arthurian legend King Arthur was the inheritor of Maximus's legacy. And as Maccsen Wledig Magnus was claimed as progenitor in the genealogies of Welsh royal houses.

Dark Age of Welsh History

No contemporary historical sources exist for the period after the departure of Roman authority from Britain at the beginning of the fifth century until well into the sixth century with the writing of the monk and saint Gildas, a Briton—part of the reason it has been called the Dark Age. Thereafter a fairly large body of writing about the period was created at increasingly greater removes of time and according to perspectives far different from those of modern historians. The validity of the information provided by writers such as the Anglo-Saxon monk and historian the Venerable Bede in the eighth century and the Welsh writer Nennius, who may have been the compiler of the *Historia Brittonum* in the ninth century, is uncertain. Not only are the sources the Bede and Nennius drew on wholly unknown (although presumably they included oral tradition and now-lost annals) and therefore unable to be assessed for accuracy or consistency, but the writing of history in that era had different goals and purposes from those of modern historians. The search for factual truth, although not absent, held for medieval historians nothing like the central place it does today.

Historians wrote from other motives, to glorify kings and their ancestors or to demonstrate the workings of God in history. There are many contradictions in dating of events between the Bede, Nennius, and the *Anglo-Saxon Chronicle*, and monastic writings in Anglo-Saxon, another important early source. Rigorous textual study of Nennius has revealed grave problems with his dating, including the fact that he indiscriminately interchanges Anno Domini—the birthdate of Christ—with Anno Passionis—the date of Christ's death—as the starting point or year one of his dating scheme.

Despite these difficulties there is agreement in the early sources on certain events, if not their precise dates, and the personages involved in them. The first of these is the invitation by a leader of the Britons named Vortigern to war leaders of the SAXONS to enter Britain and aid in the defense against the PICTS and Scots. This took place after the departure of the Romans from Britain, in the Welsh tradition recorded by Nennius 40 years after the death of Maximus in 388, and in Bede's Saxon tradition 40 years after the departure of the Romans in 410. (The time span of 40 years is used a number of times in the early sources, perhaps suggesting that this is a canonical number or rhetorical device derived from Scripture, that is, "it rained for forty days and forty nights," or Jesus's "forty" days in the wilderness. It may mean simply "a very long time"—a period whose exact length is unknown but not necessarily beyond a possible human life span and thus within living memory.)

Vortigern

Vortigern is a figure of much interest who attracted a considerable amount of folklore, including an encounter with a character sometimes identified with the mystical Merlin of Arthurian legend. In this encounter Vortigern and Merlin witness a combat between two great serpents or dragons that Merlin interprets as signifying the expulsion of Vortigern's power in favor of that of another leader who will win ultimate victory over the Saxons. (In the Arthurian legend, which emerged centuries later, this was taken as a prophesy of Arthur's career.) The name Vortigern is an Anglicized version of the Welsh Guorthigirn or Gwrtheyrn. It is not known whether he was Welsh, but he seems to have had some connection to Wales and was claimed as progenitor by several lines of Welsh kings.

Vortigern's actions do not seem to conform to the style of Celtic kings, a prominent part of whose role was that of war leader; he never goes

into battle. He is called by Gildas a *tyrannus* (in Greek and Latin, usurper), a term he also uses for Maximus and other generals who claimed the imperial title. Vortigern never did so, but he may have abrogated to himself leadership of Roman Britain after the imperial authorities left. Gildas writes that the decision to enlist the Saxons was made by Vortigern in coordination with a council of some kind, of which he seems to have been head. He may have been a high bureaucrat in Britain's imperial government who stayed after the others left, or perhaps he was a landowner unwilling to leave his lands. Genealogies also claim his overlordship over southern Wales, explained through his wife, Sevira, whose father, Magnus Maximus, had supposedly married into the local dynasty. So it could be argued that Vortigern was the natural inheritor of Maximus's claim to Britain in general and to large parts of Wales in particular. Vortigern figures in Arthurian legend as a failed and evil king, failed because he invited the Saxons to Britain, and evil because he was supposed to have engaged in incestuous union with his daughter.

Saxon Allies Become Foes

The next event consistently mentioned in the early sources is the conflict that developed between the Saxon mercenaries and their employers among the Britons, which ultimately led to Vortigern's downfall, although not before he ceded large territories to the Saxons in a vain attempt to buy them off. Subsequent resistance to the Saxons is associated with the name of Ambrosius Aurelianus of the fifth century, who may have been another leader of the Britons whose history was even more shadowy than that of Vortigern because his territory was ultimately taken over by Saxons, as Wales was not. The sources imply that Ambrosius waged a long struggle with the Saxons, sometimes successfully, sometimes not, which may have lasted as long as the canonical 40 years.

Badonicus Mons

The final event agreed on (though not at all in date or location) in the early sources is the defeat of the Saxons at the Siege of Badonicus Mons (Mt. Badon), which Gildas seems to say took place in the year of his birth. Because he died in 572, it must have taken place sometime in the first half of the sixth century. The *Annales Cambriae* (the *Annals of Wales*), a yearly record of events that runs from the mid-fifth century to the 950s and was compiled in the 10th century, gives the date of Badon as 518 and describes it as

follows: “The battle of Badon, in which Arthur carried the Cross of our Lord Jesus Christ for three days and three nights on his shoulders and the Britons were victorious.” This is the earliest record of Arthur that places him in a chronological context. Strangely neither Gildas nor Bede mentions Arthur’s being at Badon.

The Historical Arthur

Arthur, or Artorius as he is sometimes called, for many historians is simply a composite figure, a name connected to the exploits of a number of war leaders. Some early sources name an Artur who was the son of a king of the DÁL RIATA in western Scotland. He is also associated with Wales and with Tintagel in Cornwall. The massive ruins of the Roman fort at Caerleon were believed to have been a castle of King Arthur, its amphitheater the site of his Round Table. Some later versions of Arthur’s story place Camelot near Caerleon.

Another passage of the *Historia Brittonum* says, “Warlike Arthur fought against [the enemies] along with the soldiers of Britain and the kings, [though] there were many more noble than himself, yet he it was who on twelve occasions was leader of war.” This could mean that Arthur was a low-status soldier who rose to leadership through talent and his prowess as a warrior. This might explain why he was not named by Gildas or Bede; record of him may have existed only in oral and bardic accounts. Unlike Nennius, Bede may not have seen fit to include the “ancient tradition” of Arthur embodied in such records in his academically correct history. Nennius calls Arthur *dux bellorum*, possibly a corruption of an actual military office in Roman times, that of Dux Britanniorum, duke of Britain, who was stationed at York in northern Britain and was responsible for affairs in the north. The *Historia Brittonum* cites “twelve” (including Badon) fought by Arthur; the place-names given for some of these battles seem to correspond with locations in Scotland, indicating that Nennius thought Arthur had conducted campaigns there. If true it would be an indication that Arthur was not defending only Wales but all of Roman Britain.

The “twelve” may be another canonical or poetic number possibly derived from Hercules’ Twelve Labors, meant to convey metaphorically the Herculean task of defeating the Saxons. Nennius’s device of adducing a single heroic war leader and a specific number of great battles from the source material available to him, instead of innumerable skirmishings by anonymous war bands in a years-long guerrilla war,

may reflect the goal of telling a good story rather than of recording history. On the other hand the “twelve” battles may have been intended to convey a sense of the wide range and long course of Arthur’s war with the Saxons. Nennius’s history may be an eloquent expression of the desire for a great leader whose scope transcended the tribalism in which Britain had been plunged for centuries. In later centuries Arthur’s history merged into Celtic mythology, and after the English writer Geoffrey of Monmouth included him in a largely fictional account in his *History of the Kings of Britain* in about 1135 he was taken as a symbolic figure used to promote knightly and kingly ideals. The court of Charlemagne of the FRANKS furnished a model for King Arthur’s court in medieval literature.

The Welsh annals say that Arthur died in the Battle of Camlann (location uncertain) in 537. In just over a hundred years the Saxons, who had begun to prevail in the mid-sixth century a few decades after Arthur’s death, had conquered most of present-day England, but their headway was halted when they reached the Welsh mountains defended by the Welsh kingdoms, the most powerful of which were Gwynedd and Powys.

Welsh Kingdoms

The earliest of the Welsh kingdoms was probably Gwent, the former Silurian territory between the Wye and the Usk, its emergence the result of the political cohesion of the Silurian ruling class. Glywysing, the land between the Usk and the Tawe, has more obscure origins. Glywysing and Gwent were united to create the kingdom of Gwlad Morgan (Glamorgan or Morgannwg) in 665, or perhaps in 974. Ceredigion, which absorbed the kingdom of Ystrad Tywi (essentially the later Carmarthenshire and Gower), was purported to have been established by Ceredig, the son of Cunedda. In southwest Wales Dyfed, the land of the Demetae, fell under the rule of Irish newcomers, as did the kingdom of Brycheiniog. Powys, probably derived from the Latin word *pagus* (hinterland), may represent part of the territory of the tribe of the Cornovii.

Offa’s Dyke

In about 780 the Saxon king Offa of Mercia in the central region of England constructed a long fortification called a dyke, which approximately follows what became the border of Wales. Recent studies are finding that the dyke was probably built as a defense against Welsh incursions into Mercia. The only part of the dyke almost certainly built by Offa is the 64-mile sec-

tion in the middle, which does not demarcate the whole of the borderland between Wales and England. Therefore Mercia's enemy may have been only one of the Welsh kingdoms rather than all of them.

The precise boundaries of the early Welsh kingdoms are uncertain, but it is highly likely that Offa's Dyke marks the border between eighth-century Mercia and Powys. To the north was the frontier between Mercia and Gwynedd, and to the south that between Mercia and Ercing and Gwent. There is evidence that Mercia was at war with Powys, but not with the other states to the north and south. A defensive boundary was therefore needed only in the middle. Evidence of the power of Powys is found in a text carved onto a freestanding cross shaft known as the Pillar of Eliseg from the eighth century (from the name of the king it commemorates), which stands a few miles west of the northern end of the dyke. The inscription says that after a nine-year campaign Eliseg, the king of Powys, annexed territory from the ANGLO-SAXONS. The *Annals of Wales* mention a battle between Powys and Mercia in 760.

Consolidation of Wales

In the ninth and 10th centuries the Welsh kingdoms were undergoing a process of consolidation similar to that happening elsewhere in Europe at the time, as the chaotic fragmentation of the Dark Ages, which had followed the collapse of the Roman Empire, gave way before efforts at achieving political stability and a cessation of the continual in-fighting and rivalry among small-scale war leaders. At the same time a sense of a distinctly Welsh identity was emerging, as attested by some of the earliest inscriptions in the modern Welsh language. One of the most important leaders at this time was Rhodri, known as Rhodri Mawr (Rhodri the Great), who won a victory over the VIKINGS in 856. Rhodri united Gwynedd, Powys, and Seisyllwg (Ceredigion and Ystrad Tywi). His grandson, Hywel, began as king of Seisyllwg and Brycheiniog; to these he added Dyfed, thus creating the kingdom of Deheubarth, and in 942 he also became ruler of Gwynedd and Powys.

Vikings in Wales

The Welsh armies were being tested and honed at this time by the Vikings, whose first recorded raid in the region was in 852. The success of Rhodri against them was so resounding that word of it reached the court of Charles at Liège. According to Saxon annals Welsh forces joined the Saxons of Mercia to repel the Vikings. In 914

a Viking fleet from Brittany ravaged the coast of South Wales and penetrated the Wye valley, capturing the bishop of Llandaff, Cyfeiliog. According to the *Anglo-Saxon Chronicle* Edward the Elder of the Anglo-Saxon kingdom of Wessex paid £40 ransom for him.

By the early 10th century the raids had largely ceased for a time, despite the expulsion of Viking leaders from Ireland, which caused them to annex other territories around the Irish Sea. By the middle of the century the shores had become in some respects a single community strongly influenced by Norse culture. Coastal Wales, however, was only slightly affected.

Viking raids resumed in Wales in the second half of the 10th century, with raiders focusing on religious centers such as St. David's monastery, which was raided 11 times between 967 and 1021. After another relatively peaceful period a third phase of raiding began during the second half of the 11th century.

Despite these repeated incursions the Vikings had relatively little long-term impact on Wales. In common with the Irish kingdoms the small but cohesive and aggressive Welsh kingdoms may have offered too much resistance.

Gruffudd ap Llywelyn

The trend toward consolidation of the Welsh kingdoms culminated in the 11th century with Gruffudd ap Llywelyn's successful, if brief unification of the country. A man of somewhat distant royal connections, Gruffudd attained the kingship of Gwynedd and Powys, Macbeth-like, by murdering the reigning king, Iago ap Idwal. Thereafter through a combination of ruthlessness and ability as a war leader he acquired the rest of Welsh territory in part by forming an alliance with Swegen Godwinson, the ruler of the border region with England called the Marches, with whom he attacked the southern Welsh kingdom of Deheubarth. Over time Gruffudd won control over the remaining Welsh kingdoms, and for the first and last time in Welsh history the country was united under a Welsh leader. Gruffudd's opposition to the Anglo-Saxons spelled his ultimate downfall. Because of Gruffudd's alliance with Harold Godwinson's political enemy, as well as his incursions into Anglo-Saxon territory, Harold Godwinson, the powerful Anglo-Saxon war leader, determined to rid himself of his troublesome Welsh neighbor and in 1063 attacked Wales by land and sea with large armies that devastated Gruffudd's forces. Many Welsh, especially in Deheubarth, where Gruffudd was hated as a usurper, flocked to Harold's banner.

Gruffudd fell back before Harold's armies, retreating to the mountain fastness of Mt. Snowdon, where he was murdered, in some accounts by the son of Iago ap Idwal, whose murder by Gruffudd had launched the latter's career.

The Normans and the Welsh

Harold Godwinson's conquest of Wales three years before the arrival of the NORMANS in Britain made it impossible for the unified Welsh kingdom of Gruffudd ap Llywelyn to survive the Norman onslaught. William the Conqueror granted earldoms to Norman barons at Chester, Shrewsbury, and Hereford in the Welsh March to create a buffer zone. As was typical of Normans these barons were aggressive and highly ambitious, and by William's death in 1087 they had seized the kingdom of Gwent and much of Powys and had struck deeply into Gwynedd. Early in the reign of William II, the lowlands of Glamorgan and Brecon fell to Norman knights. The earls of Shrewsbury drove through Powys and Ceredigion to southern Dyfed, where they built a castle at Pembroke.

Nevertheless the fierce independence of the Welsh petty kings, which had for so long prevented the unification of Wales, now obstructed attempts to impose the complete Norman hegemony over the Welsh they had imposed on the Anglo-Saxons. Because Anglo-Saxon England had moved toward a more peaceful, stable society devoted more to the arts of civilization than to those of war, they were vulnerable to the Normans. Because defense of the kingdom had become primarily the responsibility of the king the unfortunate death of King Harold at the Battle of Hastings left the Anglo-Saxons leaderless and prevented them from mounting an organized rebellion. The Welsh labored under no such disadvantage and by the 1090s were successfully pushing the Normans back until, by 1100, Gwynedd had been retaken. Wales then was divided between regions under native rule and others held by Normans. In the March most of the inhabitants continued to be native Welsh, interspersed by enclaves of "Englishries" protected by castles where immigrant Normans had settled. Yet all lordships in Wales, native or Norman, were claimed as vassals by the Anglo-Norman kings, and for centuries these kings involved themselves extensively in Welsh affairs.

Early Medieval Period

In the 12th century as the native Welsh kingdoms of Gwynedd, Powys, and Deheubarth

maintained and strengthened their autonomy, the Norman lordships in the Marcher territory maintained and strengthened theirs, ruling them as kingdoms. The Marcher lords recognized the overlordship of the king of England but were not bound by English law. The March remained a distinct region of Wales for some 450 years.

The mid-12th-century reign of Madog ap Maredudd, ruler of Powys, illustrates the state of Welsh politics at this time, for Madog was as concerned to resist the power of the other native Welsh kingdoms as that of the Anglo-Normans, often playing the one off against the other. A chief rival of Powys was Gwynedd under Owain ap Gruffudd. Owain expanded the boundaries of Gwynedd until they reached the outskirts of Chester, and in 1165 he led the resistance of the Welsh princes to the invasion of Henry II. The strengthening of Gwynedd allowed for its pre-eminence in the 13th century under Owain's grandson, Llywelyn ap Iorwerth (Llywelyn the Great).

The Cistercians

The Cistercian monastic order became important in native Welsh kingdoms in the 12th century. Cistercian monasticism had several similarities to the Celtic; monasteries were founded in remote rural areas, and the Cistercians practiced the sort of heroic asceticism favored by Celtic Christians. Moreover the Cistercians maintained close ties with their founding house in Cîteaux in Burgundy and thus were outside the Norman sphere of influence. By the 13th century all the Welsh princes had founded Cistercian monasteries, whose scribes were primarily responsible for writing Welsh chronicles and copying Welsh literature. The Cistercians pioneered the wool industry in Wales and thus played an important role in economic development there.

Overlordship of Gwynedd

In the 13th century the power of Gwynedd was such that its rulers sought to establish their overlordship in Wales, in feudal fashion under the overlordship of the kings of England, with lesser Welsh princes swearing homage to them and they in turn would swear homage to the English Crown. The dwindling power of Powys and Deheubarth helped make this a reality. Owain's grandson, Llywelyn the Great, gained rulership over Gwynedd in 1203 and began asserting his influence in the other kingdoms, aided by his marriage to the daughter of the English king John (Lackland), which for a time gave him more scope and leverage with which to pursue

his ambitions. However in 1210 seeing Llywelyn as a threat, John invaded Gwynedd and restricted Llywelyn's power to the lands west of the river Conwy. John's conflicts with the pope and his own barons distracted him enough to allow Llywelyn to regain his lost lands. Llywelyn supported the barons in their demands from John set out in the Magna Carta in 1215, and several of its provisions concern concessions made to him. In 1216 he presided at Aberdyfi over a body similar to the English Parliament, and in 1218 the advisers of the boy king Henry III recognized his overlordship of Wales.

On reaching his majority Henry III sought to curb the power of Gwynedd, demanding of Llywelyn's son and heir, Dafydd ap Llywelyn, that he send his half-brother Gruffudd, to England as a hostage, with which Dafydd complied; Gruffudd died trying to escape from the Tower of London, where he was being held. Dafydd died after a short reign, before he had been able to consolidate his power.

The overlordship of Gwynedd was secured by Gruffudd's son, Llywelyn ap Gruffudd, in 1258. From 1267 to 1282 the native Welsh kingdoms together formed the Principality of Wales. However, it was only the relative power vacuum created by the ineptitude of Henry III, whose scope for action was being curbed by the English Parliament, that allowed this development, and the 1272 succession of Edward I restored to the English throne a monarch whose ability matched his typically Norman ambition. After invading Wales in 1276 with the largest army amassed in Britain since 1066 Edward defeated Llywelyn, dismembered his kingdom of Gwynedd, and asserted his lordship over the Marcher lords as well. Llywelyn revolted in 1282 but again was bested by Edward; Llywelyn died in battle. After Llywelyn's defeat his principality was organized into six counties that were granted to the king's heir, who thereafter was styled the Prince of Wales.

Castle Building by Edward I

After his victory in 1277 Edward embarked on a great castle-building enterprise, constructing among the most advanced and elaborate fortifications anywhere in Europe at the time. Among these are Harlech, Beaumaris, Aberystwyth, and the most remarkable, Caernarfon, built near the site of the Roman fortress of Segontium. Segontium figures in the history of Magnus Maximus, the Roman general stationed in Britain who declared himself emperor of Rome in the fourth century. The father of Maximus's wife was a chieftain based in Segontium. It may

well have been with Maximus in mind, and also Constantine (called Constantine III), another self-proclaimed emperor in Britain after Maximus in the fifth century, that Edward and his architect, James of St. George, built Caernarfon. Its octagonal towers and bands of light-colored stone emulated the fortress of Constantinople (modern Istanbul), the Eastern Roman capital founded by the Roman emperor Constantine the Great.

First English Prince of Wales

It is a measure of the importance of Wales to Edward that his son and heir, Edward II, was born at Caernarfon in 1284. In 1301 Edward was invested as Prince of Wales, in part to focus the loyalty of the Welsh nobility. Edward and subsequent medieval Princes of Wales took an active role in Welsh affairs and received revenues from the principality. Edward's council administered Wales and sought to extend its authority to the March. Meanwhile Edward I strengthened his hold on Wales by encouraging English to settle there by establishing towns for them and giving local offices to English. English common law was imposed on all matters except those concerning lands. As a result much important business was conducted in English, straining the survival of Welsh. In an act that amounted to an attempt at psychological conquest, Wales's most treasured national artifacts, including the royal insignia and Y Groes Naid, said to be a fragment of the True Cross on which Christ was crucified, were taken to London.

Owain Glyndwr's Revolt

Glyndwr had princely connections on both sides of his family; on his father's side he was heir to the dynasty of Powys. On his mother's he represented what was left of the claims of the descendants of Rhys ap Gruffudd, or the Lord Rhys of Deheubarth.

Because one of his estates, Sycharth, was only a mile from the border with England and was surrounded by Marcher lordships, Glyndwr had opportunities to form relations with both English and Marcher lords. He married into a leading Marcher family and spent time in London and in the army of the king of England. He was thus in a position, were he to aspire to the Principality of Wales, to form alliances within the English nobility. On the other hand, as a great patron of poets he was steeped in his own genealogy and the legend and history of Wales that formed so much poetic subject matter; this may have nurtured his ambitions. As always turmoil in English royal politics gave Glyndwr his

opportunity. Richard II, who had many adherents in Wales, was deposed in 1399 by Henry IV. In 1400 Glyndwr seized on Henry's mishandling of a dispute he had with a Marcher lord to have himself declared Prince of Wales.

Owain Glyndwr's revolt at first consisted of guerrilla-style harassment of English settlements, his raiders disappearing into the mountains after each foray. Owain's kinsmen, the Tudor family of Anglesey, occupied Conwy Castle on Easter Day 1401, and a victory a few months later sparked growing enthusiasm for his cause across Wales. Henry was unable to find a strategy with which to counter Owain's tactics, and severe weather that hampered the movements of his heavily armed soldiers caused many Welsh to believe that Owain had allies among the elements themselves.

The English Parliament passed Penal Laws designed to curb the Welsh, prohibiting gatherings and the bearing of arms; nevertheless Owain's campaign continued with success after success. In 1404 he captured the castles of Aberystwyth and Harlech, sealed an agreement with the French, and held a parliament at Machynlleth, where he may have been crowned Prince of Wales. French assistance arrived in 1405, and virtually the whole of Wales, beyond Henry's remaining castles, acknowledged the authority of Owain Glyndwr.

French support for the revolt was only lukewarm, prompting Owain to send a letter to the king of France promising major concessions, including the offer to transfer the allegiance of Wales from the pope at Rome, recognized by England, to the pope at Avignon, recognized by France. In the so-called Pennal Letter Owain outlined a blueprint for his plans for Wales should he succeed. Among his aims were recognition of St. David's as an archbishopric, appointment of clerics fluent in Welsh, establishment of two universities in Wales, and retention in the country of the revenues of Welsh churches.

After 1405 the war began to go against the Welsh; more help from France was not forthcoming, and Henry IV's son Henry V proved a more able general than his father. After Harlech was lost in 1409, Owain took refuge in the mountains, where he died in about 1416. The English retaliated with punitive measures of such destructiveness that the economy did not recover for a generation.

After the failure of the Glyndwr revolt the Welsh nobility generally ceased to oppose English authority, instead seeking to advance their power by involvement in English conflicts such as the Wars of the Roses. As mentioned,

increasingly they drew away from the Welsh people, adopting English manners and customs such as primogeniture. Many sided with Henry VII, the first Tudor king, who gained the English throne by achieving the decisive victory of the war. Henry was a descendant of the Tudor family of Anglesey who had helped Owain Glyndwr. He chose to begin his campaign by landing in 1485 in Wales, where Welshmen flocked to his standard, constituting about one-third of his victorious army at the Battle of Bosworth.

Act of Union

By the Act of Union in 1536 enacted by the English Parliament under pressure from Henry VIII, all Welsh customary law that differed from the English was abolished, and English was made the language of all legal proceedings. Welsh representatives entered the English Parliament; from 1536 onward the differences between Wales and England were mainly religious and cultural.

Modern Welsh

Despite the success of industrialization in Wales the country continued to be plagued by poverty and unemployment into the 20th century. The rise of David Lloyd George, born of Welsh parents, to become prime minister of Great Britain in 1916 and the success of his Liberal Party, which had many Welsh members, failed to improve the situation. Only the industrial boom during World War II (1939–45) reversed the situation temporarily. Wales's economic woes had fostered the emergence of socialism, especially in the coal-mining regions in the south and after the war. Welsh socialists supported the British Labor government's socialization of the British economy. In Wales this included the placement of the coal mines and tinplate manufacture under government control, introduction of more diversified industry, and improvement of communications, housing, and technical education. However, the Welsh coal industry fell into almost terminal decline, with only a few mines still operating.

In 1997 Welsh voters passed by a narrow margin a referendum establishing a 60-member Welsh assembly. Elections were held in 1999, when the Labor Party won the most seats.

CULTURE (*see also* CELTS)

Economy

Copper and Bronze Age Trade The mineral wealth of Wales put the region within the scope of pan-European trading networks at least from

the Copper Age. During the Bronze Age copper mining intensified because the arsenic ores of Wales were highly sought by the civilizations in the Mediterranean region. The mines at Great Orme in Gwynedd are the largest prehistoric mines found so far in Europe. Other mines are located at Parys Mountain in North Wales, Cwmystwyth in central Wales, and Alderley Edge in Cheshire.

Trade during the Iron Age The slave chains found in Llyn Cerrig Bach, each connecting five collars, seem to support the Roman writer Strabo's observation that slaves (along with grain and hunting dogs) were the main exports of the Britons in the pre-Roman period.

Iron Age Farming In the highlands of north Wales Iron Age farmers practiced transhumance, moving their flocks to high pastures in the summer and into sheltered valleys in winter. Tre'r Ceiri (the town of fortresses), on the slopes of Yr Eifl mountain in Snowdonia, was a summer village for shepherds. It consists today of an elongated enclosure within which are the remains of more than a hundred huts built of dry-stone walling. Some of the huts are square, but the great majority are round and have some of the characteristics of the houses of the *castros* of northern Spain, built by CELTIBERIANS of Iron Age Spain, who also led their flocks to summer pastures in the high mountains. There is evidence that the village was occupied during the Roman period, but it appears that its beginnings occurred in the years around 200 B.C.E.

The territory of the Silures, as well, was most suited to seasonal movement of livestock. It was a land of boggy uplands, wooded slopes, and narrow valleys and plains. This relatively harsh environment, like that of the Celtiberians in Spain (although there the problem was the aridity of the plains), seems to have given rise to a similar society, in which the constant movement of flocks and the precariousness of life led to conflicts, raiding, and feuds.

Roman Era The Roman city of Wroxeter, located on the Severn River, was an important entrepot for trade with the European mainland. It had a large harbor for the river barges that plied the Severn. The local tribe, the Cornovii, had access to several valuable importable goods, including salt from brine springs, copper, lead, and agricultural products from the good grazing lands in their territory. Yet few signs of wealth before the invasion of the Romans have been found by archaeologists. The Welsh did build hill forts in profusion and farmed extensively. But they did

Welsh women wash clothes in this 1819 print. (Library of Congress, Prints and Photographs Division [LC-USZ62-78098])

not mint coins as several pre-Roman tribes in southeastern Britain had done. Nor do they appear to have used domestic pottery to any great extent. Their difficulty lay in their inland situation; all trade routes by which they might have benefited were controlled by other tribes. It was the Roman establishment of Wroxeter that finally gave the Cornovii trading access to the wider world.

Within two generations of the Romans' arrival the town of Wroxeter was flourishing. The energy that had previously been channeled into constructing hill forts was instead turned to building the urban center of the administrative capital. In the surrounding area farms were reorganized to produce market garden crops to feed the army and the rapidly swelling population of the town.

Curiously the Cornovii aristocracy seem not to have used their newfound wealth to become Romanized to any great degree or to equip themselves with Roman material goods in the way tribes in other parts of Britain did. An example of this piecemeal acceptance of Roman ways is Whitley Grange villa west of Wroxeter. Here excavations have uncovered a villa equipped with a large bathhouse including a small swimming pool, and another room containing a mosaic. On the other hand only four coins and fewer than 100 shards of pottery have been found.

After the Roman Era Many archaeological finds in Wales show that people there continued to have trading contacts with the wider world after the departure of the Romans. For example, a

rare early Byzantine jewel was found on the site of a remote farmstead in North Wales. The jewel, a garnet inscribed with a scorpion, was made in the eastern Mediterranean in the sixth or seventh century. The discovery, along with evidence from other sites, shows that the western kingdoms of Britons maintained trading links with the Eastern Roman Empire, at a time when much of eastern Britain had fallen under Anglo-Saxon control. Imported Mediterranean goods of this date, including pottery, have been excavated at a number of sites.

However, this need indicate no more than that Roman material culture continued to be desired by elites in Wales as evidence of high status, as it had been in eastern Britain before the Roman invasion, and that trading networks to import items of that culture to Wales continued after the Romans' departure.

Links with Norse Trade Networks The imposing wall of the fort at Llanbedrgeoch suggests the possession of considerable wealth. This settlement was at the height of its prosperity in the second half of the ninth and 10th century, when the interior contained rectangular longhouses and halls. Evidence has been found for craft production, such as bronze casting, antler work, and leatherwork, possibly intended for the nearby trading networks of the Hiberno-Norse world in Ireland. Some objects from the site bear the mark of the Hiberno-Norse style, such as hack-silver, merchants' weights, and ringed pins and buckles.

Norman Town Building The Normans, fittingly enough for descendants of the Vikings, built the first towns in Wales since the Romans left in the fifth century. The failure of the Vikings, with their town-building propensities, to gain much of a foothold in Wales prevented the growth of Viking trading centers such as those that had flourished in England and Ireland in the ninth and 10th centuries. The Normans went about town building at a great rate; between 1070 and 1300 they established about 80 towns, which were created near castles to supply and service the castle garrisons and to ensure that their economic activity remained under Norman control. Many of the new Norman towns were founded in places chosen for military reasons rather than for their suitability as trading centers; as Wales became pacified such towns lost their reason for being and fell into disuse.

Government and Society

The tribal society of Iron Age Welsh, as in the rest of Celtic Europe, consisted of a largely

anonymous populace of farmers with an overlay of elite warriors and chieftains-cum-kings. The pastoral economy of much of Wales, with its movable wealth of sheep, seems to have encouraged the activities of warriors both to raid the flocks of the tribes and to repel raids on their own. On the other hand the need for movement of animals from winter to summer pastures fostered the forming of alliances between tribes to secure grazing lands and the migration routes between them. The political survival of the Silures through and after the arrival of the Romans exemplifies the cohesiveness of the Welsh tribes.

Were the Early Welsh Kingdoms Roman or Celtic? Much disagreement as to the extent of the survival of Roman civilization in Britain outside Anglo-Saxon territories continues. Some scholars see the Welsh kingdoms that began to emerge in the fifth and sixth centuries as retaining to a large extent the forms of Roman-style governance—bureaucracies, laws, and language—and believe that the Romano-British *civitates* (or tribal areas) may have evolved without major disruption into fifth-century local kingdoms. For example the *civitas* of the DUMNONII in Cornwall became the kingdom of Dumnonia, while that of the Demetae in Wales became the kingdom of Dyfed. The other school of thought is that the *civitates* quickly reverted to Celtic tribalism, and war leaders wielded political power instead of civil authorities such as the city councils of magistrates that the Romans had fostered.

Major evidence for the former view has been found at Wroxeter, which may have been the capital of the sixth-century C.E. kingdom of Powys and of the fourth century C.E. *civitas* of the Cornovii. There parts of the late Roman town were rebuilt after the fifth century and were occupied until the late sixth or seventh century. Yet the situation at Wroxeter has to be considered against a background of a more general trend of decline, seen across Britain, in new building activity in Roman cities and towns after the early fourth century. This was accompanied by a sharp contraction of the Roman villa system, a key part of the Roman economy. In Wales as in the rest of Britain a majority of villas had been abandoned by about the year 375. Native farms, many of which had prospered as they provided food for the burgeoning urban populations of previous centuries, also declined. A survey of archaeological finds from 317 native rural sites in the Severn valley/Welsh Marches region discovered a fall of 27 percent in the number occupied between 100–150 and 350–400. Thus

by the late fifth century the underpinning of Roman-style society, fueled as it was by the creation of wealth through large-scale farming and trade, had largely ceased to exist. Detailed analysis of the buildings at Wroxeter shows a marked decline in living standards there.

Cultural Divisions in Welsh Kingdoms The Welsh kingdoms were not culturally monolithic, because they had come into existence out of the flux and turmoil in Britain that followed the departure of the Romans. The Saxon and Irish invasions of the time seem to have caused tribes all over the peninsula alternately to flee the Saxons as refugees into other regions, ally together in self-defense, and compete among themselves for power. For example the rulers of Gwynedd traced their ancestors to Cunedda Wledig of the Gododdin of southern Scotland around the Firth of Forth, whom Vortigern is said to have been invited to settle in north-west Wales to aid in the defense against the Irish. The Gododdin were originally the VOTADINI. Ceredigion, which absorbed the kingdom of Ystrad Tywi (essentially the later Carmarthenshire and Gower), was purported to have been established by Ceredig, the son of Cunedda.

