"*The Emperor has no clothes!* Remember those words in the story?"

After that the boys stopped bothering the editors with questions and showing the huge collection of pictures they

carried around in a backpack. The school year ended, and come September another began. And it didn't take long for the news to spread through the newspaper offices: *the boy and his chums are back again*. The veteran journalist exclaimed to his colleagues at the journalists' club for the umpteenth time:

"He's back... Yes, indeed... And just think, he finally managed to get a hearing. And he wasn't alone. They all sat quietly waiting together in the reception room for about three hours. I agreed to see them. I warned them to talk quickly, as I had set aside only two minutes to hear what they had to say. They came in and spread out a huge sheet of drafting paper across my desk. I looked at their masterpiece and was dumbfounded. I kept looking, not being able to take my eyes away, or even to say a word. Two minutes must have gone by, for I heard the boy say to everyone:

"It's time for us to leave. We've overstayed our welcome."

"What's that?" I called after them, just as they were on their way out the door. He turned around, and I felt the look of another age descend upon me. Yes, indeed... There's a lot we still have to think through, make sense of... Yes, indeed!"

"Well, did he say anything?" asked a colleague.

Others, too, became restless and asked:

"Don't keep us in suspense — did he say he was coming back?"

Whereupon the veteran editor replied:

"He turned around and answered my question like this:

"That's *our* Nevsky you've got in front of you. For now it's only on paper. But eventually the whole city will be that way. And then the door closed."

<sup>7</sup>*We've overstayed our welcome* - the original Russian phrase (*Vremia zdes' uzhe ne nashe*) can also be interpreted to mean: 'The age you live in here is no longer the age we live in'.

For the umpteenth time the journalists bent over to examine the design, and marvelled at its amazing beauty.

The design showed the houses along Nevsky Prospekt no longer one right smack up against the other, forming a continuous stone wall. Some of the old buildings were still there, but every other building had been taken down. In place of the razed houses there were now marvellous green and fragrant oases. Birds were shown nesting in the many birches, pines and cedars, and it seemed as though one could hear their song just from looking at the drawing. The people sitting on benches beneath shady trees were surrounded by beautiful flower-beds as well as raspberry and currant bushes. These green oases jutted out a little into the street, and the Nevsky no longer looked like a stone trench, but a splendid living green allée.

The building façades had a multitude of mirrors built into them. The thousands of splashes of sunlight reflected in the mirrors played with the passers-by, caressed the petals of the flowers and played in the streams of the little fountains set up in each green oasis. People were shown drinking water along with the splashes of sunlight and smiling...

“Anastasia,” I asked, “did the boy ever show up again?”

“What boy?”

“You know, the one who kept pestering the editors with his question.”

“The ‘boy’ was gone for good. He became a great architect. Together with his like-minded chums he created splendid cities of the future. Cities and villages, in which happy people began to live. But his first marvellous creation was the city he designed on the Neva.”

"Anastasia, in what year will Russia's marvellous future appear?"

"You can determine the year for yourself, Vladimir."

"What do you mean, for myself? Is time subject to Man's will?"

"What Man *does* in his time is definitely subject to his will. Everything created by a dream already exists in space. The dreams of many human souls — your readers — will turn the Divine dream into material reality. What you have seen may come about in three hundred years, or it could come right now, this instant."

"Right this instant? But you can't build a house in an instant, and a garden won't grow up even in a year."

"But if you, right where you are living at the moment, even if it is just a tiny flat, plant a seed in a little clay pot of earth, from which may grow a shoot of a family tree, this tree will eventually grow to maturity in your future family domain..."

"You yourself are talking about what *will be* — that's not the same thing as *right now*. In other words, a dream cannot materialise itself in a single instant."

"What do you mean, it cannot? After all, that material seed you plant -- that is precisely the beginning of the dream's coming true. The shoot interacts with the whole Universe, it materialises your dream, and you will be enfolded by splendid bright energies, you will stand before the Father as the embodiment of His dream."

"Interesting, indeed. That means we should get started, right away?"

"Of course."

"Only where can I find the right words to get people to understand?!"

"The words will be found if you can be sincere and true to yourself in front of people."

"I don't know how, but I shall act. Your dream has sparked something in my soul, Anastasia. And I very much want to make the future I have seen come true."

## CHAPTER FIFTEEN

# Making it come true

First of all I had to determine whether there were any people willing to get involved in the building of an eco-community and then to work in it. I asked the Anastasia Foundation for Culture and Assistance to Creativity, based in Vladimir,<sup>1</sup> to circulate information on the building of an eco-village according to Anastasia's design. A scant two months later, one hundred and thirty-nine people had responded, declaring their interest in building the future community — including Russians who had emigrated abroad. Once this book is out, telling about the future of Russia and giving information on Russians' new lifestyle, that number may well rise a hundred or a thousandfold, and be spread over a number of regions of the country. Hence the organisational work of building the communities should be able to start in different regions at the same time. In regard to this, the Anastasia Foundation, which as an information clearing-house has reviewed the existing laws on the subject and suggested that any readers sharing Anastasia's views proceed as follows:

*First:* Start with your own region by organising a spearhead group that could eventually be given legal status in accord with prevailing legislation.

Some regions, possibly, already have readers' clubs or community organisations bringing Anastasia's readers together,

<sup>1</sup>*Vladimir* — here referring to the name of the city of Vladimir (see foot note 1 in Chapter 6: "A garden for eternity").

which could get the project off the ground there. But if you don't happen to know of anything like that in your region, you can get in touch with the Anastasia Foundation, which receives a lot of correspondence on this and can provide you with addresses. Overall, I have a lot of faith in entrepreneurs. They have more experience in organisational matters and so, even if community organisations are already set up in some areas, you should still try and get in touch with entrepreneurs.

You should appoint an authorised representative, at least temporarily or on a trial basis — someone who can act on your behalf in dealing with the authorities (submitting applications for land allotments, calling meetings when required, etc.). Provide a small honorarium for your chairperson. The representative's role can be filled either by an actual person or a corporate body.

In the latter case you might want to appoint, for example, a well-known construction company, which could subsequently enjoy priority rights in the awarding of contracts for erecting single-family houses, as well as infrastructure buildings. Such a major contract will be extremely profitable for the construction company, and so it may agree to take on the job of applying for land-use permits and compiling budget estimates.

*Second:* Submit a formal application to your region's local public authorities — and directly to the official at the top — for a single allotment of land with an area of no less than 150 hectares. The size of the allotment will depend on how many interested participants you have, as well as what kind of local resources are available.

You will need to consider that in the future your community will be home to quite a few families, and so it should include a school, club and medical facility, and these are best supported by a significant number of people. Small communities may not be in a position to create the required infrastructure.

*Third:* In applying for an allotment, you should contact land surveyors, architects and builders to draft blueprints for the settlement. Another important reason for this is that you will need to find out the depth of the water table under the allotment, with a view to drilling wells to supply each house with running water, to determine what depth house foundations should be as well as the feasibility of constructing a small pond in each domain. Drawing up a good overall plan for the community is also important in determining the location of the future school and play areas, as well as where the access roads should go.

The Anastasia Foundation has already commissioned competent specialists to work out a model plan, and if it is completed before you launch your spearhead group, you can consult with the Foundation — it will cost you less. But then you will have to adapt the model to your own locale, introduce your own modifications and share them with other spearhead groups. Successful proposals which have the greatest appeal will be adopted by other groups, and eventually we shall jointly put together a master design.

*Fourth:* After completing the design for the settlement — and this is something not only specialists but also future residents can participate in — you will receive a detailed set of schematics, including an overall plan highlighting the individual plots of at least one hectare each. Every participant should be formally assigned a plot of land, perhaps by drawing straws. Land use entitlement should be formalised with an appropriate legal document, drawn up in the name of the individual owner rather than the organisation, as was the case in the Auroville community in India.

And so here you are standing on your own plot, on your very own hectare of land. This is your kin's domain, the place

where your descendants will be born and will live. They will fondly remember its founder, their family patriarch, and they may even rebuke him for certain mistakes in planning out the place.

Right at the moment the design of everything to be situated on the assigned plot is completely up to you. Where will you place your family tree — an oak or cedar, for example — which will keep on growing for as long as 550 years, and may be looked upon by the ninth generation of your descendants as they remember you?

Where will you decide to dig a pond, plant an orchard and a small grove of woodland trees, build your house and set up your flower beds? What kind of living fence will you create around the perimeter of your kin's domain? Maybe the one Anastasia described, or maybe it will come out even more fanciful and functional than the one depicted in my previous book. It can be started even now, even before you get the official documents, even before a spearhead group is organised among the people who share your vision. You can start the building process in your thoughts, pondering what will go in each corner of your future kin's domain.

You should remember that the house you build, even one of fairly solid construction, will last about a hundred years and then fall into disrepair. The living structures you set up, on the other hand, will only become better and stronger, thriving more and more as the ages pass. They will convey your living thoughts to your descendants for centuries, and perhaps even for millennia to come.

You can start building right away, and not just in your thoughts. Even now you can plant the seeds of your future majestic family trees in a clay pot on the windowsill. Of course you can also buy grown saplings ready for transplant at a specialised nursery, or dig up young shoots in the forest without damaging the growth around, especially in places

where the forest growth needs thinning out. That is possible, of course, but I think Anastasia is correct here — it's better to grow the sapling on your own, especially when it comes to your future family tree. A sapling from a commercial nursery is like a baby from an orphanage. Besides, you need to grow not only one sapling, but several different ones. And before planting the seed in the pot of earth, you need to infuse the little seed with information about yourself.

I realise that support on a national level may be needed to overcome bureaucratic obstacles in certain regions. Or if not support, then at least an absence of opposition. Appropriate changes in legislative policies are required.

Instead of waiting around idly for this to happen all by itself, waiting for at least one of our existing political bodies to mature into a state where it will support such a project, the Anastasia Foundation, at my request, has worked out a draft constitution for a new political party, a party of land-users. This germinating social movement has been called *Co-creation* (*Sotvorenie*). Its platform, which still has to be discussed and finalised, comes down to one central theme (as I see it): *The state should grant to every willing family one hectare of land for lifetime use, for the purpose of establishing their own family domain.*

This movement is still young, and nobody is really in control of it at the moment, but I think that in time we shall see literate politicians coming on board who are capable of working out a relationship to the new movement on the level of federal policy-making. For the time being the Co-creation Party functions mainly as an information clearing-house. A legal department will get started as soon as sufficient funds become available. For now the party's administrative affairs are being handled by the Anastasia Foundation for Culture and Assistance to Creativity.

The regional spearhead groups set up to organise new communities will be quite successful after they gain the support

of the local public authorities. This should happen once the authorities see the substantive benefits which will accrue to their region. And these can be pinpointed right now. They do exist and they are indeed substantive. Try to get a discussion of the project going in the local press and see if you can get specialists — ecologists, economists and sociologists -- to weigh in on the specific influences the project will have on your region.

In an effort to do my part to help — at least in some way — in getting land allotted for the purpose of setting up kin's domains, I have decided to publish in this book an open letter to the President of Russia.

## CHAPTER SIXTEEN

### Open letter

To Vladimir Vladimirovich Putin,  
President of the Russian Federation

From Vladimir Nikolaevich Megré,  
Citizen of the Russian Federation

Dear Vladimir Vladimirovich!

We live in a generation which must be very lucky indeed. We have before us a real opportunity to begin building a prosperous, flourishing state thoroughly protected from external aggressors, internal conflicts and crime. A state in which happy families will live in prosperity. Our generation has the opportunity of not only building a splendid country, but of actually living in it, provided there is enough good will among the legislative powers that be to grant to every willing family one hectare of land for the purpose of establishing thereon its own kin's domain. This simple action will suffice to call forth an impulse to creative endeavour on the part of the majority of people at various levels of society.

The land should be granted free of charge, for lifetime use, with the right of inheritance. The produce grown on these kin's domains should not be subject to any form of taxation.

You will agree, Vladimir Vladimirovich, that an abnormal, illogical state of affairs has now come about: every Russian is supposed to have a Motherland, but nobody can show exactly

where his piece of this Motherland is. If every family receives one and transforms it into a flourishing corner of Paradise, Russia as a whole will become a magnificent land.

Current policies on national development do not inspire people into creativity, since it is not clear where or to what kind of future they are leading. The forging of a democratic, economically developed state on the Western model has been rejected — intuitively, perhaps — by the majority of the population. And I think this is all to the good. Common sense makes us ask ourselves: Why should any of us in particular, or we as a nation, waste our efforts on building a state which will only be racked by drugs, prostitution and gangsterism? All those things are part of Western society.

We used to think that the so-called developed societies enjoyed an abundance of food products, but now it is clear that this abundance has been achieved at the expense of applying all sorts of chemical additives and poisonous chemicals to the soil, as well as genetic engineering. We have seen that imported food products have nowhere near the taste quality of our own. In Germany, for example, people gladly buy potatoes brought in from Russia.

In a number of countries the government has become concerned over this situation and mandated special labelling of genetically modified produce. Scientists, too, are becoming more and more concerned. America and Germany are among those countries that have the highest per-capita cancer rates in the world. Do *we* have to go down the same path?

I don't think it is a path that inspires very many people. But our country has come to tolerate the promotion of foreign goods and the Western way of life. We have become resigned to the appearance in our midst of more and more diseases, to the fact that we can now drink water only out of bottles we buy at the store and that the population of Russia is decreasing by 750,000 souls a year. It's all just like in the West.

“They hadn’t been dug around — they were just growing there amidst the grasses, they hadn’t been sprayed for insects, but these old apple trees were bearing fruit, and their fruit showed no sign of worm infestation.”

— *Chapter 6: “A garden for eternity”*

“In the distance I could see tall trees growing densely together. They appeared to cover about a hectare of ground. This place seemed simply like a green isle of forest, all surrounded by fields and meadows.”

“Just imagine: there inside were ancient apple trees with gnarled trunks, spreading their branches out into space. Branches literally dripping with fruit.”

“As we drew closer, I could see in amongst the dense grove of two-hundred-year-old oak trees and bushes an entrance leading to a woodland oasis inside.”

“Twenty-three Siberian cedars, planted... two hundred years ago, still stood there all in a row, like soldiers protecting this splendid orchard from freezing winds and harmful pests. There had been more of them, but one by one they perished.”

“Last year that one of them began falling, but came to rest against the top of the one next to it in the row. I looked at the sharply leaning tree trunk, whose top was intertwined with that of its neighbour. Their branches had grown together, and the falling tree was still living.”

“Your descendants, my fine Russian fellow, are growing up in another land, while in Russia, in your kin’s domain, the leaves of the trees in your orchard are rustling in the breeze, and every year your old apple trees are bringing forth fruit — no doubt in the hope that your descendants will return to taste the best apples in the whole wide world. Yet your descendants are still not coming.”

Vladimir Megré arriving at the Ringing Cedars of Russia movement conference held in the city of Vladimir on 5 June 2004.

True to Anastasia's promise, books in the Ringing Cedars Series have produced a powerful creative outburst on the part of the readers. Thousands of people started to write poetry, compose songs, make paintings as well as changed their lifestyle and proceeded to designing and establishing their kin's domains.

After all, the birthrate has fallen in highly developed countries too. We are trying our hardest to be like them. But I have been hearing from people who live in these countries, hearing about their hopes — their hopes that Russia is searching for and will inevitably find its own path of development, and show the whole world a happier way of life.

Mr President, you, no doubt, have received various proposals for the future development of our country. If this new proposal appears questionable in comparison with others you have seen, I would ask you to test it on an experimental basis in regions where the respective governors can discern in it a grain of common sense.

You will find further details of this proposal in the series of books entitled *The Ringing Cedars of Russia*, of which I happen to be the author. I would not imagine that you have had the time to read them personally, caught up as you are in attending to a flood of affairs of state. Still, there are certain appropriate administrative bodies which are aware of these books and have already rendered their verdict.

They conclude that these books have engendered a new religion in Russia, which is “spreading like wildfire” — an opinion that is also being circulated in the press in a number of publications. Their conclusion came as a complete surprise to me. While I *have* expressed my feelings about God in these books, I never thought of creating any kind of new religion. I simply wrote books about an extraordinary and beautiful recluse living in the Siberian taiga and the fervent dream she entertains about what is splendid and beautiful in life.

One could say that the enthusiastic reaction on the part of people of different social backgrounds and the popularity of these books both in Russia and abroad bear some resemblance to a religious phenomenon. But I think this is quite a different story here. The ideas, philosophy and topical awareness of this Siberian recluse, not to mention the language in

which she expresses herself, have all deeply stirred people's hearts.

It will probably be quite a while before scientists reach a unanimous conclusion on who Anastasia is and what is the full significance of the books containing her sayings, or how one should interpret the public reaction to them. Let them keep on trying to figure it out. I am only concerned lest their theoretical analyses overshadow the concrete proposals made by Anastasia.

Vladimir Vladimirovich, so that you may be personally persuaded of the effectiveness of Anastasia's proposals regarding the land, I invite you to authorise an experiment, regardless of who either Anastasia or Vladimir Megré may be, which will put some of her less significant statements to the test.

*First:* I suggest that your public officials will not be unduly burdened if asked to commission an appropriate scientific research institute to do a simple analysis of the effectiveness of Anastasia's proposal on cleansing the air in major cities from harmful dust pollution. The gist of this proposal was set forth back in my first book.<sup>1</sup>

*Second:* I recommend you authorise an analysis of Siberian cedar nut oil as a general remedial agent. Both data from ancient sources and modern research by scientists at the University of Tomsk<sup>2</sup> confirm Anastasia's statement that this natural product, provided it is obtained through a specific technological method, is one of the most effective remedies in the world for the cure of a broad range of diseases. You will not find anywhere else on the globe a vaster array of plantings than in Siberia, which is home to the nut-bearing cedar.

<sup>1</sup>See Book 1, Chapter 17: "The brain — a supercomputer".

<sup>2</sup>*Tomsk* — a city of a half-million residents in southwest Siberia, founded during the reign of Tsar Boris Godunov in 1604. The university was established in 1880.

The Russian federal budget could realise substantial profits from putting this product on the international market, as well as from its use within our own country. We need to have a state policy on the exploitation of Siberian flora. A policy aimed not at the establishment of large-scale industrial enterprises but at the unfolding of a network of small businesses involving people actually living in the remote regions of Siberia. The implementation of such a policy does not require a huge outlay of capital, only a legislative decision allowing the local residents to acquire land in the taiga on a long-term lease basis.

Moreover, Vladimir Vladimirovich, life inevitably confirms even the statements of Anastasia's that seem less plausible at first glance. Personally, I am absolutely convinced of our country's splendid future. It is only a question of whether those living today will accelerate its coming or slow it down. I sincerely wish you, Vladimir Vladimirovich, along with all of us alive today, the opportunity of being the creators of this splendid future!

Respectfully,

Vladimir Megré

## CHAPTER SEVENTEEN

# Questions and answers

Anastasia's design intrigued me. I wanted to think and talk about it on a daily basis. I wanted to stand up for it at all costs, defend it against ridicule and dispel the doubts of the sceptics. I talked about it at the readers' conferences held in the city of Gelendzhik<sup>1</sup> and at the Central Letters Club<sup>2</sup> in Moscow. The majority of the participants at these conferences (there were more than two thousand in all, hailing from various countries of the Commonwealth of Independent States,<sup>3</sup> as well as from further afield) either supported this design or at least expressed an interest. But in this chapter I shall reproduce some of the basic questions and comments by the doubters, along with my responses to them, based on Anastasia's statements and my own convictions, as well as information I have managed to glean from other sources.

*Question.* In today's world no nation's economy can survive independent of the global economic system. Today's

<sup>1</sup>*Gelendzhik* — see footnote 2 in Book 1, Chapter 30: "Author's message to readers". On one of the readers' conferences in Gelendzhik, see Book 4, Chapter 34: "Anomalies at Gelendzhik".

<sup>2</sup>*Central Letters Club* — in Russian: *Tsentral'nyi Dom literaturov* (literally: Central House of Literati).

<sup>3</sup>*Commonwealth of Independent States* — an organisation of countries comprising most of the former members of the Soviet Union. It was formally launched at a conference in Alma Ata (Kazakhstan) on 21 December 1991, following the official dissolution of the USSR at a conference in Minsk (Belarus) earlier the same month.

economic processes point to the need to create large industrial structures, the need for specialised knowledge of today's markets and how they are set up, as well as the major directions of capital flow. It does not appear that you have training in economics. Your proposal involves emphasising small-scale commodity production, which may take away from more important things and ruin the national economy.

*Answer:* It is true that I have had no training in economics. But as to your point that large conglomerates are of prime importance to the nation's economy, I am in complete agreement with you. I think you will also agree that a large factory, say, is economically viable for the nation only when it operates to produce goods in high demand. When a large enterprise shuts down — and such cases are not infrequent in our country, or in others — it inevitably means losses.

The state is obliged to pay workers unemployment benefits. Hundreds of thousands are forced to eke out a wretched existence on the strength of this paltry allowance. They don't know what to do, they're so used to relying on their production-line job to feed themselves and their families. Given these conditions, they could make better use of their new free time working intensively on their own plots of land.

One's family domain is not just to provide a home base to spend one's leisure time in. It can also serve as a profitable workplace, more profitable, even, than in many enterprises, even major ones. In terms of the larger picture — on the national level, that is — the state may be seen as not only made up of industrial and financial conglomerates, both large and small, but its very building-blocks consist precisely of these family nuclei.

For any family the domain can serve as a home base — an insurance policy against any possible form of nationwide economic disaster. I don't see anything wrong with each family being offered the opportunity to provide independently for its own poverty-free existence.

I also believe that personal freedom is impossible without economic freedom. A working family, even one living in a modern city apartment, cannot be free, dependent as it is on an employer who determines one's salary, on utility companies with the power to supply or withhold heat, water and electricity, on the availability of groceries and on the prices of food products and consumer services. The family is slave to all of these, and the children in such a family are born into a slave mentality.

*Question.* Russia is an industrially developed country and a mighty nuclear power. And only as such will it be able to guarantee the security of its citizens. If all its residents do nothing but work the land, the country will be transformed into a purely agrarian state and thus become defenceless against external aggressors.

*Answer:* I don't think everybody's necessarily going to agree to work on their plots of land right off the bat. It'll be a gradual process, and the situation will unfold naturally, in an orderly manner. National power depends not only on possessing a sufficient number of nuclear warheads, but also on the overall economic state of affairs, including sufficiency and quality of food products. And when a state does not have sufficient food production to feed its people, it is then obliged to sell off not only its natural resources but its armaments as well, thereby strengthening the position of any potential aggressor.

The proposed design has the power to strengthen the economic position of the state as a whole, and as such offers the opportunity not only for more effective scientific and industrial development but also a more efficient combat-ready army.

In the near future, however, when this way of life has been adopted on a massive scale, I think — indeed, I am quite convinced — that it will provoke considerable interest among

many citizens of other countries, including countries we don't currently get along with. And people in those nations too will want to reshape their lifestyle the same way many Russians have done. The adoption of this design in a variety of countries will signal the start of a whole new era of peaceful co-existence among peoples.

*Question.* The implementation of the proposal is feasible, of course, in the more trouble-free regions of Russia. But isn't it naïve to think of implementing it in an inherently crime-prone republic such as Chechnya?<sup>4</sup>

*Answer:* A significant lowering of social tensions, especially in the so-called 'hot spots', along with complete cessation of conflict through the help of the proposed project I see as something not only *not naïve*, but absolutely realistic. If you take the northern Caucasus, for example, and its most troubled region, Chechnya, it has recently become clear (and this has been reported in the press) that the basic conflict is centred around the struggle of a small group of people for control of the republic's oil reserves, as well as for money and power. This situation is typical of most of the 'hot spots' today — indeed, of most of the conflicts the world has known throughout the ages. That still leaves the question of why such a large part of the population, especially men, has been drawn into the Chechen conflict.

<sup>4</sup>*Chechnya* (pronounced *chich-NYAH*) -- a small, predominantly Muslim republic of about 800,000 people in the Northern Caucasus area of the Russian Federation. With its capital at Grozny, Chechnya is situated to the north of Georgia (a former Soviet republic, now an independent country). Chechnya was forcibly annexed by the Russian Empire in 1859, and throughout history, a part of the Chechen population has fiercely resisted Russian rule. The Chechens' striving for independence has been constantly suppressed by the Russian Federation, and in the mid-1990s this led to a military conflict which has not been settled to the present day (mid-2006).

Chechnya used to have hundreds of illegal oil-refining operations, belonging to a small group of people. Tens of thousands of people from among the local population worked in these enterprises. When the government tried to restore law and order these people lost their jobs, leaving their families without any means of support. The principal aim of this class of people in joining the militants was to try and protect their jobs and the welfare of their families, minimal though it was. Besides, their participation in the rebel forces wasn't exactly volunteer work — they ended up earning quite a bit more than the unemployment benefit they had been getting. Consequently, for the majority of the ordinary fighters, taking part in the armed gangs was simply a job — no different from being a policeman or a Russian army officer, only better paid. As a result, many of these foot-soldiers don't see much in the way of hope for their families' welfare if military operations were to cease.

How can we possibly do away with unemployment in Chechnya if we can't completely do away with it in even a single region closer to home, especially one that is comparatively well off? Let's say the Government pours colossal resources into Chechnya and starts setting up all sorts of enterprises there to guarantee a job for everybody who wants one. But then another problem arises — the size of the pay packet offered. Say you offer a special raise for the Chechen population, then all of Russia will be working to support the Chechens, since the only way the raise can be implemented is on the backs of the Russian taxpayers as a whole. Even then, not all the money will reach its intended target, since the problem of getting allocated funds through to those who actually need them has not been resolved. In sum, we'd be faced with the same situation we have today, only with a significant increase in expenditures.

The Chechen Republic is a region favourable to agricultural production. Now let's suppose a law granting land for family

domains is already in effect. Suppose that the state is able to protect these family domains from any kind of encroachment. So a Chechen family receives land for its kin's domain where everything they produce belongs exclusively to them and their future descendants, guaranteeing them a poverty-free existence and a life not ruled by bombs, and not as outlaws, but in their own splendid corner of the Earth — a piece of their Motherland which they have established themselves. I am certain that such a family will not oppose a government which has given them an opportunity like that — on the contrary, they will defend such a government more zealously than they now oppose it. They will defend such a government as passionately as they would defend their family nest. They will counter any attempt by agitators to separate Chechnya from such a government, or any attempt at racial discrimination.

I am convinced that if the government launched a campaign on a sufficiently large scale, introducing settlements like that into Chechen territory, even on an experimental basis, the 'hot spot' we call Chechnya will be transformed into not only one of the most stable regions of Russia, but one of the major centres of spirituality on the Earth. We shall see a complete hundred-and-eighty-degree turn. When Anastasia spoke of ways to eliminate crime, I too had a hard time believing what she said. But eventually, life inevitably kept bearing out the truth of her words. And as far as the Chechen Republic is concerned...

At the readers' conference in Gelendzhik there were more than a thousand people from all parts of Russia and the Commonwealth of Independent States. I was especially struck by the fact that a delegation had come from Chechnya. Nobody had invited them specially to the conference; the Chechens came all on their own. Later I spoke with several of them personally.

At the moment we are talking about Chechnya, but are other parts of our country free of crime? It's there all right,

and in just about every form you can imagine. One of the causes of crime is unemployment, and the fact that people are released from prison with no opportunity to rebuild their lives in our society. Anastasia's project is capable of solving this problem.

*Question.* If you give a hectare of land to everybody in Russia who wants one, there won't be enough land to go round. Especially for the rising generation.

*Answer.* At the present time we are faced with a question even more acute -- namely, that there are not enough people to work the land. And I'm not talking just about wasteland and land unsuitable for farming, but arable land as well. As to the rising generation, it is unfortunately the case that every year more Russians are dying than are being born. According to Goskomstat (the government statistics agency), the Russian population is showing an annual attrition rate of 750,000 people. So the current concern is over whether there will be a rising generation at all.

At first I too was under the misconception that a family, or even a single person, living, let's say, in a flat in a five-storey apartment block, takes up less land than a family or person with a private house and a garden plot. But, as it turns out, it's not that way at all. Any person, no matter what floor he lives on, consumes as food all sorts of things that grow on the land. To get those growing things delivered to him, roads, trucks, warehouses and stores are required, and all of these take up land-space too. So at any given moment every individual is being supported by his own plot of land. It supports him regardless of whether the individual has abandoned it or even thinks about it at all.

Naturally I wasn't able to give a full answer to this question right off, as I didn't have immediate access to all the figures, but I looked them up later and can now include them here.

*Russia's land:* The total land mass of the Russian Federation comprises nearly 1,710 million hectares, of which only 667.7 million hectares are fit for agricultural production. Figures for the beginning of 1996 show 222 million hectares used for farming at the time, or 13% of Russia's total land resources. Of these, 130.2 million hectares (7.6% of the total) were classified as arable land.

At the present time Russia's population comprises 147 million people. Hence the 'problem' of allocating a hectare of land to any family wishing to have one simply doesn't exist, according to the statistics. Moreover, the real problem is quite the opposite: the population of our country is shrinking drastically. And here's what the analysts have to say in regard to the general state of the Russian population: if current trends continue, between 2000 and 2045 the number of children under 15 years of age will be cut in half, while the number of senior citizens will increase by 50%. The capacity of the population to reproduce itself will be pretty much exhausted.

Oh yes, and one more problem: the *quality* of the arable lands of our country.

Large areas of the nation are witnessing topsoil erosion. Specialists are of the opinion that these processes have already reached a critical stage at the regional and inter-regional levels. In all of Russia's agricultural zones erosion (or the threat of erosion) has affected 117 million hectares (or 63% of all agricultural lands). Over the last 50 years the rate of erosion has increased by a factor of 30; the rise has been especially steep since the onset of the 1990s. According to the UN's Food and Agricultural Organisation (FAO) experts, Russia is among the top ten countries of the world in terms of erosion rates, and by 2002 erosion will affect as much as 75% of our farmland. I could go on and cite even more detailed statistics about our country's land — they're all pretty miserable. I shall include them at the end of this book.

Now after becoming familiar with the statistics cited above, I can confidently state that Anastasia's project is capable of stopping the drunken orgy our nation is indulging in with its land resources. To this day it is the only effective and feasible project in existence. It envisages the restoration of the soil's fertility through natural processes. It does not require additional capital outlays on the government's part, and yet with one fell swoop solves the problems of ecology, refugees and unemployment, and completely eliminates the problems we today are creating for our children by our attitude to the land.

Perhaps there is somewhere in Nature a more effective and feasible project. In that case, let it be brought forward. At the moment, all some agencies are doing is demanding more money for the restoration of agricultural production by outmoded means. The government does not have the money they require. But the saddest scenario would be for such plans to be realised by borrowing money abroad and having chemical fertilisers poked into the soil to its further detriment, since we do not have sufficient quantities of manure to go round.

That money will have to be repaid with interest, the condition of the land will deteriorate even further, and the whole problem will fall on the shoulders of the rising generation. I shall do all I can to promote Anastasia's project. Of course, government officials will hardly accept a recluse from the taiga as an authority, and I am no specialist in agriculture, and so it will be a challenge for me to prove its effectiveness before our worldly-wise politicians, but nevertheless I shall keep on trying with all the means at my disposal.

I will be most grateful to those readers who are familiar with the intrigues of the workings of our government if they can explain in a more professional language the effectiveness of Anastasia's project to our high-ranking government officials. Perhaps this book will find its way, too, into the hands of government agencies empowered to undertake such

measures, and so I am appealing to them once more with a declaration on behalf of all willing participants. I don't know how many willing participants there are, but I am certain that their numbers are in the millions. On their behalf I make the following request, namely that the Russian government...

*...settle the land question on a legislative basis and grant each willing family in our nation one hectare of land free of charge, affording the opportunity to each willing family to establish its own kin's domain, dignify it and lovingly care for its own piece of the Motherland, thereby making the Motherland as a whole beautiful and happy — the Motherland, after all, consists of little pieces.*

*Question.* In many regions of our country the ecological situation is extremely complex. One could even call it disastrous today. Wouldn't it be better to first direct our efforts toward the improvement of ecological conditions in general — as many ecological organisations are doing at the moment — before turning our attention to individual domains?

*Answer.* You yourself say that there are a lot of organisations focusing on the ecological situation, but it is getting worse. Doesn't this mean that simply focusing attention on it is not enough here, since the situation is continuing to deteriorate and even reaching disastrous proportions?

Let us imagine a beautiful garden, with all different kinds of trees growing in just one splendidly laid out domain. Just one little corner of Paradise! Only one hectare in size. Of course that's not sufficient for a global change, either for a country or the planet. But now let us imagine a million of such little corners and we shall see the whole Earth as a flourishing garden of Paradise. But still, it is up to each one of us in particular to start by setting up our own little corner. Perhaps then we shall be able to go from being totally focused on the subject to being totally involved in concrete actions.

*Question.* Do you believe that an unemployed family can get rich with the help of a single hectare of their own land? If you believe that, then tell me why today's rural areas are at a standstill? People in these rural areas have land but they're still going hungry.

*Answer.* Let's consider this phenomenon together, but first I want to add a few more questions to the one you asked.

Why do millions of people say that for them four or five hundred square metres of a dacha plot has been a significant help to them in financial terms, significantly increasing the amount of food available to them, and yet rural residents with 1500 to 2500 square metres call themselves poor and starving?

Why? In addition to other factors, doesn't the state of our well-being also depend on our level of conscious awareness? The majority of the rural population thinks that you can have a good life only in the cities, and that's why you've got so many young people leaving the rural areas altogether.

I think our own recent propaganda is at least partially to blame. I'm sure you remember those glowing articles in the Soviet press in the fifties and sixties — who were the heroes back then? Miners, lumberjacks, machine operators, aeroplane pilots, sailors...

Even paintings of cityscapes invariably featured a host of smoking chimneys from industrial giants. There was occasionally a condescending reference to the collective farmer, but a Man tending his own garden plot was always negatively portrayed. They even tried building city-type apartment blocks in rural areas, thereby depriving people of their own back yard and made them work only on so-called communal land. Just as with the Auroville community in India — you could live on the land and cultivate it, but you still couldn't have any land to call your own — all of which leads to some pretty sad results.

You hear constant talk from both politicians and the media of the widespread poverty in the Russian countryside today, just as in the majority of the population at large. There's so much talk about it that everybody *en masse* ends up convinced that if you live in the countryside you must be poor. There are hardly any examples cited indicating that your well-being largely depends on *you*.

It must be in somebody's interests to keep rehearsing the scenario: *Don't rely on yourself — I am the only one that can make you happy*. That's what you hear from a lot of religious leaders, as well as a lot of politicians gathering their own circle of voters around them. If you want to be poor and destitute, you can go right on believing them. I want to talk about not how to be poor, but how to be rich. When someone asks me if it is possible to live above the poverty line with one's own parcel of land, I answer: *Yes!* And here's a concrete example.

In 1999 an acquaintance of mine, a Moscow entrepreneur who had read *Anastasia*, invited me over for a visit. He intrigued me when he said that he could prepare a table almost identical to the one Anastasia had set before me in the taiga. When I arrived, his dining table was still empty. We sat down and chatted, and Andrey (that was the entrepreneur's name) kept looking at the clock, apologising for someone he was expecting being held up.

Before long his chauffeur arrived with two large baskets. The table was soon spread with tomatoes, cucumbers, bread and much else besides. The room was filled with tempting aromas. In a few minutes the women in Andrey's household had laid out a splendid table. No Pepsi-cola to drink, but some marvellous, fragrant Russian *kvass*.<sup>5</sup> Instead of French cognac there was home-made wine — on top of it all infused with

<sup>5</sup>*kvass* — a fermented beverage made from rye, barley or other natural ingredients.

some sort of herbs. The tomatoes and cucumbers were not as splendid as the ones Anastasia had in the taiga, but they were far tastier than what you could get at the supermarket or even at farmers' markets.

"Where did you get all this from?" I asked Andrey in astonishment, and this is what he told me.

At some point on their way back to Moscow from Riazan,<sup>6</sup> Andrey's chauffeur had stopped the jeep at a small roadside market. They bought a litre-jar of pickles and a jar of tomatoes. Turning in to a small café, they decided to have a decent meal. They opened the jars they had bought and took a taste.

After lunch Andrey told his driver to turn around and go back to the roadside market. He bought from the elderly woman behind the table everything she had, and offered to give her a ride home in his jeep. The woman lived all alone in a rather old-looking cottage with a small vegetable garden. Her lot was situated in a wee village about fifteen kilometres from the main road. Andrey's enterprising mind was already working quickly and here is how things unfolded.

Andrey purchased a house in the country with 2000 square metres of land, on the edge of a forest, about 120 kilometres from Moscow in an ecologically clean zone. He registered the house in the name of this woman, presented her with the documents and a contract obligating him to pay her a monthly amount of 300 US dollars, while the woman in turn was to give the produce from her garden to his family, except for what she ate herself.

The woman's name was Nadezhda Ivanovna,<sup>7</sup> she was 61 years old. And she really didn't understand documents or believe in them. Then Andrey took her to the local rural

<sup>6</sup>*Riazan* – a city (whose history dates back to the late 11th century) on the Oka River about 200 km south-east of Moscow, with a population of slightly more than a half million.

council and asked the chairman to read her the documents and assure her that they were in order from a legal standpoint. The rural council chairman read over the documents and said to the woman:

“What have you got to lose, Ivanna? Nobody’s asking you to give up that tumble-down hut of yours. So if you don’t like it, you can always come back.” Nadezhda Ivanovna was finally persuaded to accept the offer.

For the past three years she’s been living in a well-built house. Andrey hired workers to dig her a well and put in a heating system with a hot water furnace. They also dug and outfitted a vegetable cellar. They put a fence around the whole property, brought in all the furnishings she needed, along with a goat, some chickens and animal feed. As well as a lot of other things needed to set up a home.

Nadezhda Ivanovna’s daughter and wee granddaughter came to live with her. Since Andrey has read what Anastasia had to say about vegetable-growing, he cultivates seedlings himself, but only with seeds he obtained from Nadezhda Ivanovna. Each summer Andrey’s father, a retired restaurant manager, takes the seedlings out to her home and gladly helps the woman with the garden work.

This arrangement has provided both Nadezhda Ivanovna and her daughter with work and a place to live. Andrey and his family (his wife, their two children and his father) are supplied all summer long with fresh fruits and vegetables which are really eco-clean, along with marvellous marinated produce during the winter. And all year long they have access to health-giving herbs whenever they need them.

---

*Ivanovna* (pron. ee VAHN *ov-na*) - - a patronymic derived from her father's name *Ivan* (not a surname). In informal circumstances older people can be addressed by the patronymic alone, and the full form *Ivanovna* is nearly always shortened to something like *Ivanna*.

Maybe somebody will say that the example I have cited is an exception. Nothing of the sort! Ten years back, when I was president of the Interregional Association of Siberian Entrepreneurs, many of its members tried to set up their own household plots, either for their companies or just for their families. Today you can find such services advertised in the papers. Only there is one *but* — it is very hard to find any capable workers, or rather, anyone who is competent to do what Nadezhda Ivanovna did. And since such people are so hard to find, let's recall for ourselves what attitude *we* should cultivate toward the land. Let's share our experiences of how to be rich and happy on our own land, and not how to be poor.

*Question.* Vladimir Nikolaeovich, I'm an entrepreneur. I too happen to know that many well-off people use the services of rural residents who are experts at cultivating and preserving agricultural produce, which is definitely superior in taste quality to what comes out of large-scale enterprises. But if everybody follows the same path, that will mean a saturation of the market, and then how is a family going to survive on income just from its own hectare of land, if it turns out that nobody needs the tomatoes and cucumbers they grow?

*Answer.* The land yields not just tomatoes and cucumbers, but much more besides. However, even if half the total number of Russian families have their own domains, they still won't be able to satisfy the demand for their produce over the next twenty to thirty years, since the demand will come not just from Russians but from many people abroad, especially in the rich, developed countries. The reason is that agricultural producers in most countries have got so caught up in the business of artificial selection and chemical treatment of crops that the original form of these crops has simply got lost — and I'm not just referring to how they look but to the fulness of their content. The example of cucumbers and

tomatoes, though, gives everyone a chance to be convinced independently of the following:

Go into any average supermarket — or, better still, into an up-scale supermarket (there are quite a few these days in our big cities) — and you will see very beautiful imported tomatoes and cucumbers, priced from 30 roubles<sup>8</sup> per kilogram. They are uniform in size and a treat for the eyes, and sometimes they're sold with the little green stems left on. But there's no aroma and no taste. They're *mutants!* They're an illusion, a mock-up, only an external reminder of what ought to be there. Most of the world today feeds on such mutants. This is not my discovery — it's something people are concerned about in many of what we call the developed countries of the world.

A decree was passed in Germany, for example, mandating product labelling to include information about the presence of artificial additives, and people who can afford to are boycotting these products. Products grown in eco-clean regions, using only limited quantities of chemical fertiliser, cost a lot dearer in the West. Only the current Western agricultural system does not permit farmers to grow produce that is ecologically clean through and through. Farmers in Western countries are obliged to use not only hired labour but all sorts of technology besides, including weed-destroying chemicals and chemical fertilisers, in their efforts to maximise their profit margins.

Let's say a Western farmer, and there are some of these already, wants to grow eco-clean produce, and even take what Anastasia said into account. You may remember she said that it wasn't necessary to destroy all the weeds, since they

<sup>8</sup> 30 roubles — at the time this book was written, 30 roubles in Russia was worth more than 4 US dollars in terms of buying power — a price far greater than that fetched by domestically grown produce.

to perform significant functions. But let's say a farmer still wants to grow this kind of produce, if only for his family and friends. Right off he's faced with a challenging problem: *seeds*. Artificial selection has done its work — the original varieties have long since disappeared in the West. And there are few of them left even in Russia. Especially after imported seed stock was allowed on the Russian market.

If people use their own seed stocks, the variety of vegetables will gradually see a restoration of their original properties — drawing from the soil everything needed by Man — but a complete restoration will take decades. In Russia, possibly thanks to both poverty and the abundance of small private plots, many people are using their own seeds, and this turns out to be their greatest asset, the effects of which will soon be multiplied a hundredfold in monetary terms.

We're talking about seeds, about the necessity of growing crops in eco-clean zones and the avoidance of chemical fertilisers — all this is very good, something they're talking about in a lot of countries... But that's it — only talk. There's still a very real shortage of healthful and tasty agricultural produce in the world, especially in the developed countries. But that's not all! The processing and preserving are of the utmost importance.

In spite of all the efforts of our technocratic world, our highly equipped technological complexes are unable to match many Russian grandmothers in their production of marinated tomatoes, cucumbers and cabbages of superior taste quality. What's the secret? Apart from the many pearls of wisdom, few people realise that once the tomatoes or cucumbers are plucked from the beds they have been growing in, no more than fifteen minutes should go by before they are sealed in preserving jars. The shorter this period the better. This is what preserves the marvellous aroma, the ethers and the aura. The same applies to the additives — dill, for example.

Water is extremely important. What good can we possibly derive from using chlorinated, dead water? We can boil it, steam the jars, but there are people who take spring water and add huckleberries, among other things... Would you like to try it yourselves? Just take a tumbler, fill it a third full of huckleberries, then fill it up with spring water, and you will be able to enjoy drinking this water even six months later.

You will also notice the strikingly distinctive, superior quality of the fruits and vegetables preserved for the winter, one jar at a time, by these many Russian 'crackerjacks'. These products' pre-eminence in quality of taste over produce from even the most well-known food companies in the world is something each one of us can confirm for ourselves by simply comparing the two.

Now let's say a family living in its domain has canned a thousand litre-jars of tomatoes and cucumbers. The result is first-class produce, surpassing all others in many respects. In terms of taste quality and eco-clean production there is none like it anywhere on the planet. This produce becomes a highly desirable commodity for the tables of many consumers in various countries of the world, including American billionaires and tourists at Cyprus' famed hotel resorts. And it will say on the labels: *From Ivanov's domain, From Petrov's domain, From Sidorov's domain,*<sup>9</sup> etc.

Of course entrepreneurs won't be interested in selling just a thousand litre jars. But let's say there are three hundred family domains in a community, they would end up with three hundred thousand jars, and *that* would get a major business firm's attention. I would imagine that initially a jar would cost the same as one currently in the supermarket, somewhere around a dollar, but once people actually taste it, the price will go up, maybe as much as dozens of times.

<sup>9</sup>*Иванов* (pron. ee-va-NOFF), *Петров* (pe-TROFF), *Сидоров* (SEE-da-ruff) — three common Russian surnames.

I mentioned cucumbers and tomatoes just as an example. There's a whole lot of things that a domain can produce — for example, wines, liqueurs, sweet berry wines — from currants, raspberries, blackberries, sweet rowanberries — and so much else besides. Each person can make up their own 'bouquet', improving it more and more as time goes on. And no super-expensive elite wines will be able to compete with them. There aren't any wine-making materials anywhere in the world like those you can get in Russia. Besides, wines can be prepared using herbs according to ancient recipes, and can be made healthful and vitamin-enriched.

Anastasia says that soon the hand-embroidered Russian *kosovorotka*<sup>10</sup> will be considered the most fashionable garment in the world. So this is another line to think along. During the winter months families can prepare hand-made wood-carvings.

It all comes down to the folk saying: *If you want to be happy, be it.* You could also say: *If you want to be rich, be it.* The main thing is: not to program yourself for poverty. You should attune your expectations to wealth. It makes a lot more sense to think about how to become wealthy, and not to constantly tell yourself it's impossible.

*Question.* Anastasia maintains that it is a lot easier for young couples to hold on to their love for each other in a domain such as you describe than in a typical apartment. Please tell me whether you have discussed this point with psychologists or people who research family problems, and if so, what do they have to say about this, and what makes it happen?

*Answer.* I haven't talked about this with any academics. Just what precisely makes the love last longer is not something

<sup>10</sup>*kosovorotka* (lit. 'skewed-collar') — a Russian men's shirt with an off-centre buttoned opening near the top and embroidered collar, cuffs and hem.

that frightfully interests me. The main thing is that it hangs in there. The fact that it happens is something you could possibly confirm for yourself after thinking it over. Consider where you would like to see your own son or daughter living — in a city flat, which is like a sack made of stone, or in a house surrounded with a magnificent garden?

Consider what you would like to feed your daughter, or son, or grandchildren — tinned goods or fresh, ecologically clean produce? And in the long term, do you want to see your children living healthy lives or living off the local pharmacy? Ask any young woman who, other things being equal, she would prefer to marry — someone who had set up his life and his future family nest in a concrete apartment block or in a house with a splendid garden? I think the majority would choose the latter.

*Comment.* The regeneration of any country can begin only on the basis of its spiritual rebirth. Certain members of our government, including the President, have realised this and started talking about spirituality. Anastasia is considered by a majority of readers to be a highly spiritual individual, living according to the laws of God the Creator. She speaks of spiritual values, while here you are leading people astray, calling them in particular to get involved in business on their own plots of land, thereby leading them away from spirituality.

*Response.* In the long term, I think that nobody will ever be able to lead mankind away from true values. It's good that our leaders today are talking about spirituality. As for Anastasia's sayings, even though I didn't always understand them myself at first, yet later they would still spill over into some kind of concrete reality. Concrete reality is more meaningful to me than philosophical musings, and so here I am talking about concrete things, which I consider most important on the spiritual plane as well. The world probably has a great many concepts of spirituality and God.

After talking with Anastasia and trying to make sense out of what happened, such concepts started coming together for me too. For me God is a person. A good, smart and life-affirming person. A person aspiring to a happy existence for people, His children, to all alike and to each Man in particular. God is the Father, loving and caring for each one of us. Yet to each Man He has given complete freedom of choice. God is the wisest person, striving every moment to do only good for His children. And His Sun comes up each day, the grass and the flowers grow. Trees grow, clouds sail by and water gurgles, ready at any moment to quench any Man's thirst.

And I don't believe, and nothing can ever make me believe, that our wise Father could ever think spirituality is something to be attained only by incessant talk about it without specific concrete actions.

Ever since the so-called Iron Curtain fell, our country has been flooded with hordes of all sorts of people passing themselves off as religious preachers, and quite a few home-grown ones have popped up as well. All trying to tell us what God the Father wants of us. Some say we need to eat a special way, others teach us the best words to use in addressing God. Still others — the Krishnaites, for example, maintain that you have to jump up and down and chant mantras from morning 'til night. For me, all that's balderdash. I can imagine no way of paining God more than through antics like that — all that jumping up and down and wailing. Any loving parent tries to see to it that his son or daughter carries on his father's work, taking part in conjoint creations with him.

God's first-hand creations are all around us. And what can be a higher manifestation of our love for God than a caring attitude to them, or building our lives, our own well-being and that of our children with the help of these Divine creations?

All these antics and meditations have not made us any happier — either our country as a whole or any of its citizens

individually. And the reason they have not made us happier is that they are leading us in exactly the opposite direction — away from truth, away from God. Their efforts have been intense and constant, tossing out all sorts of new variations in their antics as truth. Doctrines come and go. Some of them which have been around for ages now only provoke mirth, while others pop up for a few years and then disappear without a trace like a flash in the pan, leaving only a trail of dirt, garbage and ruined lives in their wake.

To my question as to why we are constantly compelled to listen to various rantings about God from all sorts of preachers, and why God does not speak His own words to us directly, Anastasia replied:

“Words? The peoples of the Earth have so many words with different meanings. There are so many diverse languages and dialects. And yet there is one language for all. One language for all Divine callings. It is woven together out of the rustlings of the leaves, the songs of the birds and the roar of the waves. The Divine language has fragrance and colour. Through this language God responds to each one’s request and gives a prayerful response to prayer.”<sup>11</sup>

God talks with us every moment, but is it not our spiritual apathy that makes us unwilling to hear Him? *All I have to do*, comes the thought, *is chant a mantra or jump up and down and heavenly manna will fall my way which will make me happy and choose me as ruler over all*. Presto — no sooner said than done! And here *we* have to spend years setting up our Paradise, waiting until our trees grow and bear their fruit and our flowers blossom... Yet if we don’t do that we are not only rejecting God, we are actually insulting Him — degrading Him with our antics and pompous verbalisations.

<sup>11</sup>Quoted from Book 4, Chapter 11: “Three prayers”.

Of course you can refuse to listen to Anastasia, and especially to me. But ultimately, at some point you will walk into a springtime forest or garden, where you will stand still and listen to your heart. Many people's hearts will most certainly hear the Father's voice. As to the question of what God can do in the face of the energies of annihilation holding sway on the Earth, to say nothing of so many people taking His name in vain even as they strive to gain personal power over others, the Father (according to Anastasia) has replied:

"I shall come up as the dawn at the inception of the on-coming day. By caressing all creations on the Earth without exception, the rays of the Sun will help My daughters and sons understand that each one in their own soul can hold conversation with My Soul."<sup>12</sup>

He believed — and still believes — in us, affirming:

"There is one main defence against all the many and varied causes leading one into dire straits, against all the barriers that a lie can throw up in one's face — namely, the fact that My daughters and sons aspire to the conscious awareness of truth. A lie inevitably has its limits, but truth is limitless — it will impart itself as a conscious awareness to the hearts of My daughters and sons."

So, there is no excuse for tardiness in retrieving from one's heart the conscious awareness of God's son — not of a slave or some half-crazed bio-robot jumping up and down to the jingling of a bell.

But how much can one ask of the Father — "Give me!" "Grant me!" "Set me free!"? Isn't it time we ourselves did something pleasing for our Father? And what *could* be pleasing or bring joy to Him? In response to a question like this, Anastasia once referred to a simple test we can make use of

<sup>12</sup>This and the following quotation are taken (with slight variations) from Book 1, Chapter 6: "First encounter".

to verify the authenticity of the many religious concepts and tendencies we are faced with. She described it this way:

“When your heart is stirred by something someone says, claiming to speak in the Father's name, take a look at how the preacher lives his own life, and then imagine what the world would be like if everybody started to live that way.”

This simple test can help verify a lot of things. I tried imagining what mankind would be like if everybody to a man started chanting mantras from morning 'til night the way the Krishnaites do, and the immediate result was the end of the world. Now imagine how it would be if every Man on the Earth started growing his own garden. The Earth, naturally, would be transformed into a blossoming garden of Paradise.

As an entrepreneur — all right, a former entrepreneur, but still one at heart — I like specifics, and perhaps that's why I consider 'spiritual' someone who can take actions which will be beneficial to the Earth, his family, his parents and, consequently, God. If someone who calls himself spiritual cannot happily either himself or the woman of his heart, or his family or children, then that is a false spirituality.

*Question.* Anastasia spoke of a fundamentally different approach to education for children, and a new school. Is this something feasible only in the kind of community she has designed, or in our major urban centres too? What does Shchetinin<sup>13</sup> think about this? Back in your first book you quoted Anastasia as saying she considers raising children a top priority and was always trying to bring up the subject,

<sup>13</sup>*Mikhail Petrovich Shchetinin* -- a well-known Russian educator who founded an alternative school at Tekos in the Caucasus based on ideas similar to Anastasia's. For a description of the school — where pupils cover the 11-year Russian school curriculum in only two years — see Book 3, Chapter 17: “Put your vision of happiness into practice” and Chapter 18: “Academician Shchetinin”.

whereas you seem to be constantly avoiding it — it almost never comes up in your books. Why?

*Answer:* Mikhail Petrovich Shchetinin set up his boarding school in the forest. As soon as the foundation is laid for the first community consisting of families' own domains, we shall have to ask Mikhail Petrovich to work out a special programme for the future school. And if he cannot teach in it himself, I shall ask him to at least send his best pupils to it, and select appropriate instructors from among those currently teaching.

I don't think setting up a school like that in today's urban centres is really feasible. Anastasia's sayings aside, let's just think back to our own schooldays. You hear one thing at school, another in the street and still something else at home. While you are trying to figure out where the truth lies, trying to get a complete picture of the world, half your life goes by. I think we have to try and start living a normal life ourselves before trying to educate our children. And once we have got a life set up that's worthy of human existence, then we can take care of our children in partnership with the school, working in harmony, complementing each other.

Anastasia, indeed, often speaks about bringing up children, but she doesn't talk about anything resembling a system scheduled according to days, hours and minutes. And quite often what she says is not all that clear. She says, for example, that a child's education begins with your own education, with setting up a happy existence for yourself, with your own attempts to get in touch with God's thoughts. And one of the principal points in this education is precisely the setting up of a splendid kin's domain.

## CHAPTER EIGHTEEN

# The philosophy of life

I visited this man three times in all. He lives in a prestigious dacha community not far from Moscow. His two sons, who hold some sort of fairly high positions in the government hierarchy, built their ageing father a large two-storey mansion and hired a housekeeper to look after both the house and their father. At best they come to see their father once a year on his birthday.

His name is Nikolai Fiodorovich,<sup>1</sup> and he's already in his seventies. His legs ache, and so almost the whole time he sits in his imported wheel-chair. His huge mansion is designed in the best European style, with half the ground floor taken up by his study with its multitudes of shelves home to a considerable collection of books in a variety of languages. Most of these books are on philosophy, in expensive leather bindings.

Before his retirement, Nikolai Fiodorovich taught philosophy at a prestigious Moscow university, and has several academic degrees. In his more senior years he settled into this mansion, and spends almost all his time in his study, reading and reflecting.

I got to know him thanks to the persistence of his housekeeper Galina, who came to one of my readers' conferences. I am grateful to her for introducing us.

<sup>1</sup>*Fiodorovich* — a patronymic derived from the Russian name *Fedor* (also spelt *Fiodor* in English, which is closer to the actual pronunciation). Similarly, the feminine patronymic *Nikiforovna* (to be encountered presently) is derived from *Nikifor*.

Nikolai Fiodorovich had read the books about Anastasia, and he was a most interesting chap to talk with. In spite of his academic degrees, this old fellow could explain in simple, straightforward terms things that had not always been clear to me in Anastasia's sayings, as well as reveal new aspects he had discovered in them.

After the publication of my third book, *The Space of Love*, the office of the Anastasia Foundation forwarded several letters to me written by the leaders of various religious denominations, aggressively denouncing Anastasia, calling her a fool and a scoundrel. One of them even wrote a long letter replete with obscene language.

I was at a loss to understand why Anastasia had suddenly started provoking such unmitigated aggression among certain religious leaders, and so I decided to send some of these letters along to Nikolai Fiodorovich for his opinion. Two months later his housekeeper Galina came to see me, having looked me up at my hotel. She was very distraught and pleaded with me to come see Nikolai Fiodorovich right away, as she was concerned about his health. It was hard to resist Galina's insistence.

Galina had a gorgeous, solid physique. Not fat, she was simply a large and physically strong Russian woman in her early forties. She had spent her whole life in some Ukrainian village, driving trucks and tractors and looking after cows. She was an excellent cook with a good knowledge of herbs, and was extremely neat. Whenever she got excited she would lapse into her thick Ukrainian accent.<sup>2</sup>

<sup>2</sup>*Ukrainian accent* — a 'softer' and more relaxed pronunciation by comparison with the terser manner of speaking in north and central Russia (not unlike the difference between the American Southern drawl and the more clipped Canadian speech). In Ukrainian (and some south Russian dialects), the name *Galina* would sound more like *Halina*.

I have no idea how Nikolai Fiodorovich's sons happened to find her and set her up as a nursemaid to their father, but it was curious to see this ageing intellectual, a philosophy professor, talking with a country woman of limited educational background. Galina had been allocated a room of her own in the mansion. It would have been fine for her simply to look after the household affairs — she did this quite well — but she couldn't help listening to what Nikolai Fiodorovich and I were saying to each other. She would invariably think up something that needed doing in our presence and start dusting a particular spot over and over again, all the while commenting aloud on what she was hearing, as though talking to herself.

This time Galina had come to collect me in the Niva,<sup>3</sup> which Nikolai Fiodorovich's sons had purchased so she could go grocery-shopping in the town when necessary, or drive into the woods to gather herbs, or fetch medicines for their father. I dropped what I was working on and went with her. Driving through the streets of Moscow, Galina was very quiet — she looked tense behind the wheel, and I even noticed drops of sweat on her face — until we got past the outer ring road. Once she found herself on a familiar route, she breathed a noticeable sigh of relief. Now she was much more relaxed behind the wheel and started quickly telling me about all her concerns in her mixture of Ukrainian and Russian.

“He was sure quiet back then. The man would sit the whole livelong day jest quietly in his wheel-chair, readin’ books and thinkin’ to hisself. I’d make up hominy grits or oatmeal for ’im every morning, I’d feed him and I could then go to the market or mebbe into the woods to get some herbs — for his health, ya know. I could go with a clear conscience, see, knowing he’d

<sup>3</sup>*Niva* — a Russian make of four-wheel-drive sports utility vehicle, produced since 1977 by the Volga Automobile Factory in Toliatti, which also makes the Zhiguli — see footnote 1 in Book 4, Chapter 22: “Other worlds”.

be sittin' in that chair of his thinkin' his thoughts or readin' a book.

"But now it's all different. I brought him the letters you sent. He read 'em. Jest two days after that he says to me: 'Take some money, Galina Nikiforovna, go an' buy some of those Anastasia books, an' then go to the market, no need to hurry home. Stay there at the market an' watch the people. As soon as you see somebody who looks sad or sick, give 'em a book. I did this once, even twice, but there was no way he'd quiet down. 'Don't worry about my dinner, Galina Nikiforovna,' says he, 'I'll make do myself, if I get hungry.' But I still always made it home in time for dinner.

"But the other day when I got home from the market I went into his book room as usual to give 'im some herbal tea. An' hey, his chair's empty, and if he ain't lying there face down on the carpet! I rush over to the telephone and grab the receiver to dial the doctor's number, jest like his sons told me to. They even gave me a special number, not the one everybody uses. So I call up and cry 'Help!' into the telephone. An' jest then he lifts his head an' says to me: 'Cancel the call, Galina Nikiforovna, I'm okay... I'm jest doin' some exercises... push-ups.' So I dash over to him, pick him plumb up off the floor and set him back in his chair. How'd he ever get hisself up off the floor with those achin' legs of his?

"'What kind of exercise is it,' I says to him, 'when someone jest lays on the floor?' And he replies: 'I'd already done my exercises an' was jest restin'. No need for you to worry yer little head over.'

"The next day he'd gotten out of his chair again onto the floor to do his exercises. So I went out and bought him some dumb-bells — not dumb-bells, exactly — something called an *ex-pan-der*. With handles and elastic bands — you can hook up jest one band to make it easier, four when you've got a bit more strength. I bought him this expander, sec, but he still keeps

tryin' to get up out of his chair, jest like a kid who don't know any better. His heart ain't any too young. An' seein' it ain't too young, he shouldn't try things too heavy all at once, he has to do it one step at a time. But he's just like a foolish child.

"It's pretty near five years I've been workin' for him now, an' nothin' like this ever happened before. An' I haven't a clue myself as to what's goin' on in my heart. You have a talk with him, tell him to at least go easy on his exercises if he likes 'em so much. Tell him to go easy."

When I entered Nikolai Fiodorovich's spacious study, the hearth was cheerily ablaze. The old philosophy professor was not sitting in his wheel-chair as usual, but at his large desk, writing or sketching out something. Even his outward appearance told me that something was different about him. He was not wearing his customary dressing-gown, but sported a proper shirt and tie. He greeted me with more vigour than usual, quickly invited me to take a seat and, bypassing the traditional "How-are-you's", started in talking. Nikolai Fiodorovich spoke fervently, passionately:

"Do you know, Vladimir, what marvellous times are coming upon our Earth? I don't want to die — I want to live on this kind of Earth. I read the letters with all those obscenities directed at Anastasia. Thank you for passing them along to me. In many respects it was a real eye-opener. They call Anastasia a taiga recluse, an enchantress, a sorceress, whereas in fact she is a warrior *par excellence*. Indeed, just think about it, Anastasia is a warrior *par excellence* for the forces of light. Her significance and greatness are something that will be appreciated by future generations.

"The human consciousness, mind and feelings expressed in the sagas, folk tales and legends that have been passed down to us were incapable of even imagining the greatness of this warrior. Only please don't be surprised, Vladimir, don't get

touchy as you usually do about Anastasia. Yes, she is Man... she is a woman endowed with all — and I mean *all* — of human nature, with all the feminine weaknesses and virtues, designed to be a mother, but at the same time she is also a great warrior! Right this moment!

“I shall try to express myself not quite so abstrusely. It all comes down to the philosophical concept. You see, Vladimir, on the shelves of my study there are a great many books. These are philosophical works of thinkers of different times and from different parts of the globe.”

Pointing to his bookshelves, Nikolai Fiodorovich listed them off one by one.

“That’s ancient rhetoric, talking about the living, animated body of the cosmos. Next to that is what’s been written about Socrates — he himself didn’t write anything. Over to the right you see Lucretius, Plutarch and Marcus Aurelius. A little lower down are five epic poems of Nizami Ganjavi.<sup>4</sup> Further along there are Arani,<sup>5</sup> Descartes, Franklin, Kant, Laplace,<sup>6</sup> Hegel and Stendhal.<sup>7</sup> All of these men attempted to learn the central essence of things, to fathom the laws of the Universe. It was people such as these Durant<sup>8</sup> was referring to when he wrote:

<sup>4</sup>*Nizami Ganjavi* (also spelt *Gianτζbevi*) (1141–1209) — one of the most celebrated historical Persian poets from the region of Azerbaidzhan. He was learned not only in Arabic and Persian literature, but also in a variety of academic disciplines, including mathematics, geometry, astronomy, medicine, Islamic law and theology, history, philosophy, music and the visual arts.

<sup>5</sup>*Dr Taghi Arani* (1904–1940) — Iranian Marxist intellectual, arrested and tortured for his communist sympathies.

<sup>6</sup>*Pierre-Simon Laplace* (1749–1827) — French mathematician who used mathematics to study the origin and stability of the solar system, an early contributor to the theory of probability.

<sup>7</sup>*Stendhal* (real name: Marie-Henri Beyle, 1783–1842) — French realist writer known for his detailed analyses of his characters’ psychological make-up.

“The history of philosophy is essentially an account of the efforts great men have made to avert social disintegration by building up natural moral sanctions to take the place of the supernatural sanctions which they themselves have destroyed.”

“Great thinkers,” Nikolai Fiodorovich continued, “have attempted, each in their own way, to get closer to the concept of the Absolute. Their philosophical concepts gave rise to religion-like philosophical tendencies which in turn passed into history. Eventually, having defied all the timid counter attempts, the dominant concept in our lifetime has turned out to be, to put it concisely, the concept of subjection to some kind of Supreme Mind. Its precise location is unimportant, be it in the infinite spaces of the Universe or localised in the essence of a particular human soul. Much *more* important is the fact that the concept of subjection or inclination dominates over everything else. After that come the particulars — subjection to a teacher, a mentor or a ritual.

“My collections also include Nostradamus’ prophecies. Taken as a whole, they constitute a philosophical concept, namely that man is perishable, corruptible and insignificant, and that he has a lot to learn. This concept is precisely what distorts and destroys the soul of Man. No one who adheres to this concept can be truly happy. Not a single person on the Earth can be happy as long as such a concept is dominant in Man’s consciousness.

“It weighs equally upon the philosopher and the one who has never gone near philosophy in his life. It weighs equally

---

<sup>8</sup>William (Will) James Durant (1885–1981) — American philosopher, historian and writer, of French-Canadian heritage. Two of his best-known works are the eleven-volume epic *The story of civilization* (1935–1975) and *The story of philosophy* (1962).

<sup>9</sup>Will Durant, *Philosophy and the social problem*. New York: Simon & Schuster, 1928, p. 7.

upon the newborn and the aged. It weighs upon the foetus in the mother's womb. Many adherents of this concept are living today. They have been around at different times, and today their followers are proselytising human society with their beliefs in the frailty and insignificance of Man's essence. But no! Other times are upon us! Anastasia's words from God were like a flash of light to me. You wrote them down, Vladimir, I remember them. When Adam asked God:

"Where is the edge of the Universe? What will I do when I come to it? When I myself fill everything, and have created everything I have conceived?"<sup>10</sup>

"And God replied to His son, replied to us all:

"My son. The Universe itself is a thought, a thought from which was born a dream, which is partially visible as matter. When you approach the edge of all creation, your thought will reveal a new beginning and continuation. From obscurity will arise a new and resplendent birth of you, and it will reflect in itself your soul, your dreams, your whole aspirations. My son, you are infinite, you are eternal, within you are your dreams of creation."

"What a perfect, philosophically comprehensive, precise and concise response that explains it all! It stands head and shoulders above all our philosophical definitions taken together. You can see for yourself, Vladimir, the vast collection of books on my library shelves, but the one Book which is worth far more than all the volumes ever published on philosophy taken together is missing. Many have seen this Book, but few are afforded the opportunity to read it. The language of this Book is not one that can be studied, but it can be felt."

"What language is that?"

<sup>10</sup> Adam's questions and God's reply are quoted from Book 4, Chapter 8: "Birth".

“The language of God, Vladimir. May I remind you of how Anastasia described it:

“‘The peoples of the Earth have so many words with different meanings. There are so many diverse languages and dialects. And yet there is one language for all. One language for all Divine callings. It is woven together out of the rustlings of the leaves, the songs of the birds and the roar of the waves. The Divine language has fragrance and colour. Through this language God responds to each one’s request and gives a prayerful response to prayer.’”

“Anastasia can feel and understand this language, but what about us?... How can it be that we have let it go unheeded for centuries? Think of the logic! Cold logic dictates that if God created the Earth and the Nature that lives all around us, then every blade of grass, every tree and cloud, the water and the stars can only be His materialised thoughts.

“But we simply pay no attention to them, we trample them, break them, disfigure them, all the while talking about our faith. What kind of faith is that? Who are we really worshipping?”

“‘The parade of worldly rulers, no matter what grand temples they might have built, will be remembered only by the filth they have bequeathed to their descendants. Water will prove to be the criterion, the measure of all things. Every day that passes, water seethes with more and more contamination.’”<sup>12</sup> That’s how Anastasia put it. That could only have been said by a consummate philosopher, and it behoves all of us to ponder that statement.

“Just think, Vladimir, anything we construct, even if it is for worship, is temporal, just like religion itself. Religions come

<sup>11</sup>Quoted from Book 4, Chapter 11: “Three prayers”.

<sup>12</sup>Quoted from Book 3, Chapter 24: “Who are you, Anastasia?” (only with a different sentence order).

and go, along with their temples and philosophies. Water has existed since the creation of the world, just as we have. After all, we too are composed, by and large, of water.”

“But Nikolai Fiodorovich, why do you think Anastasia’s definitions are the most accurate?”

“Because they are taken from that one Book that covers everything. And their logic, Vladimir, is the logic of philosophy. There’s one preceding statement, given in God’s name, in which God answers the question ‘What do you so fervently desire?’, and His answer is directed to every single entity in the Universe:

“Conjoint creation and joy for all from its contemplation.”<sup>13</sup>

“Just one brief sentence! Only a few words, that’s all! Just a few words to express God’s aspiration and desire. None of the great philosophers have been able to give a more precise and accurate definition. ‘One must perceive reality through one’s self,’ says Anastasia.<sup>14</sup> So any parent who loves their children should determine whether this may not be what they are really dreaming about. Who among us, being the son or the daughter of God, would not desire conjoint creation with our children and joy from its contemplation?”

“What consummate power and wisdom are contained in these philosophical definitions of Anastasia’s! They are absolutely crucial for mankind! They are effective. The hosts of doomsayers have lined themselves up against them. They will continue to manifest themselves — not just in the form of cursing Anastasia in correspondence, but in a variety of

<sup>13</sup>Quoted from Book 4, Chapter 2: “The beginning of creation”.

<sup>14</sup>An approximation of Anastasia’s words in Book 2, Chapter 8: “The cherry tree”: “To perceive what is really going on in the Universe one need only look into one’s self.” See also Anastasia’s grandfather’s advice in Book 4, Chapter 33: “School, or the lessons of the gods”: “Decide what’s real by yourself.”

ways. Many small-minded preachers will gather a fistful of followers around them and look as if they are preaching truth to people — people who are too lazy to think for themselves. Anastasia has already said about these:

“Woe unto you who call yourselves teachers of human souls! Cool the passions of your heart, and may everyone now know: the Creator has given all to each one right from the start. The Truth has been there right from the start in each one’s soul. And we need only refrain from hiding the Creator’s great creations under the murky domain of dogma and conventions, the murk of inventions for the sake of one’s own selfish interests.”<sup>15</sup>

“These are the people who will try to pounce on Anastasia. Because Anastasia is utterly destroying their philosophy. With her own philosophical concept she is actually forestalling the end of the world. And this is our reality today: we are witnessing and participating in the greatest deeds of all time. Here we are at the threshold of a new millennium, and we are entering upon a new reality. We are already living in this reality.”

“Wait, Nikolai Fiodorovich. I didn’t get what you said about reality and deeds. Let’s say one - - or maybe two — philosophers said something. And Anastasia says it, too — what have reality and deeds got to do with it? It’s all just words. Philosophers talk, and life goes on unfolding in its own way.”

“The life of any human society has always been constructed, as it is today, under the influence of philosophical concepts. The Jewish philosophy was one way of life, the crusaders’ philosophy was another. Hitler had his own philosophy, and we under the Soviet régime had ours. Revolution, after all, is only one philosophical concept taking the place of

<sup>15</sup>These phrases are quoted (though not in the original order and with slight variations) from Book 3, Chapter 24: “Who are you, Anastasia?”.

another. But all that amounts to details determined by local conditions. What Anastasia has accomplished is much more global in scale. It has an impact on human society as a whole and on each member of society in particular. She said she would transport mankind across the dark forces' window of time.<sup>16</sup> She has done this, Vladimir. She has set up a bridge over the abyss which everyone may cross, and each one is free to decide whether to go across it or not.

"I am a philosopher, Vladimir. I can now see this very clearly. What's more, I can feel it. Her philosophical concept shines like a clear ray of light on the threshold of a new millennium. And each one of us, at any given moment, acts this way or that depending on our individual philosophical convictions. If these change, then our actions change accordingly. As I was sitting in my study, for example, and reading through various philosophical works, I pitied all mankind, inevitably moving toward its doom. I wondered where I would be buried, and would my sons and grandchildren come to my funeral, or whether it would be too much trouble for them to come see their grandfather. I pitied all mankind, and thought of my own death. And then along came Anastasia, with an entirely different philosophical concept, and my actions took an about turn."

"How would you do things differently now, for example?"

"Well, I'll tell you. Now... Now when I get up in the morning I start acting in accord with my new philosophical concept."

Nikolai Fiodorovich got up, bracing his arms against the table. Then, holding on first to the chair, then a bookshelf, he managed to make his way on his aching legs over to one of the bookcases. He looked at the titles on each spine, then pulled out one book in an expensive leather binding and headed

<sup>16</sup>See Book 1, Chapter 27: "Across the dark forces' window of time".

over to the fireplace, leaning on various pieces of furniture as he went. Tossing the book into the blazing hearth, he explained:

“Those are the prophecies of Nostradamus about all sorts of cataclysms and the end of the world. D’you remember, Vladimir, Anastasia’s words on this? You should remember them. She says:

“The dates you gave, Nostradamus, for fearful cataclysms on the Earth, were not predictions. You created them out of your own thought and persuaded people to accept their implementation. Now they are still hovering over the Earth, still frightening people with their sense of despair.” This could only have been said by a consummate philosopher and thinker, one who understands that a prophecy is nothing more than an attempt to set a direction for future developments. The more people believe in universal doom, the greater will be the number of thoughts attempting to outline the image, and it will come to pass.

“It can come to pass simply because human thought is material and creates what is material. And whole sects immolate themselves in different parts of the world — that is, the ones who believe in doom immolate themselves, while the ones who have faith in the future live. And she is fearless in the face of despair. She completely destroys any notion of the end of the world when she declares:

“But now they will no longer come true. Let your thought join in fray with mine. I am Man! Anastasia I am. And I am stronger than you.’ And again she says: ‘All anger on Earth, leave your deeds and make haste to me, join fray with me, try your utmost.’ And again: ‘With my Ray I shall take but

“These and the following quotations concerning Nostradamus’ prophecies are drawn (in fragmented order and with minor modifications) from Book 3, Chapter 24: “Who are you, Anastasia?”.

a moment to burn up the mark of age-old dogma.' She alone has gone out to fight against the countless hordes. Against the millions who outline an image of mankind's total doom. And she doesn't want to involve *us* in this fight. She only wants us to be happy, and so she says in her prayer addressed to God:

*In your bright dream the coming ages all will live and share.  
It shall be so! I wish it so! I am a daughter of Yours.  
My Father, You are present everywhere.*<sup>18</sup>

"And she will get her wish. Her philosophy is extraordinarily potent. And the coming ages will indeed live in the Divine dream, in splendid gardens of Paradise.

"And she will not distract anyone with memories of herself. People will not build monuments to her nor reminisce about her when it is clear to everyone where true humanity lies. People will simply drink in the Divine nature, they won't be thinking about her. But flowers will bloom in various gardens, including one splendid flower named *Anastasia*.

"I am old, but I am willing to serve as her foot-soldier even today. You say, Vladimir, that philosophy is just a bunch of words. But these words, spoken somewhere in the far-off taiga, have been enthusiastically taken in by my heart, and here you have first-hand evidence of concrete material actions: it is not mankind that is perishing in the flames, but predictions of the doom of humanity. That is why the doomsayers are all stirred up and have set their forces in array. Anastasia has stirred up people who have built their philosophy on such a scenario and manipulated mankind for their own purposes with the threat of the 'inevitable' end of the world."

"Hasn't anyone before Anastasia come out against the notion of the end of the world?"

<sup>18</sup>Quoted from Book 4, Chapter 11: "Three prayers".

“There have been a few timid — but ultimately insignificant — attempts, but they’ve hardly received any attention. Nobody, but nobody, has spoken out as she has. Nobody’s words have been accepted so readily and joyfully as hers, in any human heart. And not a single philosophical concept has ever taken hold of people this way. But hers has taken hold. It is burning up the murk of age-old dogma.

“How she does it — well, that’s not for us to grasp at the moment. There is an extraordinary rhythm in her words, and a consummate logic, possibly something else. Possibly... No, undoubtedly! ‘The Creator,’ she says, ‘has shone forth with some kind of new energy! An energy that tells us anew about something we see around us every day...’<sup>19</sup>

“Undoubtedly a new energy has made its appearance in the Universe, and more and more people in our time are starting to possess it day by day. The fact is that decades and possibly even centuries, as a rule, are required to spread a significant philosophical concept. And here it’s only taken *her* a few years... Amazing!

“You surmised, Vladimir, that her words were simply words. But her words are so strong that — you see these hands?” He raised one of his hands, looked at it and added: “Even these old hands of mine are materialising her words. And the whole prospect of the end of the world is burning up in flames. And life will go on. These hands can still help life go on. The hands of one of Anastasia’s foot-soldiers.”

Holding on to the furniture, Nikolai Fiodorovich made his way over to the table and picked up a pitcher of water. Bracing himself with one hand against the wall, he headed over to the window. It was a challenge, but he made it. On the windowsill stood a beautiful flower-pot, in which a green shoot, still very young, was sprouting up from the earth.

<sup>19</sup>Quoted from Book 4, Chapter 13: “To feel the deeds of all mankind”.

"Look, my baby cedar's come up at last. And now my hands will water it, materialising the words that are close to my heart."

Bracing one hip against the windowsill, Nikolai Fiodorovich grasped the pitcher with both hands and said:

"The water isn't too cold for you, my dear?" After a moment's thought, he took a swallow of the water, held it in his mouth for a little while and then, resting his hands on the windowsill, let a thin stream of water spew from his mouth onto the earth beside the green shoot.

Galina was in the study during our conversation. She was always thinking up some excuse to be in his study. She would bring tea, or start dusting, all the while muttering quietly to herself, commenting on what she had heard and seen. These last actions of Nikolai Fiodorovich evoked a rather louder comment than usual:

"Now what's the point of that? Any decent person might wonder. Here he goes doin' tricks like that in 'is old age. He won't ride in his wheel-chair, he goes an' tortures his agein' legs, makin' 'em walk like that. An' somehow people ain't satisfied. Here it is nice an' warm an' comfy at home, but it ain't enough for them, jes' ain't enough!"

I remembered Galina being concerned about Nikolai Fiodorovich's health and asking me to warn him about something, only now I couldn't figure out what there was to warn him about, and I asked him:

"What have you thought up this time, Nikolai Fiodorovich?"

He was a bit emotional, but said distinctly:

"I have a big favour to request of you, Vladimír. I ask you only to respect an old man's wishes."

"Go ahead. I'll be happy to oblige if I can."

"I've heard say you're planning to get people together who want to start building an ecological settlement. You want to

see about having a hectare of land granted each family to set up a kin's domain."

"Yes, I do. The Anastasia Foundation has already submitted a proposal to several regional administrations about this. But there's been no decision on land grants as yet. They've offered a few small allotments, just for a handful of families each, but unless we have a minimum of a hundred and fifty families, we shan't be able to afford the cost of any infrastructure."

"They'll grant the land, Vladimir. Most definitely they'll grant it."

"That would be good. But what about this favour you want?"

"When they start handing out land for kin's domains, and they'll definitely be doing this all over Russia, I would ask you, Vladimir, not to forget about an old man. Please, don't forget to count me in. I too want to establish my own piece of the Motherland before I die."

Nikolai Fiodorovich started getting more and more excited, his words came quickly and with passion:

"To establish it for myself. For my children and grandchildren. See, I'm growing my own baby cedar in this pot, so I can plant the seedling in a piece of my Motherland with my own hands. I shan't be a burden to anyone. I'll set everything up on my own hectare of land, I'll put in a garden and plant a living fence. I'll be able to help my neighbours. I have some savings, and I keep receiving honoraria for various articles. My sons — whatever else you say about them, they never refuse any financial help. I'll build myself a little house there and I can help finance construction for my neighbours."

"Now that'll be a fine sight to see!" Galina was muttering even louder than before. "People don't stop to think of it — how you can plant a garden when your legs don't move. And here he is plannin' on helpin' his neighbours. Oh, if decent

folk could only hear that! What would decent folk think? Here his sons have built 'im a house like this — he should jest live and be happy, and thank his sons and God for it. But people jes' can't sit still. They've gotta keep thinkin' up things like that right into their old age. What might decent folk think about people like that?"

Nikolai Fiodorovich heard what Galina said, but didn't pay any attention to her, or at least pretended to ignore her, and went on:

"I realise, Vladimir, that my decision may be treated as excessive emotionalism, but that's not how it is. My decision is the fruit of extensive reflection. I may appear to enjoy a fine life, but that's only an appearance. I have a mansion fully equipped — practically a palace... I've got a housekeeper to take care of it... My sons have done pretty well for themselves... But you know, before learning about Anastasia I was as good as dead.

"Yes, Vladimir, dead. Look, I've been living here for over four years now. I spend most of my time in my study. I'm useful to no one, and there's literally nothing I can have an impact on. And the same fate awaits my sons and grandchildren. It's the fate of experiencing your death while you're still alive.

"They call Man dead, Vladimir, when he stops breathing, but that's not the case. Man dies the moment he stops being useful to others and is no longer in charge of anything.

"The neighbours' houses around here aren't quite so grand, but I don't have any friends among them. And my sons have asked me not to announce my name even to the neighbours. There are a lot of jealous types about, wondering whose house this is — a house that's practically a palace. Once they find out, they'll splash my name all over the media, enquiring how I managed to finance this set-up. They'll never believe it was my own hard-earned money. The way I sit here, I may as well

be in prison, or even dead. I just sit here in my study, never go upstairs — there's no reason for me to. Certainly I have a lot of philosophical publications to my name, but after finding out about Anastasia...

"I'll tell you right off, Vladimir — and please don't take what I say as a fantasy of old age — I'll prove to you what I'm about to say is true. You realise, Vladimir — right now, right this very moment, God's judgement is coming to pass."

"Judgement? But where and how? Why doesn't anybody know about this?"

"You realise, Vladimir, for so long we've imagined this judgement to be the coming of some kind of terrible Being from on high, with its terrible entourage. And this Supreme Being is supposed to tell each of us where we've been right and wrong. Then this Supreme Being is supposed to mete out punishment in due measure, sending whoever's being judged to either heaven or hell. How primitively we've pictured God's judgement!

"But God isn't some primitive creature. He can't judge that way. He has given Man eternal freedom, and any kind of judgement is a violation of one's person, it's a deprivation of freedom."

"Then what did you mean when you said something about God's judgement coming to pass right this very moment?"

"And I'll say it again: God's judgement is coming to pass right this very moment. Everyone is given the opportunity to judge himself.

"I realise now what Anastasia's done. Her philosophy, power and logic are speeding up the processes. Just think, Vladimir, many people will believe her, and bring the idea of these splendid Divine communities to fruition. Once they believe, they'll find themselves in a garden of Paradise. Others won't believe and will remain where they are now. Everything in the world is relative.

“At the moment we are not in a position to compare our life with any other, and so we think our lifestyle is tolerable. But when it is put side by side with another kind of life, when the unbelievers finally believe, they will see themselves in hell. Some people count themselves happy simply because they don’t know how unhappy they really are. God’s judgement is coming to pass right before our eyes, but it is strange to our way of thinking.

“This isn’t just *my* discovery. I know of this psychologist in Novosibirsk who’s undertaken a study of how various population groups react to Anastasia’s sayings — she’s said practically the same thing. I don’t know her personally — I’ve only read her conclusions in print, and they’re similar to my own.

“People in various cities and towns are feeling and realising the majesty of what’s been taking place. Professor Yeriomkin, whose poems have been published in the people’s collection,<sup>20</sup> is another one who’s described the Anastasia phenomenon in magnificent verse. I’d like to remind you, Vladimir, of these lines he dedicated to Anastasia:

*In you I have beheld a Man quite clearly,  
Possibly from the end of another era,  
Where, midst goddesses, my own grandchildren too  
Will be an embodiment of you.*

“I memorised these beautiful lines. I want my grandchildren, too, to live among the goddesses, and therefore I want to provide this opportunity for them, I want to begin establishing for them a piece of our splendid Motherland. Just to

<sup>20</sup> *people’s collection* — a reference to the 544-page volume of readers’ poetry, art and letters published in Russian under the title: *V luche Anastasii zvuchit dusha Rossii. Narodnaya kniga* (The soul of Russia sings in Anastasia’s ray. A people’s book).

buy a piece of property, even more than one hectare in size, is no problem for me, but it is important to me who my neighbours are. And so I want to set up my property in a circle of people who share my way of thinking. To set it up for my grandchildren. One of them will most certainly want to live there. And my sons will want to come and rest there in their father's garden from the bustle of daily life. At the moment they come and see me only on rare occasions. But they *will* come to the garden I shall set up. I shall ask that I be buried in this garden. My sons will come...

"I'm talking about my grandchildren, my sons, but above all I need to create something inherent in the essence of Man, otherwise... You see, Vladimir... All at once I have acquired the desire to live and be active. I can do it. I shall become a foot-soldier and enlist in Anastasia's cause."

"You can live just as well right where you are. Why don't you jes' live out a good quiet life right here?" Galina enquired.

This time Nikolai Fiodorovich took it upon himself to reply. He turned to her and said:

"I can understand your concern, Galina Nikiforovna. You're afraid of losing your job and a roof over your head. Please don't worry — I'll help you build a little house nearby, you'll have your own little house and your own plot of land. You'll get married — you'll find the one meant just for you."

All at once Galina straightened up to her full height, threw her white rag down on the side-table — the rag she had been pretending to dust with all during our conversation — and placed her hands on her solidly built thighs. She looked as though she wanted to say something, but couldn't, as though her emotional state had cut short her breath. Then, mustering up her strength, she managed to pronounce quietly:

"Well mebbe I don't like the idea of bein' close to a neighbour like you... Anyways, I can build my own house, jes' as soon as I get my land. When I was a kid I helped my father

build a log cabin. And I've saved up a pretty penny. Besides, workin' around here ain't so pleasant. Who is there to clean up for day after day upstairs? Nobody ever goes upstairs, yet here I am, cleanin' up like a damn fool after nobody. I don't want to live in a neighbourhood if the neighbours don't have their head screwed on right!"

Galina did a sharp about-turn and quickly headed off to her room. But presently the door of her room opened, and Galina re-appeared in the doorway, holding in her hands two little pots with green shoots just like those in Nikolai Fiodorovich's fancy pot. She walked over to the window and put her little pots down next to his on the windowsill. Then she returned to her room and brought out a large basket filled with a whole lot of little cloth bundles. She placed the basket at Nikolai Fiodorovich's feet and said:

"Them's seeds. Real ones, 'cause I gathered them meself all summer long and right through the fall. They're from real medicinal herbs. The ones they sow in the fields to sell at pharmacies, they ain't got the power of these here. Jes' scatter 'em with your own hand on your land — they'll multiply your health and strength — when they're growin', and when you make a herbal tea with 'em and drink it in the wintertime. 'Sides, that baby cedar of yours, it's gonna be lonely — well, there's some friends an' a brother for it."

Galina pointed to the windowsill, where the three pots with little shoots were now standing, and then walked slowly to the front door, calling over her shoulder:

"Good-bye, philosophers! Maybe you already know the philosophy of death. But as for the philosophy of life, you've still got a lot to learn."

As far as anyone could tell, Galina had been deeply offended by something, and she was walking away for good. Nikolai Fiodorovich took a step to follow her, but stumbled. He then tried to catch himself by reaching out for the back of a chair, but the

chair fell over. Nikolai Fiodorovich started to sway back and forth, flinging his arms out to the side. I jumped up to offer him a hand, but I was too late. Galina, who by this time had already reached the door of the room, turned at the noise of the falling chair and saw Nikolai Fiodorovich swaying back and forth.

Quick as a wink she was at his side. With her strong arms she managed to grasp the old man whose legs had already given way beneath him, and stood there holding him to her bosomy breast. Wriggling one hand free, she picked up Nikolai Fiodorovich by the legs and carried him like a child to his wheel-chair. She sat him down in it, then took hold of a plaid rug and began covering his legs, gently chastising him:

“Some soldier of Anastasia’s you are! You ain’t no soldier, jest a green recruit!”

Nikolai Fiodorovich put his hand in Galina’s. Fixing his gaze on this drooping woman now sitting at his feet, he said, switching to the familiar form of address<sup>21</sup> for the first time:

“Forgive me, Galya. I thought you were laughing at my aspirations, and here you are...”

“I’m the one laughing? You think I’m crazy?” Galina blurted out. “Every night I sit and think only soul thoughts. ’Bout how I’m gonna plant herbs — real medicinal herbs, ’bout how I’m gonna use ’em to feed this bright-eyed falcon<sup>22</sup> here, to help

<sup>21</sup>*familiar form of address* — similar to using *tu* instead of *vous* in French (see footnote 1 in Book 1, Chapter 2: “Encounter”). The informal form of address is reciprocated by Galina in addressing Nikolai Fiodorovich.

<sup>22</sup>*bright-eyed falcon* (Russian: *sokol yasny*) — a reference to a Russian folk-tale about a falcon named Finist. When Marya, the daughter of a rich merchant, is brought a falcon feather by her father at her request, she waves it in the air, whereupon a falcon appears and later turns into a handsome young man. The two fall in love. Injured, however, thanks to the trickery of Marya’s wicked elder sisters, Finist flies off and eventually recovers, but Marya must set out on a long quest to find him, and rescue him from a palace where a sly princess has her own designs upon him. The tale ends, of course, with Marya and Finist marrying and living happily ever after.

'im get his strength back. I'll make some real soup from fresh cabbage that don't smell of chemicals. I'll give him some real cow's milk to drink, not that fancy pasteurised stuff. An' jest as soon as this ol' bright-eyed falcon gets hisself straightened out, mebbe I'll even bear him a child. Me, I wasn't laughin', not one little bit. I's just *sayin'* that to see how firm a decision he'd made, to see whether he might change it in midstream."

"It is firm, Galina, I'm not going to change it."

"Well, if that's how it is, then don't chase *me* out to the neighbourhood. Don't hand me over to some other suitor."

"I wasn't chasing you out, Galya. It's just that I had no idea you wanted to be with me some place other than this well-appointed mansion. I am happy to accede to your wishes, Galya. I am immeasurably grateful to you. I simply had no idea..."

"What's there here to have no idea about? What woman would turn away from such a determined soldier as yourself? Oh, I've read about Anastasia, how I've read about her!... Took me a long time, it did — had to read syllable by syllable, but still I got it right off. All us gals today need to become like Anastasia. So I've decided to be a little bit of Anastasia to you. All us gals need to become a little bit like Anastasia. She ain't got too many soldiers jes' yet, only a bunch of green recruits, still wet behind the ears. Us gals are gonna make 'em strong, an' make 'em well!"

"Thanks, Galya. That means, you, Galina Nikiforovna,<sup>23</sup> have read the books — and pondered them during your evenings?"

"For certain. I've read all the books on Anastasia an' thought about them during my evenings. Only please don't address me as a stranger any more. I've been meaning to ask you for a good long time now. Just call me Galya."

<sup>23</sup>*Galya / Galina Nikiforovna* — Nikolai Fiodorovich's alternation of familiar and formal forms betrays his temporary uncertainty as to how he should address this woman.

“Okay, Galya. I was intrigued by what you said when you were offended — really intrigued. You said we already know the philosophy of death. But as for the philosophy of life, we’ve still got a lot to learn. What a concise formulation of two contrary philosophical tendencies. A succinct definition indeed: the philosophy of death and the philosophy of life. Simply amazing! Anastasia is the philosophy of life. Yes! Of course, of course! Just amazing!”

Stroking Galina’s hand excitedly and tenderly, Nikolai Fiodorovich exclaimed:

“You’re a philosopher, Galina — I had no idea!”

Then he said, turning to me:

“There’s absolutely no doubt there is so much more we need to figure out, both from the philosophical point of view and through the help of esoteric definitions. I am trying to evaluate Anastasia as Man — a Man such as we must all become. But there are certain unexplainable abilities she has which prevent us from fully appreciating her as a Man like us.

“Vladimir, I remember your describing an episode in which she saved people at a distance from being tortured. She saved them, but she herself, if you recall, lost consciousness, went white all over and even the grass turned white around her.<sup>24</sup> What kind of device was operating here, to make both her and the grass turn white? I’ve never heard of anything like that before, even though I’ve tried asking esoterics about it. It’s not something either philosophers or physicists — or esoterics — know anything about.”

“Whaddya mean, they don’t know ’bout it?” Galina burst into the conversation, still sitting on the floor at Nikolai Fiodorovich’s feet. “An’ what’s there to think about, when we need to scratch their eyes out?”

<sup>24</sup>This incident is described in Book 1, Chapter 28: “Strong people”.

"Whose eyes, Galya? Do you have your own opinion on this phenomenon?" Nikolai Fiodorovich enquired in surprise.

Galina was only too ready and willing to provide an answer:

"It's as plain as the nose on your face! Jest as soon as a Man is attacked by somethin' rotten, by some sort of wretched news or threats, or cussed in anger, he goes all white. Turns pale, you know. He turns pale when he don't return that anger, but burns it up within 'imself — meaning he gets all shook up, and burns up the anger within 'imself, and this makes 'im go all white. You see lots of examples like that in life. Anastasia too can take this rot and burn it up within herself, and the ground goes all white, tryin' to help her, and as for me, well, I think you gotta scratch its eyes out — the eyes of any kind of rot, I mean."

"Wow! Really! Many people turn pale," Nikolai Fiodorovich exclaimed in surprise, fixing his gaze on Galina, and then added: "but Man truly turns pale when he does not reciprocate someone's insult, but tries to keep a stiff upper lip and hold it within. He burns it up within himself, as it turns out. Why, that's true! How simple it all turns out to be! Anastasia burns up within herself the energy of aggression aimed at her. If such energy were reciprocated, it would fail to dissipate in space but would go off and find some other target.

"Anastasia doesn't want anyone to be a target. Just think of all the filth that will be aimed at her! So much has been building up over centuries, and is being produced even now by the adherents of the philosophy of death. Who is strong enough to withstand such an onslaught? Tell me, who? Stay the course, Anastasia! Stay the course, noble warrior!"

"And stay the course she will," Galina chimed in. "We're gonna help her now. I've started givin' away your books down at the market, and the gals that have been readin' 'em now stand around on a street-corner in klatches. I gave 'em some cedar seeds too. They planted 'em. An' I told 'em about the

healin' herbs too. The gals say: 'We've gotta do somethin'! Sure, we ain't gonna beat up our husbands, like one of 'em there on the corner suggested. But we better think about who we're gonna have a child with.'

"What are you talking about, Galina?" Nikolai Fiodorovich asked in surprise. "Don't tell me you have your own activist group already?"

"No way! What kind of 'activist group' might that be? We jes' stand around on the street a bit an' chit-chat about life."

"And where did the idea of beating up on men come from? What arguments motivated that?"

"Whaddya mean, what arguments? How come our men don't come through for us? They want us to give 'em a child, so we give 'em a child, but then there ain't no nest for our young 'uns. An' if you can't make a nest, why ask for a child? What gal's gonna be happy with her man when her kid jes' wanders around aimlessly right before her very eyes?"

"Teacher's come to us twice already. Teacher says some sort of psych factor stops 'em from gettin' ahold of themselves — it's all because of some kinda loan they're waitin' for from some foundation overseas. It's a 'syndrome', she says. Lack of self-confidence. An' this psych syndrome digs up all sorts of reasons to avoid buildin' a nest.

"An' the teacher went an' told the gals that these loans have to be paid back in a certain number of years. Maybe twenty, maybe thirty, I don't remember. I only know, they need to pay back a little bit more than they've been given. So it's like a man today ends up sellin' his own kids?"

"Why would you make a comparison like that, Galina?"

"Whaddya mean, *why*? The men we've got today, they've been foolin' around, lookin' to borrow money. An' who will have to pay it back? For certain that'll be their kids — the kids that are still jes' young 'uns. Yeah, an' the kids who ain't even born yet. And our kids'll have to pay back even more than

their dads have borrowed! When the gals began graspin' this picture of the future, they started goin' crazy over concern for their kids — they felt like bashin' their men's snouts in. As for me, I thought we better not wait for help from anywhere, it's time we ourselves started helpin' these poor men of ours.

"I once tried a taste of that overseas sausage, an' my heart broke out in tears, an' I really wanted to send a piece of our Ukrainian bacon to whoever made that sausage, along with some of our own home-made sausage. Oh my dear God! People in those countries have no idea how sausage should taste!

"There's no point in takin' loans from people like that — that's bad money, it's no good at all, it'll bring us nothin' but harm. As for beatin' up, I told you only one gal proposed whippin' all them men, the other gals didn't go along. What's the point? So you can knock the last bit of sense out of 'em? Even so, the gals tell each other how miserable their men have made their lives. And I boast a bit, I say *my* man's come to 'is senses. He's already started makin' a nest."

"*Your* man? Who is he?"

"Whaddya mean, who is he? I've been tellin' 'em about *you*. How you've gone an' planted a baby cedar, how you sent me to buy you a draftin' board with a large ruler -- the one on the table over there," Galina indicated, pointing to the drafting table next to Nikolai Fiodorovich's desk. "I told 'em how you asked me what trees are best to plant around the hectare, and made drawin's on sheets of paper at your desk, and sketched out a lovely community, where good people can live. You didn't have enough room on your sheets of paper, so you asked me to bring you bigger sheets, an' the board an' the ruler too.

"I told the gals 'bout that, an' we all went together to choose the drafting board. We chose the biggest and best we could find, an' it sure cost a lot. The gals said to me: 'Don't be stingy, Galina.' They helped me, an' I could see the envy in their eyes. The bitches were jealous that my child would be

born in a marvellous garden, in his own native ground, with good people all around. An' I ain't mad at them for bein' jealous — after all, everybody wants to be happy.

"They pooled their money together an' bought me a camera so's I could take a picture of your sketch. So I took the camera, an' they showed me what button to press and where I should look through to take a snap. Only I never got the courage to ask your permission so I never pressed the button."

"You did the right thing, Galina, not taking a photo of my design without permission. When I've finished, then perhaps I shall publish it as one proposal for the new settlement."

"That's gonna take you a long time, and the gals right now can't wait to see this lovely, beautiful future, at least to sneak a glimpse. You've managed to come up with a lovely drawin' on one of them large sheets."

"What makes you think I shan't soon complete it? Everything's almost all ready to be published — I have the plans, and colour drawings too."

"That's what I said — you already have a beautiful picture. For certain it shouldn't be published for people to use, but you could still show it to the gals — the ones I meet with — an' I'll just say it's not quite right yet."

Nikolai Fiodorovich quickly wheeled himself over to the drafting table. I followed. There on the table lay plans, done in coloured pencil, of several domains of the new settlement. The drawings showed little houses, and gardens, and a living fence made out of various kinds of trees, and ponds too... The overall impression was a fine, beautiful arrangement of everything.

"Where did you notice a mistake or an inaccuracy?" enquired Nikolai Fiodorovich of Galina, who had by now joined us at the drafting table.

"You didn't put any Sun in the picture. An' once you get the Sun in, you have to put in shadows too. An' if you're goin' to put in the shadows, you'll see that you can't plant any tall trees

along the eastern fence — they'll give too much shade on the plant beds. The trees should be planted on the other side."

"Really? Maybe you're right... I wish you'd told me earlier. But this is only a draft so far... Anyway, Galina, did you say you're going to have a child?"

"Well, it's like this. You keep on doin' your exercises for now. But once you stand on your own native ground, you'll crawl out of your catacombs. An' I'll feed you with what grows in your native soil, an' give you a healin' tea to drink. An' spring'll come, you'll see, an' everythin' on that native ground's gonna come alive, and bloom. An' you'll feel your own strength again. *That's* when I'm gonna have my child."

Once again Galina sat down on the carpet at Nikolai Fiodorovich's feet and put her hands on one of his arms resting on the side of his wheel-chair. Even though she wasn't exactly a spring chicken, Galina had a strong, powerful and attractive body — she could even be called tender and beautiful. Their conversation became more and more friendly in tone, as though they were immersing themselves in some kind of philosophy of life, while I stood around slightly stupefied, feeling like a third leg. So I managed to get a word in edgewise:

"Excuse me, Nikolai Fiodorovich. It's time for me to be going. I don't want to be late for the plane."

"I'll have some pies ready for you in a flash," said Galina, getting up. "An' some preserves for your trip — I'll get you back to Moscow in a jiff."

Nikolai Fiodorovich slowly got up from his chair. Bracing himself with one hand against the table, he extended the other to me in a gesture of farewell. His handshake was firm, it no longer felt like that of an old man.

"Give my greetings to Anastasia, Vladimir. And please let her know that the philosophy of life will definitely triumph here. Our thanks to her!"

"I'll tell her."

## CHAPTER NINETEEN

### Who controls coincidences?

Right from the very first appearance of the Anastasia book there have been quite a number of articles written by various scholars on the 'Anastasia phenomenon'. Many of them included references to me. Whenever I heard or read unflattering remarks about myself, even if they temporarily upset me, it wasn't for long — maybe a day or two, a week at the most. My insides would get stirred up a bit, but then it was history. But this time...

At a meeting in Moscow one of my readers handed me an audiocassette. He said it was a recording of a talk given at an academic conference by the leader of a scholarly research group which was studying the 'Anastasia phenomenon'.

I listened to the cassette a few days later. What I heard was beyond belief. Its message (once it had sunk in) not only knocked me off the rails, it seemed it was going to do me in for good. Really do me in — especially in my own self-esteem. Before listening to it, I was planning to head off again to the taiga to see Anastasia and my son, but after hearing it I put my plans on hold. Here's what I heard (slightly abbreviated):

My respected colleagues, I should like to present you with some of the conclusions and arguments worked out by a research group I head on the basis of over three years' investigating the phenomenon we shall call *Anastasia*.

In my report I shall use the name *Anastasia* not just for the sake of convenience, but because the subject of our investigation has presented itself under that name. This does not rule out the possibility of giving it a more specific and

characteristic definition in the future. It is difficult to do that at the moment, since I am persuaded that we are dealing with 'something' that surpasses the boundaries of traditional academic disciplines and possibly modern science on the whole.

We began by defining three research questions: (a) the truthfulness of the events described by the author Vladimir Megré in his books, (b) Megré's books themselves and (c) public reaction to Megré's books.

By the end of the first six months it was clear that the truthfulness or untruthfulness of the events described in the book was an irrelevant question. The wild emotional reaction of most readers who have had contact with Megré's books has nothing to do with whether the events described are real or not. Public reaction is determined by a different set of factors entirely. However, the time and resources and intellectual potential we spent pursuing this question led to what is, in my opinion, a rather interesting conclusion — namely, that the tendency of individuals, including sociologists and academic circles in general, to cast doubt on Anastasia's existence is in fact a contributing factor to the very phenomenon we are studying.

It is this very hoopla surrounding the question *Does she or doesn't she exist?* that has enabled the phenomenon to penetrate unhindered into all levels of society today. The denial of the existence of Anastasia has actually served to neutralise any opposition to her designs. If she doesn't exist, after all, then it follows that there is no object to study, nothing to oppose. On the other hand, the public reaction to Anastasia's sayings attests to the vital necessity of research to determine her significance and intellectual capabilities.

As to the truthfulness of the events set forth in the books, we can state the following:

In describing these events, the author not only presents himself under his own name, but does not shield anyone else connected with these events. He makes no effort to change

the real names of people or places, or to cover up embarrassing facts about himself.

For example, the episode described in the first book — where Megré, in the presence of the captain, flirts with the local country girls visiting the ship during a pleasure cruise<sup>1</sup> — has been fully documented as fact. Crew members have also confirmed the presence that evening of a quiet and taciturn young woman with a kerchief tied around her head. Megré showed this woman around the ship, then spent some time alone with her in his cabin. From the book we learn that this was the first appearance of the Siberian recluse Anastasia on Megré's lead ship, the one that served as his headquarters. It was the entrepreneur's first encounter with the Siberian recluse, and their first conversation together.

The chronology of many of the events described in the book has been confirmed by documents and eyewitness accounts. Not only that, but other situations even more extraordinary have come to light which the author for one reason or another did not describe in his books. A notable case in point is Megré's stay in a Novosibirsk city hospital, where medical records indicate the progress of his illness, medical test results, the prolongation of his illness, *and* his remarkable recovery.

We have determined that his recovery immediately followed the doctors' application of cedar oil which was left at the hospital by an unidentified woman!

I shan't deny that, carried away as we were in our pursuit of the truth of the events described in the book and with access to criminological facilities, for example, we were in a position to prove or disprove a great deal. We were halted in this pursuit, however, by the public's wild and extraordinary reaction to Megré's books, or, more specifically, to Anastasia's sayings therein recorded. The details of Megré's intimate relations

<sup>1</sup>See Book 1, Chapter 24: "A strange girl".

were not a drawing card for most people — they were excited instead by Anastasia's monologues.

Even our initial investigations of this reaction — and especially its latest manifestations — clearly indicated that 'something' calling itself Anastasia is exercising an unmistakable influence on today's society.

Her sphere of influence continues to increase in size even today. And we need to pay greater attention to even the most improbable arguments — try to discern them and follow them up. In all probability, the phenomenon known as Anastasia possesses powers and abilities which our mind and consciousness are not in a position to fully make sense of.

In Megré's very first book, in the chapter entitled "Across the dark forces' window of time", the phenomenon predicts not only the appearance of the book, but also how and by what means she will capture people's minds and consciousness. In her monologue Anastasia affirms that she has collected from various ages the best combinations of sounds to be found in the Universe, and that they will have a positive influence on people. She affirms that this action is quite simple:

"As you can see, it is simply a matter of translating the combinations of signs from the depth of eternity and infinity of the Universe — exact in sense, meaning and purpose."<sup>2</sup>

Our group as a whole reached a unanimous conclusion: this particular saying is an invention. This conclusion was based on the following logical and (as we believed) irrefutable argument: Even if certain unusual combinations do exist in the book, then they cannot exercise any influence over the reader, since there is no instrument to reproduce them. The book cannot utter sounds, and consequently cannot convey to our hearing the 'sounds of the Universe' said to have been collected by Anastasia.

Later, however, Anastasia did give the following answer:

<sup>2</sup>Quoted from Book 1, Chapter 27: "Across the dark forces' window of time".

“You are right, a book does not make sounds. But it can serve as a score, like a musical score. The reader will involuntarily utter within himself any sounds he reads. Thus the hidden combinations in the text will resonate in the reader’s soul in their pristine form, with no distortion. They are bearers of Truth and healing. And they will fill the soul with inspiration. No artificial instrument is capable of reproducing what resonates in the soul.”<sup>3</sup>

In his third book, *The Space of Love*, Megré sets forth Anastasia’s dialogue with the scholars. But for some unknown reason he abbreviates it. Or, if we assume that the phenomenon itself participated in the book’s appearance, then it is possible that it deliberately omitted the continuation of Anastasia’s response to the scholars. What for? Possibly to leave the unbelievers in their state of inaction? The fact remains that proofs of Anastasia’s incredible declaration do exist.

Here is the continuation of Anastasia’s dialogue with the scholars. To her adversary’s statement that the blending within Man of certain sounds not part of human speech has never been anywhere established as fact,<sup>4</sup> Anastasia replied as follows:

“It has been established. And I can give you an example.”

“But it must be an example everybody can relate to.”

“Fine. Ludwig van Beethoven.”

“What about him?”

“His *Ode to Joy*. That was the name he gave to his Ninth Symphony. It was written for a symphony orchestra and mass choirs.”

“Okay, but how can that prove your statement about the evocation of sounds within the reader’s mind? Sounds that nobody’s ever heard?”

<sup>3</sup>Quoted from Book 3, Chapter 4: “Chords of the Universe”.

<sup>4</sup>See Book 3, Chapter 4: “Chords of the Universe”.

“Sounds evoked within the mind of the reader of a book are heard by the reader alone.”

“There, you see? By the reader alone. That means there’s no proof. And your example with Beethoven’s symphony isn’t convincing.”

“At the time he wrote his Ninth Symphony, *Ode to Joy*, Ludwig van Beethoven was deaf,” responded Anastasia.

This fact is attested by Beethoven’s biographers. Not only that, but the deaf composer himself conducted the first performance of his symphony.

In the light of this particular historical fact, Anastasia’s next saying no longer raised any doubts:

“Every letter or combination of letters from any text, being uttered, can be transformed into sound. A page of text can be compared to a page from a musical score. It is simply a question of who is able to set forth the note-letters and how. Will they comprise a great symphony or simply audible chaos? And another question: does everyone have an instrument of sufficiently high quality within themselves to reproduce the full orchestration?”

The researchers in our group subsequently came to the following conclusion:

*Anastasia’s sayings in respect to the derivatives of explosion,<sup>5</sup> transportation by creating a vacuum, purification of the air; agro-technical methods, the significance of cedar oil in the treatment of many diseases, the energy of Man-produced thought, as well as many other phenomena, deserve the most meticulous study by scientific circles.*

<sup>5</sup>*derivatives of explosion* — see Anastasia’s declaration to Vladimir in Book 1, Chapter 16: “Flying saucers? Nothing extraordinary”: “The functioning of all your machines, every single one of them, is based on the energy of explosion.”

In arriving at this conclusion, our group does not make any claim to be the first to discover it. Scholars in Novosibirsk came to it at the same time or even a little ahead of us, as may be seen in a presentation by the leader of the Novosibirsk Scholars' Circle, Sergei Speransky.<sup>6</sup> In a published paper entitled "It's more useful to believe", the Novosibirsk psychologist Nina Zhutikova came up with the following conclusion on the basis of her sociological research:

"One's relationship to Anastasia is not dependent on the presence or absence of academic degrees, but very much depends on a Man's character, his scale of values, on his conscious and subconscious mindset — i.e., on a Man's personality and all its elements; it depends on whether this Man wants Anastasia to be real or not; it depends on how open a Man's consciousness is, on the degree that it is ready to accept amazing phenomena that go beyond the bounds of commonality. What is revealed to us and how — this depends on the characteristics of our time and corresponds to the level of our own self-awareness."

Possibly the Novosibirsk researches could have gone even farther than ours, but the Siberian branch of the Russian Academy of Sciences declined to finance them. Today our group, having received a commission — and consequently prearranged funding, — is already in a position to state with confidence and the support of evidence the following fact:

*Our civilisation has witnessed a phenomenon never before subject to scientific measurement nor, consequently, to scientific definition. Our research must attract not only representatives of modern scientific disciplines — especially physicists and psychologists — but esoterics too. The processes taking place in our society today under*

<sup>6</sup>*Sergei Vladimirovich Speransky* — see footnote 1 in Book 3, Chapter 19: "What to agree with, what to believe?".

*the influence of the Anastasia phenomenon are evident and actual, and we cannot — in fact, we do not even have the right to — leave them unstudied.*

Some of the events described in Megré's books indeed look like fiction at first glance, and we have endeavoured to treat them with scepticism. Nevertheless, the subsequent events that happened to the author but are not described in the books are even more incredible. But the incredible has happened. And we find ourselves obliged to draw conclusions which are difficult even for *us* to believe.

One of these conclusions is that Vladimir Megré does not exist, and that there's no point in studying his biography for an explanation of what has happened.

What appears at first glance to be a rather far-fetched conclusion removes and explains a whole host of improbabilities — namely: how did it happen that an ordinary Siberian entrepreneur suddenly became capable of writing a book — a series of books, now, which has become one of the most popular in Russia? The speculations put forth in the press, upon closer inspection, turn out to be unfounded:

*A bankrupt entrepreneur decides to settle his affairs by becoming a writer.* But we have a lot of bankrupt entrepreneurs. Yet not one of them has ever become a famous writer.

*He managed to think up a sensational story-line.* But the story-line has nothing to do with it. Our esoteric press does nothing but publish sensational stories about unusual phenomena week after week — superhealers, flying saucers and aliens — yet the public hardly bats an eyelid. And these stories are prepared by professional writers and journalists.

*Megré's books have a powerful publicity engine working for them.* Just the opposite: many publications are now trying to promote themselves on the back of Megré's books. We have established beyond a doubt that Megré's first three books were

published without even any exposure in bookstores — not by a publishing firm with a large distribution network but by Moscow Printshop Number Eleven which doesn't deal in the book trade at all. And yet here people have been standing in queue for Megré's books, and wholesalers have been paying advances up front to carry them, even before they're published.

In the minds of many book dealers, the popularity of Megré's books flies in the face of all book business norms, and goes against experts' predictions concerning consumer demand.

So what is the result? Did Vladimir Megré miraculously become a genius out of the blue? Nothing miraculous about it. I repeat: Vladimir Megré — the entrepreneur who was well-known in Siberia — simply does not exist today. Evidence in support of this argument may be found through a careful reading of Anastasia's sayings back in the first book. Let's recall her words addressed to Vladimir:

"You will write this book, guided only by feelings and your heart. You will not be able to do otherwise, since you have not mastered the technique of writing, but through your feelings you can do *anything*. These feelings are already within you. Both mine and yours."

Note carefully Anastasia's last words cited here: *These feelings are already within you. Both mine and yours*. This means that Vladimir Megré's own sense-perception of the world has been supplemented with that of Anastasia's. We shall not examine how and by what means this supplementing was effected. We shall accept it as a fact which engenders the following logical conclusion: if to one defined magnitude another is added, then the aggregate of the two magnitudes engenders a third independent magnitude.

Hence the present Megré's date of birth cannot be determined by the date registered on his official birth certificate.

<sup>7</sup>Quoted from Book 1, Chapter 27: "Across the dark forces' window of time".

There is more justification in considering his birthdate to be in 1994 — i.e., the moment he met Anastasia.

Even though the outward appearance of the new individual corresponds to the former Mègré, the radical difference between the two is all too apparent. This includes, for example, both his literary talent and his ability to hold an audience's attention for an extended period of time — five hours or more — as has been twice attested by witnesses to his appearance at a readers' conference in the city of Gelendzhik in the Krasnodar region.<sup>8</sup> This fact is reflected in accounts in a number of national magazines.

Many researchers and journalists have got caught up in comparisons and investigations of events connected with the activities of Vladimir Mègré, just on the basis of the descriptions in the books. They have been attempting to prove, either subconsciously or openly and aggressively that *this cannot be so!*

My dear colleagues, I am inclined to believe, and not without some justification, that the following communications will convince you that such a feeling is nothing more than a defence mechanism found in those whose mind or consciousness is incapable of making sense of what is really going on.

Vladimir Mègré himself — on more accurately part of his own *self* — is even less capable than that of making sense of the events he is involved in. It is just that he has gradually become accustomed to them, and is beginning to categorise even the most incredible phenomena as normal or commonplace — which has also served to keep him from having a nervous breakdown. I think that, like many readers, he did not pay any special attention to what Anastasia said to him back at that first meeting with him in the taiga. When Mègré protested: "I shan't even make an attempt to write anything," Anastasia responded: "Believe me, you shall. *They* have

<sup>8</sup>Described in Book 4, Chapter 34: "Anomalies at Gelendzhik".

already created a whole network of circumstances that will make you do this."<sup>9</sup>

This dialogue is given right in Book 1, but in Mégré's subsequent books there isn't even an attempt to return to this question: who in fact are these mysterious *They*? Upon receiving specific information, the members of our group once more delved into the dialogues reproduced in the first book to select all the references to this *They* scattered over its pages. I shall cite these references in Anastasia's words:

"If it had not been for *them* — and for me too, a little — your second expedition would not have been possible."

"I want you to be purified. That is why I thought back then about your trip to holy places, about the book. *They* have accepted this, and the forces of darkness are always fighting with them, but never have the dark forces scored a major victory."

"My plan and conscious awareness were precise and realistic, and *they* accepted them."<sup>10</sup>

"*They* are answerable only to God."<sup>11</sup>

The following conclusion can be drawn from Anastasia's sayings: some indeterminate forces will set in place for Mégré some kind of network of circumstances compelling him to carry out action somebody's pre-programmed for him. And if that is so, then Mégré's role as an individual in his creations amounts to *nil*, or at least something very insignificant. Everything is simply being handed him on a platter through this network of supposedly coincidental circumstances. This also means that the individual of the past known as Mégré has evidently been violated.

<sup>9</sup>These and the following passages (except as otherwise noted) are quoted from Book 1, Chapter 26: "Dreams — creating the future".

<sup>10</sup>Quoted from Book 1, Chapter 27: "Across the dark forces' window of time".

<sup>11</sup>Quoted from Book 1, Chapter 24: "A strange girl".

We decided that if we succeed in establishing certain anomalies in Megré's behaviour — or, rather, the presence of a network of circumstances or so-called coincidences, such a presence could confirm or disprove (a) the reality of what happened in the taiga, (b) the degree of participation of Megré as an individual in the events taking place in society surrounding the publication of his books, and (c) the existence of some kind of forces capable of producing coincidences influencing Man's destiny.

The episode in Megré's life which we have managed to examine in the greatest detail, right down to individual nuances, is his behaviour on Cyprus in June 1999, during the time when he was working on his fourth book, *Co-creation*. It would even be more accurate to say that he was in the process of figuring out the meaning of his dialogues with Anastasia (which he had already transcribed) about the creation of the Earth and Man. What we discovered on Cyprus can only be summed up in one short phrase: *What is it?* Let me acquaint you with certain events that took place there.

At the end of May 1999 Vladimir Megré took a Transavia<sup>12</sup> flight to Cyprus, but not as a member of a tourist group. There was nobody he knew on Cyprus. He did not know any of the languages spoken on the island. The Cyprus travel agency, Leptos,<sup>13</sup> placed this individual Russian tourist in a single room on the second floor of a small hotel. The room had a balcony overlooking a fair-sized pool, where tourists (mainly from England and Germany) would lounge around and have fun.

<sup>12</sup>*Transavia* — an international airline company, part of the Dutch-based KLM Group.

<sup>13</sup>*Leptos* — a large conglomerate headquartered in Paphos (Cyprus) that includes both tourist services and property development.

Mégré's Russian travel agent had informed the manager of Leptos that this particular tourist was a Russian writer. But that was hardly news to a major travel firm like Leptos, accustomed to hosting world-famous celebrities. As far as they were concerned, Mégré was just an ordinary tourist. Nevertheless, on the second day of his stay he was approached by the senior company manager responsible for the Russian tourist market with an offer to show him around the city, including the estates the company itself had developed. They brought along a Russian-speaking interpreter employed by the firm. I am now going to quote, my friends, from a transcript of the statement provided to us by the Leptos interpreter, Marina Pavlova,<sup>11</sup> during an interview:

I accompanied Nikos, the manager of Leptos, and Mégré, and interpreted during their conversation. Mégré distinguished himself from most Russian tourists by his uncompromising attitude, which bordered on tactlessness. For example, we were standing on a mountain with a terrific view of the sea and the city of Paphos.<sup>12</sup> Nikos was giving the usual spiel:

"Look at all this natural beauty around us. What a fantastic view!"

I translated the sentence, but Mégré responded:

"It's a depressing view. Nice and warm... The sea... But look, the vegetation's all stunted, just an occasional bush here and there. So unnatural in a climate like this."

<sup>11</sup>*Pavlova* (pronounced *PAHV-la-va*) – a Russian surname (feminine form).

<sup>12</sup>*Paphos* – a bustling seaport on the south-west coast of the island, which before the time of Constantine served as the capital of Cyprus. An even earlier settlement by the same name (with ruins dating back to 3000 B.C.) is located some 16 km to the southeast. The Paphos District covers the whole western tip of the island and according to local legend is the birthplace of the goddess of love, Aphrodite.

Nikos began to explain:

“Earlier the island was covered with cedar forests, but when the Romans invaded, they cut down the forests to build their ships. Besides, there is very little rainfall here.”

To which Megré retorted:

“The Romans were here many centuries ago. Over that time new forests could have grown up, but you have not been planting them.”

Nikos tried to explain that there is very little rainfall on the island, and even drinking water must be collected in special reservoirs.

But Megré sharply responded:

“There is no water because there is no forest, and the wind carries the clouds on past the island. If there were a forest, it would slow down the movement of the lower air currents, as well as the movement of the higher-altitude clouds. It would rain more often on the island. I think the reason they don’t plant a forest is that they are trying to sell all the land for development.”

Having said this, Megré turned aside and became lost in thought. We didn’t say a word. An oppressive pause hung over us. There was nothing anyone could say.

The next day, as we were having lunch at a café, Nikos enquired as to what he might do to make Vladimir’s stay more comfortable. Megré replied in all seriousness:

“There should be more Russian spoken on the island. The restaurants should serve proper fish, instead of some kind of perch. The hotel rooms should be quieter. Besides, I’d rather have a forest around me than people who smile when they don’t mean it.”

Then there was the meeting between Megré and the head of the Leptos agency. How this came about I have no idea. The CEO has never met with any tourists in person, and even many of his employees have never seen his face.

I was present at the meeting as an interpreter. But even here Megré said the company should change the layout of the sites where it was constructing its new estates. Each site should be no less than a hectare in size, a place where people can plant trees and look after them, and that way the whole island will be transformed. If this doesn't happen, it won't be long before the island becomes an undesirable tourist destination, and Leptos will see a significant decline in business.

After a moment's pause, the CEO began expounding with considerable aplomb on the island's legendary tourist sites and the most famous site of all, the Baths of the goddess Aphrodite.<sup>10</sup> He concluded by offering Megré an opportunity to suggest anything that might make his stay more comfortable. While the CEO of Leptos might have been able to satisfy the wishes of many Western millionaires, what Megré said to him in response completely threw him for a loop — it sounded like a joke, as though Megré were making fun of him. Megré in all seriousness replied:

"I need to meet with the granddaughter of the goddess Aphrodite."

I tried translating this sentence as a joke, but nobody laughed. The shock of the remark left everybody speechless.

By and by news of this Russian tourist's eccentricities reached the ears of the hotel staff where Megré was staying, and they began to make fun of him. Nikos told me in conversation that there was something abnormal in Megré's behaviour.

<sup>10</sup>*Baths of Aphrodite* — a serene, shady grotto and pool near Polis on the Akamas Peninsula, about 50 km north of Paphos, where the goddess Aphrodite, according to legend, was wont to take her baths.

Nikos and I made regular morning visits to the hotel on administrative matters, and each time Nikos would jokingly ask the clerk on duty at the main desk whether Aphrodite's granddaughter had checked in yet. The clerk would laughingly respond that she hadn't arrived yet, but there was always a room waiting for her!

Megré evidently felt the mocking glances of the hotel staff whenever he came down to the bar from his room in the evening, or to breakfast in the morning. It seemed to bother him. As a Russian, I too felt uncomfortable about seeing my fellow-countryman being ridiculed, but there was no longer anything I could do.

On the morning of the last day of Megré's scheduled stay on Cyprus, Nikos and I went to the hotel as usual. Nikos wanted to say good-bye to Megré. Once again he greeted the desk clerk with his customary jocular enquiry, but this time the clerk's usual response was not forthcoming. The clerk, in a rather emotional frame of mind, told Nikos that Megré had not spent the night in his room and was not in the hotel at the moment. He went on to report in all seriousness, without even the hint of a smile, that the evening before, Aphrodite's granddaughter had come to the hotel in a motorcar and collected Megré along with his things.

She had told the clerk on duty in Greek that there was no need to be concerned, that Megré would not be returning to the hotel and so his room could be reassigned as needed, and that they need not bother booking Megré's return flight to Moscow. She also asked him to tell Nikos that she would bring Megré to the hotel at ten o'clock the next morning to say good-bye. The clerk repeated that Aphrodite's granddaughter had talked with the hotel staff in Greek but with Megré in Russian. Without a clue as to what was going on, Nikos and I seated ourselves in two of the comfortable armchairs in the lobby and silently waited

for the appointed hour to arrive.

At ten o'clock on the dot the big glass doors of the main entrance swung open, and we saw Vladimir Megré accompanied by a beautiful young woman. I had seen her before. She was Elena Fadeyeva,<sup>17</sup> a Russian who lived and worked on Cyprus as a representative of a Moscow travel firm. I told you I recognised her, but not right away. This particular morning Elena Fadeyeva looked exceptionally beautiful. Wearing a long light-weight dress, she sported an attractive hairdo and had a cheery sparkle in her eyes. The slender young woman accompanying Megré immediately drew the attention of the hotel staff in the lobby. Bartenders, maids and clerks froze in their tracks, their eyes fixed on the approaching pair.

In talking with them Nikos and I learnt that Megré had decided to extend his stay on Cyprus by a month. When Megré temporarily withdrew to see about something at the bar counter, Nikos remarked on Megré's fussiness, saying he was making demands which neither he nor the Leptos CEO could possibly fulfil. Whereupon Elena responded:

"I have fulfilled all his wishes. I think I shall be able to fulfil any others, too, that may arise."

Nikos continued to question Elena as to how she was able to do the impossible in just twelve hours. How could she make Megré's favourite Siberian freshwater fish appear on Cyprus, or cause cedars to grow on the island in just twelve hours, or make all the Cypriots suddenly be able to understand Megré speaking Russian? Where could she have found a place for him to stay where nobody could interrupt the solitude he so desired?

Elena replied that everything Megré needed just simply appeared as though by coincidence. She put Megré up

<sup>17</sup> *Fadeyeva* (pron. *fa D'AY a-va*) - a Russian surname (feminine form). The first name *Elena* is pronounced *ye LEN-a*.

at her own villa, which just happened to be vacated at the right moment. The villa was located not far from Paphos at the edge of the village of Peyia,<sup>18</sup> where nobody could possibly disturb him. She provided him with transportation by hiring a motorscooter especially for him. It turned out that her Russian friend Alla who was also working on Cyprus just happened to have some Siberian freshwater fish on hand. And cedars grow on a hillside not far from her villa. Besides, Megré had brought with him two little Siberian cedars, and she put them in pots right at the villa's entrance. The language barrier would present no further problem for Megré, since there are telephones in all the places he wants to visit, including shops and cafés, and she always has her own mobile phone with her and that way she can interpret for Megré whenever necessary — i.e., whenever he has something he wants to say to someone.

As Elena and Vladimir were already making their way toward the door under the fixed stares of everyone present, I reminded Nikos that he had forgotten to ask how Elena would be able to fulfil Megré's request concerning the granddaughter of the goddess Aphrodite. Nikos looked at me in surprise and replied:

“If that Russian girl isn't the living embodiment of Aphrodite or her granddaughter, then for certain the spirit of Aphrodite is present in her at this moment.”

My dear colleagues, after hearing Marina Pavlova describe these events of Vladimir Megré's life during his stay on Cyprus, the question naturally arose: whence came this chain

<sup>18</sup>*Peyia* — one of the four municipalities in the Paphos District of Cyprus, close to the tourist resort of Coral Bay — a picturesque village of white-washed houses hugging the steep Mediterranean coastline. A quiet haven in comparison to the bustle of Paphos, Peyia also features the remains of two Christian basilicas on its outskirts.

of coincidences which fulfilled all Megré's stated demands in the blink of an eye? Was it really just coincidence, or was someone — like Anastasia, or the mysterious *They* she talks about — somehow shaping these coincidences? Note how immediately after the people around Megré at his hotel began to wonder what was going on, a situation turned up to remove him from the curious observers' field of vision — he retired to Elena Fadeyeva's villa.

As far as the people back at the hotel were concerned, this ended the unusual chain of coincidences. But we wondered whether it had really come to an end, and so we reconstructed subsequent events in as much detail as we could, thanks to the help of what we were told both by Fadeyeva personally and by people who know her. And what did we learn? It turned out that not only did the series of extraordinary coincidences not stop, but they became even more mysterious. I'll cite just a few excerpts from our records.

So — here we have Vladimir Megré staying all by himself in Fadeyeva's small but cozy villa. He was most probably in the process of deciphering Anastasia's sayings about God, about the creation of the Earth and Man, and Man's destiny. He had just finished working on this part of the book. But he didn't understand everything himself yet. And true to his nature, before publishing the book, he wanted to find somewhere (or in some thing) at least a modicum of confirmation of Anastasia's unusual sayings. From time to time he would ring up Elena and ask her to come and see him, to take him somewhere in the car. And each time the young woman would drop whatever she was doing at the moment to fulfil Megré's request, even if it meant reneging on a commitment to greet people arriving from Russia. Twice she had to reassign her duties to one of her colleagues, losing part of her income in the process.

So, where did Megré go? We established that, apart from the usual tourist spots, he paid a visit to two churches, which

none of the other tourists went to, along with a monastery not on the tourist circuit and a vacant castle in the Troodos mountains.<sup>19</sup> On several occasions he climbed the ridge not far from Fadeyeva's villa. He would take solitary walks among the cedars growing on the ridge while Elena waited for him down by the road.

We were also able to establish that all Męgrę's visits to the churches and monasteries were spontaneous — i.e., not planned in advance. More specifically, they formed part of the same chain of coincidences. Here is what Elena Fadeyeva told us about Vladimir Męgrę's night-time visit to one of the churches:

I went to see Vladimir at around nine p.m., directly after he called. He told me he simply wanted to go for a ride around the city. He got into my car and we headed for Paphos. Vladimir seemed absorbed in his own thoughts and scarcely offered a word of conversation. We drove for about an hour or so. As we passed by all the cafés along the embankment, I suggested we stop for something to eat, but he declined. When I asked where he would like to go, he said he felt like visiting some vacant church.

I turned the car around and headed full speed (I'm not sure why I was in such a hurry) to a little village. I knew there was a church there that hardly anybody visits. We drove right up to the entrance and got out of the car. Not a soul around. The night-time silence was broken only by the roar of the waves. We walked up to the main door. It was dark, but just below the door-handle I could feel a large

<sup>19</sup>*Troodos mountains* — the largest mountain range on Cyprus, spread across the western end of the island and capped by Mount Olympus (1,952 metres high). The range is home to a number of monasteries and Byzantine churches; nine of the latter are listed as UNESCO World Heritage sites.

key sticking out. I turned it and opened the door. Vladimir went in, and for a long time stood in the middle of the floor below the dome. I stayed by the entrance. Then Vladimir went through the archway the priests come out of and must have lit a candle or something. Anyway, something there began emitting a bright glow, and the whole church interior brightened a bit. I stood for a while longer and then went out to the car. Some time later Vladimir appeared and we left.

Here is the second incident Fadeyeva told us about:

I wanted to show Vladimir a village way out in the country, so he could see how the local people lived. There were so many turns going off the mountain road we were travelling and somehow (probably by mistake) I took a wrong turn, since instead of ending up at the village, we presently found ourselves in front of the gates to a little monastery. Vladimir wanted to go in at once and asked me to go with him to interpret with the monks, but I said I couldn't. I was wearing a rather short skirt and had no head covering, and that's not permitted in a monastery. So I stayed outside.

I watched as Vladimir walked across the courtyard. All at once he noticed a young monk in front of him. They stopped to face each other and began conversing. Then they came over to me. I could hear the young monk speaking with Vladimir in Russian, and presently Vladimir was approached by an older grey-haired man — the Father Superior — and the two of them sat and talked for the longest time on one of the benches in the courtyard. The monks and I were standing a little distance away, and we couldn't hear what they were talking about.

Then the Father Superior and the monks gathered to see us off. But on his way out the gate Vladimir stopped, and

everybody else stopped, too. Vladimir turned and headed across the courtyard to the church. Nobody followed him. We were still waiting at the gate when he came out of the vacant monastery church.

And so the chain of coincidences continued. Just to remind you, Vladimir Megré was working on deciphering what Anastasia had said about God. Was it just a coincidence that at the very moment when he wanted to visit a vacant church, there at his side, coincidentally, was Elena Fadeyeva, who just happened to know about such a church? Was it just a coincidence that a key was sticking out of the door of this vacant church? Was it just a coincidence that Elena made a wrong turn and ended up taking Megré to a monastery hardly anybody goes to? Was it just a coincidence that he encountered a Russian-speaking monk? We are dealing here with a chain of events, real-life situations, practically a series of seeming coincidences, sequentially arranged, all leading to some kind of predetermined end.

Now that we know about such coincidences, can we still talk about the philosophical conclusions Megré comes to in his books as being purely random or coincidental? Perhaps it was in some of these churches where Megré (as we now know) stood alone under the dome, that God's words became consolidated in his mind, afterward to appear in his fourth book, *Co-creation*?

Time and again we have tried to trace in detail the sequence of the coincidences surrounding Megré. Among a great many others there was one that interested us in particular — namely, how Megré just 'happened' to meet Elena Fadeyeva. We shan't speculate as to whether this young woman was actually imbued with the spirit of the goddess Aphrodite. We'll leave such speculation to the esoterics. But let's consider just why this girl dropped what she was doing at the very first call and rushed to Megré's side, made him borsch and carted him

around Cyprus in her motorcar? Why did she change so radically, even in her appearance, after meeting Megré? Why did her eyes suddenly begin to sparkle upon meeting Megré (as claimed by people who know her)?

Perhaps it was just from meeting a celebrity? But as a representative of a travel agency affiliated with *Mosèstrada*,<sup>20</sup> Elena gets to meet much bigger celebrities than Vladimir Megré.

Money, perhaps? But Megré couldn't have had much money — otherwise he wouldn't have booked into a three-star hotel to begin with.

There is only one conclusion to be drawn from all this: *Elena Fadeyeva fell in love with Megré*. This is confirmed by something she said to one of her acquaintances. When the acquaintance asked her:

“Well, Lena, you haven't fallen in love with this Megré chap?”

Elena responded:

“I don't know -- it's a rather strange feeling... But, if he asked me...”

And so we have yet another incredible coincidence before us: here's a twenty-three-year-old woman — slender, warm and outreaching, independent and pragmatic, not lacking in a fair share of attention on the part of the many men around her, suddenly falling in love at first sight with a forty-nine-year-old man. I think you will agree that such coincidences are extremely rare indeed.

We've tried analysing in still greater detail — even moment by moment — the first meeting between Vladimir Megré and Elena Fadeyeva. We spoke with the employees at the Maria Café who witnessed it first-hand. From what we were told

<sup>20</sup>*Mosèstrada* (in full: *Moskovskaya èstrada* — lit. 'Moscow Musical Stage') — a large Moscow-based entertainment enterprise. In Soviet times it was in virtual control of Moscow's pop-music entertainment sector.

by Elena herself and by the people who know her, we have reconstructed the day of that meeting. As a result we have been presented with yet another coincidence — but this time what a coincidence! It could explain Elena falling in love with Megré a few minutes before she met him for the first time! A kind of coincidence that can have an effect on both Man's consciousness and his subconscious simultaneously.

Picture to yourself Elena Fadeyeva driving her car on the way to the Maria Café in a resort town. One of the waiters had rung her up and asked her to come to the café if at all possible, as there was a Russian man sitting at one of the tables and getting very nervous. The café's sign featured its name in Russian, as well as names of Russian dishes, all of which promised a Russian-speaking waiter — but, as it turned out, this person did not happen to be on the premises at the time.

Elena at first declines, but then a little break happens to come up in her work. So she gets into her car and heads for the café where some kind of Russian man is waiting. Along the way she takes care to powder her sun-tanned nose, picks an audiocassette at random and slips it into the player in her car. The car's speaker system fills the interior with the words and melody of a Russian popular song.<sup>21</sup>

I am now going to remind you of the words of that song, and you, my dear colleagues, can draw your own conclusion. Here are the words Elena heard resonating from her car speakers just moments before her encounter with Megré in the café:

*I myself am a rather young god,  
My experience? Perhaps there's not much to say.*

<sup>21</sup>Russian popular song — these are the words to the song “Don't let him go” (*Ne dajemu uyt*) by the well-known St. Petersburg singer-songwriter Maxim Leonidov (1962–). The third stanza shown here is actually the song's refrain and is repeated at the end.

*But still, my dear girl, I just know I could  
I help you, and shine sunlight upon your dark day.*

*No moments to spare — you're in a crunch.  
You've a break coming up, hardly any time at all.  
So you powder your nose, and head off to lunch  
To meet him at a café — at a table by the wall.*

*Somewhere far away trains are flying through the wood,  
And 'planes are off course — just why, we don't know.  
If he should take off, he'll be gone for good,  
So the answer is simple — just don't let him go.*

*Why are you suddenly quiet, my dear?  
Just look into his eyes and do not be shy.  
I've been closing this circle for many a long year...  
The one who has brought him to meet you is I.*

And she, or someone acting through her, did *not* let him go. And she, or someone acting through her, fulfilled all his wishes, providing more and more information to confirm his philosophical conclusions. He returned to Russia and submitted the manuscript of his fourth book, *Co-creation*, to the publishers.

Thus Vladimir Megré's life really turns out to be like the life of Ivan the Fool<sup>22</sup> in the Russian folk tales, the only difference being that the events that happened to Megré are absolutely real.

<sup>22</sup>Ivan the Fool (Russian: *Ivan durak*) — the main character of many Russian folk tales: in their more recent versions, Ivan is a simpleton who invariably wins considerable favours through no effort of his own. In the older versions of the same tales he is portrayed as a wizard able to control natural forces. The term *durak* is based on the ancient root *ra* signifying the Sun, but which over the centuries has been perverted to take the opposite meaning of 'fool'.

Faced with the reality of such phenomena, we cannot deny the existence of some kind of forces capable of purposefully influencing the destiny of an individual Man. This begs a number of questions: are these forces capable of influencing the destiny of all mankind? How active have these forces been in the past? Have they become more active in our century? What kind of forces are they? The events we have witnessed suggest the need to pay more careful attention to Anastasia's sayings.

My dear colleagues, the majority of our research group is inclined toward the following conclusion: *the Siberian recluse Anastasia, while leaving the governments of the different countries in position for the time being, is actually taking personal control of the whole human civilisation.* Note the distinction — not 'seizing power', but 'taking personal control'.

Upon coming into contact with Megré's books, the majority of readers experience a desire to change their way of life. His readers already number more than a million, and their numbers are steadily growing. Once they have reached a critical mass, they will be capable of influencing the decisions of the world's governments. But even today in these governments there are to be found enthusiastic supporters of the conclusions reached in the books.

In other words our society as a whole will become just as controllable as Vladimir Megré himself. I hope there is no longer any doubt in your minds, my dear colleagues, that this Megré is an entity completely under the control of some kind of forces. I believe it is incumbent upon us, through our joint efforts, to figure out just who this Siberian recluse Anastasia is. Where is she, anyway? What are her capabilities? What kind of forces are helping her? Where are they trying to lead our society? These are the questions that modern science must answer.

## CHAPTER TWENTY

### Breakdown

I listened to the unknown speaker's report on the audiocassette a second time. It made absolutely no difference to me who this person was. The conclusions he reached had such an effect on me that not only did I not have any desire to continue writing, but my life itself began to seem meaningless.

Anastasia's concept of Man's significance was actually starting to grow on me — about how each Man is the beloved child of God, that he can be happy right here on the Earth. One only needs to gain a proper understanding of one's purpose. I believed Anastasia and believed in the possibility of changing our life today for the better by transforming our lifestyle and building new communities.

But all my faith collapsed after hearing what was on the cassette. The thing was that the facts cited by the speaker regarding the coincidences that had happened to me — which, in his words, formed a pattern — were spot on. Everything he said actually happened, and more. There were other things I knew about besides — things they hadn't been able to establish.

It all did happen the way he said, and that means that I've simply been a puppet in somebody's hands. It doesn't really matter whose — Anastasia's, or some kind of forces or energy — that's not important. What matters is that I, as a Man, am nothing — I don't exist. What exists is my flesh, which is so easily controllable by someone through arranged 'coincidences'. It would be all right if I were the only one who could be controlled. But there may very well be other people under

someone's control from above, or maybe someone on high is controlling all humanity, and all humanity is just a plaything for an invisible someone, someone imperceptible to our human minds.

I didn't want to be anyone's plaything, but the facts cited in the report argue incontestably that I'm nothing, I'm being controlled — and this is clearly manifest. I can see it backed up by facts I know all too well myself.

Whatever happened to me on Cyprus wasn't bad — quite the contrary, it was good! But that's not the point! If an invisible someone has arranged a chain of wonderful coincidences, then tomorrow it may come into somebody else's head to arrange another, not so wonderful chain of coincidences. This is relegating Man to the status of a plaything. And what about mankind as a whole? How could I not have realised before that some kind of forces are playing with all mankind, like children with toy soldiers?!

When Anastasia talked about God and co-creation back in the taiga, it was as though some kind of curtain had parted as a result of her words.

For the first time in my life I pictured God not as some kind of amorphous, incomprehensible being or an old man sitting on a cloud — but as a Person, capable of feeling, experiencing concern, dreaming and creating. My impressions from what Anastasia told me were more vivid and more comprehensible than anything I had ever heard or read before on the subject. And that wasn't all! When she spoke, my heart felt good and not so lonely. Which means: *He exists!* He can be understood and He acts. He is wise and good. And this is confirmed by His creation all around us — the cedars, the grass, the birds and the beasts. There in the taiga, in Anastasia's glade, they are all somehow kindly, not aggressive.

We're so accustomed to taking His creations for granted — we hardly pay any attention to them, but we try to appreciate

Him through something else instead. Through some kind of secret doctrines. And we wander the planet looking for hidden sacred places, looking for teachers, looking for teachings. Now if that isn't truly absurd! A complete absence of logic! If we talk about God as our good Father, then how can we assume that He will conceal something good from His children? There is nothing He has hid or concealed from people — His children. On the contrary, He always endeavours to be right beside them. What power is it that opposes Him? What power has so mesmerised us that we through our lifestyle have placed the whole planet — this splendid Earth which He has given us — under the threat of global disaster? What power is toying with us?

Every evening we see the glow emanating from the windows of our many-storeyed apartment blocks. Behind every window people's lives are unfolding. And how many of them, how many of these lives are really happy in this world? We talk about morality, love and culture, we all try to present an appearance of decency. But in reality? But in reality, even by the most conservative estimate, every other man, though outwardly decent, is fooling around with women on the sly — unbeknownst to his family, which still presents a decent appearance.

What is one of the most lucrative sources of our national government's income? Vodka and cigarettes. The State still maintains a tight hold on its monopoly here. But who does the drinking? The winos lolling about our fences and apartment-block lobbies? Well, of course, they drink, too. But they don't have the financial clout to sustain the hundreds of our flourishing factories spewing out rivers of spirits. No, it is the outwardly decent and respectable folk who constitute the bulk of the consumer market here.

We maintain huge police forces, not to mention personal security services and private investigative teams. What for?

To round up all the winos and philanderers? Nonsense! With the forces at its disposal Internal Affairs<sup>1</sup> could go and collect them all in a single day. It's not them they're after, but outwardly decent folk.

Just think — here we have a whole army of “special services”, and believe me, they do not sit around with time on their hands. Which means there must be a whole army out there working against them! Which means that here a constant warfare is being waged, and we are all sitting right on the border between the warring parties, financing both sides. We attempt to improve the technical capabilities of one of the belligerents — namely, our organs of law enforcement, yet at the same time the other side is also upgrading its own technical prowess, and financing it from our pockets, too. After all, money has only one source — human labour. And the war is being waged on an ever more technically advanced level.

And it's not just a one-year or two-year conflict. It's all been going on for millennia. And nobody knows where it all started or who can put an end to it. And we're right in the midst of the action, and not one of us is neutral — we're all participants. We're all participants in a never-ending war. Some of us are directly involved in the fighting, some finance it willingly or unwillingly, others manufacture the arms for it. But we all proceed under the mask of decency, talking about science, technology and culture.

As an intensively developing, intelligent civilisation, we make ourselves look smart and utter the slogans of scientific and technical progress. Well, you smart civilisation, what about all the stinking water coming out of your taps? How did you ever think up, especially with that smart appearance

<sup>1</sup>*Internal Affairs* — the Russian ministry in charge of national security, including the “special services” branch which deals with any perceived threats against the State.

of yours, this business of forcing people to *buy* their drinking water in bottles? Water which gets more expensive day by day?

We are unwilling to take off our masks of decency. But why? Why do we inevitably complicate our lives this way year after year? Why are we moving so inexorably toward some stinking cesspool? And we *are* moving toward it, even if we don't want to admit it to ourselves. Why is nobody stopping this movement?

We have religious denominations aplenty. But not one of them can stop this movement. What if they can't stop it completely, but just slow it down? If so, then that would be a form of sadism, only prolonging the period of torture. We go on thinking of ourselves as being a smart and decent civilisation, but why, in this smart civilisation, are women losing interest in having children? Statistics are already showing us that our nation is dying out. What kind of forces are making a complete nutcase out of Man?

For a whole week I was depressed and apathetic about everything. I simply lay in bed the whole time and hardly had a bite to eat. Toward the end of the week I was suddenly overcome by fits of anger — even rage. I felt like doing at least something to counteract these forces. It didn't matter what kind of forces they were — dark or bright. Just to spite anything that was trying to control us... To show them that Man is capable of coming out from under their control.

But what could I do to spite them? If they — or Anastasia along with them — wanted me to write, then I would refuse to write. If meat was off limits, then I'd eat meat, and smoke

and drink too. Judging by their actions, they wouldn't like that. Well just let them try and stop me!

I drank every day for a whole month. The stupor relieved me temporarily, but then came the sobriety of the following morning, and all the bad thoughts flared up in me once more. Why had I been writing? I was trying to be honest, while all along I was simply becoming a toy of amusement in goodness-knows-whose hands.

At night-time, after getting thoroughly drunk, I would make my way along the wall to my bed. And how I wanted to cry out — cry out so that my grandchildren and great-grandchildren could hear! So that they could hear and understand! Understand!!! I'd been writing because I couldn't take the lie of the mask any longer! I was trying to find a way out!

## CHAPTER TWENTY-ONE

### Attempt at deconditioning

Occasionally in the morning I would feel a desire to break free of my drunken stupor. And then I would head for the bathroom to shave off my several days' growth of stubble. Remembering Anastasia, I tried not to think of bad things, but of the good she had managed to accomplish. I tried to convince myself that she was doing something good, but life kept on tossing more and more destructive arguments my way.

And so on one particular morning, as I was routinely trying to come out of my stupor, a good friend of mine rang the doorbell of the flat I was renting. It was still early, and I hadn't finished shaving yet. I still had shaving cream on my face as I opened the door.

Vladislav was in some kind of emotional state. After saying hello he announced:

"We gotta talk. Go finish your shaving while I start."

I did so, and he began telling me that he had finally read the book. He was excited about it, and could agree with Anastasia on a lot of things. He thought her logic was ironclad, but there was something else that he was even more concerned about.

"So, because of this meeting with her, you broke up with your family and lost your business... You don't feel like carrying on with business any more, ch?"

"That's right."

"And you tried to organise a commonwealth of entrepreneurs with purer thoughts, like she suggested?... So, are you writing your next book?"

"I'm not writing at the moment. There's something I'm trying to work out."

"That's just it — you've got to work it out. Tell me, just what have you accomplished after five years' acquaintance with this recluse — what do you have to show for yourself?"

"What d'you mean, what? I'll give you an example. Here in the Caucasus you can already see the first glimpses of a change in people's attitude toward the dolmens.<sup>1</sup> You can imagine how many scientific papers had been written about them earlier, but they never made anyone excited about them. People just plundered them and carted things away.

"But what Anastasia said had an immediate effect. In just the *Druzhba* sanatorium<sup>2</sup> alone they had no sooner read my book than the employees got together and went to the nearby dolmen to lay flowers. And in other places too, people are changing their attitude toward their forebears, they're thinking about —"

"Stop! I completely agree with you. Her words *are* having an effect. And the fact you mentioned just now not only confirms this, but something else too. She's turned you into a zombie — you're not really yourself any more."

"What makes you think that?"

"It's simple. You're an entrepreneur who even back in the early days of *perestroika* was able to build up major commercial enterprises from scratch — even without any starting capital. You were the President of the Association of Siberian Entrepreneurs. And all of a sudden you stopped doing business, and now you're doing your own washing and cooking — hey, you're a completely different person!"

<sup>1</sup>*dolmens* — ancient megalithic tombs; see footnote 1 in Book 1, Chapter 30: "Author's message to readers".

<sup>2</sup>*Druzhba sanatorium* — the name *Druzhba* means 'friendship'. This incident is described in Book 2, Chapter 33: "Your sacred sites, O Russia!".

"I've heard these arguments before, Vladislav. But what Anastasia said got me excited. She has a beautiful dream: 'Carry people across the dark forces' window of time'. She believes in it. She asked me to write a book. I promised I would. She's alone, after all, waiting and dreaming. She probably somehow associates the book with that dream of hers. You said yourself that what Anastasia says in the book can have a tremendous influence on people."

"That's just it — another illustration confirming her interference in things. Judge for yourself. An unknown author, an entrepreneur, all at once writes a book. And about what? About the history of mankind. The Cosmos. The Mind of the Universe. The raising of children. She's beginning to have an effect on people in their day-to-day real life, she's influencing their behaviour."

"But it is a positive influence."

"Possibly. But that's not the point. Haven't you ever thought what made you suddenly able to write a book?"

"Anastasia taught me."

"How did she do that?"

"She took a stick and outlined the letters of the alphabet on the ground.<sup>3</sup> And she said:

"Here are the letters which you know. All your books, both good and bad, are made up of these letters. It all depends on how and in what sequence these 33 letters are arranged. There are two ways of arranging them."

"So that's it? All you have to do is arrange those 33 little letters in a specific sequence? You just arrange them, and then whole groups of people will head into the mountains to lay flowers at the dolmens? That's preposterous! Too much of

<sup>3</sup>Described in Book 1, Chapter 15: "Attentiveness to Man". There are 33 letters in the modern Russian version of the Cyrillic alphabet (see footnote 2 in that chapter).

a stretch for an ordinary mind. It has to be the presence of some power we can't fathom yet. Whether she's zombified you, or reprogrammed you, or hypnotised you, I don't know. But she's done something."

"Whenever I called her a witch or used words like *mysticism*, *fiction* or *incredible*, Anastasia herself would get very upset and start claiming that she was just an ordinary human being, an ordinary woman -- it was just that she had a lot of information in her. But it's only a lot by our standards. She says that back in the days of our pristine origins anybody might have abilities like that. But later... And, after all... She bore me a son."

"And where's your son now?"

"In the taiga, with Anastasia. She says that it would be more difficult to raise a child in the conditions of our technocratic world and make him into a real Man. Because the little one can't comprehend artificial objects. They only lead him away from the truth. We can't show them to him until he's already assimilated this truth."

"And why aren't you in the taiga? Why aren't you with her, helping raise your son?"

"A normal Man can't live in those conditions. She's not even willing to light a fire. She's got her own way of eating. Besides, she says... that I shouldn't communicate with my child for the time being."

"So, she's not able to take it here in our normal living conditions. You can't live there. Then what's next? Ever thought about it? Here you are alone, without a family. What if you fall ill?"

"I'm not ill at the moment. I haven't had anything for well over a year now. She cured me."

"Does that mean you're never going to fall ill again?"

"I'll probably get ill at some point. Anastasia said that all one's little aches and pains will try to come back again, since there's a lot of the dark and harmful stuff in Man, and of

course in me, just like in everyone else. You see, I still smoke. I've started drinking again. But that's not the main thing. She says people don't have too many bright aspirations and thoughts. And they're the principal defence against one's aches and pains."

"In other words, it's unlikely you're going to have the same kind of future as normal people have. Anyway, I've come to you with a business proposal. I'll de-zombify you, de-hypnotise you, and then, once you're back to a normal state, you'll be able to help me. You can help me get my firm back on track. After all, you've had experience, and you were a talented entrepreneur. You've got connections."

"I shan't be able to help you, Vladislav. I'm not thinking about business at the moment. My thoughts are occupied elsewhere."

"It's quite clear you're not thinking at the moment. You've got to pull out of this first, get back to a normal state of mind. Just believe me. I'm asking you as a friend. You'll thank me for it by and by. After all, once you get back to a normal state, you'll be able to evaluate what's happened for yourself."

"How can you define what is the most normal?"

"It's very simple. You live a normal, natural human life at least for a few days. You have some fun with girls. And then you take a look back at the past few years of your life. If you like what you see, you can go on working and living as you are now. But if, from a normal state of mind, you see that you were hypnotised, you can get back into business again. It'll be good for you, and you can help me."

"I can't go out with prostitutes."

"Who says anything about prostitutes? We'll take up with those who want it themselves. We'll have a party and enjoy some music and other people's company. We can have it at a restaurant or out in nature. I'll get everything organised, all you have to do is go along."

“I need to work out things within myself first. I need to think.”

“Come on, enough with the thinking! Look at my proposal as an experiment. I’m asking you as a friend -- just give me a week, and then you can think.”

“Okay — let’s go for it...”

The following day we went by car to a neighbouring town, where some nice girls (as Vladislav put it) lived — girls he said he’d known for a long time.

## CHAPTER TWENTY-TWO

### Our reality

The woman who opened the door for us was attractive and alluring. Thirty-something, feminine and shy, pleasingly plump. No, she wasn't fat. Her body preserved and even accentuated all the man-enticing curves -- which were hardly obscured under the sheer gown she was wearing. Her childlike voice and welcoming smile at once made us feel at home.

"Hello there, travellers! Come on in, come on in. Svetlana told me about you. She said you'd like to see the town, and then go to a restaurant and have a great time!"

"That's just the ticket! We want to do all that, and of course with you, my lovelies," Vladislav blurted out. "And how's my dear Svetlanka -- still out partying, eh what?"

"Now when would we have time to go out partying, and who with? Seems the rest of us have to wait a lifetime..."

"*Why not?* See here, I've brought a pal along. He's from Siberia, and he's one-hundred-per-cent entrepreneur!"

She straightened her tight-woven braid and raised her timidly lowered eyelids to reveal a sparkling pair of eyes that looked as though they could be full of passion and desire. She offered me her hand.

"I'm Lena.<sup>1</sup> Hello!"

"Vladimir," I introduced myself, shaking her cream-puff hand.

While Lena got some coffee ready for us in the kitchen, Vladislav and I washed up and then took a look around her

<sup>1</sup>*Lena* -- like *Lenka*, an informal form of *Ekaterina*.

two-room apartment. I really liked her flat. The layout was pretty much like any other flat, but hers looked especially clean and cozy, well cared for. Everything was arranged in place, no clutter. The bedroom featured turquoise flowered wallpaper and matching curtains with frills. This colour, also picked up by the rug and the counterpane on what looked like close to a king-size bed — together with the tidiness of the room — had a soothing effect. The bed especially was truly inviting.

We sat ourselves down in comfortable armchairs in the other room, which was a little bigger. Vladislav switched on a rather expensive-looking tape player, and asked me:

“Well, what do you think of her?”

“Jolly good. I’m just wondering, how come she’s not married?”

“How come millions of other women aren’t married? I haven’t you heard? There’s not enough of us — men, that, is — to go round!”

“Sure I’ve heard it, but she’s not just everyone. She’s really nice, and she’s managed to make a cozy nest for herself here.”

“Yes, she has. She gets a decent salary. She’s a top hairdresser. Not just a hairdresser — a stylist to boot. She goes in for competitions, and as for her clientèle — let’s just say she has more than one wealthy lady waiting to pay good money for her services.”

“D’you think she sleeps around?”

“No way. Svetka<sup>2</sup> said that back when they were in school together, Lenka took up with this dim-wit from the next class up. Then after they finished school she dumped him, but he kept after her for the longest time, and picked a fight with anyone who tried to go out with her. There were quite a few lads he and his pals left in a pretty bad way — right before her eyes. He even got hauled up on delinquency charges. She felt sorry for him and never testified against him. She always claimed she wasn’t fully conscious and couldn’t remember. So

<sup>2</sup>*Svetka* — like *Svetlanka*, an informal form of *Svetlana*.

they were only able to get him once — for beating up on some lad who had a high-placed daddy.”

“Then maybe she’s frigid — maybe she doesn’t need a man?”

“Frigid? I should say not! Didn’t you notice the way she looked at you with those eyes of hers? Like a boa-constrictor sizing up a rabbit! She was ready to jump into bed with you right off!”

“Don’t exaggerate.”

“Now don’t you go with your faultfinding, just enjoy yourself. *Carpe diem!* We agreed we were going to relax and have a good time, so let’s just relax and have a good time.”

Lena brought in cups of coffee on a beautiful tray. She had changed into a body-hugging sun-dress and had put on a bit of makeup. Looking even better than before, she suggested:

“If you’re hungry, I can throw something together.”

“No,” replied Vladislav. “We’ll eat at a restaurant. Ring up one of the better places here and reserve a table for four.”

While we sat and drank our coffee, Lena telephoned a restaurant and reserved a table with some manager she apparently knew quite well, as she used the familiar form of address,<sup>3</sup> instructing him:

“Try to find a good spot — I’m coming with some very nice gentlemen.”

That evening, Lena took us on a ride in her car to see the sights of the city and its environs, ending up at the restaurant.

An obliging doorman in a richly adorned uniform opened the door for us with a gallant sweep of his hand. The Maitre D’ escorted us to a table on the far side of the dining room. It was indeed a nice spot, on a slightly raised floor, with a good view of the whole restaurant and the stage. The dining room with its beautiful plaster mouldings on the walls and ceilings, indicating a rather expensive establishment, was already

<sup>3</sup>familiar form of address — similar to *tu* instead of *vous* in French.

almost filled to capacity. Probably only the wealthy could afford to enjoy a meal here. We decided we would hold nothing back — we ordered the most expensive hors d'œuvres, some good wine and a bottle of vodka for me.

The orchestra struck up a dance tune — some kind of tango. Vladislav immediately suggested we all take to the dance floor, and we started off. Lena's womanly body swayed cozily and comfortably in my arms. Already a wee bit tipsy, I was even more intoxicated by the fragrance of her perfume, not to mention those sparkling eyes of hers. Her lowered eyelids lifted from time to time to reveal a tender gaze, burning, as it seemed, in anticipation of forthcoming passion. And then they lowered once more, as though embarrassed all of a sudden.

By the time we got back to our table, all my sense of being a seeker on the straight and narrow vanished out the window. I felt good and light-headed, and I was grateful to Vladislav and Lena and everything in general. So, it *was* possible to live a good life, as long as one didn't dig into it too deep, but simply enjoyed its benefits.

I poured everyone a glass of wine, vodka for myself. I was just about to propose a toast when Vladislav interrupted.

After dancing with his Svetlana he looked very nervous for some reason. He immediately lit a cigarette, carelessly dropping the ashes into his salad. Without waiting for anyone else he took a large gulp of wine and didn't say a word, only fidgeted in his chair. I was on the point of picking up my glass and proposing my toast when he started muttering:

"Wait, something's come up... Something serious. Let's step out for a bit. We gotta talk." And without waiting for my reply he rose sharply from his seat. "You birds stay here and swap a bit of gossip. We'll be right back."

We went out into the spacious restaurant lobby. Vladislav beckoned me over into a far corner by the fountain and in a sour, muffled voice spat out:

“She’s a bitch! You were right... A damned bitch!”

“Who’s a bitch? If you’ve had a falling out with Svetka, then don’t spoil the evening for others.”

“Not Svetka... Lenka’s set us up, or rather set *you* up, though I’m in for it, too. I’m gonna stick with you.”

“D’you mind telling me just how she could set me up, or set us up? Who or what for?”

“Svetka told me while we were dancing. I’d been telling her all about you, and she felt sorry for you... As soon as she saw you... And while we were dancing she told me the whole story.”

“What story?”

“Lenka’s a bitch. Some kind of sick masochist. A pervert. You can see how men fall for her, she flirts with them, and then she takes them to this restaurant. She invariably gets a table reserved through her friend there, and that lackey right off contacts this mafia bloke.”

“What mafia bloke?”

“That dim-wit over there, the one she got to know in school. I was telling you how even when he was younger he and his chums would beat up on anyone taking her out. And now he’s making like a kind of local gang boss, running some sort of racket. Anyway, she knows that as soon as she asks for a certain table through her pal there, he’ll automatically contact this mafia bloke. And right here in the restaurant, or more often afterwards in some secluded spot he’ll lie in wait with his thugs and beat Lenka’s companion half to death. The whole business is supposed to take place right before her eyes. She gets a real high from it, maybe even starts to ‘come’. Svetka says it’s already a disease with her. She once admitted to Svetka that these scenarios can even sometimes give her an orgasm.”

“And the dim-wit, what does he get out of it?”

“Who knows what he does it for! Maybe he loves her like he did before. Maybe he too gets some perverse pleasure from it. Svetka says Lena pretends she’s ‘out of it’, and then after

the scene's over he takes her home and spends the night with her. And goodness knows what they do there in her flat."

"So why doesn't he just go ahead and marry her?"

"What difference does it make to *you* why they don't get married? I tell you, it's like Lenka's sick! Like she doesn't want to let go of her youth. You get married, and all you've got is humdrum everyday life. This way she gets her high, but what high would she get in married life? She's sick, Svetka says. What's it to us? We gotta think of ourselves, how to get outta this now."

"Let's just leave the restaurant, since you say they might contact that mafia jerk."

"Too late. He's already here with his henchmen. Watching us... Svetka says the first thing he'll do is come over to our table, and very politely ask to have a dance with Lenka. If her companion says okay, they'll have a dance. Otherwise, he'll calmly walk away. But it all ends up the same — they lie in wait and then beat him half to death. If there's any valuables, his henchmen will grab them. I've already given my Rolex to Svetka. If you've got anything like that, let me give it to her too for safekeeping."

"I don't have any valuables. Tell me, how come they're not afraid of the cops?"

"Listen, I tell you they've got it all set up... He's got a lawyer... Not only that, but they can make the whole situation look like they were protecting the woman from a rapist."

"And that means Lena won't testify?"

"She'll shut up, the bitch, fake a memory lapse, like she was in shock or had a fainting spell... It's all my fault. We've landed in this pile of crap, but I think I have an idea. I've got an idea. Let's pretend to start something, pick a fight, get into a row with each other, so the police will come and take us away. Better to spend a night in the drunk tank and pay a fine than end up scarred for life!"

"No, no way. I'm not going to punish myself for their sakes. Can't we go out through a back door, then you could ring up Svetka, order a taxi to go and collect her?"

"We shan't make it — they're already sitting out there. If we leave, they'll only come after us and bring us back. We'll get it doubly hard in that case. And then they'll claim we were trying to run off without paying our bill."

"If there's no escape, then let's go all out — sky's the limit! At least play on the nerves of these bastards. It's a shame the evening's spoilt — I was having such a good time."

"I low're we gonna 'go all out'? Tell me, how?"

"We'll go and get really soused, then we shan't have a care in the world. Let's pull out all the stops, while we still can. Only don't let on that you know — don't get nervous in the meantime."

"What d'you mean? I'm not afraid for myself — I'm worried about you."

"Let's go."

We returned to our table. The spacious and luxurious restaurant sparkled with the grandeur of the ladies' refined attire, and the jewels adorning them were to all appearances genuine. A lot of the still very young beautiful girls in the company of their suave escorts also sported fancy jewellery. These were the so-called 'new Russians' out for a good time.

But *they* are Russia too. Which meant that here was Russia herself out for a good time in a way she alone was capable of. With daring and pizzazz. And the pizzazz will most certainly show itself in due time, even if for now everything is done with decorous grandeur and luxury.

As soon as we sat down at our table, I filled our wine-glasses to the brim and proposed a toast:

"Here's to satisfaction! Let each of us sitting here tonight bring at least a moment's satisfaction to those around us. To satisfaction!"

Vladislav and I emptied our glasses, while the women drank half of theirs. I edged my chair right up to Lenka's, put my arms around her right away, rested my hand on her half-exposed cleavage and whispered in her ear.

"You're beautiful and cute, Lena. You'd make a terrific wife and mother!"

Initially feigning embarrassment at my embrace and my hand upon her breast, she made an attempt to withdraw, but not a serious attempt. On the contrary, she began inclining her head toward me. Thus the game was afoot — playing by their (or her) rules. And I played along as best I could, without really thinking about why I was doing it, as though rushing headlong, ever closer to a sad result for someone's (or some dark forces') sport. And the result came.

From a table beside the stage rose a stout-looking fellow with a neck like a bull's. He stood there for some time, staring at us. Directly the music began he buttoned his jacket and confidently strode over to our party's table.

But half-way across the floor he suddenly stopped and began to stare just as hard in the opposite direction. And throughout the room many heads turned in the same direction. A number of couples even got up from their chairs in astonishment. I too followed their gaze, and nearly fainted from shock.

There, making her way from the main entrance to the stage was none other than Anastasia! And not a single person could be left unastonished at her sprightly — I would have to say: defiantly sprightly — step, not to mention her outfit!

And what an outfit it was! She was still wearing her old but clean cardigan, skirt and mother's kerchief, but this time they looked as though the world's most celebrated fashion designer had come up with a super-ensemble especially for her, outshining all the other women's attire that had seemed to me so refined and fashionable up 'til now:

Perhaps it seemed that way on account of the fact that her usual clothing was supplemented by some rather unusual jewellery, or perhaps it was her posture, or the manner in which she carried herself?

From Anastasia's earlobes hung (as though clipped on) two little green twigs with fur-like needles. Her head was encircled by a garland of grasses woven into a braid, keeping in place a thick golden shock of hair. Over her forehead a little flower, burning bright as a ruby, had been woven into the band. And she was wearing makeup — there was just a tint of green shadow above her eyelids.

She had on the same skirt as before, but with a slit almost to her thigh. Around her waist was a belt made from a kerchief and tied with a knot. The incredible ensemble was topped off with an extraordinary, superfashionable purse, into which she had transformed her bundling cloth. Folding the cloth in half, she had tied two of the corners to one end of a bark-covered stick and the other two corners to the other end, and then used a little grass belt she had woven to fasten it all together into a kind of hippie-style handbag. And to top it all off she strode with a freedom and confidence that models and supermodels could only dream of.

Upon reaching the dance-floor, where a few couples were launching in to some kind of a quick-paced dance, Anastasia all at once spun gaily around several times in time with the music, whereby every limb of her supple body bent and twisted with beautiful, fluid movements. Then she arched her arms over her head and clapped her hands with a delightful laugh, and all the men in the room responded in enthusiastic applause.