The fact that the language that had become dominant in Wales by the 11th century was spoken not only there but also in the Brythonic kingdoms of Elmet in the Pennines, Rheged in Cumbria, Dumfries in northern England, Strathclyde in the Clyde Valley of Scotland, and the lands of the Votadini along the Firth of Forth gives a sense of the mixing and separation out of which arose the Welsh kingdoms of the early Middle Ages. The ruling families could trace ancestors from all over Britain, whereas the population they ruled had most probably remained in Wales for millennia, their remote ancestors Iron, Bronze, and Neolithic peoples, and possibly even the “Red Lady of Paviland” of 24,000 B.C.E., before the last Ice Age. Thus a cultural divide between the ruling class and ordinary Welsh, which was increasingly marked as the dominance of the Normans and then the ENGLISH in Wales grew, may have existed to some extent even earlier.

Law of Hywel King Hywel, grandson of Rhodri the Great, was called Hywel Dda (Hywel the Good) probably because of his codification of the law of Wales around the year 940. The law of Wales was composed of legal traditions built up over centuries of practice, rather than promulgated by kings. As in other such bodies of customary law, its emphasis was on ensuring

reconciliation among kin groups. Wrongdoing was compensated for by a form of “blood money” called *galanas*, rather than by punishment. *Galanas* was paid by the family of the wrongdoer to the family of those who had suffered the wrong. For a *bonheddwr* or freeman the size of the compensation or *galanas* depended on the distinction of his descent, whereas a *taeog*, or bondman’s *galanas*, was paid to his lord.

Welsh law assigned women a fairly high status, particularly with regard to the property of married women and their rights over their children. After the conquest of Wales by Edward I the Law of Hywel was displaced by English law, although aspects of it remained in use until at least the 15th century.

Changes in Welsh Society On the whole, however, fundamental changes in Welsh society after the English conquest took place only gradually. Perhaps the most important of these was the change in the relations of Welsh nobles to their lands and tenants, brought about by their adoption of primogeniture as the mode of inheritance. Previously under the system of gavelkind all sons inherited equal shares in their father’s land, a practice that tended to prevent the amassing of wealth by any one individual. Primogeniture, by which only the eldest son inherited, promoted the accumulation of wealth in ever fewer hands, leading to economic inequality on a scale never seen before in Wales. A much-increased tax burden on ordinary Welsh to pay for castles and armies exacerbated this process. The Welsh nobility increasingly adopted English customs and spent time at the English court in London, furthering the breach between them and their countrymen and -women.

Although many Welsh accepted English rule and even fought in English armies, tensions over the conquest remained, and rebellions occurred repeatedly throughout the 13th and 14th centuries, culminating in the nearly successful revolt of Owain Glyndwr in 1400.

Welsh Gentry Anglicized The language provisions of the Act of Union of 1536 were mainly intended to foster the use of English among the Welsh gentry, many of whom used it already. In ensuing centuries as the gentry ceased to speak Welsh the language remained in use only among the lower classes. In practice the use of Welsh was not abolished from courts, and interpreters were used extensively. Meanwhile in 1563 as part of the English government’s promotion of Protestantism through translations of liturgy and religious texts into the vernacular it was

decreed that the Bible in Welsh be available in every parish church in Wales. This became an important means by which the Welsh language survived.

Henry VIII's dissolution of Catholic monasteries in Britain in the case of Wales put the extensive sheep-grazing lands of the Cistercians in the hands of Welsh gentry, further enriching them. Through the imposition of the shire or county system in Wales members of the Welsh gentry were enlisted as justices of the peace or law enforcers in their respective counties, another means by which they were drawn closer to the English in their attitudes.

English Civil War: Welsh Sympathies In the Civil War (1642–48) between Parliament and Charles I the majority of Welsh were for the king, both because Puritans were few in Wales and because the Parliamentarians emphasized that they were defending “Englishness” against foreign influences, a cause with which the Welsh had little sympathy. The Welsh gentry had indeed drawn closer to the English, but it was the traditional ruling classes in England they emulated, not the mostly middle-class Puritans.

Literacy Campaign The Welsh-speaking lower classes had long remained isolated from progressive currents in the rest of Britain because they were largely illiterate, as most of the country's business was conducted in English. In spite of the Welsh Bible the Anglican Church in Wales promoted the idea that knowledge of English was a virtual necessity for Christians seeking salvation. In the 18th century Griffith Jones, a clergyman who strongly opposed this idea, embarked on a campaign to teach Welsh speakers to read. He formed what were called circulating schools that traveled through Wales teaching literacy at a remarkably fast rate. A report by Jones in 1761 estimated that over the previous 25 years some 3,000 schools had been held in 1,600 different locations. The establishment of his schools coincided with the early years of the Methodist Revival, as the spiritual riches of the Bible became available firsthand for the first time to people across Wales.

The Treachery of the Blue Books: English Prejudice against the Welsh In the 19th century members of the English establishment had much the same prejudices against Welsh-speaking Welsh as they had against the Irish. This attitude was called prominently to public attention with the publication of a report in 1847 on the state of education and knowledge of English in Wales, prepared for Parliament by three young English barristers (lawyers) with no previous

knowledge of Wales. The sources they relied on, mostly Anglican churchmen out of sympathy with the Nonconformist majority, were highly biased. But instead of ascribing the poor conditions of schools and the lack of teachers to the endemic poverty in Wales, they concluded that the problem was an inherent defect in the Welsh character; the Welsh were dirty, lazy, ignorant, and promiscuous. These weaknesses were caused, they said, by their stubborn adherence to the Welsh language and to Nonconformity. The report became known as *Brad y Llyfrau Gleision* (The Treachery of the Blue Books), a reference to the Dark Age Welsh legend of the “Treachery of the Long Knives,” when at a conference Saxons treacherously turned on and slew Welsh chieftains. It was attacked by both Anglicans and Nonconformists, and its publication may have been a major stimulus to the rise of Welsh nationalism.

Dwellings and Architecture

Castell Henllys (in Welsh, castle of the prince's court) is an Iron Age hill fort whose extensive excavation and reconstructions reveal it to be similar to other Celtic hill forts. The fort, first built in the Early Iron Age, consisted of a defended area of about 1.25 acres located on a steep-sided spur above a stream that curved around it on three sides. It was defended by major earthworks, consisting of a large inner bank, ditch, smaller outer bank, and further ditch.

The walls at the Silures' town of Venta Silurum, made of earth and faced with stone in 330 C.E., enclosed about 40 acres. At the height of its prosperity in the third and early fourth centuries C.E. it may have had a population of 2,500, making it the largest city Wales knew for 1,500 years. Nine miles from Venta Silurum, Isca Silurum had all the features of a Roman city—a basilica, a forum, bathhouses, hotels, temples, and streets of houses. The houses included some substantial dwellings, which had murals, mosaic floors, and central heating. The ruins of the amphitheater at Isca Silurum excited the imaginations of later people and may have given rise to the idea of King Arthur's Round Table.

Whitley Grange Roman Villa Whitley Grange is the site of a Roman villa near Wroxeter that has yielded fascinating evidence of post-Roman occupation. Finds include a large and elaborate floor mosaic, dating to the latter half of the fourth century, which is notable as the only figurative mosaic known in Shropshire. The villa may have been occupied into the sixth century;

however, the nature of the occupation calls into question the degree to which it represents a continuation of a Roman way of life. A number of holes were cut through the mosaic, causing considerable disfigurement. Some of these seem to have been repaired to some extent, but the mosaic tiles were not replaced. The next layer of occupation shows signs of beams placed across the mosaic and ash, possibly from a hearth. A bathhouse in the villa complex was replastered and refurbished in the fourth century; its hypocaust (the Roman underground furnace and tile flues) was last heated in the second half of the fifth century (according to carbon dating of charred wood remains) after which the occupants of the site ceased to use it for bathing and despoiled it. Such evidence seems to indicate a decline or a shift in lifestyle and taste from those of Roman times.

Other Technologies

The discovery that copper containing a certain amount of arsenic was a superior metal led to the development of what must have been sophisticated techniques to control the amount of arsenic. Copper ores in Wales can contain as much as 30 percent arsenic, but most metals produced as early as the middle of the second millennium B.C.E. contain 1 to 7 percent arsenic, suggesting that somehow the excess arsenic was being removed. Such techniques for controlling the composition of metals are thought to have led to the early development in Wales and Ireland of bronze making, with Cornish tin being alloyed with copper. Whether or not the initial idea of bronze making was introduced from abroad or originated in the British Isles, bronze made there was soon being traded to northern Europe.

Art

The metal objects found in the former lake of Llyn Cerrig Bach demonstrate the high level of craftsmanship of Welsh smiths. In this important hoard the smiths used what is called the Llyn Cerrig Bach style, which was influential in the development of the local variant of the continental La Tène style. An important innovation of the style, which would form one of the most distinctive elements of La Tène art on the British Isles, was the practice of filling in the background voids or “negative” areas surrounding the raised or “positive” figures with tiny lines to give an impression of shading and to set off the figures. Common figures in the style are stylized bird heads as well as whirlygig-shaped figures called triskeles, decorating various artifacts such

as bronze plaques, horse gear, shields, swords, and spears.

Music

Welsh Harp The harp is considered the national instrument of Wales. In that poetry in ancient Wales was probably as much sung as recited, skill in playing the harp was part of a poet's training. Hundreds of harp tunes were passed down by ear through the generations, many of them possibly of great antiquity. Among the earliest written collections are the Robert ap Haw Manuscript of 1613 and Edward Jones's 18th-century compilation *Musical and Poetical Relicks of the Welsh Bards*. Most of the tunes from the 1613 manuscript were probably written in the 14th and 15th centuries.

Singing Giraldus Cambrensis noted in 1193 that in their musical concerts the Welsh did not sing in unison but in many different parts. This indicates a high level of musicality, for polyphony, the singing together of different parts or vocal lines, although first practiced in Europe from the ninth century, was still the “state of the art” of music, mostly practiced in great urban centers such as Paris and in universities like Oxford.

Although choral singing in Wales, as in all Christian countries, continued to be an integral part of religious liturgical practice throughout the Middle Ages and beyond, in the 19th century the peculiar Welsh phenomenon of the immensely popular secular choral societies came into being. Particularly in the mining region of southern Wales in the raw mining towns with their throngs of young unmarried men, drunkenness had become such a problem that temperance societies were formed. They organized choirs to occupy the men, keep them away from taverns, and give them a sense of community and pride. In the Nonconformist chapels hymn singing formed the basis of the exuberant style of worship, which aimed to replace the dancing and other “rural sports” condemned by preachers as distractions from the business of salvation. Even outside regular services certain days each year were set aside purely for the singing of hymns. These occasions became the *Cymanfaoedd Ganu*, or Hymn Meetings, entirely in Welsh. They were led by conductors especially trained in eliciting from their congregations the Welsh *hwyl*, or emotion.

Literature

Latin Literacy Although only a handful of Latin-inscribed tombstones are known from late Roman Britain, hundreds survive from the fifth

to the seventh century. The sixth-century memorial stone at Penmachno in North Wales, for instance, commemorates a *magistratus* of one of the kingdoms of Britons. Many of these inscriptions show literary inventiveness and wit; they have been cited to bolster the argument that Romanization of Wales long outlasted the Roman presence. If use of Latin is to be taken as a marker of Romanization, however, growing number of Latin inscriptions in the fifth to seventh century would indicate not merely survival of Roman civilization but its growth in influence at a time when on the European mainland the Roman Empire was collapsing into anarchy and chaos. And the literary values of the Latin inscriptions in Britain and Wales are more than matched by writings in never-Romanized Ireland. It can thus be argued that such inscriptions indicate instead the caliber of the “literary” enterprise of the native people of the British Isles rather than their Romanization.

Oral to Written Tradition In the early Middle Ages centuries-old Welsh poetry and narratives were first committed to writing. The *Historia Brittonum* was compiled, possibly by a writer called Nennius, in the ninth century, and the *Annals of Wales* was written in the 10th century. The *Gododdin*, a poems of 1,480 lines, was written in the 13th century by the poet Aneirin of the sixth century; its core is believed to have been composed in about 590, making it among the earliest Welsh poems to have been preserved. It recounts the attack of the Gododdin of Scotland on Catraeth to win it from the Saxons. The attack was a disaster, and Aneirin’s words can be interpreted to mean that he alone of the men of Mynyddog, king of the Gododdin, escaped with his life. The poem contains what may be the earliest known reference to King Arthur. The reference is notable for the fact that the name of Arthur must have been a household word at this time, possibly only 50 years after his death, for he is mentioned without explanation; moreover he must have been a byword for heroism, for the reference occurs in the context of a description of another heroic warrior who, however gallant, was described as not comparable to Arthur.

The Four Ancient Books A pinnacle of medieval Welsh culture occurred in the 12th century in the courts of the Welsh kingdoms, invigorated by their successful resistance against the Normans, and in the Cistercian monasteries, where the oral tradition of Celtic Wales was first compiled and transcribed. The earliest works written at this time are thought to date to about

the sixth century C.E.; notable among them were those compiled into the Four Ancient Books of Wales: *The Book of Aneurin*, *The Book of Taliesin*, *The Black Book of Caemarthens*, and *The Red Book of Hergest*. Although most early literature is anonymous, the names of four bards have been passed down to us (probably from the sixth to seventh century): Aneurin, Taliesin, Myrddin (the Merlin of Arthurian romance), and Llywarch Hen. These names are semimythical, as so much else written in the Middle Ages about earlier Welsh history, and may have been assigned to poetry by anonymous bards. For example the *Hanes Taliesin* (Romance, or Tale, of Taliesin), one of the stories in the *Mabinogion* collection, describes the career of Taliesin in completely mythical terms. Extant poetic works are ascribed to a sixth-century bard called Taliesin, but the Taliesin in the *Hanes Taliesin* attains his powers in a magical way, by tasting a few drops from the brew in the cauldron of a sorceress called Cerridwen.

Giraldus Cambrensis An important source for early medieval Welsh history is Giraldus Cambrensis (Gerald de Barri, Gerald the Welshman) of the 12th and 13th centuries. Son of the Norman castellan of Pembroke Castle he could also trace his ancestry to the kings of Deheubarth. He was educated in Paris, where he became fluent in Latin. Among his many writings are *Itinerarium Kambriae* (The journey through Wales) and *Descriptio Kambriae* (A description of Wales).

Welsh Court Poetry During the period when the Welsh kingdoms maintained their independence from England, the highest form of poetry was considered to be the eulogy of the ruler and his ancestors. The elegy was also important. Bards elaborated the music of poetry with complex meters, rhyme schemes, and alliteration. Poetry was systematized by court bards; only a limited number of particular meters, epithets, and metaphors were authorized, as were archaisms of expression. Poetry was largely written in strict meter embellished with *cynghanedd*, an intricate system of sound chiming.

From about the 10th century the professional tradition of the court bards became increasingly codified as to permissible subject matter. The Welsh Laws, a law code of the time, heavily influenced by the church, show that it had become essential for poets to avoid “untruth.” The relative lack of traditional mythic lore in court poetry as compared to contemporary prose tales and romances, indeed the lack of narrative itself, suggests that by “untruth” was

meant heresy: the myths of the pagan past. Poetry for court bards had to consist solely of epithets and allusions.

The cultural divide between the Welsh ruling class and the populace is underlined by the contrast between court poetry and the contemporary prose tales and romances, which are full of color, vivid description, and narrative. The composers of romances such as the *Hanes Taliesin* seem to have been wandering minstrels called vulgar rhymsters by court poets who performed for ordinary people in villages, never for the courts of the nobility.

After the conquest of Wales by Edward I the greater Norman influence introduced to Wales the French Provençal concept of courtly love. Meanwhile Breton knights accompanying the Normans seem to have recognized in the minstrel tales versions of stories told in their Celtic homeland; as a consequence minstrels began to be introduced into the courts. The richly imaginative tales of the vulgar rhymsters, when translated into French and combined with the Provençal literature of chivalry and courtly love, brought about the genesis of Arthurian romance. Many of them were compiled into the *Mabinogion*.

The *Mabinogion* The title *Mabinogion* (meaning juvenile romances, i.e., stories that formed the stock-in-trade of apprentice bards) was given by William Owen Pughe, an 18th-century antiquarian, to a selection of prose narrative works found in one or both of two books, the *Red Book of Hergest* and the *White Book of Rhydderch*, thought to have been compiled first in 11th-century Wales, although they are only known from later manuscripts that contain transcripts of the originals and other material added in subsequent centuries. The earliest copy of the *Mabinogion* did not contain the *Romance of Taliesin* but only some poetic interludes referring to it. But because a 16th-century manuscript of the *Romance* had poetic interludes matching those in the *Mabinogion*, it was determined that the 13th-century *Romance* had been included in the *Mabinogion* collection along with the much earlier *Book of Taliesin* attributed to the sixth-century bard of that name. The romances of the minstrels, although in prose, included interludes in poetry at moments of high drama or emotion, comparable to the arias of modern opera; they were probably sung by minstrels who accompanied themselves on the harp.

The material in these books is often referred to as *The Matter of Britain*—that is, the body of folk, historical, and narrative lore originating

among the Celtic peoples of western Britain. Consisting of 11 tales the *Mabinogion* maps out a cosmology of the mortal and immortal realms, its characters exploring and often crossing the boundaries between the two. It comprises the full gamut of literary styles and genres, from folk and mythological tales to bardic works and romances composed for the 12th- and 13th-century Welsh aristocracy in a style much influenced by Norman literature. The tales run the entire Celtic time span as well, from the mythic “time out of time” of the origins of things, through the heroic age to historical times. The section called “The Four Branches” contains the earliest material; the Arthurian Dark Age is represented in “The Three Romances,” and the civil strife of the Middle Ages is described at the start of “The Dream of Rhonabwy.” King Arthur of the Company of the Round Table and the quest for the Holy Grail appear in the *Mabinogion*, the first such literary version of the tale.

Dafydd ap Gwilym In the work of Dafydd ap Gwilym, the premier poet of the 14th century, the theme of love predominates over the eulogy of princes. Dafydd achieved a synthesis of court and minstrel poetry. Most of his more than 150 surviving poems make full use of the *cyng-hanedd* of the court bards, each line having seven syllables and arranged in rhymed couplets in which the paired lines end alternately with a masculine and a feminine foot (masculine feet end with a stressed syllable and feminine with an unstressed syllable), so that a stressed syllable rhymes with an unstressed one. He achieved such prestige for this style that for 300 years all ambitious Welsh poets aimed to achieve mastery of it. Yet unlike the court bards of the past, he included in his poetry subjects and characters from Celtic mythology, and a Celtic respect for women that had largely been lost in the patriarchy of the early Christian Church. (He once tried to persuade a nun with whom he was in love to break out of her cloister.) In one poem he tells of Blodeuwedd, formerly the wife of Llew Llaw Gyffes (considered the Welsh version of the deity known elsewhere among the Celts as Lugus), now transformed into an owl, who maintains that she is the daughter of the Lord of Mona (Anglesey of the Druids) equal in dignity to any king.

The Eisteddfod An exemplar of Welsh royal cultural patronage, Rhys ap Gruffudd, was the last of the rulers of Deheubarth to wield a significant degree of power. Lord Rhys was a patron of the Cistercian order, and in 1174 he presided over a cultural gathering at Cardigan, which is

considered to be the first recorded example of an *eisteddfod* (from the verb *eistedd*, to sit, that is, a gathering in which people sit to witness musical and bardic performances).

The *eisteddfod* evolved from the ancient bardic “contentions,” such as that between the court poet and the vulgar rhymesters, in which apprentice poets and musicians would compete for a seat of honor in the households of nobility. The winner of an *eisteddfod* could expect generous patronage from the nobility. The proceedings of such competitions were formalized in the 16th century, when the Caerwys Eisteddfod of 1523 regulated the patronage system and graded poets and musicians according to rank and status.

Religion

Druids The Roman general Julius Caesar wrote that Druidism originated in Britain, and the Welsh island of Anglesey was a center of Druidic activity. The Druids there may have been in the forefront of fomenting resistance to the Romans, perhaps the reason that the Roman governor Suetonius Paulinus mounted a campaign in 60 C.E. to wipe them out. Roman historian Tacitus gives a striking description of the Druids as they attempted to ward off the Roman troops, saying that the warriors included women in black robes. The Druids reportedly raised their hands in prayer and uttered incantations against the Romans so powerful that they became paralyzed.

During the early invasion period a young man of apparently elite status, attested by the lack of signs of wear on his hands and his well-nourished condition, was killed ritually and deposited in Lindow marsh in Cheshire, not far from Anglesey. His lack of war wounds strongly suggests he was a Druid, or at least a priest or religious figure of some kind. Among the Celts human sacrifice was offered at times of crisis, according to Caesar, Tacitus, and other Roman writers. The man found in the marsh (called Lindow II because he was the second oldest body found there) may have offered this supreme sacrifice for his people in such a time of crisis. Tacitus wrote that the Druids on Anglesey sacrificed prisoners in great numbers. Whether or not this was propaganda on Tacitus’s part, Lindow II suggests that Druids were also ready to lay down their own lives.

Iron Age Water Ritual at Llyn Cerrig Bach People in Wales, as elsewhere in the Celtic world, worshipped and performed rituals at watery sites such as springs, lakes, and streams. The first clear archaeological evidence of such practices was found during World War II while

construction work was in progress on an airfield near Llanfihangel-yn-Nhowyn on Anglesey, which was built over the former lake of Llyn Cerrig Bach, silted up to become a peat bog. A remarkable array of Iron Age metalwork was found—swords, spears, chariot fittings, horse bridles, cauldrons, a trumpet, currency bars, animal bones, and two sets of slave chains. These votive offerings seem to have been dropped into the lake from a rock platform. They range in date from about 500 B.C.E. to after 100 C.E., indicating that the practice continued after Suetonius Paulinus’s Roman army’s raid on Anglesey. The rite at Llyn Cerrig Bach, then, was probably independent of the Druids. On analogy with other water ritual sites excavated more thoroughly than Llyn Cerrig Bach in Britain and Europe the site probably featured a long, wooden causeway leading out over the water, from which objects were dropped and where, no doubt, prayers and other rituals took place. In contrast to other such sites, no human bones were reported from Llyn Cerrig Bach (possibly for reasons of wartime propaganda, when Britons might have been reluctant to learn that their ancestors were as capable of cruelty as the Germanic tribesmen described by Tacitus). Again on analogy with other sites human sacrifice probably took place at Llyn Cerrig Bach as well.

Welsh Christianity Christianity in Wales during the early Middle Ages, as in other parts of Celtic Britain, had assumed a distinctly Celtic form different from that of the Catholic Church in most of Europe. The Roman Church was in many ways a continuation of the Roman Empire in terms of its strictly hierarchical nature, its focus on Rome, and the primarily urban point of view of its leaders. The Celtic Church differed in all these respects: It had a strongly localized organization focused on the monastery rather than the urban bishopric. Its main hierarchy was the simple one of abbot and monks, although the Welsh did have some bishops. It was marked by a heroic asceticism, a strong emphasis on scholasticism—an inheritance from the Druids—and the incorporation of the worship of nature into Christian ritual and teachings, rooted in pagan Celtic religion. When Saint Augustine traveled from Rome to Anglo-Saxon England in 597 the Welsh bishops rejected his demand for obedience. The method for calculating Easter was an important point of contention between the Celtic Welsh Christians and the Roman Church and was only accepted by the Welsh in the eighth century.

Saint David The sixth-century Saint David is the patron saint of Wales. The Welsh form of his name, Dewi, is a southwestern dialect form of the Welsh Dafydd. He founded his first monastery on a promontory pushing out to the sea at the farthest point of southwest Wales in a region where many Irish had settled the previous century. David may have been part Irish; he practiced the heroic Christianity of Irish saints such as the sixth-century Columba, subjecting himself to rigorous privations to make his soul closer to God. He was a zealous missionary and founded many more monasteries in Wales. Saint David's feast day is March 1 and his symbol is the leek.

Early Christian Burial Practices During the sixth century to the eighth century Welsh Christians were often buried in stone-lined cists aligned east to west in cemeteries not associated with churches but rather with Bronze Age barrows or, in at least one case, with standing stones. New enclosures and special entrances were constructed for the cemeteries to provide dramatic settings for the graves.

Norman Romanization of the Welsh Church In part to appease the English church hierarchy and to show their loyalty to the papacy in Rome, which had sanctioned their conquest of England, the Normans made more determined attempts to align Christianity in Wales with the Roman Church than the Anglo-Saxons had. The Welsh had maintained their Celtic style of Christianity, in which the basis of church organization was the monastery rather than the bishopric. Moreover their monasteries differed from those that followed the Benedictine Rule (after St. Benedict of the fifth–sixth century), the dominant form of monasticism in Latin Europe. The traditional monastic community of the Welsh was the *clas*, whose monks lived in wooden huts; Welsh abbots could marry and monasteries were served by hereditary officers. To put the Welsh in the Latin fold the Normans founded Benedictine monasteries in Wales, the first in Chepstow in 1071; by 1150 the country had 17 houses. The *clas* monasteries were suppressed and their income was frequently diverted to rich abbeys in England and Normandy. The Normans countered the loose diocesan structure of Wales, whose bishops had no clear delineation of power, by appointing Norman bishops, as ambitious for power as their lay brethren, and defining the territory of each diocese; St. David's Cathedral received a Norman bishop in 1115. All bishops in Wales, Norman or Welsh, were forced to acknowledge the archbishop of Canterbury as their “overlord” in Christ; Norman control over

the Welsh Church was an important component of their dominance in Wales.

Protestantism in Wales Radical Protestantism was slower in entering Wales than the rest of Britain. The first prominent Puritan was John Penry of Breconshire, a bitter opponent of bishops, who was hanged in 1593 and became for future generations the founding martyr of Welsh Nonconformity. Not until after the victory of the Puritans and Parliament in the English Civil War did a movement of evangelical Protestantism gain momentum. It remained a minority sect until the Methodist Revival of the 18th century.

Welsh Methodism Welsh Methodism differed from Methodism in England in remaining at first within the Church of England and embracing Calvinist theology. Although Welsh Methodism eventually became a separate denomination, the Welsh remained more politically conservative than English Puritans and Methodists. They focused solely on awakening converts to a sense of sin and a need for salvation. Welsh Methodists tended to be voluble in their services and demonstrative about the joys of believing. Over the 19th century they awakened to inequities in Welsh society and began to criticize the privileges accorded the Anglican Church. The finding of a religious census conducted in Britain in 1851 that possibly as much as 80 percent of the Welsh population were Nonconformist (non-Church of England) greatly encouraged the demand for the disestablishment (the end of government sponsorship) of the Church of England in Wales, which by the end of the 19th century had become the most important political issue in the country. Nonconformists worshipped in chapels, and a vast chapel-building enterprise took place after 1800. It is estimated that between 1800 and 1850 a new chapel was opened in Wales every eight days.

The land of Wales is distinct from British territory on its eastern border in being largely a highland zone, a characteristic that to some extent has isolated the Welsh from people to their east and fostered a distinctive economy and society. For many centuries the highlands protected the Welsh from interference and conquest by outsiders and gave its people a fiercely independent character. In all Welsh history only the Romans and the Normans—arguably the first European people after the fall of the Roman Empire to rival the Romans as conquerors—have been able to capture Wales. At the same time the mineral wealth of

Wales and the great river Severn leading into the Welsh interior have placed the Welsh in contact with the wider world, helping to foster the rich Welsh cultural heritage, particularly its literature, with its gift to the world King Arthur—one of the great utopian figures of Western culture and an important vehicle for the transmission of the idea of civilization from the ancient world to the modern—who has fired the imagination of generations up to the present.

Efforts to preserve the Welsh language are on going. Welsh language primary and secondary schools have been established, a Welsh-language television channel began broadcasting in 1982, and there are several nationally recognized Welsh arts, opera, and literature councils.

Wends (Wenden; Winds; Windisch; Vends; Vendians; Sorbs; Sorbians)

The name Wends has been used variously throughout history with regard to the SLAVS. It is thought to be derived from VENEDI, a term used by ancient GREEKS and ROMANS for all peoples living to the east of the GERMANICS, centuries earlier than Slavs as a distinct ethnic group had emerged. It was later used by early medieval Carolingian FRANKS as a collective name for Slavic tribes near their eastern borders. The use of this name for ancestors of historically known Slavs is a device employed by modern Slavic scholars with a nationalistic agenda to claim more ancient antecedents for the Slavs than they actually had.

The Germanics, in particular the Franks who invaded the region in the eighth century C.E. and established the Sorbian (or Lusatian) Mark, referred to those Slavic tribes between the Elbe and Oder Rivers as Wends and their territory as Wendenland. Other tribes farther to the West were later grouped among them as well. One group was known as the SORBS, or Lusatian Sorbs. Some writers have used the names Wends and Sorbs interchangeably. Others apply the name Polabians to those tribes in German territory in the north, because of a shared Polabian dialect, and Sorbs to those in the south.

The Western Slavic dialect still spoken by present-day Lusatian Sorbs is referred to as Lusatian, Sorbian, or Wendish. A community of people also identified as Wends currently lives in eastern Slovenia.

White Croats See CROATS.**Wislanie** See VISLANIANS.**Wolinians (Woliners; Volinians; Velunzani)**

The Wolinians are classified as a tribe of Western SLAVS. They lived on and opposite Wolin Island near the mouth of the Oder River in present-day northwestern Poland. To their west were the VELETIANS and to the east, the POMERANIANS. In the ninth century C.E., possibly in conjunction with BALTS or VIKINGS, the Wolinians founded Kamien Pomorski, which since that time has prospered as a port city. Along with the POLANIANS, who gained hegemony over other area tribes in the 10th century, they are among the ancestors of the Poles (see POLES: NATIONALITY).

Y-Z

Yotvingians (Yatvingians; Yatvigs; Jatvingians; Jatvians; Jatviagians; Jotvingas; Jotvinge; Jotvingiai; Sudovians; Sudavians; Soudinoi; Sudini; Sudavits-Yatvyags)

The Yotvingians were one of the tribal entities to evolve out of the ancient **BALTS**, Baltic-speaking peoples living in north-central Europe. Their homeland was in the eastern part of present-day Lithuania, especially between the Neman and Neris Rivers in the Baltic Highlands, south of the **LITHUANIANS** and extending into present-day northeastern Poland. Along with the Lithuanians and **SAMOGITIANS** Yotvingians were ancestral to inhabitants of the modern nation of Lithuania (see **LITHUANIANS: NATIONALITY**). They are thought to have been closely related to **BORUSSIANS**. Their name is possibly Finnic in origin, meaning “long-legged riders.”

ORIGINS

It is thought that proto-Baltics migrated to the Baltic Sea region by about 2000 to 1500 B.C.E. The Yotvingians were one of the first Baltic tribes mentioned by name, listed as the Soudinoi by the second-century C.E. geographer Ptolemy of Alexandria.

LANGUAGE

The Yotvingian Baltic dialects are closely related to those of the Borussians.

HISTORY

Early Yotvingian history is tied into that of the **RUS**, the founders of Russia, as well as the **POLANIANS**, the founders of Poland, more than that of the **VIKINGS**, who had more contacts with Balts living along or near the Baltic Sea. The Yotvingians paid tribute to the Rus as early as 983 C.E. By 1000 the Polish state had formed. Boleslaw I of the **POLES** recognized the political advantage of converting the pagan Balts to his religion, so he sent the German prelate Bruno of Querfurt to the lands of the Yotvingians. Boleslav competed for the Yotvingian lands with the Rus grand prince Vladimir I. Bruno was led to the estate of local Yotvingian chieftain, Nethimer, and began preaching. Nethimer refused to be christened, however, and after a confrontation ordered that Bruno be burned at the stake; as legend has it, for some reason the fire refused to light. Nethimer considered this to

be a miracle, released Bruno, and he and his 300 men were baptized. Nethimer's brother refused baptism and Nethimer had him killed.

Polish influence on the Yotvingians continued until Archbishop Bruno himself was killed in 1009 by the Yotvingians. The eventual death of Boleslaw in 1025 created internal battles in Poland and temporarily ended that period of Polish domination in Lithuania. In 1038 the Rus under Yaroslav again invaded Yotvingian territory. All Yotvingian and other Baltic lands east of the present borders of Lithuania and Latvia were under the control of the SLAVS by the 11th century.

Yotvingians and Crusaders

In later centuries the Yotvingians were forced to contend with Germanic expansion from the west. In 1201 the city of Riga was founded by Germans from Bremen and Hamburg, the beginning of a long period of Germanic influence in the region. The military and religious orders the Brothers of the Sword in the north and the Teutonic Knights in the south campaigned against the pagan peoples of the region. In 1283 the Germans defeated the last Yotvingians and deported some 1,600 to the occupied lands of the Sambians, a subtribe of Borussians, near modern Kaliningrad. The last resisting Yotvingian chief, Scurdo, escaped to Lithuania with many of his soldiers, however. Yotvingian lands eventually became part of Lithuanian territory, and surviving tribal members were assimilated by the 14th century.

CULTURE (see also BALTS)

Little is known about the specific culture of the Yotvingians, who are only known from histori-

cal accounts that speak of events rather than their sociocultural background. It is assumed that their society and culture were similar to those of other Baltic tribes. Because of their location away from the coast they would not have taken part in the amber gathering that was an important part of the economy of the coastal regions. Their location along the Neman and Neris Rivers, an important trade route from the coast, may have allowed them to play some role in the amber trade, if only as raiders and toll takers. Their territory on the Baltic Highlands was more suitable for grazing than farming. They were also known as hunters.

The name of one of the most renowned war chiefs and pagan priests of the Yotvingians fighting the Germans, Skomantas, is being used as the pseudonym for various writers who contribute to a historical adventure series about Balt history for young readers, published by Nordik in Riga, Lithuania. Some of the novels have been translated into English.

APPENDIX I:

EUROPEAN PEOPLES WITH ENTRIES IN THIS BOOK WITH ALTERNATE NAMES AND GROUPINGS

- Abazians (Abazins; Abaza; Apswa; Ashvy)—Caucasic
- Abricantes (Abrincati; Abricantui)—Celtic
- Achaeans (Achaioi)—Hellenic
- Adriani—Italic
- Aduatuci (Aduatici; Atuatuci; Audatici)—Celtic
- Aducinates—Celtic and Germanic
- Aedui (Haedui; Haeduers; Eduans)—Celtic
- Aeolians (Eolians; Aeolic Greeks)—Hellenic
- Aequi (Equi; Equians; Aequiculi)—Italic
- Aestii (Aestae; Aestyans; Aistii; Aistians; Austii)—possibly Baltic or Finno-Ugric
- Aeginates (Agesinates; Cambolectri Aeginates)—Celtic
- Aigosages—Celtic
- Alamanni (Alamani; Alemanni; Alemans; Allemanni; Allemans)—Germanic
- Alans (Alani; Alanoi; Alanians; Sarmatians)—Iranian
- Albanians: nationality (Albans; people of Albania)
- Albici—Celtic
- Allobroges (Allobrogi; Allobrogae)—Celtic
- Ambarri (Ambarres; Ambarisii)—Celtic
- Ambialates (Ambialati)—Celtic
- Ambiani—Celtic
- Ambibarii—Celtic
- Ambidravi—Celtic
- Ambivariti (Ambivarii)—Celtic
- Amsivarii (Amsivari; Ampsivari; Ambivarii)—Germanic
- Anagnutes—Celtic
- Anares (Anari)—Celtic
- Anartes (Anarti)—Celtic
- Ancalites—Celtic
- Andecamulenses—Celtic
- Andecavi (Andecaves; Andes)—Celtic
- Andis (Andians; Qwannab; Khivannal)—Caucasic
- Andorrans: nationality (people of Andorra)
- Angles (Angli; Engle)—Germanic
- Anglo-Saxons (Old English; Engle)—Germanic
- Antes (Antae; Anty; Ants)—Slavic
- Aorsi—Iranian
- Apuli (Apulians; Dauni)—Illyrian
- Aquitani (Aquitanians)—Celtic
- Arecomici (Aricomi; Volcae Arecomici)—Celtic
- Arevaci (Arevacii; Arevacos; Arevacians)—Celtic
- Arvanites (Arberor; Shqiptar; Albanian Greeks)—Albanian (Illyrian)
- Arverni (Arvernii; Arvernes; Aaverni; Arveni)—Celtic
- Arviens (Aulerci Arviens)—Celtic
- Aspiates—Celtic
- Astures (Asturii)—Celtic
- Atacini—Celtic
- Atrebates (Atribati)—Celtic
- Attacotti (Attacots)—Pictish
- Aulerci—Celtic
- Aurunci (Auruncians)—Italic
- Ausci (Auscii; Auici)—Celtic
- Austrians: nationality (people of Austria)
- Auteri (Auterii)—Celtic
- Avars (Juan-Juan; Varchonites)—Mongolic, Turkic, or Caucasic
- Baiocasses (Bodiocasses)—Celtic
- Balkars (Malkarli; Mountain Tatars)—Turkic
- Balts (Baltic peoples)—Baltic
- Bashkirs—Turkic
- Basques (Vasco; Vascons; Vascones; Vascongado; Euskotarak; Euskaldunak)—Basque
- Bastarnae (Bastarni; Bastarnians; Peucini; Peucinians)—Germanic and Celtic
- Bastetani—Iberian
- Bastuli—Iberian
- Batavi (Batavii; Bataves; Batavians)—Germanic
- Bavarians (people of Bavaria)—regional
- Bavarii (Baiovari; Baiuvvari; Baiuoarii; Boiarii; Bojuvari; Bojovares; Bavarians)—Germanic
- Belarusians: nationality (Belarusans; Belorussians; Byelarussians; Byelorussians; Bielorussians; people of Belarus)
- Belegezites—Slavic
- Belendi—Celtic
- Belgae—Celtic
- Belgians: nationality (people of Belgium)
- Belli (Belos)—Celtic
- Bellovaci (Bellovici; Ballovaci; Bellovaques)—Celtic

- Bercorates—Celtic
 Berones (Beroni)—Celtic
 Bibroci—Celtic
 Bigerriones (Bigerri; Begerri)—Celtic
 Bituriges (Buturiges; Biturges)—Celtic
 Bodiotonci—Celtic
 Bohemians (people of Bohemia)—regional
 Boii (Boi; Boyards)—Celtic
 Boikos (Bojko; Boikians; Verkhovyntsi)—Slavic
 Boresti—Celtic
 Borussians (Borussi; Prussi; Old Prussians)—Baltic
 Bosnians and Herzegovinians: nationality (Bosniaks; Hercegovinians; people of Bosnia and Herzegovina)
 Brannovices (Aulerci Brannovices)—Celtic
 Bretons—Celtic
 Brigantes (Brigantii)—Celtic
 Brigantini—Celtic
 British: nationality (Brits; people of the United Kingdom of Great Britain)
 Britons (Britanni; Brittones; Brythons; Brithons; Hyperboreans)—Celtic
 Bructeri (Bructerians; Bructi; Brutteri)—Germanic
 Bruttii (Brittii; Bruzi; Brezi)—Italic
 Bulgarians: nationality (people of Bulgaria)
 Bulgars (Bulghars; Bulgari; Bolgars; Bolghars; Bolgari; Bulgarians; Ogurs; Onugurs)—Turkic
 Burgundii (Burgunds; Burgundiones; Burgundians)—Germanic
 Buzhanians (Buzhians; Boujans)—Slavic
 Byzantines (Romaioi; Rhomaioi; Romans; people of the Byzantine Empire)—regional
 Cadurci (Cadurces)—Celtic
 Caerenii (Caereni)—Celtic
 Caerosi (Caeraesi; Caeroesi)—Germanic or Celtic
 Caledones (Caledonii)—Celtic or Pictish
 Caledonians (Caledones; Caledonii)—Celtic
 Caleti (Caletes)—Celtic
 Cambolectri (Cambolectri Atlantici)—Celtic
 Campani (Campanians)—Italic
 Cangi—Celtic
 Cantabri (Cantabrii; Cantabros)—Celtic
 Cantiaci (Cantii)—Celtic

 Normans (Northmen)—Germanic
 Norwegians: nationality (people of Norway)
 Novantae—Celtic
 Novioduni—Celtic
 Obodrites (Obotrites; Obodriti; Obodrichi; Obodricians; Obodritians; Obotritae; Abodrites; Abodritians; Bodryci; Bodrii; Nortabtzezi)—Slavic
 Olcades—Celtic
 Onesi (Monesi)—Celtic
 Opici (Obsci; Osci; Oscans)—Italic
 Ordovices (Ordovicians)—Celtic
 Oretani (Oretoni)—Iberian
 Oscidates (Osquidates)—Celtic
 Osismi (Osismii; Osismes)—Celtic
 Ossets (Ossetes; Ossetians; Digoron; Iron; Tualhg)—Iranian
 Ostrogoths (Ostrogothi; Ostragothae; Ostrogothones; East Goths; Greutung; Greutungs; Greutungians; Greuthungi; Greuthungs)—Germanic
 Oxybii—Celtic
 Paeligni (Peligni; Pelini)—Italic
 Paemani—Celtic and Germanic
 Palmiensi—Italic
 Pannonians (people of Pannonia)—regional
 Parisii (Parisi; Parisis)—Celtic
 Pechenegs (Petchenegs; Patzinakoi; Patzinaks; Bessenyo; Besseni)—Turkic
 Pelasgians (Pelasgoi)—Hellenic
 Pelendones (Palendones)—Celtic
 Petrocorii (Petrocori; Petrocores)—Celtic
 Peuceti (Peucetii)—Illyrian
 Phoenicians (Phoenice; Poinicians; Sidonians)—Semitic
 Picenes (Piceni; Picienians; Picenti; Picentini)—Picenian

- Pictones (Pictons; Pictavi)—Celtic
 Picts (Cruithne; Cruithin; Pechti; Caledonii; Caledonians)—Pictish
 Pleumoxii (Pleumo)—Celtic
 Podilians—Slavic
 Polabians (Polabs; Polabian Slavs)—Slavic
 Polanians (Polans; Polanie; Polians)—Slavic
 Poles (Polish; Polanders)—Slavic
 Poles: nationality (Polish; Polanders; people of Poland)
 Polianians (Polians; Poliane; Polyans; Poliany; Polyane; Polyanians)—Slavic
 Polochanians (Polotchans; Polachanians; Polchani; Polechane)—Slavic
 Pomaks (Achrjani)—Slavic
 Pomeranians (Pomerani; Pommeranen; Pomorjane; Pomorzanie)—Slavic
 Portuguese: nationality (people of Portugal)
 Praetutii (Pretuzi)—Italic
 Preciani—Celtic
 Prussians (Pruzzi; people of Prussia)—regional
 Quadi (Quades; Quadians)—Germanic
 Quariates (Quariates Sebasiens)—Celtic
 Radimichians (Radimichi; Radimichy; Radimiches; Radimitches; Rodimichi)—Slavic
 Raeti (Rhaeti; Rhaetii; Raetians; Rhaetians)—Celtic
 Ranians (Rügen Slavs; Rugians)—Slavic
 Raurici (Rauraci; Rauraki; Rauraques)—Celtic and Germanic
 Regni—Celtic
 Remi (Remes)—Celtic
 Rhedones (Rheidones; Redones; Redons)—Celtic
 Robogdi (Rhobogdii)—Celtic
 Romanians: nationality (Rumanians; people of Romania)
 Romans (Latins; Quirites)—Italic
 Roxolani (Roxolanae; Rhoxolani; Roxolans)—Iranian
 Rroma (Roma; Rom; Romani; Romany; Romanies; Romanes; Gypsies; Gipsies; Tsigani; Tziganes; Ciganos; Zigeuners)—Indo-Aryan
 Rugii (Rugi; Ruges; Rugians; Rugarians)—Germanic
 Rus (Ruser; Ruserna; Russes; Varangians; Varjager)—Germanic
 Russians: nationality (people of Russia)
 Rusyns (Rusins; Rysin; Russniaks; Carpatho-Rusyns; Carpatho-Rusin; Ruthenians; Ruthanians)—Slavic
 Ruteni (Rutheni; Ruteni; Rutini)—Celtic
 Ruthenes (Ruthenians; Ruthanians)—Slavic
 Saami (Saam; Sami; Sámi; Sāmi; Same; Samis; Saami Sabme; Lapps; Laplanders)—Finno-Ugric
 Sabines (Sabini; Sabaens)—Italic
 Salasses Saliensienses—Celtic
 Salii—Germanic
 Saluvii (Salluvii; Sallurii)—Celtic
 Salyens—Celtic
 Samnages—Celtic
 Samnites—Italic
 Samogitians (Samogytians; Zemaitians; Zemaiciai; Zhmud; Zsnudz; Zcnzailcy)—Baltic
 San Marinians: nationality (Sammarinese; Sammarinesi; people of San Marino)
 Santones (Santoni; Santonae)—Celtic
 Saracens (Sarraceni)—Semitic, Hamitic, and Turkic
 Sardinians—regional (people of Sardinia)
 Sardones—Celtic
 Sarmatians (Sarmatae; Sarmats; Sauromatae)—Iranian
 Saxons (Saxones)—Germanic
 Scandinavians (people of Scandinavia)—regional
 Sciri (Schiri; Skiri; Scires; Scirians; Skirians)—Germanic
 Sclaveni (Sclavenes; Sclavini; Sclavesians; Sclavenoi; Sklavenoi; Sklavoi; Sclaci; Slovonici)—Slavic
 Scordisci (Scordisii)—Celtic
 Scots (Scotti; Scoti; Scotch; Scottish; Caledones; Caledonians; people of Scotland)—Celtic; Pictish; regional
 Scythians (Scyths; Scythae; Skythians; Skythai; Sai; Sakā; Sacae)—Iranian
 Sea Peoples—unknown
 Seduni (Sedunni; Sedunes)—Celtic
 Segontiaci—Celtic
 Segovellauni (Segovellaunes; Segouellauni)—Celtic
 Segusiavi—Celtic
 Selgovae—Celtic
 Selonians (Selones; Selians; Selijans; Selen; Selhen; Seli; Sels)—Baltic
 Semigallians (Semigalleons; Semigalls; Zhemgala; Zemgali; Zemgalians; Ziemgalians; Hellespontians; Daugavians)—Baltic
 Semnones (Semoni)—Germanic
 Senones (Senonians; Serones)—Celtic
 Sequani (Sequoni)—Celtic
 Serbs (Serbians; Serbi; Serboi; Sirboi)—Slavic
 Serbs and Montenegrins: nationality (Serbians; people of Serbia and Montenegro)
 Setantii—Celtic
 Severians (Severyane; Severiane; Severyans; Siveryans; Siverianians)—Slavic
 Sexovii—Celtic
 Sibusates—Celtic
 Sicani (Sicans; Sicanians)—Sicanian
 Sicilians (people of Sicily)—regional
 Siculi (Sikeloi; Sicels; Sikels)—Sicilian
 Sidicini—Sidicinian
 Silesians—Slavic
 Silures (Silurians)—Celtic
 Silvanecti (Silvanectes)—Celtic
 Siraces—Iranian
 Skalvians (Scalovians)—Baltic
 Slavs (Slays; Slaves; Sclavi; Sklavoi; Sclaci, Slaveni; Slovani; Slovonici; Sclaveni; Sclavini; Sclavenoi; Sclavenes; Sclavesians; Sklaveni; Sklavini; Sklavenoi; Sklavenes; Sklabenoi; Sthlaboi; Sporoi; Esklabinoi; Antes; Venedi; Vinadi; Vinades; Wends; Welatabians; Slavic peoples)—Slavic
 Slovaks—Slavic
 Slovaks: nationality (Slovakians; people of Slovakia)
 Slovenes (Sloveniani; Slovenians)—Slavic
 Slovenes: nationality (Slovenians; people of Slovenia)
 Slovienie (Slovenians)—Slavic
 Smertae—Celtic
 Sorbs (Sorbian; Lusatian Sorbs; Lusatians; Serbs of Luzice; Wends)—Slavic
 Sotiates (Sotiades)—Celtic
 Spanish: nationality (Spaniards; people of Spain)
 Suebi (Suebii; Suebians; Suevi; Sueves; Suevians; Swabians; Swabs)—Germanic
 Suessiones (Suessons)—Celtic
 Suetri—Celtic
 Sugambri (Sigambri; Sicambri)—Germanic
 Svear (Suiones; Sueones; Sveonas)—Germanic

- Swedes: nationality (Swedish; people of Sweden)
- Swiss: nationality (people of Switzerland)
- Taexali (Taezali)—Celtic
- Taifali (Taifals)—Germanic
- Tarasconiens—Celtic
- Tarbelli (Tarbelles)—Celtic
- Tartessians—Iberian
- Tarusates—Celtic
- Tatars (Tartars; Turko-Tatars; Turko-Mongols)—Turkic
- Taurisci (Tauriscii; Teurisci)—Celtic
- Tectosages (Tectosagi; Volcae Tectosages)—Celtic
- Tectoverdi—Celtic
- Tencteri (Tenctheri; Tenchtheri; Toncteri)—Germanic
- Teutones (Teutons)—Germanic
- Thracians (Thraci)—Thracian
- Thuringi (Thurungii; Thuringians)—Germanic
- Tigurini—Celtic
- Titti (Titos)—Celtic
- Tivertsians (Tivertsi; Tivertsy; Tiverts; Tivertians; Tiverians; Tiverchy; Tolmachians)—Slavic
- Tolistobogii (Tolistoagii)—Celtic
- Tolosates—Celtic
- Torks (Uzes)—Turkic
- Tornates—Celtic
- Tornedalians (Tornedalens; Tornedalicans)—Finno-Urgic
- Toutones—Celtic
- Treveri (Trevires)—Celtic and Germanic
- Triboci (Triboces; Tribocians)—Germanic
- Tricassi (Ticasses; Tricasi)—Celtic
- Tricastins—Celtic
- Tricorii (Tricori; Tricores)—Celtic
- Trinovantes—Celtic
- Trocmi (Trocmes; Trocini)—Celtic
- Tubanti (Tubantes)—Germanic
- Tulingi—Celtic and Germanic
- Tungri—Germanic
- Turboletas—Celtic
- Turdetani (Turditani; Turdetanians; Turditanians)—Iberian
- Turduli—Iberian
- Turkics (Turkish; Turkic peoples)—Turkic
- Turkmens (Trukhmens; Türpen)—Turkic
- Turks: nationality (Turkish; people of Turkey)
- Turmogi (Turmogos)—Celtic
- Turonnes (Turoni; Turons)—Celtic
- Uaithne (Auteini)—Celtic
- Uberi—Celtic
- Ubii (Ubiains; Utii)—Germanic
- Ubyks (Ubyx)—Caucasic
- Uceni (Ucenii)—Celtic
- Udmurts (Udmorts; Odmorts; Ukmorts; Vudmurt; Udmurtjuz; Votyaks; Votyaki; Votiak; Ari; Arsk people; Chud Otezkaya)—Finno-Urgic
- Ukrainians: nationality (people of Ukraine)
- Ulaid (Ulaidh; Uladh; Ulunti; Volunti; Voluntii)—Celtic
- Ulichians (Ulichi; Uliche; Ulychians; Uhlychians; Uliuchany)—Slavic
- Umbrians (Umbri, Camertes)—Italic
- Unelli (Unelles; Venelli)—Celtic
- Usdiae—Celtic
- Usipetes (Usipeti; Usipii; Useppi; Usipians)—Germanic
- Vaccaei—Celtic
- Vacomagi—Celtic
- Vadicasses (Vadicassi)—Celtic
- Vandals (Vandali; Vandili)—Germanic
- Vangiones (Vengiones)—Germanic
- Varini (Werini; Warni; Warmes; Warnawi)—Germanic
- Vasates—Celtic
- Vascones (Vascons; Vasconi)—Basque
- Vediantii (Vedentii)—Celtic
- Veletians (Veleti; Wieletes; Wilzi; Wiltzi; Wilti; Wilts; Liutizians; Luticians; Lutize; Lutitzes; Lituians; Ljutii)—Slavic
- Veliocasses (Veliocassi)—Celtic
- Vellabori (Vellibori; Velabri)—Celtic
- Vellavi (Vellavii; Vellaves)—Celtic
- Venedi (Veneds; Venedes; Venedae; Vendi; Venets; Veneti; Venethi; Vinedi; Venetkeni; Venetkini; Wenets; Wenetes; Winidi; Enetoi)—Slavic
- Veneti (Venetii; Venethi; Venetians)—Illyrian
- Venetians (people of Venice)—regional
- Venetii (Venites; Veneti; Veniti)—Celtic
- Venicones (Venniconii; Vennicnii)—Celtic
- Veps (Vepses; Vepsa; Vepsians; Ves; Vepsleine; Chukhar; Chukhna; Chuhonets; Chudes; Northern Chuds)—Finno-Urgic
- Veragi—Celtic
- Verodunenses—Celtic
- Verturiones—Celtic
- Vestini—Italic
- Vettonnes—Celtic
- Viducasses (Viducassi; Viducesi)—Celtic
- Vikings (Norse; Norsemen; Northman; Nordmanni; Varangians; Varjager; Danes; Norwegians; Swedes)—Germanic
- Villanovans (Italici)—Villanovan
- Vindelici—Celtic
- Vinderii—Celtic
- Viromandui (Viromandues; Veromandes; Veromandui)—Celtic
- Visigoths (Visigothi; Wisigoths; West Goths; Tervingians; Tervingi)—Germanic
- Vistulans (Vistulanes; Vistulians; Vistulianians; Vislanes; Vislanians; Wislanie)—Slavic
- Vlachs (Wlachs; Walachs; Wallachs; Walachians; Walasians; Olahs; Aromani; Romani; Romeni; Roumani; Rumeni; Rumans; Romanians.)—Italic
- Vocontii (Voconti; Voconces)—Celtic
- Volcae (Volki)—Celtic
- Volhynians (Volhinians; Volynnyans; Volynnyane; Valynanians)—Slavic
- Volsci (Volscians; Volusci)—Italic
- Votadini—Celtic
- Votes (Vodes; Vods; Vadja; Vaigaians; Vadjalain; Vaddalain; Vadjakko; Vatjalaiset; Maavatchi; Chuhonets; Southern Chuds; Southern Chudes)—Finno-Urgic
- Vyatichans (Vyatichi; Vyatichy; Viatitches; Viatiachi; Viatichi; Viatichians; Viachians; Vjatichians)—Slavic
- Wagrians (Wagri; Vagri)—Slavic

APPENDIX IV:

THE GEOGRAPHY OF EUROPE

THE NAME

There are a number of explanations regarding the etymology of the name Europe. Europa is a figure of Greek mythology, who was seduced by Zeus, the ruler of the gods, in Phoenicia and taken to Crete, where she gave birth to their son, Minos, the legendary ancestor of the Minoans. The name has also been associated with the Phoenician word *ereb*, “sunset” or “west”; the word Asia possibly means “sunrise” or “east.” The ancient Greeks used the term to describe their lands west of the Aegean Sea. Europe might simply have meant “mainland” in its root form, however.

THE LIMITS OF EUROPE

At about 4 million square miles, Europe, including adjacent islands, is the sixth largest continent. It is actually the western fifth of the vast landmass Eurasia, which comprises Europe and Asia.

To distinguish Europe from Asia most geographers use an imaginary line running from the northern extent of the Ural Mountains on the Kara Sea, then south along the Ural River to the Caspian Sea, then west along the Caucasus Mountains to the Black Sea, then along the Bosphorus Strait (linking the Black Sea and the Sea of Marmara, both forming an arm of the Mediterranean Sea), and the Dardanelles (a strait linking the Sea of Marmara with the Aegean Sea, also part of the Mediterranean). The Mediterranean Sea and the Strait of Gibraltar separate Europe from Africa (in addition to the Black Sea and Aegean Sea, the northern Mediterranean includes the Ionian, Adriatic, Tyrrhenian, and Ligurian Seas).

The northernmost point of the European mainland is Cape Nordkinn (North Cape) in Norway; the southernmost is Punta de Tarifa in southern Spain near the Strait of Gibraltar; the westernmost is Cabo da Roca in Portugal; the easternmost is the Ural Mountains in Russia.

To the west of Europe is the Atlantic Ocean (with the North Sea and Baltic Sea as subdivisions) and to the north is the Arctic Ocean (with the Norwegian Sea, Barents Sea, and White Sea as subdivisions).

MODERN-DAY NATIONS

Europe is commonly discussed as five geographic regions: Scandinavia (present-day Denmark, Finland, Norway, Sweden); the British Isles (present-day United Kingdom and Ireland); western Europe (present-day Belgium, France, Luxembourg, Monaco, and Netherlands); southern Europe (present-day Andorra, Italy, Portugal, San Marino, Spain, and Vatican City); central Europe (present-day Austria, the Czech Republic, Germany, Hungary, Liechtenstein, Poland, Slovakia, and Switzerland); southeastern Europe (present-day Albania, Bosnia and Herzegovina, Bulgaria, Croatia, Greece, Macedonia, Romania, Slovenia, Yugoslavia, and the western part of Turkey); and eastern Europe (present-day Belarus, Estonia, Latvia, Lithuania, Moldova, Ukraine, and the western part of Russia). Some geographers include Transcaucasia (Armenia, Azerbaijan, and Georgia) as part of Europe, but that region is generally defined as part of southwestern Asia. A tiny portion of Kazakhstan west of the Ural River can be said to be in Europe, but that nation is grouped with Asian nations.

ISLANDS

The British Isles (the location of the United Kingdom and Ireland), separated from the mainland by the English Channel and the North Sea, are part of Europe. Mediterranean islands include the Balearics (part of Spain), Corsica (part of France), Sardinia (part of Italy), Sicily (part of Italy), Crete (part of Greece), Malta (independent), and Cyprus (independent). The archipelago of Novaya Zemlya (part of Russia) in the Barents Sea and the Faeroe Islands (part of Denmark) in the Norwegian Sea are also defined as part of Europe, as are Iceland (independent), about 600 miles west of northern Europe in the North Atlantic, and the archipelago of Svalbard (part of Norway), about 400 miles to the north in the Arctic Ocean. The Azores, about 900 miles west of southern Europe in the Atlantic, are also politically tied to Europe.

PENINSULAS

Much of Europe, which can be viewed as a large peninsula of Eurasia itself, consists of peninsulas; the largest are the

Scandinavian Peninsula (Norway and Sweden), Balkan Peninsula (Albania, Bosnia and Herzegovina, Bulgaria, Croatia, Greece, Macedonia, Romania, Serbia and Montenegro, Slovenia, and part of Turkey), Iberian Peninsula (Portugal and Spain), Italian Peninsula (Italy), Kola Peninsula (part of Russia), and Jutland Peninsula (Denmark).

HIGHLANDS AND LOWLANDS

A west-east mountain chain—the Alpine—traverses Europe. It includes the following ranges: the Pyrenees (separating France and Spain); the Alps (in France, Switzerland, Italy, Austria, and Slovenia); the Dinaric Alps along the Adriatic coast (in Slovenia, Croatia, Bosnia and Herzegovina, Yugoslavia, and Albania); the Carpathians (in Slovakia, Poland, Ukraine, and Romania); the Balkans (in Bulgaria and Yugoslavia); and the Caucasus (separating Russia from Georgia, Armenia, and Azerbaijan). Other notable ranges are the Apennines, extending through much of Italy, and the Urals, separating European Russia from Asian Russia. The Scandinavian Peninsula is also mountainous, its highest range the Kjølén (Norwegian) or Kölen (Swedish) Mountains.

The highest point in Europe is Mount Elbrus in the Caucasus, at 18,481 feet above sea level. The lowest point is located along the Caspian Sea's north shore, at 92 feet below sea level. Between the mountainous Scandinavian Peninsula in the north and the Alpine chain in the south, and extending from the Atlantic Ocean to the Urals, lies the Great European Plain. The Central European Uplands, consisting of a number of ranges, break up the plain. In the east is found some steppe country.

RIVERS AND LAKES

Among the larger rivers in Europe, from west to east, are the Thames in England; the Tagus in Spain and Portugal; the Garonne in Spain and France; the Loire in France; the Seine in France; the Rhône in Switzerland and France; the Rhine in Switzerland, Liechtenstein (border), Austria (border), Germany, and Netherlands; the Elbe in the Czech Republic and Germany; the Oder in the Czech Republic, Poland, and Germany; the Vistula in Poland; the Danube in Germany, Austria, Hungary, Croatia (border), Yugoslavia, Bulgaria (border), and Romania; the Dnieper in Russia, Belarus, and Ukraine; the Dniester in Ukraine and Moldova; the Don in Russia; and the Volga in Russia.

The mountainous areas, especially in the Alps of Switzerland, Italy, and Austria, have numerous lakes, as do some plains regions, especially in Sweden, Finland, and Poland. The largest European lake is Lake Ladoga in northwestern Russia.

CLIMATE

Europe's changeable climate results from air-mass circulation. Both polar air masses from near Iceland and tropical masses from near the Azores, with differing climatic effects, have a relatively unimpeded path eastward, as do continental air masses. The west-east mountains prevent the ready inter-

change of tropical and polar air masses. It can be said in general that the prevailing westerly winds from the Atlantic Ocean pass over the ocean current known as the North Atlantic Drift and cause a moderating effect and significant rainfall in the west, with cooler and drier weather to the east.

Europe can be discussed as four climate types. A maritime climate, influenced by the maritime air masses, is found in the east on Atlantic islands, as well as much of Norway, southern Sweden, western France, Netherlands, Luxembourg, Belgium, northern Germany, and northwestern Spain. Temperatures vary according to latitude and altitude but are moderate compared to those of similar latitudes elsewhere. The weather is changeable. There occurs year-round precipitation, the greatest amount in autumn and early winter.

To the east in central Sweden, southern Finland, southern Norway, eastern France, southwestern Germany, and much of central and southeastern Europe is found a transitional climate, resulting from the interaction of maritime and continental air masses. Winters are colder, and summers, especially in the lowlands, are warmer. Precipitation is adequate to abundant, especially in the summer; snowfall is plentiful in the mountains but not elsewhere.

A continental climate type is located in northern Sweden, most of Finland, northern Ukraine, eastern Belarus, and all of European Russia. There is less precipitation than in the west, but with more snowfall due to colder and longer winters and more snow cover than to the west. To the south precipitation can be scarce.

The subtropical Mediterranean climate along the coastal regions of southern Europe is characterized by hot and dry summers, and mild and wet winters.

With part of Europe above the Arctic Circle, tundra and subarctic climates are found in the north. Mediterranean regions in the south have a Mediterranean climate with hot and dry summers and rainfall generally only in winter; there are some subtropical regions as well.

VEGETATION ZONES

Most of Europe, except the treeless tundra in the far north and the grasslands of the Great European Plain, was originally forested. The tundra, located in northernmost parts of Scandinavia and Russia—as well as part of Iceland—is a generally flat and treeless region that is frozen in winter and marshy in summer, with a permanently frozen subsoil (permafrost) and low-growing vegetation, such as mosses, lichens, and dwarf shrubs. Similar vegetation occurs at high altitudes of the Alps and Urals.

To the south of the tundra, also in Scandinavia and Russia, lie the predominantly coniferous forests and swamplands of the taiga, also called the *boreal* forest, meaning “northern” forest. The more northerly boreal zone is “open,” with a combination of conifers, willows, birch thickets, and lichen. The more southerly “closed” boreal forest has more trees: conifers, birch, and larch.

A mixed forest of deciduous broadleaf trees once stretched across the heart of Europe, from the British Isles to the Urals; it exists now only in patches. The Mediterranean

vegetation consists of broad leaf evergreen shrubs, bushes, and small trees. The steppes of southwestern Russia and Ukraine have both wooded-steppe and grass-steppe areas. Around the north-northwest coast of the Caspian Sea is found semidesert vegetation.

ANIMAL LIFE

Large mammals including the bear, wolf, bison, boar, reindeer, roe deer, elk, antelope, mountain goat, mountain sheep, wildcat, and wild boar were native to Europe, along with many smaller mammals, such as the fox, marten, badger, polecat, white weasel, ermine, sable, beaver, rabbit, and squirrel and other rodents. Europe has a wide variety of birds, among them the eagle, falcon, hawk, kite, owl, pigeon, finch, nightingale, sparrow, black grouse, snipe, hazel hen, partridge, woodpeck-

er, crossbill, blackbird, tomtit, bullfinch, swan, duck, goose, lapwing, partridge, and lark. Seabirds are found offshore and in coastal areas. European waters have a wide variety of fish, such as cod, mackerel, herring, and tuna; sturgeon are found in the Black Sea and Caspian Sea.

THE HUMAN FACTOR

Humans over the centuries have played a factor in the natural conditions, altering the landscape, flora, and fauna of Europe by clearing forests, planting crops, relocating water supplies, and building towns, cities, and roads. These changes, as well as overhunting, overfishing, and air and water pollution, have adversely affected wildlife. Development and pollution have also altered climatic conditions.

APPENDIX V:

HOMINIDS, THE EARLIEST EUROPEANS

HOMINIDS

The term *hominid* refers to any of the family Hominidae of erect bipedal primate mammals including extinct and related forms as well as human beings. The study of nonhuman hominids involves a number of disciplines, including paleontology, the study of fossils; anthropology, the science of human beings; and archaeology, the study of material remains of past human life.

THE DIVERGENCE OF HUMAN ANCESTORS FROM APES

Human ancestral species first diverged from ancestors of the apes around 6 million years ago in Africa. First the species of the genus *Australopithecus*, and then later species of the genus *Homo*, emerged during successive periods in which the rate of speciation (divergence into new species) increased. These waves of speciation occurred not just among hominids but among many other species and coincided with an important series of climate changes that began around 6 million years ago, in which the prevailing warm and moist tropical to subtropical climate of Africa was interrupted for periods several million years long by cooler and drier weather. Fossils documenting the divergence of apes and hominids are lacking. But evidence provided by studies of genetic differences between humans and apes, showing how long ago they shared a common ancestor, suggests a divergence in the same time frame as the climate shifts in Africa.

Cooler and drier conditions created openings in the dense tropical forests, creating a mixed habitat with different zones of forest and of open savannah or grasslands. This led to a divergence between forest-adapted species ancestral to the apes and species ancestral to hominids. The australopithecines were well adapted to open terrain because they could walk upright, roam around searching for food, and, if threatened, retreat quickly to the forest shelter carrying the food they had found.