As she then headed for our table, two alert waiters approached her enquiringly, and I could see her gesturing in our direction. One of them picked up an elaborately carved wooden chair and followed her. As she walked past Lenka's friend with the bull neck who had been about to head over to

our table, Anastasia paused for a bit and looked him straight in the eye. It almost seemed as though she gave him a wink before heading over to us.

There I was sitting with my arm around Lena, watching the proceedings with open-mouthed astonishment. None of us were talking, only staring.

Anastasia approached our table as though nothing unusual had happened, and greeted us as though she were an expected guest:

"Hello and good evening! Hello, Vladimir! If you will allow me... You will not mind if I join you for a bit?"

"No, of course not, Anastasia — do sit down!" I began, recovering from the shock of her arrival. I rose to offer her my seat, but the obliging waiter had already put the additional chair in place. The second waiter moved my plate to one side and, setting a clean plate in front of Anastasia, offered her a menu.

"Thank you," she responded. "But I am not hungry at the moment."

Reaching into her hippie-style purse, she brought out a cluster of berries wrapped in a large leaf — huckleberries and cranberries. Putting them on a plate in the middle of the table, she invited us to help ourselves.

"How did you happen to show up here all of a sudden, Anastasia?" I asked. "Have you been taking in the restaurant scene lately?"

"I came to visit you, Vladimir. I had a feeling I would find you here, and so I decided to come. I am not imposing on you?"

"You're not imposing at all. Only what's with the fancy get-up? And the makeup?"

"At first I did not have any makeup or fancy clothes, but when I tried to enter the restaurant, the doorman would not let me in. He let others in, and bowed to them as he held the door open for them, but he told me:

"Outta here, sister, this ain't your local greasy spoon!"

"I stepped aside to a more shaded place, and watched to see how others managed to get in. I realised they were wearing different attire and did not walk the same way I did. I caught on to it all quite quickly. I found two twigs handy that had fallen from a nearby tree, split them with the ends of my nails and attached them to my ears as decoration. Look!" Whereupon Anastasia turned sideways to me and showed me her invention. "What do you think — did they turn out well?"

"Very well indeed."

"So I quickly made myself a purse, and a belt out of my kerchief, and some makeup from leaf and flower sap. Pity, though, I had to tear a slit in my skirt..."

"You didn't have to make such a huge tear, practically to your thigh! Just to your knees, that would have been enough."

"I wanted everything to be as perfect as possible, so they would let me in."

"And where did you get the lipstick? That's real lipstick you're wearing!"

"That I obtained here. When the man at the entrance opened the door for me, I went over to the mirror in the lobby to see how I looked. Naturally, I was curious. There were some women standing in front of the mirror, looking at me. One of them came over, all excited, and asked me where I got my outfit from. She offered to do a 'full swap' — said she would give me her ring and costume jewellery. She even offered me some 'greenbacks'.<sup>4</sup>

"I explained to her that it would not take her long to put together a dress like this on her own. I started by showing her the clip-on twigs. The other women looked on, and one of them kept saying 'Oh, wow! Oh wow!' Another started asking me where she could find magazine pictures and descriptions

<sup>4</sup>'greenbacks' — American banknotes have commonly functioned for many years as a second currency in Russia, though not always legally.

of such fashions. And the first one said that if I wanted to ‘turn tricks’ here, she was the Madam and wouldn’t allow any pimps, since her girls are free agents and she’s quite capable of smashing any protection racket.”

“That must have been Anka-putanka,”<sup>5</sup> said Sveta. “She’s one tough cookie — they’re really afraid of her. If anyone crosses her, she can come up with all kinds of schemes and arrange an ‘incident’ where so many heads will be banged together they’ll really be sorry.”

“One tough cookie’...” Anastasia echoed moodily. “But her eyes are full of sadness — I feel sorry for her. I wanted to do at least something for her. When she started to sniff me over and ask about my perfume, I gave her a little twig containing the essence of cedar oil and showed her how to apply it. She at once daubed it on herself and on her girlfriends, and in return she gave me some lipstick and a pencil to highlight the edges. I could not get it right at first, and we had a good laugh over it. Then she helped me put it on, and said anytime I needed anything, I could come to her. She offered to have me join them at their table, but I said I had only come to see my —” Anastasia paused in mid-sentence, then continued after a moment’s thought: “to see you, Vladimir, and the rest of you.”

“Vladimir, could we take a little walk outside? There is a breeze blowing off the sea — the air is better there. Or would you like to stay here a little while longer with your friends? I can wait until you have finished. Or I — Are you certain I am not imposing?”

“Not at all, Anastasia!” I replied. “I’m really happy you came. It’s just that I was so surprised to see you at first.”

<sup>5</sup>*Anka-putanka* (pron. ANN-ka poo-TAHN-ka) — a play on words derived from the rhyme of *Anka* (derivative of the name *Anna*) and *putanka* (hooker). Two other variants of *Anna* which will be encountered later are *An* (highly colloquial) and *Aniś* (endearing).

“Indeed? So, perhaps you and I could take a stroll by the sea? Just the two of us, or all together? Which would you prefer?”

“Let’s go, Anastasia. Just the two of us.”

But getting out of there wasn’t all that easy. Elena’s friend was heading our way. He too, it seemed, took a while to recover from the unexpected arrival of Anastasia. *We should have left earlier — right off*, I thought to myself, but now it was too late. They had already set their dastardly scenario in motion. And Elena, as though getting herself mentally prepared for it, began sitting up straight, lowered her eyes and made a show of smoothing out her hair.

He came over to our table, but instead of approaching Elena, he went directly to Anastasia. With a slight bow of his head he began addressing her, taking no notice of anyone else. Elena’s jaw dropped in surprise at hearing him ask Anastasia:

“Miss, allow me the pleasure of asking you for this dance.”

Anastasia rose, smiled and responded:

“Thank you so kindly for the invitation. Please, have a seat in my chair. They will miss your company otherwise. As for me, I really do not care to dance at the moment. My... my gentleman friend and I have just decided we would like to go for a walk in the fresh air.”

In obedience to her suggestion he sat down in her chair, not taking his eyes off her for a moment. Anastasia and I headed for the exit.

My plan was to get as far away from the restaurant as possible, go for a bit of a walk as Anastasia wanted, then grab a taxi and go back to my flat. It was around ten o’clock at night. We walked through a shady allée and then down to the rocky seashore.

We hadn’t yet reached the water’s edge when I heard the screech of brakes. I turned around to look. From a jeep parked at the side of the road up above, five tough-looking

lads were heading in our direction. As four of them encircled us, I recognised the fifth as the dim-wit with the bull neck — he took up a position just a little distance away. But it was he who kicked off the conversation:

“Hey, pal, you’d better get back to the pub. Your lady’s missing you.”

With no response from me, he started up again:

“Hey, you deaf or what? We say you’d better go back to your lady. But you got this lady mixed up with another and split. We’re gonna help you back — right this instant.”

The oversized lad standing nearest me took a step closer, and I made a decision.

“Run, Anastasia!” I cried, and decided to let him have it first, and keep them at bay as long as I could so that Anastasia could get away. I tried to land the first blow on the chap approaching me, but he seized hold of my arm, punched me in the solar plexus, and then *wham!* — right in the face. I tumbled to the ground, right on the rocks. I would probably have landed right on my head, but Anastasia reached out her hand and cushioned my fall.

My head was spinning and I could hardly breathe. I lay there and watched the big fellow’s feet — shod in steel-reinforced boots — come right up to my face. *Uh-oh, he’s going to use his foot on me next!* the thought flashed through my mind. Now he came *really* close and lifted his leg...

Only right at that point Anastasia did what just about any woman would have done under the circumstances — she screamed. But what a scream! It was a regular scream only for a split second. The sound associated with it quickly vanished, and her inaudible scream rose wildly in intensity to the point of shattering one’s eardrums. I could see the lads around us letting some kind of objects fall from their hands as they grabbed hold of their ears. Three of them collapsed to the ground and began writhing on their knees in pain.

Anastasia, having covered my ears with her own hands, kept refilling her lungs with fresh breaths of air and screaming again. Her scream was evidently something akin to ultrasound, causing all our would-be attackers to writhe in pain. They had no idea what was happening, or where this piercing, unbearable sound was coming from. Through her hands I could feel the sharp penetrating sensation — maybe not as strongly as the others, but it still hurt.

Then I noticed a group of women running down toward us from the road. Anastasia stopped screaming and took her hands off my ears, I sat up on a rock. I could see the two *Zbigulis*<sup>6</sup> the girls had arrived in standing beside the jeep.

The women were armed — one was carrying a bottle, another a tyre iron, a third brandished a policeman's truncheon, while the fourth held a massive candlestick in her hands. Out in front was Anka-putanka, holding in her hands the neck of a broken champagne bottle, while following behind, slowly, came yet another — a plumpish woman clad only in a nightgown, who had apparently come straight out of bed and hadn't had time to get dressed. Somehow the Madam-in-charge had managed to sound the alarm and rope all her 'workmates' into the task at hand.

The fearsome, dishevelled Anka stopped just a few metres from our little group, which was now picturesquely sprawled over the rocks. Anastasia was the only one of us standing, and Anka spoke to her:

"How now, friend! You've got so many lads after you — they wouldn't be botherin' you, would they now?"

"I just wanted to have a talk with one of them," Anastasia calmly replied.

"And the rest of them — what are *they* doin' here?"

<sup>6</sup>*Zbiguli* — a car produced at Toliatti on the Volga River (see footnote 1 in Book 4, Chapter 22: "Other worlds").

"They followed us for some reason. I have no idea what they want."

"*You* have no idea? I know what those scumbags want," replied Anka and burst into a torrent of expletives in the direction of Lena's friend. "How many times have I told you, muttonhead, not to lay a hand on me girls?!"

"*She* isn't one of yours," the 'dim-wit' responded gruffly.

"She's my 'professional colleague'. That means she's mine. Got it, you overgrown school-kid? If I see your pimp-snout so much as anywhere *near* one of me friends, I'll smash the livin' daylight's outta you an' your cronies. Just remember that! I'm not puttin' up with a single pimp on my territory — not a single scumbag will I allow. You're not satisfied with sucking blood from the suits? You wanna be pimpin' for us too?"

"You've gone crazy. She's *not* yours. She's a novice. I just wanted to have some fun with her myself. This time, Anka, you've gone too far. What's all the fuss about her? What's she to you?"

"She's me friend. Got that? An' you've got your hands full with that sadist of yours."

"You've gone bonkers! Before you know it every last bird's gonna be your friend! — oh, what?"

The leader's voice in him was now no longer stifled by fear. And I realised why: while Anka was talking with him, his henchmen had come to, and the short, stocky fellow standing beside the leader was holding a gun in his hands, aimed right at Anka. A second man had his own gun trained on the group of hookers standing behind her.

Here was this group of young women, armed with whatever they could lay their hands on, standing directly in the path of the thugs' guns. The situation, as it now turned out, was far from being in their favour. One thing was absolutely certain: another moment and their morale would be broken and their bodies maimed, not to mention the loss of their freedom and

income. I really felt like doing at least something to influence the proceedings and head off the inevitable dreaded result.

Anastasia was standing beside me, intently observing the situation. I jerked her arm. Putting my hands over my ears, I quickly said:

“Scream, Anastasia! Scream as quick as you can!”

Lowering my arm, she enquired:

“Why scream, Vladimir?”

“Eh? Don’t you see what’s going on? These women are about to get their heads bashed in, maimed for life. Their bluff’s been called. It’s all over for them.”

“Not for all of them. The spirit is still fighting in three of them.”

“But what can the spirit do against guns? They’re done for.”

“They are not ‘done for’ yet, Vladimir. As long as their spirit is still fighting, nobody should interfere. Outside interference may take care of the situation at hand, but it will weaken their self-confidence, and mean that a whole lot of other situations in their lives will not turn out favourably for them. They will come to rely on outside help.”

“Stuff that philosophy of yours, at least for now. Can’t you see the situation’s hopeless?” I fell silent. It was clear Anastasia’s mind was made up. And I thought wistfully: *Oh, if only I could scream like that!*

Seeing his cronies ready and alert, Lena’s boyfriend (the pimp) spoke up — it was clear from the tone of his voice that he was already feeling he had the situation well in hand.

“I told you, Anka-putanka, you’ve gone too far. But this time we’ve won. So you’d better drop your toys, you little tarts! Drop them, and get those rags off — we’re gonna screw all of you, one at a time.”

Anka looked around at the thugs standing or concealing themselves, guns at the ready, and answered with a sigh:

"Maybe you don't need all of us — maybe just me's enough?"

"Ha, ha, bitch! See, now you're singing a different tune," the leader responded over the laughter of his buddies. "We shan't be satisfied just with you — we're gonna teach you all a lesson here. After this you're gonna be working for us, bitches!"

"An' jest where are you goin' to get the stud power to take on all of us?" Anka responded with a laugh. "You'll be lucky if you have enough for just one!"

"Shut your trap, bitch! We'll screw all of you, several times over!"

"I doubt that! I bet you won't be able to take on even one of us!"

"We'll keep screwing you all night long!"

"You know, sweetcheeks, you're startin' to get on my nerves — you an' your 'promises'. I don't believe 'em, I don't believe you're *man* enough!"

"You'll find out soon enough, bitch! I'm gonna smash that pretty face of yours in!" wheezed the leader, already seething with rage, putting on a pair of brass knuckles as he moved toward Anka.

Anka retreated a bit and called out to her group:

"Step aside, girls!"

The group of hookers took several steps back. Only the sullen plumpish 'cow' in the nightdress stood on the sidelines as though rooted to the spot, and when the tall and lanky leader took another step in Anka's direction, the 'cow', who before this had not spoken a word, suddenly said blandly:

"Hey, An — what're you waitin' for, An? Let's get started, eh?"

"Don't be in such a hurry, Mashka,"<sup>7</sup> replied Anka, taking another couple of steps back. "Well, go ahead, scein' you're itchin' to get on with it!"

<sup>7</sup> *Mashka* — like *Masha* and *Masbenka*, a colloquial variant of *Maria*.

The plumpish Masha, calmly and coquettishly tore open the flaps of her nightdress, scattering the buttons to the winds, exposing not only her bare breast and bikini briefs, but something else as well...

Under her nightgown the 'cow' was carrying a Kalashnikov assault rifle with a silencer and night-vision telescopic sight. She pulled the bolt, raised the butt stock to her shoulder, pressed her cheek to the stock and peered into the sight.

"Only remember, Masha, no automatic," Anka suggested. "This ain't no war zone. Just one bullet at a time. You know — every bullet costs money."

"Uh-huh," answered Masha, her eye still pressed to the sight, and fired off five shots, each about a second apart. But what shots they were! The first bullet tore off the heel from one of the leader's boots, apparently wounding his foot in the process. He jumped back in the direction of the water, limping. The other four shots landed right by each of the thugs in turn. Immediately they began looking for cover behind the rocks, and the ones who didn't have any cover handy lay face down on the ground.

"An, tell them to crawl into the water! Or they may get blasted by a ricochet!" Masha blurted out, her Kalashnikov still at the ready.

"You heard her, sweetcheeks! Into the water!" Anka ordered the big thugs already crawling toward the water's edge, gently reminding them: "Mashenka's not yet a good enough shot to be responsible for ricocheting bullets!"

A moment later, and all of them, including their leader, were standing waist-deep in the sea.

Ania went up to Anastasia, and for a while the two simply looked at each other, face to face, without saying a word. Then Ania said quietly, with just a hint of sadness:

"You, friend, wanted to go for a stroll with your companion there. So go ahead. It's a fine evening, quiet, warm..."

"Yes. There is indeed a pleasant air blowing over the city," Anastasia replied, adding: "You are tired, Ania, perhaps you would care to relax in a garden of your own?"

"Perhaps... but I feel sorry for me girls, an' I'm still so mad at those... blokes. Say, are you from the country?"

"Yes."

"Nice place, where you live?"

"Very nice. But I do not always feel at peace, especially when things are not going well for everyone in other places, as here right now."

"Don't mind them. Come whenever you like... Anyway, I'm off. Gotta work. Have a nice quiet stroll here."

Ania headed toward the cars, her entourage in tow. As they walked past the 'cow' still sitting on the rock, the Kalashnikov lying across her bare knees, Ania said:

"You stay and relax here a bit, Mashenka. We'll send a car for you later."

"I've got a client waitin' — I was with 'im when you called me. An' he's paid already!"

"We'll take care of your client. We'll say you had an upset stomach. Like, the quality of the champagne wasn't up to scratch."

"I had vodka. And only half a glass."

"Well, then, maybe you ate something..."

"I didn't have anything to eat — just a bit of candy and some pastries."

"So that's it, then — the pastries weren't too fresh. How many d'you eat?"

"Don't remember."

"C'mon — she never eats less than four at a time," said one of the girls. "Right, Masha?"

"Well, maybe you're right. At least leave me a cigarette. So's I don't get bored out of my skull."

Ania put a package of cigarettes along with a lighter on the rock beside Masha, and the girls walked on.

"Hey," came a voice from the water, "you gonna leave this gal of yours here on the rock?"

"She's stayin', sweetchecks, she's stayin'!" replied Ania. "I told you right off, one of us is enough for the likes of you. You wanted all of us. And now it turns out it's goin' to be pretty boring for just one of us to stay here with you."

"Once this gets out, about how conniving you are..." one of the thugs called out. "Once it gets out... Well, no one will ever want to shag with you again. Even if you offer to pay them."

Five muffled shots rang out from the rock in quick succession. And five little splashes popped up in the water, one right beside each of the men standing there, making them retreat even further out from the shore. Ania turned to them and warned:

"Look, boys, just make sure you don't rile Mashenka here. When we like someone, we can be sweet and tender. An' loyal as dogs. When we like someone, understand? No matter who..." And then, as she clambered up the hill toward the cars, she struck up a song in a resonant, wistful voice:

*The paths and roads are all overgrown there  
Which my dear lover's feet have known there.*

And the young prostitutes following her picked up on the tone of her voice, on the intonations of sadness and despair:

*Overgrown there with mosses and grasses:  
He's taken up with another of the lasses.  
Where does he travel, my lover?  
It makes my heart only sorrow and suffer.*

And off they drove, still singing the song about the pathways and roads, as they headed back to work.

## CHAPTER TWENTY-THREE

### Your desires

It was almost midnight by the time Anastasia and I got back to my apartment. As I put the key into the lock, I felt a sense of exhaustion after all the intense experiences the day had brought. Upon seeing my bed, I told Anastasia that I was extremely tired, and went to take a shower. When I came out of the shower, Anastasia told me she'd already made up my bed, and that she herself would lie down on the balcony.

*It's probably too stuffy for her in one of these mass-produced apartment blocks,* I thought, and went out to the balcony to see what kind of bed she had made for herself there. It turned out she had put a little strip of rug down on the balcony floor and covered it with some white paper, which my landlord had got ready for wallpapering the flat. In place of a pillow she had folded her cardigan, and put a small tree-branch at the head of her makeshift bed.

"How can you get a good night's sleep here, Anastasia? It's hard, and you'll be cold. At least let me fetch you a blanket."

"Not to worry, Vladimir. I shall be fine here. The air is fresh, and I can see the stars. Look up and see how many stars there are! There is a soft, warm breeze blowing — I shall not be cold. You go lie down, Vladimir, and I shall sit on the edge of your bed for a while, and once you fall asleep, I shall lie down, too."

I lay down on the bed Anastasia had made up for me and thought I was so tired that I'd nod off right away, but it didn't work out quite like that. The thought, or realisation, that Man — i.e., every single individual — was nothing more than

a plaything in the hands of some sort of coincidences, kept gnawing away at my mind, giving me no peace. This led to a growing feeling of irritation at those who had arranged these coincidences, and Anastasia too. Anastasia in particular, since I considered it a definite possibility that she had actually participated in the formation of these coincidences, at least as far as my life was concerned.

“Is something disturbing you, Vladimir?” Anastasia calmly enquired, and I even raised myself slightly on my elbows.

“As if you didn’t know!... I believed you... I wanted to believe... I particularly wanted to believe that Man — every Man — is capable of making his own life happy. I especially believed in the eco-communities you talked about, where people can live a secure existence thanks to their own family plot of land, and raise their children to have a happy life. And that there would be good schools there for the children. I believed you when you said that every Man is the beloved child of God. ‘Man is the summit of creation’ — you did say that, didn’t you?”

“Yes, Vladimir, I did tell you that.”

“Of course you did! And how convincing you made it all sound! I not only believed you, I started acting on it, started organising a community. I’ve already submitted the necessary paperwork to the authorities. The Anastasia Foundation is collecting people’s applications. A design’s been commissioned, along with a layout for gardens and all sorts of plantings. It would have been all right just to believe you and all that, but I actually started carrying things out, and with pleasure! *You knew!* You knew I’d carry things out!”

“Yes, Vladimir, I knew. After all, you are an entrepreneur. You are always ready to carry out practical actions, to make things happen...”

“Always ready?” I echoed. “How simple it all is! Of course. No need to be a clairvoyant to see that. As long as an

entrepreneur believes in something, he will start to act. And I, fool that I was, started too.”

I couldn't stay lying down any longer. I jumped out of bed, walked over to the window and opened the *fortochka*,<sup>1</sup> since I felt a sudden wave of heat -- either in the room or within me.

“Why did you think your actions foolish, Vladimir?” Anastasia calmly asked.

And her equanimity, along with her feigned ignorance, as I then considered it -- made me even more angry.

“And you just sit there talking all calm-and-collected-like? Calm and collected! As if you didn't know all along that Man is a puppet in somebody's hands. *They* control Man through various circumstances. Each Man is easily controllable by some kind of forces. If they feel like it, they can plunge half the human race into war. They plunge people into war and then take up a position somewhere up above or on the sidelines to watch us kill each other. If they feel like it, they'll slip some sort of religion into the proceedings and watch, once again, as people go to war over their faith. If they feel like it, they can play with just a single individual. I'm convinced of it. I've been convinced by people who are smart enough to analyse what's going on.”

“And just how did these ‘smart people’ succeed in convincing you that Man is just a plaything in the hands of some kind of forces?”

“I listened to a report. They were talking about me. Some smart people became interested in public reaction to the books. They became interested in you, and in me too. They followed my every move during my time on Cyprus, while I was working on the fourth book. They recorded everything

<sup>1</sup>*fortochka* -- a small openable window in the upper corner of a larger window-frame.

and then analysed it. And, if you can believe it, I'm not mad at them for following me. I'm even grateful to them — for finally opening my eyes. They showed how Man is being toyed with. Coincidences don't just happen, they're arranged, and I've become convinced of this through my own experience."

"What experience is this, Vladimir? Have you been conducting an experiment?"

"I haven't, but they've been conducting an experiment on me. When I was on Cyprus, I happened to mention freshwater fish, and *presto!* — freshwater fish appeared. I mentioned cedars, and cedars appeared. I wanted to pay a night-time visit to a church — and, lo and behold, there was a church, and the church doors were open at night. A whole lot of other things happened — all I had to do, no doubt, was write what they wanted me to.

"But the main thing — the granddaughter of the goddess Aphrodite appeared. I mentioned to several people on Cyprus that I wanted to meet with her granddaughter, since I had had it up to here with their Aphrodite. There were posters everywhere about her Baths, and people were forever carrying on about her. Anyway, I told them I was going to meet with the granddaughter of this goddess Aphrodite. I mentioned this, and a few days later along comes this girl with fire in her eyes — anyway, the way things turned out, everybody decided that Aphrodite had indeed sent her granddaughter, and was working miracles through this girl, and the girl herself underwent some kind of transformation.

"But who arranged all these circumstances one after another? Who? I certainly didn't arrange anything. If only one thing like this happened to take place, well, okay, but here was a whole chain of them together, and if you take them altogether, it's no longer a coincidence, it's a *pattern*. This is the conclusion the academics came to. And I'm convinced they're right. And you can't persuade me otherwise."

“But I was not about to deny that there is a pattern to what has been happening, Vladimir,” Anastasia calmly observed.

I felt my whole insides turn cold, and I was suddenly overwhelmed with some kind of extraordinary sense of apathy following these last words of Anastasia’s. I did have a hope — a faint one, but still a hope — that she would be able to dissolve the whole feeling that had been building up in me of Man’s utter insignificance — not just my insignificance but all mankind’s — but this she didn’t do. In any case, how could she have? Who would dare deny what is so patently obvious? Indifferent to everyone and everything, I stood by the window in a room lit only by moonlight, and looked out at the stars.

Somewhere out there, perhaps on one of those very stars, lived those who were controlling us, toying with us. *They* were living, *they* were real! But could *our* existence really be called life? A toy in subjection to somebody’s will cannot be said to live an independent life — which meant only one thing: *we were not living*. This is why we are indifferent to so many things.

Once again Anastasia began talking in that same quiet and calm voice. But this time her voice didn’t arouse in me any emotions whatsoever — it was more like some kind of extraneous sound.

“Vladimir, you and the people who sent you that cassette with the report were right: there really are energies out there capable of changing time, joining together into a single chain various events or, as happened with you, arranging a chain of circumstances required to achieve a predetermined goal. Pure coincidences do not happen — that is already clear to many people. Coincidences, even those which seem to be the most far-fetched, are programmed. Everything that happens to each individual is programmed. And what happened to you on Cyprus, which served as a clear illustration for the researchers as well as, naturally, for you, was also programmed, and then turned into reality.

"Tell me, please, Vladimir, would you not like to know where the one directly responsible for programming your coincidences is now?"

"What difference does it make where he is? Doesn't matter to me. On Mars, the Moon... Whether he feels good or bad."

"He is right here in this room, Vladimir."

"That means, it's you?... If so, that still doesn't change anything. I'm not even surprised. And I'm not angry. I simply don't care. We are manipulable, and that's the hopeless tragedy of the human race."

"I am not the one in charge of programming your coincidences, Vladimir. I am able to exercise but a tiny speck of influence."

"Then who *is* in charge? There's only two of us in the room. Or is there a third — a programmer who's invisible?"

"Vladimir, this programmer is right within you — it is *your desires*."

"How so?"

"Only Man's desires and aspirations can launch any kind of programme of action. This is the law of the Creator. Nobody, none of the energies of the Universe, can ever break that law. Because Man is the master of all the energies of the Universe! Man!"

"But I didn't launch anything on Cyprus, Anastasia. Everything happened all by itself, by coincidence, apart from me."

"There were indeed certain minor incidents that were not part of the more significant events — though they contributed to their realisation — and these incidents did happen apart from your will. But the basic events themselves were preceded by your desires. Was it not you who wanted to meet with the granddaughter of the goddess Aphrodite? You expressed your wish in the presence of witnesses and repeated it a number of times."

"Yes, I did..."

“And if you remember that, then how can you call servants carrying out the will of their lord masters, and how can you call the master a plaything in their hands?”

“Yes, that *would* be silly. Interesting, how all this is turning out! Wow! Desires... But why then aren't all our desires fulfilled? Many people wish for things, but their wishes aren't fulfilled.”

“So much depends on how meaningful the goal is. On whether the desire corresponds to the light or the dark. On how strong the desire is. The more substantial and bright the goal, the more the forces of light are drawn to fulfil it. To bring it about.”

“And if the goal is a dark one — let's say, for example, to get drunk, or get into a fight, or plan a war?...”

“Then the dark forces take over — Man through his desire has given them the opportunity to act. But, as you can see, it is still Man's desire that is first and foremost! Your desire, Vladimir.”

I began to ponder what Anastasia had said, and my heart felt better and better. The very pleasant moonlight filled the whole room, and it seemed as though the stars in the sky were shining not with a cold light, but with a warmer one. And Anastasia, sitting there on the edge of the bed, seemed to look even better than before. I said to her:

“You know, Anastasia, back there, when I first arrived on Cyprus, to be honest with you, I very nearly went on a binge. Because at first I couldn't find anything there I liked. Nobody spoke Russian. It was too noisy to work — people were whooping it up all around. *Why on earth did I end up here*, I thought, *maybe to get to know some hookers?* There are lots of women there, shall we say, of loose behaviour — from both Russia and Bulgaria.”

“You see, Vladimir? You had the desire, and there they were. You got drunk on vodka, and set up a date with them.

With one woman from Bulgaria, and another from Russia. Only even before that you wanted to meet with Aphrodite's granddaughter — your first desire proved to be stronger, and *she* appeared, and saved you from all the wretched stuff. She helped you."

"Yes, she did. And just how might you know about the Bulgarian girl?"

"From my feelings, Vladimir."

"I don't understand that, but never mind. Tell me rather: this girl, Elena Fadeyeva, she's not the daughter of the goddess Aphrodite — she's Russian, she's simply an employee of a tourist agency on Cyprus. But I was talking about Aphrodite's granddaughter. Does that mean these forces of light were too puny to show me the real granddaughter of Aphrodite?"

"They are by no means 'puny'. And they did show you. The goddess Aphrodite today exists as energy. She is capable of connecting for a time with the energy of any Man — if she can see some meaningful reason to do so. That Elena Fadeyeva, whenever she was with you, had two energies inside her. There was a lot she could do during those days. There was a lot she succeeded in doing, and she managed to help you, too."

"Yes, I'm grateful to her. *And* to the goddess Aphrodite."

All my concerns and unpleasant sensations, connected with my assumption that all people were simply pawns in the hands of some kind of forces, literally flew out the window. Now, after my talk with Anastasia, a sense of confidence and peace set in.

For some time I just watched silently as Anastasia sat on the edge of my bed in the moonlight, her hands meekly folded atop her knees. And then... to this day I cannot figure out how this happened, but I suddenly came out with:

"I realise that you, Anastasia, are a great goddess." And as I said this I fell on my knees before her.

A cry of pain and despair burst from Anastasia's lips. She immediately rose and stepped back from me, leaning against the wall and clasping her hands to her breast as though in prayer.

"Vladimir, I beg of you, get up off your knees — you should not bow down to me. O God, O God, I have overdone it, I have been in too great a haste — forgive me for not making myself clear enough to Your sons. In God's sight, Vladimir, all people are equal. They should not bow down to one another. I am simply a woman — *I am Man!*"

"You are so vastly different from all other people, Anastasia, so if you are simply Man, then who are we? *Who am I?*"

"You are Man, too, only as you are living out your life in vanity, you have not yet been able to think of what your purpose is."

"Moses, Jesus Christ, Mohammed, Rama,<sup>2</sup> Buddha — who are they? And how do you relate to them?"

"Those are my elder brothers you have named, Vladimir. I am not in a position to judge their works, but I shall say one thing: none of them had their fill of earthly love."

"That can't be — every single one of them has millions of worshipping followers, even today."

"But worship does not mean love. It only exhausts the worshipper's power of thought — a power exclusive to Man. Great is the *egregor*<sup>3</sup> of my brothers — for millions of years many people have fed it through their worship, and in so doing each worshipper lost some of his energy. Over the centuries there have been many willing to condemn the deeds of my brothers. And I could not understand why they made such

<sup>2</sup>*Rama* — a god-king and an earthly incarnation of Vishnu (in the Hindu tradition).

<sup>3</sup>*egregor* — a unifying collective psychic entity or field — see footnote 3 in Book 3, Chapter 24: "Who are you, Anastasia?"

great efforts to feed their own *egregor*; building up its energy over thousands of years. Nobody has been able to guess their secret until the dawn of the present age. And my brothers decided to gather the accumulated energy into a single whole, in order to distribute it to souls now living on the Earth. A new millennium will soon be given birth, in which the gods will settle the Earth — those people whose conscious awareness will allow them to accept this energy in all its worth.

“Vladimir, I beg of you, get up off your knees! It is painful for any father to see his son bowed down and enslaved. It is only the dark forces that have always tried to demean Man’s significance. Vladimir, get up off your knees, refuse to betray yourself. Do not separate yourself from me.”

Anastasia was extremely upset, and I did as she asked. I got up off my knees and said:

“I wasn’t separating myself from you. On the contrary, it seems I’ve just begun to understand you. Only I don’t agree that worship interferes with love. On the contrary, all believers say that they love God. And I am bowing before you as a goddess, but you are frightened for some reason, you’ve become upset.”

“We have known each other for five years now, Vladimir. A lot of time has gone by since that night when our son was conceived, but ever since that time, not once have you had the desire to touch me, to give me the look you give to other women. Lack of understanding — and now, worship — do not allow love to reveal itself. Worship does not bring forth children.”

“Well, that’s because you’re not exactly a woman, Anastasia. You’ve become a kind of information node. It’s not just me — others too don’t get your meaning right off. For example, what does ‘don’t betray yourself’ mean? Why did you say that in reference to me?”

“You wrote a letter to the President of Russia, Vladimir, but at the same time you have come to doubt yourself — you

almost perished. You have ceased creating on your own and handed your problems to others — basically to a single President.”

“That’s because he’s the only person in Russia who can realistically do anything.”

“One person cannot do it by himself — the will of the majority is required. Besides, why did you send your letter only to one president? There are presidents in Ukraine, Belarus, Kazakhstan...”

“But you’ve always talked about Russia. Besides, Russia is my Motherland.”

“But your passport<sup>1</sup> says you are a Belarusian.”

“That’s right. My father was Belarusian.”

“And you spent your whole childhood in Ukraine.”

“Well yes, I did. And that was the best part I remember from my childhood. I remember the white cottage with its straw roof, and the weir where I fished for mud loaches along with the neighbourhood lads. And my grandma and grandpa never once quarrelled in my presence, and never punished me.”

“Yes, yes, Vladimir, and remember how you and your grandfather planted tiny seedlings in the garden...”

“I do remember. Grandma would water them from a bucket.”

“But you know that even today in the village of Kuzdnichi, in Ukraine, in the village where you were born, that garden has been preserved, its trees are all crusty now, but they are still bearing fruit — they are waiting for you.”

“So then, where is my Motherland, Anastasia?”

“It is within you.”

“In me?”

<sup>1</sup>*passport* — in this case, an internal identity document, which states one’s ethnic origin.

“In you! You can materialise it forever on the Earth, wherever your soul indicates.”

“You’re right — I have to figure it all out somehow. At the moment I get the feeling I’m scattered all over the land.”

“Vladimir, you are tired. This whole day has brought a lot of emotion upon us. Lie down and go to sleep. By morning your sleep will have built up fresh strength for you, and you will have a new conscious awareness...”

I lay down on the bed, and could feel Anastasia taking my hand in hers. Now a deep sleep would ensue, and I already knew that she could make it deep and peaceful, so that everything would be all right by morning. But just before I dropped off I managed to say:

“You know, Anastasia, could you please see to it that I shall be able once again to catch a glimpse of Russia’s splendid future?”

“Fine, go to sleep, Vladimir. You will see it.”

And Anastasia started singing very quietly — a wordless song, like a lullaby. *Anyway, it’s great that people can program everything for themselves*, I managed to think before plunging into a peaceful and pleasant dream about the future of Russia.

## CHAPTER TWENTY-FOUR

### Eternity lies ahead for you and me

The rising Sun shone through the uncurtained windows straight onto the bed, waking me up. I had such a wonderful sleep! Some kind of extraordinary strength (fantastic!) was making its presence known inside me — I even felt like I wanted to do push-ups or some other kind of physical exercise. And I was in an excellent mood.

From the kitchen I could hear the clatter of dishes. *Wow!* I thought, *Don't tell me that's Anastasia trying to make breakfast?! She doesn't know how to cope with all the kitchen gadgets, or even how to turn on the gas. Maybe I'd better help her?* I put on a track suit and opened the door to the kitchen. No sooner had I caught sight of Anastasia than a hot flash seemed to run through my entire body.

This was the first time I had seen the Siberian recluse not in a taiga forest, not in her glade or by the seashore, but in a modern city woman's most typical surroundings — the kitchen. She was leaning over the gas stove, trying to regulate the burner. She kept turning the gas knob up and down, but the old cooker was not designed for any settings except 'high' and 'low'.

In the kitchen Anastasia appeared to be a completely normal woman. Now why did I go and scare her last night by bowing down on my knees? I'd probably had too much to drink and was beastly tired to boot.

Anastasia felt my gaze upon her, and turned to face me. One of her cheeks sported a dab of flour, and from underneath her bandana a braid of hair clung to her slightly perspiring

forehead. Anastasia smiled. And her voice — that marvelous voice of hers!

“A splendid good morning for the coming day to you, Vladimir! You see, I have almost finished preparing breakfast. Just a wee bit more to do. You go and wash up, and by then everything will be ready. You go wash up, and do not worry — I shall not damage anything here — I have figured things out.”

Instead of heading for the bathroom right off, I stood there dumbfounded, just looking at Anastasia. For the first time in the five years we'd known each other I caught a glimpse of just how extraordinarily beautiful this woman really was. There are no words to describe a beauty like this. Even with a flour-spotted cheek, even without a fancy hairdo (her hair was simply tied back in a bun) — not to mention her plain, unfashionable clothing — she was still extraordinarily beautiful.

I headed off to the bathroom, did a careful job of shaving and took a shower. During all this time I could not get my thought off this woman's beauty. When I came out of the bathroom, I sat down on the bed (which by this time had already been made). Instead of going into the kitchen, I just sat there, my mind still racing with thoughts about Anastasia.

It's been five years now that I've known this woman, this recluse from the Siberian taiga. *Five years...* And how my whole life has changed over these five years! Even though we rarely get together, it seems she's always around. And it's really her!

Of course, it was thanks to her that I was able to patch up my relationship with my daughter. We get along famously now. And as for my wife, well, even though I haven't been home in five years, I *have* talked with her on the telephone, and I can tell by her voice that my wife now speaks to me without any sense of coldness or resentment. She tells me that everything's fine with the family.

*Anastasia...* After all, she was the one who cured me. The doctors weren't able to, but she was. I knew myself that I was in danger of dying, and she cured me, and she made me famous, too. Now I'm getting big royalties for my books, but they're still her words, after all. And she always talks so tenderly, never gets angry. Even if I get mad at her without meaning to, she still won't get angry. Of course she's changed my life drastically, but she's changed it for the better. It was she who bore me my son! Sure, it's not your normal situation — my son lives in her glade in Siberia, but it's probably better for him there, with her.

She's so very kind. I need to say something nice to her, and do something nice for her. Only what? There's nothing she needs. Funny how it turns out — even if you owned half the world, she'd still have more than you. Still, I really felt like giving her some kind of gift. A long time ago I had bought her a pearl necklace. Not artificial, but large, natural pearls.

I decided this was a good moment to go and give it to her. I took the little jewellery box out of my suitcase, but instead of heading straight for the kitchen I decided, for some reason, to change my clothes. In place of the track suit I put on a pair of trousers, a white shirt and even a tie.

Then I put the necklace in my trouser pocket, but I was still too excited to go out to the kitchen. So I stood by the window, looking neat as a pin, until I managed to get a hold of myself. *What's going on here, anyway?* I thought to myself. *It's high time! Enough of this silly emotionalism!* And I walked out to the kitchen.

Anastasia was sitting at the table she had got all set for breakfast, waiting for me. She rose to greet me. By this time she had done her hair and put on a very neat appearance. She got up and silently gave me one of her tender looks with her greyish-blue eyes, while I just stood there, not knowing what to say. Then I said, unexpectedly using the formal form of address:

“Good day to you, Anastasia!” My formality completely took me aback. But she replied in all seriousness, as though she hadn’t even noticed:

“Hello, Vladimir! Please, sit down. Breakfast is waiting.”

“Okay, I’ll take a seat. But first I wanted to say... I have something to tell you...” But I couldn’t remember the words.

“So, tell me, Vladimir.”

But I completely forgot what I was going to say. I went up close to Anastasia and gave her a kiss on the cheek. Whereupon my whole body flared up — I felt hot all over. And Anastasia’s cheeks flushed a deep red, and her eyelids fluttered faster than usual. And when I spoke, it didn’t sound like it was me at all, but some kind of constrained voice:

“That’s from all my readers, Anastasia. So many people are grateful to you.”

“From your readers? A big thank-you to all the readers. Thank you very much!” Anastasia quietly whispered.

And then I gave her a quick kiss on her other cheek and said:

“That one’s from me. You are extremely good and kind, Anastasia. And you are extremely beautiful. Thank you for being you.”

“You think I am beautiful, Vladimir? Thank you... Do you really think so?”

She was excited, too. I didn’t know what to do next. But then I remembered the pearl necklace in my pocket. I hastily pulled it out and began trying to undo the clasp.

“This is a gift for you, Anastasia. Those are pearls... real ones... they’re not fake. I know you don’t like anything artificial, but those are real.”

But the clasp wouldn’t budge. I jerked at it, and the thread broke, and all the little pearls that had been threaded onto it clattered to the floor and scattered in different directions. I sat down on the floor to pick them up. Anastasia

began picking them up too, only she managed to go faster. I watched as she deposited the pearls into the palm of her hand. She took a careful look at each one, and I just sat there entranced with her movements. I sat there on the floor, leaning against the wall, and watched her in astonishment.

I thought to myself how common the standard kitchen was, but how uncommon and marvellous I felt everything was in my heart. Why? Probably because *she* was here in this very kitchen — *Anastasia*. She was right beside me, but for some reason I couldn't muster up enough resolve to embrace her.

This woman, who back there five years ago in the taiga had seemed to be a somewhat abnormal recluse, now appeared as a star which had dropped in for a few moments from heaven. Here she was right beside me, yet as a star she was unreachable. And the years... Pity, the difference in years between us! I watched intently as Anastasia rose and put the pearls she had collected into a saucer on the table. Then she turned her head toward me. Entranced, I went on sitting there on the kitchen floor, leaning against the wall, and looking into her greyish-blue eyes. And she never averted her tender gaze even for a moment.

"Here you are right beside me, Anastasia, but now I can't touch you. I feel as though you're a distant star in the sky."

"*A star?* That's how you feel? Why? Look! Here she is at your feet — this little star, turned into an ordinary woman."

Anastasia quickly got down on her knees and sat next to me on the floor. She put her hands on my shoulder and rested her head on her hands. I could hear her heart beating, only *my* heart was beating a lot stronger. And her hair smelt of the taiga. Her breath was like a warm breeze infused with the intoxicating scent of flowers.

"Oh why, Anastasia, why couldn't I have met you when I was young? You're so young, and just look at how old I am! I've lived almost half a century already!"

“But it has taken me ages to break through to your wandering soul! Do not chase me away now.”

“I’m getting old, Anastasia. And my life will soon be at an end.”

“But while you are getting old, you will be able to plant your own family tree, and lay the foundation for a city with a splendid future, and a marvellous garden.”

“I’ll try. Pity I shall have such a short time to live in this garden myself. It’ll take quite a few years to grow.”

“If you set it up, you will always live there.”

“Always?”

“Of course. Your body will grow old and die, but your soul will take flight!”

“The souls of the dead take flight — I know that. The soul takes flight, and that’s the end of it.”

“Oh, what a marvellous day we have today! Why are you creating a joyless future, Vladimir? You are creating it for yourself.”

“It’s not me creating it. That’s objective reality, plain and simple. First comes old age, then death — for everyone. And even you, my dear, sweet dreamer, cannot come up with any other scenario.”

Anastasia shuddered all over and moved slightly to one side. Her kind and cheerful eyes peered into mine and sparkled — radiating a joyful confidence that nothing could withstand.

“I have no reason to ‘come up with’ anything. There is only one truth. Death exists for the flesh — that is clear to everyone. For the flesh! In every other aspect death is a dream, Vladimir.”

“A dream?”

“Yes, a dream.”

Anastasia got up on her knees and began talking, looking me straight in the eye. But somehow the way she talked

silenced the kitchen radio, the sounds of voices and other noise outside the window, as she spoke in a gentle voice:

“My dearest! Eternity lies ahead for you and me. Life will always claim its own, you see. The littlest ray of sunlight glitters in the spring, and the soul enrobes itself in its new things. But the decaying body does not embrace the ground in vain. Come spring, from our bodies will sprout new flowers and grass again. You shall forever hear the birds sing, and drink in the drops of rain. In the blue sky above, the clouds — again and again — will entrance you with their dance.

“And if you, my dearest, should find yourself scattered across the unfathomable Universe as little specks of dust, still refusing to believe, then from these specks of dust wandering through eternity I shall begin to gather you up. And the tree you plant will help me do this: in the early spring, to the place where your soul lies in unfeeling peace, it will stretch out its branch above. And those you have been kind to upon the Earth will remember you with love. And if the sum total of earthly love is not enough to materialise you once again, then there is one — one whom you know, and on every plane of being she will be flaming with a single breath of desire, namely: *materialise yourself, my love!* — there is one who will give herself over, for a moment, unto death.”

“That will be you, Anastasia? Are you sure you will be able to do such a thing — really?”

“Any woman possesses the ability to do it, if only she can compress the Logos into her feelings.”

“And what about you, Anastasia? Who will help *you* return to the Earth once more?”

“That I can do for myself. I need not bother anyone about it.”

“But how shall I recognise you? After all, our lives will be quite different from before.”

“Once you materialise upon the earthly plane, you will become a youngster once again. You will notice a snotty little

red-haired girl in the garden next door to yours. Say a kind word to this slightly bow-legged youngster, pay attention to that little maid. After you grow into your teens, you will start to notice pretty girls. Do not be in a hurry to join your destiny to theirs. In the meantime, in the garden next to yours your friend will be growing, too. Her face will be all freckled -- she will not appear beautiful yet. At some point you will notice her following you out of the corner of her eye. But do not laugh at her, do not chase her off when she approaches you to draw your attention away from a more mature beautiful woman. Three springs will pass, and the neighbour girl will become a truly beautiful young lass. One day you will look at her and feel yourself aflame with love. And you will be happy with her. And she will be happy, too. And it is my soul that will be living in that happy girl you choose."

"Thank you for that marvellous dream, Anastasia, my precious storyteller!"

I carefully embraced her by the shoulders and drew her close to me. I wanted to listen to how excitedly her heart was beating, to feel the fragrance of this marvellous woman's hair -- a woman who believes only in good, in eternity. And possibly to grasp hold of, if only like a straw, her incredible dreams. Her words about the future made everything around me seem more and more joyful.

"Maybe what you say, Anastasia, is all just words, but still they are marvellous words, and I feel more joy in my soul when I hear them."

"The words of a dream can set a tremendous energy in motion. Man creates a future for himself through his dream, through the thoughts he cherishes. Believe me, Vladimir, everything will happen for the two of us exactly as I have described. But you are free in your dream, and you can change anything you like just by speaking different words. You are free, you have the liberty, and every Man is a creator for himself."

“I shall change none of the words, Anastasia, spoken by you. I shall try to believe in them.”

“I thank you.”

“For what?”

“For not spoiling eternity for the two of us.”

On this splendid sunny day the two of us swam in the sea and sunned ourselves on the deserted seashore. That evening Anastasia took her departure. As usual, she asked me not to see her off. I stood on the balcony and watched as she made her way along the pavement by our building, her head covered with her kerchief, wearing the plainest of clothing and carrying her hand-made cloth bag. She walked along, trying not to stand out among the other pedestrians — this same woman who had created a splendid future for the whole country.

And it will definitely come. People will turn her dream into reality and start living in this splendid world themselves.

Before disappearing around the corner, Anastasia paused, turned in my direction and waved. And I waved back in farewell. I could no longer make out her facial features, but I was sure she was smiling. She is always smiling, because she believes in and creates only good. Perhaps it has to be that way. I waved back, whispering to myself: *Thank you, my dear, sweet Anastasia!*

## Appendix

Desertification has affected the lands of the Rostov Region<sup>1</sup> (up to 50% of the Salesian Steppes), the Altai Territory<sup>2</sup> (a third of the Kulunda Plain) and thirteen other regions within the Russian Federation. Altogether 6.5 million hectares of Russian farmland have now been taken over by blowing sands, the largest single segment being in the Caspian Lowlands, covering as much as 10% of their total area.<sup>3</sup> The overall area of Russian farmland subject (either actually or potentially) to desertification approaches 50 million hectares.

According to agrochemical indicators, Russia's agricultural lands are, on average, not very productive, especially outside the Chernozem Belt.<sup>4</sup> The layer of topsoil does not contain a sufficient quantity of nutrients for proper cultivation:

<sup>1</sup>*Rostov Region* (Russian: *Rostovskaya oblast*) — a prairie region comprising just over 100,000 square kilometres around the city of Rostov-on-Don, bordering on the Sea of Azov (just north of the Black Sea) in Russia's south, including the fertile *Salesian Steppes* (Russian: *Sal'skie stepi*).

<sup>2</sup>*Altai Territory* (Russian: *Altai'ski kray*) — a partially mountainous territory of 169,100 square kilometres in the south-western part of Siberia, south of Novosibirsk at the headwaters of the Ob River, centred around the capital Barnaul. Almost two-thirds of its area is covered by the *Kulunda Plain* (*Kulundinskaya ravnina*), which is suitable for farming.

<sup>3</sup>*Caspian Lowlands* (Russian: *Prikaspiiskaya nizmennost*) — a semi-arid lowland area (as low as 28 metres below sea level) covering approximately 200,000 square kilometres around the northern end of the Caspian Sea in both the Russian Federation and Kazakhstan.

<sup>4</sup>*Chernozem* (lit. 'Black Earth') *Belt* — a zone of forest and farmland containing a layer of dark-coloured soil (ranging from 1 to 6 metres in depth)

nitrogen, phosphorous, potassium, calcium, magnesium, micronutrients (especially cobalt, molybdenum and zinc). At least a third of the farmlands have acidic soil, and soil containing low concentrations of available phosphorous and potassium amount to 30% and 10%, respectively.

Over 43% of arable lands have a low humus content; in 15% of them (45% outside the Chernozem Belt) the proportion is critical. More than 75% of the farmlands of the Kaluga, Smolensk, Astrakhan and Volgograd Regions,<sup>5</sup> as well as the Republics of Kalmykia, Adygeya, Buryatia and Tuva<sup>6</sup> are low

---

in southern Russia and Ukraine. It is characterised by a high percentage (up to 15%) of humus, as well as large quantities of acids, phosphorous and ammonia. A similar belt (also known as Chernozem) is found in the prairielands of the province of Manitoba in Canada. (The original Russian term is pronounced *chernoz-YO.M.*)

<sup>5</sup>These regions are all named after the cities at their respective centres: *Kaluga* — a city on the Oka River about 200 km southwest of Moscow; originally the domain of the princely Vorotynsky family. *Smolensk* — one of the oldest cities in Russia (dating back to AD 863), located about 360 km west-southwest of Moscow, and described in an ancient history text as one of the key stations on the trade route between Scandinavia and the Mediterranean. *Astrakhan* — at the mouth of the Volga, on the Caspian Sea, in the Caspian Lowlands; formerly the capital of a Tatar khanate, the city was conquered for Russia by Ivan the Terrible in 1556. *Volgograd* (originally *Tsaritsyn*, known as *Stalingrad* from 1925 to 1961) — a city founded in 1508 at the confluence of the Volga and Tsaritsa Rivers, about 400 km northwest of the Caspian Sea.

<sup>6</sup>These republics are all part of the Russian Federation: *Kalmykia* — just southwest of the Astrakhan Region in the northern Caucasus, covering an area of 76,000 square kilometres, bordering on the Caspian Lowlands. *Adygeya* (pron. *a-di-GAYya*) — a small republic (7,600 sq. km) surrounded by Russia's Krasnodar Territory (northwestern Caucasus), with prairie lands in the north and mountains in the south. *Buryatia* — a large, primarily mountainous republic of 351,000 sq. km in south central Siberia, situated on the eastern shore of Lake Baikal. *Tuva* (pron. *too-VUDD*) — also in south central Siberia, covering an area of 170,500 sq. km, not far to the west of Lake Baikal; the western section of Tuva comprises a dry lowland.

in humus. Experts believe that, on average, with irregular and insufficient applications of organic fertiliser and improper cultivation practices, a significant depletion has taken place in Russia's soil content. Humus levels have been reduced to a minimum — 3.5–5.0% of topsoil in the central Chernozem regions and only 1.3–1.5% outside the Chernozem belt. Annual humus losses in farmland topsoil are pegged at 0.6–0.7 tonnes per hectare (as much as 1 tonne per hectare in Chernozem areas). This means an annual nationwide loss of approximately 80 million tonnes.

It has been proved that there is almost a perfect linear relationship between the humus reserves in basic soil types and the productivity of major agricultural crops. A one-tonne-per hectare increase in humus levels means an increase in average long-term productivity of cereal crops of 10–15 kg/ha. For a number of crops cultivated under various soil/climatic conditions, this amount corresponds to 30 kg of cereal crop units. For every 1-centimetre decrease in humus depth in Chernozem topsoil under the influence of either natural or man-made factors (e.g., erosion), cereal crop productivity falls by 100 kg/ha.

Over the course of many years Russia's soil resources have been extensively exploited<sup>7</sup> by various means, and nutrients have often been eliminated through the harvesting process at a faster rate than they could be replenished.

Agricultural scientists warn that such extensive exploitation of the soil's fertility will lead to an irreversible degradation. Trends in overall cereal output are cited as evidence of this. The annual manure application required to maintain constant humus levels in the soil should amount to between

<sup>7</sup> *extensively exploited* — In Russian the term 'extensive' (*èkstensivnoe*) here refers specifically to using up more and more land resources, as opposed to increasing fertility on the lands already under cultivation.

7 and 15 tonnes per hectare. This means adding to the soil a minimum of 1 billion tonnes of organic fertiliser every year. Russia today employs only about 100–120 million tonnes, or approximately 10 times less than is required.

*What is the current situation with regard to conservation of soil resources?*

Centralised financing of soil-improvement projects has been completely cut off, and the scope of these projects has been drastically reduced. Financing now comes out of local budgets — since 1993 out of land taxes, with 30% of the conservation-programme expenses to be paid by land-users. As a result, from 1994 to the present all projects for applying peat-manure compost in non-Chernozem areas, as well as lime treatment of acidic soils, delivery of liming materials and bone-meal, and phosphate application have pretty well ceased on most Russian territory because local authorities do not have funds for carrying out agrochemical projects.

This has contributed to the failure of practically all comprehensive federal soil-improvement and agricultural development programmes initiated by the Russian government and the Ministry of Agriculture and Food.

In view of the above, we can now speak of the escalating degradation of Russia's topsoil, which threatens its ecological and food security, as well as its national security as a whole.

**THE AUTHOR, Vladimir Megré**, born in 1950, was a well-known entrepreneur from a Siberian city of Novosibirsk. According to his account, in 1995 — after hearing a fascinating story about the power of ‘ringing cedars’ from a Siberian elder — he organised a trade expedition into the Siberian taiga to rediscover the lost technique of pressing virgin cedar nut oil containing high curative powers, as well as to find the ringing cedar tree. However, his encounter on this trip with a Siberian woman named Anastasia transformed him so deeply that he abandoned his business and went to Moscow to write a book about the spiritual insights she had shared with him. Vladimir Megré now lives near the city of Vladimir, Russia, 190 km (120 miles) east of Moscow. If you wish to contact the author, you may send a message to his personal e-mail [megre@online.sinor.ru](mailto:megre@online.sinor.ru)

**THE TRANSLATOR, John Woodsworth**, born in Vancouver (British Columbia), has over forty years of experience in Russian-English translation, from classical poetry to modern short stories. Since 1982 he has been associated with the University of Ottawa in Canada as a Russian-language teacher, translator and editor, most recently as a Research Associate and Administrative Assistant with the University’s Slavic Research Group. A published Russian-language poet himself, he and his wife — Susan K. Woodsworth — are directors of the Sasquatch Literary Arts Performance Series in Ottawa. A Certified Russian-English Translator, John Woodsworth is in the process of translating the remaining volumes in Vladimir Megré’s Ringing Cedars Series.

**THE EDITOR, Leonid Sharashkin**, is writing his doctoral dissertation on the spiritual, cultural and economic significance of the Russian *dacha* gardening movement, at the University of Missouri at Columbia. After receiving a Master’s degree in Natural Resources Management from Indiana University at Bloomington, he worked for two years as Programme Manager at the World Wide Fund for Nature (WWF Russia) in Moscow, where he also served as editor of Russia’s largest environmental magazine, *The Panda Times*. Together with his wife, Irina Sharashkina, he has translated into Russian *Small is beautiful* and *A guide for the perplexed* by E.F. Schumacher, *The secret life of plants* by Peter Tompkins and Christopher Bird, *The continuum concept* by Jean Liedloff and *Birth without violence* by Frederick Leboyer.

# Who Are We? by Vladimir Megré

## Book 5 of The Ringing Cedars Series

Spirituality /  
Nature /  
Childrearing

*Who are we?* describes the author's search for real-life 'proofs' of Anastasia's vision presented in the previous volumes. Finding these proofs and taking stock of ongoing global environmental destruction, Vladimir Megré describes further practical steps for putting Anastasia's vision into practice. Full of beautiful realistic images of a new way of living in co-operation with the Earth and each other, this book also highlights the role of children in making us aware of the precariousness of the present situation and in leading the global transition toward a happy, violence-free society.

Anastasia herself has stated that this book consists of words and phrases in combinations *which have a beneficial effect on the reader*. This has been attested by the letters received to date from thousands of readers all over the world.

If you wish to gain as full an appreciation as possible of the ideas, thoughts and images set forth here, as well as experience the benefits that come with this appreciation, we recommend you find a quiet place for your reading where there is the least possible interference from artificial noises (motor traffic, radio, TV, household appliances etc.). *Natural sounds*, on the other hand – the singing of birds, for example, or the patter of rain, or the rustle of leaves on nearby trees – may be a welcome accompaniment to the reading process.

**Ringling Cedars Press** is an independent publisher dedicated to making **Vladimir Megré's** books available in the beautiful English translation by **John Woodsworth**. Word of mouth is our best advertisement and we appreciate your help in spreading the word about the Ringling Cedars Series.

## CHAPTER ONE

# Who raises our children?

There was a large sign on the office door of the private clinic giving the M.D.'s full name, along with a title indicating an advanced academic degree, and identifying him as a specialist in child psychology. He had been recommended to me as one of the best scientific minds on the subject of parent-child relationships. I had put my name down for his last appointment of the day, as I didn't want to limit the length of our consultation — if it proved useful, I was prepared to pay him extra to continue as I was in such desperate need of advice. I opened the door and walked in.

Behind the desk was seated a gentleman of retirement age with a drawn face, listlessly stuffing sheets of scribbled paper into a file. After inviting me to take a seat, the doctor placed a clean sheet of paper before him and said:

“So? How can I help you?”

To avoid getting into a long, extended story about everything that had happened after meeting with Anastasia, I did my best to put the essence of my question in a nutshell:

“Alexander Sergeevich,<sup>1</sup> I need to learn how to get along with my child — my son — who will soon be five years old.”

“So, you believe you have lost contact with your son?” the psychologist asked blandly and dispiritedly.

“There has been practically no meaningful contact as such to date. The way it's turned out, since his birth I've hardly

<sup>1</sup>*Alexander Sergeevich* — first name and patronymic, the usual polite form of address in Russian among adults.

had any communication with him at all. I did see him one time while he was still an infant, but after that... I haven't talked with him even once. So, I have to say, he's started learning about life without me. We've been living quite apart from each other.

"But now I'm going to have a chance to meet with my five-year-old son and actually talk with him. Maybe there are some ways to help make him favourably disposed toward me? Like when a man marries a woman who already has a child, and wants to get along with him, to become his father and friend."

"There are ways, certainly," Alexander Sergeevich observed, "but none which are guaranteed to be effective in all cases. There's so much in parent-child relationships that depends on individual nature and character."

"I realise that, but still, I'd like to become familiar with whatever specific hints you may have."

"Specific... Hmm... When you make your appearance in the family — and you have to remember that even a single mother with a child constitutes a family — try to interfere as little as possible with the way of life they have already established. It will take some time before you become anything beyond an outsider to your son, and that's something you've got to accept. At the beginning stages you will have to spend some time sizing up the whole situation AND... give them a chance to size *you* up.

"You could try tying in your appearance with the fulfilment of some dream or desire the child has had but which has been impossible to fulfil. You could find out from his mother some kind of toy he's had his eye on which she hasn't been able to buy for him. But don't buy it yourself in advance. Start talking with him about your own childhood and the toys you had, and tell him how you dreamt of getting this one in particular. If he picks up on that and mentions about how he wants the

same thing, then you can suggest the two of you go to the store together and get it. What's important here is the actual conversational process, and the outing itself. The boy should get to the point of trusting you with his dream, allowing you to have a hand in making it come true."

"The toy example really won't work in my case. My son has never seen store-bought toys."

"Strange... So, that won't work, eh?... Well, my friend, you've got to be frank with me. If you want to hear some useful advice, then you'll have to give more details about your relationship with your child's mother. Who is she? Where does she work? Where does she live? What's her family's financial situation? What do you think led to the break-up?"

It was dawning on me, finally. If I wanted to get more specific advice out of the psychologist, I would have to go into my relations with Anastasia, which I still hadn't fully fathomed myself, so how was I going to explain them to a psychologist?

Without mentioning her name, I began describing the situation as follows:

"She lives in a very remote area, in Siberia. I happened to make her acquaintance while I was on a trade expedition. I've been doing business there since the beginning of *perestroika* — on a ship which took me to some isolated settlements along the Ob River, selling various manufactured goods and bringing back fish, furs and wild mushrooms, berries and nuts."

"I see. So, like Paratov,<sup>2</sup> this tradesman makes everyone jealous with his romantic exploits along a Siberian river?"

"No romance, just work. Haven't you heard? Entrepreneurs work like dogs!"

<sup>2</sup>*Sergei Paratov* — a cynical, hard-nosed character in Alexander Ostrovsky's drama *The dowryless bride* (*Bespridamitsa*), who betrays the affections of a poor girl named Larissa in a small town on the Volga River.

“Well, let’s say they do, but... entrepreneurs also find time to have fun, do they not?”

“Believe me, with this woman it wasn’t a question of having fun at all. I wanted to have a child by her. I’d been wanting a son for a long time, but then I seemed to forget about that particular dream. The years went by... But as soon as I saw her — how wholesome, young and beautiful she was... It seems just about every woman today is sick or sickly, but she — well, she was simply beaming with energy, the picture of health! So I figured her child would turn out healthy and good-looking too.

“She bore me a son. I went to see them when he was still quite little, before he could walk or talk. I held him in my arms. But since then I’ve had no contact with him.”

“And why is that?”

How on earth was I to explain to this gentleman during our brief conversation everything that it had taken me several books to describe? How could I tell him that Anastasia had refused to leave her taiga glade and move with our son into town, while I on the other hand was not adapted to life in the taiga? Or that she was the one who would not let me even communicate with him, let alone give him traditional toys?

Every summer I had gone back to Siberia, to the very glade where Anastasia and my son made their home, but I never managed to see my son again after that one time. Each time he would be somewhere else — with her grandfather and great-grandfather, who lived not far away, in the wilds of the endless Siberian forest. Anastasia refused to take me to visit them, and further insisted each time that I should first prepare myself for conversation with my son.

In attempting to find out more about child-raising, I would put a single question to many of my friends and acquaintances,

which was invariably greeted with misunderstanding and astonishment, even though it was quite a simple question:

“Have you ever had a serious conversation with your child?”

It would always turn out that the topics of conversation were pretty much the same: “Come to the table... Time for bed... Stop fooling around... Pick up your toys... Got your homework done?...”

The child gets older, goes to school, but talking about the meaning of life, Man’s destiny or even just about what his future path in life will be — well, most of them don’t have time for that, or even think it anything worth discussing. Maybe they feel the time isn’t right yet, that they’ll still have a chance to... But they never do. The child grows up...

But if we ourselves never even try having a serious conversation with our children, who then is raising them?

Why has Anastasia not allowed me to communicate with my very own son all these years? I have no idea what she’s been afraid of or trying to ward off.

Anyway, the day came when she all at once asked me whether I felt I was ready to meet and talk with my son. I replied that I did want to meet with him, but I still couldn’t quite bring myself to say I was ‘ready’.

All these years I had been reading anything I could lay my hands on concerning parent-child relationships. I kept writing my books, giving talks at conferences in various countries, but wrote and said almost nothing about the most important thing that interested me during all this time — the raising of children and how older generations should interact with them.

I kept thinking about all the different words of advice I had encountered in child-raising literature, but each time I would find myself coming back to what Anastasia said: “*Raising children means also raising yourself.*”<sup>23</sup> It took me a long

time to comprehend the meaning of that saying, but I finally managed to reach a definite conclusion:

*Our children are not raised by parental admonition, nor by kindergartens, schools and colleges. Our children are raised by the way people live — the way we ourselves live and the way society in general lives. And no matter what kids hear from their parents or teachers in school or any other institution of learning, no matter what clever systems of education are adopted, children will follow the lifestyle practised by the majority of people around them.*

That means that the raising of children depends entirely on your own understanding of the world, on how you live your own life, how your parents live and how society in general lives. A sick and unhappy society can only give birth to sick and unhappy children.

“If you don’t tell me in detail about your relationship with the mother of your son, I’ll have a hard time finding any real advice to give you!” said the psychologist, interrupting a rather lengthy pause.

“That’s a rather long story,” I mused. “To put it briefly, the way things turned out, I’ve had no communication with my son for several years, and that’s all there is to it.”

“Okay, then tell me, in all these years have you given any financial support to your child’s mother? I think, for an entrepreneur, financial support would be the simplest way to show your interest in the family.”

“No, I haven’t. She believes she is fully provided for.”

“So, she’s a wealthy woman, then?”

“Let’s just say she has everything she needs.”

Alexander Sergeevich rose sharply from behind his desk and blurted out:

---

<sup>3</sup>See Book 4, Chapter 30: “In His image and likeness”.

"She lives in the Siberian taiga. She lives the life of a recluse. Her name is Anastasia, your son's name is Volodya,<sup>4</sup> and you are Vladimir Nikolaevich Megré. I recognise you. I've read your books — more than once, in fact."

"Yes..."

Alexander Sergeevich started pacing the room excitedly. Then he began talking again:

"Well, well, well! I was right, eh? I guessed it! So, would you please answer me one thing. I need an answer! It's very important to me. To science... But no, don't answer. I'll say it myself. I'm beginning to understand... I'm sure that all these years since you first met Anastasia you've been doing intensive studies in psychology and philosophy. You've been constantly thinking about child-raising. Am I right?"

"Yes."

"But the conclusions you reached after reading these 'scholarly' books and articles did not satisfy you. And so you started looking for answers within yourself, or in other words, you started reflecting on the rising generation, on child-raising?"

"More or less. But most of all about my son."

"That's an inseparable part of it. You came to see me in desperation, and without too much hope for answers to the questions you've come up with. And if you don't get them from me, you'll go on searching on your own."

"Probably."

"So... Amazing! I'm going to mention the name of someone who is immeasurably stronger and wiser than me in all this."

"Who is that person and how can I arrange an appointment?"

"That person is none other than your Anastasia, Vladimir Nikolaevich!"

<sup>4</sup>*Volodya* — an endearing form of the name *Vladimir*.

“Anastasia? But she’s hardly said anything about child-raising lately. And she’s the one who wouldn’t let me communicate with my son.”

“That’s just it — she’s the one. And up to this moment I haven’t been able to find any logical explanation for this decision on her part. Such strange behaviour! A loving woman suddenly announces to the father-to-be that he shouldn’t communicate with his own son. A most irregular situation — never come across it before. But the result!... The result is simply amazing! You see, she’s succeeded in making you... No, that word isn’t applicable here. Anastasia’s succeeded in attracting... And who? If you will pardon me, she’s made a not-very-well-educated entrepreneur get interested in psychology, philosophy and the problems of child-raising. You’ve been thinking about that through the years — I can tell as much just by the simple fact that you came to see me. She’s been raising your son all these years by herself, but at the same time she’s also been educating you! She’s been preparing you for this meeting of father and son.”

“Yes, she actually has been raising our son alone. As for educating me, I don’t think so. We don’t get together all that often. And only for a brief time.”

“But that information she gives you, even during those ‘brief’ moments, as you say, you’re still having to sort out even today. The information is truly amazing. You, Vladimir Nikolaeovich, say that Anastasia rarely talks about child-raising, but that isn’t so.”

Alexander Sergeevich quickly went over to his desk and pulled a thick grey notebook out of one of the drawers. Tenderly stroking it in his hands, he continued:

“I took all Anastasia’s sayings in your books about the birth and raising of children and wrote them out in order, leaving out the details of the plot. Maybe, though, it wasn’t right to take these quotations out of context. After all,

there's no doubt the plot makes them a lot easier to comprehend.

"These sayings of Anastasia's are fraught with great meaning — a great philosophical meaning, I would say, and wisdom from an ancient culture. I'm inclined to suppose — and I'm not alone here — that these principles are set forth in some kind of ancient book, maybe millions of years old. What Anastasia says has the kind of depth to it and the accuracy of expression that one associates with what I think are the most important thoughts set forth in ancient manuscripts, as well as modern scholarly works.

"After I had written out everything I could find concerning the birth and raising of children, what I had before me amounted to a treatise with no equal anywhere in the world. I am sure it will be used as the basis for a great number of dissertations and awardings of academic degrees, along with amazing discoveries. But even more importantly, it will give rise to a new race on the Earth known as *Man!*"

"But *Man*<sup>5</sup> already exists right now."

"I think, when people look back from the future, the fact of *Man*'s existence may be in some doubt."

"How can that be? You and I exist. How can our existence ever be placed in doubt?"

"Our bodies exist, and we call them *people*. But in the future the content, or mental makeup of the human individual will be vastly different from yours and mine today, and so to underline the difference, the name will have to be changed. Possibly today's people will be called 'Such-and-such-a-period *Man*', or else they'll find a new name for those who are born in the future."

<sup>5</sup>*Man* — Throughout the Ringing Cedars Series, the word *Man* with a capital *M* is used to refer to a human being of either gender. For details on the word's usage and the important distinction between *Man* and *human being* please see the Translator's Preface to Book 1.

“Is it really that bad?”

“It is — no question about it. You’ve gone and read a lot of books about child-raising — books written by scholars. Now tell me, at what point does child-raising begin?”

“Some writers think it should begin when the child’s a year old.”

“Precisely. At best, starting at a year old. But Anastasia showed how Man is formed even before... I know you’re thinking ‘in the mother’s womb’. But she showed that parents can form their future offspring even before the sperm and the egg get together. And this is explainable scientifically. Anastasia stands head and shoulders above all other psychologists who exist or have ever existed on the Earth. Her sayings are potent, they cover all stages of the development and the raising of the child — the pre-conceptual, the conceptual, the foetal stage and so forth.

“She covers topics which neither wise men of the past nor contemporary scholars have been able to grasp hold of. She has specifically highlighted what is absolutely essential to bearing and raising a fully fledged Man.”

“But that’s not something *I* remember. I never wrote about developmental stages.”

“The books you wrote just documented the events you witnessed. Anastasia realised that that is just how you would be writing. Her next move was that she herself began giving specific form to these events, effectively clothing a great scientific work in an entertaining narrative form. She created your book with her very life, using it to bring invaluable knowledge to people.

“Most readers feel this intuitively. Many are ecstatic over the books, but they are unable to fully make sense of the cause of their excitement. They are absorbing information they never knew about before, on a subconscious level. But it can be taken in consciously too. I’ll prove it to you.

“Look, here before you is a transcript of Anastasia’s sayings about the birth of a Man. My colleague and I have gone over them very carefully and noted down our comments. He is a sexopathologist with a post-graduate degree in medicine, and has the office next to mine. We conducted experiments and analysed the situation.”

Alexander Sergeevich opened his notebook and began speaking excitedly, almost exultantly:

“So, we have the beginning... The *pre-conceptual stage*. This is hardly ever looked upon as an aspect of child-raising, either in the present time or in the past as we know it. But it is quite clear today that at some point on the Earth, or somewhere in the limitless expanses of the Universe, there existed or still exists a culture in which the relationships between men and women were immeasurably more perfected than our own. And that the pre-conceptual stage was an important component — perhaps the basic component — in the upbringing of Man.

“Following the cultural traditions of a civilisation hitherto unknown to us, Anastasia carries out specific preparatory steps before conceiving a child. First, she dulls your sexual appetite. This is quite evident to me as a psychologist from the events described in your first book. Let me remind you of the order in which these events take place.

“During a rest stop on your trek through the taiga, you drink some cognac and have a bite to eat, but Anastasia does not respond to your offer of food and alcohol. She takes off her outer clothing and lies down on the grass. You are awed by her natural beauty, and you are aroused by a natural desire to possess this beautiful womanly body. Driven by a sexual impulse, you attempt to penetrate her, you touch her body and then... you lose consciousness.

“We shan’t go into the details of just how she manages to make you lose consciousness. The important thing is that as

a result of this you no longer look upon Anastasia as a sexual object. And you yourself mention this — I wrote down your words: ‘I had no thought of wanting to possess her.’”<sup>6</sup>

“Yes. You’re right — after the incident at the rest stop I had no further sexual desires in regard to Anastasia.”

“Now to the *second event* — *conception* — you tell about the proper way to conceive a child.

“Night-time in a cosy dug-out, with the fragrance of sweet grass and flowers. But you are not accustomed to spending the night alone in the taiga, and you ask Anastasia to lie down beside you. You already realise that if she is with you nothing bad will happen. She lies down beside you.

“So it turns out that in this intimate situation you find this most beautiful young womanly body right next to yours — a body which has the added attraction of being radiant with health. Unlike most women’s bodies you have known before, this one actually luxuriates in health. You sense the fragrance of Anastasia’s breath, yet at the same time you feel no sexual inclination. It has been expelled from you. The space it occupied has been cleansed to make way for another mental state — an aspiration to ensure the continuation of the family line. You are thinking about a son! A son that doesn’t yet exist. This is what you wrote in your book:

“It would be good if my son could be borne by Anastasia! She is so healthy. That means my son will be healthy and good-looking too.”<sup>7</sup>

“You involuntarily place your hand on Anastasia’s breast and start caressing it, but not with the same caresses as before. This time they are not sexual. It is as though you are caressing your son. Then you write about the touch of the lips, about Anastasia’s gentle breathing, and then — a complete

<sup>6</sup>Quoted from Book 1, Chapter 9: “Who lights a new star?”.

<sup>7</sup>Quoted (with slight variations) from Book 1, Chapter 9.

lack of any kind of details. Then you jump to describing the following morning, your excellent mood, and the feeling that an extraordinary feat has been performed.

“I wouldn’t be surprised if your publishers tried to persuade you to describe that night in greater detail, to increase the book’s popularity.”

“Yes, they actually did try to do this, several times.”

“But still, you did not describe that night in any of the subsequent editions of your book — why?”

“Because —”

“Stop! Please, don’t go on. I want to see if my own conclusions are correct. You did not describe the sexual details of that night because you simply didn’t remember anything after touching Anastasia’s lips.”

“You’re right, to this day I can’t remember anything about it. Except for that unusual sensation the following morning.”

“What I’m going to say to you now you may find incredible. On that marvellous night you spent with Anastasia, absolutely no sex took place.”

“No sex? But what about my son? I saw my son with my own eyes.”

“What you experienced that night was indeed physical intimacy. There was sperm involved — in fact, everything that accompanies the conception of children, but there was no sex. My colleagues and I kept going over and over what happened with you. Just like me, they too concluded that you did not have sex with Anastasia.

“You see, the word *sex* in our time implies the satisfaction of fleshly needs, the aspiration for the pleasure of fleshly gratification. But in the context of the events of that night in the taiga, that particular motivation was lacking — in other words, you were not aiming to achieve sexual satisfaction. This time your aim was quite different — namely, a child.

Consequently, even the name of that event must be different. It's not just a question of terminology here — we are talking about a fundamentally different way of giving birth to Man.

“I'll say it again: *this is a fundamentally different way of giving birth to Man.* This is not an abstract statement — it is easily provable by means of scientific comparisons. Judge for yourself: no psychologist or physiologist today would deny the influence of external mental factors on the formation of the foetus in the mother's womb. Among other factors a major one (and frequently the dominant one) is the man's attitude toward the mother-to-be. Similarly, we cannot deny that a man's thoughts about a woman at the moment of their sexual intimacy has an unmistakable influence on the formation of the future individual. In one instance he is thinking of her as an object of sexual gratification. In the other he looks upon her as a co-creator. The result will naturally be different. It is possible that the child born under such circumstances will be just as strikingly different intellectually from contemporary Man as contemporary Man is different from the ape.

“Sex and the pleasure associated with it during the moment of co-creation is not an end in itself, but merely a means to an end. Other mental energies will govern the couple's bodies, and the child's psyche will be formed quite differently.

“Here is the first rule following from what I have said: a female desiring to bear a fully fledged Man and create a solid and happy family must be able to capture the moment at which the male wishes to join with her for the purpose of giving birth to a Man, cherishes the image of their child-to-be and desires its birth.

“Under these conditions the man and the woman achieve a mental state which allows them to obtain the highest possible satisfaction from their intimacy. And the child-to-be obtains a kind of energy which is absent in those who are born in the traditional manner — i.e., haphazardly.”

“But how does the woman feel this moment? How is she to know about the man’s thoughts? Thoughts, after all, are not something you can see.”

“Caresses! That’s how she can tell. The mental state is always expressing itself through outward signs. Joy is shown in smiles and laughter, sorrow in a telltale expression of the eyes, position of the body etc. In this particular case, I think, it is not too hard to distinguish purely sexual caresses from the way he would touch his future child. Only with this kind of touch a certain ‘something’ happens that Man alone, of all the creatures living on the Earth, can experience. Nobody will ever be able to describe or scientifically explain this ‘something’. At the moment when it occurs any kind of analysis is impossible.

“As a psychologist, I can only assume that what is paramount in such an event is not the coming together of two physical bodies, but something immeasurably greater: the merging of two thoughts into one. More specifically: the merging of two complexes of feelings into one. The pleasure and bliss experienced through this are significantly superior to mere sexual gratification. Its continuity is not fleeting as with ordinary sex. The inexplicable pleasant feeling that it brings can last for months and even years. This is what makes a strong and loving family. This is what Anastasia is talking about.

“This also means that once the man has experienced it, he cannot bring himself to exchange the new sensation for mere sexual gratification. He will not be able to, or even desire to, betray his wife — his beloved. That is the moment that marks the beginning of the formation of the family. A happy family!

“There is a saying that ‘marriages are made in heaven’. The saying is quite true in respect to this particular case. Judge for yourself. What is generally considered today to attest to a heavenly marriage? A scrap of paper issued by the Civil

Records Office, or all sorts of church rituals. Funny, isn't it? Funny, yet at the same time sad.

"Anastasia is quite right when she says that a marriage made in heaven can only be affirmed by the couple's extraordinarily splendid mental state, which leads to the birth of a new and fully fledged Man.

"And I might add that the majority of children born today are born out of wedlock... And now... Now I'd like to read to you some comments made by my colleague, the sexopathologist:

*The mutual sexual relations between a man and a woman as described in the book Anastasia, bring out a whole new meaning of sex. All currently existing textbooks on the subject, beginning with those of Ancient India and Greece right up to our contemporary treatises, may be seen as naïve and ridiculous in comparison to the significance of what Anastasia has to say. All the research described in all known works on sex, both ancient and modern, is focused solely on discovering various body positions, caressing techniques and sexual aids. But people have different physiological and psychological abilities and capabilities.*

*For any given individual there may be just a single most effective and acceptable position and just one particular sex aid that will match his character and temperament.*

*One would be hard put to find anywhere in the world a specialist capable of pinpointing with any degree of accuracy the most appropriate technique (out of the thousands of possibilities) in the case of a particular individual.*

*To carry out such a task the specialist would need to know the thousands of existing techniques with all their nuances, and study the physical and mental abilities of the individual in question, and that is patently impossible.*

*Evidence that the questions raised in regard to men and women's sexual relations have not been solved by modern science may*

*be seen in the ever-increasing loss of potency on the part of the majority of men and women in today's society. There is a growing number of sexually dissatisfied family couples. But this joyless picture can be changed.*

*Anastasia has shown that there exists in Nature some kind of mechanism, some kind of higher power capable of solving a seemingly insoluble problem in an instant. Through a couple's — a man and a woman's — specific mental state, this mechanism or power will help them find the conditions and techniques of sexual intercourse appropriate solely to them.*

*Undoubtedly, the pleasure experienced in this particular case will achieve the highest level attainable. It is quite possible that the man and woman who have experienced such satisfaction will maintain their conjugal fidelity for ever, quite independently of the dictates of laws and rituals.*

“Conjugal fidelity! Conjugal infidelity. Betrayal.”

Alexander Sergeevich got up from behind his desk and continued to talk while standing.

“Anastasia was the first to show the nature of this phenomenon. I remember by heart not only isolated phrases, but whole monologues. Listen to what she says:<sup>8</sup>

*They try all sorts of tricks to persuade people that satisfaction is something you can easily obtain, thinking only of carnal desire. And at the same time they separate Man from truth. The poor deceived women who are ignorant of this spend their lives accepting nothing but suffering and searching for the grace they have lost. But they are searching for it in the wrong places. No woman can restrain a man from fornication if she allows herself to submit to him merely to satisfy his carnal needs.*

<sup>8</sup>This and subsequent quotations (unless otherwise indicated) are taken from Book 1, Chapter 9: “Who lights a new star?”.

“And again... I’ll have it in a moment... Yes, here it is:

*They will strive to possess body after body, or make paltry and fateful use of their own bodies, realising only intuitively that they are drifting farther and farther away from the true happiness of a true union!*

“Here is an absolutely accurate explanation of the cause of conjugal infidelity. I can also explain it as a psychologist. It’s all quite logical: a man and a woman — the so-called husband and wife — engage in sex just for the sake of sex. When they intuitively feel they are not getting sufficient satisfaction, they turn to a specialist and read supplementary literature on the subject. They are advised to try various positions and ways of caressing each other — in other words, to engage in a search for greater satisfaction through switching sexual techniques.

“Note what I said — ‘engage in a search’. They may not say this explicitly, but if they themselves, as Anastasia has correctly pointed out, have an intuition about the existence of a higher happiness, they will engage in a search. But... where are the limits of this search? Is it just limited to a change of positions? The logical next step is a change of bodies.

“Aha!” society cries. “That’s conjugal betrayal!” But there’s no betrayal going on here. There’s no betrayal, because there is no married couple!

“A marriage dependent on a scrap of paper is not a marital union. It is nothing but a convention thought up by society.

“A marital union should be established by a man and a woman through their attainment of the highest mental state Anastasia describes. She not only talked about it, she showed how to achieve it. This is an entirely new culture in male-female relationships.”

“Does that mean, Alexander Sergeevich, that you are recommending young people engage in intimate relations before a marriage is officially recognised?”

“Most people today are doing just that. Only we’re ashamed to talk about it openly. But what I am proposing is to *refrain from engaging in sex just for the sake of sex, either before or after the marriage is registered.*

“We consider ourselves a free society. We have the possibility of freely engaging in debauchery. And oh, how we engage in it!

“Debauchery has become a whole industry. Look at the cinema and the endless stream of all kinds of pornography, look at prostitution or the rubberised dolls you can buy at sex-shops. What more evidence do you need?!

“In the face of this whole sexual orgy, which only attests to the failure of modern science to understand the nature and function of the mechanisms involved in the union of two people, Anastasia’s words come as a discovery — literally a revelation!

“As a psychologist I have been able to appreciate the grandness of Anastasia’s discovery. She has brought to light a whole new culture in male-female relationships.

“The primary role in them is taken on by the woman. Anastasia has succeeded in bringing you, too, to the understanding of this culture. She has been able to do this, using — intuitively, perhaps — the knowledge of some kind of ancient civilisation. But... we — or rather, my colleague — he has proved it in practice. He has proved that even a man can...

“He’s a sexopathologist. He and I have worked together to analyse Anastasia’s sayings. He was the first to talk about the new culture in relationships that has been unknown up to now. He was especially struck by this saying — you should remember it — she said:

*...who — what individual — would want to come into the world as a result of carnal pleasures alone? We would all like to be created under a great impulsion of love, the aspiration to creation itself, and not simply come into the world as a result of someone's carnal pleasure.*

But that is precisely how our children have come into the world — as the result of carnal pleasure. My wife and I wanted a child, so we had sex. I don't even know which day it was my wife conceived. It wasn't until after she became pregnant that we started thinking more specifically about the child. But Anastasia says that a particular mental state and aspiration is required right at the very moment preceding intimacy. Anyway, my colleague, no doubt, got more out of those sayings of hers than I. Or he felt more. He wanted to experience this mental state. He wanted them to have a child — a son.

“My colleague is already past forty, and his wife is two years younger than he. They have two children. He himself admitted that they have rarely had any sex these past few years. But he began talking with his wife about a child.

“At first she was quite surprised at his desire. She said it was too late for her to bear children. But her attitude toward her husband took a turn for the better. He gave her the book with Anastasia's sayings to read. And now the woman herself would start a conversation — no, not about her desire to have a child, but about how true the sayings in the book were.

“And then one night my colleague began caressing his wife — only not thinking about sex, but about their future son. He probably managed to do the same thing you did. The only difference is that you were led to that point by Anastasia, while he achieved it all on his own. Whether it just happened that way or not, it's hard to say, but he managed to achieve, in all probability, precisely the mental state you experienced. His wife responded with the same kind of carresses.

“These are not young people, and naturally they were not feeling the same strong sexual inclinations as in their youth. Their thoughts about their future child, no doubt, pushed any concerns about sexual techniques into the background.

“As a result... as a result, that ‘something’ happened. Neither my colleague nor his wife could remember any of the details of their intimacy. Just like you, they don’t remember anything. But, as you did, they talk about the unforgettable, marvellous sensations they experienced the next morning. My colleague tells me that he has never felt anything like it in all his life, from intimacy either with his wife or with any other women — and, believe me, there were quite a few of those.

“His forty-year-old wife is now pregnant, in her seventh month. But that’s not the main thing. The main thing is that his wife has fallen in love.”

“With whom?”

“With her husband, my dear Vladimir Nikolaevich! Just imagine, here’s this woman who used to be rather irritable and nagging, now coming to our clinic and waiting for her husband to finish work. She sits in the reception room and waits like a young girl newly in love. I have often caught the expression on her face out of the corner of my eye. It too has changed, and a barely noticeable hidden smile is now evident.

“I’ve known this family quite some time. About eight years. This plump, depressed woman has suddenly become ten years younger. And she is beautiful, in spite of her all-too-obvious pregnancy.”

“What about your colleague’s attitude toward his wife — has it changed too, or has it remained the same?”

“He’s changed too. He’s completely given up drinking, even though he didn’t really have a serious problem with it before. He’s stopped smoking. He and his wife have a new favourite pastime — painting.”

“Painting? What do they paint?”

“They paint their future family domain, the kind Anastasia talks about. They want to get a piece of land and build on it — wrong word: not to build a house, but to lay the foundation for a future corner of Paradise for their children-to-be.”

“You said, *children-to-be*?”

“Exactly. His wife’s only regret is that the conception took place in an apartment, and not in their own domain, as Anastasia recommends — in the Space of Love built with their own hands, where the woman should stay during the whole period of her pregnancy and where the birth should take place.

“My colleague’s wife is convinced she can have still another child beyond this one. And my colleague thinks so too.

“I am convinced that the instinct one finds among animals to perpetuate the species differs from the human condition in the fact that the animals’ mating is governed only by the call of nature. When Man engages in so-called sex, he is merely imitating the animals. A child brought into the world as the result of this process is half-man, half-animal.

“A true Man can be born only when the energies and feelings inherent in Man alone are involved — i.e., love, a vision of the future, an awareness of what is being created. In fact, the word *sex* isn’t really applicable at all. It only trivialises the event taking place. The term *co-creation* is much more accurate here.

“When a man and a woman achieve the mental state where co-creation takes place, it is at that point that they enter into a marriage made in heaven. This is not a union sealed by a scrap of paper or a ritual, but by something immeasurably greater and more meaningful, and hence it will be solid and happy.

“And you mustn’t think that only young people can enter into a union like this. The example of my colleague shows that it is available to people of all ages. Such a union is possible

only on the condition that they themselves are able to comprehend the significance of what Anastasia has set forth.”

“So what does all this mean?” I asked. “Does it mean that all the people whose passport<sup>9</sup> is stamped with a marriage registration aren’t married after all?”

“A passport stamp is nothing but a convention thought up by society. The pieces of paper and all the rituals practised by different peoples in different historical periods may be outwardly different, but in essence they all amount to the same thing — an attempt to impress the mind and artificially create at least an appearance of union among two people. As Anastasia correctly points out:

*A false union is a frightening thing.*

*Children! Do you see, Vladimir? Children! They sense the artificiality, the falsity of such a union. And this makes them sceptical about everything their parents tell them. Children sub-consciously sense the lie even during their conception. And that has a bad effect on them.*

“It turns out that in Nature there is not an artificial, but a natural, Divine union. And Anastasia has shown people living today how it can be achieved.”

“So what you’re saying is that even people who are married — even the ones with a stamp to that effect in their passport — should really be marrying their spouse a second time?”

“Not the *second* time, but *for the first time in actual fact*, it would be more accurate to say,” observed Alexander Sergeevich.

“That’s going to be a hard one for most people to understand. In every country of the world sex is held up as the

<sup>9</sup> *passport* — in this case, an internal document issued by the Russian government as proof of one’s identity, which includes a record of marriage where applicable.

highest form of pleasure, and every last individual engages in it for the sake of pleasure.”

“All a lie, Vladimir Nikolaevich! Ninety percent of men are incapable of satisfying a woman.

“The myth that the majority of people derive supreme delight from sex is nothing but a psychological suggestion. Human beings’ appetite for sex is the basis of a whole commercial industry. The flood of legal and underground porno-magazines is a veritable gold-mine. And they know how to pull the wool over people’s eyes. Films where all sorts of supermen freely satisfy their partners — that’s all business too.

“The simple fact is: we are too timid and too afraid to admit to each other that we don’t have the right partner. But the fact remains — an indisputable fact — that sixty percent of marriages do not last. And the other forty percent are far from perfect, as is evidenced by continual spousal betrayals and the tremendous increase in prostitution.

“The gratification we derive from sexual experiences today is hardly satisfying. It is no more than an infinitesimal part of the satisfaction Man experiences from the genuine co-creation appointed by God, in partnership with Him — something we search in vain for all our lives.

“*We’re searching for it in the wrong places!* The truth of this saying is indisputably borne out in our very lives.

“Anastasia represents a culture of some kind of ancient civilisation which our historians probably haven’t the faintest concept of. She completely destroys prevailing stereotypes. Just how perfect this culture was can be seen by considering how it dealt with pregnant women, who upon conception were expected to stay in the same place for nine months, and give birth there. How important is this?

“The advantage of this policy can be corroborated by information from modern science and comparative analysis. The

place where the mother conceives and carries her child-to-be is termed a *domain*. In this domain a man and a woman have established a garden with their own hands, a garden containing all sorts of plants. Physiologists recognise the importance of proper nourishment for pregnant women — this has been written up in dozens of scientific and popular publications. But what of it? Is it necessary for every pregnant woman to study these? Just forget about everything else and set about studying the literature on the subject? That would be rather hard to swallow!

“Even if every single pregnant woman took to studying these scientific treatises, she would inevitably be faced with another insoluble problem: where could she obtain the products recommended?

“Let’s suppose a couple had unlimited funds at their disposal and could buy whatever they liked. *An illusion!* No money will or even can buy what a pregnant woman desires, and right at the very moment she desires it. I’m thinking, for example, of an apple of the quality a woman can pick in her own garden and eat on the spot.

“Then there are the psychological considerations, which are no less important than the physiological. Let’s take and compare two situations.

“The first is a standard scenario, which happens with the vast majority of people. Let’s take a young family with an average or slightly-above-average income. A pregnant woman lives with her husband in a flat. Is she able to feed herself with the proper quality of food? No! Modern supermarkets, even those with upscale prices, are unable to offer us good-quality food. Tinned or frozen foods are *not* something natural for Man.

“Well, what about the farmers’ markets, then? Even there the quality is doubtful, to put it mildly. Private farmers too have learnt to use all sorts of chemical additives in raising

their crops. When they're growing things for themselves, that's one thing, but when they're growing to sell, that's when their desire to make money pushes them to use all sorts of stimulating devices. Everyone knows about it, and so there is naturally a feeling of concern and alarm over using food from unknown sources.

*"A feeling of alarm!* A feeling that has become modern Man's bosom companion!

"Pregnant women today are overwhelmed by an endless flood of information about constant social cataclysms and ecological disasters. Both her consciousness and sub-conscious become home to an ever-increasing fear over the future of her child-to-be. Where can we possibly find anything positive to counteract it? There are no positive aspects — indeed, under the monstrous circumstances of contemporary life we have doomed ourselves to, there cannot be.

"Even in a comfortably appointed apartment we get used to our surroundings and they cease to delight our eye with anything new. We also get used to everything in the apartment ageing and breaking, even as we are accustomed to our tap water being undrinkable.

"All this all of a sudden starts to weigh upon a pregnant woman's acute sensibilities. All she can do is to hope for a miracle. Under the constant pressure of hopelessness, this is the most she can count on.

"In the second scenario, the woman is surrounded by a Space of Love, as Anastasia terms it, where in addition to the satisfaction of her physiological needs she is also given a powerful psychological boost.

"Modern science is capable of explaining and demonstrating the truth of practically every one of Anastasia's sayings. They are altogether simple and logical. The only wonder is that in spite of all our studied speeches on the subject we have never given them much heed.

“But Anastasia also talks about mysterious phenomena that modern science cannot explain:<sup>10</sup>

*Parents should impart to their co-creation the three most important points, the three primary planes of being.*

“She further says that for all three planes of being to merge into one in one spot, namely, in one’s family domain, the following must occur:

*The thoughts of two in love will merge into one... Here is the first point — it is called parental thought... The second point, or rather, yet another human plane, will be born and light a new star in the heavens when two bodies merge into one — merge in love and with thoughts of a splendid creation... And a third point, a new plane of being should come about in that space. Right there on the spot where the conception occurred the birth should take place. And the father should stay close around. And the great all-loving Father will raise over the three of them a crown.*

“I am certain that physiologists and psychologists will be able to explain the advantages of conceiving, carrying and giving birth to a child all in the same spot — in a splendid kin’s domain. But Anastasia talks about something even greater. She says that in such a case the individual who is born experiences a complete connection with the Universe. Why? How does it happen? How important is this approach to a child’s birth for his future as a Man? Scholars today can only guess.

“I tried juxtaposing what Anastasia said with the prognostications of the horoscopes that are popular today. The question naturally arose, which of the three points Anastasia

<sup>10</sup>These passages are quoted (with a slight variation) from Book 4, Chapter 30: “In His image and likeness”.

mentions is the most important constituent of a Man's birth — the thought, the physiological conception or the emerging of the infant from the mother's womb?

“It is generally accepted today that one's birthdate is defined by the moment of emergence from the mother's womb. This is what horoscopes are based on. But science has already determined that the foetus, even before it has emerged from the womb, is alive, it has feelings. And if that is so, then the Man already exists. He is already born. He can move — the mother can feel the push of his little legs and arms. Perhaps, then, it would be more accurate to calculate a Man's birthdate from the moment the sperm fertilises the egg? Certainly from the physiological point of view, this could be considered the most accurate defining moment of somebody's ‘birth’. But...

“The meeting of the sperm and the egg is still not a cause — it is an effect. It is preceded by the couple's thoughts. Could it be that *these thoughts* define one's birthdate? Of the three moments we have mentioned, it is generally accepted today that one's birthdate is the moment of emergence into the world. Tomorrow, though, the calculation could be different.

“According to Anastasia's theory, Man's birthdate is the point where these three moments merge into one. And here may be seen her irrefutable logic. But we (and here I am referring to religious teachings as well as modern science) are afraid even to mention this.”

“What is there to be afraid of?” I queried.

“There *is* something, actually... You see, Vladimir Nikolaevich, if we accept the irrefutability of Anastasia's statements, then we are obliged to admit that by comparison with the people of the culture she represents, we are not fully fledged people. Most of us today are lacking one or two of the components inherent in a fully fledged Man. So that's why we're afraid not just to talk about it, but even to think about it. And yet we should be thinking about it...”

“But perhaps we don’t think or talk about these statements because they’re too controversial?”

“On the contrary! They are too *uncontroversial* — they are incontrovertible!

“*First*, think about this: who will deny that a situation where thought rather than debauchery precedes the birth of a child — the meeting of the sperm and the egg — is more moral and more psychologically fulfilling?

“*Second*: it is also absolutely indisputable that a pregnant woman should receive a wholesome variety of nourishment and avoid stress. One’s own family domain, as Anastasia describes it, is ideal for this.

“*Third*: giving birth in familiar surroundings, in a setting one is accustomed to, will create a much more favourable condition for the birthing mother and, more importantly, for the newborn. This is also an irrefutable fact in both psychology and physiology. Now, are you in agreement with these three points so far?”

“Of course I am.”

“You see, they are indeed irrefutable, and not only for scholars. Consequently, we cannot deny the positive influence produced by the union of these three positive components into a single whole.

“As a psychologist, I can conjecture that in such a union, a psychic reaction takes place in space. The whole Space of the Universe reacts to it — accepting the newborn and establishing an information link with him.”

“Possibly. But what is the significance here of establishing an exact birthdate for Man?”

“A tremendous significance! A global significance! This is what determines the level at which we perceive the world. If we give priority to the emergence of the foetus into the world, that means *matter* is primary in our world-view.

“If on the other hand we give priority to the moment at which the man’s and woman’s thoughts merge together, then *consciousness* takes precedence in our world-view.

“The upshot is that we are dealing with the formation of two different cultures which determine our way of life. In the first instance *matter* takes predominance, in the second, it is *spirituality*. This conflict has been going on for ages, either openly or below the surface. But now I am beginning to see the absurdity of such a conflict. Anastasia talks about the merging not only of these two concepts, but of a third as well, into a single whole. On the basis of her statements one can postulate not only a *theory* of the birth of a fully fledged Man, but also the possibility of its realisation in practice. It comes right down to something that is available to everyone. But why do we not take advantage of the opportunities we have? Why is there chaos in our consciousness, and why does life evaporate into vanity? — there’s the question!”

“I still think,” I said, “you should use the date and hour when the infant emerges into the world from the mother’s womb as one’s birthdate. Only phrase it more accurately: ‘the moment of emergence into the world’.”

“Possibly. Quite possibly! But as to the moment of the birth itself, I still think you’d better ask Anastasia.”

“I shall indeed ask her. I’ll be interested to know myself exactly when I was born, and when my son was born.”

“Oh, your son! You came to me asking for advice, and here I’ve been rambling on about my own — Sorry, I got talking too much. It’s something that’s been nagging at me. You see, I hold consultation three times a week. People come to me with their problems.

“They all ask the same kinds of questions: *How to raise a child? How do I establish contact with my son or daughter?* And the child may be already five, or ten or even fifteen years old.

“If I tell someone: ‘Well, old chap, it’s too late to think about raising them now!’, then I’m killing his last hope. So my real task is basically one of comforting.”

“Well, my son too will soon be five years old. Does that mean it’s too late for me too?”

“You, Vladimir Nikolacvich, are in quite a different situation. Your son’s got Anastasia watching out for him. It’s just as well she prevented you from tossing your child out into the routine of our world. She’s raising him in the context of a totally different culture.”

“Does that mean my son and I are of different cultures, and so we’ll never be able to understand each other?”

“Parents and children always represent what seem to be different cultures, different world-views. Each generation has its own priorities. Granted, the distinction is generally not so sharp as in your case. My advice to you is this: before attempting to communicate with your son, have a talk with Anastasia about how best to approach it. Pay careful attention to whatever she says. After all, you’ve been reading a lot and thinking a lot about the raising of children. Now it’ll be easier for you to understand her.”

“Understanding her doesn’t always work out,” I countered, “even after a long time goes by. Some of her sayings still provoke doubts in me. They are mystical and not the kind you can prove. In fact, I’ve deliberately refrained from publishing a lot of her sayings — a lot of them sound more like fantasy and —”

Alexander Sergeevich suddenly banged the palm of his hand down on the table and sharply — even somewhat rudely — interrupted me:

“You’ve no right to do that. If your mind won’t allow you to make sense of something, at least give others the opportunity.”

I did not appreciate the psychologist’s sharp tone of voice or his message. This wasn’t the first time I had heard or read

such accusations directed at me. They would reduce me to some kind of half-wit and say that my role was no more than transcribing as accurately as possible everything this Siberian recluse had said. But in making such statements these smart alocs weren't taking the whole picture into account. I decided to put this suddenly aggressive psychologist in his place:

"Naturally you count yourself among those — those others, who are able to understand everything she says. I may not be a psychologist with an academic degree, but there is one simple truth even I can comprehend: if I were to publish all her mystical sayings without back-up evidence, people would be inclined to treat everything written in the books as a fairy tale. And all the practical stuff that can be put into practice today would get lost. By not publishing some of her mystical sayings, it is quite possible that I have saved the practical message she has for people."

"Can you tell me specifically what kind of 'mystical sayings' you're talking about?"

"Well, here's a good example. She said that she's taken the best combination of sounds in the Universe and hidden them in the text of the book and they will have a beneficial influence on the readers."<sup>11</sup>

"Yes, I remember that. I remember it very well. It's written right in the first book. It also says there that the effect is increased if the reader listens to natural sounds while reading."

"You remember that, eh? And the fact that these words can be found not only in the text itself, but right at the front of the book. Remember? The publishers suggested I put them there, to intrigue the readers. And I did..."

"And rightly so."

<sup>11</sup>See Book 1, Chapter 27: "Across the dark forces' window of time".

“You think so? But you know, that particular saying right up front turned a lot of people off the book. Many saw it as just an advertising gimmick, and said so in the media. I removed it in some of the editions. Many people consider it mystical, or just something made up.”

“Idiots! Don’t tell me... Don’t tell me the mind of society can atrophy to that extent! Or has mental laziness switched off any logical thinking on the part of the masses?”

“What’s mental laziness got to do with it? If the saying is impossible to prove?”

“*Prove?* What is there to prove? This saying is nothing if not a psychological test ingenious in its simplicity and effectiveness. It has the power to identify at a single glance complete dullards with atrophied mental capacities. If they go ahead and mention this in the media, it’ll be as though they’re saying: *Look at what utter klutzes we are!* A most ingenious test, indeed.”

“What’s this about a test? The saying in question is simply not provable.”

“Not provable, you say? Well, it’s not a matter of proving anything. What Anastasia says here is an axiom. Judge for yourself. The text of any book — and I mean *any* book, any letter, any oral speech — consists precisely of combinations of sounds. Does that make sense? Do you agree?”

“Well, yes, in general, I agree. It’s true that the texts of all books are made up of combinations...”

“You see how simple it all is? It is this very simplicity that people who are too lazy to think logically have stumbled over.”

“Possibly... But, after all, she did say she had found and collected the best combinations from the expanses of the Universe and that they would exercise a beneficial effect on the readers.”

“But there is absolutely nothing ‘mystical’ in that. Judge for yourself: when you read any kind of book, or newspaper or

magazine article, doesn't it have an effect on you? The reading can leave you indifferent, provoke irritation, satisfaction, anger or joy. Well? Get it? D'you agree?"

"Yes."

"Okay. As for the beneficial effect of Anastasia's texts, it's clearly evident in the reaction of the readers. I'm not talking about published reviews, which are sometimes paid for. The fact of beneficial influence is confirmed in the creative urges shown by the readers. It is evident in the multitude of poems and songs your readers have composed. I myself have bought five audiocassettes of songs dedicated to Anastasia. They have been written by people who are very simple, or maybe just the opposite — quite possibly they're not so simple after all. I bought these cassettes and listened to them. What Anastasia said has been confirmed by life itself. After all, the poetry came about under the influence of the reading. And you call it 'mystical'. You have no right to censor Anastasia."

"Okay. That's it — I'm leaving. Thanks for the advice."

I had already taken hold of the doorknob and was about to walk out, when I heard the doctor say:

"Hold on a moment, please, Vladimir Nikolaevich. I can see you've taken offence at what I said. I'm sorry if I sounded a bit sharp. I don't want us to part with bad feelings."

Alexander Sergeevich was standing in the centre of the room. A little bit pudgy around the middle, getting along in years. He neatly buttoned up his jacket and went on:

"You should understand that you have a duty to publish everything Anastasia says. Don't worry if not everything she says is clear to you, or to me or to someone else. Don't worry about that. It's important for *them* to understand."

"And who's *they*?"

"Young women still capable of bearing healthy children. If they get it, that means everything will change... Anyway,

look at how little we've talked about your son, and that is the whole reason you came to see me!"

"Of course it is."

"There's no concrete advice I can really give you. Your situation's too irregular. Maybe you could take some picture-books to Siberia for him. History books, for example. You might also try dressing up. Maybe this all sounds silly, but I just want to make sure you don't paint too harsh a picture of our reality for him."

"What picture would you like me to paint? All prettied up and glossed over?"

"That's not what I'm talking about. Remember, you'll be introducing yourself to your son as a representative of our reality, and this may mean you'll be compromising yourself in his eyes."

"And why should I alone be expected to answer for all the perversions of our society?"

"If you show your son that you are incapable of changing anything in our society for the better, you'll simply be demonstrating how powerless you are. You'll be compromising yourself in your son's eyes. I have a feeling he has been raised in such a way that he will not understand how anything *impossible* can exist for Man."

"I guess you're right, Alexander Sergeevich. Thanks for the practical advice. Really, it's *not* a bad idea to put a good face on our life as far as the child is concerned. Yes, definitely it's worth it, or else he'll think..."

We shook hands and, as far as I could tell, parted friends.

## CHAPTER TWO

# Conversation with my son

Having trekked from the river the whole way to Anastasia's glade all on my own, I felt right at home as I approached the familiar places. This time nobody was there to greet me. It even gave me a good feeling to walk through the taiga all on my own, without a guide.

I wasn't about to cry out, or call Anastasia's name. Perhaps she was occupied with her own affairs. When she was free, she would feel my presence and come to me on her own.

Spying my favourite spot on the lakeshore where Anastasia and I were wont to spend time together, I decided I would change my clothes first before sitting down and relaxing after my trip.

I took out of my backpack a dark grey wrinkle-resistant suit, a thin white sweater and a new pair of comfortable shoes. In getting ready for my trip I had also thought of taking along a white shirt and tie, but then decided that the shirt would only get wrinkled, and there would be no place to iron it in the taiga. But I had the suit packed in the store so it wouldn't wrinkle.

I decided I should present myself to my son in a solemn, elegant manner, and so I spent a great deal of time and effort in thinking about my outward appearance.

I had brought along a battery-powered razor and a mirror. Resting the mirror on a tree-branch, I proceeded to shave and comb my hair. Then I sat down on a small hillock, took out a notepad and pen to round out my plan for meeting my son with some thoughts that had come to me along the way.

My son will soon be five years old. Of course he can talk already. The last time I saw him he was still very little, he wasn't talking yet, but by now there must be a lot of things he can understand. He probably natters on with Anastasia and his grandfathers for days on end. I had it all set in my mind that just as soon as I saw Anastasia I would let her know how I had planned out my meeting with our son and what I would say to him.

For the past five years I had been diligently studying all the various systems of child-raising, taking from them what I considered the best and easiest to understand. After talking with educational experts and child psychologists I had arrived at the conclusions I needed for myself. Now, before meeting with my son, I wanted to talk with Anastasia about these conclusions, along with the plan I had worked out — to think through everything once again in detail, this time with her. Perhaps Anastasia could suggest what first words I should say to him, and what pose to adopt while saying them. I had decided the pose was important, too, since a father should appear to his son as a significant person. But first Anastasia had to introduce me to him.

The first point on my notepad read: *Anastasia presents me to my son.*

All she had to do was introduce me with some simple words, such as: "Here, son, here before you is your birth father."

But she had to say them quite solemnly, so that our son would be able to feel from her tone of voice his father's significance, and subsequently treat him with respect.

All at once I felt everything around become quiet, as though put on alert. The sudden onset of silence didn't frighten me. This always happened every time I met Anastasia in the taiga. The taiga and all its residents literally froze, listening,

watching and deciding whether the newcomer might have brought their mistress any kind of unpleasantness. Then, if no aggression were detected, everything would calm down.

I surmised from the ensuing silence that Anastasia had quietly approached me from behind. It wasn't a difficult thing to sense her presence, especially since I always experienced something like a warming sensation in my back — something only Anastasia was capable of producing with her look. I didn't turn around right away, but continued sitting there for some time, luxuriating in the pleasant and cheering warmth. Finally I turned, and lo and behold...

There before me was standing my little son, his bare feet planted firmly on the ground. He had grown. His straw-blond hair was already falling in curls down to his shoulders. He was dressed in a collarless shirt woven from nettle fibres. His features resembled those of Anastasia's — perhaps mine too, though this was not obvious at first glance.

Turning to face him, my hands pressed against the ground, I found myself standing on all fours, watching him intently, oblivious to everything else in the world. He in turn kept his eye silently trained on me, watching me with Anastasia's kind gaze. Perhaps the unexpectedness of it all would have continued to prevent me from saying anything for a long time, but he was the first to speak.

"Greetings to your bright thoughts, my dear Papa!"

"Eh?... And greetings, of course, to you as well," I responded.

"Forgive me, Papa."

"Forgive you for what?"

"For interrupting your important reflections. I have been standing at a distance, so as not to interfere, but I wanted to come and be close to you. Please, Papa, let me sit beside you quietly until you have completed your reflections."

"Eh? Okay. Sure, have a seat."

He quickly approached, sat down a half-metre away and didn't move a muscle. I continued kneeling distractedly on all fours. As he was settling in, I managed to think: *I must adopt a deep-thought pose while I finish my 'reflections', as he put it. I need to think of what to do next.*

I took up what I thought was a dignified pose, and for a while we just sat there side by side without saying a word. Then I turned to my little son and asked him:

"Well, how are things going with you?"

Upon hearing my voice he gave a joyful start, turned to me and looked me straight in the eye. His look told me he felt tense, not knowing how to answer my simple question. But he finally responded:

"I cannot, Papa, give you an answer to your question. I do not know how things are going. Here, Papa, life is going on. It is something very good, life is."

*Somehow I've got to carry on the conversation, I thought. I can't afford to lose the momentum.* And so I asked him another traditional question:

"Well, how are you doing here? You minding your Mama?"

This time he replied at once:

"I am always happy to mind my Mama when she speaks. And when my Grandfathers speak, it is interesting to listen to them too. I talk to them as well, and they listen to me. But Mama Anastasia thinks that I talk too much — I ought to think more, says Mama Anastasia. But my thoughts come very quickly and I want to talk differently."

"What do you mean, differently?"

"Like my Grandfathers, I want to arrange my words one after another, like Mama does, like you do, Papa."

"And how do you know how I arrange my words?"

"Mama showed me. I get very interested when Mama starts talking with your words."

"Really? Wow!... Well... and what do you want to be?"

Again this very ordinary question, which adults frequently ask children, was apparently beyond his understanding. After a brief pause he replied:

“But I already *am*, Papa.”

“I know that you are, but I meant: what do you want to become? When you grow up, what are you going to do?”

“I shall be you, Papa, when I grow up. I shall carry on what you do now.”

“How do you know what I do?”

“Mama Anastasia told me.”

“And what all has she been telling you about me?”

“A whole lot. Mama Anastasia tells me that you are such a... What is the word? Oh yes, I remember — that you are such a *hero*, my dear Papa!”

“A hero?”

“Yes. It is hard for you. Mama wants life to be easier for you. She wants you to be able to rest in normal conditions for Man, but you go to a place where many people find it very hard to live. That is why you go away, to do good to people there. I was very sad to learn that there are people who do not have their own glade and they are always being frightened and made to live in a way they themselves do not want. They cannot pick their own food. They have to... well, *work*, I think it is called. They have to do not what they want themselves but what somebody tells them to do. And for this they are given paper — money — and they then exchange this money for food. They have simply forgotten a bit how it is possible to live otherwise and enjoy life. And you, Papa, you go to that place where it is hard for people to live, to bring good to the people there.”

“Eh? Yes, I do go there... There should be good everywhere. But how do you plan to carry on with the good? — how are you preparing for it right now? You need to study, to learn.”

“I am learning, Papa. I like learning very much, and I try my best.”

“What are you learning, what subject?”

Again, he didn't understand the question right off, but then replied:

“I learn the whole subject. Just as soon as I chase it up to the speed Mama Anastasia has, I shall immediately understand the whole subject, or all the subjects. Yes, it is better to say: *all the subjects*.”

“What do you chase up to the speed your Mama has?”

“My thought. But for the time being I cannot chase it up as quickly. Mama's thought runs more quickly. Her thought is quicker than my Grandfathers' — quicker than a ray of sunshine. She is so quick that only He thinks faster.”

“Who? Who's *He*?”

“God — our Father.”

“Oh yes, of course. Still, you have to try. Yes, you must try your best, my son.”

“Fine, Papa, I shall try even harder.”

In an effort to continue the conversation about learning without saying something stupid and meaningless, I reached into my backpack and pulled out a book at random — one of the books I had brought with me. It turned out to be a Grade 5 textbook called *A history of the ancient world*. I explained to my son:

“You see, Volodya, this is one of the many books people are writing today. This book tells children about how life began on the Earth, how Man and society developed. It's got a lot of colour illustrations along with a printed text. This book outlines the history of mankind. Scholars — they're such smart people, well, smarter than others, or so people say — have described in this book the life of primordial people on the Earth. When you learn to read, you'll be able to learn a lot of interesting stuff from books like this.”

“I know how to read, Papa.”

“Eh? Really? Your Mama’s teaching you to read?”

“Mama Anastasia once drew the letters for me in the sand and said their names aloud to me.”

“D’you mean to tell me you memorised all the letters right off?”

“I did. There are very few of them. I was sad to learn there are so few.”

I didn’t pay any attention at first to his remark about the fewness of the letters in the alphabet. I was interested in hearing whether or not my son could actually read a printed text. I opened the book to the first page, handed it to him and said:

“Here, try to read this.”

### A distorted view of history

He took the open book, in his left hand for some reason, and spent a few moments silently looking at the printed text, before starting to read:

*The earliest people lived in hot climates, where there were no frosts or cold winters. People did not live by themselves, but in groups, which scholars call human flocks. Everybody in the flock, from the littlest to the greatest, collected food. They would spend whole days searching for edible roots, wild-growing fruit and berries, and birds’ eggs.*

After reading this text aloud, he raised his head from the book and began looking me straight in the eye, enquiringly. I said nothing, not understanding his query. His voice betrayed concern as he began talking.

“I do not have any concept from this.”

“What kind of ‘concept’ do you mean?”

“No concept at all comes to me. Either it is broken, or it cannot present a concept of what is written in this book. When Mama Anastasia or my Grandfathers speak, I have a clear concept of everything they say. When I read His book, the whole concept is even clearer. But from this book I have only a distorted kind of concept. Or it is somehow broken within me.”

“What do you need this ‘concept’ for? Why waste time on a concept?”

“The concepts come all by themselves, when there is truth being told... but here, it is not happening — that means... One moment... I shall try to check. Perhaps the people written about in this book had no eyes, if they had to search all day long for food? Why did they spend days searching for food if it was always right with them?”

Then something inexplicable began happening with the child. He suddenly shut his eyes tight and began feeling the grass around him with one hand. Upon finding something, he picked and ate it. Then he got to his feet, and said without opening his eyes:

“Perhaps they did not have noses either.”

He pinched his nose tight together with his fingers and began walking away from me. After proceeding about fifteen metres, he lay down on the grass, his hand still covering his nose, and uttered a sound something like *a-a-a*.

At that point it seemed as though everything around sprung into motion. Several squirrels jumped down together out of the trees, spreading their paws and fluffing out their tails like

a parachute. Running up to the child lying on the grass, they would put something down beside his head, then dash back up into the trees and again parachute down to the ground.

Three wolves standing some distance away also came running up to the boy lying on the grass and began hovering anxiously around him.

With a noisy crunch of branches a young bear appeared, toddling quickly along, then a second bear, a little smaller but more agile.

The first bear sniffed the child's head and licked his hand, which was still holding on to his nose. Various other creatures of the taiga, big and small, kept popping out of the bushes. They all began to hover anxiously around the little fellow lying on the grass, completely oblivious to each other's presence. It was quite evident they didn't understand what was happening to him.

I too could not understand at first my son's strange actions. Then I figured it out. He was portraying a helpless person deprived of sight and smell. The little *a-a-a* sounds he kept making from time to time were to signal to those around him that he was hungry.

The squirrels kept arriving and departing as before, bringing cedar cones, dry mushrooms and something else besides, and piling them up on the grass beside the child.

One squirrel stood up on its hind legs, its front paws holding a cedar cone. With its sharp teeth it quickly began extracting the nuts inside. Another squirrel bit the nuts open and made a pile of the freshly shelled kernels.

But the boy did not take the food. He continued lying there with closed eyes, his hand holding his nose, and uttering his *a-a-a* with growing insistence.

At this point a sable came running headlong out of the bushes. A beautiful fluffy creature with a luxuriant coat of fur. It ran two circles around the boy, paying no attention to

the gathering cluster of animals. And the creatures, whose attention had been totally focused on the unusual behaviour of the child, didn't seem to take any notice of the sable at all. But when it suddenly pulled up sharply and stopped at the pile of cedar nuts the squirrels had shelled and began eating them, the creatures reacted.

The first ones to bare their teeth and have their hair stand on end were the wolves. The bear, which had been swaying back and forth, shifting its weight from one paw to another, first froze still, his gaze trained on the glutton, then he gave it a slap with his paw. The sable flew off to one side and flipped over, but immediately jumped up again and made a nimble dash for the child, putting its front paws up on his chest. Directly the little one tried making his usual demanding *a-a-a*, the sable brought its muzzle right up to the boy's open mouth and deposited therein the food it had just chewed.

At long last Volodya sat up on the grass, opened his eyes and let go of his nose. He surveyed all the creatures around him, who were still showing signs of concern. Then he got to his feet and began calming them down.

Then each creature in its turn, according to a hierarchy known only to them, approached the boy. Each one received a reward. The wolves got a friendly clap on the mane. With one of the bears Volodya took its muzzle in both hands and gave it a shaking, then for some reason rubbed the second bear's nose. He used his leg to press the sable squirming at his feet to the ground, and when it flipped over onto its back, he proceeded to tickle its tummy.

After receiving their due reward, each creature in turn respectfully withdrew.

Volodya picked up a handful of shelled cedar nuts from the ground and made a sign to the squirrels which by all appearances was intended to let them know that they need not bring any more gifts. Even though the child had been calming the

creatures down, up to this point the squirrels had been continuing to feed him, but stopped immediately upon Volodya's signal.

My little boy came over to me, handed me a fistful of nuts and said:

"In the concept I have within me, Papa, when the first people began to live on the Earth, they did not need to spend entire days searching for and gathering food. They did not need to think about food at all. Forgive my concept, Papa — it is not at all like what the intelligent scholars wrote in the book which you brought me."

"Yes. I realise it is quite different."

I sat down again on the hillock. Volodya immediately followed suit, and asked:

"But why are they different — my concept and the one in the book?"

I'm sure my own thought must have been working faster than ever before. Indeed, why did this book, a textbook for children, contain such hocus-pocus? Even an adult unfamiliar with the wilds of nature must grasp the fact that in a warm climate, especially a tropical climate, there would be all sorts of food in abundance. So much so that even the huge creatures — mammoths and elephants — had no trouble in finding enough to eat. And the smaller animals didn't go hungry either. And yet here was Man, the most intellectually developed creature among them, having difficulty feeding himself! Really, a virtually impossible scenario!

It turns out that the majority of people who study history simply do not think about the implications of what is written in history textbooks. They do not evaluate what they read against the criterion of the most elementary logic, but simply accept the historical past in whatever form it happens to be served up to them.

Try telling a dachnik,<sup>1</sup> for example — a dachnik with just six hundred square metres of land — that his neighbour spends

his day walking among the food growing there and can't find anything to eat. The *dachnik* would get the impression that his neighbour must be sick, to put it mildly.

By the same token, how could a child who has grown up in the taiga and tasted all the various fruits and growing plants, imagine any need for searching for them if they are always at hand? Especially when the creatures around him are ready at any moment to serve him, to spare him the necessity of climbing trees to fetch nuts and even the task of shelling them?

Earlier I had observed still another phenomenon. All the female creatures living on Anastasia's family territory accepted the child born to her as their own.<sup>2</sup> And I am not the only one to have described this phenomenon. There are many instances recorded where animals have nourished human children. And many people, no doubt, have observed a dog feeding a kitten or a mother cat feeding a young puppy. But animals have a special relationship to Man.

Creatures in the taiga always mark out their territory. It is on such a territory that Anastasia's family lives, and hence their special relationship to her too. How is it that all the creatures are so drawn to Man and ready to serve him with heartfelt desire? How is it that Man's loving attitude is so essential to them? Just like household pets in a modern apartment — a cat, a dog or a parrot, for example — each and every one tries to get at least some kind of attention from Man, and treats any indication of love as the ultimate reward. They are even jealous when a Man shows attention to some pets more than others.

---

<sup>1</sup>*dachnik* -- one who has a *dacha* — something like a country cottage but always with a garden where enough fruits and vegetables are grown to feed the family right through the winter (for further details, see the Translator's Preface to Book 1: *Anastasia*).

<sup>2</sup>See Book 3, Chapter 14: "A father's role".

While this is something we easily take for granted with pets, it may seem a little unusual here in the taiga, and yet fundamentally it is the same amazing phenomenon — all animals aspire to feel the invisible light of grace (or feelings, or some other kind of radiance) emanating from Man. The specific term may vary, but the fact is incontestable. The important thing is that this is a real natural phenomenon, and we need to understand its specific purpose.

Did this phenomenon exist right from the very beginning, or has Man trained the animals over the centuries? It is quite possible that every single one of them has been trained. After all, look at how many different animals and birds on all continents serve Man today! They know who their master is. In India we are talking about elephants and monkeys, in Central Asia — camels and donkeys. And almost everywhere this applies to dogs, cats, cows, horses, chickens, geese, hawks and dolphins — so many kinds of creatures, it is hard to name them all. The important thing is that they are in service to Man — a fact practically everyone is aware of. But when did it begin — three thousand years ago? Five, ten thousand years ago? Or possibly this was part of the Creator's thought right when He created Nature? Most likely the latter.

It says in the Bible: "To determine the purpose of every creature."<sup>3</sup> And if all this was planned and implemented right from the beginning, then Man could not possibly have had any problems finding food.

Why then do our history books — those written for adults as well as children — say exactly the opposite? This happens

<sup>3</sup>The reference here is apparently to Genesis 2: 15, 18–20. In Anastasia's (and Megre's) interpretation, based on what they understand to be the logic of the biblical text, Adam's *naming* actually refers to an *assignment of function* to each creature in respect to the task of tending the Paradise garden and its human resident.

not just in our country, but such absurdities are inculcated in people the world over. A mistake? Probably not! Whatever's behind this is more significant than a mere mistake. Design! If so, that means it's important to someone. To whom? Why? What would happen if history were written differently? If the truth were written? What if textbooks all over the world stated something like this:

*The first people living on our Earth did not have any problems finding food. They were surrounded by a great variety of high-quality and nourishing food.*

But then... Then the question would arise in the vast majority of minds: *What happened to this great variety and abundance? Why is Man today forced to work as a slave for someone just to earn a piece of bread? And perhaps the most important question of all: How flawless is the course of human society's development today?*

How was I now to answer my son as to why this 'intelligent' book — a textbook — was spouting such absurdities? People in the tropics spending whole days searching for food? To one brought up in the taiga surrounded by faithful creatures, these sayings of so-called 'intelligent people' were patently absurd.

I remembered Anastasia's words: *To perceive what is really going on in the Universe one need only look into one's self*<sup>4</sup> In an attempt to extricate myself from the situation, I tried explaining to my son:

"This is not a simple book. You should examine everything written here against your own concept. Why write about something that you have such a clear concept of already? Here everything is presented upside-down. You need to use your own concepts to verify whether something you read is

<sup>4</sup>Quoted from Book 2, Chapter 6: "The cherry tree".

the truth, or whether it's turned upside-down. You need to be more attentive to that. Do you understand me, Volodya?"

"I shall try to understand, Papa, why people write what is not true. At the moment I do not understand. I know that some creatures use their tails to wipe out their tracks. Others build fake burrows, and there are those that even construct traps. Only why do human beings need to be so deceptive?"

"I told you, it's for their self-development."

"But can they not develop themselves through the truth?"

"They could do that too... But it would be different."

"Where you live, Papa, do they develop themselves through the truth or through lies?"

"They try all sorts of things — sometimes truth, sometimes lies — whatever will get them ahead most effectively... Anyway, Volodya, do you often read books?"

"Every day."

"What kind of books do you read? Who gives them to you?"

"Mama Anastasia has given me all the books to read that you wrote, Papa. I read them very quickly. But every day I read other books. Books that have lots of different happy letters of the alphabet."

At first I didn't pay any attention to his words about some kind of strange books with 'lots of different happy letters'.

### **"You loved Mama, but did not recognise it"**

A fearful conjecture flashed through my mind: *If my son has read all my books, then he is well aware of my relationship to*

*Anastasia during those first few days after I met her. He knows how I insulted her and even wanted to hit her with a stick. What child who loves his mother can forgive such shameful treatment? There can be no question that every time my son remembers this, he will think evil of me. Why did she give him my books to read? It would have been better if he hadn't learnt to read at all. Or maybe she remembered to tear out the pages describing my despicable behaviour?*

Grasping at this latter hope, I carefully asked Volodya:

"So, Volodya, you've read all the books I wrote, eh?"

"Yes, Papa, I have."

"And did you understand everything in them?"

"Not everything, but Mama Anastasia explained to me how to figure out what I could not understand, and then I understood."

"What did she explain to you? Could you give me at least an example of something you didn't understand?"

"Yes, I can. I did not understand at first why you got angry at Mama Anastasia and wanted to hit her. She is very good, kind and beautiful. She loves you. And if you got angry at her, that must mean you did not love her. But then Mama explained everything to me."

"What? What did she tell you?"

"Mama Anastasia explained how you loved her very much but did not recognise it. But all the same, even with your love that you did not recognise, when you returned to the place where people find it hard to live, you began doing what Mama asked you to. She says that you, Papa, did everything your own way, the way you thought best. But when you remembered Mama, you wrote a book which people liked. People started writing poems and songs. People started thinking about how to do good. Now there are more and more of them — people thinking about what is good. That means that good shall prevail on the Earth."

“Yet people both criticised you and envied you over the book. But then, Papa, you wrote another book, and then another and another. Some people got even more angry at you. But others clapped their hands when you went to meet with them, they understood what you wrote in the books. They felt the energy of Love — which you still did not recognise — helping you write those books. And I was born, because you very much wanted to see me, and so did Love. You wrote the books, Papa, because you wanted to make the world better for my birth. Only you were not able to make it completely better by the time I was born. Because the world is very, very big.

“Mama Anastasia told me I must be worthy of you and the world. I need to grow up and understand everything. And Mama told me too that she has never been offended at you. She recognised at once the energy of Love. Then Mama Anastasia read you a book written with letters of the alphabet that are not sad. She did not read you the whole book. But what she read, you were able to write with letters which people could understand. And you got almost all of it right.”

“What book? What do you mean, Mama read you a book? What’s it called?”

“It is called *Co-creation*.”

“*Co-creation*?”

### A book of pristine origins

“Yes, *Co-creation*. And I love to read it every day. Only not with your letters, Papa. Mama taught me to read this book

with different alphabetical letters. I love all sorts of happy letters. This is a book I can read my whole life. It tells about everything. And soon a new book will appear on the Earth. And you, my dear Papa, will write about this new book.”

“I don’t think you said that right, Volodya. You should have said: ‘will *write* this new book’.”

“But your ninth book, Papa, will not be one *you* will write. It will be co-created by many people — grown-ups and children. It will be a living book. It will consist of a whole lot of splendid chapters — paradise domains. People will write this book on the Earth with their Father’s happy letters. It will be eternal. Mama taught me to read these living and eternal letters, to make words from them.”

“Wait,” I interrupted my son. “I have to think about that one.”

He meekly fell silent at once.

*Incredible, I thought. That means, somewhere here in the taiga Anastasia has an ancient book written in letters nobody else knows. She knows these letters, and she has taught our son to make words out of them and read them. She read me chapters from this book for my Co-creation. The chapters about how God created the Earth and Man, and I wrote them down. That’s how it worked out, according to my son. But I never saw Anastasia with any kind of book in her hands. And yet my son tells me that she translated the letters of this book for me. I shall have to find out everything through my son.*

And I asked him:

“Volodya, you know that in the world there are a whole lot of different languages — for example, English, German, Russian, French and many others?”

“Yes, I know.”

“What language was it written in — the book Mama can read, and you too?”

“It is written in its own language, but its letters can speak in any language. And they can be translated into the language

you speak, Papa. Only not *all* the words can be translated, because in your language, Papa, there are so few letters.”

“Can you bring this book to me — the one with ‘all sorts of happy letters’, as you put it?”

“I cannot bring you the *whole* book, Papa. I could bring you some of the little letters. Only why carry them around — it is better for them to stay where they are. If you wish, Papa, I can read you the letters right from here. Only I cannot read as fast as Mama.”

“Well, read it as best you can.”

Volodya rose to his feet, and pointing his finger out into space, began ‘reading’ sentences from the chapters of *Co-creation*:<sup>5</sup>

*The Universe itself is a thought, a thought from which was born a dream, which is partially visible as matter. ... My son, you are infinite, you are eternal, within you are your dreams of creation.*

He read syllable by syllable. I followed the expression on his face as it slightly changed with each syllable — now showing wonder, now attentiveness, now joy. But when I looked in the direction his finger was pointing, there were no letters, let alone syllables, to be seen out there in space, and so I interrupted this strange reading:

“Hold on a moment, Volodya. Does this mean you see some kind of letters out there in space? Why can’t I see them?”

He gave me a quizzical look. He thought for some time before saying hesitantly:

“Do you not see, Papa? Do you not see that birch tree over there, the pine, the cedar, the rowan-tree?”

“Sure I see them, but where are the letters?”

<sup>5</sup>Quoted from Book 4, Chapter 8: “Birth”.

“Those *are* the letters, the ones our Creator writes with!”

He began to read further, his finger pointing to each plant or tree in turn. And at last I grasped this incredible phenomenon. The whole area of the taiga surrounding the lake where my son and I were sitting (and where I had sat many times with Anastasia) was filled with growing things. The name of each tree or plant began with a particular letter, and some were known by different names. Name by name, letter by letter — and out came a syllable, then a word, and a sentence.

It was much later that I learnt that the trees, bushes and herbs throughout the whole area of the taiga around the glade were not just arranged randomly, but that they actually formed living, growing letters. It was an incredible book that, it seemed, one could read *ad infinitum*. It turned out that the very same plant names made up one set of words and sentences if read from north to south, but a whole different set if read from west to east. A third set resulted if one read strictly around the perimeter. And the names of the plants made up yet another series of words, sentences and images if one followed the movement of the Sun's rays, which acted literally as a pointer.

I understood why Volodya called these letters “happy”. In traditional books all the printed letters are pretty much uniform. But in this situation, the living letters, even those associated with the same species, were always different. Under different angles of the Sun's illumination, they greeted Man with their rustling leaves. Indeed, one could go on ‘reading’ them indefinitely.

But who *wrote* this amazing book and when, and how many centuries did it take to write? Generations of Anastasia's forebears? Or...? Later I heard from Anastasia this brief, laconic answer: *For thousands of years generations of my forebears preserved the letters of this book in their original order.*

I looked at my son and feverishly tried to find a topic of conversation on which we could reach a complete mutual understanding.

### One plus one equals three

Arithmetic! Mathematics! Of course, there will be no disagreements over an exact science like that. If Anastasia has taught our son to count, then a conversation on that subject cannot include any contradictions or superiorities. Two times two is always four, in any language at any time. Encouraged by my 'discovery', I asked hopefully:

"Volodya, has your Mama been teaching you how to count, add and multiply?"

"Yes, she has, Papa."

"Good. Where I live there is a science known as mathematics. It is very significant. A lot of things are based on calculations and computations. People have invented a good many devices to make it easier to add, subtract and multiply, and it would be difficult to get along without them today. I brought you one of them — it's called a calculator."

I took out a solar-powered Japanese pocket calculator which I had brought, switched it on and showed it to my son.

"You see, Volodya, this little device can do a great deal. You know, for instance, what you get when you multiply two by two?"

"You want me to say 'four', do you not, Papa?"

“That’s right, four. But the fact that I want you to say it is not important. That’s just what it is. Two times two is always four. And this little device too can count. Look at the little screen. When I press the ‘2’ button, the screen lights up with the figure ‘2’. Now I press the multiplication sign and then the ‘2’ again. Then I press the ‘equals’ sign to find out what the result will be, and the figure ‘4’ lights up on the screen.

“But this is a very simple arithmetical calculation. This device can count in a way impossible for human beings. For example, 136 times 1,136. I only have to press the ‘equals’ sign and we can find out how much it is.”

“154,496,” Volodya blurted out, ahead of the calculator.

After that I began to multiply and divide four-, five- and six-digit numbers, but each time my son beat the electronic calculator. He named the correct figure immediately and without any trace of tension. The competition with the calculator resembled a game, but my son showed no sign of any real interest. He simply named the figures, all the while evidently thinking about something else.

“How do you do that, Volodya?” I asked in amazement. “Who taught you to compute so quickly in your head?”

“I’m not computing, Papa.”

“What d’you mean, you’re not computing? You’re telling me the result, you’re answering the questions.”

“I am simply naming the figures because they are always invariable in a dead dimension.”<sup>6</sup>

“Don’t you mean ‘exact dimension’?”

“You may call it that, but it amounts to the same thing. Figures always come out invariable if you picture time and space as frozen. But time and space are always in motion,

<sup>6</sup>The Russian word for *dimension* (*izmerenie*) can also be taken in the sense of *measurement* (which is how the author interprets it); hence in Russian the phrase ‘exact dimension’ in fact can also mean ‘exact measurement’.

and their movement changes figures, and then calculations become more interesting.”

Volodya went on to name some incredible formulas or arithmetical operations which turned out to be way beyond my comprehension. I only remember that the formula was extremely long — in fact, it really didn't have an ending. He quite animatedly told me the results of some arithmetical operations, but they invariably turned out to be transitional. Each time after naming a figure, Volodya would add excitedly:

“When interacting with time, this number produces...”

“Hold on there, Volodya,” I interrupted my son. “I don't understand this ‘dimension’ of yours. One plus one is always two. Look, I'm taking here... one twig.”

I picked up a small twig off the ground and placed it before my son. Then I found another twig, put it beside the first and asked:

“How many twigs?”

“Two,” Volodya replied.

“Exactly — two, and it can't be anything else, not in anybody's ‘dimension’.”

“But in the *living* dimension the calculation is completely different, Papa. I have seen it.”

“What d'you mean, you've seen it? The calculation with this other ‘dimension’ — is that something you can show me on your fingers?”

“Yes, I can, Papa.”

He raised his little hand in front of me with his fingers compressed into a fist and began to demonstrate. First he unfolded one finger and said: “Mama”. Then a second finger with the words: “Add — Papa — equals...” and, finally, out came a third finger: “— Me.”

“You see, three fingers. In order for there to be only two, I would have to take one away. But I do not want to take away

any of these fingers. I want them to be even more, and in a living dimension that is possible.”

Neither did I want any one of the three fingers to be taken away. So long live this other ‘dimension’ — this *‘living dimension’*, as he puts it. And may the calculation increase. Oh, wow! One plus one equals three! Most extraordinary! Still, the most incomprehensible thing for me remains the book of the taiga with its living letters.

### “I shall make a Universe Girl happy”

I looked at my little son, who could read and had revealed to me the most extraordinary and probably the ‘livingest’ book in the world. I realised it would take a very long time to read it in its entirety. Besides, I would need to know the names of all the plants. But for some reason I had a good feeling in my heart just from the fact that it existed — this book with “all sorts of happy letters” (the way my son expressed it). And he will read it.

But what then? What will happen when he grows up? He said he would be like me. That means he’ll go into *our* world. Into a world full of wars, drugs, violent crime and poisoned water. Why should he go there? And yet he’s got himself ready for it. He’s ready to go into our world when he grows up and do something good in it. *I wonder what?* I asked him:

“Volodya, when you grow up, what kind of task or job do you think will be the most important for you?”

"Mama Anastasia told me. First and most important when I grow up is... I need to make a particular Universe Girl happy."

"Who? What kind of Universe or Girl?"

"Every girl living on the Earth is the likeness of the Universe. At first I did not understand this. Then I read, I read the book, and understood. Every girl is like the Universe. Each girl has within her all the diverse energies of the Universe. Universe Girls should be happy. And I must be sure to make one of them happy."

"And how do you intend to carry out your project when you grow up?"

"I shall go where many people are living and find her."

"Who?"

"A girl."

"She will, of course, be extraordinarily beautiful?"

"Probably. But perhaps she will be a bit sad, and not everybody will think she is beautiful. Perhaps she will be someone who is ill. Where you live, Papa, many people are ill from 'anti-living' conditions."

"And just why would you pick a girl who is *not* the healthiest and most beautiful?"

"I am the one, Papa, who will make her the happiest, healthiest and most beautiful Universe Girl."

"But how? Though by that time, when you're grown up, you'll probably have *learnt* how to make another person — your girl — happy. But, Volodya, you don't know everything there is to know about the world in which I live. It could be... it could turn out, after all, that the girl you pick may not even want to talk with you.

"You know who today's girls notice? You don't know. I'll tell you. The pretty ones and the not-so-pretty, the sick and the healthy — they notice first and foremost men who have heaps of money, and a *car* — men who dress smartly and have a good social position. Not all of them, of course, but the

majority are that way. And where are you going to get heaps of money?"

"Heaps' — how much is that, Papa?"

"Well, for example, let's say at least a million. Better still, a million dollars. You know about currency units?"

"Mama Anastasia told me about the scraps of paper and coins which people love. She said people give out clothes, food and all sorts of things in exchange for them."

"They do. But where do they get the money, d'you know? To get this money, you have to work somewhere. No, just working isn't enough, if you want a lot... You have to get into business or invent something. For example, Volodya, could you really invent something people need, something they're really missing?"

"And what kind of invention are people missing the most, Papa?"

"What kind? Well, all sorts. A lot of regions are being hit by an energy crisis, for example. There's not enough electric power. People don't want to build nuclear power plants — they're dangerous, they can explode. But they can't get along without them."

"Nuclear? Where radiation from them can kill people and growing things?"

"You know about radiation?"

"Yes, it is everywhere. It is energy. It is good. Needful. Only it should not be collected in a large quantity in one place. Grandfather taught me how to control radiation. Only it must not be talked about openly — some people turn good radiation into weapons to kill other people."

"Yes. Better not to talk openly about it. I should think you would really be able to invent something and earn a good deal of money for your girl."

"Probably I shall be able to. But money does not make people happy."

“What do you think makes people happy?”

“The Space they make for themselves.”

I pictured to myself my son becoming a young man. Maybe knowing a lot of unusual things, all sorts of phenomena, albeit naïve. Capable of coping even with radiation, but still naïve in respect to the intricacies permeating our lives... and there he'll be, off to look for his girl to make her happy.

He'll try not to stand out amidst other people. That was always Anastasia's strategy when she left the taiga and went out among people. He will try not to stand out, yet all the same, he will never be able to completely blend in. He's preparing himself, he's acquiring a colossal amount of knowledge, he's trying to become physically fit and all for the sake of one lonely girl!

I thought Anastasia would prepare our son for great deeds and to this end would share her own knowledge and abilities with him. And now it turns out that he sees a man's main goal in life as simply making just one woman happy. My son's convinced that every woman is the likeness of the whole Universe. Could it really be like that? An extraordinary philosophy, but in any case the point is: my son is convinced of it and one of his chief aims in life will be to make just one girl happy — a girl he doesn't even know. Maybe she hasn't even been born yet. Maybe she can crawl already, or she's just taking her first steps. Or — maybe no girl will want to, or rather, maybe no girl is capable of loving him.

Initially, when he fulfils her wishes and brings her money, she may pretend to love him. Oh, how many women there are like that in our world! They're even ready to jump into marrying some oldster for the sake of his money. They've learnt how to feign love.

My son will grow up and meet some girl like that, he'll keep fulfilling her wishes, she'll keep telling him she loves him, but what will happen when he starts talking about the need to

create a Space of Love and plant a garden? Will she laugh at him? Will she call him crazy, or will she understand? Maybe she'll understand. But maybe... No, it's better to prepare him for the worst.

"You see, Volodya, when you find this girl and you manage to make her healthy and very beautiful — absolutely the most beautiful, as you say — something might still happen that you know nothing about. The prettiest girls in our world aspire to become models and actresses and go into show-business. They like it when all the men around them pay them compliments. So, just imagine she wants to dazzle the public like a queen, and here you start proposing to create a Space of Love. Maybe she'll hear you out, but that'll be it. She'll leave you and go off somewhere where there's lots of bright lights, compliments and applause, and she could even — God forbid! — leave you holding a baby! What'll you do then?"

Volodya replied unhesitatingly:

"Then I shall build a Space all on my own. First on my own, and then with the child she leaves me — and together we shall preserve Love in this Space."

"Preserve it for whom?"

"For myself, Papa, and for the girl, who, as you say, will go off into the world of artificial lights."

"Then why preserve a Space of Love specifically for her? Don't you see how naïve you are in such matters? You'll have to look for another girl. And be more careful the next time."

"If I look for another, then who will make the girl who left happy?"

"Let anyone who wants to try to, do that. It's not worth breaking your neck over. She's gone, and that's it."

"She will come back. And she will see the marvellous forest and garden. I shall make it so all the creatures serve and obey her. Every one and every thing in this Space will sincerely love her."

“She will probably come back all tired out. She will wash herself in pure water and have a good rest. She will become even more beautiful and will never want to leave her Space of Love ever again. Our Space. She will be happy. And the stars above her will shine brighter and happier than anywhere else. But if you, Papa, had not thought all this up, if you had not brought about such a situation with your thought about her leaving, she would not have left.”

“I? I brought it about?”

“Yes, Papa. After all, you are the one that spoke about it. It was your thought. Man creates all kinds of situations with his thought, and this is what you have created.”

“But you, your thought — can’t it change the situation? Can’t it counteract mine? You did say it was quick, almost as quick as Anastasia’s.”

“It could counteract it.”

“So go ahead, counteract it.”

“I do not want my thought to run counter to yours, Papa. I shall seek out another way.”

### How to bridge the gap?

I could not talk with my son any longer. Everything I said he automatically checked against his ‘concept’, with which he easily distinguishes between truth and falsehood. He even discredited the conclusions of the historians outlined in the textbook. There was no question here of a father’s superiority over his son. The conversation did not endow me with any

more authority and probably erased the authority I had before thanks to Anastasia. Moreover, his unusual confidence in the power of thought frightened me and put a gap between us. We were so different. There was no father-son contact with the child. I could not feel in him my own birth son. On the whole he seemed like another being to me.

We didn't say a word to each other. And then I remembered Anastasia's words: *With children one must be absolutely sincere and truthful*. I even felt anger over the hopelessness of the situation. So, I'm supposed to be sincere? I'm supposed to be truthful? I tried to be that way, but what came of it? Indeed, if I were to be completely sincere and truthful, then in the present situation I'd have to resort to some pretty bad language. So I said, spilling it all out on one breath:

"Volodya, if everything is to be said absolutely sincerely, you and I cannot hope to have a father-son conversation. We are different, you and me. We have different concepts, information and knowledge. I do not feel as though you are my son. I'm even afraid to touch you. In our world a father can show affection to his son pure and simple, and even punish him or strike him for insubordination. But doing anything like that with you is something I can't even imagine. There's an unbridgeable gap between us."

My outburst at an end, I sat silently, not knowing what to say next or how. I sat and looked at my little son, who seemed to be lost in thought — and what strange thoughts he has!

At last he turned his curly little head in my direction, and reinitiated the conversation, but this time I could feel a note of sadness in his voice:

"Is there some kind of gap between you and me, Papa? You say it is hard for you to accept me as your own birth son? You spend a long time in that other world, where things are not exactly the same as here. I know, Papa, that parents there

sometimes beat their children... Everything is a bit different there. I have been thinking, Papa... Just a moment...

He quickly got up and ran off a little ways. He returned carrying a branch with dry needles and handed it to me.

"Take this branch, Papa, and beat me with it. The way parents beat their children in that other world which you spend so much time in."

"Beat you? Why? What have you thought up now?"

"I know, Papa, that over there, in the world you have to spend so much time in, parents beat only their own birth children. I am your birth son, Papa. You can beat me so you can feel yourself to be my birth father. Perhaps it will be easier for you that way. Only do not strike this arm or this leg — this arm will not feel pain and this leg will not feel at all — they are still a little numb. But all the rest of my body will feel pain. Only I probably shall not be able to cry the way children do. I have never cried in my life."

"Nonsense! Sheer nonsense! Nobody ever beats their children, not even in that 'other' world — as you call it — without a reason. Sometimes, yes, they punish them, and give them a light slap. But only when children do not obey their parents, when the kids don't do as they're supposed to."

"Yes, of course, Papa. When parents decide that their children have behaved improperly."

"Exactly."

"So, Papa, I want you to consider something in my behaviour improper!"

"What d'you mean, you want me to 'consider'? When behaviour's improper, it's clear to everyone that it's improper — it's not up to the parent to 'consider' it proper or improper. Everyone should understand that it is improper."

"And the children who are beaten should understand?"

"The children too. That is why they beat them, to make them realise that they were wrong."

“And cannot they understand this before being beaten?”

“They can’t, obviously.”

“Even when parents explain it to them, they cannot understand?”

“They cannot, and that’s why they’re at fault.”

“And the one who did not explain it to them understandably is not at fault?”

“Well... no... that is... Now see how you’ve thrown me off completely with your misunderstanding!”

“Good! Now that I cannot understand, that means you can beat me. And there will be no more gap between us.”

“Oh, why can’t you understand? Punishment comes when, for example... Well, for example... Let’s say Mama tells you in no uncertain terms: ‘Volodya, don’t do that.’ And in spite of her telling you not to, you go ahead and do what she told you not to. D’you understand now?”

“I do.”

“Have you ever done something Mama told you not to?”

“Yes, I have. Twice. And I will do it again, no matter how many times Mama Anastasia tells me not to do it.”

My conversation with my son continued to unfold quite differently from the way I had planned. There was no way I could present modern civilised society — and, consequently, myself — to him in a favourable light. I got so upset over my son’s latest arguments that I banged my fist on a tree-trunk. I spelled out to him — or perhaps more to myself:

“Not all parents, even in our world, punish their children by beating them. On the contrary, many of them look for a better system of child-raising. I tried to find one, but it didn’t work out. The last time I saw you here, you were still quite little. I wanted to hug you and squeeze you. But Anastasia said I shouldn’t interrupt a child’s thoughts even to give him a pat on the head. She said a child’s thought-process was an extremely important matter. And so I just watched you, and

you were always busy with something. And now I've come to the point where I don't know how to talk with you."

"And today, Papa, you no longer want to give me a hug?"

"I want to, but I can't — my head has been turned upside down with all these systems of child-raising."

"Then may I do it, may I give you a hug, Papa? After all, our thoughts are the same now."

"You? You want to hug me too?"

"Yes, Papa!"

He took a step toward me. I gradually lowered myself to my knees — it felt as though my whole body was sinking to the ground. He grasped me firmly around the neck with one arm and pressed his head to my shoulder. I could hear his heart beating. My own heart was beating fast and irregularly. I started finding difficulty in breathing. It must have been just a few seconds, though — a minute at the most — before my heartbeat began to even itself out, as though tuning in to the rhythm of another heart. My breathing became natural and gentle. In fact, my whole feeling of well-being suddenly changed. I wanted to say or cry out: *How wonderful everything is around! How splendid Man's life is! Thank you to whoever thought up this world!* And I felt like saying a whole lot of other good things. But the words came together only inside me. I stroked my son's hair and asked him, for some reason in a whisper:

"Well, tell me, son. What could you possibly have done that your Mama told you not to? And that you would still do even now?"

"It was once when I saw Mama Anastasia..." he replied, also in a whisper to start with, without raising his head from my shoulder. "It was when I saw..."

And at this point he detached himself from me, sat down on the ground and stroked the blades of grass with his little hand. "The grass is always green when it feels good."

For a while he didn't say a word. Then he raised his head and continued talking.

### **“I shall save my Mama”**

“One time I did not see Mama for a long while,” Volodya began. “I wondered where she was, and decided Mama must have gone to the neighbouring glade, the one next to ours. It is similar to ours, but it is not as nice there. I walked over to the neighbouring glade. There I saw Mama. She was lying on the ground without moving, and was all white. And the grass around her was all white too.

“At first I stood there wondering why this had happened — Mama’s face and the grass around should not be all white like that. Then I decided to touch Mama. She managed to open her eyes, only just, but she did not stir. Then I took her by the hand and began to drag her out of the white circle. She helped me with her other hand, and we got ourselves out of the white circle.

“When Mama got back to her normal self, she told me never to touch her if this should happen again. She said she herself could cope with it, but that I could not. After being in the white circle and dragging Mama out, my arm and leg grew numb and are taking a long time to recover. Mama gets better very quickly, but my arm and leg have still not fully recovered.

“When I saw Mama once again in the same circle... When I saw her lying there all white, I was not going to touch her

myself. I cried out, I called the strong she-bear to help, the one I slept on when I was little. I told the bear to drag Mama out of the circle. The bear stepped onto the white part of the grass, and fell down, and now she is no more. Only her children remain.

“The bear died at once, as soon as she stepped on the white grass. Everything dies on the white grass.

“Then once again I entered the white circle and began to drag Mama Anastasia out. The two of us pulled ourselves away from the dead grass. This time my arm and my leg did not grow as numb as before, only my whole body was trembling a little. Now it does not tremble any more. You see, Papa? My body does not tremble, it obeys me. And I shall soon be able to raise my arm when I want to. I can already lift it a little. Before I could not raise it at all.”

I listened to my son’s story in astonishment. I remembered how once I had seen Anastasia in a similar situation — I too had instinctively tried to pull her out of the white circle. I remembered the elderly philosopher Nikolai Fiodorovich talking about it.<sup>7</sup>

But why does she put herself in that kind of danger? Even risking her own son? Can it be so important to her — burning within herself some sort of invisible energy directed at her?

A number of times on TV there have been reports on unusual circles with perfect geometrical shapes. They have appeared in various countries — usually in grain fields. Right in the middle of ordinary grain crops people have discovered circles with the stalks trampled to the ground. Not just trampled at random but with all the stalks pointing in the same direction and forming perfect geometric figures. Scientists are

<sup>7</sup>See Book 1, Chapter 28: “Strong people” and Book 5, Chapter 18: “The philosophy of life”.

studying these mysterious phenomena, but so far haven't been able to come up with any explanation for them. In Anastasia's case the grass has also been trampled down in a circle, but in contrast to what's been shown on TV, the grass here has gone all white besides, as though it hadn't got enough sunlight.

Anastasia says that this is human-generated negative energy. Maybe it is, but why has it been focused so strongly on Anastasia? What kind of people are aiming it at her? Forgetting myself, I said aloud:

"Why does she struggle with it? Whom does the struggle benefit? Who is made better by it?"

"Everybody benefits a little," I heard my son's voice say. "Mama says that if the energy of evil lessens — if she is able to reduce it by burning it up inside her so that it is not reflected back into space — there will be less of it. And those who produce it will mellow somewhat themselves."

"Show me, how many of these white circles are there? And *where* are they?"

"Next to our glade there is a very small glade. The white circles are always appearing there. Afterward the grass becomes green again, but it has not yet greened over completely, and you can still see the circles. If you wish, come with me and I can show them to you, Papa."

"Let's go."

I quickly rose to my feet and took my son's hand. The child trotted quickly along on his little legs, though I noticed that he was limping slightly, and so I endeavoured to walk a little more slowly.

From time to time Volodya tried to look into my eyes. He chatted away the whole time, telling me about something as we walked. But all I could think about were the strange white circles and Anastasia's inexplicable behaviour, and the reasoning behind her actions, about this whole unusual phenomenon.

To somehow keep the conversation going with my son I asked him:

“Volodya, why do you sometimes call her Mama, and sometimes Mama Anastasia?”

“I know a lot of Mamas who lived earlier on the Earth. Mama Anastasia told me about them. I can call them grandmothers, or great-grandmothers, but I can also call them mamas. My grandmothers gave birth to Mama. I can also call them mamas. When I hear them being talked about, I can feel them, and see them, and picture them, and sometimes I picture them all on my own. But so as not to get confused, I sometimes call my mama Mama Anastasia. All mamas are good, but for me Mama Anastasia is the closest and the best, and she is more beautiful than the flowers and the clouds. She is very interesting, and cheerful. I hope she is for ever. As soon as I chase my thought up to speed, I shall always be able to bring her back.”

I wasn't listening carefully enough to grasp what he was trying to say. By this time we had arrived at another little glade, and I saw four whitish circles on the grass. The circles were about five or six metres in diameter. They were barely noticeable, but one of them was whiter than the rest — it had probably been made quite recently.

Now I realised why Anastasia had not come to meet me and why she wasn't with me at the moment. It meant that she was lying helpless somewhere. And she didn't want us to take pity on her, or become upset by her appearance.

I looked at the white circles, and my thoughts kept racing and intertwining. Of course, a lot of people can turn pale from troubles which befall them unexpectedly. Almost all people turn pale when anger is unexpectedly directed at them. But here? Can it be possible to feel it just like that, at such a great distance away? Can such a huge amount of hateful human energy be concentrated into a single stream?

So huge that not only Man, but all the growth around him turns pale?

Apparently so. There they are — the traces of the most wicked attempts... And once again I remembered her words, which I cited in the fourth book:

*All anger on Earth, leave your deeds and make haste to me, join fray with me, try your utmost. ... I stand alone before you. Try to defeat me. To defeat me, all of you come meet me together. The fight will be fightless...*<sup>8</sup>

I thought these were just words. But everything she says comes true. The books, just like she said, and the bards' songs, and the poems... She's not just whistling in the wind. But why did she say: "The fight will be fightless"? The upshot is that she tries to simply burn up the anger inside of her. And she tries to do this alone! As far as I'm concerned, I think one should fight them out and out! Smash their rotten mugs in! But she's all alone. *No! You shall not be alone, Anastasia! I can at least try... I can at least take a little of this filth upon myself. And I shall fight it. Oh, if I could only speak the way she does... I'd tell them!...* I probably got a little too carried away and blurted out:

"Hey you, malice-mongers, come'n try to get me, and I'll burn at least a few of you!"

Little Volodya all at once let go of my hand and ran on ahead, then looked me intently in the eye with amazement. Then he stamped his little foot and, grasping hold of his injured arm with his healthy one, he raised both arms above his head and cried out, imitating my tone of voice:

"Hey, come'n try to get me too, you malice-mongers. You see, my arm is getting better. Mama Anastasia is not alone. I

<sup>8</sup>Quoted from Book 3, Chapter 24: "Who are you, Anastasia?"

am here too, and my thought will be racing faster and faster. Hurry and come on, you malice-mongers, leave what you are doing and hurry over to me. Look at how I am growing!”

And he got up on his tiptoes in an attempt to raise his arms even higher.

“So, my fine warriors, my dashing young braves! Who are you about to make war on today, my gallant knights?” came Anastasia’s quiet voice.

I turned around and caught sight of Anastasia, sitting under a cedar tree. She was evidently very tired — her head was even resting against the tree-trunk. And her shoulders and arms were sinking, and her hands were resting on the ground. Her face was pale, and her eyelids slightly lowered.

“Papa and I were standing up against malice, Mama!” Volodya responded on my behalf.

“But to fight against malice, you have to know where to find it, what forms it takes. It is essential to know everything about your enemy,” Anastasia said quietly, and with difficulty.

“Mamochka, you rest here while Papa and I try to do that. If we do not do it properly, you can tell us later.”

“Papa has had a long journey, little one. He should have a rest first.”

“I’ve had a rest, Anastasia. In any case, I’m not all that tired... Hello there, Anastasia! How are you?”

For some reason I was overwhelmed by the sight of her helplessness and couldn’t move. I started talking disconnectedly, not knowing what to say or do next. Volodya came over to me, took me by the hand, and went on talking to his mother.

“I shall give Papa some refreshment after his journey and bathe with him in the pure water in the lake. And I shall collect some cleansing herbs. You, Mamochka, just rest here in the meantime. Do not waste your energies on conversation. I shall take care of everything myself. Then Papa and I shall

come to you. I want you to recuperate your strength as quickly as possible...”

“I shall go bathing with you too,” Anastasia declared. “Wait, and I shall go with you.”

Supporting herself with her hands against the cedar trunk, Anastasia tried to get up. She managed to raise herself a little, but again sank back down to the ground, her hands slipping against the trunk. Her whisper was barely audible:

“Oh, how could I have failed so badly?! I am unable even to rise to greet my son and my love?!”

Once more, leaning against the cedar trunk, she began the challenging task of raising herself off the ground. She probably would not have made it this time either. But all at once something incredible happened. The huge cedar tree Anastasia was leaning against suddenly began to extend the needles of its lower branches out toward her. The needles began emitting a barely noticeable pale-bluish glow. Slowly, almost imperceptibly, the glow enveloped Anastasia. Then I heard a crackling sound coming from above, not unlike the kind one hears when standing under high-voltage transmission lines.

I looked up and saw that the needles of all the surrounding cedar trees had also started glowing with the same faint bluish light. But that wasn't all. They were all pointing in the direction of Anastasia's tree. This tree's upper branches were receiving the light emanating from the neighbouring cedars. And the glow of its lower needles kept increasing in intensity.

This phenomenon lasted approximately two minutes. Then there was a pale blue flash, and the light coming from the needles was extinguished. The needles looked to me as though they had become slightly withered.

Anastasia was scarcely visible in the bluish radiance still enveloping her. After it had dispersed, or gone into her — I could not tell — I saw...

There beneath the cedar tree, back to her normal self, full of life, stood Anastasia, looking unusually beautiful, smiling at me and our son. Looking up, she quietly said "Thank you!" Then... Can you imagine a grown woman showing off this way?

Anastasia sprang into action, making a dash over to the largest of the white circles. Upon reaching its edge, she made another leap in the air, this time quite high. A triple somersault landed her in the very centre of the circle. Another leap, and this time she did a leg-split just like a ballerina. With a trill of her alluring laughter, she twirled in a dance over the white circles.

All around, the forest seemed to come to life and echo her joyful excitement. Squirrels leapt from branch to branch around the perimeter of the glade. Through the bushes some kind of creatures' eyes glamed like precious stones. Two great eagles flew down one after the other from the sky and circled over the glade, rising and descending by turns.

Anastasia continued laughing and dancing like an acrobat and a ballerina. And gradually the grass beneath her feet began to turn green. And even the whitest circle became barely noticeable. My heart kept feeling lighter and lighter from her dancing, her laughter and everything around. And then all at once...

All at once my little son ran out and did a double body roll across what remained of the white circle. Then, quickly regaining his feet, he leapt in the air and spun around, trying to imitate his mother's dance. Even I couldn't refrain myself, and joined in the fun, dancing or just jumping up and down for joy alongside my son.

"Let's go! To the water! Who can catch up to me?" exclaimed Anastasia as she made a headlong dash for the lake, with Volodya and me in hot pursuit.

Slightly panting from all the jumping, I began to lag a little behind. But I saw how Anastasia leapt and somersaulted in

the air before plunging into the lake. A few moments later Volodya took a flying leap from the shore and his bottom hit the water with a loud smack.

I began taking my clothes off on the run, tossing them on the ground along the way. I plunged into the water still wearing my undershirt, trousers and boots. As I surfaced, I caught Anastasia's shrill trill of laughter. Our son was laughing, too, with a surfeit of emotion, slapping the water with his hand.

I was the first to come out of the water. I began to peel off my wet clothes and wring them out. Upon reaching the shore Anastasia immediately put on her light dress right over her wet body. Then she helped me spread out my trousers over a bush so that they would dry more quickly in the breeze.

I fetched a track suit from my backpack and put it on. Anastasia stood beside me, and her dress was already dry. I wanted to give her a hug, but for some reason could not bring myself to go through with it.

She came up very close to me, and I could feel the warmth emanating from her. I felt as though I wanted to say something nice to her, but nothing came to mind. All I could muster was:

"Thank you, Anastasia!"

She smiled, put her hands on my shoulders, rested her head on my shoulder and responded:

"And thank *you*, Vladimir."

"Great!" Volodya's cheerful voice rang out. "I shall be off now."

"And where are you off to?" Anastasia enquired.

"I shall go and see my elder grandfather. I shall give him permission to bury the body, and I shall help him. So I am off."

Volodya quickly departed, with hardly a limp to be noticed.

## CHAPTER THREE

### An invitation to the future

“What did he mean when he said he would give his grandfather permission to bury the body?” I asked in some bewilderment.

“You will see for yourself, and understand,” replied Anastasia.

A little while later I saw Anastasia’s great-grandfather, alive, but no signs of any funeral. That was how he remained in my memory — alive and unfathomable.

Anastasia was the first to sense her grandfathers’ approach. We were walking together across the glade at the time. All of a sudden Anastasia stopped, and gestured to me to stop as well. As she turned in the direction of the tallest and mightiest cedars, I followed her gaze, but saw no one. I wanted to ask her what was going on, but could not. She took my hand and gave it a squeeze in a silent plea to refrain from uttering a sound.

It wasn’t long before I caught sight of the figure of Anastasia’s great-grandfather making his way among the majestic cedars. The majestic elder was wearing a long light-grey shirt which went down below his knees.<sup>1</sup> As he entered the glade at an unhurried but confident pace which betrayed no sign of ageing, I noticed our son — his great-great-grandson, Volodya — trotting along beside him, holding his hand tight. The old man’s own son, Anastasia’s grandfather, followed at a little distance behind.

<sup>1</sup>This is typical of many Russian peasant-style shirts.

It seemed that everybody, including me, felt some kind of solemnity surrounding the approaching encounter, and only the child accompanying the elder was behaving his natural and unaffected self. Volodya kept chatting away the whole time to his great-great-grandfather. Occasionally he would run slightly ahead and turn to look him in the eye, or suddenly stop, let go the old man's hand and bend down to the grass to inspect something that had captured his attention, whereupon the old fellow would stop too. Then Volodya would take his hand once more and begin telling him animatedly about what he had seen, all the while leading him over to where we were standing.

As they drew near, I couldn't help noticing that the usually severe- and majestic-looking elder was sporting a faint smile. His bright face was radiant with grace and, at the same time, a degree of solemnity. Even as he stopped but a few steps from us, his gaze was still aimed somewhere far off in the distance. We were all speechless — only Volodya's voice was to be heard, speaking at a fairly rapid pace:

"Here, Grandpakins, here right before you are my Papa and Mama. They are good people. Even though your eyes cannot see them, Grandpakins, you can still feel everything. But I can see them with my eyes. You can look at what is good through my eyes, my dear Grandpakins, and that will be good for you too."

Then, turning to us, Volodya all at once announced even more joyfully:

"Mama and Papa, a little while ago, when we were all swimming together, I realised something, and I have allowed the body of Grandfather Moisey<sup>2</sup> to die. We have already found a spot for me to bury the body of my Grandfather Moisey."

<sup>2</sup>*Moisey* (pronounced: *ma-yi-SAY*) — a Russian man's name, the equivalent of *Moses* in the Bible.

Volodya pressed his whole head and body against Grandfather Moisey's leg. The majestic grey-haired elder carefully and tenderly stroked his great-great-grandson's head. The love, tenderness, understanding and joy inherent in their mutual relationship was only too palpable. It made the conversation about burial all the more bewildering to me. In line with the way I was brought up, I felt like stopping my son and telling him his great-great-grandfather looked terrific and still had many years ahead of him. That is what we always say, even to an elderly person who is very ill, and I wanted to say that to him — in fact the words were already on the tip of my tongue — when Anastasia suddenly gave my hand another squeeze, and I stopped myself from speaking my mind.

Grandfather Moisey then turned to Anastasia and said:

“Granddaughter Anastasia, the Space you are creating, how is it being limited by your thought?”

“My thought and my dream have merged into one, without encountering any limitations,” replied Anastasia.

Whereupon Grandfather Moisey asked her another question:

“Human souls are accepting the world you are creating... Tell me, what energy is driving your creation?”

“The same energy that grows a tree and unfolds the buds to turn them into the flowers we see.”

“What kind of forces might interfere with your dream?”

“When I dream, I do not visualise any interference. All the challenges I can see on my path ahead can be overcome.”

“You are free in everything, Granddaughter Anastasia. Order my soul to embody itself as you see fit.”

“I cannot permit myself to order anybody's soul. The soul is free — the work of the Creator. But I shall dream, my dear Grandfather, that your soul find a worthy embodiment in the most splendid garden you have ever seen.”

A pause ensued. Grandfather Moisey did not ask any new questions, whereupon Volodya once more began talking apace:

“Neither shall I order you, Grandpakins. Only I shall urge you most strongly to embody yourself soon once more upon the Earth. You will appear once more, young as before and will be my best friend. Or you will become someone else for me... I am not ordering... I am simply talking... My dear Grandpakins Moisey, let your soul be always within me and beside me.”

Upon hearing these words the majestic elder turned to Volodya, and slowly got down on one knee in front of him, then on both knees, bent down his grey head, raised the child's little hand to his lips and kissed it. Volodya put his arms around the elder's neck and started whispering something quickly in his ear.

Then Grandfather Moisey got up from his knees with only one small child helping this very old man. Even now, when remembering this scene for the umpteenth time, I still can't figure out how it happened. They simply held hands, and the great-great-grandfather rose to his feet without leaning on anything.