In the absence of fossil evidence this scenario for the original divergence of apes and hominids is speculative, but for the period of the next wave of speciation, around 3 to 2 mil-

lion years ago, again coinciding with a return to cooler and drier conditions, fossils of hominids and of many other species they associated with have been found. They show that many forest-dwelling species of bovids such as antelopes became extinct at this time, and others suited to open habitats evolved. At the same time the forest-dwelling hominid genus *Australopithecus* diverged into species of the genus *Paranthropus* (although this genus is not accepted by all paleontologists), which, as did their immediate ancestors and the apes, continued a herbivorous forest existence, and into species of the genus *Homo*, which exploited the new habitats as aggressive, omnivorous scavengers and possibly hunters. The open-ranging bovids began to disperse and migrate over wide areas, probably as a result of the lower density of nutrients in the grasslands that resulted from the cooler, drier conditions. The hominids of *Homo* with their larger size, longer legs, and a pelvic structure allowing a ranging, bipedal gait, were adapted to follow the herds and may have dispersed with them.

GENUS AUSTRALOPITHECUS

The primary characteristic that distinguished the australopithecines from other primates was the ability to walk fully upright. This genus was first known from the discovery in 1924 of the skull of a juvenile, nicknamed the “Taung baby” after the site in South Africa near which it was found. *Australopithecus* means “southern ape.” The position of the foramen magnum, the opening in the skull through which the spinal cord attaches to the brain, of this specimen shows that it could walk upright. It was named *Australopithecus africanus* and lived from before 3 million years ago to approximately 2 million years ago. The date of evolution of *Australopithecus* was pushed back in time with the discovery of the remarkably complete skeleton of a female (nicknamed Lucy) in 1974 near Hadar in Ethiopia. Subsequently named *Australopithecus afarensis*, this species is believed to have lived from approximately 4 to 2.7 million years ago along the northern Rift valley of east Africa. An earlier species of *Australopithecus*, tentatively called *Australopithecus anamensis*, was found in 1994 by Mary Leakey, who with her husband, Louis Leakey,

pioneered the search for human ancestors in Africa. This species lived 4.2 million years ago.

Australopithecines did not have large brains; their skull and facial characteristics were more like those of chimpanzees, as was their size: Lucy was only three feet eight inches tall. Males were considerably larger; this sexual dimorphism (large differences between males and females) is more typical of apes than of humans. Their arms were longer relative to their legs than is the case with humans. This proportion is quantified by using the humerofemoral index, the ratio of the length of the humerus, the upper arm bone, to that of the femur, the upper leg bone. An index of 100 means both are the same length; modern humans have an index of 70, meaning our upper arms are 70 percent of the length of our upper legs, whereas chimpanzees have an index of nearly 100, as did australopithecines. Thus australopithecines are classified as “hominid apes,” that is, apes closely related to humans.

A number of other species of *Australopithecus* are known and have been grouped according to two distinct body types, gracile and robust. Gracile australopithecines have lighter bones, especially in the face, than robust species, such as *Australopithecus boisei*, which have powerful jaws and teeth adapted to crushing tough foodstuffs, probably mostly plant foods, and a ridge running from front to back on the top of their skull that served to anchor powerful jaw muscles. Robust species are classified alternately as belonging to the genus *Paranthropus* or as being part of *Australopithecus*. It is not clear as yet which lineage of *Australopithecus* is directly ancestral to *Homo*; some researchers favor *Australopithecus africanus* and others *Australopithecus afarensis*. In general the fossil record of early hominids is still so sparse that relationships between lineages are difficult to establish.

GENUS HOMO

The earliest members of the genus *Homo* are *Homo habilis* (handy man) and *Homo rudolfensis*. *Homo habilis*, first reported in 1964 on the basis of fossils discovered by Louis Leakey and his colleagues at Olduvai Gorge in east Africa, though having a brain size considerably smaller than that of modern humans, was claimed as human on the basis of numerous finds of stone tools in the same geologic horizon (layer) as the jaw and cranial specimens. This species lived 2 million years ago, as did *Homo rudolfensis*. These hominids were contemporaries of *Australopithecus africanus* and other australopithecines. There is currently debate as to which hominid species evolved into *Homo ergaster*, which is considered the probable ancestor of modern humans. It was probably *Homo ergaster* that, 1.6 million years ago, developed an advanced type of stone working called the Achulean stone tool industry.

With *Homo ergaster* there occurred a dramatic increase in brain size and typically human behavior such as the use of fire and hunting. *Homo ergaster* was tall and thin, probably an adaptation to activity in hot weather, and had narrow hips relative to adult brain size, meaning that their young were born small and helpless. Apes give birth to infants whose brain's

weight is 50% of the weight of an adult brain, whereas modern human babies are born with a brain only 25% the adult size. *Homo ergaster* could not have given birth to an infant with a brain more than 30% its adult size. The long childhood of humans is considered a crucial element in fostering intelligence, learning, and socialization.

HOMINIDS LEAVE AFRICA

The first early hominid fossil found outside Africa is that of a skullcap found near the Solo River in Java; it is called Java Man. In the 1950s paleontologists decided that this species, of whom the remains of 40 individuals have been recovered, was the same as that of fossils from caves near Zhoukoudian, China, discovered in the 1930s, which had been called Peking Man. The two were combined into a species called *Homo erectus*. Dating of *Homo erectus* finds has been problematic; once this species was thought to be no more than 1.1 million years old; new dating methods have now pushed back the age of some fossils to 1.6 million years. Claims of dates of as much as 1.8 and 1.9 million years ago have been made. These last are provisional as yet and 1.6 million years old is so far the most reliable date. There is also some disagreement as to whether some early specimens of *Homo ergaster* found in Kenya and dated to as much as 1.8 million years old are actually *Homo erectus*, though the consensus is against this view. In general human paleontology remains a volatile field; again, because so few specimens exist, a single find can have a dramatic effect in realigning the human family tree.

If the claims of dates of 1.8 million years old for *Homo erectus* in Asia are discounted, the earliest hominid find out of Africa becomes that of two skulls found in 1999 in Dmanisi, in the Republic of Georgia, whose date of 1.7 million years old is considered reliable since it is based on dating of volcanic sediments contemporary with the fossils. These skulls are closer to *Homo ergaster* than to Asian *Homo erectus*. More than a thousand stone tools were found with the skulls; they are important because they were made in the more primitive Oldowan style used by *Homo habilis* of Africa, showing that *Homo*'s migration from Africa was not a result of the development of better tools. This find also pushes back the date of the arrival of *Homo* in Europe, once thought to have been first accomplished by a more advanced human, *Homo heidelbergensis*.

HOMO HEIDELBERGENSIS

More fossil evidence exists for the precursors of the Neanderthals, *Homo heidelbergensis*, than for earlier hominids. The earliest traces of *Homo heidelbergensis* are a lower jaw from a site in Mauer, Germany, and part of a leg bone from Boxgrove, England, both about 500,000 years old. More complete specimens date from 400,000 to 200,000 years old. *Homo heidelbergensis* had a large brain and a robust build, pointing to the body type of the Neanderthals. The species is associated with some of the first evidence (400,000 years old) of shelter building, saplings stuck into the ground in a circle with their tops drawn together, and the use of an interior hearth. At Schöningenen, Germany, a collection of

carefully shaped six-foot-long wooden throwing spears that were found (with their center of balance to the front) date to about 400,000 years ago. This represents a “great leap forward” in technological innovation once thought exclusive to *Homo sapiens*; throwing spears allowed hunters to attack prey from a distance, a far less dangerous method than using earlier thrusting spears.

Little evidence has been found from this period of settlement in any one place for an appreciable length of time. More common are sites with a low-density scatter of chipped stone tools and animal bones showing marks of butchering. The stone used for making the tools is always close by, about 10 miles away at most, and could easily have been gathered and taken to the butchering site within a day. The normal sequence, then, was to hunt and kill an animal, then scout around for a suitable stone to make tools for butchering. In areas without flint or chert, which can be made into very sharp cutters, people made do with whatever they found, including coarse-grained basalts and quartzites. The sequence from making a kill to finding stones and making tools, then finally butchering could have taken as little as a few hours or even minutes. This implies a lack of long-range planning and the ability to project ideas very far into the future, even to carrying and reusing better flint and chert tools rather than simply discarding them after use.

THE FIRST EUROPEANS: NEANDERTHALS

The first fossil human form recognized in Europe was that of *Homo sapiens*'s closest relative, the Neanderthal, named after the Neander River valley in Germany, where the first specimen, a skullcap, was found in 1856. There is still disagreement as to whether the Neanderthals represent a distinct species from *Homo sapiens*—that is, *Homo neanderthalensis*—or a subspecies of *Homo sapiens*. Their morphology (body shape) differs from that of humans—particularly their massive physique and extremely heavy bones. Yet they are more like modern humans than any other hominid found. In fact the early specimens were thought at first to be the bones of diseased humans; only in 1864 was the classification *Homo neanderthalensis* proposed.

EVIDENCE FOR PLANNING AND FORETHOUGHT IN NEANDERTHALS

Early Neanderthals from around 200,000 years before the present (B.P.), transported raw materials for tool making much farther than did *Homo heidelbergensis*, as much as 200 miles. They remained at sites long enough to create well-defined hearths, often in caves, which are surrounded by a debris of stone chips and animal bone, evidence that people sat in a circle around the fire eating and working. Other sites lack such patterns, however; many seem to show that groups were opportunistic, using whatever resources they found when they arrived at a site.

By about 180,000 B.P. more signs of forethought appear, for example, at the site of La Cotte on the island of Jersey in the English Channel, where selected parts of mammoth

bones—mostly skulls, shoulder blades, and pelvises—were taken to a central camp. They were probably gathered from the bodies of mammoths that had been stampeded over the nearby cliff, which is a prominent landmark in the area. There is evidence from this period of more elaborate stoneworking techniques, including reworking of the edges of tools for reuse.

DWELLINGS

After 60,000 B.P. Neanderthals were making more elaborate hearths and shelters—or perhaps only windbreaks—of mammoth skulls and reindeer antlers, “a quantum leap” away from living space arrangements of earlier times. The distances they traveled differed greatly in different regions, being much greater in the north and in the continental interior than in the southwest in modern-day France and the Iberian Peninsula, probably because of greater seasonal change there and the greater impact of the fluctuations of climate from glacial to interglacial that occurred during the Ice Age. Sites in the north and central regions were seldom occupied long enough to accumulate more than a single horizon of artifacts, whereas in the southwest many were occupied continuously over long periods. During the period 60,000–40,000 B.P. Neanderthals were moving for the first time into the North European Plain and the plains of Russia and Ukraine.

STONE TOOL INDUSTRIES OF NEANDERTHALS AND MODERN HUMANS

Neanderthals, of whom the latest fossil skeleton dates from around 28,000 years ago, probably coexisted with modern humans for thousands of years in Ice Age Europe. In addition to finds of fossil bones, stone tool types have been used to determine which species lived at a site, even in the absence of bones. The stone tool industry that is associated with the first modern humans in Europe is called the Aurignacian. The earliest industries of western Europe showing some Aurignacian characteristics (not yet fully Aurignacian) have been dated to 38,000 to 42,000 years ago. They have been found in modern-day Belgium, southern Germany, northern Spain, and northern Italy. Some scholars believe that the sites in southern Germany in the Danube basin are evidence that this was a major migration route.

Yet there is disagreement over whether these pre-Aurignacian industries were made by modern humans or by Neanderthals. Entry of modern humans at a later period, 30,000 to 35,000 years ago, is supported by the sudden appearance at this time of a distinctly new art style of anthropomorphic (humanlike) animal figurines, such as the beautiful figure of a lion-headed man carved from mammoth ivory found in southern Germany and dated to 30,000 years old. This figurative art is usually associated with Aurignacian tools. The earliest fossil remnants generally accepted as modern, consisting of a frontal (forehead) bone from Hahnöfersand, Germany, is dated to 36,300 years old. Other fossil remains dating some 30,000 years back have been found in England and northern Spain.

QUESTION OF SYMBOLIC BEHAVIOR IN NEANDERTHALS

Far more specimens of Neanderthals exist than for any other hominid because they lived relatively recently. Some paleontologists believe that so many skeletons survived intact because their survivors deliberately buried them, possibly even strewing flowers over them. If that is true, such burials would be the first unmistakable evidence of the awareness of death and of symbolic behavior. This interpretation is far from accepted by most researchers, however, who point out that the apparent burials can be explained as chance depositions; even the flower pollen found with the skeletons could have percolated through overlying sediments or could have been carried there by rodents. The burials are found only in caves, where the sheltered cave environment might have preserved them, whereas in open settings, where burials of modern humans have been found and where the effort involved in digging deep graves provides clearer evidence of intentionality, no Neanderthal bodies have been found.

Perhaps a more powerful argument against symbolic behavior of the Neanderthals are the scarcity of artifacts such as animal teeth, bones, and shells fashioned to be worn as ornaments and the lack of figurative art such as that of the Aurignacian toolmakers. Although Middle Paleolithic Neanderthals are associated with symbolic items such as red ochre pigment, tooth pendants, exotic shells, and carved bones and stones, far fewer of them have been found at Neanderthal sites than at those of modern humans.

Such artifacts, evidence of cultural objects as bearers of symbolic meaning used in the codification and transmission of culture, are found in *Homo sapiens* sites over a broad area after about 40,000 B.P.; some archaeologists refer to a cultural “explosion” among modern humans at this time. It seems unlikely that the ability to think symbolically would have emerged among the Neanderthals without a similar explosion. They may be better understood as “tool-assisted” hominids than as “culture-using,” and the similarity of stone tool styles among them, as well as tooth pendants and carved bone, may have been the result simply of imitation, of copying by seeing rather than by being told and instructed. Cultural continuity among modern humans directly results from the fact that certain styles of dress, tools, and behavior take on symbolic meaning, becoming symbols of belonging to a distinctive group. The European “peoples” we follow in this book derive their existence as much or more by these symbolic distinctions as by genetic lineage. Such cultural distinctiveness appears not to have been a characteristic of the first Europeans, the Neanderthals.

SOCIAL ORGANIZATION OF NEANDERTHALS

The last interglacial warming period began around 130,000 B.P. In England the warming generated mixed oak forests and abundant big game, which were thinly dispersed through the forests. The same was true over the North European and Russian plains. But the Neanderthals were absent. Apparently they were unable to cope with such conditions. Some paleontologists suggest that their massive physique was an adapta-

tion to cold and that they were unable to survive in a temperate climate. Another possibility is that they lacked the social organization needed for the more difficult task of hunting in forests; theirs has been called a “face to face” social organization in which group cohesion, in the absence of language, could be maintained only when individuals were close together. Language assists in projecting the future, particularly among members of a group. The sort of extended hunting expeditions undertaken by modern human hunter-gatherers, in which the hunters depart the main group for weeks at a time as they roam the forests in search of game, may have been beyond the ability of Neanderthals.

THE LAST NEANDERTHALS

In 1999 it was determined that pieces of Neanderthal skulls found in a cave in Vindija, Croatia, are as recent as 28,000 years old. The tools in the cave include some made from bone, which had been thought to be an innovation of *Homo sapiens*. Whether the Neanderthals obtained these tools by trade with *Homo sapiens* or by imitation, their presence implies some degree of interaction between the two hominids. Late skulls from the cave seem to have some modern human characteristics. On the other hand a 24,500-year-old early modern human child unearthed in Portugal had distinctive Neanderthal characteristics, an indication of interbreeding. The extinction of the Neanderthals, whether it came about by displacement or population absorption by modern humans, or by some other factor, was a slow and geographically mosaic process. As we learn more about Neanderthals, their differences from modern humans in basic behavior and abilities increasingly appear to have been more subtle than striking.

UPPER PALEOLITHIC REVOLUTION

The period from about 40,000 to 28,000 B.P. has been called one of the critical turning points in European prehistory. It is marked by two developments fundamental to the nature of European societies for the rest of history. The significance of the extinction of the Neanderthals, which meant that the world would forever be populated by a single hominid species, cannot be overstated. The ready ability of *Homo sapiens* to see other members of our own species as “alien” on the basis of ethnicity and even cultural differences alone makes it highly likely that the presence of Neanderthals would sooner or later have led to violence; the two hominids’ interactions undoubtedly would have dramatically changed the course of European history.

The demise of the Neanderthals roughly coincided with changes in the behavior of early modern humans—changes so great and so varied that they have been called the Upper Paleolithic Revolution. These are the changes associated with Aurignacian stone tools. The question of whether these two developments were related in a cause-and-effect way—with new techniques and social structures based on language giving modern humans a competitive advantage over the Neanderthals, leading to their extinction—has still not definitively been answered.

ENVIRONMENTAL BACKGROUND

Environmental factors probably played a minimal part in the extinction of the Neanderthals. The period was one in which a harsh glacial climate steadily but only slowly worsened to the glacial maximum (called the Older Dryas) of 16,000 to 13,000 B.P.; however, Neanderthals had prospered during previous glacial periods. The northern and central parts of Europe had a climate similar to that of southern Alaska today. Glaciers extended south to the English midlands and covered all of Scandinavia and the Baltic coastal regions. Winters were bitter and long, and heavy snowfall posed major obstacles to movement by people. On the other hand the treeless tundra conditions that prevailed in southern Britain, France, and Germany and in a belt to the east through central Europe supported an immensely rich biomass of migratory herd animals such as reindeer, wild horse, and bison, as well as the giant pachyderms, the woolly mammoth and woolly rhinoceros. These herds, numbering in the thousands and following a predictable pattern of seasonal movement, afforded humans a resource that could be exploited with relative ease.

REVOLUTION IN STONE TOOLS

A primary feature distinguishing the new types of stone tools was their thinness; slender, tapering flakes were struck from specially prepared conical or barrel-shaped cores and made into blades, a technique requiring a high level of skill. Such blades, it is now known, were already being made in the Middle Paleolithic, though whether by modern humans or Neanderthals is not clear. What distinguishes the Upper Paleolithic industries is a sudden proliferation of many new types of tools, hafted knives, scrapers, projectile points, and chisels and gouges used to work bone and wood.

Beyond the utilitarian purposes served by this new tool kit, the apparent standardization of many of these forms, implying they were shaped according to a preconceived idea, has led some researchers to argue that specific forms had some kind of symbolic significance for their makers and users. The “mental templates” that guided the shaping of these tools may be a sign of language use, as specific shapes were associated with particular verbal and conceptual labels. (For example, certain forms might have been given names by their makers, such as *leaf blade*, or *blade used to kill cave bears*, similar to names we use today, such as *Bowie knife* or *jackknife*, the forms of which we can visualize.) The ability to retain mental templates of forms is crucial to creativity and art in the sense we mean the words today, because innovative conceptions in the mind guide the hand in the making of original forms. Moreover we may be seeing here the first clear sign of cultural and social differentiation. In any case the dynamic creativity of toolmakers at this time stands in the sharpest contrast with the past, when the shapes of tools remained unchanged for centuries and millennia.

OTHER ARTIFACTS

The new relationship between mind and material is seen most clearly in the more easily worked and malleable media of

bone, antler, ivory, and wood, and in drawing on cave walls. Although Neanderthals did use bone and antler tools—for example, sharpening naturally pointed bones for use as awls—they seem never to have appreciated these materials as “plastic,” that is, able to be transformed into completely different shapes; a piece of antler might be made over into the figurine of a horse, or a mammoth tusk transposed into a lion-headed man. Such transformations are the sign and signification of an interior life of their makers and of their apprehension of an invisible realm coexisting with the visible.

In 2001 drawings in charcoal of horses on the walls of a cave in Chauvet, France, were shown to be much older than previously thought. The sophistication and complexity of these drawings have led researchers to assume they were made around the same time as the famous Lascaux cave paintings, some 17,000 years ago. The theory was that such art could have developed only slowly over thousands of years of experimentation. But French researchers, using a dating technique called accelerator mass spectrometry, which separates and counts carbon isotopes found in dead animal and vegetal matter, found the Chauvet drawings to be between 29,700 and 32,400 years old, only 4,000 to 6,000 years later than the oldest modern human fossil so far found in Europe.

Thus these highly accomplished artists predate the cave painters of Lascaux by as much as 10,000 years. Yet their technical prowess and fertile creativity were in no fundamental way inferior to those of artists working at any time since, again underscoring the revolutionary nature of such symbolic behavior, but also the essential similarity of these distant ancestors to us. The painter Pablo Picasso, after viewing the Lascaux paintings in 1940, declared, “We have discovered nothing” in reference to the modernist revolution in painting in his lifetime. Art is both immensely old, perhaps as old as our species, and forever new.

PERSONAL ARTIFACTS

Personal ornaments were another class of new objects being made at this time, such as animal teeth perforated to be hung by a cord around the neck. More remarkable are the great numbers of beads and pendants of other shapes that were first made around 34,000 B.P., produced in structures akin to factories using a complex, multistage technique of incising, grooving, and splitting carefully made ivory rods. Two sites alone in southern France have yielded more than 500 such pendants; other “factories” have been found in Belgium and southern Germany.

ECONOMIC BASIS OF THE UPPER PALEOLITHIC REVOLUTION

The massive, concentrated herds of animals grazing on the tundra during this period made for a rich and relatively reliable resource (when compared to the situation in the later Mesolithic forests) that could be exploited by groups with a fairly simple social structure. The new complexity of the Aurignacian way of life can be seen less in hunting techniques or social organization than in an increasing specialization of

hunting activity with regard to the species being hunted. Animal remains from Upper Paleolithic sites show a marked tendency toward focus on a single-prey species; in some regions wild horses were favored, in others reindeer, steppe bisons, or woolly mammoths. In the Périgord region in southern France it is not uncommon to find that more than 90% and in some cases up to 99% of animals taken were reindeer. This compares to single-species frequencies before the Upper Paleolithic of rarely more than 70% to 80%. Thus Neanderthals can be seen to have acted as more generalized, opportunistic foragers, whereas modern humans became specialists.

This behavior implies the ability to predict the migratory movements of the herds so that the desired species might be taken, as does the fact that Aurignacian sites tend to be heavily concentrated along river valleys that served as major migration routes. Among these were the Dordogne valley in southwestern France, the Rhine and Upper Danube valleys in southern Germany, and the Don and Dneestr valleys in southern Russia. Not only are the sites concentrated, but individual sites are much larger and more structured than ever before, reflecting larger social units.

DWELLINGS

Substantial houses of a circular or semicircular form were first built during this period, particularly in open areas lacking caves, such as the loess plains of central and eastern Europe; houses were built over depressions or upon stone or sunken post foundations. Some houses in eastern Europe were built of mammoth bones. Settlements could consist of a number of single-family dwellings or of larger structures housing multiple families.

POPULATION DENSITY

Within the region of southern France the number of Upper Paleolithic sites exceeds by four and five times the number of sites from the preceding period. Similar contrasts are seen in central Europe and the south Russian plain.

SOCIAL STRUCTURE

The denser concentrations of people within large social units probably required a more complex social organization than ever before. Specialization of roles within society is evidenced by the high degree of artistic skill required for the elaborate cave art of the period. Great technological skill was needed for the highly sophisticated stone and bone tools that were being made. The organization of communal hunting activities to feed the greater numbers of people must have required some degree of differentiation of authority. Elaborate burials found in the former Czechoslovakia and in Russia and Italy may point to the beginnings of social stratification, although this interpretation may be reading into the archaeological record ideas of social structure alien to societies whose worldview may have been radically different from our own. Such ceremonial burials may have been

intended less to honor an individual than to express communal values and group cohesion.

The “crowding” of populations along the migratory river valley routes may have necessitated recognition and demarcation of discrete “territories.” The highly contrasting artifact styles in different regions and among different communities may point to the formation for the first time of distinct, self-conscious cultural or ethnic groups.

DANGERS OF OVERSPECIALIZATION

However abundant the Upper Paleolithic herds their availability was subject to periods of disruption. Tundra and steppe ecologies are inherently unstable, fragile, and unpredictable over the short term. A period of unusually heavy snowfall or harsh winters, of drought or overgrazing, or destruction of grasslands by fire, causing large population declines in the herds, would have had catastrophic consequences for groups heavily dependent on them. Such instability may have prevented the formation of truly independent and self-sustaining social groups, and local units may have maintained long-distance contacts as insurance against hard times. Evidence of long-distance trade between regions as far as 310 miles from one another has been found for this period. Such patterns are indicated all over Europe and are most conspicuous during the period of glacial maximum from 16,000 to 13,000 B.P., a time of particular vulnerability for the herds and the human groups dependent on them.

END OF THE ICE AGE

The Upper Paleolithic was in many ways a harbinger. The tundra way of life that made possible the great efflorescence of Upper Paleolithic art ended with the warming trend that began around 11,000 or 10,000 B.P. The return of the forests in the Mesolithic led to a simplification of material culture as subsistence became more difficult. The next wave of cultural complexity awaited the next period in which humans experienced an economic stability sufficient to free up energies for use in cultural productions; this time the stable food source was based not on the exigencies of climate change and ecology but on human invention: the development of agriculture.

THE QUESTION OF EUROPEAN ANCESTRY

The relationship between very early Europeans and those of more recent times may never be known. Were the makers of the spectacular cave art in southern France the ancestors of the Gauls and later the French? Even the question of whether the first people who populated Europe were later displaced by farming groups arriving from the Near East, were absorbed into them, or adopted farming techniques on their own is difficult to answer.

Linguists have attempted to relate prehistoric cultures to the present by using the similarities among European languages belonging to the Indo-European language group, which comprises most modern European languages, to postulate a proto-Indo-European language. Using a theory that

languages diverge from one another at a relatively constant rate when speakers of a common language are geographically separated, rather like the theory of genetic drift applied to speciation, linguists try to assess how long ago proto-Indo-European was spoken by measuring how different modern languages are from one another and projecting back in time to their original divergence.

This method has proved to be problematic, however, and difficult to relate to archaeological data. It gave rise to the theory that Indo-European speakers arrived after peaceful, matriarchal (goddess-worshipping) farming communities had long been established in southeastern Europe; that they were warlike, patriarchal pastoralists (cattle herders) and that they violently displaced the matriarchal societies. Attempts to relate this to the archaeological record eventually discredited this theory, and it has few adherents today. An alternative theory proposed by the British paleontologist Colin Renfrew is that Indo-European speakers were actually the first farmers; he

relates the amount of language drift between modern languages to the probable rate by which farming spread through the continent.

What this illustrates, along with the many uncertainties about human evolution and the relationships among our ancestral species, is that the European peoples who are recognizable either from the historic record, such as the Celts, Scythians, or Thracians, or from their artifacts, such as the La Tène culture, occupy the very latest chapters of an extremely long human prehistory during which the way of life for most people hardly changed at all for hundreds of thousands of years. In the same way, despite disagreement over such issues as whether modern *Homo sapiens* evolved once in Africa or in parallel in Asia and Africa, the discoveries of paleontology have continually reinforced the extremely close relationship among all hominids, and among members of *Homo sapiens*. We are all close cousins under the skin, truly members of the human family.

APPENDIX VI:

INDIVIDUALS MENTIONED IN TEXT THROUGH THE NINETEENTH CENTURY, WITH BIRTH AND DEATH DATES, ORGANIZED BY PEOPLES

(The names may appear in entries other than those of peoples under which they are listed; popes are listed separately.)

(Some of the nontribal headings are not necessarily strict nationalities and may include individuals of historic regional entities within a present-day nation.)

(Those dates not marked B.C.E. are C.E.)

AEDUI

Divitiacus. fl. 50s B.C.E. Druid.

Vergobretos. fl. first century B.C.E. Magistrate for Rome.

ALAMANNI

Cnodomarius. fl. 350s. King.

Fraomarius. fl. 360s–370s. King.

Macrianus. fl. 360s–370s. King.

ALANS

Addac. d. c. 415. King

Safraux. fl. 370s. King.

Sangiban. fl. 450s. King.

ALBANIANS

Ali Pasa Tepelenë. 1744–1822. Ruler.

Skanderbeg (George Kastrioti). 1405–1468. Military leader.

ANGLO-SAXONS

Adelred fl. 720s. King.

Aelfric (Grammaticus). c. 955–1010. Abbot and writer.

Aethelbald (Ethelbald). d. 860. Ruler (855–860).

Aethelberht (Ethelbert). d. 794. King and saint.

Aethelberht (Ethelbert). d. 866. King.

Aethelbert (Ethelbert; Aedilberct). d. 616. King of Kent (560–616).

Aethelflaed (Ethelfleda; Aelfled). d. 918. Ruler (911–918).

Aethelred I (Ethelred). d. 871. King (866–871).

Aethelwulf (Ethelwulf; Adelwulf; Athulf). d. 858. King of West Saxons (839–855).

Alcuin (Albinus; Ealhwine; Flaccus). c. 732–804. Scholar.

Alfred (Aelfred; Alfred the Great). 849–899. King of Wessex (871–899).

Athelstan (Aethelstan). 895–939. King of Mercia and Wessex (924–939).

Augustine. c. 354–430. Christian church father, philosopher, and saint.

Bede (Baeda; Beda; Venerable Bede). 672– or 673–735.

Scholar, historian, theologian, and saint.

Benedict (Biscop; Benet Biscop). 628?–690. Ecclesiastic and saint.

Boniface (Wynfrid; Wynfrith). c. 675–754. Benedictine missionary and saint.

Caedmon. d. 680. Poet.

Cynewulf (Cynwulf). fl. ninth century. Poet.

Ecgberht (Ecgbyrht; Egbert). d. 839. King of West Saxons (802–839).

Ecgfrith (Egfrith). d. 685. King of Northumbria (670–685).

Edward. (Eadward; Eadweard; Edward the Elder). d. 924. King (899–924).

Edward (Eadward the Confessor). 1003?–1066. King (1042–1066).

Edwin (Eadwine). 585?–633. King of Northumbria (616–633).

Egbert. d. 766. Archbishop of York.

Eorpwald. fl. 620s–630s. Ruler.

Godwine (Godwin). 992?–1053. Earl of Essex (c. 1018–1053).

Harold II (Godwinson). c. 1022–1066. King (1066).

Hereward the Wake. fl. 1070s. Rebel and outlaw.

Ine (Ini; Ina). d. after 726. King of West Saxons (688–726).

Margaret. 1045–1093. Queen of Malcolm III of Scotland and saint.

Offa. d. 796. King of Mercians (757–796).

Orosius (Paulus Orosius). fl. 410s B.C.E. Priest and historian.

Oswald. 605–641. King (633–641) and saint.
 Raedwald (Redwald). d. c. 625. King of East Anglia.
 Sigbert. fl. 630s. Ruler and monk.
 Tostig. d. 1066. Earl of Northumbria (1055–1066).
 Willibrord (Wilbrord; Wilbrod). 658?–739. Missionary and saint.
 Wulfstan (Wulstan). c. 1008–1095. Prelate and saint.

ANTES

Bozh. fl. 380s. Prince.

AORSI

Spadines. fl. 60s B.C.E. King.

ARVERNI

Vercingetorix (Fearcuincedorigh). d. 46 B.C.E. Chieftain.

ATREBATES

Commius. fl. 50s–40s B.C.E. Chieftain.
 Verica. d. 35. Chieftain.

AUSTRIANS

Johann Josef Adam (Johann Adam of Liechtenstein).
 1690–1732. Prince (1721–1732).
 Albert II. 1397–1439. Duke of Austria as Albert V, and king
 of Hungary, Bohemia, and Germany (1438–1439).
 Hermann Bahr. 1863–1934. Writer.
 Ferdinand I. 1503–1564. Holy Roman Emperor
 (1558–1564).
 Ferdinand II. 1578–1637. Holy Roman Emperor
 (1619–1637).
 Francis II. 1768–1835. Holy Roman Emperor (1792–1806).
 Sigmund Freud. 1856–1939. Founder of psychoanalysis.
 Franz Joseph Haydn. 1732–1809. Composer.
 Gustav Klimt. 1862–1918. Painter.
 Leopold I (Leopold of Babenberg). d. 994. Margrave
 (976–994).
 Gustav Mahler. 1860–1911. Composer
 Gregor Johann Mendel. 1822–1884. Botanist.
 Metternich (Klemens Wenzel Nepomuk Lothar von
 Metternich-Winneburg). 1773–1859. Statesman.
 Wolfgang Amadeus Mozart. 1756–1791. Composer.
 Rudolf I (Rudolf of Hapsburg) 1218–1291. Holy Roman
 Emperor (1273–1291).
 Arthur Schnitzler. 1862–1931. Physician and writer.
 Franz Peter Schubert. 1797–1828. Composer.
 Johann Strauss. 1825–1899. Composer.
 Maria Theresa. 1717–1780. Archduchess of Austria and
 queen of Hungary and Bohemia.

AVARS

Baian. fl. 560s–610s. Khan.
 Shāmil. 1798?–1871. Leader.

BASQUES

Juan Sebastián del Cano (Juan de Elcano). c. 1476–1526.
 Navigator.
 Ignatius of Loyola. 1491–1556. Knight and saint.
 Francisco de Vitoria. 1486?–1546. Theologian.
 Francis Xavier. 1506–1552. Missionary and saint.
 Sancho III Garcés (Sancho the Great). c. 992–1035. King
 (1000–1035).

BATAVI

Gaius Julius Civilis. fl. 60s–70s. Chieftain.

BELARUSIANS

Kastus Kalinouski (Vikenty-Konstantin Kalinousky).
 1838–1864. Poet and revolutionary.
 Simeon Polatsky (Symon Polatski; Simiaon of Polatsk).
 1629–1680. Poet, scholar, monk, and saint.
 Francysk Skaryma (Frantsysk, Franciszak, or Francis
 Skoryna). 1485?–1540? Scholar and printer.

BELGIANS

César Franck. 1822–1890. Composer.
 Leopold I. 1790–1865. King (1831–1865).
 Leopold II. 1835–1909. King (1865–1909).
 Maurice Maeterlinck (Maurice-Polidore-Marie-Bernhard
 Maeterlinck). 1862–1949. Writer.
 Josquin des Prez (Josquin Desprez). c. 1450–1521.
 Composer.
 Andreas Vesalius 1514–1564. Anatomist.

BITURIGES

Ambigatus. fl. sixth century B.C.E.? King.
 Bellovesus. fl. sixth century B.C.E.? Chief.
 Segovesus. fl. sixth century B.C.E.? Chief.

BOSNIANS

Kulin. d. c. 1204. Ruler.
 Stephen Kotromanić. d. 1353. Ruler (1322–1353).
 Tvrtko Kotromanić and Bosnia. 1338?–1391. King of Serbs
 and Bosnia (1377–1391).

BRIGANTES

Cartimandua. fl. 50s. Queen of Brigantes.

BRITONS

Ambrosius Aurelianus. b. c. 403. Leader.
 Calgacus (Galgacus). fl. 50s. Chieftain.
 Gildas (Gildas the wise). c. 516–c. 570. Monk and historian.
 Ninian (Ninias; Ninus; Ninnidh). c. 360–c. 432. Bishop and
 saint.
 Patrick (Succat). 389?–461? Apostle and saint.
 Roderic. fl. 720s. King.
 Vortigern. c. 370–459. Ruler.

BULGARIANS

Alexander I (Alexander Joseph of Battenberg). 1857–1893. Prince (1879–1886).
 Boris I. d. 907. Czar (852–889).
 Christo Botev (Khristo). 1848–1876. Poet and revolutionary.
 Iven Asen I. d. 1196. Czar (1186–1196).
 Iven Asen II. d. 1241. Czar (1218–1241).
 Kaloyan. d. 1297. Czar (1197–1207).
 Paisij. fl. 1760s. Monk and writer.
 Peter. d. 969. Czar (927–969).
 Samuel. d. 1014. Czar (980–1014).
 Simeon (Symeon the Great). d. 927. Czar (893–927).
 Ivan Mincov Vazov. 1850–1921. Writer.

BULGARS

Asparukh (Asperuch; Isperich). d. 700. Khan.
 Bezmer (Bat-Bayan). fl. 640s. Son of Kurt.
 Krum. d. 814. Khan (802–814).
 Kurt (Kubrat). d. 642. Ruler. (c. 605–c. 642).
 Omurtag. 814–831. Khan.

BURGUNDII

Chilperic (Chilperic). fl. 470s. Brother of Gundobad.
 Clotilda (Chrotechildis). c. 470–545. Queen and saint.
 Godomar. d. 534. Brother of Gundobad.
 Gundicar (Gundahar; Gunther). c. 385–437. King (413–437).
 Gundobad (Gundebaud; Gondobald). c. 475–516. King (480–516).
 Sigismund d. 524. King (516–524) and saint.

BYZANTINES (EASTERN ROMAN EMPIRE)

Alexius I Comnenus. 1048–1118. Emperor (1081–1118).
 Alexius III Angelus. d. 1211. Emperor (1195–1203).
 Alexius IV Angelus. d. 1204. Emperor (1203–1204).
 Alexius V (Alexius Ducas Murtzuphlus). d. 1204. Emperor (1204).
 Anastasius. 430?–518. Emperor (491–518).
 Anna Comnena. 1083–?1148. Author and daughter of Alexius I Comnenus.
 Arcadius. c. 377–408. Emperor (383–408).
 Baldwin I. 1172–1205. Emperor of Constantinople (1204–1205).
 Basil I (Basil the Macedonian). 812?–886. Emperor (867–886).
 Basil II (Bulgaroctonus). c. 958–1025. Emperor (976–1025).
 Chilbudius. fl. sixth century. General.
 Constantine IV (Pogonatus). d. 685. Emperor (668–685).
 Constantine V (Copronymus). 718–775. Emperor (741–775).
 Constantine VII (Porphyrogenitus). 905–959. Emperor (913–959).
 Constantine VIII. c. 960–1028. Emperor (976–1028).
 Constantine XI Palaeologus (Dragases). 1404–1453. Emperor (1449–1453).
 Cyril (Constantine). c. 827–869. Missionary and saint.

Heraclius. c. 574–641. Emperor (610–641).
 Irene. 752–803. Ruler (780–802) and saint.
 John of Ephesus (John of Asia). c. 507–c. 586. Syrian prelate and monk.
 Justin I. c. 450–527. Emperor (518–527).
 Justin II. d. 578. Emperor (565–578).
 Justinian I (Justinian the Great). 483–565. Emperor (527–565).
 Justinian II (Rhinotmetus). c. 669–711. Emperor (685–695, 705–711).
 Leo III (Leo the Isaurian). 680–741. Emperor (717–741).
 Leo IV (Leo the Khazar). 749–780. Emperor (775–780).
 Leo V (Leo the Armenian). d. 820. Emperor (813–820).
 Leo VI (Leo the Wise; Leo the Philosopher). 866–912. Emperor (886–912).
 Marcian. c. 392–457. Emperor (450–457).
 Maurice. c. 539–602. Emperor (582–602).
 Methodius. c. 825–884. Missionary and saint.
 Michael I. d. 843. Emperor (811–813).
 Michael III (Michael the Amorian; Michael the Phrygian). 838–867. Emperor (842–867).
 Michael VIII Palaeologus. 1224?–1282. Emperor (1259–1282).
 Nestorius. d. c. 451. Persian prelate.
 Nicephorus III Botaneiates. fl. 1070s–80s. Emperor (1078–1081).
 Phocas. d. 610. Emperor (c. 602–610).
 Photius. c. 820–891. Patriarch of Constantinople.
 Procopius. fl. 520s–550s. Historian.
 Pseudo-Maurice. fl. sixth–seventh century. Historian.
 Romanus IV Diogenes. d. 1071. Emperor (1068–1071).
 Stephen (Stephen of Perm). 1340–1395. Missionary, linguist, and saint.
 Theodora. c. 500–548. Wife of Emperor Justinian I.
 Theodora. c. 810–862. Wife of Emperor Theophilus.
 Theodore I Lascaris. c. 1175–1222. Nicaean emperor (1208–1222).
 Theodosius II. 401–450. Emperor (408–450).
 Theodosius III. d. after 717. Emperor (715–717).
 Theophylactus Simocattes (Theophylact Simocatta). d. after 640. Historian.
 Tribonian. d. 545. Jurist.
 Valens. 328?–378. Emperor (364–378).
 Zeno. d. 491. Emperor (474–491).

CARTHAGINIANS

Clitomachus (Hasdrubal). fl. second century B.C.E. Philosopher among Greeks.
 Hamilcar. d. 480 B.C.E. General.
 Hamilcar Barca (Barcas). 270?–229 or 228 B.C.E. General.
 Hannibal. 247–183 B.C.E. General.
 Hanno. fl. c. 470s B.C.E. Navigator.
 Hasdrubal. d. 221 B.C.E. General.
 Himilco. fl. c. 450s B.C.E. Navigator.

CASSI

Cassivellaunus (Cassivelaunus; Caswallawn; Caswallon). fl. 50s. Prince.

CATUVELLAUNI

Caractacus (Caratacus; Caradoc). fl. 40s–50s. Chieftain.
Cunobelin (Cunobelinus; Cymbeline). d. c. 42. King.
Togodummus. fl. 40s–50s. King.

CHECHENS

Nethimer. fl. 1010s. Chieftain.
 Scurdo. fl. 1280s. Chieftain.
 Skomantas. fl. 13th century. Chieftain.

POPES (ITALIANS AND OTHER NATIONALITIES)

Adrian I (Hadrian I). d. 795. Pope (772–795).
 Adrian IV (Nicholas Breakspear). 1100?–1159. Pope (1154–1159).
 Felix III. d. 492. Pope (483–492) and saint.
 Gregory I (Gregory the Great) c. 540–604. Prefect of Rome (c. 572–574), pope, (590–604), and saint.
 Gregory VII. c. 1020–1085. Pope (1073–1085) and saint.
 Innocent III. 1160 or 1161–1216. Pope (1198–1216).

Innocent IV. d. 1254. Pope (1243–1254).
 John IV. d. 642. Pope (640–642).
 John VIII. d. 882. Pope (872–882).
 John X. d. 928. Pope (914–928).
 John XII. 937?–964. Pope (955–964).
 Leo I (Leo the Great). c. 400–461. Pope (440–461) and saint.
 Leo III. d. 816. Pope (795–816) and saint.
 Leo VII. d. 939. Pope (936–939).
 Leo VIII. d. 965. Pope (963–965).
 Leo IX (Bruno of Egisheim). 1002–1054. Pope (1048–1054) and saint.
 Nicholas I (Nicholas the Great). c. 819 to 822–867. Pope (858–867).
 Nicholas II. 980?–1061. Pope (1059–1061).
 Pelagius. d. 590. Pope (579–590).
 Stephen II (Stephen III). d. 757. Pope (752–757).
 Stephen IV (Stephen V). d. 817. Pope (816–817).
 Urban II. c. 1035–1099. Pope (1088–1099).
 Zacharias (Zachary). d. 752. Pope (741–752) and saint.

NON-EUROPEANS

Anan ben David. fl. 760s. Religious leader. *Jew*.
 Babur (Zahir-ud-Din Muhammad). 1483–1530. Emperor of India. *Turk*
 Simon Bar Kokhba (Simeon bar Koziba). d. 135. Revolt leader. *Jew*
 Cleopatra VII. 69–30 B.C.E. Queen (51–30 B.C.E.). *Egyptian*
 Croesus. d. c. 546 B.C.E. King (c. 560–546 B.C.E.). *Lydian*
 Cyrus II (Cyrus the Great). c. 585–c. 529 B.C.E. King. *Persian*
 Darius I (Darius the Great). 540–486 B.C.E. King (522–486 B.C.E.). *Persian*.
 David. d. 962 B.C.E. King. *Jew*
 Ibn Fadlan. fl. 920s. Ambassador and writer. *Arab*
 Judas Maccabeus (Judah Maccabees). d. 160 B.C.E. Leader (166–160 B.C.E.). *Jew*
 Mattathias. d. 166? B.C.E. Priest and leader. *Jew*
 Merneptah. fl. 1230s–1220s B.C.E. King (1236–1223 B.C.E.). *Egyptian*
 Mithridates VI Eupator (Mithradates the Great). d. 63 B.C.E. King (120–63 B.C.E.). *from Pontus*
 Muhammad. c. 570–632. Founder of Islam. *Arab*
 Psamtik I (Psamtek; Psammetichus; Psummetichos). fl. seventh century B.C.E. Pharaoh (664–610). *Egyptian*.
 Ptolemy. c. 90–150. Astronomer, geographer and mathematician. *Hellenized Alexandrian*
 Ramses III (Rameses). fl. 1190s–1160s B.C.E. King (1198–1166 B.C.E.). *Egyptian*
 Sargon II. d. 705 B.C.E. King (721–705 B.C.E.). *Assyrian*
 Simeon ben Yohai. second century. Rabbi and scribe. *Jew*
 Solomon. fl. 10th century B.C.E. King. *Jew*
 Tamerlane (Tamburlane; Timur; Timur the Lame). 1326–1405. Ruler. *Turk*
 Xerxes I (Xerxes the Great). 519–465 B.C.E. King (486–465). *Persian*

APPENDIX VII:

LIST OF INDIVIDUALS FEATURED IN BIOGRAPHICAL SIDEBARS, ORGANIZED ALPHABETICALLY (SHOWING ENTRIES WHERE FOUND)

Alaric—Visigoths	Boudicca—Britons	Justinian I—Byzantines	Rollo—Normans
Alexander the Great— Macedonians	Charlemagne—Franks	Kenneth I MacAlpin—Scots	Spartacus—Thracians
Alfred—Anglo-Saxons	Clovis I—Franks	Martin Luther—Germanics	Strabo—Greeks
Arminius—Germanics	Constantine I—Byzantines	Mieszko I—Poles	Suleiman I—Turkics
Árpád—Magyars	Cyril and Methodius—Slavs	Odoacer—Sciri	Tacitus—Romans
Attila—Huns	Gaiseric—Vandals	Otto I—Germanics	Theodoric—Ostrogoths
Augustus—Romans	Gregory I—Romans	Patrick—Irish	Vercingetorix—Gauls
Basarab I—Vlachs	Hadrian—Romans	Pericles—Greeks	Vladimir I—Rus
Bede—Anglo-Saxons	Harold I—Vikings	Pliny the Elder—Romans	William the Conqueror— Norman
Boris I—Bulgars	Herodotus—Greeks	Ptolemy—Greeks	
	Julius Caesar—Romans	Pytheas—Greeks	

APPENDIX VIII:

CHRONOLOGY OF EUROPEAN PREHISTORY AND HISTORY

The following chronology is designed to give an overview of European prehistory and history and to be used in conjunction with the text, that is, with an emphasis on the formation and movements of peoples as well as developments that affected all European peoples. There are many more important dates found in the time lines in the entries themselves. Sources of information about the past change as we look ever farther back in time. A watershed in sources of information is the point at which cultures adopt writing and begin to record earlier oral traditions about themselves and to keep written records—often in the form of annals recording the notable events of each year. We have divided this chronology into two parts based on the predominant source of data available, one beginning 1.7 million years before the present, when different hominid species began entering Europe, and the other taking up the story in the eighth century B.C.E., when, with the end of the Greek Dark Ages, Greeks began writing about themselves and their world, first in mythological tales and poetic epics, then in histories, travelogues, and other accounts. The first part of the chronology, based in large part on archaeological evidence, mostly covers broad cultural trends rather than history—historical events and specific peoples—because little of such matters can be deduced from archaeological artifacts. All prehistoric dates are circa, with cultural overlapping occurring from one age to the other; start dates indicate the first appearance of a culture or cultural characteristic anywhere in Europe and end dates indicate the latest survival of the same. The rate of change in this first part is slow, measured in millions and then thousands of years. In the second part, the rate speeds up greatly as the time scale shifts to specific centuries and years.

PART ONE: PREHISTORIC PERIOD

Paleolithic (Old Stone Age): 1.7 million before present (B.P.)–10,000 B.P. (10,000 B.P. is the equivalent of 8000 B.C.E.)

Stone tool industries are the pebble tool/flake traditions (Clactonian/High Lodge) and Acheulian/Abbevillian hand axes, flakes, and scrapers (Lower Paleolithic); scrapers, flakes, and points of the early Mousterian and Levallois tradition, and knives, small axes, scrapers, flakes, and points of the Mousterian and late Acheulian and early Aurignacian (Middle Paleolithic); and Aurignacian and Gravettian technologies, bifacial pres-

sure-flaking of the early Solutrian, and Azilian bone and stone technologies (Upper Paleolithic).

Lower Paleolithic Age: 1.7 million B.P.–200,000 B.P.

The peopling of Europe occurs, apparently in waves by separate hominid species; first *Homo ergaster*, around 1.7 million B.P.; then *Homo heidelbergensis* (earliest finds are 500,000 B.P.).

Middle Paleolithic Age: 200,000–40,000 B.P.

Neanderthals occupy much of Europe; the youngest skeletal remains so far found date to 28,000 B.P. The earliest modern human find in Europe to date is 36,300 B.P. The huge migratory herds in the tundra regions of southern Europe provide an abundant food supply that can be exploited with a relatively simple social organization.

Upper Paleolithic Age: 40,000 B.P.–10,000 B.P.

The Upper Paleolithic Revolution consists of a proliferation of new stone tool types, sophisticated stoneworking techniques, and the beginning of figurative art in bone, ivory, cave drawings, and paintings. The extent to which Neanderthals take part in this is unclear. The migratory herds attract large, dense settlements along river valleys such as the Dordogne Valley in southwestern France; the fairly predictable food supply allows for a high degree of craft specialization, leading to the masterpieces of cave art.

Mesolithic Age (Middle Stone Age): 10,000–9000 B.P.

The period is often defined by the use of microliths, small retouched blades or blade segments, probably used to tip arrows. Industries of microliths are organized into three cultures: the Maglemose (9500–7600 B.P.), the Kongemose (7600–6500 B.P.), and the Ertebølle (6500–5200 B.P.) of southern Scandinavia, in which people continued a Mesolithic lifestyle as the Neolithic had begun elsewhere in Europe. Other important stone tool types are scrapers, perforators such as awls, burins for working bone and antler, and axes. Tools of organic materials such as bone, antler, wood, and plant fiber for nets, are widely used.

The return of forests at the end of the Ice Age causes the migratory herds to move north. A dramatic series of ecological changes occurs throughout the period. The rise in sea level caused by the melting of the glaciers inundates large land areas; there is a complex interplay between formation of ice-dammed lakes during the glacial melting period, their draining and then replacement by incoming sea water, and the slow isostatic rising of the land that had been depressed by the weight of the ice. All of these are accompanied by changes in flora and fauna. In general the

return of the forests occurs in stages, each with a different assortment of plant and animal species. As a result subsistence is more difficult than in the Paleolithic Age and necessitates in some places a seasonal round of movement to fishing, hunting, and foraging grounds. In others, such as at Lepenski Vir in the Danube valley, an abundant supply of fish fosters a sedentary existence; the best preserved dwellings from the Mesolithic Age are here, located on terraces along the river, most houses containing a block of limestone carved into the shape of an anthropomorphic fish. The closest equivalent in the Mesolithic Age to the tundra herds of the Ice Age are aquatic resources, as attested by massive shell middens, found from Portugal to southern Scandinavia. These resources include lake, shore, and sea birds. Material culture becomes more focused on the utilitarian and varies greatly among people living in the variety of ecologies of Europe. Yet figurative art is not wanting as, for example, the rock art of the Spanish Levant. The common elements are a continual adaptation to the changing environment and exploration for foods and sources for tools and shelter. When farming practices become known to Mesolithic foragers, some groups adopt them selectively, incorporating herding or gardening into their repertoire as just one of a number of subsistence means.

(Some theories of the emergence of the language ancestral to the Finno-Ugric language family, later spoken in a wide area of the northern forest zone of Europe, posit that it originated as a lingua franca, made up of elements of languages from Asia and Europe, used by peoples from both continents who followed migratory herd animals to northern Europe to hunt and forage as the glaciers receded. These peoples from widely divergent backgrounds could have used the lingua franca of proto-Finno-Ugric to communicate with one another. Common cultural characteristics—pottery, burial rites—shared for millennia by peoples throughout the circumpolar region, including those in North America, suggest that contacts throughout the region and a common way of life created a distinct cultural province in these lands “on top of the world.”)

Neolithic Age (New Stone Age): 7000–5000 B.C.E. (9000–7000 B.P.)

The Neolithic Age is defined less by tool materials and industries than by the emergence of new elements in people's subsistence strategies; in Europe most of these elements originate elsewhere. They include plant and animal foods not native to Europe, such as wheats and barleys, sheep, and goats, together with the knowledge of how to raise them, which then is applied to native cattle and pigs. Also important as these new material subsistence means are a new set of values surrounding sedentary existence, the acquisition and storage of food and goods, close kin groups, and a symbolic interpretation of the world.

after 7000 B.C.E.

The first farmers arrive in Europe from the Near East, spreading from southeast to northwest through northern Greece and Thessaly to the Balkans and Danube basin.

7000–6000 B.C.E.

Early Aegean and Anatolian Painted Ware Culture: The people of this culture farm wheat and barley and keep sheep and goats; fish and both small and large wild game are also important. They make polished stone artifacts; simple pottery and fired clay figurines, often of human females with sexual parts exaggerated; and animals. Later pottery is painted with geometric designs, often in red and white; styles seem to be used as social identification. Their dwellings are squarish to rectangular mud brick or clay-covered timber-framed buildings arranged in small clusters or hamlets, some houses freestanding, others interconnected; some people live in caves, such as that at Franchthi in the northeast Peloponnese of Greece. The hamlets often include buildings that seem to have been used

as shrines; otherwise little sign of differentiation has been found. The dead are buried in the settlement areas, often close to dwellings, perhaps an indication of ancestor worship and continuity with the past. The many female figurines that have been found in and around buildings may be connected with ancestor worship, though they have also been interpreted as evidence of a widespread goddess cult. Sites are occupied for a long time, so that decayed building material and other detritus build up into mounds (tells), sometimes many feet high.

7000–5000 B.C.E.

Makers of tells inhabit Bulgaria and Serbia, later moving onto the Hungarian plain.

6500–4000 B.C.E.

Balkan Painted Pottery Cultures: These cultures are very similar to those of people in the Aegean area; during this period older settlements are joined by many new ones. Pottery and figurines gradually become more elaborate, and different regions develop distinct styles; one of the most famous of these is the style of figurines found at Vinča in Serbia, which have catlike or insectlike triangular faces with large bulging eyes. Anthropomorphic vessels are made with stylized faces, breasts, stubby arms, and incised lines in complex geometric patterns. The cultural complex exists throughout the Balkan region and extends to the southern Hungarian plain. Newer sites tend to be larger with larger houses; in a few cases, such as at Sesklo in Thessaly, there are more complex arrangements, such as an inner enclosure containing a large house surrounded by smaller ones. An infilling of the landscape takes place later in this period, with settlements in areas previously avoided. Cattle become increasingly important, particularly for people who live near Tisza on the Hungarian plain. Copper is first worked into beads, hooks, pins, and awls, both by beating and by smelting. Commodities and raw materials, such as fine pottery, flint, and obsidian, are traded over distances of up to 100 miles away.

6000–5000 B.C.E.

Farming spreads to western Mediterranean. Some people live in caves; others build timber houses within circular ditches.

6000–4000 B.C.E.

Impressed Pottery Cultures: Impressed ware is made by the first farmers in the central and western Mediterranean region; bowls, dishes, jars, and a variety of other vessels are decorated with impressions made in the wet clay. The islands in the region are possibly colonized by seafaring people from the eastern Mediterranean, but native Mesolithic groups, who are known to have occupied Sicily and southern Italy as early as 9000 B.C.E., may possibly adopt farming as well. Too little is known about the North African coast at this period to assess whether farming practices possibly spread north from there. In southeast Italy painted ware is made, possibly introduced from Greece, from around 6000 B.C.E. Sheep, goats, cattle, and pigs (and even red deer) are introduced to the region, followed by cereals by the end of the sixth millennium. From here farming practices, along with impressed pottery, slowly move northward through Italy to southern France, and along the coast to the Iberian Peninsula. Obsidian from Sardinia and other islands is an important export.

6000 B.C.E.

Farming arrives in central France.

after 6000 B.C.E.

Farming arrives in the Iberian Peninsula (it is not known whether there are any influences from North Africa).

5500–5000 B.C.E.

Farming arrives in central and western Europe, at first confined to river valleys and light, easily worked loess soils. Agriculture spreads in separate waves, first along the Upper Danube, Upper Rhine, and Neckar Rivers; second down the Rhine to the southern Netherlands and southern Poland; third to southern Belgium and the northern European plain. During the last phase there is more evidence of contact between farming groups and the indigenous Mesolithic foragers. Settlement expands out of river valleys and onto other than loess soils.

5500–4200 B.C.E.

Linienband Ceramic (LBK) or Linear Pottery Cultures: Pottery decorated with linear designs (but not painted) is made by the first farmers in the central and western temperate forests of Europe to the southern edge of the north European plain, from northern Hungary to northern France, southern Belgium, the southern Netherlands, Czechoslovakia, northern Austria, central and southern Poland, and Germany. Farming arrives late in this region compared to the Mediterranean, but it develops more quickly. A distinctive pottery style appears as farming spreads from the Hungarian plain and the Carpathian basin, both westward and also eastward into the Ukraine and on to the steppe lands to the east.

Farming perhaps spreads through the region generation by generation, the young moving on to find new land in which to settle; whether native Mesolithic groups take up farming along with the other features of the Linear Pottery cultural complex or whether they maintain their way of life side by side with the newcomers has not been determined.

People live in scattered single homesteads, hamlets, and small villages usually along river valleys and on fertile loess soils. The distinctive building style is the post-framed long house, made of substantial timbers, housing single to multiple families and possibly animals. The building of these houses represents a considerable investment of labor. Larger concentrations of building, such as those found in the Balkan tells, apparently do not have streets or lanes, and buildings are not made to any standard length, perhaps evidence of greater independence of individual households within villages here than in the Balkans. On the other hand, the buildings share a common orientation.

Single inhumation (underground) burials, sometimes with pottery, stone tools, and simple ornaments, are organized into cemeteries near some settlements, with graves aligned in a common orientation. Numerically the graves that have been located are too few to account for all of the dead in the settlements with which they are associated; the criteria for choosing who is to be buried have not been determined; men, women, and to a lesser extent children are buried in cemeteries. Pottery and stone tools are found in graves of both men and women, though stone tools such as arrowheads predominate for men and pots for women; older people have more grave goods; as many as a third of adult graves have no goods at all. (Such evidence has to be used with caution in attempting to identify social differentiation because one cannot assume that goods buried with the dead belong to them in life in a straightforward modern sense. Western concepts of individual ownership and private property are by no means universal. Grave goods may be offerings by the whole community to the ancestors via the agency of the deceased. Infrequency of burial could have had less relation to do with the status of those buried than to the timing or circumstances of their deaths.)

5000–4000 B.C.E.

Lengyel Circular Enclosure Culture: While houses, settlements, and subsistence practices remain the same as in the Linear Pottery culture, in Slovakia, eastern Austria, and northern Hungary ditched, palisaded circular enclosures are first built, with multiple concentric circles, inter-

rupted by one or more causeways, and surrounding an area of a few acres. Some of these are built on the sites of earlier longhouses; often they are near current settlements. Many do not contain buildings; others with buildings may serve a defensive purpose. Others may be used to pen cattle or to mark out sacred space for ritual use. In the ditches of some enclosures, numerous fragments of broken figurines have been found, possibly having been “killed” after being used in rituals to rid them of dangerous spiritual potency. Such enclosures may indicate ritual activity on a community as well as a household level.

5000–3400 B.C.E.

Combed Ware Pottery: Pottery making begins in Finland before people adopt a fully Neolithic farming way of life; hunting, fishing, and gathering continue to be the main means of subsistence. Pottery may be adopted as seal hunting grows in importance and better containers are needed for storing the fat and blubber. The most common style bears decorations made with a comb-like stamp; pots are round bottomed and probably secured by being set in sand in the typical beach settlements. Gradually during this period, in Finland and elsewhere in the Finno-Ugrian region and surrounding areas, people may begin to take up farming.

(An alternate theory on the emergence of the ancestral language of the Finno-Ugrian languages later spoken in the northern forest zone posits that arrival of Neolithic or sub-Neolithic practices in the Finno-Ugrian area led to the spread of the language of the earliest group to adopt farming to other peoples as they, in turn, adopted farming. If, as is likely, farming techniques such as domestication of herd animals, cattle, and reindeer, were viewed in mystical terms as gifts from the gods, the first group in the northern forest zone to master such techniques would have enjoyed great prestige, perhaps causing others to use their language.)

Copper Age (Chalcolithic Age): 5000–2500 B.C.E.

Copper begins to be mined and worked by beating and smelting in the Balkans. Large-scale mining is undertaken in 4800 B.C.E.

Copper is used for ornaments and axes. (However, flint continues to be used for knife blades and arrowheads.)

Fifth millennium B.C.E.

Roessen Culture: Settlements from this time in the region west of Cologne in Germany have trapezoidal longhouses more closely grouped than before, with timber palisades surrounding them. It has been theorized that they indicate a denser settlement of the region, leading to competition and instability; at the same time farmers are beginning to expand farther west and north into Normandy, Brittany, and the Lower Seine region, indicating population pressure farther east.

4500–3500 B.C.E.

Farming arrives in the coastal regions of France, Britain, Netherlands, Denmark, and southern Sweden.

Megalith Builders: Large timber and stone tombs covered by long or circular mounds are first built in the coastal regions of France, Britain, Netherlands, Denmark, and southern Sweden, where incoming farming groups meet dense populations of Mesolithic foragers. It has been theorized that this development results from a kind of compromise between the farming and foraging lifestyles, the greater mobility of the latter leading to a shift in the focus of farming communities from the extreme sedentarism of the tell societies of the first farmers in the east, with their substantially built and long-lasting settlements, to a more mobile lifestyle in which the building of houses for the living is less important socially than the building of these for ancestors. These large mortuary houses

become prominent features in the landscape through which people may move in a seasonal round. Such tombs are built in a great variety of shapes and styles, some covered in long mounds, others having a burial chamber within a round mound that is approached by a long corridor; chambers are built of dry stone walling culminating in a corbelled vault. In the British Isles dolmens are important, each consisting of a huge horizontal block of stone weighing many tons perched on slender stone uprights, the whole then covered with earth. It has been theorized that the proliferation of forms arise from a dialectic of imitation and competition (which can be traced by comparing styles in neighboring regions) as different groups strive to forge distinctive identities in a changing cultural landscape.

Lake Village Cultures: Mesolithic groups in the Alpine foreland in southern Germany, Switzerland, and Austria begin to farm, building villages of timber houses on piles along the margins of lakes.

Pontic Steppe Horse-Rearing Culture: Nomadic herding peoples north of the Black Sea begin to move into tell areas of Hungary; they build circular burial mounds, perhaps in emulation of tell mounds; their pottery has cord impressions, possibly symbolic of ropes used to control horses and cattle.

4200–3800 B.C.E.

Tripolye-Cucuteni Cultures: These are located in the forest-steppe region of Ukraine and Moldova, and in the foothills of the northern Carpathian Mountains. They develop from a Linear Pottery lifestyle, which accompanied the beginning of farming. Villages of these groups generally occupy high terraces on the interfluvies between river tributaries and consist of concentrations of as many as 200 substantial rectangular buildings, some surrounded by ditches. Pottery is elaborately painted in two and three colors. Copper objects, particularly beads, have been found, although fewer than farther west.

4200–2800 B.C.E.

Funnel-Necked Beaker Cultures: This pottery type is made in northern Germany, in Jutland in Denmark, and on the coasts and islands of the Baltic as native Mesolithic groups take up farming. A characteristic assortment of vessels found in tombs of this culture includes a large beaker with a tall, funnellike neck, a smaller collared flask, and a drinking cup, possibly used to mix ingredients for an alcoholic drink.

A dialectic in tomb making similar to that of the megalith builders to the west takes place in these regions, as descendants of the Linear Pottery peoples, moving north out of the loess lands, make long mounds reminiscent of long houses. In response coastal Baltic peoples make dolmens or *dysse*; long or round mounds curbed with stone.

4000–3000 B.C.E.

Globular Amphora Culture: People of this culture, who live in a region roughly bounded by the Elbe and the Vistula Rivers in central Europe, engage in complex and probably protracted funeral rites. Burial grounds that have been located contain the remains of both people—men, women, and children—and animals, including cattle. Many people are buried with body parts missing; different people are buried together and animal bone is included in human graves. Whole bodies of cattle are buried alone, occasionally accompanied by pieces of human bone. Grave goods include pots and polished flint axes. The burials may suggest rituals involving postponement of the interment of some human remains, which may be carried for a long time by the living, perhaps to be used in rituals of ancestor worship, before their eventual burial. Great feasts accompany burials; other animals are sacrificed and not eaten but rather offered whole. Little indication of social differentiation has been found in these burials, while the treatment of animals suggests both a recognition

of the separation of people from animals and a wish to unite with them in consciously enacted rites. Burial grounds are more often found than settlement sites, which can only be recognized by pits and artifacts, not remains of buildings, which perhaps are insubstantial.

after 3500 B.C.E.

Passage Grave Builders: The first colonists on the Orkney Islands of Britain build monumental corbelled stone tombs approached by narrow stone passages, covered with earth mounds and precisely oriented to the winter solstice sunset (such as Maes Howe), as well as large ditched and banked stone circles (such as Brodgar and the Stones of Stenness). In Ireland the massive passage graves of Newgrange, Knowth, and Dowth are built.

3500–2500 B.C.E.

In the Aegean area trade links (especially in silver) with the urban cultures of Syria and Mesopotamia lead to a transition from mud brick villages to hilltop stone forts; the earliest level of Troy is built; silver wine cups emulating Anatolian (in Asia Minor) models are made.

In Iberia copper metallurgy and chambered stone burial mounds (which indicate contact with North Africa) are developed.

In southern France, stone cairns are used to cover stone chambers; anthropomorphic menhirs (tall, upright stones) are constructed.

On Malta, major temple complexes with huge representations of female figures (possibly a mother goddess) are developed.

Pit Grave or Kurgan Culture: Beginning in the Carpathian basin and the region north of the Black Sea, spreading to the lower Danube area and along the Danube into northern Bulgaria and eastern Hungary, this culture has male graves in pits covered by wooden beams and topped by a round mound called a kurgan. Cattle are sometimes buried with the men, and sometimes women; occasionally wagon wheels and whole wagons are also included, as well as pottery drinking cups imitating, in their lustrous gray finish and their shape, silver wine-drinking vessels being made at the same time in the Aegean area.

Oxen are being used to pull wagons and plows, which allow the farming of soils not workable before, particularly the dry lands north of the Black Sea. Cultures to the southeast in the northern Caucasus on the periphery of the Near Eastern urban civilizations, which are already using bronze, in interaction with pastoral horse raisers of the steppes north and east, possibly help lead to the Pit Grave culture. The peoples of this region are another conduit into Europe, besides the Aegean area, for Near Eastern innovations such as wool-bearing sheep and two-piece mold metal casting.

3000–2000 B.C.E.