Upon standing, he took a step in our direction and made a bow. Then, without uttering another word, he turned and held out his hand to Volodya. Off they walked, hand in hand, chatting away to each other. The younger grandfather followed a few paces behind, without interrupting their conversation.

I now realised that Anastasia's great-grandfather was going away for good. He was going away to die.

I could not take my eyes off the receding figures of the child and Grandfather Moisey. Earlier Anastasia had told me about her attitude toward modern cemetery rituals and funerals, and I even wrote about that in my previous books.<sup>3</sup>

She and, of course, all the other members of her family who had either lived or were currently living in the taiga, believe that there should be no cemeteries. Cemeteries are like refuse dumps, places where people toss out the lifeless bodies of the deceased as useless garbage. People are afraid of cemeteries, they believe, because things happen there that go against the laws of nature. They believe that the relatives of the deceased, through their very thoughts about their departed loved ones as gone forever, prevent them from reappearing in a new earthly embodiment.

In going over in my mind the various burials I have witnessed, I'm inclined to agree. There are simply too many falsehoods involved. People practically kill themselves over a deceased family member, but after just a few years... well, you go to a cemetery, and you rarely find a grave of someone who died ten or twenty years ago well tended. In fact at some untended gravesites workers are already digging new pits.

In the meantime the people who are buried are forgotten by everyone. Nothing remains of their brief sojourn on the Earth, and nobody even needs their memory any more. If that is how they end up, why were they born in the first place? Why did they live? Anastasia says the bodies of the deceased should be buried in their own domain with no special headstone to mark the burial place. The grass and flowers, trees and bushes that come up will be the continuation of the life of their bodies. That way the soul upon leaving the body is afforded greater opportunity for splendid reincarnations.

In the kin's domain the thoughts of the deceased before they die will have been creating a Space of Love. Their descendants will stay on to live in this Space, in contact with

<sup>3</sup>See Book 4, Chapter 31: "But who is to blame?" and Book 5, Chapter 1: "Two civilisations".

everything growing therein, which means keeping in contact with the thoughts of their parents as they take loving care of what their parents have created. And the Space itself will take care of those living therein, consequently maintaining one's earthly life forever.

But what about people who live in the cities? How are they to get along without cemeteries? Well, perhaps their lifestyle will give them pause to reflect — at least in their old age — on how they shouldn't live a life devoid of thought for the future, for eternity.

And I am in agreement with Anastasia's philosophy. But it is one thing to agree in thought, quite another to witness the departure of a great-great-grandfather in real life. Though in this case he — or, rather, his soul — will not die. It will evidently stay somewhere in the vicinity or very quickly embody itself in a new life — most certainly a good one. After all, neither Anastasia nor our little son, nor her grandfather, nor even Great-Grandfather himself, is projecting any kind of tragedy, even in their thinking. They have an entirely different approach to death from ours. For them it is not a tragedy, but simply a transition to a new and splendid existence.

Stop! Even Great-Grandfather himself showed no sign of grief. Quite the opposite. So that's it! That's the ticket! "When you go to sleep overwhelmed by heavy, dark and unpleasant thoughts, you will most probably have a nightmare. If you go to sleep with bright thoughts, you will have pleasant dreams," says Anastasia. And again: "...death is not a tragedy, it is only a dream — shorter or longer, it makes no difference. Man should enter into any dream contemplating what is beautiful — then his soul will not suffer. Through his thoughts Man can create a Paradise — or anything else — for his soul."

And Great-Grandfather knew this. He did not suffer. But what was it that brought him such obvious joy during those

final hours? Something happened. He wouldn't have been smiling like that just for no reason at all. But what *did* happen? I turned to look at Anastasia and saw...

There she was standing a little distance away from me, her arms outstretched to the Sun, and whispering, it seemed, some kind of prayer. The Sun's rays would hide themselves behind a cloud, then shine brightly, reflected in a single tear rolling down Anastasia's cheek. But her face showed no sign of sadness, only peace. After whispering, she listened, as though somebody were answering her. I stood and waited, not daring to approach her or even utter a word. It was only when she turned, caught sight of me and headed over my way that I asked:

"Were you praying for the peace of your great-grandfather's soul, Anastasia?"

"My great-grandfather's soul will rest in great peace, and its earthly life still lies ahead when the soul itself desires it. I was actually asking about our son, asking the Creator to furnish him with greater strength.

"Our son, Vladimir, has been doing works undertaken by few people today. He has now accepted within himself all of Great-Grandfather's strength, which Great-Grandfather imparted to him with his soul. Because he is still in the process of maturing, he will find it difficult to contain the multitude of diverse energies within him as a single whole."

"But why," I asked, "after all this happened, did I not notice any particular change in our son?"

"Our son, Vladimir, uttered some special words before Great-Grandfather knelt in front of him. He uttered words whose meaning is comprehensible only to those who are able to fathom the process of the Creator's work. Possibly the child did not fully understand this, yet he told Great-Grandfather sincerely and confidently that he was capable — through his own self — of helping him and his soul stay on the Earth. I

was not able to say the same for myself. I do not feel that kind of strength within me.”

“I noticed that after hearing these words Great-Grandfather began simply radiating with joy,” I observed.

“Yes, few indeed are those who have heard words like that in their grand old age. You see, Great-Grandfather received from the child’s own lips an invitation to the future — an incarnation of the Future.”

“It looks as though they had a strong love for one another.”

“Our son, Vladimir, had begged Great-Grandfather to keep on living when he could not go on living any longer. And Great-Grandfather did live — he could not refuse the child’s request.”

“But how is such a thing possible?”

“It is very simple. But not automatically so. After all, doctors, too, are able to bring back people from a state of unconsciousness or oblivion. And not just doctors, but someone close to this person may call or stir them out of a faint or a state of unconsciousness, and they will live. Great-Grandfather’s will and his love allowed him to prolong his life at his great-grandson’s request. Great-Grandfather is the descendant of priests who did tremendous works through the centuries. Once he even stopped a huge explosion through his will, through his gaze, but it made him blind.”

“What d’you mean, through his gaze? Is it possible for one’s gaze to stop an explosion?”

“It is possible if the gaze is consciously directed with confidence in Man’s power and unshakable will. Great-Grandfather knew where the disaster was about to happen and went there. He was just a little late with his foresight and an initial explosion did take place. But then he stood facing the source of life-threatening danger and through his gaze was able to tame the manifestations of the dark forces already whirling through space. Just one explosion happened, and that not at

full strength, and two others could have taken place. But if Great-Grandfather had flinched even for a moment...

"You see, Vladimir, he stopped the explosion. Only he went blind."

"But why are you so concerned about our son's abilities which he has inherited from his great-great-grandfather?"

"I thought that the abilities he had inherited from you and me were sufficient. I taught him to conceal his additional abilities so that he would not appear strange to people. I wanted our son to go out and live in the world and not stand apart from others in his appearance. After all, there is a lot one can do without standing out from others.

"But something too extraordinary has happened. Who our son is now, and what his purpose in life is — that is something we must definitely try to decipher. And so I was asking the Creator to give him the strength to remain, at least for just a little longer, a simple child."

"You're concerned about this now, Anastasia. But I think in many respects it is you and your method of upbringing that are at fault here. You talk a lot about the soul, about Man's purpose in life. You have taught the child to read that extraordinary book about co-creation. So he's gone and formulated his own peculiar world-view.

"Why should a child at that age have to know about Soul, about God? You see, he calls me Papa, and at the same time he says he has a father. I realise he's calling God his Father. Even I have a hard time understanding that, but you've gone and given him an information overload. It's the way you've brought him up that's to blame, Anastasia."

"Remember, Vladimir, how I replied to Great-Grandfather that I could not order anyone's soul. And our son heard what I said. And yet some power higher than I has allowed him to act otherwise. But you should not worry. I shall be able to understand what has happened, even though our son may

possibly look at me now in a different light. It will not be long before his strength exceeds both of ours combined."

"Well, okay. Every generation should be stronger and smarter than the one before."

"Yes, you are right, of course, Vladimir, but there is an element of sadness when someone is stronger and more insightful than his own generation."

"Eh? I don't understand what kind of sadness you're talking about, Anastasia."

She didn't reply, only hung her head, and her facial expression became sad. She is rarely sorrowful or sad. But this time... I understood... I understood the great tragedy of this Siberian recluse — Anastasia. She is all alone. Incredibly alone. Her world-view, her knowledge, her abilities are so vastly different from those of other people. And the more pronounced they are, the more tragic is her loneliness. She lives in another dimension of conscious awareness. This other dimension may be marvellous, but she is all alone there. Of course she could come down to other people's level, she could be like everyone else. But she has not done this. Why? Because to do that she would have to betray herself and her principles — perhaps even betray God. And then Anastasia decided to do something amazing. She began calling others into this splendid dimension. And there have been those capable of understanding her. And I, it seems, am just beginning to understand her, to really feel... Six years have passed and I am only beginning, just barely, to understand. And she has been patiently waiting all this time, calmly explaining everything without getting angry. Perseverant, unshakable in her hope.

Christ Jesus was probably the same way. Of course he had his disciples and people were constantly coming to hear him. But who could have been a *friend* to him? A friend who could finish his sentences and help him in a pinch. But not a single kindred spirit was at hand. Not one.

God! How do most people perceive Him? As an unreachable, amorphous, feelingless being! All they can say to Him is "Gimme this!" or "Judge that!" But if God is our Father, if He has created the world around us, then, quite naturally, the fundamental desire of our Parent can only be for a meaningful existence for His children, along with their understanding of the essence of creation and the opportunity to co-create together with them. But how can we talk about a meaningful existence when we constantly trample down everything God has created around us — trample on His thoughts — and yet all the while engage in various forms of worship to someone, only not Him?

But He doesn't need to be worshipped. He is waiting for our co-operation. But we... Well, we can't even comprehend such a simple truth as: if you're the son of God and can understand your Father, take just one hectare of land and create a Paradise on it, bringing joy to your Father. But no! All mankind is striving for something like crazy, but what? Who is it that is constantly making idiots of us all? And what does He, our Father, think when He sees all this earthly debauchery? He watches and waits for His earthly sons and daughters to wake up and come to their senses. He watches and causes the Sun to illuminate the whole Earth, so His children can breathe.

How are we to comprehend the essence of being? How are we to make sense of what is really happening to us? Is it mass psychosis? Or the deliberate influence of some kind of forces? What forces? When will we be free from them? Who are they?

## CHAPTER FOUR

### A dormant civilisation

This conversation took place on the second day of my stay.

Anastasia and I were sitting quietly together in our long-time favourite spot by the lake. Evening was coming on, but the cool evening freshness had not yet set in. A barely perceptible breeze fanned our bodies from constantly changing angles, as though designed to delight us with the many and variegated fragrances of the taiga.

With just a trace of a smile on her face, Anastasia contemplated the mirror surface of the lake before us. She seemed to be waiting for me to ask her the questions I wanted answers to. Only somehow I wasn't able to reduce my questions to a brief and concrete formulation. It appeared that what I managed to formulate in my mind did not reflect the main thing I really wanted to know. So I approached it circuitously:

"You see, Anastasia, here I am writing books using many of the words you have given me, even though I don't understand all your words right off, but it's not so much the words but the reaction to them that has me baffled most of all.

"Before I met you I was a simple entrepreneur. I worked and, like everyone else, wanted to make as much money as I could. I could afford to enjoy a drink and have a rousing good time, but nobody laid into me or my company's workers with the kind of criticism that the media is now overwhelming me with.

"Strange as it may seem, back then nobody faulted me for earning money, but as soon as the books came out, some personages began right off publishing articles saying I was nothing

but a gold-digger, if not a charlatan and a bigot. It'd be okay if it were just me, but they've also gone and insulted my readers too, calling them bigots and fanatics. And goodness knows what they write about you. Either they argue that you don't exist at all or they say you're the queen of the heathens.

"It's funny how everything's turned out: here in Siberia there are a lot of minority ethnic groups, with different cultures and beliefs, some of them still practise shamanism, and nothing bad is ever said about them — on the contrary, they say these peoples' cultures need to be preserved. And here you are, all alone — well, apart from your grandfather and great-grandfather, and now your son — you live all alone here. You don't ask for anything, and yet the words you say provoke a storm of emotions. Some people absolutely delight in the words you say and get all excited, and start acting on them, while others attack you with unabashed fury and anger. Why is that so?"

"And you, Vladimir, can you not answer this question yourself?"

"Myself?"

"Yes, yourself."

"I've got very strange thoughts running through my head. I get the impression that out there in human society there are some kind of unknown people or forces who will do everything they can to make people suffer. These forces thrive on wars, the drug trade, prostitution and disease. And on their constant increase. How else to explain it? They don't attack books about murders or magazines with half-naked women, but there's something about books on Nature, or books on the soul, that isn't to their liking. And in your case it's even more peculiar. Here you are calling upon people to build their Paradise domains for happy families, and many people are strongly behind you in this endeavour.

"And not just in their words. People are starting to act. I myself have seen people who have taken land and begun

working it, as you said, building their own kin's domain. These include young and old, rich and poor, and yet somebody's really uptight about that. And the media's constantly trying to distort what you say. They resort to outright lies, to put it bluntly. I can't understand how the words of a single woman living in the taiga and apparently not bothering anyone can be so powerful.

"And why would anybody try to engage in direct conflict with your words? There's also the claim that behind those words of yours lurks some kind of great power — occultism, maybe."

"And what do *you* think — is there a power behind them or are they just words?"

"I think there must be some kind of occult power in them, yes. That's what some of the esoterics are saying."

"Be careful, Vladimir, and try not to take in what others say. Try listening instead to your own heart and soul."

"I'm trying, only I haven't got enough information."

"What information, specifically?"

"Well, for instance, what ethnic background are you Anastasia? What religion are you and your relatives? Or maybe you don't have any ethnic background?"

"I have," replied Anastasia, rising to her feet. "But if I tell you now, the dark forces will rise up and scream in fright. Then they will try to come down with all their might — not just on me, but to crush you too. You will be able to withstand it once you have got beyond noticing their attempts and give your thought over completely to the marvellous reality. But as long as you consider yourself defenceless in the face of their anger, you should withdraw your question and forget about it until the right time."

Anastasia was now standing in front of me, her arms hanging loose at her side. I gazed up at her from below and couldn't help noticing how proudly, splendidly and unassailably she

carried herself. Her tender and enquiring look was awaiting my response. I had no doubt that what she was about to say was indeed capable of provoking some kind of extraordinary reaction. I had no doubt because over the years I have known her I have seen a feverish reaction to her words on the part of many people. And for that reason I didn't doubt the possibility of danger either, but I responded:

"I'm not afraid. Even though I'm sure it's all going to come about just as you say. Maybe I'll be able to hold out myself, but then I'm not the only one... We have a son now. I don't want anything to threaten him."

At this point Volodya suddenly appeared and went over to Anastasia. He must have been quietly standing somewhere nearby and listening to our conversation, without interfering. But now that the topic had turned to him, he probably felt it was time to make himself known.

Volodya took Anastasia's hand in his own little hands, pressed his cheek against it, lifted up his head and said:

"Mamochka Anastasia, go ahead and answer Papa's question. I can take care of myself. History need not continue to be hidden from people on my account."

"Yes, that is true," observed Anastasia, stroking the child's little head. "You are strong, and you are getting stronger with each passing day." Then, raising her head and looking me straight in the eye, she pronounced the letters more distinctly than usual, as though introducing herself for the first time:

"I am a *Ved-russ*, Vladimir."

I actually felt a kind of extraordinary sensation within me from the word Anastasia pronounced — it felt like a mild electrical current was running over my whole body like a pleasant heat wave, as though imparting some kind of news to every cell of my being. And something unusual, it seemed to me, had happened in the space around me too. The word itself meant nothing to me, but for some reason I rose to my feet

upon hearing it. I stood there, as though trying to remember something.

Once again, this time quite joyfully, Volodya spoke up:

“You, Mamochka Anastasia, are a Vedruss beauty, and I too am a Vedruss...”

Then he looked at me with a happy grin and said:

“You are my Papa. Just like me, you are a Vedruss, only dormant. I’m talking too much again, eh, Mama? I’ll go now. I’ve thought up something marvellous for you and Papa. Before the Sun sets behind the trees I shall create what I have thought up!” And catching an affirmative nod from Anastasia, off he went trippingly into the forest.

I looked at Anastasia standing there in front of me and thought to myself: *The Vedruss must be one of the Yugra minorities still living in the Far North and Siberia.*<sup>1</sup>

In 1994 in Khanty-Mansiysk Province there was an international documentary film festival devoted to the Yugra minorities. At the request of the provincial administration many of the festival participants were quartered aboard my ship on the Ob River. I had the opportunity to talk with them, watch the films in the competition and travel with the film-makers to some of the more remote Siberian settlements where shamans were still practising their craft. I couldn’t remember much about the culture and customs of these minority peoples. But I did recall feeling a tinge of sadness over the fact that these

<sup>1</sup>*Yugra* — the original name of the *Khanty*, one of the two major aboriginal groups in the Province of Khanty-Mansiysk, located around the northern reaches of the Ob River, just before it flows into the Arctic Ocean. Together with the neighbouring *Mansi*, the Khanty are classified as part of the Siberian branch of the Finno-Ugric peoples, which include Finns, Estonians and Hungarians. Since the first recorded arrival of Russian explorers and colonists in the 11th century, the Khanty have co-existed with the Russian state, often with a greater degree of autonomy than other parts of the Russian empire or federation.

extremely small populations were dying out. And people were treating them as some kind of exotic curiosity which would soon be disappearing completely from the face of the Earth.

I did not recall hearing anything from the participants at this film festival (which could really be considered a major national event) about the Vedruss people, so I asked Anastasia:

“Have your people died out, Anastasia? Or rather, are there just a very few of them left? Where were they settled previously?”

“Our people have not died out, Vladimir, they are dormant. Our people happily thrived on the territories now known as Russia, Ukraine, Belarus, England, Germany, France, India, China and many other states both large and small.

“Up until quite recently, only five thousand years ago, in the real world our people were thriving on lands from the Mediterranean and Black Sea to the farthest northern latitudes.

“We are Asians, Europeans and Russians, as well as those who recently called themselves Americans — in fact, god-people, all from a single Vedruss civilisation.<sup>2</sup>

“There was an age of life on our planet known as the Vedic Age.

“During the Vedic Age mankind reached a level of sensitive knowledge allowing it to create energy images through collective thought. And then it underwent a transition into a new era of existence, known as the Image Age.

“With the help of energy images, created by collective thought, mankind was afforded the opportunity of co-creating in the Universe. It could have had the ability to create Earth-like life on other planets. And it *would* have, if it had not committed any mistakes in passing through the Image Age.

<sup>2</sup>*Ved* is a Slavic root signifying ‘knowledge’ or ‘to know’. The words *Vedic* and *Vedas* are derived from this root.

“In the Image Age, however, which lasted for nine thousand Earth years, mistakes were repeatedly made in the co-creation either of a single image or several images simultaneously.

“A mistake occurred if there remained in the Earth’s human society people with insufficient purity of thought, with an insufficient culture of feelings and thoughts.

“Such mistakes had the effect of obscuring the opportunity to create in the expanses of the Universe, and led mankind into occultism.

“The Occult Age of human life has lasted for one thousand years now. It began with an intensive degradation of human consciousness. Ultimately, a degradation of consciousness and an insufficient purity of thought, coupled with knowledge and opportunity at the highest level, would always lead mankind to a global disaster.

“This was repeated many times over billions of Earth years.

“Now we are in mankind’s Occult Age. And, as always, a disaster of global proportions was supposed to take place. It was supposed to, but the deadline has passed. We have passed the end of the Occult Millennium. Now it is up to everyone to take stock of their purpose, their essence and where the mistake was made. We should help each other in mentally retracing the course of our history in the opposite direction and pinpoint the mistake. Then an era of joyous life on the Earth will be ushered in — an era such as no one has ever witnessed before in global history. The Universe is anticipating it with bated breath and great hope.

“In the meantime the forces of darkness are alive and prevalent, feverishly trying to control people’s minds. But for the first time they failed to notice the Vedruss’ unusual behaviour back five thousand years ago.

“When an image was born by a perverted consciousness upon the Earth — an image which desired to exercise control

over everybody, that was when the first war began. It was under the influence of this image that people started killing each other. This has happened many times on the Earth just before a global disaster. But this time... For the first time the Vedruss civilisation did not enter the fray on a non-material plane.

“Instead, the Vedruss fell asleep on their territories both large and small, switching off a part of their consciousness and feelings.

“Man’s life on the Earth seemed to carry on as before: children were born, houses were built, the decrees of the attackers were obeyed. It seemed as though the Vedruss had submitted to the dark forces, but therein lay a great secret: by falling asleep, the Vedruss, unconquered, remained alive on all planes of being. And this happy civilisation is dormant right to this day, and will continue to sleep until those who are awake search out the mistake in the image creation. That same mistake that led the Earth’s civilisation to its present-day situation.

“Once the mistake has been identified with absolute precision, the dormant ones may hear the words of those who are awake and begin to rouse each other out of sleep.

“Just who thought up this particular move, I cannot say. It is probably someone very close to God.

“You, as a Vedruss yourself, should try to wake up, at least a little, and take a look at the course of history.

“Our people went to sleep on various continents. Three thousand years ago they were thriving only on what is now Russian territory. At that time the age of the dark forces had already come upon the whole Earth. And the Vedruss continued their happy existence only on the ‘island’ now known as Russia.

“They needed, very much needed to hold out another thousand years. They had to decide how to convey their knowledge to future generations, figure out what was happening on the Earth and determine how a repetition of the mistake could be avoided in the future. They managed to hold out

another fifteen hundred years on this 'island'. They fended off the attacks, but not on a material plane. The darkness had already taken control of people's minds over the whole Earth. The priests placed themselves above God and decided to create their own world of the occult. They had already managed to intoxicate a third of the world.

"But all the forces of darkness could do no harm to our people on this 'island' that is today called Russia.

"It was only fifteen hundred years ago that this last 'island', too, fell asleep. The civilisation of the Earth, the people who knew God, fell asleep in order to awaken to the dawn of a new reality.

"The forces of darkness supposed that they had succeeded in destroying this people's culture and the aspirations of their soul forever. This is why they are trying so hard to conceal the history of the Russian people from those living on the Earth today.

"In reality there is much more to the story. In covering up the history of the Russian people, which can serve as a stepping-stone into the world of the beautiful, they are actually trying to cover up the joyously living civilisation of the Earth — cover up the culture, knowledge and feeling of knowing God which are inherent in that glad civilisation your forebears were a part of."

"Wait, Anastasia! Could you tell me a bit more specifically about this extinct — or, as you put it, dormant — civilisation using simpler terms, terms easier to understand? And can you prove the existence of this civilisation?"

"I can try, using simpler words. But it will be a hundred times better if each one tries to visualise it for themselves."

"But is it possible for everyone to see what happened ten thousand years ago?"

"Yes, it is. Only in varying degrees and detail. But everyone can get an overall feeling of it, and even see one's forebears and one's self in this joyous world."

“How can everyone do that? How can I do it, for example?”

“It is all very simple. To start with, Vladimir, try to evaluate and compare events you are familiar with just with your own sense of logic. When questions come up, find your own answers to them.”

“What d’you mean, by *logic*? How can one learn about the history of Russia, let’s say, by logic? Anyway, you said that our Russian history and culture have been destroyed, or hidden from all the people of the Earth... But how can I — or anybody else, for that matter — verify what you say just using logic?”

“Let us try reasoning through this together. I can do a little to help you get in touch with history.”

“Okay, then. What needs to be done to start with?”

“To start with, you should answer yourself a question.”

“Which one?”

“A very simple one. Remember, Vladimir, the history textbook you brought for our son. It is called *A history of the ancient world*. There are chapters in it discussing the history of Ancient Rome, Greece and China. They describe what Egypt was like five thousand years ago. But nothing is said about what Russia was like during this time. Never mind five thousand years — Russia’s history and culture even from a thousand years ago are kept in the strictest secret. The textbook is written in the Russian language, aimed at Russian children, but there is not a word in it about the Russia of only two thousand years ago. Why?”

“Why?” I echoed. “Indeed, a most peculiar situation. A Russian textbook on the history of the ancient world and nothing said about Russia itself. Not a word about the history of the Russian people, either during the time of Ancient Rome and Egypt or even later. Strange! Very strange... as though there were no Russian people living during those times.”

In trying to recall what I knew of history, I remembered hearing about the existence of the ancient philosophers of

Rome, Greece and China. I never read their works, just heard about them. I also knew that their works were accepted by society as brilliant and outstanding. But I could not recall a single Russian philosopher or poet of that time. Indeed, why?

Aware that Anastasia wanted me to try to figure out the answer myself, I said:

“Neither I nor anyone else can answer this question, Anastasia. It’s a question that’s probably not possible to answer.”

“It *is* possible. Only one must not be lazy in one’s logical reasoning. You see, we have come to our first conclusion: the history of the Russian people is unknown not only to the world at large but to the Russians themselves. Do you agree with this, Vladimir?”

“Well, maybe not entirely unknown. We still have *descriptions* of what happened a thousand years ago.”

“The description was written under censorship and with significant distortion. Besides, the commentaries are the same for every historical event. Russia’s past millennium — the Christian era — is like a single day of history. We have Christianity in Russia still today, but can you tell me what preceded it?”

“They say that before Christianity, Russia was a heathen land. People worshipped various gods. But the description is very superficial. There are no writings or even any legends about that period. There are no descriptions either of the political system or of people’s way of life.”

“So, you have reached Conclusion Number Two: the Russian people had a different culture then. Now, use your logic and tell me under what circumstances do attempts arise to hide or distort history?”

“Well, there’s a clear answer to that question. People try to falsify history when it’s necessary to show the benefits of following a new order, a new authority, a new ideology. But to completely conceal any trace of it... Wow! That’s incredible!”

“The incredible happened, Vladimir. It is an incontestable fact. Now, tell me something else — and do not slacken in your thinking, please. Did this fact come about all by itself, or is it the result of a deliberate effort on somebody’s part?”

“Judging by the fact that people have always burnt books when they wanted to stamp out knowledge or ideology, I would say that someone deliberately stamped out all knowledge about pre-Christian Russian culture too.”

“Who do you think would have done that — who?”

“Most likely the ones who were imposing a new culture and religion on Russia.”

“One might say that. But possibly there was somebody behind it, somebody controlling the new religion and those who imposed it? Someone with their own agenda?”

“But who? Who can control religion? Tell me!”

“You are still looking for answers from the outside, you are too lazy to search for them within yourself. I can give you an answer, but an outside answer may seem to you incredible — it may provoke a degree of doubt. Everyone can hear the answer within themselves, once they have liberated their soul and logic and awakened even a wee bit from sleep.”

“It’s not that I’m lazy. It’s just that searching for answers within myself will take a lot of time. Better you tell me yourself what you know about history. If I start having doubts, I’ll question you further. I shan’t just take your story for granted, but I shall verify it by logic, both now and later on, as you suggest.”

“Let it be as you wish. But I shall merely give you a rough outline of the whole, and let everyone try to fill in the details as they perceive them. Today’s reality, along with the past and the future, is something that needs to be determined only within one’s self, with one’s own soul.”

## CHAPTER FIVE

# The history of mankind, as told by Anastasia

### Vedism

People have been living on the Earth for billions of years. Everything on the Earth was created perfect right from the start. Trees, blades of grass, bees and the whole animal world.

There is a direct connection between everything living on the Earth and the entire Universe. The apex of creation is Man. And in the great pristine Harmony of all things Man was created harmonious.

Man's purpose is to learn about all his surroundings and create perfection in the Universe. To create the likeness of the world of the Earth in other galaxies. And with each new creation of his to add more splendour to earthly creations.

The way will open for Man to create on other planets when Man is able to overcome temptation — when Man is able to hold in unity the grand and diverse energies of the Universe inherent in himself. And when he does not allow one of them to take precedence over the rest.

The day when the whole Earth is a Paradise garden will mark the opening of the path of creation in the Universe. And once Man becomes aware of the whole harmony of the Earth, he will be able to contribute his own splendour.

Man takes it upon himself to take account of his actions once in every million years. Whenever he makes a mistake, whenever he allows one of the many diverse energies he

contains to dominate at the expense of the rest, a global catastrophe takes place. Then everything starts again from the beginning. This has happened many times.

One of mankind's million-year periods may be divided into three ages: first, the *Vedic Age*, second, the *Age of the Image*, and third, the *Age of the Occult*.

The first age of human society on the Earth, the Vedic, lasts 990,000 years. During this age Man lives in Paradise like a gladsome child, maturing under parental care.

During the Vedic Age God is known to Man. All God's feelings are inherent in Man, and through them Man is able to obtain any advice he needs directly from God. And if Man should suddenly make a mistake, God is free to correct it simply by giving a hint, without disturbing the general harmony or infringing on Man's freedom in any way.

In the Vedic Age Man does not raise questions about how or by whom the world, the Universe, the galaxies — along with his marvellous planet called Earth — were created. Everyone is completely aware that everything around, either visible or invisible, has been created by their Father, namely, God.

The Father is everywhere! All that grows and lives — are His living thoughts, His programme. And one can use one's own thought to commune with the Father's thoughts. And one can contribute to His programme, provided one first understands it in detail.

During the Vedic Age Man did not bow down before God, nor was there the multitude of religions which sprang up afterward. There was a culture to life. People lived a Divine way of life.

There were no diseases of the flesh. Feeding and clothing himself in a Divine manner, Man simply did not think about food and clothing. Thought was otherwise occupied — with the excitement of discovery. And no rulers reigned over human society. There were no boundaries marking off states as today.

Human society on the Earth consisted of happy families. The various continents were inhabited by families. They were all united by their aspiration to create a Space of Splendour.

There were many new discoveries, and each family, upon making a splendid discovery, felt the need to share it with others.

Families were formed by the energy of Love. And everyone was fully aware that a new family would create one more oasis of splendour on their native planet.

There were many rituals, holidays and carnivals among the people of the Vedic Age, each imbued with great meaning, sensitivity and a conscious awareness of the real Divine existence on the Earth.

Each ritual served as a grand school and a grand examination for each Man that took part in it. An examination in the eyes of others, in the eyes of one's self, and, consequently, in the eyes of God.

I shall tell you about and show you one of these rituals. It was a wedding rite — or, rather, the recognition of the union of two people in love. Look and see. Try to compare the level of knowledge and culture with that of today.

### **A union of two — a wedding**

The wedding rite — a bonding of two hearts — took place with the participation of the whole village, sometimes several neighbouring (or even distant) villages together.

The lovers-to-be could meet in various ways. It could happen that two young people from the same settlement might fall in love. More frequently this occurred at one of the major festivals where a number of villages got together, when two gazes met and a spark of feeling was ignited in their hearts.

It did not matter whether he approached her or the other way round. They could tell a lot about each other's feelings simply by looking into each other's eyes. But there were words too, which, when translated into today's language, might sound something like this:

"With you, my beautiful goddess, I could create a Space of Love to last forever," he would tell his intended.

And if the girl's heart responded in kind, she might answer: "My god, I am ready to help you in your grand co-creation."

Next the young lovers would jointly select a location for their future home.

They would go together and visit the area around the settlement where *he* lived, and then visit a corresponding area near *her* village. And there was no need for the lovers to tell their parents of their plans. Everyone in both settlements knew what was going on and was fully aware of the grand happening that would soon take place.

After mutually agreeing upon a site where they would make their future life together, the lovers would often retreat there, just the two of them.

Sometimes they would spend the night there under the open sky or in a shelter they had constructed from tree branches. They would greet the dawn and bid farewell to the day there. After returning briefly to their parents' houses, they would hurry back to their chosen site. It called them, and drew them to itself, much as an infant inexplicably draws to itself a pair of loving parents.

The parents did not ask the young lovers any questions. They simply waited in eager and joyful anticipation for their

children to ask questions of them, all the while watching as their son or daughter spent time in deep meditation.

And the children once more went off to their grand retreat. This might go on for months, or even a year or two. And all during this time there would be no physical intimacy between the lovers.

People in the Vedic settlements knew that these two lovers' hearts were creating a grand design, inspired by the energy of Love.

Right from birth both *he* and *she* had been absorbing from their parents the lifestyle, knowledge and mindfulness of the Vedic culture. They could share their deep knowledge either of the stars burning in the night sky or of the flowers unfolding their petals with the rising of the Sun, or of the purpose of bees, or the diverse energies existing in space.

From early childhood both *he* and *she* had been bearing witness to the marvellous domains, oases and Paradise gardens their parents had created in love, and now they were aspiring to co-create their own.

On their chosen plot of land, a hectare or more in size, the lovers laid out a plan for their *real* life ahead. The task before them was to mentally formulate a design for their home and work out an arrangement for a wide variety of plant life, where everything could work in mutual support and harmony.

Everything would be arranged to grow on its own, without requiring any physical effort on Man's part. There were a whole lot of factors to be taken into account here, including the disposition of the planets, as well as the day-by-day flow of air currents.

Come spring and summer, plants would exhale ethers and give off a delightful fragrance. The young lovers would try to arrange them so that whenever a breeze blew a bouquet of many different ethers would waft into their dwelling.

All this foreshadowed the birth of a grand and extraordinary complex. It consisted of Divine creations. Besides, the place the lovers selected was to be transformed into a scene of splendour which would delight the eyes. Not on a canvas, but on living ground — a living design was being created in thought, one that would last for ever.

Even today people can imagine how involved and concentrated thought can become when one is endeavouring to come up with a design for one's own home.

A *dachnik*,<sup>1</sup> too, will understand how, especially in the spring, one's thought can get absorbed in what one's plot of land will look like in the future. And a talented artist, in planning out a picture, also knows how he can get carried away by his thoughts.

All these aspirations were now concentrated in the two loving hearts. Their knowledge was enhanced by the energy of Love, fostering new inspiration. This is why they did not even think about what we call today the pleasures of the flesh.

Once the design was complete in their thoughts, the lovers first paid their respects to the bridegroom's home village, where they went around to every house and invited the residents to come for a visit. Each household awaited their arrival with great excitement and anticipation.

The people of the Vedic culture knew that when lovers came to see them, a new energy of Divine Love would visit their domain, albeit just for a moment. And the marvellous Space of each domain would smile at the energy of young love. There was no question of imagination or occult beliefs here. After all, even today anyone finds the company of a good person more pleasant than that of an angry one. Lovers cannot be angry, especially when they come visiting as a couple.

<sup>1</sup>*dachnik* — see footnote 1 in Chapter 2: "Conversation with my son".

But in every family in the village there was also a feeling of anxiety. Whenever the young couple dropped in on a garden, a courtyard or a house, they would say just a few words to the residents. Just a sentence to each one. Something like: *Oh, what a splendid apple tree you have!* or *Your cat has a knowing look!* or *Your bear is a real worker, very considerate!*

To any resident hearing the lovers praise a tree growing in the garden or the household cat, this was a sign of respect shown by the younger generation to their elders' way of life. The appraisal was always sincere, for the one giving it was indicating that he too would like to have a tree or a bear of similar worth.

It was with great pride and joy in the face of the whole village that each resident aspired to present the young couple with the object of their praise as a gift. And all would wait with anticipation for the day the couple had selected, when they would present their gifts to the bride and groom.

In the meantime the couple would also go from house to house in the bride's village. Sometimes it took three days to visit every family in the two settlements. Sometimes more than a week. When the couple finished making their rounds and the selected day arrived, people both young and old would rise at dawn and begin hastening to the site of the young couple's new home for a visit.

People would take up a position around the perimeter of the couple's selected domain, marked out by dry branches. In the middle, next to the shelter, a little mound rose out of the earth, decorated with flowers.

Look now and you will behold a most extraordinary scene!

There he is! Look! Here is a young man coming out to greet the residents of two villages. He is magnificent, a virtual 'Apollo'! With hair of russet brown and eyes of bright blue, he ascends the mound. Now on top of the mound, Radomir<sup>2</sup> — that is his name — is excited. The eyes of all the

people present are fixed on him alone. And in the ensuing silence he begins his speech.

In front of everyone assembled he sets forth the design of a new Space which he has co-created with his beloved. With the aid of hand gestures, Radomir tells where the apple tree will grow, as well as the cherry tree and the pear tree. He shows the location of future groves of pine, oak, cedar and alder, along with what berry bushes will grow in between, what grasses and herbs will send forth their pleasant fragrances. And how easy it will be for bees to build their home among the trees. And where that workhorse of a bear will hibernate during the winter.

He speaks quite quickly, with great inspiration, setting forth the carefully thought through design. He goes on speaking for about three hours, and the whole time the people listen with rapt attention. And each time the young man points to a spot where some living thing will grow, according to his grand design, someone from the group of people listening will go over and stand on the future site of the apple tree, pear tree or cherry tree. Sometimes this individual is a woman, sometimes a man or an elderly person, but it could also be a child with eyes full of awareness, wisdom and joyful contentment.

Those stepping forth from the assembly are already holding in their hands saplings of the tree or plant designated for the selected spots where beauty is to unfold.

As each one steps forth, the people bow to him, inasmuch as he has shown himself worthy of the young couple's appreciation — as they did the rounds of the village domains — for being able to bring forth beauty. Which means he has been

---

<sup>2</sup>*Radomir* - - an ancient Slavic name derived from the roots *rad* (joyful) and *mir* (peace). The word *rad*, in turn, is a derivative of *ra* (Sun).

found worthy of appreciation on the part of the Creator — the Father of all, the all-loving God.

That is not a conclusion reached through superstition. It is quite logical.

People of the Vedic culture were wont to treat the young couple designing the splendid oasis as deities. Such treatment was not unfounded. After all, the Creator had performed His creations in an impulse of inspiration and Love. And these young lovers, likewise inspired by Love, have now created a splendid design.

Look — the young man has finished speaking. He comes down from the mound and goes over to where his bride is standing. She has been following the whole proceedings with great excitement and emotion. He grasps her hand and leads her to the mound, where they take up a position together.

And the young man utters these words in front of everyone assembled:

“I have not created this Space of Love in isolation. Here is my marvellous inspiration standing beside me before you all.”

The girl — it would be better to refer to her as a *maiden*<sup>3</sup> — initially lowers her eyes in the face of the whole gathering.

Every woman has her own particular charm. But there come special moments in the life of every woman when she rises over everyone else. Such moments are not found in today's culture. But back then...

Look! Standing on the mound, Liubomila<sup>4</sup> (as she is called) has raised her eyes to greet the people around her. The cries of excitement of the whole crowd have merged into one. The girl's face has broken into a smile — a bold smile, not a saucy

<sup>3</sup>*maiden* — The Russian word *deva* (here translated 'maiden') is identical to the Sanskrit word denoting the nature spirits which help plants to grow.

<sup>4</sup>*Liubomila* — an ancient Slavic name derived from the roots *liub* (love) and *mil* (dear).

one. She is overflowing with the energy of Love. Her cheeks glow more intensely than usual. The maiden's clear eyes and body vibrant with health reach out to envelop the people and the whole space around them with a radiant warmth. For a moment the whole scene falls silent, still. The young goddess shines before the people in all her beauty.

And so there is no question of haste as the maiden's parents, accompanied by the whole family, both young and old, solemnly make their way to the mound where the young couple are standing. They pause at the mound and bow to the couple, then the maiden's mother asks her daughter:

"All the wisdom of our family line lies in you, my daughter. Tell me, do you see the future of the land you have chosen?"

"Yes, Mama, I see it," replies the daughter.

"Tell me, daughter dear," the mother continues, "do you like everything about the future you have been shown?"

A young maiden might answer this question in a variety of ways. Most often she would say:

"Yes, Mama. Here will be a splendid Paradise garden, a living home."

But look and see, this particular temperamental girl, her cheeks flush with a bright glow, comes forth with a non-traditional response:

"The design is not bad, I really do like it. But, you know, still I should like to add just a little something."

Quickly jumping down from the mound, she all at once runs through the crowd to the edge of her future garden, where she stops and says:

"Here is where an evergreen should grow, with a birch beside it. When a breeze blows from that direction, it will first meet the branches of the pine, then the birch, and after that the breeze will ask the trees of the garden to sing a tune. It will not be repeated exactly the same way each time, but it will always be a delight to the soul. And here," the maiden

adds, running off a little to one side, "here flowers are to grow. First there will be a flush of red, then over here a little later violet will spring up, and burgundy over there."

The maiden, all aglow like a fairy, starts dancing around her future garden. And once more the people remaining in the circle set themselves in motion, hurrying about to carry the seeds in their hands to the spots on the ground the high-spirited girl has pointed out.

Upon finishing her dance, she once more runs up to the mound. Here, standing next to her chosen one, she says:

"Now the Space here will be splendid in its sheen. The earth will produce a most marvellous scene."

"Tell everyone, my daughter," her mother once more addresses her, "who will be crowned to reign over all this marvellous Space around? Of all the people living on the Earth, upon whom could you bestow the crown?"

The maiden takes a sweeping look at all the people standing around holding saplings and seeds in their hands. Each of them stands in a spot indicated by the young man according to his plan and the maiden's outline of the splendid scene to be. But no one is yet planting a seed in the ground. The sacred moment for that has not yet arrived. And at this point the maiden turns to the young man standing beside her on the mound, and says, almost in song:

"He is worthy to wear the crown whose thought is able to create a future that will be splendid all around."

With these words the girl touches the shoulder of the young man standing beside her. He gets down on one knee before her. And the girl places on his head a most beautiful crown, a garland woven from sweet-smelling grasses by the maiden's own hand. Then, running her fingers three times through her fiancé's hair with her right hand, she takes hold of his head with her left and draws it a little closer to herself. Upon her signal the young man stands up. Then the girl runs

down from the mound, and bows her head ever so slightly in a sign of meekness.

Right at this moment the young man's father, accompanied by his whole family, is making his way over to the newly crowned groom. Approaching the mound, he stops and pauses in respect. Then the father begins speaking, his gaze fixed on his son:

"Who are you whose thought is capable of creating a Space of Love?"

Whereupon the young man replies:

"I am your son, and I am the son of the Creator."

"A crown has been placed upon your head, a sign of a great mission to come. You who are wearing the crown, what will you do as you reign over your domain?"

"I shall create a future that all around most splendid will remain."

"Where will you gain the strength and inspiration, my son, and crowned son of the Creator?"

"In Love!"

"The energy of Love is capable of wandering through the whole Universe. How will you manage to see the reflection of universal love on the Earth?"

"There is one girl, Father, and for me she is the reflection of universal love on the Earth."

With these words the young man comes down to where the girl is standing, takes her by the hand and leads her back up to the mound.

Holding hands, they watch as the two families merge into a single group, sharing hugs and jokes and laughter, from the youngest child to the eldest present. Everything becomes quiet once more when the young man holds up his hand and proclaims:

"My thanks to all who heard me in this place. My soul has spoken of the creation of a new Space. My thanks to all who

have held the energy of Love in such high esteem. May what has been conceived by the soul's dream now sprout from the earth!"

These words have the effect of setting all the people standing around in joyful motion. And with pride and joy and great emotion the people plant the seeds and saplings in the ground. Each one plants just one sapling in the spot indicated by the young man as set forth in his plan. Those not assigned a specific spot set about to walk around the perimeter of the plot which has already been marked out, and to the song of the *khorovod*<sup>5</sup> throw the seeds they have brought with them into the ground.

Within the space of a few minutes a marvellous garden has been planted — the Space which has been created through a dream.

And now the people retreat once more beyond the plot's perimeter. Only two families remain surrounding the mound where *he* and *she* — the young lovers — are still standing.

Drops of rain from the skies are falling onto the ground. The very warm rain is unusual and lasts but a short time — these are tears of joy and tenderness falling from the Creator's eyes to water the marvellous Space co-created by His children.

What could be dearer for a parent than the marvellous creations of His children?

And once again the young man with the crown holds up his hand, and when all is quiet, says:

"Let all the creatures given to Man by the Creator live together with us in friendship!"

Whereupon the girl and the young man come down from the mound and head over to the shelter where they stayed while working out the design.

<sup>5</sup>*khorovod* (pronounced *hur-a-VOI*) — a circle dance accompanied by choral singing, traditionally popular among Russians, Ukrainians and Belarusians.

After these words, out from the circle of people standing around someone approaches the couple, accompanied by an old dog and a pup. The dog is one that greeted the couple in a friendly way on their tour of the domains and which they have taken a great liking to.

The visitor bows and presents the bride with the puppy. At his signal the old dog goes and lies down at the young man's feet. This dog has been trained to help Man teach all the other animals."

The young man orders the dog to sit by the entrance to the shelter, and presently the girl lets the puppy inside. Other people approach the shelter one by one, carrying in their arms a kitten or a lamb, or bringing a colt or a bear cub on a lead.

People quickly fashion tree branches into a wicker fence to attach animal pens to the shelter. And soon the dwelling which just a short time ago was used by people as sleeping quarters is now filled with young animals. And there is tremendous significance in this. For in mixing with each other this way, these animals will forever live together in friendship, caring for and helping each other. No mysticism in this. It is the law of the Creator of Nature. After all, you can find examples of this even today. If a puppy and a kitten grow up together, they will remain friends as adults.

One of the other characteristics of the Vedic period was that people were fully aware of the purpose of the various creatures. And all animals served Man.

Man did not bother feeding the animals; on the contrary, they fed *him*. During the Vedic age both Man and his household pets were vegetarians, and never ate meat — they would not even think of it. The tremendous variety of plants around were able to supply Man's taste abundantly — not only his, but that of the animals surrounding him.

In this instance the bride and groom are presented by the residents of the two villages with the best they have.

After accepting the gifts, the young couple once more ascend the mound:

“Our hearty thanks to everyone,” the bridegroom expresses their gratitude to those gathered. “Thank you all for co-creating this Space. My descendants will care for it over the centuries to come.”

“Our thanks to the mothers who bore the creator,” says the bride.

And, turning to the young man, she adds:

“For the joy of the Creator of the Sun, the Moon, the sprinkle of stars in the sky and our most beautiful Earth, we shall co-create everything you are able to think of.”

“Together with you, my splendid goddess, and with people!” the young man answers, and adds:

“You alone are capable of inspiring my dreams.”

Once again the young couple come down from the mound. They are immediately surrounded by their respective families, all congratulating them.

And the people dance a *khorovod* around the plot, accompanied by a joyful song.

By this time it is getting on toward evening. The young people each go back to their own home. For two nights and a day they will not see each other.

Upon reaching home, after having spent so much effort creating, the young creator falls into a deep sleep. His beautiful bride does the same in her own bed.

Those who remain at the spot where the co-creation took place in love will go on singing songs in a *khorovod*. Older couples will go off by themselves with resurrected memories of how it all happened to them on a similar day of their own.

And over the course of the following night and day the best craftsmen from both villages will build the couple a little house to the accompaniment of songs and the *khorovod*. They will fit the rows of timbers tight together, the moss and

grass between them making a sweet-smelling bouquet. And by the end of that day the women of the villages will place the best fruits of their harvest in the new home. The two mothers will cover the bed with a linen counterpane. And by the second night every last one of the visitors will be gone from the domain.

In the meantime, after a good night's sleep, the young man awoke on this day to see the Sun rise over the Earth, illuminating his parents' house with its glad rejoicing. His first thought was for the crown he had been given the day before. He took this and put it on his head, smiling at everyone, the picture of bliss.

Accompanied by his brothers and sisters he went over to a nearby stream to wash in fresh spring water. Passing through the garden on his way back to the house, Radomir caught sight of his mother.

With a restrained smile the mother began admiring her son.

Whereupon the young man, bursting with excitement, could no longer restrain himself at the sight of his own mother. He picked her up in his arms with delight. Spinning around like a child, he exclaimed:

"How marvellous is life all around, my dear Mama! Mama!"

"Oh!" his mother exclaimed, breaking into a laugh. Grandfather smiled behind his moustache. Grandmother then approached the happy pair, carrying a beautiful carved wooden ladle, and said:

"Young god of ours, stop right there. You must spare your gladsome energies. Drink this tea of calming herbs, so that your energy does not burn you. Its time will come the following day."

After drinking the tea, the young man began conversing with his grandfather about the Universe and the meaning of

life. But the tea soon inclined him to sleep. And the young man whom his grandmother called a "young god" had soon nodded off to sleep on the hand-crafted counterpane.

What was happening? Why did the grandmother call her grandson a 'god'? Was she exaggerating, delighting in her admiration of the young man? Not at all! It was simply the case that her grandson had done deeds worthy of God's name.

God had created the Earth and everything living and growing upon it. And with all the knowledge he had assimilated from his forebears, the young man was able to distinguish the purpose and function of a multitude of creations, much to the delight of the Creator. This enabled him to create from them a marvellous living oasis, one capable of bringing joy not only to him and his beloved, but also to the generations of their children, and to people who would over the centuries look upon this splendid domain which was created with love.

Could any of all people's deeds on the Earth have delighted God more? What better and more significant thing could a Man do within the space of one human lifetime on the Earth?

In the Vedic culture the wedding rite was no occult ritual. As an aspiration to the likeness of the Divine being it is of tremendous practical significance.

In showing his knowledge and aspirations to the people gathered, the young man in love was, in effect, being tested in front of them. His deeds showed that he included the knowledge of all the generations of his family beginning with its pristine origins. And he added his own contribution too. His creation was appraised as worthy by all the people, and it was with great joy that they planted trees and herbs in the spots he indicated. And the marvellous co-creation will flourish each spring in ever more beautiful form.

Yet for all this, not a single neighbour would feel the slightest envy at the sight of it, since everyone has been involved

in co-creating this marvellous Space of Love. Each one now has their own little shoot they planted in the new splendid domain. When domains like this begin to multiply, the whole Earth will be clothed in God's own flourishing garden. And in the Vedic culture everyone knew that Man has been given life eternal, and that a splendid life repeats itself when those living now aspire to beauty and perfection!

*Domains! Domains of the Vedic culture! Domains that were to be known in subsequent occult books as 'Paradise', as people lost their vast store of knowledge and imagined that this Paradise could be perceived only over the distant horizon beyond the clouds. And all to enhance the significance of so-called 'modern science' and covering up the poverty of their own thought.*

*There's no point in debating this without practical proof. But debate-settling actions can be quite simple. Let all those 'worthy' scholarly luminaries now living on the Earth try, for example, to set up just a single oasis for a single family — a task which, in the Vedic culture, every young man in love had to cope with.*

*A domain which is home to a happy family should be able to satisfy all the food requirements of everybody living in it, hour by hour.*

*Disease should not be permitted to have even a foothold. The changing reality of the scene before Man should moment by moment gladden his gaze. It should delight the ear with an infinite variety of sounds, and the nostrils with flowering fragrances.*

*And provide ethereal food for the soul, nursing the newborn and preserving love for ever. And so no member of the family should be wasting their energies on mundane concerns — their thought should remain free. 'Thought is given to all people for creative purposes.*

*The world of academe takes pride in its illusions:*

*"See, our ships are flying into space for the benefit of mankind!"*

*"For mankind's benefit, you say?"*

*"See all those bombs going off? They are to protect you!"*

*"But are they really to protect us?"*

*"See how this learned doctor has saved your life!"*

*But up to that point life was in the process of being annihilated, moment by moment, by everyday concerns. They saved the life of a slave to prolong his suffering.*

*The world of academe is in no position to create even the similitude of a splendid domain because, again, there is a law of the Universe which says: A single Creator inspired by love is stronger than all the sciences combined, which are deprived of love.*

Now the newly-wed young man has slept his second night, his deep sleep undisturbed by anything. Only the image of his beloved sparkled and flashed like the stars. In his sleep this image merged with the Space they had created, the might and infinite variety of the Universe.

Radomir awakes before dawn. And without a word to anyone, he puts on his garland and picks up a shirt that has been hand-embroidered by his mother. Then he goes to the spring-fed stream.

The moon illumines his path through the pre-dawn darkness, while garlands of stars twinkle in the heavens. After washing in the stream, he puts on his shirt, and quickly makes his way to his sacred creation. The heavens begin to brighten.

And there he stands alone on the spot where the two villages recently celebrated their joy — the place he created through his dream.

The power of the feelings and sensations within a Man at such a moment can scarcely be comprehended by anyone who has not experienced them at least once for himself.

It can be said that these sensations and feelings are Divine in nature. And they increase in quivering anticipation of the first ray of dawn, in which... *There she is! His marvellous Liubomila!* Illumined in the dawn's rays, she runs to greet him and their co-creation.

This vision incarnate runs to meet Radomir. While perfection, of course, knows no real limit, it seems as though time has suddenly stopped for the two of them. Enveloped in the

mist of their feelings, they enter their new house. The table is spread with delicacies, and a tempting fragrance of dried flowers wafts from the embroidered counterpane on the bed.

“What are you thinking about right now?” she asks him in a heated whisper.

“About *him* — our future child,” and Radomir gives a quiver as he looks at Liubomila. “My, how beautiful you are!” No longer able to contain himself, he very tenderly touches her shoulder and cheek.

Both are enveloped in the warm breath of Love and carried away to unknown heights.

Nobody in a million years will ever be able to describe in detail what happens between *him* and *her* when, merging into one in the impulse of mutual love, two people work out the likeness of themselves and God.

But the god-people of the Vedic culture knew precisely that after the inexplicable miracle takes place, merging two into one — each of them still retains their individuality. And at the same time, for one inexplicable moment the Universe quivers at the sight: the soul of a newborn child runs trippingly, barefoot, through the stars to the Earth, *embodying in himself the union of two — plus a third — as one.*

This act of sanctifying the union of two people in love during the Vedic age can by no means be considered a manifestation of the occult. It was an entirely rational act, corresponding to their way of life. The ever-increasing feeling of love for one another in every family coupling bore witness to the level of this culture.

In our modern day this feeling of mutual love in married couples always tends to dissipate after a while. The energy of Love is no longer within them. And this is something accepted as a given by human society. But this scenario is unnatural to Man. It tells us that the lifestyle people lead today is unnatural.

A loving couple in the Vedic culture realised not with their mind but with their heart and soul that the spark of the feeling of Love is a call to a Divine co-creation.

Take note of what the couple originally aspired to. Together, in an impulse of inspiration, they mentally worked out their design — the design of a Space for their love. It was in this Space they had created that their child was conceived. Three significant feelings of love merged into one for eternity. After all, a Man — for reasons he cannot explain, even to himself — retains a strong reverence all his life for his family domain — his Motherland, for his child and for the woman with whom all this was co-created. It is only three feelings of love, not a single feeling all by itself, that can live for eternity.

The birth of a son or daughter to a Vedic-age family was also the occasion for a grand celebration and a life-significant rite. And there were many other celebrations back in those days. And there was absolutely no marital infidelity. Millions of happy families made the Earth a delightful place. It is the ranks of historians today, in their efforts to please the powers that be, who say that Pristine Man was once stupid, that this Man killed animals, ate their meat in a frenzy and dressed himself in their skins. A monstrous lie is necessary to people trying to cover up their monstrous deeds.

### **Raising children in the Vedic culture**

Mankind is ever looking for a perfect system of raising children. It endeavours to seek out the wisest teachers, and

then hands over its children to be raised by them. And you, Vladimir, in preparing to talk with your son, spent five years seeking out the best system of child-raising. A system capable of explaining everything to you and teaching you how to communicate with your own birth son. And you kept on asking advice from recognised teachers and various scholars. But not one piece of advice, not one system did you find satisfying or indicative of perfection. Doubts came to you with increasing frequency: *If there did exist a perfect system of education, many people would surely be using it. And somewhere on the Earth there would be living a people that is truly happy. But it seems that in every society all you find is the same or different kinds of problems. You have to search for a happy family — it is like looking for a needle in a haystack. So that means there is no miraculous system of child-raising, and there is no point in searching, since there is nothing to search for.*

Forgive me, please: I had no other choice but to keep track of your thought the whole time. I was trying to determine through you what leads people away from what is so obvious.

And then one day I felt you thinking: *Lack of trust and fear of making a mistake are what make people hand over their children to schools and academies so that afterward they can blame their teachers — anyone but themselves.*

On another occasion I saw how you turned pale and became scared stiff at the thought that children are raised by their parents' and society's lifestyle. Your thought was true and accurate. But you were afraid of it, you kept trying all along to forget about it. But you did not succeed in forgetting what is all too obvious.

Then you tried disagreeing with your own thought. You reasoned like this: *How is it possible to become a scholar, an artist or a poet? How can one learn about astronomy or history without studying at a special school?*

But you were thinking in terms of subject categories of knowledge, and they are not the most important in raising children.

Much more important is the culture of feelings, which are capable of compressing all knowledge into a tiny nucleus. You were in a position to understand this since you yourself are a vivid example of what I have been saying. After all, you were able to write a book without studying in a special school.

You and I spent only three days together in this glade, and now you are a writer, known in various lands. You can step out in front of a huge audience including prominent teachers, scholars, poets and healers. And you can go on speaking to them for as long as three hours or more. And people listen to you with rapt attention. You are often asked questions such as: *How can you hold an infinite store of information in your memory? How can you recite pages of your books from memory without a copy in front of you?* You generally responded to such questions with a mumble. But you concluded within yourself that I must have been working some kind of invisible charms on you. In fact, everything that happened to you is a good deal simpler than that.

During those first three days you were with me here in the taiga, on all three days it was the Vedic school that was exercising an influence on you. And it is certainly not pushy or intrusive, and it does not have any treatises or dogmas. It is capable of transmitting all information through feelings.

At times you would get angry, or get excited and laugh, or become fearful. And every time a new feeling arose in you, new information was taken in. That information was truly vast in scope. It is being revealed only later on, when you remember the feelings it aroused in you at the time.

Feelings, after all, represent a tremendous amount of concentrated information. And the clearer and stronger the feeling, the more knowledge of the Universe it contains.

For example, remember that very first night in the taiga, when you awoke and saw the she-bear beside you. Right off you were frightened. Please take note and think about those words “right off you were frightened”.

But what *is* this feeling of fear? Let us try translating it into informational terms. What do we get then? You thought: *Here beside me is a huge beast of the forest. It weighs considerably more than my body weight. Its paws are far stronger than the muscles of my arms. A beast of the forest can be aggressive, it can attack me and tear my body apart. I am defenceless. I had better jump up and run.*

To make logical sense of this whole tremendous amount of information requires not just a moment, but a considerably longer time. But this same information, when compressed into a feeling — in this case, fear — allows one to react instantaneously to the situation. When one experiences a vivid feeling, a large amount of information passes through Man in a flash. It would require a whole scholarly treatise just to describe it, which could take years to work out without the aid of feelings.

A correct complex of feelings sequenced in the right order can multiply a Man’s existing store of knowledge by a thousandfold.

For example, your fear of the bear passed as instantaneously as it arose. But what made it go away? After all, it was not natural for it to go away. You were still in the taiga as before, still defenceless, and the bear was not far away — besides, there might be a multitude of other beasts out there in the forest.

But that sense of fear in you was instantaneously replaced by a feeling of security. You felt this sense of protection even more strongly than when you were on your boat, or in the city, surrounded by armed guards.

This feeling of protection came over you just as instantaneously. It came over you just as soon as you saw that the bear took pleasure in carrying out my orders, reacting to my

words and gestures. The feeling of protection enabled you to perceive information in a whole new way. A detailed description of everything that happened to you could fill a great many pages of a scientific treatise. And in your books you have devoted quite a few pages to the animals' relationship to Man. But the theme is infinite in scope. In terms of feelings, however, it can be expressed in the twinkling of an eye.

But something still more significant took place. Within the space of just a few seconds two opposite feelings turned out to be in perfect balance. I became to you someone in whose presence you could feel completely protected, even though at the same time one you could not fully explain and even found a little frightening.

The balance of feelings is very important. It is a confirmation of Man's equilibrium, yet at the same time, as though constantly pulsating, feelings engender more and more streams of information.

The culture and way of life of each family in the Vedic civilisation, as well as the way of life of the whole human society of the time, constituted a most remarkable school for the raising of the next generation, an intense régime of self-perfection for Man, advancing him to the act of creation in worlds of the unfathomable Universe.

In the Vedic age children were not raised the way they are in our schools today, but through participation in merry festivals and rites. These were either celebrations within a single family or ones where the whole community took part, or several neighbouring communities together.

More specifically: the multitude of celebrations during the Vedic age were crucial tests for both children and adults, and a means of information exchange.

The way of life in the family and the preparation for these celebrations afforded the opportunity to acquire a tremendous systematic store of knowledge.

Children were taught without the compulsion they feel when they are made to sit and listen to a teacher against their will. The learning process unfolded moment by moment for both parents and their children, cheerfully and not obtrusively. It was something desirable and fascinating.

But it did include some methods that would be considered unusual today. Ignorant of their tremendous significance for Man's education, modern scholars might call parents' actions during Vedic times superstitious or even occult-like.

For example, *you* thought that way and were very concerned when you saw our son, still so very young and helpless, as yet unable to stand on his own two feet, being picked up by the mighty eagle. The eagle held the little boy in its claws, and circled over the glade, rising and descending by turns.<sup>6</sup>

That happened with children in all Vedic families, though they did not always employ eagles for this purpose. They might be able to show the Earth from on high from the top of a mountain, if there happened to be a mountain close to where they lived. Occasionally a father might take his infant son or daughter and climb to the top of a tall tree. Sometimes they would build a special tower for this purpose. And yet the effect was more dramatic when an eagle circled over the ground with an infant in its claws. In just a moment or so the child would experience a whole gamut of feelings, and in that very moment he would take in a whole multitude of information. And when he was older, he could discover this information within him through these feelings whenever he wanted, whenever the need arose.

Remember, for example, I showed you what a perfect design the handsome Radomir created together with his bride Liubomila for their domain. I told you that the most recognised scientists in the world today are unable to create

<sup>6</sup>See Book 3, Chapter 15: "A bird for discovering one's soul".

anything like that. They would not be able to do it even if they all joined together as one.

But how could the young man bring about such a miracle back then? Where did he acquire the knowledge of all the plants, the significance of the winds, the functions of the planets and so much else besides? After all, he never sat at a traditional school-desk. He did not study science. Then how did the young man learn the purpose of each and every one of 530,000 species of flora? He might make use of only nine thousand of them, but he could accurately tell the interrelationship each species had with the others.

Naturally Radomir had been observing his father's and their neighbours' domains right from childhood. Yet he never wrote anything down, and did not consciously memorise anything. He never asked his parents what grew for what purpose, and they would never vex him by preaching at him. And yet this young man in love still managed to create his own domain, and even a better one than his parents had.

Please do not be surprised, Vladimir! 'Try to understand. You see, Radomir did not set forth a logical plan for his garden, although indeed it turned out that way in his domain. What happened was that Radomir outlined through his feelings a splendid picture for his loved one and his future offspring. And in this his flight with the eagle over his family domain contributed to his impulse of love, to his inspiration.

During the time the infant Radomir looked down from the height of the eagle's flight on the landscape of the domain, a picture was being imprinted on his subconscious just as on a reel of movie film. He was still not able to appreciate the beauty of the scene with his mind. *But his feelings!* His feelings were able to scan all the information from the variegated countryside below into a permanent imprint. And through his feelings, not through his mind or intellect, he was able to perceive what he saw as beautiful.

Not only that, but there amidst the beautiful landscape seen from the sky stood his very own Mama, smiling at him. What can be more marvellous for a little one than his mother's smile? And his mother was waving to him. Yes, that was *her!* The one whose breasts contained warm, life-giving milk. For a suckling child, nothing could be more marvellous than that. And from the height of the eagle's flight everything the young Radomir beheld seemed to him to be a single whole, inseparable from his Mama. In the twinkling of an eye the knowledge of this part of creation entered into him with a flash of exhilaration.

Young people displayed great competence in such modern sciences as zoology, agronomy and astronomy. People also appreciated their artistic taste.

Of course, there were also professional teachers in the Vedic age.

During the winter, elderly people who were especially learned in various disciplines would come to the community. Each settlement had a common meeting-hall, where they could set forth their wisdom. And if one of the children listening to them suddenly showed a special interest in astronomy, for example, the teacher would go and talk to the child's parents in their home. The teacher would always be warmly welcomed in the home. This scholar would talk about the stars with the child as many hours and days as the youngster wished. And there is no definitive answer to the question as to who learnt more from whom during these discussions. After all, it was with considerable respect that the great elderly scholar asked questions of the child. He could argue with him without being preachy. In the Vedic age there was no need to record the discussion, or the conclusions or discoveries arising therefrom. Free from daily routine and the multitude of concerns that occupy us today, the human memory could take in a great deal

more information than the best computers that have been invented in our times.

Besides, any discoveries made, provided they were rational, were at once shared with everyone to use and put into practice.

The parents and other members of the household might also listen to these scholarly discussions, and sometimes even contribute to them, albeit tactfully. But still, it was the child who was inevitably the centre of attention. When a budding astronomer came to what the adults judged to be a wrong conclusion, they might say something like: "Excuse me, I can't understand you."

The child would try to explain. And it often happened that the child would prove himself right.

As spring approached each year, all the residents of the settlement would gather in the common meeting-hall and take note of their children's most recent achievements. Reports were given during these days. A six-year-old lad, for example, might astound everyone, telling about the meaning of life like a philosopher. Children might show everyone the marvellous things they had made. Others might delight the gathering with a song or an unusual dance. You could call these acts a kind of test, or simply a time of fun for all — the label was unimportant. What was important was that everybody derived joy from the act of creating. The stream of positive emotions and revelations during this event were joyfully put into practice. To the question as to who remained the most important figure in the raising of children, one could confidently answer that it was the culture and way of life lived by families in the Vedic age.

What lessons can be drawn from that culture for children of our present day? Which of our current systems of child-raising is the best, can we say? Judge for yourself, none of them is perfect. Mind you, when we distort the history

of mankind, we cause children to lie to themselves. And we force their thinking into a completely false way. And that is why we suffer and cause our children to suffer too.

Above all, everybody ought to know the truth about themselves. Without truth, life bogged down in false dogmas is like a hypnotic sleep.

The sequence of three pictures in children's textbooks needs to be rearranged. The history of people living on the Earth needs to be presented to children correctly, for a change. First of all one must verify in one's own heart the accuracy of what has been reported. And then once children have learnt the essence of this history undistorted, a new path must be selected in consultation with them.

Children's books about the history and development of the Earth and its people tend to feature three pictures that are far from harmless. Consider what these pictures impress upon them from a very young age:

The first picture shows an impression of Primitive Man. Take a look at how he is portrayed: he stands there all covered with thick hair, with a beastly grin and a dumb expression on his face, holding a wooden club and surrounded by the bones of the creatures he has killed.

The second picture features a Man clothed in armour, carrying a sword, a dazzling decorated helmet on his head. He is off to conquer cities with troops under his command, while a crowd of slaves bows low before his hand.

In the third picture Man is shown with a noble face and an intelligent expression. He is healthy-looking, and dressed in a suit, and surrounded by a multitude of appliances, contrivances and mechanical gadgets to boot. Happy and delightful is the overall impression of modern Man.

All three pictures are false, as is the sequence in which they are arranged. This whole lie is stubbornly, rigidly and deliberately drilled into our children. Later I shall be able to tell you

who is responsible and why they find this lie so indispensable. But first I want you try to verify the accuracy of these three pictures using your own sense of logic.

Judge for yourself: the trees, bushes and grass you can still see today in their primitive form. Even though they are billions of years old, you can still look at them and delight in their perfection.

What does all this tell us? The works of the Creator were made perfect right from the very beginning. And so? Did He make Man, the favourite of all His creations, to be some kind of monstrosity? Of course not! Right from the beginning, Man, the most perfect work of the Creator, was the most glorious creation on the Earth.

The first picture ought to show history as it actually was: it ought to show a family of happy people, with a look on their faces expressing both intelligence and child-like purity. And love on the faces of both parents. Human bodies in harmony with their surroundings, striking in their beauty and graceful power of spirit. A flourishing garden all around. Creatures always on the alert to render service with gratitude.

The second picture, too, should present to children an image of historical fact — two armies in monstrous armour rushing at each other, their commanders standing on a height of land, being entreated by priests. Some of their faces show fear and disorientation, while those of others, after yielding to the priests' entreaties, are inflamed with a beastly fanaticism. In just a moment a senseless slaughter will begin. People will start killing their own kind.

The third picture shows people in today's world. We should see a group of people of pale and sickly countenance in a room filled with an array of artificial things. Some have extremely obese figures, others are bent over, faces are full of heaviness and gloom. The kinds of faces you see on most passers-by along big-city sidewalks. Through the window one

can see cars exploding on the street. And dirty ashes raining down from the sky.

All three of these true pictures of history should be shown to the child and the question asked: "Which of these lifestyles would you like to live?"

The pictures are only arbitrary illustrations. Of course the child should also be told the true account, sincerely and skilfully presented. The child should know the whole history of the human race without misleading distortions. Only after that can his actual education begin. The question should be asked: "How can we change the situation today?"

And the child will come up with an answer — not right off, not in the twinkling of an eye. But he will find it! Another thought will take over — a creative thought. Oh, the raising of children!... You see, Vladimir, just a single sincerely asked question, together with the parents' desire to hear their child's answer, is capable of uniting parents with their children — of making them happy — for ever. This joint quest for happiness is infinite. But even the beginning of the quest can be called a state of happiness.

Everybody today should learn their true history.

## Rituals

At a later period the occult priests undertook tremendous efforts to distort and besmirch the significance of the ritual acts of Vedic times. They started a rumour, for example, that the Vedic people mindlessly worshipped the element of

water. And that they held a yearly sacrifice of young girls who had not yet known love, throwing them into a lake or a river. Or that, tying them to a raft, they pushed them off from the shore and despatched them to their doom.

The element of water — a lake or a river — was indeed connected with many acts among the Vedic people. But it had a completely different significance — in support of life, not death. Let me tell you about just one of these. It is still practised today in a superficial form. But the resemblance is only superficial. In today's variant its great rational and poetic significance has been replaced by obscurity and occultism.

In various countries today there is a celebration involving water, whereby wreaths or small rafts with beautiful lanterns or candles are set afloat on a water surface and pushed away from the shore in a plea to the water to grant good fortune. But let us see where this particular celebration originated and how rational and poetic a significance it had in its pristine form.

In Vedic times it sometimes happened that one or two girls (how many is of no importance) did not find someone they could love within their own community. And even at large festivals involving several communities they did not succeed in choosing their intended. This would not have been on account of a limited selection. Indeed, they were presented with a whole array of splendid young men with intelligent countenances — almost like gods, who shone in their celebratory performances. But while the heart and soul of the girl in question were filled with great expectations, they were not visited by love. The girl was dreaming of someone, but of whom? She herself did not know. Even today, no one can explain the mystery or freedom of choice inherent in the energy of Love.

This is why on a designated day the girls would go down to the river, and in one of the little bays set a small raft afloat. Its

edges were decorated with a garland of flowers. In the middle stood a small jug of wine or fruit infusion. Pieces of fruit were placed around the jug. The drink was to be prepared by the girl herself, and the fruit to be plucked by her from the trees she had planted by her own hand in her family garden. She might also place on the raft a woven linen headband, or some other object, but it had to be something made with her own hands. Lastly she would place on the raft a little *lampadka*.<sup>7</sup>

Around a fire burning on the shore the girls danced their *kborovod* and sang about a beloved of whom they were not yet fully aware. Then, taking one of the branches burning on the fire, they lit the wick of the *lampadka*. They pushed their rafts out of the bay into the mainstream of the river, where the current would catch it and tenderly convey it down to the river's farthest unknown reaches.

And each girl followed her raft with a hopeful gaze as it receded into the distance, until only the little light of the *lampadka* was still visible. But the girls' hearts were aflame with the fire of hope. A feeling of joy and tenderness grew within, directed to one whom they were yet to know.

Hastening back to their homes, the girls retreated to their rooms and excitedly began preparing for the anticipated meeting. He, the desired one, might come with the dawn or at sunset time — the hour did not matter. But how did it happen? What would draw him to her? Was the meeting the result of mysticism or rationality? Or perhaps of the knowledge to which the Vedic people had access through their feelings? Decide for yourself which way.

After all, the girls' rafts were carried along by the current on specific days. All the communities, even the distant ones, were aware of these particular days.

<sup>7</sup>*lampadka* -- a small vessel filled with tree oil and a wick which could be lit.

Their journey might last a day, or two or three. On all these days and moonlit nights young men who had not yet known love were waiting hopefully in their loneliness all along the river's bays.

Upon seeing the little lights in the distance being carried along by the current, a young man would at once leap into the water and swim toward the little lights of love he had seen. The current did not inflame the young man's heated body, but tenderly cradled it with the transparent water of the stream. Closer and closer came the little lights and now the young man could make out the outline of the rafts — each one prettier than the next, it seemed. He chose one of them. It was not clear why this particular one fell under his special esteem.

He drew the raft from the middle of the stream to the shore, either pushing it with his hand or nudging it along by pressing his cheek to its side. It seemed as though the river current was engaging him in play. But his body was constantly being arrayed with strength, more and more, and he scarcely noticed the river's play. Besides, his thought was already on the shore.

Placing the little raft carefully on the land, the young man snuffed out the *lampadka*, took an excited drink from the jug and quickly headed home to prepare for his journey. He took with him whatever he had found on the little craft. Along the way he took a taste of the fruit, and was thrilled by its taste.

By and by he arrived at the village from where the raft had been launched, and was able to accurately determine which garden and tree whose fruit had sweetened his journey.

*Aha!* — some might wonder — *one cannot escape mysticism entirely: how on earth could young men of that time find their future loved ones with such accuracy?*

One could say that it was Love leading them by a path known solely to Love. But I can simplify the explanation — the *lampadka* also played a role. Notches had been cut in the

small vessel carrying the brightly burning wick floating in the oil, so that everyone could tell how long the *lampadka* had been alight. The speed of the river's current was also widely known. It was a very simple calculation, and quickly executed. For a young man of the Vedic age, it was no task at all to find in the village the particular tree from which the fruit he had eaten had been plucked.

Pieces of fruit resemble each other only superficially. The fruit of trees and plants of the same species, even two trees growing side by side, can show marked differences in shape, colour, fragrance and taste.

There is only one thing that cannot be explained with complete accuracy. How was it that *he* and *she* always fell in love with each other upon meeting for the first time? And their love was extraordinarily passionate.

"It is all quite simple," a philosopher of the present day might say. "Their feelings for each other were already being set afire by their own dream even before they met."

But back then a wizened wise-man would have responded to such a question with a wink: "Our river has always had a mischievous streak in her!"

Of course, if he wanted to, the wise-man could always go into the details of each moment of the ritual I have told you about and explain the purpose of each one of those moments. He could write a great treatise on it. But no wise-man would bother wasting his thought on such a venture. The whole point is, Vladimir, that they... *They did not analyse life, they CREATED it!*

### **Feeding life in the flesh**

People living in the Vedic age did not know a single disease of the flesh. Even at the age of a hundred and fifty or even two hundred years they maintained a lively spirit, a joy of living, and remained completely healthy. They had no doctors or healers such as exist in great numbers today. Diseases of the flesh were impossible because the way of life in one's own domain, the natural Space of Love which they themselves had established, completely regulated their intake of food. Man's body was supplied with everything it needed in the required quantity and at the time most favourable for its consumption, and at the most favourable planetary alignment for the intake of food.

Take note, Vladimir: in Nature it is no arbitrary phenomenon that during the whole spring, summer and autumn seasons the various plants mature and bring forth their fruit in a particular sequence.

First come the blades of grass — the dandelions, for example. They are also pleasing to the taste, especially when mixed with winter fare.

Then we see early currants maturing, wild strawberries and raspberries — both earlier in the full sun and later in the shade; sweet cherries; later sour cherries and a great many other fruits, herbs and berries, all of which, at the appropriate moment of their own choosing, attempt to attract human attention by their unusual shape, colour and fragrance.

There was no science of nutrition back then. What and how much one should eat and at what time — that was not something anyone even thought about. And still Man consumed everything needful for his body, with an accuracy down to the last gram.

Each berry, little herb and piece of fruit has its own day, hour and minute when it is the most beneficial to the human body — when it will complete the process of its own growth in conjunction with the celestial bodies. By this time it will have taken account of the specifics of what lies under the ground and of other plants growing around it, as well as of the Man that has bestowed his gaze upon it, and then evaluate and determine what his greatest needs are. And on that very day when it is ready to serve Man, Man will honour it by his acceptance, and allow perfection itself to become his food.

I have said that a woman with child should spend all nine months of her pregnancy in her own garden, in the Space she has created together with the one she loves. This is no occult mystery — it manifests the great rationality of the Divine being. Judge for yourself: in Nature there are many plants that can even painlessly terminate a woman's pregnancy — garlic, for example, oregano, the male fern, birthwort and many others. On the other hand, there are plants capable of helping the foetus develop harmoniously in the mother's womb. Which ones should be taken and in what quantity is not something anybody will ever be able to tell. *He* is the only one who knows — the one inside the mother's womb. And he is taking care of not only himself but his mother too. That is why it often happens that after having a child a mother becomes healthier, younger-looking.

In order for this to occur, the pregnant mother must definitely be in her own garden, where every blade of grass is acquainted with her and every piece of fruit grows exclusively for her. She has also come to know each one's taste and fragrance. Her desires are quite natural and are in the best position to determine what kind of food she needs to take in and in what quantity.

Such accuracy is not possible in someone else's domain or garden, even if the vegetation in that garden is many times richer

and more diverse. Besides, another factor making the ideal food intake impossible in another garden is that before consuming a particular berry or piece of fruit the woman will try it first.

Take an apple, for example. If she wishes to eat it, she plucks it from the tree and takes a bite. After swallowing the bite she at once feels that here is something her body does not need and has thereby caused harm to herself and to her child. Why does this happen? The fact is that even outwardly similar pieces of fruit can be made up of different substances. In her own garden, having tasted fruit from the various trees on a number of occasions, she could not make such a mistake. In another garden mistakes are inevitable.

What kind of law or knowledge provided such fine-tuned assistance in feeding Man at that time? It was the absence of laws and treatises! Man could depend only upon the Divine. Today they say that Man is in unity with — is at one with — Nature. But what is this unity right now — have you ever thought about it? In today's day and age Man consumes mainly artificial food — only what the system offers him as convenient to itself. And the schedule of consumption of food is also artificially determined by this artificial system.

Back then, in the Vedic age, everything was determined for Man by his God-given feelings. And the slightest sensation of hunger was satisfied by the Space of Love back then. After all, Man's feelings, in harmony with his Space of Love, could determine down to the minute — as accurately as the most perfect mechanical device ever invented or the smartest instructions ever penned — what food Man should take in and when.

Whenever Man walked through the Space of his own co-creation, his free thought could create or work out plans on the scale of the Universe. Temptingly beautiful fruit surrounded him. Intuitively he would pluck and eat a sample, or two, or three, without having his thought distracted by these sweet delicacies supplied him by God.

Back then, Man did not think about food. He fed himself in much the same manner as we today breathe. The Space he had created, in conjunction with his intuition, accurately worked out how and when the flesh should be fed.

In the wintertime the whole multitude of plants freed itself from its fruit and foliage in preparation for rest. Winter was for the creation of the spring to come.

But even in winter Man did not waste his time thinking of food, even though he did not prepare any comestibles in advance. All this was done for him by household creatures with great effort and love. Squirrels amassed a whole collection of nuts and mushrooms. Bees collected honey and flower pollen. Every autumn the bear would dig root-crop storage cellars.

Upon awakening in the spring, the bear would come to the Man's dwelling and either give a low roar or knock lightly with his paw upon the door. The bear would summon the Man, who would in turn show him which of the cellars should be dug up. Perhaps the bear had forgotten where he had stored away the food. Perhaps he was longing for communication with Man. Any member of the family might come out to him in response, but most of the time it was the child. After giving the hard-working beast a pat on the muzzle, he would go to the place designated by a marker and stamp his foot on the ground. The bear then began scraping the earth away in that spot and opened up the stores. Upon seeing his accomplishment he would jump all around for joy before delivering the stored food up to the surface with his paw. But he would not be the first to partake of the food — he would wait until Man began carting off at least some of the goods to the house.

Man himself could also prepare provisions, but this was not so much work as an art form. Many families would produce their own wine and infusions from different kinds of berries. Such wine was not strong and intoxicating like vodka. The result was a most healthful drink. Useful food provided to

Man by animals included milk, only not from just any animal. Man selected only those that were considered kind, tender and keen of mind — those who demonstrated an eagerness to offer Man what they produced.

Let us say one of the children or the elders of a household went up to a goat or a cow and touched its udder, and the animal suddenly began moving away. Man would not attempt to drink the milk of any animal that did not want to share it with him. This did not mean that the animal did not love the Man. It often happened that animals subconsciously determined that at that moment the composition of their lactic mixture would not be useful to the Man.

People of the Vedic civilisation would feed themselves from the various kinds of food growing only on their own plot or produced by their household animals. This approach was not determined by any kind of superstition or law. Rather, it was the result of a vast store of knowledge.

Though there is a difference between ‘knowing’ (*znat*) and ‘being fully aware of’ (*vedat*) something.<sup>8</sup> ‘Being fully aware of’ is not just to ‘know’. It is to feel with one’s whole being — body and soul — a multitude of phenomena, the purpose of each Divine creation, as well as His system.

And every Man of the Vedic culture was fully aware that what he consumed as food not only fed the body, but filled the soul with conscious awareness. At the same time it conveyed information directly to him from all the worlds of the Universe.

<sup>8</sup>The words *znat*’ and *vedat*’ in Russian are often used interchangeably in the sense of ‘know’, whereas in fact there is a significant distinction between them, as Anastasia points out here. While *znat*’ specifically refers to ‘knowing’ through the mind or logic, *vedat*’ (from an ancient Sanskrit root) covers other kinds of knowing as well — inspiration, intuition, emotional feelings etc.) — in other words, not just ‘knowing’ per se, but being *fully aware* of all dimensions of a subject through the various channels of knowledge available.

This is why these people were many times superior to their modern-day counterparts in terms of inner energy, keenness of mind and quickness of thought.

The animals and plants living in Man's family Space reacted to Man as to a god. The animals, herbs and trees were constantly thirsting for a tender look or a kind touch on Man's part.

And this power of the energy of feelings was what prevented unwanted weeds from growing in the garden or vegetable plot. Many people are now aware how a household plant can suddenly shrivel up when it meets with disfavour on the part of someone in the family. On the other hand, a feeling of love and communication directed toward the same plant can cause it to flourish.

This is why the Vedic people never went near their garden with a hoe. Even today, we have expressions such as 'give someone the evil eye'. It originated in those times. People could create a lot through their energy of feelings.

Suppose a Man is walking through his domain. Everything around catches his kindly gaze. He might look at a weed, and think: *Why are you here?* The weed would quickly wither from sorrow. On the other hand, if one were to smile at a cherry tree, it would cause its sap to run through its veins with twice the energy as before.

And if someone among the Vedic people happened to set out on a long journey, that Man would not bother to take along a supply of food. He would be able to find more than enough along the way to feed himself. Whenever he came to a settlement, he would see the splendid domains and ask for food and drink. It was considered an honour to serve tasty fruit, vegetables and drink to a traveller.

## **Life without violence and crime**

Among the people of the Vedic civilisation, over the thousands of years of its existence, there was not a single act of violence or theft, or a mere fight. Even insulting words were absent from people's vocabulary. Yet at the same time there were no laws to punish such behaviour.

Laws can never protect one from evil deeds. But the knowledge and culture of the Vedic peoples completely ruled out conflicts in interpersonal relationships.

Judge for yourself, Vladimir: you see, every family living in their domain was aware that should any kind of unpleasantness happen to anyone, even a stranger, on the territory of their own domain or nearby, even on the very edge of the settlement, the whole Space would then suffer.

The universal energy of aggression would have an effect on every growing thing and on everyone living in that Space. It would upset the balance of energies. The energy of aggression might grow and leave its impression on adults and children alike, and infect their offspring with illness.

By contrast, if a passing traveller leaves a feeling of joy behind, the Space will radiate even greater beauty.

Not only that, but a Man visiting another settlement would be physically incapable of eating food plucked from a tree without the owner's permission or picked up from the ground in a garden upon which he had intruded.

People of the Vedic culture had a highly refined sensitivity. Their physiological makeup would immediately notice a significant distinction in the taste of pilfered food from that served by someone's generous hand. The whole range of foodstuffs sold in our modern supermarkets has nowhere near the fragrance and taste of the pristine produce of the Vedic age. Completely indifferent to Man, it has no feeling or

soul. It does not belong to anyone and is beholden to no one. It is simply merchandise for sale.

If modern Man could actually taste and compare the food known in Vedic times, he could never eat the produce of today.

A newcomer could not, would not even think to take what was owned by somebody else without asking. Every single object, even a stone, contains information within itself known only to the family living in that particular domain.

In the Vedic civilisation, every domain was a fortress that loomed impenetrable to evil in whatever form. At the same time it served as a mother's womb for the family dwelling therein.

Nobody back then built high walls for fortification. The territory of each domain was protected by a living green hedge — a hedge which, along with everything living within its boundaries, protected the family from a whole host of harmful influences on the human body and soul.

I already mentioned to you that the bodies of deceased family members were buried only in the garden or among the trees of their own domain.

Those people were fully aware that while the human soul is eternal, the material body, too, cannot disappear without a trace. All objects, even those which appear to be soulless, carry within themselves a great deal of information from the Universe.

In the Divine nature nothing ever disappears into oblivion. It only changes its state and its fleshly form.

The bodies of the deceased were not covered with headstones, and even the places of their burial were not marked in any way. The Space created by their hands and soul served as a great monument to them.

And, changing their state, the now soulless bodies gave rise to trees, herbs and flowers. New children were born and

walked among them. Oh, how everything around just loved the children! The spirit of their ancestors lingered over the Space, loving and protecting the children.

Children treated the Space of their Motherland with love. Their thought created no illusion about life being finite. On the contrary, the life of the Vedic peoples was infinite.

The soaring soul passes through all the dimensions of the Universe, and after visiting a number of different planes of being, it is once again embodied in conventional human form.

Upon waking in the garden of his Motherland, the child will once again give a bright smile. The whole Space responds to his smile. And the little rays of light, the breeze rustling the leaves on the trees, the flowers and the stars in the distant sky will sigh: "We are at one, embodied by you, child of Divine being."

Even today people cannot figure out why elderly people living on foreign strands ask to be buried in their Motherland.

Such people intuitively suspect that only their Motherland can bring them back to the Earth in a Paradise garden, while a foreign strand rejects their souls. To have their bodies buried in the Motherland has been the aspiration of people's souls for millennia. But can a cemetery be called a piece of the Motherland in any nation?

Cemeteries are a markedly recent phenomenon, designed to tear human souls apart in hellfire, demean and subjugate them, make them into lowly slaves.

Cemeteries are like... Well, they are like cesspits, where people go to get rid of their useless junk. The souls of the dead are tormented over cemeteries, while the living are terrified of cemetery plots.

Picture to yourself, by contrast, a kin's domain of Vedic times. Bodies of many generations are buried there. Every little herb aspires to tenderly care for those living therein, to be useful to Man's life in the flesh.

But every herb and every fruit in the garden can suddenly become poisonous when faced with aggression on the part of a newcomer. That is why nobody even thought of taking anything without asking.

The domains could not be seized by force. They could not be bought for any amount of money. Of course, who would dare trespass upon a place that is capable of destroying the trespasser?

And each individual here endeavoured to create their own marvellous oasis. The whole planet grew more beautiful with each passing year.

When modern Man surveys a city from on high today, what does he see, pray tell? The whole ground covered with an accumulation of artificially erected stones. Dwellings spread in all directions — upward and outward. Here, there and everywhere lie miles and miles of vast expanses blanketed by stone landscapes. There is no clean water anywhere, and the air is polluted. How many happy families can dwell under their own piles of stone?

If one compares modern families with those of the Vedic culture, the answer is: not a single one. And one could go further: amidst these piles of artificial stone people do not dwell — they sleep.

And yet in this hypnotic sleep a single living cell still strays like a tiny nucleus through the body. Sometimes at rest, sometimes in motion, this living cell touches teeming multitudes of others, attempting to awaken those that are asleep. Its name is *Dream!* And it will awaken them! Then human families will once again create marvellous oases upon the Earth.

As it was before, so will it be again. And in looking down on the Earth from on high, Man's gaze will once again be much charmed by a multitude of living scenes. And each of these marvellous scenes will mean that the Earth has been touched in that spot by the hand of an awakened Vedruss. And once

again a happy family of people will be dwelling in their own plot of the Motherland — people who have learnt to know God and the meaning and purpose of life.

The Vedic people knew why the stars are in the sky. Their numbers included a great many poets and artists. There was never any rivalry among the communities. There was no cause for crime or violence. And there was a complete absence of hierarchical structures. The Vedruss culture flourished on the territories of our modern nations of Europe, India, Egypt and China, and there were no lines of demarcation dividing the various areas of land. There were no rulers, either important or petty. The sequence of grand celebrations provided a natural order of things.

People of the Vedic age possessed a knowledge of creation far in advance of modern Man. Their inner energy allowed them to enhance the growth of some plants and arrest that of others. Household animals endeavoured to carry out Man's commands not to obtain food, which they already had in abundance, but to receive from Man a reward in the rays of the energy of grace emanating from him.

Even today a word or gesture of praise from Man is pleasant to everyone — to people, animals and all growing things.

But in earlier times people's energy was immeasurably greater — all living things were drawn to it as to the Sun.

## CHAPTER SIX

# Imagery and trial

Toward the end of the Vedic Age of human life a great discovery began to take place — a discovery unparalleled over the whole course of the history of human civilisations on the Earth.<sup>1</sup>

People became acutely aware of the power of collective thought.

And here we must clarify: what, exactly, *is* the thought of Man? The thought of Man is an energy unparalleled anywhere in space. It is capable of creating marvellous worlds on the one hand or, on the other, weapons capable of destroying the planet. And all the matter that we see today, without exception, has been created by thought.

Nature, the animal kingdom, Man himself, have all been created with great inspiration by the Divine thought.

And the proliferation of artificial objects, machines and mechanical devices which we see today are the creations of Man's thought. You may think that it is Man's hand that has produced them. Yes, today, hands must be employed. But to begin with, everything down to the last detail is created by thought.

It is believed today that Man's thought is more perfect now than in the past. But that is far from being the case.

For each member of the Vedic civilisation it was many millions of times superior to that of modern Man in terms of the

<sup>1</sup>This chapter is a continuation of Anastasia's narrative on the history of mankind, which, with one or two interruptions, carries through to the end of Chapter 8.

speed and fulness of information involved. This can be seen in the knowledge we have taken from the past about using plants for medicines and food. But Nature's devices are far more perfect and complex than anything artificial.

It was not just that Man summoned a whole lot of beasts to serve him. It was not just a case of defining the function of all growing things. Once he realised the power of collective thought, he found that he could use it to control even the weather, or cause springs to well up from the depths of the Earth. If he were not careful in handling his thought, he could make a bird fall from the sky while in flight. Or affect life on distant stars — either to plant gardens on them or to utterly destroy them. This is no fiction, but fact, and it was all given to mankind.

Everyone today knows how Man, having launched himself on the path of technocracy, has been attempting to build space ships capable of reaching the stars.

People have gone to the Moon, but only by wasting valuable resources and energies and with great harm to the Earth. But they have changed nothing on the Moon. This kind of approach is short-sighted — it is doomed to failure and is dangerous for everyone on the Earth as well as for other planets.

There is another approach which is much more effective. Through thought alone it is possible to grow a flower on the Moon, create an atmosphere capable of supporting human life, plant a garden there and find one's self with one's beloved in that garden in the flesh. But, before that can happen, thought must transform the whole Earth into a flourishing Paradise garden. And that has to be done through collective thinking.

Collective thought is indeed powerful — in the whole Universe there is no energy that can interfere with its operation. Matter and today's technology are the reflection of collective thought. It is this collective thought that has invented all the mechanical devices and armaments we have today.

But remember I was saying that in those Vedic times every living Man's thought had far greater power and energy than now. Objects such as rocks weighing many tonnes could be moved by as few as nine people gathered together. To make it easier to use collective thought for the benefit of the majority without wasting time getting a whole lot of people to congregate in one place, people invented images of various gods and began to control Nature with their help.

The Sun-god appeared in its own image, likewise the gods of Fire, Rain, Love and Fertility. Everything needed for life was created by people through images on which human thought was concentrated. It performed many useful acts. Rain, for example, was necessary for watering the ground, and so one person directed his thought just to the image of the Rain-god. When rain was really essential, then a whole lot of people concentrated their energy on the image of rain. When enough energy had been accumulated in the image, the clouds gathered and the rain fell, watering the harvests.

Unlimited opportunity has been given to Man by the Divine Nature. If mankind could only overcome the temptations associated with unlimited authority and hold all the energies of the Universe in perfect balance within themselves, then gardens — as the fruit of human thought — would appear in other galaxies. And Man would be capable of happyfying other worlds with his thought.

What is called the Age of the Image was now coming into bloom. In it Man not only created, but felt himself to be a god. But then what else could the son of God turn out to be?

In what is called the Age of the Image, Man exists in the likeness of God and begins to create his own images. This period lasts nine thousand years. And God does not interfere in Man's deeds. All the diverse energies of the Universe are set in motion and actively try to seduce Man.

Particles of all the diverse energies of the Universe are to be found in Man. They exist in great numbers, and play opposite roles. But all the particles of the diverse energies of the Universe ought to be perfectly balanced in Man, brought together in a harmonious whole.

If one of these particles dominates, the rest are denigrated and their harmony is disrupted, and then... Then the Earth is transformed and becomes inharmonious.

Images can lead people to a many-splendoured creation, but if their inner unity is surrendered they can also lead to annihilation.

But what, exactly, is an *image*?

An image is an entity of energy invented by human thought. It can be created by a single Man or by several together.

A clear example of the collective creation of an image may be seen in stage-acting. One Man describes the image on paper, while another portrays the described image on the stage.

What happens to the actor who portrays the image invented? For a time the actor exchanges his own feelings, aspirations and desires for those inherent in the invented image. In the process the actor may change the way he walks, his facial expression, his usual clothing. In this way the invented image acquires a temporary embodiment.

The ability to create images is something only Man is endowed with.

The image created by Man can remain in space only so long as it is held in Man's thought — either by a single Man or by several at once.

The greater the number of people feeding the image with their feelings, the stronger it becomes.

The image created by the collective thought can possess colossal destructive or creative potential. It has a reciprocal connection with people and is capable of shaping character

and behaviour on the part of groups of people both large and small.

In exploiting the great possibilities they have discovered within themselves, people became carried away with creating the life of the planet.

But it happened, back in the early stages of the Age of the Image in the life of Man, that there were six people — just six — who found themselves unable to hold within their bodies, hearts and minds the balance of those energies of the Universe which God gave to Man upon creating him. Perhaps they needed to make their appearance to test all mankind.

At first it was in just one of the six that the energy of grandeur and self-importance predominated — then in another, and then in a third, and finally in all six.

They did not meet together at first. Each one lived independently. But like attracts like. And they ended up concentrating their thought on how to become masters of all the people of the Earth. There were six of them, and in public they referred to themselves as priests.

Through the process of reincarnating themselves over the centuries, they are still living to this day.

Today all the peoples of the Earth are governed by just six people — these are the priests. Their dynasties are ten thousand years old. From generation to generation they have been transmitting their knowledge of the occult to their heirs, along with the science of imagery, which was also partially known to them. They have taken great pains to hide the Vedic knowledge from other people.

Among the six there is one who is considered chief, and he is called the High Priest. Today he considers himself to be the chief ruler of human society.

Through a few sentences I have uttered which you have recorded in your books, as well as through the reaction of many

people to them, the High Priest has begun to suspect who I really am. Just in case, he attempted to destroy me by using a negligible amount of power. He did not succeed. He was surprised. And he has tried again, applying a greater amount of force, still not completely convinced of who I am.

Now I have uttered the word *Vedruss*, thereby exposing myself completely. The current High Priest living on the Earth today is afraid even of the word *Vedruss*. You can just imagine how shaken he is, since he knows what lies behind it. Now he will muster his soldiers — bio-robots to a man — along with the forces of all the dark occult sciences, to bring about my termination. And he himself will be working minute by minute on a plan of annihilation. Let him do that — it means he will not have time to be busy with his other plans.

You were telling me about the angry attacks in the recent press, Vladimir. Now you will see them intensify even more. And they will be even more cunning and sophisticated. You will see slander and provocation. You will see the whole arsenal of devices which the dark forces have been using over the millennia to bring about the devastation of our people's culture.

But what you will see at the beginning is only the tip of the iceberg. Not all people can witness the occult attacks at first hand. But you will understand them, you will feel them, you will see them. Do not be afraid of them, I beg of you. What is fearsome is powerless to affect a fearless Man. Whatever you see, you should forget immediately and forever. No matter how omnipotent a monster may seem, once it is forgotten it ceases to exist altogether.

This is an unusual fact, and I can tell you are doubting. Do not be hasty to give in to your doubts. Think it over calmly.

After all, even a small group of people who have gathered together for the purpose of building something inevitably has a leader — we may call him a ruler.

A small enterprise has an official in charge. A large enterprise has several people in charge, under a chief executive officer. There are many rulers over all sorts of territories which are known by different names: provinces, regions, states, communities, republics etc. The particular name is not important. Each nation has a ruler, who is aided by a whole host of assistants.

The *ruler of a nation* — is that the limit? That is what people often think. Does that mean nobody is governing the whole human society living on the Earth? And are there no claimants wishing to ascend the throne of the Earth?

There have indeed been claimants. There still are. You know from recent history many names of military commanders who have tried to dominate the world by force. But not one of them has ever succeeded in taking power over the world. Whenever they found themselves close to seizing universal authority, something would inevitably happen, resulting in the destruction of both the pretender to world dominance and his army.

And the nation aspiring to world domination, which before had been considered strong and flourishing, suddenly dropped to the level of a run-of-the-mill state.

That is the way it has always happened over the past ten thousand years. But why? All because there is already a secret ruler in the world, and has been for a long time. He toys with nations and their rulers, along with individual people.

He calls himself the High Priest of the whole Earth, while his five assistants refer to themselves as priests.

Consider one other fact, Vladimir. Think about how in various parts of the Earth over the millennia wars between people have never ceased. In every country crime, disease and various disasters are increasing day by day, but there has been a strict (indeed, the strictest) prohibition on discussing a particular question: *Is human civilisation really on the path of*

*progress, or is human society being further degraded with each passing day?*

There can be but one simple answer to such a question. Only first take a look and see how the priests acquired their authority and how they have managed to maintain it to date.

Their first step leading to the accomplishment of their secret purpose was the creation of the Egyptian state. The Egyptian state is more familiar than others to historians of today. But once you eliminate personal commentary and mysticism and look only at the facts, you will be able to uncover many secrets.

Fact Number One — history calls the Pharaoh the supreme ruler of Egypt. And the many military achievements and defeats of the pharaohs of old have been well documented. Even today their magnificent tombs astound the imagination and prompt scholars to probe the mysteries they hold. Nevertheless, the grandeur of the pyramids distracts us from the most important secret of all.

Not only were the pharaohs considered as rulers over all the people, but they were worshipped as gods. It was to them that the people turned with pleas for an auspicious crop year, pleas for rain and an absence of pernicious winds. History can tell us about many of the factual accomplishments of the pharaohs, but after learning all these historical facts, you should ask yourself: could any of the pharaohs really have been a ruler over a large nation-state, let alone a god over the people? And once you weigh all the evidence, you will realise entirely on your own that the pharaoh was nothing more than a bio-robot in the hands of the priests.

Now here are the facts — they are also known to us from history.

During the age of the pharaohs there also existed priests in magnificent temples, and one of them was the High Priest. There were always several candidates for the pharaohship in

training under their supervision. The priests would inculcate in the young boys whatever the priests desired — among them the notion that the pharaoh was chosen by God. Along with this they told them that the High Priest himself could hear God speaking to him in a secret temple. Later the priests would decide which of the candidates would become the next pharaoh.

And so the day of the coronation arrived. The new pharaoh, clothed in special robes and holding the symbols of office in his hands, took his place majestically on the throne. In the eyes of the people he was an omnipotent king, a god. Only the priests knew that it was their own bio-robot that sat on the throne. And having studied the new pharaoh's character from his childhood, they knew exactly how he would rule, they knew what gifts he would offer up to the benefit of the priesthood.

There was the occasional attempt on the part of certain pharaohs to come out from under the High Priest's authority. But none of them ever succeeded in becoming a free Man. After all, the power of the priests was just as invisible as the pharaoh's royal robes were visible to all. You see, the priests' authority did not require any verbal proclamation or manifest communication for its enforcement. After all, in exercising their power over any individual ruler the priests did not relent, even for a moment. And it was exercised over the masses in turn with the aid of invented suggestions as to what constitutes the order of the Universe. If only the pharaoh could have liberated himself from the images inculcated in him by the priests and reflect by himself in peace, perhaps he would have been able to become a real Man. But there was no way the pharaoh could free himself from the day-to-day cares and concerns — this had been part of the plan right from the start.

And what concerns there were! Couriers, scribes and local governors by turns brought in a daily flood of information

from all over the vast nation. Situations calling for immediate solutions. And then a war would break out, absorbing the ruler's full attention. And the pharaoh would take his chariot and keep following his daily trajectories, respecting or rejecting the deeds of his subjects, often not getting enough sleep himself. The priest, on the other hand, would spend his time quietly reflecting, and in this lay his greatest advantage.

The priest directed his efforts to gaining single-handed control of the world as a whole. And even more than that — he meditated on how to resurrect his own world, distinct from the world God had created.

And did he care in the least about the stupid boy-pharaoh, not to mention the crowds which were subject to the pharaoh? For the priest they were all merely toys.

The priests studied the science of imagery in secret, while the masses of people remembered less and less about the law of Nature.

It was these priests, Vladimir, who channelled the energy of the interaction between people and the living Deity — the creations of Nature — into the temples they had invented. They fed on it — the energy of the people — giving nothing in return.

What had been surely clear to everyone in the age of the Vedic culture now became obscure and surreptitious. The people became stupefied, as though under a hypnotic spell, and unthinkingly followed the commands in a kind of semi-sleep. And they began to destroy the world of the Divine Nature, while building an artificial world for the priests' benefit.

The priests held their science under their strictest secretive control. They did not even dare write it all down on scrolls. They invented a language of their own for communication with each other — and this is a fact you can also learn from history. They needed a different language lest someone

should inadvertently overhear their conversation with each other and become party to their secrets. And so even today these simple truths which have now become shrouded in a cloak of secrecy are passed down to new generations of the priesthood.

Six thousand years ago the High Priest, one of the six, decided to take control of the whole world.

He reasoned as follows: *There is no way I can seize power by military force, with the pharaoh's armies — even if I taught the commanders how to make use of weapons more advanced than others possess. Besides, what could an army of raving mindless dullards do? Go and plunder gold, but there is so much of that as it is. There are slaves aplenty, but there is an unfavourable energy emanating from them, and it would not be proper to accept food from the hands of a slave. The food would be savourless and harmful to health. I must bring human souls into subjection, and direct all their love and tremulous affection back to myself. But in this case it is not an army that is needed, but scientific thought. The science of imagery — that is my invisible army. The deeper I become acquainted with it, the more faithfully this army ought to serve me. The less that is known by the crowd, immersed as it is in occultism and unreality, the more it will be in subjection to me.*

The High Priest devised his plan. Even today it finds its reflection in the historical events of the past six thousand years.

You and everyone else are aware of recent events. The only difference is in their interpretation. But you should try and give your own, and then the truth will be made known to you. Look and see.

There in the council of those six priests the plan was laid out, and was later revealed to many — it is mentioned in the Bible, in the Old Testament. By order of the High Priest the priest Moses led the Jewish people out of Egypt. The people

were offered a most marvellous life in the Promised Land, prepared by God especially for them.

The Jewish people were declared to be God's chosen ones. The tempting news set minds afire, and a part of the people followed Moses, who for forty years led his people about from region to region in the wilderness. The priest's assistants constantly preached sermons about their being a chosen people and inspired the people to make war and plunder cities, all in His (God's) name.

If anyone should happen to awake from his psychosis and demand a return to his former life, he was declared a sinner to be reformed, and given a deadline by which he had to be reformed. If he failed to do this he would be killed. The priests acted not in their own names, but by pretending they were carrying out the deeds of God.

What I am telling you is no fantasy or dream. This may be clearly seen by everyone for themselves by looking for answers in the Old Testament of the Bible — a great historical book. A reliable portrayal of historical events can be learnt by anyone who wakes at least a little from the millennia-old hypnotic sleep and reads how and by what means the Jewish people were programmed and turned into troops of the priesthood. Later Jesus tried to deprogram his people and to use his manifest gift for acquiring new wisdom to prevent the priests from carrying out their designs. In his journeys among wise-men, he endeavoured to glean inklings into the science of imagery. And after he had learnt a great many truths, he decided to save the Jewish people, his own people. He succeeded in creating his own religion — one which could serve as a counterbalance to the terror.

His religion was not for all the nations upon the Earth. It was intended only for the Jewish people. He himself mentioned this more than once. His words were written down by his disciples, and you can still read them to date.

See, for example, St Matthew's gospel, Chapter 15, verses 22–28:

A Canaanite woman from that vicinity came to him, crying out, "Lord, Son of David, have mercy on me! My daughter is suffering terribly from demon-possession.

Jesus did not answer a word. So his disciples came to him and urged him, "Send her away, for she keeps crying out after us."

He answered, "I was sent *only* to the lost sheep of Israel."<sup>2</sup>

What does it mean: "I was sent only to the lost sheep of Israel"? Why are Jesus' teachings only for the Jews? Why did he consider the Jewish people to be lost?

I tell you, Vladimir: Jesus knew that as a result of the forty-year programming in the Sinai wilderness, the majority of the Jewish people were lost in a hypnotic dream. This part of the people as, indeed, Moses himself, thus became a tool in the hands of the High Priest. They were his foot-soldiers, whom he compelled to seize power over all the Earth's people to satisfy his own vainglory.

And they will be running their battles in various parts of the Earth for thousands of years. Their weapons will not be primitive swords or bullets, but cunning and the creation of a way of life subjecting all the world's peoples to occultism — in other words, to the selfishness of the priests.

And they will do whatever it takes.

*But any battle presupposes the presence of two opposing sides, you may well be thinking. And if so, then where are the victims? In any battle there have to be victims on both sides.*

<sup>2</sup>Matth. 15: 22–24 (*New International Version*; emphasis added by the author).

You could probably find evidence of these battles yourself through searching by the dates mentioned in the various historical sources. But to make it easier for you to locate these fearful dates I shall cite just a few of them right now. If you wish, you can look up their historical confirmation for yourself.

Everybody knows today, including you, Vladimir, how children and elderly people are perishing from terrorism in Israel. It was not all that long ago that what you call the Great Patriotic War<sup>3</sup> took place. And it is well documented how during that war the Jews — old people and children, mothers and young pregnant women, young men who had not yet known love — were systematically burnt in ovens, poisoned with gas and buried alive in common graves.

Not just one person, not an hundred, not mere thousands, but millions of people were brutally slain during this brief period. Historians lay the blame squarely on Hitler. But who was to blame back in 1113, in Kievan Rus',<sup>4</sup> when popular hatred of the Jews suddenly boiled over? Jewish houses in Kiev and other parts of Rus' were plundered and burnt, while Jews — even children — were killed. The people of Rus', caught up by a brutal rage, were ready even to topple the ruling princes from their thrones. And when the princes gathered together within council, they decided to pass a law expelling all Jews from the whole territory of Rus' and henceforth letting none in. An order was given to rob and kill any who surreptitiously entered therein.

<sup>3</sup>*Great Patriotic War* (Russian: *Velikaya Otechestvoennaya voyna*) — the common Russian term used to refer the events of the Second World War that directly involved Russia or the Soviet Union.

<sup>4</sup>*Kievan Rus'* (pron. *ROOSS*) — the name given to the East Slavic state dominated by the city of Kiev between 880 and the mid-12th century.

In 1290 there was a sudden move to effect the physical extermination of all Jews in England. The rulers were obliged to eject the whole Jewish population from the country.

In 1492 Jewish pogroms began in Spain. A threat of physical annihilation hung over all Jews living in Spain, and once again they were obliged to leave the land.

Right from the moment when the Jews left the Sinai wilderness they became the target of hatred by peoples of various countries. The hatred kept increasing, and here and there manifested itself in cruel pogroms and murders.

I have cited just a few dates of these fearful pogroms — ones that you can easily verify for yourself in histories people have written down. There have been many more conflicts besides for the Jewish people. Any one of them by itself is naturally not as significant as the instances everybody knows about. But when the range of small-scale conflicts is examined as a whole, it takes on an unprecedented scale and proportion, perhaps the most extreme of all the most terrifying phenomena in human history.

If something like that has happened throughout the millennia, one could conclude that the Jewish people are to be blamed in people's eyes. But what are they to be blamed for? Historians both ancient and modern have said that the Jewish people have conspired against authority. That they have aspired to deceive everyone, from the least unto the greatest. In the case of the poor, to try to trick them out of at least a little, in the case of the rich, to bring them to utter ruin. And this is evidenced by the fact that among the Jews there are many wealthy people capable of even influencing governments.

But there is one question you should ask yourself: How righteous are the ones who have been deceived by the Jews? The ones that had amassed such wealth, did they acquire it all by honest means? As for those condemned to be in authority,

can we believe them to be so smart if they could be so easily deceived?

Besides, most rulers are dependent on someone else, as the Jews have demonstrated quite clearly. One could go on exploring this topic for a long time, but the answer is simple: in the Occult world *everybody* lives by deceit. Then should we only condemn the one who has succeeded in achieving more than the rest?<sup>5</sup>

And as far as the Jewish people are concerned, we could easily substitute any one of the other peoples we know today. Any one — if they were subjected to the same totally unprecedented programming as the Jews were during their forty years of wandering in the wilderness, heeding only occultism and not seeing what had been created by God.

Jesus tried to remove this programming and save his people. He came up with a new religion for them — one different from what they had before. For example, in contrast to the previous saying: “an eye for an eye, a tooth for a tooth”, he said: “whosoever shall smite thee on thy right cheek, turn to him the other also”.<sup>6</sup> In contrast to the verse which said: “God hath chosen thee to be a special people unto Himself” he called his people “the servants of God.”<sup>7</sup>

<sup>5</sup>Vladimir Megré has always emphasised in his writings and public speeches that any individual should be judged by his actions and not by his religion, ethnicity, nationality or race. The raising of the ‘Jewish question’ in this chapter is aimed solely at exposing the roots of (and thus helping to alleviate) the inter-ethnic conflict and the anti-Semitic feelings so prevalent in today’s Russia and elsewhere in the world. See also Book 7, Chapter 16: “To Jews, Christians and others”.

<sup>6</sup>See Exod. 21: 24; Matth. 5: 38, 39 (quotation from the *Authorised King James Version*).

<sup>7</sup>Quoted from Deut. 7: 6; I Peter 2: 16 (*Authorised King James Version*); see also Rom. 6: 22.

Jesus could also have told the truth to his people. He could have told them about Vedic times, about how Man was able to live happily in his domain, in contact with the creations of the Father-Creator. But the Jewish people were already programmed. They believed only in occult deeds, their consciousness was oppressed by the world of the unreal. And so Jesus decided to act in an occult manner himself. He founded an occult religion.

The High Priest at the time was able to guess Jesus' intention. The High Priest racked his brains for many a year before he found what he considered the smartest solution: *There is no point in fighting Jesus' teachings. Through the minds of the soldiers I have selected from among the Jews I must spread them through all the peoples of the Earth, while maintaining the old religion for Israel.* And so it happened, exactly as the High Priest had conceived.

And two essentially different philosophies began to co-exist.

According to one, the Jews are a chosen people, as Moses taught, and all other peoples ought to be subject to them. According to the other, expressed in Jesus' words, all are equal before God, and people should not try to take precedence over others; instead one should love one's neighbour and even one's enemy.

The priest realised that if the Christian religion, which calls everyone to love and humility, should succeed in spreading throughout the world, and at the same time Judaism, which elevates one over the rest, is preserved, the world would be subdued. While the world might bow before the Jews, they are but foot-soldiers. The world would actually be bowing before the priest.

And the priest's preachers went out into the world as earnest teachers of the new doctrine.

The doctrine of Jesus? Not quite. The priest had by now added a great deal of his own teachings to it. What happened

thereafter you already know. Rome fell. It was not external foes, however, that destroyed the great empire. Rome was destroyed from the inside after adopting Christianity. The emperors were under the impression that Christianity would enhance their power and authority. They were quite flattered by one of the postulates, namely, that all power was derived from God, and that the ruler was ordained to the Emperor's throne by God's grace.<sup>8</sup>

In the fourth century A.D. Christianity celebrated its victory in Rome, both officially and in actual fact. In great delight the High Priest gave a silent, non-contact command to the Byzantine emperor. And Christian Rome burnt the Library of Alexandria\* to the ground. Altogether 700,033 volumes were lost. Bonfires of books and ancient scrolls burned in many cities. The burnt books were largely from the heathen period, but they also included the few that recorded the knowledge of Vedic people. These were not burnt — they were salvaged, concealed and studied in turn by a narrow circle of the devoted, and only afterward were destroyed.

It seemed to the High Priest that now that people were getting further and further away from a knowledge of their pristine origins, he would encounter no more obstacles on his path. Feeling bolder, he issued yet another tacit command, resulting in an anathema being issued at the Second Council of Constantinople<sup>9</sup> against the doctrine of reincarnation. For

<sup>8</sup>Compare Rom. 12: 1: "...there is no power but of God: the powers that be are ordained of God." (*Authorised King James Version*).

\**The Library of Alexandria* [footnote appearing in the Russian edition] -- the most famous library of antiquity, containing every single work in existence at the time. In Cæsar's time its collection numbered something on the order of 700,000 items. In 391 A.D., during the time of bloody wars between the heathens and the Christians, the Temple of Sarapis, which housed the library, was destroyed. -- *Slovar' antichnosti* (Dictionary of antiquity), Progress Publishers [Moscow], 1989.

what reason? — you may ask. To keep people from thinking about the essence of earthly life.

To keep them thinking that a happy life exists only beyond the Earth's borders. And many peoples of the Earth began believing precisely that.

The priest was truly delighted. He knew what would happen next. He construed that since nobody had experienced other-worldly life, Man would have no idea of how to reach Paradise the Good or how to avoid ending up in a fearsome Hell. So now he would offer to Man a little occult hint which would favour his own plan.

And so the priests have kept on giving out hints to the world which bring benefit to themselves. But they were not able to immediately obtain full power over the world, even when it seemed to them that the strongest bastion of heathen culture, Rome, was destroyed. Even then, there still remained on the Earth one small island which was impervious to the priests' usual charms. Even back before Rome, even before the appearance of Jesus' teachings, the High Priest had aspired to destroy the culture of the last Vedic state — Rus'.

---

<sup>9</sup>*Second Council of Constantinople* (also known as the *Fifth Ecumenical Council*) — an assembly held at Constantinople (5 May–2 June, A.D. 553), summoned by the Byzantine Emperor Justinian and attended mainly by Eastern bishops. Its purpose was to head off 'contamination' of official Christian doctrines by 'heretical' Christian-based teachings such as reincarnation and Nestorianism (a belief in Jesus as two persons, human and divine).

## CHAPTER SEVEN

# The secret war with Vedic Rus'

The war with Vedic Rus' began long before Jesus' appearance on the Earth, long before the fall of Rome. This thousand-year war was not waged with iron swords. Occultism executed its military raids on a non-material plane.

Preachers of the occult religion came to Russia — dozens of their names are mentioned in various ecclesiastical books. But they actually numbered in the tens of thousands. They were not to blame for their ignorance. They were fanatics, which means their mind was unable to fathom even the millionth part of creation. As foot-soldiers to the priest, reverently carrying out his orders without so much as a murmur, they attempted to explain to people how to live. They tended to say exactly the same things they had said when preaching to once-majestic imperial Rome.

They tried introducing ritual. And proposed the construction of temples, instead of paying attention to Nature or earthly existence. Then the kingdom of heaven would come for everyone. I shall not burden you by reciting their sermons. If you wish, you can still read their words today. I shall tell you why for thousands of years they did not succeed in doing anything with Vedic Rus'.

Every other person living in Rus' at that time was a poet and a wit. And there were bards in Rus' — they were called *bayans'* back then. And this is how it all took place in those times. For decades the priest's foot-soldiers waged a propaganda campaign to the effect that God had to be bowed down to. And here and there people began to listen and reflect on

the message. Upon seeing this, the bayan would simply laugh and make up a parable, which he would then sing. And the parable would quickly spread throughout Rus'. And over the next ten years or so Rus' would have a good laugh at the priests' sermons.

The priest was furious and launched new attacks. But once again in Rus' a parable would be born, and Rus' would laugh once more. Of all the many parables of those times I shall tell you just three.

### In which temple should God dwell (Anastasia's first parable)

In one of the many populated settlements on the Earth people went happily about their daily life. In this particular community lived ninety-nine families. Each family lived in a splendid house decorated with fanciful woodcarvings. The garden around the house brought forth fruit every year in abundance. Vegetables and berries grew all by themselves. Every year people met the spring with joyful greeting and delighted in the summer. A series of cheerful friendship celebrations brought forth songs and *kborovods*.<sup>2</sup> In the

<sup>1</sup>*bayan* (pron. *bah-YAHN*) — see footnote 4 in Book 4, Chapter 33: "School, or the lessons of the gods". On the role of bards, see Book 2, Chapter 10: "The ringing sword of the bard".

wintertime people rested from their daily exhilarations. And they looked up to the heavens and tried to decide whether they might be able to weave the Moon and the stars into even better patterns.

Once every three years in July those people gathered in a glade at the edge of their community. Once in every three years God would respond to their questions in an ordinary voice. Even though He remained invisible to ordinary eyes, each one could feel Him. And He, together with all the residents of the community, decided how best to build their life in the days to come. The people's conversation with God might be philosophical, but sometimes quite simple and even funny.

So, for example, one middle-aged man stood up and addressed God this way:

"C'mon, now, God, for our celebration this summer, when we all gathered together with the dawn, You decided to drench us all with a monsoon? The rain poured down like a waterfall from heaven, and the Sun began to shine only around noon. What, did You sleep in till noon?"

"I was not asleep," God replied. "At this morning's dawn I thought about how to make your celebration truly glorified. I saw how some of you on their way to the celebration were too lazy to wash themselves with clean water. How so? Such reprobates would spoil the show with their appearance. And so I decided to first wash everyone, and then have the clouds sweep in and allow the rays of the Sun to caress the water-washed bodies with tenderness."

"Well, okay, if that is how..." the man agreed, brushing off food crumbs from his moustache and wiping the blackberry stains around his son's mouth.

"Tell me, God," asked an elderly and pensive philosopher, "there are many stars shining in the sky overhead. What does their fanciful alignment mean? If I should select a star that

is pleasing to my soul, and then when I get bored with my earthly life, could I remove there with my family?"

"The alignment of the heavenly bodies twinkling in the dark tells about the life of the whole Universe. An alertness in your soul, but without tension, allows you to read the Book of the Heavens. This Book will not open for idleness or curiosity, but only for pure and meaningful thoughts. And yes, you can settle on a star. And each of you can choose for yourself a planet in the heavens. There is only one condition that you must observe. You must become capable of producing on your selected star creations more perfected than those produced on the Earth."

A very young girl jumped up from the ground and tossed her light-brown braid of hair over her shoulder. Raising her little face with its turned-up nose heavenward, she placed her hands saucily on her hips and suddenly declared to God:

"I have a complaint to make to you, God. For two years now I've waited patiently to tell you about it. Now I shall tell you. Some kind of disorder or abnormality is taking place on the Earth. All the people are living as people — falling in love, marrying and being happy. But am I to blame for something? Every year, just as soon as spring arrives, my cheeks break out into freckles. There is nothing that'll wash them off, and I can't paint them over. Did you think this up as some kind of a joke, God? I demand that as of next spring not a single freckle ever appears on my face again!"

"Oh, My daughter! Those are not freckles, but spring speckles that appear on your beautiful little face each spring. But I shall call them as you wish. If you find your freckles to be such an annoyance, I shall remove them come next spring." God answered the spunky girl.

But then a handsome young lad got up at the other end of the glade, and meckly addressed God, though not in a loud voice:

"We have a lot of work ahead of us in the springtime. You, God, try to take part in everything we do. Why would you waste your time on removing her freckles? Besides, they are so beautiful that I cannot picture a more beautiful image than a young maiden with freckles in the spring!"

"So what am I to do?" God thoughtfully responded. "The maiden asked, and I promised her..."

"What's this about 'what to do?'" the girl once more broke into the conversation. "You heard the people say it's not freckles, but other more important things, that we should be concerned about... But while we're on the subject of speckles, I'd like to ask for two more — right here, on my right cheek, so that it's all symmetrical."

God smiled — this was evident from the fact that all the people were smiling. Everybody knew that it would not be long before a new splendid family would be lovingly born into their community.

So the people lived with God in that remarkable community. And then one day a hundred wise-men came to see them. The hospitable residents always greeted guests with all kinds of good things to eat. The wise-men tasted their splendid fruit and were amazed at its extraordinary flavour. Then one of them said:

"Oh, people, what a splendid, orderly life you lead! You have abundance and coziness in every home. But your communication with God lacks sophistication. There is no glorification or adulation of Deity."

"But why?" the residents tried to protest in alarm. "We talk with God the way we talk with each other. We talk and reason with Him every three years. But every day He rises with the Sun. As a bee He busies Himself around the gardens beginning in every spring. Every winter He covers the ground with snow. His tasks are clear to us, and we are glad for all the seasons."

“You are doing things the wrong way,” said the wise-men. “We have come to teach you how to talk with God. All over the Earth an array of temples and palaces has been built in His honour, where people can talk with God every day. And we shall teach you to do the same.”

For three years the residents of the settlement heeded the words of the wise-men. Each of the hundred insisted on his own theory about how to best construct a temple to God, and what should be done in the temple each day. Each of the wise-men had his own theory. The residents of the community had no idea which of the hundred wise theories they should choose. Besides, how could they choose without offending the wise-men? And so they decided to heed them all and build all the temples proposed. One for each family. But there were only ninety-nine families in the village, and there were a hundred wise-men. When they heard the decision of all the residents, the wise-men became very concerned. It meant one of them would not get his temple built, and would not receive the anticipated offerings. And they began arguing among themselves as to whose theory of worshipping God was the most effective. And they began dragging the residents into the dispute. The dispute heated up, and for the first time in many years the villagers forgot about their time of communication with God. They did not gather as before in the glade on the appointed day.

Another three years went by. Ninety-nine magnificent temples were scattered about the settlement, and it was only the villagers' huts that had lost their lustre. Some of the vegetables lay uncollected on the ground. And the fruit of the garden began to become infested with worms.

“This is all because,” the wise-men preached in the various temples, “you do not have full faith. Bring more and more gifts to the temple, try harder and bow down to God more often.”

But there was one wise-man — the one who had been left without a temple — who whispered first to one, then to another:

“You have been going about everything the wrong way, people. All the temples you have built are of the wrong construction. And you do not worship the right way in your temples, you are not saying the right words as you pray. I am the only one who can teach you how you can communicate with God every day.”

Just as soon as he managed to bring someone over to his side, a new temple would be erected, and one of the existing ones would fall into disrepair. And again one of the wise-men, the one newly deprived of the people's offerings, tried to surreptitiously slander the others in front of the villagers.

A number of years passed. Then one day the people remembered about the gatherings they used to have in the glade where they heard God's voice. Once again they gathered in the glade and began asking questions in the hope that God would hear them and give an answer as before.

“Answer us, how did it happen that our gardens are bringing forth worm-infested fruit? And why do our vegetables no longer yield an abundant harvest every year? And why do people quarrel, fight and argue amongst themselves, but cannot possibly choose the best faith? Tell us in which of the temples we built for you do you dwell?”

For a long time God did not answer their questions. And when a voice finally sounded in space, it was not a happy voice, it sounded weary. God answered those gathered:

“My sons and daughters, the reason for the desolation in your houses and the gardens around them is that I am simply not able to do everything by Myself. Everything has been designed by My dream right from the start in such a way that I can create splendour only in conjunction with you. But you have in part turned away from your homes with their

gardens. Creation is something I cannot ever manage on My own — there must be co-creation by the two of us together. Moreover I want to say to you all: you yourselves include love and freedom of choice, and I am ready to follow your aspirations with My dream. But you must tell me, My dear daughters and sons, in which of the temples I am to dwell. Before me you are all of equal worth, so where abouts should I reside so that no one feels left out? When you have decided on your own in which of the temples I should make my home, I shall be glad to follow your collective will.”

After responding to all with these words God fell silent. The people of the once beautiful village are continuing their conflict even to this day. Their houses are filled with desolation and dust. Around them the temples rise higher and higher, even as the conflict grows bitterer and bitterer.

“Well, Anastasia, that is quite an unrealistic, fairy-tale parable you told. There must have been some pretty dumb people in that settlement. Didn’t they realise that God wants to work with each one of them to care for their garden? Besides, you say that those dullards in the settlement are still arguing, even today. And where is that settlement, in what country? Can you tell me?”

“I can.”

“Then tell me.”

“Vladimir, you along with people from different lands are living in this very settlement right now.”

“Eh? Oh, I see, precisely: we are the ones! We are still engaged in a dispute about whose faith is better. While our gardens are full of worm-infested fruit!”

### **The best place in Paradise (second parable)**

Four brothers came to a gravesite to honour the memory of their father who had died many years before. The brothers wanted to know whether his soul was dwelling in Paradise or in hell. They were all eager for their father's spirit to appear before them and tell how it was doing in the next world.

Their father's image appeared before them in a wondrous radiance. The brothers were awed and their hearts were afire when they saw this miraculous vision. When they finally regained their composure, they enquired:

"Tell us, Father, does your soul dwell in Paradise?"

"Yes, my sons," their father replied, "my Soul delights in a wondrous Paradise."

"Tell us, Father," the brothers started asking, "what fate awaits our souls after our own flesh dies?"

And the father responded to each of his sons in turn with a question of his own:

"Tell me, my sons, how do you appraise your deeds to date upon the Earth?"

And each brother answered his father in turn. The elder son began:

"I have become a great military leader, Father. I have defended my native land against its foes, and never allowed an enemy foot to tread upon it. I have never offended the poor and infirm. I have endeavoured to take good care of the soldiers under my command. I have always honoured God, and therefore I hope to enter into Paradise."

The second son replied to his father:

"I have become a prominent preacher. I have preached goodness to the people. I have taught them to worship God. I

have reached great heights and achieved high standing among my peers, and therefore I hope to enter into Paradise.”

The third son replied to his father:

“I have become a prominent scientist. I have designed a great many devices to benefit people’s lives. I have raised a large number of handsome buildings for mankind. Each time I start a new construction project, I give praise to God and celebrate and honour His name, and therefore I hope to enter into Paradise.”

The youngest brother answered his father:

“I, Father, cultivate a garden and work daily at raising vegetables. From my splendid garden I send fruits and vegetables to my brothers and try not to do anything dishonourable or displeasing to God, and therefore I hope to enter into Paradise.”

The father replied to his sons:

“Your souls, my sons, will indeed dwell in Paradise after your flesh dies.”

The vision of their father faded. Years went by, the brothers died and their souls met in the Garden of Paradise, only the soul of their younger brother was not among them. The three brothers then began to call out to their father, and when he once again appeared before them in his wondrous radiance they asked him:

“Tell us, Father, why is the soul of our little brother not among us in this Garden of Paradise? It has been a hundred earthly years since we last spoke with you at your gravesite.”

“Do not be concerned, my sons,” replied the father. “Your little brother’s soul, too, is dwelling in the Garden of Paradise. Only he is not here with you right now because your little brother is at this moment communicating with God.”

Another hundred years went by, and once again the brothers met in the Garden of Paradise. But again their younger

brother was not with them. And again the brothers called for their father. When he appeared, they asked:

"See, another hundred years has gone by, but our little brother has not come to meet us, nor has anyone seen him in the Garden of Paradise. Tell us, Father, where is our little brother now?"

And the father answered his three sons:

"Your little brother is communicating with God, and that is why he is not among you."

And the three brothers began asking their father to show them where and how their younger brother was communicating with God.

"Take a look," the father replied. And the brothers saw the Earth, and there was the marvellous garden which their little brother had cultivated during his life. In this wondrous earthly garden their brother, looking so much younger, was explaining something to his child. His beautiful wife was busying herself nearby.

The brothers asked their father in astonishment:

"There is our little brother in his earthly garden as before, not in the Garden of Paradise as we are. What is he to blame for before God? Why has his flesh not died? Several centuries have passed in Earth years, and here we see him as a young man? Does that mean God has somehow changed the order of the Universe?"

And the father answered his three sons:

"God has not changed the order of the Universe, which He established right from the start in great harmony and inspired love. Your brother's flesh has died, and on more than one occasion. But the place of one's soul in the Garden of Paradise is best created by one's own hands and soul. Just as for any loving mother and father the child of their own creation is always the most glorious. According to the Divine order of things, the soul of your little brother should assuredly be

granted entrance to the Garden of Paradise, but seeing this garden is on the Earth, it is immediately incorporated into a new body in the earthly garden so dear to it.”

“Tell us, Father,” the brothers went on, “you were saying that our little brother is communicating with God, but we do not see God with him in his garden.”

And the father responded to his three sons:

“Your little brother, my sons, is looking after God’s creations — the trees and the grass — they are the Creator’s own materialised thoughts. In treating them with love and conscious awareness, your brother is thereby communicating with God.”

“Tell us, Father, shall *we* ever return to the Earth in fleshly form?” the sons asked their father. And they heard him answer:

“Your souls, my sons, now dwell in the Garden of Paradise. They can take on earthly form only if someone creates a garden for your souls on the Earth similar to the one in Paradise.”

The brothers exclaimed:

“Gardens are not created with love for *other* people’s souls. We ourselves, once we are given a fleshly form, shall cultivate a Garden of Paradise on the Earth.”

But the father replied to his sons:

“You were given that opportunity already, my sons.”

After this response the father began to quietly withdraw. But once again the three brothers cried out and asked their father:

“Dear father, show us *your* place in the Garden of Paradise. Why do you withdraw yourself from us?”

The father stopped and replied to his three sons:

“Look there! Do you see that leafy apple tree flowering beside your little brother in his garden? Under that apple tree is a little cradle, and in that cradle is the beautiful body of a tiny infant that has just wiggled its little hand as it begins to

awake. My soul is alive in that little body. After all, that was the marvellous garden I began creating myself..."

### **The wealthiest groom (third parable)**

I shall make a few changes in this parable to put it in a modern-day context.

In one village lived two neighbours. The families were friends with each other, and enjoyed working their land. Every spring gardens bloomed on the two plots, and their little groves of trees grew taller.

Into each family a son was born. After their sons had matured, one day, while gathered around a festive table, the fathers took a firm decision and handed everything over to their sons' control.

"Let those sons of ours now decide what to sow and when," one of them said to the other. "And you and I, my friend, shall not oppose them, or even give them hints or questioning looks."

"Agreed," replied the other. "Let our sons even make changes around the house if they wish. Let them choose the clothing they like, and let them decide what livestock and other things to buy."

"Fine," replied the first. "Let our sons become self-sufficient. And let them choose worthy brides for themselves. We shall go together, my friend, to seek brides for our sons."

And this is the decision that emerged from the two friends and neighbours' conversation. Their idea was supported by their wives, and the families began living under their grown-up sons' administration. But thereafter the two families' lives significantly diverged.

In one family the son became an active member of the community and paid his respects to everyone, which led to his being defined as the 'first citizen' of the village. The other son seemed to be slow and serious of mind to all around; he came to be called the village's 'second citizen'.

The first neighbour's son felled and sawed up the trees of the grove his father had planted and hauled them to market. He bought himself a family car in place of his horse, along with a small tractor. The first son here was considered very enterprising. The new entrepreneur calculated that the coming year would see a sharp increase in the price of garlic, and he was not mistaken. He pulled up all his plantings and sowed his fields with garlic. His father and mother did their best to help him in everything — they had made a promise and it was not forsaken.

The family sold the garlic at a profit. They set about building a huge mansion using the most modern materials invented and hired construction workers. And the enterprising son did not relent — he spent from morning 'til night trying to figure out what the most profitable crop would be to plant in the spring. And by winter's end he had calculated that this spring's most profitable crop would be onions. And again he sold his harvest at a profit, and bought himself a fancy new car.

One day the two neighbours' sons met along the road. One was driving a car, the other a wagon harnessed to a frisky mare. The successful entrepreneur stopped his car and the two neighbours had a conversation.

"See, neighbour, I'm driving a fancy car, while you're getting around in a horse-drawn cart just like before. I'm building a

big house, while you're still living in that old house of your father's. Our fathers and mothers have always been friends, and I too am ready to help you in a neighbourly way — if you like, I can tell you what is the most profitable crop to plant your whole field with today.”

“Thank you for your willingness to help,” responded the second neighbour from his wagon, “only I happen to cherish a great deal my freedom of thought, indeed I do.”

“I certainly don't want to encroach on your freedom of thought. It's just that I sincerely want to help you through.”

“I thank you for your sincerity, good neighbour. But freedom of thought is eroded by non-living things — that car, for example, you are sitting in.”

“How can a car erode...? It can easily overtake that old farm-cart of yours, and by the time you get to the city I'll be able to have my business all taken care of. And all thanks to my motor car.”

“Yes, your car, of course, can certainly overtake my wagon, but it requires you to sit behind the wheel and hold on to it constantly as you drive, while you as the driver have to keep jerking some kind of stick with your hand and looking continually at the dashboard and the road. Maybe my horse is slower than a car, but it doesn't require any attention, and doesn't distract my thought either. If I should take a snooze, the horse will find its own way home. You say you have problems with fuel, whereas my horse fills itself up in the pasture over there. Anyway, tell me, where are you in such a hurry to get to in your car?”

“I want to buy some spare parts to keep on hand. I know exactly what could go wrong with my car at any moment.”

“So, you know enough about technology that you can accurately predict all your breakdowns?”

“Yes, I'm pretty good at that! I took special mechanics courses — for three years in all I swotted through. If you recall, I asked you to join me in those courses too.”

“So for three years of your life you had only this technology to give your thought to. Something that can get old and break down.”

“Your horse, too, will get old and die.”

“Yes, of course, she will get old. But before that happens she will be able to give birth to a foal. The foal will grow, and I shall be able to ride him. What is living will eternally serve Man, never fear, while what is dead only shortens his years.”

“The whole village makes fun of your ideas,” remarked the entrepreneur. “They all think of me as successful and wealthy, while they see you just sit and live off your father’s fortune. Besides, you haven’t introduced any new species of trees or bushes on your father’s land, not even a bit.”

“But I’ve come to love *these*. I’ve been trying to understand each one’s purpose and how they interact with each other. And I’ve been able to invigorate the ones starting to wither, just by looking at and touching them. Now, come each spring, everything is blossoming in harmony, all by itself, requiring no outside attention. It’s just waiting eagerly for summer, and then for the fall when it will offer up its fruit for the year.”

“Really, friend, I must say you *are* queer,” sighed the entrepreneur. “You walk around entranced with your domain, your garden and your flowers. At the same time, you say, you are giving freedom to your thoughts.”

“Yes, I am.”

“What do you need a free thought for, anyway? What’s the point in freedom of thought?”

“So that I can make sense of all the grand creations. So that I can be happier myself, and help you.”

“Me? What’s got hold of you? I can marry the best girl in the village, any one of them will go for me. They all want to be rich, live in a spacious house and ride in my car.”

“Being rich doesn’t mean being happy.”

“And being poor?”

"Being poor isn't so good either."

"So if you're not poor and not rich, then what?"

"You ought to have just enough of everything. Being self-sufficient — that's not bad either. And be consciously aware of what's going on around. After all, it's not by chance that happiness can be found."

The entrepreneur grinned and quickly went on his way.

A year later the two neighbouring fathers got together to talk. They decided it was time to be courting brides for their sons. When they asked them which of the village girls they would like to wed, the entrepreneuring son replied to his father:

"The daughter of the village elder really appeals to me, Father. I would rejoice to have her as my wife."

"I can see, my son, that you have made an excellent choice. The village elder's daughter is renowned as the most beautiful girl in the county. All the visitors to our village from both near and far are entranced at the sight of her. Mind you, she can be quite capricious. The girl has a mind of her own that even her parents can't figure out. Some people might think her strange — more and more women keep coming to her from various settlements for advice and to be healed of their ills, and they even bring their children to see this young girl."

"What of it, Father? I'm made of sterner stuff. In all our village there is no more spacious house or better car than mine. Besides, twice now I have seen her give me long and thoughtful looks."

On being asked which of the village girls *he* most fancied, the second son told his father:

"I love the village elder's daughter, Father."

"And how does she act toward you, my son? Have you noticed a look of love in her eyes?"

"No, Father. Whenever I happen to meet her, she lowers her eyes."

Both neighbours simultancously decided to woo the maiden for their sons. Arriving at their house, they seated themselves sedately. The village elder summoned his daughter and told her:

"Look, my daughter, two matchmakers have come to see us. On behalf of two young lads, each wishing to have you to wife. The three of us have decided that you should choose from the two. Can you tell us your decision now or would you like to think about it until tomorrow morning?"

"I have spent many mornings thinking about it in my dreams, Father," the young girl quietly said. "I can give you my answer right now."

"So tell us. We are all eagerly awaiting your decision."

The beautiful girl answered the matchmakers like this:

"Thank you, fathers — thank you all for enquiring. I thank your sons for desiring to join their life with mine. You have indeed raised splendid sons, and it might have been very difficult to choose to which of two destinies I should myself resign. But I do want to have children, and I want my children to be happy, to stand tall in prosperity, freedom and love, and so I have fallen in love with the one who is wealthiest of all."

The father of the entrepreneur rose to his feet in pride, while the other father sat glumly in his chair. But the girl went over to the second father, knelt down before him, and said, without raising her eyelids:

"I wish to live with your son."

At this point the village elder rose to his feet. He wanted to see his daughter living in what was deemed by all the richest house in the village, and so he said to her rather harshly:

"You spoke correctly, my daughter — your smart reasoning brought gladness to your father's heart. But you for your part

did not go and kneel before the richest man in the village. Someone else here is the wealthiest. This is he."

And the elder, gesturing to the entrepreneur's father, added:

"Their son has built a spacious home, honey. They have a car, a tractor... and money."

The girl went over to her father and responded to his harsh and bewildering words:

"Of course you are right, Papa dear. But I was talking about children. What use will our children have for those things you mentioned? The tractor can break down while they are still growing up. The car may rust and the house fall into decay."

"That may be — maybe what you say is true, granted. But your children will have *a great deal* of money, and they can buy for themselves a new tractor and a new car and new clothes."

"And just how much is 'a great deal', might I ask?"

The entrepreneur's father proudly stroked his beard and moustache, and answered solemnly and seriously:

"My son has heaps of money — enough so that if he needed to buy three of everything our household already has, he could do so all at once. And those horses our neighbour keeps, we would be able to buy not just two, but a whole stable full."

The girl meekly lowered her eyelids and responded:

"I wish you and your son great happiness. But there is no amount of money on the Earth that would buy a father's garden where every branch reaches out in sheer love to the one cultivating it. And no money in the world can buy the loyalty of a steed that has played with a child as a colt. Your domain may indeed make money, but my beloved's domain will make a space for sufficiency and love."

### A change of priestly tactics

During the thousand-year war the priest changed his tactics a number of times, but all to no avail. Rus' still laughed, as before, at his occult intrusions. The people referred to those preachers as miserable wretches. At that time wretchedness was not equated with physical affliction but with occultism. People in Rus' took pity on the wretched preachers, they fed them and offered them shelter, but did not take any of their sermons seriously.

After four hundred centuries the priest realised he would never achieve victory over the Vedic land. He accurately determined wherein the extraordinary power of Vedism lay.

Vedism was based solidly on a Divine culture. Everyone's way of life was Divine. And every family created in its domain a Space of Love, they felt the wholeness of Nature and, consequently, of everything God had created.

What happened in Vedism was that people spoke with God through Nature. Instead of bowing down before Him, they attempted to understand Him. They loved God as a son and daughter love their kindly parents.

And so the priest came up with a plan which would be able to break this dialogue with the Divine. To this end it was necessary to separate people from their domains, from the Divine gardens, from their co-creation together with God. It was necessary to divide the whole territory where the Vedic people lived into different states and to destroy their culture.

New preachers went to Rus'. They put a new approach into practice. This time they sought out people in whom selfishness — pride — dominated even just a little over the other energies of feelings. Whenever they found such a Man, they tried enhancing the sense of pride within him. This is how they operated:

Imagine a group of stately-looking elders arriving at the home of a happy family. But there is no attempt, as before, to preach or teach them how to live. On the contrary, they all at once bow down before the head of the household, present him with outlandish gifts and say:

“In our far-off land we climbed to the top of a high mountain — the highest mountain on the Earth. Standing at the summit, above the clouds, we heard a voice from heaven telling us about you. And it was told to us that you are the wisest of all people on the Earth. You alone were chosen, and we are honoured to bow down to you, present you with our gifts and wait upon your words of wisdom.”

And if they saw the Man taking their bait, they would continue their sly talk:

“It is your duty to make all other people happy — the voice told us so on the mountain-top. You should not waste your valuable time on other concerns. You should be in charge of people and make decisions for them — decisions that have been entrusted to you alone. And here is your heavenly head-dress.”

At this point a head-dress decorated with precious stones was presented to the Man as though it were the grandest treasure.

And so the head-dress was placed upon the head of the Man who now believed in his own majesty and his chosen status. And at that very moment all the visitors fell to their knees before him in great reverence. And they began to praise heaven for the honour of being worthy to bow before this majesty. Next, the foreign visitors built him a separate house to live in that looked very much like a temple.

This is how the first princes rose to power in Vedic Rus'.

The new prince's neighbours looked upon this Man sitting on his throne in the temple as some sort of curiosity. They watched as the foreign visitors bowed before him, indulged his every whim and plied him with all sorts of questions.

At first they took this scenario for some kind of game from overseas, and some decided, either out of curiosity or out of compassion, to play along with the foreigners and with their neighbour. But people gradually got drawn into the game. And little by little they sank into a state of serfdom, and without their realising it, their thoughts turned more and more away from co-creation.

It was not easy for the priest's emissaries to get the princedoms established. In the beginning, for more than a hundred years, their attempts proved unsuccessful. But still it finally came about, and Vedic Rus' was carved out into princedoms.

And then events took their natural course: the princes began fighting over who was greater, and dragged their neighbours into internecine feuds.

Later historians would claim that grand princes arose who managed to join the isolated princedoms of Rus' together into one mighty state. But think for yourself, Vladimir — could that really have been so? And what kind of unification exactly do the historians have in mind? It is all very simple, in fact. Yes, one prince was able to kill or conquer others. But people can be united only by culture and a way of life.

The setting up of borders always indicates separation. Once a state was established, not on the basis of a cultured way of life but on the artificial greatness of one or more people by virtue of their armies, a whole lot of problems immediately made themselves heard: how to maintain those borders and expand them as the opportunity occurred — and so arose the need for a sizeable army.

A large state cannot be governed by one Man alone — so clerks and scribes soon appeared, and they have been multiplying each day right up to the present time. The princes, clerks, scribes, merchants — and all their servants — together form a category of people who have been separated from God's creations. Today their functional designation is

the creation of an artificial world. They have utterly lost the ability to perceive true reality, and so constitute fertile soil for occultism.

Only a thousand years ago Rus' was considered pagan. Paganism still carried within itself a lingering sense of the Divine Vedic culture. With the advent of the princes and their principedoms — first little principedoms, and later large ones — the rulers found they needed a force more powerful than an army. A force capable of creating a type of Man inclined to unquestioning submission to authority.

Here too the priest's messengers came to the ruling princes' assistance and offered them a suitable religion.

The essence of this new development was very much to the princes' liking. Though there was hardly anything new in it. It contained everything that Egypt had had five thousand years earlier.

Like the pharaoh, the prince was considered to be appointed to his position by God. The occult ministers of the new religion were his advisors — again, just as in Egypt. Everyone else was a mere slave. It was not a simple task to inculcate the new order into the minds of free people whose memories could still savour the celebrations of Vedic culture. And so once again the priest came to the princes' aid. His foot-soldiers began spreading false rumours to the effect that there were pagan settlements where people were being more and more frequently sacrificed to God.

It was noised abroad that pagans sacrificed to their gods not just various animals but also beautiful girls, or young men, or even little children. This false rumour is still rampant among us today. More and more it became a source of anger to the pagan people. And now here was this new religion being offered which placed a strict prohibition on burnt sacrifices. It talked about equality and brotherhood — exempting, of course, the princes. Thus this new religion was little by

little introduced into pagan Rus'. Eventually one of the ruling princes decreed that Christianity be recognised as the only true religion in the land, Rus' came to be called Christian and all other religions were banned.

Now let anyone whose forebears — mothers and fathers — were called pagan just a thousand years ago ask themselves this question: did pagans really sacrifice either animals or people to their gods? And the true picture of events will become clear to anyone who is able to do at least nine minutes of logical reasoning.

And you, Vladimir, once you have applied your own logic to the discovery of the truth, can see the facts for yourself. I shall be glad to give you a little help.

First ask yourself a logical question: If pagans, as their accusers claim, actually offered up someone as a sacrifice to God, then why did the mere rumour about such offerings so greatly trouble their mind and feelings? It would have been more logical in that case to welcome such claims and enthusiastically try to repeat them, instead of greeting them with outrage and accepting the new religion's entreaties. But the people were outraged — why? Naturally, because the pagans could not entertain even the thought of sacrificing animals, let alone people.

That is why no one can come up with even a single source in support of burnt sacrifices among the people of pagan Rus'. It was only the chroniclers of Christianity that claimed that. But then they never lived in pagan Rus', and did not even know the language of pagan Rus'. And what about the sources and manuscripts of pagan Rus' itself? Some of them were hidden, some were burnt in bonfires, just as in Rome. What exactly was seditious in those scrolls? What did they disclose? Without being able to read them, everyone today can make their own guess. They would have exposed the falsity of the accusations against paganism. And they could

have transmitted the knowledge of Vedism. There was more to it than the fact that none of the people of pagan Rus' ever indulged in burnt sacrifices. They did not eat meat at all. They could not even imagine such a thing. They were friends with the animals. Their daily diet was varied enough, but it was strictly vegetarian. Who can come up with a single recipe from ancient Russian cuisine that even mentioned meat? No one!

Even our epic folk tales tell about how the turnip was respected in ancient Rus', about how the people drank mead-beer. Let anyone today, even meat-caters, try drinking this warm mead made from flower pollen and herbs — after drinking that, you will not want to eat anything else, certainly not meat. Those who force themselves to do so may find the meat will only make them vomit.

Besides, judge for yourself, Vladimir, why should anyone eat meat when all around them a whole lot of easily digestible, high-energy food was available?

During the winter bees feed on nothing but honey and pollen, and so can go the whole winter without excreting at all. The whole intake is assimilated by the bee's body. And *sbiten'* — a drink made with boiled honey — was always served to guests directly they entered the home. And who would start eating meat after tasting a sweet drink?

It was the nomads that introduced meat to the world. There was hardly any edible fruit to fend for in the prairielands and deserts they moved about in, and this is why they ended up killing cattle. And the nomads ate the meat of those animal herds that served as their beasts of burden — animals that carried their belongings, fed them with milk and gave their wool for clothing.

Thus the culture of our forebears was destroyed, and Rus' was plunged into religion. If the people had learnt genuine religion, purely Christian, it is possible that life would have

turned out differently. But the priest managed to inject his own twists into the Christian teachings. And the one religion became subject to various interpretations. And the Christian world became divided into a multitude of denominations, often in conflict with each other.

The High Priest spent a great deal of effort on Rus'. In other places on the Earth people saw what he was doing and did not permit his preachers within their borders. Japan, China and India did not become Christian. But the High Priest won them over by another way. The Age of Occultism began one thousand years ago. People all over the Earth lived in the Age of Occultism. And are still living in it today.

## CHAPTER EIGHT

# Occultism

It lasts only a thousand years.

During the Age of Occultism mankind is plunged into a world of unreality.

Mankind begins to direct its tremendous store of diverse energies toward made-up images and abstract worlds existing beyond the boundaries of real life. The real world with its diversity receives less and less of the life-creating warmth of Man. It maintains its existence only at the expense of past accumulation and its original charge from the Divine.

Mankind ceases to fulfil its main purpose. It becomes dangerous for the Universe, and planetary-scale disasters take place.

Today all mankind still lives in the world of the occult. But that age ended in the year 2000. Of course, in reality the name *2000* is a misnomer.

You know yourself that only recently the traditional year-count was radically changed. The latest temporal borderline represented the millionth anniversary of civilisation on the Earth.

And as always a global disaster was slated to happen. More specifically, mankind was supposed to launch a new attempt toward populating the Universe through its own perfection. But no disaster occurred during any year of the Occult Age.

It took only three of the Vedic people who were not asleep to partially remove the soporific occult spells from people today. Remember how the hearts of those reading your books began to flutter and recall their love for the Earth? They are

still asleep, but the power of God's Vedic culture is coming back to them. And God is gaining new hope. While still not fully awake, they through their love averted a disaster. Now it will not happen on our planet.

Soon all people will come out of the hypnotic occult sleep. They will start coming back to reality.

Are you surprised that mankind today is either asleep under a hypnotic spell or dwelling in an unreal world? You might wonder: *How can that be? Here I am, and in the cities both large and small there are millions of people living. Cars go up and down the streets.*

You should not be all that surprised by my words, Vladimir. Think about it and judge for yourself — at what times, on what day or at what hour do people actually live in a real world? Think, for example, how many different religions there are on the globe. They all have a different interpretation of Man's being and the order of the Universe, and each has its own set of rituals, distinct from the others.

Let us say that there is indeed one religion which is truer than all the rest. But that would mean that the worlds the rest of them are creating are unreal. But after all, people believe in them too. And if they believe, they live in submission to the laws of the unreal world.

All over the Earth greater and greater numbers of people are wanting to have more money. But what is money? It is simply a convention. People think that everything can be bought with money. That is an illusion. No amount of money can buy the true energy of Love, or a mother's feelings, or one's Motherland, or the taste of fruit intended only for the one who grew it with mindful attention.

As a convention, money can be used only to buy conventional, conditional love — along with a multitude of soulless things around — but in the process you are dooming your soul to a state of loneliness.

In the Occult Millennium mankind is completely disoriented as to the Space created by God. And people's souls simply flounder about as though in darkness.

Look closely, Vladimir. Just over the past hundred years in the country where you live, look how society has kept changing its direction.

There was a tsar, the social élite functioned according to prescribed behavioural rites, and people of prominence were decorated with various emblems, medals and orders with coloured ribbons. They wore gold-embroidered uniforms. And monasteries and temples were built throughout the country where you live now. And then all of a sudden that was considered contemptible. Uniforms, medals and the ribbons attached to them came to be considered no more than clown outfits. Temples were part of the dark ages. Those who served in the temples were called swindlers.

And people enthusiastically sacked the temples and angrily slew the occult servers therein. Later it was announced to all that only the Soviet authorities were to blame. Yes, the authorities did officially encourage the people to do this. But then the people did not protest — they simply responded to the call of their ruling idols.

After all, you know from documents existing today how in the Kuban<sup>1</sup> forty-two Christian priests were brutally slaughtered. Not just killed, but brutally tortured. Their bodies were tossed in cesspools. This was not just the work of the rulers, the people themselves willingly participated in such acts. The rulers' only role was to allow them to happen. As a result, priests were slain by the thousands in different parts of the country. The ones that could not run ended up

<sup>1</sup>*Kuban'* — the area around the Kuban' River in the northwestern Caucasus, which flows from Mount Elbrus to the Sea of Azov.

renouncing their faith. Very few in those times managed to save both their life and their faith.

The majority of the people in the country became sincere atheists. They changed their clothes; the emblems and ribbons on their uniforms became different, with different colours. Many analysts and historians have written books about the Soviet years, but... In the future Lenin and Stalin will be remembered for just one thing: *For the first time mankind has been shown clearly that occultism is obsolete. Even in their sleep people do not accept occult religions. Occultism is supported only by artifice and force.* But, you see, it was not their faith in God that was destroyed. It was only the occultism that had infested their faith that was brought down.

Over the past millennium, in Russia alone a startling change of philosophy has managed to occur among the people as a whole. Religion became significantly denigrated and people's faith in it was transferred to communism, though that too is a faith.

Quite recently, you saw yourself how once again the people in the country where you live sharply changed their direction. The path everybody in the country had been enthusiastically following was declared to be the wrong one. And priorities changed once more.

Did the people choose a new way? No way! The path is not at all clear to the people. In the unreal world of the occult the people do not choose their own path. Someone always points it out. But who? The High Priest, who still today rules the world.

How does he rule the people of the modern world? And why can nobody ever overthrow him? Where is he located? Take a look — I can show him to you.

## **The priest who still rules the world today**

Now you see an elderly man. Do not be surprised at his modest appearance. In terms of clothing and behaviour he is indistinguishable from most other people, and as you can see, he is surrounded by ordinary things. And his house is not that big — his staff comprises just two servants. He has a family: a wife and two sons. But even his family do not know who he actually is.

And yet he does have one outward distinguishing feature: if you observe him closely, you can see that he spends the whole day in isolation. And on his face you can see the depth of his meditation. Whenever he eats, or talks with his wife (although their conversations are rather rare), his eyes look as though they are concealed behind a foggy film. And even when he watches television, his eyelids are slightly lowered, he never shows surprise and never laughs. In fact he hardly watches any television at all. He merely pretends to watch, and during this time he is deep in intensive thought. He is working out grandiose plans. And exercising control of events in whole countries. He is the High Priest from a dynasty of priests, having inherited from them a knowledge of the occult, which he will also be able to transmit to one of his sons. It will take him just a year to convey everything orally to his successor, whom he is training in secret without his even knowing it — the priest has long been developing specific abilities within his son.

All the world's money belongs to the High Priest. All the world's money works for him — including what you have in your pocket right now. Do not be surprised. I shall show you how this happens, and by what means and for what reason the High Priest prefers not to live in a castle surrounded by an army of guards, why he prefers commonplace routines to special luxury.

The High Priest has no bodyguards because he knows perfectly well that the more visible authority is to all, the greater the need for armed protection. Besides, there is no guarantee that any number of bodyguards, even hundreds of thousands, will succeed in protecting any earthly ruler. Indeed, there have been instances where the guards themselves betray or even kill the ruler. Besides, having bodyguards may entail a lot of problems. There are times when the ruler is compelled to submit to the guards' terms. Compelled to tell the guards about his intentions — forthcoming trips, for example.

With a bodyguard a ruler is always under observation, and so meditation becomes more difficult for him.

It is much simpler and more reliable to conceal one's identity. This also wards off intrigues on the part of one's adversaries, fanatics and challengers to one's authority.

Now you may well be thinking: *But how is it possible to control huge numbers of people without assistants, managers and deputies, without drafting laws and disciplining those who fail to carry them out?*

It is all very straightforward. The vast majority of the people have been immersed in occultism for a very long time.

The High Priest knows all the tricks of occultism. He does have assistants, managers, drafters of laws, prisons and executioners. He has armies and commanders, though not a single one of those who carry out his missions has any suspicion himself of who is secretly commanding him and by what means the orders are issued.

It is a simple system of control without visible and personal contact.

In cities both large and small of any country there are people who all at once start to hear voices from a source they cannot pin down. And this voice from an unknown source may order a Man to carry out some kind of action, and the Man obeys the order.

Sometimes there is a clearly audible voice, sometimes this Man does not know himself what is happening to him — it is just that he feels some kind of attraction within and he carries out the action ordered.

This kind of phenomenon is known to modern science. Psychiatrists along with other scientists have been attempting to study it for a long time, but to no avail.

Modern science classifies this kind of phenomenon as a type of mental disorder. People who go to doctors and report hearing voices coming out of nowhere and giving them orders are invariably carted off to a hospital. What kind of hospital? A psychiatric institution. In many countries these are very much like prisons. There are a great many of them today in America, Europe and Russia. Patients are treated with all sorts of pills and injections to quiet the mind — this dulls their sensations, making them sleep a lot and become extremely sluggish. And some of these people stop hearing voices as such. Others feign cure in an attempt to procure their release.

But not everyone who hears voices will go see a doctor. Just imagine now that someone submitting to a voice command is in charge of an atomic missile, or in command of an army, or assigned to guard a container of deadly bacteria. And this voice then gives him a bizarre order...

Science has not been able to define the exact nature of this unusual phenomenon. It definitely exists today, and they are afraid to publicise it, but that does not help. In the meantime, they should have been focusing their attention on something more basic: if there is a signal receiver, there must somewhere be a signal transmitter as well.

The High Priest and his assistants know how to transmit voice-commands. They also know what kind of Man each of the many religions is capable of shaping. The priests are the originators of these religions, of occultism itself. They need

it in order to control people. The fanatic who believes in the unreal world is like a bio-robot, predisposed to hear the voice-commands and to carry out any order unquestioningly.

The High Priest and his assistants know how to set people at odds with each other and start wars among people of different faiths.

Wars may have different specific causes, but in any war the basic weaponry has consisted of discrepancies in people's beliefs.

All technology and all artificial information channels are similarly controlled by the priests through people. And for this they do not have to control every television broadcast themselves or look over every reporter's shoulder as he writes. They need only create a general condition whereby all media are out to make money.

Television advertising, for example, has become more and more sophisticated, intrusive and aggressive. Any psychologist will tell you that it is nothing less than aggressive mental suggestion aimed at individual viewers — often not to their benefit, but to their harm. People are shamelessly told that commercial advertising cannot be helped — that is what pays for the programmes people watch. But then every TV viewer pays for all these adverts by purchasing products at the suggestion of the advertisers. Advertising costs are included in the retail price of the product. What can be more sorry than a situation like that?

And money acts as a huge and powerful lever for the priest's influence.

I told you that even the money you have in your pocket right now serves the High Priest. Here is how it all happens.

A simple pattern may be observed in the convoluted banking system we have: money withdrawn by someone from a bank increases the bank's capital. For example, let us say Russia as a country borrows on credit from an international

bank. It is then obliged to pay back with considerable interest much more than it originally borrowed. How is the difference made up? From the taxes you pay — or, let us say, even when a pensioner buys a quarter-kilo of bread, a tax is also included as a percentage of the price. And that percentage, or at least a part of it, goes to the international bank. Thus capital flourishes, but whose? The High Priest's. Without even touching the capital himself, he is able to direct the flow of money into wars, occult activities or the production of deadly medicines.

His goal is simple. Pride dominates in him, and it constantly aspires to create its own world, distinct from the world God made, and hold it in subjection. And the priests partially succeed in achieving the objectives they desire. People's concerns about their everyday lives are a great help to them in this. And they themselves stir up concerns among the people to distract them.

Note how when people are distracted by everyday concerns they do not notice that less and less information is being provided them. There are stricter and stricter prohibitions on bringing up the one basic question: is the path to which all mankind is now aspiring the right one?

If they could only free themselves from distraction, many might be able to come to a conclusion for themselves: seeing how every year diseases are on the rise, wars are not ceasing and each day brings greater and greater disasters, the path we are on is doubtful, to say the least. But oh the distractions! They do not allow for any kind of contemplation. The priest, on the other hand, is engaged minute by minute in meditation, creating designs and having them carried out by the hands of millions of people...

I spent a long time listening to Anastasia's emotional narrative. I refrained from interrupting her or asking her for

clarification along the way. This time I stayed longer than usual in the taiga. As I was leaving, I realised I was suffering from information overload and that it would be difficult for me to set everything down in a book. Besides, the things she said were so extraordinary, raising questions about religion and authority. In our religious denominations today there are a great many fanatics, all kinds of them. They are ready to go after anyone who encroaches on their beliefs! What do I need these problems for?

## CHAPTER NINE

### A need to think

After I got home and was preparing this book to submit to the publisher, I still couldn't decide, even up to the last moment, whether or not I should include all of Anastasia's sayings in the manuscript.

When Anastasia spoke of a splendid future for Russia which could be realised through the establishment of family domains, everything she said made sense. Her idea quickly caught on among my readers. People began to act.

Then in the book *Who are we?* when in an emotional answer to a question she referred to Christ Jesus as her older brother, and I wrote about it,<sup>1</sup> a number of readers, mainly faithful Christians, began to object.

In the book before that, I had written how, in answer to my question as to whether she might name any clerics who could understand her, she replied that Pope John Paul II would help her.<sup>2</sup> This prompted fresh doubts on the part of a few Catholic readers.

Such sayings of hers left me with a constant series of doubts of my own: should I write in my books about Anastasia's unusual actions, words and behaviour? Are they beneficial or harmful? Will they not cause some readers to entertain doubts about the obvious practical ideas of transforming society through the improvement of the living conditions and way of life on the part of individual families?

<sup>1</sup>See Book 5, Chapter 23: "Your desires".

<sup>2</sup>See Book 4, Chapter 24: "Take back your Motherland, people!".

Besides, I wasn't completely free of doubt in regard to the content of her sayings — now I ask you, what am I to make of phrases like “Christ Jesus’ sister” or “Pope John Paul II will help”? If you look through the Bible, there is no mention anywhere that Jesus had any brothers or sisters.

And then all at once there occurred an event that could be called super-sensational, and in connection with this Anastasia's unusual sayings again and again gave me pause for reflecting on the tremendous scope of Man's true possibilities. This is what happened.

All at once I heard that the Vatican had publicised sources mentioning two of Christ Jesus' sisters. Only I don't remember whether they were sisters or cousins... I heard this brief news report while I was alone in my apartment, taking care of some routine tasks.

The radio and the television were both on at the time, and so I can't say for certain where I heard it. I think it may have been the TV news.

After hearing this, each time I sat down at my desk I couldn't help picking up my notes with Anastasia's unusual sayings, which I had previously decided not to include in the new book. Now I was having second thoughts about whether I had made the right choice. Among these sayings there was this one in particular:

*The American President, George Bush, in a highly unconventional move, without being aware of it himself, will save his country from a terrible disaster and protect the world from a war unprecedented in its potential destructive influence over the whole Earth.*

Following the disastrous acts of terrorism in America on 11 September 2001 and the subsequent military operation (war, in fact) in Afghanistan with direct American involvement, this saying of Anastasia's seemed to completely contradict what actually happened. However, upon analysing the information available in the press and on the TV, I became more and more

convinced that the events of 11 September in America could help people uncover a major mystery — could help head off even larger-scale, global acts of terrorism in various countries of the world. And they will be averted only providing this secret is exposed. Again and again I read over all Anastasia's extraordinary sayings. And here is what I discovered.

On 11 September 2001 in the United States of America there occurred a series of large-scale acts of terrorism. Several jets with passengers aboard took off with unknown pilots from New York airports and immediately altered their scheduled flight path. One after the other the planes tore into the twin towers of the World Trade Centre along with other strategic targets.

Over and over again gruesome images of the crashes lit up TV screens all over the world. Soon afterward Osama bin Laden and his organisation were declared to have masterminded the attack. A little while later the American President and government secured the support of a number of European countries and Russia and began bombing Afghanistan, where, according to available intelligence, the chief culprit and members of his organisation were hiding out.

So then, what is the mystery here? After all, images of the results of these terrorist acts and the ongoing anti-terrorist military operation were shown many times over and are still being used in TV news clips several times a day.

The mystery lies in the complete absence — or cover-up — of the *causes* of the acts of terrorism — in the complete absence of logic, not on the part of those who carried them out but of those who thought them up.

The mystery lies in the fact that the press didn't even try to make even a half-way significant analysis of the causes of what happened, as though somehow all the mass media had been issued an injunction not to investigate them. What we see and hear in the media on a daily basis touches upon only

the fact of what occurred. The constant repetition tends to make the extraordinary commonplace, something as routine as the daily reports of highway accidents.

According to media briefings this is what happened: Some extremely wealthy terrorist — generally assumed to be bin Laden, planned and carried out through his agents a series of notorious acts of terrorism which resulted in a huge number of casualties and exerted an unprecedented effect on people the world over.

Just what, in sum, did the mastermind behind these terrorist acts achieve? A significant part of the world community, on the head-of-state level, united against him. The most up-to-date technology and well-trained military units were employed to capture and destroy him.

According to the official version, terrorist Number One is hiding out in caves in the Afghan mountains. These mountains have been bombed from the air, along with Taliban forces, considered as collaborators with the mastermind.

The developed countries, led by the USA, have joined forces to put an end to all the camps of terrorist organisations, no matter what country such camps are located in.

Could the mastermind have failed to foresee the subsequent development of events? Sheer nonsense! Of course he knew that it would happen precisely that way. For a man able to evade capture by the special forces for such a long time, to plan and carry out terrorist acts requiring serious analysis and calculation, it should not have been a difficult task to calculate the course of events which followed.

Thus it turns out that this mastermind, from one point of view, is an astute strategist and tactician capable of meticulous analysis, while from another standpoint he is an utter fool. It turns out that through his terrorist activities he has brought doom upon himself, his organisation and all terrorist organisations, even those not connected with him.

The situation is utterly illogical and, consequently, the actions of the world community in the struggle against terrorism may not be effective — and, if the full truth be told, dangerous, since logic dictates that the mastermind behind a terrorist act remain above suspicion.

Be that as it may, one thing is clear: the picture of events that emerges from the facts reported in the mass media is a highly illogical one.

In the beginning, of course, I, like many other people, didn't pay much attention to this, but... The news from America immediately resurrected in my thought several of Anastasia's sayings — sayings which I had decided to refrain from publishing because of their strange and extraordinary nature. But now, after what happened in America, these same sayings explain a lot. Though it didn't become clear right off, by any means. Here's one example:

Right from the time of the Egyptian pharaohs, the rulers of states both large and small have been the least free people on the Earth. They spend the greater part of their time in an artificial information field, compelled to submit to accepted rituals of behaviour. They constantly receive a tremendous amount of routine and monotonous information, but time constraints do not allow them to analyse even that. If a ruler should make the transition from an artificial information field to a natural one even for just three days, this is something dangerous for all levels of the priesthood. Dangerous, too, for the ruler's secular rivals. The danger lies in the possibility that the ruler might start analysing a whole range of processes on his own, thereby freeing himself from the yoke of occult influences and freeing his people from them.

A natural information field is Nature at large — its appearance, fragrances and sounds. It is only the Nature of

one's own domain — a place where flora and fauna treat Man with love — that can protect Man from occult influences on him.

Now, as I sat at my desk (made of the cedar wood which Anastasia had given to me), I recalled these words, though this time they no longer seemed strange to me, as they had before.

Indeed, look at what is happening, even with our own President of Russia. He is constantly meeting either with foreign heads of state or with officials from our own country. None of them just stop by to take tea — they come with all sorts of problems, and are impatient for an immediate solution. And the press? No sooner does some sort of unusual event happen in the country than immediately the press wonders what the President's reaction will be. Or more bluntly: *Why didn't the President himself go to Ground Zero?* And he wins approval ratings when he actually visits the place where a flood or something else happened. But is that a good thing?

And when does he have time to calmly think about and analyse the information coming in? *Give us the President!* the people demand the moment something occurs. That's the way it happens. That's the way it's scripted. But what if it were scripted another way? The President should not be dashing off in all directions like a firefighter. He shouldn't be briefing officials, wasting time on meetings.

It is essential that he be given the opportunity to sit in his own garden, and from that perspective follow what is going on in the country, then analyse the incoming information, and from time to time take some kind of decisions. Perhaps then the people, too, would start to live better.

“What kind of nonsense is that?” many might react, as I did at first. Nonsense? But is it normal not to give someone the chance to think? Indeed, there is someone who finds it very

profitable for the presidents of various countries to think as little as possible. What would happen in our country if our President were given uninterrupted time to quietly think about things? What if he were afforded the opportunity to step out of the artificial information field, at least for a time?

And all at once... I was struck by a thought which made me feel as though an electric current was running through my whole body. All at once I could feel my desk warming up. An incredible stroke of intuition hit me... For some reason in my excitement I grabbed the telephone receiver and, without dialling any number (since she doesn't have a telephone) I cried into the mouthpiece: *Anastasia!*

There was no customary dial tone. And a moment later I heard a familiar voice, easily distinguishable from all other voices in the world — the calm, pure voice of Anastasia, saying:

"Hello, Vladimir! You should try not to get so excited. You see yourself what unnatural actions excessive excitement can lead to. I shall not talk with you on the telephone. Please, calm down. Get up from your desk and go out into the fresh air, into the grove of trees near your house."

The dial tone returned. I put the receiver down.

*Wow! I thought, I really did get stirred up. I wonder whether that was really Anastasia talking to me or was I just hallucinating from excitement? I really must go outdoors into the fresh air and calm down.*

A short time later I got dressed and went out to the grove of trees next to the house. Deep in the grove I caught sight of... her! There was Anastasia, standing under a pine tree, just by the side of the pathway, and smiling. Not paying any attention to her extraordinary arrival, I began talking immediately.

### Who saved America?

“Anastasia, I’ve got it... I did some analysing, comparing your sayings with the events which took place in America, and it all became clear... Listen to me, and correct me if I’m wrong. The series of terrorist acts which occurred on 11 September in America — it wasn’t complete. The organisers were preparing something a lot bigger, weren’t they?... Of course they were. Only I can’t fill in the details. In general, I think, I’ve got it. But the details... Can you help me here?”

“I can.”

“Then tell me.”

“The mastermind behind this was counting on six terrorist groups to act in succession. Each of the six groups was to act independently at its appointed time, without knowing anything about each other. And their leaders did not know who was behind it all or what the ultimate goal was. Each group was made up of religious fanatics, ready to die for the cause.

“Only one group was comprised of people who had agreed to carry out the dirty deeds for money.

“The first group was to simultaneously seize control of all civil aircraft in the skies over the country, as well as those taking off from airports and those approaching American airspace. All the seized aircraft were to be used to destroy targets of national importance.

“Six days prior to this another group was to infect the water-supply system in twenty major hotels. The plan was drawn up in such a way that it would be virtually impossible to trace the source of the infection and the location of the perpetrating agents. Each agent was supposed to take a room in one of the hotels, place a special device on the cold-water tap and open the tap. Instead of water flowing from the tap, the air pressure would force a deadly powder back into the whole

system. After this the tap would be shut off and the following morning the perpetrator would be making his way to a hotel in another city.

“The bacteria released into the water-supply system would become glutinous upon contact with the water, sticking to the sides of the pipes, swell up, multiply and flow downward. In twelve days they would have proliferated a great deal. In an ordinary, natural-water setting they would be incapable of proliferating — they would be destroyed by other bacteria. But such a balance is absent in an artificial supply system, where Man has deprived the water of many of its natural properties.

“During peak consumption periods — when people would be washing themselves in the morning, for example — the water flow would cause a part of the bacteria to come loose, and contaminated water would come out of the tap. People washing themselves would feel nothing at first. But after eight to twelve days small abscesses would appear on their skin at an increasing rate. They would grow in size and suppurate. The disease would be highly infectious and very difficult to cure, though the attack organisers possess an antidote...

“A lot of people would be infected in many countries. Soon it would be discovered that these people had all stayed at hotels, but this would become evident only after the planes crashed.

“It pains me to talk about the wretched deeds to be carried out by the other perpetrators. The net result of all the acts of terrorism taken together were designed to produce a climate of panic and dread.

“Many people would begin leaving the country, taking their families with them. They would attempt to relocate their capital to banks in lands where they considered it less dangerous to live. But not every nation would agree to accept refugees from the USA. Most countries’ populations would be gripped

by fear and terror — especially if what had been considered the most powerful state in the world could not cope...”

“Stop, Anastasia! Let me try to guess. After that the masterminds would announce themselves — I mean, put forward their demands through some kind of intermediaries.”

“Yes.”

“But they didn’t succeed in carrying out all the attacks they had envisaged. They didn’t succeed in wholly frightening Americans. They didn’t manage to do everything they had planned because they were forced to start acting quite a bit before they were fully prepared. That’s how the illogicality arose. The terrorist acts took place, but they didn’t follow through with any demands. The whole process got cut off! And I think I can guess why. Because the real masterminds are to be found among the priests who are alive today. And they were frightened by Bush’s actions and were obliged to jump the gun. Right?”

“Yes. They...”

“Wait, Anastasia! I’ve got to understand all this for myself — I’ve got to learn *how* to understand. This is very important. If *I* can get it, that means others like me will also be able to discern the reality we live in. That means everybody will understand what must be done to better our lives.”

“Yes, Vladimir. If you have been able to understand, other people will too. Some right off, with others it will take time, but people will start building their lives in a splendid reality. Go on, only a little more calmly — there is no need to get so emotional about it.”

“But I’ve almost got myself calmed down now. Or maybe not. This is hard to talk about without getting emotional. But hey! — The President of America, Bush, has really stirred things up for those smart asses. I realised how horrified they must have been when he... When President Bush all at once upped and left for his ranch in Texas.

“Just six months after taking office, the President takes a holiday and goes away for close to a month! And where does he go? Not to some fashionable resort. Not to some exotic castle. He goes to his ranch, where he has a small house. Even the usual lines of presidential communication are missing. All he’s got there is one very ordinary telephone. And no proliferation of TV channels, seeing he hasn’t got a satellite dish. The media commentators mentioned these facts, but nobody realised what was behind them. I read on the Internet everything I could about Bush’s trip to his ranch. Just the fact was stated. They were surprised that he took a holiday so early in his mandate. And for such a long time. He spent twenty-six days at his ranch. He didn’t allow any press people to visit, and didn’t invite a bunch of officials.

“Nobody, but nobody, understood! Here was George Bush, the President of the United States of America, taking a colossal step which not a single president had ever taken before in the whole history of the country. Maybe not a single ruler has ever thought of doing something like that over the past five or ten thousand years!”

“You are right, they have not.”

“The beautiful thing is that for the first time the ruler of a huge country, the most important country in the world, much to the horror of all the priests, suddenly tore himself away from his artificial information field. He simply picked himself up and left it behind. And with that he came out from under the control of the occultists.

“Now I understand: rulers are always kept under control. Their daily pronouncements are vigilantly followed, right down to their intonations and facial expressions. Their actions are subject to correction through all kinds of information tossed their way. But when Bush escaped from that field they were horrified. They tried reaching him through occult means — you know, the way you put it, through remote voice

commands. But that didn't work — they didn't reach him! Just as you said — d'you remember? You said that Nature — the flora and fauna — constituted the natural world, and it does not permit harmful occult influences to reach Man. It protects Man, provided Man has made contact with the natural world — the one he has created himself."

"Yes, that is it, exactly."

"George Bush, of course, evidently did not create what was growing on his ranch. But he was the one who selected the location. He treated it with love — love for the Nature there, which is obvious from many facts. And Nature reacted to his love. It responded to him in kind. It protected him in the same way as the vegetation growing in one's family domain. Is something like that possible, Anastasia, when someone hasn't planted things himself, yet they still react?"

"It is possible. Sometimes they will react when Man treats his surroundings with sincerity and love. A similar thing happened in the case of George Bush."

"So there! I was right. Here was the President on his very own ranch. Everybody thought he wasn't receiving any information. But in actual fact the flow of artificial information from the artificial world significantly lessened. And the flow of natural information from the world around him significantly increased. The President took it in through the rustling of the leaves, the splashing of the water, the singing of the birds and the whistling of the wind, and he meditated. He analysed! He thought! This fact is something they will try to 'wipe out', to forget, or to refrain from talking about. They'll try to change the subject. But they won't succeed! Bush will still go down in millennial history.

"I've got it, Anastasia. Of course one can say a lot of intelligent things and write a lot of songs and poems, like King Solomon did in the Bible. Or one can act more radically and convincingly, like Bush, and thereby say to the world: *Look*

*here, people. I'm rich, I have supreme power over the strongest country in the world. But none of this is the most important thing for Man's being. Man's soul, along with its Divine essence, prefers something else: not an artificially created world, but the natural world, created by God. My ranch is dearer to my soul than gold and technocratic achievements. And that is why I am going to my ranch. You too should be thinking, people, about your aspirations in life!*

“The American President has come up with the best, the strongest and most convincing advertisement for the family domains you spoke of. The future family domains of Russia — of the whole world! If people don't understand it after this, then mankind really *is* asleep. Or just about everyone's under somebody's hypnosis. And that's why they're sick and in agony, that's why they use drugs and go to war and kill each other. If mankind doesn't come out of this hypnosis after your words, after Bush's actions, then it's going to take a disaster.

“Bush is the President. He's the most informed person in our technocratic world, since he has access to information from special services and various think tanks. And he is aware of the information offered by the natural world. He can do comparisons and analyses. He did this and showed with his actions...

“Wait — another incredible coincidence. No, a whole series of coincidences — if, indeed, they are coincidences. You were saying... You say things, and they come to pass... You told me that at the start of the new millennium the Russian President would pass a law concerning the land, to grant every Russian family a hectare of land free of charge.

“Well, on the 21st of February 2001 all the TV news programmes carried a report on a session of the State Council of governors under the chairmanship of the Russian President, Vladimir Vladimirovich Putin. The session looked at the land question — specifically, private ownership of land, including

farmland. The various governors assembled had different opinions on the question. The majority of regional leaders — members of the State Council — were in favour of making land available to Russians as private property.

“Judging by his remarks and his address, as well as by the fact that he was the one who had put the land question before the State Council, it appeared that the President was also in favour of allocating land to people as private property with the right of inheritance.

“And so the upshot of the session was a directive to the government to prepare draft legislation on the land issue by May of 2002 and present it to the State Duma for consideration.

“Of course they’re talking about *selling*, not giving the land away for family domains, and farmland isn’t even on the table, but all the same, it’s a palpable step in the right direction.

“Anastasia, is all this a chain of coincidences or did you exert some kind of influence on people? Eh? You can give remote voice commands too, can’t you? Of course you can. And you do. Have you been talking with them?”

“Vladimir, I have not been talking with anyone except you, and that has only been today, on the telephone. I have not talked with anybody at a distance, as you suppose. And I never influence anyone against their will.”

“But one time when I was in Moscow I could hear your voice, Anastasia. You weren’t around, yet I still heard your voice.”<sup>3</sup>

“Grandfather, Vladimir, was near you at that time. Many people can catch thoughts existing in space. It is a natural ability of Man. Earlier all people could do this, and there is nothing bad in it. Because there is no forcing. One Man can touch another at a distance with his thought-ray, send him warm cheer and thereby speed up the thinking process. Every Man possesses this thought-ray, only in varying degrees.”

<sup>3</sup>A reference to Book 2, Chapter 25: “The Space of Love”.

“But your ray is very strong — have you tried touching people with it?”

“Yes, I have. But I shall not mention their names.”

“Why not?”

“The touch of the ray is not important here. What is important is their ability to perceive reality.”

“All right, then, don’t name names. Only... Hey, I’ve got an idea! You know what I just thought of? It’s terrific! After all, you’re able not just to warm people with your ray at a distance, but to burn them too. You can even turn a stone into dust — you demonstrated that once.<sup>4</sup> So what you should do is burn up the perpetrators of terrorist acts. Burn up the priests — along with all the demonic forces. You were telling me. I remember writing it down: ‘With my Ray I shall take but a moment to burn up the murk of age-old dogma. Stand not between the people and God...’<sup>5</sup> And so forth. You remember those words of yours?”

“Yes, I do.”

“Then what are you waiting for? Why don’t you burn them up? After all, you said that...”

“I was talking about dogmas. I would never dare burn up *people* with my ray.”

“Even the masterminds behind acts of terrorism?”

“Even with them I would not dare.”

“Why not?”

“Think about what you are saying, Vladimir.”

“What’s there to think about? Everyone knows the terrorism masterminds and their accessories need to be destroyed, right away. Armies of various countries have already been mobilised to this end. Special forces. People are dying.”

<sup>4</sup>See Book 3, Chapter 7: “Assault!”.

<sup>5</sup>See Book 3, Chapter 24: “Who are you, Anastasia?”.

“Their efforts are to no avail. They will never find and never destroy the real masterminds. They will never be able to stop terrorism that way.”

“All the more reason. If you can pinpoint and burn up the masterminds and their accessories in a flash, then do it. Burn them up!”

“Vladimir, perhaps you might give some thought to — you might determine — just who are the masterminds’ accessories, and how many of them there are?”

“Well, sure, I could think about that. Only I doubt I’ll be able to come up with an answer. If you know who, tell me their names.”

“Very well. One of the accessories to terrorism is none other than *you*, Vladimir — along with your neighbours, friends and acquaintances.”

“What? What are you saying, Anastasia? As for myself, and my friends too, I’m absolutely certain that we are not accessories.”

“The lifestyle of most people, Vladimir, is fertile soil for terror, disease and all sorts of catastrophes. Is not someone who works in a factory producing machine guns and cartridges an accessory to killings?”

“If they manufacture weapons, well, maybe, indirectly. But you were talking about me. And I don’t work in an arms factory.”

“But you smoke, Vladimir.”

“Well, yes. But what’s that got to do with it?”

“Smoking is harmful, hence it follows that you are terrorising your own body.”

“My own...? But we were talking about terrorising other people...”

“Why bring up other people right off? Everyone should carefully examine his own lifestyle. Especially those who live in cities. Do people who ride in motor cars not know what

deadly gas their motor car is polluting the air with? Do people who live in large buildings divided up into a whole lot of flats not know that it is harmful and dangerous to live in these apartments? The way life is organised in big cities is aimed at destroying Man and disorienting Man in respect to natural space. The majority of people who live that way — they are the ones who are accessories to terrorism.”

“Well, let’s say you’re right. But now many are beginning to understand, and they’re going to change their lifestyle. So help people, burn up the masterminds of terrorism with that ray of yours.”

“Vladimir, in order to carry out your request, I would have to charge my ray with a great deal of malicious energy capable of destroying Man.”

“So, what of it? Go ahead and do it. After all, this Man is a mastermind of terrorism.”

“I understand that. But before I can aim malicious energy at another, I would need to concentrate and produce in myself a large amount of this energy. Afterward it can inject itself into me again or be scattered in particles among other people. Yes, I can destroy the High Priest, but his program will continue to operate. And evil will find another priest, and he will be even stronger than the one I destroyed.

“You must understand, Vladimir, that terrorism, murders and crime are many thousands of years old. In Egypt the pharaoh was poisoned by the priests for trying to oppose their actions. When scientists opened his grave in the past century, they discovered that Tutankhamen was only eighteen years old.

“You have read in the Bible about the war of the priests. You yourself might remember that it talks about it in the Old Testament. Before all the Jews were to come out of Egypt, the priests quarrelled among themselves.

“The priest Moses asked for exclusive authority over the Jews, but the other priests would not accede to his request, and then the locusts came and attacked the Egyptian crops. Then a plague came over all their children. Many people and cattle fell victim to the disease. And finally the pharaoh let the Jews go. The residents of Egypt were so frightened they gave them cattle and weapons, as well as gold and silver.

“In the Old Testament it says that God was behind these attacks in Egypt. But could such attacks really have come from God? Of course, they could not have. God creates life to be happy for everyone. The priests caused the terrorism in Egypt when they were attempting to divide the authority among themselves. And then they blamed God for their evil deeds.

“Remember, too, Vladimir, how Jesus was crucified on the cross. Who was crucified along with him, on the crosses next to him? Criminals! That is what the New Testament says. And that was more than two thousand years ago. But they had crime back at that time too. They executed criminals. But what was the result? Crime still exists today. It goes up with each passing day. Why? Spending thousands of years in constant commotion, people have not realised that you cannot fight evil with evil. In that kind of a fight evil will only get bigger. That is why, Vladimir, I cannot respond to evil with malice.”

“Well, either you can't or you don't want to — I don't suppose it makes much difference overall. When you speak, Anastasia, your arguments are very weighty indeed. It is quite true that mankind has not been able to cope with lawlessness for thousands of years. Maybe they've been using the wrong methods all this time. Only when you look at the current situation in the world, no alternative to suppressing terrorism by armed force comes to mind.

“And another thing: more and more often today we hear the term *religious extremism*. You've heard about that?”

“Yes.”

“And they even say: *Islamic religious extremism*. They say it’s the strongest religious extremism of all.”

“Yes, so they say.”

“So what’s to be done? After all, I have heard Islam is the fastest-growing religion today. Many of my acquaintances are Muslims, and these aren’t bad people, but on the other hand, there are also extremists among the Islamists. They engage in large-scale terrorist activities. How can we counteract them except with military force?”

“The first thing is, not to lie.”

“Not lie to who?”

“To yourself.”

“How so?”

“You know, Vladimir, you have heard about Muslim religious extremism. Many people have been called terrorists. You are not the only one who knows that — people have been deliberately spreading the news all over the world. It is not difficult to make a lot of people believe a notion like that, when acts of terrorism are actually taking place and Muslims participate in them. But when we talk about Muslim terrorism, we forget about another weighty argument.”

“Which one is that?”

“Those that are called extremists and terrorists believe that it is *they* who are attempting to put an end to terror and save their people from calamities. And their arguments have substance to them. They believe that they are saving the whole world from the plague brought on by the Western, non-Muslim world.”

“You said that their arguments have substance to them. But I have never heard anything about their arguments. If you know about them, please tell me.”

“Fine, I shall tell you. But try to reason things through for yourself, and then tell me which of the two warring sides

is right. The Muslim spiritual leaders say something along this line to their flock: *Look, people, look at what the unfaithful bring. The Western world has sunk into the mire of promiscuity and adultery. It wants to inject its fearful diseases into our children too. Allah's troops must stop the invasion of the unfaithful.*"

"Wait, Anastasia, those are mere words. Where are their arguments?"

"They cite facts showing that promiscuity, prostitution and homosexuality are widespread in Western, non-Muslim countries. Crime is prevalent. And every day more and more people are using drugs. And they are unable to stop terrifying diseases — AIDS, for example, and drunkenness."

"And you mean to say they don't have any of that in the Muslim countries?"

"Vladimir, in the Muslim world, in the Muslim countries, there are far fewer drunkards and smokers. There are far fewer cases of AIDS. Their birthrate is not falling as it is elsewhere and there is much less marital infidelity."

"So, it turns out, both sides are convinced they are fighting for a right cause?"

"Yes."

"So, what's ahead?"

"The priests believe they have already done everything necessary to initiate and spread large-scale war. The Western countries, the Christians, have joined together to attack the Muslim world. Following this, the Muslim world will come together, ready to fight. But the sides will not be equal: the Muslims have no modern weapons. Then, upon seeing their faithful brethren perish, they will get ready thousands of terrorists to make the Western world quit. War will start, but it will be stopped — *they* will not let it go ahead."

"Who will stop it?"

"Your readers. A new world-view is being formed in them, different from the one that has prevailed throughout the past

millennia. They are creating in their dreams. Once dreams begin to turn into reality, all wars and diseases will cease.”

“D’you mean to say that this will come about when construction of family domains begins? But how do family domains relate to the cessation of conflicts and religious opposition throughout the world?”

“The glad tidings of these domains will keep spreading throughout the world. People all over the globe will be roused out of their hypnotic incarceration, they will awaken from their millennial sleep. They will change their way of life and build a Divine world on the Earth with inspiration.”

“Of course, Anastasia, if what you say begins to take place, and takes place everywhere on the Earth, then the world will indeed change. I know that you dream about this. You believe in your dream and will never betray it. And many people have understood your idea in regard to the family domains. These people are really starting to take action.

“But, Anastasia, you don’t know everything. Come! Come to my flat, to my office. I have something I want to show you right now, and you will see, you’ll understand for yourself what these people are up against.”

“We shall go, Vladimir, and you will show me what has troubled you so.”

### **Who is for, who is against?**

Upon entering the flat, Anastasia took off her cardigan and kerchief, letting her golden hair fall to her shoulders. She

gave her head a light shake, and the flat was at once filled with the enchanting fragrances of the taiga.

I took a chair and put it next to my own arm chair by the desk, turned on my computer and logged on to the Internet.

Not all people in Russia today will know what that is. And so I shall give a brief explanation. The Internet is an electronic information network, or 'web', which has been developing at an intensive pace in many countries of the world. With the aid of a computer one can tap in (or 'log on') to this network through a telephone line connected to a server. A server is a special powerful computer containing all sorts of information pages. On most servers one has the opportunity of posting one's own messages.

The Anastasia Foundation for Culture and Assistance to Creativity, based in Vladimir,<sup>6</sup> together with the Moscow firm known as *Russki ekspress* (Russian Express) has also set up its own server and its own site at the address: *Anastasia.ru*.

Thus any readers with a computer can type in the address on their keyboard and not only visit our site, but they can send us an electronic message expressing their opinions about the books, find out what other readers have said about them, and argue or discuss any particular question.

Those that do not have their own computer can gain access to our website through one of the Internet cafés which now operate in all the regional and provincial centres of Russia, as well as, I am sure, in most major cities.

From time to time I too log on to the Internet and look up what my readers have been saying. I have not been able to do this very often, as I simply have not had time to respond to all the correspondence I receive by regular mail. And last year the *Anastasia.ru* site received more than fourteen thousand

<sup>6</sup>*The Anastasia Foundation for Culture and Assistance to Creativity, Vladimir* — see Book 5, Chapter 15: "Making it come true".

postings. People discussed concrete questions connected with Anastasia's ideas on family domains. They suggested draft changes to the Russian Constitution; some were thinking to hold a referendum on this issue.

The substance of Anastasia's idea about granting every willing family no less than a hectare of land on which to organise a family domain was set forth in appeals to President Putin more accurately and with more cogent back-up arguments than I had expressed in my own appeal, published in the book *Who are we?*<sup>7</sup> In any case, you can judge for yourselves. For those readers without Internet access I am reproducing here an excerpt from one of the appeals.

### **Open letter to the President of the Russian Federation Vladimir Vladimirovich Putin**

Dear Vladimir Vladimirovich,

Over the years of Soviet power, which even today many of us still remember as the best years of our lives, a most frightful thing, you know, happened: we — the citizens of this Great Country, Russia, historically a mighty Power, which emerged victorious from the terrible Second World War and in an incredibly short period of time was able to build up its war-ruined economy — we transformed ourselves, without our even being aware of it, into weak-willed... parasites and welfare bums.

Look back — in Soviet times we all went to work without ever worrying about a job opening, and received a stable salary on which we could lead a normal life. We handed over our children to be schooled and were assured of their future. We knew that upon reaching retirement age we as pensioners would receive a stable pension and quietly live out our years... And this stability,

<sup>7</sup>See Book 5, Chapter 16: "Open letter to the President".

this mighty totalitarian system, played a dirty trick on us: having got accustomed to social passivity, social apathy and indifference, and now no longer enjoying access to a stable source of income, we have begun to get very upset. You see, we did not start to take action or improve our lives — we just started vilifying and railing like the blazes at the powers that be — each President and each Government in turn — blaming them and them alone for our Present Situation. After all, we figure it is up to them to pay us a stable salary and take care of our present and our future, while we simply live our lives for our own pleasure, and do nothing to support this Stability and Prosperity. I think you will agree that when there is movement only in one direction — that is parasitism. If all we want to do is receive and give nothing in return, well, that's parasitism for you.

And now something *amazing* has happened: thousands and tens of thousands have risen up under the impulse *to make something happen, to create!*

*To create* — a splendid flourishing corner of their Motherland — *Russia*.

*To create* — a splendid Present and Future for themselves and their children.

*To create* — their own Material and Spiritual Prosperity.

*To create* — Russia to be the wealthiest and most flourishing country in the world!

And for that these people need nothing more than a small plot of land a mere hectare in size. Along with the assurance that this land will not be subsequently taken away from them — their Motherland, where they will Create for ever a Space of Love for themselves and their children. A *Space of Love* — which will be comprised of all the flourishing corners of our vast Russia and proclaim to the Whole World the Great Miracle — the Renaissance of Russia the Great!

It seems to me that even now in Russia a situation has come about that any Ruler — you can call him a President,

if you like — might dream about: a situation where people themselves desire to work and create their own material and spiritual well-being, asking nothing from the state except a plot of land and a sign of stability expressed in Law.

Isn't this the dream of any state — to open up an *inexhaustible source* of wealth and well-being within itself, to find *stability* within itself and independence from external troubles?

Dear Vladimir Vladimirovich! Like thousands of other Russian citizens, I should like to affirm once more my intention to *create* my little corner of my Motherland, Russia, to make it into a flourishing garden for many generations of my descendants.

Like thousands of other Russian citizens, I hereby reaffirm my intention of labouring for the good of my family and for the good of my Motherland.

Like thousands of other Russian citizens, I have stopped unthinkingly and relentlessly criticising either you or our Government, realising the complexity and responsibility of your work.

Like thousands of other Russian citizens, I believe in your wisdom and far-sightedness, and am confident that you will take a responsible approach to appraising the current situation.

The time has finally come for you and us to work together as a fraternal team, a team of like-minded thinkers, for us to *understand* and *accept* you as a close friend, and then you will feel our love and support and look after us, too, with love, as the People entrusted to your charge.

*And together we shall create a splendid Present and Future for our children, for our Russia!*

20 July 2001

Vadim Ponomaryov, citizen of Russia

### They defamed our forebears too

One day on my computer I opened up an Internet search engine, which lists all the various websites containing any key word you type in. I typed in the word *Anastasia*. And the monitor immediately lit up with an impressive list: 246 Russian-language sites, together with links to their web addresses.

Still not believing that they all related to the Siberian Anastasia, I began following the links and familiarising myself with the content of these pages. It turned out that the vast majority of them did in fact discuss at varying length the Siberian Anastasia. Her ideas were treated favourably on many of the sites. At first I was delighted by this, but as I delved deeper into the volume of information available on the Internet, I began coming up against an even more incredible phenomenon. Several of the sites offered a selection of articles from the press, along with anonymous messages, claiming that the movement associated with Anastasia was a sect, and all the readers of the books were categorised as sectarians. One of the sites featured a list (either full or partial) of the existing sects in Russia, and the list included 'Anastasia' and her supporters. There was no mention of the basis for such a conclusion or of who was spreading such rumours — they were simply set forth as though they were a given fact that apparently everybody had known about for a long time.

The articles and brief comments from various national and regional publications posted on different websites were very similar to each other, and they always came to the same conclusion: that the *Ringling Cedars of Russia* movement was either a sect or a business. The Anastasia movement was lumped in with such sectarian organisations as *Aum Shinrikyo*,<sup>8</sup> and classified as a 'totalitarian sect'. They even used words like

'bigots' and 'destructivism'. No concrete facts were cited, just the conclusion, and that was it.

Not knowing the exact definition of the word *totalitarianism*, I looked it up in my Great Encyclopedic Dictionary<sup>9</sup> and read the following:

Totalitarianism is one of the forms of domination, characterised by its complete control over all spheres of a society's life along with the virtual liquidation of constitutional rights and freedoms, also by repression of political opposition and dissenters (for example, the various forms of totalitarianism in Fascist Germany and Italy or the Communist régime in the USSR).

Now that's pretty steep! What they're saying in effect is that I or Anastasia have been in control of some flashy totalitarian sect ready to overthrow authority, abolish constitutional freedoms and institute a fascist régime. But I categorically deny that I have had any governing role in any kind of organisation, all the more so in the case of Anastasia. Throughout the past six years I have been working exclusively on my books, and once or twice a year I give talks at readers' conferences which are open to anyone who wishes to attend. My talks have been recorded on tape, and anybody can have access to them.

But why, for what purpose and by whom is this bald-faced lie being spread abroad? In one of the newspaper articles,

---

<sup>8</sup>*Aum Shinrikyo* (also spelt *Senrikyo*) — a Japanese Buddhist religious group founded by Shoko Asahara; some of its members were held responsible for the 1995 gas attack on a Tokyo underground (subway) line. In 2000 the organisation's name was changed to *Aleph* (the first letter of the Hebrew and Arabic alphabets). In 2006, after years in prison, Shoko Asahara was sentenced to death.

<sup>9</sup>Great Encyclopedic Dictionary (*Bol'shoi Entsiklopedicheski Slovar'*), edited by A.M. Prokhorov, 2nd ed. Moscow & St. Petersburg, 2002.

this one in the Vladimir-region supplement to *Komsomol'skaya pravda*, it says that in the Anastasia books readers are encouraged to give up their city apartments and go off into the woods.

*How can that be?* I thought. After all, Anastasia says the exact opposite. Here are her direct words: "There is no need to go live in the forest. You need to clean up the place you have been polluting first."<sup>10</sup> And she calls upon people to build their family domains near big cities, and gradually change their lifestyle to one more civilised and more favourable to one's soul and physical health.

Not having the opportunity to personally review the tremendous amount of information, let alone analyse it, I turned to several well-known experts in political science to examine the situation independently of each other and draw their conclusions. Each of them asked considerable compensation for their work, given that they had to read through all five books plus the huge amount of information connected with the books which had been posted on the Internet. I had no choice but to accept their terms.

Three months later I received the first expert's conclusions and, not long afterward, the remaining reports. Even though they expressed their findings in different words, since they did not know each other and were working independently, they came to pretty much the same conclusions. I shall cite a few typical excerpts from one of the reports:

There is a whole targeted, clearly formulated campaign directed against the *Ringling Cedars of Russia* series of books, with the aim of preventing the spread of these books among the population at large...

<sup>10</sup>Quoted (from two separate sentences) from Book 3, Chapter 21: "Should we all go live in the forest?"

The pivotal ideas of the books are the strengthening of the state, the achievement of the greatest possible unanimity in the various social strata of the population through the well-being of each individual family. This condition of well-being is achieved by virtue of each willing family being allotted no less than one hectare of land for lifetime use. In the context of the books this idea is the most persuasive and takes precedence over all others. Consequently, the series' opponents, whatever the arguments they put forward, are in fact denouncing this particular idea.

The next question raised by the *Ringing Cedars of Russia* series — the Divine nature of Man, his spiritual origin — may provoke animosity on the part of many religious denominations. The book's main heroine declares that Man's existence in Paradise should be built here on the Earth and by Man himself. Man is eternal, only changing his fleshly form from one century to the next. Our whole natural environment is created by God and comprises His living thoughts. It is only by making contact with Nature that Man can comprehend what God has programmed and the substance of His purpose for Man on the Earth...

This whole concept, the reasoning behind it and its extreme persuasiveness cannot fail to provoke opposition, especially among religious fanatics who believe that the end of the world is inevitable and that some people will be transported into a Paradise beyond the clouds while others are sent to hell. Such a concept is favourable to many people who have been unable to make their own life happy during their existence here on the Earth.

The opposition to the ideas of the series' main heroine (Anastasia) is being effected by the circulation, through the mass media, of rumours that its readers, who have taken the initiative to put a number of the projects suggested by the books into practice, belong to some sort of totalitarian sect.

This approach is quite deliberate, inasmuch as it serves to distance the authorities from contacts with enterprising readers and from examining their specific proposals, as well as from discussing the problems raised in the books in the mass media. It also serves to interfere with the circulation of the books and the ideas put forward in them. It should be pointed out that the opposition has achieved their aim. According to reports on hand, claims about the readers belonging to a sect are being circulated in many government agencies.

The specific objectives of the opposition are not clearly presented — they remain quite enigmatic.

As a rule, when candidates competing for office use dirty tricks in their campaigns, it is easy to guess who is instigating them. Similarly in the economic sphere, when individual firms are competing for business, it is not difficult to determine who is behind a smear campaign and why. The goal is always clear — to knock off or weaken the competition.

Anastasia talks about a new consciousness for Man, a new way of life, establishing the state on a more perfect foundation.

Who would oppose an aspiration like that? Only forces interested in the destruction of individual families, states and society as a whole. The existence of such forces can be traced through their conspicuous opposition — in this case, in launching actions directed at Anastasia herself and her ideas, as well as against the readers of the *Ringling Cedars of Russia* series. To all appearances they are acting through agencies either directly or indirectly under their jurisdiction, as well as through individuals.

I showed Anastasia isolated excerpts from the discussions of the subject on the Internet, and read her the expert's con-

clusions, in the hope that the situation portrayed would somehow move her or rouse her into taking corrective action.

But Anastasia continued sitting quietly beside me on her chair, her hands resting on her knees, her face showing absolutely no concern. On the contrary, it even betrayed a little smile.

“What are you smiling for, Anastasia?” I enquired. “Doesn’t it bother you at all that they are slandering your readers? The fact that they are blocking their initiatives to obtain land for the family domains?”

“I am delighted, Vladimir, by the inspired impulse on the part of so many people, by their understanding of the essence and significance of what they are undertaking. See how thoughtfully they are setting forth their thoughts and drawing up plans for the future. And the appeal to the President is better than the one you formulated in your earlier book. As well as their making plans to hold a conference with that wonderful title: *Choose your future!*<sup>11</sup> It is very good when people start reflecting on their future.”

“They certainly are making plans, Anastasia. But don’t you see how their plans are being thwarted? What a tricky move someone thought up — to call them all sectarians, striking fear into the population and discouraging administrative bodies from contact with them? Don’t you see that?”

“I see it. But there is nothing new or sophisticated in such opposition. The same approach was used to destroy the culture, lifestyle and knowledge of our forebears. And now the dark forces are using the old methods again. And they will even come up with provocations, and then spread frightening rumours. This has happened before, Vladimir.”<sup>12</sup>

<sup>11</sup>The conference later took place in February 2002 in Moscow’s Palace of Youth (*Dvorets molodiozhi*) and was attended by hundreds of readers from all over Russia and abroad. The conference’s Proceedings, including presentations on economics, law, ecology, public policy and other subjects were subsequently published as a separate volume.

“Exactly — this happened before. And they won. You said yourself — they destroyed the culture of our forebears. They distorted history. That means that now, too, using a tested method, they’ll win again. If they haven’t won already. Hey, just a simple question like granting every willing family a hectare of land — it’s been impossible to solve for a year now.

It would have been okay if they’d asked for that hectare for something obscene. But it’s impossible to get land for the purpose of organising one’s family domain, for normal living conditions and a supply of food. Those refugees that have been living in tent cities for more than three years now<sup>12</sup> — if they — at least the ones who wanted it — had each been given a hectare of land, by now they could have turned it into a decent human place to live. I’ve thought quite a bit, Anastasia, about what colossal changes could take place in our country, if only the authorities would not oppose but help people aspiring to create their own domains. But such a simple little question regarding the allocation of land is not being solved.”

<sup>12</sup>In October 2006 a central Russian daily newspaper with a circulation of 1.6 million featured an article (subsequently reprinted in other editions throughout the country) claiming that destructive behaviour on the part of readers of the Series had reached the point of feeding their children to wild beasts and copulating on tombstones of the dolmens — all at Vladimir Megre’s instigation. Similarly, a thousand years earlier Christian ‘historians’ alleged that pagans were offering human sacrifices and engaging in public orgies.

<sup>13</sup>A reference to the hundreds of thousands of people displaced by the war in Chechnya — see footnote 4 in Book 5, Chapter 17: “Questions and answers”.

### Glad tidings

“This question is far from simple, Vladimir. It actually involves major changes on our planet and in the Universe. When millions of happy Earth families begin to consciously transform the planet into a flourishing garden, the harmony reigning on the Earth will have an effect on other planets and the whole space of the Universe. Right now the planet Earth is sending a poisonous stench into the Cosmos. And more and more garbage is piling up in orbit. And a malicious energy is radiating from the direction of the Earth. A different energy will be emitted when there is a change in the conscious awareness of Earth dwellers. And then the grace emanating from the Earth will bestow flourishing gardens upon other planets.”

“Wow, how grand! And has there never been such an opportunity before in human history? After all, in Russia back before the revolution landlords had their family estates. And now in many countries there is private ownership of land. We have farmers too who rent out land for extended periods. But nothing comes of it. Why not?”

“There has been no conscious awareness — the kind that is growing today in human minds and souls as little shoots of the Divine. What you called a straightforward question, Vladimir, during the occult millennia was the greatest secret held by the priests. Many religions through the ages have talked about God, but not one of them has ever stated the obvious: in consciously communing with Nature, Man communes with the Divine thought. To understand Space is to understand God.

“And even the thought or the dream of a family domain, where everything is in harmony with you, embodies much more closeness to God than a whole lot of convoluted rituals.

All the mysteries of the Universe will be unfolded to Man. And all at once Man will discover within himself capabilities that he cannot even imagine today. And Man will become truly Godlike — the Man that begins to create the Divine world around him.

“Think, why do not ‘wise-men’ ever mention this anywhere? All because once Man understands his earthly essence and his capabilities, he will become free from occult spells. The power of the priests will disappear. Nobody and nothing will ever have power over a Man who has created a Space of Love around him. And no harsh and threatening judge will the Creator be for such a Man, but rather a father and a friend.

“This is why through the centuries they have come up with so many tricks to turn Man away from his purpose. Land! Such a straightforward question, you say, Vladimir. But think about how centuries have passed and Man still does not have family land of his own. You were mentioning farmers and landlords. But with their family domain they hired other people to work the land. They have endeavoured to get as much profit as possible out of their land. People who did not work the land themselves could not treat it with love. And often seeds were sown in the ground in anger, and malice grew.

“For thousands of years simple truths have been hid from the people. Other people’s hands and thoughts should not be compelled to touch one’s family land. In different ages rulers have offered people land allotments, but in such a way that the meaning of their earthly deeds has not been clear to people.

“If a Man is given just a small piece of land — a quarter of a hectare, for example — his family will not be able to build an oasis there which will serve him effortlessly. A large tract of land is too much for a Man to govern independently and he will end up hiring helpers, thereby involving other people’s thoughts. So people have been drawn away by trickery and chicanery from what is important.”

“Does this mean, Anastasia, that not a single religion over thousands of years has ever called upon people to create Divine oases on the Earth’s land? On the contrary, they have spent all their time calling people’s thought away from the land, somewhere else. So it turns out that they...”

“Vladimir, do not say unflattering words about religion. Your spiritual father, the monk Feodorit,<sup>14</sup> led you to where you are today. And it is largely thanks to him that you and I met in the first place. The time has come today when congregations of all the various denominations need to think about how to save our spiritual leaders from disaster.”

“What kind of disaster?”

“The same kind that happened in the past century — when people sacked the temples and put ministers of various faiths to death.”

“You mean under the Soviet régime... But now, you see, we have democracy, freedom of religion and the authorities treat all religions — or at least the major ones — with respect. How could the events of bygone years all at once repeat themselves?”

“You should take a closer look at what is happening today, Vladimir. You know that many countries have joined together in the struggle against terrorism.”

“Yes.”

“They have pointed their finger at *other* countries as the ones promoting terrorism. And they have publicised the names of the instigators. They have accused, among others, some spiritual and religious leaders, and special forces have been assigned to hunt them down. But that is only the beginning. Reports have been given to the leaders of countries both large and small exposing the nature of many religions, and they include a whole lot of examples of how these

<sup>14</sup>*Feodorit* — see Book 2, Chapter 24: “Father Feodorit”.

religions themselves were responsible for fomenting acts of terror and wars on the Earth. In these reports, which have already been prepared, analysts have set forth everything accurately and convincingly. Information about many terrible crimes will now gradually come to light. They will remind people of an endless succession of wars like the Crusades, intrigues, perversions and greed among the ministers of the occult. When anger builds up in a whole lot of people, pogroms may be launched in many places, and these may include the destruction of temples.

“At the moment, clerics from a number of religions are trying to put a stop to religious extremism, making declarations to the effect that the extremists have nothing in common with them — indeed, these clerics openly condemn extremism. For the moment, these declarations are being accepted. Or, rather, the political leaders feign ignorance... and say they are satisfied with the declarations.

“In the meantime, these secret reports are already claiming that religions are programming people, using any kind of pretext. The pretext may be well-intentioned — calling the faithful to good works, for example. But any faith in something a Man cannot see, especially one which he accepts unquestioningly as truth from a preacher, is always fraught with the danger that the thoughts of the programmed believer may be redirected at the will of the preacher, and so today’s believers may easily be transformed into tomorrow’s suicide bombers. And a whole lot of different facts from both past and present are cited in the reports as evidence in support of this conclusion. Before long the rulers will become inclined to the opinion that they should select one religion and put it completely under their control, at the same time declaring all others harmful and deserving of elimination.

“Subsequently, if they do not succeed in drawing all the people into one religion, then the next step is to destroy *all*

religions, at least within their own borders. Such a decision will lead to a never-ending war. This war has already started, it is already going on. It must be stopped. And this can only be done in one way — by giving birth to a conscious awareness on the part of our spiritual leaders. Only glad tidings can restore peace to all the Earth. Those that accept the glad tidings and proclaim them in temples both great and small — they will fill the temples with multitudes of people. Those that do not perceive the sayings will find themselves in temples that are empty and decaying.”

“What glad tidings are you referring to, Anastasia? Can you explain it a little more simply?”

“People who call themselves spiritual leaders, who talk of God and teach children in the schools today, should recognise as a God-pleasing deed the co-creation of a Space of Love in the personal domain of every family dwelling on the Earth. Not only to recognise this but to create designs as well for future projects together with their parishioners. To endeavour, along with the people, to bring back the knowledge of pristine origins. To dream and discuss such a theme, and then to bring the design to perfection in all its detail. The process of creating the dream will take many years. Then, when all this comes to prevail upon the Earth, people will live in harmony, in a real, Divine Space of Love.”

“I’ve got it, Anastasia. You want everyone to begin studying Nature in all the temples of whatever religious persuasion, and in the schools and in institutions of higher learning. To master the science of creating a family domain according to a special design. Let’s say this can actually bring various religious denominations together into a common alliance — not just in words but in deeds. Let’s suppose it could really awaken people from their hypnotic sleep, put an end to terrorism, drug use and a whole lot of other negative tendencies in society.

“Let’s suppose. But... How will you be able to convince all the patriarchs and all the clerics, and in so many different denominations? How will you be able to convince all the secular educational institutions? A lot of things you say come true, Anastasia, but what you’re talking about at the moment is completely unfeasible, sheer pie in the sky!”

“It *is* feasible. They have no other choice now.”

“But that’s just what *you* think. Just you. These are mere words that you’re saying.”

“But the One who allows me to utter these ‘mere’ words, as you put it, possesses power unsurpassed. You may remember back seven-plus years ago, back when you were still an entrepreneur, that I stood before you and drew letters in the sand by the lake in the taiga.”

“Yes, I remember, but what of it?”

“And then all at once you began to write books, and now a whole lot of people are already reading them. Who do you think was mainly responsible for this? The sand by the taiga lake? Or the stick I drew with? Or the words I articulated? Or perhaps your hand created the books all by itself? And later poetry welled up like a sacred spring in human hearts. Who was the chief Creator behind these works of art?”

“I don’t know. Possibly all the factors played a part.”

“Believe me, Vladimir — please try to understand. It is His energy that stands behind everything that was created. It is His energy that inspired human hearts. And it will continue to inspire them.”

“Perhaps, but somehow it is hard to believe that church ministers will start to act the way you say.”

“You should believe in this. And visualise a gladsome prospect within yourself, and then it will come to achievement. All the more so, since that is no longer hard for you to do. You remember how an Orthodox village priest came to you to cheer up your crestfallen spirits.<sup>15</sup> Another priest paid for

your books with his own money and then distributed them to the prisons. And your Father Feodorit talked with you about a lot of things... Do you remember?"

"I do."

"And you should realise, too, that not all church ministers share the same world-view. There are those who will proclaim the glad tidings."

"Yes, I think you're right. But there will be others who will begin to oppose them. Especially the High Priest you spoke about — his occult agents will think up some kind of new intrigue."

"Of course they will, but all the dark forces' endeavours will now be in vain. The process has begun and it has already attained the point of no return. People will learn first hand of their earthly Paradise. These are mere words, you will say. But here, I shall now utter two simple words — and a part of the darkness will be illumined with light. Let the rest of the darkness tremble and begin to conceal their names, as they fail to win the possibility of turning into reality. And these words are utterly simple: *The Book of Kin*."<sup>16</sup>

---

<sup>15</sup>See Book 4, Chapter 24: "Take back your Motherland, people!"

<sup>16</sup>*The Book of Kin* — a translation of the two-word Russian phrase *Rodovaya kniga*.

## CHAPTER TEN

# The Book of Kin

“Yes, the words are certainly simple, all right,” I observed. “And just why are all the forces of darkness supposed to tremble at hearing them?”

“They are afraid of what is behind the words,” replied Anastasia. “Do you know who will write this book? And how many pages it will have?”

“How many? And who will write them?”

“Just a few days will go by, and millions of fathers and mothers in many a land will be writing the Book of Kin, filling in its pages with their own hand. There will be a vast multitude of them — these Books of Kin. And all of them will contain the truths which begin in the heart, for their children. There will be no room in these books for artifice or guise. Before them all the lies of history will fall.

“You can surmise what would happen, Vladimir, if you could take into your hands today a book which your ancestor of old had begun to write especially for you. Then another would continue the writing, eventually your grandfather, and your father and your mother.

“The books read by Man today include many that are devised with a specific aim in mind — namely, the distortion of history and of the meaning of life. Many false dogmas are especially designed to disorient Man in space. This is not easily discernible all at once. But clarity comes directly a son reads a book of his forebears, which his father and mother have continued personally for him.”

“But wait, Anastasia, not everyone knows how to write a book.”

“Everyone can if they feel the demand to do so — if they are looking to protect their children, and in the future themselves, from false dogmas. In Vedic times every father and mother would write a book of kin for their future children and grandchildren. This book was not comprised of words, but of deeds. Children could read created space like a book, and understand the deeds and thoughts of their parents, and were happy to inherit a happy space. Only one thing was missing from that book — children were not alerted to the world of the occult. It was not part of the complete awareness of the omniscient Veduns.<sup>1</sup> Now that all mankind has been able to detect in their own experience the devastating influences exerted on themselves by the occult dogmas, they will certainly be able to protect their children from them.

“Even if there are not yet any domains to bloom in the spring, thoughts about them are already alive in many human hearts. They need to start writing a book precisely about their thoughts, for their children.”

“And why, Anastasia, does every parent need to write? Look, I’ve written books about domains and an architect from the suburb of Medvedkovo<sup>2</sup> is working on a design for a whole settlement. Besides, there is a flurry of Internet discussions on the subject — isn’t that enough?”

“It is not enough, Vladimir. Take a closer look at what has been going on. You have been writing books, but other people are writing books too, to counteract yours. There are so

<sup>1</sup>*Vedun* (pron. *ve-DOON*) — in Slavic and Hindu traditions: a revered wise man. Like the word *Vedic*, it is derived from the Old Slavic (originally Indo-European) root *ved-* meaning *knowledge* or *full awareness*.

<sup>2</sup>*Medvedkovo* — a northern Moscow suburb, founded in the 16th century as the estate of Vasili Fiodrovich Pozharsky, who bore the nickname of *Medved* (Bear). Note that this word includes the roots *med-* (honey) and *ved-* (know) — the bear was originally named in Russian for his knowledge of where honey could be found.

many books that a Man could not hope to read even half of them over his lifetime. And look, there is a daily flow of information to Man that does not come from books. And even though it seems very diversified, all that information really comes down to the same result: it justifies and glorifies the unreal world of the occult. What can help the newcomer to the world determine where the truth and where the falsehood lies?

“The holy temple of the family will help in this — the Book of Kin. In it a mother and father will write for their son and daughter about what is the most important thing that needs to be created for happiness in life. The children will continue to record the Book of Kin. There will be no wiser and truer books for families anywhere on the Earth. All the knowledge of their pristine origins will be poured into it.”

“But how, Anastasia, how can knowledge of one’s pristine origins turn up in a book which people are only beginning to write today? Where are they to find such knowledge? You said that the culture of our forebears, their books, were all destroyed.”

“Those that will begin to write already have this knowledge concealed within themselves. It is preserved within each one of us. When people think deeply and begin to write not just for anyone, but for their children, all the knowledge of their pristine origins will be revealed within them and come to light.”

“So that means that before they start to write, they first need to *think*, so that wise thoughts may be set forth right from the very first pages of the book?”

“The first pages may be outwardly very simple.”

“Can you give me some examples?”

“When was the Man who began to write this Book of Kin born? What was his name? For what purpose and with what thoughts did he take pen in hand and approach the pages of

this most important book? And what did he plan to create in the future?"

"Such a book," I observed, "would be easy to begin for anyone who, let's say, has been a famous artist, or a governor, or a scholar, or a die-hard entrepreneur. But what about someone who has simply lived a life? Say someone's been working and can barely make ends meet, he scarcely earns enough for food and clothing. What could he possibly write for his children, what advice could he give them?"

"The rulers of today, and those who bask before the public in rays of glory, and those who have accumulated a whole lot of money, will find it difficult from now on to have an answer for their children. People quickly forget their deeds of yesterday. But what a Man has contributed to his future will be appreciated by future generations. Are you or anyone else in the habit of recalling past governors, famous artists or entrepreneurs?"

"Not very often — or, rather, I don't really think about them at all. I don't even know their names. But children will take great pride in remembering what their parents did."

"And their children will try to forget — they will be ashamed just at the mention of their parents' names."

"Why should the children be ashamed?"

"Because fate offered their parents such great opportunities, but they could not grasp the fact that fate is affording us opportunities only — invariably — for the purpose of creating the future. In his one lifetime, Man should be endeavouring to create the next life for himself — a life in which he can embody himself anew and live for ever.

"Every Man can even today plan out a domain and a Space of Love, they can create their design and try to obtain the land. They can use that land to plant a few saplings or plant seeds of family trees. Perhaps they will not be able to grow to maturity, say, a whole grove, or a green hedge, or a splendid garden, in

their lifetime. Perhaps a poor old man will not even be able to lay a foundation for his house. But he will be able to write in the Book of Kin for his grandchildren, for his children: *I was poor, it was only in my old age that I began to think on the meaning of life, on what I have handed to my children. And I have created a plan for a space for our family, I have described it for you, my children, in a book. I have been able to plant nine fruit trees in the garden, as well as just one tree on the spot where a grove will grow.*

“The years will flow on, the grandson will read that book and remember his grandfather. He will go up to the mighty, majestic cedar or oak growing amidst a lot of other trees on the land of his kin’s domain. His thought, overflowing with love and gratitude will soar into space, will merge with his grandfather’s thought, and then a new plane of being will be born for both of them. A whole life in eternity is afforded to Man. The settling of the Earth and the planets of the Universe is nothing more than a transformation for each Man within himself.

“The Book of Kin will help convey the glad tidings to one’s descendants, and help the soul of the beginning writer to once again embody itself upon the Earth.”

“Well, Anastasia, you attach such importance to this book that I too have the desire to start writing one for my descendants. I have the intuitive feeling that in this idea of yours about the book is something most unusual and grand. Wow! That’s quite a name: *The Book of Kin, The Kin’s Book, the most holy book for the family.*

“But what should it be written on? Ordinary paper will soon yellow and disintegrate. And the binding on notebooks and albums tends to look rather primitive. After all, if the book is destined for one’s descendants — if, as you say, it is of such great importance — then the paper and the binding should correspond too. What do you think? What should be used?”

“*That* kind, for example...” And she nodded in the direction of a book lying on my desk. I followed her gaze, and a moment later I was holding something quite extraordinary in my hands...

Some time ago a man named Sergei from Novosibirsk had sent me a copy of my *Anastasia*. The customary publisher's binding had been cut off, and the pages transferred to another — I was going to say *binding*, but that's not the right word for what these pages had been put into. A Siberian craftsman had created an extraordinary work of art. The whole cover, including the spine, had been made out of valuable species of wood — the edges were of beech with cedar inside the frame. All the details were decorated with finely carved ornaments, text and illustrations. One could hardly apply the ordinary term *cover* to all this. The term *casing* would probably be more appropriate. The front and back parts were fastened together on one side by the spine, on the other by a little lock. All the little parts were finely fitted together. When the book was closed, the pages were evenly positioned between the front and back parts of the casing, thus preventing the paper from buckling under conditions of either high or low humidity. The pages would not flutter even from a draught of air, in contrast to some other books which I put beside it for comparison. Many visitors who saw this work of art would hold it for a long time in their hands, looking it over carefully with joyful admiration.

Following Anastasia's gaze, I took the book with the wooden casing into my hands, felt its warmth and began to understand. Perhaps it was thanks to this extraordinary work that I really understood the tremendous significance of the Book of Kin Anastasia had been talking about.

She sat there meekly on the chair beside me, her hands modestly resting on her knees. But I got the feeling that she was wiser than all the priests and dynastic leaders right from

ancient times, wiser than our modern analysts. And through her wisdom and purity of thought she is able to overcome all the negative manifestations in human society. Where did these capabilities of hers come from? What school or system of child-raising can endow Man with such abilities?

*Wow!* What an unusual, incredible step to think up — a Book of Kin! I couldn't stop myself from letting my mind get carried away and... Just look what a grand thing she's come up with!

Nobody has so far been able to counteract the flood of various kinds of suggestions which has been rushing at people in different countries minute by minute — first and foremost, at our children.

Suggestions! Our TV features a constant parade of action films supposedly for the purpose of public entertainment, but in actual fact demonstrating how splendidly Man can provide for his financial well-being through violence.

Suggestions! How great it must be to be a famous singer, to bask in the spotlight and the applause, to gad about to receptions in luxury limousines!

Suggestions! If it weren't for the power of suggestion, they would also need to show other, considerably longer segments from the life of these people. The most challenging everyday work routines, the never-ending intrigues instigated by entertainment rivals, the never-ending attacks by jealous wannabes, not to mention the paparazzi hoping to make money on the backs of celebrities under the so-called 'freedom of the press'.

One particularly monstrous suggestion comes in the form of aggressive and sophisticated advertising, which is ready to promote anything as long as you pay the money.

Suggestions! Never-ending news about all sorts of international do-good foundations coupled with wonder-boy politicians — and people are left with the impression that it

is only thanks to our politicians that they can live all warm, fed and cozy in their homes. And then when the radiators go cold, people no longer bother asking themselves questions about how they can change their lives, how they can become independent of central heating, electricity and water-supply. Instead, they rush madly into the streets and shout *Gimme!* A suggestion of their own helplessness! Such false dogmas are being suggested to adults and children alike.

Children! How can we talk about raising children as long as we parents just stand on the sidelines? First we entrust the delivery of our children to strangers in an unfamiliar medical institution. Then we allow strangers to teach them in kindergarten and school. Then we allow them to be exposed to a plethora of explicit or disguised pornographic literature on our store shelves.

We allow strangers to recommend books and textbooks to our children to read. We allow strangers to produce TV programmes for them. Who? Who finds it profitable to hold the whole system of child-raising in their hands? Maybe that's not the important question. Maybe what's more important is our feeling of utter helplessness and insignificance? We feel we're totally incapable of putting a stop to such lawlessness. But this isn't true! Any parent can do it! If only he wants to. If only he thinks about it.

The Book of Kin! What a super idea! The end of lawless commercial suggestions! Such lawlessness may still flex its muscles and show off a little. But it won't be long before Man takes in his hands the Book of Kin, and finds there written — by the hand of his grandfather, grandmother, father and mother — a statement of Man's purpose in life.

We, today's parents, shall certainly be able to figure out what this purpose is. Most definitely! We are experienced, we've seen, heard and gone through a lot already. We only need to pause for just a wee bit, turn away from the flood of

suggestions and think for ourselves, with our own heads. For certain, every parent must think about this. By himself! Only by himself. There's no point in looking for answers to questions on the meaning of life in books of wisdom from past centuries. No matter how celebrated or promoted these books are. And there's no point in seeking answers in the works of wise-men whose reputation is thousands of years old.

These wise-men were great preachers and messiahs. They endeavoured to preach and leave writings for future generations. But there is not one — not even one of these great works that we shall ever see. They have been most cleverly destroyed. This can be clearly understood if one but stops and thinks.

Just look and see what a difference it makes — how switching a single comma around in a brief sentence can change the whole meaning of a message. Remember the famous example: *Execute never, show mercy!* / *Execute, never show mercy!* And how many similar alterations have crept into the works of the ancient thinkers, either deliberately or inadvertently, at the hands of copyists, translators, publishers and historians? And we are talking here not just about changes in punctuation, but the deletion of whole pages, whole chapters, and the writing of one's own interpretations.

The result is that we today are living in some kind of illusory world. Mankind is constantly at war. People keep destroying each other like hell and can't understand why wars do not stop. But how can they stop if mankind has not even once been able to determine who has been instigating these wars? It hasn't been able to because there has been no independent thought, and without independent thought it accepts suggestion as truth.

Who started the Second World War? Who fought with whom? Who won? The whole world community is convinced that the war was started by Hitler's Germany under Hitler.

Victory was achieved by the Soviet Union under Stalin. And these half-truths — or, rather, delusions — are accepted by the majority as absolute, unequivocal, historical facts.

And only a very few historical researchers occasionally mention Hitler's spiritual mentors — for example, the Russian lama Gudzhiev,<sup>3</sup> acting through Karl Haushofer.<sup>4</sup> Hitler had one other spiritual mentor — Dietrich Eckhart.<sup>5</sup> Historians know of contacts these spiritual mentors had with their superiors, part of a more elevated hierarchy. But at this point nobody any longer mentions names. Researchers say only that they have traced the connections to the Himalayas and Tibet, as well as to both open and secret occult societies existing at the time in Germany, and confirm Hitler's participation in them.

Germany witnessed the rise of organisations such as the *German Order*<sup>6</sup> and the *Thule Society*<sup>7</sup> — the latter's emblem was the swastika together with a wreath and sword.

<sup>3</sup>*Georgi Ivanovich Gudzhiev* (also spelt *Gurdjieff*, *Gurdzbiev*) (1872–1949) — a Greek-Armenian mystic, later based in Paris. In 1922 he founded the Institute for the Harmonious Development of Man. He emphasised the principle of 'self awareness', the need to awaken from the dream-like state that most of human existence seems to be. Gudzhiev authored a number of books, including the well-known *Beelzebub's tales to his grandson* (*Rasskazy Vel'zevuda svoemu vnuku*).

<sup>4</sup>*Karl Ernst Haushofer* (1869–1946) — German geopolitician, believed to have influenced Hitler's expansionist policies. He was an avid student of Japanese culture and was instrumental in forging Germany's alliance with Japan following Hitler's rise to power in 1933. His link to Gurdjieff is a matter of some controversy.

<sup>5</sup>*Dietrich Eckhart* — German occultist, who was very close to Hitler.

<sup>6</sup>*German Order* (in German: *Deutsche Orden*) — a religious order founded for charitable purposes, known from the 12th century as the *Teutonic Order*; abolished on occasion by both Napoleon and Hitler (it still exists today in both Germany and Austria). The term *German Order* was also applied to the highest decoration awarded by the Nazi Party.

Someone was clearly and deliberately shaping their own unique, brand-new ideology in Germany, inculcating in its population a specific type of world-view. The upshot was large-scale war and masses of human casualties, followed by the Nuremberg trials where Hitler's cronies were tried. But those who appeared before the court were ordinary soldiers — even if they happened to be generals or field marshals, they were still soldiers, including Hitler himself. Foot-soldiers to the unseen priest who shaped the ideology. He — the chief strategist and organiser — was not even mentioned in the trial records. Who is he? Who are his closest secret associates and assistants? Is it all that important to know about them? It *is* important! Extremely important! After all, it is they who masterminded the war. And as long as they are allowed to remain in the shadows, they will start it again. With their growing experience, new wars will be even more sophisticated and on an even more massive scale.

What were these people really after, the masterminds behind the Second World War? Perhaps an examination of the following fact will bring us closer to solving the mystery.

For the Nazi ideologists in Germany at that time, there was an organisation known as *Amenerbe* which collected ancient books from all over the world. In the first place they were interested in Old Russian editions of the pre-Christian period. One can trace a rather bizarre chain — the Himalayas, Tibet, lamas, secret societies — all leading to a relentless hunt for the knowledge of our forebears from pagan Russia. We Russians saw no need to preserve these manuscripts, but someone else found them to be a vital necessity. Why? What secrets did

---

<sup>7</sup>*Thule Society* — a German occultist group in Munich, named from the Greek word meaning 'farthest [northern] land', founded in 1910 by Dietrich Eckhart. It is said to have sponsored the *Deutsche Arbeiterpartei* (German Labour Party), which Hitler later transformed into the Nazi Party.

this knowledge harbour within itself? Secrets which evidently had much more of an edge to them than anything known to the Tibetan monks.

But how to gain access to even one of these secrets? Just to one?! And if it turns out to be significant, then what kind of lost world might open up to people today if a few more — or, indeed, all — of them should be revealed? But where and in what millennia should we look for an answer?

Rome! Ancient Rome! Something extraordinary happened there four thousand years ago. More extraordinary than the exploits of the Roman legion. Oh, yes! That's it, an incredible discovery! The Roman senators were the highest élite group of that period. They were slave-owners, but all at once they began to give their slaves, who were skilled and desirous of growing food crops on the land... They began to give them *land...* for their lifetime use with the right of succession. Funds were allocated to a slave's family to build a house. A slave's family could not be transferred to another owner without their land. It — the land — became an inseparable part of the slave's family.

But what suddenly moved these slave-owners to such a humane and altruistic act? Was it purely from kind and noble motives, or did they receive something in return? What they received was ten percent of the harvest for their table. That is probably the smallest tax of the whole known period. This begs the question: why did the Roman élite do such a thing? After all, the slave-owner could have simply ordered his slaves to work in his fields by the sweat of their brow and take as much of the harvest as he wanted. But no! Why? Because back in pagan Rome they had still hung on to the Vedic knowledge. And the patricians and senators knew that the same product grown by a slave on land other than his own would differ sharply in its properties from that grown on his own ground and raised with love.

Back then they still knew that everything growing in the ground carries in itself a psychic energy. To be healthy, one must feed one's self with lovingly grown produce. This was mentioned in several ancient books in the Alexandria Library,<sup>8</sup> which was destroyed. What further knowledge, what wisdom was lost along with these books? Anastasia says that it is possible to resurrect this knowledge and all its attendant wisdom, beginning with their pristine origins, within one's self. Everyone has the ability to do it. I want to believe that statement, but I'm still not fully convinced. Where can we find proof that such a thing is possible? What facts can we draw upon from memory so that we can fully accept what she says?

Are we to remember everything we heard from our father and mother, or that we were taught in school, or read somewhere over our whole lifetime? But our recollections still do not contain any significant or absolute proof. What if I could remember everything I was told by Father Peodorit? But he didn't say all that much. He spent most of the time listening, and while he did give me some ancient books to read, there was no evidence in them. Then how? How can modern Man suddenly unfold within himself this treasured knowledge of his pristine origins? He can!!! No doubt there exist characteristic examples and proof in the recollection of every Man! In my own recollections I did come across one.

<sup>8</sup> *Alexandria Library* — see special footnote (from the original text) near the end of Chapter 6: "Imagery and trial".

### A good and attentive grandmother

Grandmother! My grandmother was a witch. Not a fairy-tale witch, but a real, actual white witch. Oldsters, perhaps, will remember her incredible marvels. She lived in Ukraine in the village of Kuznichi in the Gorodnia district of Chernigov Region. She was called Efrosinya, and her last name was Verkhusha. On one occasion, when I was very young, I was present at one of her miracles.

Back then I hardly understood anything about them, but now it has all become crystal clear to me. O God, what simplicity there is in the most puzzling incredible phenomena! I have an idea at least half of the population today, especially the healers, would be able to freely duplicate her results. To provide a few more details, here is what happened.

All my early childhood I spent in the Ukrainian countryside, in a small white, straw-covered hut. I loved to watch my grandmother busying herself about the stove. Once after a scuffle with one of my classmates, someone taunted: "Your grandmother's a witch!" Other kids started to defend my grandmother, saying, for example: "My mummy says she's a good woman."

On a number of occasions I saw how my grandmother treated people's physical ills. I didn't attach any particular significance to it at the time — after all there were many healers in different villages back then. Some had better success treating one particular disease, some another. And nobody was called a witch. But my grandmother's abilities did not fall under the usual healing methods.

It turned out that my grandmother, who was only semi-literate, easily cured many animals. She did this by a method that seemed at first glance incredible. She would disappear for a day along with the sick animal, and by the time she returned it would have made a full recovery, or at least a partial

one, in which case she would instruct its owner on how to continue the treatment.

When I heard my classmate insulting my grandmother by calling her a 'witch', even though children are generally afraid of witches, I did not begin acting any worse toward my kind grandmother. On the contrary, she — or rather, her actions — only awakened a greater fascination in me.

One day the collective-farm chairman's horse was brought to my grandmother. It was a purebred, recently bought for the chairman to travel about on his daily business. We local kids always admired this particular mare when the chairman happened to ride by. The mare held her head high, and her gait was friskier and more elegant than that of all the other horses in the area. But this time she was brought to Grandmother not harnessed to a wagon and not saddled. She was being led just by the bridle, looking very downcast and moving very slowly. This was a rare event for me — the chairman's horse right in our yard! I began following the proceedings with considerable interest.

Grandmother walked up to the mare and began stroking her, first from one side on her muzzle, and then around the ear, all the while quietly whispering soothing words. Then she unbridled the mare (taking the metallic bit out of her mouth). Carrying a bench out into the yard, she laid out bunches of herbs on the bench, then brought the mare over to them and began offering the animal various dried herbs in turn. With some of them the horse didn't pay any attention and turned away, while others she sniffed at and even took a small taste of them. The bunches that caught the mare's attention, Grandmother threw into a water-filled iron pot which was standing over a coal fire, and finally dropped her night-cap into the mixture.

I heard her tell the people who had brought the horse to come the day after next, in the morning. After the people had left, I realised that Grandmother was once again getting ready to disappear somewhere together with the mare, and

I started pleading with her to take me along. Grandmother, who had always granted all my requests, did not refuse this one either, though she did stipulate one condition: I was to go to bed earlier than usual that night. I obeyed.

Grandmother awoke me at dawn. The mare was standing in front of the house; she was covered with a small piece of canvas. After washing my face with the mixture from the iron pot, Grandmother gave me a small bundle containing something to eat, then took hold of the rope-lead (which she had fastened to the horse's bridle). Presently we set off along the border between the garden plots in the direction of the little forest that started just beyond. We walked very slowly along the edge of the forest. To be more specific, Grandmother walked alongside the mare and stopped each time the mare bent her head down to the grass to taste some kind of herb. Grandmother held the lead so loosely that it even slipped out of her hands whenever the mare, having spied something in the grass, jerked her head sharply to one side.

Occasionally Grandmother would still keep on leading the horse further, but after coming to a new place, she would once again give her free rein. We kept walking, either along the edge of the forest, or just a little ways in.

It was already past noon when we came to a mudhole in the middle of the field. We sat down by a haystack from the first haycutting for a little rest and a bite to eat. After snacking on milk and bread, I was tired from our long trek and felt like sleeping. On top of it all Grandmother took out of her bundle a small sheepskin coat, spread it out beside the haystack and encouraged me:

"Lie down and have a rest, little one. I guess you must be pretty tuckered out."

I lay down and began to fight off sleep, fearing that Grandmother might magically disappear along with the mare and without me, but sleep won out.

Upon awakening I saw Grandmother picking some sort of herbs right next to the mare's muzzle and sticking them in her bundle. Not long afterward we started heading for home, but a different way this time. As it began to get dark, I again felt as though I needed a rest, and once more Grandmother put me down on the sheepskin coat. When she woke me up it was still dark, and we continued once more on our homeward journey.

From time to time I could hear Grandmother saying something to the mare. While I don't recall the content of her words, I clearly remember her voice intonations — soothing, tender and cheerful. When we reached home Grandmother at once began to give the horse water, adding the mixture from the iron pot to the pail.

Later I saw her give the people who came for the horse the bunches of herbs she had picked during our walk and explain something to them.

The mare, who had by this time become a little friskier, was reluctant to leave our yard. She had already been harnessed again and kept turning her head to look at Grandmother, pulling on her lead.

For several days afterward I was angry at my grandmother for not showing me how she could magically disappear like a witch, but the whole time she had just kept on feeding the horse, picking herbs and tying them into bunches.

I might have soon forgotten about the walk and the witchery, but when I told the boy who had called her a witch that my grandmother didn't disappear anywhere, but simply fed sick animals, he — and he was just a bit older than me — cited a significant fact that neither I nor any of the village kids who were on my side could counteract:

“Why is it then that each time the chairman rides by your yard, the horse stops trotting, and goes by just at a walk — she doesn't even obey the whip?”

I don't remember how Grandmother explained this to me. It is only now that I understand the reason. I am confident that a lot of people today who have kind hearts and have an attentive relationship to Nature and animals could also treat creatures' ailments the way she did.

Now I realise that she allowed the horse to try bunches of various herbs simply to determine what specific herbs the ailing animal required. She also used this to decide the route she would take the next day, counting on finding these herbs along the way, and at the same time replenishing her own stock.

She needed to make this a whole day's trip, since each plant has a particular time when its consumption is especially beneficial. She held the lead loosely so as to allow the mare to determine for herself which herbs and how many she needed to take in. Animals can feel this in an inexplicable way. Since the mixture was prepared from herbs chosen by the mare herself, Grandmother's use of it for washing, as well as letting her night-cap soak in it, was probably to make the animal more predisposed to her.

See how simple everything turns out to be! Only it's still not clear to me how all this was known by my semi-literate grandmother. Oh, how we have complicated this simplicity! May that not be the reason for the large-scale epizootic ('mad-cow-disease') that recently swept across Europe, and our modern scientific thought came up with nothing better than to destroy thousands of diseased animals!

I have cited just one example attesting to the fact that the achievements of our modern medicine are illusory. Indeed, I could cite a whole lot of similar examples of the illusory achievements of our contemporary society. But why talk of specific details when we can go right off to the main thing?

### To live in a marvellous reality

What kind of society are we living in today, anyway? What are we striving for? What do we suppose we can build in the future? The overwhelming majority of the Russian population will answer without hesitation:

“We live in a democratic state and are striving to build a free democratic society, just like in the developed, civilised Western countries.”

That is exactly what the majority of politicians and political strategists will say.

That is exactly what they say on TV and in newspaper columns.

That is exactly what the majority of people in our country think.

That majority opinion exactly confirms Anastasia’s statement that a part of the people in our modern civilisation are asleep, while the rest, because of their programming, are mere bio-robots in the hands of a bunch of priests who imagine themselves to be the rulers of the world.

If one can just stop and withdraw one’s self, even a little, from the world’s feverish daily monotonous commotion and think independently, it should be possible to understand the following facts.

Democracy! Just what is democracy, anyway? What concept does the word itself denote? The majority will answer by quoting the well-known Great Encyclopedic Dictionary<sup>9</sup> or the Dictionary of the Russian Language,<sup>10</sup> both of which offer pretty much the same terse definition:

<sup>9</sup>See footnote 9 in Chapter 9: “A need to think”.

<sup>10</sup>Dictionary of the Russian Language (*Tolkovy Slovar’ Russkogo Yazyka*), edited by S. I. Ozhegov and N. Yu. Shvedova, Moscow, 2002.

Democracy is a form of political system or social order in a state, based on the recognition of the people as a whole as the source of authority. The basic principles of democracy are the authority of the majority, the equality of citizens...

And in highly developed countries people choose their parliaments and presidents by majority vote.

'Choose'? Utter nonsense! A complete illusion! There are no choices or elections! Not once, not even in a country which considers itself the most democratic and civilised on the globe, have the people themselves ever held power.

But the elections? They are a complete illusion! Remember what always happens before elections in any so-called democratic country. Teams of political strategists working for each candidate fight among themselves, spending huge sums of money and sophisticated methods of psychological influence on people through the mass media, TV and graphic promotional campaigns.

And the more highly developed the country, the more sophisticated the technological methods of suggestion employed.

It is clearly evident that the victory always goes to the team of political strategists that can exert the most influence and the greatest power of suggestion. It is under the influence of this suggestion that people go and vote. They think they are voting by their own will. In fact they are merely carrying out somebody else's will.

Thus it turns out that modern democracy *is an illusion of the masses. It is their faith in an unreal social order — an unreal, illusory world.*

It all boils down to this: subordination to the majority does not exist in the natural world. All the groups of plants, animals and insects may be subject to instinct, the movement of the planets, the order established by Nature, or the leader of

a herd. And in human groupings it is always the minority that is in control.

It is not the majority that has fomented revolutions and wars, but the majority participated in revolutions and wars at the consciously directed suggestion of a minority. That's the way it has been and that's the way it is now.

Democracy is the most dangerous illusion people have been exposed to *en masse*. It is dangerous because in the democratic world it is only too easy for any democratic country to end up being ruled by one person, or a small group of people. For that, all they need is a pile of money and a good team of psychologists and political strategists.

And we — today's parents, living under the influence of illusions, are still trying to raise our children. But in actual fact what we are doing is introducing — pushing, one might say — their consciousness into a world of illusion... We are in fact handing them over into somebody else's clutches... Only not to God. We are handing them over to some kind of opposite of God.

God's world is not illusory, it is real and beautiful. It has its own unsurpassed fragrances, colours, shapes and sounds. The gates to this world are always open, and we are always free to enter, if only we can shake off the illusions that have been fettering our consciousness.

I too shall write my own *Book of Kin* for my descendants — indeed, for myself. And among other things I shall most certainly write the following:

I, Vladimir Megré, lived in an age when mankind did not exist in the real world. Their flesh fed on the gifts of the real world, but their consciousness wandered in a world of illusion. This has been a very challenging period in people's lives. Right now I am attempting to bring my consciousness back to the real world of the Divine. This Divine

world of Nature has suffered at the hands of people's consciousness. Suffered terribly. I realise this and am trying to correct the situation. I will do whatever I can, even if it is only creating a design for my domain. Perhaps even just a part of it. The main thing is to understand and have my children understand.

As before, Anastasia sat quietly by and listened while I vented my reasonings aloud. When I stopped, she got up, walked over to the window and observed:

"The stars are beginning to twinkle in the sky. It is time for me to go, Vladimir. You are right in many respects. But be careful not to let these new visions of reality make you want to control others. Get the better of such a temptation and do not join any organisations. Other people, too, are seeing this reality. Once they have organised, they will bring about a significant achievement on the Earth. You will understand your own destiny in life."

"I'm not aiming to join anything or control anybody, Anastasia. But what is this destiny of mine you speak about?"

"The time will come when you will feel this for yourself. Right now lie down on the bed, go to sleep and rest. You are excited. It is possible that an untrained heart will not be able to withstand such excitement."

"Yes, I know. But if I go to sleep, you will go away. You always do. Sometimes I have a strong desire for you to stay and not go away. I want you to be always beside me."

"I *am* always beside you. Whenever you think of me. You will soon begin to feel and understand this. Now wash yourself with water and go to sleep."

"I can't sleep. Lately I haven't been sleeping all that well. My thoughts have been keeping me awake."

"I shall help you, Vladimir. Would you like me to read some of the poetry your readers have sent in, and sing you a lullaby?"

“Go ahead and try, perhaps I really *shall* nod off to sleep.”

After I washed and lay down in my bed which had already been made up, Anastasia sat down beside me and placed her hand on my forehead. Then she ran her fingers through my hair and softly sang a song written by one of my readers from Ukraine. Anastasia sang very softly, only it seemed that many people and the stars in the sky were listening to her song — listening to her pure voice and her words:

Take my hand this hour...  
Tomorrow, you will see,  
Is another day, but now  
You can press your cheek to me.

Thus hour after hour  
You may sleep in sweet relief,  
For from your strands of hair  
I'll gather up the grief.

And I shall spread a blanket fine,  
Blue with stars all woven,  
I shall stay a long, long time,  
Just so you won't get frozen.  
If only you'll receive me.

From the night I'll come and stand  
All throughout the ages.  
I've learnt to heal ills by my hand,  
Which all pain assuages.  
If only you'll believe me.

Down from a high incline  
Past us stones will tumble.

I know ahead of time  
Where you're going to stumble.

Into church and palace  
You'll go, a hero bright.  
All the pretty lasses  
I shall keep from your sight.

In a world of black and white  
I too'll live unimpeded,  
So that swords and bows drawn tight  
Will never more be needed.

If only you, if only you  
If only you will love me.

I'll let loyal Sparrow fly up and team  
With Crane in the heavens above you.<sup>11</sup>  
I dare not come into your dream...  
'Too tenderly I love you.

Before immersing myself in a deep and calm sleep, I managed to think: *Of course, tomorrow is another day. It will be better. I shall describe the dawn of a brand new day. And many people will start writing in their Books of Kin about how a splendid new beginning has been dawning on mankind. And these will be the greatest*

<sup>11</sup>A reference to the Russian proverb: *Luchshe sinitsa v ruke, chem zburav' na nebe* (lit. 'Better [to have] a sparrow (titmouse/chickadee) in one's hand than a crane in the sky'). Like its English counterpart, *A bird in the hand is worth two in the bush*, it suggests a cautious, conservative approach to life which the poet's heroine now finds herself ready to give up, releasing the sparrow so that she may join the crane in the sky.

*historical books for their descendants for thousands of years of time. And one of them will be mine. Tomorrow I shall start writing a new book, and now I shall be able to give it a more coherent-sounding design. And the new book will define a new historic turning-point for the people of the Earth — a turning to the marvellous reality of the Divine.*

Until we meet again, dear readers, in this new and marvellous reality!

Vladimir Megré

*To be continued...*

## Translator's Afterword

Suppose you've lived all your life in the same town at the base of a huge mountain. You've looked at that mountain day in and day out as you walked to and from school, ploughed your fields, shopped at the outdoor market, or cycled around the town on errands. You are familiar with every detail of its craggy surfaces, and on occasion have even climbed up part way to explore the foothills. But you have never been round to the other side.

Then one fine day you decide to take the night train to a town some distance away, about a quarter of the way around the mountain, where the local residents speak a completely different dialect from yours. Upon arriving the next morning, you set out to take a look at the mountain from this side. And there it is, looming just as large, just beyond this new town. Only at first it doesn't look like the same mountain at all, even though your angle has changed by a mere 90 degrees. What was familiar from a frontal view you now see in profile. Features you knew before in profile are now facing you head on.

Some of these features require a closer examination to identify. In fact, many of your fellow residents who made this trip before you and didn't bother to examine the scene in detail say the mountain here looks nothing at all like the one back home. Some of them refuse to believe it is the same mountain. A few even associate the unfamiliar appearance with something hostile and threatening.

Such impressions are further fuelled by the different way the locals describe the mountain in their own dialect — either

with completely different words, or using the same words but with different connotations. Indeed, the terminological discrepancy is rather disconcerting at first. But little by little, the more you examine these features in detail and even try a bit of climbing exploration, the more you become convinced that you are dealing with the same mountain you have known all your life. And as you hear local residents speaking about it, you gradually acquire the ability to translate between their dialect and yours and realise they are talking about the same concepts you have known all along.

In sum, you find yourself simply amazed at what you are learning about a familiar landmark from a brand new perspective. That does not necessarily mean, however, that you have any plans to suddenly relocate your residence. But you are certainly able to make use of your new knowledge to enhance your appreciation and exploration of the mountain from your own home base.

This little story pretty much describes my experience in approaching Vladimír Megré's *Ringing Cedars Series*. Having been raised in the Protestant denomination known as Christian Science<sup>1</sup> (though I am sure people of many different faiths have had a similar experience), I was amazed, even 'blown away' by the new vistas of 'Mount Spirituality' that opened up to me from my initial reading of the Series. At first glance, like the mountain in the story above, some of the features,

<sup>1</sup>*Christian Science* — a Christian denomination founded in 1879 in New England by Mary Baker Eddy, designed to "reinstat[e] primitive Christianity and its lost element of healing" (Eddy, *Manual of The Mother Church*, p. 17). Eddy's principal statement of her ideas is found in a 700-page volume entitled *Science and health with Key to the Scriptures* (Boston, 1911). As with Megré, one of Eddy's basic aims was to change the human perception of God's laws in action from one based on mysticism and the promise of future rewards to one based on reason and fact, demonstrable in our earthly experience here and now.

especially those given new names or whose names were interpreted differently, presented something of a recognition challenge. But the more I read, the more I realised I was not being presented with a new God or even a new religion, but simply with new views on the same God and spirituality I had known all along, only from a different angle. And these insights have indeed enhanced my appreciation and exploration of spiritual concepts from my own faith's home base.

One particularly striking example of being 'blown away' by a new view of familiar territory was my initial reading of Chapter 1 in the present volume ("Who raises our children?"), which seems to pick up right where Mary Baker Eddy's chapter on "Marriage" in *Science and health* (pp. 56–69) leaves off. Not only that, but a friend of our family's — a Catholic writer on theology — told me of a number of instances where intimate relations have been linked to a more spiritual outlook, including certain practices among Orthodox Jews and native peoples of North America.<sup>2</sup> She also referred me to the Book of Tobit (or Tobias) in the Apocrypha for an additional illustration. These examples, however, while fascinating, differ from the approach outlined in Chapter 1 in that their attention is still concentrated on the physical act of intimacy (albeit seen from a more spiritual standpoint), while the principal focus of Megré's discussion with the psychologist is *children*, the physical conditions playing but an incidental role.<sup>3</sup>

<sup>2</sup>For further exploration, see: Philip Sherrard, *Christianity and Eros* (London: SPCK Holy Trinity Church, 1976); Linda Sabbath, *The radiant heart* (Denville, NJ, USA: Dimension Books, 1977); Mary Shivanandan, *Natural sex* (New York: Rawson Wade, 1979).

<sup>3</sup>Compare Eddy's statement in *Science and health* (pp. 61–62): "If the propagation of a higher human species is requisite to reach this goal [of spiritual unity], then its material conditions can only be permitted for the purpose of generating."

Another group that has much in common with Anastasia's viewpoints on life are the Doukhobors — a sect that was persecuted in Tsarist Russia for their pacifism and opposition to the dictates of official church hierarchy. In 1899 they were helped to emigrate to Canada by the writer Leo Tolstoy, who recognised in them a living embodiment of his own simple, straightforward approach to a Christianity of the heart without ecclesiastical trappings.<sup>4</sup>

This past year I had occasion to present a conference paper entitled: "Links across space and time: the life and works of Leo Tolstoy, Mary Baker Eddy and Vladimir Megré", pointing out some of the many similarities not only in the ideas of these three spiritual thinkers, but also in their personal and professional lives. As specific examples, the paper compares similar statements from all three writers on the subjects of *life* and *prayer*. I have no doubt that the comparison could be extended to include some other spiritual thinkers too.

Indeed, to me one of the most remarkable features of Megré's whole account of Anastasia and her sayings is its sense of *inclusiveness*. Megré does not purport to take his readers into another universe, where all the worthy values they have held dear for so long must suddenly be regarded as worthless and forsakeable in favour of some new doctrine. He is not presenting them with a 'new mountain'. Rather, he is simply showing them the spiritual values they already have from a brand new point of view, thereby enhancing the significance of these values and helping his readers put them into practice more effectively.

As a translator, I was delighted to find that this sense of inclusiveness embraces not just people and their values, but the

<sup>4</sup>See, for example: Andrew Donskov, *Leo Tolstoy and the Canadian Doukhobors* (Ottawa: Centre for Research on Canadian-Russian Relations, 2005).

whole underlying foundation of *language* as well. Often seen as a divisive element in human society, in the *Ringling Cedars Series* (particularly the present book) language becomes a unifying force as fragments of its ancient roots are uncovered, enabling us to trace equivalent words in different languages back to their common origin.

At the beginning of Chapter 10, footnote 2 on the name *Medvedkovo* explains that *medved'*, the Russian word for the animal we call a 'bear', is comprised of the roots *med-* (honey) and *ved-* (know).<sup>5</sup> Surprisingly, both these roots have their counterparts in English: *mead* (an alcoholic drink made from fermented honey and water) and *wit* (an obsolete word meaning 'know', now more commonly used in the sense of 'quick understanding' or the ability to play intelligently with words and their meanings).<sup>6</sup> Historically, *knowledge* and *sight* were related concepts (we *see*, therefore we *know*), and hence words like *video* and *vision* can also be traced (through Latin *videre* = 'to see') back to this same root, as can the word *white* (something clearly seen). These examples show some of the many layers of meaning inherent in the original root.

But even more interesting, as my editor, Leonid Sharashkin, has pointed out to me, is the realisation of how these linguistic changes reflect the evolution of the underlying concepts in human consciousness: in both Russian and English the roots *ved-* and *wit-* have yielded in general usage to *zna-* and *know-*, respectively, indicating mankind's greater interest today in superficial, technological knowledge than in the

<sup>5</sup>On *vedat'* and its distinction from *znat'* please see footnote 8 in Chapter 5: "The history of mankind, as told by Anastasia".

<sup>6</sup>The word *wit* may be familiar to readers of the Authorised (King James) Version of the Bible in its variant *wot* — see, for example, Exodus 32: 1, where the people tell Aaron they "wot not what is become of" Moses. See also Acts 3: 17, Romans 11: 2.

multi-dimensional awareness and wisdom implied by the earlier terms. In fact, with some of their derivatives in both languages, e.g., *ved'ma* = *witch*, the original positive reference (in this case, to someone capable of harnessing the extended abilities of the human mind) has given way in popular perception to a more negative connotation (of one who uses such abilities for devious or evil purposes).

Like many Russian roots, *ved-* comes directly from Sanskrit (along with Latin, one of the two proto-tongues from which the whole Indo-European family of languages is derived).<sup>7</sup> And this highlights another aspect of inclusiveness evident in the Series — namely, certain indications that language transcends mere human invention,<sup>8</sup> hence its great potential for unifying instead of dividing the peoples of the Earth. On a visit to Russia in the 1960s, renowned Sanskritologist Durga Prasad Shastri discovered remarkable similarities between present-day Russian and the Sanskrit spoken in India some twenty-five centuries earlier. In fact, his knowledge of ancient Sanskrit enabled him to understand spoken Russian well enough that he could get by without an interpreter.<sup>9</sup>

And this is one more illustration of how Vladimir Megré, through relating Anastasia's sayings on mankind and its

<sup>7</sup>Another interesting insight from Sanskrit is the origin of the name *Anastasia*. In Sanskrit the first letter *a-* is a negating particle (as in *asymmetrical* in English), while the root *nast-* signifies 'deterioration' (compare English *nasty*) - hence *anasta* = 'without deterioration'. This also underlies the use of *anastasia* in Greek to signify 'resurrection'. (I am grateful to my editor for pointing out this etymology.)

<sup>8</sup>See, for example, "A book of pristine origins" in Chapter 2: "Conversation with my son".

<sup>9</sup>See: D. P. Shastri, *Links between Russian and Sanskrit*. Meerut District Conference of the Indo-Soviet Cultural Society (Ghaziabad, 1964). Again, I thank my editor for bringing this reference to my attention.

history, brings together people of not only different religions and cultures but also of different chronological periods, to recognise and embrace their common heritage as children not of different genetic backgrounds, but rather of the one universal God.

Perhaps the author's future volumes will not only show us still new views of our familiar 'mountain', but transform our whole perception of a 'mountain' into a dimension we cannot yet fathom. Think of how a mountain seen from space may resemble, let's say, a cedar nut! Then imagine how what we see as a 'mountain' of spirituality might be perceived through spiritual vision itself! The possibilities are endless.

December 2006

## ABOUT THE RINGING CEDARS SERIES

*Anastasia*, the first book of the Ringing Cedars Series, tells the story of entrepreneur Vladimir Megré's trade trip to the Siberian taiga in 1995, where he witnessed incredible spiritual phenomena connected with sacred 'ringing cedar' trees. He spent three days with a woman named Anastasia who shared with him her unique outlook on subjects as diverse as gardening, child-rearing, healing, Nature, sexuality, religion and more. This wilderness experience transformed Vladimir so deeply that he abandoned his commercial plans and, penniless, went to Moscow to fulfil Anastasia's request and write a book about the spiritual insights she so generously shared with him. True to her promise this life-changing book, once written, has become an international bestseller and has touched hearts of millions of people world-wide.

*The Ringing Cedars of Russia*, the second book of the Series, in addition to providing a fascinating behind-the-scenes look at the story of how *Anastasia* came to be published, offers a deeper exploration of the universal concepts so dramatically revealed in Book 1. It takes the reader on an adventure through the vast expanses of space, time and spirit — from the Paradise-like glade in the Siberian taiga to the rough urban depths of Russia's capital city, from the ancient mysteries of our forebears to a vision of humanity's radiant future.

*The Space of Love*, the third book of the Series, describes author's second visit to Anastasia. Rich with new revelations on natural child-rearing and alternative education, on the spiritual significance of breast-feeding and the meaning of ancient megaliths, it shows how each person's thoughts can influence the destiny of the entire Earth and describes practical ways of putting Anastasia's vision of happiness into practice. Megré shares his new outlook on education and children's real creative potential after a visit to a school where pupils build their own campus and cover the ten-year Russian school programme in just two years. Complete with an account of an armed intrusion into Anastasia's habitat, the book highlights the limitless power of Love and non-violence.

*Co-creation*, the fourth book and centrepiece of the Series, paints a dramatic living image of the creation of the Universe and humanity's place in this creation, making this primordial mystery relevant to our everyday living today. Deeply metaphysical yet at the same time down-to-Earth practical, this poetic heart-felt volume helps us uncover answers to the most significant questions about the essence and meaning of the Universe and the nature and purpose of our existence. It also shows how and why the knowledge of these answers, innate in every human being, has become obscured and forgotten, and points the way toward reclaiming this wisdom and – in partnership with Nature – manifesting the energy of Love through our lives.

*Who are we?* — Book Five of the Series — describes the author's search for real-life 'proofs' of Anastasia's vision presented in the previous volumes. Finding these proofs and taking stock of ongoing global environmental destruction, Vladimir Megré describes further practical steps for putting Anastasia's vision into practice. Full of beautiful realistic images of a new way of living in co-operation with the Earth and each other, this book also highlights the role of children in making us aware of the precariousness of the present situation and in leading the global transition toward a happy, violence-free society.

*The book of kin*, the sixth book of the Series, describes another visit by the author to Anastasia's glade in the Siberian taiga and his conversations with his growing son, which cause him to take a new look at education, science, history, family and Nature. Through parables and revelatory dialogues and stories Anastasia then leads Vladimir Megré and the reader on a shocking re-discovery of the pages of humanity's history that have been distorted or kept secret for thousands of years. This knowledge sheds light on the causes of war, oppression and violence in the modern world and guides us in preserving the wisdom of our ancestors and passing it over to future generations.

*The energy of life*, Book Seven of the Series, re-asserts the power of human thought and the influence of our thinking on our lives

and the destiny of the entire planet and the Universe. It also brings forth a practical understanding of ways to consciously control and build up the power of our creative thought. The book sheds still further light on the forgotten pages of humanity's history, on religion, on the roots of inter-racial and inter-religious conflict, on ideal nutrition, and shows how a new way of thinking and a lifestyle in true harmony with Nature can lead to happiness and solve the personal and societal problems of crime, corruption, misery, conflict, war and violence.

*The new civilisation*, the eighth book of the Series, is not yet complete. The first part of the book, already published as a separate volume, describes yet another visit by Vladimir Megré to Anastasia and their son, and offers new insights into practical co-operation with Nature, showing in ever greater detail how Anastasia's lifestyle applies to our lives. Describing how the visions presented in previous volumes have already taken beautiful form in real life and produced massive changes in Russia and beyond, the author discerns the birth of a new civilisation. The book also paints a vivid image of America's radiant future, in which the conflict between the powerful and the helpless, the rich and the poor, the city and the country, can be transcended and thereby lead to transformations in both the individual and society.

*Rites of Love* — Book 8, Part 2 (published as a separate volume) — contrasts today's mainstream attitudes to sex, family, childbirth and education with our forebears' lifestyle, which reflected their deep spiritual understanding of the significance of conception, pregnancy, homebirth and upbringing of the young in an atmosphere of love. In powerful poetic prose Megré describes their ancient way of life, grounded in love and non-violence, and shows the practicality of this same approach today. Through the life-story of one family, he portrays the radiant world of the ancient Russian Vedic civilisation, the drama of its destruction and its re-birth millennia later — in our present time.

*To be continued...*

## READERS' COMMENTS

*Originals of these letters or e-mails are held by the publisher. We have preserved the spelling and grammar of the originals.*

I received a copy of Anastasia, two days ago and read it entirely! It is difficult finding the words to express how much it means to me and how powerfully I am impacted by it. It's almost as if my mind and heart have been prepared to read this book for years! I've found a treasure for which I have been searching desperately for years! I will be ordering the entire series soon and sharing them with everyone I know! [and received soon after from the same reader] I've been immersed in the books. Since we last spoke, I have read book 2 AND 3! I am in awe of what I have read. I have been DEEPLY impacted and touched thus far, and I can't wait to read book 4 through 8. As soon as book 5 is available, I will order a copy!

— *Brian, Los Angeles, USA*

It is the first thing written in a book that has made so much sense to me. All that she says makes sense and you just know that you are reading TRUTH. The book is awesome. I cannot explain how very little I have read in my life and certainly I've NEVER finished one book I started. This book was different and I could not put it down... ever! The truth lies in there for sure and which I believe is why it is selling incredibly all over the world with no advertising at all.

— *Denise, Canada*

Basically, these books make all the books that I've read to date look like a complete waste of paper! ... I think that going through life without this knowledge is a waste of time, and not passing it on to children is a crime. I can say with confidence that nothing like these books exists in the world today.

— *Rafal F., Australia (from an unsolicited letter to the editor of NEXUS Magazine, February/March 2006 edition)*

I first laid my eyes on the Anastasia books in the Nexus Magazine, and felt the energy at once, bought them, and was completely breath taken. I had to stop reading — just to cry for while — so touched

with the beauty and simplicity of Anastasia's spirit. This is a series of books bound to have tremendous impact. I have read hundreds of books through the years on spiritual advancement (Personal/Earth), but there is nothing so direct and clear as this — with the exception of selected channellings. Thanks to Anastasia, Vladimir, John, Leonid and all involved!

— *Jan, Norway*

A while back, myself and MR also purchased 6 books, 2 each of the first 3. I have been passing them on to a few other people, and now I am being asked about them more and more. This order is a copy each for my 2 daughters, because they have been asking me to borrow them, and so far it hasn't been possible, because other people have them at the moment. So, I decided to give these to them as a birthday gift, seeing as they are both "into" this kind of reading. In fact, we all are into the spiritual types of books, and prefer them to any other kind of books. After reading these series though, I have recommended that they give all their other reading materials away, because this Anastasia series is all they'll need from now on. I am in my 60's now, and I just wish I knew all of this Anastasia material about 40+ years ago. I think my life, as well as the lives of my family would have been vastly different, if this kind of knowledge was "the norm" back when I was young, instead of it all being suppressed by the mainstream. The sooner we can all get "Anastasia" centres established worldwide, the better of mankind, and our planet will be. ... I just can't wait until the entire series has been translated, but in the meantime, I'll be getting book 4, and waiting eagerly for each new volume as it becomes available.

— *John, Melbourne, Australia*

Anastasia is among — no — is the most profound work I have ever read. I haven't read that many "great" works, and may still be a bit naïve — but I have read enough to realise that this is something special. No other book has actually changed me... I am even more excited now in expectation of acquiring Books 2 through 4 — I'm quietly confident that this is indeed the "life-changing" experience I have been waiting for. Cheers!

— *Ben, Australia*

Have just read with utter delight and joy Book 1 and would like to buy the first four books that are translated into English. Do you have a distributor in the U.K. and what is the cost per book in sterling? Please e-mail me back with this information. Thanking you in advance and so looking forward to hearing from you.

— *Araura, UK*

I need to buy 6 copies of the first book, Anastasia. I have six close friends who just HAVE to read them, and won't unless I shove them into their laps. Bill me.

— *Duncan, Queensland, Australia*

What a wonderful read. I thoroughly enjoyed all 3 — I finished them all by Sunday eve. I'm a fast reader when I find something that touches my soul. I am hooked. When is #4 due? Can't wait to read them all. I've just started to go through them again to highlight the messages.

— *Katbleen, Australia*

I've read through all 3 books and what can I say?... hard to put into words. Now I have some idea how hard it could be for Anastasia to put into words what she wants to say for us. Anyway.. I can't wait to read the next one so can you please email me as soon as available in Australia.

— *Elizabeth, Rochedale, Australia*

I am enjoying the books very much, am half way through book 2, which has moved me most so far. Now I would like to get another set of the first three books as a present for a friend.

— *Don, Warragul, Australia*

These ringing cedar books are so powerful, I feel in communion with Anastasia reading them. I would love to distribute these books.

~ *Andrew, Melbourne, Australia*

I cannot even begin to describe the depth of the effect Anastasia has had on me and I have only read Book 1. For the first time in my life I feel affirmed on a very deep level and feel free to be me. I am

so excited to have discovered these books and am fully committed to doing what I can to help spread their message.

— *Mary, New Zealand*

We have devoured the first book as if we were starving and I am eager to order the others very soon.

— *Sherry, USA*

There has been a very significant change taking place within me since reading the Series. It has been a casting off of the selfish elements within me and walking into a vast chasm of blessings. What is possible I do not yet know, only that an awareness and a consciousness is possible in this life. My life is hopeful now.

— *Allan, Wisconsin, USA*

At last! Truth that has not been distorted by dogma or someone's ego! I might explode from emotion if I read any more! I had a hard time getting myself to just stand still.

— *Ana, Portugal*

The Ringing Cedars books help with explaining ways to have a richer life, raise healthier children, filling one's heart rather than one's pockets.

— *Penny, Missouri, USA*

There is something highly significant stirring in the spirit world which has broken out upon the world, starting in Russia since Vladimir Megré first encountered this remarkable woman. You read her books; you get filled with the passion of wanting to share what you find with your families and friends... The appearance of Anastasia is a most important and needful occurrence which has benefited many people enormously. Her appearance has rocked hosts of people to their very foundations and reading Book 1 it is easy to see why. There seems to be the promise that Anastasia and Vladimir Megré are to become the most famous people to appear on the world scene... So far I am deeply affected and inspired by her... roll on Book 2.

— *David, England*

**THE AUTHOR, Vladimir Megré**, born in 1950, was a well-known entrepreneur from a Siberian city of Novosibirsk. According to his account, in 1995 — after hearing a fascinating story about the power of ‘ringing cedars’ from a Siberian elder — he organised a trade expedition into the Siberian taiga to rediscover the lost technique of pressing virgin cedar nut oil containing high curative powers, as well as to find the ringing cedar tree. However, his encounter on this trip with a Siberian woman named Anastasia transformed him so deeply that he abandoned his business and went to Moscow to write a book about the spiritual insights she had shared with him. Vladimir Megré now lives near the city of Vladimir, Russia, 190 km (120 miles) east of Moscow. If you wish to contact the author, you may send a message to his personal e-mail [megre@online.sinor.ru](mailto:megre@online.sinor.ru)

**THE TRANSLATOR, John Woodsworth**, born in Vancouver (British Columbia), has over forty years of experience in Russian-English translation, from classical poetry to modern short stories. Since 1982 he has been associated with the University of Ottawa in Canada as a Russian-language teacher, translator and editor, most recently as a Research Associate and Administrative Assistant with the University's Slavic Research Group. A published Russian-language poet himself, he and his wife — Susan K. Woodsworth — are directors of the Sasquatch Literary Arts Performance Series in Ottawa. A Certified Russian-English Translator, John Woodsworth is in the process of translating the remaining volumes in Vladimir Megré's Ringing Cedars Series.

**THE EDITOR, Leonid Sharashkin**, is writing his doctoral dissertation on the spiritual, cultural and economic significance of the Russian *dacha* gardening movement, at the University of Missouri at Columbia. After receiving a Master's degree in Natural Resources Management from Indiana University at Bloomington, he worked for two years as Programme Manager at the World Wide Fund for Nature (WWF Russia) in Moscow, where he also served as editor of Russia's largest environmental magazine, *The Panda Times*. Together with his wife, Irina Sharashkina, he has translated into Russian *Small is beautiful* and *A guide for the perplexed* by E.F. Schumacher, *The secret life of plants* by Peter Tompkins and Christopher Bird, *The continuum concept* by Jean Liedloff and *Birth without violence* by Frederick Leboyer.

## CHAPTER ONE

# Thought which creates

Man's life! On what or on whom does it depend? Why do some become emperors or regimental commanders, while others are obliged to fend for scraps at garbage dumps?

One opinion holds that each person's fate is pre-determined from birth. That would make Man<sup>1</sup> nothing more than an insignificant cog in some mechanised system, and not the highly organised creation of God.

According to a different opinion, Man is a self-sufficient creation, including, without exception, all the diverse energies of the vast Universe.

But there is in Man an energy peculiar to him alone. It is known as *the energy of thought*. Once Man realises just what kind of energy is in his possession and learns to exploit it to the full, then he will be a ruler of the whole Universe.

Which of these two mutually exclusive definitions of Man is true?

Perhaps the following ancient parable — you could call it an anecdote — will help us arrive at the answer.

A man fed up with his life ran out into the woods at the edge of town, threw up his hands, clenched his fists and railed at God:

<sup>1</sup>*Man* — Throughout the Ringing Cedars Series, the word *Man* with a capital *M* is used to refer to a human being of either gender. For details on the word's usage and the important distinction between *Man* and *human being* please see the Translator's Preface to Book 1.

“I can’t go on with my life. Your earthly household is filled with nothing but injustice and chaos. Some people go galivanting ’round town in expensive cars and dine in fine restaurants, while others fend for scraps at garbage dumps. Me, for instance — why, I ain’t got enough money to buy me a new pair o’ shoes. If You, God, are just — that is, if You exist at all — then make my lottery ticket hit the jackpot.”

At that moment the clouds parted in the heavens, a warm sunbeam caressed the complainant’s face and a calm, clear voice sounded from above:

“Do not worry, My son. I am prepared to fulfil your request.”

The man was overjoyed. He walked along the street with a smile on his face, happily peering into shop windows and imagining what kind of goods his lottery winnings might buy.

A year passed. The man won nothing. He concluded God had let him down.

Now the man, who by this time was *really* fed up, went back to the same place in the woods where he had heard God’s promise and cried:

“You didn’t keep your promise to me, God. You let me down. Here I’ve been waiting for a whole year now. I’ve been dreaming about the things I’ll buy with the money I win. But a whole year’s gone by, and I ain’t got no winnings yet.”

“Oh, My dear son,” came the sad response from the heavens. “You wanted to win a lot of money in the lottery. So why over the whole year did you not buy a single lottery ticket?”

This little parable or anecdote has been making the rounds lately. People tend to laugh at the loser.

“How come he didn’t catch on that for his dream to come true he first had to buy at least one lottery ticket?” they ask. “But this chap didn’t even take the most obvious first step!”

It’s not the parable itself that’s important here, or whether this situation ever actually happened. What is important is how people relate to the chain of events recounted in this story.

The fact that people laugh at the unfortunate dimwit tells us that they intuitively, perhaps subconsciously, realise that their own future life depends not only on some kind of Higher Power or Divine Design, but on themselves too.

And now everybody can try and analyse their own life situations. Have they done everything they possibly can on their own to make their dream come true?

I dare say, and not without some justification, that any dream — even one that seems to be unreal and utterly fantastical — will come true if only the individual wanting it to come true takes simple and consistent actions toward his goal.

This statement could be illustrated with a whole range of examples. Here is one of them.

## CHAPTER TWO

# A bride for an English lord

One day at a small local market in the city of Vladimir I happened to witness an incident between a young salesgirl and an inebriated male customer.

The girl was selling cigarettes. She was evidently new on the job and hadn't yet boned up very well on her merchandise. She was getting the brand-names of the cigarettes mixed up and took a long time to wait on each customer. A small queue had formed — about three people. The last person in line, a drunken male, shouted out to the salesgirl:

“Hey, can't you move a little faster, birdbrain!”

The girl's cheeks blushed bright red. Several passers-by stopped to stare at the hapless girl.

The drunk continued shouting out his unflattering remarks. He wanted to buy two packs of *Primas*, but when his turn came, the girl refused to serve him. Flushed with embarrassment and clearly having a hard time holding back her tears, she declared to the customer:

“You are being insulting, and I refuse to serve you.”

At first the man was dumbfounded at this unexpected turn of events. Then he faced the growing crowd of gawkers and launched into an even more insulting tirade:

“Will you just look at this stupid jackass?! If you got yourself a husband, he'd complain in no uncertain terms if you hobbled about the kitchen like a lame hen!”

“I wouldn't let even my husband insult me like that,” the girl replied.

“Who d'you think you are, anyway? Nothing but a stubborn

jackass!" the inebriated man went on, shouting even louder and more irritatingly. "*She won't let her husband* — Maybe you're planning on marrying some English lord?"

"Maybe a lord, that's my business," replied the girl tersely and turned away.

The situation was heating up. Neither side was willing to give in. A sizeable crowd of market regulars had gathered to watch things unfold. Onlookers began scoffing at the young salesgirl's declared intention to marry an English lord.

Another girl came over from the next stall and stood beside her friend. She just stood there, without saying a word.

They stood there silently, two young girls who looked to be just out of high school. The crowd that had gathered were now talking amongst themselves about the girls' insolent and haughty behaviour.

Most of the snide remarks were about the girl's pie-in-the-sky hopes of marrying a lord, along with her over-estimation of her attributes and opportunities.

The dilemma was solved by a young man, the owner of the market stalls. When he first approached, he demanded in rather severe tones that the girl sell the cigarettes to the customer. However, after hearing her refusal, he quickly hit upon a solution satisfactory to all. Reaching into his pocket he pulled out a fifty-rouble note and addressed the girl:

"Madam, if you would be so kind, and if it is not too much trouble, please sell me two packages of *Primas*."

"Of course," responded the girl, handing him the cigarettes.

The young man in turn passed the cigarettes to the male customer. The conflict was over and the crowd dispersed. This story has a sequel — a quite unexpected one at that.

Each time I went by the market thereafter, I couldn't help paying attention to these two young salesgirls. They worked just as deftly as their senior fellow-workers, but at the same

time significantly distinguished themselves from them. They were slender of figure, modestly but neatly dressed, makeup not overdone, and their movements were far more elegant than the others'. The girls continued working at the market for almost a year and then both disappeared at the same time.

It was about six months later, in the summertime, at the same market, that I noticed an elegant young woman walking beside the fruit stalls. She stood out from the crowd by her proud bearing and fashionable expensive attire. This striking young woman was accompanied by a dapper-looking gentleman carrying a basket filled with a variety of appetising fruits.

It dawned on me that this young woman who was attracting all sorts of attention from the men around — as well as (no doubt) jealous glances from the women — was none other than the friend of the cigarette salesgirl.

I went over and explained to the young couple — especially to the lady's concerned companion — the reason for my curiosity. Finally the woman recognised me. We sat down at a table in an open-air café and Natasha (as she was called) recounted to me the events that had taken place over the past year and a half. Her story went as follows:

The day when Katya had that incident with the customer in front of all the regulars we decided to quit our jobs so people wouldn't laugh at us. You remember how Katya said back then that she was going to marry an English lord. And people laughed at her. We realised they would go on laughing and pointing fingers at us.

But we didn't manage to find work anywhere else. You see, we'd just finished high school, and didn't make it when we applied to college. Well, all right, I got average marks, but Katya was a real brain. She passed her exams with flying

colours, but still didn't get in. They'd cut back on the number of free college places, and she didn't have the money to pay for her education — her mum makes a pittance, and there's no dad. So we ended up taking sales jobs at the market, since they wouldn't hire us anywhere else.

We began working and swotting to sit the next year's college exams. But a week after the incident at the market Katya all of a sudden turns to me and says:

"I've got to prepare myself to be worthy of being the wife of an English lord. D'you want to train along with me?"

I thought she was joking, but she was dead serious. Even back at school Katya had always been pretty obsessive about whatever she put her mind to.

She went to the library and found the syllabus of a seminary for young ladies,<sup>1</sup> which she adapted to modern times. And we started training like crazy according to Katya's syllabus.

We did dancing and aerobics, we studied English and English history, along with the rules of etiquette and good manners. We watched political discussions on TV so we could hold conversation with intelligent people. Even while we were at work in our stall we tried to behave as though we were at a high-society gathering, so that our manners would acquire a natural feel.

We earned money, but didn't spend it on ourselves. We didn't even buy makeup, so we could save. We were saving so we could have fancy outfits custom made, as well as for a trip to England.

<sup>1</sup>*seminary for young ladies* — from tsarist times in Russia, when there were elite boarding schools reserved for girls of noble descent. The syllabus would have included a wide array of subjects (languages, dancing, painting, etiquette, religion etc.) designed to prepare the girls for their future roles in high society.

Katya said, you see, that English lords would never come round a small market like this in Vladimir, which meant we had to go to England. Our chances would be far greater there.

So we went to England with a tourist group. The two weeks there simply flew by. Of course, you understand, there were no English lords to greet us or take us around. And I really had no expectations for myself -- I was just doing this to keep Katya company. But she actually had hopes. Once she gets something into her head, that's it. She never stopped looking every Englishman in the face, searching for her intended. We even went to a dance club a couple of times, but nobody asked us to dance, not even once.

It was the day of our departure, and we were on our way out to the motor coach from our hotel, and Katya still kept looking around, ever hopeful. We stopped right on the hotel steps, when Katya suddenly puts her bag down, looks off to one side and says:

“Here he comes!”

I look, and lo and behold, walking along the sidewalk toward us is a young man, minding his own business and paying no attention to us. Just as I expected, he came right up to where we were standing, but didn't even glance at Katya and walked right by.

And then all of a sudden Katya — coo, blow me away! — calls out to him.

The young man turns to look at us. Katya goes up to him slowly but confidently and says to him in English:

“My name is Katya. I am from Russia. Now I am leaving to go to airport on a bus with my tour-group. I have approached you... I have feeling that I can make you a very good wife. I do not yet love you, but I shall be able to love you, and you will love me. We shall have good children together. A little boy and a little girl. We shall be happy together. And now, if you wish, you can accompany me to say good-bye at airport.”

The young man just stood there staring intently at Katya without saying a word. He was dumbfounded, no doubt from the shock. Then he said he had an important business meeting, wished her *bon voyage* and walked off.

The whole way to the airport Katya sat staring out the window. We didn't say a word to each other. Both Katya and I felt awkward in front of all the tourists who saw the scene in front of the hotel. I could literally feel my skin tingling at all those people making fun of Katya and accusing her.

But when we arrived at the airport and were getting off the coach, right there was none other than this same young Englishman, greeting Katya with a huge bouquet of flowers in his hand.

She put her bag down — no, she simply let it fall to the pavement. She didn't take the bouquet, but buried her head in his chest and began crying.

He dropped the bouquet, and the flowers scattered all over. I helped the other tourists gather them up, while they just stood there. And the Englishman was stroking Katya's head. And as though there were nobody else around, he kept telling her what a fool he was for almost letting fate slip through his fingers, how if he didn't catch up with her he would suffer for it his whole life, and kept on thanking Katya for finding him.

Meanwhile, as it turned out, the plane's departure was delayed. I shan't tell you how, but I was the one who managed to delay it.

Her Englishman turned out to be from a family of British diplomats and he himself was about to be posted to some embassy.

As soon as we got back to Russia, he started ringing up Katya every day. They'd talk for hours. Katya's now in England, and pregnant. I think they really do love each other. And now I believe in love at first sight.

When Natasha finished telling me her amazing story, she gave a smile to her companion sitting beside her. I asked whether they had known each other long. And the young man answered:

“You see, I was in the same tourist group. When the Englishman’s flowers got strewn all over, Natasha started picking them up, and I began helping her. Now I carry her fruit basket for her. Who are we, compared to English lords?!”

Natasha lovingly placed her hand on her companion’s shoulder and said with a smile:

“And just who are they compared to *you* — our Russian men?!”

Then the happy girl turned to me and said:

“Andrei and I got married a month ago. And here we are, come to see my parents.”

After hearing the story of these girls, a lot of people might think: well, they were just lucky. Not a typical situation. But if I dare say it, the situation in this case was absolutely typical and entirely normal. More than that, I would affirm that other girls could predict a similar destiny for themselves if they are prepared to follow the pattern set by Katya and Natasha. Of course there may be certain differences — names, the type of suitor, and the time-frame involved — but a similar situation happening with others is already a predetermined fact. Predetermined by whom? By the girls themselves, their way of thinking and the consistent steps they take toward their goal.

Think about it. Katya had a dream, or a goal: to marry an Englishman. What prompted this dream is unimportant. She was probably turned off by the atmosphere of the market, the drunken customers and how rude they were, or maybe the shameful taunts of the customer in question.

In any case, a dream was born. What of it? What young girl doesn't dream of a prince driving a white Mercedes, and yet still ends up marrying a typical loser? In the vast majority of cases their dreams do not come true.

I concede that, of course, but the reason they don't come true is simply that their actions, or more precisely, their *inaction* in respect to their dream is like the anecdote about the lottery ticket — when someone dreams about winning big at the lottery and even asks God for help, but doesn't take the first elementary step of buying a single ticket.

The girls began taking action, and a consistent pattern was realised: *dream — thought — action*. Try removing just one of these elements from the chain, and the girls' fate would have turned out completely differently.

## CHAPTER THREE

# You create your own fate

Man's destiny! Many are wont to think that Man's fate is decided by someone *up there*. But this 'someone' simply makes available to every Man the most powerful energy in the Universe — an energy capable of not only shaping its holder's destiny, but of creating whole new galaxies. This energy is called *human thought*.

It is not enough just to know that this is so. One must become consciously aware of this phenomenon — one must *feel* it.

How completely we are able to become aware of it, to feel and understand it, determines the degree to which the secrets of this vast Universe of ours unfold before us, the degree to which we perceive how its wonders — or, more precisely, its natural phenomena — work.

It is only the conscious awareness and acceptance of the energy of thought that will allow us to make our lives and the lives of our loved ones truly happy. And yet it is precisely a happy life that is predestined for Man on the Earth.

And so we are obliged to persuade ourselves of the indisputability of the following conclusions:

First: *Man is a thinking being.*

Second: *the power of the energy of thought has no equal in the Universe: everything we see, including ourselves, is created by the energy of thought.*

We can name off millions of objects from a primitive hammer to a space ship, yet the appearance of each one of these is preceded by thought.

Our imagination builds a material object in space unseen to our eyes. Just because we don't yet glimpse its materialisation doesn't mean that the object doesn't exist. It is already constructed in mental space, and this is more significant than its subsequent materialisation.

A space ship is constructed by the thought of one or more people. We still don't see it, we can't touch it, yet at the same time it exists! It exists in a dimension invisible to us, but later it materialises, taking on a form we can see with our ordinary sight.

Which is more important in the construction of a space ship - the craftsmanship of the worker executing the details according to the blueprints presented to him, or the thought of the designer and builder? Of course the physical labour on any project is absolutely necessary, but nothing can displace the primacy of *thought*.

A real space ship can suffer a catastrophic accident, caused not by some kind of defective part, but always by an inadequately developed thought. In ordinary parlance it is known as *thoughtlessness*.

Thought *is* capable of foreseeing any kind of accident. In thought there are no unforeseen situations. Yet all sorts of accidents and irregularities *do* happen. Why? Because of haste in turning the project into material reality, not allowing it to be sufficiently thought through.

Anyone who thinks this through on their own can come to the same indisputable conclusion: all objects that have ever been manufactured on the Earth are materialised thoughts.

Now it is vitally necessary to realise that absolutely all life situations, including life itself, are formed first of all in thought.

The world of living Nature which we see, including Man himself, was originally formed by God's thought.

Just like God, Man is capable of forming with his thought not only new objects but his own life situations as well.

If your thought is insufficiently developed, or prevented by some cause from freely making use of its inherent energy and speed capabilities, your life situations will be influenced by somebody else's thoughts — possibly the thoughts of your family, acquaintances, or society in general.

But note that even in this case your life situations are determined aforesaid by human thought. And you have only yourselves to blame if you have choked and imprisoned your own thinking, thereby subjecting yourselves to the will of another person's thoughts, meaning that your successes or failures in life are already dependent on this other person or persons.

You may be persuaded of what I have just said through a variety of examples in life. Think what a Man does before becoming a famous performing artist? First of all he dreams about it, naturally, then thinks up a plan of how to attain his dream, and then steps into action. He takes part in amateur productions, studies at an appropriate school, and then takes a job in the theatre, film studio or symphony orchestra.

Some people may protest and say that while everybody dreams of becoming the most famous performing artist, only a few actually achieve this, while others are obliged to look for work in another field that has nothing to do with a career in the arts. Besides the dream, one needs talent too. Yes, of course, that is true. But talent is also a product of the power of thought.

What about physical and natural gifts? They are significant, of course. But, then again, human thought is not so stupid as to inspire a legless person to enrol in a ballet school.

How can it be, the reader may wonder: if everything, even one's profession and well-being, depended on one's own thoughts, then surely everybody would be rich and famous, and there wouldn't be any people eking out a pitiful existence, rummaging through garbage dumps in search of something to eat.

Well, now, let's head off to a garbage dump, in the literal sense of the word.

## CHAPTER FOUR

### ‘Garbage-dump thinking’

I did this in the following manner. I let some stubble grow on my face, ruffled my hair and borrowed some old work clothes from a painter friend. Then I took a plastic bag and a stick and walked up to a garbage dumpster. I rummaged about with a stick in the garbage and came up with several empty bottles, which I put into the plastic bag, before proceeding to the dumpster at a neighbouring building. My efforts were rewarded. I had been at the second dumpster no more than ten minutes — fifteen tops — when I was virtually set upon by a man wielding a metal rod in his hands.

“Keep your paws off what doesn’t belong to you,” he said in a tone that brooked no contradiction.

“You’re saying that this is your territory?” I asked calmly, taking a few steps back from the dumpster, at the same time handing him my plastic bag with the bottles.

“Whose else would it be?” the man replied, already sounding less aggressive than before. He took my bag and began raking through the contents of the garbage dump, paying no attention to me.

“Maybe you could show me where there’s some freebies around?” I enquired, adding: “I’ll make it worth your while.”

“White,” responded the unofficial owner of the dumpster.

I went to the store and picked up a bottle of ‘white’ vodka,<sup>1</sup> along with a few snacks. Over drinks we got to know each

<sup>1</sup>*‘white’ vodka* — clear, unmixed, ‘classic’ Russian vodka as distinct from ‘coloured’ varieties of vodka (e.g., fruit liquors infused with cranberry, rowanberry etc.) available on the market.

other, and Pavel shared with me a lot of the tricks of his trade, and believe me, there were quite a few.

You have to know, for example, what days especially to guard against ‘transients’ like me invading and pinching one’s ‘property’. Especially after holidays, when a lot of bottles get tossed out. It is also important to know which refuse materials contain base metals, and how to collect them — some dealers pay more for glass containers and base metals. And to know what to do with discarded clothing that’s still fit to wear.

I attempted to change the subject.

While Pavel was entirely capable of expressing his opinions on politics and the government, he did so with considerably less interest. He had a one-track mind — everything revolved around the dumpsters.

As a final conclusive test I suggested the following to him:

“You know, Pavel, there’s a chap building a house not too far away who’s looking for a security guard over the winter, as well as to help in the construction, for which he’s willing to pay extra. And supply groceries to boot. Every week his driver brings potatoes, onions and cereal. You’re a decent fellow — he’ll hire you. If you like, we can go have a word with him.”

After a few drinks, as might be expected, we had become friends. Which made the sudden sharp shift in his mood all the more unexpected. First he spent about thirty seconds in intensive thought. Then after staring at me another thirty seconds in a kind of standoffish silence, he finally came out with what was on his mind:

“You think I’ve been drinkin’ and not realised what’s going on? What’s all this business, creep, about me being hired as a guard, just so’s you can take over my dumpsters?”

He didn’t even ask what kind of wage a security guard might earn, or what kind of accommodations might be included, or

what kind of work, specifically, he might have to do for the extra pay. His thought was completely concentrated on his dumpsters, working out the best way to take care of them and protect them from competitors.

So it turns out that this Man predetermined the course of his thought — deciding the questions of his existence on the basis of garbage dumpsters — and then followed the direction of his thought.

One could cite quite a number of other examples confirming the indisputability of the fact that the creation of all material objects, life situations and social phenomena is preceded by the energy of *thought*.

One Man can influence another through his own thoughts. This is attested in ancient tales and parables. Here is what Anastasia's grandfather had to say about the energy of human thought.

## CHAPTER FIVE

### A goddess of a wife

“Yes, Vladimir, Man’s thought has access to energy unsurpassed. Many of the creations of this energy are either dismissed as magic or counted as miracles and ascribed to a higher power.

“Take, for example, the ‘miracle icons’. Why would they suddenly become miraculous? Why would a piece of wooden board with a hand-painted image on it all of a sudden have the power to work miracles? It happens when iconographers imbue their work with a sufficient amount of their own mental energy. Those who look at the icon then add their own energy. People talk about a ‘prayed-over icon’ — in other words, an icon imbued with a goodly amount of the energy of human thoughts.

“It used to be that iconographers knew about the properties of this great energy. Before approaching a particular work, they fasted to cleanse their body of impurities, at the same time intensifying their thought. Then they entered into a state of detachment, focusing their energy on a single task — the painting of the icon. When it was completely finished, they spent another long period contemplating what they had done. And miracles were sometimes the result.

“People sometimes see unusual phenomena, or various kinds of angels. But note that people invariably see only what they are thinking about. They invariably see only the images they believe in.

“Christians, for example, can see only their own saints. Moslems see only theirs. That is because they are beholding

the projections of their own or the general collective thought.

“Back only fifteen hundred years ago there were people who understood the power and properties of the energy of human thought. There are parables about this. Would you like to hear one?”

“Yes, I would.”

“I shall translate it from its ancient tongue into contemporary language, and change the setting to modern terms to make it more understandable. But tell me first, how does a man who has been married to a woman for a long time behave? What does he do when he comes home?”

“Well, a lot of husbands, as long as they don’t habitually reach for the bottle, will sit down in front of the television set and either read a paper or watch TV. They might take out the garbage, if their wife asks them to.”

“And what about the women?”

“There’s no question about that — they get supper ready in the kitchen, and afterward wash the dishes.”

“Fine. That will help me translate the ancient parable into modern terms.”

Once upon a time there lived an ordinary husband and wife. The wife’s name was Elena, her husband was Ivan.

Every day the husband would come home from work, sit down in his favourite chair by the television set and begin reading the newspaper. His wife Elena would get supper ready. As she gave Ivan his supper she would nag him that

he never did anything useful around the place, and was not earning enough money. Ivan got irritated by his wife's nagging. But instead of giving her some kind of gruff response, he simply thought to himself: *She herself's a dirty slut, and she's telling me what to do. But when we got married, she was so totally different — she was beautiful, she was tender.*

One day when this nagging wife demanded Ivan take out the garbage, he reluctantly tore himself away from the TV and headed outdoors with the dustbin. Upon returning, he stopped in the doorway and turned to God in his thought:

“O, Lord! O, Lord! Just look at how lousy my life's turned out! Do I really have to while away all my remaining years with such a nagging and ugly wife? This isn't life — it's sheer torture!”

And then all of a sudden Ivan heard the quiet voice of God:

“My son, I could help alleviate your troubles, I could give you a splendid goddess of a wife, only if your neighbours noticed a sudden change in your life, they might become greatly astonished. Let us work this way: I shall change your wife just a little at a time. I shall imbue her with the spirit of a goddess and improve her outward appearance. Only you must remember that if you want to live with a goddess, you have to make your own life worthy of a goddess.”

“Thank you, O Lord! Any man would be happy to change his life for the sake of a goddess. But tell me: when will You start making changes in my wife?”

“I shall begin a few little changes right away. And minute by minute I shall be changing her for the better.”

Ivan went back into his home, sat down in his chair, picked up the paper and turned the television back on. Only he did not feel like reading, or watching any TV films. He could not wait to peek and see whether his wife had started changing — even just a little.

He got up and opened the kitchen door. Leaning against the door-post, he began watching his wife intently. She was standing with her back to him, washing the supper dishes.

All at once Elena felt herself being watched and turned toward the doorway. Their eyes met. Ivan looked at his wife and thought: *No, I don't see any changes going on in my wife.*

Seeing the unusual attention her husband was paying her and not being able to figure it out, Elena all at once straightened her hair, and a rosy blush came over her cheeks as she asked:

“What is it, Ivan? Why are you looking at me so intently?”

The husband could not think of what to say. Embarrassed, he blurted out:

“Well, maybe... the dishes... maybe I could help you wash them? I was just thinking about it, for some reason.”

“The dishes? You help me?” the wife echoed in surprise, taking off her much-soiled apron. “Well, you see, I’ve already done them.”

*Wow! She's changing right before my eyes! Ivan thought. Look how much prettier she's become all of a sudden!*

And then he started drying the dishes.

The next day after work Ivan couldn't wait to get home. He couldn't wait to see how his nagging wife was little by little being transformed into a goddess.

*Hasn't she got a lot of goddess in her already? But I haven't changed even a little bit myself, as usual. In any case, I should buy her some flowers, so I won't fall flat on my face before a goddess!*

Upon opening the door to his home, Ivan stood entranced in amazement. There before him stood Elena in her party dress, the same one he had bought her last year. She was sporting a neat hairdo, complete with a bright ribbon. He was dumbfounded. With some awkwardness he offered the flowers to Elena, not being able to take his eyes off her.

She accepted the flowers and gave a little gasp. She lowered her eyelids and a rosy blush filled her cheeks.

*Oh, what marvellous eyelids goddesses have! What meekness they express! What extraordinary inner beauty, and outward looks!*

And Ivan gasped in turn, upon seeing the table set with their fancy china and two candles burning on the table, along with two wine-glasses and the food with its divinely tempting aromas.

He sat down to the table, and Elena his wife sat down opposite him. But then suddenly she jumped up and said:

"I'm so sorry, I forgot to turn the TV on for you. But here, I've got today's paper for you."

"Never mind the TV, and I don't really feel like reading the paper either — they all keep saying the same thing," Ivan responded with sincerity. "I'd rather you tell me what you'd like to do tomorrow, Saturday."

Completely overwhelmed, Elena asked in amazement:

"What would *you* like to do?"

"Well, I happened to pick us up a couple of theatre tickets today. Anyway, tomorrow afternoon, I thought you might like to do a bit of shopping. Since we're going to the theatre, I thought we'd drop into a store first and buy you a dress suitable for the occasion."

Ivan just caught himself in time from blurting out his cherished secret: *a dress suitable for a goddess*. Embarrassed, he looked at her again and gave another gasp. A goddess was indeed sitting at the table before him. Her face was beaming with joy, and her eyes were sparkling. Her restrained smile was just slightly inquisitive.

*O Lord, how marvellous goddesses are after all! But if she keeps on getting better day by day, can I become worthy of this goddess?* Ivan mused. All of a sudden, a thought struck him like lightning: *I've got to do it! I've got to do it while this goddess is here*

*with me. I've got to ask her, plead with her to bear my child. A child which will come from me and from this most marvellous goddess!*

"A penny for your thoughts, Ivan! Could that be *excitement* I see in your face?" Elena asked her husband.

He sat there excitedly, not sure how to talk about so precious a thing. This was no piece of cake — asking a goddess to bear a child! This was not a gift God had promised him. He did not know how to tell her about his wish. Fumbling with a corner of the tablecloth, Ivan got up from the table and pleaded, blushing:

"I don't know... Do you think... But I... wanted to say... for a long time now... I want to have a child with you, my beautiful goddess!"

Whereupon she, Elena, came over to Ivan, her husband. From her love-filled eyes a tear of joy rolled down her rosy cheek. She placed her hand on Ivan's shoulder, and her breath flared in a warm flush.

*What a night that was! What a morning! And oh, what a day it is! How marvellous it is to live with a goddess!* thought Ivan, as he bundled up his second grandson for an outdoor stroll.

"What did you understand from this parable, Vladimir?"

"I understood all of it. God didn't actually help Ivan. All he did was listen to God's voice. Ivan made his own wife a goddess through his thought."

"Of course, you are right: Ivan created his own happiness with his thought. He made his wife a goddess and changed himself. But God did help Ivan."

“When?”

“Back when God gave everything to each of us, when He was contemplating the creation of Man. And explaining everything to the first Man he created. Do you remember God’s words from the book *Co-creation*? He said:

“My son, you are infinite, you are eternal, within you are your dreams of creation.”

“These words, Vladimir, are still true today. Every Man has within himself creative dreams. The question is only: in which direction are they aimed? And how powerful is the thought, including its energy, in His sons and daughters living on the Earth today?”

<sup>1</sup>Quoted from Book 4, Chapter 8: “Birth”.

## CHAPTER SIX

# And where is your thought right now?

I shall not concern the reader with further examples. Each one can ascertain independently from his own life what segments of his being have been created by his own thought and what segments by somebody else's.

To answer this question once and for all, let's start by stating the obvious: *thought is precursor to everything.*

As I have already indicated, to anyone who succeeds in not only becoming aware of this but in feeling it as well many secrets of the Universe will be revealed. First and foremost, a distinct picture of creation will appear.

God created the world in which we live through the help of a dream — the energy of His thought. He created Man, giving him complete freedom of action and endowing him with powerful energy capable of creating similar worlds, or possibly worlds even more perfected than the Earth.

In order to create new worlds or to perfect the world already created, it is vital that the speed of Man's thinking match that of the Divine.

However, one glance at the world created by human society shows clearly that it is not only imperfect but poses an ever-increasing danger to existence. Consequently, a degradation of consciousness is clearly taking place or, more precisely, Man's speed of thinking is diminishing.

The very first people possessed a speed of thinking equal to the Divine. It could not have been otherwise, since, like

any parent-creator, God could not even think of creating His child less perfect than Himself.

What powers could have proved capable of influencing human consciousness and aiming it down the path of degradation? If anyone had the power to do so, that means he would be able to surpass the energy of thought of both God and Man. But there is no such being, either on the Earth or anywhere else.

The proof of this statement is simplicity itself. If there existed an entity possessing a greater speed of thinking than Man, it would long ago have created its own world and we would be able to see it.

To either redirect or subjugate the energy of human thought is something only human thought itself can do. In other words, one Man possessing a greater speed of thought than the rest and wanting to subjugate others could, under certain circumstances, do so.

In today's situation human society has been subjugated to the descendants of the Egyptian priests who preserved the knowledge of the science of imagery and who maintained, with the help of special exercises, the capability of thinking at a much greater speed than the vast majority of people living on the Earth.<sup>1</sup>

And there are circumstances which confirm this to be the status quo.

There is one Man who has proved capable of standing up to the priests one-on-one.

I am talking, of course, about the Siberian recluse, Anastasia. And note that she achieves palpable results without the help of any kind of army or technical superstructures, but simply by virtue of the power of her thought.

<sup>1</sup>For further details, see Books 4 and 6, especially Book 6, Chapter 6: "Imagery and trial".

That mankind is beginning, at the dawn of a new millennium, to enter into a Divine world of splendour is to me, personally, an indisputable fact. I should like to share some joyful news with my readers.

I have it on reliable authority that several individual groups of scholars have been working, independently of each other, on a programme of national development according to an image created by Anastasia. Not just people with academic degrees, but students, too, have been involved in these projects.

To develop a programme like this in detail requires approximately two to three years of persistent work on the part of a whole army of specialists. But the first glimpses of it you can already catch even now.

For example, the Internet site [www.Anastasia.ru](http://www.Anastasia.ru) has published a paper by a fourth-year Ukrainian university student outlining a programme of development for Ukraine, based on Anastasia's idea of family domains. People all over Russia and the Commonwealth of Independent States<sup>2</sup> have been sending in draft constitutions for future communities.

It is not for me to judge the merits of this young woman's paper, but it is already significant simply by virtue of its being the first one published. It is also important to note that these scholars became involved not by dint of somebody's commission but by the dictates of their own hearts.

It won't be long before you get a chance to become acquainted with and discuss their highly important works. I

<sup>2</sup>*Commonwealth of Independent States* — an organisation made up of most of the former Soviet republics, founded in December 1991 — immediately following the dissolution of the USSR — to facilitate trade ties as well as mutual co-operation in matters of foreign policy and defence. It does not include Estonia, Latvia or Lithuania; moreover, Georgia and Turkmenistan have opted for less than full membership status.

think these projects will be set forth for public discussion under the umbrella name of *the national idea*.<sup>3</sup>

I could have included these passages in my previous book, following the account of my conversation with Anastasia's grandfather. I didn't. I thought it would be premature. As it is, many people dismiss Anastasia's powers as bordering on fantasy or fairy tales.

My conversation with her grandfather, however, revealed to me even more extraordinary phenomena than any Anastasia had shown me earlier, and helped me see Anastasia herself in a new light. Now that current events in human society have begun to confirm what I heard back in the Siberian taiga, I shall cite part of my conversation with her grandfather.

<sup>3</sup>Indeed, in 2006 — four years after this book was originally published in Russian — the Russian government put forth four *National Projects*: strong agriculture, affordable housing, high-quality education and healthcare. A number of prominent politicians, including Vladimir Zhirinovskiy — the leader of Russia's Liberal Democratic Party and Deputy Head of the Russian Duma (Parliament) — have openly declared that the concept of *kin's domains* should become the basis for implementation of these 'National Projects'. More recently, in March 2007, Dmitry Medvedev, Russia's Deputy Prime Minister in charge of the 'National Projects', publicly stated that the idea of kin's domains was fully aligned with the government's own priorities.

## CHAPTER SEVEN

# A conversation with Anastasia's grandfather

This took place on the day following her great-grandfather's passing.<sup>1</sup>

Usually, when loved ones pass from our lives, relatives offer expressions of sympathy. The last little while Anastasia's grandfather never left his father's side. Now that he's all alone, I decided to seek him out and talk with him, to take his mind off his sorrow, as is customary. I knew pretty much where I could find him, and so headed over to the neighbouring glade.

Anastasia's grandfather was standing motionless at the edge of the glade, watching and listening to the nutcracker birds<sup>2</sup> twitter on the branches. He was wearing a long shirt<sup>3</sup> made out of nettle fibres and some kind of rope-belt. He was barefoot.

I knew that residents of the taiga took care not to interrupt each other's train of thought. And I began to realise on just how high a level this culture of communication actually was. It speaks of the great respect they have for each other's thinking.

After some time Anastasia's grandfather turned and headed over in my direction. As he approached, I could detect no

<sup>1</sup>Great-grandfather's passing is described in Book 6, Chapter 3: "An invitation to the future".

<sup>2</sup>*nutcracker birds* (Latin: *Nucifraga caryocatactes*) — in Russian these are known either as *orekbovki* (nut birds) or *kedrovki* (cedar birds).

<sup>3</sup>*long shirt* (Russian: *rubakha*) — in this case, a knee-length shirt common as everyday wear among Russian rural dwellers.

trace of sorrow on his face, which manifested its customary kind-heartedness.

“Good day to you,” he said, offering me his hand as we exchanged greetings. In our conversation he always structured his sentences in terms of modern, often quite mundane usage, sometimes making a joke or teasing me — though never insultingly. On the contrary, he had a way of making you feel at home, as though you were chatting with a member of your family. And he was somebody you could talk with very easily on any subject — even on topics men bring up when there are no women around.

Undoubtedly many of Anastasia’s abilities were inherited from her parents and ancestors, as well, of course, as from her grandfather, who had, after all, played a hands-on role in her upbringing.

What knowledge of life, what abilities lay hidden in this grey-headed elder who a hundred years on had lost none of his keenness of mind and youthful agility? With me he spoke in very simple terms, although one time I overheard him talking with his father. Well over half the words he used were ones I had never heard before. It means that in talking with others, out of respect to them he makes use of their lexicon and manner of speaking.

“Well, now, how are things going? In your civilised society? Any people starting to wake up?” asked Grandfather with a hint of jocularity.

“Things are going along okay,” I responded. “There are some scholars who have taken an interest in Anastasia’s ideas. Various groups are working on national development programmes based on her proposals. This is happening not only in Russia but in other countries as well. But it’s not clear just yet when all the marvellous things, as she put it, will actually come to pass either in our country or abroad.”

"It's all happened already, Vladimir. The main thing has been done."

"What do you mean by 'the main thing'?"

"Anastasia has created a thought, an image of a future state, and she has done this with her usual meticulous approach, right down to the last detail and how thoughts will be materialised in a future reality.

"Now you and a lot of people will be able to see this splendid future materialised. The energy of her thought is extraordinarily strong, and her strength has no equal anywhere in space. It is perfect and quite specific, but the main thing is that she keeps on gaining strength thanks to the help of other people's thinking. She is no longer alone.

"So you tell me that groups of scholars in various countries are working on national development programmes, and entrepreneurs are starting to build the domains she thought up, and her thought has been perceived by many people young and old. Once these people have had contact with her thought, they are creating thoughts of their own.

"The thoughts of all these people merging together are filling space with an energy of unprecedented strength, and this energy is materialising a splendid future. Already one can see partial manifestations of this materialisation."

"But what if someone deliberately started to obstruct this materialisation of the future?" I asked. "The priests, for example, who now rule the world, let's say the high priest himself began obstructing it?"

"He will not obstruct it. He will help it along."

"How can you be so sure?"

"I have heard his conversation and seen his thought."

"What conversation? How did you see it?"

"Vladimir, you've probably already guessed that my father was one of those six priests."

"I had no idea."

“Well, you might have guessed. Although outward simplicity and the ability to conceal one’s abilities and possibilities is one of the important components of their power. There’s no way they’re going to brag about the weapons in their arsenal the way the leaders of the world’s great powers do. The priests are capable of aiming these weapons wherever they like by directing the leaders’ thoughts, by bringing about corresponding situations. And they never had any thought of bragging about themselves in public. Their major, secret goal over the millennia has been to achieve a dialogue with God. No matter how they’ve acted, they have never feared Divine revenge, knowing that God has given full freedom to each Man, and He will not break His promise.

“They have been controlling mankind, torturing it even, thereby showing God that they are more capable than anyone else, that the fate of the Earth’s civilisation depends on them. This kind of situation, they figured, ought to compel God to enter into a dialogue with them... Only there hasn’t been any dialogue. And now it’s become clear why it has been totally out of the question for the priests to have a dialogue with God.”

## CHAPTER EIGHT

# Thank you

When little Anastasia was born, and after this tiny infant who had not yet learnt to walk was left all alone without any parents, the fiery sphere began to put in an occasional appearance beside her.<sup>1</sup>

My father, along with the other priests, knew about a great many natural phenomena that your scientists today consider mysterious and unexplainable. Yet he could still not account for the power of this fiery sphere.

Its unfathomable energy could momentarily dissipate in space in the form of tiny sparks, or just as quickly gather itself together into a single whole. A delicate tongue of fiery light bursting from the sphere could instantaneously pulverise a huge stone or rock.

The same tongue of light was also capable of tenderly touching an insect's leg as it crawled along the petal of a flower, without causing any harm.

But the main, the most inexplicable part of the mystery was how this cluster of tremendous energy reacted to the feelings and desires of little Anastasia. That meant it had feelings, and *thought* besides.

Thought, in the complete sense of the word, is native only to Man. But the fiery sphere was not Man. Then who was This? How could It possess feelings which belong only to Man? Where did It acquire such tremendous power and might?

<sup>1</sup>This and the following two chapters are narrated by Anastasia's grandfather.

I told you, and you described this in your book,<sup>2</sup> how it changed the Earth's gravitational field in a single spot, when Anastasia was learning to walk. Thousands of little tongues of light emanated from it, combing the little girl's golden hair.

Father had an idea about what kind of forces could have produced this fiery, mighty and thinking sphere, but he never spoke of it aloud. Supposition requires proof.

When Anastasia was a little older, we once overheard her talking with the sphere. Or rather, she was the one who did all the talking. The sphere never uttered words, it only reacted to the child's words through its actions.

When Father asked Anastasia about the sphere, she gave only a very brief answer:

"I would call it *Good*." Her answer was insufficient for my father, but he didn't speak with her again about the sphere, not back then nor over the years since.

From that original answer it was clear that Anastasia had no desire to give a definition either to the fiery sphere itself or to its actions. Most probably she perceived it through her feelings. But my father, for some reason, was anxious to define the phenomenon.

From the time the sphere first appeared, Father stopped participating in the priests' affairs and concentrated his attention on solving the mystery.

The priests know the mechanisms for confirming a hypothesis or overturning their own hypotheses. To this end it is necessary to publicise the phenomenon with a highly accurate report and await people's reaction and opinions. Mind you, these people should not be asked or instructed to express their opinions. Definitions must arise freely, on the level of feelings and not just intellect, in order to be as accurate as possible.

<sup>2</sup>See Book 2, Chapter 27: "The anomaly".

So, at my father's request, I told you about Anastasia's childhood, including the story of her communication with the mysterious phenomenon. You wrote about this in your book without distorting what you heard, and, most significantly, you did not express any opinions of your own.

We looked forward with some excitement to hearing your readers' reaction. It came very quickly, expressed not only in the usual things people say, but in emotional bursts of feeling. People said or wrote what my father had supposed for many years but never spoke aloud — thoughts he had hid from the other priests.

You published poetry from readers who wrote not because somebody had asked them to, but straight from the heart. Let me remind you of how one of these poems starts off:

*On her Birthday  
God appeared  
To his beloved little Nastenka...<sup>3</sup>*

Father's guess had been confirmed. The fiery sphere which communicated from time to time with Anastasia is none other than a representative form of God.

God has many representative forms. Each blade of grass is a manifestation of His thoughts. But of all the many elements comprising God's representation, the sphere presented itself, if not as the main one, certainly as one of the most majestic and concentrated forms, including even the energy of both intelligence and feelings.

And then one day... This happened after you had written your first five books. After the publication of her words — or rather, dark space was penetrated by what seemed like a fiery sword — the emotional outburst captured in her words:

<sup>3</sup>*Nastenka* — a common diminutive variant of *Anastasia*.

“Prepare yourself, all wickedness and evil-mindedness, to leave the Earth behind and fall upon me!”<sup>1</sup>

From Anastasia’s lips these words go far beyond the meaning of just the words. You, Vladimir, along with many others, have had the opportunity a number of times to see that for yourself. And the wickedness began to attack Anastasia with an invisible energy.

The white circles started appearing, bleaching the grass all around. It even happened sometimes that Anastasia would lose consciousness momentarily. And we didn’t know how to help her.

Our little granddaughter did not ask us for help. And because she didn’t ask, that meant unquestionably that this was something she had to work out all on her own.

More recently, however, we began to notice these attacks on her getting more and more severe. It was as though evil were simply agonising to carry out these final attacks.

But our granddaughter’s tenacity was growing at the same time. Lately the routine blows have simply caused her to give a shudder and head for the lakeshore. Somehow the lake water has been able to quickly restore her strength. After splashing and diving in the water, she’s come out at full strength, as before.

On one particular day we noticed Anastasia heading for the lake after one of the usual blows, but she was treading very carefully. When she stopped to lean against a cedar trunk and rest, Father said with some alarm:

“Today our granddaughter is having a particularly difficult challenge to handle. It’s really been hard on her. Look, and you will see some grey strands in her golden hair.”

Then we saw Anastasia push off from the trunk, take one step and then another in the direction of the lake. Then she stumbled and stopped once more.

<sup>1</sup>Quoted from Book 3, Chapter 24: “Who are you, Anastasia?”.

It was at this point that the fiery sphere appeared from space, right in front of her. But this time its lightning flashes were changing colours, as though volcanic ashes were seething inside it. And then all of a sudden it would look as though fierce fiery arrows were piercing through an invisible protective shield — floods of them dashing out and disappearing in space. But the sphere was not decreasing but increasing in size, while the diverse energies inside it were condensing and seething with ever greater intensity. The sphere itself was not suspended in space, but contracted and expanded like a heart. Then all at once it fell still, as though trying to make a decision. And thousands of lightning trills of energy dashed out in Anastasia's direction.

At just what point this sinking girl managed to raise her hand, Father and I failed to detect, even though we were watching the whole event, trying not to blink. We knew what this gesture meant. She was shielding herself from the lighting trills directed at her. But why? At that time we still weren't in a position to understand.

But one thing was clear: the fiery sphere, through its energy, was capable of fully restoring her strength. Not only that, but it could also endow Anastasia with fresh energy, whereby outward attacks could no longer hold any terror for our granddaughter. But why did she decide to act on her own?

The tongues of fire extended in her direction quivered, but did not touch Anastasia, standing there with her hand raised. They either disappeared in the sphere, which was still raging with tremendous energy, or dashed out once more, reaching out in her direction but, as before, not touching her.

And then all at once, with slow and tender words, she addressed the fiery sphere and its tongues of light:

"I implore You now to contain the bursts of Your energy. Do not touch me. I can restore my strength in Your lake as before. I just need to make it to the shore."

In an instant the sphere gathered up all its quivering tongues of light from all around, and kept pulsating like a heart. It swept upward with a flash — it seemingly cracked asunder and then contracted. Its myriad tongues made a dash for the ground, touching everything on the path leading to the lake from Anastasia's feet.

And another vision arose. The path began to sparkle with millions of pulsating colours of light, making a multicoloured rainbow arc over the path leading to the lake from Anastasia's feet. It was a wondrous sight indeed! Anastasia's pathway now lay through a triumphal arch!

She took a step, but to one side. She did not follow the route marked out for her by the fiery sphere. She slowly attained the shore and dived in, then resurfaced and simply lay in the water with outstretched arms. Then she started splashing about — her strength had returned.

Anastasia's behaviour in relation to the fiery sphere, which was really in relation to God, was beyond our comprehension. But what happened next is comparable to a turning point in the consciousness of all mankind, or to a change of balance in the energies of the Universe. What happened next was...

Throwing on a little dress over her still wet body, she carefully smoothed out its folds, straightened her hair, then pressed her hands to her breast and began speaking out into space:

"My Father, You are present everywhere! I am your daughter amidst Your perfect creations.<sup>5</sup> I must put an end to the dispute among the entities in the Universe as to whether Your creations are perfect, or whether they might be flawed.

"My Father, You are present everywhere! You have fulfilled my request and not touched me. None of them will now say that Paradise will return to the Earth only when God corrects His imperfect creations!

<sup>5</sup>See Book 4, Chapter 11: "Three prayers".

“But there is nothing requiring Your correction. You created all right from the start in perfection. My Father, present everywhere, I am not alone. In all the corners of the Earth there are sons and daughters of Your own. And they have mighty aspirations. They will restore the Earth to the marvellous flowering of its original pristine creation.

“My Father, present everywhere, we are your sons and daughters. We are created by You. We are perfection.

“And now we shall show everyone what we can do. And may You be delighted by our actions.”

When Anastasia uttered these words and then fell silent, the fiery sphere which had been resting high above made a dash for the ground. About three metres from Anastasia's feet it dispersed into millions of tiny sparks all around, and then in an instant gathered itself back together into a single whole.

Only this single whole was no longer a fiery sphere.

There in front of Anastasia stood a child of (in Earth terms) about seven years. It is difficult to say whether it was a boy or a girl. The child's shoulders were covered by a fabric with a pale bluish-purple sheen that looked as though it were made out of mist itself. The child's hair fell around his shoulders. The expression on the child's face was one of intelligence, confidence and grace. Rather, the expression on the child's face was impossible to convey in words — it could only be described in terms of the feelings which overflowed our souls.

The young child stood barefoot on the grass without trampling even a single blade. Anastasia knelt to the ground in front of Him, then sat down on the grass, her eyes fixed on His extraordinary face. It seemed that in the very next second He and she would embrace, but this did not happen. The child smiled at Anastasia. With a careful utterance of each sound, He said:

“I thank you, sons and daughters, for your aspirations.”

Then as He dissipated into space, the fiery sphere once more appeared high above, glistening with a joyful light of the like nobody had ever seen before. It made several circles over the lake, and for five minutes or so drops of warm rain soothed everything growing around, as well as the smooth surface of the lake.

The moisture was invigorating. A few drops fell on my arm without rolling off. Instead, they dissolved, filling my body with a luxuriant bliss.

My father is always unflappable in situations like this, in complete control of his emotions, but this time even he was shaken. He walked through the taiga as though he could no longer feel his body, and I followed.

He walked for several hours, and then turned to speak to me. A tiny tear was rolling down his cheek. As one of the high priests, he was not susceptible to such emotion. But I saw his tears. Father said quietly and confidently:

“She did it! Anastasia has brought people across the dark forces’ window of time. The seeds of happy and joyful aspirations will now be scattered over the whole Earth.”

Then Father had a long and animated conversation with me. He was not surprised by the actions of the sphere, or by the fact that one of God’s representative forms — perhaps His main manifestation — had appeared to Anastasia in the person of a child.

My father was a priest, and not just a simple priest either. He had the ability to discern what was important in visible occurrences. And it wasn’t at all the vision itself that interested him. The most important thing was the appearance of a thought in space.

The thought produced by Anastasia had not been heard since the time of creation, nor reflected in a single religious or scientific treatise. Utterly simple and yet, at the same time, extraordinarily exalted, it has turned the treatises we know

into naïve musings which had nothing in common with the Divine essence. Anastasia had imbued human consciousness with the concept of God which Man had been missing all these years.

“What does it consist of?”

## CHAPTER NINE

# Divine faith

You know that the Earth and everything growing on it, as well as all its functions — rain, snow, wind — were thought up by Him right from the very start.

Our Creator — the Great Mind — created His great creation in an impulse of inspiration. And He created Man in His own image as a culmination of His creation.

But ever since the time of creation it turned out that many beings have been plagued with doubt as to whether Man was really created by God as a creation unsurpassed in the Universe. Is it really true what God said about Man not being just like any other creature but being equal with God? God Himself said, “My image and likeness he is... I have given him everything that is Mine, and will furthermore give him for his own all that may be thought at a future time.”<sup>1</sup>

God wanted to see His own creation, Man, in the likeness of Himself.

Now take a look at mankind today. Many people talk about God. They talk about the strength of their love for the Creator. But with that they are lying to themselves. For it is impossible to love someone without seeing, feeling or understanding Him.

Many will say “I believe in God”. But what exactly do they believe in? Do they believe in God’s existence? But surely that indicates a very primitive level of consciousness. A Man

<sup>1</sup>Quoted (with a slight variation) from two different paragraphs in Book 4, Chapter 3: “The first appearance of *you*”.

who says "I believe God exists" is admitting in effect that he neither feels nor understands God, but simply believes in His existence.

If by faith in God they mean that God is an almighty, kind and loving parent, then what do they do for God apart from uttering words? They destroy His creations and isolate themselves behind the stone walls of monasteries from the world created by their Father. They spend their time thinking up and churning out all sorts of treatises. And everywhere it's the same. The treatises say that God must be worshipped. But people worship they know not what.

And now, Vladimir, just imagine how God feels when He looks down and sees all this corruption. You can picture it if you try. After all, God possesses all Man's feelings, only with Him they are stronger, sharper and purer.

But even with the feelings we have today — our human and parental feelings — we can still picture how our Parent, our Creator must feel.

Here He is looking down on His children, but all they can do is cry:

"We love You, only give us more of Your goodness. We are Your servants, we are powerless and ignorant, we are stupid. Help us, O Lord!"

Is it really possible for creations in God's likeness to conduct themselves this way? What could be more painful for a parent than the helpless moaning of his children? This is how doubts about the perfection of God's creations arose among the elemental beings of the Universe.

"But who could make such a fool of Man this way? How? When?"

"The only one who could make a fool of Man is someone possessing equal power of thought — in other words, Man himself."

The priests were the ones who launched mankind down the path of degradation. They took it upon themselves to prove to God that they were capable of controlling all mankind, on the premise that humanity's moanings and torments would force God to enter into a dialogue with them.

They counted on this because they know that God never talks with anyone, never interferes in human destiny, that all destinies are determined by the paths human beings themselves have chosen.

But if mankind were to be brought to the brink of total destruction, God might enter into negotiations with those leading mankind to that brink — with those influencing people's minds — in order to head off an utter collapse. The premise was that God would do this for the sake of all humanity.

Millennia went by. But God did not enter into a dialogue with the priests and did not bring about any new miracles to bring people to their senses. First my father, and later I myself, understood why.

If He had done this, if God had interfered in human affairs, then He Himself would have confirmed the speculations on the part of the elemental beings of the Universe that Man was an imperfect creation.

But, more importantly, His interference would have ultimately destroyed Man's faith in himself. Man would have ultimately ceased discovering the Divine elements within himself and relied solely on help from outside.

And so He waited, and believed in His children, observing events and suffering, enduring the mockery and the taking of His name in vain. He believed in His creation, Man. It is His own faith that is truly the Divine faith.

The priests had hoped that the solution would come about just at the point when a global catastrophe was imminent. They had hoped the scenario they had thought up would come to pass. Not one of them imagined that a single Man — a young

woman — in the space of a few short years would thwart their plans and efforts they had been making over the course of millennia and turn mankind back to its Divine pristine origins.

But Anastasia did produce this most extraordinary turnabout. She demonstrated to the whole Universe the power of God's creation, she demonstrated the Divine wisdom. And quite possibly for the very first time. Just imagine, Vladimir, the majesty and significance of that event. For the first time since the moment of the creation of the Earth, our Father heard talk of the perfection of His creation.

The marvellous future visualised by Anastasia is already alive in space, and being concretised moment by moment by a whole lot of people who are beginning to understand their own essence and purpose in life. Materialisation will inevitably follow.

“But when will it follow? The priests, after all, are also capable of acting and interfering.”

“But not the high priests. The challenge now is to abort the programme created by the priests. My father spoke with one of them before his departure. The priests never meet amongst themselves. They are located in various parts of the globe, but can communicate at a distance by feeling each other's thoughts.”

My father was standing on a small hillock. The dawn's rays were already skimming the tops of the cedar trees, illuminating my father's face and his profile. I heard this dialogue take place silently in space:

“I am Moisey, descendant of a dynasty that has been controlling the destinies of peoples for thousands of years. I am their descendant and forebear. I appeal to you, self-appointed High Priest, but not on bended knee. Do not waste your efforts trying to counteract Anastasia.

“My granddaughter’s aspirations do not correspond, in any way, shape or manner, to the plans we have thought up. This lack of correspondence is pleasing to me, it strikes a chord in my soul. I am Moisey, I am a priest. We are equal in power. I shall shield my granddaughter with my own self.”

And the high priest’s answer:

“Yes, Moisey, you and I are equal in power. And thus I realise that you are not asking me to stop the attacks — it is advice you are seeking from me.

“I am the one who is now thinking of how we can help her, how to put an end to this monstrosity of a system. We created a monster, and it is stronger than us. You yourself, after all, participated in its creation.

“It has been devouring children and mangling people’s bodies for millennia. Now it will take centuries of our efforts to stop it. But your granddaughter’s thinking is more accelerated than ours. She can create millennia in the space of a single year. None of us at the moment is in a position either to help her or to harm her.

“The only thing I am certain of is that we should be creating our own lifestyle according to the image outlined by your granddaughter, and pour all our knowledge into our creations, so that we ourselves become an example for people to follow.”

The priests did not use all that many words as they talked amongst themselves, but what they said made a great deal of sense.

“I don’t think everyone will understand the priests’ dialogue. It’s not clear to me, for instance, what kind of a beast they are talking about, the one that devours children. And why, if they really want to help Anastasia, your father and the high priest still say they are not in a position to offer help.”

“It’s all in the speed of one’s thinking, Vladimir.”

“Speed of thinking? But why is that so important? What’s the connection?”

## CHAPTER TEN

# The speed of one's thinking

It is now well known that the feature that distinguishes Man from all other life growing and thriving on the Earth is his capacity to think. But thought is found in creatures and plants too, albeit in embryo. Man distinguishes himself from all others by the *speed* of his thinking.<sup>1</sup>

Back at the beginning, the speed of Man's thinking most closely approximated God's, and with a certain lifestyle could increase and even surpass the Divine. At least that was the way our Parent wanted it. If Man's speed of thinking had attained the level of the Divine, Man could even now be creating a living, harmonious world on other planets.

The whole question of the significance of the speed of one's thinking is the greatest of the secrets guarded by the priests. They did their utmost to eliminate even expressions referring to it from the language.

Perhaps you have heard such expressions as *slow-witted* or *with you it takes a long time to sink in*. What is the meaning here? It means that it is difficult or boring to talk with someone whose thought operates at a slower speed.

All people living on the Earth have varying speeds of thinking. The differences may or may not be significant. A significant superiority in speed of thinking may enable one Man to conquer a great many people, even whole nations.

<sup>1</sup>On the speed of one's thinking see also Book 2, Chapter 29: "Why nobody can see God".

Imagine that a million people are given a specific problem in arithmetic to work out. The one who can think at a faster rate than the others will be the first to come up with the solution. He may solve the problem ten seconds faster than the rest — or twenty, or thirty seconds, or a minute, or even ten minutes faster. We learn from this simple example that one person may know the answer ten minutes earlier than the rest. Ten minutes before the other 999. He will learn something new, acquire knowledge faster than the rest.

This arithmetic example may seem harmless enough, but...

Now let's imagine that all people on the Earth are given a problem that takes a thousand years to solve. They start working on it. But one Man has three times the speed of thinking of the others. That means he will know all the intermediate decisions of mankind before everyone else.

What takes humanity 900 years to work out, he will solve in 300 years. That means that for 600 years he will be in a position to control and direct the actions of everybody else. He will be able to reveal to someone the correct intermediate decision which will help him further his goal or, alternatively, give someone a false hint, thereby throwing him backward. Or, what would even be easier for him, give the wrong clue to everybody at the same time, driving them all to a dead end, and then later 'make a discovery' in front of everyone — in other words, rule over them.

As far back as seven thousand years ago the priests realised the tremendous advantages available to any Man who possessed a higher speed of thinking than all the rest. They took it upon themselves to significantly widen the gap. They tried to increase the distance between their own thinking and that of others by using special exercises, but they failed to achieve any significant difference in those times. And so they thought up a system which would slow down the thinking of

every child coming into the world. The system they inculcated kept improving over the millennia and it is still operating today.

Take a close look at the lifestyle of the majority of people of our time. If you analyse it, you will see the multitude of efforts directed at stopping the operation of your thought.

Anastasia began revealing the priests' secrets to people. She told about how even a small child should not be distracted from what he is doing — in other words, the operation of his thought should not be stopped.

Then she showed you a series of exercises aimed at accelerating a child's thought. She told about how education as we see it begins with the correct presentation of questions to the child.

When a child is presented with a question, his thought begins to search for the answer and thereby gains more and more momentum. This means that the speed of his thinking is increasing minute by minute, and by the time he is eleven it will be many, many times faster than that of someone raised under a system designed to slow thought down.

Let us take a look at what is happening in the world today. Right from his mother's womb a child is surrounded by artificial objects. Any object is the embodiment of someone's thought. So the child is presented with somebody's thought — a primitive thought at that — a rattle, for example. A child just a little older is given a doll or a mechanical toy car. Children love to play, but they are still dependent on others, so they play with what others present to them.

Think about the difference, Vladimir. Your daughter, when she was little, kept shaking her rattle, and later got interested in dolls. Your son, on the other hand — the one Anastasia bore you — also likes to play, as all children do. But what he played with was a squirrel, a wolf, a bear, a snake and a lot of other creatures made by the Creator.

Now compare the two, only be sure to picture to yourself the degree of discrepancy in the speed of thinking between the one who created the child's rattle or doll and the One who created the squirrel.

So it turns out that one child comes into contact with an object comprising a primitive thought, while the other communicates with an object created by God. The vast discrepancy between the objects the children communicate with means that the speed of their thinking will be vastly different. One of them will have a greater speed of thinking — you yourself can guess which one.

When children in your society begin to talk, you determine for them what they can do and what they cannot. Children are persuaded, in effect, that they should not think for themselves, that everything is already decided for them. This means they don't have to think. All they have to do is follow somebody else's thoughts.

When children go to school, a teacher stands before them and explains the essence of things, along with the rules of conduct and the order of the Universe. The teacher not only explains — he demands that the children think the same way as somebody else has thought. And once again this serves to slow down the development of the children's thinking speed. Or, to put it more precisely, children are prohibited from thinking independently.

In your schools the most important subject — the one designed to increase the speed of children's thinking — is missing from the syllabus. This most important subject is replaced by a whole lot of other subjects aimed at slowing down children's existing speed of thinking.

## CHAPTER ELEVEN

# Training thought

Listening to Grandfather's account, I realised that Anastasia too, in communicating with our son, was constantly creating learning experiences for him, training his thought up to speed. Outwardly this looks like play, but thought is all the while being trained even when the child, through what looks like play, is developing purely physical abilities.

I have already mentioned how one morning while playing tag with a she-wolf, Anastasia executed the following trick: after beckoning to the wolf, she quickly began running away from it. The wolf gave chase. But when it had almost caught up, Anastasia suddenly leapt up against the trunk of a nearby cedar tree, pushed herself off from it with her legs, did a somersault and ran off in the opposite direction, while the wolf's inertia kept it dashing on past.<sup>1</sup>

I watched as my son, too, played tag with a wolf cub. The young wolf always overtook the boy, no matter how fast he tried to run.

It would run just a little ahead, then turn and deftly manage to give a quick lick to the child's arm or leg on the run. Volodya would stop on the spot, rest a while, and then once again try to outrun the wolf, and once again the wolf would catch up with him.

When Anastasia showed our son the trick of leaping against the cedar tree to sharply change his direction, he really liked the idea, and tried to repeat it himself. He leapt up against

<sup>1</sup>See Book 1, Chapter 6: "Anastasia's morning".

the tree from a run, but was unable to do a somersault and head off in the opposite direction. When he tried pushing off from the trunk the first time, Volodya landed on all fours. Falling again on his second attempt, he looked enquiringly at his mother. Anastasia told him:

“Before jumping up against the tree, Volodya, you should work out your next moves in your head.”

“I did do that, Mama. I saw how you did it, you know.”

“You saw how my body did it, but you did not conceive or feel how *your* body should do it, or what it should be governed by. You first need to train it with your thought.”

How one could execute a physical exercise in one's thinking was something quite incomprehensible. However, the boy walked up to the tree-trunk and stood by it for some time, either with his eyes closed or making instinctive movements with his arms and legs. Then he stepped back and made a run at the cedar trunk.

This time he ran faster than usual. I was even a bit afraid something might happen to him, that he might hit himself against the trunk and get hurt. But he came through with flying colours. He pushed himself off and executed the somersault. After stumbling just a little on landing, he was able to start running back at once. He repeated the exercise several times, getting it more technically perfect each time.

*Good exercise*, I thought. “It develops all the muscles,” I told Anastasia.

“Yes,” she replied. “It develops the muscles, and, more importantly, accelerates the thinking.”

I wasn't about to ask how a purely physical exercise could accelerate one's thinking, but it wasn't long before I realised that this was precisely the goal Anastasia had in mind in showing Volodya that particular trick. It happened like this:

Volodya summoned his playmate, the wolf, and they started off racing. The wolf had almost caught up to the boy when

Volodya did his somersault and ran back in the opposite direction. Not anticipating this turn of events, the creature kept dashing on past the cedar.

While the wolf stopped and tried to figure out what had happened, Volodya was already running headlong the other way in triumph. He was laughing, waving his arms, leaping into the air, making the most of his victory.

The young wolf, however, proved an exceptionally astute and clever rival. As Volodya was trying this trick for the fifth time, at the very moment he was approaching the tree, the wolf suddenly slowed its pace and stopped just a little space shy of the tree-trunk. When Volodya completed his somersault and was about to run off in the other direction, the wolf easily got in a lick as he landed, leapt in the air and wagged its tail. Now it was the creature's turn to triumph, while Volodya could only stare at it distractedly in amazement.