Cord Ware Culture: Beginning in the forested regions of northern Europe just south of the North European Plain, a new cultural pattern appears with characteristics closer to those of steppe cultures to the east. Instead of communal graves, individual graves begin to be constructed. Those of males contain a characteristic set of objects: stone battle-axes and pottery drinking vessels of a shape similar to those of silver wine cups in the contemporary Aegean region and bearing cordlike decorations very similar to those used far to the east, where the cord impressions may have evoked ropes used to control horses. The emphasis on drinking, both in ritual and as a means of forging bonds of loyalty, has begun to filter north, as the shape of burial mounds is introduced from the east, the rounded form perhaps symbolizing the tents of nomadic herding people.

This phenomenon coincides with the culmination of long centuries of forest clearance; there is now enough pastureland available for cattle rearing to become an important activity. This leads to the so-called secondary products revolution in which, for the first time, cattle, sheep, and goats (and possibly horses) begin to be used for more than their meat—for milk, wool, and traction in pulling wheeled wagons and plows.

The pastoral lifestyle leads to a general loosening of social ties, particularly for men, and a new emphasis on the individual, whose social importance is measured by the portable wealth of objects and cattle rather than by land. With the greater mobility and increase of contacts among different groups common allegiance to place becomes less important and is replaced by new ideals—of leadership and hospitality, symbolized by the wine cups in burials, and modes of negotiation supplemented by the threat of force, symbolized by the battle-axes. The village possibly decreases in focal importance in favor of wider networks of villages and homesteads linked by allegiance to a chieftain. This cultural pattern soon spreads over a wide area of central Europe, from Switzerland to Moscow, and south into Greece, and has been called one of the most revolutionary transformations of European prehistory.

(Recent thinking has linked this transformation to the appearance of the ancestor of Indo-European languages. A new language could have emerged as a “trade language,” or *lingua franca*. The derivation of this new language may never be known. Earlier theorists held that it must have reached central Europe from the Asian steppes along with a new way of life, perhaps brought by the Pit Grave people, with their apparent pattern of male dominance, nomadic lifestyle, and patriarchal religious belief, who displaced by force the matriarchal religions of the sedentary tell peoples of the Balkans and Greece. The Indo-European language was seen as synonymous with an ideology of male dominance. But this theory has fallen out of favor. It is no longer clear that the Corded Ware revolution was wholly or even mostly a foreign product. The rituals of hospitality that became important at this time could have derived from the communal world of the tell societies. There is as much evidence of former tell-dwellers moving eastward toward the steppe lands, as they sought grazing for their herds, as of steppe dwellers migrating westward. Far from seeing the abandonment of tells as the collapse of an ideology and sense of community that had developed among their inhabitants, it may be preferable to consider the new, much more mobile and open way of life the fulfillment of the tell ideology, with former tell-dwellers able to maintain their ties with their home communities even while traveling far from them or settling abroad. Membership in a community now may thus include sharing cultural forms and activities—pottery and other art styles, customs and rituals—and no longer necessitate staying at home. If Indo-European languages did emerge as part of the Corded Ware phenomenon, it, too, need not have come from abroad nor represent a complete abandonment of the ways of the past.)

Grooved Ware Culture: People in Wessex, England, construct huge henge monuments, possibly in emulation of the Orkney passage graves, consisting of a circular bank and interior ditch, such as at Avebury, surrounding an inner stone circle; the first construction, consisting of a bank with an exterior ditch, is carried out at Stonehenge. Some henges contain huge timber roundhouses. The 130-foot-high Silbury Hill, a turf-covered earthen mound, is erected at this time. *Cursus* monuments are built, consisting of pairs of earth walls flanked by ditches extending for miles across the countryside. These constructions may have been made in reaction to incomers who had a Corded Ware lifestyle or to natives who have taken it up. Some hilltop ritual sites show evidence of fortification and of assault by warriors using bows and arrows. The communal labor on henges may be a way of reinforcing traditional social

bonds and demonstrating their spiritual power in the face of the new and competing ideology.

3400–2300 B.C.E.

Pit-Comb Ware Culture: This is located in the Ural region extending to Finland and from the White Sea to the Upper Dnieper River and the Middle Volga River basin. It is characterized by pottery with pit decorations, often with comb-shaped motifs, a development of earlier Combed Ware. This style is associated with the arrival of incomers who seem to have a close interaction with natives of the sub-Neolithic Narva culture, with whom they join in gathering and shaping amber for export. Amber is shaped into disks, rounds, and convex beads. Some theorists believe that the Finno-Ugric language group in Finland had its beginnings with this culture rather than at an earlier time.

3000–2800 B.C.E.

The Corded Ware culture is adopted in the southern parts of Finno-Ugrian territory in the northern forest zone, including Finland.

(The survival of the non-Indo-European Finno-Ugric languages in the northern forest zone shows that, unlike most regions of Europe where Indo-European languages come to dominate—possibly spread by Corded Ware users—the arrival of Corded Ware here does not result in a similar language change. However, when Corded Ware arrives in Finland, the fact that it is people in coastal regions who come to use it while those in the interior do not may lead to the language divergence between the two groups, coastal peoples developing the Balto-Finnic branch of Finno-Ugric and interior peoples developing the Saamic branch.)

after 3000 B.C.E.

The use of the plow leads to cultivation on a larger scale; a need for more forest clearance leads to industrial scale flint mining for axes. Horses begin to be used in central Europe.

2500–1800 B.C.E.

Corded Ware and use of stone implements continues in Finno-Ugrian areas.

Bronze Age: 2500–800 B.C.E.

The few sources in Europe for the copper and tin used to make bronze are rare and highly sought; as a result the spread in the use of bronze of necessity is accompanied by the emergence of elites involved in the exchange cycles and long-range trading links that bring both copper and tin into the hands of smiths. Bronze is prestige material at least as important as gold or silver, and it is used to make ornaments as often as weapons or tools. Bronze is quite useless as a material for armor, yet bronze armor is made. Flint continues to be used during this period, notably to make arrowheads.

Early Bronze Age: 3200–1300

3200–1800 B.C.E.

Urban civilizations spread from the Fertile Crescent to Anatolia and Crete and result in the rapid emergence of regional bronze-using cultures in the Balkans, the Danube basin, the Carpathian Mountains, central Germany, and Italy. The Minoan culture emerges on Crete.

(The languages of Greece and the Balkans may have begun to diverge into the Hellenic and Thracian languages from a common Indo-European ancestor during the Early Bronze Age, as the proximity of Greece and the Aegean islands to Near East civilization and Mediterranean trade routes fosters a rapid development of technology and society there, while the Balkans and the Danube region, where

Thracian dialects are spoken in historic times, remain more isolated from these trends.)

2800 B.C.E.

Bell Beaker Culture: This culture expands from its beginnings in the Lower Rhine delta through northwestern coastal Europe to Britain and to southern Iberia, Italy, and Sicily. It represents a spread of the new values of aggressive individualism that began in central Europe with the Corded Ware complex. The characteristic bell-shaped beakers with incised decoration begin as a variant of Corded Ware in the Lower Rhine region; the complex quickly spreads by sea along the Atlantic coasts. Artifacts in burials, covered with a round mound, replace the Corded Ware battle-axes first with stone, then copper, and later bronze daggers; these are accompanied by barbed flint arrowheads and wrist guards of fine stone; bone belt fasteners complete the array. Images of belted warriors on stelae (inscribed standing stones) from the western Alpine region give an idea of the Bell Beaker warrior. Garments of woven wool are first made during this period; since wool can absorb dyes in contrast to the skin and linen used for clothing in the past, colorful clothing becomes another element in the trend toward ostentation and self-definition through appearance and possessions.

Bell beakers have been found with a residue showing they had contained mead flavored with herbs such as meadowsweet (known from pollen) or wild fruits. They seem to point to social rituals of individual hospitality in contrast to the great communal ceremonies that must have taken place in the henges and cursus monuments. The Bell Beaker ideology appears to arrive among the communal societies of the Atlantic coastal regions as a disruptive influence, more a movement of ideas than of whole peoples, though it is carried by the material means of alcohol and of horses. (The first appearance of horse-drawn chariots in these regions must have made as great an impression as the arrival of horses among the tribes of the North American plains.)

The complex may have been adopted by local elites that had emerged earlier under a Corded Ware influence or by people who had lived on the fringes of the closed megalith-building societies of the past. The reaction to the Bell Beaker phenomenon varies from place to place. In Ireland Beaker motifs are used in elaborately worked crescent-shaped gold necklaces (*lunulae*) and other ornaments, but drinking and burial practices are not adopted. In Wessex the first Beaker burials are located far from the henge monuments, as though to form with them a pole of opposing cultural values. The stone alignments such as Carnac in Brittany in France seem to be another response to the Beaker ideology.

Midway during this period the final construction at Stonehenge takes place, seeming to document the struggle between old and new, as the timber and earth henge idea of the past is reinterpreted in stone. Beaker people clearly take part in building the Stonehenge stone circle, as Beaker burials from the time are located close by. In about 2300 B.C.E. a partial circle of bluestones transported from Wales is erected and then dismantled. (There is still disagreement among scholars over whether the bluestones were transported by people, probably by boat, or were already present on Salisbury Plain as glacial erratics—stones deposited by glaciers.)

(In 2002 C.E. a typical Bell Beaker burial was found several miles away from Stonehenge, dating from 2300 B.C.E. Later Beaker burials would be in the immediate vicinity of the monument; thus this burial may document a stage in an ongoing process of rapprochement between Beaker users and henge makers. The inclusion of gold ornaments makes it the earliest Beaker burial representing that extent of wealth yet found in Britain. Analysis of the man's teeth shows that he was from somewhere in the Alpine region, perhaps Switzerland, a sign of the wide-range hege-

mony of the Beaker culture. Near him is buried a younger man who, judging by a shared skeletal abnormality, may be his son. Analysis of the younger man's teeth shows he was born and raised in Britain.)

The bluestones are erected in their present positions in about 2000 B.C.E. They are used in several temporary constructions during this period, which are hard to date but whose sequence was as follows: (1) a separate setting is made at the same time as the bluestone circle; (2) the separate setting is dismantled and the bluestones are raised into a circle and an oval that are incorporated into the sarsen circle design; and (3) an arc of stones is removed from the oval to create the present horseshoe shape. Again there is a sense that these buildings and rebuildings represent some sort of dynamic interplay of ideas.

The interior passage and communal burial chamber of the nearby West Kennet long barrow, first built in about 3600 B.C.E., are filled to the ceiling with rubble and earth in 1600 B.C.E., as though to close a chapter of cultural history. Whether Stonehenge represents the triumph of the Beaker ideology—social influence based on force and the possession of wealth—or a compromise in which Beaker elites partake of the spiritual power wielded by participants in communal rituals is unclear. (The existence of so influential a priestly class as the Celtic Druids a thousand years later suggests the latter, as does the account of sixth-century B.C.E. Greek geographer Hecateus of Miletus about the priests of the Hyperboreans of Britain worshipping Apollo in a remarkable round temple that may be Stonehenge.)

(An Indo-European language may have arrived on the Italian Peninsula, in Sicily, and elsewhere in the region with users of Bell Beakers beginning in a second wave in about 2500 B.C.E.—after the earlier wave associated with Corded Ware users, who never came to or emerged in this region. This language may have evolved into the Italic languages.)

(Parts of the Iberian Peninsula participated in the Bell Beaker phenomenon; it is possible that the characteristic Beaker weaponry and warrior status first emerged there. If the Beaker trade network brought an Indo-European language to Iberia, it either was never adopted by people there or else disappeared by historic times, because the Iberian language was not Indo-European. It is also possible that the people who built the large fortified centers in Iberia at this time had too robust and complex a society for Indo-European-speaking incomers to influence to any great extent; the evidence is that Beaker users were peacefully absorbed into Iberian society.)

2500–1600 B.C.E.

Balkan and Carpathian Bronze Age Group: Craftsmen here benefit from improved bronze-making techniques from the Caucasus region; the distribution of bronze products from this region leads to the establishment of important long-range trade routes across Europe. The most striking new form being made is a bronze battle-ax with a shaft hole, crafted in a two-piece mold.

2000 B.C.E.

Steppe peoples transfer knowledge of metal working to the copper-rich southern Ural Mountains. In succeeding centuries metal-working technology spreads through the Finno-Ugrian zone.

2000–1800 B.C.E.

Unetice or Bronze-Hoarding Cultures: In central Germany and Denmark massive accumulations of bronze objects are buried in hoards. Some of these hoards may have a sacral aspect in the sense of an offering to the gods; others consist of broken bronze objects and may have been buried by smiths to be melted down and reused.

El Argar Culture: In southern Spain hilltop settlements are built and livestock are reared.

2000–1500 B.C.E.

Peoples ancestral to later Baltic tribes possibly migrate to the Baltic Sea region.

3000–1200 B.C.E.

Minoan and Mycenaean Palace (Aegean) Cultures: Trade with Egypt fuels the emergence of civilization in the Aegean; Linear A script is invented; sailboats replace row galleys.

after 2000 B.C.E.

Horses are now used for pulling chariots in much of Europe.

1800–1300 B.C.E.

Wessex Culture: In Britain, extensive forest clearance promotes cattle rearing on a large scale, leading to the creation of wealthy elites living a warrior elite lifestyle and buried with rich grave goods, including sheet goldwork, amber, and bronze weapons made with the most advanced techniques of the time. The wealth of the Wessex culture may also derive from the importance of the region's rivers as routes for trade between western Britain and the Continent, along which ores important for the making of bronze, particularly tin from Cornwall, are carried by boat to launching points for crossing the English Channel.

Tumulus Cultures: Burials are covered with tumuli (mounds) in northern France and central Germany.

Nordic Bronze Age: Bronze making begins in Denmark and southern Sweden.

Relief-Band and Timber-Grave Cultures: Located northeast of the Black Sea, these cultures represent a continuation of the Pit Grave culture.

Abashevo Culture: Between Don and Volga Rivers, a Finno-Ugrian region, wealthy elites emerge who may engage in raiding on and trading with copper traders traveling through the region from the southern Urals south to east-west trade routes along the central steppe zone. This culture receives influences from steppe peoples, including multiple relief band pottery, decorated bone cheek pieces for horse bridles, and timber graves. Some burials are communal covered with a mound.

Sub-Neolithic Forest Cultures: In Norway, northern Sweden, and Finland farming is still supplemented by foraging and hunting.

1400 B.C.E.

The Mycenaean culture of mainland Greece replaces Minoan civilization as the dominant force in the Aegean as the latter is weakened by a catastrophic volcanic eruption 200 years earlier.

Late Bronze Age: 1300–800 B.C.E.

after 1300 B.C.E.

Through most of Europe there is a change from burial of the dead to cremation and deposition of ashes underground in urns; this has been called the Urnfield period.

In a central zone of temperate Europe from France to Poland a trend develops toward fortification, with hilltop forts and palisaded stockades.

There is a dramatic increase in the amounts of metal objects produced and in their complexity. Enormous hoards of metal objects from this period have been unearthed, displaying great progress in the skill of smiths. Multiple-piece rather than the simpler two-piece molds of earlier times are being used to form molten metal, allowing a greater variety of shapes. Sheet-metal working begins during this period, and bronze

armor is made: cuirasses, greaves, helmets, and shields, shaped and elaborately embossed by using hammers of various sizes. Such armor is useless for actual defense; experiment has shown that it can easily be penetrated by blows from a bronze sword. Its main purpose then must be decorative and/or ritualistic. The lost-wax method becomes important; in this method wax is shaped into the desired form and encased in clay, which is fired in a kiln, causing the wax to melt away, leaving a mold without seams. The ease with which wax can be worked enables smiths to create much finer and more subtle forms with more intricate detailing. These new techniques both enable and inspire smiths to endow even the most utilitarian objects, such as axheads, cauldrons, rivets, and buckles, with beautiful decoration and form.

The great increase in the volume of bronze being made implies a well-established, long-range trading network because the sources of copper were widely dispersed (Ireland, the Alps, Carpathians, and Balkans), as are the probable sources of tin (Cornwall, Brittany, and parts of Germany, Czechoslovakia, Spain, and Italy).

Many new domestic plants are adopted, including millet, legumes such as Celtic beans, and oil-bearing plants such as flax and poppy; there is greater specialization in different regions as to the predominant domestic animal, whether cattle, pigs, or sheep and goats. More systematic methods of herding horses are adopted as they become more widely used as prestige animals to carry warriors in battle; large ranches or estates replace the small fields of the past.

The adoption of cremation may indicate a different belief system concerning death and the body. Images of birds, often associated with wheeled carts, become important.

The Phoenicians establish trade routes throughout the Mediterranean region.

Armies of warriors called Sea Peoples carry out attacks from the sea. (Knowledge of them is based on Egyptian written sources. The Sea Peoples may have been groups of seaborne raiders who preyed on the lucrative trade routes of the Mycenaeans and Phoenicians; opposition to them on the part of the Mycenaeans may have caused them, in retaliation, to join forces into actual armies; they may have been joined by warrior bands from the north, the source of northern-style weapons that have been found from this period.)

c. 1200 B.C.E.

Aegean civilization collapses, possibly as a result of invasions, earthquakes, a massive drought, or a systems collapse caused by internal socioeconomic problems.

Northern forms of swords, spears, armor, ornaments, and other artifacts, such as statuettes of warriors with horned helmets, appear in the Mediterranean region, possibly by means of indigenous peoples' copying of styles, possibly introduced by outsiders such as war bands from the north.

(Evidence of technology transfer between the Thracian Balkans and Greek Mycenaean society during the Bronze Age suggests that Thracian-speaking peoples were coming into the Mycenaean sphere; Minoan-Mycenaean double axes have been found in the north, although they seem to have been used there as tools rather than in ritual. Hordes of forged and hammered sheet bronzework have been found in the Balkans dating to the time Mycenaean civilization was disintegrating, evidence that Thracian-speaking warriors played a part in this.)

1200–800 B.C.E.

Peoples in present-day Greece undergo a "Dark Age" after the collapse of the Mycenaean civilization; many migrate to Asia Minor and the western Mediterranean. New groups possibly migrate to Greece, probably including those referred to as Dorians by later Greeks.

c. 1050 B.C.E.

Widespread use of iron in Greece begins (thought to have been spurred by the disruption in the Mycenaean bronze trade network, iron replacing bronze).

c. 1000 B.C.E.

A culture archaeologically recognizable as ancestral to that of people known in historic times as Illyrians is established in the western Balkans.

c. 1000–900 B.C.E.

The Ionians of Greece begin to unite in confederacies, probably in the context of the collapse of Mycenaean civilization as different groups ally with one another in the face of the ensuing disruption of the Dark Ages. Greek refugees migrate across the Aegean to Anatolia from Attica and other central Greek territories.

Iron Age: 1000 B.C.E.–1200 C.E.

The transition to the Iron Age happens slowly and incrementally and earliest in Greece (around 1050), although iron is far more readily available than the copper and tin needed for bronze; iron is found throughout most of Europe. The melting point of iron is only slightly higher than that of copper, and bronze-working techniques are used at first in working iron. Recent research has raised the possibility that iron does not directly replace bronze at the end of the Bronze Age, but rather takes over the roles of flint, which had continued in use during the Bronze Age because of its superior hardness and cutting ability.

The Iron Age ends at different dates in different regions. Its end is often defined politically and socially rather than in terms of iron use, which of course has continued to the present. In Britain the Iron Age has usually been considered to end with the Roman conquest in 42 C.E., as the Iron Age culture of the Celts is radically modified by the Romans into a culture with true cities and a high level of civilization. This process occurs earlier in Gaul during the first century B.C.E. In Scandinavia the end date is often given as around 1200 C.E., when Christianity becomes a dominant force and the tribal societies of the Viking Iron Age give way to a medieval feudal society of powerful Christian kings and important urban centers emerge. For the Germanic tribes that destroy the Roman Empire, their conversion to Christianity during the ensuing centuries aids their transition from a tribal to a politically more advanced society.

1000–800 B.C.E.

Hallstatt Culture: This culture is named for the Austrian Alpine village of Hallstatt, where salt mining begins around 1000. Salt mines are dug in other locations in the region, such as Hallein. Hallstatt people bury their dead in large cemeteries; near Hallstatt itself is a cemetery that by the Iron Age contains 2,000 graves; some are richly furnished with trade goods from distant locations; some contain bronze models of cult wagons carrying birds and other animals such as stags, as well as worshippers and in one case a tall, slender goddess. Hill forts, walled hilltop settlements, and other defensive structures guarded by timber palisades are characteristic, because warfare is common. The chief weapon is the sword, and warriors carry bronze shields and wear bronze armor for display; actual armor is probably of leather or wood. The Hallstatt culture continues into the Iron Age and may be a part of the Celtic cultural complex. Its characteristic elements have been found over a wide area of central temperate Europe from the British Isles and France to Poland.

(The Indo-European languages of central and western Europe may have begun the basic differentiation into the Celtic and Germanic language families in association with many changes in society and culture

that occurred mostly in the region which would later be part of the Celtic world, the central temperate zone. This area increasingly feels the impact of proximity to the Mediterranean world with trade goods and influences leading to ever greater stratification and complexity of society and the development of town-like hill forts and then *oppida*, while people in the later Germanic lands of the north European plain and Scandinavia continued to live a far simpler tribal life based on villages and characterized by much less social stratification.)

after 800 B.C.E.

Horses are first ridden in eastern and central Europe.

PART TWO: HISTORIC PERIOD

c. ninth–eighth century B.C.E.

The Greek epics the *Odyssey* and the *Iliad* emerge and are credited to Homer; various tribal names are cited, such as Achaeans, Aeolians, Dorians, and Ionians.

c. late ninth–mid-eighth centuries B.C.E.

Phoenicians found the city of Carthage in North Africa.

c. 800 B.C.E.

Greeks begin to colonize Sicily.

c. eighth century B.C.E.

The disorders of the Dark Ages come to an end and the Greeks begin to found city-states; they rediscover writing, using the Phoenician alphabet.

Phoenicians establish trading colonies among the Iberians of the coastal Iberian Peninsula.

Etruscans expand their trade routes southward on the Italian peninsula.

The Scythians reach Europe from the Asian steppes, arriving in the territory of the Cimmerians.

eighth–fifth century B.C.E.

The Archaic Age occurs in Greece.

eighth century B.C.E.

The Olympic Games held at Olympia, the Pythian games at Delphi, the Nemean games at Nemea, and the Isthmian games at Corinth have major importance.

772 B.C.E.

The Assyrians conquer the kingdom of Israel.

753 B.C.E.

According to legend Rome is founded by Latins and Sabines.

c. 750 B.C.E.

The Etruscans form a loose confederation of city-states.

736–716 B.C.E.

Spartans capture Messenia (southwestern Greece).

733 B.C.E.

Greeks from Corinth found Syracuse on Sicily.

c. 720–714 B.C.E.

The Cimmerians invade Asia Minor.

seventh or sixth century B.C.E.

Celtic tribes migrate to the Iberian Peninsula.

660 B.C.E.

Greeks found Byzantium (on the site of later Constantinople); it serves as a trading center with the Thracians and Scythians.

c. 630 B.C.E.

Greeks establish trading colonies among the Iberians.

621 or 620 B.C.E.

Exceptionally severe laws called the Draconian Code are implemented in Athens; the death penalty is specified for every manner of crime; although these are not the first rules of law written and implemented, they are thought to be the first codes comprehensively recorded.

late seventh century B.C.E.

Greeks found coastal cities among the Illyrians of the eastern Adriatic coast.

600 B.C.E.

Greeks found the trading center of Massalia (modern Marseilles) among the Celts of southern France.

sixth century B.C.E.

Greeks extend their trade to the Black Sea region, having contacts with Caucasians.

Rome emerges as a city-state under Etruscan influence.

586 B.C.E.

The Babylonians out of Mesopotamia conquer Judah and destroy the Temple at Jerusalem, beginning the 50-year-long period of their rule, known as the Babylonian Captivity, in which many Jewish leaders are exiled; this and the subsequent scattering of the Jews, many of them to Europe, becomes known as the Diaspora.

c. 509

The Romans adopt a republican form of government.

490–479

The Persian Wars are fought between allied Greek city-states and Persia.

fifth century B.C.E.

The Etruscans established trade routes across the Alps in the Rhine-Moselle region.

c. 493 B.C.E.

The Romans sign a treaty with the Latin League.

480–323 B.C.E.

The period designated as the Classical Age occurs in Greece.

c. 478 B.C.E.

The first Delian League is founded by Athens and Ionian city-states in Asia Minor.

460 B.C.E.

Pericles gains rule of Athens; his period of power, with economic and cultural flourishing among Athens and other city-states of the Delian League, lasts until his death in 429 B.C.E.

mid-fifth century B.C.E.

Carthaginian Himilco explores Atlantic coast of Europe.

c. 443 B.C.E.

Greek historian Herodotus begins work on his *History* describing the geography of the known world in Europe, Asia, and Africa, including information on peoples and cultures.

431–404 B.C.E.

Athens and Sparta fight the Peloponnesian War, with Sparta victorious.

409 B.C.E.

The Carthaginians gain a foothold in Sicily.

c. late fifth century B.C.E.

The Carthaginians establish trading contacts with the Iberians.

c. late fifth–early fourth centuries B.C.E.

Celtic tribes cross the Alps into northern Italy and occupy territory, especially along the Po Valley.

c. fourth century B.C.E.

The Sarmatians arrive on Scythian territory in the Caucasus.

390 or 387 B.C.E.

Celts besiege Rome and lay waste to the surrounding countryside.

358 B.C.E.

The Macedonians under Philip II campaign against the Illyrians.

The Latin League is reorganized under Roman leadership.

343–341 B. C.E.

The Romans drive back the Samnites in the First Samnite War.

341 B.C.E.

Italic tribes of the Latin League revolt against the Romans, who dissolve the league in 338 B.C.E.

338 B.C.E.

The Macedonians under Philip II defeat allied Greek city-states.

336–335 B.C.E.

The Macedonians under Alexander III (the Great) consolidate rule in Illyria and Greece; Alexander receives a delegation of Celts.

332 B.C.E.

Alexander the Great founds the city of Alexandria in North Africa; in 333 B.C.E. he defeats the Persian King Darius I.

326–304 B.C.E.

The Romans defeat the Samnites and their allies in the Second Samnite War, but sporadic resistance follows.

c. 325 B.C.E.

Greek scholar and navigator Pytheas sails through the Strait of Gibraltar into the Atlantic Ocean and explores coastal Europe, including the British Isles.

312–264 B.C.E.

The most important of the Roman roads, the Appian Way, is constructed enabling easy access through Italic lands.

third century B.C.E.

Celts migrate to Asia Minor.

The Romans conquer Gallia Cisalpina.

298–295 B.C.E.

The Romans fight the Samnites and their allies in the Third Samnite War, gaining final victory at Sentinum in 295 B.C.E.

279 B.C.E.

The Galatoi (Celts) invade the Balkan Peninsula.

264–241 B.C.E.

The Romans and Carthaginians fight the First Punic War; Carthage is forced to give up holdings in Sicily.

238 B.C.E.

The Romans annex Sardinia.

237 B.C.E.

The Carthaginians occupy part of the Iberian Peninsula; in 227 B.C.E. they found New Carthage (Cartagena).

218–201 B.C.E.

The Romans and Carthaginians fight the Second Punic War; in 218 B.C.E. Carthaginian general Hannibal leads an army from Spain over the Alps into Italy; in 202 B.C.E. Hannibal suffers a major defeat at Zama in North Africa; Carthage is forced to give up territory in Spain.

215–205 B.C.E.

The Macedonians defeat the Romans in the First Macedonian War.

200–197 B.C.E.

The Romans defeat the Macedonians in the Second Macedonian War.

197 B.C.E.

The Romans establish colonies on the Iberian Peninsula.

195–190 B.C.E.

The Lusitani revolt against the Romans on the Iberian Peninsula; other revolts occurs in 154–150 B.C.E. and 147–139 B.C.E.

171–168 B.C.E.

The Romans defeat the Macedonians in the Third Macedonian War.

168–167 B.C.E.

The Romans defeat the Illyrians and capture Scodra.

167 B.C.E.

The Jews under the Maccabees revolt against Greek rule over Judah.

149–148 B.C.E.

The Romans defeat the Macedonians in the Fourth Macedonian War; Macedonia becomes a province of Rome in 146 B.C.E.

149–146 B.C.E.

The Romans and Carthaginians fight the Third Punic War; in 146 B.C.E. the Romans sack Carthage.

133 B.C.E.

The Romans begin to conquer Greek city-states.

102–101 B.C.E.

The Teutones and Cimbri, migrating Germanic tribes from northern Europe, are defeated by the Romans under Gaius Marius in southern France.

90–88 B.C.E.

Italic tribes seek equality with the Romans in the Social War, in 90–87 B.C.E. various tribes are granted Roman citizenship.

86 B.C.E.

Athens is sacked by the Romans under Lucius Cornelius Sulla.

80–73 B.C.E.

The Lusitani revolt against the Romans under the Roman expatriate Quintus Sertorius; they are pacified by troops under Julius Caesar in 61 B.C.E.

73–71 B.C.E.

Spartacus, a Thracian, leads a slave revolt against the Romans in the Gladiatorial War; despite early victories it ends in defeat.

c. 71 B.C.E.

The Suebi and other Germanic tribes under Ariovistus cross the Rhine and attack the Celtic Aedui; they are defeated by the Romans under Julius Caesar in 58 B.C.E.

67 B.C.E.

The Romans annex the island of Crete.

63 B.C.E.

The Romans under Pompey conquer Judah and established the province of Palestine, with Judea as the southern division.

c. 60 B.C.E.

The Dacians under Burebista begin expansion from west of the Black Sea into Hungary and defeat Celtic tribes, the Boii, Scordisci, and Taurisci.

58 B.C.E.

The Helvetii, a Celtic tribe out of Switzerland, attempt to migrate to France until driven back by the Romans under Julius Caesar.

57–56 B.C.E.

The Romans under Julius Caesar battle Celtic tribes of northern and western Gaul.

55–53 B.C.E.

Julius Caesar leads a Roman force across the Rhine into territory of Germanic tribes; he leads two military expeditions to Britain,

encountering tribes of Britons; he pacifies the Celtic tribes of northern Gaul.

52 B.C.E.

Vercingetorix of the Arverni leads united tribes of Gauls in a revolt against the Romans; it is suppressed by Julius Caesar.

50 B.C.E.

The Romans pacify the last resisting Gauls; in 49 B.C.E. Julius Caesar confers Roman citizenship on pacified inhabitants of Gallia Cisalpina.

48 B.C.E.

Julius Caesar defeats Pompey at Pharsala, becoming master of Rome and ending the republic; he is assassinated in 44 B.C.E.

35–33 B.C.E.

The Romans defeat the southern Illyrians.

29 B.C.E.

The Romans build a new city at Carthage.

The Romans defeat the Bastarnae, the easternmost of the Germanic tribes.

27 B.C.E.

Augustus becomes, in effect, emperor of Rome and reorganizes Gaul into three provinces—Gallia Belgica, Galli Lugdunensis (Gallia Celtica), and Gallia Aquitania—based on Julius Caesar's classifications of tribes.

19 B.C.E.

The Celtiberians, after a two-century-long sporadic resistance against Roman occupation of the Iberian Peninsula, are pacified.

17 B.C.E.

The Romans establish trade contacts with the Caucasians.

12–7 B.C.E.

The Romans take control of Germanic territory east of the Rhine.

6–9 C.E.

The Romans suppress an Illyrian revolt and found Illyricum.

9 C.E.

The Cherusci, Chauci, and Marci—Germanic tribes allied under Arminius—defeat the Romans at Teutoburger Wald, forcing the Roman frontier back from the Elbe to the Rhine.

16 C.E.

The Romans under Tiberius stop campaigning across the Rhine, establishing the river as the empire's northeastern boundary.

17 C.E.

The Cherusci defeat the Marcomanni.

c. 23 C.E.

Greek scholar Strabo completes his 17-volume *Geography*, describing the known world, including information on peoples and cultures.

43 C.E.

A Roman army under Emperor Claudius I invades Britain; in 48 C.E. the Romans invade Wales; in 50 C.E. they found Londinium (London).

51 C.E.

Caractacus of the Catuvellauni, a tribe of Britons, leads an unsuccessful resistance against the Romans in Britain; he seeks refuge with the Brigantes, but their queen, Cartimandua, turns him over to the Romans.

52 C.E.

The Silures defeat a Roman legion.

60–61 C.E.

Queen Boudicca of the Iceni, a tribe of Britons, leads an unsuccessful revolt against the Romans in Britain.

69–70 C.E.

A Roman cohort of Batavi with fellow Germanics from among the Sugambri mount an unsuccessful revolt against the Romans.

77 C.E.

Roman scholar Pliny the Elder publishes the encyclopedia *Historia Naturalis* (*Natural History*).

79 C.E.

The Italian city of Pompeii is destroyed by the eruption of Mt. Vesuvius.

79–85 C.E.

Roman general Gnaeus Julius Agricola campaigns in Scotland, defeating northern tribes known to the Romans as Caledonians at Mons Graupius in 84 B.C.E.

c. 98 C.E.

Roman historian Cornelius Tacitus publishes two works: *De Vita Iulii Agricola* (*Life of Agricola*) and *De origine et situ Germanorum* (*Concerning the origin and location of the Germans*) about Germanics and other peoples, such as the Fenni, probably Finno-Ugrians, and Aestii, probably Balts; and *De Vita Iulii Agricola* (*Life of Agricola*) about his father-in-law, Gnaeus Julius Agricola.

98–117 C.E.

The Roman Empire reaches its greatest extent under Trajan.

101–106 C.E.