Anastasia and I sat nearby and watched the whole scene unfold. Once again Volodya attempted to outwit the creature, but once again he failed. On each occasion the clever wolf stopped just in time, waited for the boy to land, and managed to get in a lick, sometimes more than one.

Volodya began pondering the situation. His expression turned serious, even to the point of frowning. But apparently nothing came to him. Still pondering, he headed over to us and looked us enquiringly in the eye. Anastasia at once said:

"Now, Volodya, you will have to take into consideration not only your own thought, but also the thought of the wolf."

And once more the boy went off to think. I also began contemplating the situation. And I reached a firm conclusion: once the wolf had figured out the boy's manoeuvre, there was nothing more that could be done. The wolf would anticipate his actions, and while he was executing them, it would simply wait for him. Even if Volodya did the trick twice as fast, the wolf would still succeed in getting in its lick, and no

amount of thought would help. When I discerned from the boy's face as he approached us that he had come to the same conclusion, I said to Anastasia:

"Why are you tormenting the child like that? It's clear that he's never going to outrun the wolf now. And neither will you. That she-wolf of yours had no idea of what was going on when you ran away from her, but this young wolf has proved to be smarter than its mother."

"Yes, it is smarter than its mother, but Man should always be smarter. I am not tormenting our son. I simply suggested he think about it, take the wolf's thought into account and come to his own solution."

"But it's absolutely clear there's no solution here. If there is, then show me. It's hard for me to see my son with such a sad expression on his face."

Anastasia got up and beckoned to the young wolf, which came to her delightedly at once, wagging its tail. Anastasia gave it a cuff on the shoulder and ran off, signalling the wolf to follow.

Volodya and I watched how fast and easily Anastasia ran. The amazingly sprightly and fluid movements of this already mature mother were impressive in their beauty and forthrightness.

Yet still the young wolf's pace was just that much faster. Several times Anastasia was able to dodge it by sharply changing direction. The wolf momentarily lagged behind a bit, but was soon well on its way to catching up. There was no doubt but that it would overtake her in the long run.

Then Anastasia made a headlong dash for the same cedar trunk Volodya had used to push himself off from. A few metres before reaching the tree the wolf slowed his pace and, upon seeing Anastasia leap into the air, he sat down, preparing to lick her arm or leg the moment she landed. But...

She did indeed make her leap, but did not push off from the tree. Her body passed within a centimetre or two of the trunk. She kept on running, getting further and further away, while the astonished wolf went on sitting at the ready, trying to make sense of what had happened.

Volodya jumped up and down, clapping his hands and shouting with glee:

“I have got it, Papa, I have got it! I have to think quickly, for both myself and the wolf. I have to think quickly for myself and manage to think for the wolf more quickly than it thinks for itself, and put it all into action on time. I now know how to do it.”

When Anastasia came over, he said to her:

“Thank you, Mama. The wolf will never catch me now.”

The next time he raced the wolf, Volodya first tried twisting and turning as Anastasia had done, but then he went through a whole cavalcade of all sorts of tricks. He would grasp hold of a small tree-trunk on the run and use it to change direction faster than the pursuing creature. Or, leaping over a thick branch that had been broken by the wind, he would run up to it a second time, only this time jumping just on the spot, while the wolf made a headlong dash forward.

This is just one example — and there are a great many more. But the important thing is not the number of examples, but understanding the principle of the exercise.

## CHAPTER TWELVE

# The ultimate taboo

Not only for children, but for grown-ups living today too, the system pours forth floods of apparently meaningful information, but in reality practically all communications are calculated to draw Man away from information.<sup>1</sup>

Take, for example, the TV you watch regularly. Every news broadcast tells about how one official is meeting with some other official, or how one leader meets with another leader. Their meetings are served up as news. But if you stop to think about it, you'll realise that there is absolutely nothing new here at all.

Officials have been meeting together for thousands of years now, hour by hour. Summit negotiations between various countries have also been taking place for thousands of years. But nothing ever comes from these negotiations, and nothing of substance ever changes as a result.

It does not change because they never talk about *the most important thing*. They never discuss the true cause of war. They talk only about effects.

Yet the media lead you astray by serving up every summit meeting as news.

Just think about it: the ultimate taboo subject in the whole world is the path of mankind's development.

Can you just imagine the passengers of an aeroplane in flight who couldn't give a care in the world as to where the

<sup>1</sup>This and the following chapter are once again narrated by Anastasia's grandfather.

plane is heading or whether it is even able to land? You may think that passengers like that don't exist. Everyone boarding a plane has an idea of how long the flight will last and the destination city. But ask one or two or a thousand people living on Planet Earth, ask a million even, and nobody will be able to tell you just where mankind is heading.

The system created by the priests has blocked up human thought.

Modern Man with his extremely slow rate of thinking is not in a position to determine whether mankind — or even a single nation-state — is on the right path of development. He is not in a position to visualise even his own life.

In reality, all the leaders on the Earth are in control of nothing, absolutely nothing. There is not a single country in the world where you will find a clearly stated plan of national development. Such a plan is impossible without first determining a clear and explicit path of development for the residents of Planet Earth as a whole.

As a result of a simple scheme the priests devised in the process of constructing their system, all rulers are mere superintendents watching over the functioning of the priests' system. They are all wrapped up in their own country's scientific and technical progress, their military strength and the preservation of their own power. For this they are ready to sacrifice the quality of the air and water in their own country and collectively in the world. They are weighed down under the system created by the priests. Like the majority of people on the Earth, the rulers are active pawns in this system. Their thought is slowed down as much as anyone else's.

*The speed of one's thinking!* Oh how I hope that you or some of your readers can perceive this not just through cold logic but feel it with every fibre of your being — feel how important the speed of your thinking is for the whole Universe!

To find the right words, or to cite the examples needed for understanding, is not an easy task. Examples! Anastasia compared the modern computer to a prosthesis for the brain<sup>2</sup> — in other words, to a prosthesis for thinking. It is probably true that people most familiar with how a computer works will not only understand but also feel the importance of thinking speed more readily than others. After all, you too, Vladimir, are able to work on a computer. Maybe through the computer you will be able to more quickly appreciate the catastrophic consequences of the sluggishness of human thinking.

Anyone familiar with a computer knows how important for the computer is the size of its memory and its operating speed. Note, I said: *operating speed*.

Now imagine what could happen if one were to slow down the operating speed of a computer controlling an aircraft's flight or a nuclear power plant. The computer might allow an accident to happen, and that would mean a disaster.

The living biological computer native to every Man on the Earth is incomparably more efficient than the manufactured variety. It is called upon to assist in the controlling of an immeasurably more perfect and massive device — the planets of the Universe.

These *can* be governed when this biological computer operates at a speed approximating or surpassing that of the original. However, the speed has been diminishing, and is continuing to diminish. Anyone can see this for themselves if they but examine the situation more carefully.

When even the most state-of-the-art manufactured computer keeps getting loaded day by day, hour by hour, with all sorts of data — it doesn't matter what kind of data, only that it is being inputted — eventually it will start to work more slowly, or it may refuse to process any new information

<sup>2</sup>See Book 1, Chapter 17: "The brain — a supercomputer".

whatsoever. This happens when its memory is overloaded to the point it can no longer accept new data.

Most people on the Earth today have experienced something like this. And the system created by the priests has got out of control. It has started operating all on its own.

When I mentioned earlier the monster devouring the children, I was talking about the system which has got out of control. Take a careful look: when a child is born to an earthly mother, what is it that immediately takes it into its mighty clutches? The system.

What determines what food is to be given to the child? The system.

What determines what kind of air the child is to breathe and what kind of water he is to drink? The system.

What determines the selection of his path in life? The system.

The priests are losing control of the social order on the Earth, yet they are aware of the laws by which it operates and can still exercise an influence on the life of the planet. They are able still today to slow down or accelerate development in specific situations.

When the first book with Anastasia's sayings appeared, the priests took an immediate interest in it. Naturally! After all, these sayings came from the mouth of the great-granddaughter of a priest — not only someone familiar with the secret levers of control but also a young woman leading a lifestyle favourable to accelerating the operation of thought.

They realised that Anastasia had set herself the goal of transporting people across the dark forces' window of time. Theoretically, this is indeed a possibility. Transporting across time constitutes a change in consciousness. And it is possible to do something like this with a single individual.

Substantially changing the collective consciousness of mankind is a process extending over millennia, requiring the

participation of many generations. But a process extending over millennia cannot be called transporting people across a window of time.

Transporting people across a window of time means changing the consciousness of people already living on the Earth today — changing it to a consciousness which was or will be inherent in them under the conditions of a Divine, paradisaical existence.

The priests tried to figure out the plan by which Anastasia was going to operate. They did work it out and deemed it to be naïve, containing a plethora of questionable decisions. The means of distributing information through a book alone they regarded as clearly insufficient. Modern Man, they believed, requires a good deal of repetition for information to sink in.

Then they learnt that the book's author was an entrepreneur who not only was lacking even minimal authority among spiritually thinking people but was a complete unknown in such circles.

Consequently, the priests decided, a Siberian recluse would not be able to achieve anything significant in human society by the method chosen. My father shared this opinion as well.

The priests got their first shock and call to alertness when Anastasia's prophecies in the first book started coming true. She told you:

“I shall bring you many people who will explain to you what is incomprehensible.”<sup>3</sup> And people started coming to you who were not just capable of explaining something. People started to act. She said:

<sup>3</sup>This and the following references are drawn (though not word-for-word) from various chapters in Book 1. See especially Chapter 26: “Dreams — creating the future”.

"Artists will draw pictures, and poets will write verse." And both pictures and many poems came forth, dedicated to the new and marvellous reality of mankind's being. She said:

"The book you write will be read by people in various countries." And the book has been published in many languages.

The priests did not know what power or devices facilitated the realisation of Anastasia's sayings. Yet they are coming true for all to see.

They realised that she was beginning to make her cherished dreams come true, but they could not discern the manner by which she reached the goals she set for herself.

This could mean only one thing -- namely, that the speed of Anastasia's thinking significantly surpassed that of the priests. The insightful combinations produced by her thought are incomprehensible. This means that the priests might lose the opportunity to influence human society for good.

This was not something the priests could permit.

While they were trying to figure out patterns of counter-action, something even more incredible came to light. New sayings of Anastasia's were being made public. Many people now aspired to create the domains she had talked about.

And then Anastasia became the target for all kinds of counter-measures. One of the most effective of these was a disinformation campaign involving the magic word-symbol *sect*.<sup>4</sup>

Your press was filled with publications talking about various terrifying sects, including the so-called 'Anastasia sect'. These publications used still other word-symbols like *totalitarian* and *destructive*.

This particular counter-measure has been used by priests from time immemorial. In ancient Rus' it helped facilitate a

<sup>4</sup>In today's Russian usage, the word *sekta* ('sect') is used as a synonym for *kul't* ('cult'). Therefore the accusation of being a 'sectarian' actually suggests adherence to some dangerous cult.

change in religion.<sup>5</sup> This was a tactic that never failed. And in the latest case, too, the priests imagined that it had done its job. You and a whole lot of readers — both those who communicated amongst themselves and those who didn't know each other — were amazed to discover that people were labelling them 'sectarians'.

False rumours were cleverly and intensively circulated. This is why government agencies never reached a decision on the question of land-grants. There was active opposition, both vocal and hidden, to the initiative to allocate land for the establishment of family domains. The system had worked.

Lower-order priests figured that they were rid of Anastasia once and for all. The high priest was the first to discern that this was not the case. He realised that in visualising the future, Anastasia's thought had not only taken the system's counter-measures into consideration, but had also redirected them to serve the cause of good.

This is what happened. The domains established according to the principles outlined by Anastasia were impossible to construct along traditional lines. They required a detailed plan of development. They involved the working out of a long-term project which would take at least a year to develop — significantly longer in some cases. Action without sufficient preparatory thought could lead to the discreditation of the ideas involved.

By slowing down the process of land allocation, the authorities prevented quick action from being taken.

<sup>5</sup>*change in religion* The reference here is to the official adoption of Christianity as a state religion by Kievan Rus' in A.D. 988. For a more detailed description, see Book 6, Chapter 4: "A dormant civilisation". *Rus'* (pronounced *ROOSS*) was the name given to the East Slavic state dominated by the city of Kiev between 880 and the mid-12th century, although Anastasia explains that it dates back much farther than that — see, for example, the closing statement in Book 6, Chapter 6: "Imagery and trial".

But slowing down the process of land allocation did not enable them to destroy the dream of a bright future or to slow down the speed of thinking on the part of many people who were in the process of imagining their future domain, not to mention the future of the country and a marvellous future for all mankind.

While Anastasia spoke about Russia's taking the lead in building this marvellous future, she well understood that it would be impossible to create a Paradise in just a single community or even in a single nation-state. Indeed, her dream was being adopted in the hearts of people in countries the world over. You can ascertain this, Vladimir, by the popularity of your books published in these countries. They are enjoying great acclaim today, but that is nothing compared to what the future holds. When people begin to realise...

Now the priests have recognised this. Anastasia is beginning to solve mysteries they have been beating their heads over for thousands of years. Here is one of them.

## CHAPTER THIRTEEN

# Divine nutrition

The high priest once told my father in conversation:

“Your great-granddaughter, Moisey, knows the mysteries of being which were concealed from us. She knows the secrets of nourishing both the body and spirit. You yourself, of course, ascertained this from her own words: *One should eat just as one breathes.*<sup>1</sup>

“Our forebears once read these words on the walls of their secret temples. We believed them to be meaningful, but up until now their secret has not been revealed. In explaining just a little of it to those who will be creating their own family domains, she will thereby create the conditions for the speed of thinking of these new domain dwellers to exceed our own. Compared to children born in her domains we shall appear to be simply ignorant youngsters. In setting out her design, she showed us the only way out — each of us must set up the same kind of domain which she has described to everyone. We shall establish them, we shall try to make them better and more perfect than the rest, and for that we have great possibilities.

“She is revealing the mysteries of being to everyone, and by the time we learn about them, we shall already have *our* domains, while others will still be going about setting up their own. And then once again the difference in the speed of our thinking will allow us to foresee and consequently control life

<sup>1</sup>Quoted from Book 1, Chapter 4: “Who are they?”.

on the planet. This is what I have been thinking. I should like to hear your opinion on this, Moisey.”

And my father replied:

“You want to hear my opinion because you have your doubts. You want to foresee what situation Anastasia will be visualising in case the priests — and you who have appointed yourself to the highest position — are the first to set up the domains which will draw you closer to the Divine being? You want to know whether her thought has taken such a scenario into account?”

“I am convinced that she has,” the high priest replied to Father. “And she herself does not conceal the fact. But I should like to hear your opinion on why she is openly daring us by giving us the opportunity to reassert our control over the world?”

“All because,” my father answered the high priest, “my great-granddaughter Anastasia is not about to enter into a confrontation with you. When the priests, as the rulers of the Earth, begin creating their own domains, their thoughts will be transformed. Their souls will become radiant with light.” [...]

“Thank you, Moisey! Our thoughts have come together as one. And I applaud the prospect of living in another reality — possibly in one where each of us can talk with God.

“I bow before your great-granddaughter’s thought, Moisey. May Anastasia succeed in finding the strength within herself to overcome the system we created like a wild beast, or a herd of beasts. Help her if you can, Moisey!”

“Try helping her yourself. I can’t keep up with her more youthful thought. I used to think her actions were illogical.”

“And I shall not be able to either, Moisey. She eats just as she breathes. We have been soiling our flesh. I have not the strength to nourish my spirit the way she nourishes hers. I can only guess at what is helping her.”

In the times of our pristine origins people's way of life was quite different from today's. They not only knew Nature, they controlled it. Through the sounds of Nature and the power of the light of the heavenly bodies they had access to the database of the Universe. They received information not just through their mind, but through their feelings too. The speed of their thinking was many times greater than that of people today.

The early priesthood realised that absolute control over mankind was possible only if they could achieve a considerably greater speed of thinking than other people, but how to achieve this goal? One of the ancient priests once said in a secret conversation with the high priest:

"We cannot accelerate our thought to achieve sufficient superiority over everybody else. But we can use special devices to slow down the thinking of all mankind."

"You said: *all mankind*. Does that include your own thought?" the high priest responded.

"Yes, in the final analysis, it does, but to a much lesser extent. The discrepancy will be tremendous. The advantage will be on our side."

"Since you are talking about it, that means you have already found a way of slowing down the thought of all mankind. Tell me about it."

"It is simple. We need to conceal from people the existing Divine method of nutrition. We need to have them consume food that does not accelerate, but, rather, slows thought

down. That is the main condition. The rest is a chain reaction. The degradation of thought will bring a number of factors into play which will influence the speed of their thinking. Compared to us everybody else will be inferior.”

“How can we conceal what God offers to everyone?”

“We promote the necessity of giving gratitude to God for what He offers.”

“I have it. You have come up with a monstrous plan, but it is perfect. People will agree to give gratitude to the Creator and will not see anything wrong with it. We shall think up rituals to draw people away from God’s first-hand creations. People will be thinking that they are giving God thanks. But the more time they spend on giving thanks, gathering around the idols we think up, the less communication they will have with God’s own creations, and the farther removed they will be from information coming straight from God.

“They will be receiving information from us, but imagining it is God’s will. Their thought will go off in the wrong direction. We shall lead it in the wrong direction.”

Centuries passed, and people spent more and more time on the rituals thought up by the priests, thinking all along that they were simply paying their respects to God. At the same time people communicated less and less with the Creator’s first-hand creations and, consequently, no longer had access to the information of the Universe in all its fulness — God’s information. They caused God pain and suffering, all the while believing they were bringing Him joy.

At the same time the priests began telling people what kind of food they should be giving preference to, at the same time creating for themselves the secret science of dietetics. The priests needed this to maintain their brain, their spirit, their physical health — and, consequently, their thought — in a more efficient operational state than other people's.

Thus they suggested that people plant certain kinds of growing things, but they themselves used other kinds for food — more specifically, in a greater variety than the rest. Thus began a monstrous degradation of human consciousness.

Man began to know diseases of both body and soul. People intuitively sensed the meaning of nutrition and over the millennia tried to come to terms with this question.

Wise men appeared who attempted to give advice on what food products were the most healthful. Many teachings on dietetics were introduced. It was a topic touched upon in books you are familiar with, such as the Bible and the Koran. Here is what it says about nutrition in the Old Testament, for example:

You shall not eat any abominable thing. These are the animals you may eat: ox, sheep, goat, buck, gazelle, roebuck, wild-goat, white-rumped deer, long-horned antelope, and rock-goat. You may eat any animal which has a parted foot or a cloven hoof and also chews the cud ... you may not eat ... the camel, the hare, and the rock-badger ... you shall regard them as unclean; and the pig, because it has a cloven hoof but does not chew the cud, you shall regard as unclean. You shall not eat their flesh or even touch their dead carcasses.

Of creatures that live in the water you may eat all those that have fins and scales, but you may not eat any that have neither fins nor scales; you shall regard them as unclean. You may eat all clean birds. These are the birds you may

not eat: the griffon-vulture, the black vulture, the bearded vulture, the kite, every kind of falcon, every kind of crow, the desert-owl, the short-eared owl, the long-eared owl, every kind of hawk, the tawny owl, the screech-owl, the little owl, the horned owl, the osprey, the fisher-owl, the stork, every kind of cormorant, the hoopoe, and the bat.

All seeming winged creatures you shall regard as unclean; they may not be eaten. You may eat every clean insect.

You shall not eat anything that has died a natural death. You shall give it to the aliens who live in your settlements, and they may eat it, or you may sell it to a foreigner; for you are a people holy to the Lord your God.<sup>2</sup>

Over the millennia various books were written advising people what and how to eat to be healthy. But not a single book, not a single wise-man — or, indeed, all the scholars put together — has ever been able to fully shed light on this question. The proof may be seen in the ever-increasing numbers of diseases of the human body and soul.

A whole lot of books were published advising how to treat disease. And today you have the science of medicine. They tell you it is constantly being perfected. But at the same time just look at how the number of sick people is constantly increasing.

So what is medical science actually perfecting? The results speak for themselves: *it is perfecting disease.*

<sup>2</sup>Deuteronomy 14: 3–21 (cited here from *The New English Bible*).

I can see that this conclusion sounds strange to you. But just think: why don't the whole masses of animals in natural surroundings get sick, while Man, who considers himself to be the most highly developed of all creatures, is unable to cope with his own diseases?

The science you call upon to treat disease has never, over the whole period of its existence, ever touched upon the ultimate cause of all disease. It has always given its attention to *effect*. People who are sick, of course, need doctors. But it is no less true under the current conditions of your world order that doctors need sick people to treat.

But even among the priests themselves the speed of thinking has been declining. Not to the level of everyone else's, but still diminishing. This phenomenon disturbed the priests more than any other. They paid more and more attention to the mysteries of Divine nutrition but could not unravel them.

One of the priests assigned to take care of the science of dietetics apparently figured out something and began writing it on the wall of the secret underground chamber where no one except a few of the main priests could enter.

He wrote: *One should eat just as one breathes.*

After writing the last letter of the last word of the sentence — or, rather, just before finishing the last letter — the old priest died. He had not managed to explain the meaning of this sentence to anyone — either to his descendant-successor or to any of the other priests.

Priests have been trying to unravel the mystery of the phrase "One should eat just as one breathes" over all the millennia since. They were afraid that somebody else might get wind of it and guess its secret before they did.

They crased it, rubbed it off the wall of their temple. But they transmitted it orally to succeeding generations of their descendants, in the hope that it would be deciphered in the future. All to no avail.

Astrologers, healers and wise-men appointed by political rulers worked on the question of nutrition over many thousands of years. Nobody was able to solve the puzzle.

If any of the rulers' wise-men had managed to figure out how Man should feed himself, then those rulers that considered themselves to be the strongest in the world would have ceased to fall ill, and their longevity would have increased.

If any of the earthly rulers had known what kind of food he should take in, he could have become the supreme ruler of the Earth. The speed of his thinking could have surpassed that of the priests.

But all the rulers of the Earth get sick and die. Their longevity is no greater than that of ordinary people, even though they may have the best healers and wise-men right at hand. And so the degradation of human society continues.

It seemed to be just in passing that Anastasia uttered that sentence to you: "One should eat just as one breathes." You published it in a book. You published it in the context of your experience with her and didn't give it any special thought.

But for the priests living today, the publication of that sentence, the one that had been crased from the walls of their temple more than five thousand years ago, became a cause for very great concern.

Time and again they gave careful reading to the books with Anastasia's sayings and realised that not only did she know the phrase, but she had full knowledge of Divine nutrition.

The speed of thinking of a Man possessing such knowledge would naturally be able to surpass that of all the priests taken together and, consequently, be able to control all humanity, including the priests. But in order to maintain control, he would have to conceal information, while here *she* has gone and revealed it to everyone. This means she has freed people from the priests' influence, thereby leading them to direct communication with the thoughts of God.

This was something they realised after seeing how Anastasia slipped in among her sayings information on the nourishment of Adam. In *Co-creation* you cited Anastasia's words about how people were nourished back at the time of their pristine origins:

"All around him were a multitude of fruits with a variety of tastes, berries and edible grasses. But during those first days Adam felt no sense of hunger. He remained satisfied with fresh air alone...

"One certainly cannot live on the air Man breathes today. Today's air is dying, and is often harmful to one's body and soul. You mentioned the saying that one cannot live on air, but there is another saying: 'I have been fed by air alone', which corresponds to what was available to Man in the beginning. Adam was born in a marvellous garden, and the air surrounding him did not contain a single harmful particle. Pollen had been dissolved into that air, along with drops of purest dew."

"Pollen? What kind of pollen?"

"Pollen from flowers and grasses, from trees and fruit, which diffused fragrances into the air. Some came from those close by, while breezes brought others from distant places. Back then Man was not distracted from his great works by any problems of finding food. He was fed by everything around him through the air. This was the way it was all designed by the Creator right from the very beginning, so that all life on Earth should strive to please Man, and the air and the water and the breeze would be life-giving, under the impulse of love."<sup>3</sup>

<sup>3</sup>Quoted from Book 4, Chapter 4: "The first day".

Of course, people's diet at the time of their Divine pristine origins was not confined to life-giving air. They consumed a lot else besides, but their body and soul were nourished by air and water to a significant degree.

When you published Anastasia's words about nutrition, the priests were astonished at how this simplest of truths had escaped them for so long. Yet all along they knew why this was so.

Secluding themselves in their temples, they were not able to breathe the pollen-laded air. In gathering people together for rituals, where the only thing the crowds raised was dust, they ended up breathing the dust of their own schemes.

The priests understood the significance of nutrition. Their diet included teas containing many healing herbs, along with a variety of fruits and vegetables. Among other things they attached considerable importance to cedar oil, which their attendants brought them from far-off places. Moreover, their diet also included honey and flower pollen gathered by bees. But Anastasia showed that this was far from being sufficient. It was a different kind of pollen, for one thing. The pollen that the bees gathered and packed into honeycomb was quite healthful, of course, but was a far cry from the variety that could be found in the air over one's family Space.

Bees, after all, gather pollen from a relatively small number of floral species. But the air contains all varieties, and it is distinguished from bee-produced pollen by its softness and its easy digestibility.

Airborne pollen is alive, capable of fecundation. With each breath a Man would take it in and it dissolved inside, nourishing his whole body, including his brain.

When the priests saw Anastasia talking about family domains — a hectare of one's Motherland for each family — they realised she was taking people back to a way of life that was part and parcel of their pristine origins.

They knew right away that family domains are not only capable of bringing people material benefits — there is something much more important. In the context of Anastasia's sayings people can form a Space capable of nourishing their body, soul and spirit, and show to everyone openly the truths of the Divine order of creation.

The time is approaching when mankind will be present simultaneously in two worlds. It will be able to make use both of the achievements of the technocratic, artificial world, as well as its own Divine pristine origins. By comparing these two worlds, not through hearsay but first-hand, through observing their own experience, people will be able to make their own choice, or create a new world. They will be able to create their own marvellous Divine future.

Anastasia showed people not only the meaning and essence of Divine nutrition, but how to attain it as well. Her family domains...

Picture to yourself, Vladimir, a morning-time. A Man awakens at dawn and goes out of his house into the garden of his family domain, in which are growing more than three hundred varieties of plants he needs.

He has taken up the habit of walking around his property every morning.

As he walks along the path his eyes are delighted by the lively variety of herbs, trees and flowers. These cannot help but delight and furnish him with positive emotions.

Nothing can give him a greater emotional charge or abundant energy than one's own family life-giving Space.

Many ages passed. In each of them attempts were made to attract mankind to all sorts of different values.

Man became enthralled with a huge house, the latest clothing, a new car or some other gadget. Man became enthralled with money and his position in society. But all such joys are

conditional and fleeting. They only bring a temporary sense of happiness and pleasure, and within a short space of time they become commonplace, bothersome and sometimes downright annoying.

An old and decaying house will begin to demand constant repair. A car, too, can start having frequent breakdowns. Clothes wear out.

Man has always intuitively felt the true beauty and perfection of the eternal, and that is why even a king surrounded by luxury and personal palaces has always needed a garden. This is a truth that has remained unshakeable for millions of years of Man's life on the Earth.

True delight and peace is attainable only in one's own family domain.

When a Man takes his morning walk through his family domain, every blade of grass is delighted and reacts to him. And, far from decaying, his garden grows with every passing moment of blessed living.

The Man understands that the programme he has set out — trees, bushes and fruit-bearers planted by his own hand — will not decay but live on through the ages. They will live for ever, provided the Man does not change his mind.

When the Man takes his morning walk through his family domain, he breathes its air, and with each breath takes in thousands of invisible particles — plant pollen. The air is saturated with them. Quite alive, they enter the Man, dissolving within him without a trace, nourishing his body with everything he needs. And the air of one's family domain nourishes not only the human body, but feeds the spirit with ethers and accelerates thought.

When the Man takes his morning walk through his family domain, he may stop all of a sudden and pick three berries off a currant bush and eat them. Why does he stop in front of a currant bush in particular? Why does he pick precisely three

berries? In what book of wisdom has the Man read that on this particular day he will need these three berries?

And he really does need them, as it turns out. He needs them on this very day, this very minute, and in this very quantity.

Then after taking another few steps, the Man bends over to smell a flower. Why does he do this? Who told him of the need to take in the aromatic ether of this flower in particular?

And several steps farther on he picks something more to eat...

When the Man takes his morning walk through his family domain, he smiles, thinking about something personal, while at the same time enjoying a surfeit of fruits — not thinking about them, but feeling them. *This Man has been eating just as he breathes.*

Who then has been calculating the Man's dietetic needs with such incredible accuracy? Where has all this information been recorded for every Man born on the Earth? This information — you realise, Vladimir — all this information is present in every Man born on the Earth. Note this:

Every Man contains a 'mechanism' (I can't seem to find an alternative word) capable of arousing the sense of hunger — a signal that his body and spirit require some kind of substance in the Universe. We need not specify just what exactly, the proportion or quantity — nobody can answer this question intellectually. Only your body knows about this and it is what selects just three currant berries out of the whole variety available.

But in order to afford the opportunity for the right choice, your body must have all the information available about them. And it is only in one's family domain that such information is accessible.

Let's say you go into a store where there are a whole lot of fruits spread out on the counters. You want an apple. You

see a whole huge variety of apples. Which kind to choose? An exact choice is impossible, since your body — which is capable of making an exact choice — does not have any information about the apples on the counters. It hasn't tried them. It doesn't know the taste and correlation of substances. Neither does it know when the apples were picked, which is very important as well.

As a result, the apples you purchase at the store may turn out to be beneficial, but their benefit will be not nearly so great as when your body is apprised of all the information about the product you are making it digest.

The product you ingest may even turn out to be harmful to your body — in which case disease makes an appearance. Such a thing could not happen in your family domain, since you know for absolute certain which tree produces the sweeter or more sour apples, and when they are ready for you. Your body receives all the information about all the fruits in your family domain.

It received all the information about them back when you were still in your mother's womb. And afterward, when you drank milk from your mum's breast. Your mum, after all, delighted in the very same fruits. And they contributed to the consistency of her milk.

And now as a grown Man...

When a Man is in the Space of his kin's domain, he tastes the fruits and berries — everything that went into the consistency of his mother's milk.

There is another concept in your civilisation — it's healthful for a Man to consume fresh produce. But what, exactly, is 'fresh produce'?

Not frozen, dried, tinned or sealed in barrels, like you thought, but produce that comes to you in its natural state. And you have cultivated a huge assortment of hybrid varieties

that can be preserved many days with the appearance of fresh produce. Believe me, the appearance of freshness is deceptive and harmful.

Now see if you can make sense of what I've just said and test it out for yourself.

Almost all berries can be considered 'fresh' for no more than a few minutes. Cherries (both sweet and wild) and apples will last an hour, tops. But still they change with every minute that goes by, mutating into something else.

Pick a cherry and leave it just overnight, then take it back to the tree where it came from and eat it. Then pick another cherry from the same branch and taste it. See — you will sense the difference — which cherry is fresher and tastier — even with your eyes closed.

As for raspberries, you'll notice the difference after only an hour, while some other kind of fruit might take twenty-four hours. And you will see that anyone who does not have a family domain, no matter how rich or important he may be, cannot take in *fresh* food. That means he is not as capable of quick thinking as he might otherwise be.

Even back in ancient treatises wise men attempted to set forth their perceptions as to what produce was the most healthful for Man in any given season. And this is very important. But among all of these there is only one treatise which remains inviolable, and that is the one which God Himself prepared for each individual Man.

Look for yourself and see how gradually, starting in the spring, the early plants bring forth their fruits. Others appear later in the summer, at its beginning or end, while the autumn gives rise to a variety of other plants.

What is there to write about here, when it has been so obviously set forth what one should eat and when. And not just in broad terms of months or seasons. The choice is hinted at moment by moment. You need only think about it, Vladimir,

to understand. It is as though the Creator is ready to spoon-feed any Man with His own hand.

Just think how perfect and exact His programme is.

There is a particular season of the year when any given species of fruit ripens. At the same time the planets are in a particular arrangement. And that is the most favourable season for Man to take in that fruit. It was at that very moment, the most appropriate moment as indicated by God, that Man decided to take in the fruit, as his body suddenly felt a desire for it. There was no question of Man's working all this out through calculation. Man did not make a problem out of what to ingest and when. He simply ate. He ate because he felt like eating, because it pleased him to do so. And at the same time his thought was elated with joint co-creation.

His thought danced ahead, no longer concerning itself with what had been planned in advance by the Father's hand. It desired to create even more so that everyone could rejoice in the contemplation at the sight of a new creation.

And the Father exclaimed in delight: "My son is a creator", as He fed His child with His creations.

## CHAPTER FOURTEEN

### A society of schizophrenics?

In listening to Anastasia's grandfather's account of what Man should eat and how, I couldn't help comparing what he said with the dietary régimes of people today, even rich people living in so-called civilised countries. A rather puzzling situation unfolded. Let's work it out together once and for all.

To begin with, we all know that it is healthful for Man to consume fresh and ecologically clean produce.

We all know that in Nature there are plants capable of treating all types of diseases of the body. Hold on — we need to be more precise: *in Nature there are plants capable of preventing diseases of the body*. Then why don't we have them available? Why and under whose influence have we chosen a way of life which destroys not only our bodies but our minds too? Someone out there must be simply laughing at us, befooling us into calling this way of life 'civilised' besides.

If we use terms like *civilised country*, *civilised society*, meaning by this a society of people which has achieved a certain (and, of course, correct) level of development, then this development should also be reflected in, among other things, questions pertaining to diet. And not just 'among other things', but first and foremost.

Now let's pay a visit together to a typical food-store or supermarket, the kind you find in any so-called civilised country. It could be either in the West or here in Russia — if we're talking about major cities, the difference in variety of produce isn't all that great.

We find that the majority of produce available is nicely packaged and has a long shelf-life. We find a whole lot of dried, frozen and concentrated products, which can hardly be termed 'fresh produce'.

At the supermarket we can also find so-called 'fresh' vegetables, beautiful-to-look-at tomatoes, cucumbers and so forth. But lately it has come to light that these are hybrids — specially cultivated varieties capable of preserving their good looks for a long time, but considerably inferior in quality to the normal, natural variety.

Just about any adult resident of a European country is aware of this. Europe already has a chain of stores with signage proclaiming they sell only ecologically clean merchandise, but at a price about five times higher than in other stores. This means that the public has now recognised that other stores (and there are far more of *them*) sell produce that is *not* ecologically clean.

But let us call a spade a spade. The public has recognised that a majority of their number have been consuming produce that is harmful to their health.

Hold on! What about the term *civilised society*? Is it possible for people in a 'civilised society' to consume food of inferior quality which is harmful to their health?

A more accurate description of such a people might be a 'muddle-headed society', or a 'society with a befuddled population'.

In 'muddle-headed societies', whose ranks Russia seems to be trying so hard today to join, one can outline a distinct system for befuddling the population.

Look at what is happening. Someone consumes inferior produce and takes ill. The sick person falls into the arms of a system called 'health care'. This system has at its disposal a huge quantity of drugs, hospitals and clinics — and this has to be paid for somehow. Huge sums of money are

continually being poured into it. We are told it is constantly improving.

But note: according to statistics the number of sick people is rising each year. Then along come new diseases which mankind never had to grapple with before — including a whole lot of mental illnesses, not to mention the fashionable profession of psychotherapy.

And the question resounds loud and clear: what is behind the degradation of the overall health of these 'civilised societies'? Isn't the health-care system itself at least partly to blame?

By comparing data from various sources, anyone who wishes to can determine that the overall degradation of humanity's health is an actual fact.

Yes, we're talking about physical well-being, but mental health is an even more dangerous factor.

We have only but to turn away from the obtrusive, monotonous flood of information that does not allow Man to think about what is really going on, and we begin to doubt (to put it mildly) the 'normality' of the majority of the population of these so-called 'civilised societies'. We begin to look upon these societies' chosen lifestyle as indicative of a schizophrenia disorder. Judge for yourselves.

Let's say a Man living in his family domain wanted to eat — an apple, for example. What does he do? He goes out into his orchard, picks fresh fruit from a tree and eats it.

Then let's take a look at the actions of another Man who lives in a city apartment in a developed society, who also wants to eat an apple. He takes some money, goes to the store and buys an apple, which is no longer fresh. He buys an apple which another person grew and packed in a crate. Someone else transported this apple in a truck or a plane. Then a third party built a store and placed this apple on one of the counters. All these operations, from the growing of the apple

right up to the final sale, are accounted for by special people who compile inventories and collect taxes, duties and other exorbitant charges.

Thus we have a whole chain of procedures whereby people are involved in the supposedly useful business of offering a fellow human being the opportunity to taste the fruit of an apple tree. And the one who tastes this fruit must first find work somewhere to earn the paper money and pay for this whole thought-up chain of intermediaries standing between the apple-tree's branch and Man.

Yet our society considers this normal. A befuddled society has no inkling that *someone* very much wanted to lead people away from their true purpose and have their attention occupied in senseless pursuits.

The process of drawing people into such absurdities has been a long one. That's not something you could do quickly. If you tried to do it quickly, even the most feeble-minded individual would be able to see the stupidity of what was happening.

Just think what a paradox it all is! One fine day you decide, as usual, to go out to your apple tree and pick some fruit. You no sooner step off your front porch and start heading for the tree than you catch sight of a whole queue of people.

"Who are you?" you ask the fellow standing closest to you.

"I'm an apple dealer," he answers.

"And who are these people behind you?" you continue to wonder, and hear in reply:

"Behind me is the person who trucks the apples to my store, behind him is the one who picks them from the tree, and around each one of us you see an entourage of people in fresh clean suits — they are the ones who record the quantity of apples that pass through our hands."

"But really, what are you, chaps? Don't tell me you're a bunch of schizos?" you blurt out in a fluster. "What's with all

the meaningless red tape? Who's going to thank you for such nonsense as this?"

And the reply comes:

"You will thank us — you will pay all of us money, and with that money we too shall buy apples."

"And where am I going to get all that money to pay you?"

"Go see your neighbour, the one with the pear trees. There's a job open for a record clerk. You can become a pear-tree record clerk, earn money, pay us and eat apples whenever you like."

*How absurd!* — you're thinking, no doubt. *Utter schizophrenia!* Of course it's absurd. Of course it's schizophrenia. But this is just the kind of thing that's going on right now with each of us in our society.

The conditions for a healthy life — and really, they are all too obvious — need to be set down in the form of a treatise. Well, here's one — a miniature treatise:

**Point Number 1.** Every Man living on the Earth should have his own domain, his own Space to guarantee for himself a supply of high-quality food.

**Point Number 2.** In his own Space Man should grow, preferably by his own hand, fruit-bearing plants — plants that he considers tasty and healthful. Say, for example, someone knows ahead of time that he doesn't like red currants — he need not plant these in large quantities. Altogether at least three hundred varieties of perennials should be put in. I shall not go over again the particular methods of sowing and communicating with the plants, as they were described back in the first book, when Anastasia was talking about the dachniks.<sup>1</sup> Naturally, this is not something that can be

<sup>1</sup>See Book 1, Chapters 10: "Her beloved dachniks" and 11: "Advice from Anastasia".

accomplished in the space of a year — or even two or three. But it is entirely possible to ensure that one's children will have, in fact, an ideal source of food supply.

**Point Number 3.** Every morning upon awakening, a Man should take a walk through his family domain and, if he desires, eat some fruit or berries or herbs which have just that moment ripened to maturity. This should be done entirely according to one's desire, and not at the recommendation of some sort of dietician, even one with a post-graduate degree. Once your body has become familiar with all the taste qualities of the food growing in your domain, it will compile the ideal régime for you in terms of quality, quantity and the appropriate time for the food to be eaten. You don't need to go out to your garden just in the morning or according to a strict timetable somebody has thought up, but only when you have a real desire to eat.

In our modern living conditions, many people cannot stay all the time in their domain, even if they have one. But it is good to go out to it at least once a week.

And in case of illness, before taking any medicines, it is best simply to go out to your family Space and stay there for several days.

If you have already established your own Space, and if your body can access information about the plants growing in that Space, it will be able to determine with absolute certainty what is necessary for recovering your health.

According to Anastasia's affirmation, there are no diseases of the human flesh which cannot be overcome by the Space of Love you have created.

Of course we're not talking about the space of a city flat, but a domain established according to the principles she has set forth.

After formulating these rules on a pad of paper, I read them to Anastasia's grandfather and asked:

"Have I left out anything?"

"If you simply want to jot down a summary, this will do to start with. Only you really must say something about the neighbours."

"What have neighbours got to do with it?" I didn't understand at first.

"What d'you mean, what have they got to do with it?" Grandfather was taken aback by my query. "Think about it: if just on the other side of the fence from your domain there's a factory spewing forth deadly fumes, and the wind carries these fumes into the Space of your domain, what kind of air are you going to be breathing?"

"Nobody would build their domain next to a factory!" I protested, but said no more.

Then I remembered. In the city of Novosibirsk, there are dacha plots located barely half a kilometre from a tin-smelter. And in Germany there are farmers' fields right next to an autobahn with eight lanes of traffic.

And I thought: *Wow! Such a simple concept as growing agricultural produce for food is possible only in places that are ecologically clean — preferably not anywhere close to big cities. There's no way a simple concept like this is going to get through to Man. So I've really got to add one more point:*

**Point Number 4.** Your domain should be located in an ecologically clean zone. It should be surrounded by the domains of those who share your vision of creating family oases of Paradise. One breeze will carry life-giving pollen from your domain to your neighbours', while another breeze from their direction will bring you life-giving air.

## CHAPTER FIFTEEN

# Opposition

Many readers of the Ringing Cedars Series can already attest to the opposition that has pitted itself against a harmonious lifestyle — a lifestyle favourable to both physical and mental health.

I have mentioned on a number of occasions having received communications regarding anti-Anastasia statements purporting to come from Russia's Orthodox Church. And that churchmen themselves apparently instigated the rumours now spreading among government departments to the effect that all the readers of the Series are 'sectarians'.

At first I found it hard to believe that such communications were serious. But shortly afterward members of the Novosibirsk Readers' Club told me church representatives had paid a visit to the local Concert Hall where a reader's conference was to take place, asking management to forbid the event.

Then they showed me one of the Orthodox-Church-related sites on the Internet where a so-called 'Doctor of Theology' was making all sorts of slurs against Anastasia, and the language he used could hardly be termed theological. My readers protested in an effort to show that Anastasia's ideas were indeed positive. But apparently the 'Doctor of Theology' was not able to discuss this point, preferring instead to focus on the question of whether *Megré* was my real name or a pen-name.

After that, people started sending in newspaper articles from various regions of the country which looked almost like carbon

copies of each other. Indeed, from the writing style, uniform phrasings and malicious inventions, it was readily apparent that they had all been drawn from the same original source.

Finally, there was something quite extraordinary, in connection with the St. Petersburg *Vstrecha* drama company's performance of a play called *Anastasia*, based on the Ringing Cedars Series. On 23 July 2002 the troupe arrived in Vladimir<sup>1</sup> and staged a performance in the Taneev<sup>2</sup> Concert Hall.

The play was to have been presented in Tula<sup>3</sup> on 25 July. On the 24th of July the local newspaper ran a front-page appeal from the missionary office of the Tula Diocese urging people to boycott the production, saying that both the books and the play were promoting a return to paganism.

It was a case of rampant fear-mongering. In spite of that, the Tula performance went ahead, playing to a full house. But when the artistic director of the *Vstrecha* Theatre showed me the article, I and others who read it immediately came up with a set of identical questions addressed to the missionary office of the Tula Diocese.

*How can you criticise a play you haven't seen?* The only performance before Tula had been in Vladimir only a couple of days before. To all intents and purposes Tula was the première.

<sup>1</sup>*Vladimir* — the name of the city in Russia where the author resides. See footnote 1 in Book 5, Chapter 6: "A garden for eternity". 23 July (the author's birthday) was proposed by Anastasia as the date for *Dachnik Day* — see Book 2, Chapter 9: "Dachnik Day and an All-Earth holiday!".

<sup>2</sup>*Sergei Ivanovich Taneev* (1856–1915) — one of Russia's most revered composers and pianists, also a professor at the Moscow Conservatory. Many music-associated buildings and institutions are named in his honour. One of the largest music venues in the region, the Taneev Concert Hall, with its seating capacity of 600, also houses the Vladimir Philharmonic Society.

<sup>3</sup>*Tula* — a large city of a half-million inhabitants a few hours' drive south of Moscow, known for its production of samovars as well as armaments. It is not far from Leo Tolstoy's family estate of Yasnaya Polyana.

In St. Petersburg, however, Orthodox priests came to see it and afterward thanked the actors for a most spiritually inspired production. They said we should have more plays like this!

The conclusion is inescapable. A phenomenon like Anastasia is constantly under the watchful eye of some kind of opposing power. This power may be located entirely within the borders of Russia or outside as well. In any case it has at its disposal a far-flung network, capable of reacting to currents running through masses of people, capable of accelerating or retarding these currents at their own discretion.

The stories about the priests told by Anastasia and her grandfathers are taking on increasingly real and specific shape. They have begun to express themselves in concrete actions of today.

Her grandfather said that the high priest, who forms the ideology of whole peoples, has stopped opposing Anastasia, but the system created by the priests will carry on the opposition for centuries to come. And this has also been confirmed by real-life events.

The zealots who implement the opposition on a local level have proved themselves incapable of figuring out what is really going on. They seem to be acting as though they had been pre-programmed, making sweeping and completely unfounded accusations against Anastasia.

For example, in response to the question *Should we all go live in the forest?* Anastasia replies:

“There is no need to go live in the forest. You need to clean up the place you have been polluting first.”<sup>4</sup>

The press, however, has been putting out statements to the effect that Anastasia is urging people to abandon their city dwellings and children and go off to live in the forest.

*So, one can draw the conclusion that some kind of agencies are actively endeavouring to hinder the promotion of Anastasia's ideas -- namely, that each Russian family should be granted a hectare of land to establish a kin's domain.*

Naturally, Anastasia's opponents try not to mention this idea, preferring instead to scare people with their fictitious inventions.

Naturally, I wanted to defend both the idea itself and the readers of my books from slander and from the other obstacles standing in the way of reaching this high goal. Defend them. But how? And from whom, specifically? After all, even the slanderers must have real names, they have their own masters and interests. But Anastasia's supporters have their own research centre. I don't know all their names personally, not by a long shot, but their ideas and conclusions are quite fascinating. For example:

The counter-action is aimed not directly at Anastasia so much as at the 'national idea' currently taking root in Russia. It arises from an intermediary source, as though local followers each received a cue to take action, independently of each other. These followers are to be found in various social strata, including the clergy.

*Their methods are primitive: slander and the propagation of patently false rumours and, when necessary, taking over the movement's leadership and discrediting it.*

<sup>4</sup>Quoted from two different paragraphs in Book 3, Chapter 21: “Should we all go live in the forest?”.

The research centre managed to establish who it was that stole a computer containing the manuscript for one of my forthcoming books, and found out about a secret plan for taking over the Anastasia website. But who tried to replace my Anastasia books with others that looked similar on the surface but in fact were aimed at leading people away from her ideas? And how could they possibly do this?

I was also told that the same forces were organising a smear campaign, using the same methods in each case, against Anastasia, Academician Shchetinin's school<sup>5</sup> and the singer Nikolai Baskov.<sup>6</sup> And just what, the reader may well ask, has Baskov got to do with all this? He is a very pleasant young man with a rich and powerful voice. And that is precisely what is driving these forces mad. Imagine this young Russian with his top-notch voice suddenly singing:

*The dawn is now breaking o'er the great ringing cedar's fair branches  
And illuming the tribes of the pure Planet Earth with its lustre.  
With a love-sigh the heavens pour forth all the help they can muster:  
Interplanetary breezes caress the grand Dream with romances.*

*From every seed springs a mighty idea,  
A Messiah from every child's perepeteia.  
In a bright ray will awaken Rossiya...  
God bless Rossiya and Anastasia!*<sup>7</sup>

<sup>5</sup>*Academician Shchetinin's school* — This school, founded at Tekos in the Caucasus by the renowned educational authority Mikhail Petrovich Shchetinin, is described in Book 3, Chapters 17: "Put your vision of happiness into practice" and 18: "Academician Shchetinin".

<sup>6</sup>*Nikolai Baskov* (1976 -) — an internationally recognised Russian opera star, who has performed on a number of occasions with his mentor, Spanish diva Maria de Montserrat Caballé. In recent years he has become known for his rendition of popular songs, especially those based on operatic or classical pieces. Some critics consider him one of the most popular singers in Russia today.

This song was sung by a children's choir at the launch of the book *Who are we?* at the Oktiabr Concert Hall<sup>8</sup> in St. Petersburg. It has been performed by modern bards, and was featured in the video *Take back your Motherland, people!* It was written by a schoolteacher from Belarus and seems to be taking on a kind of folk-song status.<sup>9</sup> Perhaps Baskov will sing other patriotic songs which will strike a chord in Russian hearts. These new national initiatives, harbingers of a Russian *renaissance*, are obviously threatening to someone.

I was told there was no need for concern, and asked not to speak about what was going on. I was assured that this was simply a first opportunity to study the methods and pinpoint who was specifically behind the ideological subversion aimed at any positive tendencies in Russia.

And I would have gone along with that. Let it be dealt with by the 'competent authorities'. However — and you must excuse me for this — there is one subject on which I cannot remain silent, despite my promise to the contrary. If I did not speak out on this, I would forever lose my self-respect.

---

<sup>7</sup>Reminder: the words *Rossiya* and *Anastasia* both rhyme with *Maria* (and *idea*) — see footnote 1 in the Translator's Preface to Book 1, also footnote 2 in Book 5, Chapter 13: "Equestrienne from the future".

<sup>8</sup>*Oktiabr Concert Hall* (Russian: *Bol'shoi kontsertnyj zal "Oktiabr'skiy"*) — a modern concert-hall with glass exterior, seating 4,000, opened on 25 October 1967 in celebration of the 50th anniversary of the Bolshevik Revolution (which actually took place 5 November by modern calendars). It is still one of St. Petersburg's most prominent cultural centres.

<sup>9</sup>The song cited above actually belongs to Oleg Atamanov (1956–), a celebrated Russian bard, sometimes referred to as "the *bojan* of all the Russias". In ancient Russia, *bojans* were enlightened travelling bards who had mastered the power of word to such an extent that their songs and tales had the effect of putting the listener into an altered state of consciousness and leading to spiritual awakening. Atamanov is continuing this tradition today. Since 1998 he has recorded over forty albums, and has audiences weeping at his concerts.

I cannot remain silent about the attacks on Academician Shchetinin's school — on its teachers, on educational innovators in general, and especially on the children.

The pupils at Shchetinin's school, along with their teachers, have decided to build a second school, this time in the Belgorod Region.<sup>10</sup> Under an agreement with a local organisation they began refitting the interior of an allotted accommodation to suit their needs. Accustomed to hard work, and experienced in design and construction, they quickly brought their task to completion. They wanted to afford other children, too, the opportunity to study in a *real* school. Only they were forced to abandon the premises they had just refitted. Why? Because their provocateurs were on the alert.

From the same source that instigated the rumours about all the Anastasia readers being 'sectarians' came exactly the same kind of accusations of Shchetinin's school being a 'totalitarian sect'.

As in the case of Anastasia, seemingly on cue, a number of Russia's so-called 'Orthodox' priests<sup>11</sup> began to confirm what had been said. Again, the same uniform phrasings, the sweeping accusations without any factual confirmation.

<sup>10</sup> *Belgorod Region* (Russian: *Belgorodskaya oblast*) — a large, primarily agricultural region located on the fertile plains of south-western Russia between the Don and Dniepr Rivers, north of the Black Sea. While today it is believed that the name *Belgorod* (literally 'White city') is derived from the proliferation of limestone deposits in the area, it may actually have a deeper meaning, originating from the name *Belbog* (lit. 'white god') — the god of light, goodness and happiness in the ancient Slavic tradition.

<sup>11</sup> *so-called 'Orthodox' priests* — Megré is questioning here the traditional application of the term *pravoslavnaiia* (commonly translated *Orthodox*, literally signifying 'right-praising') to Russia's official church. The term *Prav'* (Order, or rightness) was one of the three concepts central to Russia's original 'paganism' (see Chapter 20), along with *Nav'* (the Inner, or invisible world) and *Zav'* (designating the Outer, or visible world) — cf. footnote 1 in Book 4.

According to a certain 'Father Alexei', the pupils at Shchetinin's school "have absolutely no experience in handling money". That's a lie, chaps. They do have experience. Only they are not fixated on money the way you are.

At Shchetinin's school they make use of 'sentencing circles', where the perpetrator appears in person in front of a whole group of people who are predisposed to react negatively toward him and express their censure.

That's quite an accusation! But haven't Cossacks<sup>12</sup> brought their own violators to 'sentencing circles'? They have indeed, and not just to censure, but to punish with whips. And haven't our political parties, either communist or democratic, not used similar methods? Does not the Russian Orthodox Church summon its violators to a 'circle' before defrocking them? The Church used to do worse than that — it used to burn them at the stake. And here we are simply talking about censure.

Perhaps the writer who described this in a negative light had in mind a circle consisting of his own persona? But that would no longer be a 'circle' but real totalitarianism!

Again, some articles complain that Shchetinin's school is protected by Cossacks and free access to its grounds is not always permitted.

---

Chapter 6 ("The first appearance of *you*"). It should also be noted that the term *Slavic* (as applied to a number of related East European peoples from Russians in the East to Poles in the West to Serbs in the South) comes directly from the root *slavo* meaning 'praise' (compare also the Russian word *stova*, meaning 'word').

<sup>12</sup>*Cossacks* (Russian: *kazaki*) — descendants of a race of independent professional warriors who traditionally hired out their services to the ruling authorities, especially in the Caucasus. Local Cossacks in the Terekos area today have a special relationship with Shchetinin's school.

But today, ladies and gentlemen, many schools are under security protection. And not only in our own country. Anyway, what business might *you* have at Shchetinin's school? Be God-fearing and take care of your own health. Aren't you the ones, after all, who are horrified at the fact that the pupils of this school don't drink or smoke, that they are constructing new school buildings themselves and are good students? You no doubt get a thrill of 'sublime pleasure' when you find drugs and foul language in schools!

I am not going to list all the nonsensical drivel written about this marvellous school. The writers have come under condemnation even from their colleagues.

An article by Alexander Adamsky<sup>13</sup> is of particular interest. Here are some excerpts:

On Saturday 1 April, on the ATV creativity channel, they showed a pre-taped episode of the programme *Press Club*, devoted to what people refer to today as 'controversial press coverage' surrounding Mikhail Petrovich Shchetinin's school near the village of Tekos in the Province of Krasnodar. The *Press Club* producers decided to invite journalists writing on educational topics, as well as educators themselves, to discuss the whole question.

<sup>13</sup>Alexander Izotovitch Adamsky (1955-) — Rector of the Eureka Institute for the Study of Educational Policy in Moscow and member of the Public Chamber of the Russian Federation (a consultative body analysing draft legislation for the Russian parliament). Adamsky is an ardent supporter of innovative educational approaches that develop and support independent thinking on the part of children. Adamsky has been advocating transferring control of educational budgets to the schools themselves as well as opposing attempts by Russia's Orthodox Church to introduce 'Fundamentals of Orthodox Christian culture' as a compulsory subject in Russia's public school curriculum. The article cited here was first published in the newspaper *Pervoe sentiabria* (First of September) in 2000, issue 27, under the title "Anything you can't understand has no right to exist". (Note that 1 September, the first day of school, is termed 'Knowledge Day' in Russia.)

Both professionally and from a global perspective, the unique character of Shchetinin's system provokes controversy in modern educational circles. But there are what Alexander Radov terms 'educational killers' whose arguments vastly differ from those of people who question Shchetinin's views on particular matters of substance.

Such 'killers' do not argue; their aim is to destroy.

As long as education has existed, as long as anyone can remember, right from the times of Socrates, up-and-coming philosopher-teachers have been censured and beaten down for 'confusing young minds' and not teaching according to conventional norms...

So yet another round of 'pogroms' directed at Shchetinin is not coincidental. As Alexander Radov said during the *Press Club* discussion, even as in times past such attacks were organised by bureaucrats, today they are initiated by innocent-looking journalists. So it turns out that these 'nice boys and girls', faced with something that does not fit into — indeed, that is quite contrary to — their pre-conceived opinions as to what a school should be, what an educator should be, or how an educational system should be structured, find themselves quite incapable of accepting the existence of something their consciousness can neither fathom or even make room for. In other words, 'what I don't understand has no right to exist' — such is the 'killers' simple but deadly logic.

What we have here is the old world flushing out the dregs on the bottom — the last, clotted sediments of totalitarianism, which has been so aggressive and unshakeable in its harred toward anything unlike itself. The old world, where there is no room for tolerance, where children must fit into a uniform mould and all teachers are obliged to teach one and the same thing.

The opening remarks on *Press Club* were telling: one of Shchetinin's attackers said there were grounds for censure, but first he wanted to hear the arguments *for*. Amazing how the old Stalinist logic survives — anyone is obliged to defend himself to start with, and then the prosecutors decide the degree of the defendant's guilt. That he is guilty in the first place there is absolutely no doubt. The question is only how guilty he is and what the degree of punishment should be...

It is useless to argue with such accusers, and to mention them by name would only play into their desire to be noticed — their desire for self-promotion and self-glorification which is what they are really after. One must be extremely patient here, realising that they are the mouth-piece for the old world of the obsolete, an outlet for gross ignorance and malice. In terms of the broader picture, they themselves are not to blame for anything, just as an infant is not to blame if he plays with matches and burns down his home. But what will become of the school, what will become of our educational future?

As we see it, Shchetinin has made a tremendous educational discovery which, naturally, has gone unnoticed by his persecutors. He has come up with a totally new educational content. He has established a lifestyle pattern at his school, on his 'educational island', so to speak, in such a way that this lifestyle pattern has become its educational content. Of course there is a syllabus — of course there are subjects — the kids study both mathematics and biology. But this is just the raw material, while the 'lekos way of life has become the content — building construction, arranging for the provision of food, protecting one's living quarters, art, interpersonal communication. Moreover, everybody says that children are different, that they not only have different learning rhythms but also different

areas for the optimum development of their abilities. But so far it is only Shchetinin that has managed to make it so different children can learn entirely at their own individual pace. So a Shchetinin pupil may end up, for example, taking Grade 9 physics at the same time as a post-secondary course in architecture. This is *continuing education* in the true sense of the term.

Who else has been able to accomplish this?

It is a challenge even to imagine such a thing, let alone think it through and put it into practice.

Of course, Mikhail Petrovich Shchetinin is a genius. Of course he is an artist, a thinker and a prominent exponent of our culture.

But by the very same token neither he nor his creative genius can be squeezed into pre-set frames and clichés, either laudatory or derogatory. Shchetinin is someone whom one not only can but must engage in argument, someone to study with and, yes, someone definitely deserving of praise. An artist, after all, cannot live without some kind of praise or recognition.

But Shchetinin is not someone to be pushed around.

Nobody should be pushed around. And nobody should be utterly destroyed — because, sooner or later, shame will have its own. It's only in a mob mentality that people assert themselves by destroying others. The way to assert one's self in normal human society is by expressing respect and love — not only toward one's self, but toward others as well.

You can condemn such ideological 'killers' all you like, but what is that to them? They see condemnation as their reward. Their masters will make it all up to them. Meaning that they will keep trying all the harder. And they'll always get away with it. How can they be punished, anyway? People have simply

expressed their own opinions. They have simply made a mistake, and no punishment has been decreed for mistaken opinions. Yet they are not mistaken. In labelling the school a totalitarian sect they have merely been pursuing a specific goal, namely, stopping the public authorities from extending a helping hand to the new marvellous beginnings in Russia. Very few government officials, after all, will bother going to the school itself to ascertain the real status of things first-hand. They will most certainly try to keep as far away as possible from any contacts. *What if there really should be something wrong with the school?* they might ask themselves. Hence the school is put in a defenceless position — an easy target for the ‘killers’, who are just waiting to deal their well-calculated blows.

But what are we doing to help? After all, we see it’s not just the teachers that are under attack, but the children too. Look, more than three hundred Russian children are being trampled in the dirt, vilified and insulted, and this has been going on for two years now.

I don’t believe it’s Russians who are doing this. It’s nowhere near part of the Russian character. But we are passive observers of this poisoning. Highly-placed government officials and ordinary people alike are passively observing it. We are passive witnesses to an all-too-obvious pushing around and moral bashing of children. Who’s doing it?

Maybe Russian special-service officers can say. But God forbid we’ll have to tell our grandchildren that we once lived in a time when Academician Shchetinin’s school still existed in Tekos, home to three hundred children who dreamt about a marvellous Russia!

We ought to be able to tell our grandchildren living in their Russian domains that “we were around when this school you are so happy to go to now got off the ground. We saw it through during this difficult time.”

All that will come later. But right now...

Mikhail Petrovich, Tekos teachers, educational innovators! It's a challenge for you, of course, but you know... You know very well that "you cannot creep your way to the truth".<sup>14</sup> And children too! Children of the Tekos school. Forgive me, young Russians, if I don't manage to do everything I'm supposed to. But I shall be able to. So will many other people. What's the weather like there at the moment — nice and warm, eh? That's good if it's nice and warm. May the Sun shine over you more often, and warm up the dream within each of you!

Hoping to get some advice on how best to proceed, I described the situation to Anastasia's grandfather. The elderly fellow stood there leaning on his walking-stick (or staff) as he listened intently to what I had to say.

After hearing me out, including my request for advice, the old fellow stood silent for a while. His facial expression betrayed intense thought. Finally, he lifted up his head and, squinting his eyes as though scanning space, began speaking.

"Neither my father nor I myself, not even the high priest, was able to guess how our granddaughter Anastasia would have any success in deciphering the secret of all secrets and answering the question as to why the Earth has begun morphing itself into such a stinky mess. The tribulations of the

<sup>14</sup>This is a quotation from Anastasia, reproduced on the back cover of the Russian edition of Book 2, *The Ringing Cedars of Russia*.

flesh and the agitations of human souls are something Man has brought upon himself.

“If Earth’s earlier civilisations are supposed to be the smartest, why did they not preserve a happy lifestyle for their children?”

“Everything today can at last be returned to the original world of God’s creation. Nobody had any idea how to preserve it and avoid repeating mistakes of the past. And then, if you please, she created the unthinkable combination all by herself, with her own thought, and immediately translated it into reality. All questions will now be answered.

“Events that took millennia to unfold Anastasia has compressed into a single age. She is repeating them. Now everyone can experience the history of the Earth, the history of your country, for himself. They can evaluate, draw a conclusion and write that conclusion down in their own Book of Kin. Man will be able to learn for himself, with his feelings and his soul, the events of a whole series of millennia.

“You see, just as Anastasia is now being denigrated, your ancestors were denigrated in Ancient Rus’ as their culture was devastated.

“They accused the paganism and Vedism of Ancient Rus’ of being frightfully barbaric and a cultural wasteland. How can you make people feel and fully appreciate what things were really like back then?”

“All on her own our granddaughter revealed the aspirations of our Russian ancestors and took upon herself the harsh blows of her attackers — themselves the descendants of those who slandered our ancestors in front of their contemporaries, in front of their children and grandchildren.

“It is as though she were inviting everybody living on the Earth today to choose themselves a role in a historical play, then act out this role and observe the situation from the sidelines. And even those who start observing the whole scenario

as spectators will be playing the *role* of spectators and thereby experiencing and appreciating the events taking place, and they themselves will be drawn into the action.

“I’ve got a bit ahead of myself. You wanted to know who is responsible for the insults and hindrances. I’ll give you an answer. After all, that’s not hard for a priest.

“It is people that have been responsible for obstructing anyone who has understood and been inspired by the ideas expressed by our granddaughter Anastasia. But not just *any* people. These people are bio-robots controlled by a tiny sect which arose a long time ago, and far away from Russia.”

“But,” I observed, “one of the clippings I have of signed newspaper articles states that the missionary office of the Tula Diocese has come out against Anastasia. I’ve read reports from people in various parts of the country on the unkindly attitude on the part of individual Christian congregations. Do they too include, as you say, bio-robots, controlled by some kind of sect?”

“The human bio-robots themselves are unaware of this control. They were simply pre-programmed a long time ago. The programmers had not foreseen anything on the order of Anastasia and so the programme experienced a major malfunction — pointing it down the road of self-annihilation.”

“I can’t put together details like that in my head. Where can I find confirmation?”

“If you can’t put them together in your head, then put them all together according to your own sense of logic. Anyone capable of thinking will find it in their own sense of logic.”

“Put it together logically?”

“Yes. Simple facts everybody knows. Take a look and see how one can reason, using only facts as a basis.”

“How?”

“First of all, get a clear determination for yourself of just what Anastasia recommended everyone should do.”

“Well,” I said, “she recommended everyone obtain at least one hectare of land and set up a domain on it for their family and descendants. As she says, if every family creates this little corner of Paradise for themselves, the whole Earth will be transformed into a Paradise. She also explained how to grow edible plants to counteract human diseases. Furthermore, she talked about a healthy lifestyle, child-raising and an appreciation for Nature, stating that Nature is comprised of God’s thoughts in solution. In sum, she set up a model whereby Russia can become a flourishing land and a home to happy families.”

“In talking about kin’s domains,” Grandfather continued, “Anastasia in fact revealed the greatest secret of the Divine being. She showed Man the way back to Paradise. This becomes clear if you gather all her sayings scattered over the various books together.

“She revealed a secret which the dark forces had kept concealed for thousands of years. These dark forces had destroyed everything that could have helped people learn about it.

“In the second century of your so-called ‘Common Era’ the last book still written in Runic characters was destroyed. This book told about Man’s Divine way of life. It talked, too, about the possibility of mastering the Universe through the harmonious mastery first of a plot of one’s family land and then the planet called Earth as a whole.

“Man who had mastered the Earth to perfection was presented with the opportunity to master other planets in the Universe — not technocratically, but psychotelepathically.”

“But didn’t any of the great wise-men talk about the Earth the way she did, at least once?”

“There is not a single treatise extant today, Vladimir, where you will find the discoveries Anastasia has made. Moreover, in the past six thousand years people have been deliberately led astray, led away from understanding the Earth. They have

had all sorts of teachings thrown at them and told that that's where they'll find the truth.

"No sooner does Man study one doctrine than he recognises that there is no truth in it. He's presented with another to study, then a third, and so forth. So life goes on, and even upon reaching his deathbed Man still hasn't understood the essence of life.

"Yet Man is still intuitively attracted to the Earth, to the great adventure of understanding it. Realising that this attraction of human souls could not simply be cut off at the roots, the powers of darkness decided to cast a shadow over Man's attraction to the Earth.

"In short, there have been a great many deceptions throughout the ages. But over the past six thousand years nobody has interacted with the Earth with conscious awareness."

"'With conscious awareness' — is that what Anastasia recommends?"

"Yes, that is what she recommends, and what people take from her sayings. Anastasia has turned human society as a whole onto a marvellous path. And nobody will now be able to stop her. After all, a whole lot of people are already carrying her dream in their hearts."

"But still, the hindering and slandering of both Anastasia and her readers has not stopped. If they only realised they can't stop her, they'd give up their slandering."

"At the moment, Vladimir, through the efforts of the slanderers, the higher echelons of power are attempting to thwart the dawn of a new era here in Russia. In the near future they will try to present the idea in a distorted form in some other country. And they will try to discredit the idea.

"Anastasia was able to foresee all this ahead of time. Her course of action, carefully thought through in advance, impressed even the high priest. She realised that once she had revealed the essence of Man and the Earth, a lot of people

would not be able to hold themselves back from direct interaction with the Earth. Too hasty an action could be dangerous — after all, people would first need to create their Space in their thoughts.

“In Russia the slanderers are now trying to set up obstacles, but people are still not betraying their dream and are mentally creating their Space without letting up.

“Of course the system is strong, but you can’t just go accusing everyone indiscriminately. Church people are divided over Anastasia.”

“I know,” I said. “I have met with a number of clerics who understand and support Anastasia.”

“You and your readers must be aware of just who in the world might be disadvantaged by information surfacing in Russia today.”

“I would say there are many self-proclaimed ‘developed’ nations that would not want to see another, even more developed country on the horizon.”

“Yes, that’s logical. But each country has a lot of people. What do you think — are all of them up on what’s happening here, do they follow and analyse events taking place in Russia?”

“Not all of them, of course. But there are certain interested parties.”

“Who, for example?”

“Who? Well, for instance, companies that deal in medicines and supply them to Russia in large quantities, they would be disadvantaged if Russians stopped getting sick.”

“And beyond that?”

“Beyond that... There are a great many foodstuffs that we import from abroad today. If Anastasia’s plans were to be implemented, it would be the other way round: Russia would export foodstuffs to many countries. And in that she would have no competition.”

“Which means Anastasia’s plan would turn out to be unprofitable — not to the populations of these various countries but to certain classes of people, and these might be located in just about any country, including Russia itself. Do you agree?”

“Yes. In general, I do.”

“Now tell me, this class of people who possess enormous capital, might they not have their own intelligence services following global development trends?”

“Of course. All major companies have such services. If they didn’t, they would go bankrupt. There are even schools set up to train such people.”

“All right. So, major companies have services providing them with intelligence from various countries. And in turn they can influence the creation of favourable conditions for themselves?”

“Yes.”

“You agree. Good. If you pursue this line of reasoning, you will come to the conclusion that national governments have similar services at their disposal. There are many examples of this in history. The most significant of all is a tiny Jewish group which is involved in the governing of America, Europe and Russia. Though they have merely been an instrument in the hands of the high priest.”

“What’s the connection between this group and the Christian dioceses that have come out against Anastasia?”

“I indicated that those who serve as bio-robots are this type of people. They arose under the influence of the priests’ programme and the tiny Jewish group that is spread out in various places.”

“Where’s the proof of such statements?”

“In historical facts. They need to be examined meticulously and impartially.”

## CHAPTER SIXTEEN

# To Jews, Christians and others

In appealing to Jews and Christians, I am counting on the understanding of at least some adherents of these two mutually exclusive ideologies. I realise not everyone is aware of the reason I felt compelled to touch upon this topic.

The mere mention of the subject in my previous book<sup>1</sup> touched off a chain of hurt feelings — even though the essence of Anastasia's sayings has only one aim, namely, to shed light on the causes of conflicts between peoples — the same conflicts that have been going on incessantly over the past five millennia.

As I was working on the present volume, common sense dictated that it would be better to avoid the theme of Jews and Christianity altogether. Why stir up a good part of my readership and cause them to become disposed against me? Nevertheless, in view of the information in my possession, I do not feel I have a right to withhold it, no matter how distasteful it may seem to some people.

In presenting descriptions of the Jewish pogroms which have been going on for millennia, I simply cited historical facts, trying my best not to offer personal commentary on the events described or to treat them too subjectively.

*My only goal here is to try to prevent yet another large-scale pogrom against Jews which could take place simultaneously in several countries.*

Such a pogrom could conceivably be significantly greater in scope than that unleashed during the era of Nazi Germany.

<sup>1</sup>See Book 6, Chapter 6: "Imagery and trial".

In fact, it is almost inevitable. Only one thing can prevent it: a sufficient understanding of the causes of previous pogroms, along with corresponding actions to remove these causes.

I shall try not to resort to the statements made by the recluses of the Siberian taiga — Anastasia and her grandfather — even though they carry more and more weight with me personally with each passing year, since others might interpret them as sheer invention. I shall endeavour to draw proofs simply from well-known facts, or facts which can be easily attested by anyone who wishes to.

And so, as is known from historical sources, anti-Jewish pogroms date back to the time of the Egyptian pharaohs. And over the last millennium they have occurred approximately once every hundred years, in various countries which had become christianised by that time. And their scope has been expanding with each passing century.

The last large-scale attempt to annihilate the Jews occurred in Nazi Germany from 1939 to 1945. Jews were burned in concentration-camp ovens, shot execution-style and poisoned with gas. Various sources estimate the number of Jews exterminated during this time to be in the neighbourhood of six million.

The regularity of recurring events connected with the extermination of the Jewish populations of various countries over more than one millennium clearly and convincingly attests to the existence of certain causes behind these events. At the same time somebody has been attempting to carefully conceal the true causes.

The mass media — the press, radio and TV — have been painstakingly trying to avoid this most contentious issue. It only takes a single mention in the media to provoke accusations of inciting racial hatred.

*In actual fact racism can be incited more readily by remaining silent about the sensitive and controversial issues facing society today.*

A great many facts attest to society's sensitivity to the Jewish question. Many people will remember a speech by a Russian general, a member of the State Duma, in which he declared, in effect: "Get all the Jews out of Russia!"

A number of Duma members condemned the general. Naturally, he was given no coverage in the press. Nobody started an argument with him. Why? Was it because this general was just one lone voice supporting such a view, making it hardly worth wasting precious airtime on the whole Russian public's arguing with just one person?

I dare say, though, he is not alone. He has a lot of company, not just among his fellow-generals, but among Russian civil servants, among Russian youth.

The numbers of people willing to blame all their troubles on the Jews are steadily increasing. The silence on the part of the press is allowing them to build up to a critical mass. I can cite figures which more than eloquently attest to this.

Since 1992 more than fifty anti-Semitic books have been released in Russia by various publishing houses. This rather sizeable number does not include materials published by the underground press, nor a multitude of newspapers and magazines.

You won't find these publications gathering dust on store shelves or in publishers' warehouses. They are circulating from hand to hand. Many of them have been read so many times the covers are starting to fall off. These are publications in demand. And their readers tend to dismiss the absence of any discussion of the issue in the press by simply saying "the whole press is in the hands of Jews". Their arguments are so well developed that anyone without a thorough grounding in the subject will find it a challenge to counteract them.

I was sitting in my train compartment, on my way back to Moscow from St. Petersburg, when I walked two men and a girl. The men wore dark-coloured shirts and wide army-officer belts. They looked very much as though they had been exhausted by some rather strenuous activity and immediately lay down on the upper bunks.

I struck up a conversation with the girl, who, like the men, was dressed rather severely. It turned out they were on their way home from a convention of (as she put it) 'the patriotic forces of Russia'.

"And what issues were discussed at your convention?" I asked her.

"The struggle with world Jewry," she proudly replied.

"How can you, being here in Russia, struggle with someone who is, let's say, in Europe or America?"

"We've got our supporters in Europe, and in America too. We haven't contacted them all, but we know of many movements that share our views. Patriots in various countries are soon going to unite against world Jewry."

The girl was talkative, chatting on audaciously. Either by instruction or at her own initiative she was taking on the role of agitator for her (as she was convinced) 'patriotic' movement.

I asked the girl:

"Tell me, have the Jews harmed you personally in any way?"

"Sure they have. Because of them I'm forced to live in a poor and filthy country which keeps kowtowing to the West and licking up its crumbs."

"But what makes you think the Jews are the cause of the failures in our country?"

"Cause they've got this special plan of action. They deceive and plunder one country, then another, then a third. And no sooner does the first get back on its feet than they start cleaning it out again. They don't even consider us human beings.

Just look at what's written here. This is a copy of several passages from their Talmud."

Handing me a slim pamphlet, she opened it to a particular place and I began reading.

I shan't reproduce these citations here, as back then, during our conversation, it was hard for me to tell how much they actually corresponded to the Talmud. I was already aware that, according to the Old Testament, the Jews consider themselves to be a chosen people. But that's not the point. I was so struck by this young 'patriot's' rampant aggressiveness that I felt it was high time to get to the truth of the matter.

*The root cause of the incessant conflicts within many countries lies in the existence, within one and the same society at one and the same time, of two mutually exclusive religious ideologies.*

Let us examine the question of just *what is religion?* First and foremost, *it is an ideology which shapes a particular class of Man, plugging him into a particular programme of action.*

Religion — in this case, the religion of the Jews — defines the Jewish people as exclusively chosen by God, and even concretises and regulates its actions in respect to other peoples.

Christianity, on the other hand, says that a Christian Man is a servant, and some will get to relax in Paradise only after this earthly life. It's hard for rich people to get to Paradise. You must love your neighbours and share your possessions with them.

The Talmud says: "It's all yours", while the Bible says: "Give it all up". A good combination! These two mutually exclusive ideologies arose from one location — i.e., Israel. But that doesn't mean that they were worked out by Jews themselves. That's not the point. What is significant here is the inevitability of conflict.

The inevitability of conflict between adherents of the two ideologies can be attested by examining even the behaviour of very young children. Let's say we tell one child that all the toys he sees belong only to him, while we encourage another

child to give up the toys he owns when another needs them — what then is the result?

The second child may agree to hand over his toys once or twice, but he won't exactly feel love for the one who takes them. Sooner or later he will want at least something back, but nothing will be offered to him. As a result he will either start crying or try to use force.

And so it turns out that two differing ideologies may serve to facilitate conflict even between children as yet unborn.

In a case like this nationality doesn't even come into the question. You could turn all the ethnic Jews into Christians and all the Slavic peoples into practising Jews and still get the very same conflicts.

*It is not nationalities that are constantly warring with each other, but differing ideologies exploiting nationality for their own purposes.*

We have heard even very cultured and enlightened people warn us from time to time about the necessity of a tolerant attitude toward different faiths. The State Duma has adopted a law punishing those inciting ethnic or religious hatred. On TV we see leaders of different denominational groups getting together to participate in secular governmental receptions.

It all gives the appearance of something good, proper and normal. But it does absolutely nothing to reduce extremism. We still keep seeing placards with inflammatory slogans saying *Kill them!* and we still hear reports on people setting off explosions at non-profit organisations.

So, what's going on? It's all quite simple. The situation cannot be changed simply by eloquent words and appeals. To the contrary, such words only serve to conceal the real state of affairs and make it worse. It remains concealed, waiting for the 'zero hour' to explode and destroy the state.

“Let’s show a tolerant attitude toward all faiths!” Let’s indeed. I myself — like many others, I think — have nothing against a tolerant attitude.

But what then happens with the faiths themselves? This is what happens. Each of them tries with all their might to become as strong as possible and attract to their ranks the greatest possible number of followers. Finally, once they think they have achieved a sufficiently solid power base, two ideologies inevitably find themselves on a collision course, as is clearly confirmed by the history of incessant conflicts in the world. But over the course of many centuries mankind, as though pre-programmed, continues to make the same mistakes over and over again.

Did the priests know about this — the ones who created the two ideologies? Yes, they knew. How could they not know, these people who are capable of exercising a psychological influence on millions of people in various countries all over the world, capable of pre-programming human beings?

Was their aim really to make the Jewish people happy by telling them they were ‘chosen’? History shows quite a different motivation. Over the centuries the Jewish people have been used as a ‘throwaway card’, or scapegoat, serving as a shield to divert people’s attention from those who are ‘playing their own little game’, using both Jews and Christians as pawns in a simple chess match. This kind of pre-programming causes only suffering to both parties.

You can see for yourselves where all this is leading today. The world is witnessing an ever greater accumulation of aggressive energy. Conflict continues between Israel and Palestine. With their military technology and American support, Israel can occupy Palestinian land and subject the inhabitants to its own demands. But this is by no means favourable to the development of mutual respect between two neighbouring

peoples. Quite the opposite: the amount of aggressive energy directed at the Jews is sharply rising throughout the Muslim world. This energy will inevitably find its outlet, including incessant acts of terrorism on both Israeli and American territory. But it is not just the Israeli-Palestinian conflict that is at play here. More and more inhabitants of our planet are realising that the current path of development of our global civilisation is heading for a dead end.

People are being devoured by AIDS, drugs, crime and technological disasters. The overwhelming majority of Earth's inhabitants are deprived of the opportunity to consume food that will not harm their health, to drink clean, uncontaminated water and to breathe pure, unpolluted air.

But what if these masses of people were to acquire information about the true cause of social and technological disasters? What if leaders appeared who could show them the true instigators of this depressing global situation, and expose their game, their aims, their tricks?

This, and this alone, is what the world ideologists are afraid of. It is for this reason, in an attempt to shield themselves from universal human outrage, that they keep tossing out again and again that time-tested card, namely the Jews. *You bet — they're to blame for everything — down with them!* Angry masses launch attacks on Jews indiscriminately. That's what's been going on, over and over again, throughout the ages. They attack them, thinking they're getting rid of something evil, whereas all they're doing, in fact, is 'letting off steam'.

## CHAPTER SEVENTEEN

# Going deep into history

The account told me by Anastasia's grandfather struck me as being quite extraordinary, and yet quite simple in its proof of the extraordinary.

Subsequently I began comparing his arguments with those from other sources and was amazed at how closely the details coincided. These were facts which nudged logical thinking to certain conclusions. And now I shall try reconciling the conclusions drawn by Anastasia's grandfather with those of other sources.

Back during the years 30–100 of our Common Era small groups of believing Jews and dissidents living in Israel, Palestine or other parts of the Roman Empire, began to merge into an independent movement within Judaism. This resulted in the formation of a small Christian community comprising people who earnestly believed in the precepts of Christ Jesus and His imminent resurrection — an account attested in a great number of historical monographs, including the Bible.

In a word, there is no question that the mighty Christian doctrine began with the gatherings of a small Jewish community.

But now let us try to determine how the teachings of this small community suddenly found its way into not only the Roman Empire but also the territories of present-day Europe and Russia. How did people in so many countries come to hear of it — given that so few people knew about it even in Israel itself?

According to Anastasia's grandfather, the priests who controlled the Jews of that period realised that by tinkering with (or, rather, re-working) the Christian teachings in a certain way, these teachings could shape a type of slave mentality which would be very easy to control. This mentality either partially or almost completely rules out independent logical thinking, and Man begins to believe what he is told by the clergy or by someone else. More precisely: one ends up with bio-robotic people, subject to whatever programming has been instilled in them.

(A bio-robotic Man is a Man who consents — not entirely of his own free will, of course, but under the influence of special occult programming — to believe in an unreal world. And given that this unreal world has been constructed by someone for a specific purpose, this someone claims that he knows the laws of the unreal world and demands that Man subject himself to them. Whereas in fact he is subjecting the Man personally to himself.)

Next, the priests of Judaism, who at the time had not just the knowledge but also the practical experience of inculcating self-serving teachings into masses of people, trained hundreds of preachers from Christian ranks, gave them money and sent them off to various countries to instil the priests' own self-serving teachings into the local populations.

An incidental proof of this may be seen in the following.

At the end of the second century of our Common Era a number of Jewish Christian communities suddenly launched a comprehensive missionary campaign in various countries. This campaign was preceded by a period of intensified evangelisation (the publication and copying of the Christian Hebrew Bible).

Everybody knows perfectly well that even today publishing books requires money. In ancient times the production of each book required not just money, but big money. A goodly

sum would have been needed, too, for travel to other countries. It was largely merchants, or wealthy and prominent people, who could afford such travel. So how could such an extravagant, large-scale operation be carried out by a community consisting mainly of rural residents?

Of course there must have been expert theoretical training and a considerable amount of financing involved. The attention the priests paid to these rural residents, together with their moral and financial support, served to turn ordinary peasant believers into fully-fledged fanatics.

Just picture to yourself a Hebrew villager who is suddenly told:

“We see in you the makings of a great missionary and preacher. All you have to do is study up a bit, we’ll give you money and you’ll teach people, only... Only not here in our country. You’ll be going to other countries.”

And so they studied up, got their money and off they went — travelling to other lands. So, what was the result? Any success? Not a bit. The Jewish preachers were rejected by the people in every country they went to. It was more than just a simple rejection — at first they were listened to, then asked to leave. The more obtrusive among them were beaten or had dogs set upon them.

This is confirmed by many historical facts known from the Roman Empire of the period, where the major contingent of preachers was sent.

The only significant result of this massive campaign was the organising of a network of Christian communities in various parts of the Roman Empire. But there was no way they could shake the foundations of the traditional sects of the time. Ancient Rome was left just as pagan as in earlier times. These sects exerted no influence either on the political life of the Empire or on the formation of the new type of Man — the bio-robotic slaves the priests had dreamt about.

And the Roman emperors had absolutely no regard for this first wave of preachers.

The Emperor Nero, who was generally tolerant of the various pagan beliefs on the whole, took a particular dislike to the Christians. Christians were expelled from Roman territory by various emperors: Dionysius (249–251), Diocletus (284–285) and especially Galerius (305–311), one of the leading persecutors of the sect.

It was not until the second wave came that the preachers had any success. Unlike their predecessors, preachers of the second wave were no fanatics. The priests prepared them in such a way that they could speak eloquently about their faith on the one hand, while on the other they had a knowledge of psychology and were capable of influencing a person by using his aspirations to achieve their own ends.

The mission of the second wave of preachers was focused solely on the rulers — persuading them that their authority could be enhanced and perpetuated by the Christian faith, that it would make their state completely governable, controllable and flourishing.

It was to this end that certain dogmas were introduced as well, such as *All power is of God* and *The ruler is God's vicegerent on the Earth*.

Confessions opened the door to controlling the thoughts, hopes and actions of every citizen of a country. In a word, the preachers began persuading the rulers that the christianisation of a state would create the most favourable conditions for governing.

And on the surface it did, but only on the surface. In falling into these traps, the rulers had no idea they were actually falling under the control of other powers.

Christianity began noticeably consolidating its position in the Roman Empire beginning in 312 C.E., when Emperor Constantine was persuaded how advantageous the presence

of Christian churches within the state would be for him. He agreed to offer them patronage, even while still maintaining the temples to the Roman gods.

This led to a significant improvement in the position of Christianity within the Roman Empire, an increase in its wealth, and successive generations of Christian archbishops attaining a level of power rivalling that of the Roman senators.

This phenomenon, along with many others to follow, attests to the fact that Christian teachings were unable to develop and exert any serious influence on society without the support of secular rulers. Christian leaders themselves were always among the pretenders to power.

While the Roman Church continues to enjoy great power even today, the Roman Empire disappeared. A coincidence? An exception to the rule, or a predictable pattern? This question can be answered by examining the history of nation-states in the ensuing centuries, right up to the present day.

There is not a single state on our planet anybody could name which began flourishing with the arrival of Christianity. On the other hand, one can name off a whole list of states which succumbed to the same sad fate as the Roman Empire.

And one more interesting historical fact: in every single country where Christianity was officially adopted, it wasn't long before non-Christian Jews began to appear and start engaging in rather strange activities. They became wealthy with extraordinary ease.

In every Christian country they pursued their activities on such a large scale that they couldn't help but be noticed by both the citizenry and the governments of these countries. And when they reached a certain level in a particular land, the people started reacting violently toward them and the government began expelling them abroad.

We have access to a whole lot of reports of anti-Jewish pogroms in various Christian countries, dating back to the

beginning of the eleventh century. In 1096 dozens of Jewish communities were plundered on the Rhein and their residents exiled. In 1290 Jews were expelled from England. At the end of the fourteenth century more than 100,000 Jews were exterminated in Spain. (Granted, some time later Jews quietly began coming back to these countries.)

This list of historical facts could all too easily be added to. But no need. It is already absolutely clear that these situations, so similar to each other and constantly repeating themselves over many centuries, are the result of pre-programming.

And since losses have been suffered by both the members of the Christian world and the Jews themselves, there must be a third party involved which remains free from loss. For this third party both types of Man — the Christian and the Jew — are reduced to the status of mere bio-robots, easily manipulable.

Who is this third party? Historical researchers attempting to dig out the roots and discover the essence of the lawlessness that has been taking place constantly in the world over the millennia have always pointed only to the Jews. They are to blame for everything, or so the claim goes. But if there exists a third power, both the Jews and the Christians turn out to be nothing but puppet bio-robots in the hands of this third power.

But is it possible to determine and prove its existence today? Of course it is. By what means? By means of historical facts and logical thinking. You can judge for yourselves.

Within the Jewish society there is one tribe in particular — or layer, ethnic division, caste: you can call it what you like — the name doesn't really matter. For brevity's sake let's call them *Levites*.

Some historical sources say the Levites were descendants of the Egyptian priests. Other more familiar sources, in particular the Old Testament, give us to understand that the Levites occupied a special position among the Jews.

For example, according to Hebrew law they were exempt from participation in military action. They were not compelled to pay taxes or tributes to anyone. The Levites were not included in the Hebrew census described in the Old Testament.<sup>1</sup>

When the Hebrews were on the march and the time came to make camp, the tribes of Israel — numbering anywhere from 50,000 to 150,000 — pitched their tents in a circle, each one in a pre-designated spot. There were indications of the north, south, east and west co-ordinates as well as the locations where guards were to be posted. The Levites invariably occupied the centre. Hence protection of the Levites fell within the duties of all the other Hebrew tribes.

And just what did the members of this class of Levites do?

It was their duty to appoint from among their ranks officials to conduct services, and enforce Jewish laws — laws which, among other things, regulated what to eat, what to do with apostates and where to go. The laws were strict and specific. They covered all one's waking hours from morning 'til night. They showed what lands people could occupy. Also whom they should fight.

Thus the Levites were the *de facto* rulers of the Jewish people. And, all things considered, most definitely qualified for the job.

<sup>1</sup>Special provisions for the Levites are described in the first chapter of the Book of Numbers in the Bible (verses 47–54).

It is hard to tell whether the Levites were actually Jews themselves. Few of the laws every Jew was supposed to abide by extended to them. For example, while universal Jewish law required circumcision of a child on the eighth day after birth, the Levites were exempt.

Thus, with their knowledge of the secret science of the Egyptian priests and their capacity to do experiments, engage in observation and contemplation free from military duties and the work routine everybody else was so accustomed to, they have been in a position to constantly perfect their knowledge from generation to generation right up to the present day.

Now, how could that be — ‘up to the present day’? People may wonder why we haven’t heard about the ethnic group or social class known as the Levites. The English, Russians and French, for example — everybody knows about them. But why do so few people know about the most intelligent people of all, the Levites, especially since they are the ones governing everybody?

The reason is that just like the Egyptian priests, they too must remain in the shadows. In case anything happens, full responsibility will fall on the Jews, the ones who carry out their will.

Jews have been persecuted for centuries in various countries of the world. Persecuted for what? For using any means they can to make as much money as possible. And many of them are successful.

Anyway, what have the Levites got to do with this? What benefit or interest would it be to them if Jews in England, Spain or Russia went about their politicking and transferred a major part of public or private funds to their own bank accounts — in other words, pocket the money for themselves? Wouldn’t both the rulers and the people of some country or other catch sight of this ugly phenomenon, and start a violent

reaction against Jews and mistreat them? Something like that could go all the way up to the Levites. Hence the impression of illogicality in the actions of the 'wise Levites'. And what point would there be in the Levites' helping the Jews with sound advice or in coming up with clever intrigues for them — manipulating whole nation-states at a time?

Well, as it turns out, there *is* a point. A matter of simple, direct and specific interest. Money! Wealthy Jews, no matter what country they find themselves in, are obliged to pay a part of their profits to the Levites. Proof? Take a look! According to the Old Testament, the Hebrews are obliged to give a tenth part of their income to the Levites. Here is the exact wording from the Bible:

All the contributions from holy-gifts, which the Israelites set aside for the Lord, I give to you and to your sons and daughters with you as a due in perpetuity. This is a perpetual covenant of salt before the Lord with you and your descendants also.

The Lord said to Aaron: You shall have no patrimony in the land of Israel, no holding among them; I am your holding in Israel, I am your patrimony.

To the Levites I give every tithe in Israel to be their patrimony, in return for the service they render in maintaining the Tent of the Presence. In order that the Israelites may not henceforth approach the Tent and thus incur the penalty of death, the Levites alone shall perform the service of the Tent, and they shall accept the full responsibility for it. This rule is binding on your descendants for all time. They shall have no patrimony among the Israelites, because I give them as their patrimony the tithe which the Israelites set aside as a contribution to the Lord. Therefore I say unto them: You shall have no patrimony among the Israelites.

The Lord spoke to Moses and said, Speak to the Levites in these words: When you receive from the Israelites the tithe which I give you from them as your patrimony, you shall set aside from it the contribution to the Lord, a tithe of the tithe. Your contribution shall count for you as if it were corn from the threshing-floor and juice from the vat. In this way you too shall set aside the contribution due to the Lord out of all tithes which you receive from the Israelites and shall give the Lord's contribution to Aaron the priest. Out of all the gifts you receive you shall set aside the contribution due to the Lord; and the gift which you hallow must be taken from the choicest of them.

You shall say to the Levites: When you have set aside the choicest part of your portion, the remainder shall count for you as the produce of the threshing-floor and the wine-press, and you may eat it anywhere, you and [your sons and] your households. It is your payment for service in the Tent of the Presence...<sup>2</sup>

Someone might wonder how the Old Testament, more than two thousand years old, relates to our modern times. There is an answer. Aren't there still rabbis and other clerics among Jewish believers today? Of course there are! And, of course, the majority of Jews still observe their religious canons. If that is so, then just try to picture the colossal amount of capital held by the Levites, scattered through the banks of various countries!

Besides that, they don't have to worry about maintaining or multiplying their capital. Most bankers in a lot of countries are Jews, and that is their job. Of course, at the right moment

<sup>2</sup>Numbers 18:19-31 (cited here from *The New English Bible*). Note that "the Tent of the Presence" corresponds to "the tabernacle of the congregation" in the older Authorised Version of the Bible.

the Levites can drop a hint as to where their capital should be invested. They can suggest which régimes, alliances or groups opposing existing governments should be either supported or, alternatively, exterminated by financial intrigue.

There might have been reason to doubt Anastasia's information on human society all over the globe being controlled by just a handful of priests. But now, after going through this chain of logic, there can no longer be any doubt for anyone still capable of logical thinking. I'm not talking about fanatics.

The logic may be outlined as follows:

Approximately one million Jews came out of Egypt under the control of the priests. The priests' close assistants were the Levites, to whom they entrusted the task of shaping the Jews into a pre-determined type of individual Man. To this end they created an ideological religion, which set up a series of rituals along with a unique way of life.

The Levites managed to carry out their appointed task. The ideology created several thousand years ago still weighs on the Jews even today. It is what distinguishes them from the host of other nationalities living on the Earth.

One of the basic tenets of this ideology is the declaration that, of all the national groups populating the Earth, God selected the Jews alone as His chosen people.

So, this ideology still exists today, the Jews still exist today, and the conflicts continue and many people know about them. But where are the Levites? Do we ever hear much about them? Hardly at all. And therein lies their subtlety — or their wisdom — you can call it what you like, but they exist.

Now picture to yourself a rather small group of people living on this Earth who possess a greater degree of esoteric knowledge than anyone else — a group that has, over the millennia, been constantly adding to their experience of practical influence over masses of humanity.

Is there any body that can be compared with them — say, some sort of state-sponsored institute set up to study issues of national development or the formation of ideologies?

This is not possible for a variety of reasons, including the following:

The Levites have been passing their esoteric knowledge down to their heirs over the generations, and are continuing to do so today.

Modern science rejects esoteric knowledge and therefore does not consider it a serious object for research, to say the least.

This absurd situation did not come about haphazardly. But why is it *absurd*? Judge for yourselves.

On the one hand, the state accords official recognition to a number of religions, and they too are quite esoteric. The state even sets up favourable conditions for their financial support. Yet the state does not make any provision for *scientific study* of esoteric tendencies. This means, in effect, that within the territory of the state there are legalised structures capable of influencing the mentality of its citizenry. But the secular government has only the foggiest idea of what this influence consists of in actual practice. So, in the end, who is controlling whom?

Secondly, not only the government but all its thinking citizens should try to learn the lessons of history. History makes a very good school of life. But, for this, one has to know one's history. Those who rule the world know it perfectly well. Most people, however — and that includes those in the government — know next to nothing of the history of the state in which they live. More than that, the little history they do know is distorted. Russia is a perfect example.

It wasn't that long ago that we heard in our schools and colleges, in art and especially literature — just about everywhere, in fact — how terrible life was for our grandmothers and grandfathers in Tsarist Russia. For most of us this belief was a sacred cow. For most of us it went far beyond a belief — people made such a fuss over those that delivered us from the terror of tsarism. For many people the commissars in their leather jackets were heroes, while the symbol of reactionary extremism became the priesthood.

And then all at once, before our very eyes — note, not over two or three generations or centuries, but right before our eyes — history changed.

The commissars in their leather jackets, it turned out, were scoundrels, subjecting the people to genocide. And after tsarism we lived in the most terrible and totalitarian state in the world. And again, the majority of the people believed it. And once more the majority made a fuss over those who had delivered them from the yoke of a totalitarian state.

I am not about to say which of these régimes is the better or the worse. But it seems that we should all ponder this phenomenon of change — something amounting to a whole sea-change in our consciousness over an extremely brief period of time. We should ponder the question of why it changed so radically. Did the changes take place all by themselves or under somebody's manipulation?

Here, too, it is not difficult to guess: for a long time now it has been all too easy to manipulate our consciousness, and this is what is still going on today. We are like guinea-pigs in somebody's hands.

It is only the masters of manipulation that are competing amongst themselves. It is they who render us incapable of perceiving historical reality.

But let us try to discern just what this reality, in fact, is all about. Let us try to determine historical reality not on the basis of somebody's words, but of our own power of reasoning.

Note how every day on the TV, programme after programme keeps showing us first-hand how husbands subtly betray their wives and vice-versa. We are constantly being called upon to pay attention to scores of non-existent problems, but God forbid any serious issue will be raised by our politicians, journalists or writers! Such an issue makes a brief appearance only to be immediately lost in the daily soup of gossip, violent TV series, psychotropic advertising and mud-slinging.

What we need is a thoughtful analysis of what's been going on, a critical analysis of the status of life on our planet today, and the working out of a plan for the future. We need a new ideology. An ideology that won't cause the world's peoples to come to blows with each other, but will actually unite them.

But repeating a thousand times how necessary it is to do this, even shouting it a thousand times, won't make it happen. Even if we were to gather all the leading scholars of the world and sit them down together to work out this new ideology, again, nothing would come of it. Only an unending argument.

If science were capable of working out such an ideology, it would have come up with it and put it into practice long ago, at least in some country or other.

Anastasia. It doesn't matter any more who she is. That's not the point.

*In the face of this ongoing lawlessness, Anastasia has given to the world the idea of family domains. Now it is becoming abundantly clear that in very simple terms she has outlined a philosophy, a new ideology, which has remained and still remains unshaken in human hearts ever since the creation of the world.*

*Kings and paupers, Christians and Jews, Muslims and Shintoists, Russians, Chinese and Americans, have always found the greatest grace and solace for their souls in the bosom of Divine Nature.*

*Anastasia's philosophy is the philosophy of uniting mankind not with words, but through concrete action, by merging the interests of different peoples of the world. Experience has shown that it is accepted by people of different nationalities, including Jews. And I have documented proof of this.*

And I invite Jewish analysts, Christians and ideologues of patriotic movements to examine her ideas and philosophical aspirations. My invitation extends to leaders and followers of any religious denomination, either large or small. The very act of examination is a creative process in itself, which can lead to a union of opposites — to a “conjoint creation and joy for all from its contemplation”,<sup>3</sup> as God Himself wanted.

<sup>3</sup>Quoted from Book 4, Chapter 2: “The beginning of creation”.

## CHAPTER EIGHTEEN

# Take down Jesus Christ from the cross

I'll say this right off: one must be careful not to confuse the teachings of Jesus Christ, the selfless deeds of Russian church elders, with the occult set of rituals we are confronted with today. It is quite possible for the most beautiful teachings to be neutralised by occult devices.

As you must realise yourself, Christ Jesus has nothing to do with them. Moreover, He himself continues to hang on the cross to this day, thanks to the efforts of the occultists and our own ignorance.

I have deliberately devoted a number of chapters to the power of the energy of human thought, through which people are able to create images. If this is understandable, then tell me: which is the clearest image of Christ Jesus prevailing in your thought — in the thoughts of the majority of believers? A straw poll points to a crucifix — the image of Jesus Christ crucified on the cross.

You will find crucifixes in every Catholic and Orthodox church. Who thought up an occult device like this, and for what purpose? Did Christ Jesus himself want this particular image to be front and centre, predominating over all the others? Of course not!

But we — yes, we — continue to project the image of the crucifixion — note, not the resurrection, but the crucifixion — through the power of our own thoughts. And the image we kiss is not of the resurrection, but of the crucifixion.<sup>1</sup> And that is how we still keep Him on the cross.

This simple occult device uses the energy of collective human thought in shaping an image.

And Jesus Christ will remain hanging on the cross until we realise this and take him down from it with our thoughts — until we stop giving in to occult machinations.

Right from the start, in shaping the various religions the priests tried to imbue them with their occult rituals and teachings.

Any religion — even the very brightest, one which summons people to kindness and noble deeds — if interwoven with the priests' nuances, can be a powerful device in their hands. This device has enabled them to subjugate whole entire nations and set them at odds with each other, to the point of utter self-annihilation. That's the way it has been and still is today. Many contemporary religions still today involve occult rituals and teachings whose meaning and degree of influence on mankind is known only to the priests.

The projection of Jesus Christ's crucifixion by a great many people's thoughts is due to a particular occult ritual. But the people themselves involved in this projection — or, rather, their souls — will be crucified over and over again as long as they project this image.

The collective thought of the crucifixion is so strong that it can penetrate right through to the flesh of people today. Jesus' bleeding wounds periodically appear on the bodies of certain believers — this is known as the *stigmata mystery*.<sup>2</sup> Many

---

<sup>1</sup>In some Christian churches, including the Russian Orthodox, kissing a crucifix is part of accepted ritual.

<sup>2</sup>*stigmata* — marks or pain sensations in places on the body corresponding to Jesus' wounds from the crucifixion. The word *stigmata* comes from the Latin word for *marks* in the Vulgate edition of Galatians 6: 17: "I bear in my body the marks of the Lord Jesus" (quoted here from the Authorised Version). The majority of stigmatics are said to be female members of Roman Catholic orders.

scholars believe that the *stigmata*, or bleeding wounds — are a symptom of mental illness. I would add that this is not a disease affecting a single individual, but rather a whole segment of society, and that its root cause is an occult ritual observance induced by the priests.

However, instead of making a thorough investigation of this phenomenon, some enterprising people have exploited it for commercial purposes. Take, for example, the city of San Nicolás in Argentina, home to the stigmatic Gladys Motta:<sup>3</sup> all around her house are signs of a brisk trade in everything directly or indirectly connected to her.

Anastasia's grandfather put it this way:

“People murdering each other, along with what you call *terrorism*, is rooted in the teachings of the priests which they have infused into many religious denominations, both large and small.

“They are the ones who came up with the doctrine that Man's true Divine life is not on the Earth but somewhere in another dimension. They are the ones who invented the image of a Paradise apart from the Earth God Himself created. It is because of this doctrine that so many religious fanatics manifest an attitude of neglect toward life on the Earth. It takes but a small amount of pressure exerted on their mind to induce them to kill either themselves or others.

<sup>3</sup>*Gladys Quiroga de Motta* (1937–) — one of the more celebrated stigmatics in the world today. An ordinary housewife living in San Nicolás de los Arroyos (a small town 230 km north of Buenos Aires), Ms Motta had her first vision of the Virgin Mary on 25 September 1983, a vision repeated many times since. Ms Motta's stigmata first appeared in November of the following year and then twice a year since, during Advent and Lent. Every year on 25 September thousands of pilgrims (now more than a million annually) descend upon the town, hoping to benefit from her presence. In recent years the increased tourist trade in San Nicolás, including the sale of 'Blessed Virgin Mary' souvenirs, saved the town's economy following the privatisation of the local steel mill.

“Anastasia has tried to bring this information to our attention through many different words and phrases. But not everybody will grasp what she says. Not everyone will understand my words. You, Vladimir, along with your readers, should give careful thought to what we have said, and cite your own examples and proofs. A number of different voices blending into a single whole will be able to bring liberation.

“Look carefully at the root cause of war and terrorism today and you will clearly see the influence of this monstrous teaching.”

The Siberian elder went on at some length on this subject. He appeared to be just a little excited, sometimes pausing to stroke the cedar pendant hanging around his neck before returning to the topic of how we ourselves need to be more aware of the manifestation of occult rituals and teachings.

“No spiritual teachers will be able to save people from these doctrines if the people don’t start thinking for themselves and learning to recognise them,” Grandfather said.

Believing that I had grasped the significance of his statement, I set about investigating the phenomenon of terrorism in our lives. In the future this is something we shall have to do all together. I shall merely start the ball rolling.

## CHAPTER NINETEEN

# Terrorism

And so, in recent years, a wave of acts of terrorism has swept across many lands. Memories of large-scale events, such as those of 11 September 2001 in America, still haunt people's minds. A fearful terrorist act took place even more recently in our country: from the 23rd to the 26th of October 2002 terrorists held more than 800 people hostage at the Moscow Theatre Centre on Dubrovka Street during a performance of the musical *Nord-Ost*.<sup>1</sup>

In between these two major acts of terrorism quite a few others have occurred, not quite so spectacular, in various parts of the globe, claiming human lives.

On each occasion different governments have angrily denounced the terrorists involved. Their 'special services' keep mouthing assurances that the guilty parties will be punished, at the same time increasing the level of precautionary security measures.

<sup>1</sup>*Nord-Ost* (lit. 'North-East' in German) — a Russian musical play based on a novel by Veniamin Kaverin and telling a romantic story set in the Severnaya Zemlya Archipelago (in Russia's Far North) in 1913. During the performance the premises were seized by a group of well-trained and well-armed commandos (including a group of women with explosives strapped to their bodies) who demanded from the Russian government the immediate withdrawal of Russian troops from the war-crippled Chechnya republic. The theatre was eventually stormed by Russian élite 'special troops' but the deadly gas they used ended up killing 130 hostages on the spot and causing many more to die afterward. The theatre was closed temporarily after the hostage crisis, but re-opened with the same production the following February. Subsequent attendance was poor, however, possibly because of fears of renewed attacks, and the play was cancelled in May 2003.

An international coalition to combat terrorism is already at work. Even today, however, the problem shows no signs of letting up. Quite to the contrary, it is taking on ever greater proportions and becoming increasingly refined in its methods. It is hard to escape the impression that someone has been making masterful ploys to keep leading both governments and their special services down the wrong path.

The true source and chief organiser of many of the world's terrorist acts came in for a brief mention not too long ago in Russia. During the October 2002 hostage crisis the major TV networks featured a whole host of interviews and commentaries. This included statements from the Emergency Response Headquarters, presented by the Deputy Minister of Internal Affairs, among others. This trim, grey-haired man spoke tersely, almost in military fashion. His speech included no hesitation-sounds like *uh-uh... uhm...* His sentences were marked by thoughtful content and sensitivity, indicating that his thinking was relatively quick and precise.

He was one of the first to declare that “we’re dealing here with religious fanatics”. Quite possibly not very many people paid attention to this particular phrase, but for many who did understand, it resounded like a bolt from the blue. For the very first time — from the lips of a Deputy Minister of Internal Affairs yet — one of the fundamental tenets of terrorism was called by its real name.

This was followed by the floating of another concept: *Islamic fundamentalism*. Rumours began circulating that Islamic fundamentalists had declared war on Christians and Jews — Israel, Russia and the United States of America in particular.

The question arises as to how to fight against religious fanaticism. I suggest we all calm down and take a more thoughtful look at the situation.

Let us first decide whether religious fanaticism is found only in Islam or whether it exists in other religions as well.

Of course the latter is true. Let's not forget history. Think of the numerous Christian crusades. Think of the painting of the Boyarynya Morozova.<sup>2</sup> Think of the names of all the martyrs ready to sacrifice their lives for the sake of some religious dogma — martyrs who were elevated to sainthood after death.

The fact becomes patently obvious that it is not religion as a whole, but rather specific dogmas infused into various religions which make people indifferent to their own life. The religious suicide-fanatic is quite confident that, far from being indifferent to life, he is crossing over into real life.

How does this happen? Among any community of believers, Muslim or Christian, there can always be found a group of radical adherents to a particular dogma, whose faith can be honed by occult rituals to the point of fanaticism. The result is a kind of bio-robot who believes in something he himself can't see or understand logically.

Subsequently, those who are familiar with the functioning of the mind know perfectly well what buttons to press on this bio-robot, and they press them. Not with their fingers, of course. They simply indicate the target the bio-robot is to destroy for the sake of a bright future. Then the bio-robots

<sup>2</sup>*painting of the Boyarynya Morozova* — a famous canvas painted in 1887 by the Russian artist Vasily Ivanovich Surikov (1848–1916), showing the chained Boyarynya (Duchess) Feodosia Morozova on a horse-drawn sleigh surrounded by her 'Old Believer' supporters, all crossing themselves with two fingers, in defiant protest against the politically motivated reforms of the Russian Orthodox Church. The Church's new decree at the time that three fingers were to be used in making the sign of the cross was one of the main points of contention in the *niskol*, or schism, that split the whole institution apart in the 17th century. Tsar Alexey Romanov (father to Peter the Great), who instigated the reforms, had the Boyarynya (pron. *ba-YAH-rin-ya*) arrested in 1671 and planned to execute her, but fear of public unrest caused him to commute her sentence to imprisonment in Borovsk, where she was kept in a pit and died in 1675.

begin to work out the termination operation on their own and proceed to carry it out. Their own earthly life no longer has any meaning for them. They are, after all, confident in their own transition to a better, heavenly existence.

*And so long as there exists the doctrine of goodness being attainable not on the Earth, but somewhere else, no army or 'special services' will succeed in eliminating suicide-bombers.*

Let us picture the following situation. Let's say the 'special services' belonging to the major powers have got together and through their joint efforts have managed to get rid of every last terrorist on the globe. But what will that change? New terrorists will simply be born — as long as the doctrine which produces them continues to exist.

So what is the solution? Of course one cannot do without traditional precautionary measures. But along with these it is essential to understand how dangerous the doctrine is and to eliminate it before it produces more and more suicide-bombers.

Understanding! That is the most important thing today! Otherwise the struggle against terrorism will simply turn out to be a joke.

Picture the following situation. A religious fanatic, a suicide-bomber, seizes an aeroplane and aims it at some significant target in a major populated area. The authorities start negotiating with the terrorist — they tell him they are ready to meet any demands he has. But what these negotiators do not realise is that the religious fanatic's real goal is not the satisfaction of his demands. His aim is to die and assure himself entry into the non-earthly Paradise he has imagined for himself.

This dogma of a non-earthly Paradise, projected by the collective thought of people of various denominations, influences unbelievers too. For millennia now it has been exerting a most destructive influence on all mankind.

What I'm about to tell you now may seem unrealistic, even fantasaical. Still, the only way to solve this problem without violence may be the following.

*It is absolutely essential that Orthodox Church patriarchs, Islamic muftis,<sup>3</sup> religious elders and (above all) Christians, Catholics and Muslims come together for a conference, to carefully examine the situation in the world today and change the life-destroying doctrines in their religious teachings. It is essential that religious fanatics be helped to regain their human perspective on life. It is essential to declare: "Our Father is here, on the Earth, and not somewhere else!"*

And what if the religious leaders don't get together? What if they don't make any declaration like that?

Not to worry.

*It has already been made!*

People aren't turned on any more by the leaders of our religious denominations exhorting everyone to live in 'peace and friendship' with each other. Just the mere statement that "we will have nothing to do with terrorism" is no longer believable. A more radical step is required.

I indicated that a meeting and declaration such as this may be dismissed as unrealistic. Let's examine why. Why are we reluctant to believe that highly-placed, highly religious leaders would not be able to simply come to an agreement amongst themselves? After all, if *they* can't come to an agreement, then what can you expect from rank-and-file believers?

<sup>3</sup>*mufti* — an Islamic leader who has studied and is authorised to interpret Islamic law.

If they can't come to an agreement on their own, then common-sense elements in society and governments need to give them some help.

It is absolutely essential that they talk amongst themselves and agree. Otherwise bombs will start talking for them, in a big way. Much better for the *mind* of Man to do the talking. The mind of the children of God.

At first glance it may seem as though it might take a rather long time for Anastasia's ideas to effect any positive transformation in Russia, let alone other countries, seeing how gradually human consciousness ordinarily changes. However, experience has shown that in the case of many readers it can change instantaneously.

Let's look at what might happen in Chechnya<sup>1</sup> if the Russian government, the State Duma, had adopted a law granting every willing family a hectare of land on which to establish a domain of their own along the lines recommended by Anastasia. The twenty thousand refugees who have been living with their families in tents for three years now would be granted their own domains. Over those three years each of those same tents which are now forming dirty tent cities would already be standing in its own splendid garden. Some of the residents would have already managed to build themselves a house.

<sup>1</sup>*Chechnya* – a small, mainly Muslim republic within the Russian Federation (see footnote 4 in Book 5, Chapter 17: "Questions and answers").

Who is stopping this from coming about today? Somebody who favours not peace, but its opposite. Somebody who is trying to prevent any positive changes from taking place in Russia.

Your efforts are wasted, chaps! I doubt any of you has even the foggiest idea of just who Anastasia is, or what powers she embodies within herself.

I'll say one thing: it's not simply that she *will* create what she has thought up, she has *already* created it. It's already coming to pass, and your opposition confirms it. Any building site has its share of garbage, but sooner or later they clean it up and plant flowers.

## CHAPTER TWENTY

# Pagans

The main criticism levelled against Anastasia comes down to the allegation that she is a ‘pagan’ — without even the slightest proof or examination of the ideas put forward by this taiga recluse. Though Anastasia herself clearly and distinctly called herself a *Vedruss*.<sup>1</sup>

Well, then, if she is a ‘pagan’, what does that imply? Japan, even today, is practically a pagan country. The Roman Empire, in its heyday, was pagan, too. Our forefathers and mothers were also pagan. But much more than that. At the time when the Egyptian state and the Roman Empire were flourishing, Vedic culture was still reigning in Russia.<sup>2</sup>

So, should we be proud of our pagan history and heritage, or be ashamed of it?

We are told that our heritage is something to be ashamed of.

The words *paganism* and *pagan*<sup>3</sup> have been turned into word-symbols — symbols designating something bad or terrible.

<sup>1</sup>*Vedruss* (pron. *vid-ROOSS*) — see Book 6, Chapter 4: “A dormant civilisation”.

<sup>2</sup>*Vedic culture* -- see the section on ‘Vedism’ in Book 6, Chapter 5: “The history of mankind, as told by Anastasia”.

<sup>3</sup>*paganism, pagan* — In Russian, the word *paganyi* (now spelt *poganyi*) means ‘foul’, ‘unclean’, ‘vile’ and has been frequently used by Christian ideologists — in conjunction with *yazychnik* (‘pagan’) — to refer to adherents to Russia’s pre-Christian religion, as well as ‘non-believers’ in general. Thus under the influence of the Christian church over centuries the term *yazychnik* has acquired a strong negative connotation. *Yazychestvo* (‘paganism’) and *yazychnik* (‘pagan’) — both stressed on the second syllable — are derived

The word *Christian* has also become a word-symbol. But it symbolises, by contrast, spirituality, decency, enlightened thought, closeness to God.

Today we have the opportunity to observe the Christian as a type, and judge his worth by his fruits.

We can judge by our own modern way of life... What am I saying? — *we* are not in a position to judge anything! We simply can't compare this type with the way of life led by our pagan forefathers and mothers, which people today are all too prone to curse, hidden as it is from our sight.

In sum, what we are told about the history of our country (as served up to us) is the following:

Our ancestors were some kind of horrible dark people, but then 'enlighteners' arrived, bringing with them a new ideology worked out in Israel — namely, Christianity.

The Russian Prince Vladimir adopted it and baptised the whole nation of Rus'.<sup>4</sup>

Not long ago we celebrated the millennium of this event. But what is a thousand years? A mere split-second against the backdrop of billions of years. Well, let's think in terms of

---

from the word *yazyk* (literally, 'tongue' — meaning a territory where the population shares the same language) — and were used by early Christians in Russia to refer to the totality of Russia's (non-Christian) people, who spoke a language different from that of the Christian newcomers. The English term *pagan* is derived from Latin *paganus*, meaning 'rural' or 'of the village' — rural areas were much slower than urban populations to accept Christianity. Note that for the same reason the word *villain* (derived from *village*) in English has also acquired a negative meaning.

<sup>4</sup>*Rus'* (pron. *ROOSS*) — the name given to the large East Slavic state in the tenth century, north of the Black Sea, with its capital at Kiev. In 988 Prince Vladimir of Kiev accepted baptism from the Byzantine (Eastern Orthodox) church and shortly thereafter presided over a mass baptism of Kiev residents in the Dniepr River. In return he obtained the hand of the Byzantine Emperor's sister in marriage as well as a military alliance with Byzantium.

not a split-second, but a single day. That's very important — being able to compress time. Now you will see what comes from this line of reasoning.

Let's say you awake one fine sunny morning and see visitors at your door. They proceed to tell you that your parents are bad and horrible pagans, that you must become Christian and instead of communing with Nature, you must ask forgiveness for your sins, since your parents were such sinners that their sins have attached themselves to you.

And right off you agree with the foreigners' statements. You follow them to their temple and kiss their hands. You ask for their blessing and try not even to think about your parents. You try to erase them from your memory, leaving behind nothing but the notion *horrible pagans*.

This is the picture that emerges from our figurative compression of time.

Over the past thousand years the 'foreigners' have focused our attention on a multitude of different events: they tell about who went to war with whom, what splendid buildings they constructed, who married whom among the princes or kings, who gained power and how. But by comparison with one's attitude toward one's parents and their culture, this has no essential significance. All these other events, disasters and woes will simply be a consequence of the fundamental act of betraying one's parents.

"But we never betrayed our parents," someone will argue. "Such events took place more than a thousand years ago, and those were quite different people who lived back then."

Well, I could paraphrase it, and expand the time frame, but it wouldn't make a scrap of difference.

Your distant (very distant) foremother was a pagan. She loved and understood Nature. She was acquainted with the Universe and knew the meaning of the rising Sun. She gave birth to you... She gave birth to you, in the far-distant past, in

a marvellous garden. And your beautiful foremother rejoiced over you, and your father was happy at your appearance.

And your forefather and foremother wanted you, so far-far distant from your present-day self, to make this marvellous Space even more marvellous — to make it so that it would come down to you in the present day, enhanced by each succeeding generation, so that you, today, would be able to live on an Earth transformed into a planet of Divine Paradise. They did this especially for you.

They were pagans, and were able to understand God's thoughts through Nature. Your distant (very distant) mama and papa knew how to make you happy. They knew because they were pagans.

Your father died in an unequal battle with foreign mercenaries, fighting for your future.

Your mama was burnt at the stake because she refused to exchange your marvellous future for what you see around you today.

But today still came...

And today the descendants of the pagans are still on bended knee, still kissing the hands of the descendants of those who burnt their mothers and slew their fathers.

They kiss their hands and make up songs about Russia's unconquerability. They sing songs about the Russian spirit, slavishly crawling on their knees for more than a millennium now.

What kind of freedom is that? Hey, you who have been oppressed by a thousand-year yoke, intoxicated by the drug of foreign ideology, it's time to wake up!

Whoever is able, wake up and start thinking! How could it have happened that Anastasia, a Siberian recluse, a Russian, after saying only a few words about Russian history, was immediately met with such opposition — and not just anywhere, but right here in Russia itself?!

If this country, as we believe, was not seized by ideologues from abroad, then who is behind all this opposition? It turns out that it is the Russians themselves who are opposing even the slightest mention of their past, of their parents. As though they — Russians — had quite lost their marbles.

No, not quite, and this is evident from the multitude of letters, songs and verses, the constantly increasing print-runs (already totalling millions of copies) of books containing the sayings of Anastasia.

The hearts of Russians are starting to beat in time with the hearts of their forebears — both distant and not-so-distant — who dreamt about their children's happiness. The opposition is being provoked by mercenaries and their accomplices. What kind of mercenaries? What kind of mercenaries' accomplices?

Can you seriously think that the transformation of the whole Russian people's way of life was brought about simply by the word of some Russian prince named Vladimir? Especially in view of his rather shaky hold on his princely throne. What, did he just happen to be sitting around one day and say: "Well, lads, I've decided you're all going to have to forget your parents' culture and be converted to Christianity"?

And the people enthusiastically replied: "Sure, we're tired of our ancestors' culture — come on, Prince, baptise us"?

Absurd? Of course it's absurd. In actual fact, Prince Vladimir first tried to strengthen his hold on power through changing the religious views of the ancient Slavs, setting up a pantheon of pagan deities. Pagan belief, however, would not permit the hallowing of the social relations that would result. It rejected the attempted justification of social and proprietary inequality, Man's exploitation of his fellow-Man and the divine right of kings. Hence Prince Vladimir, in order to satisfy his political ambitions, was obliged to select a foreign religion for the Russian people.

It is no secret that the choice fell upon the Byzantine variant of Christianity, precisely because it allowed for the virtual subordination of the clergy to the prince's authority, never mind the legal question of subordination to the patriarchate at Constantinople. But we are assured that Vladimir took this step for the benefit of Rus's enlightenment and prosperity.

We are all aware that a change of ideology is almost invariably accompanied by social disasters and bloodshed. But in this case it wasn't merely a question of a change of ideology. It was a sharp sea-change in religion, culture, way of life and social order.

Compared to the Bolshevik Revolution of 1917 this was a revolution 'seventy times seven'. And if it too had been followed by a bloody civil war, it would have been a civil war 'seventy times seven'.

But in those early times there was no civil war. There was no civil war simply because pagan Russia was inhabited exclusively by pagans. We are told there was opposition, including armed opposition between pagans and Christians in Rus'. But if Rus' was wholly pagan, then where did the Christians come from? They came from other countries, along with the mercenaries.

Prince Vladimir at the time was a long way from being the most powerful prince in the region. Of course he had his own armed garrison. But we learn from history that this garrison was far from being equal to any serious military confrontation. Additional support from the populace was always required. The basic armed forces in Ancient Rus' were always made up of the People's Militia.

But what kind of popular military resistance can we talk about if the people as a whole were opposed to baptism?

Foreign mercenaries, perhaps? Of course! But was the Prince's treasury wealthy enough to hire and maintain an entire army? Of course not! But the Prince still obtained the required funds. From whom?

From the patriarchates of Rome and other christianised countries — these patriarchates had become fairly wealthy by that time.

And so it happened a thousand years ago that the half-Russian Prince Vladimir, in return for the boost to his power, allowed foreign emissaries to conduct their propaganda campaigns, along with their schemes and provocations — and in the long run to commit acts of violence against the Russian people.

Rus' turned out to be a tougher nut to crack than the Roman Empire, and not easily given to being influenced by propaganda. This resulted in the Prince using mercenaries to reinforce his garrison and — again, with the mercenaries' help — to get rid of a part of the rebellious population.

My opponents may argue that this is only one version of events. No, my ideological friends, we are talking about objective historical reality. It can be proved even without the phenomenal abilities of Anastasia or her knowledge of history. I as a simple human being can prove it to you here and now, and that means a whole lot of other simple human beings will also be able to figure it out.

Perhaps those devotees of occult ideologies can tell me how many millions of Russian fathers and mothers they burnt alive at the stake? Name your figure — even a conservative estimate will do. Or are you going to tell me that this never happened? But it did! Your own sources mention it. Think back.

At a congress that took place in Russia back in the fifteenth century, a group of Volga elders raised the question of abolishing the death penalty for heretics. Note that this was already five centuries after the christianisation of Russia, and here are the sons of Rus', still resisting. Not only was the death penalty not abolished, but the Volga elders faced an unenviable fate.

But if you still wish to look upon what I have said as simply *my* version of events, go ahead. Only let us then regard *your* statements as a version too, and then let's compare both versions.

A comparison will easily show that your version is completely illogical, that it is founded merely on statements which you demand to be accepted as truth. Besides, you are unable to present a single document confirming, for example, that pagans in Rus' offered human sacrifices.

Show people what archæological evidence you have, go dig up the victims. You won't find any, because there weren't any.

Show us the pagan books outlining their world-views. Give people a chance to compare the cultures of both civilisations.

You refuse to show them? Why? Because you know very well that once people become acquainted with such texts, they will see the utter absurdity of their modern lifestyle.

And so it turns out that your Utopian version is not backed up by any proof, and so you demand that everyone simply *believe* and that's it. "Believe in us, or else you'll be labelled a godless non-believer."

There is evidence to show that Rus' was enslaved by deception and force. I shall not go through the whole list — a single example will suffice.

From those times right up to the present day Rus' may be considered an enslaved country. And foreign ideology is still prevalent in the Rus' of the present. Even today Rus' is still paying tribute money, only in a different form — the flight of capital, the sale of mineral resources, the stranglehold of poor-quality foreign food products on our market. And today the ideological component is very closely monitored.

The mere mention of the culture of Ancient Rus' is enough to call counter-measures into action — including the never-ending scheming and attacks on Anastasia.

You speak of freedom of speech, but why are you so afraid of her words? Why do you try to discredit your own country's culture and not allow people to get to know it? I know why. The culture of our ancestors is marvellous, joyful and highly spiritual!

In my previous volume, called *The Book of Kin*, I cited Anastasia's account of a wedding rite involving two lovers.<sup>5</sup> This rite still existed a scant two thousand years ago in Rus'. The publication of this book gave rise to a number of conclusions on the part of scholars and researchers. I have already mentioned that over the past while Anastasia's sayings have been subjected to investigation by scholars in various disciplines. Some of them carry on their work openly and even try to have their findings published, while others simply send them in to the Anastasia Foundation<sup>6</sup> for reference. So as not to leave them open to attack, I shall not name names, but simply convey the gist of their various reports.<sup>7</sup>

<sup>5</sup>See the section entitled: "A union of two . . . a wedding" in Book 6, Chapter 5: "The history of mankind, as told by Anastasia". All further quotations from Anastasia in this chapter are taken from this same section.

<sup>6</sup>The *Anastasia Foundation for Culture and Assistance to Creativity* — a non-profit organisation based in the city of Vladimir. See Book 5, Chapter 15: "Making it come true".

<sup>7</sup>Five different reports are cited (the first at some length), set off by asterisks in the English translation.

Anastasia's presentation of the wedding rite prevalent in the culture of Ancient Rus' is a unique and priceless document attesting to the high level of knowledge among the inhabitants of the time. The whole rite is based not on belief in the supernatural but on the *knowledge* of that which we today term 'supernatural'.

The individual components of this rite may be seen even today among various peoples. But in the modern interpretation these components are purely ritualistic, senseless and deficient in nature and, consequently, not up to the task of cementing the union of two people in love to the same degree of effectiveness as back when they were applied with full conscious awareness.

In today's version of the rite, some of these components seem meaningless, grounded in a kind of superstition. At best, they fall into the category of so-called 'esoteric' activities. Anastasia's description takes us from a misperception of the rite as a senseless act to an awareness of its pre-eminent rationality and indicates not only knowledge but the ultimate height of spirituality among those generations of Slavs which came before us. [...]

A comparative analysis of today's wedding rites and the one described by Anastasia fosters the impression that today's rites are more characteristic of an undeveloped primitive society, while those of Ancient Rus' belong to a civilisation which is highly developed in every sense of the word. For example:

Among a number of peoples today, including Russians, there is a ritual activity of showering the newlywed couple

with cereal grains. One of the mothers or grandmothers or relatives of the newlyweds scatters cereal grains in front of the couple on their way into their home or throws it over the couple themselves as a token of happiness for the future family.

This kind of activity today is associated with superstition or esoterica. There is no other rational explanation for it. What sense is there in seeds of grain simply falling on the floor, asphalt or pathway leading to the house where they will immediately get trampled on and crushed?

The ritual described by Anastasia also includes a special act involving cereal grains. But here, right off, one can associate it with several distinct and clearly thought-through rational purposes. All the wedding guests — relatives, friends and acquaintances — bring with them seeds from their best plants, and each one plants by his own hand the little seed he has brought with him in the spot designated by the newlywed couple.

In terms of material wealth, it is not simply betokened but actually achieved in practice by the special act described. In just a brief space of time — an hour or two — the newlyweds have the makings of their future orchard, drawing upon the best fruit and berry plantings in the neighbourhood, as well as a vegetable garden and a green hedge wherewith to frame their Space. [...]

No less important is a second, or psychological, aspect of this special act. Many of us know about the improvement in one's mental state upon entering into natural surroundings. Such pleasant sensations are enhanced by contact not with someone else's garden plantings but with your very own. The strength of spirit and level of emotions you should feel upon entering a garden where every little tree, bush and blade of grass was created as a gift for you directly by your parents, relatives and friends is something

we can only guess at, as it is doubtful that anyone living on the Earth today is able to have such a Space as this.

And by all appearances it was not just material prosperity but, more importantly, one's inner positive emotions resulting from such a special act, that played a fundamental role therein. [...]

In current esoteric literature a lot is said about the energy of *kundalini* and *chakras*.<sup>8</sup> The information presented basically focuses attention on the possibility of the existence of chakras. There is little doubt as to the existence of the energy of love or the energy of sexual attraction between men and women.

The vast majority of people have experienced the effect of this energy on themselves. However, neither the theoreticians of the past nor our modern sciences have ever touched upon the possibility that Man can actually control this energy.

The rite described by Anastasia has shown for the first time how Man can control, transform and maintain this energy. [...]

In actual fact, the young lovers materialise the love which has been bestowed upon them — or which has entered into them. With the help of this energy they shape a visible and tangible Space around them. They see to it that this great energy remains with them in perpetuity.

Why was this possible for them, but not in our present reality? Let us compare the actions of two loving couples — in the past and present.

The average loving couple today spends their time either at entertainment venues or alone together on walks

<sup>8</sup>*kundalini* — the power (energy) coiled up in a form of a serpent and located at the base of the spine, at the body's lower *chakra* (energy plexus). Many oriental yoga practices aim at spiritual enlightenment by awakening the kundalini energy and moving it up the spine to the higher *chakras*.

or at home. They often enter into sexual relations even before marriage. [...]

The basic goal of most lovers today is the official recognition of their relations by a secular marriage bureau or a church. Research has shown that young couples do not adequately plan for their future life together. If a couple should try to determine their course of life together after marriage, it is a vague conjecture at best. Psychologists observe that it is the hope of each would-be newlywed that, after joining together, their life will be improved by their partner.

They all hope that the elevated, life-fulfilling state of love will carry on after marriage. But the love is fleeting. The surrounding space becomes routine — far from reminding them of their earlier feelings of being in love, it starts to become irritating through its routineness and primitiveness.

The irritation can also arise in the couple's relationship to one another. Few suspect that something other than this irritation is at the root of the couple's actions after marriage. Dissatisfaction actually results from an inability to make proper use of the state of love. [...]

As practice has shown, neither secular laws nor religious admonitions are capable of ensuring continuing mutual affection or even an attitude of mutual respect.

Now let us take a look at the actions of the young couple in the account presented by Anastasia and try to come up with a logical, scientific interpretation.

First, the declaration of love in itself is quite striking:

“With you, my beautiful goddess, I could create a Space of Love to last forever,” the young man told his intended. And if the girl's heart responded in kind, she might answer: “My god, I am ready to help you in your grand co-creation.”

Now compare this with the declaration of love formulated by the famous poet, which comes the closest to describing the gist of modern attitudes toward the energy of love:

*I love you so, what can I say more,  
What else could I tell you besides...?*<sup>9</sup>

As we can see, the first declaration above proposes right off a distinctly formulated grand act, namely the creation of a Space of Love. In effect, it is a scientific materialisation of love. The second declaration, on the contrary, does nothing more than state "I love you" with no further action specified. It is simply that neither he nor she have any idea how and for what purpose to use their energy of love. [...]

The lovers in Anastasia's account, by mutual agreement, set about forming a Space of Love for themselves and their future generations. They go off by themselves, and may even spend the night in the shelter they have built on their chosen plot of land, but refrain from entering into sexual relations. Is this some kind of ritualistic abstention? [...]

Such instances of abstention are part of many peoples' religious beliefs. They are also found in secular ethics. Young people in love should not enter into sexual relations before their marriage is registered or, alternatively, before they are wedded in a religious ceremony. However, the vast majority of young people today pay no heed to religious admonitions or public condemnation, but freely launch into pre-marital sex. Why? The most probable answer lies in the complete illogicality of both the social and religious

<sup>9</sup>From Tatiana's declaration of love in her letter to Onegin in Alexander Pushkin's *Eugene Onegin* (better known in the West as Tchaikovsky's opera of the same title), Act I, Scene 2 (JW translation).

requirements — the lack of a plausible explanation as to what the energy of love is all about -- or, more accurately, simple ignorance thereof.

The energy of love activates a whole complex of feelings in Man. It accelerates the mental processes. And this energy can be compared to an apex of inspiration which presupposes a series of grand acts to follow.

Thanks to their knowledge, as well as a highly developed culture of mutual human relations, the young couples of Ancient Rus' quite naturally directed the energy of love and sexual attraction toward the act of creating a Space for their future life together.

What two young lovers create together can hardly be surpassed, one would imagine, with the help of scientific investigation. The following statement of Anastasia's attests to this:

*The world of academe is in no position to create even the similitude of a splendid domain because, again, there is a law of the Universe which says: A single Creator inspired by love is stronger than all the sciences combined, which are deprived of love.*

All the actions of the participants in the events reflected in Anastasia's account of the wedding rite are infused by logic, rationality and the highest degree of culture and spirituality. By comparison, what a sorry spectacle is offered by our modern wedding ceremonies, with the main focus on the *reception*, where the guests gorge themselves on food and alcohol.

In terms of their emotional richness, along with their meaningful and informative content, Anastasia's presentations of the parables and rites of Ancient pagan (or, to use her term, *Vedic*) Rus' by far surpass all the ancient tales we know of, describing our past history. Even the famous *Song of Igor's campaign*<sup>10</sup> pales before them.

<sup>10</sup> *Song of Igor's campaign* (Russian: *Slovo o polku Igoreve*) — a celebrated poetic chronicle of Ancient Rus', dating back to the twelfth century.

Through her narratives on Vedic Rus' Anastasia is, in effect, revealing to us the highly spiritual culture of a civilisation of which we were hitherto unaware. She is radically transforming academic concepts as to the history not only of our country but of humanity as a whole.

Such an unexpected sea-change, not to mention the simplicity with which it was brought about, has thrown many leading lights of contemporary academia into confusion. And in an effort to somehow maintain the framework of the academic positions they have attained, they try to pretend that nothing has changed, that they know nothing about the information presented.

They are like ostriches hiding their heads in the sand. The information is real, it is truly priceless and sensational, and it will come to be demanded more and more by society at large.

I have presented to you, dear readers, the pronouncements of a number of academic researchers. As you can see, they confirm the informational significance of Anastasia's sayings and even talk about the subsequent confusion among contemporary scholars.

But confusion is one thing. The opposition — the concentrated efforts being made to stop the spread of this information which sheds light on the history of our country and our people — is quite another.

Somebody has felt very threatened by the possibility of our digging into the knowledge and culture of our forebears.

Who might that be? Under whose influence are they operating today — these people that are calling our ancestors ‘barbaric pagans’, perverting that great word *pagan* to suggest something backward, or evil? What programme are they following?

And how come our historians have accepted such a definition? It couldn’t have been *our* historians that did that.

Maybe they’re not historians at all? If they haven’t been able to tell us up to now anything concrete about the history of our country of just one thousand years ago, but keep on insulting or tacitly allowing others to insult this period of our history, then these are not historians of Russia, but traitors or mercenaries, acting on behalf of somebody else.

And we shouldn’t be relying upon them any longer. It is vital that we ourselves, through our joint efforts, bit by bit, use analogies to restore our own past and rehabilitate both our forebears and ourselves. If we don’t...

Many readers the Ringing Cedars Series have already begun to write a Book of Kin for their children.<sup>11</sup> Some of them will certainly want, too, to express their thoughts on the history of Ancient Rus’, to tell their children about where we came from. But what can we write about our past? Are we really going to carry on with that nonsense we have been told for so long?

<sup>11</sup>See especially Book 6, Chapter 10: “The Book of Kin”.

Maybe it's better not to write anything about our past, just pretend it never existed. But that won't work. If we act that way, then our children after us will keep getting served up the same story over and over again in a way that will suit somebody's particular interests.

Someone may wonder how we, as ordinary folk — not scholarly historians — can restore a history of two or three thousand years ago. We can! Since we'll be doing it not because we're carrying out someone's instructions, but according to the dictates of our hearts and minds. I shall attempt to start the ball rolling, but let us all together begin gathering whatever stories, facts and analogies we can, and putting together our own family histories.

Let us all begin thinking and reasoning about this together. As I said, a lot can be restored even just using analogy. Here's an example. Take a look.

More than two thousand years ago the mighty Roman Empire was in its heyday, including Roman law, the Roman Senate and the Roman Emperors. The cities of the Empire were adorned with epochal edifices, and Rome already had a water supply system. There were libraries, and a flourishing of art. The Roman Empire waged quite a number of wars.

In contrast to the developed states of the pre-Christian era, there is virtually no information about the *Russian* state — its political structure, its territories or culture. Maybe it simply didn't exist? Of course it existed. We know from historical sources that by the time Rus' was baptised it already had cities and principdoms. And Prince Vladimir, who oversaw the baptism of Rus', was by no means its first prince. The same sources tell us about his father, Prince Sviatoslav.<sup>12</sup>

In other words, Rus' existed contemporaneously with the Roman Empire. It had its cities and a multitude of wealthy settlements. Yes, wealthy, because the cities of Ancient Rus'

took shape not just as capitals of princedoms, but as trade and handicraft centres serving the many settlements in the outlying area.

Poor settlements do not give rise to cities. There would simply be no one to finance their construction and no consumer demand for what they produced.

And now let us try to determine whether pre-Christian Rus' was a strong or a weak state? Let us suppose, for the sake of argument, that it was extremely weak. Not only that, but historians claim that Rus' was divided into petty independent princedoms which were constantly warring with each other.

But once again the question arises: if pre-Christian Rus' was so weak, a state torn apart by internecine conflicts, why did it not fall prey to attacks by more powerful states?

As a weak state by comparison with its neighbours, not to mention the Roman Empire, the Russian state could have been easily conquered and transformed into a tribute-paying colony. But here is where the enigma and the mysteries begin.

In all the annals of the Roman Empire and other states of the period there is no mention of any attack on Rus'.

We ourselves know that up to the time of the official baptism, Rus' was a free and independent state, unconquered by any other.

So, why did no one try to conquer pagan Rus'?

--  
<sup>12</sup>Prince Sviatoslav I of Kiev (942–972) — a warrior prince of Kievan Rus', said to be the first Slavic prince with a completely Slavic name. The name is comprised of two ancient Russian roots: *sviat* (holy) and *slav* (praise/glory), which had the same meanings as the Old Norse names of his mother (Olga) and father (Rurik), respectively. He is known largely from what is described in a document known as *Povest' vremennykh let* (Chronicle of ancient years, sometimes referred to as the *Primary chronicle* or the *Tale of bygone years*), which refers in large part to Scandinavian and Byzantine influences on Russian culture and religion. But not all Russian scholars accept this document as historical fact.

Perhaps it was because it had an extensive, well-organised and well-equipped army? But no, that it did not have. Even during the time of the princes there were only small armed garrisons whose numbers were far from equalling those of the Roman legions.

We shall never understand the historical truth if we start with a false reasoning about pagan Rus' — especially Vedic Rus'.

On the other hand, everything falls into place if we accept and understand the opposite hypothesis.

*Vedic Rus', before the time of the princes, was a highly spiritual, highly organised civilisation. It was that same 'lost civilisation' on the Earth about which legends would be subsequently told.*

I deliberately referred to Ancient Rus' not as a *state* but as a *civilisation*, since the benchmark of statehood for that period is considered to be Egypt or Rome. These were under the control of supreme rulers, priests and an élite that had enriched itself at the expense of slaves.

The social structure of Rus' was significantly perfected and more civilised in comparison to Egypt or Rome.

In Rus' at that time there was absolutely no slavery. Neither were there any petty principdoms warring amongst themselves. Rus' was comprised of marvellous kin's domains. Decisions were taken at popular assemblies known as *veche*. Information was circulated by 'wise-men'.<sup>13</sup>

<sup>13</sup> *wise-men* (Russian: *volkbvy*), also known as *Magi* or *wizards* — a reference to ancient 'scientists' with particular knowledge of the workings of Nature, often possessing exceptional powers. In Ancient Rus' one of the *volkbvy*'s major tasks was the development of agricultural symbology and fertility rites to guarantee abundant harvests. Many *volkbvy* also fulfilled the role of travelling community teachers. Further details will be presented in *Rites of Love* (Book 8, Part 2 of the Ringing Cedars Series). This is the same reference that is found regarding the 'wise men' who visited the infant Jesus in Bethlehem, according to the New Testament (see, for example, Matth. 2:1).

But note how the concepts have been distorted, including the meaning of the word *civilisation*. Egypt, where all the people were subject to the rule of the priests and pharaohs, was known as a highly developed, 'civilised' state, while Rus' at the same period was called backward, uncivilised and weak, without any kind of real statehood. That's pretty steep! If there was no slavery, and no petty-tyrant despots, does that mean there was no state — that Rus' was uncivilised?

Again, the same question: why then did nobody conquer Rus'?

There were, of course, *attempts* at conquering the Vedruss people. But those who tried it always endeavoured to erase the results of such attempts, even from their own memory.

Here is what Anastasia told me about one of these attempts that took place more than two thousand years ago.

## CHAPTER TWENTY-ONE

# Combat

In those days the Vedic way of life was still the prevalent culture in Rus'. The Vedruss people still had no cities. Rus' was made up of a large number of settlements, rich in extraordinary foods, the joy of life and bright people who lived in their family domains.<sup>1</sup>

There were other countries at that time, which boasted of great cities where the power of money was becoming more and more dominant over human aspirations. And there were great armies, and with their help rulers attempted to bring the whole world under their own control. And many countries bowed under the control of the dark forces.

Once an élite Roman legion was sent to Rus'. Five thousand warriors approached the boundary of the first settlement they came to. And they threateningly made camp right on the outskirts of the little village.

The military officers called for the village elders to come to them. And the elders came, knowing no fear in the face of this ominous force. The officers explained that they came from the most powerful country of all and that, consequently, all the settlements must pay tribute to them. Anyone unable to pay would be taken into slavery.

The elders replied that they were not disposed to share their food with any evil-doers, thereby feeding hordes of dark forces.

<sup>1</sup>The text of Anastasia's narrative is reproduced in this chapter without quotation-marks for each paragraph.

Whereupon the commander-in-chief said to the elder most advanced in age:

“I have heard about your barbarity and your unusual way of life. Your mind is incapable of even appreciating the correlation of forces here. With a mind like that you will never be free in a civilised Empire. You will either exist as slaves or not exist at all.”

And the Vedruss village elder replied:

“It is the one who is not capable of using Divine provisions for his food that is not allowed to exist. Look.”

And with these words the elderly Vedruss took two identical fresh and beautiful apples out of his pocket. He surveyed the officers, all glistening in their armour, but his gaze rested on a young private soldier. He went over to the soldier and held out one of the apples, saying:

“Take this, my son, may this fruit be a delight to your soul.”

The young private took the fruit and tasted it right there in the sight of all those standing around. His face lit up with a delight that provoked envy among the others.

Then the elder, still holding the second beautiful apple in his hand, turned again to the commander-in-chief, went over to him and said:

“My soul has no desire to offer this marvellous fruit to you. What that means, try to understand yourself.” And he placed the second apple at the feet of the commander-in-chief.

“How dare you, old man, answer back that way to a commander distinguished in battle?” a Roman orderly exclaimed, as he picked up the apple and gasped in amazement.

And all the commissioned officers and their subordinates were in shock from what they saw. For the beautiful apple had begun rotting right before their eyes in the orderly's hands. And right before their very eyes a swarm of midges suddenly appeared and devoured the rotting fruit. And the Vedruss elder continued:

“Nobody can buy the fruit of Divine grace for gold or take it by force. You may call yourself a lord and master and imagine yourself defeating countries, but the only thing you will eat that way is rot.”

“This is not mysticism, Vladimir, you must understand. Fruits grown with love can give their grace only to those who themselves have instilled love in them, or to those to whom the growers give them of their own free will. This is the order of the Universe, and for proof of this you need only take a careful look at the present day. People are doomed to eat fruit which is far from fresh.”

“But what about the wealthy?” I queried. “And those that rule the world?”

“They face even greater problems with food. They are afraid of poisoned fruit and dainty dishes. And before they eat anything themselves, they have those around them taste it first. They post guards and special servicemen around their foodstuffs, but to no avail... Many a ruler has died in agony from eating bad food.

“You will note that many people are trying today to produce health-restoring cedar-nut oil. Only the healing properties of this oil vary, depending upon the thought of the producer.

“And that Vedruss elder was no mystic. He was merely outlining what every child growing up in Vedic Rus' knew about all the time.”

But the aged Vedruss's remarks provoked anger and he was taken captive. He was put into a cage so that he could witness the torching of the houses and gardens in his village. And so that he could watch its men, women and children parade before him in chains.

The commander said to him spitefully:

"Look there, old man. There are your fellow-villagers, now they are slaves. You made fun of me in front of my retinue in a bad way, and the fruit you gave me showed immediate signs of decay. Now all your fellow-villagers are slaves, and they will now produce undecaying fruit for us under pain of death."

"Under pain of death," observed the elder, "one can only grow that which brings death, even though it may have a pleasant appearance. You are primitive. You will not be able to conquer my country. I have released a pigeon with information about you. Once they see it, my magi will tell everyone the news."

The commander issued an order. Runners fanned out to all the Vedruss settlements with a view to delivering the order. It demanded that each settlement send representatives to see how strong, well-trained and well-equipped were the Roman troops. And how they were capable of wiping any bravely resisting settlements off the face of the Earth and taking the children and young women as slaves. And for everybody to bring tribute to his warriors so fearsome. And from now on to collect tribute for the Empire, and deliver the tribute to the Empire in person.

On the appointed day, at dawn, ninety Vedruss lads appeared before the huge camp.

Out in front stood Radomir — whom you have heard about before — wearing a long shirt Liubomila had sewn for him with love. And all the young men with him had on light-coloured shirts.

No helmets of iron covered their light-brown hair. Their heads were framed instead by bands woven from grasses. They carried no shields to protect themselves from fatal blows. Only two swords hung from a belt around each one's waist. They stood silently holding their steeds by the bridle; many of their horses did not even have a saddle.

The officers in command of the five-thousand-strong well-trained troops, who had gathered together in council, stared at the ninety young lads. The commander-in-chief came over to the cage in which the head of the razed Vedruss settlement was being held, and asked:

“What can the presence of these lads possibly mean? I ordered the elders of all the settlements to come and hear the decrees of my country's Emperor.”

The Vedruss replied from his cage:

“All the village elders know what you want to tell them. They do not like what you have to say. And they decided not to go meet someone they do not like. In front of your troops' camp you see but ninety lads from the next village. They are wearing swords. Possibly they want to do battle.”

*Oh you brainless barbarians!* mused the commander-in-chief. *I could send a single detachment to fight them and it would be a light task, of course, to kill them off completely. But what good would come from a bunch of dead bodies? Would it not be better to explain the situation to them and bring them back hale and hearty to the Emperor for slaves?*

“Listen to me, old man,” the commander addressed the Vedruss elder. “The young people will pay heed to what you say. You explain to them the absurdity of such an unequal combat. Tell them they ought to submit to us. I'll spare their

lives. Of course they'll be taken captive and I'll make slaves out of them. But they will not be living in a barbaric land, they'll be provided with food and clothing if they become obedient slaves. You tell them, old man, how utterly absurd it would be to shed their blood in such unequal combat."

The Vedruss elder replied:

"I shall try. I shall tell them. I can see for myself the blood boiling in these young Vedruss lads."

"Then go ahead, old man."

The Vedruss elder began speaking from his cage in a loud voice so that the warriors standing before the camp could hear.

"My sons, I can see the two swords hanging from each of your belts. I can see the spirited steed that each of you has by his side. You are holding them by the bridle, you are not over-exerting them with your own weight, but you are saving their strength for battle. You have decided to go into battle, under the wise Radomir. Answer me."

The commanders and troops watched as Radomir stepped forward. After making a deep bow before the elder in the cage, he responded by confirming the elder's words.

"I thought as much," said the Vedruss elder, and went on: "You are their leader, Radomir. I believe you are aware that the forces you see before you are not equal to your own."

And once more Radomir bowed in acknowledgement of the elder's affirmation.

The officers were satisfied with this dialogue. But what they heard next astounded them like nothing they had ever heard before. The elder went on:

"Radomir, you are young and your thought moves swiftly. So spare the visitors' lives. Do not kill all of them. Make them depart and put down their weapons and not play with them any more."

At first the officers were in a state of shock upon hearing the elder's extraordinary words. Then the commander-in-chief exclaimed with irritation:

"You're mad! You're out of your mind, old man! Who is in a position to spare whose life here -- you have absolutely no idea! You have just condemned all your fellow-villagers to death. I'll give the orders now..."

"You are too late. Look, a few moments ago Radomir was standing there contemplating, but you saw how he acknowledged what I said. That means he understood my words and will not kill you."

A second later the officers saw the ninety young men standing in front of the camp suddenly leap onto their steeds and head at full speed toward the camp. The commander-in-chief managed to order a detachment of archers to prepare themselves to meet the Vedruss warriors with a hail of arrows.

But when the warriors on horseback came within shooting range, they suddenly jumped down off their horses and began running alongside them.

As soon as they got close to the Roman troops, the Vedruss lads formed an oval encircling half their number along with the horses, while the other half cut through the Roman ranks, which had not yet completely come together, and started fighting. In each hand they held a sword, which they wielded equally deftly with either hand. But they simply knocked the weapons out of their opponents' hands without fatally wounding them.

The reserve legionnaires had a hard time picking their way through the disarmed and wounded Roman soldiers lying on the ground to replace them in combat. In the meantime, the small Vedruss contingent determinedly pushed through to the tent of the commander-in-chief.

Radomir used his sword to hack open the lock on the cage where the Vedruss elder was being held captive. After bowing to him, he easily picked him up by the waist and set him on a horse.

Two of the young warriors of Radomir's contingent seized the Roman commander-in-chief, threw him over the rump of another horse and brought him into the centre of their oval.

The valiant warriors quickly pushed ahead, not back the way they came, but forward, and before long they left the crush of the Roman troops behind, jumped on their horses and dashed off. But after only a few minutes' ride they stopped at a small hillock and dismounted. Almost all of them then lay down on the grass, stretched out their arms and stayed motionless.

The captured Roman commander was amazed to see the Vedruss lads lying on the ground fast asleep. Pleasant smiles brightened their faces. In the meantime their steeds peacefully nibbled at the grass beside them. Only two watchmen kept an eye on the actions of the Roman troops.

Left without their regimental superior, the Roman officers argued for some time, blaming each other for what had happened, and then argued over who should take charge and how to proceed.

At long last they decided to despatch a thousand horsemen (almost all the cavalry) in pursuit of the Vedruss warriors. The remainder would follow the pursuers at a distance, in case of unforeseen events such as the appearance of reinforcements on the Vedruss side. The basic motivating factor behind this decision, however, was fear.

The thousand-strong detachment of well-equipped cavalymen launched into the chase. No sooner had the ranks of the Roman cavalry begun leaving the camp than one of the warriors of Radomir's contingent, seated on his steed, gave a blast on his horn.

The warriors lying on the grass sprang up at once, seized their horses' bridles and began running. Having rested themselves after the battle, the Vedruss lads ran very fast, but gradually, very gradually, the pursuing Roman cavalry started catching up to them.

Anticipating victory, the cavalry commander ordered his bugler to signal an escalation of the pursuit, and the bugle sounded. But the thousand eager legionnaires were already spurring on their frothing horses in a mad rush to shorten the interval between them and the Vedruss lads running on foot ahead of them. There now remained a very small space between the two.

Again the agitated commander ordered an acceleration of the chase. And once again the bugle sounded forth. But by now the mad gallop proved too much for some of the broken-winded Roman horses and they fell in their tracks. Paying no attention to them, the horsemen were already drawing their swords to attack the fleeing Vedruss warriors, when suddenly...

At the sound of the horn all the Vedruss runners leapt onto their horses and... they soon began to put an ever-increasing distance between themselves and their pursuers.

The captured Roman commander-in-chief realised that the Vedruss warriors had been saving their horses' strength up 'til this point and now there was no way his men would be able to catch up. They changed both the Vedruss elder's and the Roman commander's horses. The commander also observed that the lads were not sitting upright, but lying prone along their horse's rump, clinging on to the mane, once more sound asleep. He wondered about their need to conserve their strength at this stage of the game. It was only later that he would find out why.

The Romans, stimulated by the chase, kept feverishly whipping their horses. Many of their steeds fell beneath them, while the sturdier specimens among them, given the weight of the heavily armoured soldiers on their backs, could not keep up with the Vedruss horses, which remained untired by the pursuit.

Once the cavalry commander was able to discern the folly of trying to overtake his opponents, he ordered all his men

to stop and dismount. But by now it was too late. A good number of the Roman horses were broken-winded and fell to their knees.

"All rest!" came the command to the Roman cavalry. And then the soldiers, who had just dismounted from their exhausted steeds, saw the Vedruss contingent sweeping down upon them like a whirlwind.

The young warriors held a sword at the ready in each hand. Bounding all along the edge of the circle of dismounted Romans, they inflicted light wounds on soldier after soldier, knocking their weapons out of their hands.

And the Roman legion was seized with horror. And they all began running for help toward the infantry that was following behind. The Vedruss contingent came after them on horseback, but for some reason kept their distance. Nor did they touch the Roman soldiers which had fallen from exhaustion.

The fleeing Romans -- by this time no longer running, but swaying from fatigue as they walked -- stopped dead in their tracks at the sight of Radomir with his two swords at the ready, along with his horsemen right behind him, all calm and full of energy.

The Roman soldiers dropped to their knees, and those that still held weapons placed them on the ground in front of them. Now utterly powerless, they began awaiting the anticipated vengeance at the hands of the Vedruss warriors.

Radomir and his companions walked among the Roman soldiers seated on the ground, their swords sheathed. And Radomir and his companions began talking with the soldiers about life. Taking off their grass headbands, they gave them to the legionnaires so they could apply the healing herbs to their wounds. The herbs stopped the blood flowing from the wounds and took away the pain. And they returned the commander-in-chief to his legion.

Some time later, upon returning from their campaign against Vedic Rus', the fine-looking columns of soldiers marched into Rome.

The Emperor had been informed by courier-runners about the strange events that had befallen the Roman legions' elite soldiers. After he had the opportunity to see his soldiers and officers for himself, he was overcome by a sense of embarrassment that lasted for several weeks.

Whereupon he issued a secret order to eliminate all the detachments from his army that had participated in the Vedic Rus' campaign, both soldiers and officers, and have them transferred — to various corners of the Empire. And he gave strict instructions that nothing should be heard about the campaign even by their friends and close relations, not even a word.

The Emperor himself sent troops to Rus' no more. And in a secret book written for his successors he implored:

“If you want to keep the Empire intact, as to a war with the Vedruss people, do not even think of such an act.”

The Emperor was no fool. He was alarmed to see his troops returning from their campaign all healthy and unharmed, but carrying no spoil with them. Indeed, their faces betrayed no anger or even a desire to serve in war again. If he let men such as these remain in the Imperial army, who knows whether they might infect the whole corps with the same desire not to go to battle any more.

All the same, the Emperor's successor made another attempt to conquer the Vedruss people. Having learnt a lot about their tactics from those that had had contact with them, he sent *ten thousand* soldiers on a second campaign to Rus'. Once more the soldiers arrived at a small Vedruss settlement, where they speedily made camp and set up fortifications. Runners were sent to summon the elders.

But at the appointed hour the Roman officers looked and saw coming toward them from the Vedruss village only a little girl about ten years old, accompanied by a little boy who could not have been more than five. The soldiers parted ranks to make way for them as they arrived, arguing with each other. Tugging at his sister's skirt, the boy said:

"Sis Palashechka,<sup>2</sup> if you don't let me conduct the talks myself, I shan't think proper of you."

"What improper thing would you think of me, you little scamp?" the sister asked her brother.

"I shall think of you, Sis Palashechka, that you were born a jolly naughty girl!"

"It's not proper to think that."

"It's not proper indeed. So let me conduct the talks with the enemies."

"And if I agree, how will you think of me then?"

"I shall think that you, Sis Palashechka, are the prettiest, cleverest and kindest girl of all."

<sup>2</sup>*Palashechka* (stress on second syllable) — an affectionate name in Medieval Russia.

"All right, brother, you start the talks. I don't find it proper to talk with addle-brained people."

The children presented themselves boldly before the Roman officers, and the girl's little brother addressed them, without the slightest hint of trembling:

"My daddykins told me to tell you all that in our village everybody is gathered round for a celebration at our feasting-ground. It is held there every year. And every year the people enjoy themselves at the feasting-ground. It's not proper, my daddykins says, it would be wrong for him to leave the celebrations and come and talk nonsense with you. So he sent me — and my sister tagged along."

The commander-in-chief even let out an audible squeal upon hearing the boy's audacious remarks. His face turned pale, and he grasped at his sword.

"You insolent young whelp, how dare you speak to me like that? I'll make you a slave in my stables well into your old age! Your sister, now..."

"Hey, there, gramps!" the sister interrupted. "Hey, there, gramps! Give up those silly playthings of yours — your swords and shields and spears — and run back home lickety-split. You better run while you still can. See that cloud coming? It won't talk with any visitors. It'll attack you without any words first."

With that the girl unwrapped the bundle she was carrying and, taking out a thimbleful of some kind of pollen-dust, sprinkled it over her brother. Then she took the remainder and sprinkled it on herself.

In the meantime the cloud-horde kept approaching steadily over the land, all the while buzzing and increasing in size, until it finally descended upon the camp. And before long the Romans' armour lay on the ground — their shields and spears and swords. The officers' and the soldiers' tents were left empty. The brother and sister stood

among the troops' discarded things, and the little brother said to his elder sister:

"You still didn't let me speak with the enemies, Sis Pala-shechka! I didn't finish telling them everything I wanted to."

"Anyway, you started. You mustn't be upset if I interfered a bit — you're a Vedruss warrior, a defender of your Motherland!"

"Well, okay. I shall still think that I have a well-behaved, kind and beautiful sister."

Picking their way through the discarded armour, the brother and his beautiful sister headed back to their village.

The receding cloud already looked quite small from where they stood. Even so, within it were ten thousand elite Roman warriors fleeing home in terror. They kept falling and getting up again. And kept on fleeing in panic.

Do not think there is any mysticism here, Vladimir. The Vedruss people simply made a decision. In each domain — and there were more than two hundred domains in the settlement — they opened up ten beehives,<sup>3</sup> each hive containing approximately fifteen thousand bees. You can figure out the size of the cloud for yourself. A huge number of bee-stings will first cause serious itching and pain. A person could then fall into a fatal sleep.

And so the happy Vedruss people continued to live in peace of mind, knowing neither war nor trouble of any kind. No external foe posed a threat to them for a long, long time. And yet... Rus' was still conquered, after all. It happened when it fell prey to cunning snares, thereby producing a power which acted against its own self and brought about its fall.

<sup>3</sup>*beehives* — The Russian term here (*koloda*) designates a special kind of beehive, made out of a hollow log. For a description, see the section entitled "Who gets stung by bees?" in Book 1, Chapter 11: "Advice from Anastasia".

Thus Anastasia recounted several stories about life in Vedic Rus'. Possibly others might have information — in the form of ancient tales — about how people lived in those times. There's no point in looking for written records since, as we know from history, they were all carefully destroyed. They were burnt in Italy, England and France, and especially zealously in Russia.

But those who feverishly destroyed the culture of our forebears could not eradicate its imprint in the depths of human hearts and souls.

*We must perfect the knowledge of our history. We must know it and respect it. But we must also reflect on the understanding that Vedism, Paganism and Christianity are all stages of our history. Not one of these stages should we neglect. By attacking one of them, we shall only go on attacking ourselves.*

*We should treat Christianity with understanding and respect. And other faiths as well. Only then will all the stages of our history form a solid foundation for a marvellous future. But this is what can follow from knowledge and understanding. From giving a proper evaluation to each stage of our history, from seeing each stage of our history as lessons for building the future. Otherwise we shall go on living in the world of the absurd.*

*Governments and legislators in various countries are currently struggling with terrorism. They pass laws forbidding the incitement of racial or religious hatred. And yet at the same time these countries officially permit and support denominational teachings in which acts of mass terrorism are carried out for political purposes, supposedly in the name of God.*

## CHAPTER TWENTY-TWO

# The marvellous Vedruss holidays

We can get some idea of the Vedic culture by looking at certain holidays which have survived into our modern times. Even today they still remain among people's favourites, even though only a few elements of the original pristine rites have been preserved. What holidays are these? I'm talking about New Year's, Shrovetide<sup>1</sup> and Trinity Sunday.<sup>2</sup> Of all the many holidays I could mention I shall simply cite here this most prominent example, where the greatest changes have taken place.

This holiday occurs at the beginning of June. As you know, in current practice Trinity Sunday is a day when people go to the cemetery to visit their relatives' graves. Upon arriving at the cemetery they sanctify the graves and tidy up the enclosures.<sup>3</sup> A lot of them bring a bottle of liquor with them; after

<sup>1</sup>*Shrovetide* (Russian: *Maslenitsa*) – the week prior to the beginning of Lent (in February or March), marked by a carnival or public festivities. *Maslenitsa* (from *masto* = "butter") is actually the ancient Russian holiday marking the coming of Spring. Even in its present-day form it includes a large number of old 'pagan' elements, such as the ritual making and eating of pancakes (symbolising the Sun) and the burning of a straw-stuffed figure representing Winter. After the Russian Orthodox Church's attempts to eradicate this and other pagan celebrations failed, the Church included these pagan festivities in its own calendar of 'Christian' holidays and continued to venerate Russia's ancient pagan gods under the guise of Christian saints.

<sup>2</sup>*Trinity Sunday* (Russian: *Troitsa*) – In contrast to western churches, which celebrate the Trinity the first week after the late-spring holiday of Whitsuntide (Pentecost), the Eastern Orthodox Church includes the Trinity in its Pentecost celebrations.

<sup>3</sup>In Russian Orthodox cemeteries family graves are usually located within a fenced enclosure.

having a drink at the gravesite, they leave a small glass and a piece of bread for the deceased. They talk amongst themselves, reminiscing about the deceased's life. Many people feel obliged to weep at gravesites.

The degree to which this original pagan ceremony has undergone profound change is confirmed by the following.

During Vedic times, and even later in the pagan period there were no cheerless, mournful rites as there are now. Each holiday gave people a charge of positive energy, and transmitted to young people the knowledge of their forebears.

And remembrance days in Vedic times were quite different from those of today. There were no processions to the cemetery or lamentations over the graves of the deceased. In fact, during Vedic times there were no cemeteries at all. The deceased were laid to rest in their own family domains without burial vaults or even headstones to mark the occasion. A small raised mound of earth was created, but even this over time became flattened to ground level.

The Vedruss people believed that the best memorial to their forebears was to be found in what they had created during their lifetime. Their knowledge of Nature and of Man's capacities led them to conclude that if all the relatives were to visualise death, their collective thought would prevent the deceased's soul from being reincarnated.

On the day of remembrance of one's forebears all the members of a family would gather in the morning in the oldest domain. In front of everyone the eldest — usually a grandfather or great-grandfather — would approach the youngest generation of children, and begin to talk with them, more or less as follows:

“When your Papa was the same height as you are now,” the grandfather would tell his grandson of about six, “he planted this little sapling. Time went by and now that little sapling has grown into a large fruit-bearing apple tree.”

Whereupon the grandfather led his grandson over to the apple tree and touched it himself as his grandson stroked the tree.

Next, the grandfather went around to other trees and bushes, telling who planted them. All the other members of the family were able to help the grandfather with their own reminiscences, telling amusing anecdotes or the impressions they had had at the time the trees were planted.

Finally, the family members all gathered around the domain's centrepiece — the family tree, which was usually a cedar or an oak.

"You see this tree," the eldest family member continued. "It was planted by my great-grandfather's great-grandfather."

A general discussion then ensued as to why this variety of tree was chosen over some other. Why had the distant forebear planted the tree in this particular spot, rather than further to the right or left. Some people asked questions, while others answered them. Occasionally an argument would break out. And it often happened that, in the heat of the argument, all of a sudden one of the children, without being aware of it himself, came out with a strange-sounding declaration:

"How come you do not understand? I myself planted this tree in this particular spot, because..."

The adult family members realised at once that their little one harboured the soul and feelings and knowledge of one of their own distant forebears. And how proud they were that his soul was not aimlessly drifting through the waste spaces of the Universe, that it had not broken up into small particles, but continued to live in perfection, in life eternal.

Paganism, and especially Vedism, could scarcely be termed a 'religion'. It would be more accurate to refer to it as *the culture of a way of life*. It was the greatest culture alive on the Earth, belonging to a highly spiritual civilisation. This civilisation did not need to *believe* in God — its people *knew* God.

This civilisation's people communicated with God, they understood the thoughts of the Creator.

They knew the designated purpose of every blade of grass, of every midge, of every planet.

This civilisation's people continue to rest in our souls even to this day. They will most certainly awake. The happy, life-delighted creators of a marvellous planet, the children of God — the Vedruss people.

These are not simply empty words. There is as much evidence to back them up as can be desired. One proof is found in Japan.

As is known, in the sixteenth century Christians began a considerable proselytising campaign in Japan. However, upon observing the results of the Christian missionaries' activity, Tokugawa Ieyasu,<sup>4</sup> the Japanese ruler at the time, outlawed Christianity in his country.

Japan, with its native religion of Shintoism, is the closest country today to paganism. The word *Shinto* translates to 'pathway of the gods'. According to Shinto, Man's ultimate goal is harmonious co-existence with Nature.

What then? Is the Japanese people's way of life something terrible and uncivilised? That's how people see Man's life during the pagan period. But it's not true. Quite the opposite.

Many Japanese write poetry and have a reverent attitude toward Nature. The whole world is entranced with Japanese *ikebana*.<sup>5</sup> And yet the attraction to this refined art is not restricted to Japan's professional florists. *Ikebana* is something you can see in practically every Japanese household.

The Japanese show special treatment to their children. Adults go the greatest possible lengths to ensure complete freedom for their children.

<sup>4</sup>*Tokugawa Ieyasu* (1543-1616; surname cited first) — the founder of the Tokugawa shogunate of Japan which ruled the country from 1600 to 1868.

<sup>5</sup>*ikebana* — the Japanese art of flower arranging.

A nation of poets and artists, it would seem. Yet the level of Japanese technology surpasses that of even the most developed countries of the world. It is a challenge to compete with them in the field of electronics or motorcar manufacturing. In referring to a modern pagan country like Japan, we are talking only of *elements* of paganism. Just think what type of Man one could have in a fully pagan culture!

One thing is clear: in terms of the level of knowledge and spirituality he would significantly surpass the type of Man prevalent today. But it was in somebody's interests to befool us by insisting upon our belief in the exact opposite.

Japan is not an exception — it is by no means the only example. From deep in our millennial past come names of such geniuses among poets, thinkers and scholars as Archimedes, Socrates, Democritus, Hecralitus, Plato and Aristotle. They lived between two and six hundred years B.C. And where did they live? In Greece — which at that time was also a pagan country.

Japan, Greece, Rome, Egypt, with their ancient temple structures, classical art, holidays and traditions, all bear witness even today to the cultural level of these peoples. But what can our own historians tell us about *Rus'* of that time? Absolutely nothing.

How does one find tangible evidence that Vedic *Rus'* was home to artists and poets, not to mention glorious warriors who never attacked anyone but were skilful masters of weaponry?

I said to Anastasia:

“Unless we can find tangible proof of the culture of Vedic *Rus'*, nobody will believe in it. Your accounts of it will be treated as mere legends. Beautiful legends of course, but still legends. I'm convinced there's no point in searching historical works. So you are all that's left. Can you point to any tangible proof, Anastasia?”

“Yes, I can. For there is actually a great deal of proof.”

“Then tell me: in what spot should we go with excavation?”

“Why start with excavation? There are a great many human dwellings that offer proof of the Vedruss culture.”

“What kind of dwellings? What do you have in mind?”

“Look carefully, Vladimir, at the houses people are constructing today, and compare them with the houses that have been built in the village where you now live. Almost all the old houses in this village are decorated with traditional Russian wood-carvings. You also saw even older houses when you visited the museum-town of Suzdal.”<sup>6</sup>

“Yes, and they are all decorated with even finer carvings. And not just the houses — the portals and garden gates too, they’re all works of art.”

“In other words, the deeper you go into your people’s past, the more beautifully appointed human dwellings you see.

“In museums, too, you can see beautiful wood-carvings adorning distaffs, mugs and other household items which were in common use three to five hundred years ago. You will notice, Vladimir, that the artistry of the masters keeps increasing, the farther one travels back through the ages.

“Creativity like that on a massive scale has not been found over many centuries in any country in the world. Note, Vladimir, that these were not individual artists working on commission for a few rich bigwigs, but absolutely the entire population participated. Judge for yourself: if you see an ordinary distaff in a museum, it did not belong to the Tsar, or the Tsar’s wife, or some kind of bigwig. You are looking at an object which was found in every home. People used these

<sup>6</sup>*Suzdal* (pron. SOOZ-dal) — like the neighbouring town of Vladimir (about 30 km distant), one of the oldest cities in Russia. For further information see footnote 1 in Book 5, Chapter 6: “A garden for eternity”.

lacy wood-carvings to decorate all their buildings, including the fences; they decorated all their household items, and embroidered their clothes. If this had been done by master craftsmen, it would have taken an unimaginable number to produce all the examples we know about. Each Vedruss family did this on their own.

“The whole population were engaged in artistic pursuits. And this tells us that the whole population lived in plenty. A good deal of time is required if one is to spend a lot of time on artistic creations. Your historians are all wrong when they say that people in ancient times spent their whole day bent over, tending their agricultural lands. If that were true, they would have had no time for artistic pursuits. And yet they did. And as for their skill with weaponry, judge for yourself: if they were able to build such beautiful log mansions with an axe, they must have wielded it like a brush in the hands of an artist.

“Do you know what kind of competitive entertainment they thought up for Shrovetide? They drove into the ground two large upright logs about three metres apart. Two male competitors went up to these logs, carrying an axe in each hand. After being blindfolded, the men worked with both hands simultaneously, competing to see who could cut down their log first. But that was not all — they had to cut it down so that it would fall exactly on their competitor’s log and knock it over.”

## CHAPTER TWENTY-THREE

### Significant books

One day I asked Anastasia's grandfather if he had ever had the opportunity to read any spiritual or scholarly books. His answer struck me as rather strange:

"If you mean taking a book into my hands, leafing through the pages and reading the words printed in the books, that's something I've done only on one occasion. But everything written in significant books is known to me."

"How so? And what are 'significant books'? If there are significant books, that means there must also be insignificant ones, eh?"

"Indeed. But why are you stuffing your head full of all this?"

"What d'you mean, why? A cultured and civilised Man ought to be well-read. When I speak at readers' conferences, I'm often asked whether I've read this book or the other. But I've only read just a few books in my lifetime. So I'd like to know which books I should read first. A lifetime isn't enough to read all of them, even if one read all day from morning 'til night. That's why I need to know about these 'significant books', so as not to come across as an utter ignoramus."

"You know, Vladimir, when you're asked at your readers' conferences what books you've read, you can say you're familiar with all of them."

"I can't do that unless I have actually read them all. They might ask me, for instance, what a particular author said in his book. If I've never even held his book in my hands, there's no way I could come up with any kind of answer."

“Simply tell them: ‘This author has nothing substantial to say.’ Tell the one who asked you the question to prove otherwise. You know, Vladimir, it only appears from the numbers that there’s a lot of books out there. In fact you can count the number of significant books on your fingers.”

“But how do I know whether a book is significant or not?”

“With the help of a criterion.”

“Can you let me have this criterion? At least to borrow?”

“Of course I can let you have it, and all your readers too. The point is that the criterion for determining the significance of a book is people’s way of life.”

“What d’you mean — their way of life? What’s that got to do with it?”

“People live in various parts of the globe. Human societies are conditioned by national differences. National cultures vary from country to country. As does their way of life, and their longevity. The culture of various peoples is shaped under the influence of, among other things, a significant book. Generally: a book that determines a people’s philosophy, gives rise to a particular religion and, consequently, a way of life.

“In China, for example, Confucius’ teachings<sup>1</sup> are considered significant. A special view of the world has been developing there since ancient times. To put it briefly, it views the world as a living organism.

“Part of this cosmic organism, or system, is the concept of *yin* and *yang*.<sup>2</sup> If you are interested in the Chinese people’s way of life, if you think it might serve as an example for the rest of mankind, then read Confucius’ book. If you are

<sup>1</sup> *Confucius (Kung-fu tzu)* (551–479 B.C.) — ancient Chinese thinker and philosopher whose teachings on morality, justice and social relationships (collectively known as *Confucianism*) are still respected and practised today in a number of Asian countries, including China, Japan and Korea. They are set forth in a publication known as *The analects of Confucius*.

interested in the Japanese world-view and their life-achievements, then read a book about that country's traditional religion — Shintoism. In many respects it helped shape the Japanese people's way of life.

“If you think that the happiest people live in the Christian world, then read the Bible. Significant books are those books which shape a particular way of life of a part of human society.”

“But in Christian spiritual literature, after all, there is a lot more besides just the Bible.”

“Yes, indeed. But there is absolutely nothing new in them. As a rule, in every significant book there are one or two basic thoughts or philosophical conclusions. All other books on a similar theme simply repeat this thought and contribute nothing new to one's world-view.

“Take, for example, one of the basic thoughts of the Bible — namely, that God must be bowed down to and his instructions carried out. This has given rise to a whole lot of books outlining the best way to do this. Some books say you should cross yourself with two fingers, others with three. They tell how to build temples with the best-looking outward appearance. They cite hundreds of examples of acts of worship by various people, devotees of genuflection. They talk of wars and arguments over particular methods of worship.

“People get immersed in these arguments and lose their ability to discern the basic thought. They no longer use the basic thought as a standard with which to compare others.

<sup>2</sup>*yin. yang* — the two opposite (though complementary) principles of Chinese philosophy, underlying both Taoism and traditional Chinese medicine. The *yin* (originally denoting a shady slope of a mountain or river-bank) represents a darker, passive feminine entity, symbolised by the elements of water or earth, while the *yang* (from the designation of a sunny slope) encompasses a brighter, active, masculine force, symbolised by fire and wind.

What happens is that in reading a whole lot of books about one and the same thing, they do not obtain any new information, but merely atrophy their analytical abilities. And they don't even bother trying to determine whether God really wants Man to bow down to Him, or whether He wants something quite different.

"As you can see, the hundreds of thousands of 'spiritual' books that have appeared over the past two thousand years all say pretty much one and the same thing.

"The appearance of a new well-grounded thought about the interrelationship of God and Man signals the appearance of a new significant book for the first time in two thousand years. With its appearance, its predecessor in the ranks of significant books passed into the ranks of historical documents."

"You're talking about the appearance of a new significant book? What's it called?"

*Co-creation.* It contains new thoughts. And it is well-grounded. The main thought of this book states in a clear and well-grounded manner precisely what God's wants of Man, and what Man's purpose is. You wrote this book from Anastasia's words, and you will remember, Vladimir, God's response to the question from the elements of the Universe:

'What do you so fervently desire?' everyone enquired.

And He, confident in His dream, replied:

*'Conjoint creation and joy for all from its contemplation.'*<sup>3</sup>

"But where is the proof that this declaration actually represents God's will?"

"The proof is everywhere. In the declaration itself. In the human heart and soul. In the logic of thinking. Judge for yourself:

<sup>3</sup>Quoted from Book 4, Chapter 2: "The beginning of creation".

if you accept as a premise God's creation of the Earth and Man, then the feelings ensuing from that on the part of God will correspond with those of Man — the parent of his children. All loving parents wish conjoint creation with their children.

"The second part of the declaration specifies what kind of creation God desires: 'and joy for all from its contemplation'. So tell me, what kind of creations can bring joy to absolutely everybody?"

"That's a hard question to answer. Some people get joy out of a good car, while others couldn't care less about cars. Some like eating meat, while others don't eat meat at all. There's even a popular saying: *There's no accounting for taste*. It'd be hard to find something that everybody could embrace."

"And yet, it is possible. Think about air, water, flowers, for example..."

"But those have already been created, while we're talking about conjoint creation."

"Yes, air, water and vegetation have already been created. But they're not always the same. Man is capable of making his air filled with dust, smoke and lethal gases, yet the same Man can fill it with ethers, aromas and flower pollen.

"Water can vary too. You can use chlorine-smelling water, for example, or you can drink genuine, refreshing water. And in among the great variety of plants you can either manufacture bloody chaos or create living scenes of extraordinary beauty and grandeur, attractive and delightful to the eye. There's a statement about that in *Co-creation*."

"If the book *Co-creation*, as you say, is significant, then isn't it also supposed to transform the life of society or somehow influence it?"

"Yes, that's a law. A new thought inevitably embodies itself in a new way of life for society."

"But when will this come about? Two years have gone by already since that book was published."

“To put it more accurately, not two years *already*, but *just* two years. In this relatively brief space of time, however, it has already co-created a great deal. You yourself were saying, weren’t you, that many people are already attempting to build a new way of life for themselves. They’re even creating national development programmes.”

“Yes, I did say that. There are indeed manifestations of this already.”

“You see? It took three hundred years to make Christianity noticeably felt, and here look at what’s been accomplished in just two years! Anastasia’s thoughts are materialising in a real way of life among many peoples, they are uniting their aspirations into a single creative impulse of universal co-creation.

“She launched a new way of thinking into Space, and this is an event of colossal proportions. This means that the book in which these thoughts were set forth for the first time will be accorded a similar evaluation.”

“I guess that means that I too will be one of the world’s significant writers?”

“You will not be *one of*... You will be *the* most significant, Vladimir. My granddaughter would not even think of secondary roles for her beloved.”

“It’s not working out quite that way. The popular newspaper *Argumenty i fakty* (Arguments and facts)<sup>1</sup> published a book rating putting *The Book of Kin* in second place overall in Russia.”

<sup>1</sup>*Argumenty i fakty* — a leading weekly newspaper on current affairs. Founded in 1978 by the *Znanie* (Knowledge) organisation, it was designed primarily as a Soviet propaganda tool, but during the *glasnost* (openness) era of the late 1980s the paper was gradually transformed into a forum for real discussion. In the early 1990s it claimed to have a print-run of 33.5 million and was listed in the *Guinness Book of Records* as having the largest circulation in the world.

“After a time a great many people will become aware of the significance of the books you have written. And then a simple first place in the ratings won’t seem like all that much. A mere six years has passed since you wrote your first book. You were a nobody back then, but today — you are more than just famous. I’ve heard that you’ve been awarded recognition as a People’s Academician and presented with a certificate.”

“You’re right, only this recognition wasn’t from a traditional academy, but a public one.”

“Well, there you go — a public academy.<sup>5</sup> Treasure this award, it’s higher than the traditional variety. The people have spoken. The people who have realised the significance of your books, they’re the ones who’ve decided that *you* are significant. It means they’ve actually understood Anastasia’s thoughts and appreciated them. It’s not just ordinary people who have been able to do this, it’s people who will be able to go further and embody, understand and materialise her thoughts. That’s how it will be. Only don’t give yourself airs — hold out until the time comes, without giving in to pride.”

“I’ll try my best. I’ll read over Anastasia’s sayings again. It goes without saying that I won’t read crime novels or any kind of fiction. There’s really nothing in the way of new thoughts in them. Just light entertainment fluff.

“But I do have one question I’m unable to find an answer to. You can’t really tell whether a book is significant or not until after you’ve read it. But there’s a huge number of books out there — you walk into a library and the shelves are lined

<sup>5</sup>*a public academy* -- In Russia today, apart from the state-sponsored and state-controlled Russian Academy of Sciences (known by its Russian acronym of RAN) and its branches, there are a large number of independent academies created by individuals or groups of citizens, or by other non-governmental organisations. These are sometimes referred to as ‘public’ (Russian: *narodny*) — in the sense that they have been created by members of the public rather than State.

with tens of thousands of books. Many of them have pretentious titles, even ones like *Conversation with God*, or *Truth unveiled* or *All the secrets of life*. In actual fact, however, you can read and read and still not come across any new thoughts. For every ten thousand there's maybe only one significant book, but then my chances of stumbling across it are one in ten thousand too. What to do?"

"Well, I'm telling you: before starting to read anything, take a survey of how people live in various corners of the globe, take note of situations that appeal to you in their lifestyle, and then read their book, and ponder it."

"But what if I don't find anything appealing? All peoples have similar troubles. There are differences, sure, but in the main... Take the environment, for example — there's nowhere in the world where it's not going downhill."

"Well, then, if you don't find anything appealing, then give some thought on your own as to how to build a harmonious way of life, and when you come up with something, you'll write a book about it yourself."

"All by myself? Without reading anything else?"

"You're contradicting yourself, Vladimir! You were the one that said you can't find any books worth reading, and behind those outrageous titles there's only a proliferation of words without any sense, without any new thoughts. And at the same time you are doubting — you think you can't be intelligent without reading a whole lot of rubbish. In any case I can tell you that every Man, right from birth, aspires to read the most important book — one whose language is distinct from printed letters — you remember: "The Divine language has fragrance and colour..."<sup>6</sup>

"I understand."

"So read and ponder what you've read."

<sup>6</sup>Quoted from Book 4, Chapter 11: "Three prayers".

## CHAPTER TWENTY-FOUR

### An exercise for teleportation

“You’re right, Vladimir,” Anastasia’s grandfather continued. “In terms of the present state of consciousness of most people today what Anastasia creates can seem incredible.

“Still, once the conscious awareness and state of mind belonging to our forebears at the time of our pristine origins are fully comprehended, these same people will look back and laugh at the astonishment they are now expressing.

“I’ll tell you now about just one exercise that will enhance your ability to easily teletransport your second self — that is, to transport yourself to a neighbouring town, or a different country or time period. Anybody can do this as long as they’re not lazy about it.

“Remember one time you saw Anastasia, in response to your request, move her body in a split second from one side of the lake to the other, and then move it back again?<sup>1</sup> And she didn’t hide the fact that any Man is capable of doing the same. One must mentally visualise all the cells of the body, down to the tiniest ones which aren’t even visible under a microscope, and disperse them into space with one’s thought, and then gather them together by the power of thought in the new place. Just watching this can astonish the imagination.

“Anyone can do this whose speed of thinking allows them to visualise in a single moment all the details of their body. Even a microscopic error, though, is enough to prevent the cells from gathering together after dispersal.

<sup>1</sup>See Book 4, Chapter 21: “Where do we go in sleep?”.

"I've done this on just three occasions over my lifetime, and each time I prepared for it a year or more in advance. I can't do anything like that any more. Either I'm just a bit past my prime, or I've got too lazy. But even my granddaughter, who was able to demonstrate her teleportation abilities so easily, said that this shouldn't ever be done unless there is an acute need for it. And she explained why.

"Still, she transported you on several occasions to different times and cities. You saw images and you felt as though you were present at the events you witnessed. Am I right?"

"Yes, you are," I confirmed. "It was when I described how she transported herself and me to another planet, without our bodies.<sup>2</sup> Our bodies remained on the Earth. A lot of people didn't believe such a thing was possible."

"They'll believe it when they're able to do something along those lines themselves. I'll teach you how. Just listen carefully and try to make sense of what I say.

"Man is made up of a multitude of energies which comprise his being. Feelings, thought, imagination — that's all Man too. But these energies cannot be seen by the eye. We shan't say whether these parts of the body are material or not. In this case the degree of their materiality isn't important. What *is* important is that they exist, and that these are also *you* — a Man.

"The material human body is one of many elements comprising a Man. Man can live without a material body, only then he would have to be called something else. The material body affords a visible opportunity to define the degree of harmonious balance among all the other energies.

"Now imagine that you or some other Man took all your energies, by your own free will, separated them from your body and transported them to a different space."

<sup>2</sup>See Book 4, Chapter 22: "Other worlds".

“Is that something anybody can do?”

“They can. It happens to a certain degree with everyone when they sleep. But don’t get carried away, keep on listening. I said that Man is capable of transporting, by his own free will, his whole complex of feelings to some other place.

“That requires just a bit of training. Here’s a training exercise.

“First, you need to find a spot where you won’t be disturbed. It can be just an ordinary room with a bed. As long as no distracting sounds can enter.

“So, you lie down on the bed and relax your body. See to it that your arms, legs and head are all lying freely in a comfortable position. Then, without moving, try to direct more of your blood toward one hand (as opposed to other parts of your body), purely by your will. If you don’t succeed right off, try again, until you feel a slight tingling in your fingertips on the hand you’ve been directing the blood — and your energy — toward.

“You should spend no more than thirty minutes a day on such attempts, but keep them up until you are able to freely direct the flow of energy and blood at will — first to one hand, then the other, then to your feet. Once you achieve the desired result, you should be able to direct energy to the brain as well.

“If you succeed at this, you will notice a significant benefit to your health. You’ll be able, for example, to remove a pimple or sore from your arm or leg or any other part of your body. You’ll be able to reverse hair loss. But, most importantly, you’ll be able to supply your brain with supplemental energy.

“I should also point out that in order to achieve such results, you should refrain from eating meat for several days before beginning the exercise. You should have a varied diet of fresh and easily digestible foods — foods containing ethers.

In your present living conditions these are hard to come by. But here are some foodstuffs which can give you a lot of things you're missing: take approximately ten grams of cedar oil each morning, then about twenty grams of honey and five of flower pollen. You should repeat this three hours before bedtime.

"Once you have completed this first part of the exercise, you can then go on to the second. For this part, tell me, what are some of the most common actions people perform every day around their home?"

"Probably food preparation is the most frequent. The majority of us, of course, prepare food every day. Peeling potatoes, for example."

"So, choose an action which you repeat most often. Which specific action it is doesn't really matter — the main thing is that it is one you are very familiar with. You mentioned peeling potatoes. This may well be the most familiar for some people; others can choose something else.

"Now take a watch and note the time as you begin this particular action. While you are carrying it out try not think about anything else. Remember all the details as well as what you feel while doing it. If you're peeling potatoes, for example, take note of how you hold the knife, where the scraps fall, how you washed them, and the sensation of the water. Remember how you put the potatoes into the pot for boiling and set it on the stove. Remember how you cleaned up the scraps when you were finished.

"When you decide that your actions are completed, look at the time and either remember or write down how many minutes you spent on them. Let's say it took twenty minutes altogether. Now set your alarm-clock to go off in exactly twenty minutes. Go into the other room, the one where you mastered the first part of the exercise while lying on the bed. Lie down on the bed again, relax, close your eyes and picture yourself in the room where you peeled the potatoes.

“It is essential to visualise everything down to the minutest detail. If you visualise everything correctly and consistently and in all the details, the alarm should go off at exactly the moment that you have finished your visualisation.

“If you’re lazy and leave out a lot of the details, you’ll finish your visualisation before the alarm goes off. If, on the other hand, you’re slow and lethargic in your thinking and visualisation, the alarm will go off before you’ve finished.

“Some people will need a whole year’s training to do this, others two years, while there are those who might learn it all in a month. Once you learn to make your visualisations coincide with real time, you’re close to being ready for teleportation. You can then go on to the third part of the exercise.

“In Part Three you have to mentally enter another room of your home and carry out a series of actions which you do only rarely. First measure the time it takes you to carry out the actions in visualisation. Let’s say you go into a room, fill a watering-can with water and proceed to water some flowers. After doing this and getting up from the bed, check your watch to see how many minutes the visualisation took you, and either memorise the figure or write it down.

“Then go into the room you recently entered in your mind and repeat the action of watering the flowers. The time should coincide right to the minute. If it doesn’t, well, that means you need more training. Once you’ve got the times to coincide, then you’ll be able to do a great deal with your second self — you’ll be able to visit not just other rooms in your home, but your neighbour’s home too and even other countries. For this you will only need a few reliable details. After analysing them, you’ll be able to re-create the whole environment in detail and actually go there.

“Not everyone will manage to do something like this, but I can tell you with certainty that once you have been in an

overseas city, you'll be able to go there again and again by transporting that second self of yours.

"Once you master this, though, you need to be mindful about one particular danger — you shouldn't detach your second self from your body for very long."

At this point I'll digress from Anastasia's grandfather's account and tell you in more detail about the danger involved.

After doing this exercise (for curiosity's sake) and achieving the results he spoke of, I tried teleporting my second self to the island of Cyprus, to the city of Paphos, which I had visited earlier.<sup>3</sup>

Lying on the sofa in my office, I relaxed and pictured myself getting ready for the trip, going to the airport, boarding the plane, landing at Larnaca and checking into the hotel I had stayed at in Paphos. Then I took a shower and walked down to the sea-side.

Coffee in the evening, the local music, a morning stroll on the beach, bathing in the sea — it was all there.

I returned — or woke up, I'm not sure which is the more accurate description here — three days later. And I could barely lift myself out of bed. My body, to put it mildly, had been wanting to go to the bathroom for a long time, and nobody had bothered to take it there. It was also very hungry, but nobody had fed it. I finally managed to get up and take a look at myself in the mirror. I wasn't happy with what I saw. A three days' stubble had sprouted on my face, and my facial expression was peeved and joyless. And I felt very sorry for my poor body, which had been abandoned the past three days.

The whole experience taught me a lesson: that Man's body is nothing but an utterly helpless piece of flesh without the

<sup>3</sup>See Book 5, Chapter 19: "Who controls coincidences?"

energy of the second — or is it the first? — human self. Yet helpless as it might be, it still belongs to me and I have no right to leave it unattended, even for the sake of a trip to some overseas resort. I also observed that when you travel without your body, though the sensation may appear complete, and you feel the sea water and the warmth of the Sun's rays, the body still doesn't get a tan.

At first I regretted the time wasted on the training. But later I managed to make profitable use of it in the ability to foresee, with the help of my second self, some events that hadn't happened yet. This is how I managed to write on several topics which I'm about to present to you now.

## CHAPTER TWENTY-FIVE

# Give children their Motherland

In Ukraine there is a city called Kharkov.<sup>1</sup> In this city there is an orphanage. A fine orphanage, with cozy rooms, a handsome aquarium and a large swimming pool. It has received significant support from local authorities and the business community. In showing me the facilities, the head of municipal education department remarked that children from this orphanage go to the regular public school. As I looked out the window I could see groups of children on their way back from school. Only one little girl was walking apart from the rest.

“That’s Sonia.<sup>2</sup> She’s in Grade One,” the director explained. “She always walks alone. She thinks that she will soon be adopted by a Jewish family.”

“Why a Jewish family?” I asked. “She doesn’t at all look like a Jewish child, with her fair hair. She looks Ukrainian more than anything.”

“Someone at school told her that *Sonia* is a Jewish name, so she must be Jewish. Sonia agreed, and decided at once that she would definitely be adopted by a Jewish family. And she

<sup>1</sup>*Kharkov* (known in Ukrainian as *Kharkiv*) — a major Ukrainian industrial and cultural centre, situated near the junction of the Lopan and Udy Rivers (tributaries of the Severski Donets), in the north east of the country. With a population of a million and a half, it is the second largest city in Ukraine after Kiev.

<sup>2</sup>*Sonia* — an ancient Russian name (literally meaning ‘sleepy’), now often used as an affectionate form of the name *Sofia*, also appearing in variants such as *Sonechka* (pron. *SON-yetch-ka*).

always walks alone, thinking that if she walks with the group, her future parents might not notice her.”

Kharkov has a fine orphanage. There are orphanages, too, in other cities in Ukraine, Belarus and Russia. They are home to children. Yet no matter how cozy the rooms in these orphanages, all children dream of having parents and a family.

In her nondescript shoes, small and slender first-grader Sonia trod in a no-nonsense fashion across the asphalt courtyard, separately from her group of classmates. And Sonia, who lived in the orphanage, had a dream...

A day went by, then another, then months. Sonia wasn't aware that children's shelters had been around a long time in various countries, and that not all children ended up being adopted. Most of them, in fact, are doomed to spend their whole lives parentless. Sonia wasn't adopted either.

However, her life did not turn out in the usual way. At that time a group of Kharkov residents decided to build a community not far from the city. They managed to acquire a hundred and fifty hectares of land, and a hundred and twenty families decided to set up their own kin's domains, a hectare each in size.

One lot on the edge of the community remained unspoken for, so they decided to give it to somebody from the orphanage. It turned out that little Sonia was selected as the recipient. They brought the girl out to see her plot, accompanied by one of the housemothers. The housemother began to explain to Sonia:

“D'you see, Sonia, the stakes driven into the ground and the rope stretched between them? This rope marks off your land, a whole hectare. It is a gift to you from people who have also taken a hectare of land nearby to plant gardens and build houses on. When you grow up, you too will be able to build a house and plant a garden. Your land will be waiting for you.”

The little girl walked up to the rope, touched it, and asked the housemother:

“Does that mean that on the other side of this rope is my land and I can do whatever I want with it?”

“Yes, Sonechka, this is your land, and you alone are in charge of everything that will grow on it.”

“And what will grow on it?”

“Well, for the time being, as you can see, a lot of different kinds of grasses. But look over there, on your neighbours’ plots — they’ve already started planting apple trees and pear trees, and a whole bunch of other fruit trees, and they’ll soon have flourishing orchards. And when you grow up, you will decide what to plant on your land and where to put it, so that it will look beautiful, just like the others.”

Sonia bent over and crawled under the rope onto her hectare of land. She took several steps along the rope, carefully examining the ground and all the little creatures twittering and darting about on the grass. She walked as far as a little birch-tree growing on the plot and touched its slender trunk. She turned to the housemother, and in a somewhat excited voice asked:

“What about this little tree? The little birch tree? Is that mine too?”

“Yes, Sonechka, as of now the birch tree belongs only to you, since it’s growing on your land. When you get older, you’ll be able to plant other trees here... But now it’s time to go. It’ll soon be lunch-time and I have to get back to the group.”

The little girl turned to look at her plot and stood silently contemplating it.

People who have children know that when they play, children often build little rooms for themselves out of various things or, in the country, they set up little lean-tos for themselves to play in. For some reason, every child has a need to fence off a little world of their own from the big world outside, to create their own space. Children who live in orphanages have a common space, but this common space, even if it is very well appointed, can only have a negative effect on them.

Like other orphanage children, Sonia never had a corner to call her own, even a tiny one. And here she was standing on the other side of the rope, where everything belonged exclusively to her — including the grass, and the lively grasshoppers hopping across the ground, and the little birch tree. The slim little girl turned to her housemother and started to speak. Her voice combined tones of both pleading and decisiveness.

“I beg of you, very, very much, to please let me stay here. You go on ahead, and I’ll come back on my own.”

“How will you get back? It’s thirty kilometres!”

“I’ll make it,” replied Sonia firmly. “I’ll walk and I’ll make it. Maybe I’ll take the bus. Please let me have some time on my land all by myself.”

The driver of the *Zbiguli*,<sup>3</sup> who happened to be the proprietor of the plot next door to Sonia’s, overheard the conversation and proposed:

“Let the girl stay here until this evening. I’ll take you back now, and bring her home tonight.”

After a moment’s thought the housemother agreed. How could she refuse, after seeing the face of this little girl standing behind the rope, awaiting her decision.

<sup>3</sup>*Zbiguli* — a car produced at Toliatti on the Volga River (see footnote 1 in Book 4, Chapter 22: “Other worlds”), here referring to the car which had brought Sonia and the housemother out to see the plot.

"All right, Sonia, you may stay here until this evening. I'll send along lunch with the driver."

"What d'you need to do that for?" responded the *Zhiguli* driver. "We'll be happy to share our lunch with our neighbour," he added, with a respectful emphasis on the word *neighbour*.

"D'you hear that, Klava?"<sup>4</sup> he called out to his wife, who was busy preparing lunch on the porch of their house. Their house was still under construction. "Make dinner for four — our neighbour will be joining us today."

"Fine," answered his wife. "There's enough for everyone." And she added: "Just give us a shout, Sonia, if there's anything you need."

"Thank you," answered Sonia, now extremely happy.

After the *Zhiguli* had departed, Sonia walked along the rope strung between the stakes. She walked slowly, sometimes pausing to sit down on the grass and touch something with her hands before continuing on. In this fashion she walked around the whole perimeter of her lot.

Then she stood in the middle of her hectare and surveyed all sides of the perimeter. And then all at once, she threw her hands in the air and began running, jumping and spinning around.

After lunch Klava noticed how tired the girl looked after trotting around her plot, and invited her to have a nap on a folding cot. But Sonia, tired as she was, replied:

"If possible, can you give me some old clothing I can spread out to lie down on. I'll take a nap on my own piece of land, by the birch tree."

Nikolai<sup>5</sup> set up the cot with a mattress and blanket beside the birch tree on Sonia's plot. The girl lay down and

<sup>4</sup>*Klava* — an affectionate form of the feminine name *Klavdia* (corresponding to *Claudia* in English).

immediately fell into a deep sleep. This was her first time sleeping in her own kin's domain.

But now the orphanage was faced with what initially seemed an insoluble problem. Not a day passed but Sonia would ask the housemothers to allow her to go to her own hectare of land. Their explanations — that she was still too young to take the bus all by herself, and the housemothers couldn't take her since they couldn't leave the other children — fell on deaf ears.

Sonia began talking with the orphanage's director. She explained to him that she absolutely *had* to go see her land. She had to, because on the neighbouring plots people were already planting trees, and would soon have flourishing orchards, while her land would be left abandoned. Nothing would be flourishing on it.

Finally the orphanage's director came up with a solution that was acceptable to Sonia. He told her:

“Right now, Sonia, it's not possible to take you out to your plot, since apart from everything else, you still have a fortnight's study ahead of you. Two weeks from now the summer holidays will begin. I'll have a word with the neighbours next door to your plot, and if they agree to watch out for you, then during the holidays we'll send you off to your plot for a time — for a week, at least, or maybe longer.

“By the way, you could spend this coming fortnight getting yourself ready for your land. Here, take these two brochures and read up. One of them tells how to make planting beds, and the other is a guide to medicinal herbs. If you can be on

---

<sup>5</sup>*Nikolai* (pron. *ni-ku-LYE*, rhyming with 'by') — a masculine name of Greek origin, now commonly used in Russia (corresponding to *Nicholas* in English). The ancient Russian name *Kobyá* is now used as an endearing form of *Nikolai*. In this case it is the name of the driver, Klava's husband.

your best behaviour these next two weeks, I'll also get ready for you a selection of seeds for the holidays."

Sonia was on her best behaviour. She did all her lessons conscientiously, and devoted all (absolutely all!) her spare time to reading the two brochures the director had given her. When she lay down to sleep, she dreamt about the beautiful plants that would grow on her plot. On one occasion, while all the other children were fast asleep, the night-nurse noticed Sonia drawing sketches of trees and flowers by the moonlight streaming through her window.

The neighbours did agree to watch out for the little girl, and when the summer holidays began, the director himself helped load a number of items into the baggage compartment of the *Zhiguli*, including box lunches for two weeks, a small shovel and rake, as well as a packet of seeds.

Nikolai didn't want to take the box lunches from the orphanage, but the director assured him that Sonia was an extremely independent girl and would never want to be a burden to anyone, so it would be better for her to see she had her own supply of food.

And they also gave her a new sleeping bag — in spite of the fact that Nikolai's family had already fixed up a little room for Sonia on the finished ground floor of their house, complete with sheets and pillows.

As Sonia was getting into the car, a whole lot of people came out to see her off — not just the orphanage staff on duty that day, but a crowd who had come especially to look upon the little girl's face, which was beaming with happiness.

For the first three nights Sonia slept in the room her neighbours had fixed up for her, spending all day long on her own hectare of land which was so dear to her heart.

The third day was Nikolai's birthday, and a lot of guests came. One young couple arrived with their tent. On the

following day, when the guests departed, the tent was left behind.

"That's a present for you," the young couple said to Nikolai.

Then Sonia asked Nikolai if she could sleep in the tent. Nikolai gave her his permission.

"Of course, go ahead, if you like. What is it — do you find your room stuffy?"

"The room's fine," replied the girl. "But everybody here spends the night on their own land, while my land is all alone at night. There are lights burning on many of the other plots at night-time, but mine's all dark."

"So, does that mean you'd like me to set up the tent on your plot?"

"I'd like that very, very much, Uncle Kolya — if you could set it up beside the birch tree. Only if you have time, and if it's not too inconvenient..."

Every night after that Sonia slept in the tent Nikolai set up on her plot beside the birch tree.

Upon awakening early in the morning, she would go at once to the bucket of water standing by the tent, and draw some water in a mug. After filling her mouth, she would let a thin stream of water splash onto the palms of her hands to wash her face.

Then she would take out a sketch-book in which she had made hand-drawings of the plan for her plot, and study them. After that, she would proceed to dig her flower and vegetable beds.

The small sapper's spade the director had given her had a sharp edge, but Sonia was unable to get the full blade into the ground; she could only get it in only half-way. But she still managed to make her vegetable beds.

Her neighbour Nikolai offered to plough up any designated areas with a rototiller, but Sonia categorically refused. She was fiercely jealous of any encroachment on her territory.

People sensed this and endeavoured not to cross over the line (marked out by stakes and rope) without her knowledge. Even Nikolai, upon awaking in the morning, when he went to call Sonia to breakfast, would go only as far as the property line and call out to Sonia from there.

Perhaps it was some kind of extraordinary streak of aspiration toward independence on this young girl's part, or else the fear of becoming a burden to someone, that prevented her from asking anybody any favours. Even when one of the community residents tried to offer her clothing, or candy, or some sort of equipment, she would politely thank them, but categorically decline the offer.

In the two weeks she spent on her land, Sonia managed to dig out and plant three vegetable beds, with a huge flower-bed in the middle.

On the morning of her last day of her fortnight's stay, Nikolai went to the perimeter of her plot as usual, to call her to breakfast. The girl was standing by her flower-bed (in which nothing had come up yet). As she stared at it, she replied to Nikolai without turning around:

"Uncle Kolya, you don't have to call me to eat this morning, I don't feel hungry."

Nikolai would say later that he could hear her voice cracking, he could tell she was barely holding back her tears. He wasn't about to try to find out what the matter was. He went back to his place and began observing Sonia through his field-glasses.

The girl was pacing back and forth across her plot, first touching a plant with her hands, or straightening out something in one of the beds. Then she went over to her birch tree and put her arms around it. Nikolai could see her shoulders trembling.

By lunch-time the orphanage's ageing mini-van arrived. The driver stopped at the entrance to Nikolai's territory and sounded his horn. Nikolai would recount the subsequent events as follows:

When I saw her through my field-glasses gather up her simple little things, like the shovel and rake, and head over our direction with such a sad expression on her face, when I looked at that face close-up, I couldn't hold out any longer. I grabbed my mobile phone and rang the orphanage. Fortunately I was able to get through to the director right away. I told him I was willing to sign any papers required, accepting responsibility for the child, saying I would take the summer off work to spend the whole time here on the plot, just so the little girl could stay on her piece of land until the end of the holidays.

At first the director started to explain that all the children from their orphanage were to go to summer camp at the sea-side for rest and therapy — that he and his colleagues had spent a long time securing this opportunity, and that now they would be going to the camp, thanks to the generosity of a group of sponsors.

I then spoke with the director frankly, man-to-man, but he wasn't offended, and gave me an equally frank response. Whereupon he asked to have a word with the driver, promising to come out himself tomorrow.

I ran out to the road and handed the telephone to the driver, adding from myself:

“Okay, there, friend. Get out of here pronto!”

The driver left. Then Sonia came up to me and said:

“Uncle Kolya, didn't the van-driver come for me? But why did he leave?”

For some reason my negotiations with the orphanage director had left me rather tense. I lit a cigarette, my hands were trembling, and I responded to her:

“What makes you think he was coming for you? He simply came to see if you needed any food supplies, or anything else, and I told him everything was okay.”

She looked me straight in the eye. It seemed as though she understood what was going on. Then she said softly:

“Thank you, Uncle Kolya!” Then she began walking, and eventually running, back to her land.

The orphanage director came the following morning. I was already waiting for him. Only he didn't head my way, but walked straight over in the direction of Sonia's tent. I didn't get a chance to warn him not to cross the line without an invitation. But, smart fellow that he is, he guessed as much himself. Again, in an apparent effort not to traumatise the child, this clever chap had the sense to say, as the little girl came to meet him:

“Good day, Sonia. I just stopped by to let you know we're all going off to the sea-side. Would you like to stay here, or join us on our trip?”

“*Stay here!*” Sonia didn't just say it, but screamed it.

“I thought as much,” responded the director. “So I brought you something by way of box lunches...”

“No need to trouble yourself, no need to waste your time. I don't need anything.”

“No need? Then what would you have me do? The state provides us with funds for each child in our care. But you are here taking care of yourself, and feeding yourself. Tell me, how can I account for the state funds in a situation like this? No, please be so gracious as to accept these... Okay, Alexeich,<sup>6</sup> you can go ahead and unload them.

“Will you allow us to come in, Sonia? Maybe you'll show us your place here?”

<sup>6</sup>*Alexeich* (pron. *a-lek SAY-yitch*) -- here a patronymic (see footnote 9 in Book 1, Chapter 1: “The ringing cedar”). Patronymics in Russian are occasionally used alone in certain situations, one of them being an employer addressing an employee he knows very well. The full form of *Alexeich* would be *Alexeevich*.

Sonia stared at the director for several moments, sizing up the whole situation. Then she noticed the driver of the mini-van unloading some heavy-looking bags, and once she finally realised that she would be staying put here on her land for the whole summer holidays, she joyfully exclaimed:

“Oh, what have I... Come in, come in. The gate’s over there where there’s no rope. Please be my guests. I’ll be happy to show you my place. You too, Uncle Kolya, come on in.”

She led us over to her tent and at once invited us to take a drink of water from the bucket standing alongside.

“Here, have some water. I get it from a spring. It’s good-tasting, better than tap water. Do please take a drink.”

“I shan’t say no to that,” replied the director, drawing a half a mugful of water from the bucket and downing it with gusto. “It’s jolly good!”

The driver and I both took a drink and complimented Sonia on her water, to her great delight. It was probably the first time in her life that Sonia had possessed anything of her own. Even if it was just water, it was still something that was hers, something of her own that she could offer to adults. Sonia began to feel like a real participant in the world.

After that, we sat there listening for maybe an hour and a half or two hours while Sonia regaled us with her report of what she had already planted and what she was going to plant. And she showed us her drawings of her future kin’s domain. Only there was no house in the plans she had drawn.

“It’s time for us to go,” the director told Sonia. “You can unpack your things on your own. I threw in a battery-operated flashlight. It’s an electric torch that can shine far into the distance, but if you switch it over to the daylight-lamp setting, you can use it to read by. And now you’ll

have something to read. I brought you some magazines on landscape design, and gardening books, and books on folk medicine.”

“Oh, I forgot something again,” spluttered Sonia. “Just a moment.” She pulled back one of the tent flaps, and we saw bunches of various herbs hanging on a tent wire stretched taut. She took out several bunches and offered them to the director.

“This is celandine.<sup>7</sup> A special kind of herb... This is for Katya in our group, she needs to make a brew with it and drink it. She’s so often ill. I read up on celandine in the brochure you gave me. I’ve dried it already.

“Thank you...”

In sum, this director’s a pretty fine fellow, and he loves children. I had a talk with him later. He asked me how Sonia was behaving herself, and gave me some concrete advice.

Sonia spent the whole summer in her tent on her own piece of land. The bed at the centre of her garden blossomed with magnificent flowers, while the produce from the vegetable beds included onions and radishes.

In the evenings, when the days began to grow shorter, you could often see the light of the electric torch flickering in the tent. Every evening Sonia read books on folk medicine and made drawings of her future plans for her land in her sketch-book.

When the orphanage’s mini-van came to collect her at the end of the summer, I helped Sonia load up her things. And there was quite a bit to load! Just the bunches of herbs she had dried numbered around two hundred. Her yield also included a sack of potatoes and three pumpkins. The van had a full load. I asked Sonia:

<sup>7</sup>*celandine* -- see footnote 4 in Book 3, Chapter 20: “Mediums”.

“What about next year? Shall I hold on to your tent for you?”

“I’ll definitely come again next summer. First day of the holidays, I’ll be here. You’re a good neighbour, Uncle Kolya. Thank you for being such a good neighbour!”

And she shook my hand just like an adult. And this time it was a much stronger handshake. Sonia had not only got herself a good tan, but she had got stronger and more self-confident as well.

When she came the next year she brought fruit-tree saplings along with her, as well as some kind of seedlings, and got down to business right off.

At a community meeting people from our settlement decided to build Sonia a little house.

But Zina,<sup>8</sup> whose husband was an entrepreneur and had built the biggest mansion in the community, began to insist that Sonia’s house should be more than ‘little’.

“I’m ashamed to look visitors in the eye. The foundations of all the houses in the settlement are being set up as though they were palaces, and here’s one only child living in a tent. What can visitors think?”

Knowing the girl’s feelings, especially her resentment at any kind of offers of assistance, they entrusted me to negotiate with her.

I went to see her and said:

“Sonia, at a community meeting the residents decided to build you a little house to live in. All you have to do is show us where you would like it placed.”

In response, she asked me rather guardedly:

“Uncle Kolya, how much would a little house cost?”

Not suspecting anything, I replied:

<sup>8</sup>*Zina* — an endearing form of the name *Zinaida* (pron. *Zee-na-EE-da*).

“Oh, somewhere in the neighbourhood of two hundred thousand roubles. In other words, about two thousand per family.”

“Two thousand each? But that’s a lot of money. That means people would have to buy less of something for their own children — just to spend on me. Uncle Kolya, I beg of you: tell the people I don’t need a house right now. I haven’t even thought of a place to put it yet. I beg of you, Uncle Kolya, please explain to the people...”

She was greatly concerned, and I could understand why. Upon receiving her piece of land, Sonia felt independent for the first time in her life. Her plot of land substituted for her parents — it needed her and she needed it. By some kind of internal instinct the girl felt or imagined that her land didn’t want any outsiders laying their hands on it.

And God forbid anyone might criticise her after the house was completed, even tacitly. Her own sense of independence was far dearer to her than having her own house.

I tried to persuade the residents not to force any gifts on the girl. But then something completely unexpected happened. A group of kids on their way back from the lake ran past Sonia’s plot. Out in front, on a fine-looking bicycle was the entrepreneur’s son, Edik.<sup>9</sup> He was always teasing Sonia, calling her *Mal’vovka*,<sup>10</sup> even though he himself was only three years her senior.

<sup>9</sup>*Edik* — an endearing variant of *Edward*. A few foreign names have become popular among Russians at certain periods of history. But then Russian suffixes may well be added to satisfy the Russian penchant for diminutive (endearing) forms. By way of comparison, note the popularity among English speakers of certain endearing Russian names like *Tanya* and *Sasha*.

<sup>10</sup>*Mal’vovka* (pron. *mal-YAF-ka*) — a condescending nickname indicating someone younger or shorter than one’s self, something on the order of ‘Little One’ or ‘Shorty’.

“Hey, there, Malyavka!” Edik called out to Sonia. “You spend your whole time landscaping — aren’t you bored with that already? Why don’t you come with us to see the fireworks?”

“What ‘fireworks?’” asked Sonia.

“My Papa’s going to burn down the construction trailer his workers have been using. Come and you’ll see. We’ve already got a fire-engine there on stand-by.”

“Why burn it down?”

“Cause it’s spoiling the view.”

“But after it burns down, nothing will grow on that spot for a long time.”

“Why not?”

“Cause all the helpful worms, all the bugs, they’ll get burnt up too. I tried lighting a fire by my tent one time and see, nothing’s ever grown on that spot since.”

“Wow, Malyavka! You’re really observant! So, come and save our worms. Take the old trailer away, otherwise Papa won’t know how else to get rid of it.”

“How am I going to take it away? Isn’t it heavy?”

“What d’you mean, how? With a crane, of course! The crane’s coming the day after tomorrow to set up our wind-mill. So, either you take it or we’re going to have a big bon-fire.”

“Okay, Edik. I’ll agree to take your trailer.”

“Then let’s go.”

A crowd of adult neighbours, along with a whole lot of children, had gathered at Edik’s parents’ estate. A fire crew was standing by at the ready. Edik approached his father, who was already on his way over to the construction trailer, carrying a can of gasoline. To the disappointment of the younger crowd and the glad astonishment of the adults, he told his father:

“Papa, you don’t need to burn the trailer.”

“What d’you mean, I don’t need to? How come?”

“Cause I’ve given it away.”

“To whom?”

“To the Malyavka.”

“What Malyavka?”

“To Sonia, from the plot on the far side of the settlement.”

“Well! Did she agree? Did she agree to accept it from you?”

“Hey, Papa, if you don’t believe me, ask her yourself.”

Sonia was standing in the crowd of youngsters. Edik took her by the hand and brought her over to his father.

“Tell him, Sonia, that you agree to take this shack off his hands. Tell him.”

“I agree,” Sonia answered quietly.

Oh, how the entrepreneur just bubbled over with pride at his son’s accomplishment! Quite a coup! Here was this girl who never took anything from anyone, and now the capricious Sonia had decided to accept a gift from his Edik.

As soon as the children had left, the entrepreneur summoned the whole construction brigade that had been putting the finishing touches on his mansion, and said to the foreman:

“So, now, lads. Take any materials you need and start working around the clock — I’ll pay you double time, if you can only refit the trailer’s interior to modern European living standards in forty-eight hours. You can leave the exterior shabby, the way it is. But the interior...”

Forty-eight hours later, next to the birch tree where the tent had been standing on Sonia’s plot, the construction trailer with its shabby exterior was set up on a brand new brick foundation. The exterior was indeed shabby, but the builders had primed it for painting, and left tins of Finnish<sup>11</sup> paint and brushes inside.

Sonia later painted the exterior herself. She now had, for the first time in her life, her very own little house, standing on her own dear piece of land. By the following year this house had been transformed into a little fairy-tale château, covered with ivy and wild grapevines and surrounded by flower-beds.

Ten years went by. Sonia finished school and had already spent a whole year living in her domain. Mansions could be seen throughout the community, which was already dripping in lush green vegetation and flourishing orchards. But the best and prettiest estate belonged to Sonia.

While her classmates were leaving the orphanage and going off to parts unknown, trying to get accepted into any kind of academic institution just to get a roof over their heads, or to find any kind of work so they could at least feed themselves, Sonia was already a wealthy woman. The residents of the community would give their surplus fruits and vegetables to a manager. Products grown on domains fetched a higher-than-average price. They were exported to countries in the European Union, where they were sold in stores specialising in eco-friendly produce. Sonia gave what she grew on her plot to the manager as well. Though most of what she produced was bought by visitors from the city who had heard about this extraordinary girl and her fabulous domain.

---

<sup>11</sup>*European, Finnish* — to Russians or Ukrainians, this meant significantly higher quality than was standard in their own countries.

Sonia had also been gathering medicinal herbs and had helped save a great many people from disease.

One day Edik came back for a visit to his parents, who were now living full-time in their domain. For the past three years he had been studying at a prestigious university in America. He was about to undergo a serious medical operation. He was suffering from liver and kidney disorders, probably caused by the poor quality of food and water abroad. Before the operation, Edik decided to spend a week visiting his parents. His mother, Zinaida, made a suggestion:

"Maybe, son, we should pay a visit to our local healer? Just in case she can help."

"Now there, Mama, what century are we living in, eh? Medicine in the West has been highly developed for quite a while now. They just cut out and replace whatever they need to. Don't worry. I'm not going to see any witch-doctors. That's ancient!"

"I'm not suggesting you go to any witch-doctors. Let's go see... you remember that little girl from the orphanage on the far side of our settlement who surprised everyone by fixing up the piece of land they gave her, all on her own?"

"Oh, you mean that Malyavka? I vaguely remember her."

"Well, now she's no longer a Malyavka, son, but a very respected woman. Managers are willing to pay double the price for anything grown by her hand. And people come from faraway places for her blend of medicinal herbs. Even though she doesn't advertise it at all."

"How did our Malyavka get to be such an expert?"

"Well, she's been spending every summer since Grade One on her plot, and every day during the winter she's been reading books on gardening and folk medicine. The child's mind is sharp, and she picks up everything so quickly. She got a lot of it from books. Only people say her real understanding

came more from herself. They say, too, that the plants understand her. She talks with them.”

“Well, that’s our Malyavka for you! How much does she charge for treatment?”

“Sometimes she charges, but she’s also been known to offer help for free. One day last autumn I happened to meet her by the pond. She looked me in the eye and told me:

“Auntie Zina, the whites of your eyes don’t look too good. Here, take this herb, make a tea with it and drink it, and it’ll get better.’ And it did. And there was really something wrong with my eyes, since I had a liver complaint. Now that’s gone too.

“Let’s go, son. We’ll go and see her. Maybe she can help your liver too.”

“It’s not just my liver, Mama. They’ve already made their diagnosis and they’re going to remove one of my kidneys. And no tea’s going to help that. Anyway, let’s go pay her a visit — it’ll be interesting to see Malyavka’s domain. They say it’s like a Paradise there.”

“Yes, indeed! She’s done a fantastic job!” exclaimed Edik, as he and his mother approached Sonia’s domain. “Most people in the community seem to have put all their efforts into building mansions with stone fences, whereas she’s created a real Paradise. Just look, Mama, the fence she’s created from greenery!”

“You would have held some of that exclamation in reserve if you knew what her garden looked like,” observed Zinaida. “Only very few people get to see it.”

She opened the gate a little and called out loudly:

“Sonia! If you’re home, come on out. Sonia, are you home?”

The door of the little house — the former construction trailer — opened wide, and out onto the porch stepped a young

woman. With a deft movement of her hand she tossed her tightly woven braid of chestnut-coloured hair over her shoulder. When she caught sight of Zinaida accompanied by her son, her cheeks flushed with a rosy glow. She fastened the top button on her cardigan which fit snugly over her supple breasts, and with a soft and light but still gracious step this young and beautiful girl made her way down the porch steps and along the path to the gate, where Zinaida and Edik were standing.

“Hello, Auntie Zina! Welcome back, Edward! If you’d like, come into my house or into my garden.”

“Thank you for the invitation. We accept with pleasure,” replied Zinaida.

But Edik didn’t say a word and didn’t even return Sonia’s greeting.

“You know, Sonia,” Zinaida went on as they headed for the garden, “my son has a problem. He’s about to have an operation. Even though it’ll take place in America, it’s still pretty upsetting to me as a mother.”

Sonia stopped, turned around and asked Edik:

“What’s the trouble with you, Edward?”

“My heart,” Edik replied, gasping in his throat.

“What d’you mean, your heart?” exclaimed Zinaida. “You told me it was your liver and your kidneys. Does that mean you were lying so I wouldn’t get overly concerned?”

“I wasn’t lying. But now, Mama, my heart is beating so fast — can’t you feel it right here?!” He took his mother’s hand and placed it against his chest. “Listen — it’s going to rupture and explode if you don’t convince this beautiful maiden to marry me at once!”

“You’re such a jokester,” laughed Zinaida. “You practically scared me to death!”

“I’m not joking, Mama.”

“Well, if you aren’t joking,” Zinaida gaily continued, “you ought to know that half the community have already sent

matchmakers over on behalf of their sons. But to no avail — Sonia doesn't want to get married. You can ask her yourself why she doesn't want to, but don't set your poor mother up for a fall."

Edik went up to Sonia and quietly enquired:

"Sonia, why have you never married anyone?"

"Because," Sonia softly responded, "I've been waiting for you, Edik."

"Oh you teasers! What are you making fun of a mother like that for?"

"Bless us, Mama, right now. I'm not teasing," Edik declared firmly, and took Sonia by the hand.

"And I'm not teasing either, Auntie Zina," Sonia said in a serious tone.

"You aren't teasing? That means you too, Sonia?... You're not joking? Well, if you're not joking, then what are you still calling me 'Auntie' for, instead of 'Mama'?"

"Fine. I'll call you Mama," replied Sonia, her voice trembling. She took a step in Zinaida's direction, but then paused in hesitation.

Zinaida couldn't immediately catch on to what was happening — was this some kind of stalemate, a joke? She anxiously glanced back and forth between Sonia's face and her son's. Then there came the moment when she realised how serious the young couple's intentions really were, and at this point she rushed over to Sonia, embraced her and broke into tears:

"Sonia! Sonechka! Daughter! I know you're serious about each other."

Sonia's shoulders were trembling too. She hugged Zinaida and repeated:

"Yes, Mama, we're serious. Very serious indeed."

Whereupon the young couple, holding hands, slowly and without eyes for anyone but each other, walked down the

community street to the domain belonging to Edik's family. Zinaida walked out in front. She was laughing and crying at the same time, and chattered on incessantly, accosting each person they met:

"We've just come... And they — *bang!* — they've fallen in love with each other... And I — *bang!* — I blessed them. At first I thought they were joking. But they — *bang!* — they fell in love right off. And I told them... And they said they wanted 'to get married, Mama, today!' Good people, how is that possible? There's preparations to be made — it all has to be done officially. That's just not possible!"

Presently they saw Edik's father, the entrepreneur, coming out of the house to greet them. Upon hearing this same (more or less) disconnected account from his wife's lips, he looked at the young couple and said:

"Well, now, you're chattering on as usual, Zinaida. And what d'you mean, a wedding today is impossible? Just look at these young'uns. We have to hold the wedding not just today, but right now!"

Edik went up to his father and embraced him.

"Thank you, Papa."

"What are you thanking me for? Let's not waste time hugging each other! Everybody say *Gor'ko!*"<sup>12</sup>

"*Gor'ko! Gor'ko!*" all the people cried out that had gathered round.

Edik and Sonia kissed each other for the first time in front of the residents of the community. Everyone who happened to be home at the time assembled for the wedding. An improvised table was set up in the fresh air and they all helped set it together. The ceremony didn't just 'buzz' the way things did at traditional Russian parties — it 'sang' well into the night.

<sup>12</sup>*Gor'ko!* (lit. 'Bitter!') — a call for the bride and groom to kiss at a wedding reception (in the sense that the wine is bitter and needs a kiss to make it sweet).

Despite the parents' pleadings, the young couple decided to settle down not in Edik's parents' mansion, which was actually more like a palace, but in Sonia's little house.

"You see, Father," Edik explained, "this palace we've built here with all its different wings takes up practically half a hectare. But we don't have the beauty that Sonia's domain has, or even the air. We've got to take half the additions down."

The entrepreneur started drinking, and kept at it for a whole week. But after that, to everyone's surprise, he started taking down the wings he had added to his mansion. He explained:

"We were pretty silly, putting up all the additions. Our grandchildren won't want to move into catacombs like these!"

And Sonia and Edik went on living happily...

Stop! Now I've already started talking about the future. And most certainly, it will be marvellous! But what about the present? At the present time, there is indeed a fine orphanage in the city of Kharkov. And there is a little girl named Sonia there. Sonia's in Grade Three now, but she doesn't have a hectare of land of her own, neither do Tanya, Seryozha or Katya, or any of the thousands of children living in orphanages. The Ukrainian *Rada*<sup>13</sup> has not even put the question on its agenda yet — the question of granting a hectare of land to every resident of the country, including orphans, for lifetime use, on which to set up a family domain. Neither has the Belarus Duma or the Russian Duma considered it.

Will the children forgive them? Will today's parliamentary deputies be able to forgive themselves?

<sup>13</sup>*Rada* — the Ukrainian Parliament, corresponding to the *Duma* in Russia and Belarus.

## CHAPTER TWENTY-SIX

### A security zone of the future

For the past five evenings Nīkolai Ivanovich<sup>1</sup> — the warden of a maximum-security correctional facility (in plain language, a *prison*) — had not been able to leave his office at the usual time. When his workday officially ended he turned his telephonic ringer off and began pacing his office, deep in contemplation. Occasionally he would sit down at his desk, pick up the green folder lying on it and peruse its contents for the umpteenth time.

A convict serving time for an infraction of Article 93, Clause 1, of the Criminal Code of the Russian Federation had put forward a petition to him on behalf of a group of inmates in Cell 26, with what at first glance looked like an unthinkable proposal.

The convict, whose name was Khodakov, proposed acquiring for the facility a hundred hectares of abandoned or unused arable land, to be surrounded by a barbed-wire fence with a watch-tower at each corner — in other words, taking all due precaution to prevent escapes. On this fenced-in hundred hectares ninety prisoners would be engaged in agricultural labour. The applications of those interested were kept in a file in this green folder.

In their applications these prisoners committed themselves to supply the whole facility with vegetables, to the tune of half

<sup>1</sup>*Nīkolai Ivanovich* (pron. *Nee-ka IYF i-VAIN-ych*) -- first name plus patronymic (cf. footnote 9 in Book 1, Chapter 1: "The ringing cedar"). The name *Nīkolai* also has an endearing form: *Kolya*.

of all the produce they grew on the land. The other half they asked to be sent to their families. So far, nothing impossible in their request. In various correctional facilities prisoners are engaged in manufacturing activity. In some cases this involves crafting simple objects in woodworking shops, in others — organised textile production, where prisoners sew simple items of clothing, such as quilted jackets or underpants, and receive a nominal wage for their work. The low wage is also due to the rather low level of productivity involved.

According to the proposal in the file, the prisoners wanted to take up agriculture. Well, no problem there either. A payment of half of their produce was entirely feasible. No need to bother with selling stuff, or shipping off products on consignment and then waiting months for the proceeds to come in. But that wasn't all...

Khodakov, on behalf of the other prisoners, asked that the hundred hectares be divided into one-hectare plots, each plot to be assigned to a specific prisoner. In addition, they asked that each prisoner be granted the right to build a one-room cell-but on their plot. There was also a request that any prisoner who wished to, be allowed to stay on their land after serving their sentence, and then for the prison not to collect as a levy but to purchase surplus produce from them, as well as to allow them to enlarge their dwellings.

The file containing the proposal, or request, had been given to Nikolai Ivanovich as far back as six months ago. Along with the ninety applications and the text of the proposal, the file also included plans for the future plots, handsomely executed in coloured pencil. The drawings showed the watch-towers, the barbed wire and the controlled-entry point.

After his initial reading Nikolai Ivanovich tucked the green folder away in the bottom drawer of his desk. From time to time he would mentally go over its contents, but he had not given any answer to the prisoners.

A certain circumstance had come about, however, which caused the warden to spend every evening over the past five days in intensive contemplation of the prisoners' proposal. An order had come from the national administration to take steps, beginning the following year, to enlarge the facility and construct additional cells, with a view to being ready to accept a hundred and fifty new convicts by the year's end. The order was accompanied by plans for additional wards to be attached to the existing buildings, along with a financing schedule. It was proposed to use prisoner labour in the construction.

Nikolai Ivanovich mused as follows: *The financing will be delayed as usual, and there will be problems procuring low-cost materials. They put one set of prices for construction materials into the budget, but when it comes to the actual building, it's something else already. Prisoner labour is never very efficient. The order is patently impossible to carry out.*

But there was no question that it *had* to be carried out. Nikolai Ivanovich's retirement was only five years away. He had already attained the rank of colonel. He had been the warden of this facility for twenty years now, without a single black mark on his record. And now this order.

But these concerns were not uppermost in the colonel's deliberations. The green folder! In his memo Prisoner Khodakov stated that his proposal would fulfil the principal objective of incarcerating prisoners in such institutions — namely, rehabilitation.

The fact that modern correctional institutions seldom succeed in their rehabilitation efforts — indeed, quite the contrary, they end up producing more experienced criminals — was not lost on Nikolai Ivanovich. If this were not so, you wouldn't get them coming back to prison for the second or third time. Nikolai Ivanovich had given a great deal of time and energy to his calling, and was extremely disturbed by this situation.

His life was getting on now, his term of service was coming to an end, and what was there to show for it? A nursery for criminals, as it turned out.

The green folder! How infectious it was! If only he could confidently conclude that there was something unacceptable in the proposal the file contained! But no. Something inside him would not let him reject it out of hand. But neither could he bring himself to fully support it. It was an offbeat, unconventional proposal.

The next morning, the colonel's first order of the day was to have Prisoner Khodakov from Cell 26 brought to his office.

"You can take a seat, Mr Khodakov," said Nikolai Ivanovich to the man who had just come in, accompanied by an escort guard. The warden gestured to a chair.

"I've just been looking over the contents of your file. I have a specific question for you."

"Sir!" the prisoner hastened to reply, getting up from his chair.

"Sit!" the guard commanded.

"Yes, do sit down," the prison warden replied softly. "No need to jump to your feet the way they do in court." Turning to the escort guard, he added: "You can wait for us outside."

"So, Sergei Yurevich Khodakov, I must say you've submitted a rather strange proposal."

"It only seems strange on the surface. In fact, the proposal is extremely reasonable."

"Then tell me directly, flat out, what kind of cunning plan have you thought up here? Are you aiming to set up the conditions for a mass escape? The ninety candidates applying are all serving sentences of between five and nine years. Does this mean you want your freedom sooner?"

"If there's any cunning plan in this proposal, it has nothing to do with escape, sir." Again the prisoner rose and showed signs of concern. "You've got the wrong impression..."

“Just sit down and relax. And let’s dispense with the ‘sir’. I’m Nikolai Ivanovich. I know from your file that you are Sergci Yurevich. You used to be a psychologist. You defended your thesis, and then went into business. Your sentence was for major embezzlement — right?”

“Yes, I was sentenced — it was back at the beginning of *perestroika*, after all, Nikolai Ivanovich. You just get used to one set of laws, and suddenly new ones come out...”

“Okay, okay. That’s not the issue here. Explain to me what you have in mind with this agricultural zone with a barbed-wire fence, or is there another name for it?”

“I’ll try to explain, Nikolai Ivanovich. Only it’s hard for me to do that, because of a particular circumstance.”

“What circumstance?”

“You see, we’ve been reading this book — it’s called *Anastasia*. Then along came another book, a sequel. Well, anyway, the book talks about Man’s purpose in life. About how if everyone living on the Earth took a hectare of land and created a corner of Paradise on it, the whole Earth would be transformed into a Paradise. The book explains this very simply and convincingly.”

“Sounds pretty simple to me! If everyone took... and created..., well, then, of course, the whole Earth would be transformed... But what’s this got to do with your proposal?”

“I’m trying to tell you: it’s all outlined very persuasively in these books. Now some people might just glance over them superficially, and not get everything. But *we* have the time — we’ve been reading and discussing them, and we understand them.”

“So, what have you got out of it?”

“After reading these books, a whole lot of people have the desire to acquire their own land and create a Paradise oasis in their own kin’s domain. They’re free, they can do this. So we’ve decided: even if it’s behind barbed wire, we can still each take a hectare of land, work on it, and make it into something

beautiful... By way of a penalty, we suggest handing over half or even more of our produce either to the facility or to the public at large. But we do have a special request — that our plot is not taken away from us when we've served our sentence — in other words, those who want to stay on there can remain."

"So, what does that mean — that you're going to live out the rest of your lives under the guards' rifle muzzles?"

"After we've all served our sentences, you can take away the barbed-wire fences and cart them off for use somewhere else, along with the towers. You can use them in another location for a new group of prisoners who want to fix up their own domains — while we stay put on ours."

"Aha! And then when their time is up, we switch the towers and barbed wire to a third location, while they go on living on their land. Is that it?"

"You've got it."

"Some sort of phantasmagoria! What is it — you want me, the warden of this facility, to create Paradise oases for my prisoners? And are you certain that this can really work?"

"I'm absolutely convinced it will be a success. As a psychologist I'm convinced. And it's something I feel in my heart. Judge for yourself, Nikolai Ivanovich: someone serves nine years behind bars, and then walks free. He hasn't any friends. His friends are back in the prison's security zone, or in their cells. His family doesn't want anything to do with him. Neither does society at large. Let's face it, who'll give an ex-con a decent job? Most job categories are up to their ears in unemployed professionals, and look how many highly qualified people are standing in queue at employment centres. Our society provides no positions for ex-convicts. There's only one road ahead for them — back to the old routine. And so they follow it, and they end up back here with you again."

"Yes, I know the scenario. What's the point in merely stating the obvious? But tell me, as a psychologist, why

did the cons who read these books suddenly change and go for the idea of getting a piece of land behind a barbed-wire fence?"

"Well, you see, they all got a glimpse of eternity on the horizon. Like, people believe you're still alive, even in a prison cell. Whereas in fact you're not. You're dead. Because there's nothing left for you on life's horizon."

"What were you saying about 'a glimpse of eternity'?"

"I told you, it's hard for me to explain it right off. It's all in the books..."

"Okay, I'll read these books, and try to figure out what's made you wax so lyrical over this. Then we'll talk again. Guard, take him away."

Prisoner Khodakov got up, put his hands behind his back, and asked:

"May I ask one more question?"

"Go ahead," the colonel agreed.

"When we were working out the plan for this security zone, we took all existing regulations for prisoner holding into account. The proposal does not allow for any violation of these regulations."

"I say, you've thought of everything! The regulations... No violation... I'll check it out." Then Nikolai Ivanovich ordered the guard:

"Take him away."

Subsequently the warden called in the prison's legal counsel. He handed him the file and said:

"Here, take this. Study it thoroughly and determine where there are any violations of prisoner-holding regulations. Report back to me in forty-eight hours."

Forty-eight hours later the legal counsel was sitting in the warden's office. He began his report with a few evasive phrases, atypical for his profession.

“The thing is, Nikolai Ivanovich, that from the point of view of the law and the regulations governing the holding of prisoners in so-called places of confinement, the proposal in question cannot be treated as an open-and-shut case.”

“What kind of spin are you trying to give me here, Vasily,<sup>2</sup> like a lawyer in court? You and I have known each other for fifteen years...”

Nikolai Ivanovich got up from his desk. For some reason he appeared flustered. After pacing around the room for a while, he sat down again and continued:

“Tell me specifically, what have we here by way of regulation violations?”

“Specifically... Well, if you want it specifically, I’ll have to take it one step at a time.”

“Okay, then. One step at a time.”

“We’re talking about forming a new security zone here. The proposal allows for the isolation of this area from the outside world. This hundred-hectare zone will be fenced off with two rows of barbed wire. Watch-towers are also provided for. The zone is secured in full accordance with regulations.

“The document goes on to propose the dividing of the security zone into individual plots of one hectare each and assigning each plot to a particular prisoner. Well, what is there to say? The regulations state we should accustom the unconscientious citizens in our charge to hard work, create workshop units for basic production, as well as set up a subsidiary farm and work toward partial self-financing. After all, the law allows for the setting up of institutions such as ours with special

<sup>2</sup>*Vasily* (pron. *va-SEE-lee*) — a masculine name of Greek origin, now commonly used in Russia. Note that Nikolai and Vasily, because of their long friendship, often omit the patronymic in conversation with each other. In Russian they also call each other by the informal pronoun *ty* (similar to *tu* — instead of *vous* — in French).

provisions for economic activity and multi-purpose use of forest reserves.<sup>3</sup> In our case this proposal envisages the setting up of a subsidiary farm which will provide those in our charge with a supply of fresh vegetables, with maybe some left over for sale. So far, we're entirely within the limits of the law."

"Don't draw things out. What's next? Where do we go beyond the limits?"

"Well, next it's proposed to construct a separate cell on each plot to provide living accommodations for the prisoner — the one the plot is assigned to as a work-space."

"That's right — each one will have his own individual cell on his piece of land. The thing is, we don't have enough funds to buy regular beds. And here they're asking for a separate cell with all the amenities and furnishings. A utopia!"

"I guess you didn't take a thorough look at all the details of the proposal, Nikolai."

"What d'you mean, not a 'thorough' look? I practically memorised the thing."

"I don't know about that. Don't know about that... But there's an attachment here giving plans and a description of the interior of this individual cell. Everything is strictly according to regulations — one bed, one toilet, one table, one chair, one bookshelf, one night-stand; a metal door with a peep-hole and an exterior lock, bars on the windows. As for financing, it's spelled out here specifically: each prisoner is responsible for funding the construction of his own individual cell."

"That wasn't in the document I saw."

"I don't know about that. Don't know about that... Take a look for yourself — it's there. And the sketch, and the working drawings for the builders, and the description."

<sup>3</sup> *Editor's footnote from the Russian edition:* Law of the Russian Federation of 21 July 1993, amended 9 March 2001: "On institutions and agencies administering criminal punishment in the form of confinement".

“What d’you mean, ‘it’s there’? It wasn’t there when I handed you the file to go over. I distinctly remember that it wasn’t. I’ve been over that file a dozen times from cover to cover. And here you... In two days?”

“Yes, I did it, Kolya. I was the one. Only not in two days. They gave me a similar file three whole months ago. I recently put in my own additions and corrections, to which they agreed.”

“Why didn’t you say anything to me about this earlier?”

“You yourself only asked for my opinion two days ago.”

“Okay. Let’s hear what you have to say about all this.”

“Here’s what I think, Nikolai. If this proposal comes to fruition, there’ll be a significant decrease in the number of prisons and labour camps in the country, and the crime-rate will be cut in half. And you, Nikolai Ivanovich, will go down in history as a genius of a reformer.”

“Never mind history. Let’s look at the nitty-gritty. Will it fly from a legal standpoint?” Nikolai Ivanovich once again got up from his desk and began pacing the room.

The legal counsel turned to the warden, who was still pacing the room in serious contemplation, and enquired:

“What are you so concerned about, Nikolai?”

“Me, concerned? Now what have I got to be concerned about? Anyway... No, you’re right, Vasily. I *am* concerned. I’m concerned because I can’t decide what I should say about this proposal in my brief to the general.”

“Aha, so that’s it! So you’ve decided to support it after all? You’ve been thinking about taking it to the general?”

“I’ve been contemplating it. I was thinking you might shoot the proposal down and persuade me not to go see the general. That’d be a weight off my shoulders. So I guess you’re in favour of it?”

“Yes, I am.”

“That means I’ve got to go,” Nikolai Ivanovich concluded, in a rather cheerful tone, as though he had actually been

afraid his friend might shoot the proposal down. The warden stepped over to a cupboard and took down a bottle of cognac, along with some lemon and two shot-glasses.

“Let’s drink, Vasily, to our success! Tell me, when was it that you found yourself so favourably disposed toward this file?”

“It wasn’t right away.”

“Same here.”

“My daughter’s doing a law degree at an institute. She’s in the middle of writing her graduating essay on “The influence of incarceration on the eradication of criminal acts”. She gave me a draft to read. I read it, and just listen to what she says:

Ninety percent of those who serve their time in incarceration reoffend. The underlying cause behind these depressing crime statistics is the following:

- a person’s upbringing, which has led him to the committing of a criminal act;
- the challenge of adapting to society following the period of incarceration;
- the formation of a criminal world-view during the period of incarceration in a criminal environment!

“Do you realise what her conclusions mean, Nikolai? It turns out that you and I, just by honestly trying to do our duty, are actually helping shape a criminal world-view?”

“We don’t ‘shape’ anything. We act in accord with regulations, the law and the orders we’re given. Although, you know, I too have a lurking sense of dissatisfaction here. I used to put it out of my thought. I’ve been trying to convince myself it’s none of my business.

“But then this file appeared... I’ve been contemplating it for six months now. And I’ve finally decided to go see the general. Only even though I’ve sat down several times to rewrite a report, to make it sound more intelligible, it’s still not coming.”

“Let’s try it together. I think the main thing is not to scare the general off by making it sound too original and outlandish. We’ve got to simplify it.”

“I agree. It should be simpler. But how? Especially since they’re asking to have the land turned over to each prisoner for lifetime use after they’ve finished serving their sentence.”

“Yes, that aspect doesn’t seem realistic for the time being. We don’t have any federal law at the moment on the allocation of land for lifetime use. I’ve thought about this point. We’ll have to be honest with them. When they’ve finished serving their time, the question will be taken up in the context of the land legislation in existence at that time. I think they’ll understand. Everybody knows you can’t go above the law. We don’t make the laws. But we should also point out the direction we see things heading. Right now it all seems to be leading to a law permitting private ownership of land.”

“God willing,” affirmed Nikolai Ivanovich as he poured out a second round of cognac. “Let’s just have another wee dram... To success!”

They clinked glasses. Then all at once Nikolai Ivanovich put his glass down on the table and once more began pacing the room.

“Don’t tell me you’re concerned again?” asked the legal counsel.

“You see, Vasily,” Nikolai Ivanovich rattled on anxiously without pausing, “you and I here have been dreaming big dreams, like youngsters. We’ve got carried away with our dreams, forgetting that we’re dealing here with criminals. There are some among them, of course, that simply took a wrong turn, and may be sincerely willing to get their lives back together within the limits of the law. But the majority of them are hard-core criminals, rounders through and through. They’ve got an entirely different agenda, and what kind of gimmick are they trying to pull here?”

"I've thought about that too, Nikolai. But let's do a test first, and afterward you can decide whether to report to the general or not."

"How are we going to test them?"

"Here's how. Tell me, when did they give you this file?"

"About six months ago."

"That means they've been discussing this project for *more* than six months now, working out the drawings and plans. Then they put it all beautifully into a folder and attached ninety application forms. So, let's you and I gather all the applicants together, suddenly and without warning, in the auditorium. We'll invite specialists — let's say, agronomists, specialists in vegetable growing, and have them examine the lot. The examiners can ask questions about things like what to plant in the soil and when, and we shall see how many would-be responders there are. You know, if they're really serious about this, and they've got hold of this idea without any ulterior motives, if it's a real dream with them, they wouldn't just sit on their fannies, would they now, and wait 'til their proposal's answered. They'd have to be studying agrotechnology."

"Now that's really something, Vasily! Can you imagine rounders spending half a year boning up on how to plant flowers and cucumbers? That's really steep! Maybe a chap raised in the country might know the answer. But for these..."

"That's why I'm telling you, let's test them before deciding whether to go see the general or not."

Upon entering the auditorium they found not ninety, but two hundred prisoners sitting there. By the time the warden had invited the specialists in agrotechnology — two instructors from the agricultural institute and one from the college, the number of would-be domain dwellers had reached two hundred prisoners.

The prisoners had taken their seats in the auditorium, not suspecting that they were to be given a test. They saw the three people sitting behind the table on stage, but had no idea who they were. Then the warden came out and announced:

“In connection with the proposal to organise a subsidiary farm, we needed to consult people acquainted with agriculture. Anyway, I am happy to present to you three instructors from specialised educational institutions. They will be asking you questions, and after that we shall decide who among you may be entrusted with a plot of land.”

Nikolai Ivanovich introduced each of three instructors in turn and invited them to put questions to the gathering. The first to ask a question was an elderly instructor from the agricultural college, seated at the right of the stage:

“Who among you, sirs, can tell me what time of year tomato seeds should be planted for the propagation of seedlings? When should the seedlings be transplanted in the ground? And if you’re familiar with the term *singling out*, tell me then, please, what signs indicate the need to use it?”

*He’s got ‘em on the run now!* thought Nikolai Ivanovich. *A bunch of questions all together in one. I bet even my wife, who’s a veteran dachnik, couldn’t even handle those from memory. She always checks in the books before planting anything. And look how quiet everybody is — not a stir.*

The silence in the hall disturbed Nikolai Ivanovich. He secretly hoped that the project would actually come to fruition. The only reason he was being so picky about it was not that he wanted to reject it but because he wanted to eliminate any flaws or defects in advance. The silence in the hall indicated that the project was being treated as less than serious by the participants most involved, which augured poorly for its chances of success.

*Come on, now!* he agonised. *Not a single answer? Isn’t there at least one country lad out there? Though, in the country, it’s more often the women than the men who do the vegetable planting.*

To somehow compensate for the awkward pause, Nikolai Ivanovich stood up from the table and said in a severe tone:

“What’s up, lads? Didn’t you get the question?”

“We got it,” replied a young prisoner seated in the front row.

“Well, if you got it, then answer the question.”

“Who do you want to answer? You haven’t called anyone to come to the chalkboard.”

“What d’you mean *who*? What *chalkboard*? If anyone knows the answer, put up your hand.”

Instantly all two hundred prisoners present raised their hands.

The examining instructors, who had been conversing amongst themselves, at once fell silent. Nikolai Ivanovich was overcome with mixed feelings. On the one hand he felt a sense of pride in his charges, as well as a renewed hope that the project might indeed come to fruition. On the other hand — a sense of alarm over whether any of the two hundred who had raised their hand could give a satisfactory response to the question.

“How about *you* answering?” He gestured to the talkative young prisoner sitting in the front row.

The young man got to his feet. Stroking his bald head with a tattooed hand, he began to talk quickly and volubly:

“The time for starting tomato seedlings will not be the same each year. It all depends on the onset of reliable frost-free weather, which, of course, varies from year to year. If we take into account the need to plant the seedlings in the ground before they bloom, along with the period of maturation, we can calculate the time the seeds should be planted for propagation under greenhouse conditions or on a window-sill.”

“That will do, young man,” said the college instructor, interrupting the young prisoner’s discourse. “Put up your hand, whoever can continue.”

Again two hundred hands were thrust in the air. The instructor gestured to an elderly prisoner, by all appearances an old-time criminal with a gold filling in his mouth. The old fellow quickly rose to his feet, and began speaking in sedate tones:

“They need good regular soil, not some kind of useless crap. You need to put in some worm-processed humus, or peat-moss. But you shouldn’t plant seeds directly into *pure* peat moss like that. They quickly get used to the peat, then when they’re put into the garden they’ll be knocked for a loop — it’ll be too different for them. So you need to take the peat and mix it with just a bit of sand, using soil from the garden to dilute it at least by half. And you have to warm up their little earth-nest for them — say, up to about 25 degrees<sup>3</sup> — before sticking the seeds in the earth.”

“That will do,” the instructor interrupted. “Basically you explained everything correctly. Next one continue,” and he pointed to a decent-looking, bespectacled prisoner in the third row. “So, your colleague left off saying: before planting tomato-seeds in the prepared soil, you have to... What do you have to do?”

The prisoner rose to his feet, straightened his spectacles and continued:

“Before planting the seeds in the soil you have prepared for them, you must put them in your mouth and hold them in the saliva under your tongue for at least nine minutes.”<sup>4</sup>

The examiners seated at the table, as well as the warden, were shocked by this amazing declaration, and stared at the

<sup>3</sup>The Celsius (Centigrade) scale common throughout Russia, Europe and Canada, is used throughout the Ringing Cedars Series. 25° C. = 77° F.

<sup>4</sup>See the section entitled “The seed as physician” in Book 1, Chapter 11: “Advice from Anastasia”.

bespectacled prisoner. After a brief pause one of the institute instructors asked again:

“Do you mean to say that before planting in the soil it should be moistened in water?”

“Never in water, certainly not in chlorinated or boiled water, where all the vital bacteria are destroyed. It must be moistened in one’s own saliva, to infuse it with information about one’s self. After it has been in a Man’s mouth, after being in his saliva at a temperature of 36 degrees<sup>5</sup> (i.e., normal body temperature) for nine minutes, the seed will awaken from its dormancy and know right off what it is to do, and for whom it is to bear fruit. If a Man is suffering from any ailments or abnormalities, the seed will try to bear fruit to remove such abnormalities.”

The three instructors held an impromptu discussion amongst themselves, then turned to Nikolai Ivanovich. The college instructor queried:

“Who taught your charges — what institution did you invite specialists from to teach them?”

Even days later the warden still couldn’t figure out how he could have tripped up on answering this question. He responded this way:

“I don’t really remember where they were from. I wasn’t involved with that aspect, but I know they came from Moscow. A high-profile professor came.”

The prisoners in the auditorium caught on to the warden’s fib at once. They realised he was trying to protect them, not letting the latest responder be made fun of by the examiners, and, silently and gratefully, they in turn extended their support. The young prisoner in the front row (who had been the first to respond to the question) added:

<sup>5</sup>36° C. = 96.8° F.

"We thought he wasn't just a professor, but an academician." And he knows a lot about the Siberian taiga, about life in general."

"That's right," added the prisoner sitting beside him, "he's a real clever chap, a super scholar."

From various corners of the hall could be heard rumblings of approbation of the professor from Moscow, whom none of them had ever seen in the first place.

The second institute instructor, who had not spoken up to now, all at once began talking, trying to sound imposing:

"Yes, colleagues, I seem to remember seeing this theory somewhere myself, although I can't remember where it was. Science today is moving in this direction. I find something intriguing in this — 36 degrees, actual human saliva permeated with all different kinds of vital bacteria... There's definitely something to this."

"Yes, yes. I seem to recall it too," the college instructor echoed thoughtfully and in an equally grandiose manner, giving the impression that he too had heard something. "This is one of the new tendencies in vegetable-growing. Theoretically, of course, it is scientifically grounded, but we shall have to see how it works in practice."

The prisoners seated in the hall gave fluent responses to a whole series of questions on agrotechnology. Their answers were not always of the standard variety. But the invited examiners were no longer in a hurry to offer counter-arguments. Quite the contrary, they listened with great interest.

While the assistant warden went to see off the instructors, Nikolai Ivanovich sat silently at the table in front of the hushed auditorium. A deathly silence hung over the hall as he leafed through the contents of the green folder. Then the

<sup>6</sup> *academician* — a member of the Russian Academy of Sciences (a very high rank indeed).

warden raised his head, surveyed the whole auditorium and began to say:

“I can tell you this, lads. I still don’t have a complete understanding of what you’re proposing. No, not completely. So I’ve decided... In any case, I don’t know what will come of it. I’m going to try to push it through with the central administration.”

The hushed auditorium, as though on command, suddenly rose to its feet and erupted in spontaneous applause. Taken completely by surprise at the reaction, Nikolai Ivanovich rose to his feet as well. Overcome by an inexplicable embarrassment, he felt a pleasant and joyful sensation in his heart. But he managed to put on his best poker face befitting his status as a no-nonsense warden, and said:

“What’s all this noise about? Take your seats!” But even as he spoke he could feel the inappropriateness of excessive severity in the given context, and added: “We’ll still have to invite the professor from Moscow, all the same!”

Upon receiving Nikolai Ivanovich, the head of the Correctional Facilities Central Administration, General Pososhkov, got down to business right off:

“It’s not just you. Others, too, have been advised to upgrade their facilities, some just by five or ten places, some by as much as a hundred and fifty. You should be ready to accept an additional contingent of prisoners within a year. They all say it’s a challenge, unrealistic, and so our prisons are overcrowded. What would you have me do? Here I’ve got an order from the Justice Minister to make room for an additional six thousand prisoners. But you’ve given me cheer, Nikolai Ivanovich. I heard you say you’ll be ready to receive your share and right on time.”

“Yes, I’ll be ready. Only there have to be some modifications to the project, as I outlined in my report.”

“I know, I know. I read it. Only not everything’s clear to me in your report. You want to get involved in agriculture. That’s great! Assigning a separate plot to each prisoner — who’s stopping you? What makes you think you need my approval on this? But the notion of building a separate cell on each plot, now that *does* sound rather strange — it’s unreasonable. Go build one or two barracks. They can march to work each morning under guard. Less expensive. You’ll get no additional financing for individual cells.”

“But I’m not asking for any additional financing.”

“What *are* you asking for, then?”

“I just need you to approve the overall plan for individual cells on each plot.”

“And where’s the money going to come from to build these units?”

“From sponsors’ subsidies.”

“You must have some pretty eccentric sponsors... Look, okay then, I don’t have time to go into it. I’m going to write on your proposal: ‘Review and complete’ — but I’ll ring them up myself and tell them they should review and complete it with due process — no delay. Is that it?”

“There’s just one minor problem...”

“What problem?”

“I don’t have any land I can use for a subsidiary farm.”

“So, go see the governor. Ask him.”

“I spoke with his deputy. They’re considering, but that’s all they’re doing at the moment.”

“Okay, I’ll do what I can. I’ll ring him up... That’s it?”

“Yes, sir.”

“So, you can proceed. All the best.”

Nikolai Ivanovich's facility obtained the land — 200 hectares — by the autumn. The land was in an isolated area, far from the nearest population point. They managed to truck in the barbed wire and five-metre-tall posts required to construct the enclosure before the seasonal rains washed out the road. Nikolai Ivanovich realised that if the enclosure wasn't ready by the autumn, there was no way they could start cultivating the land on the plots the following spring. But how to get the posts into place, if even the back country road stopped two kilometres short of the allotted area? They wouldn't be able to get either the manpower or the equipment they needed for drilling the post-holes to the designated site.

When the prisoners learnt about the problem, they put forward a proposal to the warden: they would dig the post-holes by hand, and cross the two-kilometre stretch from the end of the road to the construction site on foot, under guard.

Every day, even under the cold autumn rain, a convoy of fifty prisoners marched out to the site, wearing homemade oilskins they had glued together from plastic sheeting. There had actually been even more volunteers, but because of a shortage of guards only fifty could be accommodated at a time. The future landholders gave their all to their work. By the first frost all the fence-posts had been set up and connected by barbed wire, and the watch-towers erected. Back at the cellblock they constructed a log cabin for the guard at the controlled-entry point and put it in place, too.

The order was also submitted that autumn for the construction of the huts — individual cells for the prisoners to live in, at a cost of 30,000 roubles each. But there was no money left to pay for these. The prisoners set about raising the money where they could. Some had savings stored up from before their incarceration, others were helped by relatives, but there

were a few who found it impossible to raise such a sum from any source.

They sent a memo to the warden letting him know of their willingness to live in tents. But this was against regulations, and they were turned down.

One hundred and eighty huts were transported to the new security zone over the winter road and set up on the piles driven in the autumn. And early in the spring one hundred and eighty prisoners were installed in these primitive huts with bars on the windows.

One fine spring day the warden stood in one of the watch-towers and surveyed the extraordinary scene before him. On the two hundred hectares of barbed-wire enclosure a hundred and eighty plots had been delineated, divided from each other by stakes and brushwood, with the occasional border marked by a length of stretched wire.

*Those are the wealthy ones,* decided the warden. *Their relatives must have sent them money not just to build their cell, but for their border markings too.*

Lanes and foot-paths ran between the plots, with a common space for meetings at the centre. In some of the low-lying areas the snow hadn't completely melted. But on the little hills the first green blades of grass were already showing. On almost every plot the warden could make out the dark outlines of isolated human figures — figures which appeared faceless and identical in their warm prison jackets, cloth caps with ear-flaps, and rough, artificial-leather boots.

What could these isolated, faceless figures possibly create on this empty ground? Why weren't they staying in their cells? The warden peered through his field-glasses and focused in on one of them. It turned out to be Prisoner Khodakov, thrusting his spade into ground, which was still partly frozen as he dug another hole. Shifting his field-glasses around, Nikolai

Ivanovich counted nineteen holes already dug in the half-frozen ground around the perimeter of Khodakov's plot.

All over the zone, figures in dark jackets were doing exactly the same thing — digging holes around the perimeter of their plots.

"Why so many holes?" Nikolai Ivanovich wondered aloud.

"They're for the saplings and bushes which will grow into a green hedge surrounding each plot," the guard explained.

"I see. Couldn't they wait a week or two until the ground is thawed and the digging will be easier?"

"I told them as much, but they don't want to wait. They're afraid they won't get it all in on time. Each one has four hundred metres of hedge to plant — that's no light undertaking. And once the ground thaws out, they'll have to start work on their vegetable beds."

The warden spent quite a while longer observing the zeal and dexterity each of his charges displayed as they worked, and he mused:

*There must be some kind of cosmic link between the soul of a Man and the soul of the Earth. If that link is there, Man is in harmony with the planet. If it isn't, then there's no harmony. Corruption sets in, and crime goes up.*

*Of course, that book, Anastasia, must be quite exceptional. All the cons have read it, and something inexplicable has erupted in their hearts. It's happened with me too — I read it and now I've started looking at life differently. Of course this book is playing its part — prisoners all over the country are reading it. But the book's strength is really in how it brings out Man's relationship with the Earth. In other words, that relationship is primary, and one should never attempt to sever it. And all this talk about high morals and spirituality is nothing but idle chatter without this mysterious relationship which is not yet fully comprehended!*

By autumn all the plots in the 'new zone', as the prisoners themselves called it, were framed by still only partly-grown saplings of apple trees, pear-trees, rowans, birches and all sorts of plantings, which with their leaves decked out in their multi-coloured autumnal hues, created a most pleasing picture to the eye. Approximately fifteen hundred to two thousand square metres of each hectare had been planted with forest saplings. Even by that very first autumn the view from the watch-towers over the two hundred hectares below gave a distinctly different and positive impression compared to the desert-like black earth that could be seen everywhere the preceding spring. It was abundantly clear that the whole enclosure was being transformed into an exceptional oasis of green.

All summer long the new zone provided the prison cafeteria with fresh greens, then cucumbers, tomatoes and beets.

In the fall each prisoner offered up — from the plot of land entrusted to him — five sacks of potatoes, along with several dozen jars of salted and canned cucumbers and tomatoes. The prison commissary was provided with a whole winter's supply of beets, carrots, horseradish and other vegetables.

An unusual scene took place in the autumn at the new zone's controlled-entry point. In contrast to all other prison facilities in the world, where foodstuffs and other treats would be passed to the prisoners from outside, in this new zone they were moving in the opposite direction.

The soldiers handed out jars of preserved vegetables to the prisoners' relatives. Many had come by car and left with a wealth of produce in their baggage compartments.

Prisoners who did not have any relatives living close by sold their part of the harvest, through the soldiers, to food wholesalers at a handsome profit.

Nobody came to see Prisoner Khodakov, however. He did not have any relatives. He had grown up in an orphanage, and asked to have his portion of the harvest sent to the nearest children's home.

Nikolai Ivanovich earned the administration's gratitude for a successful carrying out of their order. He was the only warden able to accept a new contingent of one hundred and eighty prisoners without a worsening of holding conditions for the remainder.

The past year had been the busiest one for Nikolai Ivanovich in all his twenty years of service. Apart from his usual duties, he was also responsible for 'prying' seeds or saplings for the new zone out of whatever source he could. But he felt a shiver of delight every time he saw the old prison *Zil*<sup>7</sup> pull up, loaded to the gills with young saplings.

<sup>7</sup>*Zil* (pron. ZEAL) — a standard lorry or truck produced by the major Russian (Soviet) automobile factory known as *Zavod imeni Likhacheva* (acronym: ZIL) in the city of Nizhny Novgorod on the Volga river, which has been operating under one name or another since 1916. From 1927 until his death in 1956, it was run by Ivan Alexeevich Likhachev, when it was renamed in his honour. The factory also produces passenger cars (marketed under the *Volga* brand) and luxury limousines (*Chaika*) which during the Soviet period were the motorcars of choice for higher-placed government officials.

Five more years went by. Then on one fine July day a helicopter appeared and began to circle over the new zone. Nikolai Ivanovich stood at the controlled-entry point and watched the helicopter fly over. He knew that on board were General Pososhkov and members of a committee despatched by the Ministry of Justice. Perhaps someone had sent in a complaint about the warden, or it might have been simply rumours, but in any case word had spread about a 'peculiar' prisoner-holding régime.

After the helicopter landed, the committee members, all highly-placed officials, stepped out onto the open space in front of the entry point. But Nikolai Ivanovich kept standing and thinking only about the zone's security perimeter:

*Yes, it is clear that I shall be charged with a violation of regulations here. Why did I ever give permission for these climbing perennials to be planted around the security perimeter? They've already climbed up three metres, the full height of the barbed wire and formed a hedge, so that the wire can't even be seen behind all the different flowers.*

*The barbed wire, you see, they didn't find aesthetically pleasing. They even put in climbing plants and flowers around the watch-towers, which have wound their way right up to the guards' lookout. Now the whole thing doesn't even look like a security zone any more, more like some sort of a Paradise oasis amidst fields overgrown with tall grasses.*

"Here, if you please, is the first violation, already quite evident," said the general representing the Ministry. "What kind of security perimeter have you got here? Anyone who wants to, can climb over a barrier like that, all wound around with vines," the general went on, turning to Pososhkov, the administration chief. "Any soldier will tell you that. Am I right?" The Ministry representative addressed the lieutenant on duty at the entry point.

"Permission to answer, General, sir!" the duty officer responded, standing to attention at his post.

"Answer when you're asked a question! Is there any violation of regulations here?"

"Negative, sir, General, sir! In this instance you are simply looking at a tactical improvement of the security perimeter of the prisoner-holding zone."

"Wha... what's that?" one of the Ministry committee members was taken aback. "What kind of tactical improvement are you talking about? What kind of drivel is that?"

All the committee members stopped beside the lieutenant standing at attention.

*Oh, that jokester, mused Nikolai Ivanovich, feeling ultimately let down — that Lieutenant Prokhorov again with his endless jokes. If only he could control himself in front of the committee! Now for certain they'll never pardon this ridicule. And he just stands there at attention without so much as a blush.*

The lieutenant began talking, spitting out his words:

"Permission to answer the question on improvement, sir!"

"Answer, if you can," ordered the general from the Ministry. "By 'tactical improvement', do you mean your flowers?"

"Exactly, sir. If any criminal tries to escape by climbing over the barbed wire intertwined with flowers, he won't get very far."

"Why is that?" asked the general in astonishment.

"In the process of climbing over the perimeter fence intertwined with fragrant flowers, his whole body will be infused with their scent, which means that even an inexperienced dog will be able to easily track him down and bring him back."

"So, he'll be infused!" The general broke into a loud guffaw and all the committee members joined in. "And the dog will follow the scent of the flowers! Pretty nifty, Lieutenant. Imaginative. And how many escapees have your dogs brought back that way?" asked the general through his laughter.

"Not a single one," replied the lieutenant, and continued in all seriousness: "Since the criminals realise the futility of

any attempt at climbing the fence, there hasn't been a single escape attempt in the past five years."

The committee members felt even more exhilarated by the lieutenant's serious look and his declaration.

"D'you mean to say that there has not been a single attempted escape from this security zone in the past five years?" the committee head asked the administration chief.

"That's right, not a single one," replied Pososhkov.

The committee members, clearly pleased by the lieutenant's sharp-witted responses, put the following question to him:

"Tell us, Lieutenant, if no criminals even attempt to escape from this security zone, then why the armed soldiers in the watch-towers?"

"To protect the zone from the outside world," replied the lieutenant.

"What does that mean — 'to protect from the outside world'? Does anyone try to break *in* to the zone?"

"Affirmative, sir!" the lieutenant responded. "Many of the prisoners' wives have declared their wish to live with their husbands in their cells. Some of them have requested permission to spend the summer in the cells along with their children. But our strict warden's strict enforcement of regulations won't permit any such lawlessness. So a few unconscientious wives took it upon themselves to try either getting through the hedge or tunnelling underneath. But all such brazen attempts have been thwarted by the zone's excellent security force."

Uncertain as to whether the lieutenant was joking or speaking seriously, the committee chair enquired of Nikolai Ivanovich:

"Have there really been instances like this?"

"Affirmative," replied Nikolai Ivanovich. "Two such attempts have been thwarted. I received ninety-six applications

from prisoners' wives wishing to spend the summer with their children on their husbands' plots. But apart from the conjugal meetings provided for in the regulations, nothing like this can be permitted."

"I wonder what it is that attracts them to the security zone, especially with the children?" mused the committee chair aloud, adding: "In any case, colleagues, let us go in and take a look for ourselves."

"Open the gates!" Nikolai Ivanovich ordered the lieutenant.

The wooden gates, decorated with traditional Russian carvings, quickly opened up, and the committee members entered the security zone. They had hardly gone a few paces when they all at once spontaneously stopped.

Seen through the helicopter's viewports, the zone had had the appearance of a beautiful green oasis. But here on the ground it was not only the delightful foot-paths of mowed grass, not only the multicoloured living fences around the perimeter, that struck the committee members. Accustomed to the odours of their offices and city streets, they were now gracefully enveloped by the delicate fragrances of summer plants and flowers. The silence was broken only by the singing of birds and the humming of insects — sounds which by no means irritated, but soothed people's ears.

"We should visit one of the plots," said the committee chair, for some reason in a hushed tone, as though afraid of disturbing the general atmosphere.

The prominent officials walked up the pathway of the first plot they came to, heading for the cell-hut. The little hut was actually surrounded by a metal cage, though this was scarcely visible unless one examined it at close range. From a distance it looked like a little green hillock. Wound around with various vines and surrounded by flower-beds, it blended in most harmoniously with the surrounding space.

At the entrance to the hut stood a man in a white T-shirt, his back to the approaching visitors. The prisoner was oiling a metal lock bolt, energetically trying to slide it back and forth. This was something of a challenge, and the prisoner was so absorbed in the task that it was a while before he became aware of his visitors.

“Hello, Kharlamych!”<sup>8</sup> Nikolai Ivanovich greeted him. “Make our guests feel at home, introduce yourself.”

Kharlamych quickly turned about. After momentarily losing his bearings upon seeing visitors, he quickly regained his composure and introduced himself:

“Prisoner Kharlamych, sentenced according to Article 102 of the Criminal Code of the Russian Federation to twelve years. Served six years in the cellblock, five years now in the new zone.”

“And what have you been doing here with your door?” asked the committee chair.

“I’ve been oiling the exterior bolt, Chairman, sir! It’s started sticking quite a bit, the metal they produce today’s not very good quality, it rusts quickly.”

The committee chair went over to the door leading into the cell, closed it and tried shoving the bolt into position. It didn’t budge on the first attempt, but he finally got it to work. Then he turned, and, with a meaningful glance to the administration chief Pososhkov, declared:

“So, you claim you’re following all the regulations for prisoner-holding to the letter. Does that mean that after completion of their workday they’re all locked up in their cells?”

<sup>8</sup> *Kharlamych* (pron. *har-l.A mitch*) — a patronymic derived from the prisoner’s father’s name *Kharlam*. The use of the patronymic alone here indicates the highly informal relationship that has developed between the warden and his charges.

The administration chief was silent. Everyone realised that the metal bolt had rusted and was hard to budge for the simple reason that it had not been used for a long time.

Prisoner Kharlamych realised that he had let his superiors down. And thoughts began running through his head:

*I should have fixed this damn bolt a long time ago. How can I explain to these people that this lock is completely unnecessary? Nobody here would even think of leaving the zone, of running away from his land. To what purpose? Where would they go?*

As for Kharlamych, here was his native space, here was his Motherland. It was here that he was greeted every morning by the singing of the birds and the waving of the branches of trees he himself had planted. He had even been raising a little goat, which he had named Nikita, along with a dozen laying hens, and had a couple of beehives. Others had their own homesteads, setting them up just a little differently, but for each one it was his own homestead, on his own piece of land. And here he had gone and let down his warden with this damn bolt!

Kharlamych was really upset. He began talking quickly and excitedly.

"I'm the world's worst son-of-a-bitch when it comes to this bolt, Chairman, sir! And I have no excuse if it should reflect badly on my buddies. Only I want you understand — let me have one last word here. Let me... Let me tell you: my whole life has changed. Not even 'changed' — in fact, my life has just begun in this place. I'm free here. Out there, outside the gates — there's no freedom there — indeed, that's where all hell breaks loose. The soldiers up there in the watch-towers — they're like angels to us. We pray that they don't let any scum in here..."

The prisoner's voice with its heart-wrenching emotion and the content of what he had to say worked its own unique effect on the people standing by. All at once one of the committee

members, a woman deputy from the State Duma, suddenly burst out:

“What’s all the fuss over this measly bolt? Don’t you see it rained last night? The bolt’s started shrivelling.”

The committee chair glanced at the metal bolt, then at the woman, and burst out laughing.

“Shrivelling, you say? Why didn’t I think of that before? It did rain, after all, and the bolt began to shrivel, and it rusted... And up in the towers — those are angels, you say?”

“Angels,” Kharlamych echoed.

“Tell me, when is your time up?”

“In eleven months and seven days.”

“How do you propose to live after that?”

“I’ve applied to have my sentence extended...”

“What? How could it be extended? Why?”

“Cause out there there’s no freedom. There’s no order in that kind of freedom. There’s no freedom without land.”

“And who’s stopping you from going free, getting a piece of land and creating the same kind of homestead that you have here, only as a free man? You could get yourself a family!”

“You know, Chairman, sir, that’s something I’ll never understand. Who’s stopping us here in Russia from giving each Russian a hectare of land? I’ll never understand. Does Russian land belong to Russians or not?”

“Right now, according to the law adopted by the State Duma, everyone has the right to buy land,” observed the woman deputy.

“And what if I don’t have the money even to buy a single hectare of land? Does that mean I have no Motherland? That’s the way it looks — I don’t have it and never will have. But if Russia is my Motherland, just who am I supposed to buy it from? It turns out somebody’s seized my Motherland for themselves — the whole country, down to a single hectare — and is now demanding a ransom from every last Russian!

There's some monkey business going on here. Beyond the law and beyond our understanding.

"You, Chairman, sir," Kharlamykh addressed the committee chair, "I see by your stripes that you're a general. So, liberate our Motherland from whoever seized it and is demanding a ransom. Or are you too going to be paying a ransom for your own little piece of the Motherland?"

"Prisoner Kharlamykh, cease and desist!" Nikolai Ivanovich intervened. He could see the scar on the war-wounded general's cheek turning purple, and his fists clenching. The general stepped up to the prisoner. They stood staring each other in the eye, without a word between them. Then the general quietly said:

"Show me around your homestead, Russian citizen," and added even more quietly, almost to himself: "your piece of the Motherland behind barbed wire."

Kharlamykh showed the committee members around his young garden, with its budding fruit on the branches. He treated them to currants and raspberries. He showed them the tomato beds, along with the more than 200 square metres he had planted with cucumbers. He showed them the pond he had dug himself with a spade. Standing beside the pond was a neatly arranged row of barrels.

"Kharlamykh has a particular know-how here," Nikolai Ivanovich explained to the committee members, pointing to the barrels. "He salts away a hundred fifty-litre barrels of cucumbers every year. He's developed a superior, first-rate pickling method. And he's invented an original preservation system. First he fills each barrel with cucumbers and brine, then he caulks them and stores them in the pond, underwater. They'll keep that way until the spring. As soon as the restaurant wholesalers arrive from Moscow, Kharlamykh chops a hole in the ice and drags a barrel over to the entry point. We sell them at five hundred roubles a barrel. Kharlamykh gets 250, and the rest goes to the prison coffers."

"And how much does each enterprise make annually for your facility?" enquired one of the committee members.

"On average, around a hundred thousand roubles a year," responded Nikolai Ivanovich. "Though, according to contract, half of it goes to the workers on the plots."

"A hundred thousand?" the committee member was astonished. "And you've got here a hundred and eighty hectares all told. That means you have a net profit of ninety million a year from them?"

"Yes, that's right."

"And the prisoners each make fifty thousand a year?"

"Yes, that's how it works out."

"In the whole country we've got over a million citizens being held in incarceration. What if we switched them all over to such a system? What a tremendous source of income for the country! Plus the number of criminals, judging from what we can see, would significantly decrease."

"Switch over... all of them?" another committee member broke into the conversation. "But we're facing quite a different question here: this zone may even be closed down. Why were we brought here anyway? To find out what's really happening. There's something funny going on here — prisoners living in better conditions than people at liberty. And these prisoners, no matter how you put it, are criminals. Anyway, what are you going to do, Nikolai Ivanovich, when these people's terms are up?"

The warden answered without hesitation:

"If I had my way, I would let every last one of them look after their own plot. I'd take down the barbed wire and move it somewhere else — start setting up a new zone."

In their report to the Ministry of Justice the committee members reported that they found no violations of regulations on prisoner-holding.

“What about these rumours that the prisoners are living in better conditions than many free citizens?” asked the Minister.

“Then it is the lives of our free citizens that have to be improved,” the committee chair observed. “We need to give people land. Not lip-service, but in actual fact.”

“But that’s not within our jurisdiction,” said the Minister, dismissing the proposal. “Let’s get right to the essentials.”

“In terms of essentials, it comes down to this: we need to replicate this experience in all the facilities under our jurisdiction,” the committee chair stated firmly.

“I second that,” affirmed the woman deputy, adding: “and I fully intend to introduce a bill in the Duma to grant every Russian family a hectare of land for lifetime use, whereon to establish their own kin’s domain.”

The Duma passed the law. At one swoop millions of Russian families began planting gardens and little forests on their own family lands. And Russia flourished...

In what year did this happen?... What — it hasn’t happened yet? Why not? Who’s stopping us? Who is preventing Russia from flourishing?

## CHAPTER TWENTY-SEVEN

### A law for deputies elected by the people

I realised that Anastasia's grandfather possessed not only extraordinary psychoanalytic abilities but also information about the societal structure of various nations. But I wondered how specific his knowledge was about state institutions. After all, here he was living out in the taiga, without access to radio, telephone or television. So how would he get information, let's say, about our national government agencies? There was no way. Which meant he did not have any specific information. Still, I decided to ask him:

"You know that in our Russian state there is a body known as the State Duma?"

"I know," came the reply.

"And d'you know who works there, and how it functions?"

"I know that too."

"And do you have information on each deputy?"

"Yes, on every single one."

"And the laws they pass — is that something you know about too?"

"Not only about the laws they pass, but about the laws they *will* pass in the future. I know about them in advance. But, again, why are you so surprised, Vladimir? For a priest that is the simplest of tasks — it's not all that interesting."

"Yes, I *am* surprised, because I don't understand how you can possibly know about every single deputy, let alone what laws the Duma is going to pass in the near future. It's some sort of inexplicable mysticism."

"There's no mysticism here, only the most primitive of tasks."

"Well, could you explain this phenomenon to me? The depth of information you have, I mean."

"I can, of course. It's really all very simple. You see, back five thousand years ago the pharaohs had their Council. In the Roman Empire there was the Senate. The tsars had their Boyars' Duma.<sup>1</sup> Now what can I say more? The names may be different, but the essence is always the same. After all, the law doesn't depend on how a legislative body is named, but on what influences parliamentary delegates are subjected to — on the living conditions surrounding them and the perspectives for the future to which they are bound. But all the conditions were pre-programmed for them a long time ago. If one knows the programme, one knows what's ahead as well — including what decisions the legislators are capable of reaching."

"What do the law and the deputies' living conditions have to do with it? How are they connected with a broader programme? Anyway, what can you yourself possibly know about how a modern Duma deputy lives?"

"It's very simple. Of course, I'm not talking about how any particular deputy sleeps, what they eat or how they dress. That's not something I care to know, nor do I find it of interest. I'm talking about what's significant.

"I'm sure it's the same now as in earlier times: people are elected as deputies only after going through a whole lot of wheeling and dealing. That's fact number one. In their

<sup>1</sup>*Boyars' Duma* — an advisory council comprised of the *boyars* (in Russian, stress on second syllable), a hereditary caste of nobility which prevailed in Russia from the ninth to the seventeenth centuries. The Boyars' Duma, instituted in the 15th century, was involved in various aspects of affairs of state, including legislation, financing and military support.

striving for power, many of them fall into the hands of those who are in control of the material world. But after going through all their trials and tribulations, they find themselves in a tight spot. The programme is always attempting to cut them off from significant information, and generally succeeds in doing this.

“What perks does the deputy receive? I think — I’m sure — that today, just as before, he gets an individual office, a new place to live, along with (nowadays, at least) a car. Not to mention two or three assistants, some get more than that.”

“Yes, that’s more or less it,” I confirmed. “Are you trying to say that all this fits in with a programme worked out millennia ago?”

“Of course it does. But wait, let me finish. Tell me if I’m mistaken about what happens today. Apart from that, I believe that just like a whole lot of people, deputies have to go to work each day. They have to be present at Duma sittings, and make laws.”

“Yes, you’re right.”

“And each one serves for a set term — four or five years...”

“It’s four at the moment.”

“Okay, four. When their term is up, they have to be re-elected. But even before the next election they’re all thinking about it.”

“Quite right.”

“Hold on, there — how do you know that? I think how surprised you were when I told you I know what laws are going to be passed. And now you claim you know how deputies think about their future. What, have you suddenly become a clairvoyant? Or a celebrated prophet?”

“Nothing of the sort. Any fool would know this. If election time is coming up, than anyone wanting to be re-elected will be thinking about it and taking appropriate action.”

“Slow down, there. Note what you just said: ‘thinking about re-election’.”

“Yes, that’s what I said.”

“But surely deputies should be thinking about new laws.”

“Of course. They’re thinking about them at the same time.”

“When? At what time of the day? In short, believe me, the programme doesn’t leave them any time for thinking. For ages now, as you too well know, the people have been choosing parliamentary delegates on the expectation that they will then pass wise laws. What the people don’t understand is that their basic programme does not allow them to think.

“Think about this yourself some time.”

I did subsequently think about this situation — over and over again, in fact. And truly, our traditional laws on the election and duties of Duma deputies began to seem more and more absurd.

Let’s take a more detailed look at the practice as it has evolved up until now. Let’s say a relatively smart fellow — above-average, that is — has decided to stand for office. He wants to participate in passing wise legislation that will help people lead a good life.

In running the gauntlet of an election campaign, he is very likely to find himself dependent on funding (some become more dependent than others). This in no way means that someone from the world of the wealthy offers financial assistance to every single candidate in return for future considerations.

It is enough to point out the various levers that can be moved with the help of money. We are shown this in the press and on TV through stories about so-called 'dirty technology'. But we watch it all through the eyes of an outside observer.

On the other hand, the actual participants in election campaigns are far from being outside observers. They know what it's like to be the target of smear tactics. Even if you haven't experienced it yourself, you can, of course, well imagine what kind of weapons can be used against you when big money's involved. A defensive reaction is only natural — you have to cover your behind at all costs. And *behind* you, in this case, is some pretty big money. So you have to tie yourself, for safety's sake, to some kind of solid financial shore. Or, as people say today, to the oligarchs.

An alternative is to throw your fortunes in with some political party. It doesn't really matter which one — you're still going to have to pay off your debt to them later.

And what about wise laws? Ah, yes. It is simply a question of no appropriate conditions having ever been created to facilitate them.

Of course, deputies do enjoy a host of perks — including parliamentary immunity with law-enforcement agencies. But the question still remains: if you put the deputies' perks on one side of the scale and the intensity, scheming and stress associated with their work on the other, it's anybody's guess as to which will win out.

There is another paradoxical circumstance. The history of mankind has never known a single individual, a single super-wiseman, capable of making only and exclusively wise decisions hour after hour, day in and day out. It is no secret that even prominent rulers and regimental commanders occasionally make mistakes.

The deputies' work schedules are arranged in such a way that they have sittings every single day. Not only that, but

daily sittings for several hours a day. At each sitting they are supposed to pass a number of legislative bills relating to different spheres of human life.

History has shown that the adoption of wise legislation is impossible under such an overloaded work schedule — on either a theoretical or a practical plane. It is impossible because of the lack of time for contemplation. Nevertheless, this absurd order of things is what prevails in most countries on the various continents of the globe.

Who instituted it? Well, it must have instituted itself, many might think. But there's no way that could have happened. It's too carefully thought through and goal-specific. Besides, for some reason, it is not being discussed in any meaningful way.

You can argue as cogently as you like for its destructive nature. You can prove its destructive nature scientifically, with the help of psychoanalysts. That, of course, is important, but it's not the main thing. The main thing is: what's the alternative? But there is nothing in the way of an alternative on the horizon. Indeed, who would even have one come to mind when such a phenomenon has practically become the norm in almost all countries?

But since Anastasia's grandfather was the first to raise this question, and since he was familiar with the work of bodies similar to our current legislative assembly over the course of thousands of years, it was possible he might be able to suggest an alternative. And so I enquired:

"Well, could you suggest your own ideal version of how elections should be run and how legislators should subsequently proceed in organising their work?"

And this is what I heard in reply:

"There's no point in talking about the elections themselves until the deputies' working and living conditions are changed."

“And what kind of working and living conditions, in your opinion, should there be?”

“First of all, the deputies need to be taken away, at least for part of the time, from their artificial information field.<sup>2</sup> They need to be supplied with nourishment capable of sustaining the complete functioning of the brain. An image needs to be created which attracts the respect of society and which any deputy cannot fail to follow.”

“What does it mean to ‘create an image?’”

“Judging by what you told me about today’s deputies, their outward trappings suggest that the public has formed a negative image of government officials in general and elected deputies in particular.”

“Yes, generally speaking, the public does have a pretty negative image of them.”

“That’s very bad. People build up negative thought-forms regarding their deputies, and so what happens is that they themselves make them negative. An image is the most powerful, concentrated energy of a large number of people.”<sup>3</sup>

“And how are people to think of them positively if their own life doesn’t improve?”

“You see, we’ve got what amounts to a closed circle here. Each time, you elect those who seem to be the best people for the job, but then, no sooner are they elected than you start calling them the worst people.”

“But just how do we get out of this vicious circle?”

“For the past five thousand years there has been no better way than the one proposed by Anastasia, and there won’t be in the foreseeable future.”

“What d’you have in mind here?”

<sup>2</sup>*artificial information field* — see Book 6, Chapter 9: “A need to think”.

<sup>3</sup>On the science of ‘imagery’, see Book 4, Chapter 19: “A secret science”.

“Land.”

“She said we need to give each willing family at least a hectare of land — for lifetime use, whereon to establish one’s own kin’s domain. But she didn’t say anything about parliamentary deputies.”

“In actual fact, she specified ‘every willing family’. Don’t deputies have families?”

“Indeed they do.”

“So, why not start with them?”

“The public would say that’s going too far — they’ve got enough perks as it is.”

“You need to explain to the public on whose behalf this step is being taken. They need to know what the most favourable conditions are for passing the legislation the public expects.”

“But on what basis should the deputies be granted land — on special terms or the same as for everyone else?”

“The same as for everyone else, though not exactly. Every deputy should be allotted at least a hundred and fifty hectares of land on which a new type of community will be established, according to the principles Anastasia talks about. Of the hundred and fifty hectares granted for lifetime use, the deputy may keep one for himself, as long as his family is small and no additions are in the offing. In cases where the deputy has children who are already forming their own families and they want to set up domains of their own, a hectare should be set aside for each of his children’s families. Thus the deputy himself will end up with one, or three, or five hectares of land, depending on the size of his family.”

“And what about the remaining hectares? You mentioned a hundred and fifty, all told.”

“Thirty percent of the remainder he can give away to whomever he likes. But after that the plots should be offered to people from different social strata — soldiers, academics, artists, entrepreneurs and so forth. In each community one

or two hectares should be definitely set aside for refugees and children from orphanages. But two deputies should not be given land in the same community.”

“So, what then? If each deputy has his own family domain, does that mean that the laws will get better right away?”

“Of course they will. Our country will have the wisest laws in the world!”

“How so?”

“At the moment, deputies spend long periods of time in their offices and at parliamentary meetings, cut off from the public. At the moment, they do not receive any gratitude for good laws or censure for bad ones. At the moment, following their natural inclinations, they try to provide for the material well-being of their families. After their term of office is up, they may change their place of residence and even move to another city or another country, where nobody will reproach them or hound them for any violation of expected norms. A change of residence or country will not affect their financial status. As long as they have money, they can go wherever they like and find shelter, food and clothing. But money won’t be able to buy them a kin’s domain of their own, a piece of their Motherland.

“Today the concept of *Motherland* is terribly distorted. ‘Motherland’ is nothing but a territory someone has defined by borders. But, when you stop to think of it, one’s Motherland always begins with one’s family land and extends to encompass all the people who are of a kindred spirit to you. Those who begin to establish their own domains will obtain their Motherland in perpetuity. The loss of one’s family domain is the loss of one’s Motherland in perpetuity. This is the greatest tragedy for one’s family.

“It is not their laws or their morality that will prevent deputies from making wrong decisions, but their kin’s domains. And for people who have their Motherland, money will lose

its primary importance. Only in his kin's domain can Man obtain the complete range of nutrition he needs, including nourishment for the proper functioning of the brain. But this is extremely important for people who have a lot of thinking to do.

"The sittings of the State Duma should run no more than three days a week. The rest of the time the deputies should spend in their kin's domains — a place they can really think things through, and lay the real groundwork for the making of laws.

"The deputies' wives should not be employed in any position that is not connected with their husband's work. The family domains will shield deputies, at least for a time, from the influence of artificial information coming from the artificial world. It will facilitate the thinking process. In the case of the great philosophers, great thoughts were always born in conditions of solitude, and not during public speeches."

"And what if some of the deputies are unwilling to accept land and refuse to set up their own family domains?"

"This is where we come to the election of public representatives. If any deputy refuses to set up a family domain, the public should not re-elect him for a subsequent term. Even though he holds citizenship in the country where he was elected, in reality he is a foreigner. He doesn't need this Motherland. And no matter what good things are said about him, his actions, in fact, will bring no good to the people."

"But once they know that voters will give preference to candidates who have a family domain, some deputies may just take the land and erect their own palace-like mansions on it, along with tennis courts and brick walls, and won't plant any trees or garden or living fence as Anastasia recommended. What then?"

"Then they'll show what they're really made of. But here too people will be able to make the right choice. Why do you

think every Man in Rus' was endowed with a patronymic?<sup>4</sup> Back in the early days of Rus' a Man would introduce himself by saying: *I am Ivan from Nikita's domain*, citing the name of his father or grandfather who had established his kin's domain. In other words, the domain was something to be proud of. In referring to it, a Man would describe himself, as well as his character and abilities, in the fullest possible manner. Anyone who could not point with pride to his domain was considered an outcast."

The more Anastasia's grandfather went on about the kin's domains, the more distinctly the joyful picture of our country's future became etched in my consciousness. Can you just imagine?! Imagine! Three hundred and sixty deputies of our State Duma each taking a hundred and fifty hectares of land and organising three hundred and sixty marvellous new-style communities! Each deputy will then be showing not just in his words, but in his actions, what he is capable of achieving.

And Russia will bear witness to the first three hundred and sixty oases in which Russian Federation citizens will begin to live in actual human conditions. Then these deputies will pass legislation. And, naturally, there will be not a single law harmful to the environment.

They will pass laws guaranteeing the right of each citizen to obtain his own small piece of the Motherland. They will stand up for this right, because each of them will have their Motherland.

<sup>4</sup>*patronymic* (Russian: *otchestvo*, derived from the Russian word for 'father' — *otets* — and related to the word for 'Fatherland' — *otchestvo*) — the middle name of every Russian citizen, derived from one's father's first name. Cf. footnote 9 in Book 1, Chapter 1: "The ringing cedar".

## CHAPTER TWENTY-EIGHT

# To the readers of the Ringing Cedars Series

My dear readers!

I thank you heartily for your understanding and moral support. I thank all who have openly expressed their thoughts in Internet communications and the *almanac*,<sup>1</sup> who have tried to organise discussions of the ideas outlined in the Ringing Cedars Series through letters to the press.

My thanks to you, scholars of Russia — first and foremost, to Boris Minin,<sup>2</sup> who openly appeared on the stage of the Podmoskov'e Concert Hall with his evaluation of Anastasia's ideas.

A special note of gratitude is due the fine actor, Distinguished Artist of Russia Alexander Mikhailov,<sup>3</sup> who took part in the conference.

<sup>1</sup>*the almanac* — a quarterly periodical that was published by Anastasia Foundation (in conjunction with the Russian publisher of the Series) between 2001 and 2004. The *almanac* contained readers' art-work, poetry and letters, articles on ecological building-design, permaculture and other topics relevant to the creation of kin's domains, as well as news on the newly formed eco-villages, readers' clubs and forthcoming events. The functions of the *almanac* are now largely fulfilled by a range of on-line resources and periodicals.

<sup>2</sup>*Boris Alexeevich Minin* (1936–) — professor of economics; president of the International Academy of Social Development; director of Russia's Federal Certification Centre for eco-friendly products; member of Russia's parliamentary committee on questions of social tolerance.

<sup>3</sup>*Alexander Yakovlevich Mikhailov* (1944–) — a popular Russian film and theatre actor, who has appeared in several dozen films and received a number of awards, including Actor of the Year (1982 and 1985), as well as the title of Distinguished Actor of Russia (1992).

My thanks also to the economist Dr Viktor Medikov,<sup>4</sup> who has written a number of papers on his research of the ideas expressed in the books.

And to Anatoly Eriomenko, Active Member of the Academy of Pedagogical Sciences, for his marvellous poetry:

#### TO A DEITY

Age and health and sloth all notwithstanding,  
Here I am before you on knee bending,  
Simply 'cause I've seen in you from far  
Life's renown. A Deity you are.

Instantly you scattered all illusions  
Rising from dark forces' sly intrusions.  
Your depiction of a future bright  
Helped me banish sorrow's fearsome night.

In you I see Man's true being ascending,  
Possibly, another age's ending,  
Where my granddaughters, just like a Muse  
Will embody you and your bright views.

Though at heart I quietly resist  
Every time you need say "I exist!",  
'Tis no sin to talk of your appearing  
In a place where others might be hearing.

<sup>4</sup>*Viktor Yakovlevich Medikov* (1950–) — professor of economics; member of the Russian State Duma (Parliament) for two consecutive terms (1993–1999). Author of several books on Russia's new national idea of kin's domains, he has founded a Kin's Domain Academy to collect and disseminate information on the establishment of family domains. He was one of the first political figures in Russia to lead by example and set up his own kin's domain in an eco-settlement some 240 km (150 miles) east of Moscow.

Therefore send I from my heart a gleam  
Rays of warmth to you, my living dream.  
And, in night-time vision or tomorrow,  
In the taiga I shall see your shadow.

### TO THE ELDERS OF RUSSIA

Oh, you wise-hearted elders of Russia,  
Have you nothing to lone hearts to say?  
For the blue eyes that grow ever lusher  
Will still shine o'er the world with their ray.

They will waken dull tribes and refresh them  
With humanity's flourishing wave.  
If there's no other means of expression,  
A tall cedar to chips she will shave.

And in secret will give them like manna  
To all people eternity-bound,  
And will call us with this unknown manna  
To the place where our future is found.

With our knees now already unbended,  
And our backs straightened tall and so proud,  
All our worries and idle contentment  
We forsake not tomorrow, but *now*.

Let us still hear the voice of the ages,  
That has whispered to us as a friend:  
"You are singular children of Nature,  
Death and treason do not spell your end.

“Nor do mud-slingings, fury unleashing,  
Nor do stone walls or home-destroying hail,  
But for those who accept the true Teaching  
Their connection with Nature won't fail.

“We are given a power immortal  
From the Earth-gods and God high above,  
By a heavenly hand incorporeal,  
That our hearts may awaken to love.

“Let us all, then, as singular brothers,  
With our heart-strings stretched taut in a bow,  
Now extend our embrace to all others,  
Send our ray out wherever we go.

“Then in spring over all the Earth's nations  
All the cherry-tree gardens will bloom.  
For humanity's new generations  
There will be no more danger or doom.”

Oh, you wise elders, sons of *Rossiya*,  
Do not slacken, but say the word true.  
May the joy of dear Anastasia<sup>5</sup>  
Now shine forth in its heavenly blue.

I thank Viktor Pavlovich Garkavets, the Superintendent of Education for the City of Kharkov, as well as the instructors, workers and administration of the tractor factory in this Ukrainian city, for organising a fantastic meeting with my readers.

<sup>5</sup>*Rossiya, Anastasia* - a reminder: both these words rhyme with *Maria* (pron. *ras-SEE ya, a na sta SEE-ya*). The phrase *On a star see ya* (= *See ya on a star*) might be a helpful hint in remembering the pronunciation of Anastasia's name.

My thanks, too, to all the organisers of readers' conferences in other cities.

Thank you, Russian emigrants in Germany and Canada.

Thanks to the bards who have written more than five hundred songs now, and the artists who sent in their pictures. They are already posted on the site [www.Anastasia.ru](http://www.Anastasia.ru), and the best of them have been published in the almanac *Zveniasbchie kedry Rossii* (Ringling Cedars of Russia). One of their works may be seen on the cover of [the Russian original of] the present volume.

My thanks go out to the tens of thousands of people who have expressed their appreciation for my books in their sincere and inspired letters.

I thank you all for your open support. Without it, it would be a lot harder for me to write!

However, I would like to share with you — especially with those public figures who are only just contemplating coming out with their support of Anastasia's ideas — the following points.

You should understand that there is considerable opposition to these ideas — a planned and organised opposition. It is still not completely clear specifically who is spreading the false rumours and what levers of power they are using.

You should be aware of this so that you can determine for yourself whether it is worth it to you to openly support the ideas outlined in these books.

I know first-hand how unpleasant all the slander and provocations have been, but it is many times harder for me when they are directed against you, my readers. All the more so when they are personalised and intensive — as, for example, the attacks against the children and teachers of Academician Shchetinin's school.<sup>6</sup>

I wouldn't want any others to be subjected to similar attacks.

I am not merely convinced — I now know for absolute certain that the ideas outlined by Anastasia are irreproachable. Their materialisation can, of course, be temporarily held back, but they will still be revived in human beings with ever-increasing force.

From where I stand, the most vital and important steps required today are the following:

*First.* Organisation of schools, courses and seminars at the local level. It is vital to adapt general designs of family domains and communities to specific locales.

You need to study the healing properties of herbs and plants growing in your area in particular. You need to know exactly which vegetables and fruits will grow under natural conditions in your climate.

You need to prepare working designs — specified down to the minutest detail — for your family domains and communities.

*Second.* You need to bring in specialists who have a good understanding of what is happening and plug them in to work on creating a programme of development for the Russian Federation. This should be a universal programme, capable of solving all the problems of orphans, refugees and low-income families through the idea of establishing kin's domains. The security and well-being of each family will ensure the security and well-being of the nation as a whole.

It is vital to flesh out the details of your dream, then it will most certainly come true.

Let every person do as much as they can along this line, starting from their own resources.

---

<sup>o</sup> *Academician Shchetinin's school* — See description in Book 3, Chapter 17: "Put your vision of happiness into practice" and Chapter 18: "Academician Shchetinin".

We should see the birth of dozens, hundreds of designs for kin's domains and communities — designs for the economic, ecological and spiritual development of individual regions and the whole nation.

You know, when I first saw Anastasia, she was standing on the shore of the Siberian River Ob.<sup>7</sup> She was wearing an old long skirt and a quilted jacket, with a kerchief on her head and rubber galoshes over her bare feet. This taiga recluse looked like an unassuming and lonely woman.

But today I have the impression that it was our *Rossiya* that was standing there in the Siberian wilds with rubber galoshes over her bare feet. It was our dream of the future that was standing there so lonely on the deserted Siberian riverbank. But now, *it is within us!*

And the time will most certainly come when our dream will stride openly and free in a beautiful ball-gown across all of Russia — and not just across Russia.

The greatest energy in this dream is *the energy of life!*

*To be continued...*

<sup>7</sup>See Book 1, Chapter 2: "Encounter".

FOR NOTES & POETRY

## THE RINGING CEDARS SERIES AT A GLANCE

*Anastasia*, the first book of the Ringing Cedars Series, tells the story of entrepreneur Vladimir Megré's trade trip to the Siberian taiga in 1995, where he witnessed incredible spiritual phenomena connected with sacred 'ringing cedar' trees. He spent three days with a woman named Anastasia who shared with him her unique outlook on subjects as diverse as gardening, child-rearing, healing, Nature, sexuality, religion and more. This wilderness experience transformed Vladimir so deeply that he abandoned his commercial plans and, penniless, went to Moscow to fulfil Anastasia's request and write a book about the spiritual insights she so generously shared with him. True to her promise this life-changing book, once written, has become an international bestseller and has touched hearts of millions of people world-wide.

*The Ringing Cedars of Russia*, the second book of the Series, in addition to providing a fascinating behind-the-scenes look at the story of how *Anastasia* came to be published, offers a deeper exploration of the universal concepts so dramatically revealed in Book 1. It takes the reader on an adventure through the vast expanses of space, time and spirit — from the Paradise-like glade in the Siberian taiga to the rough urban depths of Russia's capital city, from the ancient mysteries of our forebears to a vision of humanity's radiant future.

*The Space of Love*, the third book of the Series, describes author's second visit to Anastasia. Rich with new revelations on natural child-rearing and alternative education, on the spiritual significance of breast-feeding and the meaning of ancient megaliths, it shows how each person's thoughts can influence the destiny of the entire Earth and describes practical ways of putting Anastasia's vision of happiness into practice. Megré shares his new outlook on education and children's real creative potential after a visit to a school where pupils build their own campus and cover the ten-year Russian school programme in just two years. Complete with an account of an armed intrusion into Anastasia's habitat, the book highlights the limitless power of Love and non-violence.

*Co-creation*, the fourth book and centrepiece of the Series, paints a dramatic living image of the creation of the Universe and humanity's place in this creation, making this primordial mystery relevant to our everyday living today. Deeply metaphysical yet at the same time down-to-Earth practical, this poetic heart-felt volume helps us uncover answers to the most significant questions about the essence and meaning of the Universe and the nature and purpose of our existence. It also shows how and why the knowledge of these answers, innate in every human being, has become obscured and forgotten, and points the way toward reclaiming this wisdom and — in partnership with Nature — manifesting the energy of Love through our lives.

*Who are we?* — Book Five of the Series — describes the author's search for real-life 'proofs' of Anastasia's vision presented in the previous volumes. Finding these proofs and taking stock of ongoing global environmental destruction, Vladimir Megré describes further practical steps for putting Anastasia's vision into practice. Full of beautiful realistic images of a new way of living in co-operation with the Earth and each other, this book also highlights the role of children in making us aware of the precariousness of the present situation and in leading the global transition toward a happy, violence-free society.

*The book of kin*, the sixth book of the Series, describes another visit by the author to Anastasia's glade in the Siberian taiga and his conversations with his growing son, which cause him to take a new look at education, science, history, family and Nature. Through parables and revelatory dialogues and stories Anastasia then leads Vladimir Megré and the reader on a shocking re-discovery of the pages of humanity's history that have been distorted or kept secret for thousands of years. This knowledge sheds light on the causes of war, oppression and violence in the modern world and guides us in preserving the wisdom of our ancestors and passing it over to future generations.

*The energy of life*, Book Seven of the Series, re-asserts the power of human thought and the influence of our thinking on our lives

and the destiny of the entire planet and the Universe. It also brings forth a practical understanding of ways to consciously control and build up the power of our creative thought. The book sheds still further light on the forgotten pages of humanity's history, on religion, on the roots of inter-racial and inter-religious conflict, on ideal nutrition, and shows how a new way of thinking and a lifestyle in true harmony with Nature can lead to happiness and solve the personal and societal problems of crime, corruption, misery, conflict, war and violence.

*The new civilisation*, the eighth book of the Series, is not yet complete. The first part of the book, already published as a separate volume, describes yet another visit by Vladimir Megré to Anastasia and their son, and offers new insights into practical co-operation with Nature, showing in ever greater detail how Anastasia's lifestyle applies to our lives. Describing how the visions presented in previous volumes have already taken beautiful form in real life and produced massive changes in Russia and beyond, the author discerns the birth of a new civilisation. The book also paints a vivid image of America's radiant future, in which the conflict between the powerful and the helpless, the rich and the poor, the city and the country, can be transcended and thereby lead to transformations in both the individual and society.

*Rites of Love* — Book 8, Part 2 (published as a separate volume) — contrasts today's mainstream attitudes to sex, family, childbirth and education with our forebears' lifestyle, which reflected their deep spiritual understanding of the significance of conception, pregnancy, homebirth and upbringing of the young in an atmosphere of love. In powerful poetic prose Megré describes their ancient way of life, grounded in love and non-violence, and shows the practicality of this same approach today. Through the life-story of one family, he portrays the radiant world of the ancient Russian Vedic civilisation, the drama of its destruction and its re-birth millennia later — in our present time.

*To be continued...*

# The Energy of Life by V. Megré

## Book 7 of The Ringing Cedars Series

Spirituality /  
Nature

Re-asserting the power of human thought and its influence on our lives and the destiny of the entire planet, this book brings forth a practical understanding of ways to consciously control and build up the power of our creative thought. It sheds further light on the forgotten pages of humanity's history, on religion, on the roots of inter-racial and inter-religious conflict, on ideal nutrition, and shows how a new way of thinking and a lifestyle in true harmony with Nature can lead to happiness and resolve personal and societal problems.

## CHAPTER ONE

# Pre-dawn feelings

Anastasia was still asleep. And over the endless Siberian taiga the first glow of light was breaking across the pre-dawn sky. This time I was the first to waken, but stayed quietly lying beside her on my sleeping bag, admiring her serene and beautiful face and the flowing contours of her figure, as the soft, heavenly light of the advancing morning made them ever more distinct. It was good that this time she had arranged for us to spend the night under the open sky. She had no doubt been able to sense the warmth and gentle stillness of the approaching night, and so had made our bed not in her cozy dug-out cave but outdoors, at its entrance. She had spread out my sleeping bag, which I had brought during a previous visit to the taiga, while she fixed up beside me a beautiful place to sleep for herself, comprised of flowers and dried grasses.

She looked picture-perfect lying there on that taiga bed, wearing a thin flaxen knee-length dress, which I had brought her as a gift from my readers. Perhaps she put it on only when I was around; she was quite capable of sleeping in the nude. The colder it was in the forest, the more dried grasses were applied; after all, a haystack can keep out the cold in the winter too. Even a simple soul without Anastasia's level of hardiness could sleep comfortably in hay without extra clothing. I tried it myself. But this time I was lying there on my sleeping bag, looking at Anastasia resting beside me, and I kept imagining how this whole scene might look in a wide-screen feature film.

*A sylvan glade in the depths of the endless Siberian taiga. The pre-dawn stillness is only rarely broken by a scarcely audible rustling of branches in the crowns of the majestic cedars. And here is this beautiful woman so serenely asleep on her bed of grasses and flowers. Her breathing is perfectly even and barely audible. The only thing noticeable is the slight swaying to and fro of a blade of grass clinging to her upper lip as she inhales and exhales the health-giving air of the Siberian taiga.*

Never before had I managed to see Anastasia asleep here — she was always the first to awake. But this time...

I took great delight in watching her. Carefully raising my upper body and resting on my elbow, I studied her face, immersed myself in thought and began talking to myself.

*You are still altogether beautiful, Anastasia. It will soon be ten years that we have known each other. Of course I've got older during this time, while you've hardly changed at all. No wrinkles on your face. Only your golden hair is now showing one strand of silver grey. Apparently something extraordinary's happened to you. Judging by the massive campaign that's been unleashed against you and your ideas, judging by what is being said in the press and bureaucrats' offices, something is going on in the dark forces' camp. They keep trying to get on my nerves, and I know how they'd love to get their hands on you. But their arms are evidently not long enough...*

*And still, you've got that grey strand of hair showing. But it can't spoil your extraordinary beauty. You know, tinting individual strands a variety of colours is an 'in' thing right now. Among our young people today highlighting strands is a hip fashion statement. And you don't even need to go to a hairdresser's — it's just happened all on its own. And the scar where that bullet grazed you,<sup>1</sup> it's practically gone.*

<sup>1</sup>See Book 3, Chapter 7: "Assault!".

The pre-dawn sky continued to brighten, and the scar was barely noticeable, even up close. Soon it would disappear completely.

*Look at you sleeping so peacefully here in the fresh air, in your own taiga world, while out there, in our world, extremely significant events are taking place. Researchers are talking about an 'information revolution'. Perhaps it is thanks to you, or perhaps they are simply following the dictates of their own hearts, but people in our technocratic world are beginning to create their own family domains, enriching the land. They have adopted your image wholeheartedly, Anastasia — the marvellous image of the future for their family, the country and possibly the whole order of the Universe. They have understood all you have said and are building this marvellous future for themselves.*

*And I am trying to comprehend, too. I'm trying my best. I still don't completely understand what you mean to me. You taught me to write books, you bore me a son, you made me famous, you brought back my daughter's respect for me — you've done a lot! But that's not the main point. It's in something else, the main point. Perhaps it's lying hidden somewhere within.*

*You know, Anastasia, I have never spoken of my feelings for you, neither to you nor even to myself. In fact, I've never told any woman in my whole life that I love her.*

*I've never said that, not because I'm completely without feelings, but because these words have always seemed strange to me, even nonsensical. After all, if a person loves another, this love should be reflected in one's actions toward one's beloved. If words need to be spoken, that means there are no genuine, tangible actions. It's the actions, after all — not words — that are most important.*

Anastasia stirred ever so slightly, took a deep breath, but did not waken. And I continued to talk with her, still speaking within myself.

*Not once have I ever spoken to you about love, Anastasia. But if you asked me to fetch you a star from the sky, I would climb up to the top of the tallest tree, and pushing off from the uppermost branch, I'd*

*take a leap in the direction of that star. If I happened to fall, I would catch myself on its branches, and climb up once more to the top, and again leap toward the star.*

*You've never asked me to fetch you a star from the sky. You only asked me to write books, and I am writing them. But my writing doesn't always come out too well. Sometimes I fall. But I'm not done with them yet, after all. I still haven't written my final book. I'll try to write it so you'll like it.*

Anastasia's eyelashes fluttered, a gentle glow flushed across her cheeks, and she opened her eyes. I caught the tender gaze of her greyish-blue eyes... Oh, Lord, what a warmth those eyes always give off, especially when they're so close to me. Anastasia watched me without a word, but her eyes sparkled as though full of moisture.

"Good morning, Anastasia!" I said. "You probably haven't had a good long sleep like that before — you've always woken up before me."

"And a good morning to you, and a marvellous day, Vladimir," Anastasia responded quietly, almost in a whisper. "I should like to have just a wee bit more sleep."

"So you haven't had enough sleep yet?"

"I have, and a very good sleep at that. But my dream... I was having such a pleasant pre-dawn dream."

"What kind of dream? What was it about?"

"I dreamt you were talking with me. About a tall tree and a star, about falling down and climbing up again. The words were about the tree and the star, but it struck me as though they were really about love."

"Things can often seem pretty fuzzy in dreams. What connection could a tree possibly have with love?"

"Everything can have a connection, and great meaning too. It is the feelings that matter here, not the words. This day's dawn has brought me an extraordinary feeling. I shall go out to greet and embrace —"

“Who?”

“This marvellous day, which has offered me such an extraordinary gift.”

Anastasia slowly rose to her feet, stepped a few paces away from the cave entrance and then... She did something she always did in the mornings — her unique exercise routine. There she was, flinging her arms out to the sides and a little bit upward. She gave a momentary glance up at the sky and then all at once spun round. Then she ran off and did an incredible somersault before spinning round again.

Lying on my sleeping bag by the cave entrance, I admired Anastasia’s darts and lunges and thought: *Wow! A mature woman already, and look how quickly, beautifully and energetically she moves, just like a young gymnast! Fascinating, how she felt what I had in mind as I was talking to myself while she was sleeping! Maybe I really should own up to her?*

And I cried out:

“Anastasia, it wasn’t simply a dream you were having.”

She stopped her exercise routine at once and stood there in the middle of the glade. Then she deftly turned a couple of cartwheels in my direction and landed right beside me. She quickly sat down on the ground and joyfully enquired:

“Not simply a dream? And just how is it not ‘simple’? Out with it! Tell me all the details!”

“Well, you see, *I* was thinking about that same tree. I was talking to myself about a star.”

“And where, tell me, where did you get these words from? What produced them — these words?”

“Maybe feelings?”

Our conversation was interrupted by a cry from Anastasia’s grandfather.

“Anastasia! Anastasia, listen to me right away! Do you read me?”

Anastasia jumped up, and I got up quickly, too.

## CHAPTER TWO

# Dominion over radiation

“Has Volodya been up to something unusual again?” Anastasia enquired of her grandfather, who had rushed over to us. And Grandfather, with a passing glance at me and a brief “Hello, Vladimir!”, explained:

“He is down by the lakeshore. He dived down and brought up a stone from the bottom. Now he is standing there, clutching it in his hand. It is safe to assume that the stone is burning his hand, but he will not let it go. And I do not know what advice to give him.”

Then Grandfather turned to me and barked:

“Your son’s down there. You’re his father. What are you standing here for?”

Not fully aware of what was going on, I ran down to the lake. Grandfather ran alongside me and explained:

“This stone is radioactive. It isn’t big, but contains a good deal of energy — an energy similar to radiation.”

“How did it happen to turn up at the bottom of the lake?”

“It’s been lying there a long time. My father, even, knew about that stone. But nobody’s been able to dive down to it.”

“How did Volodya manage it? How did he know about it?”

“I trained him to do deep-water dives.”

“What for?”

“He kept pestering me to show him, asking me again and again. You two don’t seem to have the time to look after your own child’s upbringing — you’ve been shoving the whole burden onto the shoulders of your elders.”

“And who told him about the stone?”

“Now who would have told him, eh, apart from me? I told him.”

“What for?”

“He wanted to know what stopped the lake from freezing over in winter.”

As we approached the lake, I saw my son standing on the shore. His hair and shirt were all wet, but the water had already dripped off them, which told me he had been standing like that for some time.

Volodya stood with his arm stretched out in front of him, his fingers clenched into a fist, which he kept his eyes fixed on like a hawk. It was clear his hand was clutching that same sinister stone from the bottom of the lake. I took two steps in his direction. He quickly turned his head toward me and said:

“Don’t come any closer, Papa.”

And when I stopped, he added:

“Good health to your thoughts, Papa! But keep back just a little further. Maybe it would be better if you and Grandfather lay down on the ground. I shall be able to better concentrate that way.”

Grandfather at once lay down on the ground, and without really knowing why, I followed suit. For some time we didn’t say a word, just watching Volodya standing on the shore. Then a rather simple thought struck me, and I said:

“Volodya, couldn’t you just toss it a little ways away?”

“Where away?” my son asked, not turning his head.

“Into the grass.”

“I must not throw it into the grass. It could cause a lot of destruction. I feel I must not throw it away yet.”

“So, does that mean you’re going to keep standing there all day, or two days? What next? You’re going to stand there a whole week? Or a month, even?”

"I am thinking about what to do, Papa. Let us keep quiet and give thought a chance to find the solution without being distracted."

Grandfather and I lay silently on the grass and looked at Volodya. And all at once I became aware of Anastasia approaching slowly — *too* slowly, under the circumstances — from the other end of the shore. When she got about five metres from Volodya's position, she sat down at the water's edge, as if nothing unusual were going on. She let her feet dangle in the water and stayed there that way for some time. Eventually she turned to our son and very calmly enquired:

"Is it burning your hand, son?"

"Yes, Mama," Volodya replied.

"What were you thinking about when you fetched the stone? And what are you thinking about right now?"

"The stone is giving off energy, similar to radiation. Grandfather was telling me about it. But *Man*<sup>1</sup> also gives off energy. I know that. And human energy is always stronger than any other — it cannot be dominated by any other. I brought up the stone and I am holding it. I am trying with all my might to repress its energy — to send it back inside the stone. I want to demonstrate that *Man* has dominion over any radiation."

"And are you succeeding in demonstrating the superiority of the energy coming from yourself?"

"Yes, Mama, I am succeeding. Only it is becoming increasingly hotter. It is burning my fingers and palm just a little."

"Why do you not throw it away?"

"I feel that I must not do that."

"Why?"

<sup>1</sup>*Man* — Throughout the Ringing Cedars Series, the word *Man* with a capital *M* is used to refer to a human being of either gender. For details on the word's usage and the important distinction between *Man* and *human being*, please see the Translator's Preface to Book 1.

"I feel it."

"Why?"

"It... It will explode, Mama. It will explode just as soon as I open my hand. There will be a big explosion."

"You are correct, it will explode. The stone is giving off the energy accumulated inside it. You used your own energy to repress its flow and direct it back inside. You used your thought to shape the nucleus within the stone, and *your* energy is now building up inside it, along with its own. It cannot go on accumulating indefinitely. It is already raging within the nucleus you formed with your own thoughts — it is getting hotter and the stone is burning your hand."

"I realise that, and that is why I am not letting go of my hold."

Outwardly Anastasia was the picture of calm. Her movements were slow and smooth, her speech was measured and with pauses. I could still feel, however, the extremely intense concentration of her thought — it must have been working faster than ever. She rose to her feet, gave what appeared to be a lethargic stretch, and said quietly:

"That means you realise, Volodya, that if you open your hand suddenly, there could be an explosion?"

"Yes, Mama."

"That means you have to release it gradually."

"How?"

"Just a tiny bit at first. First, ease up on your thumb and index finger to expose just a fraction of the stone. Picture in your mind right off how the energy you directed into the stone is emanating straight upward like a ray. And its own energy will begin to follow suit. Be careful: the ray must be directed only straight up."

Concentrating all his attention on his tightly clenched fist, Volodya gradually eased the pressure on his thumb and index finger. It was a sunny morning, but even in broad daylight one could see the ray emanating from the stone. A bird flying way

up high fell into the ray and was immediately transformed into a puff of smoke. It looked as though a small cloud exploded in vapour when the ray passed through it. A few minutes later and the ray was scarcely noticeable.

"Oh, I have been sitting here with you too long!" said Anastasia. "I think I may go and make us some breakfast while you amuse yourselves here."

She took her time leaving. After going only a few steps, she staggered a bit, and then headed down to the water and washed her face. No doubt her outward calm had concealed an incredible inner tension. She had hid it so as not to frighten her son and interfere with his actions.

"How did you know exactly what I should do?" Volodya called out after the receding figure of Anastasia.

"How, indeed?" Grandfather echoed, mockingly. He had already got up from the ground and was feeling in much better spirits. "What do you mean, *how*? At school your Mama was a top-notch pupil in physics!" And he burst out in a loud guffaw.

Anastasia turned toward us and broke into laughter herself, explaining:

"I had not known about that before, son. But whatever happens, you always need to look for and find a solution. And not to let your thought be fettered by fear."

When the ray could no longer be seen at all, Volodya opened his hand completely. A small oblong stone was lying quietly on his palm. He stared at it for some time, muttering under his breath as he addressed the stone: "What is inside you is no match for Man!"

Then he once again closed his hand into a fist and dived straight into the water without taking off his shirt. It was a good three minutes before he resurfaced and headed back toward the shore.

"I was the one who taught him how to hold his breath that long," Grandfather commented.

After Volodya came out of the water, he jumped up and down to dry himself off, then headed over our way. I couldn't wait, but burst out:

"D'you have any idea what radiation is, son? I guess you don't. If you did, you wouldn't have gone and fetched that wretched stone. Can't you find yourself some other business to poke your nose into?"

"I know all about radiation, Papa. Grandfather told me about the disasters that have happened at your nuclear power plants, about your atomic weapons and the dangers now posed by the storage of nuclear waste."

"So, what's all the interest in this stone lying at the bottom of the lake? What about it?"

"Yes, indeed, what about it?" Grandfather joined the conversation. "You preach at him, Vladimir. I'm going to go have a little rest. It seems that lately your son's been making quite a few demands on me."

Grandfather started heading off, leaving me alone with my son.

And here he was, standing in front of me in his shirt, all dripping wet. He was evidently quite upset about the worry he had caused us all. I didn't feel like nagging him any further. I simply stood there without saying a word, not knowing how to begin. Volodya was the first to speak.

"You see, Papa, Grandfather told me that these nuclear waste facilities are extremely dangerous. According to probability theory, they can do irreparable harm to many countries and the people living in them. And to our whole planet, besides."

"They can, of course, but what's this got to do with you?"

"What this means is, if people think the problem is solved, but the danger still remains, it means they have not come up with the correct solution."

"So, what if it *is* incorrect — what does it matter?"

“Grandfather said that it is up to me to find the correct solution.”

“So... have you found it?”

“I have now, Papa.”

There he was, standing before me, my nine-year-old son, soaking wet and with an injured hand, but entirely confident in himself. And speaking in a calm and confident tone of voice about how to solve the problem of storing nuclear waste. An altogether peculiar situation! After all, he is no scientist, no nuclear physicist and doesn't even study in a regular school. Most peculiar! Here is this boy standing in his wet clothing on the shore of a taiga lake and discussing the safe storage of nuclear waste. Not counting on any kind of effective solution on his part, I asked, simply in the interests of keeping the conversation going:

“Well, what specific conclusions have you come to regarding this insoluble problem?”

“Out of all the possible variants, I think the most effective is deconcentration.”

“I'm not sure what you mean — deconcentration of what?”

“Of nuclear waste, Papa.”

“How so?”

“I came to the realisation, Papa, that radiation in small doses is not at all dangerous. It is present in small quantities everywhere — in us, in plants, in the water and the clouds. But the real danger comes when too much is concentrated in one place. In the nuclear facilities Grandfather was telling me about, a whole lot of radioactive objects are concentrated together in one place.”

“Well, everybody knows that. Radioactive waste is hauled to specially constructed storage facilities, which are carefully protected from terrorists. They've got specially trained personnel who ensure there are no violations of proper storage technology.”

“Quite right, Papa. But the danger still exists. And a catastrophe is inevitable, caused by someone’s specific thought imposing a wrong decision on people.”

“You know, this problem, son, is being investigated in scientific institutes by highly qualified specialists. You’re not a scholar, you haven’t studied science, and so you’re not capable of solving such an important question. It’s modern science that ought to come up with an answer.”

“But what has been the result, Papa? After all, it is precisely the inventions of modern science that have caused people to be subjected to great danger. Of course I do not study in school, and I do not know the science you are talking about, but...”

He fell silent and lowered his head.

“What does that ‘but’ of yours mean? Why did you stop, Volodya?”

“I have no desire, Papa, to be a pupil in that school or to study the science you have in mind.”

“Why not?”

“Because, Papa, that kind of science is what leads to disasters.”

“But there’s no other kind of science.”

“There is. ‘Reality should be determined only through one’s own self,’ says Mama Anastasia. I understand what that means, and I am studying, or ‘determining’. At the moment I do not know how to put it more specifically.”

*Wow! How sure he is of his convictions!* I thought. Then I asked:

“And what is the probability of disaster, as you see it?”

“A hundred percent.”

“You’re certain of that?”

“According to probability theory and the absence of any counteraction to destructive thought, a disaster is inevitable. The construction of large nuclear storage facilities can be compared to the construction of huge bombs.”

“And am I to guess that your thought has begun counteracting this destructive element?”

“Yes, I have launched my thought into space. And it will triumph.”

“Specifically, what solution has your thought come up with regarding the problem of the safe storage of nuclear waste?”

“All nuclear waste concentrated in large facilities needs to be deconcentrated — that is my thought.”

“Deconcentration — does that mean dividing it into fragments a hundred thousandth or a multi-millionth in size?”

“That is right, Papa.”

“A simple solution. But the big question remains: where to store these tiny fragments?”

“On kin’s domains, Papa.”

For a moment the shock of this incredible statement completely overwhelmed me — I didn’t know what to say. Then I practically shouted:

“Nonsense! That’s utter nonsense you’ve thought up, Volodya.”

After I’d thought about it a little more, I said in a calmer voice:

“Of course, if nuclear fragments are deconcentrated and spread among various places, a global catastrophe can be averted. But this will also put millions of families who have decided to live on these domains in danger. After all, everybody wants to live in a place that’s environmentally clean.”

“Yes, Papa, everybody wants to live in an environmentally clean place. But there are hardly any such places remaining on the Earth today.”

“And here in the taiga, isn’t this environmentally clean either?”

“The environment here is relatively clean. But it is not ideal, not pristine. There are no ideal spots left, anywhere. Clouds can bring their acid rain here too, from a variety of places. The

grass and trees and bushes are coping with it for the time being, but the filthy places are becoming only filthier with each passing day. And the number of such places keeps growing with each passing day. That is why it is essential right now not to walk away from this filthiness, but attack it. 'We need to create clean places ourselves' — that is what Mama says.

"From all the possible variants my thought selected just one. It could not come up with any other. My thought tells me it is safer to deconcentrate and tame the waste one fragment at a time, and derive a benefit for life on our planet by storing a tiny fragment on one's domain."

"But where on the domain? In a larder? In a safe? Store this radioactive capsule in an underground cellar? Has your thought given you any hint of this yet?"

"The capsule should be buried underground no less than nine metres deep."

I spent some time thinking about my son's proposal, which had indeed seemed incredible at first, but the more I thought about it, the more inclined I became to accept that there was some grain of reason in what he said. At the very least, his proposal for nuclear waste storage would be entirely sufficient to avert a large-scale catastrophe. As to pollution on the given domain, that was something that could indeed be avoided, and there might even be a plus side. Perhaps scientists could come up with something like a mini-reactor — or something similar.

And then, all at once a thought dawned on me. Wow! Here was another reason for the need to deconcentrate the storage of radioactive waste. *Money!*

Huge sums are being doled out by foreign governments for the storage of such waste. It is these funds that pay for constructing the facilities, maintaining service personnel and whole security control systems. And a part of this money inevitably disappears into the unknown. Why not pay it,

instead, to every domain where radioactive waste capsules are stored? Fantastic! Not only would 'safe contamination' be guaranteed, but people would earn money besides.

At the present time nobody can guarantee security from contamination even for those living far away from the storage facilities. Think what happened at Chernobyl<sup>2</sup> — the contamination affected not just parts of Ukrainian territory, but of Russia and Belarus as well. Clouds can carry the pollution for hundreds and even thousands of kilometres.

So, even though it is still at the conceptual stage and the details need fleshing out, my son's proposal deserves serious consideration — not just on the part of the academic world, but from governments, and especially the public.

I was walking along the lakeshore, immersed in my thoughts, and had quite forgot about my son. He was still standing at the same spot, silently watching me. His upbringing forbade him from being the first to reinitiate our conversation. To interrupt the thought of a Man in contemplation was unthinkable.

I decided to change the subject.

"So, you spend your time thinking about different problems, Volodya. Don't you have any duties to carry out? I have you been assigned any work to perform?"

"Work?... Assigned?... I always do what I feel like doing. Work? What do you mean by the word *work*, Papa?"

"Well, work is when you carry out some kind of task, and people pay you money for it. Or when you do something that's going to benefit your whole family. Take me, for

<sup>2</sup>*Chernobyl* — a town in northern Ukraine with a nuclear-power generating station. In April 1986 an accident at Reactor N° 4 caused one of Europe's worst environmental disasters, spreading dangerous radiation over a huge land area. As a result of the accident, the population of Chernobyl (13,000 people) and nearby Pripjat' (49,000) was evacuated, and these towns, as well as the larger surrounding area, are now uninhabited.

example — when I was your age, my parents assigned me to look after our bunny-rabbits. And that's what I did. I would collect grass for them, feed them, clean their cages... And the rabbits brought our family a bit of income."

After hearing me out, Volodya suddenly said with some excitement:

"Papa, I shall tell you about one particular duty which I assigned to myself — a very enjoyable duty. Only you'll have to judge whether it can be called *work* or not."

"Tell me about it."

"Then let's go. I have a specific place I want to show you."

## CHAPTER THREE

### “Goosey, goosey, ga-ga-ga”<sup>1</sup> *or* The superknowledge we are losing

We started heading off from the lake, Volodya leading the way. He had changed somehow. His analytical and concentrated mood had given way to one of joyfulness and excitement. Sometimes he would do a pirouette as he walked along, or a little leap into the air, as he explained to me:

“I never looked after bunny-rabbits, Papa. I did something else. I am not sure what to call it — *gave birth?* That will not do. *Created?* Not really... Ah, now I remember. I think in your civilisation it is called *sitting on eggs*. So, I sat on some eggs.”

“What d’you mean, you sat on some eggs? That’s a mother hen’s job, or some other kind of bird’s.”

“Yes, I know. But in my case I had to sit on them myself.”

“What for? Tell me everything, in the proper order.”

“All right, in the proper order. Well, it happened in this order:

“I asked Grandfather to find me some eggs laid by wild ducks and wild geese. At first Grandfather grumbled a bit, but three days later he brought me four large goose eggs, along with five duck eggs, which were smaller.

“Next in order, I dug a little hole in the ground, and put some deer manure in the bottom along with grass stalks, and then I

<sup>1</sup>*Goosey, goosey, ga-ga-ga* — the first line of a popular Russian folk song. The song accompanies a children’s game in which a group of children (representing a flock of geese) are fleeing home from their feeding grounds while another child (as a wolf) tries to catch them.

covered them over with dried grass, and then on top of this I placed the two sets of eggs Grandfather had brought me."

"What was the manure for?"

"For warmth. Eggs need warmth to hatch. And they need warmth from above, too. Sometimes I lay down on the ground myself, covering the hole with my stomach. When it was cold or rainy, I assigned this task to the bear."

"How did the bear keep from crushing the eggs?"

"You see, even though the bear is big, the hole containing the eggs is pretty small. He lay on top of the hole, and the eggs were at the bottom. Sometimes I would have the she-wolf guard the eggs, at other times I would sleep on the ground nearby myself, until they started to hatch. It was so wonderful to watch them hatching. Not all of them made it, though. From the nine eggs I started with, were born two goslings and three ducklings. I fed them grass seed and crushed nuts and gave them water to drink. Whenever I fed them, I would invite various creatures living on our territory to watch."

"What for?"

"To show them how I cared for the little chicks, to help them understand that they should not touch them, but that they should protect them instead. I would also sleep beside the hole where the goslings and ducklings were born, except on cold or rainy nights when I had the bear take over for me. The chicks nestled in his warm coat, which made it very nice for them."

"Next, if I am to proceed in the proper order: I put up stakes around the hole with which I made a wicker fence from branches, and put branches above the nest as well. As the goslings and ducklings grew and learnt to climb out of their hole, I would walk around their nest and make short whistling sounds: *tsu-tsu-tsu*. Upon hearing this, they would immediately climb out and run after me. They tried running after the bear, but I trained them out of it. The bear can travel quite a distance, and the birds might not make it in one piece."

“But nothing happened to them. They grew up, feathers appeared, and they learnt to fly. I would toss them up in the air to help them along. Then they began flying off on their own, but always returned to their nest.

“When autumn came and a whole lot of birds started gathering in flocks to fly south, my grown-up ducks attached themselves to a whole flock of ducks, and my geese joined a flock of geese, and they all flew off to warmer climes.

“But I guessed — I was almost certain — that they would return in the spring. And they did. Oh, how fantastic that was, Papa! They came back, and I heard their delightful cry: *ga-ga-ga*. I ran over to their nest and began calling: *tsu-tsu-tsu*. I fed them grass seed and some nut kernels which I had ground up beforehand. They took the feed right out of my hands. I was so happy, and all the creatures around heard the cry and came running oh so happily...

“Look, Papa, here we are! Look!”

There in a secluded spot between two currant bushes I saw the nest my son had fashioned. But there was no wildlife to be seen anywhere around.

“You say they’ve come back, but there aren’t any birds here.”

“Not at the moment. They have flown off somewhere to have a stroll or look for food. That is why they are not here right now, but look, Papa!”

As Volodya pushed the branches aside to widen the opening, I caught a glimpse of three nest holes. In one of them lay five small-sized eggs, probably, duck eggs. In the other, just one, slightly larger — a goose egg.

“Wow! That means they *have* come back. And they’re laying eggs. Only just a few.”

“Yes!” Volodya exclaimed in excitement. “They have come back and are laying eggs. They could lay more if I took some of the eggs out of the nest and fed the mothers more often.”

I looked at my son's happy face, but could not fully comprehend the reason for his joyful excitement. I asked him:

"What are you so fantastically happy about, Volodya? I know none of you — either you or your Mama or your grandfather — eat eggs. Which means that your actions cannot be called 'work' or a 'job', since there's no practical benefit from it."

"You think so? But remember, other people eat bird's eggs. Mama says it is all right to use anything the animals themselves give to Man. Especially for people who are not accustomed to a vegetarian diet."

"What have other people got to do with your activities here?"

"I have decided that something needs to be done so that people living on their domains can be free from the burden of so many household tasks. Or almost free. So that they can have time to think and reflect. This is possible — if you understand God's intent in creating our world. I find delight in the science of getting to know His thoughts. It is certainly the grandest science of all, and it is something that must be known.

"We need to learn, for example, why He made the birds fly south in the autumn, but they do not stay in those warmer climes, but come back in the spring. I have thought a lot about this, and have guessed that He did this so that Man would not be burdened during the wintertime. In winter birds cannot find food for themselves, and they fly away. But they do not stay in the south, but come back — they want to be useful to Man. This is God's intent. There is much for Man to learn from what our Creator has conceived."

"What you're suggesting, then, Volodya, is that ducks and geese can live in every domain, lay their eggs, feed themselves, and then fly off in the autumn and come back in the spring?"

"Yes, quite right. After all, it worked with me."

“Yes, I see — it really did work with you. But there’s just one concern I have... It will probably upset you to hear this, but still, I have to tell you the truth. Just so you don’t go looking ridiculous with your proposal.”

“Tell me the truth, Papa.”

“You see, there’s this science we call economics. Economists are trying to figure out what is the best way of handling the production of various goods — in this case, eggs. In our world a lot of chicken farms have been set up, where a whole bunch of chickens are kept in one place. They lay their eggs, and afterward these eggs are shipped off to grocery stores. People can go to these stores and easily purchase as many eggs as they need. It’s all worked out to ensure the least expenditure of labour and time on a per-unit basis.”

“What does ‘expenditure of labour’ mean, Papa?”

“It refers to the quantity of time and resources spent on the production of a single egg. You have to carefully work out what’s going to be the most efficient method of production, and that will be the best method.”

“Fine, I shall try to work it out, Papa.”

“When you work out the whole thing, you’ll understand. But to figure it out you’ll need expense statistics. I’ll try to get them from some economist.”

“But I can calculate everything right now, Papa.”

Volodya gave a bit of a frown, evidently concentrating, and after a minute announced:

“*Minus two to infinity.*”

“What kind of a formula is that? What does it refer to?”

“The efficiency of the Divine economy is expressed in an infinite series of numbers. Even starting from zero, modern scientific economics is already two points down.”

“You’ve got a pretty strange method of calculation there. I can’t fathom it. Can you explain how you arrived at that figure?”

"I set the benchmark for our current case at zero. All the expenses involved in a chicken factory — its construction, maintenance and delivery of eggs to stores are summed up in the figure of minus one."

"What d'you mean, 'minus one'? These expenses should be expressed in roubles and kopeks."<sup>2</sup>

"Monetary units are relative and will always vary, and so they are not significant in this methodology. They all need to be lumped together under the arbitrary value of 'minus one'. Whatever expenses there are, in terms of a zero benchmark, they can be expressed as 'minus one'."

"And where did you get the second minus figure?"

"That is *quality*. It cannot be very good. The unnatural maintenance conditions and the lack of variety in feed cannot help but lower the quality of the eggs, and this gives rise to another value of minus one. So we get 'minus two' altogether."

"Okay, let's say you're right. But in your case, too, there are huge expenditures of time. Here, tell me, Volodya, how much time did you spend, as you put it, 'sitting on' the eggs, and then feeding the ducklings and goslings, and watching out for them?"

"Ninety days and nights."

"So, ninety times twenty-four hours. And all that in aid of producing no more than a few dozen eggs — and that only at the end of a year! For people living in their domains, it would be much more efficient to buy some little chicks at a market or hatch them over the winter with the help of an electric incubator, and in four or five months they'll start laying. In the

<sup>2</sup>*kopek* (Russian: *kopeika*) — a coin worth 1/100 of a rouble. It is derived from the Russian word for 'spear' (*kopë*, pronounced *kop-YO*), in reference to a warrior piercing a dragon with his spear — a scene depicted on early Russian coins. The word 'rouble' itself is derived from the verb *rubit'* ('cut with an axe') — early coins represented a silver band cut in rectangular pieces.

second year, before winter sets in, they're generally slaughtered, since their laying capacity goes down by the third year. So they kill them and start raising a new batch. That's technology for you."

"That is the technology of never-ending burdens, Papa. You have to feed the chickens every day, store up food for the winter, and every other year raise a new batch of chickens."

"Sure, you feed them and raise new ones, but thanks to modern technology it isn't nearly as time-consuming as your alternative."