The Romans campaign against the Dacians in the First Dacian Wars and Second Dacian Wars; in 107 the Romans create the province of Dacia.

122 C.E.

Roman emperor Hadrian tours Britain and orders the building of Hadrian's Wall.

127–147 C.E.

Alexandrian historian Ptolemy publishes the eight-volume *Geographia*, identifying European peoples.

142 C.E.

The Romans build the Antonine Wall in Britain north of Hadrian's Wall, the northernmost extent of the empire.

166–180 C.E.

The Romans drive back the Germanic Marcomanni, Quadi, and other allies from the provinces of Pannonia and Dacia in the Marcomannic Wars.

238

The Gothic confederacy begins raiding the lower Danube region.

mid-third century

The Franks live as two distinct groups, Ripuarian Franks and Salian Franks, along the Rhine River.

c. 250–280

Germanic tribes carry out attacks on the Roman Empire from across the Rhine-Danube frontier.

260

Incursions by the Germanic confederacy known as the Alamanni cause the Romans to abandon the frontier system along the Rhine and Danube Rivers.

260–273

Inhabitants of Gaul, Spain, and Britain form a Gallic empire independent from Rome.

267–268

The Goths plunder Athens; in 269 they are defeated by the Romans.

271

The Romans abandon the province of Dacia, probably leaving Latin-speaking peoples behind.

273

Emperor Aurelian reclaims Gaul for Rome.

275

The Alamanni, Goths, and Vandals overrun part of the Roman province of Dacia, defeating the Sarmatians.

278

The Burgundii move across the Danube but are repulsed by Roman forces.

c. 290

The Goths separate into groups that evolve into the Ostrogoths and Visigoths.

fourth century

Irish Celts, such as the Dál Riata, migrate to Scotland and battle for territory with the Picts.

313

Roman emperor Constantine I issues the Edict of Milan, tolerating Christianity within the Roman Empire.

330

Constantine I changes the name of Byzantium to Constantinople (modern Istanbul), the new capital of the Roman Empire.

332

The Visigoths sign a formal treaty with the Romans, agreeing to stay out of Greece.

370s

The Huns out of central Asia accompanied by Bulgars reach the Black Sea, beginning the conquest and displacement of various European peoples, including the Goths and Alans; the Ostrogoths and Heruli become their principal allies.

378

Roman emperor Valens is killed by the Visigoths and allied Alans at the Battle of Adrianople (modern Edirne, Turkey).

395

The Roman Empire is divided into the Eastern Roman and Western Roman territories under two emperors.

406

The Vandals, Suebi, and Alans cross the Rhine in an invasion of Roman Gaul; in 409 they invade the Iberian Peninsula.

410

The Visigoths under Alaric sack Rome.

Roman troops and government officials withdraw from Britain.

412–414

The Visigoths under Ataulf are granted territory in Roman Gaul; from there they expand into Spain.

413

The Burgundii create a kingdom along the Rhine River with a capital at Worms, the first Germanic kingdom within the old Roman imperial frontier; in 443 they establish a second kingdom along the Rhône River, with a capital at Geneva.

429

The Vandals under Gaiseric, under pressure from the Visigoths, enter North Africa from Spain; by 439 they seize Carthage from Roman control; in 440 they mount an invasion of Sicily.

433

St. Patrick begins preaching in Ireland.

434

Attila and his brother Bleda come to power among the Huns; *c.* 445 Attila becomes sole ruler.

440–446

The Huns carry out raids in the Balkans.

443

The Alamanni settle in Alsace, soon seizing territory in Switzerland.

fifth–sixth centuries

The Angles, Frisians, Jutes, and Saxons—Germanic tribes out of northern Europe—occupy parts of Britain; the kingdom Kent, founded by the Jutes, rises to dominance in the late sixth century.

451

The Huns and allied tribes under Attila invade Roman Gaul; they are defeated by allied Romans and Visigoths in the Battle of the Catalaunian Plains south of modern Châlons-sur-Marne in northeastern France.

453

Attila the Hun dies; in 455 his sons are defeated by allied Germanic tribes; the Hunnic Empire breaks up as the Huns disperse.

455

The Vandals and allied Alans under Gaiseric sack Rome.

460

The Bulgars settle northwest of the Black Sea.

469

The Ostrogoths defeat the Sciri.

476

The Sciri, Heruli, and Rugii, Germanic tribes led by Odoacer, capture Ravenna, the capital of the Western Roman Empire, causing the deposition of the last Western emperor, Romulus Augustus. (This date is cited as the beginning of the Middle Ages.)

486

The Franks under Clovis I capture the last Roman outposts in Gaul.

487

The Heruli and Sciri defeat the Rugii.

488–489

The Ostrogoths under Theodoric defeat the Gepids as well as the Sciri and allied tribes under Odoacer; in 493 after a period of joint rule of Italy with Odoacer, Theodoric assassinates Odoacer to become sole ruler.

496

The Franks under Clovis I defeat the Alamanni; Clovis I converts to Christianity about this time.

c. late fifth century

Slavic peoples possibly are living on the northeastern flank of the Carpathian Mountains.

c. 500

The Komi, a Finnic people of eastern Europe, split into various groups, some migrating away from the Kama River.

507

The Franks under Clovis I defeat the Visigoths.

508

The Lombards defeat the Heruli; the Heruli disperse.

c. 518

Allied Britons defeat the Anglo-Saxons at the Battle of Mons Badonicus in Britain (according to possibly mythical accounts).

520–550s

Slavs from the north bank of the lower Danube carry out raids into Byzantine territory to the south.

531–534

The Franks defeat the Thuringi and the Burgundii.

533–553

Justinian I wages war against the Vandals, Ostrogoths, and Visigoths, expanding the Byzantine Empire (Eastern Roman Empire) to its greatest extent, including Carthage in North Africa; the Byzantines regain control of Italy in 552.

c. 540

Roman statesman Cassiodorus writes *Historia Gothica* (History of the Goths); the original manuscript is lost but Jordanes's abridgment of it,

published in 551, *De origine actibusque Getarum* (also known as *Getica*), survives.

mid to late sixth century

Slavic tribes reach Moravia, Bohemia, and Poland

The Anglo-Saxons begin to establish kingdoms in Britain.

559–561

The Avars, originally out of Asia, reach the lower Danube; they disperse the Bulgars; by the **late sixth century** the Avar Empire is at its height.

567

The Lombards and Avars, with the complicity of the Byzantines, defeat the Gepids.

568

The Lombards under Alboin invade Italy; in 572 Alboin founds Lombardy.

570–602

Avars and Slavs attack coastal towns on the Adriatic, Aegean, and Black Seas, until driven back temporarily by the Byzantines; the Slavs settle the Balkans in the seventh century.

590–604

Pope Gregory I reforms the Catholic Church.

597

St. Columba converts Pictish king Brude to Christianity; St. Augustine converts Anglo-Saxon king Aethelberht, and the church of Canterbury is founded.

seventh century

Arabs take all of Byzantine Africa and much of eastern territory.

605

The Byzantines cede Lombards much territory in northern Italy.

623

Frankish merchant Samo leads the Slavs in a successful revolt against the Avars on the middle Danube and creates a kingdom, staying in power until 658.

626

The Avars attack Constantinople and are repelled.

679

The Western Bulgars come to power in Bulgaria, the start of the First Bulgarian Empire; in 680 they overrun Slavic lands in the Balkans; in 681, they defeat the Byzantines, preserving their territory.

685

The Picts of Scotland defeat an army of Anglo-Saxons from Northumbria.

The Khazars drive the Arabs from the northern Caucasus region.

698

Arab forces seize control of Carthage.

eighth century

The Khazars are dominant in western Russia and Ukraine.

The Picts attain their height of power.

eighth–ninth centuries

Various Caucasian and Turkic peoples of the Caucasus region adopt Islam.

711

The Moors (Arabs and Berbers) under Tarik ibn Ziyad invade the Iberian Peninsula and defeat the Visigoths.

720s

The Carantanians founded a state known as Carantania or Karantania; it is conquered by the Franks in 787.

731

Anglo-Saxon historian the Venerable Bede publishes *Historia ecclesiastica gentis Anglorum* (*Ecclesiastical History of the English People*).

732

The Franks under Charles Martel defeat the Moors at Tours in southern France, pushing them back into Spain; Charles Martel becomes secular leader of Christendom in the West.

737

Itil on the lower Volga becomes the capital of the Khazars.

751

Pepin III deposes Childeric III, the last Merovingian ruler, and becomes the first king of the Carolingian Franks.

772–804

The Franks under Charlemagne wage campaigns against the Saxons.

773–774

Charlemagne defeats the Lombards in Italy; Charlemagne is crowned king of the Lombards.

778

Charlemagne invades Muslim Spain, capturing Barcelona.

785

The Franks under Charlemagne defeat the Frisians.

790s

Vikings out of Scandinavia raid Scotland, Ireland, and France.

796–805

The Franks under Charlemagne campaign against and defeat the Avars.

ninth century

Tribes in the Baltic region—Balts and Finno-Ugrians—coalesce into groups that become part of the historic record.

Rascia, the first Serbian state, is formed in the mountains of Bosnia.

800

Charlemagne of the Franks is crowned emperor of the West, an event that is claimed as the birth of the Holy Roman Empire.

800–950

Groups known as Domba, ancestors of the Roma (Gypsies) migrate from northern India westward.

804

The Franks under Charlemagne defeat the mainland Saxons.

830

Magyar and Khazar clans unite into a tribal confederation.

843

Kenneth I MacAlpin, king of the Scots, creates the kingdom of Alba, which includes the Picts (Alba evolves into Scotland).

The Treaty of Verdun partitions the Frankish Empire among Charlemagne's three grandsons as three kingdoms.

858

Vikings sail through the Strait of Gibraltar into the Mediterranean Sea.

c. mid-ninth century

Novgorod, an important trading center, is founded probably by Viking traders.

863

Cyril and Methodius, Eastern Orthodox Christian missionaries, travel to Moravia to convert the population.

860s

The Vikings settle in the Faeroe Islands from where they expand overseas.

865

Boris I of the Western Bulgars converts to Christianity.

c. 870

Moravia is recognized as an independent kingdom by the Franks.

c. 870–*c.* 930

The Vikings colonize Iceland.

871

Alfred assumes the Wessex throne; in the next years, he successfully defends England against Danish armies, defeating them, at Edington in 878, creating the *danelaw* in 880 (Danish territory in England), and recapturing London from them in 886.

c. 876–879

Several provinces ruled by Croats unite to form a state.

877

The Duchy of Burgundy is founded.

882

Kiev, ruled by the Rus, becomes the capital of the principality of Kievan Rus, united with Novgorod.

c. 895

The Magyars under Árpád settle in Hungary.

late ninth century

Harold I Fairhair unites much of Norway.

10th century

The Pechenegs control territory north of the Black Sea in Ukraine and Russia.

c. 906–907

The Magyars defeat the Moravians; the state of Moravia is dissolved; freed of Moravian dominance, the Bohemian state rises to power.

907

Oleg of the Rus leads an alliance of Eastern Slavic tribes in an unsuccessful attack on Constantinople.

911

Rollo of the Vikings founds Normandy; a lineage of Normans is started.

912

Vikings are recorded as having reached the Caspian Sea by way of eastern Europe.

922

The Eastern Bulgars convert to Islam and found a state.

925

King Tomislav is crowned first king of Croatia by decree of the Roman Catholic Church.

930

The Althing, an annual parliament, is established in Iceland; the Republic of Iceland forms.

955

German forces under King Otto I defeat the Magyars on the Lechfeld.

962

Otto I of Germany is crowned emperor (of what is to become known as the Holy Roman Empire) by Pope John XII, in effect becoming the first Holy Roman Emperor.

963

Luxembourg is founded as an independent entity.

965

The Rus defeat the Khazars.

966

Mieszko I of the Polonians is christened Catholic; during this period he campaigns against and gains hegemony over other Slavic tribes in the Oder-Vistula region.

968

The Pechenegs attack Constantinople and are repelled.

980–1015

Vladimir I establishes dynastic seniority of his clan over all the territories of the Rus and spreads Eastern Orthodoxy.

11th century

Albanians migrate southward into Greece, where they become known as Arvanites; others end up in Greek territory because of changing boundaries; migrations continue over the centuries.

1000

Stephen I is anointed first king of Hungary.

Boleslaw I is anointed first king of Poland.

Roma are recorded as living in Persia, Turkey, and Greece.

1018

The weakened Bulgarian Empire is annexed by the Byzantines.

1018–1035

The Danish king Canute the Great rules a kingdom that includes Denmark, Norway, Southern Sweden, and England.

1036

The Rus defeat the Pechenegs.

1054

The Eastern Roman Empire (Byzantium) breaks with the Roman Catholic Church.

1057

Gruffudd ap Llwelyn unites the kingdoms of Wales.

1064

The Cumans defeat the Pechenegs.

1066

The Normans defeat the Anglo-Saxons at the Battle of Hastings; William I the Conqueror is crowned king of England.

1086

The *Domesday Book*, a report on the Norman's economy, is published.

1096–1099

The First Crusade to the Near East is undertaken by Christian forces, culminating in the capture of Jerusalem from the Seljuk Turks.

12th century

The Kipchaks are dominant on the eastern European steppes and in the northern Caucasus.

1130

Roger II of the Normans creates the kingdom of Sicily, which includes Sicily as well as Norman possessions in southern Italy.

1139

Portugal becomes independent from Castile and León; Alfonso Henriques proclaims himself Alfonso I, the first king of Portugal.

1147–1149

The Second Crusade to the Near East is undertaken.

1160

Henry the Lion, Duke of Saxony, defeats Slavic tribes in northern Germany near the Baltic Sea, after which German settlers and missionaries settle the region.

c. 1167

Stephen Nemanja founds the Nemanjic dynasty in Serbia.

1185–1186

The Western Bulgars revolt against the Byzantines and create the Second Bulgarian Empire.

1189–1192

The Third Crusade to the Near East is undertaken.

1198

The first crusade to the Baltic region is sanctioned; in 1202 Bishop Albert von Buxhoevden establishes the military and religious order Brothers of the Sword to Christianize Baltic lands.

1201

The Germans found the city of Riga in Latvia.

1202

The French defeat the Normans and gain control of Normandy.

1204

Crusaders sack Constantinople during the Fourth Crusade, the occupiers found the Latin Empire of Constantinople.

1215

King John of England signs the Magna Carta, establishing the concept that royal power is not absolute.

1236–1238

Mindaugas begins uniting the Lithuanian tribes, including the Lithuanians and Samogitians.

1237

The Mongols defeat the Kipchaks and eastern Bulgars; in 1239 the Kipchak confederation collapses.

Two German military and religious orders active in the Baltic region to convert pagan peoples of the region—the Brothers of the Sword and the Teutonic Knights—unite, becoming known as the Livonian Order of Teutonic Knights.

1238

The Mongols capture Moscow; in 1240 they capture Kiev; in 1241 they invade Poland.

1243

The Mongols and subject Tatars found the Kipchak khanate in eastern Russia.

1245

The Cumans, a branch of the Kipchaks, settle in Hungary.

1260

The Mongol Empire is divided into four khanates.

1261

The Byzantines retake Constantinople.

1262

The king of Norway is recognized as the ruler of Iceland.

1278

Rudolf I of Hapsburg conquers Austria; the Hapsburg dynasty remains powerful until 1918.

1290

Osman I proclaims Ottoman Turk independence from the Seljuk Turks and begins a period of expansion.

1288–1391

Jews are expelled from Naples, England, France, and Spain.

1291

The Crusades end with a rout of Christian forces by Muslims at Jerusalem. Three Forest Cantons—Schwyz, Uri, and Unterwalden—sign a treaty of mutual defense, forming the Swiss Confederation; other cantons join the confederation in later centuries.

1297

Monaco is settled by the Genoese family known as Grimaldi and becomes a state.

1310

Radu Negru founds the principality of Walachia in southern Romania under the control of the Hungarians.

1347–1351

The Black Death (bubonic plague) ravages Europe, with subsequent outbreaks.

1381

Commoners rebel in England in the Peasants' Revolt.

1389

The kingdom of Montenegro, southwest of Serbia on the Adriatic Sea, is founded when Serbs, defeated by the Ottoman Turks, hide out.

1391–1395

The Turks and Turkic-speaking Mongols under Tamerlane (Timur) invade western Russia and defeat the Mongol Golden Horde and subject peoples.

1397

Queen Margaret I unites Denmark, Sweden, and Norway in the Union of Kalmar; the union is dissolved in 1523.

1400–1416

Owain Glyndyr leads a revolt against the English in Wales.

1410

A Lithuanian-Polish army defeats the Teutonic Knights at Tannenburg.

1415

Jan Huss, an anti-Catholic reformer of Bohemia, is burned at the stake for heresy; in 1420–34 fighting occurs between his followers and the Holy Roman Empire, known as the Hussite wars.

1429

Joan of Arc leads a French force in relief of Orléans under siege by the English.

1431

The Russians defeat the Eastern Bulgars.

1440s

The Kipchak khanate breaks up into four independent Tatar khanates.

1444

Albanian chieftains are united under Skanderberg (George Kastrioti).

1453

Constantinople falls to the Ottoman Turks, ending Byzantine rule; the Turks rename the city Istanbul.

France defeats England, ending what is known as the Hundred Years' War; the English are driven from France.

1455–1485

England experiences a civil war known as the War of the Roses, brought to an end by Henry Tudor, who as Henry VII founds the Tudor dynasty.

1466

East Prussia is ceded to Poland.

1471

Switzerland becomes the first nation-state to pass anti-Roma laws; other nations follow suit over the centuries.

1478

The Spanish Inquisition is started by Ferdinand II and Isabella to punish heresy.

The Grand Principality of Muscovy destroys the Principality of Novgorod and divides it into five parts.

The Crimean khanate becomes a vassal state of the Ottoman Turks.

1479

Spain unites under Ferdinand II and Isabella I.

1480

Ivan III of Moscow defeats the Tatars.

1492

The Moors are defeated at Granada; Moorish power ends in Spain; remaining Jews are expelled from Spain along with many of the Moors; the Roma are also subject to persecution.

The Italian Christopher Columbus, exploring for Spain, lands in America.

1494

France and the Holy Roman Empire compete to control Italy.

16th century

Russian Slavs expand southward onto Tatar lands.

1504

The Roma are expelled from France; in 1530 they are expelled from England.

1516–1546

Barbarossa, a Muslim (called a Saracen by some Europeans), leads raids out of North Africa on Mediterranean coastal cities as well as on European ships in the Atlantic Ocean.

1517

Martin Luther posts his Ninety-five Theses, the beginning of the Protestant Reformation.

1519

Charles I of Spain becomes Charles V, Holy Roman Emperor; in 1527 Charles takes control of Rome, Milan, and Sicily; in 1549 Belgium, Netherlands, and Luxembourg are ceded into the Spanish Empire.

1534

Henry VIII establishes and heads the Church of England.

1536

Wales is united with England.

Norway becomes a province of Denmark.

1545–1563

The Council of Trent reforms the Catholic Church.

1547

Hungary is divided, with the Hapsburgs of Austria governing the west, and the Ottoman Turks the central area.

Ivan IV becomes the first czar of a united Russia.

mid-16th century

The Ottoman Empire reaches its greatest extent under Suleiman, including much of central and eastern Europe.

1555

Holy Roman Emperor Charles V signs the Peace of Augsburg, establishing the right of princes to choose Lutheranism or Catholicism for their territories.

1558–1582

Poland, Russia, and Sweden dispute over and divide Livonia (now part of Latvia and Estonia) in the Livonian War.

1558–1603

During the reign of Elizabeth I England becomes a European naval power, commerce and industry grow, and the arts flourish.

1571

The Ottoman Turks conquer Cyprus.

1579

Seven northern Dutch Protestant provinces form the Union of Utrecht; in 1581 the United Provinces of the Netherlands declare independence from Spain; the southern provinces remain loyal to Spain.

1581–1582

Yermak leads the Cossacks against Tatar forces on behalf of the Russian czarist government.

1588

England under Elizabeth I defeats the invading Spanish Armada.

1598

The Edict of Nantes grants considerable freedom to French Protestants.

1603

James I becomes king of England and Scotland, founding the Stuart dynasty.

1618

The Thirty Years' War unites German Protestant princes with France, Sweden, and Denmark against the Hapsburgs of Austria and Catholic princes of the Holy Roman Empire; the war is sparked by a Protestant rebellion in Bohemia, where papal officials are thrown from a window (the Defenestration of Prague).

1628

The Nenets of Arctic Russia come under Russian rule.

1631

The Roman papacy recognizes San Marino as an independent nation.

1636

The *Annals of the Masters*, are compiled tales of ancient Irish peoples, are published.

1642

The English Civil War begins.

1648

The Peace of Westphalia ends the Thirty Years' War and leads to increased religious tolerance; Spain recognizes the independence of the Netherlands.

1649–1660

Oliver Cromwell governs England as a Commonwealth.

1668

Under the Treaty of Lisbon, Spain recognizes Portugal's independence.

1670–1671

The Cossacks under Stenka Razin rebel against Russian rule.

1685

Louis XIV of France revokes the Edict of Nantes.

1689–1725

Peter I (Peter the Great) carries out reforms, introducing Western European civilization into Russia; in 1712 he founds St. Petersburg and makes it Russia's capital.

1699

Most of Hungary is ceded to Austria by Ottoman Turks.

1700–1721

Denmark, Poland, and Russia fight Sweden in the Great Northern War; by the terms of the Treaty of Nystad in 1721, Sweden cedes Karelia to Russia.

1701

The kingdom of Prussia is founded.

1701–1714

European dynasties struggle for the throne of Spain in the War of the

Spanish Succession; in 1714 Spain loses many of its European holdings, such as Gibraltar, to Great Britain.

1706–1707

The Act of Union unites England and Scotland, forming Great Britain.

1719

Vaduz and Schellenberg become Liechtenstein, an independent principality of the Holy Roman Empire, ruled by the Liechtenstein family.

1733–1735

European dynasties struggle for the throne of Poland in the War of the Polish Succession, with a final reshuffling of territories negotiated in the Treaty of Vienna.

1740

Frederick II (Frederick the Great) is crowned king of Prussia and begins building it into European power.

1756–1763

In the Seven Years' War England and France compete for supremacy in colonial North America and India, and the house of Austria and the kingdom of Prussia compete for power in Germany.

1775–1783

The American colonies gain independence from Great Britain in the American Revolution.

1783

Territorial partitions among Russia, Prussia, and Austria inspire the Polish Revolutionary War.

1785

The North Caucasus is designated a Russian province.

1789–1792

In the French Revolution, the monarchy of Louis XVI is overthrown; in 1792 France is declared a republic.

late 18th century

The Russian Empire expands into the Black Sea region, Caucasus, Poland, Ukraine, Belarus, and Moldavia.

1801

Great Britain and Ireland are formally united.

1804

Napoleon I Bonaparte declares himself the emperor of France.

1806

Napoleon establishes a series of French-dependent German states known as the Confederation of the Rhine, ending the Holy Roman Empire.

1809

During the Napoleonic Wars, Sweden loses Finland to Russia.

Sweden becomes a constitutional monarchy.

1810–1825

Most of Spain's overseas colonies win independence.

1812

The French under Napoleon invade Russia and are defeated.

The Ottoman Turks recognize Serbian autonomy.

1814

Denmark cedes Norway to Sweden; Iceland remains part of Denmark.

1815

In the Battle of Waterloo Napoleon is defeated by the English and Prussians.

The German Confederation, a union of 39 independent states, and the kingdom of Poland are formed at the Congress of Vienna; Netherlands unites with Belgium and Luxembourg to form a kingdom.

1829

Greece wins independence from the Ottoman Empire; the Treaty of Constantinople of 1832 defines its modern boundaries and places it under the protection of Britain, France, and Russia.

The Catholic Emancipation Act frees Irish Catholics from repression by England.

1830–1831

Belgium rebels against Dutch rule to establish an independent nation.

1831

Poland declares independence from Russia but the rebellion is crushed.

1834–1859

Shamil, possibly of Avar ancestry, leads the people of the Caucasus in an unsuccessful struggle for freedom from Russia; in 1864 Russia annexes the North Caucasus after suppressing the last tribal resistance in the region.

1845–1854

The Irish potato famine leads to the great emigration.

1848

Revolutions (known as the Revolutions of 1848) occur throughout Europe; French, Italians, Germans, Danes, Poles, Czechs, Slovaks, Hungarians, Croats, and Romanians demand greater freedoms from their own governments or from the empires dominating them.

1853–1856

Great Britain, France, and Turkey defeat Russia in the Crimean War.

1856

Slavery is abolished in Romania, an event known to the Roma as *Slobuzenja*.

1860–1861

The kingdom of Italy is formed, including most of the Italian Peninsula, Sicily, and Sardinia; in 1866 Italy annexes Venice, and in 1870 occupies Rome; in 1871 Rome becomes Italy's capital.

Monaco is recognized as an independent state under the protection of France.

1861–1862

Moldavia and Walachia are united as Romania.

1867

Austria-Hungary, a dual state, is established, existing until 1918.

1870–1871

France and Germany fight in the Franco-Prussian (or Franco-German) War, with Germany victorious.

1871

The German states are united as the German Empire, as organized by the Prussian Chancellor Otto von Bismarck.

A new provisional government in France establishes the Third Republic.

1877

The British Empire reaches its greatest territorial expansion.

1878

The European powers call a conference, the Congress of Berlin, to revise the European map following the Russo-Turkish Wars of 1875–78, last in a series of wars between the Russians and Ottoman Turks starting in the 18th century.

The Pomaks try unsuccessfully to create an autonomous region in Bulgaria.

1881

Attacks on the Jews are condoned by authorities in Russia, the first pogrom.

1897

The Jewish Zionism movement is founded.

1905

Norway gains full independence from Sweden.

1908

Serbia leads the creation of the Balkan League, which includes Montenegro, Bulgaria, and Greece in order to fight for independence from Austro-Hungary and Turkey.

1912–1913

The Balkan Wars are fought, two consecutive wars fought among the countries of the Balkan Peninsula for possession of European territories held by the Ottoman Empire; in 1913 a conference of the Great Powers—Britain, Germany, Russia, Austria, France, and Italy—revise the European map.

1913

Crete, independent since 1898, unites with Greece.

1914

The assassination of the Austrian archduke Francis Ferdinand by a Serbian nationalist leads to outbreak of World War I (the Great War), in which the Central Powers of Austria-Hungary, Germany, Bulgaria, and the

Ottoman Empire fight against the Allied Powers of Great Britain, Russia, Italy, France, Belgium, Montenegro, and Japan; the war lasts until 1918.

1916

The Easter Rebellion against British rule takes place in Ireland.

1917

The Russian Revolution overthrows the monarchy of Nicholas II; the Bolsheviks seize power.

During the Russian Revolution, Finland declares its independence from Russia; in 1918 the country is torn by civil war.

The sinking of the *Lusitania* by a German U-boat leads the United States to join the Allied Powers in World War I.

Serbs, Croats, Slovenians, and Montenegrins unite in a union of South Slavs under the Pact of Corfu.

The Ukrainian Republic declares independence; Bolsheviks invade Ukraine, creating Soviet Ukrainian Republic.

1918

An armistice is signed, ending World War I.

With the Austro-Hungarian monarchy defeated, Hungary proclaims itself a republic.

The Kingdom of the Serbs, Croats, and Slovenes, led by Peter I of Serbia, forms.

Moravia, Bohemia, and Slovakia form the independent state of Czechoslovakia.

Poland declares independence from Russia.

Estonia, Latvia, and Lithuania declare independence from Russia and Germany.

Denmark recognizes Iceland's independence by the terms of the Treaty of Union; the Iceland republic is proclaimed in 1944.

1919

The Treaty of Versailles is signed revising the European map.

The Weimar Republic is founded in Germany.

Finland becomes a republic.

Benito Mussolini introduces fascism in Italy.

The League of Nations is formed.

1921

The Anglo-Irish Treaty creates the Irish Free State (later known as the Republic of Ireland) within the British Commonwealth of Nations.

1922

The Union of Soviet Socialist Republics (USSR; Soviet Union) is established.

Fascist Benito Mussolini becomes the prime minister of Italy.

1923

Adolf Hitler forms the National Socialist Party in Germany.

Turkey is declared a republic after a revolt that ends the sultanate.

1925

Cyprus becomes a British Crown colony.

1929

The Kingdom of Serbs, Croats, and Slovenes becomes Yugoslavia.

1934

Adolf Hitler and the Nazis assume power in Germany.

1934–1939

Joseph Stalin purges the opposition in the Soviet Union.

1936

The Rome-Berlin Axis agreement is signed by Hitler and Mussolini.

1936–1939

The Spanish civil war pits Nationalists (or Insurgents) against the Republicans (or Loyalists); the right-wing Nationalists under Franco triumph.

1938

Germany annexes Austria; German Jews are the target of concerted violence on Kristallnacht (the Night of Broken Glass).

1939

Germany annexes Czechoslovakia.

Italy annexes Albania.

Germany invades Poland.

The Allied powers of the British Commonwealth (except Ireland) and the French declare war on the Axis Powers of Germany, Italy, and Japan, beginning World War II; the war lasts until 1945.

1939–1940

Russia defeats Finland in the Russo-Finnish War.

1939–1945

During World War II, millions of Jews lose their lives in the Holocaust; hundreds of thousands of Roma are also executed; other groups are also targeted, such the mentally ill, homosexuals, and political dissidents.

1941

The German invasion of the Soviet Union ends the nonaggression pact between Germany and the Soviets.

The Japanese attack on Pearl Harbor leads the United States to join the Allied Powers against the Axis Powers.

1943–1944

Joseph Stalin accuses various Muslim peoples living in the Caucasus region—Caucasians and Turkics both—of collaborating with Nazi Germany and orders the deportation of many to Soviet Asia; many die en route; in 1956–57 some of the survivors are allowed to return to their homelands.

1944

The Soviet Union annexes Estonia and Lithuania.

1945

Leaders of the Allied Powers meet at the Yalta Conference.

The Allied Powers divide Germany into the American, British, French, and Soviet zones.

The Potsdam Conference marks the end of World War II.

Serbia becomes a Communist republic under the Yugoslav Socialist Federation.

1945–1946

Nazi war criminals are tried at Nürnberg (Nuremberg), Germany.

1945

The League of Nations is replaced by the United Nations (UN).

1946–1958

The Fourth Republic is established in France; many of France's colonies gain independence; Italians vote to establish a republic.

1947

The Marshall Plan, a program of United States economic aid to rebuild Europe, is announced; the European Recovery Act in 1948 authorizes the plan.

1948

The Americans, British, and French integrate their sections of Berlin into one economic entity.

The state of Israel is founded from part of ancient Palestine as a homeland for the Jews.

1949

The Council of Europe, an organization of European states, is established to achieve a greater unity among the member nations on the basis of common traditions of political liberty.

The North Atlantic Treaty Organization (NATO), a military alliance of Western nations, is formed.

Two German republics, East Germany and West Germany, are established; the city of Berlin in East Germany is divided between them.

1950

French foreign minister Robert Schuman proposes idea of a union of European nations in a speech on May 9, 1950, celebrated as the birthday of the European Union.

1955

East Germany and West Germany become sovereign states.

The Warsaw Treaty Organization (the Warsaw Pact) is formed, a military alliance of the Soviet Union, Bulgaria, Czechoslovakia, Hungary, Poland, and Romania.

1956

The Hungarian Revolution overthrows the Communist dictator; the Soviet Union crushes the uprising.

1957

By the terms of the Treaty of Rome the European Economic Community (EEC; Common Market) is formed to promote European development; the original 12 members are Belgium, Denmark, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, United Kingdom, and Spain.

The Soviet Union launches *Sputnik I*, the first artificial satellite, into space.

1958

A new constitution establishes the Fifth Republic in France; Charles de Gaulle becomes president.

1960

Cyprus becomes an independent republic; in 1975 the Turkish Federated State of Cyprus in northern Cyprus is established.

The European Free Trade Association (EFTA) is formed.

1961

Yuri Gagarin of the Soviet Union becomes the first human in space and the first to orbit around the Earth.

The East German government builds the Berlin Wall around the West German sector of Berlin.

Valentina Tereshkova of the Soviet Union becomes the first woman in space.

Alexei Leonov of the Soviet Union becomes the first human to walk in space.

1964

Malta declares full independence from Great Britain.

1967

Three organizations—the European Economic Community (EEC), the European Coal and Steel Community (ECSC), and the European Atomic Energy Community (Euratom)—merge as the European Community (EC).

1968

The Soviet Union invades Czechoslovakia following a rebellion.

The Basque separatist organization, Euzkadi Ta Azkatasuna (ETA), is founded.

1972

The Irish Republican Army (IRA), opposing English rule in Northern Ireland, carries out attacks known as Bloody Friday.

1973

East and West Germany establish diplomatic relations; they join the United Nations.

The European Space Agency is formed.

1978

Under a new constitution, Spain becomes a democratic parliamentary monarchy.

1979

The United Nations recognizes the Rroma as a distinct ethnic group.

1980

The Polish Solidarity trade union forms.

1986

The Chernobyl nuclear plant in Ukraine melts down.

The Saami of various nations adopt a flag.

1986–1987

The European Community formulates and adopts the Single Europe Act, which revises the Treaty of Rome, committing the EC to establishing a single market in which all trade barriers and customs frontiers are eliminated.

1989

Poland holds elections to form a government free of Soviet domination.

The Velvet Revolution takes place in Czechoslovakia.