"But those ninety days will launch a programme that will last forever. Once they come back, the migratory birds will raise their young all by themselves, they will teach them how to get along with human beings and come back to their homeland. And they will go on doing this for thousands of years. In launching a programme like this, Man is passing it on to future generations of his family. He is giving back to them a little particle of the Divine economy. A hundred years from now an expenditure of ninety days in calculating the cost of producing a single egg, will count as minutes, and continue to diminish with each passing year."

"But still, there are expenses, and you haven't taken these into account."

"These expenses are offset by a powerful counterweight, which is no less significant than what is produced by the birds."

"What counterweight?"

"When birds once again fly from faraway lands back to their native woods and fields, people are delighted to see them. Thanks to their joyful and beneficial energy, many people's diseases are eliminated. But this energy is ninety times stronger when they do not merely fly back from the south, but come directly to you and start greeting the Man living on that domain with their happy cries and refrains of exultation.

Their singing brings joy and strength not only to Man but to the whole Space around him."

Volodya spoke with confidence and inspiration. It would have seemed foolish to continue arguing with him. I pretended to be absorbed in contemplation or to be figuring out something in my mind. I felt a little put out that there was nothing I could teach my son or even offer him a few hints on.

And what kind of upbringing or education do we have here anyway? Here is my son standing right in front of me, and yet he seems like a child from another planet or another civilisation.

He has a different concept of life, a different philosophy and speed of thought. He can do instantaneous calculations. And it is clear, as I have been made aware, that even if I spent a year on computer calculations, whatever he comes up with would still be more accurate. It's as though everything inside him were turned upside-down. Or perhaps it might be more accurate to ask: *To what degree have we perverted our own lives — our concepts and meaning of life?* All our disasters have arisen from these perversions.

No doubt this is all true, but still... I'm so anxious to find some way of being useful to my son. But how? With no expectations left, I asked him quietly and offhandedly:

"I'll give some thought to those economics of yours. Maybe you're right... But tell me, son: you've been playing with different tasks here, working them out. Have you ever had a really *serious* problem to meet?"

Volodya sighed deeply and, it seemed, rather woefully. After a brief pause he replied:

"Yes, Papa, I do have a big problem. And only you can help me solve it."

Volodya was sad, while I, on the other hand, was delighted to find something at last where he required my help.

"And what does it involve, this big problem of yours?"

### A big problem

“Remember, Papa, when I told you last time you were here that I was preparing to go off into your world when I grew up?”<sup>3</sup>

“Yes, I remember. You said you would come into our world and find yourself a Universe Girl to make her happy. You’d build a kin’s domain with her, and raise children together. I remember your telling me. So, you haven’t abandoned your project?”

“Not at all. And I often think of the future, about that girl and the domain. I can picture in detail how she and I will live there together. And how you and Mama will come visit and see how the dream which that girl and I co-created together is being turned into reality.”

“Well, then, what’s your problem? Are you afraid you might not find your girl?”

“That is not the problem. I shall look for this girl and find her. Come, I shall show you another little glade. And you will see it all for yourself— you will sense what the problem is.”

Volodya and I arrived at a small glade located right next door to Anastasia’s. When we reached the middle of the glade, we stopped, and Volodya invited me to sit down on the ground. Then, cupping his hands around his mouth, he gave out a loud and extended cry: *A-a-a-a!* First he cried out in one direction, then another and yet another. In just two or three

<sup>3</sup>See Book 6, Chapter 2: “Conversation with my son”, especially the section “I shall make a Universe Girl happy”.

minutes there began a rustling in the treetops all around the glade, and a whole lot of squirrels could be seen leaping from branch to branch, gathering together on a single cedar tree. Some of them simply sat down on one of the branches and stared in our direction, while others — apparently the more restless ones — continued hopping from one branch to another.

A few minutes later and out of the bushes came running three wolves. They sat down at the edge of the glade and also began looking our way.

A sable came along and took up a position about three metres from the wolves. Then two goats appeared. They didn't sit down, but stood at the edge of the glade, their eyes fixed on us. Soon afterward came a deer. The last to arrive was a huge bear, noisily making his way through the bushes. He too sat down at the edge of the glade, panting all the while, saliva dripping from his tongue. He had probably been a long ways off and had had to run for some distance.

All this time Volodya stood behind my back, with his hands on my shoulders. Then he took a few paces back from me and picked some herbs. Coming back to me, he said:

"Open your mouth, Papa, and I shall give you some herbs to eat. This is so they can see that I am feeding you from my hand, and will not be upset at the sight of a stranger."

I took the proffered herbs in my mouth and began to chew. Volodya sat down beside me, put his head up against my chest and said:

"Stroke my hair, Papa, so that they will fully calm down."

I began stroking his light-brown hair with delight. Then he sat down beside me and began to explain.

"I realised, Papa, that God created the whole world as a cradle for His son, Man. The plants, the air, the water and clouds — everything has been created for Man. And the creatures stand ready to serve Man with great delight. But we

have forgotten, and now it is important to understand what services the creatures can perform, what their purpose and destiny is. Even today a lot of people are aware that a dog can guard the house, find lost objects, and aid in keeping one's home safe from intruders. A cat, of course, can catch the mice that raid the larder. A horse is transportation. But all the other creatures have a specific feature and designation, too, which should be understood. I have tried the best I could to determine the function of all that you see here.

"Now they are sitting there and awaiting my command. This is the third year now I have been working with them to understand their purpose. Take, for example, the bear. Because of his big and powerful paws, he can dig an underground cellar, put supplies in it to save for the winter and dig them up again in the spring. He knows how to bring honey from a tree hollow."

"Yes, I know, Volodya. Anastasia told me that at one time people used bears as household help."

"Mama told me that, too. But look what I have taught the bear to do."

Volodya rose to his feet and stretched out his right arm in the bear's direction. The bear drew himself up on his haunches, and even seemed to stop breathing. When Volodya clapped his hand against his thigh, the huge bear took several giant strides and lay down at the boy's feet. Volodya squatted down beside the beast's enormous head, gave it a slap and began scratching behind the creature's ear. The bear purred with pleasure. When Volodya got up, the bear did the same, watching the boy's every move.

Volodya went over to the edge of the glade, where he found a dry branch, and stuck it into the ground about ten metres from where I was sitting. Then he returned to the edge and approached a small cedar tree about a metre high. He touched it and clapped his hands twice. Right off, the bear ran over to

the cedar and sniffed it. And then an incredible thing started to happen.

My son sat down beside me on the grass and the two of us began watching as the scene unfolded before our eyes.

The bear spent some time sniffing the little cedar. First he would walk away from it, as though measuring something, then he would run over to the spot where Volodya's dry branch was sticking up. And all around the branch he suddenly began scraping away the earth with his front paws.

Working furiously with his paws and their powerful claws, in the space of a few minutes he had dug a hole approximately 80 cm in diameter and about half a metre deep. He stopped to admire his handiwork, and even stuck his head into the pit, probably to sniff it.

After that the bear ran over to the cedar Volodya had indicated, and began to dig out the earth around it. When he had dug what amounted to a circular trench, the bear sat down on his hind paws next to the cedar, dug his front paws into the trench and pulled the little tree out of the ground, along with a sizeable clump of earth. Rising on his hind legs, he held the clump between his front paws and headed over to the hole he had dug earlier. He carefully sat down and lowered the clump with the cedar into the hole. It turned out the hole was about 15 cm larger than required. The bear backed off to take a look at his handiwork. Once more he pulled out the cedar and set it to one side, while he filled in the hole just a little more, before replanting the cedar. Now everything was just right.

The bear backed away to once more inspect his accomplishment. This time he was apparently satisfied, as he went back to the cedar he had planted and began filling in the crevice around the clump from which the tree was growing. He used his paw to scoop up the earth, stuff it into the crevice and then pack it down around the newly replanted tree.

It was quite a fascinating scene, but I had earlier witnessed how the squirrels brought dried mushrooms and nuts for Anastasia,<sup>4</sup> or how the wolves played with Anastasia and protected her from wild dogs.<sup>5</sup>

Not only that, but a lot of people can observe all sorts of tricks with various animals just by attending a circus performance. My own dog Kedra<sup>6</sup> also takes delight in carrying out a range of commands.

What I witnessed in the taiga glade also bore outward similarities to a circus performance, except that it didn't take place in an arena surrounded by a high net, but in natural surroundings. And the performers were not circus animals living in confined cages, but free — or 'wild', as we call them — dwellers in the taiga. They might well have seemed wild to us, but to my son they were simply friends and helpers. Just like our household pets and farm animals.

However, I must point out one mysterious and incredible distinction in particular: the loyalty of household pets and farm animals can be explained by the fact that Man gives them food and drink and provides shelter. People who go see animal acts at circuses may also notice that after each successful trick the tamer rewards the lion or tiger, giving them some kind of treat or trifle he keeps on his belt or in his pocket just for that purpose.

Circus animals which spend years confined in cages have no opportunity to hunt for their own food. They are fully dependent on Man. By contrast, the creatures here in the taiga are absolutely free and fully capable of finding food and shelter on their own. Yet still they come — not just come, but

<sup>4</sup>See, for example, Book 1, Chapter 6: "Anastasia's morning".

<sup>5</sup>See, for example, Book 3, Chapter 12: "Man-made mutants".

<sup>6</sup>*Kedra* — a name derived from *kedr* (the Russian word for 'cedar' or 'Siberian pine').

make an enthusiastic dash to respond to Man's call and carry out his commands. They carry them out with considerable desire and even servility. Why? What do they get in return? Volodya gave no food to the bear. But still, the bear's joy was many times more clearly evident than that shown by the circus animals upon receiving their treat.

The bear that transplanted the little tree on Volodya's command stood there shifting from paw to paw, his eyes fixed on the boy, as though he wanted to repeat the action or perform some other task. It is strange how this huge taiga bear really wants to keep on doing something for Man, and for a child at that.

Volodya was not about to set the bear any new task. He gestured the bear to come over, grasped the fur on the bear's muzzle with both hands, ruffled it a bit, then petted the muzzle and said:

"You're a super helper — not like the goats."

The bear purred with delight. This threatening creature sounded as though it was at the very pinnacle of bliss.

Anastasia has said:

"Such beneficial energy can flow from Man as has never before been seen. Every living creature on the Earth needs this energy just as it needs air, sunshine and water. And even sunlight is but a reflection of the great energy emanating from Man."

Our sciences have discovered a multitude of diverse energies and even brought about the artificial generation of electrical energy. They have split the atom and manufactured bombs. But how far (and in what direction) have our sciences advanced in studying the more significant and important question as to the energy emanating from Man himself? Is there any tendency toward studying this energy at all, including its mysterious capabilities? Or studying Man's abilities in general, and his function in both our world and the Universe?

Perhaps someone is trying by whatever means available to hinder Man from knowing himself. And I mean actual hindering.

It cannot be, it cannot possibly be Man's destiny to spend years sitting in a casino or at a bar for a shot of vodka, or drudging away at a cash register in some store or at a manager's desk in some office. And even a supermodel, or a president, or a pop-star — none of them come even close to Man's most important purpose.

And yet it is these very professions of our modern age, along with making money, that some enigmatic 'entity' is promoting today as the most important thing in Man's life. It's what we see in a good many of our films and TV shows, which concentrate on everything except the meaning of life. All they do is turn Man into a banana-head.

Isn't that the reason wars are happening all over the place? And the Earth is becoming more and more polluted? And people lose their sense of direction, they see no purpose in living, and so they take to vodka and drugs.

Who is supposed to stop all this rot that is taking place with our Earth? *Science?* But science isn't saying anything. *Religion?* Which religion? Where are the results? Maybe everyone needs to ponder this for themselves? Ponder it! For themselves!

To ponder, one must first think. But where? When? Our lives have become one giant bustle from morning 'til night.

Every single attempt that has ever been made to ponder the meaning of life has been suddenly aborted. Selling magazines featuring half-naked sensuous bodies — oh, sure! Savouring sexual perversion — oh, sure! Showing and telling about the beastly antics of pervert-maniacs — oh, sure! Writing and talking about prostitutes in the media — oh, sure!

But there is less and less talk about the meaning of Man's life and Man's purpose — it's becoming more and more a taboo topic.

I glanced up from my contemplations to look at my son. He was sitting on the grass beside me, watching me intently. I thought he might have something more he wanted to show me. I asked him:

"And what was it you were saying to the bear about *goats*, Volodya?"

"I cannot, for the life of me, Papa, determine what their purpose is."

"What's there to determine? Everyone knows what goats are for — to give milk to Man."

"Yes, milk, of course. But perhaps there is something more they can be taught."

"What more could they possibly...? Why bother looking for something else?"

"I have been watching them. Goats are capable of stripping bark off trees and stumps. And they can bite off branches from bushes. If you let them into a domain, they could cause harm to the plants. To stop that from happening, I am trying to teach them to trim the hedges around the domains."

"Trim?"

"Yes, Papa, trim. After all, people trim hedges to make them more beautiful — either in a straight line or in different shapes. Grandfather told me you call it landscape design, or topiary art. But the goats do not seem to have any concept of what I want them to do."

"And how are you teaching them?"

"I shall show you."

Volodya reached for a rope made of nettle fibres woven together, about three metres long. He fastened one end to a small tree and stretched the rope through a clump of bushes. Then, gesturing the two little goats to approach, he gave each of them a pat. He touched the bushes with his hand and even snapped off a small branch himself with his teeth. He said

something to the goats, and they set about vigorously gnawing off the bushy branches. Each time they neared the rope border, Volodya would give several tugs on the rope and make some disapproving sounds. The goats would stop for a time, holding their snouts up and looking enquiringly at the boy, but then go back to biting off the branches, paying no attention to the rope.

“You see, Papa, it is not working. They do not realise they are supposed to trim the bushes in an even line.”

“Yes, I see. Is that the problem you were talking about?”

“That is not the main problem, Papa. It is something else.”

“Then what?”

“You noticed, Papa, how happily the different creatures came running to my call?”

“Yes, I did.”

“I have been working with them for several years now, and they have become accustomed to communicating with me, but only with me. They look forward to this interchange, they want to be petted. But once I go off into your world, they will miss me. They will miss not having a Man ever come to see them again, or call them and give them something to do. I feel that the communication with Man and serving Man has become the most significant focus in their life.”

“Couldn’t they communicate with Anastasia?”

“Mama has her own circle, her own creatures she is friends with. Besides, she is very busy and does not have time for all of them.

“But, you see, *these...*” — and here once again Volodya pointed to the creatures still sitting around the edge of the glade — these I chose myself, and I am the only one who has been working with them these past few years.

“Three months ago I asked Grandfather to be present with me at all our training sessions. Grandfather muttered, but he

was always there beside me. But recently he told me he would be unable to replace me."

"Why?"

"He said he did not have the same interest as I had in animal-training. And once again he began to mutter that I should not have spent so much time with the animals individually. And that I should not have given them so much petting. And he reminded me that these creatures look upon me not only as their leader, but as their child, too, since the older among them saw me when I was a baby and even nursed me. You see, I made some kind of mistake, and now I must definitely correct it. Only now I am no longer able to correct it all on my own."

I looked at the creatures still sitting at the edge of the glade. They gave every indication that they were waiting for Volodya to give them some sort of instructions or to do something with them. I imagined how they would miss him if he were to go away. The same way my dog Kedra misses me when I have to leave my home in the country for days or weeks at a time. She has a warm little doghouse and I don't keep her chained up — she's free to roam the fields or the forest or the village. And I have a neighbour who feeds her every day. He makes *kasha*<sup>7</sup> for her, and gives her bones to chew on. But my neighbour tells me:

"She misses you, Vladimir Nikolaevich. She'll often sit by the gate and gaze down the road you come home on. And sometimes she'll whimper."

And whenever I arrive, Kedra rushes headlong to greet me, rubs against my legs, and sometimes she's so enthusiastic she'll jump right up and try to lick my face, soiling my clothes

<sup>7</sup>*kasha* — a traditional Russian and Eastern European porridge made with wheat, buckwheat and other grains.

with her dirty paws. And there's no way I can train her to be not quite so ebullient in expressing her emotions.

But these creatures in the glade... All the time we talked they sat there quietly watching us, looking the picture of composure. What do they want? After all, nobody is making them sit that way or wait on some kind of command from Man.

*My God...* A thought all at once bubbled up with absolute clarity and struck my heart. It was much more than just about these creatures sitting in a taiga glade — it was the realisation that all the creatures on the Earth have a specific purpose and await contact with the highest being on the planet, namely, Man. They have been created to help Man fulfil his supreme mission. Like all life on the planet, they were created by God to help Man realise his grand destiny... But Man...

I looked at the creatures in the glade and began to realise that my son really did have a serious problem on his hands: he could not simply abandon these creatures. Nor could he bring himself to give up his dream about the girl he would be setting up a domain with.

"Yes, Volodya, that really is a problem," I told my son. "Doesn't look as though there's any solution. Not one we can find."

"There *is* a solution, Papa, but it does not depend on me."

"On whom, then?"

"*You* are the only one who can solve this problem, Papa."

"Me? And just how am I supposed to do that? There's nothing *I* can do here, son."

### There is a solution

"I think, Papa, that you will be able to help me if you really want to," said Volodya quietly.

"You think so? But, you see, I have no idea what to do. *You* may think so, but I have no idea."

I was still sitting on the grass, while Volodya stood in front of me, looking me in the eye with some kind of an imploring gaze, his lips whispering something inaudible. I could tell by his lips that he was saying one particular word over and over again. Then, without taking his eyes away, he said it distinctly:

"*Sis-ter*. I earnestly beg of you, Papa, to bear me a sister, together with Mama. I shall nurse her and raise her myself. They will help me. We shall not distract you and Mama from your activities. I shall teach her, when she grows a little. I shall tell her about everything. She will remain here with my creatures and my Space.

"Bear me a sister, together with Mama. Unless, of course, you are ill... or are too tired. That is, of course, if you can. Grandfather told me that men in your world often get ill and grow older faster because of the way of life there, the air not fit to breathe and the foul water. You are a little past fifty years old, Papa. But if you are tired, Papa... If your strength is pretty much exhausted... Then spend three days with me. Just three days. I have everything all prepared, and a great deal of strength will be restored to you."

My son was excited, and I interrupted him.

"Wait, Volodya, calm down. Of course I'm a little tired. But I think I'll have enough strength. That's not the point. In principle I have nothing against giving you a sister, but when it comes to bearing children, a desire on the part of *both* parents is required."

"I am sure of it, Papa. I know for certain that Mama will not refuse. If you agree, let us not waste any time, but begin right now to prepare for the birth of my sister. I have been studying up on it. Grandfather has helped me a great deal. I have made calculations and have everything prepared. Stay with me three days and three nights, and do not go off anywhere, and do not get distracted by anything, Papa. Your energy and strength will increase."

"What makes you think I don't have enough energy or strength, Volodya?"

"I think you have enough, but you shall have more."

"Okay, I shall spend all three days with you alone, but we must go and let Mama know."

"I shall explain everything to her myself, Papa. I shall tell her we have a common project. She will not go into specifics and will not object."

"Well, all right, then, let's get started."

I even began to wonder what my son had prepared that would restore a great deal of strength and energy to Man after only three days. And I shall say right off that the procedures he prepared may seem rather strange, but the sensation resulting from them on the third day defies explanation in words or writing.

It wouldn't be appropriate, either, to say that a Man becomes ten or twenty years younger, though he may indeed look as much as five years younger. But on the *inside*... Somehow everything inside me seemed to be working differently. Not only did I have new strength, but the world around me seemed just a bit different.

## CHAPTER FOUR

# Rejuvenation

### First ordeal

No sooner had I agreed to follow through with the procedures thought up by my son than he signalled the assembled creatures to *go away*. He grasped hold of my hand, and we ran down to the lake. Volodya stopped several times along the way to pick herbs in various places, which he softened and rolled into a ball. When the ball was ready, he instructed me to eat it, which I did. And in just a few minutes I noticed a heavy drip of snot exuding from my nose and I began to vomit. It seemed that all my stomach juices had been pumped out. I was unable to speak for all the vomiting, while Volodya explained:

“That is good, Papa. Do not be afraid. It is good for all that useless stuff to come out of you. Only a pure state will remain. This is what they do in cases of poisoning.”

I was physically unable to offer any kind of answer, but thought to myself: *That's true: poisoning victims drink tablets which produce nausea and vomiting. There are laxatives, of course — castor oil, for example. But what do I need this ordeal for? I haven't been poisoned.*

As though he had tuned in to my question, Volodya explained:

“You, of course, have not been poisoned, Papa, but the food you have been consuming is right on the verge of having a poisoning effect. Just let go of everything filthy inside you.”

After the vomiting and the discharge of the phlegm from my nose, along with a copious flow of tears from my eyes,

I began having a series of soft bowel movements, and five times I ended up running into the bushes for a lengthy period. The whole procedure lasted two to three hours. Then came relief.

“Now do you feel better, Papa? Better than before? Eh?”

“Yes,” I affirmed.

### Second ordeal

Volodya once again took hold of my hand and off we ran. When we reached the shore of the lake, he instructed me to wash myself and swim around a bit. Upon coming out of the water, I noticed him extracting a clay jar from a hole in the ground, about a litre and a half in size.

“Now, Papa, you need to drink this water. It is called *dead water* — because it contains very few microbes. This water should not be drunk if the air is polluted. But we have pure air here, so it is all right to drink dead water. It will rinse your insides and cleanse them, and wash out a lot of microbes and bacteria from your body. Drink as much as you can, Papa. When you have drunk up this whole jar, I shall give you another, and when you have finished that I shall give you a third jar, containing living water. And all the microbes and bacteria you need will be restored in a balance that is just right for you.”

I should point out right off that Volodya and his family consider dead water to be that found at great depths below the Earth's surface and containing a minimum of bacteria. I believe our mineral water in bottles is precisely what they call

dead water. In any case, I think *all* of our drinking water is dead water, and that is why our children suffer from disbacteriosis, especially newborns.

Living water, on the other hand, they consider to be surface water from pure streams or bodies of water, a few of which have indeed been preserved in the depths of the Siberian taiga.

There's something I wish to emphasise here. Grandfather later explained to me that spring water is not considered living water when you drink it right out of the spring. To be considered 'living water', it must first be kept for three hours or so in a wooden or clay vessel with a wide neck.

"Living water needs to absorb sunlight," he said. "With the aid of sunlight, organisms are generated which are indispensable to human life. You call them microbes and bacteria."

Then the water should stand in the shade for at least another three hours. After that it can be drunk as 'living water'.

### Third ordeal

"So take a drink whenever you feel like it, Papa. In the meantime we shall proceed to the next phase. Usually, for people polluted by the outside world, this whole process takes about nineteen days, Grandfather said, though it is even better to stretch it out over thirty-three days. Since you do not have that kind of time, I have shortened it for you down to three days, but we shall manage. Come with me to another spot — I have set up a particular device there."

We walked about a hundred metres away from the lake, and there amidst a group of trees I saw a place prepared for me to lie down, made of dried grasses. Next to this lay four ropes made of woven nettle fibres or flax.

At one end of each rope there was a noose, while the other was tied to a tree. After I lay down, Volodya put each of my hands and feet through a noose, tugged on them a little and began tightening them with the aid of sticks placed half-way along each rope. After a little tugging, as though trying to literally quarter my body, he jerked each of my hands and feet in turn. I could feel a crunch in my joints. Then he tightened the rope even more, saying:

“Papa, you need to lie like this for an hour on your stomach and an hour on your back. And so that it will not be boring for you and even more beneficial, I shall give you an invigorating massage. And you can just relax, or even go to sleep, if you like.”

My son and I went through this procedure two hours each day on all three days.

As I later found out from Grandfather, this procedure served to lubricate all my joints. It is especially important for elderly people. It can even add to one's height, since it straightens out the spinal column. But the main benefit is increased lubrication of the joints. Think about it: when we walk or run or work out in the gym to pump up our muscles, almost all exercise involves increased pressure on our joints. In Volodya's procedure, though, it is exactly the opposite: the pressure is taken off.

Each time during the stretching procedure, Volodya gave me a massage. On the second day he rubbed down my body with some sort of sweetish juice or tea, and a whole lot of insects crawled over me. I had been told earlier by Anastasia that they served to cleanse the pores of my skin.<sup>1</sup> In our own living conditions, the pores of the skin can be cleansed by

going to a Russian *banya* and applying, for example, a birch besom.<sup>2</sup> When a Man steams and sweats, the pores of his skin are cleansed, too.

Interspersed with the stretching procedures we did some fairly common exercises: running, swimming, chinning ourselves on the bough of a tree (using it as one would an exercise bar). About three times a day Volodya suggested I do a handstand, head down, and hold the position for as long as I possibly could. I stood like that, my legs leaning against a tree trunk. This, too, is a rather interesting procedure: a lot of blood rushes to one's face, making it tense up and causing a smoothing of the wrinkles.

For the whole three days we lived on cedar milk, flower pollen, cedar nut oil, berries and a small quantity of dried mushrooms (all this is available in our society). Going through all the procedures thought up by my son and reflecting on how they could be adapted to our conditions, I came to the general conclusion that all this can be done effectively back home. One can even use body-cleansing agents available in pharmacies, as well as making use of diuretic remedies and fasting. It is not difficult to obtain dead water either — all water sold in bottles today is dead water. You can get living water, too, if you have access to a pure wellspring.

You begin to feel the healing effects of these procedures right off.

---

<sup>1</sup>See Book 1, Chapter 25: "Bugs".

<sup>2</sup>*banya, birch besom* — see footnote 20 in Book 2, Chapter 1: "Alien or man?". Besoms may be made from other types of wood as well — oak or juniper, for example.

### A mysterious procedure

But included in this set of procedures was a rather mysterious one, which would be quite a challenge to replicate under our conditions, although maybe someone will have an idea and let me know. I shall describe it in detail. Three times a day — morning, just before lunch and just after three o'clock in the afternoon (more or less) — my son gave me some tea to drink which he had prepared.

Each time when the hour came for me to take the tea, Volodya would run off to his hiding-place and bring back a small jar of this tea, which he invited me to drink, but no more than one swallow at a time. The first time he did this, he said:

“Take a drink of this tea, Papa, and remember how big a swallow you took. As soon as you have drunk it, lie down on the grass, and I shall listen to what is happening with your heart.”

I drank the tea and lay down on the grass. Volodya put his little hand on my chest and kept very still. Within a few moments I felt either a warming or a tingling sensation in different parts of my body. My heart began to beat furiously. It wasn't as though it had started beating any faster — I had the sensation of my heart muscles expanding normally, but contracting much more sharply than usual, forcing out the blood.

As I was later informed by specialists, in cases of a vigorous and sharp blood flow through places where the capillary vessels are partially blocked, warming and tingling sensations can be expected.

Volodya listened to my heart-beat for several minutes, and then said:

“Everything is fine, Papa. Your heart can actually withstand an even larger swallow. But it is best not to take any chances. The next time take a slightly smaller swallow.”

When I asked my son why he was giving me this tea and what its composition was, he replied as follows:

"This tea, Papa, will give you a great deal of strength, and help you recover from any diseases you may have. But, most importantly, it will enable you to discover the strength and energy you will need for the birth of my sister."

"What, d'you think I don't have enough already?"

"Perhaps. But now you will have strength and energy in abundance, and in the exact balance you need."

"Are they permanent, or will I use them up with the birth of the child?"

"For bearing subsequent children you will need to drink this tea once more. After all, *they* do it this way each time."

"And just who might 'they' be?"

"Sables and other animals. I only studied the sable's actions. It was Grandfather who advised me as to when, at what time and for how many days I needed to watch them in particular."

"And how does Grandfather know about all that?"

"Grandfather, you see, Papa, has all the knowledge of the great wise priests of yore. Even knowledge that has been forgotten by the priests of today. And even knowledge that was secret many thousands of years ago. This tea was taken by the priests before the birth of their children, also before death, so that they could remain immortal."

"What d'you mean, 'before death, so that they could remain immortal?'"

"Well, I mean, so that everyone would think they were dead — whereas, in fact, they only changed bodies and were reincarnated on the spot, and all their information stayed with them. There are other methods of quick reincarnation, but very few that will allow the retention of the information possessed at the time of death. That is why people can be reborn but still have to study life all over again, learn

everything right from scratch, and they are unable to compare the present world with the past. And they get confused in their life because they include no knowledge of life and no feelings capable of sensing God."

"But with Grandfather, all the information about the past, you're saying, has been retained?"

"Yes, Papa. Our Grandfather is a great priest and wiseman. There is only one person living on the Earth today who significantly surpasses him in power."

"Where is he living right now, this strongest and wisest one — do you know? You must be talking about the high priest?"

"I am talking about our Mama Anastasia, Papa."

"Anastasia? But how could she have more information and greater knowledge than your great-grandfather?"

"Grandfather says he is hindered by too much information. And he can forget things. But Mama experiences no such hindrance, because there is no information contained in her."

"What d'you mean? Which is it — does she really know more, or has she no knowledge at all?"

"I did not express myself quite accurately, Papa. With Mama Anastasia all the information... how shall I put it?... she has a great deal more, only it is compressed in the form of feelings. And whenever she needs to, she is able to feel in a single moment something that Grandfather might require a day or two, or even more, to think about."

"I can't say I understand everything you've said, but it *is* interesting. Tell me more. What about you? Does this mean that you don't possess information about the past, seeing how you've had to consult with Grandfather?"

"That is correct."

"Why? You mean to say you're mentally inferior to them — Grandfather and Great-grandfather? And what do they tell you about this? Grandfather probably tells you that I'm to blame?"

“Grandfather never told me anything like that.”

“But what about Mama? What did she say?”

“I asked Mama why I do not know as much as my forebears. And not as much as she, or even you, Papa. And this was her answer:

“All the truths of the Universe, son, and all the information accumulated right from its pristine origins, has always been available to every Man, nothing hidden. Not everybody is capable of understanding it and making it their own, because their life-goals and the aspirations of their souls do not correspond to those of the Universe. Man has free will in everything, and is free to choose a path other than that of the Universe. But God is free too, as to when, how and to whom He gives a hint. You must not worry about information that is lacking in you. Seek out your dream and know that the whole will be offered to you in full, if the dream that is born within you is worthy of co-creation.”

“Hmmm... So tell me, Volodya, what do *you* make of all that?”

“Once my dream and life-goal are created in all their detail, all the knowledge I need to turn the dream into reality will be born in me all on its own, without fail.”

“But in the meantime, then, you will go on consulting with Grandfather?”

“Yes, with Grandfather, and Mama, and you, and I shall try to ponder life all on my own.”

“Does that mean I have to consult with Grandfather about the recipe for the extraordinary tea you’ve been giving me these past three days?”

“When it comes to the recipe, I can tell you about that myself.”

“Then tell me.”

“This recipe was prepared using taiga herbs. So that I would be able to know which herbs to choose, and in what

correlation, for three days and nights I observed a sable — one that likewise had an aspiration to be a father. Grandfather told me that the female sable will not allow her mate to approach her if he fails to prepare himself properly. And I observed what herbs he ate during those days, and at what time he chose to pick them. That, too, turned out to be important. All the herbs he ate I gathered as well, only I had to gather a larger store of them, since you, Papa, I can tell, weigh quite a bit more than a sable.

“Once I had gathered samples of a particular kind of herb, I would put them into a vessel and grind them down with a pestle until a juice emerged. All this time I thought only good and pleasant thoughts — about you, Papa, about Mama, and about my future sister. Then I would take the paste which resulted and empty it into a clay jar. I poured water over the jar’s contents and added cedar oil so that it formed a film on top. When you drank that swallow of tea, Father, and your heart started beating a bit faster, I could tell the tea had turned out well.”

As I listened to my son, I thought: *Not many people have the opportunity to observe a sable in its natural surroundings. But perhaps they could keep watch on what herbs a cat or a dog eats, for example. For that it would be necessary to carry or transport these pets into a forest and follow their behaviour, and, if possible, identify which herbs they ate.*

I was most interested in the tea recipe which my son followed, since just three days’ using it produced a palpable effect, while Volodya had indicated a complete therapy course ought to last either nineteen or thirty-three days. That means that after a full-term course, in combination with the other exercises, Man can really free himself from many ills, halt his body’s ageing process and rejuvenate himself in some sense of the word. I want to stress that even this three-day application in practice confirms that such an effect is possible. Then

there is folk wisdom, too, to take into account, as well as the scientific basis of these procedures.

Of course people have gone to chemists' or drug stores and seen the herbal mixtures our pharmaceutical industry has to offer for the treatment of a variety of ailments.<sup>3</sup> Many know that in Nature there are a whole lot of medicinal plants. But not everyone knows that these can only be really effective, either prophylactically or therapeutically, if they are picked on the right day and at the right time of day.

As to preparing herbal mixtures, along with everything else must be considered the way medicinal herbs correlate with each other. As we can see, there are too many factors that need to be known in order to prepare a mixture like Volodya's. And it is highly doubtful whether any of our herbal healers today knows about all the factors involved.

I very much wanted to take this opportunity of presenting, as a gift to my readers, a recipe for body restoration never before published anywhere in the world, and in a simpler form than Volodya's, so that it will be easily accessible to the majority of people.

Directly my son's three-day therapy course came to an end, he informed me he would like to go to bed earlier than was his custom (it turned out that he barely managed to get two or three hours' sleep a night the past three nights), and he dozed off immediately, while I started heading back toward Anastasia's glade.

I was fascinated by two questions. First, why did our son not possess a knowledge of the past, as did Grandfather? And secondly, was there any way of simplifying the recipe for the tea which he had prepared for me?

<sup>3</sup>In Russia today almost all pharmacies carry a large selection of dried medicinal plants, with their healing properties clearly marked on each package.

### A vision

Thoughts of food, however, were gradually relegated to the back burner as I began to concentrate more and more on thoughts of my future daughter. On the one hand, it wouldn't be a bad thing at all if Anastasia gave birth to a daughter as well as a son. But on the other hand, when this daughter gets older, she will either have her own Space or inherit the Space created by my son and face the same problems Volodya is having to deal with right now. Besides, who could she possibly marry, here in the taiga?

She could go off into our world, but that wouldn't be easy either. It would mean leaving her own Space and her loyal animal friends. And I can't imagine any young man agreeing to come and live with her in the taiga. It's not all that comfortable here in the wilds for someone from the outside. And, to be honest about it, that includes me. It is interesting to talk with Anastasia — I would even say her company is alluring. When I'm with her, I feel a sense of peace and joy in my heart. But when I'm left all alone and she's not around, I feel uncomfortable, to say the least — even a bit fearful.

The creatures treat Anastasia and our son quite differently from me. Of course they don't attack me, but whenever we meet, they still regard me with an air of suspicion. I once attempted — in Anastasia's presence — to command the squirrels to bring me some cedar cones. I made the same gestures as Anastasia, but there was no reaction from the squirrels. Another time I tried calling the she-wolf. Just like Anastasia, I held out my hand to her, then clapped it against my thigh.

But instead of running toward me, she stood rooted to the spot, and her hackles stood on end in a show of aggression. And I lost any desire to further communicate with these creatures. I realised that they could be loyal only to one specific Man in perpetuity.

So it could turn out that some young man comes to see our daughter in the taiga and he will not feel comfortable in her Space. Volodya has not given sufficient thought to his sister's future. Turns out he feels sorry for the creatures, but apparently not for his sister. And I didn't think about it either — I absent-mindedly gave him encouragement.

Immersed in these thoughts, I was surprised to discover that I had already arrived at Anastasia's glade. No sooner had I taken a few steps in the direction of the familiar dug-out than I noticed Anastasia herself standing there, her body half-turned to me, combing her long hair with her hands. I stopped dead in my tracks: she did not look at all like the same woman I had known for the past ten years. And when she turned to face me, my legs became jelly, my heart began throbbing and I realised I could not move from the spot.

Just ten to fifteen paces from me stood a woman who looked the picture of a fairy-tale vision. She was wearing a long, sheer, light-coloured dress down to her ankles, almost like a ball gown, gathered with a belt around her slender waist. Her head was crowned with a wreath woven of grasses and flowers, like a diadem. Her golden hair hung in wavelets around her shoulders. But that wasn't all! Her stately figure and face were so beautiful as to defy any possible description.

I stood there, afraid to move, my gaze unblinkingly fixed on Anastasia. It seemed as though if I took my eyes away I would lose consciousness. My head began spinning, but I continued to gaze at her without blinking. I found myself digging my nails forcefully into my hand, seeking escape in pain from this extraordinary state of mind. But I hardly felt any pain at all.

And as this uniquely beautiful woman gradually and graciously approached me, I lost all sensation, not just of pain but of any part of my physique. She slowly came right up to me, and I recall feeling the enchanting fragrance of her body. I could sense her light breathing and... I lost consciousness.

When I woke up I was lying on the ground. Anastasia was sitting beside me, massaging my temples and the bridge of my nose. Her diadem-wreath was gone, and her hair was brushed back and tied with a blade of grass. I felt an almost complete calm as I gazed into those tender greyish-blue eyes which had become so dear to me. And I finally came to myself upon hearing her voice:

“What happened to you, Vladimir? Did you get overtired, or did our son somehow upset you?”

“Our son... No, quite to the contrary, he has been giving me treatments these past three days. We went through a series of exercises.”

“And you overexerted yourselves?”

“Vołodya did. He fell asleep. By contrast, I’ve begun to feel very good indeed.”

“Then why did you lose consciousness? Your heart was throbbing and has still not completely calmed down.”

“Because... Oh, Anastasia, why did you dress up that way? Your hair’s somehow different. And the way you walked as you approached me — that was unusual, too.”

“I wanted to do something nice for you, Vladimir. After all, you are more accustomed to look at women in fancy clothes. I thought you and I could take a walk together through the taiga or along the lakeshore. And here you are lying down. If you want to have a rest, let us go to the dug-out, and there you can have a nap.”

“First let’s go and take a walk, as you proposed,” I said as I rose to my feet. “Only you, Anastasia, walk behind me, please.”

“Why?”

“Because... Yes, I am more accustomed to looking at women in fancy clothes, as you say. But it is better for me if you don’t dress up that way, or wear your hair like that, or adorn yourself like that.”

“You did not like the way I looked, Vladimir?” enquired Anastasia, as she trotted along behind me.

“That’s not it. I liked it very much. Only, in future, do it just one step at a time. Your hair first, for example. And then spend some time wearing it that way. Then you can put on your diadem-wreath, and a day or two later the dress. Only without the belt to start with, and afterward you can put on the belt. You see, if you do everything at once, it’s really hard for me to get accustomed to. It looks strange.”

“Strange? Does that mean you did not recognise me, Vladimir?”

“I recognised you. But... It’s just that I was simply overwhelmed with your beauty, Anastasia.”

“Aha, you admit it! You admit it! That means you really think I am beautiful? Eh?”

I felt her hands resting on my shoulders, and I stopped. Then I closed my eyes, turned around and replied:

“You, Anastasia, are not just beautiful. You are...”

She pressed herself against me, putting her head on my shoulder.

“Our son, Anastasia,” I went on, in a whisper, “would like to have a little sister.”

“And I would like you and me, Vladimir, to have a daughter,” Anastasia quietly responded.

“May she have your looks, Anastasia!”

“And may our daughter be like you...”

I shall not describe that night. Or the following morning. They are beyond description. But I shall say one thing to my men-readers: if any of you manage to see a goddess in the woman you know, your days and nights — many, many days and nights, in fact — will be divine. All the miseries of the past will vanish before them. And there will be no more storms to darken your day. I'm not talking about sentimentality here, nor about beautiful words and professions of love. The whole point is...

In any case, let each figure it out for themselves, if they can and wish to do so.

## CHAPTER FIVE

# Divine nutrition

It was only several days later that I remembered I wanted to find out from Anastasia the recipe for the therapeutic tea, as well as the overall method of correct nutrition or dietetics for my readers. It's a good thing I remembered. It seems that Anastasia knew about an unusual — I might say, unique — method of nutrition which can be applied even to city living conditions.

To my surprise, instead of giving me the tea recipe right off, Anastasia began talking about Man's capabilities, about patients and healers. We had spoken of this on several other occasions, but what she had to tell me this time was indeed interesting.

"Reality, Vladimir, must be defined only through one's self. Every Man living on the Earth today is capable of seeing into the lives of people thousands of years ago, of looking into the future, and of creating his own future. All have this tremendous ability within themselves. It just needs to be understood. Once it is understood, then nobody can lead them away from the truth. People will come into harmony with each other, and endless warfare will cease.

"A lot of efforts have been made to distort past reality. The possibility of distortion arises when Man abandons his own reasoning powers and forms constructs of the past based on somebody else's words and conclusions."

"It is not entirely clear to me, Anastasia, how every Man on the Earth can arrive at a knowledge of people living in centuries past, let alone past millennia. There is a whole science,

too, exclusively devoted to studying the history of mankind. But even today scholars argue over Man's origin and purpose. Historical events are interpreted in different ways."

"In different ways' — does that mean there are correct and incorrect interpretations? Or perhaps there is some distortion in the way they *all* describe the past? As a rule, the distortions are introduced for someone's particular benefit. But when you, all by yourself, recreate scenes of the past within yourself, you will see the truth — you will determine your purpose and place in the Universe."

"But how, for example, would I be able to see historical scenes of thousands of years ago all on my own?"

"You can picture them through logical thinking. And even the life of the Vedruss civilisation will appear to you."

"And what should I think logically about?"

"About images of people you have seen over the half-century of your life, and the changes that have taken place in them."

"It's still not too clear to me just how I should be thinking."

"It will become clear if you are not too lazy to think. Come, Vladimir, let us begin together, and you can continue on your own, and every Man may recreate scenes of the past, in order to integrate the very best parts into his future."

"All right then, but you be the first to start."

"I shall begin. Look hard and, if you can, add details — they are important. Today you see a whole lot of hospitals and pharmacies with medicines for thousands of ailments."

"Yes, that's something everyone can see. What of it?"

"Do you recall that just thirty years ago there were fewer of them?"

"Yes, of course."

"And how many were there a hundred or two hundred years ago?"

"A lot fewer. Everybody knows that modern medical science is only a little over two hundred years old."

"You see, your own logic has led you to a conclusion: not too long ago there were no hospitals at all. Now think, and recall: who treated people in cases of illness?"

"Who?"

"You yourself lived in a village and saw how your grandmother gave your father and mother herb teas to drink."

"In that village it wasn't just my grandmother who could bring about cures — there were others too."

"And in every human settlement there were most certainly people who gathered and preserved therapeutic herbs. And every Man could obtain help right away, whether he came down with a minor ailment or even a serious disease. And payment for help was a pittance, often just a simple 'thank you' sufficed."

"Well, sure, they were neighbours, after all. And there were plenty of herbs to be found all around."

"Yes, there were very many useful herbs. And many people were aware of the properties of these herbs."

"Of course they were. I myself knew about some of them, but now I've forgotten."

"You see, you have forgotten. Many people have forgotten. What does a Man do today if he gets a scratch or a cut?"

"He goes to a pharmacy, buys a bandage or a band-aid and sticks it on the wound."

"He spends time getting to the pharmacy and spends money when he is there. By contrast, in the past, every child knew that if you apply a plantain leaf directly to a wound, the wound will quickly heal and there will be no infection."

"I know that too, but today in many places the herbs are contaminated. All around, you find noxious fumes from cars, dust, acid rain..."

"Yes, you are right. But that is not the point. When we talk about images of the past, you could draw the conclusion

that Man's knowledge of curing people in the past was superior to that of people today."

"It would seem that way."

"I hear a note of doubt or uncertainty in your voice, Vladimir. In that case the image will not appear before you. You must be absolutely certain in the force of your confidence. Or in your rejection. Continue to pursue the course of logic."

"You see, Anastasia, all logic, too, tells me that Man's knowledge in the area of folk medicine in the past was significantly greater than that possessed by people today. One might even say, immeasurably greater. It follows that the services effected on the basis of this knowledge were significantly more perfected than today. But somehow it is challenging to suddenly find that all our modern hospitals, pharmacies and medical institutions are completely superfluous. It simply boggles the mind!

"When someone in the Vedruss civilisation — our ancestor — came down with an ailment, he would eat a herb or drink a tea, and the ailment was gone. When someone in *our* civilisation takes ill, he goes to the hospital, pays a fee to be seen by a doctor, the doctor prescribes some kind of pills or shots, and the patient has to pay again for the drugs, often quite dearly so. And then in lots of cases the drugs turn out to be counterfeit. Officials from the Ministry of Health say that up to 30% of the drugs sold at our pharmacies are counterfeit.

"And then a whole bunch of terrible new diseases keep popping up. It's as though someone deliberately erased the perfect knowledge we once had and replaced it with something less efficient or even illusory. Moreover, official medicine still today treats folk healers with a fair degree of scepticism, probably because it sees them as competition. But why do not the state and society realise that for hundreds and thousands of

years mankind has efficiently healed itself through folk medicine, accumulating a huge amount of experience over this time, and hence this deserves to be developed and studied? And, in the final analysis, to be taught in the schools?

“But that would mean all the businesses involved in modern medicine would collapse... incredible! Simply incredible, Anastasia! I think I’m beginning to understand: modern medicine is not as much about curing people as about running a business! And if it’s business we’re talking about, that means that all the companies making pills find it much more profitable when people are ill. The more sick people there are, the more income will kick in for the drug companies. By the laws of business, in such a situation the number of sick people will quickly begin to steadily increase. It’s a vicious circle. I’m becoming more and more convinced that health care in the distant past was much more rational and effective than today. Only there are a few historical facts that are standing in the way of a final conclusion.”

“What kind of facts, Vladimir?”

“Well, for instance, history has recorded epidemic outbreaks of plagues, smallpox and leprosy. Some history textbooks say that whole settlements died out. Did that really happen?”

“Yes, it did.”

“But now, through the help of modern medicine, the plagues have been beaten, along with cholera and smallpox. For example, they inoculate everyone against smallpox and that’s the end of it. That means that the folk healers of the past were defeated by these diseases, while modern medicine has succeeded.”

“That is not true, Vladimir. Take a closer look at the timeframes and put simple facts together. These epidemic outbreaks you speak of began happening at a time when folk healers were subjected to persecution. Many of them were

even put to death. During the occult ages<sup>1</sup> they were seen as a threat to the authorities. Both then and now it was believed that pagans worshipped Nature and were unspiritual people. This is not true: pagans respected Nature as the creation of God. And they had knowledge of many of the Divine creations which people are ignorant of today.”

“That’s enough, Anastasia. I no longer have any doubts. It is plain that modern medical science is a long ways from the science of folk medicine. I’m convinced of that. But why did you go to such pains to persuade me?”

“It was not just for you. I wanted your readers, too, to be able to understand by comparing facts.”

“But what for?”

“When one fact is proved beyond a shadow of a doubt, other indisputable conclusions will come about. They may seem incredible, but please do not be so easily amazed, Vladimir.”

“What incredible conclusions, for example?”

“First, answer this question. Tell me how people — the majority of people — explain how mankind in ancient times possessed such colossal information about Nature.”

“What d’you mean, how? If you’re talking about the prescriptions of folk medicine, it’s quite clear they were passed down from generation to generation.”

“All right, that may be. But I think you will agree that for each of the thousands of prescriptions, there had to be an original author.”

“According to logic, of course, there had to be, but now it is no longer possible to trace the authorship of these prescriptions.”

“It is possible! All the knowledge of the grand creation was imparted by the Creator to each and every one without

<sup>1</sup>For more information on the occult ages, see Book 6, Chapter 8: “Occultism”.

exception. This I shall prove to you, Vladimir, and to everybody. Do not be too hasty to dismiss what I say as incredible."

"I shall try not to. Go on."

"People think that originally Man was many times more feeble-minded than today. But that is not true, Vladimir. People of pristine origins had Divine knowledge right from the beginning."

"But what d'you mean, 'from the beginning', Anastasia? What, did God Himself write out prescriptions for a whole bunch of herbal treatments? Historians' descriptions allude to mankind gradually accumulating its knowledge over the centuries."

"But to pursue the course of logic to its end, that particular allusion would lead to a different conclusion."

"What kind of conclusion?"

"It would follow from that that Man is not the perfect creation of God but the most underdeveloped of all creatures that ever lived on the Earth!"

"How does that follow?"

"Think about it. Your dog knows what herbs she needs to eat when she comes down with an ailment. And a cat will know to run to the forest to find a herb she requires. But nobody wrote them a prescription. A bee knows all about extracting nectar from a flower, building a honeycomb and storing honey in it, and gathering pollen. And what raising the next generation is all about. If one link in the chain of knowledge the bee family is endowed with should be removed, the whole family would die out.

"But bees continue to exist today. And that can only mean one thing: the Creator has given them all the knowledge they need right from the start, right at the moment of their creation. And that is why the bees have not died out, but have lived for millions of years, and are still building their unique

honeycombs even today, just as in the first moment of their creation. And the ants, too, continue to build their homes. And flowers continue to unfold their petals with the advance of each new dawn, just as on the first day of their creation. And the apple, pear and cherry trees know exactly what kind of juices they need from the ground to grow their fruit. All information is given to them right at their inception, right at the moment of their creation. And Man is no exception.”

“Yes... Incredible. All logic really does lead to that conclusion. And that means... Hold on — just where is all this knowledge right now?”

“It is preserved in every single Man. And the therapeutic recipe for the healing herbal tea is one that every Man is free to compile for himself.”

“But how?”

“You see, Vladimir, God gave it to Man right from the beginning. It is capable of curing a great many diseases of the flesh and prolonging life. It is extremely simple, and at the same time not so simple. Man should be able to figure it out with his mind. Let me start with some pre-history.”

In the Vedruss civilisation everybody lived to be more than a hundred years old. And they knew no diseases of the flesh. They nourished themselves according to God’s prescription. Not arbitrarily and not haphazardly but with the greatest thoughtfulness the Creator specially arranged it so that the herbs, vegetables, berries and fruits did not ripen all at once, but one after the other in a strict sequence.

One ripened in the early spring, others over the summer, or later in the autumn. Their ripening time was determined by the moment when the specific fruit, vegetable or herb could offer the greatest benefit to Man. A Man living on his own domain, feeding himself as God prescribed, could not take ill. The type of food and the time of taking it had been determined for Man by God. Man himself decided the quantity of food, but not through reason — he ate as much as he liked. And his body could accurately determine, down to the gram, the required quantity of food.

In the autumn each family put up stores for the winter: berries, root vegetables, herbs, nuts and mushrooms. Over the winter, in every household a plate stood on the table, with little piles of produce from the summer harvest. All the members of the family were involved in their own activities, but whenever they felt hungry or thirsty, they would go over to the table and take what they needed without thinking about it. Note, Vladimir: they took what they needed *without thinking*. Their bodies knew exactly what kind of food was needed and in what quantity — everyone had been endowed with this ability by God. This ability can be revived now. All that is needed is information.

I have adapted the Vedruss method of nutrition for people of today. Try it yourself, and encourage others to try it. It goes as follows.

A Man living in a modern apartment needs to acquire a small quantity — a hundred or two hundred grams each — of all the vegetables, fruits and edible herbs growing in the region where he lives.

Before using any of this produce he should go a whole day without eating, drinking only spring water, and having a glass of red beet juice for lunch. After drinking the beet juice it is better not to leave his home. The stomach

and bowels will start undergoing an intensive cleansing process.

Upon awakening the following morning and feeling hungry, he should be able to take any vegetable, herb or piece of fruit and put it on a small plate. After sitting down at the table, he should carefully observe what is lying on the plate, sniff it, lick it and then eat it with an unhurried chewing. It is best to be alone in the room during this time, isolated from the sounds of the artificial world.

The feeling of hunger may not disappear after eating a single piece of food, or it may reappear after a short period of time. In that case he should select a second piece and eat it in the same manner as the first.

Man should take all the produce he has obtained and sample them in any sequence at short intervals.

The time for sampling any particular food is determined by the sensation of hunger.

The taking of food should definitely begin in the morning.

By the end of this day a Man should have sampled all locally grown produce. If there is a large variety available and one day is insufficient, the sampling can extend to the following day.

This procedure is extremely important. It will give many people's bodies, perhaps for the first time in their lives, a chance to become acquainted with the taste qualities and properties of the local produce, and to determine how needful it is to Man at a given moment and in what quantity.

Once the body has become familiar with all the produce, one should cut each vegetable into small pieces and lay them out on a large plate. Small clumps of greens and berries should also be put out, either alongside or on another plate. Any produce that will quickly spoil on the plate should be immersed in spring water.

Also on the table one should put honey, flower pollen, cedar oil and spring water. Man may go about his own daily affairs, but when he feels hungry he can go over to the table and pick up an item he likes (either with his hands or with a wooden spoon) and eat it.

It is possible some of the food may be eaten up completely, while the rest may be left untouched. This means that your personal wise physician and nutritionist — your body which was given to you by the Creator — selected for you what you needed at that moment, while what you did not need was left untouched.

The uncaten produce need not be put again on the table the following day. But after three days a complete variety should once again be displayed. It is possible that one's body will need something different by then.

In time Man will be able to determine which items can be temporarily excluded from his diet, so as not to waste his efforts in obtaining them. But it is possible that after a period of time his body will indeed have need of them again, and so from time to time one should lay out on the table as wide a variety as possible.

I know that people living in your world often need to be away from their dwellings, but even here one can adapt. For example, one can make or acquire a small birch-bark container, in which to put a portion of the food from the table. One's body will choose what is most required.

In case of an extended trip, one's body needs to become familiar with the produce available in the new territory, since, in spite of identical names, there may be significant taste differences.

In this method of nutrition, Vladimir, it is important to grasp one essential point: it is not only the animals that are able to determine which kinds of food will be most beneficial to their bodies at a given moment and in what

quantity. This knowledge is present, too, within every single Man.

Our son thought up everything correctly: to prepare the healing tea for you from taiga herbs, he decided to observe a sable. But if you yourself knew the taste of every herb, your body would be able to determine and select the herbs you need far more accurately than the sable.

When you get back to your apartment, allow your body to get to know the taste of all easily available produce. Do not mix the food together or add salt, otherwise your body will not be able to determine the value and significance of the produce.

This method by which any Man can compile his own dietary régime or recipe for healthful nutrition seemed to me to be most original and logical. The body's needs — in terms of quantity and variety of produce — will naturally differ from one individual to the next. Consequently, there cannot be a single recipe or dietary régime which is the same for all. But through the aid of the method proposed by Anastasia, every Man can make up his own individual régime, which will be as accurate and useful as possible for him.

It appears as though man-made recipes and prescriptions are not always beneficial to one's health. Instead, they tend to be technology-based and more convenient for the manufacturers and organisers of our modern nutrition industry. Take McDonald's, for example — one of the most powerful and influential corporations, known around the globe —

inculcating in the whole world a taste for uniform hamburgers and cheeseburgers along with packages of fried potatoes, roping in everybody under a single unitary norm. Such a system undoubtedly works very well to the manufacturer's advantage — uniform products, uniform equipment and preparation technology. How far removed such uniformity is from the natural method of nutrition, and how harmful!

More and more people all over the planet are becoming aware of this. Wednesday, 16 October 2002 (the UN's World Food Day),<sup>2</sup> became the annual official day of protest against McDonald's — a protest against the promotion of junk products under the guise of food, the use of aggressive child-oriented advertising campaigns, the cruel exploitation of workers, unethical treatment of animals, destruction of the environment and the world dominance of large corporations over our lives.

More and more, McDonald's is being held up by a worldwide circle of protesters as a symbol of contemporary capitalism. One after another, all across the globe lawsuits are being brought against American corporations dealing in 'junk food' — McDonald's, Kentucky Fried Chicken, Burger King and Wendy's — on behalf of millions of consumers led astray by the systematic and unethical promotion of harmful food products. These people have consequently suffered from obesity, heart ailments and a variety of other serious health

<sup>2</sup>*World Food Day* (also known as *World Nutrition Day*) — established in 1979 by the member countries of the United Nations Food and Agricultural Organisation (FAO) to raise awareness of world poverty and hunger and to commemorate the founding of the FAO on 16 October 1945 in the city of Québec (Canada). A specific theme is selected for each year's celebration. The Worldwide Anti-McDonald's protest is an independent movement which chose their annual protest day to coincide with World Food Day. According to their literature, the Worldwide Anti-McDonald's Day has been marked since 1985.

problems. Concern over this health threat is growing everywhere in Europe and the USA, exacerbated by mad cow disease and the use of genetically modified feed, as well as direct consumption of genetically modified produce (e.g., potatoes and corn) and their traces in other products (chocolate, pastry etc.).

But is it only our nutritional system that is constructed with somebody's particular profit motive in mind? What about our contemporary governmental institutions?

Take, for example, our modern democratic society — how ideally suited is it to human life? I was most interested to hear what Anastasia would have to say about this.

“Tell me, Anastasia, if someone could construct a nutritional system for their own advantage at the expense of millions of people, I wonder whether our social order might have been deliberately set up with a similar motive.”

“Indeed it has. Think about it, Vladimir: ages pass, and the names of your societal structures change, but their *raison d'être* remains the same — the exploitation of people.”

“Well, it hasn't always been the same. For example, we used to have slavery, and now we have democracy. I think, under democracy there is far less exploitation than when we had slavery.”

“Vladimir, would you like me to show you a scene from the past and tell you a parable?”

“I would.”

“Then look and see.”

## CHAPTER SIX

# Demon Cratius

The slaves walked slowly in single file, every one of them carrying a polished stone. Four lines of them, each line stretching a kilometre and a half long, from the stone quarries to the site where construction on the walled city had begun, under the watchful eyes of armed guards — one military guard for every ten slaves.<sup>1</sup>

Off to one side, on the pinnacle of a thirteen-metre-high 'mountain' crafted out of polished stones, sat Cratius, one of the high priests. For the past four months he had been silently observing the construction activity. Nobody distracted him, not a single person dared interrupt his contemplation, even with a sideways glance.

Both slaves and guards accepted this artificial mountain with its throne on top as a fixed feature of the landscape. And nobody paid attention to the figure either sitting motionless on the throne or walking to and fro around the lookout platform atop the 'mountain'. Cratius had set himself the task of restructuring the state, consolidating the power of the priests for a millennium, subjugating to them all the people of the Earth, turning all without exception (including national rulers) into slaves of the priests.

<sup>1</sup>Anastasia's narrative is told in the first part of this chapter without quotation-marks.

One day Cratius came down from his throne, leaving a double in his place. The priest changed his clothes and took off his wig. He gave orders to the captain of the guard to have him bound in chains like a simple slave and placed in the line behind a strong young slave named Nard.

Looking into the faces of the various slaves, Cratius had noticed that this young man in particular had a penetrating and purposeful look, not a wandering or detached gaze as did many of the others. Nard's countenance alternated between excitement and intense contemplation. *That means he's hatching some kind of plan*, the priest realised, but he wanted confirmation of the accuracy of this observation.

For two days running Cratius followed Nard's every move, silently hauling the stones, sitting beside him at mealtimes and sleeping next to him in the barracks. On the third night, directly the *Sleep!* command had been given, Cratius turned to the young slave and in a tone of bitterness and despair whispered to no one in particular:

"Will this situation keep up the rest of our lives?"

The priest watched as the young slave gave a shudder, and suddenly turned to face him. His eyes were sparkling, which was noticeable even in the dim torchlight of the cavernous barracks.

"It won't last much longer," the young slave whispered back. "I've been working out a plan. And you, old fellow, can be part of it!"

"What sort of plan?" the priest asked with a sigh of indifference.

Nard began to explain with an air of confidence and enthusiasm:

"You see, old man, soon you and I and all of us will be free men instead of slaves. Figure it out for yourself: there's just one guard for every ten of us. And one guard, too, for every

fifteen women slaves who do the cooking and sewing. When the time comes, if we all fall upon the guards at once, we can overpower them. It makes no difference that the guards are armed and we're in chains. We outnumber them ten to one, and our chains can also be used as weapons, to shield us from the blows of their swords. We'll disarm all the guards, tie them up and seize their weapons."

"Hold on there, young man," Cratius sighed again, and added with feigned indifference: "Your plan isn't completely thought through. Sure you can disarm the guards watching over us, but it won't be long before the ruler sends in replacements — a whole army, maybe — and he'll have the insurgents killed."

"I've thought of that, too, old man. We'll have to choose a time when the army's not around. And that time is coming. We've all noticed how the army's preparing for a campaign. They're getting provisions ready for a three-month trek. That means that in three months the army will arrive at its destination and engage the enemy in combat. It will be weakened in battle, but it will be victorious, and bring back many new slaves. They're already building new barracks to house them. We have to start disarming the guards just as soon as our ruler's army goes into battle. The couriers will need at least a month to go call it home, and it will take at least three months after that for the weakened army to return. By the time the four months are up we'll be ready to meet them. We'll have at least as many fighters as there are in the army. The slaves they seize will want to join us when they see what's happened. I've thought it all out in advance, old man."

"I see, young fellow, with your plan you can disarm the guards and overpower the army," the priest answered, already sounding more cheerful, and then added: "But what will become of the slaves after that, and what will happen with the rulers, the guards and the soldiers?"

“I haven’t given too much thought to that. Only one thing comes to mind, though: whoever was a slave in the past will become a free man. Whoever’s not a slave today will be a slave tomorrow,” replied Nard with some hesitation, as though thinking aloud.

“But what about the priests? Tell me, young man, after your victory, will they be slaves or not?”

“The priests? Haven’t thought about that either. But now I’m thinking: the priests can stay where they are. The slaves and rulers listen to them. Sometimes they’re hard to understand, but I get the feeling they’re harmless. Let them keep on telling their stories about the gods, but we know best how to live our lives and have a good time.”

“Have a good time — that’s great,” responded the priest, and pretended he couldn’t wait to get to sleep.

But there was no sleep for Cratius that night. Only contemplation. *Sure, he thought, the simplest course of action would be to report this to the ruler, and have them seize this young slave — he’s clearly the chief instigator. But that won’t solve the problem. The slaves will always have the desire to be freed from bondage. New leaders will emerge, new plans will be hatched, and as long as that goes on, the main threat to the state will always be from within.*

Cratius was faced with the challenge of working out a plan to enslave the whole world. He realised there was no way he could attain his goal through physical compulsion alone. What he needed to do was exert a psychological influence on every single individual, on whole nations of people. He had to bring about the thought of every single human being to the notion that *slavery is the highest bliss*. He had to launch a self-developing programme to disorient whole nations in space, time and ideas — especially in their literal perception of reality.

Cratius’ thought was working faster and faster, he was no longer conscious of his body, or the heavy chains on his arms and legs. And all of a sudden, like a bolt of lightning, a

programme came to his thought. Even though all the details were still to be worked out, and he could not yet explain it to anyone else, he could already feel it within, exploding off the scale. Cratius was now feeling himself to be the omnipotent ruler of the world.

Lying on his bunk in chains, he was full of self-exultation: *Tomorrow morning, when they're escorting us all to work, I'll give the secret signal and have the guards captain take me out of the line and remove the chains. I'll finalise my programme, say a few words and the world will start to change. Incredible! Just a few words, and the whole world will be subject to me, to my thoughts. God really has given to Man a power unequalled in the Universe — the power of human thought. It brings forth words which can change the course of history.*

*The situation's turned out very well indeed. The slaves have prepared their plan of insurrection. It's logical, this plan, and is clearly capable of leading to an interim result very favourable to them. But with just a few words I shall ensure that not only they, but their future descendants, and the rulers of the Earth too, will be slaves for millennia to come.*

In the morning, on Cratius' signal, the captain of the guard freed him from his chains. And the very next day the five other priests, along with the pharaoh, were invited to his observation platform. Cratius began his speech before the gathering as follows:

“What you are about to hear must not be noted down or passed along by any of you. There are no walls around us, and my words will be heard by no one but you. I have thought up a way of turning all people living on the Earth into slaves of our pharaoh. That is not something one can do even with the aid of vast numbers of troops and exhausting wars. But I shall accomplish it with a few simple sentences. All I need do is utter them and just two days later you will see how the world has begun to change.

“Take a look down there and you will see long lines of slaves in chains, each slave carrying a stone. They are guarded by a host of soldiers. The more slaves there are, the better for the state — or so we always thought. But the more slaves there are, the more we have to be afraid of their rebelling. So we increase the size of our guard.

“We are obliged to feed our slaves well, otherwise they will not be able to perform their heavy manual labour. But still they are lazy and inclined to rebellion. See how slowly they move, and the guards have become lazy and do not bother using their whips to beat even the strongest and healthiest slaves. But they will soon be moving much more quickly. They won’t need any guards. The guards themselves will be turned into slaves. This can be effected in the following way:

“Before sunset today heralds will be sent out everywhere to proclaim the pharaoh’s decree: *With the dawn of the new day all slaves will be granted complete freedom. For each stone brought to the city, the free men will receive one coin. The coins may be exchanged for food, clothing, housing, a palace in town, or even a whole town. From here on in, you are free people.*”

After the priests had let Cratius’ words sink in, one of them, the eldest, said:

“You are a demon, Cratius! The demonry resulting from your plan will cover most of the nations of the world.”

“So, I may indeed be a demon, and what I have thought up, people in the future may call democracy.”

At sunset the decree was proclaimed to the slaves. They were astounded. Many of them could not sleep at night, thinking about the new and happy life that lay ahead of them.

The next morning the priests and the pharaoh once again climbed up to the lookout platform atop the artificial mountain. They could not believe the scene unfolding before their eyes. Thousands of former slaves chasing one after the other, hauling the same stones as before. Dripping with sweat, many of them were carrying two stones apiece. Others with only one stone in their hands, were literally running, kicking up the dust as they ran. Some of the guards were also hauling stones. These people, who now considered themselves free — after all, they were no longer in chains — strove to obtain as many of the sought-after coins as they could, so that they could build a happy life for themselves.

Cratius remained at his post on the platform for several months after that, continuing to observe with satisfaction what was going on below. The transformation was colossal. Some of the slaves had organised themselves into groups and built themselves carts. Then they piled stones on top of the carts, and pushed them along, their skin covered in sweat.

*They will invent many more devices, Cratius thought to himself with satisfaction. Internal services have already started — food and water delivery. Some slaves have been eating right on the go, not wanting to waste time going back to the barracks for a meal, and paying for the food delivery with the coins they've earned. Wow! They've also got doctors going around, offering help to people with physical needs right on the spot — also for coins. And they've appointed themselves traffic regulators. Soon they'll be choosing their own rulers and judges. Let them choose: after all, they consider themselves free now, whereas nothing has really changed — they're still hauling the same stones as before...*

And so they have been running, down through the millennia right up to the present day, through the dust, sweating to carry the heavy stones. And today the descendants of those slaves still keep up their senseless running.

“You’re probably thinking of ordinary working people, Anastasia?” I observed. “Sure, anybody could agree with that. But you can’t apply the term *slaves* to heads of corporations, or government officials, or entrepreneurs.”

“Do you see a difference, Vladimir? If so, tell me what it is.”

“On the one hand you’ve got people labouring and hauling stones like slaves. The others are *in charge* of the hauling — or, in today’s terms, managing the operation.”

“But managing, after all, is still work, and often more complex work than slaves hauling stones.”

“Well, in a sense you’re right: entrepreneurs have a bit more thinking to do. Their thought is occupied with their work from morning ’til night. So, does that mean that the pharaohs, the presidents and chancellors are slaves, too?”

“Yes, that is correct. Even the priests have become slaves, the ones who dreamt up this whole fateful scheme.”

“But if there are slaves, there must also be slave-owners. Who are they, if you aren’t including even the priests in this category?”

“The slave-owner is the artificial world people have been creating themselves. And the guards sit within most people’s minds or bodies, whipping them and making them earn coins.”

“It’s a sad scene indeed,” I observed, “and it looks as though there’s no way out. Over the past thousands of years empires have come and gone, religions and laws have changed, but in fact nothing has really changed: just as Man was a slave before, he remains one now. Tell me, is there any way this situation can be corrected?”

“There is.”

“How? And who can do it?”

“The image.”

“What d’you mean, *image*? What kind of image?”

“The image that offers people a different situation. Judge for yourself, Vladimir: people who control the world today through money believe that only power and money can bring happiness to Man. And all the people out there striving to earn a few coins have convinced them that they are right. But often — very often, in fact — the winners in this senseless rat-race are the ones who suffer the most. They reach illusory heights and feel, more acutely than others, the whole senselessness of their life. I shall show you a scene from the future — go ahead and describe it. Let it be played out in real life.”

## CHAPTER SEVEN

# The billionaire

The billionaire John Heitzman was dying on the forty-second storey of his office tower. The whole floor had been converted into his personal apartment. Two bedrooms, a work-out gym, a swimming pool, a dining room and two studies had comprised his refuge for the past three years. During this time he had not left his apartment even once. Not once had he taken the express lift down to where the core of his financial and industrial empire was in full operation. Not once had he gone up to the roof, where his personal helicopter was on standby, replete with a full crew awaiting his command.

Three times a week John Heitzman retreated to one of his studies to receive four of his closest associates. At these brief sessions, which lasted no more than forty minutes, he listened to their reports with some indifference, and occasionally issued brief instructions. The billionaire's orders were never a subject for discussion — they were simply carried out swiftly and to the letter. The book value of the empire under his exclusive control kept increasing by an average 16.5% annually. Even over the past six months, when Heitzman ceased convening even his tri-weekly sessions altogether, the ledgers showed no decline in profits. The system he had created continued to run smoothly with no glitches.

Nobody knew the billionaire's true financial worth. His name was hardly ever mentioned in the press. Heitzman held strictly to the rule: *Money hates trouble*.

As a young man he had been admonished by his father along these lines:

“Let those upstart politicians strut their stuff on the TV screens and in the pages of the press. Let the presidents and governors spout their addresses to the people, assuring them all’s well. Let the billionaires in the public eye go gallivanting about the country with their fancy cars and bodyguards. That is not a course, my dear John, you yourself should follow. You should always remain in the shadows and use your power, the power of money, to control governments and presidents, the wealthy and the poor, in a variety of different countries. But they must never guess who is controlling them.

“The plan is simple in the extreme. I was the one who created the Monetary Fund, which lists the names of many different investors. In actual fact seventy percent of the fund’s capital has been invested by me under different names. On the surface, as far as the dimwit masses are concerned, the fund was created for the support of developing countries. In actual fact I created it as a device for collecting ‘tribute-money’ from all the countries involved.

“Here’s an example. Let’s say an armed conflict breaks out between two sides. One of them (more often, both) needs money. Let them have it — it will be repaid with interest. Or some country is experiencing a social upheaval and, again, money is required. Let them have it — it will be repaid with interest. Or two political forces come into conflict; one of them will get money through our agents, and once again it will be repaid with interest. Russia alone pays us an annual sum of three billion dollars.”

At age twenty, John Heitzman had especially enjoyed these discussions with his father. Despite his earlier severity and reticence to talk, one day the father summoned John to his office and invited him to make himself comfortable in a soft armchair by the fireplace, while he himself poured a cup of his son’s favourite coffee with cream and asked with a spark of genuine interest:

"How are your college studies going, John?"

"They're not always that interesting, Dad. I get the feeling the professors aren't too good at giving a clear and comprehensible explanation of the laws of economics."

"Good. An apt assessment. But more precisely: professors today can't explain the laws of economics because they haven't the faintest idea of them themselves. They think economics is the domain of economists. But it isn't. World economics is under the control of psychologists, philosophers and high-stakes players.

"When I was twenty, my father — your granddad, John — let me into the secrets of the management process. Now that *you're* twenty, I think you're worthy of inheriting this knowledge."

"Thanks, Dad," replied John. Thus began, in these fireside chats, lessons in the laws of economics one never hears about at university. The father taught his son using his own unique method. The whole educational process was conducted in these heart-to-heart conversations, on a good-natured tone, with examples and elements of play. The information the senior Heitzman revealed to his son was astounding. There was no way one could obtain it anywhere else, even in the most prestigious universities in the world.

"Tell me, John," asked the father, "do you know how many wealthy people there are in our country? Or in the world?"

"Their names are listed in business journals in order of their estate-value," replied John calmly.

"And where do we rank in these lists?"

This was the first time Father had used *we* instead of *I*. That meant he already considered him, John, a full partner. While he did not want to offend his father, John replied:

"Your name, Father, isn't included in these lists."

"Yes, you're right. I'm not there. Even though just our annual profit alone amounts to more than the whole estates of

many included in the lists. And my name isn't there because one's wallet should not be transparent. Many of these people work either directly or indirectly for our empire — for yours and mine, son."

"Dad, you must be a genius at economics. I can't even imagine how you can make such a huge empire pay us 'tribute-money' every year without military intervention. You've managed to set up such a tremendous economic operation!"

The senior Heitzman took a pair of fire tongs and gave a poke to the logs in the hearth. Then, without a word, he poured two glasses of light wine for his son and himself. It was only after his first wee sip that he finished explaining:

"You know, I didn't set up any operation at all. The capital under my control simply allows me to give orders, and others carry them out. Many analysts and government experts in various countries, even their presidents, would be astonished to learn that the current situation in their countries is not determined by their own actions, but rather by my will.

"Political technology centres, economics institutes, analytical think tanks and government agencies in many countries — none of them are aware that they're working along strict guidelines laid down by my departments. And I don't have all that many employees. For example, all of Russia's socio-economic policy and its military doctrine are determined and controlled by one department comprising four psychologists. Each psychologist has four secretaries. Not one of them knows about the activities of the others.

"I'll tell you how the control system works — it's really quite simple. But first, John, you should understand the true laws of economics — which you'll never get from any college professor. Professors don't even know they exist. Here's a law: in the conditions of a democratic society, presidents, governments, banks, as well as major and minor entrepreneurs in all countries work for a single entrepreneur, who

stands at the top of the economic pyramid. They worked for my father, now they're working for me, and soon they'll be working exclusively for you."

John Heitzman looked at his father and could scarcely take it all in. Certainly, he knew that his father was rich. But here they were talking about much more than riches — they were talking about supreme power, which was now going to be passed by inheritance to him, John. All this incredible information still had not sunk in completely. How could it be that, in a free and democratic society, everyone from presidents on down to the hundreds of thousands of firms, both major and minor — supposedly all separate legal entities — were in fact working for just one man, namely, his father?

"When I first heard from your granddad what I have just now shared with you, I had a hard time figuring it all out. Right now, John, you're probably in the same boat..."

"But let me make one thing perfectly clear," the elder Heitzman went on. "There are wealthy people in this world. But for every wealthy person there is someone even wealthier. And there is one who is the wealthiest of all. All the other wealthy people — and, consequently, all the people under their control — work for him, the one who is the wealthiest of all. This is the law of the system under which we live.

"All this talk of unselfish aid to developing countries is nothing but a bluff. Sure, wealthy countries grant credit to developing countries through international funds, but in fact they do this simply to get back a healthy amount of interest in return for using their credit — in other words, to collect 'tribute-money'.

"Russia, for example, pays three billion dollars a year to the IMF, and this amount only represents the *interest* on the credit allotted to Russia. Many economists are aware that the basic financing for the IMF is provided by American capital. They realise that the extortionate interest rates on credit use

is siphoned off to the USA. But who they go to specifically, nobody knows. America as a country is simply a convenient shield in the capital game. And it is dependent on capital more than any other nation. Tell me, John, did you know that America has a national debt?"

"Yes, Dad, I know. It's an astronomical figure. Just last year it amounted to... And servicing the debt cost..."

"So, that means you realise that a country which loans to other countries at the same time takes out huge loans itself?"

"Through its own Federal Reserve?"

"And who does it belong to — this Federal Reserve?"

"It... It..."

John had never thought about whom America was in debt to, but as he tried to answer his father's question it suddenly dawned on him: in the United States of America every taxpayer pays into the Federal Reserve. The Federal Reserve of the USA is a private bank. And, consequently, all America is paying hundreds of billions of dollars to private individuals... or, to a single individual.

John Heitzman had never been flustered in his life. He led, as they say, a 'healthy lifestyle'. He did not drink or smoke, he maintained a healthful diet, and worked out every day in his private gymnasium. Only in the past six months he had stopped going to the gym. He had spent these six months lying in bed in one of his spacious bedrooms, crammed full with state-of-the-art medical equipment. Doctors maintained on-call shifts around the clock in the next room.

But John Heitzman did not trust modern medical science. He felt no need of even talking with his doctors. There was one professor of psychology, however, that he occasionally deigned to favour with brief answers. Heitzman did not even care to know his doctors' names, including the name of this professor, though he did make a note to himself that he was the most sincere and honest of the lot. The professor talked a good deal, but what he said often included not just medical assertions but also reasonings and a desire to determine the causes of a disease.

One day he came in all excited and announced right at the doorway:

"I spent all last night and all this morning thinking about your condition. I think I've discovered the cause of your illness! That means that once we've removed the cause, we can talk about a pretty quick recovery... Oh, sorry, Mr Heitzman — I forgot to say hello. Good afternoon, Mr Heitzman. I got a bit carried away with my ideas."

The billionaire did not answer the professor's greeting, or even turn in his direction, but that was how he treated all his doctors. And sometimes he would make a gesture to a doctor who had just entered the room — just a slight movement with his hand, which they all knew meant: *Go away*.

Not perceiving any such gesture this time, the professor kept on explaining excitedly as follows:

"I do not agree with my colleagues on the need to transplant your liver, kidneys and heart. Granted, these organs of yours aren't functioning up to par at the moment. No sir! Not up to par! That's a fact. But neither will transplanted organs. The reason they're not up to par lies in your extreme depression. Yes sir, in your depression. I've gone over your medical history quite a few times now. And I think I've made a major discovery. Your attending physician — he's a really great guy — he wrote down everything in detail. Every single

time he noted your mental condition. Your internal organs would always start to fail the moment you got into a depressive state. Yes sir! Quite a state...

"Now here comes the \$64,000 question: is the failure of your internal organs causing the depression? Or the other way around: is the depression causing organ failure throughout your body? I'm absolutely convinced that the depression is the original cause. Yes sir! It's your extreme depression. It's a condition where someone ceases to strive for any goal, he loses interest in what's going on around him, he doesn't see any sense in living. And then the brain begins to transmit only half-hearted commands to the whole body! And I mean the whole of it! The stronger the depression, the weaker the commands. At a certain level the brain may cease giving these commands altogether, and then comes death.

"So, the ultimate cause is depression, and as for eliminating it entirely, well, that's something modern medicine has no answer for. So I turned to folk medicine. And now I'm convinced that your extreme depression is the result of a curse. Yes sir! More specifically, someone's put a spell on you, and I'm prepared to back that up with quite a number of facts."

The billionaire was about to make his *Go away!* gesture. He disliked all such esoteric healers — people who promised to exorcise demons and take away spells or set a defence against them — people he considered petty operators or swindlers. *No doubt the professor was on the rebound from the ineffectiveness of modern medicine, he thought, and so had fallen to the level of these so-called 'healers'.* But the billionaire did not manage to execute the gesture. The professor headed him off, with words evoking just a smidgen of interest, but interesting all the same.

"I have the feeling you're getting ready to send me away. Maybe for good. I ask you... No, I beg you, give me just five or six more minutes. It's very possible that once you've understood what I have to say, *you'll* make a full recovery, and

*I'll* make an important discovery. Rather, I've already made it — I just need to have it confirmed once and for all."

The billionaire did not make his *Go away!* gesture.

For three whole seconds the professor stared at Heitzman's motionless hand and realised he could continue, which he did at a rapid-fire pace:

"People look at each other differently. Sometimes with indifference, other times with love, or hate, or envy, or fear, or respect. But it's not the outward expression of the eyes that is the main factor here. The outward appearance can be just an ordinary mask, like the faux smile of a waiter or a salesman. What's important are the true attitudes, the true feelings one person harbours towards another. The more positive emotions people express towards a particular individual, the more positive energy is concentrated in him. On the other hand, if negative emotions predominate in the atmosphere surrounding a person, he will experience an accumulation of negative and destructive energy.

"Among the common folk this is called a *spell*, and folk-healers base their actions on this phenomenon. By no means all folk-healers are charlatans. The whole point is that a person who has been the target of too much negative energy from those around him is himself capable of neutralising it or, in other words, compensating for it. By telling the patient that he has removed the spell by certain types of actions, the healer helps him believe that he is cleansed. If the patient believes the healer, he is really evening out the balance within himself between the positive and the negative. If he doesn't believe, it won't happen. You don't believe in folk-healers and, consequently, they won't be of any help to you.

"But that isn't to say that you don't have an excess of negative energy which is destructive to your mind and body. Why negative? Precisely because a man in your position can only be looked upon by people around you with resentment, and

I don't mean just a bit of harmless envy. They might look at you — or, more specifically, treat you — with hatred. People you've fired or haven't given a raise to. A lot of people feel your power and react with fear. You see, all *that* amounts to negative energy. To counteract it you need positive energy. This can be supplied by family members or relatives, but your wives have run out on you, you don't have any children or friends, and you don't communicate with your relatives. You have no sources of positive energy around you.

“Now an individual human being is capable of producing positive energy — and in sufficient quantity — within himself, all on his own. But for this he needs to set his heart on some kind of dream or goal, and the step-by-step realisation of this goal will bring about positive emotions. You've already achieved so much in life that now, it seems, you don't have any more goals or dreams left.

“But it's extremely important to have such a goal and to strive to attain it. I have analysed the physical and mental health of different types of business people. Someone who likes mixing dough and bakes pies and sells them is happy that he can now afford to buy something he needs, and dreams of developing his business. After all, it's only with development that he receives many of the goods and services civilisation has to offer.

“A bank manager or the owner of a profit-making concern likewise strives to develop his business, strives for increased profits, but often with less enthusiasm than someone who makes or sells pies. It's paradoxical, but true — the enthusiasm just isn't as great. It isn't as great because he's got significantly fewer tempting benefits ahead of him than the pie salesman. For him the achievements of civilisation have no special value, they're just routine.

“If someone with a relatively modest income suddenly has the chance to buy a car, the purchase of the car will evoke in him a tremendous feeling of satisfaction or even ecstasy,

while someone who is relatively well-off won't get any thrill from a brand new car. To him it's a mere trifle. Paradoxical, but true: rich people have fewer occasions for delight than those less well-off.

"There's one other factor that can bring satisfaction — beating one's competition. But you, Mr Heitzman, it seems, have no competition at all.

"So it turns out you have only negative energy acting upon you, and there's a great deal of it out there. Oh, and I forgot to mention: there's just one force that can conquer the masses of negative energy — just one, but it's powerful, incredibly powerful — it's called *the energy of love*. It's when you find yourself in a state of love and someone loves you. Unfortunately, in your case, however, you don't have any women in your life. In fact, it looks like you don't really have any interest in them at all, and at your age and in your condition you're not likely to have any more interest in women.

"There's a lot of evidence to back up my conclusion. I've compared the longevity stats of rich people, prominent politicians and presidents over the past hundred years. The results are quite persuasive. Longevity for the world's power brokers doesn't look all that great by comparison with the common folk — in fact, most often it's less.

"Paradoxical, but true: facts are facts. Presidents and millionaires, in spite of being under constant medical care, in spite of having access to the state-of-the-art technical help and medicines and to only the highest-quality foodstuffs, are getting sick and dying just like anyone else. All this is eloquent testimony to the fact that surrounding negative energy exerts a colossal influence, and no medical science, even the very latest, is able to counteract it.

"So, what's the bottom line? A dead-end situation? There is a way out — it may be small, it may be only one of its kind, but it's there! Yes sir! It's there. Memories!

“My dear Mr Heitzman, please, try to remember the different stages of your life. Any memory that will bring back pleasant feelings.

“Most importantly, if there’s anyone you’ve given a serious promise to and not carried it out, see if there’s any way you can carry it out now. I ask you, for your own sake, for the sake of science, to take at least two or three days and try to remember the good moments in your life. We’ve got equipment to monitor the functioning of many of your body organs. The monitoring goes on minute by minute. If you do what I’m recommending, and if these instruments start indicating positive results, there’s indeed a chance we’ll be able to see you through to a full recovery. Yes sir! You’ll make it! I’ll certainly find a way. Or maybe you’ll find it on your own. Or maybe it’ll just come about all by itself... Your life will come across it on its own.”

The professor fell silent and once again fixed his gaze on the hand of his patient, lying motionless before him. A few seconds later and the customary gesture sent the professor out of the room.

Like many people, John Heitzman began to recall his past. He had at least something of an understanding of what the professor had said to him. He could try to find happy moments from his past life, and they might have a positive effect. The problem was, though, that everything he had experienced in his life seemed not just devoid of anything pleasant, it was uninteresting and even senseless.

Heitzman remembered how he took his father's advice and married the daughter of a billionaire, thereby adding to his empire's wealth. The marriage did not bring him any satisfaction, his wife turned out to be barren, and after ten years of conjugal life she died of an overdose of narcotics.

Then he married a famous fashion model, who was the very picture of a wife passionately in love. But just six months after the wedding his security service showed him snapshots of his wife cavorting with her former lover. He was not about to discuss it with her. He simply gave orders to his bodyguards to see to it that he would never have the occasion to see or be reminded about her again.

By now in his recollections Heitzman had reached the starting-point of his participation in his father's empire. He had not been able to pinpoint even one pleasant instance that he felt like holding on to and use as a source of positive emotions.

There was just one moment of pleasantness that he could remember. It was when he proved to his father that there was no need of becoming the sole owner of the Monetary Fund. Other investors in the fund, looking for a good return, would devote their mental energy to increasing the fund's capital, and thus would be working for them, for the Heitzmans.

His father took some time to think about this. Then, several days later, at dinner time, he broke with his customary reticence to offer praise and said:

"I agree with your proposal, John, regarding the Fund. You're on the right track. Congratulations! Go ahead and give some thought to other areas too. It's time for you take over the reins."

For the next several days John Heitzman was in an upbeat mood. He ended up making several more decisions and increasing the profits of their financial-industrial empire even

more. However, he no longer derived any special feeling of joy from this.

The reports of increased profits were cold and dispassionate. No further praise would be coming his way. His father died, and praise from underlings brought no particular pleasure.

John Heitzman continued going back in his recollections and reached the time of his childhood. The rare moments of contact with his father were dimly illumined in his thought. His ever-strict father, as a rule, would issue admonishments in the presence of nannies and teachers which he had hired for young John.

Then all at once a wave of warmth rolled through the body of the billionaire lying motionless in his bed. His body gave a pleasant shiver. In Heitzman's recollections the curtain rose on a bright and very clear scene. He saw a far corner of the garden of his family's estate and there, surrounded by small acacia bushes, a little house about two metres high, with a single window.

For some quite inexplicable reason all children yearn to create their own little house, their own space. That yearning is there, no matter whether the child has his own room in his parents' house or lives in the same room with his parents. With almost all children there comes a time when they start building their own little cubby-hole. In every Man, apparently, there is a gene that preserves some kind of ancient memory, telling him he ought to set up his own space. Whereupon any adult or child heeding this call, which arises from the depths of eternity, goes about setting it up at once. Never mind how amateurish it turns out by comparison with modern apartments, a Man who has built this for himself derives much more satisfaction from it than he would from the most chic and stylish apartment.

And so the nine-year-old John Heitzman, who had two spacious rooms all to himself in the family manor, still decided to build his own little house with his own hands.

He constructed it out of plastic boxes that had been used for transplanting seedlings. These boxes turned out to be handy building materials. They came in a variety of colours. John made the walls using blue boxes, with a yellow border around the whole perimeter. He piled the boxes on top of each other, fastening them together in tongue-and-groove fashion. On one wall John made the box-bottoms face outward, which meant that the whole inside wall was comprised of a multitude of shelves. Boards with stapled-on plastic film served for the roof.

He spent a whole week building his little house, taking advantage of the three hours a day he was allotted for leisure walks in the fresh air. On the seventh day, just as soon as leisure time came, he headed straight for his creation in the far corner of the garden. Pulling back the acacia branches, he saw the house he had built and froze in astonishment. There by the entrance stood a little girl looking in the doorway of his creation. The girl was wearing a light-blue calf-length skirt and a white cardigan with frills on the sleeves. Her chestnut-coloured hair fell in ringlets around her shoulders.

At first, young John reacted with some jealousy to the presence of a stranger beside his creation, and he enquired with a hint of annoyance:

“What are *you* doing here?”

The girl turned her pretty little face toward him and replied:

“I’m admiring.”

“What are you admiring?”

“This marvellous and clever little house.”

“Wh-what kind of house?” young John queried in amazement.

“Marvellous and most clever,” repeated the girl.

“Houses may be marvellous, but I’ve never heard them called *clever*,” observed John thoughtfully. “Only people can be clever.”

"Yes of course, people can be clever. But when a clever person builds a house," the girl countered, "the house turns out to be something clever, too."

"And what do you find clever about this house?"

"The inside wall is very clever. It has ever so many shelves. You can put a lot of useful things on those shelves — toys, too."

John was pleased at how this little girl reasoned things through. It flattered him, and possibly the girl herself pleased him.

*She's pretty, and reasons things through cleverly*, he thought to himself. And aloud he said:

"This house I built."

And he immediately added:

"What's your name?"

"I'm Sally, and I'm seven years old. I live here in the servants' quarters, since my dad works as a gardener here. He knows a lot about plants and is teaching me. I already know how to raise flowers and how to graft branches onto trees. And what's your name, and where do you live?"

"I live in the manor-house. My name's John."

"Does that mean you're the master's son?"

"Yeah."

"So, Johnnikins, let's play house!"

"How do we play that?"

"We play like we live in this house, the way grown-ups live. You can be the master, since you're the master's son, and I'll be your servant, since my dad's a servant."

"That won't work," observed John. "A servant's supposed to live in the servants' quarters. Only the husband, his wife and their children can live in the manor-house."

"Then I shall be your wife!" exclaimed Sally, and asked: "Can I be your wife, Johnnikins?"

John did not answer. He went into the house, took a glance around, and then turned to look at Sally who was still standing just outside the doorway. He said rather brusquely:

“Okay, come on in and pretend you’re my wife. We have to think about how we’re going to decorate the inside.”

Sally stepped into the house. She looked into John’s eyes with tenderness and excitement and said, almost in a whisper:

“Thank you, Johnnikins. I shall try to be a good wife to you.”

John did not come to his house every day. During the time allotted for leisure walks he was not always allowed to play in the garden. Escorted by bodyguards and tutors, he would be taken instead for a visit to a city park or Disneyland, or go horseback-riding.

But when he managed to get away to his little house, he almost always found Sally waiting for him. With each succeeding visit John took interest in the changes that had been occurring in the house. First of all a carpet appeared on the floor, contributed by Sally. Then little curtains on the window and over the entrance.

Next came a little round table with an empty photo-frame on it. Sally said:

“Johnnikins, you’re coming here less and less often. I keep waiting for you, but you don’t show up. Give me a photograph of yourself, and I’ll put it in this frame. I can look at your picture and it will make it easier waiting for you.”

John left her his photograph when he came to say good-bye to the house, and to Sally. He was going to be moving with his parents to another villa.

Multibillionaire John Heitzman lay on his bed in his fancy apartment and smiled as he recalled, with ever greater detail, his childhood contact with the little girl Sally. It was only now that he realised that this little girl loved him. She loved him with her first childhood love — reckless, unanswered and sincere. Perhaps, just perhaps, he loved her, too, or perhaps she was just a passing fancy. But she loved him as probably no one else would love him the rest of his life, and so the memories attached to the little house he built in the garden and his contact with Sally still evoked in him a lot of warm and pleasant feelings. These feelings warmed his body and made him feel good.

After leaving the manor-house, he met with Sally one more time, eleven years later. But this time... New feelings excited his whole body. John Heitzman even sat up a bit in his bed. His heart had started chasing the blood through his veins with ever-increasing strength. That meeting... He had forgotten about it. He had never thought about it all this time. But now it occupied all his thoughts and made him excited.

He came back to the estate where he had spent his childhood, returning after eleven years just for a day's visit. That was all the time he could afford. After lunch he went out into the garden, and somehow he found himself heading down to the far corner of the garden, where in among the acacia bushes he had built his little house. As he pushed back the branches and stepped into the little glade, he literally froze in astonishment. The house he had built out of plastic boxes eleven years ago stood on the same spot as before. But all around... All around were little beds of flowers, and a sand-covered path led to the entrance, where a little bench was now standing. And the house itself was wreathed in flowers. The bench had not been there before, but it was there now, the grown-up John noted to himself. He pushed aside the

curtain covering the entrance, bent down and stepped into the little house.

At once he could sense someone's recent presence. His childhood photo stood on the little table as before. The shelves were neatly lined with Sally's childhood toys. On one of the shelves, next to the table, stood a little bowl of fresh fruit. An air mattress lay on the floor, fitted with a coverlet.

John stood there in the little house for about twenty minutes, remembering pleasant feelings from his childhood. *Why is this happening?* he thought. His family owned a whole lot of fancy villas. There was even a castle, but neither the castle nor the villas had ever evoked such pleasant feelings as arose here, in this little house constructed of plastic seedling boxes.

When he came out of the little house, he spied Sally. She was standing there silently at the doorway, as though reluctant to interfere with the surge of recollections that had broken upon his thought. John looked at her, and noticed her cheeks flush with a rosy glow. She lowered her eyes in embarrassment, and said in a soft, velvety, extraordinarily tender and emotional voice:

"Hello, Johnnikins!"

He did not answer her right away. He stood there admiring Sally's extremely beautiful, mature body. Her figure-hugging dress fluttered in the breeze. Through the light material could be seen the outlines of her sculptured form — no longer that of a child but of a maiden, feminine and supple.

"Hi, Sally," John said, breaking a long pause. "You're still keeping house here?"

"Yes. After all, I promised. There's some fruit inside — it's just been washed. Have some. It's for you."

"I see... For me... Well, then, let's go in together and have a bite."

John pulled the curtain aside, letting Sally go ahead of him. She went in and squatted down. She took the bowl of fruit

down from the shelf and placed it on the table beside the photograph in the frame.

There were no chairs in the little house, and John sat down on the rug. He reached out for a bunch of grapes and inadvertently touched Sally's shoulder. She turned her head and their eyes met. She inhaled sharply, which caused a button to come undone on the cardigan stretched taut across her breasts. John grasped hold of Sally's shoulders and drew her close to himself. She did not resist. Quite to the contrary, she leant against him with her feverishly glowing body. Sally did not resist when John slowly and carefully laid her down on the rug, or when he caressed her and kissed her lips, and her breast, or when...

Sally was a virgin... Neither before nor afterward did John enter into intimate relations with any virgin. And now, after forty years had passed since that last meeting, he, John Heitzman, suddenly realised that this had been the only really beautiful, reason-defying intimate moment he had ever had with a woman. Or, rather, with a girl, whom he had made a woman.

After that they fell asleep for a little while. When they awoke, they began talking with each other. What had they talked about? John Heitzman racked his memory as best he could. He very much wanted to remember at least part of their conversation. And he remembered.

Sally had mentioned how beautiful life was. She said her father was saving up some money to buy her a plot of land, on which, if he could afford it, he would build her a modest house. And Sally herself would do the landscape design and put in a wide variety of plants, and she would lead a happy life and raise her children there.

Back then John decided within himself that he would help Sally. *Wow, he thought, here's a girl that can be happy just with some plot of land and a little house. Mere trifles! I mustn't forget to help her acquire the land, and the house.*

But John did forget about his intentions. He forgot completely about Sally. He was distracted by his life with its manifold charms. A new yacht and his own private aeroplane brought joy for a few days at their first appearance. He found a longer-lasting distraction in playing the money markets, in adding billions to his father's financial holdings (which he subsequently inherited) — a distraction which excited his nerves and feelings for more than twenty years. It dominated over everything else. He went through first one marriage, then a second, as a matter of course. His wives left no trace of themselves behind. After he turned forty, playing the financial markets ceased to give him any pleasure, and he began to suffer increasingly frequent periods of depression, which finally led to a nervous breakdown.

But now John Heitzman was no longer in a state of depression. His recollections of Sally had quite stirred him up. Yet at the same time they made him angry at himself. *How could this have happened?* he thought. *I promised myself that I would help Sally, this girl who loved me, to obtain a plot of land, and a house, and I forgot.*

Now John Heitzman was a man accustomed to keeping his promises, especially those he made to himself. He realised he would never stop being angry with himself until...

He pressed a button to summon his secretary. When the secretary entered, John Heitzman was sitting on his bed. Even though he found it difficult to get out the words, for the first time in the past six months he began talking:

“Over fifty years ago I was living in a certain manor-house — I don't remember the address, you can find it in the archives. There was a gardener working there — don't remember his name, but it's in our archived bookkeeping accounts. The gardener had a daughter, her name was Sally. Find out where Sally's living now. I need this information by tomorrow morning at the latest. If you have it earlier,

let me know at once, regardless of the hour, day or night. Do it!"

The secretary rang at dawn the next morning. As he walked into the office, John Heitzman was sitting in his wheel-chair by the window, wearing a dark-blue three-piece suit. He was shaved, and his hair neatly combed.

"Sir, the gardener was let go forty years ago and died soon afterwards. Before his death he managed to buy five acres<sup>1</sup> of land on an abandoned ranch in Texas. On this land he started building a house, but broke his back during the construction and died. His daughter Sally finished building the house and now lives in it. Here's the address. That's all the details we have at the moment. But on your order we'll go ahead and gather all the information you need."

John Heitzman took the piece of paper from his secretary's hand and examined it carefully. After folding it neatly, he put it into his inside jacket pocket and said:

"Have the helicopter ready for take-off in thirty minutes. It should land about four or five miles from her villa in Texas. Have a car meet me at the landing site. Just an ordinary-looking car — no limousine, no bodyguards, just the driver. Do it!"

At three o'clock in the afternoon John Heitzman, limping slightly and leaning on his cane, made his way up the gravelled path to a modest cottage surrounded by luscious greenery.

<sup>1</sup> 5 acres = 2 hectares approximately.

When he first spied her, her back was turned to him. The elderly woman was standing on a small stepladder, washing the outside of a window. John Heitzman stopped and stared at this woman with her beautiful ash-coloured hair. She could feel his gaze and turned to face him.

For a while she simply stood there with her eyes fixed on the old man standing on the path. Then all of a sudden she jumped down from her ladder and ran to greet him. Her step was light, and nothing about this woman looked old. She stopped about a metre from where Heitzman was standing, and in a quiet but emotional voice said:

“Hello, Johnnikins!”

Immediately she lowered her eyes and put up her hands to cover the blush on both her cheeks.

“Hello, Sally!” said John Heitzman, without another word. Or, rather, he was speaking, but only to himself, not aloud. *How beautiful you are, Sally, and how beautiful are your sparkling eyes, and the little wrinkles around your eyes! You are still just as beautiful and good as before!* Aloud he said:

“I was just passing through, Sally. I heard you were living here, so I decided to stop by. And maybe to stay the night... if I’m not imposing, that is.”

“I’m so happy to see you, Johnnikins. Of course you can stay the night. I’m here alone, but tomorrow my two grandchildren will be arriving for a week. I’ve got two of them: a granddaughter, she’s nine, and a little grandson — well, he’s twelve already. Come on in, Johnnikins, and I’ll give you a bowl of herb tea. I know the kind of tea you need. Come on.”

“So, you were married, Sally? You had children.”

“I’m still married, Johnnikins,” Sally answered cheerfully. “And we had one son. And now two grandchildren... Why don’t you sit down at the table out there on the porch, and I’ll bring the tea out to you.”

John Heitzman sat down in one of the plastic armchairs on the veranda. When Sally brought out a large bowl of some kind of tea, he asked her:

“How come you said you knew what kind of tea I needed, Sally?”

“You see, my father used to gather herbs for your father. He'd dry them and then make a tea, and this tea was of great help to your father. And I learned how to gather herbs, too. My dad told me that you, too, Johnnikins, have inherited this same disease.”

“But how did you know I was coming?”

“I didn't know, Johnnikins. You see, I gather them in case of any need. But tell me, Johnnikins, how are you doing? How's your life turned out?”

“In a lot of different ways, I guess. I've been busy with a variety of things, but I don't want to think about that right now. You've got a fine place here, Sally — it's beautiful, so many flowers... and a garden!”

“Yeah, it's really nice. I really like it here. But you see over there to the right, they've got a building project in the works. They're planning to build a waste treatment facility. And over to the left there'll be another factory of some sort. They're talking about moving us out...”

“But you're tired from your trip, looks like you've been travelling quite a distance, Johnnikins. I can see how exhausted you are. I'll make up a bed for you by the open window. Just have a lie down and relax. Only drink up your tea first.”

John Heitzman got undressed, with some difficulty. He really was tired. His muscles, atrophied by six months of lying motionless in bed, could only barely keep him on his feet. He finally managed to pull the blanket over him, and he fell asleep at once. Lately he had been unable to get to sleep at all without a sleeping pill. But here, all at once...

He slept in until noon and did not see the morning. He got up and took a shower and then went out to the veranda. Sally was getting lunch ready in the summer kitchen, and a little boy and a little girl were helping her.

“Good afternoon, Johnnikins! Looks like you got a good sleep. You look so rejuvenated! Here, meet the grandchildren. This is Emmy, and this young fella’s name is George.”

“And I’m John Heitzman. Good morning!” said the elderly man, extending his hand to the boy.

“So there, you’re officially introduced,” declared Sally. “You two go take a walk and work up an appetite while Emmy and I get lunch ready.”

“I’d like to show you our garden,” George said to Heitzman.

The old man and the young boy walked through the marvellous garden together. The boy kept pointing out various plants and could not stop talking about them. Heitzman, in the meantime, was concentrating on thoughts of his own. When they reached the end of the garden, the boy announced:

“Now, behind this acacia bush is my ‘apartment’ — Grandma made it for me.”

Heitzman pulled aside a branch and looked... There in a small glade behind the acacia stood his little house — made from the same plastic seedling boxes. Only the roof looked a bit different. And the curtain covering the entrance was different. Heitzman pulled back the curtain and stooped slightly as he stepped into the little house. All the furnishings were just as he remembered them. Only the photograph on the table was laminated in plastic sheathing. The photo was of Sally’s grandson. *Everything’s just the way it should be*, he thought. *The little house now has a new occupant and hence a new photograph.* Heitzman picked up the photo and held it in both hands. To make conversation, he remarked:

“Well, now, little George, your photo came out pretty well here!”

“But that’s not *my* photograph, Uncle John. That’s a picture of a boy Grandma was friends with in childhood. It just happens he looks like me.”

John Heitzman made his way back up the garden path as fast as his legs could carry him, limping with his cane, and stumbling.

Panting and feeling a little confused, he approached Sally and asked:

“Where is he now? Where’s your husband, Sally? Where?”

“Please calm down, John,” said Sally softly. “You shouldn’t allow yourself to get so excited. Please, sit down...”

“It turns out, John, that back in my childhood I promised a very fine young boy that I would become his wife...”

“But that was a game!” John Heitzman was practically shouting as he leapt up out of the chair. “A children’s game!”

“Maybe so,” Sally responded. “Anyway, let’s say I’m still continuing to play at it. And I’m pretending that you’re my husband... my husband and my beloved.”

“George does look a lot like me, the way I looked as a boy. Does that mean you gave birth to a child after that night, Sally? Did you have a baby?”

“Yes, John, I had our son. And he looks like me. But he very much has your genes, and our grandson is the spitting image of *you*.”

John Heitzman's gaze alternated between Sally and the boy and girl setting the table out on the veranda. He was no longer able to speak. His thoughts and feelings were confused. Then, for reasons which he himself did not fully understand, he said in a business-like tone:

"I have to leave right away. Good-bye, Sally."

He took a couple of steps down the path, then turned and headed over to Sally, who was standing there quietly. Barely supporting himself on his cane, he got down on one knee in front of her, took her hand and gave it a long, slow kiss.

"Sally, I have some very important, urgent matters to attend to. I have to leave immediately."

She put her hand on his head, softly rumpling his hair.

"Yes, of course. You have to leave, if you've got important matters and problems to take care of. If you run into any difficulties, John, you can always come here to our home. Our son now manages his own little firm — it's known by the lovely name of Lotos — and he does landscape design. He's had no special training, but I taught him myself, and he's doing some very smart designs, and there's hardly any shortage of orders. He helps me financially, and visits me every month.

"But it seems you've got some money problems? And something of a health problem, too? Come back, John. I know how to give you treatment and we've got enough money to live on."

"Thank you, Sally... Thank you... I've got to hurry! I've got to..."

He walked down the path to the gate, his thoughts all caught up in a plan he had in mind. In the meantime Sally watched John's receding figure and whispered to herself: *Come back, my love!* She was still repeating this phrase like a mantra even an hour later, forgetting about her grandchildren. She did not even notice the helicopter circling for more than half an hour overhead, over her plot of land with its little house and marvellous garden.

By the time John Heitzman's helicopter landed on the office tower roof, his close associates and their secretaries were already hard at work in the board room, feverishly checking figures, getting ready to report to the boss. They had grown unaccustomed to meeting in his presence, and now it was with considerable fear and trepidation that they awaited his arrival.

When John Heitzman entered the room, everybody rose to their feet. He began speaking even before reaching his chair at the head of the board-room table.

"Sit down. No reports today. Listen carefully to what I have to say, I'm not going to repeat myself. No time. So. In Texas there's this villa — here's the address. Your instructions are to buy up all the lands around this house within a radius of a hundred miles. Buy up all the industries located on these lands, even if it means paying three times their worth. Whichever one of you is responsible for buying and selling real estate can leave the room now and get to work immediately. Put all our agents on the job if required. This operation should take no more than one week."

One of the associates jumped up and hurried toward the exit.

John Heitzman continued:

"All buildings, factories and facilities located on these lands are to be demolished within a month, max, even if this means hiring hundreds of construction companies. A month from now grass should be planted on these sites."

Heitzman instructed the last associate remaining in the room:

“There’s a firm in Texas with the pretty name of Lotos. Sign a five-year contract with it. Engage this firm to design communities for all the lands we buy up around that villa in Texas. Whatever the firm asks, double it. Do it!”

Two weeks later John Heitzman appeared before an audience of fifteen hundred people. The audience, recruited with the help of personnel firms, comprised landscape design specialists, botanists and agronomists. Everyone wanted to get work — especially since the advert mentioned the contract amount, twice the standard average.

John Heitzman walked up to the podium and began speaking in his usual authoritative tone, which was rather sharp:

“According to the contracts being offered you, each of you will receive free of charge a plot of land for lifetime use, measuring five acres. You’ll be offered several designs for pre-fab homes to choose from, and these homes will be built on each plot at whatever spot you designate, all at my company’s expense. For the next five years the company will make payments to each adult member of your family as specified in the contract. Your job is to make the territory you receive a place of beauty. You will plant gardens and flower-beds, and make ponds and pathways. You will make everything beautiful and good. The company will pay the cost of seedlings and whatever seed materials you request.

“That’s it. If there are no questions, those who wish to accept my offer can sign their contract.”

But the fifteen-hundred seat auditorium was enshrouded in utter silence. Nobody got up from their seats to head over to the tables, where secretaries were waiting with contracts ready to sign. After a minute of complete silence, an elderly man rose from his seat and asked:

“Tell me, sir, these lands where you propose we settle, are they contaminated with deadly pollutants?”

"No," replied one of Heitzman's associates. "On the contrary, this whole area has a comparatively clean environment, and the soil is quite fertile."

"Then tell us honestly," asked a young woman jumping up from her seat, "what kind of an experiment are you proposing to conduct on people? Many of us have children, and I for one do not want to subject my child to goodness-knows-what kind of an experiment."

The hall erupted with a general buzz, and cries of *Opportunists! Inhuman! Monsters!* could be heard. People started getting up and filing toward the exit. Heitzman's associates tried to explain and respond to the questions, but to no avail.

Heitzman himself sat there helplessly and watched the people leave the room. He realised that their departure was the final blow to his hopes. Or something even worse... He so wanted to do something nice for Sally, for his son and grandchildren. He wanted not only for there to be no more belching smokestacks in the vicinity of Sally's cozy cottage, but for there to be gardens around, and good neighbours too. He had bought up the lands, and the belching smokestacks had been demolished on his orders. And grass had been sown in their place. But the land could only become good if good people lived on it. And here they were leaving. They did not understand. How could they understand, anyway? What could make them believe?

*Stop!* All at once it dawned on him. They knew nothing about the situation, and that was why they did not believe. But now if he told them the truth... John Heitzman rose to his feet and quietly, still hesitantly, began to speak.

"People!" he began. "I understand. I need to explain to you the reasons for this action by my company. But they're impossible to explain. There's no way they can be explained. Because it's just that I... You see, it's like this... Or, rather,

there's something personal to me in all these contracts. Or how shall I put it?..."

Heitzman was confused, and did not know how to continue. But the people had stopped in their tracks. They were standing in the aisles, in the exit doorways. And they were all looking intently at Heitzman. They were silent, and here he was, not knowing how to proceed. Yet somehow he managed to pull himself together and go on:

"Back in my childhood... In my youth... you see... I loved this girl. But I didn't realise back then I was in love with her. I was later married to other women. I got involved in business. For the past fifty years I never saw this girl. Never even thought about her. And then just recently I remembered her. I discovered she was the only person who ever sincerely loved me. And she still does. But I didn't know about it. Like I said, I'd forgotten all about her. And I realised that she was the only one I could ever love..."

"And then... I met her. Now, of course, she's along in years. But for me she's still the same as back when I knew her years before. She loves her garden. She does everything so beautifully. And I wanted there to be beauty around her. And good neighbours. It's better for her to have good and happy neighbours living nearby.

"But how to make that happen? As a businessman I've managed to put a bit of money aside. And so I bought up the land, divided it into plots, and drew up these contracts. I did it for the one I love. Or, just maybe, I did it for myself?"

This last sentence John Heitzman uttered almost as though putting the question to himself. After that he began speaking as though talking aloud to himself, as though he did not see the people standing in front of him.

"We live for something — what do we live for? We strive for something — what is it we're striving for? I'm going to die soon — what am I leaving behind, except dust?"

"But now, I'm not going to die, not until I finish my project. And I'll leave behind something eternal — I'll leave behind a garden for the one I love. I'll leave behind many gardens.

"You know, first, I wanted to simply hire a whole lot of workers and sign a contract with a big company doing landscape design. Sign a contract so that employees could look after the plants. But then it dawned on me. Any kind of beauty will turn out lifeless, if you don't create it for yourself. And that's why I decided to make it so that someone created it for themselves. That's why I'm offering you the plots of land and the houses, and all I ask in return is for beauty around the one I love.

"You didn't believe that the terms offered in these contracts were genuine. You didn't know what goals the party offering you these contracts was really pursuing. Now you know."

At this point John Heitzman fell silent. The people standing in the hall were silent, too. The first to break the silence was the woman who had expressed the most scepticism earlier. First she hurried over to the row of tables standing by the stage with the contracts laid out, and asked one of the secretaries to enter her name on a copy, which she signed without even reading it. Then she turned to the people standing in the auditorium and exclaimed:

"There, I've signed it. I was the first one to sign. That means I'll go down in history, because I was the first. When you think about it, not a single man, no matter how rich, has ever given a greater gift to the one he loves than this person standing there on the stage. And it would be impossible for him to do more."

"Nobody could even think of doing more," cried another woman, "in the whole recorded history of mankind!"

"I love you!" called out a third.

"I want a plot right next to your beloved," declared a fourth. "What's her name?"

“Her name...” began Heitzman, but went on: “maybe it’s better she doesn’t know. Let her think that this was all the will of fate.”

With a single surge, the people in the hall headed over to the tables standing by the stage. A queue formed. People gaily joked with each other, calling each other simply *Neighbour*, but the majority, especially the women, kept staring at the man on the stage with sparkles of love in their eyes.

For the first time in his life John Heitzman felt the energy of good directed at him — the energy of love and unfeigned delight emanating from many human hearts. An all-triumphant energy, capable of healing any ill. He walked off the stage, now without a trace of a limp.

For several months he personally took active part in the demolition of the remaining facilities on the bought-up lands, discussed the details of design of the whole community around Sally’s cottage and alternative landscape designs for different plots, along with the whole infrastructure.

A year later, when John Heitzman once again approached the gate leading to Sally’s cottage, as far as the eye could see, people were already planting little saplings for their large gardens. Several saplings stood near Sally’s gate, with a carefully wrapped root system. It seemed as though Sally had intuitively felt him coming, for she ran out to greet him.

“John! It’s so good to see you again! Really good! Hello there, John!”

She ran up to him with a spring in her step, bubbling over like a young girl. She grasped John’s arm, pulled him over to have a cup of tea, all the while happily chattering away non-stop.

“You know what’s been happening, John?! You know what a miracle’s been taking place here all around! I’m so superbly happy! There’ll be no more belching smokestacks next to our

house. There'll be good neighbours! See how life's sprucing up all around?! Really sprucing up! If you've had any business failures, John, don't worry your little head about it. You can just laugh at it and come and move in with us. We're wealthy now. Our son's just got himself a real big contract, and I mean big! He's now in charge of a whole design and planning project. And we've got ourselves a little more land. Our son's going to be building himself a new house. And the two of us, if you want to, can live here."

"I do want to," replied John Heitzman, adding: "Thank you, Sally, for the invitation."

"But why go on living in an old house?" boomed out a voice from behind John Heitzman's back. He turned around and caught sight of his son. He knew right off that it was his son. And the young man continued:

"If I understand correctly, you are actually my father?... When little George told me that you thought the photo of Mom's childhood friend was of him, I knew who'd come. And Mom never did learn to hide her true feelings.

"I, of course, don't yet have the same feelings towards you that Mom does, but for the sake of my happy parents, I am ready to pay for the building of a new house for the two of you."

"Thank you, son," said John Heitzman, almost overcome with emotion. He wanted to give his son a hug, but for some reason hesitated. The young man stepped toward him on his own, extended his hand and introduced himself:

"I'm John."

"Great!" said Sally. "And it's great now that you two have got acquainted. When you get to know each other better, you'll really like each other. But right now let's have some tea."

And as they sat at the table Sally kept on talking animatedly, non-stop, about the extraordinary events that had been taking place in the last few months.

"Can you just imagine, John? Just imagine! Here they've been telling a story like the most beautiful tale in the world. A tale which is coming true to life. Just imagine, John — people say that all these lands were bought by one and the same person. Then this person invited the best designers, agronomists and gardeners and gave each of them several acres of land free of charge for their lifetime use. He told them to make their plots beautiful. And he offered them all the saplings and seeds free of charge, and will even keep on paying them for five years to beautify their own plots. Just imagine, it is *he* who will be paying *them*. He poured all his savings into this project, right down to the last cent."

"Well, maybe not all," Heitzman protested.

"People say he put in all. And you know why he did all this?"

"Why?" asked John Heitzman calmly.

"That's the whole beauty of it. He did it so that the one he loved could have a place to live amidst all this beauty. They say she's a landscape designer as well. And somewhere around here she's got a cottage too. Only nobody knows who she is or where she lives. Can you just imagine, Johnnikins, what will happen when people find out who she is?"

"What?"

"What else? Everybody will want to go have a look at her and even touch her like a goddess. I myself, for instance, would want to touch her. She's probably an extraordinary woman. Maybe she's extraordinary outwardly, maybe inwardly. Everybody around is saying that there's no other woman in the world who could inspire a man to take such an unusual and beautiful step. That's why all the people will want to see her and even touch this man and his extraordinary wife."

"Probably they will," John Heitzman agreed, adding: "But what can we do about it, Sally?"

"What d'you mean, *we*?" Sally wondered aloud.

"I say *we*, because that extraordinary woman, the one on whose account all these things around are happening, is *you*, Sally!"

Sally stared at John without blinking, trying to make sense of what she had just heard. When the first glimpses of understanding dawned on her, she let the cup she was holding slip out of her hands, but nobody paid attention to the sound of it breaking to pieces. John Heitzman turned his head in the direction of another sound — the sound of a chair falling, when his son impulsively jumped up from his seat. The younger John rushed over to his father and said excitedly, in a soft baritone voice:

"Father! Father! Can I give you a hug?"

John Heitzman was the first to embrace his son. He could hear how his son's heart was racing. His son gave him a hug in turn, whispering excitedly:

"The world has never witnessed such a powerful declaration of love, without even using the words of love, ever! I'm proud of you, Father! I'm so happy for you, Father!"

When father and son turned to Sally, she was still trying to come to terms with what had happened. All at once her cheeks flushed with a rosy glow, as though smoothing out the wrinkles around her eyes. Tears began rolling down her cheeks. Sally was embarrassed. She rushed over to the elder John, grabbed him by the arm and led him down the front porch steps. Their son watched as his parents, hand in hand, started making their way slowly down the path, heading for the acacia bushes which concealed the little house of their childhood, and then began skipping toward the acacia like youngsters.

Ten years later a much younger-looking John Heitzman was sitting at a local café-bar with some other men from the community. He laughingly explained:

“No, I won’t run for any presidential office — don’t even try to tempt me. And it’s not just a matter of age. You don’t have to be president to run the country. That’s something you can do from right in your own garden. See, you’ve shown by your own example how to really make a good life, and all America is now turning into a flourishing garden. If it goes on like this, heck, we’ll even overtake Russia!”

“We’ll do it! We’ll do it” echoed Sally, who had just come in. “Only now, let’s head for home, Johnnikins. The baby won’t go to sleep without you.” Then she added, whispering in his ear: “And neither will I.”

And so they began walking home, down a shady, sweet-smelling allée, these two not-yet-old people: John Heitzman and Sally. In the springtime it always seemed that their life was just beginning. Just as real life was beginning all over America.

“That’s a beautiful ending to your story,” I told Anastasia, when she had finished telling her account of the future. “And all your stories are so encouraging. But will something like that really happen? In real life?”

“It will definitely happen, Vladimir. That is no made-up story, but a projection of the future. The names and locales are not important. What is important is the essence, the idea, the dream! And if my story has evoked positive feelings, then people will certainly project its essence into the future, and many people will add their own details and infuse the projection with their own great meaning and conscious awareness.”

“How does all that come about?”

“See how simple it is. Did you like the story?”

“Did I like it? *I'll* say!”

“Do you want it to come true in the future?”

“Of course I do.”

“What if you tell it to others? Will there be those who will want to see something like that come true, too?”

“I dare say there will.”

“You see, that means that anybody will want to, who takes on the role not just of an observer of history, but an actual participant in it. And they will make the story come true.”

“Yes, I think that's clear enough. But I'm just a bit sad that you went and painted such a beautiful scene in respect to foreign entrepreneurs, rather than Russians.”

“Vladimir, for Russians, life is already drawing beautiful and real scenes all on its own. Or, to put it more accurately, many Russians are working out the Divine eternity. And that is something you could tell about all by yourself.”

“By myself? Well, I guess so. I really do know quite a few Russian entrepreneurs who have taken not just one but several hectares of land and are building their domains on them. Like the ones you described. Only their stories aren't as romantic.”

“Grand chapters need to be written about anyone who has made conscious contact with the Earth. Such a story will be inexhaustible. Look, here is just one story — see if you can recognise some familiar names.”

## CHAPTER EIGHT

# I am giving birth to you, my angel!

Viktor Chadov, an entrepreneur, awoke at dawn. His girlfriend lay beside him in the big bed, still asleep. The thin blanket hugged the contours of her delicate figure.

Every time they attended formal receptions together or went to some fancy resort hotel, her body attracted men's envious or lustful glances.

Not only that, but Inga (as this sleeping beauty was called) possessed a most charming smile and gave the impression on those around her of being a smart and educated woman. Viktor took such great pleasure in her company that he bought a second four-bedroom flat, furnished it with ultra-modern pieces and gave Inga the keys. Occasionally, if his intensive business schedule allowed, he would spend a night or two with her. He was grateful to this twenty-five-year-old woman for these marvellous nights they spent together, and the opportunity to chat with her, but he had no plans to marry her. He had no special feelings of love for her. And, besides, he knew which side his bread was buttered on: after all, he was 38 and she 25. Naturally, it would not be long before this young woman would start hankering for a younger man. And, with *her* body and brains, that would not be too difficult to find. And she would find a younger and even richer man, all thanks to him. After all, if he married her, he would be also introducing her to a circle of influential businessmen.

Inga turned her face toward him, smiling in her sleep. The blanket had slipped down just enough to expose one of her alluring, so perfectly shaped feminine breasts. But this time

Viktor Chadov experienced none of his usual stimulation at the sight of her half-naked body. He carefully replaced the blanket on his sleeping partner. Silently, trying not to wake her, he got up from the bed and headed out to the kitchen.

He made some coffee and poured himself a cup. Lighting a cigarette, he began pacing the spacious breakfast-room floor, practically oblivious to his surroundings.

What a dream! His feelings were still aroused by last night's extraordinary dream. Yes, his *feelings*, rather than his mind. Viktor had dreamt that he was walking along a shady allée, concentrating on the feasibility of a routine commercial deal. Behind and in front of him walked his bodyguards. He was irritated at their presence and had a hard time concentrating. His attention was also distracted by the constant noise of traffic along the edge of the park.

Then all of a sudden his bodyguards disappeared and the traffic noise died down. And he could hear the birds singing, he could see the marvellous spring foliage on the trees lining the allée, and the flowers on the bushes. He stopped and delighted in the soft and pleasant feelings welling up inside him. And he felt better than he ever had before in his life.

And all at once he noticed, far down the allée, a little boy running toward him. The sunlight was shining from behind, giving him a kind of halo, and it almost seemed as though here running toward him was a little angel.

A moment later and it dawned on him that this was none other than his own little son. The lad's hands and feet were in constant energetic motion. With a joyful premonition, Viktor squatted down and threw open his arms to embrace him, while his little son, in turn, threw open his arms on the run. But then all at once the boy stopped in his tracks, about three metres shy of Viktor. The smile faded from the youngster's face, and the look in his eyes made Viktor's heart start to pound.

"Come on, come to me! Come and let me hug you, son."

The boy answered with a wry smile:

"There's no way you can do that, Papa."

"Why not?" Viktor asked in surprise.

"Because..." answered the boy with a tone of sadness. "You can't hug me, Papa, because you can't hug a son which hasn't been born. After all, you didn't give birth to me, Papa."

"Then you come and hug me, son. Come on."

"I can't hug a father who didn't give birth to me."

The boy tried to smile through his tears. A tear was already trickling down his red cheek. Then the boy turned, hung his head, and slowly wandered off down the allée.

But Viktor was still standing there on his knees, rooted to the spot. The boy kept getting further and further away. As did the soft and pleasant feeling Viktor had had a moment ago. Once again, from the distance, it seemed, he could hear the roar of traffic. Unable to move, Viktor summoned up his remaining strength and called out:

"Don't leave me! Where are you going, son?"

The youngster turned, and he could see another tear trickling down his face.

"I'm going into the nowhere, Papa. Into the infinite nowhere." Again the lad hung his head without saying a word. Then he added: "I'm sad, Papa, I'm sad that I wasn't born and so I cannot restore your life with myself."

With head lowered, the little angel receded into the distance and presently disappeared, literally dissolving in the Sun's rays.

The dream ended, but the impressions of the marvellous soft and pleasant sensations lingered on. It was as though they were summoning Viktor to take action.

After finishing his third cigarette, Viktor extinguished it firmly and decisively. He rushed into the bedroom, calling out loudly on the way:

“Wake up, Inga, wake up!”

“I’m not asleep,” answered the beautiful girl from the bed. “Just lying here, lolling about. I’ve been wondering where you disappeared to.”

“Inga, I want you to have a child. Could you have a son with me?”

She threw off the blanket and leapt out of bed. She ran over to him, flung her arms around his neck and pressed against him with every inch of her supple and beautiful body. And then in a hot whisper she confided:

“The most delightful and beautiful declaration of love is when a man asks a woman to bear his child. Thank you... that is, if you’re not just joking.”

“I’m not joking,” he replied firmly.

Putting on a bathrobe, Inga responded:

“Well, if you’re not joking — if you’re serious, that is... This is a decision we need to think through. First, I want my future child to have a father. But you, my dearly beloved, are still married.”

“I’ll get a divorce,” Viktor promised. In fact, he had already divorced his wife three months before, but for a variety of reasons had not yet told Inga the news.

“Once you get your divorce, then we can start talking about a child. But I’ll tell you right off, Viktor. Even if you get divorced, it’s still too early to think about children.

“In the first place,” Inga reasoned — half in jest, half serious, “I still need a year to finish graduate school. Secondly, I’m so tired of studying that once I finish, I’d like to take another year just to fool around, make the rounds of a few resorts and have a good time. So, if you’re talking about a child... Well, children could put an end to that little plan once and for all!”

“Okay, I was joking,” Viktor interrupted her rambling train of thought. “I’ve gotta go. Got an important meeting coming up. I’ve already called for my car. So long!”

He left, but it was not for any meeting, and he had not called for any car. Viktor walked slowly down the sidewalk, giving the once-over to every woman he met. He was viewing them through new eyes — a view he himself was not accustomed to. He was trying to pick out a woman who might be worthy of bearing him a son — a woman he felt he could have a child with.

Immediately all the stylish girls with heavy makeup who had earlier attracted his attention fell away. He had completely lost interest in all the girls who dressed in tight-fitting clothes or semi-nude in mini-bikini tops to show off their figure.

*It's clear why they do that — it's what's on their minds, he thought to himself. And then they try putting an intelligent expression on their face. They use their various body parts to attract men, and maybe someone will bite. And they do bite, of course, only not to have kids. It's a bite for a shag, no procreation there. Go on, dummies, wiggle your behinds! I'm not going to let any wigglers like that have my child.*

Two girls he happened to notice coming toward him were smoking as they walked, and one of them was holding in her hand an open bottle of beer.

*Now they're the kind that are absolutely no good for having children. Only an idiot would want to have a child with that sort.*

Another thing Viktor noticed was that very few of the women and girls he saw were really healthy-looking. Some were slouching, others had an expression on their face that made them look as though they were suffering from stomach cramps. Still others showed definite signs of either obesity or anorexia.

*No, it wouldn't do to have children with them, Viktor thought to himself. Wow! It looks like every one of those women is dreaming of a prince sidling up to them in a white Mercedes, and yet they themselves couldn't do the most basic thing of all for that prince. In their own unhealthy state, they couldn't possibly give him a healthy child.*

Viktor did not bother to call his driver. Instead, he went on to his office on the trolleybus, still looking up and down every woman his eyes fell upon, trying to find among their number one who was worthy to bear his child, but to no avail.

All day long, including during his lunch break and when he was alone in his office, he could not stop thinking about the woman who was to give him a son.

At times he had the impression of looking for a woman he himself could be born from. At long last he came to a conclusion: if an ideal partner could not be found, she would have to be created. For this he would need to find a more or less healthy young woman with an attractive (or, at least, not a repulsive) appearance, one with a good character, and arrange for her to have all sorts of training and health-improvement exercises in the best sanatoriums. But the main thing would be to send her off to be tutored in a top educational institution, one where she could learn all about preparing for pregnancy, carrying the child to term and the birthing process itself, as well as basic pre-school education.

At the end of his working day, he called in his firm's lawyer, Valentina Petrovna, a woman who had been made wiser by the school of hard knocks.

He invited her to have a seat and began in a roundabout way:

"I have a bit of an unusual question for you, Valentina Petrovna. It's rather personal, but it's very important to me. A cousin of mine asked me to make an enquiry for her. Anyway,

she's planning on getting married soon, and she asked me to find out where she can locate an educational institution in our country for women to study up on the best way to carry their pregnancy, as well as what the birth process and subsequent child-raising involves. And what the role of the father should be in this."

Valentina Petrovna listened intently. When he finished, she thought for a while before saying:

"As you know, Viktor Nikolaevich,<sup>1</sup> I have two children, and I've always been interested in literature on birthing and the raising of children, but I've never even heard of that kind of school, either in our country or abroad."

"Strange! They teach everything nowadays, and yet this most important issue isn't touched in either our high schools or our post-secondary institutions. I wonder why?"

"Yes, it *is* strange," Valentina Petrovna agreed. "I've never really thought about it before, but now this state of affairs does seem strange to me. The State Duma, it looks like, doesn't shy away from discussing the topic of sex education in the schools, but the question of teaching how to give birth to and bring up children isn't even raised."

"That means that every couple is obliged to experiment on their own child?"

"That's what it boils down to," replied Valentina Petrovna. "An experiment. There are, of course, a wide variety of courses teaching parents what to do at birthing time, how to handle newborns, but there's no scientific basis underlying the process, and it's pretty nigh impossible to decide which courses are really going to help and which are harmful."

"Did you take any courses yourself, Valentina Petrovna?"

<sup>1</sup>*Petrovna, Nikolaevich* — These are patronymics. See footnote 9 in Book 1, Chapter 1: "The ringing cedar".

“Well, for our younger daughter I decided on a home birth, in the bathtub, with the help of a midwife. A lot of women are doing that today. People believe that it’s more comfortable for a child to make its appearance in the world in a home environment, in the presence of family. They say newborns can tell when people treat them with love as opposed to just simply indifference, which is what you get in many maternity wards. It’s like a conveyor belt there, after all.”

Viktor did not find his conversation with Valentina Petrovna all that encouraging. In fact, it depressed him. For two whole weeks he spent all his free time thinking about the problem of childbirth. For two whole weeks, as he walked about the city on foot, visiting high-class restaurants, bars and theatres, he would give probing looks into women’s faces. He even went out into the countryside, but could not find anyone suitable for him there either.

One day he parked his jeep near a teacher’s college and peered through the jeep’s tinted glass windows at the girls passing by. After three hours he noticed a young woman coming down the steps with her hair tied back in a short, light-brown braid. She had a stately figure and, as it seemed to him, an intelligent-looking face. As she walked past his jeep on the way to the bus stop, Viktor rolled down his window and hailed her:

“Excuse me, please, miss. You see, I’ve been waiting for my friend here, and I can’t wait any longer. If you could show me the best route to the centre of town, I’d be happy to give you a lift home after that, if you like.”

The girl looked at the jeep, assessing the situation, and then quietly answered:

“Sure, why not? I’ll show you.”

After she got into the front seat and they had introduced themselves, the girl pointed to the pack of cigarettes on the dashboard and said:

“You got some nice cigarettes there. Mind if I have a smoke?”

“Help yourself,” replied Viktor. He was just as glad when his mobile phone rang at that moment. No important message, but when he hung up, Viktor put on a worried face and told the girl, who by now was aggressively puffing on a cigarette:

“Something’s come up. I’ve gotta get to an urgent business meeting. You’ll have to excuse me.”

With that he let the girl out on the sidewalk, cigarette in hand, after deciding there was no way he was going to let his son be poisoned by tobacco smoke.

All during these two weeks Viktor did not meet with his girlfriend at all. He did not even ring her up. He had decided that if she did not want to have a child with him, if all she wanted to do was have a good time and hang around fancy resorts, he had no use for her.

Certainly it had been fun spending time with this beautiful and intelligent woman, but now his life-plans had taken a completely different turn. *I’ll leave her the flat*, Viktor decided. *After all, this woman did spice up my life for a while*. He headed over to the university Inga attended, to give her his keys to the apartment. On the way there he rang her up on his mobile:

“Hi, Inga!”

“Hi!” came the familiar voice over the telephone. “Where are you now?”

“I’m almost at your university. Will you be finished classes soon?”

“I haven’t gone to the university for ten days now. To tell you the truth, I can’t see myself going back there any time soon.”

“Something happened?”

“Yeah.”

"Where are you now?"

"At home."

When Viktor opened the front door and entered the flat, Inga was lying on the bed in her bathrobe and reading some kind of book. Glancing at Viktor, she said, without getting up:

"There's coffee and sandwiches in the kitchen."

And once more she buried her nose in her book.

Viktor went into the kitchen and took a couple of gulps of coffee. After lighting a cigarette, he plunked his keys down on the kitchen table, then went back to the door of the bedroom, where Inga was still reading, as before.

"I'm leaving," he told her. "Maybe for quite a while, or maybe for good. I'm leaving you the flat. Good-bye. Take care of yourself, hang loose."

And with that he headed toward the door. Inga caught up with him right in the doorway.

"Hey, wait a minute, there, scamp!" she said with an upbeat tone, tugging at Viktor's sleeve. "You're leaving me, eh? You turn my whole life upside-down, and now it's 'Good-bye?'"

"Now how have I turned your life upside-down?" Viktor asked in surprise. "You gave me a good time, and I bet it wasn't too bad for you either. You now have the flat all to yourself, and a closet full of clothes. Take care of yourself, have fun the way you wanted to. Or is it more money you want?"

"You know, you really *are* a scamp! C'mon! First you spit on my soul, and then you carry on about the flat, clothes, having fun?"

"Hey, take it easy. Don't make a scene. I've got important business to attend to. Good-bye!"

Viktor reached for the door handle. But Inga once again held him back, grabbing hold of his arm.

"Not so fast, darling. Hold on a moment. There's something I want you to tell me. Did you ask me to bear a child, or didn't you?"

"I asked, and you said no."

"Yeah, I said no, at first. Then I thought about it for a couple of days and changed my mind. I quit graduate school, quit smoking, I work out every morning, and now I've got hold of these books about life, and children. I can't put them down. Here I am reading up on the best way to have a child, and he says 'Good-bye'! I can't imagine anyone but you as the father of our..."

When Inga's words finally sunk in, Viktor gave her a boisterous hug, whispering her name over and over again. Then he hoisted her in his arms and carried her into the bedroom. Tenderly, as though handling a most precious treasure, he laid her down on the bed and began tearing off his clothes. With greater passion than ever before he embraced her as she lay on the bed. He began kissing her shoulders and breast, at the same time trying to remove her bathrobe. But all at once his efforts met with a silent protest, and she started to push him away.

"Hey, calm down there... please!" Inga said to him. "That's not the way. To put it in a nutshell, I'm not going to have sex with you today. Or tomorrow, or a month from now."

"What d'you mean, no sex? Didn't you just tell me you agreed to have a child?"

"That's what I said."

"But how can you have a child without sex?"

"Sex should be something quite different. Fundamentally different."

"How so?"

"Well, it's like this. Tell me, my dear, future, loving Papa, why do you want your child to be born?"

"What are you talking about?" Viktor sat down on the bed in shock. "Everybody knows why. There's no two ways about it."

"You're making yourself very clear. But still, let's be specific as to what you want and which way you want to go about

it. D'you want your child to be born as a consequence — a side-effect — of your fleshly desires? Or of our joint fleshly desires, for that matter? Or would you rather see him as the desired offspring of our mutual love?"

"I don't think a child would fancy being just a side-effect."

"So, then, the offspring of love. But, you see, you're not in love with me. Sure, you find me attractive, but that's not the same as love."

"You're right, Inga, I find you *very* attractive."

"There, you see? And you're very attractive to me, but that's still a ways from love. We have to earn each other's love."

"You must have been hitting some pretty strange reading material, eh, Inga? Love is a feeling, it comes all by itself from goodness-knows-where. And it disappears goodness-knows-where. You can earn somebody's *respect*, sure, but love?..."

"But it is precisely each other's love that we've got to earn, and our son will help us do it."

"Our son?! You really feel we're going to have a son?"

"Why 'going to'? It's already a fact."

"Hey, what does that mean?" Viktor jumped up. "Are you telling me you're already pregnant? You've been hiding it from me, eh? Whose child is it? How far along is it?"

"It's yours. And it hasn't started yet."

"So, it's not there yet at all?"

"It is."

"Listen here, Inga. I really have no idea what you're on about. You're talking some sort of nonsense. Can't you put it, somehow, more clearly?"

"I'll try. You see, Viktor, you got this desire to have a child and you've begun thinking about it. Then I got the same desire, and I too began thinking about it. We know today that human thought is material. And that means, if we both have a mental concept of our child, it already exists."

"And where is it now?"

"I don't know. Maybe in some other dimension we don't know about. Maybe, out there in some one of the galaxies of the Universe he's running barefoot through the stars and looking down on this blue Earth where he's going to get a material embodiment. Maybe he's now choosing the place and conditions he'd like to be born in, and wants to let us know. Can't you hear, or feel, what he's asking us?"

Viktor looked at Inga wide-eyed, as though seeing her for the very first time. She had never come out with reasoning like this before. He could not make up his mind whether she was serious or simply joking. But that phrase *maybe he's now choosing where he'd like to be born* stuck in his mind.

People are born in all sorts of different places — some are born in an aeroplane, on board ship or in a motor car. Many are born in hospitals in maternity wards, some at home in the bathtub. They are born wherever it works out for them to be born, but where would children *like* to be born? For example, he, Viktor, if he had had the opportunity and the choice, where would he like to have been born? In Russia, or in one of the best hospitals in England or America? But none of these alternatives struck him as being particularly appealing.

Inga interrupted Viktor's train of thought:

"I've already worked out a detailed plan for our joint preparation for meeting our son."

"What sort of plan?"

"Listen to me carefully, my dear." Inga spoke decisively like never before, either sitting in an easy chair or pacing the floor. "First, we've got to get ourselves in top-notch physical shape. From now on we shan't smoke or drink. We have to do a thorough cleaning out of our insides, starting with the kidneys and liver, with the help of various teas and fasting. I've already selected a method.

"From now on we shall drink only spring water — that's very important. I'm already having five litres of spring water

delivered every day. Sure, it costs twice as much as in the stores, but never mind, we'll get by.

"Every day we need to do physical exercises to strengthen our muscles and intensify our blood circulation. We still need fresh air and positive emotions, which are not all that easy to come by."

Viktor liked Inga's decisiveness, as well as her plan of action. Without giving her a chance to finish, he declared:

"We'll buy the best work-out equipment for our physical exercises, and hire the best masseurs. I can send one of my drivers to pick up spring water for us every day. The driver can also go and collect air from the forest — he can use a compressor to store it in cylinders under pressure, and then we can release the air in our flat a little at a time. Only I have no idea where we can get or buy positive emotions. Maybe we could go visit some fine resorts, like on our honeymoon trip? I mean it — *a honeymoon.*"

Viktor's mood was getting more and more upbeat by the minute — thanks both to Inga's decisive and carefully thought-through approach to childbirth and to her desire to have a child by him. And he was glad to know that the son he had foreseen in his dream would be borne not by just some flighty female interested mainly in money but by Inga, who was taking such a serious and responsible approach to the matter.

He really wanted to do something nice for Inga, whom he already considered to be the mother of his future son! He got up, quickly put on a suit, walked up to Inga and solemnly declared:

"Inga, will you marry me?!"

"Of course I will," Inga replied in accord, as she buttoned up her bathrobe. "Our son should have official parents. Only there's no point in going to some fancy resort for our honeymoon — that doesn't fit in with my plan of preparation for childbirth."

“What does fit in, then? Where else can we get positive emotions?”

“We should go around the outlying villages and find a spot we both really like. It has to appeal to both of us, and that means it will appeal to our son too, when he sees it. We’ll buy a hectare of land there, and you will build a small house where our child’s conception is to take place. I shall stay there all nine months of my pregnancy, maybe with an occasional brief outing. We’ll plant a new garden right there on our very own plot of land. I shan’t give birth in a hospital, but in the little house on our family domain.”

Viktor could not believe his ears. He could not believe that Inga — a smart, glamorous woman who used to be so keen on hanging out at fashionable clubs and popular resorts — could have changed her whole way of life so radically. On the one hand, he was flattered by Inga’s vision — after all, she had *his* child in mind. On the other hand, did not this vision harbour just a hint of abnormality?

He had heard from one of his friends of the existence of a series of books describing an unusual approach to childbirth. His friend had mentioned the importance of each family having their own hectare of land, and had given him this little book with a green cover called *The Book of Kin*. He had not got round to reading it, but he had heard that these books had been stirring up quite a controversy among the public. People who read them were beginning to change their whole way of life.

All at once, Viktor’s eyes fell on a pile of books with green covers lying on one of the bedside tables. He walked over and read the series title: *Ringling Cedars of Russia*.<sup>2</sup> Among them was *The Book of Kin*. Viktor now realised that all these unusual

<sup>2</sup>*Ringling Cedars of Russia* (Russian: *Zveniaschie Kedry Rossii*) — This was the original Russian title of the Ringling Cedars (or Anastasia) series.

ideas Inga had about preparation for childbirth she had taken from these books, and she was getting ready to carry them out to the letter. He was still not quite sure whether this was a good or a bad thing.

There was something disturbing about Inga's unusual and unquestioning conviction. It was as though an invisible someone had changed her views and whole outlook on life. But had these books changed Inga for the better, or had they made her just a little quirky? Viktor kept rehashing the question over and over in his mind, and began to argue with her:

"Inga, I know you got your ideas from these books. I've heard about them. Some people find them exciting, others say there's a lot in them that's simply fairy-tale-ish and can't be proved. Maybe you shouldn't just automatically believe everything that's in them? Think about it — what's the point in our taking a plot of land and building a little house and wearing ourselves out planting trees?"

"I've got enough to buy us a fine mansion with landscaped grounds, a swimming pool, nice lawns, pathways and a garden, if that's what you want."

"There's a lot of things we could buy, of course," Inga blurted out, very emotionally, for some reason, "even a facsimile of love. But I want us to plant our garden ourselves. All by ourselves! 'Cause I want to be able to say to my son when he grows up: *You see this apple tree, son, and that pear tree and the cherry tree? I planted and watered them myself when you were just a little tyke. I did that for you. You were oh so little, and these trees were oh so little. Now you've grown, and they've grown too, and they've begun to bear fruit for you. And I've tried to make the whole Space around your little Motherland nice and beautiful for you.*"

Inga's outpouring of emotion was convincing, and Viktor liked what he heard. He even started having regrets that nobody in his lifetime had been able to take him to a garden like that and say: "This tree here was planted and grown for you

by your parents." *Yes, of course, Inga's right*, thought Viktor, *only why is she talking only about herself, as if I don't exist?* Feeling a bit slighted, he asked:

"Inga, why would you tell our growing son only about *your* part in this?"

"Cause you don't want to plant a garden," Inga calmly replied.

"What d'you mean, I don't want to? You bet I do, if it's important for our future."

"Well, then, if we're going to do everything together, I'll tell our son *we* planted this garden for him."

"That's more like it," Viktor observed, comforted.

For two months Viktor and Inga spent all their weekends driving around the outskirts of the city, looking for a place to build their future kin's domain. It was a most pleasant undertaking, and right at that time it seemed to Viktor that there was no more important task in life than searching for the one place on the Earth that would satisfy his soul and, consequently, that of his future son.

And so it happened one day that they came to the edge of a deserted village about thirty kilometres outside the city.

"There it is," Inga said quietly, jumping out of the car first.

"I feel something here, too," responded Viktor.

Later they made a second trip to the place, and spent a whole day looking over the site and talking with the local residents. They were told that the soil was not all that fertile, as there was ground water fairly near the surface. But that did

not faze Viktor. He became more and more persuaded that this particular land, along with the little birches growing on it, as well as the sky and clouds above it — that all of this belonged to him. To him and his future son, and to his and Inga's grandchildren and great-grandchildren. And if the ground was not all that fertile, no matter — he would make it fertile.

It did not take long to draw up the documents to purchase two hectares of land, and after four short months the plot sported its own pretty, almost fairy-tale cabin, built of kiln-dried logs.

The cabin featured a sauna and a biotoilet, along with hot and cold running water straight from a well dug on the spot. And on the second floor — a cozy bedroom with a window overlooking a forest and a lake.

Inga designed the layout of the cabin with all its furnishings. She also came up with a plan for the landscaping. Together they planted cedars, firs and pines around the perimeter of the lot, as well as little fruit-tree saplings. Every evening Viktor would hurry home to his little cabin on his future domain, where the mother-to-be of his child was taking care of the home front.

All the women Viktor had known before not only receded into the background — they simply ceased to exist for him at all. Inga's radical approach to childbirth engendered new feelings in him. They were still not entirely clear to him, and they were probably quite different from traditional love, but he was quite convinced that he could never part from her, and only she could bear...

It was only with her that he could build a future. The two of them went in to Moscow together to attend courses on home childbirths. There was one peculiarity of Inga's that Viktor found disconcerting — her outright refusal to have intimate relations with him. She kept insisting that their child should not be born as a result of fleshly lusts, but from Man's

infinitely greater and more meaningful desire, which was something else again.

*Now this time the author of these little green books has gone too far!* thought Viktor. *Come on, could it really be possible to do away with the factor of fleshly desire completely?*

But one day, as he lay beside Inga on the bed, not having any kind of sex in mind but thinking only of his future son, he touched her breasts. Inga at once pressed against him and put her arms around him...

In the morning, while Inga was still asleep, Viktor headed over to the lake. The world around him seemed entirely different — it seemed unusual and joyful.

What had happened the previous night he had never experienced before, either with Inga or with any of the other women he had known. This was no ordinary sex. It was an inspired impulse of creativity. Of course people are born and people die. But if they never experience anything like this over their whole lifetime, they are missing something — maybe the most important thing. But thanks to Inga, it did not escape Viktor. And he began to experience new warm — yea, fervent — feelings toward the one woman in his life: Inga.

All nine months of her pregnancy Inga spent on the domain, going into town only occasionally. She had it all worked out where the baby pram would be kept and where the crib would stand. She even had Viktor plant a modest-sized lawn where she could walk with their little son.

Her contractions began a week ahead of the expected time. Their future son was apparently anxious to make his appearance in his marvellous Space on the Earth.

From the information they had received during their childbirth courses, Viktor knew what a father should do to assist during the labour, but the only rational thing he turned out to be capable of accomplishing was to ring up the midwife they knew and call for an ambulance to stand by in case of emergency. Inga had to draw the water in the bathtub herself, prepare the towel and measure the water temperature, while he paced the room trying to think what he should be doing, but could not for the life of him recall what it was.

With no husbandly help to count on, Inga climbed into the bathtub on her own. The contractions continued, but each time one occurred, she simply drew upon her beautiful voice to sound forth on notes of joy and triumph.

Finally, out of all he had learnt during the courses, Viktor managed to remember one thing: *positive emotions*. He glanced over at the windowsill and saw the flower Inga had planted in a pot there — now in full bloom. He grabbed the flower-pot and ran with it into the bathroom, exclaiming excitedly over and over again:

“Look, Inga, your flower’s blooming! Your flower’s blooming! It’s come out, just look!”

He was standing there holding the flower-pot when his son’s little body appeared in the bathtub.

The midwife arrived only after Inga had already placed the tiny body on her tummy. Seeing Viktor standing there holding the flower-pot, she snapped:

“And just what are you doing?”

“I’m giving birth to a son,” replied Viktor.

“Ah,” the midwife nodded in agreement. “Then put your pot back on the windowsill and bring me...”

*I need to tell all men...* thought Viktor, as he ran about the house for the umpteenth time, *true and lasting love comes only when together with your beloved you give birth to a long-desired child.*

## CHAPTER NINE

### A fine state of affairs!

A fine state of affairs! We live out our lives, and we don't even try to figure out what our society's all about! And yet it is one of the most important questions in life. It's one that's troubled me for a long time now. I really wanted Anastasia to have a look at the documents on the building of the domains which I had brought with me, along with my appeal to the President of Russia and the draft legislation drawn up by my readers.

After thinking it over, however, I decided not to show these documents to Anastasia. I didn't want to risk upsetting her. Especially now, if it turns out she's pregnant, she needs positive, and not negative, emotions.

I finally decided to give the whole packet of documents to Anastasia's grandfather and asked him for his opinion.

"Oho!" exclaimed Grandfather, as he took the voluminous packet from my outstretched hands and remarked: "What d'you want me to do, Vladimir — read all this?"

"Yeah, I want to hear your opinion about them — about how things have turned out."

"And what good would that do you?"

"It would help me decide what course of action to follow."

"You ought to be deciding your own course of action, without any kind of advice."

"Does that mean you're not willing to read these?"

"All right, I'll read them, just so you won't take offence."

"I shan't take offence. What sense is there in reading if you're obviously reluctant to do so?"

"Sense? The sense is in not wasting time on useless stuff."

Grandfather sat down on the ground beneath the cedar, opened the folder and began leafing through the pages, taking his time. Occasionally his gaze would pause and focus on a particular page. Sometimes he just kept turning the pages with a passing glance. After a while he said:

“Vladimir, I need to look at everything carefully. Why don’t you go take a walk in the meantime?”

I walked about twenty metres off and began pacing back and forth, waiting for him to finish reading the documents I had brought with me (including the articles prepared for the almanac).<sup>1</sup> I would like to share these with you too, dear readers.

### Talking with presidents

Please tell me, esteemed sirs — all you presidents, prime ministers and chancellors — who in fact is in control of nation-states?

The question may seem strange at first glance. Any school-child will offer the reply:

“Countries are under the control of the president, the government, the Duma.”<sup>2</sup>

But an answer like that simply points to the extent of the mass illusion at work here, and not just in our country. All

<sup>1</sup>*the almanac* — see footnote 1 in Book 7, Chapter 28: “To the readers of the Ringing Cedars Series”.

<sup>2</sup>*Duma* — the lower house of the Russian parliament (see next chapter).

sorts of ordinary people are under the spell of this illusion, just like the rulers themselves. It can and must be dispelled with the aid of logical thinking. Those who are unable to discern the illusoriness engendered upon the Earth will die without having really lived, because the whole of their so-called life is but an illusion.

And so — how to dispel this illusion?! First of all we should define what it means to ‘control a nation’. In the main, and perhaps exclusively, this refers to the control of social processes and phenomena. The chief person in this control system is called a president.

So, let’s ask him:

“Tell us, please, Mr President, are you in charge of drug addiction in our country?”

“No,” the president will reply. “I’m not in charge of that.”

“What about the rapid development of prostitution?”

“No, I’m not in charge of that either.”

“And what about widespread corruption and bribery?”

“No.”

“And the extinction of our population?”

“What are you talking about? I’m not in charge of anybody’s extinction.”

There are a whole lot of questions which he would have to answer with the phrase “No, I’m not in charge of it.” He has, in fact, no alternative, since giving any other answer would brand the ruler a criminal.

So it turns out that there are unmistakable large-scale processes taking place in society, influencing the lives of every single individual, but the supreme ruler and the whole host of officials under his command have nothing to do with these processes. *What, then, are they, in fact, in charge of?*

Upon closer inspection, all they do, it turns out, is involuntarily and unwittingly supervise the concealment of the true rulers, who, you see, really do have a reason to hide.

In any case, no president, chancellor or prime minister can possibly be the real ruler of a nation, either in theory or in practice. Their only task is to carry out someone else's will under the guise of their own, and this can be attested by scholars — psychologists, for example.

You and I can come to a similar conclusion if we make a careful analysis of our own lives.

Haven't our own lives been influenced by 'someone' — say, in kindergarten, school or college? If they want to, they can bring us up to be communists, or fascists, or democrats, as in our present situation.

And through this process of upbringing and indoctrination, they engender the corresponding social processes.

"Reality should be determined only through one's own self," Anastasia has said. Her words are good, and true. But to understand reality, we need to reflect, contemplate. However, our prevalent way of life leaves precious little time for reflection, and so by default we use someone else's definition of reality that has been imposed on us.

In the case of a head of state, he has even less time for reflection than ordinary people. His daily schedule is calculated down to the hour and minute, and often not by himself.

History also teaches us the impossibility of a universally visible ruler actually controlling a nation-state.

It is known, for example, that in Ancient Egypt the pharaoh was raised by priests. Naturally, they knew in advance what many of the pharaoh's future decisions would be. But even during the tenure of his reign they would still keep giving him advice. So in actual fact, the pharaoh was merely carrying out somebody else's will.

Rulers in the Orient also had wise-men at their courts and consulted with them. But neither the Egyptian priests nor the Oriental court wise-men, nor the sages of our Vedruss

period, ever burdened themselves with affairs of state. Their principal task was that of analysis and reflection.

Not affording such an opportunity to our present rulers and parliamentarians renders them incapable of exerting an effective influence on the processes taking place in society. It deprives them of power.

This was confirmed to me by a well-known three-term deputy of the legislative assembly, who is also a professor with a Ph.D. in economics. But he confirmed this only after serving his parliamentary terms, when he finally had the opportunity to engage in reflection and analysis.

It was confirmed in the scandalous incident reported in the press when a deputy of the present Duma complained to the Constitutional Court that the President's Deputy Chief of Staff advised a group of State Duma representatives in no uncertain terms not to reason things through but simply to vote as they were told.

Incredible as it may seem, the Deputy Chief of Staff, perhaps intuitively, turned out to be the closest of all to the truth. It was far quicker and more efficient for him to make decisions on his own than to have a crowd of people beating their brains out over these decisions — a crowd of people who didn't have the opportunity to think. This conclusion is confirmed by the fact that none of the parties in the State Duma have put forward even a slightly articulate platform that the public can understand.

The situation with the ideas and programme already put forward by Anastasia offer the clearest evidence of the inability of the existing system to engage in independent decision-making.

Anastasia's programme has been supported by a great many people, and, as studies have shown, the overwhelming majority of these people lead a sober lifestyle and are inclined to reflection. Vast numbers of people in different parts of the

country have overcome great challenges in their efforts to implement this programme. On the government level, however, there are people who seem incapable of even seeing what is going on in the public arena.

Not only that, but counteraction has begun which has served to highlight precisely the influence foreign powers have been exerting on Russia, and the fact that the country is far from being under the control of its own government.

This counteraction, of course, does not come from the ranks of the priests, who plan out programmes for centuries and millennia to come. It is simpler and more specific, and arises from the current system of world order, in which Russia has been assigned to the role of a supplier of raw materials for the West and a market for its substandard merchandise.

By 'the West' I do not mean the ordinary people of Europe or America. I'm talking about a group of transnational companies and financiers who are interested in their own profits.

As we can all attest for ourselves, over the past decades their plans have been implemented at an alarming rate, while our rulers, to say the least, have done nothing to prevent this implementation. This is another fact clearly testifying to their lack of any kind of true power or authority.

The only counteraction to the destruction of the state and the annihilation of a significant part of its population is the programme put forward by Anastasia.

"But," the majority of my readers might reasonably argue, "why do you continue to appeal to those who have no power and are incapable of changing anything?" I shall respond.

1. I am appealing, after all, not only to the authorities, but in the first instance to *you*, dear readers, in the hope that our combined efforts will enable us to understand the situation we find ourselves in — in the hope that this situation will come out in your interpretation in family chronicles. This is an absolutely vital step. Otherwise not only we, but

our children, too, will have an unenviable future to look forward to.

2. I remember Anastasia's question: "But who is to blame for the lack of acceptance of truth — the one who does not accept the truth or the one from whom he receives it?"<sup>3</sup> I think that I am partly to blame for the lack of sufficient governmental support offered to those who have begun to set up their domains. I was not able to express the idea in a language government officials could understand. Sure, we all speak the same Russian language, but different segments of the population use it differently, and attach different interpretations to words.

In short, I am unable to express myself in a language government officials understand.

The President's administration, the Government and the Duma are all comprised of people, just like you and me. They too have children, wives and grandchildren, for whom, as would any other parent, they wish a bright future. And if they should prove capable of understanding the situation, they will gain true power and will be in a position to significantly influence the positive processes taking place in our society. But where and how can we find the words capable of putting an end to this "vanity of vanities"?<sup>4</sup> We must look! Otherwise new politicians will appear and will come up against the same system blocking their thought. Hence I am appealing to you, my readers, with a request to find together the words which will be understood by the various segments of our society.

And so for the umpteenth time, I stand my ground and appeal to our President and Government.

<sup>3</sup>Quoted from Book 2, Chapter 7: "Who's to blame?".

<sup>4</sup>*Vanity of vanities* — a quote from Ecclesiastes 1: 2.

## TO THE PRESIDENT AND GOVERNMENT OF THE RUSSIAN FEDERATION

As supreme ruler of the Russian State, you are undoubtedly more interested than anyone else in the prosperity of our country. Like any head of state, you would like to be recognised by the public for having left the brightest of all possible legacies during your tenure in office — namely, laying a foundation for the prosperity of our nation and its people.

Similarly, every Russian family desires to shape its life and daily routine in a manner worthy of human existence. And every mother who bears a child dreams about a happy future for her offspring, realising that such a future is possible only when the nation as a whole is heading in a clear and predictably good direction.

It is on this premise that you are endeavouring to build our national institutions — our government, our ministries and our regional authorities. Nevertheless, no matter how sincere your desires and the endeavours of our state apparatus may be, our country continues to be plagued by corruption, drug addiction, prostitution, juvenile crime and many other social ills.

Our environmental and demographic situation is becoming hopelessly entangled. Families are falling apart. The country's overall population is in daily decline. We as a people are simply dying out.

Everything you are doing is extremely important: the consolidation of the vertical power structure, the reorganisation of the state apparatus, the reform of the military, the doubling of the GDP in the economic sector. All our national indicators are on the plus side, the dynamics are positive, but... the public doesn't feel it. The people of our country — our neighbours, colleagues and co-workers, relatives, parents and

children — are all finding it more and more difficult to understand each other, to find kind and sympathetic words to say to each other, to build their mutual relationships on the basis of honesty, decency and trust. Fear for tomorrow, for the future of their children, shows no signs of letting up. Are not these the most important indicators to consider?

We see signs of an increasingly active struggle against social ills, but these ills are not abating. Why not? Why do the people's desires and the President's endeavours not correspond with what is happening on the ground?

Isn't it time we all faced the truth squarely in the eye and came to the conclusion that we are struggling merely with effects, and not with their underlying causes? Isn't it time for you to openly admit that our country is playing host to an ideology foreign to our society, and realise that there are certain definite forces underlying many of our ongoing social ills? As a professional KGB man, you couldn't help but be aware of this.

These forces have made such fools of our peoples that we are beginning to suffer from tunnel vision. Take a simple example: *advertising*. Both learned psychoanalysts and ordinary people will tell you that mass advertising is nothing but a device which exerts a powerful influence on the human psyche. With the aid of this device people in many countries can be persuaded to consume food products which are harmful to their health, or wear uncomfortable clothing, or vote for certain politicians. And this device, which can exert a colossal influence on masses of people, seems to be in your hands, in the hands of our national government. Isn't that so?

Most definitely *not!* It is actually subject to *other* masters. Attempts to bring resolution to this question immediately give rise to accusations of violating freedom of speech. These accusations come from those who actually have no interest whatsoever in promoting people's freedom of speech. The

mass media are, in fact, in the hands of the world's financial magnates.

And they keep spreading this monstrous lie among whole populations, hiding behind the cynical excuse that it is advertisers who support all TV and all the interesting programmes we “so love to watch”. But, in fact, TV is not paid for by any advertisers. All they do is pass on a portion of the money they collect from the public, which they build into the cost of their products in order to pay for their advertising on TV, radio, public transport and the street. Thus it turns out that the public collectively are the real supporters of TV operations — every time they purchase substandard consumer goods and food products containing chemical additives. They support mediocre and downright shoddy TV programmes and soap operas, which keep promoting the image of Man as a maniacally preoccupied Neanderthal.

### **The science of imagery, and who governs the country's ideology**

Throughout history national ideologies have been created through devices which exert an influence on human society through images, through the clandestine ancient knowledge of the science of imagery.<sup>5</sup> Some of our learned chaps might object that there is no such science. But there is. And its

<sup>5</sup>For further references to the science of imagery, see Books 4, 6 and 7, especially Book 6, Chapter 6: “Imagery and trial”.

existence is determined not by the will of academics, but by the very nature of Man. Man is created to think, and thoughts in turn form images.

In recent times we are wont to associate the science of imagery with Ancient Egypt. We learn from history how priests created images to liberate nation-states or seize power over whole peoples.

It was the same kind of knowledge that the SS troops attempted to master in Hitler's Germany, or the KGB's Division 13 in Soviet times.<sup>6</sup>

Certain elements of this science are intuitively employed by modern political technologists in the West, and more recently in our own country. Hence the terminology *image-making way of life, way of thinking,*<sup>7</sup> *a candidate's image.*

To the political technologists it is quite unimportant what a candidate's inner aspirations are, what kind of Man he is, whether or not he is good at his job. Money and the mass media help them create an image which will appeal to the public. And what people end up voting for in elections is not so much the Man himself as the image created for him by the political technologists. It won't be long before we'll all be voting for cardboard cut-out politicians and a papier-mâché president!

As for the shaping of images of whole nation-states and their peoples, these are the masterpieces of an incomparably higher-rank species of political technologists.

Centuries of human history have borne witness to a host of examples of controlling a nation-state through images. The most salient and obvious example for people today of the work of these top-ranked political technologists — or

<sup>6</sup>*Division 13* — designating the unit of the KGB responsible for covert operations, including sabotage, assassination and even terrorism.

<sup>7</sup>*way of life, way of thinking* — both these terms in Russian contain the word for 'image' (*obraz*).

'modern priests' — may be the history of our country and its peoples over the past century.

We all know about the downfall of the Soviet Union, one of the mightiest empires in the world. But what preceded the formation of the USSR and what gave rise to its subsequent collapse?

Precedent to the formation of the USSR was the creation of an attractive image of a socialist future and then of a communist state. Landowners and manufacturers were cast in the image of bloodsuckers of the proletariat. The tsar still reigned in Russia, and the monarchy seemed unshakeable. Yet at the same time an image was at work which was busy attracting followers, and these in turn found all sorts of ways to bring down the monarchy and create a new state — in the new image.

The fall of the USSR was also preceded by the creation of an image — an image of the country as a totalitarian state, along with a discussion on the need to replace it with a new one — a happy, free democratic state along Western lines. The government and leaders of the communist state were cast in the role of bloodthirsty thugs trampling on freedoms and on the people themselves. The socialist order was painted as intolerable and leading nowhere. The image of communists created by theatre and cinema directors, actors and artists, on which whole generations of the populace had been raised, was now summarily shunted aside. But what was there to take its place?

The resulting vacuum began to be filled with images of flourishing businessmen, gangsters, prostitutes and Hollywood starlets. Our young people strove to imitate their habits and morals. There is no disputing the fact that material wealth is fast becoming the criterion by which prosperity is measured. Who attains it and how — that doesn't enter into the picture. The need to build a developed democratic

state has been proclaimed to all, but not a word has been (or is being) said about the insurmountable problems in other 'democratic' countries — drug addiction, colossal corruption, environmental degradation, mental depression, decline in birth-rate and a whole lot else besides.

Women naturally refuse to have children when they see no future for their offspring.

Never mind that people in democratic countries have no clear picture of their own future — our modern 'priests' find it necessary to present democracy in its present form as the only acceptable order for the structuring of human society. Why? Because the conditions of democracy as we know it make it the easiest system to control. It is all too easy to hide behind freedom of speech, freedom of business, freedom of choice and meanwhile throw the public a black lie. And this is done not by happenstance, but deliberately and with considerable forethought. Whatever image you latch on to, you yourself will become.

These political technologists know what will happen next with the whole population. It's not a difficult task to determine who's behind the disasters happening in Russia. All one has to do is track where the country's precious human and financial resources are being siphoned off to each time.

The huge flood of emigration which fled Russia following the 1917 revolution took with it not only a significant amount of capital along with historical treasures and traditions, but, most importantly, human resources.

After the collapse of the Soviet empire, a combination of reforms and a tempting image of prosperous, civilised countries siphoned off (and continues to siphon off) our financial and intellectual resources.

The saddest part is that the latest image of our state is being summoned in the interests of annihilating the whole country and the peoples living therein. No military intervention is

required at all. A more significant force than military weaponry is at work here. An *image* is at work. A combination of factors already perceptible to analysts has been put into operation. Quite a simple combination at that. Let's try to reason it through.

What are we building today? Where are we heading to? The political technologists tell us they are building a democratic state on the Western model. And so, once it is built, we shall all be rich and happy.

"But," millions of our fellow-citizens quite reasonably argue, "if there already exist on the Earth developed states that are both democratic and happy, then wouldn't it be easier simply to go and live there now?" And millions *have* left — and continue to leave — for Germany, Israel and America, putting their intellectual and financial capital at the disposal of these countries. And they become slaves there. The image is working!

But what about those left behind in Russia? What are they to do?

"Build a developed democratic state and become rich," says the image. But what can a traffic cop, say, do to build such a state? Or a sales clerk in a store? Or a civil servant in an administrative office? That's not clear to many people. Neither is it clear how one is supposed to become rich on a salary of three to five thousand roubles a month.<sup>8</sup> But quite a number, after all, have somehow managed to wangle their way through. They drive around in expensive cars, build themselves luxury mansions and holiday at fancy resorts. Somehow they've wangled their way through...

And now the whole country is beginning to follow their example. Sales clerks and customers, traffic cops and office

<sup>8</sup>In 2005 (when this book was written) this represented approximately US\$100–175, respectively, at the then current exchange rate -- or US\$200–350 in buying power.

administrators, army officers and private soldiers, teachers and students. But those who know the science of imagery merely scoff at such efforts.

“Come on,” they say, “catch a few scapegoats among the officers’ ranks. Then you can create a security service within the security service.”

Here we are fighting not against causes, but against effects. The image has already done its work. It is capable of entering unhindered into the minds of politicians and generals, high-ranking government officials and ordinary people. Because it is *image*, it knows neither border guards nor closed office doors. It lures young girls from isolated Russian villages to far-away lands with its promises of a happy life, and then forces them to work as prostitutes in Cyprus, Israel or New York.

For the sake of this promise of a happy life, officials are ready to take bribes and policemen to go into cahoots with criminals. This image has tremendous energy. In the meantime, all our politicians can do is keep mouthing over and over hackneyed phrases like *developed democratic countries, the civilised West*, thereby serving to reinforce the image that is so destructive to our country.

People are aware there’s something wrong with the country, and so they understand when you, Vladimir Vladimirovich,<sup>9</sup> attempt to impose order, but how to accomplish this? Just consolidating your hold on power is not enough. In doing this you are strengthening not just your own power, but the power of the images too.