The Communist government in East Germany collapses, and the Berlin Wall, separating East German and West German sectors, is dismantled; in 1990 East Germany and West Germany are reunited under the government of the former West Germany.

Serbia invades Kosovo, ending its autonomy.

1990–1991

The Soviet Union dissolves into loosely allied republics as the Russian Federation; some former Soviet states declare independence, among them Belarus, Estonia, Latvia, Lithuania, Moldova, and Ukraine in Europe; other nations formerly under Soviet influence, among them Albania, Belarus, Bulgaria, Croatia, Czechoslovakia, Macedonia, Romania, Slovenia, and Yugoslavia, begin new period of self-determination.

1992

The Russian government gives the Cossacks status as an ethnic group.

Bosnia and Herzegovina declare independence from the Serbs in Yugoslavia; ethnic conflicts of Croat and Muslim nationalists against the Serbs erupt into civil war; Serbia and Montenegro form the Federal Republic of Yugoslavia; in 1995 the Dayton Peace accord establishes the two states, consisting of Bosnian Muslim and Croatian territory, and Serb territory.

1992–1993

The federation of the Czech Republic with Slovakia is dissolved; Czechoslovakia splits into two republics, the Czech Republic and Slovakia.

1992

The Maastricht Treaty (formally, the Treaty on European Union) is signed in Maastricht, Netherlands, by the members of the European Community (EC), including Belgium, Denmark, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, the United Kingdom, and Spain; the treaty takes effect in 1993, creating the European Union (EU).

Belgium becomes a federalist state with the three autonomous regions of Flanders, Wallonia, and Brussels.

1993

Andorrans vote to establish their first constitution, declaring themselves a parliamentary co-principality; Andorra joins the United Nations.

Monaco and San Marino join the United Nations.

1994

The Channel Tunnel between the United Kingdom and France is officially opened.

1994–1996

Following a declaration of independence from the Russian Federation by the Chechens of Chechnya, fighting occurs between the Chechens and Russians; in 1999–2000 renewed fighting takes place, with Chechen resistance continuing to the present.

1995

Austria, Finland, and Sweden join the European Union.

1997

The North Atlantic Treaty Organization (NATO) and Russia sign a cooperation pact, in 1999 Poland joins NATO.

Wales and Scotland vote to create their own legislative bodies.

1998

A secessionist rebellion erupts in Kosovo against the Federal Republic of Yugoslavia, leading to an air bombardment of Yugoslavia by the North Atlantic Treaty Organization (NATO) in 1999 and an agreement calling for the withdrawal of Serbian forces from Kosovo and their replacement by NATO peacekeeping troops, with Kosovo a UN-administered region.

The Good Friday Agreement negotiated by Irish and British heads of state leads to the formation of an independent government of Northern Ireland in 1999.

2002

The euro—euro-denominated coins and bills—goes into circulation in 12 of the 15 European Union member states, replacing national currencies.

2003

The European Convention in Brussels drafts a treaty for a constitution for the European Union.

The Federal Republic of Yugoslavia becomes Serbia and Montenegro.

2004

Cyprus, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, the Slovak Republic, and Slovenia join the European Union.

2005

The European Parliament, the representative assembly of the European Union, gives approval for the membership of Romania and Bulgaria (scheduled for 2007); French and Dutch voters vote no to the ratification of the European Constitutional Treaty.

GLOSSARY OF CULTURAL TERMS

abbot The superior of a monastery or abbey for men, specifically one following the Benedictine rule or certain other orders. The word *abbot* has a linguistic forebear in the Aramaic word for *father*; the man elected abbot is granted both civic and spiritual authority over other members of his community.

acropolis Originally the upper fortified part of the ancient Greek city of Athens on which the Parthenon stands; later any usually fortified or strengthened high point of a city or district. From the Greek *akros* meaning “topmost; extreme” and *polis* meaning “city.”

adaptation Change in behavior of an individual or group in response to a new cultural situation or a new physical environment (sometimes through the application of information and technology).

amber A hard translucent fossil resin, yellow to brown in color, that takes a fine polish. It is typically found in alluvial areas and some seashores, as in the Baltic Sea region.

amici Latin for “friends;” used for people who were allies of the Romans.

amphora (pl. *amphorae*) A jar or vase, typical of the ancient Greeks, having a large oval body, narrow cylindrical neck, and two high handles.

animism The belief that natural phenomena and inanimate objects possess souls and personalities.

annals A written record of events arranged by the year; a type of **chronicle**.

anthropology The study of humankind; from the Greek *anthropo*, “human being,” and *logy*, “doctrine; theory; science.” Anthropology encompasses the physical, racial, social, and cultural origins; development; geographical distribution; and characteristics of the human animal. The science of anthropology can broadly be subdivided into “physical anthropology” and “cultural anthropology.” (Anthropology is subdivided into four main fields: **archaeology**, **ethology**, **linguistics**, and **paleography**.)

archaeology (archeology) The recovery, reconstruction, and study of material evidence (such as fossil relics, implements, and artifacts) of bygone peoples and cultures to determine their ways of life. From the Latin for “antiquarian lore” and before that from the Greek word *archaio*, “ancient,” and *logy*, “doctrine,” “theory,” or “science.”

archon The chief **magistrate** of ancient Athens.

Arianism (Arian Christianity) A theological movement initiated by the Greek ecclesiastic Arius (c. 250–336) maintaining that God is unknowable and separate from all other beings and that Jesus Christ is a created being and not a divinity in the fullest sense.

artifact An object made by humans (as distinguished from a natural object).

Atlantic wheelhouse A later development of the stone Atlantic **roundhouse** of northern Iron Age Scotland, the name referring to the interior walls that radiate out similarly to spokes from the center; wheelhouses were sunk into the ground; only their thatched roofs and upper walls were visible from the outside.

augur One who foretells the future from omens; an official position in ancient Rome.

barbarian The term in its original sense meant “alien” or “foreign,” originally applied as non-Greek, then non-Roman, and non-Christian. It developed the connotation of someone uncivilized.

barrow A large earthen or stone mound placed over the remains of the dead; used synonymously with the term *cairn* or *tumulus*. In England *barrow* can refer to a hill.

basileus Among the Mycenaeans a minor official who helped the *wanax* administer his court. The term also was used as the title of the ruler of the Eastern Roman Empire as well as the title of Anglo-Saxon rulers of Britain.

basilica In ancient Rome a building used for public assembly or a court of justice; typically oblong with a semicircular apse (projection). The term was also used for early Christian church buildings, also with apses.

B.C.E. “Before the Common Era.” B.C.E. has replaced B.C., the term used for dates before the birth of Christ according to the Christian calendar.

Black Death (bubonic plague) An epidemic across Europe and Asia in the 14th century, which killed somewhere between 20 to 40 percent of the European population. It was named for the black patches (hemorrhages) that commonly formed on the skin of its victims.

B.P. “Years before the present,” in which 1950 C.E. represents the present, the year the calibration curves for carbon dating were established. B.P. dating tends to be approximate.

boyar Member of an old Russian aristocratic order ranking just below the ruling princes; the rank of boyar was abolished by Peter the Great.

broch A drystone round tower used for fortification by the ancient Scots; some 30 to 42 feet tall and 40 to 80 feet in diameter, brochs often consisted of double walls surrounding apartments and overlooking a central court. From a Scottish word meaning “borough.”

Bronze Age Arbitrary technological stage invented as part of a three-part system (Stone or **Paleolithic Age**, **Bronze Age**, and **Iron Age**, with sometimes the **Copper Age** included as a phase); the dates vary from region to region. In a general sense the Bronze Age was the period from about 2500 B.C.E., when bronze making was adopted in the Balkans and Danube-Carpathian regions, to about 1050 B.C.E., when iron use began to be important in Greece.

Early Bronze Age—The period from about 2500 B.C.E., the start of bronze making in southeastern Europe and the spread of the Bell Beaker complex, to about 1800 B.C.E., when bronze making had begun to reach the rest of Europe, including Scandinavia.

Middle Bronze Age—The period from about 1800 B.C.E. to 1300 B.C.E., during which bronze making was important in most of Europe, chariot-using steppe cultures begin to influence central Europe, and urban civilization arrived in the Greek mainland.

Late Bronze Age—The period from about 1300 B.C.E., when new bronze-working techniques led to a proliferation of new forms, to about 1050 B.C.E., when widespread iron use began in Greece.

burgh A town in Scotland that is incorporated with local jurisdiction.

bylina (pl. *byliny* or *bylinas*) A traditional form of orally transmitted Old Russian and Russian heroic narrative song, folk epic, or ballad; from the Russian for “what has been.”

cairn A typically cone-shaped pile of stones used as a burial site during the Neolithic Age and the Early Bronze Age. *Cairn* also refers to a heap of stones piled up as a memorial, a landmark, or sometimes a boundary marker. The word is of Scottish Gaelic origin. It is not clearly distinguishable from **barrow**, with which it is sometimes used interchangeably.

caliph A spiritual leader of Islam, often with political power as well; successors of Muhammad. Caliphate is the office or dominion of the caliph.

carnyx (carnex) A Celtic trumpet, used in warfare. Nearly man high they had mouths fashioned to look like beasts.

cashel A stone circular enclosure surrounding buildings, particularly church buildings. From the Middle Irish and ultimately the Latin word for “castle.” See also **rath**.

castellan A commander or warden of a stronghold, typically with military, judicial, and fiscal powers over local populations.

C.E. “Common Era.” C.E. is used in place of A.D., a term that means *Anno Domini*, “in the year of the Lord,” or after the birth of Christ in the Christian calendar.

censor One of two officials in ancient Rome, chosen from former consuls, who were responsible for taking the census, especially accounting for holdings of property; administered public finances; and inspected morals and conduct.

chronicle A written record of events arranged sequentially. **Annals** and **sagas** are types of chronicles.

city-state A state consisting of an independent city and territories under its control.

civitas (pl., *civitates*) A Roman political community; a self-governed region based largely on preexisting Celtic tribal territories. Each *civitas* had a capital, often at the location of a Celtic **oppidum**, although new towns were sometimes established.

clan A multigenerational social group within a **tribe**, made up of several families who trace descent through either the male or the female line (“patriclan” or “matriclan,” i.e., a patrilineal clan or matrilineal clan) from a common, sometimes mythical, sometimes real, or totemic ancestor.

colonization The process of establishing control of a territory in a foreign, commonly distant location, where the new settlers retain ties to their country of origin.

comitas A warrior band or society formed around the nucleus of a successful war leader, one whose good fortune

in war signaled the favor of the gods. Typical of Germanic tribes.

composite bow (reflexed bow) A bow made of varying layers of wood, horn, and sinews for extra tension. Typical of the Huns and other steppe peoples.

confederation (confederacy) An alliance of nations or states whose association is commonly based on a desire for mutual support. *Confederation* and *confederacy* have ancestors in the Latin terms that mean “agreement” or “compact.”

consul Either of two annually elected chief magistrates of the Roman Republic, who held the **imperium**, the divine authority for their power.

Copper Age Also known as the Aeneolithic period (Latin *aenus* means “of copper or bronze”) and the Chalcolithic period (Greek *chalkos* means “copper”); it refers to the times when copper was used to make various small tools, although such usage was sporadic. The Copper Age was a transitional age between the Neolithic and Bronze Ages. As with other ages the dates attributed to the Copper Age vary. The period can be placed to 5000 B.C.E. in southeastern Europe to 3200 or 2500 B.C.E. elsewhere.

crannog An artificial island built in a lake or marsh, constructed by driving a circular framework of vertical timbers into the lake floor and filling it with boulders and clay topped with a timber, clay-covered platform on which a house was built. It served also as a fort. Typical of the Celts of the British Isles. From the Middle Irish word meaning “wooden structure” and, before that, the Irish word meaning “tree.”

cremation The practice of reducing a dead body to ashes by burning. It is a very old custom, long associated with deaths in battle.

Crusades Any of eight major (and other minor) military expeditions marshaled by Western Christian powers between the years 1095 C.E. and 1291 C.E. (and even later, according to some reports); their purpose was to reclaim the Holy Land from the Muslims. The term is also applied to campaigns against pagan peoples in the Baltic region.

culture The learned customs characteristic of a given people. Culture includes behavior and beliefs, as found in institutions and rituals, as well as material objects, such as tools, clothing, and art. The term *culture* is also used in reference to particular societies or communities. In archaeology the term can refer to a cluster of diagnostic characteristics, or a recurring assemblage used to identify a group of associate sites.

curragh (currach; curach; skin boat) A type of boat constructed from oiled animal hides covering a light wooden frame. It is also called a skin boat. Pointed at both ends, it resembles a large canoe. Although normally propelled by oars,

it can be rigged with a sail. The curragh has been used especially in waters off Ireland.

cylix (pl. *cylixes*) A two-handled drinking cup, typical of the ancient Greeks, having a shallow bowl set on a stem and a foot.

czar (tsar) The ruler of Russia before the Russian Revolution in 1917. In medieval Russia before the 1453 fall of Constantinople *czar* was the title for the head of the Orthodox Christian Church.

democracy Any government by the people, or majority rule. The ancient Greeks practiced direct democracy in their city-states; in representative democracy people exercise their power indirectly, through representatives chosen periodically at free elections. From Greek terms meaning “populace” plus “strength” or “form.”

dendrochronology The practice of dating and interpreting the past on the basis of analysis of tree rings.

dialect A variety of a language, commonly regional, that is distinguished from other regional counterparts in the same language by pronunciation, grammar, and vocabulary.

diaspora A large-scale migration of a people. From the Greek term meaning “dispersion” or “scattering.”

differentiation (social) The process by which a culture becomes more complex through increasing specialization.

diffusion The movement of ideas or technologies over space and time.

dolmen A monument consisting of at least two upright stones topped by a stone placed horizontally. Believed to be a tombstone, the dolmen was found throughout prehistoric Britain and France. From the Breton words meaning “table” plus “stone.”

domestication The process of adapting an animal or plant to suit better the needs of human beings.

dun A fortified residence typical of the ancient Scots. Fortification consisted of either two or more concentric circular earthen mounds surrounding the residence containing a moat between them or a wall and a circular mound holding palisades. From the Old Irish word meaning “fortress.”

dromos (pl. *dromi* or *dromoi*) A long passageway to a subterranean tomb (a *dromos* tomb); often cut in rock as found among the Mycenaeans.

Druids Specialized class of priests, seers, philosophers versed in nature study. Associated with healing and teaching, politics and judicial systems, and known also for practice of sacrificial rites and for cruelty. Pre-Celtic, but associated with

many Celtic tribes through Roman rule. Pliny connects the word *druid* with the Greek word *dryas* meaning “oak tree.”

duchy (dukedom) The territory or jurisdiction of a duke or duchess.

dynasty A family, group, or class with authority over others, which has the power to choose its successors.

earthwork Any construction made primarily of earth and stone. Applied to permanent and temporary mounds, enclosures, and embankments.

elegiac Poetry using the elegiac meter in rhymed couplets, typically in elegies commemorating the dead. It originated in ancient Greece.

emir From the Arabic word meaning “commander” or “prince,” *emir* is both a title and a term for a ruler or chief in Islamic countries. The jurisdiction of an emir is an emirate.

emporium A place of trade, that is, a marketplace, among the ancient Romans; from the Greek *emporos* for “traveler” or “trader.”

eponym In these contexts *eponym* refers to the legendary ancestor after whom a tribe believes it is named. More generally *eponym* is one for whom something is named.

ethnicity The term is applied to the quality shared by members of a group whose association with each other is based on common cultural, national, racial, or linguistic attributes.

ethnogenesis The birth of new tribal groupings.

feudalism (feudal system) A system of political organization based on the obligation of a *vassal* to a superior related to the holding of land.

fibula (pl. fibulae) A metal clasp in the shape of a modern safety pin, used by the Greeks and Romans and other ancient peoples.

flaking (knapping, chipping) Removing flakes of stone, usually from chunks of flint, chert, or obsidian, to shape tools or points.

foederatus (pl. *foederati*) Latin term meaning “federate” or “confederate.” Applied to auxiliary troops from among other peoples serving in the Roman army.

folkright The collective will of a people as embodied in rules and laws that have been established over time, whether or not recorded in writing.

forum In ancient Rome the forum was the public gathering place and the center of public business. It was a centrally

located open air area surrounded by public buildings and colonnades.

fresco (pl. frescoes) The art of painting on freshly spread plaster before it dries with water-based pigments, or the painting itself executed in fresco.

galley (galley ship) A variety of wooden vessels powered mainly by oars, but in some cases by sails as well. The term is primarily associated with the vessels of ancient civilizations surrounding the Mediterranean Sea but also applies to the **longship** of the Vikings.

gavelkind A system of inheritance practiced in Anglo-Saxon Kent (until 1925), in which the lands of the landholder who died without a will were divided equally among the heirs.

gorget Piece of armor that protects the throat.

hegemony A political term used to describe leadership or dominance, particularly the strong influence or authority of a government.

Hellenism The ancient Hellenic thought or customs or ideals associated with ancient Greece, including a love of knowledge, arts, and reason, and a belief in civic responsibility and moderation. The term, from Greek words that mean to imitate the Greeks or speak Greek, also refers to the Greeks as a national or cultural group.

helot The lowest of the people of ancient Sparta, serfs attached to landed estates; possibly derived from the name of the town Helos in the region of Laconia conquered by the Spartans.

henge Any circular Bronze Age structure surrounded by a bank and ditch (and found in England); derived from Stonehenge, the immense circular monument of large stones surrounded by an earthwork constructed during the Bronze Age in England.

hieroglyphic writing A system that consists primarily of pictographs (pictorial characters), representing words or ideas (as opposed to a sounds, as in alphabet writing or in syllabaries). The term was originally used for the picture writing of ancient Egyptians and later applied more broadly.

hill fort (hill-fort) A Celtic stronghold built on a hill with ditches, earth ramparts, and wooden palisades, serving as a permanent settlement, a refuge in times of war, or a sacred site. Hill forts were first built in the Bronze Age but were more typical in the Iron Age. A Celtic fortified settlement on lower ground is known as an *oppidum*; one constructed as an artificial island, a **crannog**.

hominid A creature of the family Hominidae (order Primates). Only one hominid species currently exists: *Homo sapiens*.

hoplite A heavily armed infantry soldier in ancient Greece.

horde A clan or tribal group of nomadic Mongolian tent dwellers claiming jurisdiction over a defined area.

horizon An anthropological term for a particular cultural period, as evidenced in archaeology by a level or stratum. Or a geological term for a deposit of a particular time, usually identified by distinctive fossils.

hunting-gathering (hunting-and-gathering) Subsistence in which food is obtained solely through hunting, fishing, and foraging for wild plant foods. All peoples were hunter-gatherers until the invention of agriculture.

Ice Age (or Ice Ages) A period of repeated glacial to interglacial cycles, eight in all, which began at the Middle Pleistocene boundary in about 730,000 B.P. and ended around 10,000 B.P.

icon A pictorial representation of Christ, the Virgin, and the saints. From the Greek word meaning “image.”

Iconoclasm A religious movement within the Byzantine Empire, primarily during the eighth and ninth centuries; its members opposed the use of icons in the Orthodox Church.

imperium The divine authority for power, a concept perhaps passed to the ancient Romans by the Etruscans.

Indo-European The large group of related languages derived from a single root, called proto-Indo-European. Indo-European language families include Baltic, Celtic, Germanic, Greek, Indo-Iranian, Italic, Romance, Slavic, Illyrian, and a number of smaller groupings.

inhumation Grave burial.

Inquisition A papal tribunal of medieval and early modern times devoted to inquiring into (from a Latin root that means inquire into), combating, and punishing heresy, sorcery, apostasy, and witchcraft; violence was typically involved.

in situ Latin for “in place.” Archaeologists use the term to describe an artifact at the point of discovery, when it has not been removed from its surrounding soil.

Iron Age An arbitrary technological stage invented as part of a three-part system (Stone, Bronze, and Iron); the dates vary from region to region. In a general sense the Iron Age was the period from about 1050 B.C.E., when iron use began in Greece, to the beginning of the Roman Empire in 27 B.C.E. and annexation of large parts of central Europe and Britain during the first centuries B.C.E./C.E. (The Iron Age ended in Scandinavia in the 12th century C.E. with the adoption of Christianity and the emergence of strong kingdoms.)

khan A Mongol or Tatar lord or prince. A **khanate** is the dominion or jurisdiction of a khan.

kingdom The territory or jurisdiction of a king or queen.

kurgan A long and round burial mound.

laird A landed proprietor or owner of a small estate in Scotland.

language family A term used in linguistics to describe two or more languages, distinct but with elements in common and related historically in that they are descended from a common language.

La Tène Stylized curvilinear art style (named after a site in Switzerland) developed in the Rhine-Moselle region after 500 B.C.E. under the influence of Etruscan trade goods. La Tène elements were widely copied and incorporated into local styles throughout temperate Europe from Ireland and Britain to northern Italy to Poland and Transylvania. The style remained influential well into the Roman period. La Tène influences can be seen in the illuminated manuscripts of early medieval Ireland.

lawagetas A leader among the Mycenaeans, below the **wanax**; perhaps a war leader.

limes A boundary; the Roman frontier line extending from the Rhine near Koblenz to the Danube near Regensburg. The Romans fortified this line with forts and watchtowers. The Rhine line from the North Sea to Koblenz and the Danube line from Eining to the Black Sea are referred to as the wet *limes*.

lingua franca Literally “Frankish language” in Italian, the original Lingua Franca was a common language spoken in Mediterranean ports during the Middle Ages, probably developed by traders and/or crusaders. It included elements of French, Italian, Spanish, Greek, and Arabic.

linguistics The scientific study of human speech or of a specific language, in which particular attention is paid to the association between speech and writing.

longship A type of galley used by the Vikings in the fjords of their homeland in Scandinavia and for their travels to other parts of Europe and North America. Two types of Viking ships have been called by that name: the *drakkar*, meaning “dragon ship,” or the *langskip*, meaning “longship”; and the *knorr* or *hafskip*, meaning “half-ship,” also called *kautskip*, “merchant ship.”

lost wax A process in metal casting in which a piece of wax is fashioned in the desired shape, then encased in clay; the heating causes the melting of the wax and the firing of the clay, creating a mold into which molten metal can be poured.

lyre A stringed instrument related to the harp used by the ancient Greeks especially in the accompaniment of song and recitation (the lyric).

magistrate A general term for an official entrusted with the administration of laws, from the Latin *magistratus*.

major domus During the first Frankish dynasty (500–751 C.E.) the person to whom the *seneschal* would answer; translates roughly as “mayor of the palace.”

mark (march) A territorial border or frontier, typically defended by soldiers, or the region beside a boundary line.

material culture Artifacts or other physical objects left by past cultures, such as projectile points or ceramic vessels.

Medieval Warm Period Also called Little Climatic Optimum, the period was one of worldwide warming that occurred between the 11th and mid-13th centuries. Scholars believe the warmer weather and reduced sea ice influenced the increase in exploration by the Vikings.

megalith A large stone monument, typically chambered tombs from the Neolithic Age found in western Europe.

megaron The great central hall of the Mycenaean house, usually rectangular with a circular hearth in the center; also called the king’s hall.

menhir A **monolith** standing alone or as one in an avenue or circle. From the Breton words meaning “stone” plus “long.”

Mesolithic Age (Middle Stone Age) The period from 8000 B.C.E. to the beginning of farming in southeastern Europe in approximately 7000 B.C.E.

microlith An extremely small stone tool made to fit into a handle of bone or antler and associated primarily with the Mesolithic Age.

midden A refuse heap marking the site of human habitation.

Middle Ages Period of European history from the fall of the Roman Empire to the start of the Renaissance (approximately 500–1500 C.E., although the latter date can vary by a century or so).

monasticism With an ancestor in a Greek word believed to mean “to live alone,” monasticism names the religious ascetic movement in which its members separate themselves from society and devote themselves to practicing good works above and beyond those required of others in their religion.

monolith A single stone shaped into a pillar, monument, or statue.

monotheism The belief in a single, all-powerful god.

mosaic A picture or design made by placing small colorful pieces of stone, shell, feathers, or other material onto a mortar.

myth A traditional story, typically of the distant past, containing supernatural elements and involving spiritual beings and legendary beings, and/or the origins and history of a people or a natural phenomenon.

mythology The body of myths of a people; the study of myths.

Neanderthal A species of **hominid** (*Homo sapiens neanderthalensis*) widespread in Paleolithic Europe. From the name of a valley in Germany where remains were first found in 1856.

Neolithic Age (New Stone Age) The period from the earliest appearance of farming around 7000 B.C.E. to 5000 B.C.E., when copper metallurgy begins in Greece and the Balkans.

ogham Irish linear script from the fifth century C.E. or earlier, developed from Latin. Ogham letters consist of strokes inscribed on each side of or crossing a stem line. Ogham inscriptions were often carved on stones, with the strokes cut along a stem line represented by an edge of the stone.

oligarchy A form of government in which power is concentrated in the hands of a few.

oppidum (pl. *oppida*) A Celtic fortified settlement built on lower ground than a hill fort. Many developed into extensive towns, typically with well-planned street layouts.

paganism A religion with a belief in a **polytheism** as opposed to the **monotheism** of Christianity, Judaism, or Islam.

Paleolithic Age (Old Stone Age) Arbitrary technological stage invented as part of a three-part system (Stone, Bronze, and Iron); the dates vary from region to region. In a general sense the Stone Age was the period from about 1.7 million B.P., the date of the earliest known hominid fossil in Europe, to the end of the last Ice Age cycle around 10,000 B.P.

Lower Paleolithic—The period from about 1.7 million B.P., the beginning of the Paleolithic Age, to about 200,000 B.P., the date of the oldest known Neanderthal fossils.

Middle Paleolithic—The period from about 200,000 to 40,000 B.P., the approximate date of the beginning of the Aurignacian tool industry associated with late Neanderthals and early modern humans (earliest fossil found so far is dated to 36,300 B.P.).

Upper Paleolithic—The period from about 40,000 B.P. to 10,000 B.P., the end of the last Ice Age.

paleontology The study of fossil remains and ancient life-forms.

palisades (stockade) A fence of upright logs placed around a village for purposes of fortification.

patriarch Any one of the bishops of the sees of Constantinople, Antioch, Alexandria, Moscow, and Jerusalem, who has authority over other bishops.

patrician A member of one of the original citizen families of ancient Rome; they were the landowning nobles by birth for whom a common person, a **plebeian**, might work. The term was eventually used in a general sense to refer to a person of high birth or aristocrat.

phalanx In its broad military sense any body of troops in close array; in ancient Greece it named a block of armed infantry standing shoulder to shoulder in deep and solid rank and file. The phalanx is considered the beginning of European military development.

plebeian (pleb) A common person in ancient Rome, typically in service to a **patrician**.

pogrom A massacre of helpless people, usually organized by government officials.

polis The basic larger social unit of the ancient Greeks (aside from tribe and family), consisting of the city and the community of its people, that is, the city-state. The term was later used in a general sense for a state or society, a **polity**, having a sense of community.

polity Various permutations of political organization; it can mean simply “political organization,” or it can refer to a specific form of political organization. The term also can refer to the form of government of a religious denomination.

polytheism Belief in and worship of more than a single god.

praetor An ancient Roman **magistrate** ranking below a **consul**, typically one who performed judicial functions.

prefect An official or **magistrate** of various ranks and functions in the Roman Empire.

prehistory The cultural stage of a people before written records.

primogeniture From the Latin words meaning “first” plus “birth,” the term refers to the exclusive right of inheritance under English law that benefits the eldest son or male heir and excludes all female and younger male descendants.

principality The territory or jurisdiction of a prince.

rath (ring fort) A small circular earthen enclosure containing single houses, sometimes with an outbuilding. A **cashel** is a stone-built equivalent of a rath.

Reformation The religious revolution that began in the Roman Catholic Church during the 16th century and became a basis for the establishment of Protestantism. Two of its notable leaders were Martin Luther and John Calvin.

reiks A war leader of Germanic peoples, below the *thiudans*.

Renaissance Literally “rebirth”; the Renaissance is the European period of rebirth of interest in classical values and pursuits generally said to have begun in 14th-century Italy and continued into the 17th century. The Renaissance is viewed as a transitional era between medieval and modern times.

rhyton A drinking vessel of ancient times, which had the shape of part of an animal or mythological creature, especially its head.

roundhouse A round dwelling constructed by the Celts by using a variety of materials. Those of stone found in Scotland are called Atlantic roundhouses.

rune Writing symbols used by Germanic peoples from about the third century C.E. The runic alphabet is thought to be derived from both Greek and Latin. Runes were used as magic signs as well as alphabet characters.

rune stone A stone with a **rune** inscription.

saga A tale, often a poetic narrative; originally applied to stories of heroic deeds, both historical and legendary, of the Vikings.

sarsen One of the large sandstone blocks scattered over the chalk downs in England. Also called a sarsen stone or druid stone.

see A seat of power or throne. Typically used in reference to the authority or jurisdiction of a bishop.

seignorialism A system of political, economic, and social relations between seigneurs, or lords, and their dependent farm laborers.

seneschal In feudal times the person in charge of a lord's estate.

serf From the Latin word meaning “slave,” the term has at least two distinct senses: In 12th- and 13th-century England it designated a person of the lower class of the feudal system, who was bound to the soil and subject to the owner of the land. In Germany, Poland, and Russia of the 17th and 18th centuries it referred to a member of various unemancipated farming classes.

shire An administrative subdivision of land ruled by a sheriff (shire-reeve) in England predating the Norman Conquest of

1066. After the Norman Conquest *shire* was superseded by *county*.

Silk Road A system of overland routes (not a constructed road) crossing nearly 4,000 miles of Asia and used for about 1,500 years for trade between the East and the West. It was named for silk, a valued commodity transported over it.

situla (pl. *situlae*) A deep vase-like vessel with a wide opening at the top; the Celts made them in bronze.

socius (pl. *socii*) A person or people in alliance with the ancient Romans, who did not have the rights of Roman citizens.

specialization The process of changing to adapt or adjust one's acts or behavior so that they are in harmony with changed conditions or a changed environment.

stela (pl. *stelae*) An upright slab or pillar, typically sculpted with an inscription and often used as a gravestone.

steppe (*steppeland*) A level grassy treeless plain, as found in southeastern Europe or Asia.

Stone Age See *Paleolithic Age*.

subsistence The means of supporting life.

subtribe A subdivision of a tribe, or a subordinate tribe.

suzerainty The dominion or authority of a feudal lord with regard to a subject.

symposium (pl. *symposia*) A gathering of ancient Greeks, typically characterized by drinking, music, and conversation. The term evolved to refer to a formal meeting at which addresses are presented on a topic or related topics.

taiga The swampy, coniferous forest region that begins where the **tundra**, lying to the north, ends.

tartan The name given the plaid textile design used in Scotland to designate a particular clan.

tell A mound of decayed building material built up over successive generations.

tenant farmer A farmer who works on land that is owned by another and who pays for the use of the land (either in produce or in cash).

theme Originally a military unit stationed in the provinces in the Byzantine Empire; by the seventh century *theme* was applied to the military districts used as buffers against Muslim encroachments. By the 11th century the force of themes had

waned; their decline contributed to the fall of the Byzantine Empire.

Thing A council among the Vikings, held at a Thingstead, a sacred or historic place. The Germanic term has survived in the name of the Storting, Norway's parliament; in the Allting, Denmark's parliament; and in the Althing, Iceland's parliament.

thiudans A type of sacred king of Germanic peoples, more powerful than a *reiks*.

tholos (pl. *tholoi*) A circular tomb in the shape of a beehive, typical of the Mycenaeans; also called a dome tomb. The term is also applied to round buildings in later classical Greece.

torc (*torque*) A neck ring made of metal wires twisted together so as to resemble a rope or cord, with an opening in the front and molded terminals welded to the ring ends.

totem An animal, plant, natural object, natural phenomenon, or legendary being serving as the symbol of a tribe, clan, family, secret society, or individual. *Totemic* is the adjective form. A Native American-derived word.

tribe A general term applied to different kinds and degrees of social organization. Tribes usually have a common language, culture, kinship, territory, history, and purpose and comprise a number of bands (subtribes) or towns.

tumulus (pl. *tumuli*) A burial mound; see also *barrow* and *cairn*.

tundra The treeless plain of the Arctic region, frozen in winter and marshy in summer, with a permanently frozen subsoil (permafrost) and low-growing vegetation, such as mosses, lichens, and dwarf shrubs. To the south of the tundra lie the forests of the **taiga**.

tyrant An absolute ruler or monarch unrestrained by law or constitution; the Greek spelling was *tyrannos* (or pl. *tyrannoi*).

Urnfield period From 1300 B.C.E., when over most of Europe there was a change from burial of the dead to cremation and deposition of ashes underground in urns in cemeteries, to around 900 B.C.E., when burial practices began to change again.

vassal One who has placed himself under the protection of a superior who gives land in return for loyalty and military protection.

villa A country estate or property, as used by the Romans in foreign lands.

wanax The term for the king or highest ruler among the Mycenaeans; the *lawagetas*, perhaps a war leader, was below him; the *basileus* also helped him rule.

warrior society A club or sodality with exclusive membership, a common military purpose, and particular ritual organized around warfare.

yeoman (pl. yeomen) A member of the class between the gentry and the laborers in England. A yeoman (perhaps a con-

traction of *young man*) could serve as a retainer in a noble household or own land.

yurt (ger) A dwelling of central Asian nomadic peoples, a circular domed tent that consists of skins or felt stretched over a collapsible framework.