Thousands of government officials now have more power, but being under the influence of the image, they will unwittingly act in the interests of the image, i.e., in the interests of the image’s creators. But the creators have already decided that Russia’s fate is sealed. Their actions have become

<sup>9</sup>*Vladimir Vladimirovich* – President Putin’s first name and patronymic.

unbridled and brazenly bold. Specially trained personnel have been sent to Russia for the purpose of strengthening the creators' power by supporting an image which can only destroy the country. I can officially state that right at this moment specially trained people are operating on Russian territory — people whose job it is to keep track of, and correct where necessary, the ideological component of the state. I have a feeling you, Mr President, are aware of this, too.

Let us give some thought as to why there have been so few positive images over the past few years in our nation's literature, film and TV programmes — images capable of inspiring people, setting a pattern to follow and helping build a marvellous future for their children. *We* still remember and live by those images, but our children?

We are assured that this is the demand of the majority, that everybody wants to watch only Hollywood starlets, gangster showdowns and sensational reports on bloody happenings. Nonsense! That's not what people want! We are told: if you don't want it, then don't watch — if you don't like it, don't listen. That is called freedom of choice. But that's not quite the way it is. Or, rather, that's not the way it is at all. There *is* no choice here! Not for children, not for adults and certainly not for senior citizens. And unless you happen to be cold-hearted, cynical and soulless, you'll discover the road to the promised prosperity is blocked. And there is no other road. Isn't that the case all around you? Or all around us?

All this depravity is being deliberately foisted upon us. Special covert selection mechanisms were put in place long ago. Any poets, innovative educators, writers and directors who have dared create positive images for Russia are cruelly persecuted. Everything is simply closed to them.

This is partly the work, too, of Western spy agencies that claim to be fighting sectarianism. You can hear such declarations coming from the mouths not just of Russian

special-service agents, but from social and political activists as well, including the highest officials of the Russian President's administration — your administration. For example, Mr Surkov,<sup>10</sup> your Deputy Chief of Staff, said during a newspaper interview:

A secret war is being waged against Russia by circles in America, Europe and the Orient, who still regard our country as a potential enemy. They consider themselves to have rendered a service in fostering the virtually bloodless collapse of the Soviet Union, and now they are attempting to capitalise on their success. Their goal is none other than the destruction of Russia and the filling of its vast spaces with a multitude of petty quasi-states.

Such a statement is entirely plausible, even if just because the forces that overthrew the USSR still exist and, quite naturally, not satisfied with having achieved victory at one stage, they will definitely continue with a stepped-up offensive.

And it is especially important here not just to state facts but to understand the mechanism by which the destructive influence operates.

We already know that the collapse of the USSR was brought about not through armed invasion but as the result of an ideological manipulation of our people. Ideology — that is the principal means of either annihilating or reinforcing any nation-state. But any ideology can be used to influence masses of people if it has a well-built and efficient operating structure. It exists and it is not ours. It is not *our* images that are

<sup>10</sup>*Vladislav Yurevich Surkov* (1964-) — the Russian President's Deputy Chief of Staff since 1999. During the previous decade and a half Surkov held executive positions with various Russian financial institutions and media organisations.

acting through it. But where has our own structure disappeared to? *We destroyed it!*

In the USSR, apart from its ideological institutions and broadcast centres, the ideological departments of the Communist Party's Central Committee, the Ministry of Culture and the press, there was a huge network including so-called 'Palaces of Culture' and 'Houses of Culture',<sup>11</sup> along with urban and rural district activity clubs.

Such institutions afforded the opportunity for millions of young Soviet citizens to engage in amateur artistic and performance circles, including the holding of lectures and meetings, as well as the opportunity for the accepted state ideology to get through and be explained to the masses.

At the beginning of *perestroika*, when the ideology changed, this network of institutions was liquidated — their financing was cut off.

It is difficult to imagine that a driver motoring along the highway who suddenly realises he is heading in the wrong direction, instead of turning around and heading the right way, begins to dismantle his car on the spot. But something like that is what has happened in our country. When the decision was taken in society (not without the aid of certain forces, of course) that we were heading in the wrong direction, instead of turning around and using existing institutions, they were simply dismantled. And what was there to take their place?

It was proposed to hand over the basic task of spiritually educating the population, especially the youth, to Russia's Orthodox Church. However, more and more testimonies are indicating that, first and foremost, it is necessary to educate the majority of the clergy itself.

<sup>11</sup>*Palaces of Culture, Houses of Culture* (Russian: *Dvortsy kul'tury, Domá kul'tury*) — These functioned along the lines of community centres, including concert halls and recreation centres, to provide ideologically approved entertainment and recreational facilities for the public in Soviet times.

As an institution of spirituality, Russia's Orthodox Church was catastrophic in its failure to justify the hopes placed in it. Why? Simply because, through the help of the State, it only took a few years to open twenty thousand churches, while it requires centuries and a host of strict conditions to educate twenty thousand highly spiritual clerics who are truly capable of comforting and educating other people.

And not the kind of conditions as when the state pours forth grants and favours, which only corrupt and attract opportunists and vagabonds. In that scenario the winners are not those pastors who are rich in spirit but those who are more devious and position themselves closer to the trough. It is not the congregation led by a spiritually minded prior that comes out on top, but the one that manages to obtain financing.

After all, the process of attracting parishioners and raising their level of spirituality is a lengthy one — it can drag on for years. So the village priest is obliged to mend his own frock, unable to afford a new one, while his urban counterpart drives around in an expensive foreign car.

This acquisitiveness and covetousness already plaguing the clerics of Russia's Orthodox Church was brought up during a speech at the annual meeting of the Moscow Diocese in the Cathedral Church of Christ the Saviour<sup>12</sup> on 15 December 2004 by Alexei II,<sup>13</sup> the Holy Patriarch of Moscow and all the Russias, when he said:

<sup>12</sup>*Cathedral Church of Christ the Saviour* (Russian: *Katedral'nyj sobor'nyj khram Khrista Spasitelja*) — the seat of the Moscow Patriarchate of the Russian Orthodox Church. The original church, built in the early part of the nineteenth century to commemorate deliverance from Napoleon's armies during the War of 1812, was blown up on Stalin's orders in 1931. After World War II the site was used to construct the world's largest swimming pool. The cathedral was reconstructed on the site in the mid-1990s, following the collapse of the communist régime.

Today we are obliged to confront a series of negative phenomena — including the general static state of the church's activity, the absence of dynamics in congregational life, the low attendance by worshippers at temple services and the lack of interest in religion on the part of the rising generation.

The growing commercialisation of many aspects of congregational life is an alarming indicator of the dying out of the Orthodox consciousness, spiritual blindness and the disparagement of ecclesiasticism. Material self-interest all too often comes to the fore, overshadowing and stamping out everything living and spiritual. All too often temples deal in 'church services' as though they were commercial firms.

Nothing pushes people away from the faith as much as the selfishness of priests and others who serve in the temples. It is with good reason that covetousness is termed a hateful, murderous passion and the only treason in respect to God — in other words, a hellish sin.

The Patriarch outlawed taking payment for performing church sacraments — the rituals of communion, marriage, last rites and burial services — as well as commercialising the 'services' of the Church. But will clerics heed the ban imposed by the supreme church hierarchy, if they already transgress a higher law — the commandments of God?

<sup>13</sup> *Alexei II* (also spelt in English: Alexius II) — the spiritual head of the Russian Orthodox Church. Born Alexei Mikhailovich Ridiger in 1929 in Estonia, in 1990 Alexei II was chosen *Patriarch of Moscow and of All the Russias* (*Patriarkh Moskovskiy i vseya Rusi*).

## Russia's Orthodox Church — but is it Russia's?

Apart from everything else, Western spy agencies have exerted what may be the strongest and most destructive influence on Russia's Orthodox Church (ROC).<sup>14</sup> And this could have been foreseen, of course, if someone had only been assigned to foresee it. We know that major shifts in our country are always preceded by an ideological makeover. Could the departments of Western spy agencies responsible for the transformations in Russia required by their masters leave untouched such an important institution as ROC? Of course not! Otherwise their work would not be professional. Besides, the conditions in Russia at the time offered more than fertile ground for ideological diversion. Occupied with their own reorganisation, *our* spy agencies, to put it mildly, were busy with their internal 'settling of accounts', which I believe is still going on.

It is impossible to know about every single operation perpetrated by a Western spy agency through ROC structures. But one in particular has struck a chord in society as a whole. Millions of Russia's citizens, including the Church's own clerics, have felt and continue to feel its destructive consequences. I'm talking here about the agency formed under the ægis of ROC which labels as 'sects' a wide range of secular and religious organisations, thus provoking negative reactions to ROC on their part.

<sup>14</sup>*Russia's Orthodox Church* (Russian: *Rossiiskaya Pravoslavnaya Tserkov*) — traditionally known as the Russian (*Russkaya*) Orthodox Church. Note that the author deliberately uses the word *Rossiiskaya* in this phrase, emphasising its association with Russia (*Rossiya*) or the Russian Federation (*Rossiiskaya Federatsiya*) as a political entity, rather than *Russkaya*, which is used more in reference to the Russian people, language and culture. See also Book 7, especially footnote 11 in Chapter 15: "Opposition", as well as footnote 3 in Chapter 20: "Pagans".

These 'anti-sectarians' have been acting in the name of the Church and even, as they claim, with the blessing of Patriarch Alexei II. In response to their actions people who formerly maintained a tolerant attitude toward the Church or even attended services as baptised members, have now simply torn off the crosses they used to wear around their necks.

One more ploy of the 'anti-sectarians': in working to expose their straw-man 'sects', they virtually criticised and brought shame upon Russia's Orthodox Church itself, dealing it a serious blow. After that, they decided to take control of the higher organs of state power in the Russian Federation.

Having accepted the idea of a marvellous future for Russia (as shown in these books) with their heart and soul, people in various parts of Russia have turned (and continue to turn) to local administrations, asking them to grant them plots of land for the setting up of family domains. And, what is truly amazing, people for the first time are not asking for favours, or salary or pension supplements, but simply a small piece of their country's natural landscape where they can create their own living (and not just survival) conditions.

It would seem that this impulse which has arisen among the public is something that ought to be welcomed with open arms. And this impulse is no fly-by-night whim, but a lasting, well-thought-through desire, as the past four years will attest. This idea has encompassed various segments of the population: school pupils, scholars and entrepreneurs, teachers, doctors and pensioners, soldiers and politicians, artists, poets and writers — including academicians,<sup>15</sup> governors and the wives of presidents of former Soviet republics.

These people can help not only in solving many of the socio-economic problems our country is facing, but also in

<sup>15</sup>*academicians* — members of the Russian Academy of Sciences (a very high rank indeed).

making drastic improvements in our country's demographic situation, unemployment rate and national health, as well as in securing safe food supplies. But the main thing is to harness the mighty force of the people themselves, who, in creating their own Space, will strengthen their beloved country and nation-state which has afforded them the opportunity to do so.

Evidently, however, there is someone who is greatly displeased by these positive aspirations which have emerged in the Russian people.

### **Occupiers in action**

Certain government agencies at the regional (and sometimes even local) level have been advised to treat the readers of my books as sectarians and terrorists, and, consequently, to counteract any initiative they may undertake, especially those wishing to set up their own family domains in rural areas. The mass media were ordered, under threat of sacking journalists, not to report on these initiatives. Or if there were any reference, it had to describe them as part of the 'loony fringe', calling everybody to go to the forest, back into the past etc. People working in the cultural sector were called upon to take countermeasures against anything connected with the books or the ideas set forth therein.

Communications from readers clearly point to the activities of some sort of organisation operating on our national territory through agents in state and ecclesiastical structures

and carrying out destructive policies. And don't just take *my* word for it. This is confirmed by professional researchers who have familiarised themselves with a significant body of collected materials.

A special term has even surfaced: 'the Anastasia cult'. And to whom or to what does this term specifically refer? To me as a writer? To my *Anastasia* book? To the book's heroine, whose name is Anastasia? To the millions of readers of these books? Or to their efforts to implement Anastasia's idea about a marvellous and prosperous Russia? As it turns out, all of the above.

It is a sad sight indeed to see both foreign and home-grown clerics — who are definitely not of any Christian faith — occupying the Orthodox Church and exerting their influence on state officials. Christianity for them is only a convenient cover. Their actions show clearly that they are far removed from any Christian morality. Their methods are 'old hat' — the same methods of falsehood and violence that were used to destroy the culture of Ancient Rus' in favour of a new ideology foreign to the people. I have written about this in my books.<sup>16</sup>

Right off they began accusing me of paganism. But what kind of an 'accusation' is that? It's tantamount to accusing me of the desire to know the history of my country and the culture of my forebears.

There is, however, some very happy, encouraging news. Life has begun more and more often to come out with situations where their unseemly actions are exposed as if by an invisible ray of light. It puts them, one might say, in a rather funny predicament. Judge for yourselves.

<sup>16</sup>See, for example, Book 7, Chapter 20: "Pagans", especially footnotes 3 & 4.

## CHAPTER TEN

# *The Book of Kin and A Family Chronicle*

In 2002 Dilya Publishers<sup>1</sup> issued the next book in the Ringing Cedars Series entitled *Rodovaya kniga* (The Book of Kin), in which it advised its readers:

Our publishing house has taken the idea of a ‘Book of Kin’ to heart. As we were getting this book ready for press, we decided to set at once about publishing a blank ‘Book of Kin’ for you to fill in and thereby keep a record of your own family chronicle.

Not long after Dilya published this *Family Chronicle*, in 2003 the Russky Dom<sup>2</sup> publishing house put out a book under the title *Semeinaya letopis* (A family chronicle). One of its compilers was Archimandrite Tikhon Shevkunov.<sup>3</sup>

At the front of the book were featured guest forewords by Russian President Vladimir Putin and Alexei II,<sup>4</sup> Patriarch of Moscow and of All the Russias.

<sup>1</sup>*Dilya Publishers* — the current publishers of the Russian edition of the Ringing Cedars Series, located in St. Petersburg and Moscow. The quotation cited did not appear in the English edition of *The Book of Kin*.

<sup>2</sup>*Russky Dom* (lit. ‘Russian House’) — the name of (a) a publishing-house in Moscow related to the Russian Orthodox Church and (b) a monthly magazine it publishes. Archimandrite Tikhon sits on the magazine’s editorial board.

<sup>3</sup>*Archimandrite Tikhon Shevkunov* — Archimandrite (Father Superior) of the Sretensky Monastery in Moscow, sometimes described as a spiritual advisor to President Putin.

*A family chronicle is not just a simple story about a few human destinies, or even about a whole family. It tells the story of a whole nation. The destiny of Russia is the history of families over successive generations.*

*Such knowledge is indispensable for each citizen of Russia to become aware of his roots and his role in the history of our great Motherland.*

— Vladimir Vladimirovich Putin, President of Russia

*The atmosphere of the family and home, relations with one's relations, memories of one's forebears and the raising of one's descendants — all this has tremendous implications for the moral strengthening of the individual and, consequently, of the nation. It is no coincidence that it is said among many different peoples that love for one's Motherland begins at home.*

— Alexei II, Patriarch of Moscow and of All the Russias

The first one to put forward this idea was Anastasia:<sup>5</sup>

*Just a few days will go by, and millions of fathers and mothers in many a land will be writing their Book of Kin, filling in its pages with their own hand. There will be a vast multitude of them — these Books of Kin. And all of them will contain the truths which begin in the heart, for their children. There will be no room in these books for artifice or guise. Before them all the lies of history will fall.*

— Anastasia

We shan't go into details as to how Russky Dom followed the example of Dilya or who was responsible. The important

<sup>4</sup>Alexei II — see footnote 13 in Chapter 9: "A fine state of affairs!" above.

<sup>5</sup>Quoted from Book 6, Chapter 10: "The Book of Kin".

thing is the implementation of the idea itself. Now we can see that this idea has the support of the President, the Patriarch and the Chairman of the State Duma,<sup>6</sup> who presented copies of *A Family Chronicle* to schoolchildren on Knowledge Day.<sup>7</sup>

Now what are the poor slanderers to do? Include the President, the Patriarch and the Chairman of the State Duma in their list of sectarians? Along with the former President of Ukraine, who signed a decree regarding family farms, granting Ukrainians not one, but two hectares of land each?

And we must not forget Governor Ayatskov,<sup>8</sup> who during an interview on NTV<sup>9</sup> said of Anastasia's followers: "The future of the country lies with them." He has also encouraged his civil service staff to acquire land and set up their own family domains.

Nor Governor Tuleev<sup>10</sup> of the Kemerovo Region, who has granted land for a settlement. Nor the Supreme Mufti of Russia, Talgat Tajuddin,<sup>11</sup> who responded to a question by a

<sup>6</sup>*State Duma* (pron. *DOO-ma*) — the lower chamber of the Russian national parliament, corresponding to the House of Commons in the United Kingdom and Canada or the House of Representatives in America, Australia, and New Zealand.

<sup>7</sup>*Knowledge Day* (Russian: *Den' znaniy*) — 1 September, the traditional start of the Russian school year.

<sup>8</sup>*Dmitry Fedorovich Ayatskov* (1950–) — Governor of the Saratov Region on the middle reaches of the Volga River.

<sup>9</sup>*NTV* — abbreviation for *Nezavisimoe televidenie* (lit. 'Independent Television'), a national private TV network created in 1993, which on its Internet site boasts more than 120 million viewers.

<sup>10</sup>*Aman-Gel'ty Moldagazyevich Tuleev* (1944–) — Governor of the Kemerovo Region in Siberia, on the Tom' River (a tributary of the Ob) just to the east of Novosibirsk.

<sup>11</sup>*Talgat Safich Tajuddin* (1948–) — Supreme Mufti (spiritual leader) of Russia's Muslims, formally known as the Chairman of the Central Spiritual Directorate of Muslims of Russia and the European Nations of the Commonwealth of Independent States.

Sotvorenec Studios correspondent — as to what he thought of the Ringing Cedars Series — as follows:

I love these books. I read them and get a great deal out of them. I feel that reading these books helps strengthen Man's faith in God. After all, we need to nourish our faith in God day by day. But for that it is not only our eyes that must be open — more importantly, our heart must be open. Besides, our heart has been given to us for to love, and Vladimir Nikolaevich Megré's books help us love God. He conveys this truth to people through the words of Anastasia.

Perhaps theologians may have some reservations. Perhaps someone will call it just a hypothesis, but faith in God — and especially love for God — is something that starts growing bit by bit, and afterward becomes immeasurable. And long before we get to the next world, right here in this world Man can become happy. And the Ringing Cedars Series helps us do this.

On the eve of these events, evidently under pressure of the machinations and fear-mongering of these same 'anti-sectarians', one Orthodox archbishop (I shall not give his name, so as not to immortalise him) signed a letter threatening to excommunicate from the Church anyone who reads or distributes the Ringing Cedars books.

This would mean that the archbishop would 'excommunicate' the Patriarch himself, who has supported the idea in creating *A Family Chronicle*, containing his and the President's signed forewords. Even if the Patriarch has never even held any of my books in his hands, that's not the point — it's not the paper with the printed text of the books, after all, that's important, but the ideas set forth in them. Now that one of the ideas has been approved, I am convinced that it won't be

long before others will be granted official State support. But in the meantime...

So perhaps it is time we drew the attention of our law-enforcement agencies to just who these so-called 'anti-sectarians' really are. By what methods or machinations do they operate, hiding so conveniently beneath the vaulted ceilings of Russia's Orthodox Church? Evidently, they're not there for prayers! The fomenting of interreligious discord, the discrediting of government agencies — that's what they're really up to.

And it would be foolish to even suppose that some group of 'anti-sectarians' is that strongly concerned about my personal spiritual development. Their actions, rather, are testimony to their carrying out orders to stop any positive transformations from taking place in Russia. An illustration of their ideologically based diversionary tactics may be seen in the following example as well.

### **The Jewish question**

Recently, for the umpteenth time already over the past millennium, passions have been inflamed over the 'Jewish question'.

There has been more and more talk about the spread in both Europe and Russia of extremist views, including anti-Semitism. The European Jewish Congress has linked this situation with the growth of Muslim populations in European countries, which are, they say, aggressively anti-Jewish. But

there are many concrete historical examples testifying to the fact that aggression can be deliberately provoked. And this is now actively being pursued by certain circles. The provokers may even come from the ranks of the Jews themselves.

One has the impression that some kind of order has been received regarding the organisation of pogroms. Jewish pogroms are very profitable to someone, and I'm talking about financial profit. Extremist organisations do not derive any financial benefit from pogroms — rather, they suffer losses. But these pogroms offer a palpable benefit to countries where Jewish members of the financial oligarchy flee to legalise their multibillion-dollar incomes and obtain international immunity from prosecution.

And for the sake of such financial benefit they are ready to subject to abuse ordinary and utterly harmless Jews living on Russian territory. This has happened over and over again in the annals of the long-suffering Jewish people.

What's the point of a pogrom? The logic is simple. Public opinion is turning against the oligarchs, the financial magnates, as never before. According to government statistics, approximately 70% of Russia's population believe that they should be immediately censured and dispossessed. Acting on the basis of law, the President, the Government and the Russian Prosecutor's Office are attempting to investigate the activity of a number of oligarchs. They have declared war on corruption and it appears as though over the next four years the oligarchs may indeed be obliged to forfeit their financial holdings. Given the situation, they are naturally trying to get out of the country.

But then there is the problem of how to legalise their transfer of capital to the West. The surest way is to provoke a kind of pogrom that will shock the world community. It's easy to see what happens next. The financial magnates simply turn up in one of the Western countries while these pogroms are

going on and declare themselves political refugees. Naturally this provides them with not only political asylum but also a legalisation of their financial holdings, even while they may still maintain at least partial control over resources and factories back home through dummy CEOs or trusted associates.

And herein lies an important message for all Russian citizens, especially those organisations which call themselves patriotic. Don't ever give in to provocation or stoop to the level of organising pogroms against synagogues. You will only be acting out somebody else's script.

It would be wrong to accuse all Jews of machinations and unseemly acts. Just like Russians, Belarusians and Ukrainians, Jews come in all stripes and colours. I offer the following as proof. I was once the featured speaker at a readers' conference in Kazan,<sup>12</sup> where the audience was comprised of different nationalities, including many Muslims. During my remarks I read a chapter from a book by the Jewish writer and poet Efim Kushner<sup>13</sup> entitled *Beskrovnaya revoliutsiya* (A bloodless revolution). Before reading from it, I said that this was a Jewish writer living in Israel but writing about Russia, about her future. When I had finished reading the chapter, the hall broke into thunderous applause.

Muslims, too, applauded this Jewish writer and poet. Why? How did it happen that supposedly aggressive Muslims offered their sincere applause to a Jewish writer?

<sup>12</sup>*Kazan* — capital of the Republic of Tatarstan (within the Russian Federation), about 1,000 km east of Moscow. The Republic has a predominantly Muslim population.

<sup>13</sup>*Efim Kushner* (1940–) — Jewish poet and writer, who emigrated to Israel in 1990. The book mentioned was published in 2003 (it appeared in a Bulgarian translation in 2006) and includes favourable comments on the ideas set forth in the Ringing Cedars Series. Another reference to Kushner may be found in footnote 14 in Book 4, Translator's and Editor's Afterword: "I hope for the world".

It happened because in his book he speaks about the marvellous future of Russia, linking it to the ideas outlined in the Ringing Cedars Series. He calls upon the Russian government to adopt a programme based on these ideas.

I can tell you right off that he is not the only Jew who accepts and supports Anastasia's concept set forth in the books. In Israel there is a whole club of readers who have been drawn to the books about this Siberian recluse. Israelis are composing songs in both Russian and Hebrew about the characters in the series. I have the distinct impression that in the final analysis, it will be the Jews who take the lead in putting the ideas into practice, and will draw peoples of many lands along in their wake.

I can at least tell you that I have been informed that right there in Israel significant funds have been set aside for the construction of environmentally clean settlements.

"Oh, those connivers!" people will say later on. "See, they're stealing the Russian idea out from under us!"

Pardon me, but they are not stealing anything from us. In fact, they are saving this idea! Will you kindly tell me who is preventing the Russian authorities from implementing the ideas in the books? After all, for the past five years, practically, it is these same authorities that have been targeted with a large number of individual and collective letters by Russians living in the Commonwealth of Independent States and elsewhere in the world.

It is truly a comical situation that has developed. A host of researchers keep talking about the birth of a 'national idea' among the Russian people. But the way things are turning out here, it looks as though it will have its first implementation in Israel! Who's to blame?

Overall, every discussion on the Jewish question so far, at least those in the publications I have access to, seems pretty primitive. Almost all of them boil down to a routine statement

of the facts: “Jews have taken over the press in various countries.” “Pretty much all the TV networks are in Jewish hands.” “Most cash flow is controlled by Jews.”

All this is no doubt true, including here in Russia today. But this is simply a statement of fact and nothing more. It is far more important to explain *why* situations like this have developed in various countries, with an enviable consistency, over a period of centuries.

I can tell you the following right off. It is simply that the Jews are obliged to do this, and we are obliged to fall into line with them, including on the legislative level.

Judge for yourselves: the State Duma of the Russian Federation adopted a law recognising four ‘basic’ religions, two of which are Christianity and Judaism.

According to Christianity, the Christian is the ‘slave’<sup>14</sup> of God. Wealth is not welcomed. In St. Petersburg, where I am writing these lines, I can see from my hotel window the huge Orthodox Cathedral of the Blessed Virgin of Vladimir, on the façade of which is written in large, gold lettering: *Hear, Our Lady, the prayer of thy slave.*<sup>15</sup>

According to Judaism, the Jew is the chosen one of God; to him belong wealth and lands, and usury<sup>16</sup> is welcomed.

<sup>14</sup>Note that Russia’s Orthodox Church traditionally refers to every human individual as ‘slave of God’ (*yab Bozhi*). It is reflected even in the contemporary Russian word for ‘worker’ (*rabochii*), which literally means ‘Father’s slave’. The term is generally translated ‘servant’ in the Authorised Version of the English Bible.

<sup>15</sup>Compare the wording of Daniel 9: 17: “O our God, hear the prayer of thy servant...” Note, too, that in this citation the Russian term corresponding to *Our Lady* is *vladychitsa*, which has the connotation of ‘empress’ or ‘high ruler’. The Russian term corresponding to *the Blessed Virgin of Vladimir* is *Vladimirskoi Bozhei Materi*, lit. ‘the Vladimir Mother of God’.

<sup>16</sup>See, for example, Deut. 23: 20: “Unto a stranger thou mayest lend upon usury” (*Authorised King James Version*), rendered in the *New English Bible* as: “You may charge interest on a loan to a foreigner”.

Everybody knows what a huge influence religions exercise on Man's mentality, character development and way of life.

So let us be consistent in the logic of our actions. The highest legislative organ of our land has accepted these two concepts, at the same time designating who is to be slave and who is to be ruler.

And, being the law-abiding citizens that we are, let us not keep deceiving each other, but let us accept as a given, according to the law adopted by our government, that the Jews have authority over us.

Now there are some that will not be satisfied with such a position. Some will even consider such a statement absurd. But let us not close our eyes to the actualities of life. Let us see clearly the causes of what is going on, or we shall keep on tasting the consequences with an unyielding regularity.

If someone is unhappy over the current situation, then by all means let us work together to find an alternative.

The solution might be an idea acceptable with equal enthusiasm to Muslims, Christians, Jews and members of other faiths.

Such an idea exists. Not only will it fix the situation, but it holds the future in its hands. There are specific facts and life situations that attest to this.

### Let's create

In an address to the Federal Assembly,<sup>17</sup> the President of the Russian Federation set a goal of doubling the country's Gross

Domestic Product (GDP) within ten years. Well, a goal is a goal. And measures must be taken to reach it. The first step is to inspire the people with a vision. It is the people, after all, who must work to double GDP indicators. And what has been happening since this goal was set by the highest official in the current government?

Incredible events began to take place.

Instead of at least making an attempt at realising the goal, some highly placed officials began talking about how unfeasible its implementation was, while others insisted it still must be attained. And that's it! Nothing more. These discussions have wasted precious time: the year 2004 ended miserably, with a GDP growth of a mere 6.4%.

Right from the start this fascinating subtext as to whether the goal was feasible or not ran throughout the whole treatment of the subject by the press. But, again, with not even a single attempt at implementation.

This situation points to the fact that the Russian authorities are heading for a state of utter helplessness. And it makes no difference here whether the officials in question are elected or unelected, they will find any excuse they can not to carry out the directive.

Imagine how it would be if a commander-in-chief gave the order to *prepare to attack*, and his generals and colonels, instead of working out the plan of attack, began to discuss whether an attack was feasible or not. In that case defeat would be an inevitability. Which is exactly what has happened.

But could it be possible that the goal set by the President was really preposterous? We can't judge until we try to figure

---

<sup>17</sup> *Federal Assembly* (Russian: *Federal'noe sobranie*) – (the name given to the bicameral Russian Parliament as a whole, which comprises the State Duma (or lower chamber) and the Federation Council (upper chamber), as established by the 1993 Constitution of the Russian Federation.

it out for ourselves. However, I'll jump ahead of myself and say: *it is feasible!*

I can just see my readers' dumbfounded reaction: what's all this about Russia's Orthodox Church, 'anti-sectarians', Western intelligence services and the goal set by the President for doubling Russia's GDP? Be patient. There is a very close mutual connection here.

Think who would benefit by a doubling of Russia's GDP. Russia herself, of course. Who would lose by it? Naturally, the West, which looks upon Russia merely as an overflow market for its substandard merchandise.

And Western intelligence services, it seems, have once again had the upper hand (as usual), putting down the Russian President and his officials, ridiculing them even as the aforementioned goal was being set. But let's go step by step.

In order to double the overall GDP, it is necessary to first identify those economic sectors where an increase in output is essential, as well as those where such an increase would be undesirable — the production of tobacco, wine and spirits, for example (Russia's already drowning in her own booze and choking on her own tobacco smoke). You wouldn't want to double the output of armaments, or build new casinos, or double the outflow of raw materials from the country.

Which means that the remaining sectors of the economy are faced with the task of not just doubling but tripling or even quadrupling their output. These sectors have not yet been identified and, consequently, no specific goal has ever been suggested to them.

Well, some may object, if we're not sure we can double our GDP or not, how can we even think in terms of quadrupling? An impossible task!

But I say *it is possible!* It is possible, and not only that, but it requires no additional capital investment.

Take agriculture, for example, where production has been cutting back year after year, to the point where it has already begun to threaten national security. It is the talk of politicians, Duma deputies and a number of government officials.

But they're not talking in the wind. In the case of some food categories, imports already account for up to 40% of the market. This is already a threat to our national security. And what awaits us after that? I'll tell you.

By 2005 our country's rural population is expected to shrink by 25%, which will exacerbate the problem even further. More specifically, it will make the country completely dependent on external sources — and then the government will be forced to pay for food not just with natural resources, but through sales of missiles, just to avoid being utterly torn to pieces by the population at large.

This means a sea-change is required in the whole agriculture industry: it must double or even triple its production. However, this will never happen using traditional methods, where all proposals simply come down to nothing more than a requirement for additional subsidies. And it is not clear just who these subsidies are to be directed to, given that the able-bodied rural population keeps significantly decreasing in numbers. And if that be the case, not even the most state-of-the-art equipment or super-technology is going to help. There will simply be nobody left to work with it.

Which means that our goal is first and foremost to have able-bodied people showing up in the countryside. Millions of them. Tens of millions. Not only that, but they must be people with a desire to reach out and touch the ground with love. If *they* don't show up, there's no point in talking about anything else.

To hear some officials tell it, however, getting people to show up like that would be nothing short of a miracle. It is not something they believe in. They haven't believed in it even when it's happened.

Yes, ladies and gentlemen, the miracle *has* happened!

All thanks to one individual — the Siberian recluse named Anastasia.

Maybe her words seem incredible and fantasaical to some, but they are right on. They have given birth to an enduring impulsion in people's hearts and souls.

Tens of thousands of people in various parts of the country have been wanting to chart their life-course in a rural setting — to set up their domains there and move in. The numbers of applicants are rising with each passing year.

They are setting up their own regional action groups and demanding: *GIVE US LAND! We are ready to take care of it.*

These people have united in a non-governmental organisation, which was founded at a conference in the city of Vladimir on 5 June 2004 — an event which showed, for the first time in post-Soviet Russia, the rise of a popular force unparalleled in modern times. The hall was filled to capacity, as many came who were not registered delegates but simply wanted to listen and tune in to what was happening.

By a vote taken at the conference, a people's movement was set up under the name *Ringing Cedars of Russia*, with the basic aim of supporting the idea of kin's domains. It was truly a people's movement, opposed to neither the government nor any political party. Rather, it aimed to reach out to all with the simple message: *Let's create.*

Thus a people's movement was born with a clear and distinct programme, easily comprehensible to and solidly supported by the public.

What benefit would accrue to the State of Russia by carrying out just one platform of this programme? Outwardly, it is a very simple platform, focusing on a single hectare of land, but envisaging the following wide-ranging results:

- a significant improvement in the environmental situation;

- restoration of soil fertility;
- a solution to the question of providing high-quality produce for the country's population;
- a significant (twofold or threefold) increase in wages across all sectors of the economy without risk of inflation;
- an immediate improvement in the demographic situation and in the general health of the population, including its rejuvenation;
- a solution to the question of the nation's defence preparedness;
- the termination of capital outflow along with, by contrast, a capital inflow into Russia; the return of her intellectual resources;
- a significant reduction in (over the next few years) and eventual extirpation of: bribery, corruption, gangsterism and terrorism;
- a coming together of neighbouring countries<sup>18</sup> along with those of the former Warsaw Pact (Poland, the Czech Republic, Slovakia, Hungary, Bulgaria and the three Baltic states) into a single powerful union;
- cessation of the arms race and close co-operation among Russia, the USA and Eastern Moslem states.

These points have been worked out not just by me, but also by a number of students in their graduating essays — e.g., the essay by the budding jurist Tatiana Borodina.<sup>19</sup> They are also talked about in scholarly publications (e.g., by Professor Viktor

<sup>18</sup>*neighbouring countries* – primarily those of the Commonwealth of Independent States, made up of most of the republics of the former Soviet Union (Ukraine, Belarus, Georgia, Kazakhstan etc.).

<sup>19</sup>Ms Borodina's graduating essay is entitled: "The legal status of Kin's Domains in Ukraine: developmental perspectives", and has been made available on a number of Russian websites.

Yakovlevich Medikov,<sup>20</sup> a three-term deputy of the legislative assembly who holds a doctorate in economics). There are a number of privately published brochures on the topic, written by professional researchers as well as ordinary people.

I shall attempt to jot down a few words of explanation in justification of some of these points.

So, let us suppose that our country has decided to implement the programme proposed by Anastasia:

*Every willing family is offered free of charge one hectare of land for lifetime use with the right of inheritance for the purposes of establishing on it their own kin's domain. The produce grown on the domain, as well as the domain itself, is not subject to any form of taxation.*

The adoption of this programme will lead to the following results:

- *A significant improvement in the environmental situation.*

Practice has shown that people who have received land for a kin's domain first of all set about planting wild-growing trees, at an average of up to 200 trees per family, along with an average of 2,000 shrubs, hedges and berry bushes and 50 fruit-bearing trees.

Even using the most conservative estimates, researchers predict that the adoption of such a programme on a national level, if correctly implemented, will lead, right in its earliest

<sup>20</sup> *Viktor Yakovlevich Medikov* — a metallurgist and professor of economics, former Vice-Rector of the Siberian Metallurgical Institute, who served as a deputy both in the Communist 'Supreme Soviet' and in the first two terms of the post-Communist Duma. He gave the opening address at the June 2004 conference. For other references to Dr Medikov, please see the Editor's Afterword to Book 1 and Book 7, Chapter 28: "To the readers of the Ringing Cedars Series".

stages, to about ten million Russian families setting up their own kin's domains.

This means that even in the first year or two following the adoption of the programme, and without any additional subsidies, two billion wild-growing trees will have been planted, 20 billion shrubs and approximately 500 million fruit-bearing trees. And that is just the beginning.

• *Restoration of soil fertility.* As can be seen from practice, the first thing people do when they are granted land, not on a short-term lease but for their lifetime use, is to put their efforts into soil restoration. Not only that, but they are doing this not just by the application of organic fertilisers, but also by a more natural method, namely, the sowing of soil-building crops during the early years.

• *A solution to the question of providing high-quality produce for the country's population.* You may remember the 'struggle for the harvest'<sup>21</sup> back in Soviet times — how schoolchildren, students and industrial employees were transported out to collective and state-owned farms<sup>22</sup> to help bring in the harvest.

<sup>21</sup> *struggle for the harvest* (Russ. *bor'ba za urozhai*) — a term used in Soviet propaganda in reference to harvest time. Since collective farms were inherently inefficient, authorities were compelled to mount a campaign each year, urging vast numbers of people — from schoolchildren and students to industrial workers and soldiers — to help with the harvesting and 'save the crops' before they rotted in the field. People were generally expected to carry out this work either with payment in kind or without any remuneration at all.

<sup>22</sup> *collective and state-owned farms* — two systems of agricultural management during the Soviet era. On a collective farm (*kolkhoz*, pron. *kall-HOSS*), it was claimed that workers as a collective owned their farm, sold their produce to the State and shared in the profits from the sale, while on a state-owned farm (*sovkhos*, pron. *sahf-HOSS*), farm workers were paid a salary, just as in a factory. In reality, however, in both cases the quantities and prices were dictated by the state.

I myself took part in these large-scale operations, weeding fields and gathering onions at a suburban state-owned farm.

However, there was still no abundance of high-quality produce in the country. Today's older generations, of course, remember how the potatoes sold in stores would be half-rotted, not to mention the most undesirable-looking vegetables.

Then came the *dacha* movement.<sup>23</sup> They began to allot people 600 square metres of land. And a miracle happened. Everyone is aware of the statistics. Ordinary people — all by themselves, without any support from government ministries or agencies — have provided 80% of the vegetables produced in Russia. (Unfortunately, all sorts of complications are being introduced these days, including higher travel fares, taxes on land plots, increased electricity rates.) And all this on just 600 square metres, where it is impossible to create any kind of economically viable enterprise or to plant tall trees which enrich the soil, or to put in water ponds and so forth. And all this carried out by people without sufficient knowledge or experience, working just on weekends and holidays.

A hectare of land will allow the setting up of a more economically viable enterprise. With the right kind of organisation, there will be a thirtyfold decrease in the workload per square metre. Not all at once, mind you, but I do emphasise:

<sup>23</sup>The term *dacha* (originally from the verb *davat'* - to give/grant), dates back to at least the eleventh century. It has had a variety of meanings, including country residences of the Russian cultural and political élite. From the 1940s on, with the emergence and rapid growth of food gardening by the urban population, the term has been used more and more to denote a country garden plot belonging to a city-dweller, usually together with a small cottage. The *dacha movement* referred to here arose during the Second World War, when the Soviet government began to allot small plots of land for food production to combat war-time food shortages, and has since grown to include approximately 20 million families. For further information, please see Book 1 (especially the Translator's Preface) and Book 2 (notably Chapter 9: "Dachnik Day and an All-Earth holiday!").

it has to be set up properly. That given, both existing practice and theoretical calculations confirm that implementing the proposed programme will fully guarantee the country a sufficient food supply for all its citizens bar none.

Now a word about *quality*. It goes without saying that someone growing agricultural produce to be used by his own family will not add any poisonous chemicals or chemical fertilisers to the soil. He will not grow any mutant produce. All this crap is being imported into our country and bought up by the public for no other reason than insufficient production here at home. Once a sufficient quantity level is reached, *quality* becomes the number one concern. I hope I've made myself clear?

• *A significant (twofold or threefold) increase in wages across all sectors of the economy without risk of inflation and a reduction of prices within the country on all forms of merchandise, leading to a reduction in social tension.* Someone may wonder what possible link there could be between the implementation of the 'Kin's domains' programme and a wage increase — let's say, for a salesman, a trolleybus driver, a nurse or a teacher. But there is! And a direct causal link at that.

Think about it. Most enterprises today are in private hands. People we call oligarchs enjoy fabulous profits — but at whose expense? Basically, at the expense of minimum wage-earners. And what's the point of increasing their wages, let's say, from five thousand to twenty thousand roubles a month,<sup>24</sup> when there are still people queuing up just to get a job? There's simply nowhere for them to go.

<sup>24</sup>At the time this book was written (2005), the average wage in Russia was 8,500 roubles per month — approximately equivalent to US\$300 at the official exchange rate (or to US\$600 in buying power). Wages vary greatly from one region to another, and full income amounts are often unreported (meaning the actual average is higher than that calculated by government agencies).

It's an entirely different situation with a family whose work on their own domain earns them an average of ten thousand roubles a month (which has been proved entirely feasible in practice) with a minimal cost of living. No utility bills or daily commuting expenses, or the cost of buying meals at city cafés. To attract domain dwellers to work in a factory or other private enterprise, one would have to offer them a salary at least one-and-a-half or two times the income they would earn from working on the domain, and cover travel and meal expenses besides.

Today an oligarch who has privatised a factory or oil-drilling company can afford to live in a castle in London (that really happens) and earn up to a million dollars a month, while the workers slaving away to provide that income for him receive less than a tenth of one percent of what he makes.

This scenario can be played out *ad infinitum*. Inevitably it leads to revolution, stripping the property-owner of his enterprises and the overthrow of the government permitting such inequities. The only way to prevent such a result from occurring is to reach an equitable sharing arrangement with the workers. Oligarchs will not come to this point voluntarily but, under pressure of circumstances, will give in.

We mentioned the relationship between a domain dweller and the owner of an industrial enterprise. But those left living in city flats will also see their wages rise, to keep them at their jobs. They too, after all, are given a choice: stay working and living in urban conditions, or start building themselves a whole new way of life in the country.

And one more question on this point: *Why will this not lead to inflation or price rises?*

Inflation is always the outcome of certain concrete procedures, specially engineered. Price rises are simply a by-product. The cause is always Man's estrangement from a natural way of life. It is an easy matter to increase prices on fuel and

foodstuffs when people don't have any of either to call their own, meaning that they are completely dependent on external suppliers. But try raising apple prices for someone who has his own orchard. Absurd! And what about fuel? But even here there's a limit. Today's fuel prices are so high that it is actually more profitable to till a couple of hectares of land using horses — which, by the way, supply a first-class fertiliser for the soil.

• *An immediate improvement in the demographic situation and in the general health of the population, including its rejuvenation.* It is no secret that the current demographics in our country are catastrophic. And even *this* word isn't strong enough to describe it fully. If a country's peacetime population decreases by almost a million souls annually, that's monstrous! The leaders of such a country, I should think, would want to hide their identity from the public, as well as from their descendants. Discussions on the need to change the current situation amount to nothing more than pathetic babble. They don't change anything. Not even increasing financial support for birthing mothers, as necessary as that may be, will lead to any substantial improvement.

The history of many millennia shows that women cease giving birth when they see no prospective future for their children. It is necessary first to determine clearly and precisely the future development of society as a whole, as well as of each family making up that society.

The Anastasia Foundation in Vladimir<sup>25</sup> conducted a survey of families planning on setting up their own kin's domains. Of the more than two thousand polled, 1,995 responded that

<sup>25</sup>The *Anastasia Foundation for Culture and Assistance to Creativity* — a non-profit organisation based in the city of Vladimir. See Book 5, Chapter 15: "Making it come true".

they would be having children. Some wanted three or even more. Those who for health reasons were unable to have children of their own were planning to adopt them from orphanages. How to explain this phenomenon? It is simply that a Man who has built a marvellous living oasis is aware that he is building something lasting, and wants his children to enjoy life, too.

As to rejuvenation and revitalisation of health, let us turn once more to practice. Look at how much livelier and younger your grandfathers and grandmothers behave once they get out to their dachas in the springtime. And it goes without saying that a pregnant woman who eats only environmentally clean produce, drinks clean water and breathes clean air cannot help but bear healthy children — significantly healthier than today's examples.

• *A solution to the question of the nation's defence preparedness. A significant reduction in weapons and, over the next few years, the eventual complete extirpation of bribery, corruption, gangsterism and terrorism.* The military preparedness and morale of our armed forces today, including the nation's law-enforcement officers, has slipped below the zero-mark and is heading deep into the minus side. It is no secret how challenging it is for local conscription offices to call up young recruits to military service. Refusal of military obligations is no longer considered shameful among today's youth — on the contrary, it has become a mark of bravery. Those whose families are slightly better off attempt to buy their way out of serving; those not so well off try to 'cut out' any way they can, even to the point of self-mutilation.<sup>26</sup>

<sup>26</sup>By law, military service is compulsory for all male Russian citizens upon reaching the age of 18.

So it turns out that, by hook or by crook, the army drags in conscripts from the poorest segments of the population. Such an army is in no position to defend anyone or anything against a major enemy. Not only that, but it is potentially dangerous to the very country it is supposed to serve.

Let's take a close look at just *whom* the soldiers of the Russian army are called upon to protect. *The Motherland*, comes the standard response. But today the concept of *Motherland* has been seriously eroded, and it is a challenge to grasp hold of just what *is* one's Motherland. It wasn't that long ago that Russian officers and soldiers swore an oath of allegiance to the USSR, which was also considered their Motherland. Then all at once the borders changed and whole parts of the territory they were defending turned out to be 'foreign soil'. The troops deployed in these parts were suddenly treated as invaders. They were left to defend the people on the part of the territory that was still known as Russia. But what kind of people were they really protecting? Oligarchs and bribe-taking government officials? Their own families? But if a soldier or an officer came from a poor family, who was he supposed to protect them from?

For the past ten years now, government propaganda has proclaimed that we are building "a civilised, democratic state on the Western model". But just think: how could today's Russian soldiers do battle against the forces of NATO or the USA if they have already been brainwashed into thinking that their enemy is civilised and developed, which must mean that 'we', by contrast, are 'uncivilised' and 'undeveloped'? Quite absurd. Is this some sort of psychobabble, or a deliberately invented tactic? An all-professional army has been touted as a panacea for getting out of this manufactured dead-end situation, but that is even more absurd. A professional army, as is known, is made up of mercenaries who take up arms for money and shoot at whoever they are

told is the target. They carry out the orders of whoever pays the most.

History is full of examples of governments afraid to bring their armies of mercenaries home. That's how it was in Ancient Rome, and a similar danger exists in the USA. It is already happening in parts of Russia as well.

A professional army must be kept busy in continual fighting, preferably not on the territory of the nation it is supposed to be serving. When an army returns to its home country, it will inevitably be in demand by forces opposed to the existing authority, or it will disintegrate into a large number of splinter groups, some of which may even be transformed into criminal gangs. For the most part, there is no such thing as *unemployed* armed mercenaries. If they are not given work, they will find it on their own, and in their chosen profession. Besides, an army consisting of people serving only for money can be very easily bought off by a higher bidder.

Just imagine a foreign military base located, say, in Georgia, Turkmenistan or Ukraine, whose soldiers are paid three thousand dollars a month, while ours get only five hundred a month. In fact, you don't need to imagine this. There are already concrete examples right here in Russia. Just look at how many highly qualified and professionally trained officers of the former KGB are now working as security guards for commercial organisations, including foreign banks.

So, what's the solution? There is just one — one and only one. We must make sure that our Russian soldiers, officers and generals have something left to protect.

• *Every Russian army or law-enforcement officer, upon receiving the rank of lieutenant, is to be awarded not only a little star on his epaulette, but at the same time the right to receive a hectare of land on which to set up his kin's domain.* The land grants shouldn't be for 'back lot' waste lands, but for elite lands specially allocated by

the government for settlement purposes. An officer should be able to choose his own particular hectare within these territories. And, when home on leave, he should be free to plant, either alone or together with his parents, a new garden, or dig a pond, or designate a spot on which to build a house.

And if he is frequently re-posted to various parts of the country or even abroad, during the time he is billeted in officers' quarters, barracks or a field tent, every officer of the Russian Army should be able to rest secure in the knowledge that back there, in a spot of his own choosing, the garden of his little Motherland — his own garden — is flourishing in the springtime. And the girl who has fallen in love with him will know from the little star on his epaulettes that her beloved has a future, has a Motherland, and a family nest for their future children.

And even if, for the time being, she has to share with her beloved in the challenging conditions of an officer's life, all the same, at least once a year they will visit their little Motherland and share their dreams and plans for the future domain. They will decide where the pond is to be dug and where the house is to be built.

And even if they are obliged to spend their month's leave on their own land in a tent, still they will be able to experience an incomparable sense of joy at beholding the marvelous future that lies ahead for the generations of their family to come.

And even if the little trees of their future garden are still young and the green hedge they have planted around their domain is scarcely noticeable, these are still there, and they will grow and flourish, waiting for them, their creators.

*• If an officer's wife becomes pregnant, within three months' time, the State should build on the designated spot a modest home according to the plans selected by the parents-to-be, with all the amenities*

*afforded by modern technology.* And the wife of a Russian officer will be able to spend the remaining months of her pregnancy in her own little house. Perhaps her home will be shared by her parents, or perhaps she will be alone there, keeping in touch with friendly neighbours. But, most importantly, she will be surrounded and filled by the positive emotions she so badly needs. After all, she will be completely surrounded by the space of her little Motherland, belonging jointly to her and her beloved.

And she won't go off to have her baby overseas or even in one of those incubators we are accustomed to calling, for some reason, *maternity homes*. The officer's wife will have her baby in her own domain, as many women are already doing. Possibly it will be under a doctor's supervision, but it will be at home, in familiar, favourable and sympathetic surroundings — not in some maternity chair which has heard the moans and cries of hundreds of birthing mothers.

• *The child of a Russian officer should be born only in his own family domain.* Even if at the moment of birth the young lieutenant is somewhere far away, he will hear — he will most certainly hear — his child's first joyful cry. And he will let no foe encroach upon his grand Motherland. He, this young lieutenant, a Russian officer, will not let a foe get past him, since at the heart of his vast Motherland is his own little Motherland — one he feels is very dear and close to him, one where his beloved walks in a flourishing garden, holding his wee son by the hand as he takes his own first baby steps in life.

Society! Our society! The society comprising our nation is already today capable of seeing to it that a young mother — the wife of a Russian officer — need not worry about how to get food for her baby. She should be provided for. Maybe not in the style the oligarchs' wives are accustomed to, nor has she any use for the shallow fad of owning a supposedly expensive

car. She will have far more than that — love and a future. Her main achievement is the restoration of her Motherland. This is her principal work, her principal task in life.

And society should pay her a salary equal to that of her husband. That's not much, of course, in return for her grand co-creation, but such a step will at least be an initial good-will gesture on the part of society and the State.

Such a possibility already exists right now. Only one shouldn't confuse things by bringing in higher-level economic considerations.

Currently the oil pipeline is showering Russia with a rain of American dollars. And why is not a single drop of this rain falling on any Russian officer, his wife or child, or his little Motherland?

Who thought up such arrangements, concealing themselves behind that supposed panacea for all ills — democracy?

Is it 'democratic' when poorly-paid soldiers or officers of the Russian Army are obliged to defend wealthy oligarchs, their fancy detached houses along the Rublevskoe Highway<sup>27</sup> and their numerous counterparts in other regions of the country? That's not democracy, that's *drivelocracy*!

And if such drivel doesn't change, we shan't have any defence or protection at all. There will be no protection for the average citizen, nor even for the president, let alone the petty and major oligarchs.

The extermination of this drivel will spell an end to corruption, drug trafficking, and the notorious bribe-taking from drivers on the part of traffic cops.

<sup>27</sup>*Rublevskoe* (pron. *roob-LYOF ska ya*) *Highway* (named for the former village of Rublevo) - an area in the western part of Moscow where many of Russia's *nouveaux-riches* have built or bought expensive apartments or (what used to be a rarity in Moscow) detached single-family homes.

Now tell me: why should a copper have to stand in the street and breathe into his lungs all the roadway dust and the exhaust fumes of all the expensive and not-so-expensive cars passing by? As though they were the cat's pyjamas and he were nothing but a nincompoop. He stands there watching out for their safety, for which he is paid a mere pittance. Indeed, if he didn't take bribes from these cars' owners, he would be ridiculed by his relatives who would think it utterly abnormal; his wife would tear into him and his children would turn away from a father who couldn't even afford to buy them a pair of last season's jeans.

And he is not at all terrified of the police's anti-corruption squads. So what if he's sacked from his job? That's no great loss. It's not a job that will guarantee a living for his family in return for honest labour. It simply means he has to look for another. But what kind of job? What kind of job can he find where he can maintain his integrity and still provide for his family?

And so he stands there in the dust and exhaust fumes and takes his bribes. And for this, society hardly condemns him, but pays him. *So what? — we're all becoming like this*, society thinks. Now *that's* terrifying! The fact that we're getting used to it! We cease dreaming about other possible scenarios. We get accustomed to seeing the crowds of prostitutes, homeless children and street thugs. We get accustomed to the stage shows we call *elections*. Or is someone, in fact, accustoming us to these?

After all, up until recently the most terrifying thing for an inhabitant of a Russian village was social disdain on the part of his fellow-villagers, observing: *She's a slut! He hasn't kept his property up!*

And so, it's time to bring back those days. The time will most certainly come when the most pleasant thing for a Russian citizen to hear will be society's approval in the form of: *He's a good man! He has sensitive and properly behaved children!*

*He has a splendid domain!* Then there won't be any more crime, corruption or drug trafficking. It will surely come, that time.

On a bench in a shady garden sits a greying, elderly man, tenderly stroking the chestnut-coloured hair of his three-year-old granddaughter, her head nuzzled against his chest, while his eleven-year-old grandson takes the general's greatcoat hanging on the back of the bench and tries it on. Two large general's stars adorn the epaulettes of the greatcoat, which once featured two small lieutenant's stars.

*But that's not the most important thing*, the grey-headed general thinks, looking at his grandchildren. The most important thing is that he created and saved for his grandchildren this garden, this pond and the whole marvellous Space in his kin's domain, his little Motherland in the heart of Russia. He has saved Russia! And She is flourishing! His Motherland! A fresh cool breeze wafts the fragrance of *Her* gardens around the whole world. And interplanetary winds announce the flourishing of the Earth to other worlds. And the stars in the heavens burn with just a touch of envy, and dream of meeting visitors from the Earth, the wise and bright sons and daughters of God.

It will come to pass! But in the meantime... Do you hear, lieutenants, how the heart of the Russian Land is beating, sounding the alarm?! How it is begging for you to take her, little by little, to yourself and plant gardens? She promises to return to each of you your Spaces of Paradise and give you the gift of eternity!

Do you hear? You must hear!

• *The termination of capital outflow and a new inflow of capital into Russia; the return of her intellectual resources.* I can theoretically prove that this will happen with the adoption of Anastasia's programme in full. This has also been shown theoretically by famous scholarly researchers, as well as by students working on their graduating essays.

There are arguments on both sides here. Only practice can offer incontrovertible proof. And that it has done.

People of the Russian diaspora have been flocking from near and far to communities still under construction — communities which as yet do not have a solid legal footing. I know, for example, just in one community near the city of Vladimir, of a teacher from Turkmenistan and a young couple from America. A similar trend can be observed in many other communities now being built on the territory of Russia and Ukraine. People who can't wait for a law on land grants are buying up land, endeavouring to work within existing legislation. They are buying back their Motherland. It is the duty of society and the State to refund their money. Otherwise there will be a curse hanging over the head of anyone who has seen fit to take money from someone for starting to settle on the land where he was born.

In any event, people are coming back, even if it is just one or two at a time for now. You can judge for yourselves what will happen under a favourable coincidence of circumstances — i.e., the adoption of a law granting every willing family a plot of land on which to set up a kin's domain.

## **Letter to the Russian President from Germany**

ANASTASIA, reg. society

Administrative Office,  
President of the Russian Federation  
Staraya ploshchad', 4, Moscow 102132

Dear President of Russia, Vladimir Vladimirovich Putin!

This is a letter from former citizens of a country which no longer exists — the USSR. For various reasons many of us find ourselves living abroad. Germany has become a refuge for more than three million former Soviet citizens. While flocking over the border and discovering the Western 'civilised Paradise', many of us have recognised that at the same time we have lost our Motherland, without which no one can ever be happy in the fullest sense.

Today in Russia a brand new idea has made its appearance, guaranteeing Man's physical and mental health, an idea already appealing to many people of various nationalities, including those living in Western Europe. Thanks to this idea, we realise that right now it is Russia that possesses the spiritual potential needed for the re-birth of harmonious Man and the restoration of a harmonious State.

Detailed information about this idea is available in the Ringing Cedars Series by Vladimir Megré, which to date has sold almost six million copies overall. It is Megré's books that have given Russians living in the Commonwealth of Independent States and other countries a new and marvellous hope of re-birth, which is a vital need for every Man, family and State.

The substance of the idea can be summed up as follows:

Every family or citizen should have the right to receive, free of charge, one hectare of land on which to set up their little Motherland, their family domain, which can be passed down by inheritance from generation to generation. Man was born on the land and should have his own specific piece of his Motherland, created and cultivated with his own hands — and the hands of several generations of his family.

In one of your speeches you stated that Russia was born and long lived in the countryside, on the land, and that that is its destined path. We agree! Having tasted the pleasures of Western civilisation, we are acutely aware that drug trafficking, prostitution, the plight of homeless children, thievery and murder, are all the fruits of this same celebrated civilisation. We are not even mentioning the most painful European problems — namely, the environment and demographics. Russia, too, has been experiencing these same problems in trying to reinvent itself on the Western model. Today it is becoming clear to many in the West that the path being followed by their democratic states is leading to a dead end, if not utter self-destruction.

Russia has gone through difficult trials over the many centuries of its history, all of which have served to nurture a special spirit among its people. It is thanks to this spirit that, at times of the most despairing spiritual and

environmental crises, its citizens will be able to stand on the edge of the abyss and, in spite of everything, not only give birth to a new national idea — grow new life — but also to head off the catastrophe of self-destruction which threatens all mankind.

We, as former citizens of the USSR, are fully aware of what is meant by the simple concept of *Motherland*. Whether we have taken out foreign citizenship or not, many of us have realised that our hearts and souls remain in the places we lived for most of our lives.

We would like to return to Russia and start creating our family domains, establishing new-style communities. The activity of setting up a family domain will lead to an improvement in the quality of life for the whole commonwealth of people. We realise that a lot depends on us, on our labours, our capabilities, our experience. Many of us have taken on new professions in Europe, we have studied foreign languages, some of us have started our own businesses. There are quite a few of us who have begun studying the experience of Western eco-villages and non-traditional methods of farming.

In our communities we shall build our own schools, clubs and hospitals. There may not be a need for special government subsidies, as our numbers include all sorts of experts, and we are prepared and able to seek out our own financing and opportunities.

This kind of activity will lead to a fundamental improvement in the lives of the great commonwealth of people. Lands that have been unused, abandoned or have lain waste up 'til now, will become fruitful orchards, and on them will be born new generations of Russians with a new consciousness, with a new feeling for and outlook on the world.

Moreover, we all desire to assist our relatives and family members now living in Russia or the Commonwealth

of Independent States. This will also help solve the problems faced by youth, the jobless and the homeless. We are prepared, right this moment, to muster the forces of several generations of our families, and also put all our capabilities, experience, knowledge and financial resources toward the goal of co-creating a proud, majestic and mighty Motherland of Russia.

*To implement this idea we ask your consideration of the following questions:*

1. Every willing family or individual citizen should be granted the right to receive, at no charge, one hectare of land for lifetime use with the right of inheritance (but with no right to sell), whereon to create a family domain.
2. Simplification of the procedures to obtain Russian citizenship on the part of those who wish to create their own little Motherland and a vast Russia, who were born on the territory of the RSFSR<sup>28</sup> or of other erstwhile Soviet republics and who formerly held citizenship in the USSR.

Faithfully and respectfully,

Future Citizens of Russia.

Germany, 160 signatures.

<sup>28</sup>RSFSR — abbreviation for *Russian Soviet Federated Socialist Republic*, i.e., the part of the USSR that after its formal disintegration became known as the Russian Federation.

This letter, unfortunately, met no reply at all from Russia. Not even a simple pro-forma memo from some kind of official was received in response. The Russian-speaking community in Germany has in their possession a postal confirmation to the effect that the Administrative Office of the Russian President indeed received their letter.

You know, this lack of response is already becoming a pattern. It's not just you, but we who are living here in Russia too, we aren't getting any reply either. On the Internet site [of the Anastasia Foundation] there is a whole section full of letters, some of them written in English, including letters addressed to the President of Russia. For five years now people have been writing on one and the same topic — kin's domains — but to date there has not been a single reply, either to individually or collectively written letters.<sup>29</sup>

As you will soon realise, it couldn't be any other way, since here in Russia there are forces which have pegged themselves higher than the President or the Government. They believe themselves to be higher than the people, too, only I think this is an ill-founded belief. Of course one can rise higher than a drunken people. But there is not and cannot be any power

<sup>29</sup>Even more tellingly, during President Putin's major Internet conference on 6 July 2006, over 10,000 conference participants asked or voted for questions specifically dealing with the allocation of land for kin's domains. The seven most popular questions on the topic of agriculture (which the government declares to be a high priority) were *all* about the allocation of land for kin's domains. President Putin chose to answer a wide variety of questions (including, for example, "At what age did you first have sexual intercourse?") but not a single question on kin's domains. Four days later, Russia's leading business journal *Expert* commented that this particular Internet conference served as a good indication of the most burning issues in Russian society today, and observed that allocation of land for kin's domains was among them.

higher than a people in whose hearts lives not only a dream of the future but a burning desire to put such a dream into practice.

It behooves me to respond to you, dear former fellow-citizens, on behalf of our government officials, on behalf of the President.

First of all I must thank you people, you who now live in Germany, America, Israel, Poland, the Czech Republic and Slovakia, Italy and France, Georgia, Belarus and Kazakhstan, even in Mongolia. It is thanks to your efforts that the books about Anastasia have been translated and published in the countries where you are currently residing. I didn't know you personally, and so was unable to ask you to do this. But there is something I do know. I know how your hearts have been touched and how you went about approaching publishers and translators, and when you did not find a reciprocal understanding, you set about translating and publishing my books yourselves. This happened, for example, in the Czech Republic and Slovakia, Canada and America.

And finally you found some understanding! I felt this for the first time in Germany when I addressed readers' conferences in Berlin and Stuttgart.

Sitting together in the overflowing auditorium were Russian-speakers who had emigrated to Germany from Russia and native German-speakers who had no knowledge of Russian, in roughly equal numbers. I knew the two groups didn't get along all that well. But here they were sitting side by side and good-naturedly trying to explain to one another the translation from Russian, which was, I'm sure, not always understandable.

I used to consider Germans pedantic and not a strongly emotional people. But life has shown me otherwise. It was none other than a German farmer who, after reading about Anastasia, got into his car and drove all the way to Siberia.

He went knowing neither the language nor the Russian road system, neither the Russian traffic police nor the weather. He got there. He returned home with Russian souvenirs for his friends.

My great gratitude naturally goes out to all those who at their own initiative, and sometimes at their own expense, have translated and published the books abroad. But the books, after all, are not the most important thing. Something else is. Thank you all for your understanding and support of the ideas and dream that have come out of Siberian Russia. Now this dream is no longer just a Russian dream. Now it is yours as well, and in equal measure. May you succeed in preserving it, putting it into practice and passing it on to be perfected by your children.

It is hard to tell who has performed the most significant service — Anastasia, with her impassioned sayings, the books themselves, or all those who have seized upon the idea and carried the torch forward?

Anastasia has said:

“I give the whole of my soul to people. In people I shall prevail through my soul. Prepare yourself, all wickedness and evil-mindedness, to leave the Earth...”<sup>30</sup>

I thought these were just simple words. I however, life has shown me that they are not simple at all.

Anastasia’s dream has been lit with tiny sparks in the hearts of millions of people scattered across the globe — people of many different nationalities and faiths. This dream is no longer just *her* dream. It belongs to many people and will not fade. It is now the dream of the ages and of eternity!

<sup>30</sup>Quoted from Book 3, Chapter 24: “Who are you, Anastasia?”.

## CHAPTER ELEVEN

# One hectare — a piece of Planet Earth

I'm often told: "Why do you make such a fuss over one hectare? — there are more important things." But in my view there is nothing more important in our life right now than to return the Earth to its original flourishing state.

And that is why I keep talking about a hectare of family land — behind it, after all, there is something immeasurably more significant. I don't always have the reasoning and intellectual capacity — nor, perhaps, the temperament — to explain this, but when there's even just a little breakthrough and people understand, well, I consider that a victory.

One occasion in particular stands out. The year was 2003. Switzerland. Zürich. An international forum. I was invited by the organisers and allotted a time to speak. I began talking about an idea that saw its birth in Russia, but the audience didn't appear all that receptive.

Then there was a question from the floor:

"How do you tie in this hectare of land with Man's spiritual development? Perhaps the problem of land tillage is important enough for Russia, but these questions have long been resolved in Europe. We're here to talk about spirituality."

A little nervous, I began my reply this way:

I'm talking about a hectare of land and setting up one's family domain on it, and some people might think that's a rather primitive notion. We have to talk about the great teachings on spirituality, they say, because that is the topic of this

prestigious European forum. I know — I was told by the organisers — that sitting before me in this auditorium are well-known innovative educators, philosophers and writers on spirituality from all over Europe, along with other thinkers on this topic who are no less important. But it is precisely because I am mindful of the composition of this audience here before me that I am specifically talking about a hectare of land.

Ladies and gentlemen, I am convinced that concepts such as love and spirituality must necessarily have a material embodiment.

The hectare of land I have in mind, the hectare Anastasia speaks about, is much more than a mere hectare of land. It is a Space through which you may be connected to the Cosmos. All the planets of the Universe will react to this Space and, consequently, to you. They will be your friends, assistants and co-creators.

In terms of the laws of Nature, look what happens to an ordinary flower — a daisy, for example. The daisy is inseparably connected with the Cosmos, the planets and the Sun. The flower opens its petals when the Sun comes up, and closes them when the Sun goes down. They are at one with each other, in harmony with each other. Not even trillions of kilometres or light-years could break the connection. They are bonded together — the great Sun and the little earthly flower. They know that only together can they be creators of a great universal harmony.

But every single blade of grass on the Earth reacts not only to the Sun. It also reacts to other planets. It reacts to Man, to the energy of his feelings.

Scientists conducted an experiment in which sensors were attached to an ordinary flowering house-plant, and polygraph indicators registered even the minutest energy impulses coming from the flower. Several people were sent into the room

in turn. One of them simply walked past the flower, a second went over and gave it some water, while a third went in and cut off one of the leaves. According to the data registered by the polygraph, whenever the person who tore off a leaf entered the room, the plant would get agitated and cause the indicator to jump.<sup>1</sup>

A related phenomenon can also be often noticed: flowers fade when their owner goes away. The upshot is, that all plants react to Man. They may like a particular Man or they may not. Consequently, they may transmit to their planets a message of either love or absence of love.

And now imagine that you have some kind of Space — say, a hectare of land. This isn't just any run-of-the-mill hectare of land where potatoes are grown for sale, but a hectare of land on which you have begun to create, based on a particular level of consciousness or spirituality.

You have your own territory on which there are a whole lot of plants cultivated not by hired workers, but directly by you yourself. Every plant, every blade of grass will react to you with love, and these plants, as living beings, are capable of collecting for you all the best energies of the Universe. They collect them and offer them to you. Plants feed on more than just the energy of the soil. After all, you are aware that there are some plants that can grow even without soil.

Five thousand years ago in Ancient Egypt there lived priests who created a variety of religions. And these priests were in control of whole nations. These priests were the richest people in the world of that time. The basements of their palaces

<sup>1</sup>This is apparently a reference to the research conducted by the American polygraph scientist Cleve Backster (1924–). For further information see Cleve Backster's *Primary perception: Biocommunication with plants, living foods, and human cells* (Anza, California: White Rose Millennium Press, 2003) or Peter Tompkins and Christopher Bird's *The secret life of plants* (New York: Harper & Row, 1973), esp. Chapter 1: "Plants and ESP".

were filled with trunks of gold and precious gems. They were acquainted with a whole range of secret sciences. The pharaoh turned to them for advice and money.

But each of these highly placed priests had his own hectare of land, on which he permitted no slaves to work. These were the richest people of their day, with a knowledge of a great many sciences. They knew the secrets of a hectare of land. On the walls of the ancient temples of Egypt, the priests' temples, was inscribed the warning: *Do not accept food from a slave*. This is Example One.

Example Two. In Ancient Rome the senators issued a decree that if a slave was capable of working on the land and had been given land, then that slave could be sold to another master only if the land were sold with him, so as not to let any outsiders into contact with what was growing on that land. And why did the Roman senators give land to some of their slaves? And why did they give them money on top of that to build themselves a house? For one reason only: to obtain ten percent of a harvest which had been cultivated and nurtured with love and care by the Man growing it. It was only produce like this that could be at all beneficial.

The Egyptian priests and the senators of Ancient Rome knew what kind of food was beneficial to Man. The produce we eat today is in no way fit for human consumption — it's 'dead produce'. There is a vast difference between berries one picks from a bush to eat on the spot and berries sold in a supermarket. It's not just that they've already started to decay, but there's no energy left in them. They are incapable of feeding Man's soul. And I'm not even mentioning the mutant plants created by our technological world.

So, if you don't have your own hectare of land, there's nowhere that you're going to find food worthy of human consumption. You can take a little money and buy some sort of vegetables. But you must realise that those vegetables were

not grown for you. They weren't grown for any Man at all. They were grown for money.

There is not a disease which cannot be cured by the Space of Love — a Space you have created with your own hands and your own soul.

People are the children of God. The world of animals and plants, the air and the Space around us — these are also God's creations. And everything taken together is nothing less than the materially embodied spirit of God. If someone calls himself a highly spiritual person, let him show the material embodiment of his spirituality.

Imagine God looking down on you from above right now. And He sees someone driving a tram, another one of His children constructing buildings, another standing in a store and selling things from behind a counter. These aren't the professions God created. They're professions for slaves. God didn't want his children to be slaves. And He created a marvellous world and gave it in stewardship to His children. Take care of it and use it! But to do that, you must understand this world. Understand what the Moon is, what the herb known as the yarrow is...

And what is a hectare of land? Is it a place where Man must work by the sweat of his brow? *No!* It is a place where Man shouldn't work at all. It is a place through which Man ought to control the world. Tell me, who gives greater pleasure to God — a Man driving a tram or a Man who might have only a small piece of land but has transformed it into a Paradise? The latter, of course.

Can people today open up a road to the Cosmos? Or can they be taught how to settle the Moon or Mars? Of course not! Because they'll put weapons and pollution there, and end up having the same wars there as on the Earth. Yet Man, after all, has been created to populate other worlds. And this will come about only when Man understands and beautifies

his own Earth. The way to settle the planets of the Universe isn't technical at all, it is psychotelepathic.

Man needs to become consciously aware of what constitutes the true beauty of the Universe.

Your city of Zürich is considered beautiful. We can say a thousand times how beautiful it is. But what, specifically, is beautiful about it? Yes, it is very clean here. Yes, it looks as though there are many well-to-do people living here. But is land covered with asphalt truly beautiful? Is it really good to have little green islands popping up just in certain places? Is it good that there's a dying tree — a majestic cedar — right in the centre of your city? It's suffocating from the smog. It's suffocating from exhaust fumes. And it's not the only thing that's dying and suffocating. The people walking along the city streets are suffocating from these fumes too.

We should give some thought to all that we have managed to contrive on this Earth. And it's best to talk about it in very simple terms. Let each one of us take a small plot of his land, pull his whole mind and whole spirituality together and create a very small but concrete Paradise. He will transform his little piece of land on our large planet into a flourishing garden, giving a material embodiment to his spirituality, following God's example. If millions of people do this in a whole lot of countries, then the whole Earth will become a flourishing garden, and there won't be any wars, because millions of people will be completely engaged in a grand co-creation. And if Russians should then descend upon Switzerland or Germany, it will only be to delight in the contemplation of beautiful living oases, to learn from their experience in embodying true spirituality.

Russia, unfortunately, is currently trying with all its might to be like the West. Russia's politicians are peppering their speeches with references to Western countries as *developed* or *civilised*. They are urging their people to catch up to them

in 'development' and 'being civilised'. Our politicians still don't know that we have the opportunity not only to catch up quickly, but to significantly overtake them. But this can come to pass only if Russia does a complete about-face and starts heading in the opposite direction.

This is in no way to suggest I am trying to denigrate or insult your Western civilisation. But we're talking here, after all, about spirituality, and we need to be honest and sincere in what we say to one another. Spirituality cannot be measured simply by material wealth and technological achievements. Such a one-sided, technocratic approach to mankind's development will invariably lead to an abyss. No doubt those of you gathered here today will admit this, but then you must also admit that you are running out in front, with us right behind you. Try to stop and figure out what's happened to our world. If you do manage to figure it out, call out to those running behind you: *Hey, you'd better stop, chaps! Stop running! There's an abyss ahead, and we're already on the edge of it. Find another way.*

If we really listen to our hearts, together, we ought to go from simply talking about spirituality to its material embodiment. One hectare is but a tiny dot on the face of our planet Earth. But millions of these dots will transform the whole planet into a flourishing garden. Trillions of flower petals, along with the happy smiles of children and oldsters will tell the Universe that the people of the Earth are ready for a grand co-creation.

And the planets of the Universe will respond:

"We're waiting for you, Man. We're waiting for you, worthy son of God!"

Our millennium has ushered in a great transformation on the Earth. Tens of thousands of Russian families have already aspired to obtain their own hectare of land. A father and mother who are actually creating a Space of Love for their

children are more spiritual than the most celebrated wise-men who only *talk* about spirituality.

Let the spirit of each Man spring up from the ground as a beautiful flower, a tree with fragrant fruit, and let this take place on every single hectare of our planet.

After these words, for some time absolute silence reigned in the hall. This was followed by thunderous applause.

I spoke in Zürich on the following day, too. Once again, to a full house. A number of our former compatriots were present here, too.

I don't think I came across too coherently, especially since I was speaking through an interpreter. But people stayed, they listened, because it wasn't just me that was talking with this audience — a higher power was speaking. A very simple, specific, yet at the same time extraordinary, power, one that has been preserved for millennia in the depths of the human soul — a nostalgia for the true way of life for Man as Creator.

And then I thought: *Do I really need to explain to anyone that all Russia's sons and daughters that have been blown away by an ill wind will most definitely return? Of course they'll come back!* You will remember Anastasia's words:<sup>2</sup>

*Mother Russia will greet crowds of guests on that day! They are all of the Earth as Atlanteans born! As prodigal sons they shall return. Let all the bards everywhere play on their guitars. And the old shall write letters to their children. And children to their parents. Both you and I shall become very young, and people will feel young for the very first time.*

<sup>2</sup>Quoted (approximately) from Book 2, Chapter 9: "Dachnik Day and an All-Earth holiday!".

## CHAPTER TWELVE

# People power

There is one additional question I would like to bring to my readers' attention.

At the moment you are engaged in the process of creating a people's strategy for the future development of the Russian State. Part of this strategy has been published in issues of the almanac,<sup>1</sup> part appears on the Anastasia site on the Internet. As I see it, the overwhelming majority of the materials is extremely interesting. However there is one question — about power and authority — that has not yet been sufficiently illuminated. Yet it is a most important question. I invite you to join me in contemplating it. For starters, I'd like to share my own reasonings with you.

Power often changes. Just over the past hundred years, people have lived under the Tsar, the Communists and a series of democratic rulers. Power gets changed, but life does not get rearranged for the better. Why? Do bad people always come to power? Hardly. It is more likely that the current system makes any politicians who get elected to power ineffective pen-pushers when it comes to solving the problems involved in any real betterment of people's lives.

Take our legislative assemblies over the most recent parliamentary terms. It seems that we vote for normal, family-type people, and then once they're in power they come up with, to put it mildly, some rather strange legislation. Why? Perhaps,

<sup>1</sup>*the almanac* — see footnote 1 in Book 7, Chapter 28: "To the readers of the Ringing Cedars Series".

in the process of coming to power, they fall into another world — a world isolated from the people? An apartment in the parliamentary living quarters, a car equipped with its own flashing light on top, a private office where the public is denied entry, along with all sorts of special perks and “vanity of vanities”.

Anastasia’s Grandfather suggested an interesting piece of draft legislation concerning deputies of the State Duma. They should each be granted a piece of land and definitely live in a community built on that land, right out among the people. A law faculty graduate in Ukraine named Tatiana Borodina,<sup>3</sup> has drafted a bill to this effect, and I think it is worth reproducing its major clauses here in this book, so that my readers can pass on the proposal to their own elected representatives in legislative assemblies at all levels.

Moreover, I call upon my readers to be sure to take part in regional and federal elections, but to vote in only those candidates who live in their own kin’s domains.

But is it merely a passport stamp that defines someone as a Russian citizen? In many cases, a candidate on the ballot has Russian citizenship and a Moscow residence permit, but has a fashionable domain located in another country. Is he going to be mindful of the needs of ordinary Russian people? Most probably his thoughts will be oriented in a completely different direction.

If a candidate has his own little Motherland — his family domain in Russia — and lives there among Russian citizens, his work can be expected to bring benefit to those citizens and to the Motherland as a whole.

This much is becoming clear to many people. Students are even beginning to draft laws to assist the legislators.

<sup>3</sup>*Tatiana Borodina* — see reference in Chapter 10 (“*The Book of Kin and A Family Chronicle*”) above, especially footnote 19.

## **A law of Russia on Family Communities created by Russian People's Deputies on all levels (draft)**

The law defines the legal, social and economic provisions for the creation and maintenance of Family Communities and Family Domains on the part of Russian People's Deputies,<sup>3</sup> thereby guaranteeing the right of Russian citizens — as proclaimed in Russia's Constitution — to hold land as the foundation for the wealth of the nation.

The law is aimed at the creation of favourable working conditions for Russian People's Deputies, conducive to the development, drafting and adoption of federal legislation, as well as guaranteeing their maximum contact with voters.

### **Article 1. Basic terms and concepts used in the Law**

Certain specific terms used in the Law are defined as follows:

- *Family Domain* — a plot of land from 1 to 1.3 hectares in size, granted to age-of-majority Russian citizens for their lifetime use, with the right of inheritance, with no tax obligations in respect to the land or its produce;
- *Family Community* — a centre of population organised on the principles of local self-government, consisting of Family Domains as well as socio-cultural and community facilities;
- *lifetime use* — unconditional ownership and use of a plot of land, free of charge and in perpetuity;

<sup>3</sup>*Russian People's Deputies* (Russian: *Narodnye deputaty Rossii*) — formal title of elected political representatives (members of parliament or a governing council) at the federal, regional and local levels.

• *living fence* — a hedge consisting of trees and shrubs planted around the perimeter of a Family Domain or a Family Community

### **Article 2. Legislation on Family Domains and Family Communities**

The procedures involved in granting a Russian People's Deputy an allotment of land for the creation of a Family Community, as well as the definition of the legal status of Family Domains and Family Communities and their functions, are all governed by the Russian Constitution, the Russian Land Code, this Law, the Russian Law on Family Domains and Family Communities, as well as other applicable laws.

### **Article 3. Basic principles of legislation governing Family Communities**

The creation of Family Communities by Russian People's Deputies is subject to the following basic principles:

- (a) compliance with the law;
- (b) the setting of conditions for the implementation by all Russian citizens of their right to hold land as the foundation for the wealth of the nation;
- (c) the principle that ownership and use of the plot of land granted for the creation of a Family Domain shall be free of charge, unconditional and in perpetuity;
- (d) exemption of the owner of a Family Domain from payment of taxes on the sale of produce grown or goods produced on said Family Domain;
- (e) the creation of one Family Community by one Russian People's Deputy of the current parliamentary term;
- (f) other applicable principles.

### **Article 4. Purview of the Law**

The purview of this Law covers Russian People's Deputies at all levels of government who are elected in accordance with

electoral laws, as well as age-of-majority Russian citizens who have expressed a desire to live in a Family Community organised on the principles set forth in this Law.

**Article 5. Granting an allotment of land to a Russian People's Deputy for the creation of a Family Community**

1. Each Russian People's Deputy serving a current or future term, within a year from the date of his election, shall be granted an allotment of land at least 150 ha in size whereon to establish a Family Community (hereinafter: *land allotment*).

2. Upon election as a Russian People's Deputy under the proportional system from a political party's or a party-alliance's candidates' list in a nation-wide election, the successful candidate shall be granted a land allotment in a region of Russia of his choosing.

Upon election as a Russian People's Deputy by a majority of voters in a single-representative electoral district, the successful candidate shall be granted a land allotment on the territory of the district where he is elected.

3. A single Family Community shall not be created by two or more Russian People's Deputies, neither shall two or more Russian People's Deputies be permitted to live in the same Family Community during the same term of office.

4. The land allotment is granted as a single parcel of land (including any water resources thereon) from properties belonging to the State or already held communally. Land may also be expropriated from people making full-time use of it and transferred to a Russian People's Deputy for the creation of a Family Community.

5. If required, land may be purchased from property owners for community needs, in which case the property owner must be given a minimum of a year's notice in writing by the respective decision-making body, and must also give his own consent to the sale. The purchase price is to be determined

by an expert's assessment of the land's monetary value, which is to be carried out in accordance with the methodology established by the federal Cabinet.

6. A plot of land recommended for inclusion in the land allotment for the creation of a Family Community by a Russian People's Deputy, but which is in the possession of a physical or legal person, may, with the agreement of the property owner, be exchanged for another plot of land of equal value — either in the same region or in another region of Russia, depending on the property owner's preference.

7. Russian citizens who own plots of land or shares in 'real' (individually registered) plots of land adjacent to the territory of a proposed Family Community, have the right to reassign their properties, without monetary payment, for the purposes of creating a Family Community by a Russian People's Deputy, and receive in return a plot of land within said Community, whereon to create a Family Domain for their lifetime use.

8. A Russian citizen who owns 'virtual' shares in communal (not individually registered) plots of land, has the right to transfer his shares, either wholly or in part (no less than 1 ha in size) for the purposes of creating a Family Community by a Russian People's Deputy, and receive in return a plot of land within said Community, whereon to create a Family Domain for his lifetime use.

#### **Article 6. Land composition in Family Communities**

1. The land in a Family Community is comprised of the following types of plots:

- land plots for the creation of a Family Domain;
- land plots for the creation of Family Domains on the part of children of a Russian People's Deputy (no more than two plots per Community).

2. Land plots reserved for socio-cultural and community purposes are designated in accordance with the overall plan

of the Family Community. The aggregate of such plots is not to exceed 7% of the total area of the Community. The said plots are under the jurisdiction of the Local Council of the said Family Community.

3. The remaining portion of the land allotment is to be divided into plots of land for the creation of Family Domains of no less than 1 ha each. The size may be extended to 1.3 ha depending on the peculiarities of the terrain and other pertinent factors.

4. Between all land plots walkways must be created, no less than 3 or 4 metres wide. Each plot owner has the right to plant a living fence around the perimeter of his Family Domain.

5. On plots of land designated for the creation of a Family Domain, Russian citizens have the right to plant trees and shrubs (including those of the forest variety), to create artificial reservoirs, construct houses and outbuildings and erect ancillary structures and other facilities, provided principles of good-neighbourliness are observed.

#### **Article 7. Order of distribution of land plots designated for the creation of Family Domains among Russian citizens**

1. In the proposed Family Communities the Russian People's Deputies have the right to be the first to select for themselves one land plot for the creation of a Family Domain for their lifetime use with right of inheritance.

2. Each child of a Russian People's Deputy with a family of his own has the right to receive a land plot for the creation of a Family Domain for his lifetime use.

3. It is mandatory that one or two land plots in the Family Community be granted to refugees or to children from orphanages.

4. Russian People's Deputies, at their discretion, have the right to grant to Russian citizens of their choosing up to 30% of the remaining land plots, whereon said citizens are to create their own Family Domains.

5. The remaining land plots should be given to Russian citizens belonging to a variety of social classes (entrepreneurs, social workers, pensioners, representatives of the creative intelligentsia, military personnel etc.). Land plots are to be distributed among Russian citizens on the basis of a lottery conducted openly at a general meeting of future residents of each Family Community.

### **Article 8. Local Councils of Family Communities**

1. The Local Council of each Family Community comprises those living in said Community, united by the fact of their permanent residence within the boundaries of said Community, which constitutes a self-contained administrative-territorial entity.

2. The Local Council of the Family Community has the right to create a representative organ of local self-government, namely, the Family Community Council, whose members are drawn exclusively from among the residents of the said Community.

3. Russian People's Deputies are prohibited from standing for election or being elected to the Family Community Council. In cases where a Russian People's Deputy is elected to a Family Community Council, their election shall be declared null and void.

4. The procedures for setting up local self-government are regulated by the By-laws of the Local Council of the Family Community (hereinafter: *By-laws*), which said Council has the right to adopt at one of its meetings or by a local referendum. The By-laws must be registered with the district office of the Ministry of Justice.

### **Article 9. Status of land plots in respect to creating a Family Domain**

1. Plots of land designated for the creation of Family Domains are granted — for lifetime use with the right of inheritance —

only to citizens of Russia. It is forbidden to grant land plots for Family Domains to citizens of foreign countries or to stateless persons, except those who have been granted legal refugee status (but no more than two such families are permitted per Family Community created by a Russian People's Deputy)."

I don't know how much time I had spent walking around while Anastasia's grandfather familiarised himself with the contents of the documents I had brought with me<sup>4</sup> when all of a sudden I heard a loud and raucous outburst of laughter, which sounded not at all like that of an old man. He was still laughing when I dashed over to him.

"That's rich!... Oho, that really makes me laugh!... Thank you... Thank you, Vladimir! And to think I didn't want to get into these at first!"

"But now that you are into them, what's so funny? After all, this is a most serious situation! And an extremely complicated one!"

"Extremely complicated for whom?" Grandfather asked.

"For me and for my readers wishing to build the domains Anastasia talked about."

<sup>4</sup>A detailed draft and commentary will be published in a forthcoming regular issue of the *Ringed Cedars of Russia* almanac, which you will be able to purchase. It would be a good idea for readers to bring this to the attention of Russian People's Deputies at all levels of government. -- *Footnote from the original Russian edition.*

<sup>1</sup>See the beginning of Chapter 9 above.

Quite possibly in uttering these words I might have sounded irritated and hurt. Grandfather stopped laughing, looked at me intently and replied quietly and seriously:

“To this day I cannot understand why my granddaughter would have anything to do with you, let alone bear children with you. Only don’t be mad at this old man, Vladimir. Maybe I don’t get it, which means others too may not get it, but it’s possible that in this ‘not getting it’ lies a great truth. And so I don’t have any bad feelings toward you. And I don’t condemn my granddaughter. On the contrary, I’m very excited about what’s been achieved.”

“But is there anything specific you have to say about the contents of these documents?”

“I’ve already said it — I’m excited about what’s been achieved.”

“By whom?”

“By my granddaughter.”

“But I was asking you about what I’d written.”

Grandfather looked first at the packet of documents and then, silently and intently, at me, before replying.

“I really can’t say, Vladimir, just how necessary your appeal to the public really is. Maybe it is indeed important for them. As I see it, what I read simply confirms that even back ten years ago my granddaughter foresaw all these ups and downs, and long ago everything that seems to be working against you she’s turned into something beneficial.”

“How can you call offending my readers and me *beneficial*?”

“Did you realise *who’s* been offending you and your readers?”

“Some kind of entity that’s set itself up under the cover of Russia’s Orthodox Church.”

“And it provoked a feeling in you of being offended?”

“Yeah.”

“Well, that’s good! Now it’s not just with your mind, but with the feelings that you and many of your readers have experienced, that you can understand how your forebears were defamed in the eyes of their descendants — how they were called pagans and for centuries were blamed for all sorts of misdeeds they never committed. You’re not the only one who’s tried to write about this. There have been quite a few historians over the centuries who have tried to refute this slander — but in vain.

“What’s happening now is that the same tactics are being used all over again to discredit people who really want to reach out and touch God’s creations. There are quite a few of these people now, and they can feel by their own experience how their forebears were smeared like that. The souls of their distant ancestors are finding renewed strength through those being slandered in our time. Their forebears of yesterday will act like guardian angels, protecting their descendants of today.

“Believe me, there can be no kinder and brighter force — no way — than that which is emerging in the world right now. If this is coming about for people today — if some invisible thread is capable of joining today’s son together with his parent who lived two thousand years ago — and if the thread that joins them together can be extended, then today’s Man will be joined together with God, his original Parent.”

Grandfather was clearly trying to restrain his excitement as he told me this. But I felt I needed further clarification.

“Maybe what you say is very important,” I observed. “But, you see, there’s been quite a bit of delay with the creation of family domains.”

“But, just maybe, such a delay is necessary to give people the opportunity to figure things out and co-create a design for the future?”

“Maybe. It’s all turning out rather unexpectedly. As though the first book began with just simple actions, then with the

second came readers' clubs, and now, with *The Book of Kin* out, the *Family Chronicle* has come along."

These words made Grandfather laugh again, but he immediately cut himself short, and said with a kindly smile:

"My granddaughter was clearly having a fun time with that *Family Chronicle*! Maybe it was to comfort you and your readers somehow. But hey, look how she arranged it so that Russia's supreme rulers and the Patriarch of the Church supported her idea! Even if it's just *one* of her ideas. No mention of her philosophy, or maybe they simply didn't understand it. Their names will not go down in the annals of old — they're too wishy-washy, not very bold.

"People will be eternally remembered in the annals of old who are right now, at least in their thoughts, creating their own God-pleasing domains. Whether they themselves chose the idea or whether it chose them, that doesn't matter any more. Eternity awaits those who are co-creating a future for their children — and not just for their children but for themselves too. For the first time on the Earth, Man who is born for eternity will come back to eternity.

"Vladimir, I'm just beginning to understand my granddaughter's achievements. It is possible that many secrets of life have been revealed to her. But there is one which even the high priests were not fully aware of. All they ever knew before was that human life *could* be eternal. Part of this knowledge allowed them, for example, to be reincarnated over and over. But this reincarnation was never complete. And this is why their achievements did not bring joy either to themselves or to mankind.

"Now I am confident — and believe me — that Anastasia has full knowledge of the creations needed to attain eternity. You might ask her about this and try to understand. And if she can come up with words that a great many people will understand, worlds worthy of a god-Man will be unfurled to their thought.

“Take a walk over to my granddaughter, Vladimir, and have a talk with her. At the moment she is sitting under the cedar, down by the lakeshore. There may be significant revealings in the world all around when the words of eternity are found which are comprehensible to both mind and feelings. The aspirations of the great awakened civilisation will whirl upward. The whole galaxy will feel these great aspirations and will await with shivers of anticipation the touch of those capable of giving to the planets a new and marvellous life. Go, and be not slow.”

I had already taken several steps when I was stopped by Anastasia’s grandfather crying out:

“Vladimir, it’s high time that you and Anastasia’s followers started your own Motherland party.”

“A party? What kind of party?”

“I’m telling you! That’s what you should call it — the *Motherland Party!*”<sup>5</sup>

<sup>5</sup> *Motherland Party* (Russian: *Rodnaya Partiya*) — Following the publication of this appeal, several groups of inspired readers and sponsors did set about establishing the proposed ‘Motherland Party’. However, since Vladimir Megré subsequently changed his mind and decided to align himself with the *Edinaya Rossiya* (One Russia) Party, loyal to the existing régime of Vladimir Putin (and invited his followers to follow suit), the proposed party never got off the ground, and Megré’s move caused some dissension among his followers.

## CHAPTER THIRTEEN

# A new civilisation

Anastasia was sitting beneath the cedar tree, wearing a light grey flaxen dress. With her arms around her knees and her head slightly lowered, she was gazing out at the smooth surface of the lake. I didn't go up to her right away. For a while I stood at a distance, observing this recluse quietly sitting there by the lakeshore. No — that description really doesn't fit Anastasia. The word *recluse* is better suited to the people who live in modern apartments.

People live in these apartments and don't even know their neighbours sharing the same floor.<sup>1</sup> They walk along the street and couldn't care less about the people they meet. And their attitude is entirely reciprocal.

So, while there's nothing frightening in someone living alone, it's a lot more frightening when they're alone amongst people like themselves.

And so, even though Anastasia was sitting here alone on the shore of this taiga lake, her heart was beating in unison with millions of human hearts all over the world. Some call her their friend, some their sister, feeling like they're related to her.

<sup>1</sup>In contrast with North American practice, Russian apartment blocks, even the ones that appear massive from the outside, are usually divided into vertical sections, each with its own exterior entrance, stairs and lift (elevator). A given section might have four to six flats per floor around the stairwell and lift shaft. Hence there would not be very many "neighbours sharing the same floor".

In the meantime, her soft-spoken words wing their way through the endless flow of information thundering and dundering from TV screens and a host of other media. Her words waft by and people pick them up. And people who catch them may respond with guitar strings and songs, and often with actions. They retune their life anew.

And Grandfather... I saw for the first time how fervently he expressed himself as he asked me to have a word with Anastasia about eternity.

I sat down beside her and she turned her head toward me. I felt a calming sense from the tender gaze of her greyish-blue eyes. For a time we simply sat and looked at each other.

I couldn't help myself, but took her hand, gave it a quick kiss and then replaced it on her knees. Her cheeks were aflush with a soft glow, her eyelashes all aflutter. And without rhyme or reason a sense of unease came over me. How strange to feel uneasy over a woman one has known for ten years! And how delightful!

And in an attempt to overcome my sense of awkwardness and unease, I broke the silence first.

"I was talking with your grandfather just now, Anastasia. For some reason he quite unexpectedly and rather excitedly started saying something about humanity's need for words on eternity. He said these words should be the kind people can grasp not just with their mind or intellect, but with their feelings. Are these words really that important?"

"Yes, they are important, Vladimir. But it is not the words that are important, but, rather, people's conscious awareness. Words, of course, are necessary to bring it forth. A conscious awareness of eternal life will help perfect Man's way of life."<sup>2</sup>

<sup>2</sup>As noted earlier (footnote 7 in Chapter 9: "A fine state of affairs!"), the Russian phrase for 'way of life' is literally: 'image of life' (*obraz zhizni*).

“But what connection is there between our way of life and becoming consciously aware of eternity?”

“A direct connection. People today believe that they have only a few decades to live, after which they must leave life behind and disappear into oblivion. Yet all along, Man’s life can be eternal. This must be brought out, so that everyone, or, at least, most people, may understand.”

“But you talked about that already. And I’ve included your words on this subject in several of my books.”

“Yes, I did, but, evidently, what I said has not been understood, or the frailty of human existence has been drummed into people’s consciousness too strongly over the millennia. New words and arguments must be found.”

“So, can you try to find them?”

“I shall try. We need to look for them, apparently, along with those who will understand.”

“But tell me in your own words first.”

“Fine. Perhaps we should put it this way...

“Most people living on the Earth believe that they plan out their own life. They choose a profession, start a family, have children or, alternatively, decline to have children. But in many respects their decisions are not their own. A great influence is exercised upon them by somebody else’s will, acting through public opinion.

“For example, you have an object called a *clothes hanger*. At one point somebody decided to perfect this object by using Man himself as a clothes hanger. This gave rise to the profession you call *modelling*, from the word *model*. It is not an enviable profession, it is not part of Man’s destiny.

“But somebody decided to make it one of the most attractive professions of all, and did so. They began to show off live models in a variety of colour magazine photos and TV shows, and to describe their supposedly happy lives — to tell about all the money they make and how rich people want to marry

them. Millions of young girls began to dream of becoming the world's next top model and thereby attaining happiness.

"Millions of young girls all over the world began resorting to all sorts of measures in an effort to achieve this illusory glory. One in a million made it as a famous model, essentially becoming a walking clothes hanger. The others experienced deep disappointment in their lives, as their dream was not fulfilled.

"And this was due to their failure to determine their own destiny — they had begun structuring their lives under the influence of somebody else's will.

"There are many other examples that could be cited of men and women, and even children, chasing illusory values, neglecting their own purpose and destiny.

"Tell me what you think, Vladimir — if human society is made up of people like that, where can it be heading?"

"It's heading nowhere, that kind of human society. Out there, in our country — Russia — not a single political party nor the state as a whole has put forth any kind of programme for building the future. From what you have told me, Anastasia, I'm particularly interested in the definition of Man's purpose and destiny. What does it consist of? How can people discover it?"

"Let your thought, Vladimir, as well as other people's thoughts, try to grasp hold of God's creations, His programme, His dream."

"But is that really possible — grasping hold of God's dream, I mean?"

"It *is* possible. After all, He has hid nothing, and still hides nothing from people — from children who are His very own. He has written no scholarly tomes — everything by example He has shown. And the first thing everyone needs to understand and feel is which of Man's deeds to eternity lead. Think for yourself, Vladimir, why did not God, who created the

living and multifaceted world, not create things like the car, the TV and the space ship in their present form?”

“Perhaps He simply wasn’t up to the job, whereas Man is?”

“God created everything Man needs — Man has within himself a means of transportation as well as imagination through which he can see far better pictures than are shown on TV. Man is also capable of effecting the mastery of other planets of the Universe without the aid of primitive artificial projectiles.

“It was God who determined Man’s purpose and destiny, as well as the programme of development for all life in the Universe. To attain the required understanding, Man needs to refrain from destroying His programme and to study for all he’s worth and ascertain the purpose of everything on the Earth.”

## **Immortality**

“God created Man immortal. To witness this, only three conditions are required to be observed:

“*First:* create a living Space which will attract Man to itself and to which Man has aspired.

“*Second:* there should be, somewhere on the Earth, at least one person who thinks of you with kindness and love.

“*Third:* never even admit the thought that you can be overtaken by death — and this is extremely important. Even if you suggest to someone who is simply falling asleep that he is dying and he believes it, then he will die, in obedience to his

thought. But even if an elderly man (in Earth terms) wears out his body and is lying at death's door, but does not think about death, but pictures his life in the living Space he has been creating, he will be born anew — such is the law of the Universe. The Universe will not stand by and allow a life-creating thought to die.

“You have a concept in your world known as *natural selection*. Even now God's programme is selecting the best of everything for a re-embodiment. Before, however, there was not much to choose from. Now it is showing a multifold increase. Whoever builds a domain with love will be reincarnated again and again.

“Whatever interferes with them will disappear from the Earth for ever, giving way to the birth of a new civilisation.”

“But why a new civilisation,” I asked, “if the people are going to be the same, with the same vegetation and the same planet?”

“The new civilisation, Vladimir, will be characterised by a new conscious awareness as well as by new perceptions of the surrounding world. This great principle, that has been given birth in people today, will remain invisible to ordinary sight until the appearance of the planet known as the Earth has changed. It will affect life in the Universe as a whole.”

“But how can the Universe change as a result of the Earth's appearance?”

“It can, Vladimir. Even though our planet is but a small particle, it is in close interaction with other parts of the Universe. Even if one small particle should change, its changes can influence the whole spectrum of the Universe.”

“Most interesting. But couldn't you show me, Anastasia, a scene from the future as to how the Universe might change?”

“I can indeed. Take a look.”

## Love creating worlds

Spring was in full bloom on the planet Arreta.<sup>3</sup> Herbs very similar to those on the Earth, along with flowers on trees and bushes, were giving off their sweet scent. A young man named Vladislav<sup>4</sup> was walking along a pathway amidst the springtime splendour, on his way to a symposium. He was to give a talk on the origins of life on the planet Arreta. His debating opponent would be his childhood friend Radomir.<sup>5</sup>

At nineteen years old, Vladislav had an adequate store of data to defend his theory before scholars at any level. But the knowledge possessed by his friend Radomir was no less in scope. Radomir and his team would pounce on any weak points or unsupported reasoning in Vladislav's arguments regarding events in the past.

Liudmila<sup>6</sup> would be there, too. Liudmila... As it happened, both lads had been in love with this girl right from childhood. They loved her, but never admitted it either to each other or to the girl. Instead, they were waiting for Liudmila herself to give some kind of indication as to whom she preferred.

<sup>3</sup>*Arreta* — The Russian name here is actually *Yalmeza*, derived from the word *Zemlya* (Earth), spelt backwards.

<sup>4</sup>*Vladislav* — a common Russian masculine name, originally meaning '[born] in love and glory' (although often associated with the meaning 'ruler of praise'). The subsequent variant *Vadichek* is an endearing form of this name.

<sup>5</sup>*Radomir* — a Russian masculine name, derived from the words *rad* ('joyful') and *mir* ('peace').

<sup>6</sup>*Liudmila* — a common Russian feminine name, derived from the roots *liud* ('people') and *mil* ('dear').

Vladislav had deliberately chosen a roundabout route to where the symposium was being held, in order to give more thought to his presentation. But something was interfering with his concentration. He had the impression that somebody was watching him. Upon hearing a rustle behind him, he did a sharp about-face. Someone darted from the path into the bushes and was lying still in the tall grasses. Vladislav took a few steps back the way he had come and caught sight of a figure hiding in the grasses under a bush. It was his four-year-old sister Katya.<sup>7</sup>

“So, Katerinka, you’ve latched onto me again, eh?” Vladislav tenderly addressed his sister. “I’ve got an important presentation coming up. Maybe you don’t realise it, but you’re getting in the way. Or maybe you do realise it — otherwise you wouldn’t be hiding there in the grasses.”

“I’m not hiding, I’m just lying here,” replied Katya. “I’m looking at this flower, and all the different little bugs.” And she made it look as though she really were interested in a particular little flower.

“Well, now! Then you can just go on lying there looking at them. I’m off.”

Katya jumped up at once and ran over to Vladislav.

“Go ahead, Vadichek,” she started rattling off. “I’ll follow you ever so quietly, so’s not to interfere with your thinking. When we get to the place where all the people are, you take me by the hand so that everyone can see what a handsome and clever big brother I have!”

“Okay. Don’t try to sweet-talk me. Here, give me your hand. Only remember, when I or somebody else is presenting, don’t even think of criticising what the grown-ups say, like last time.”

<sup>7</sup>*Katya* — an endearing form of the feminine name *Yekaterina*, derived from the Greek word *katharós* (‘pure’); related to ‘Catherine’ in English. The subsequent variant *Katerinka* conveys a hint of brotherly condescension.

Katerinka, now satisfied, grasped hold of Vladislav's hand and promised:

"I shall try with all my might not to criticise."

Representatives of the different regions of the planet Arreta, both young and old, filled the natural amphitheatre. Nobody carried pens, notepads or any kind of writing materials. Their natural memory allowed them to memorise what they heard down to the minutest detail. Vladislav carried no exhibits with him as he walked out on stage. With just the power of his thought he would be able to create holograms in space to show any scenes from the past he wished, or reproduce household objects or even feelings.

With just a hint of uneasiness, Vladislav began his presentation:

The planet on which we live is called Arreta. It is more than ninety sextillion years old. But life began here no more than three hundred years ago. For originating life here we are indebted to our forebears, two inhabitants of the planet Earth. To put it more specifically, the originating of life on the planet Arreta was due to the influence of the energy of love and the dream of two inhabitants of the planet Earth. For this reason I offer you some historical information about life on the planet Earth.

The earliest period of people's life on Earth was quite possibly similar to our own. They had a good knowledge and feeling of their planet and the purpose of the Universe.

Earth-dwellers determined the purpose of all the living organisms of their planet, and made efficient use of them.

But one day a disaster occurred. The consciousness of one of the Earth's inhabitants was invaded by a virus which soon spread intensively among the other inhabitants of the planet. Our scientists have termed this virus *death*.

The outward signs of this virus, as indicated by historical records, are characterised as follows. The people infected by it start to destroy their own perfect variety of life on the planet, creating in its place a primitive, artificial world. This period of life Earth-dwellers themselves referred to as the *technocratic age*.

The people infected by the death virus began mutating from rational beings into anti-rational beings. They gathered together in large numbers on small plots of land and built themselves dwellings that looked like stone tombs, piled one on top of another.

Picture to yourselves a stone mountain with a whole lot of burrows hollowed out in it. It was something quite similar to these stone mountains that people built with their hands and called *apartment blocks*. The tomb-burrows in this artificial mountain were called *apartments*. A massive concentration of these artificial stone mountains with their burrows, piled up one beside the other, was called a *city*.

These so-called cities were filled with air unfit to breathe and water unfit to drink, along with stale food. Even during Earth-dwellers' lifetime, various organs of the human anatomy would begin to decay and decompose. Of course it is difficult to imagine human bodies walking around containing decaying and decomposing organs. But that's exactly how it was.

Historical sources indicate that people of the technocratic age even had a science they called *medicine*. They

considered one of the big achievements of this science to be the ability to replace their internal organs. People did not understand that the very existence of such a science proved the inadequacy of their consciousness.

It was not only people's flesh that was subject to decomposition. There was an intensive degradation of their mind and consciousness too. Their thought slowed down, they even lost the ability to compute sums and invented a *calculator*. They lost their ability to create holograms in space and invented a device they called a *television* — a primitive mechanism displaying something like a hologram.

They lost the ability to move themselves through space and began building artificial devices known as *cars*, *aeroplanes* and *spaceships*.

From time to time certain groups of people would attack other groups and they would kill each other. But, most incredible of all, the death virus gave people the notion that they were not eternal, but existed only temporarily in the space they could mentally grasp hold of.

More and more, the actions of people of the technocratic age transformed the planet Earth into a foul-smelling, smoke-stenched corner of the Universe. But the Mind of the Universe kept waiting for something, and refrained from destroying this deleterious place in the galaxy.

"Stop, please, for a moment!" Vladislav's presentation was interrupted by a voice coming from the group of his debating opponents, headed by his friend Radomir. "It's senseless to continue with your talk. It would have been impossible for something like that to happen on the Earth."

"All right, I shall break off my presentation, if you can really prove the improbability of what I have said."

From among the group of opponents one young man stood up and argued as follows:

“We have reliable reports about the existence of *religion* in Earth society. Religious treatises talked about the Earth and everything growing thereon as being created by the Mind of the Universe, which they called *God*. They worshipped him and performed many rituals in his honour. I trust, my dear presenter, that you will not deny that fact?”

“No, I shan’t deny it,” replied Vladislav.

“Then tell me, how could they perform rituals in honour of their god and at the same time destroy his creations? It would be impossible to do both at the same time. Consequently, these densely populated cities you speak of could not have existed on the Earth. And people could not have fouled the water created for them by the God they worshipped. In any case, the Mind of the Universe could not have countenanced such chaos, or he himself could not have been termed a ‘mind’. On the contrary, it would call into question any speck of rationality in what he created — Man first and foremost. What have you to say to this, my honourable presenter?”

“I say that the existence of a Mind, especially of the Universe, is the union of two great principles — Mind and Anti-Mind.

“The age of the Anti-Mind was necessary for the people of the planet Earth. And if you will permit me, in the next part of my presentation I shall prove the existence of two great principles in Man.”

“Fine, then, carry on!” the young man agreed, and sat down. Vladislav continued his presentation, now more confidently:

The world of the Universe is the union of opposites. Man also reflects this union of opposites within himself. Amidst the incredible chaos that has taken over Earth-dwellers’ consciousness, all at once there appeared people capable of understanding... These people changed their attitude toward Earth’s creations, but not with words and not through

the aid of religious treatises. *They began to change their way of life.* While not yet fully comprehending the scope of their creation, they referred to their actions simply as ‘the building of a family domain’.

They did not yet know that by approaching the Earth with a new conscious awareness, they were beginning to revitalise the planets of the Universe. They did not yet know that for them death would no longer exist, or that the children they gave birth to would be called gods by their descendants. They were simply building their family domains on the planet Earth.

In the meantime the Mind of the Universe followed their activities with trembling anticipation. And eventually the day came when all the people of the Earth began to live in their marvellous domains. And the day came when... Look, I shall show you a hologram — it has two people in it.

In the space in front of the assembly appeared a three-dimensional earthly landscape. Two elderly people, a man and a woman, were walking hand-in-hand along a pathway leading from their domain to a nearby forest. They were clearly more than a hundred years old. Evening was coming on, and the sky was filled with still barely noticeable stars. The couple walked up to a cedar tree, and the elderly woman leant her back against it.

“Here I am a grandmother now, and a great-grandmother, too,” the woman tenderly remarked to her companion, “and you’re still after me to go for a night-time walk under a starry sky, just like we did when we were young.”

“But isn’t that what you want, too?”

“Of course I do, my beloved.”

He quickly grabbed her by the shoulders, gave her an impetuous hug and kissed her on the lips. Then he pushed the

strap of her dress to one side, baring her shoulder. The now bright moonlight clearly revealed three birthmarks all in a row on the woman's left shoulder. The man kissed each of these in turn.

"You are just the same as you were before, my beloved, you are. I never want to part from you."

"And part we shall not. We shall die and be born anew."

"We can't afford to be born anew," she said sadly. "Just look, there's hardly any free land left on the Earth — it's all gardens and domains, everywhere you look. And it's possible our grandchildren won't have enough room. Probably the Creator failed to take this into account when He created the Earth."

"I don't think so. There is some kind of solution, but we don't know yet what it is. But I am confident that our love cannot be interrupted. You and I shall die to be born again."

"But where?"

"Look, my beloved — on that star out there! Let our thought create life anew on that planet, similar to life on the Earth. Think about it — why else would God have thought to create so many planets? It can't be just a coincidence. Our thought has a material form — it will create life for us on that lifeless planet. We shall be re-embodied again and again. Our love will be forever the same..."

"I thank you for this marvellous dream, my beloved, indeed I do. With you... I shall help you create life on that planet new."

"What shall we call it, my beloved, this planet of our new life?"

"Arreta, that's what it'll be called."

"Wait for us, Arreta! In the meantime you can blossom out in gardens and spread yourself with herbs, the way I desire," said the man, fervently and confidently.

"Me too," responded the woman.

The hologram disappeared. Vladislav bowed to the assembly and stepped off to one side, making way for his friend and opponent, Radomir.

Radomir stood in Vladislav's place, glanced around at the gathering and began to speak.

"I beg to disagree with my friend. I shall say right off: in his version of events there is a great deal that is unprovable and even contradictory. Like my friends here, I cannot believe in the existence of a period in people's history which is so utterly absurd.

"The hologram he showed, as we all realise, is only a whim of his thought and imagination and is lacking in confirmation. Though this hologram gave me a kind of strange sensation. It seemed as though my learned friend had taken it from a story already known — I just can't recall what source it is from."

A hushed whisper spread through the amphitheatre, and cries of "Plagiarism!" could be heard.

"Could it be plagiarism? Unheard of! But perhaps the presenter didn't know..."

"Plagiarism... Yes, there is a distinct impression of something we've seen before here."

Vladislav stood to one side and hung his head. He shuddered upon hearing a child's cry from one of the back rows.

"A-a-a-ah! A-a-a-ah!" his sister Katerinka kept calling out, refusing to be silenced.

*At least she's just calling out, and not criticising the proceedings,* thought Vladislav. But he was wrong.

After waiting for the inevitable silence to ensue, Katerinka declared in a loud voice:

"Don't even think of arguing with my big brother! 'Cause he's very, very clever and sensitive too."

"Now *there's* a weighty argument," someone said, as snickering could be heard all round.

“Quite true, very weighty indeed,” little Katerinka went on. “And you, my Radomirchik, don’t you go fancying Liudmila. Just don’t go fancying her, and that’s it!”

“Katya, keep quiet!” Vladislav cried out.

“I shan’t keep quiet! Liudmilka loves you, and you love her — I know that for certain.”

“Katya!” Vladislav cried out again, and headed over to where his sister was standing.

“Liudmilka, what are you sitting there for?” exclaimed Katya. “Stop him. He won’t let me have my say! He’ll drag me away! By force!”

A brown-haired girl rose from the back row, headed toward Vladislav and stood in his way. Liudmila’s cheeks had broken out in a soft blush. With head lowered, she whispered:

“Your sister’s right, Vladislav.”

Her whisper could be heard through the hushed amphitheatre. All heads turned toward little Katerinka, people smiled and applauded her. Inspired by the audience’s support, the little girl ran down to Radomir, who was still standing on stage. She took up a position right beside him and held up her hands to signal the gathering to quiet down.

When all were silent, she started speaking again, this time to Radomir:

“You know, Radomirchik, you almost played the traitor there. You musn’t criticise my big brother. He showed everything fair and square. He’s your friend. You’re his friend. So don’t you criticise.”

Radomir glanced down condescendingly at the little girl beside him, and with equal condescension began speaking to her, as well as to the people in the amphitheatre:

“I’m not criticising. I’m simply stating a fact. There’s not enough pieces of evidence in the hologram he showed. In fact, there’s none.”

“There is one. Or maybe two,” Katerinka firmly declared.

"And where might it be — or where might *they* be, if there's two?"

"One of them is me. And the other is *you*, Radomirchik!" the little girl confidently stated.

With these words she undid two buttons on her dress and bared her shoulder. On Katerinka's left shoulder Radomir glimpsed three birthmarks, exactly the same as they had seen on the elderly Earth-woman in the hologram. Radomir examined the birthmarks on the little girl's shoulder, and his blood began rushing through his veins. He concentrated on trying to recall something. Then appeared before him a hologram which only he could see.

*A country scene on the Earth. There he is, kissing the three birthmarks on his beloved's shoulder. Then she gives him a bug. She laughs and rumples his hair and kisses the end of his nose, still laughing, as usual.*

The hologram disappeared.

Radomir looked for a while longer at the little girl standing in front of him, her shoulder still bared as before. Then he suddenly bent over, took Katerinka in his arms and held her close. Embracing him, she rumped his hair and gave him a quick kiss on the end of his nose. He kept holding little Katerinka in his arms, and she whispered in his ear:

"Either you were in a hurry to be born, Radomirchik, or I was born later than I should have been. Now you must wait while I grow up. Wait fourteen years. You won't be happy with anyone else — I'm your better half!"

"I shall wait 'til you grow up, my dear," the lad responded quietly.

Exhausted by all the excitement, Katerinka now felt calmed down. She put her little head on Radomir's shoulder and fell into a sound sleep. He stood there silently before the hushed amphitheatre, carefully holding in his arms his bride-to-be.

With his mind, he began drawing letters of the alphabet in space. Those assembled read the text of the hologram he created:

THERE IS PROOF. IT IS IN EACH ONE OF US!  
LOVE IS INFINITE AND ETERNAL IN THE UNIVERSE.

Then, slowly and carefully, so as not to awaken the little girl asleep on his shoulder, Radomir headed for the exit.

But he had forgotten to turn off the spatial expression of his thought, and so the hologram continued to sprout more letters. The audience realised that these words were not addressed to them, but they could not help reading them:

YOU RAN BAREFOOT THROUGH STARS, NOT LOOKING FOR LOVE,  
AND IN NO WAY SELF-SERVING, NO NEVER.  
THROUGHOUT INFINITE SPACE YOU ALONE DID PRESERVE  
WHAT WE SHOULD BE PRESERVING TOGETHER.

These words were intended for a little girl of the planet Arreta, as well as for the Earth-woman — the goddess who had given life to their planet.

The little goddess slept sweetly on Radomir's shoulder. Perhaps she too was hearing in her sleep the words of her beloved.

“That’s terrific, Anastasia! That means that when people follow the Divine programme and give the whole Earth a

makeover, they will also have the opportunity to resettle on other planets?”

“Of course. Otherwise the very existence of other planets in the Universe would be meaningless. But He has infused everything with great meaning. The love between two people — a dream, born in love — is capable of breathing life into any planet.”

“And again, Anastasia, as I understood it, the people who are now building their domains will *not* die. They will only change bodies and be reincarnated in life on the spot.”

“Of course. Their actions on the Earth are more needed than anyone else’s. They please God. And even people who have never managed to touch the earth with their hands, but have mentally begun to build their own future living corner of Paradise, are many times more needful to the Divine programme than hundreds of wise men sitting behind stone walls — men who have cut themselves off from God’s creations, simply talking about God and spirituality.

“Their words are blasphemous and sad. Death without reincarnation awaits them. They can look forward to a fearful fate, but far from being God’s punishment, this is what they have chosen as their own destiny!

“God has shone forth in the Universe with a new thought — it is not only a great energy, but a judge as well. Much has been said in treatises and legends about God’s judgement. It is now coming softly and invisibly, God’s judgement. It touches all the people now living on the planet. And every Man will be his own judge.

“Whoever chooses life and creates living life will be eternal and resemble the grand Creator of the Universe.

“Whoever visualises death in his imagination is doomed to death by his own thought.”

It seemed as though these words of hers, spoken with a soft and confident tone on the bank of the River Ob, were taken up by the Space like an echo over the Earth. Over the past ten years I have not been the only one who has learnt how Anastasia is able to create the future through her thoughts and words.

As my boat took me further and further up the river, I could see her still standing on the shore. The Space around picked up her words on eternal life and repeated them over and over. From what galaxies, or from what worlds of the Universe, I all at once began to wonder, did Anastasia appear in her earthly likeness and impart a conscious awareness of *eternity* to the planet Earth? She is not one to lightly toss out words at random turns. And this has been confirmed in real life.

And that being the case, my dear readers, I must offer you my heartiest congratulations! On your conscious awareness! We shall live for ever, co-creating life in the Universe.

'Til our next joyful meeting, dear friends!

## THE RINGING CEDARS SERIES AT A GLANCE

*Anastasia*, the first book of the Ringing Cedars Series, tells the story of entrepreneur Vladimir Megré's trade trip to the Siberian taiga in 1995, where he witnessed incredible spiritual phenomena connected with sacred 'ringing cedar' trees. He spent three days with a woman named Anastasia who shared with him her unique outlook on subjects as diverse as gardening, child-rearing, healing, Nature, sexuality, religion and more. This wilderness experience transformed Vladimir so deeply that he abandoned his commercial plans and, penniless, went to Moscow to fulfil Anastasia's request and write a book about the spiritual insights she so generously shared with him. True to her promise this life-changing book, once written, has become an international bestseller and has touched hearts of millions of people world-wide.

*The Ringing Cedars of Russia*, the second book of the Series, in addition to providing a fascinating behind-the-scenes look at the story of how *Anastasia* came to be published, offers a deeper exploration of the universal concepts so dramatically revealed in Book 1. It takes the reader on an adventure through the vast expanses of space, time and spirit — from the Paradise-like glade in the Siberian taiga to the rough urban depths of Russia's capital city, from the ancient mysteries of our forebears to a vision of humanity's radiant future.

*The Space of Love*, the third book of the Series, describes author's second visit to Anastasia. Rich with new revelations on natural child-rearing and alternative education, on the spiritual significance of breast-feeding and the meaning of ancient megaliths, it shows how each person's thoughts can influence the destiny of the entire Earth and describes practical ways of putting Anastasia's vision of happiness into practice. Megré shares his new outlook on education and children's real creative potential after a visit to a school where pupils build their own campus and cover the ten-year Russian school programme in just two years. Complete with an account of an armed intrusion into Anastasia's habitat, the book highlights the limitless power of Love and non-violence.

*Co-creation*, the fourth book and centrepiece of the Series, paints a dramatic living image of the creation of the Universe and humanity's place in this creation, making this primordial mystery relevant to our everyday living today. Deeply metaphysical yet at the same time down-to-Earth practical, this poetic heart-felt volume helps us uncover answers to the most significant questions about the essence and meaning of the Universe and the nature and purpose of our existence. It also shows how and why the knowledge of these answers, innate in every human being, has become obscured and forgotten, and points the way toward reclaiming this wisdom and — in partnership with Nature — manifesting the energy of Love through our lives.

*Who are we?* — Book Five of the Series — describes the author's search for real-life 'proofs' of Anastasia's vision presented in the previous volumes. Finding these proofs and taking stock of ongoing global environmental destruction, Vladimir Megré describes further practical steps for putting Anastasia's vision into practice. Full of beautiful realistic images of a new way of living in co-operation with the Earth and each other, this book also highlights the role of children in making us aware of the precariousness of the present situation and in leading the global transition toward a happy, violence-free society.

*The book of kin*, the sixth book of the Series, describes another visit by the author to Anastasia's glade in the Siberian taiga and his conversations with his growing son, which cause him to take a new look at education, science, history, family and Nature. Through parables and revelatory dialogues and stories Anastasia then leads Vladimir Megré and the reader on a shocking re-discovery of the pages of humanity's history that have been distorted or kept secret for thousands of years. This knowledge sheds light on the causes of war, oppression and violence in the modern world and guides us in preserving the wisdom of our ancestors and passing it over to future generations.

*The energy of life*, Book Seven of the Series, re-asserts the power of human thought and the influence of our thinking on our lives

and the destiny of the entire planet and the Universe. It also brings forth a practical understanding of ways to consciously control and build up the power of our creative thought. The book sheds still further light on the forgotten pages of humanity's history, on religion, on the roots of inter-racial and inter-religious conflict, on ideal nutrition, and shows how a new way of thinking and a lifestyle in true harmony with Nature can lead to happiness and solve the personal and societal problems of crime, corruption, misery, conflict, war and violence.

*The new civilisation*, the eighth book of the Series, is not yet complete. The first part of the book, already published as a separate volume, describes yet another visit by Vladimir Megré to Anastasia and their son, and offers new insights into practical co-operation with Nature, showing in ever greater detail how Anastasia's lifestyle applies to our lives. Describing how the visions presented in previous volumes have already taken beautiful form in real life and produced massive changes in Russia and beyond, the author discerns the birth of a new civilisation. The book also paints a vivid image of America's radiant future, in which the conflict between the powerful and the helpless, the rich and the poor, the city and the country, can be transcended and thereby lead to transformations in both the individual and society.

*Rites of Love* — Book 8, Part 2 (published as a separate volume) — contrasts today's mainstream attitudes to sex, family, childbirth and education with our forebears' lifestyle, which reflected their deep spiritual understanding of the significance of conception, pregnancy, homebirth and upbringing of the young in an atmosphere of love. In powerful poetic prose Megré describes their ancient way of life, grounded in love and non-violence, and shows the practicability of this same approach today. Through the life-story of one family, he portrays the radiant world of the ancient Russian Vedic civilisation, the drama of its destruction and its re-birth millennia later — in our present time.

*To be continued...*

# The New Civilisation by V. Megre

## Book 8 of The Ringing Cedars Series

Spirituality /  
Nature

*The New Civilisation* paints a vivid image of America's radiant future, in which the conflict between the powerful and the helpless, the rich and the poor, the city and the country can be transcended and lead to transformations in both the individual and society. Vladimir Megre describes a new visit to Anastasia and their son, and offers new insights into practical co-operation with Nature, showing in ever greater detail how Anastasia's lifestyle applies to our lives and how her words already produce massive changes in Russia and beyond.

## CHAPTER ONE

# Love — the essence of the Cosmos

All of a sudden a figure appeared on the roadway ahead. He was standing practically smack dab in the middle of the travel lane with his back to my oncoming jeep. I began braking at once, so as to carefully go around this strange-looking grey-headed figure.

When I got within ten metres of him, the old fellow quietly turned around and I instinctively pressed the brake pedal to the floor.

There in front of me on the roadway stood none other than Anastasia's grandfather. I recognised him at once. His grey hair and beard were a complete contradiction to his incredibly young, sparkling eyes — a discrepancy which immediately set him apart from many of his peers. And the long grey raincoat of indeterminate cut from goodness-knows-what material was also something I was able to recognise all too easily.

Still, I had a hard time believing my eyes. After all, how could this oldster from the Siberian taiga turn up here in the heart of Russia, on a roadway leading from Vladimir to the city of Suzdal?<sup>1</sup> How, indeed? By coach and horses? How could this Siberian recluse hope to master all the intricacies of our transportation networks? Add to that a complete absence of any kind of identification documents.

<sup>1</sup>*Vladimir* (pron. *vla-DEF-meer*), *Suzdal* (pron. *SOOZ-dal*) — two of Russia's oldest historic cities, located not far east of Moscow. For further information see footnote 1 in Book 5, Chapter 6: "A garden for eternity".

Money, of course, he could have laid his hands on, by selling dried mushrooms and cedar nuts,<sup>2</sup> as his granddaughter Anastasia had done. But with no identification...

Of course we have lots of homeless people without identification, and the police can't do anything about it. But Anastasia's grandfather is far from resembling your average homeless person. Sure, he was dressed in old shabby clothes, but they were always clean, and his appearance was well-groomed, his face was bright and a light blush adorned his cheeks.

I sat there, unable to move, behind the wheel of the jeep. He came over and I opened the half-door for him.

"Hi there, Vladimir!" the old fellow greeted me as though there were nothing unusual about the circumstances. "You heading to Suzdal? Can you give me a lift?"

"Yes, of course I can. Hop in! How did you end up here? How on earth did you manage to get here all the way from the taiga?"

"How I got here isn't important. The main thing is *why* I came."

"Well, why did you come?"

"To take a tour into real Russian history with you, and to dispel your resentment toward me. My granddaughter Anastasia told me to. She said to me: 'Grandpakins, you are to blame for his resentment.' So here I am, joining you on the tour. That's why you're going to Suzdal, isn't it?"

"Yes, I want to go see the museum. And I really did feel resentment, only it's gone now."

We rode for some time in silence. I recalled how frosty our parting had been back in the taiga. In fact, we didn't even say good-bye. It had happened like this:

<sup>2</sup> *cedar nuts* — referring to the fruit of the Siberian cedar (Siberian pine, *Pinus sibirica*), known in the West as 'pine nuts'. This tree is akin to the European stone pine — see footnote 4 in Book 1, Chapter 1: "The ringing cedar" (esp. the 2nd edition).

Anastasia's grandfather had recommended I set up a political party. He suggested calling it the *Motherland Party*.<sup>3</sup>

The idea of forming a party based on Anastasia's ideas had actually been noised about for some time, by various people. Many believed a political party was essential to make it easier for people to acquire land for the building of family domains and head off any kind of encroachment on the part of government officials, since none of the existing parties, regrettably, had even considered such questions in their platform.

In view of the fact that there are some sort of powers opposed to Anastasia's ideas and that all sorts of attempts have been made to discredit not only the ideas themselves but also people who have been attracted by them, as well as Anastasia and me, it was suggested to draft the party's constitution without any reference in its "Aims and objectives" section to creating favourable conditions for the setting up of kin's domains. Nor should there be any mention of Anastasia's ideas, or the Ringing Cedars Series.

The would-be organisers were trying to persuade me that this would be the only way to get the party officially registered. And so I decided to consult with Anastasia's grandfather on this question, as well as on the topic of the party's structure, its primary aims and objectives. I surmised that since he was well acquainted with the acts of the priests who were constantly setting up all sorts of societal structures and religions which had lasted millennia, he must surely know about the secret organisational tenets underlying such longevity.

Besides, he himself was a priest of some standing.<sup>4</sup> Quite possibly, even stronger than the ones currently ruling the

<sup>3</sup>See Book 8, *The New Civilisation*, end of Chapter 12: "People power".

<sup>4</sup>Anastasia's grandfather inherited the priesthood when his own father, Moisey, passed on. The first reference to the family's priestly status comes in Book 7, Chapter 7: "A conversation with Anastasia's grandfather".

world. If so, then he must certainly be aware of the principles underlying the priesthood itself, which had turned out to be more resilient than religion.

Indeed, the priesthood was and is a suprareligious structure, since the priests took direct part in the creation of certain religions and secular institutions. This is clear from the history of Ancient Egypt and other countries.

It followed that Anastasia's grandfather would be able to set forth certain fundamentals for the Motherland Party, making it a most powerful, if not *the* most powerful, institution.

I sincerely wanted to hear what he had to say on this, and so I took advantage of what I thought was a moment when he was not immersed in his inner contemplations, and said:

"You were speaking about a party. My readers, too, have been talking about this for some time. But some of them are recommending that I don't include any mention in its constitution of Anastasia, or her ideas, or the books — so that the registration will go smoothly."

The grey-haired old fellow stood before me, leaning on his father's staff, without saying a word. It wasn't just that he kept his silence — he stared at me fixedly, as though seeing me for the first time. His eyes reflected more criticism than kindness.

And when he did start speaking again after a lengthy pause, his voice, too, betrayed notes of disdain.

"Registration, you say. So, you've come to ask my advice? To betray or not to betray?"

"What's this about betrayal? I came to consult with you on how to proceed so that the registration will go smoothly."

"Registration, after all, is not an end in itself, Vladimir. Even the party is not an end in itself. No ideas, you say, not even a mention? So how are readers going to realise that it's *their* Motherland Party, and not just some mercantile traitors' party? You've been asked to set up some kind of meaningless

organisation — without any basis, idea, or symbols which would already guarantee leadership for centuries to come. And now you've come to ask me whether you shouldn't follow their advice. Don't tell me you couldn't see through even this simple trick?"

I realised I had got myself into a rather sticky situation, and so I tried to get out of it by asking another question:

"I only wanted to see if there were some principles you could recommend including in the draft of the party's constitution, its aims and objectives?"

What happened next nearly drove me out of my mind. As it seemed to me back then, the old fellow was not only refusing to answer my questions, he had started making fun of me in a high-handed way. First he looked at me wide-eyed, then he gave a kind of irritated chuckle and turned away, even taking a step back from me. But then he turned around again and said:

"Don't you understand, Vladimir? All the answers to the questions you raise should be given birth within yourself, and within everyone who joins you in creating the party's structure. Sure, I can give you a hint. But tomorrow someone else will give you another hint, and then a third, and you won't *act* — all you'll do is focus your attention on the hints. Go right, go left, you'll all go forward and then backward again or keep going round in circles because of the laziness of your minds."

I strongly resented this latter phrase. Over the years since my first meeting with Anastasia I've been stretching my mind to the limit day and night. Maybe it's starting to overheat from the constant stress of the work. I've published eight books now and have often taken to contemplating what is written in them myself. Sometimes I've found myself pondering the accuracy of particular phrases time and again. And surely the old fellow must know all about this.

Even though my resentment was starting to become inflamed, I managed to restrain myself, explaining:

“Indeed, it seems as though everybody thinks and reflects, and various political systems are set up — communist, democratic, centrist. But as someone once said, no matter what party we aim to create, it all ends up looking like the Communist Party’s Central Committee!”

“That’s very true. That’s what I’ve been telling you — you’re going round in circles because of the laziness of your minds.”

“What’s ‘laziness of mind’ got to do with it? Maybe it’s simply that not enough information is available?”

“So, there’s not enough information out there and you’ve come to me to get it, eh? But if your mind is lazy, will you be able to make any sense of it?”

I could feel my resentment increasing, but I endeavoured to conceal my irritation and continued:

“Okay, I’ll try to make my brain work harder.”

“Then pay attention. The party should be structured along the lines of the Novgorod *vieche*<sup>5</sup> — I mean, in its early period. You’ll figure out the rest later.”

This answer made me really angry. The oldster knew perfectly well that documents on pre-Christian Russia were nowhere to be found — they had all been destroyed. So nobody could ever tell how this Novgorod *vieche* worked, especially in

<sup>5</sup>*vieche* (also spelt: *veche*) — an ancient form of self-governance in which a circle of local residents collectively discussed and decided questions of importance by general consensus. In later times, the term *vieche* was used to describe an assembly of freemen which served as a governing council in a number of cities of Western Russia from the tenth to the fourteenth centuries, even longer in the city of Novgorod (about 100 km south of St. Petersburg). Not unlike the *Ting* in Scandinavian (esp. Icelandic) communities, these latter assemblies had the power (among other things) to enact local legislation, appoint and dismiss princes, wage war and conclude treaties with other territories.

its early period. That meant he was mocking me. But why? What had I done to make him—?

Trying to restrain myself out of respect for his age, I apologised:

“Excuse me for disturbing you. You were probably occupied in something important. I’ll leave you.”

And I turned around to go, but he called after me:

“But the aim or objective of the Motherland Party should be the creation of favourable conditions for the restoration of the energy of Love to families. It is essential to bring back the rites and celebrations which can help find one’s ‘other half’, one’s *soulmate*.”

“What?” I turned to face the old fellow again. “Love? Bring it back to families? I realise you don’t want to talk serious with me. But why are you making fun of me?”

“I’m not making fun of you, Vladimir. It is you who are not capable of understanding what it’s all about. If you don’t train yourself to contemplate, it can take years to figure out.”

“Figure out what? You have at least a rough idea what kinds of aims and objectives parties all over the world write into their constitutions?”

“I have a rough idea.”

“Then tell me, if you know that. Tell me!”

“They claim they will definitely raise the standard of living for everyone, and will offer people greater freedom.”

“Exactly. And in particular they promise industrial development, guaranteed housing and control over inflation.”

“Nonsense. Utter nonsense!” the oldster chortled.

“Nonsense??? Yes, it *will* be nonsense if I follow your advice and put in as a basic tenet of the party’s constitution: *The Party will work toward the goal of helping every individual find their soulmate.*

“And you can add: *The Party will restore to the people a way of life and rites capable of preserving love in families forever.*”

“What on earth are you talking about??!! You — you want to make a laughingstock of me in front of everybody? Questions like this — like searching for one’s soulmate — this is what marriage agencies do, on a commercial basis. If I include statements like that in the party’s platform, it’ll end up being not a party but a dating service! And as for love in families, well, that’s a personal matter for families, and nobody, no political party, has the right to interfere in family affairs. That’s none of the State’s business.”

“But don’t tell me your State isn’t made up of families! Aren’t *families* the basis of any State?”

“They are, they are! That’s why the State is obliged to raise the standard of living both for families and for individual citizens.”

“And what then?” the old fellow snapped. “By raising the standard of living in the country, will you then restore love to a great many families?”

“I don’t know. But it *is* accepted that states should care about the welfare of their citizens.”

“Vladimir, ponder for a moment what that word *welfare* means. Calm down and delve into its meaning. Now I’m going to say it just a little differently: *well-faring* or *faring well*, that is, a *state of well-being*. If you think about it, you’ll realise that love alone is capable of raising any Man’s well-being to the highest possible level — not money or palaces, but only the feeling given to Man<sup>6</sup> by the Creator — the state of *love*.

“Love is the essence of the Cosmos. Living, thinking, with an advanced intellect. It is powerful, and it’s no wonder God

<sup>6</sup> *Man* — Throughout the Ringing Cedars Series, the word *Man* with a capital *M* is used to refer to a human being of either gender. For details on the word’s usage and the important distinction between *Man* and *human being*, please see the Translator’s Preface to Book 1.

was so excited about it, giving its great energy as a gift to Man. It is imperative to try to understand love, and not be shy about paying attention to it even on the national level.

“And when the nation is comprised of a multitude of families giving birth to their children in love and creating a Space of Love, it will not suffer from lawlessness or inflation. Such a nation will have no need to fight against criminal tendencies; they will disappear from society. And all the prophets with their cunning philosophising will be silenced. Whether they foolishly neglected to mention it or whether it was simply beyond their comprehension is unimportant, but they led people away from the most important thing to a place where there is no love.

“The priests knew about this, and consequently humoured the prophets.

“For centuries mankind had been creating rites in aid of life and love. Whether these rites were suggested by the Creator or the people’s own wisdom had perfected them is unimportant. They, in fact, over the centuries, created a state of well-being and helped young people obtain love and joy in perpetuity. None of these rites was characterised by occult superstition, as today. Each one served as a school of higher learning, an examination by the Universe.

“Anastasia told you about the Vedruss<sup>7</sup> wedding rite that dates back centuries. You mentioned it in just one of your books,<sup>8</sup> but it deserves to be mentioned in every book. It is far from being fully comprehended by people living today, including you.

“If you remember, she also told you about ancient ways of searching for your one to love. But again, you today have not

<sup>7</sup>*Vedruss* — referring to a people prevalent in pre-Christian Russia, from which Anastasia is descended — see Book 6, Chapter 4: “A dormant civilisation”. *Ved* is a Slavic root signifying ‘awareness’ or ‘to know’.

<sup>8</sup>See Book 6, Chapter 5: “The history of mankind, as told by Anastasia”.

been able to make sense of them. My granddaughter said: 'I, apparently, have not created strong enough images.' She takes all the blame upon herself, but I claim that the laziness of your mind (or minds) is also to blame.

"Let the best learned men study the Vedruss wedding rite letter by letter. They won't — and you'd better believe me, Vladimir — they won't find a single occult or superstitious act. It is an act which is both rational and exactly suited to love's creation. Compared to it, you will see how absurd are today's wedding celebrations — traditions smacking of occultism and superstition.

"You must realise that Anastasia knows immeasurably more than she tells you. Her acts, her logic, her behaviour are not immediately understood even by the priests, who subsequently can only marvel at what my granddaughter has done.

"Enquire of her and inspire her with your question. Ask her what rite the Vedruss people had for childbirth.

"Don't count on her to bring the subject up. She takes care to talk to you only about what she thinks interests you. But you don't have the slightest idea of what tremendous hidden wisdom lies in the ancient rites. They are the creation of cosmic worlds.

"Any world that forgets the wisdom of its age-old forebears deserves derision. It makes no difference whether an individual has forgotten on his own or under the influence of the priests who have mastered the occult sciences.

"Enquire of my granddaughter and inspire her with your question. And summon your party to the creation of love. Until that happens, you are of little interest to me. You need to have the most obvious things explained to you at length. Show forgiveness to an old man. Go. I do not find it useful to talk and think of unpleasanties."

The old fellow turned and started slowly walking away. I stood there all alone in the taiga, feeling I had been spat

upon. The resentment I had felt right from the start of our conversation prevented me from making sense of everything he said. But subsequently, upon returning home, I mentally went back to our conversation in the taiga, pondering it and analysing it. I very much wanted to prove — perhaps not so much to Anastasia's grandfather as to myself — that I had not become completely lazy of mind.

I wanted to either disprove or confirm what he said — within myself.

Back in the taiga, the oldster had told me that as long as people are content merely to listen to hints and not begin to think about the essence of life for themselves, society will never be free from its cycle of social upheavals. And Man will never be happy.

I guess that's the way it is.

He also talked about the existence of some kind of programme created by God. Now, what might that be? To what extent does the life of Man today correspond with this programme?

## CHAPTER TWO

# Do our lives correspond to the Divine programme?

A Man was born in the operating room on the second floor of a hospital. The doctors were surprised to see an absolutely healthy baby.

Days and months flew by like seconds. The child attended kindergarten, then school, then university. 'Wise' educators, teachers and professors instilled in him some kind of programme of life.

The Man decided that the most important thing in life was to have lots of money, which would enable him to feed himself well, have an apartment, a car and clothing. And he began to work hard, sometimes even taking two shifts a day.

Still, the seconds dragged out into years, and when he reached retirement he had been able to earn enough for a modest two-room flat and a used car.

Long before retiring, he fell in love, got married, divorced and re-married. His first wife bore him a child, but after the divorce the child stayed with his mother. A child was born from the second marriage, but he went off to the Far North. They talked on the telephone once or twice a year. Seconds counted down the years of the Man's old age. He took ill and died.

Such is the sad fate of the majority of people living on the Earth today.

There is a minority who manage to become famous entertainers, politicians, presidents or millionaires. Life for this category of people is considered to be more happy, but that

is an illusion. Their cares are no fewer than anyone else's, and their end turns out exactly the same: old age, disease and death. Was such a fate included in the Divine programme for residents of the Earth? No!

The Creator could not predestine such a sad and cruel fate for His children. It was human society itself, under the influence of some kind of powers, that ignored the Divine programme and started down a path of self-torture and self-destruction.

Perhaps somebody doubts the existence of the Divine programme of human life? After all, it is not something our scholars or politicians talk about.

Religions propound God's design, but invariably through intermediaries and mostly in different ways. About the only thing they agree on is that God exists.

Philosophers and many scholars, too, believe in the existence of a higher, rational, intelligent being that has created the visible world and earthly life. It is impossible not to believe this. Everything comprising our world, after all, is too logically interconnected for it to be otherwise. Well, if that is the case, then a supremely rational being could create only in a meaningful way, create only that which is eternal, and predestine a joyful perspective for all living beings — first and foremost, His beloved Man, made in His likeness. Man, in other words, is offered a specific way of life on the Earth which allows him to become aware of himself and all creation — to learn about and continue to carry out the Divine programme, contributing his own marvellous creations thereto. God desires from His son, Man, conjoint creation and joy for all from its contemplation.<sup>1</sup>

<sup>1</sup>See Book 4, Chapter 2: "The beginning of creation".

There is no doubt that God's programme exists, and it is not just a select group that can become acquainted with this programme, but everyone who wishes to do so. The Divine programme is not set forth in letters or hieroglyphs on sheets of papyrus, but in living signs of Nature — Nature as God has created it— and which belong only to Him.

The minds and intellects of the people of the Ancient Russian period still allowed them to read the grand Book of the Divine. Out of the billions of such letter-signs, the majority of people living today are acquainted with but a few, and we must begin anew to study the Divine alphabet.

The book I am writing at the moment is not on a religious theme. It is not an attempt at sheer philosophising. This book is a call to research, to becoming aware of the Divine programme.

I am not about to teach anyone or preach anything. I only want to acquaint my readers with information on the culture of our forebears, through the rites perfected by the 'wise-men'<sup>2</sup> through careful calculation and designed to preserve family love, and to call upon everyone to disprove or confirm the arguments presented.

I was prompted to publish this material by the sayings and logical conclusions of the Siberian recluses, especially Anastasia.

Publication is needed in order to let the information seep through to the level of one's own feelings and, through collaborative efforts, to start to act according to the logic of life, as well as in the hope that our generation will begin to contemplate, and then accelerate the building of a new civilisation for themselves and their children.

<sup>2</sup>*wise-men* (Russian: *volkbvyy*) — a reference to ancient 'scientists' with particular knowledge of the workings of Nature, often possessing exceptional powers. For further information, see footnote 13 in Book 7, Chapter 20: "Pagans".

It is possible that Anastasia has conceptually outlined just the first point in the programme of mankind's development, to wit:

*Human society should study the Divine programme, using the materials God has provided, and transforming the whole planet into a marvellous Paradise oasis, thereby creating a harmoniously balanced society for all living beings. Man's attainment of this level of life will open up possibilities for the creation of life on other planets and in other galaxies.*

Against the background of this grand concept, Anastasia first proposed the creation of family domains.

Let us too begin our research by examining commonly known and outwardly simple issues.

## CHAPTER THREE

# Why does love come and go?

Oh, how many poems and philosophical treatises have been devoted to this very feeling! In fact, it is hard to find a literary work where it is not touched upon to some extent. Nearly all religions talk about love. It is considered to be a great feeling imparted to Man by God.

The reality of our current human conditions, however, portrays the feeling of love as a most sadistic phenomenon.

Let's face the truth. Statistics show that sixty to seventy percent of marriages are doomed to failure. The failure comes after years of an uneasy coexistence on the part of two people who were once in love. Sometimes these years are marked by mutual insults, scandals and even face-smashing.

The original beautiful and inspired feeling vanishes, only to be replaced by years of anger, insults, hatred and, ultimately, unhappy children.

This is the sad result of what we call love today.

Could such a result be considered a gift from God! No way!

But perhaps it is we ourselves who turn aside from some kind of way of life inherent in Man, and that is why love vanishes, telling us, in effect: *I can't live in such conditions. Your way of life is killing me. And you yourselves are dying.*

Remembering my conversation in the taiga, I recalled how unusually the grey-haired recluse talked about love. "Love," he said, "is the greatest and most powerful energy in the Cosmos. It is never thoughtless. It has thoughts and its own feelings too. Love is a living, self-sufficient entity, a living being.

“By the will of God it is sent to the Earth, ready to bestow its great energy on every Earth-dweller and make their lives eternal in love. It comes to each one of them, endeavouring to tell them, through the language of feelings, about the Divine programme. If Man doesn't listen, it is forced to leave, not by its own will, but by Man's.”

Love! A mysterious feeling. And even though almost every Man who has ever lived on the Earth has managed to experience it, love remains largely uninvestigated.

On the one hand, the theme of love is touched upon in most works of prose and poetry, and in most artistic genres. On the other, all the information these contain merely establishes the existence of such a phenomenon. At best, it describes but the outward manifestations of love and variations in behaviour on the part of different people under the influence of the feeling as it has appeared in them.

But is it really necessary to *investigate* the feeling of love, which everybody knows?

The extraordinary and brand new information I received in the Siberian taiga confirms that investigation is extremely necessary. We need to learn to understand love.

I believe one of the most accurate answers to the question as to why love fades is simply that it vanishes when it finds no understanding.

People in the past understood love.

Judge for yourselves: more than ten thousand years ago the Vedruss people possessed knowledge enabling them to carry out actions which not only strengthened love but made it everlasting. One such action was the Ancient Vedic wedding rite. After the description was published in one of my books, many academic researchers came round to affirming that this particular rite was capable of transforming an initially flaring feeling into a permanent one. Comparing it with the rites of various peoples both past and present, I began more and more to draw

the conclusion that the Ancient Vedic wedding rite was a rational deed thought up by the wisdom of the people, which is capable even today of helping many family couples find lasting love. However, let's go through everything in order.

And let us begin with the most important thing.

### Should we seek out our 'other half'?

'My other half' — 'my *soulmate*' — it's a popular expression. Let's see what it means, exactly. I think many people will accept the following definition: *a man or a woman close to you in spirit and their views on life, a pleasant communicator, someone you feel attracted to (including their appearance), someone capable of inspiring you to love.*

Should we seek out our soulmate, or let our 'other half' be found all on its own, through the will of destiny?

As many centuries of mankind's experience has shown, a determined search is essential. This is attested in multitudes of stories in which stout-hearted young men have set off on long quests in search of their intended.

There are a number of ancient rites which can aid this most important search of one's life.

There are ancient rites, too, which can help determine whether one has made the right choice. What if that 'other half' has come to you straight from the devil himself?

Some of these rites I have already described in my previous books. I did not touch upon well-known rituals, but mostly introduced rites that are not commonly known and have not

been encountered heretofore. The present book focuses on the wedding rite and, at the same time, the rite for determining whether one has made the right choice of partner, which I shall go over again in a different context.

“Then get on with it — show us these miraculous rites,” some of my readers may be thinking. “Why bother with all these expositions?” But the expositions are absolutely essential! We need a vision of our reality today, otherwise we shall not understand the tremendous signification of the wisdom of the people. Everything in the world is relative and, hence, comparisons are crucial.

So let’s now take a look and see which life situations in today’s world can facilitate a meeting and which may just get in the way.

Strange as it may seem, in our present so-called ‘information age’, situations favouring a meeting of two ‘halves’ are getting harder and harder to find.

People living in large, densely populated megacities are virtually cut off from each other by invisible barriers. Someone living in a modern multi-storeyed apartment block is often unacquainted with his next-door neighbour.<sup>1</sup> Passengers on public transport, even those standing jam-packed shoulder-to-shoulder in the aisles, are all absorbed in their own individual problems. Pedestrians walking along the same street have no reason to communicate with each other.

And in America, for example, you can’t even look closely at a woman without being suspected of sexual harassment.

And so, just sitting in your flat or travelling to work or studies, there’s practically no opportunity to find your soulmate.

Let’s say your work involves contact with a lot of different people. Let’s say you’re sitting at a cash register in a large

<sup>1</sup>For a description of what this means in Russian apartment blocks, see footnote 1 in Book 8, Chapter 13: “A new civilisation”.

supermarket. But none of the customers passing by you every day thinks of striking up an acquaintance with you. It's more likely they see you merely as an adjunct to the cash register.

A college or university where a whole lot of young people congregate, though it indeed offers opportunities for conversation and coupling, is not a place for general selection of one's soulmate, since an educational institution is designed with a completely different function in mind.

Today the most acceptable locales for meeting people are generally bars, restaurants, discotheques and resorts. But encounters here, even those which end in marriages, do not, as a rule, result in a happy life in love and harmony. According to statistics, ninety percent of such marriages end in divorce.

The principal cause lies in a false image. And what might that be? Well, here's an example.

### False images

Back before I met Anastasia I took a two-week cruise on the Mediterranean Sea.

Each day in the ship's dining room my mealtime companions were three young people — two women and a man — who worked in a design institute in Novosibirsk. Each day the girls appeared in new and stylish clothing, with intriguing hairdos. It was a delight to chat with them. Nadia and Valia,<sup>2</sup>

<sup>2</sup>*Nadia* — an informal variant of the name *Nadezhda* (the Russian word for 'hope'); *Valia* — an informal variant of *Valentina*.

as they were called, were always cheerful and outreaching. One time I found their male companion in his cabin, and I asked him:

“What pretty and pleasant girls we have at our table! Maybe we can make some time with them?”

To which he replied:

“I have no desire to make time with riff-raff like that.”

“Why ‘riff-raff?’”

“Cause I work with them in the same institute and I know what they’re really like.”

“And what are they really like?”

“In the first place, they’re rowdies. Secondly, they’re lazy and slovenly. It’s only here that they try to keep up appearances and make people think they’re nice and smart. It’s quite clear they’ve come here specially to find themselves husbands among the wealthier class. You’ve noticed how they play up to the Armenian men on board.”

I had an opportunity to see for myself the discrepancy he mentioned when I paid a subsequent late-afternoon visit to the design institute to see my table companions from the cruise ship. To put it mildly, they weren’t nearly as impressive as they had been on board, and all their former cheerfulness and pleasantness had somehow vanished.

Which means that back on the ship they were putting on a false image.

Many men and women in the world today try to find their ‘other half’ with the aid of an external image which doesn’t correspond with their real nature. Perhaps such a sad phenomenon is due to an obliviousness to other possible methods? In that case both parties end up being deceived.

A man will give flowers and expensive gifts to an image which has taken his fancy. He may go so far as to offer her his hand and his heart. Then, after marriage, all of a sudden he sees her real character, which doesn’t appeal to him at all. He

feels a sense of irritation and a yearning for the earlier image which has now vanished.

A woman all of a sudden sees that the suitor who only recently was so kind and attentive to her doesn't love or understand her at all. How did this happen? But he never did love *her* — he only loved the image.

The striking discrepancy between the artificial image and the real person is particularly evident in the case of entertainment celebrities, especially if you should happen to see them in their everyday lives.

A situation no less unfortunate arises from the fact that women often change their outward appearance after marriage.

When a man falls in love with a woman, especially at first sight, it is difficult to say what, specifically, has aroused the feeling of love in him. Perhaps it was the colour of her hair or the way she plaited her braid, or maybe her eyes. It is customary to think that the feeling of love is aroused by the whole gamut of external and internal traits. And when a woman changes her external appearance, she thereby takes away part of her appeal and weakens the love between them. Even if following a radical change of clothes, hairdo and make-up, everybody around tells her how beautiful and attractive she's become, and even if these compliments ring true, and even if her husband gets excited over his wife's new look, it may be only a matter of time before his love begins to fade or disappears altogether.

After all, he has glimpsed a great many beautiful women who are a lot more attractive than his wife at present. Still, he has fallen in love specifically with *her*, and with the appearance she had when they first met. And all of a sudden that previous image is no longer there. And you will, no doubt, agree that in falling in love with the new image, he thereby betrays the image she presented before.

Why were people in ancient times so cautious about changing their clothing? Perhaps they didn't have much in the way of a selection of fabrics? But they did. They imported silks from far across the seas, and they themselves knew how to weave cloth, either coarse or fine. They could do all sorts of designs on the cloth with different colouring agents, or embroider them.

Perhaps they were lacking in imagination or finances? They had plenty of imagination — an abundance, in fact. Practically every other person was a fine artist or designer. You only have to look at houses from those times — how they are all decorated with wood-carvings.

And every woman was a master of embroidery. As for finances, both people of modest means and even those well-off were very conservative when it came to changes of clothing or hairdos. They were extremely cautious about altering their own appearance, being careful to preserve their image.

The current fashion world, especially women, is wont to change their image like a kaleidoscope.

Such extreme fashion swings are extraordinarily profitable to the clothing manufacturing industry, when people throw out things that are still perfectly serviceable and buy new fashions in the hopes that they will bring something new in the way of a semblance of happiness. But no, it never comes. In its place appears only a new artificial image someone has created — an image people put on under the influence of aggressive propaganda.

In all the round of modern life I never have discovered any efficient system of measures designed to help people find a life-long companion. Not only that, but I have been getting more and more the impression that our modern living — indeed, our whole way of life — is designed in such a way that we shall never meet our true soulmate. Maybe this situation even works to somebody's advantage. A Man who is

dissatisfied with life, who has no goals or meaning in his life, can be a profitable catch for many a man out to make money. Not to mention profitable to the powers that be.

As to the question of whether or not we are actually seeking out our 'other half', I think the answer will be: no, we are not. We don't know how to. And there are no favourable conditions to facilitate the search.

I attempted to discover sagacious hints on finding one's soulmate in the rites of bygone centuries. I shall cite a few typical examples of wedding rites. Let us examine just how sagacious — or primitive — they are. I shall include my own commentaries as we go along, but if you don't happen to agree with them, you can always cross them out, or white them out and write in your own, right here in the book.

I find myself tapping more and more into the feeling that Anastasia's grandfather is right: if we don't start thinking for ourselves, we'll go on accepting any sort of crap as the wisdom of life.

I shan't even name modern weddings. Apart from drunkenness, tripping around in cars and laying flowers at the so-called 'eternal flame',<sup>3</sup> there's precious little worth saying.

Let's take a closer look, then, at some earlier wedding rites.

<sup>3</sup>*laying flowers at the 'eternal flame'* (i.e., at tomb of the unknown soldier) — a common practice among Russian newlyweds which takes place shortly after the wedding ceremony.

## CHAPTER FOUR

# Wedding rites

I shall cite a typical rite from pre-revolutionary Russia with a view to examining it from the standpoint of social degradation in relation to love.

*Courting rituals in Perm.*<sup>1</sup> Weddings for the people of Perm involve a whole complex of preliminary operations. First, a father has to seek permission from the local authorities and from the parish priest before setting about courting a bride for his son. This kind of procedure invariably takes place without the participation of the groom, evidently according to ancient custom, and is limited to just the opinion of relatives and close friends called in to give advice. And these are the ones who will decide the fate of their closest relative's future well-being.

It happens that the groom first meets his intended only after the matchmaker has already reached an agreement with the bride's father, and sometimes not until the day of the wedding. Rarely does a young Permian have a chance to court his future bride on his own. The groom's father seeks out, on his son's behalf, a bride with a fair-sized dowry, a maiden of character and respectable moral standing.

Once the final decision had been made as to which girl is to be targeted, the courting itself begins, known as the *kora-siom*. This task is always entrusted to the family elder or, in

<sup>1</sup>*Perm* — a major city in the Ural Mountains, founded in 1781, located about 1,000 km east of Moscow on the Kama River.

his absence, to the godfather or one of the older relations, or to someone who has had experience in such matters.

It is further explained how and what the go-betweens should say. But it seems to me the whole process is utterly absurd, since the primary principle is violated right from the start.

As we can see, there is not even a hint of the young people's love in carrying out this rite. Sad, too, is the fact that with this abusive attitude toward the energy of Love, they are implicating God.

In preparation for the groom's departure to bring back his bride, the groom's mother (or matron of the house) places on the tablecloth a loaf of bread intended for the blessing of the groom, along with salt, beer and *braga*,<sup>2</sup> and lights the candles in front of the icons.<sup>3</sup> The groom prays and bows low at his mother's and father's feet, seeking their blessing. After reciting Jesus' prayer, he takes up a position at the table as all the wedding guests approach, reciting the same prayer. One after another they reach out with both hands to present the groom with the gifts and goodies they have brought: a cooked shoulder or cut of raw pork, always with bread, and each one chants: "Accept these precious gifts, young prince", followed by the prayer "Lord Jesus Christ" and so forth. At this the groom replies to each one individually: "Amen to your prayer", before accepting (also with both hands) the gifts of food, placing each one first on his head and then on the table, and honours each wedding guest

<sup>2</sup>*braga* — a mild, home-made brew.

<sup>3</sup>*icons* — sacred paintings on wood. Every Russian Orthodox church features a multitude of icons, but at least one icon stands or hangs in a corner of the living or dining room in practically every Orthodox household, often with candles in front.

with beer and braga (on rare occasions, wine) as he recites Jesus' prayer and intones: "Drink this to your health, (name of guest)." This naturally meets with a response from each wedding guest the groom addresses with the words "Amen to your prayer". Taking the glass from the groom, he bows to the groom and intones: "May the Lord grant you long life, great happiness, good living,<sup>4</sup> may He grant you to attain happiness, cattle, a full stomach, and bread and salt,<sup>5</sup> obtain a young princess, accompany the princess to the church as her swain, retain a standing position beneath the golden crowns and maintain the law of God!" And then the guest takes a drink.

*And here is some more intriguing information.*

Permian women rarely preserve their virginity, but their grooms pay no special attention to this and do not avoid such women, but rather accept them eagerly, even those who are pregnant, anticipating the speedy arrival of another worker in the family. It is said that the fathers in some families, considering their daughters to be blameless, will resent any attempt at matchmaking, will swear and even chase away the go-betweens, sometimes even beating them, saying: "What, you're telling me my daughter is *pen-na*?" — that is, *guilty* (from the word *penya*, meaning guilt).

<sup>4</sup>*good living* — the Russian term here is *zhit' da byt'* (literally: "to live and to be"). This ancient expression indicates a distinction between *life* (which is given not only to Man, but also to plants and animals) and *being* (in the sense of existing in a space of conscious awareness — accessible only to Man). The now largely forgotten meaning of this phrase is a wish not only for a 'good life' but also for spiritual fulfilment.

<sup>5</sup>*bread and salt* (Russian: *khleb-sol'*) — a symbol of Russian hospitality (also found in other Slavic cultures), symbolising the earth (bread) and the Sun (salt).

So we end up not with a continuer of the family line, conceived in love, but a worker for the household.

There are, in fact, many characteristic features of wedding rites which portray our ancestors as wild barbarians. I should point out, however, that none of the rites we know of are traditionally Slavic, even though they're sometimes called 'traditional' in the literature on the subject. They stem from a period when the really traditional, wise rites were prohibited by the Church, with nothing rational offered in their place. So, for example:

*Removing of boots.* It happened (and in some places still happens), according to a native Russian custom, that a newly-wed woman is supposed to remove her husband's footwear. In ancient times this custom generally signified meekness, a servile attitude, even humiliation, since who would take off another's boots if she were not fully subordinate to the wearer of the boots? History teaches us that this custom existed at the time of Vladimir's reign,<sup>6</sup> along with the fact that the prince of Polotsk's<sup>7</sup> daughter was unwilling to remove her husband's footwear.

The same custom existed in Germany during Martin Luther's time: on their wedding night the young wife would take off her husband's boots and place them at the head of the bed as a sign of the husband's domination over the wife, the man over the (enslaved) woman.

Olearius and von Herberstein<sup>8</sup> observed from their stays in Moscow that even princes' and noblemen's weddings

<sup>6</sup>*Vladimir I* (?–1015) — Prince of Kiev (980–1015), who accepted Christianity for *Rus'* in 988. See footnote 4 in Book 7, Chapter 20: "Pagans".

<sup>7</sup>*Polotsk* — an ancient city in what is now Belarus, formerly under Polish and Lithuanian control, before the territory was absorbed into the Russian empire in 1772. The Polotskian principedom lasted from the 10th to the 14th centuries.

included the rituals of footwear removal along with three strokes of the whip (the whip was then placed, together with baked goods, in a special box). This rite was continued in Lithuania before the Jagiellonian dynasty<sup>9</sup> and is still preserved in peasant culture.

As we can see, the taking off of boots and honouring the bride's slave status is mistakenly passed off as a traditional Russian rite. But before the princes came along, Russia had no slavery at all. Hence this rite is not traditional for our people, but a transient custom not accepted by the people at large.

But there is one situation which strikes me as even more stupid, cruel and immoral — a situation typical of wedding rites among many peoples as late as the eighteenth or nineteenth centuries.

Directly the last food dish is placed on the table — i.e., the roast — the best man wraps up the dish, along with the bread and salt, in a tablecloth and takes it to a bed in the hayloft, to which the young couple are led immediately afterward. Whereupon the father of the bride, in handing over his newlywed daughter to her husband, stands in the doorway of the hayloft and offers her seemly advice

---

<sup>8</sup> *Adam Olearius* (born *Adam Öbschläger*, 1603–1671) & *Siegmund Freiberr von Herberstein* (1486–1566) — Austrian and German diplomats, respectively, each of whom travelled to Russia in his time. Von Herberstein (sometimes spelt *von Herbenstein*), a German mathematician and geographer, visited Moscow in 1517 and again in 1526, setting forth his observations in a work entitled *Notes on Moscow affairs*; Olearius (also known as *Omaris*), a member of the Kaiser's council in Vienna, followed suit in the mid-1630s, and later published his *Description of my travels to Muscovy*.

<sup>9</sup> *Jagiellonian dynasty* — a royal dynasty that began in the Grand Duchy of Lithuania (1377–1392, 1440–1572) and spread to other East European countries, including Poland, Ukraine and even parts of Russia.

about marriage life. After the young couple have reached the bed, the wife of the master of ceremonies, wearing two coats at once (one in the normal fashion, the other turned inside out), showers them with grains, coins and hops, and feeds the young couple on their bed.

The next morning all the wedding guests show up at the hayloft and quickly remove the blanket so as to determine by well-known signs whether the newlywed girl has been chaste at the time of her marriage.

This part of the rite may be considered the most sinister and perverted, even if the newlyweds were in love with each other. In the sight of all the guests, the young people, having eaten and drunk their fill, were supposed to go to their room to consummate their marriage without fail, accompanied and encouraged by the lustful — one might even say, perverted — stares of the guests.

In the first place, after all the ups and downs of the pre-nuptial preparations, not to mention the wedding itself, the free-flowing libations of alcohol and the generous intake of food, it is best to hold off sexual intimacy for a period of time, so as to avoid the conceiving of a child in such a condition.

Secondly, why should newlyweds enter into intimate relations the same day and, on top of that, be called to account for their actions in front of the guests? What if the bride happens to be having her period on that day? All-in-all, it is something resembling the imposed mating of animals, or even worse.

Nobody in their right mind would think of bringing a bitch to a male dog — or a cow to a bull, or a ewe to a ram — when the female is not in heat. But the attitude here is: you'd better get on with it, or you'll be put to shame.

The following story was told me by a seventy-year-old man upon learning that I was investigating various rites:

I was living in the country when I got married. They fixed me up with the one I loved. She was oh so quiet, and kind. Her name was Ksiusha.<sup>10</sup> She was nineteen then, I was twenty. We had been looking at each other for about six months, and were probably in love.

On the first night of our wedding, when everything was winding down, the two of us were sent to bed in a separate room. They placed a guard at the door, and the following morning they were supposed to hold up the sheet for all to see: was the blood of virginity there or not? The moment of decision for Ksiusha and me came. Maybe it was wedding jitters, or maybe something I ate, but I got the feeling nothing was going to happen between Ksiusha and me. She did this and that, and began awkwardly showing me her breasts, then she kissed me, and later got undressed completely.

Only there was no proper reaction in me to her caresses and undressing, and I got more and more embarrassed. I sat down on the bed, and turned my face to the wall. I felt Ksiusha's cheek press against my back, I could feel her trembling and her tears running down my spine. I too began weeping for sorrow. There we were both sitting on the bed, crying our hearts out. After that I told her:

“Don't worry, Ksiusha, I'll declare to everyone that it's my fault.”

And she replied:

“Don't — they'll only make fun of you.”

Before the dawn came, she did the piercing herself with her finger, and the blood came out. In the morning they showed off the sheet to the great amusement of the guests who were once more imbibing in an effort to counteract the effects of their hangover. They summoned us in their

<sup>10</sup>*Ksiusha* — an endearing variant of the name *Ksenia*.

half-drunk state, joking around and calling out *Gor'ko, gor'ko!*<sup>11</sup> before taking their next glass.

Ksiusha and I lived together for six months in the country, then moved to the city and divorced. Turned out I couldn't get anything to happen all those six months. I married again, and now I have four kids — three sons and a daughter — and grandchildren too. But that horrendous wedding I'll never forget my whole life long. And I still remember Ksiusha to this day.

<sup>11</sup>*Gor'ko, gor'ko!* (lit. 'Bitter, bitter!') — the traditional call at Russian wedding receptions for the bride and groom to kiss (and thereby sweeten the 'bitter' wine).

## CHAPTER FIVE

# Conception involves more than flesh

Those who have read my *Book of Kin* will remember that the Vedruss wedding rite I described ended with the loving couple, Liubomila and Radomir, conceiving a child.<sup>1</sup>

But back then I wasn't about to ask Anastasia whether there were any particular aspects of the Vedruss civilisation concerning the conception of children, or whether or not it was worth paying special attention to this topic in any case. But, as though anticipating my question, she said:

“The Vedruss people had a deep understanding of what was involved in the conception of their children. But for the moment I do not know how to talk about it in a way you will be able to understand.”

Later on, after my conversation with Anastasia's grandfather and my search for various peoples' rites capable of preserving love in families, I obtained some information on conception and realised that it had nothing to do with Anastasia — I was the one who had not been ready to comprehend what she said. Even now this question has not been sufficiently researched by modern science.

Scholars have been attempting to clone Man, but it seems that even if they succeed, they will end up with an entity only superficially resembling Man. You see, it is not just the sperm and the egg that are involved in the act of conception, but something else besides — something invisible, something not tangible as matter.

<sup>1</sup>See the section entitled “A union of two — a wedding” in Book 6, Chapter 5: “The history of mankind, as told by Anastasia”.

It is possible that any further exposition of the information I obtained will be shocking to some. I spent six months pondering whether it was something worth sharing with my readers or not. In the end, I decided that it was. Here is what it's all about:

Many families living on the Earth today are unknowingly raising children that are not their own in the fullest sense. This statement is supported by some weighty evidence.

The scientific world has a term *telegony*. In medicine it is called the *paternal impression phenomenon*. They try to talk as little as possible about 'telegony'. What's this all about?

The discovery began in England about a hundred and fifty years ago when Lord Morton decided to raise a new breed of horse with exceptionally resilient characteristics. At one point he crossed a thoroughbred mare with a zebra colt. But no offspring resulted, because of the genetic incompatibility of the two species.

Some time later this purebred English mare was crossed with a purebred English colt. Subsequently the mare gave birth to a foal, only... with marked traces of stripes, as with a zebra.

Lord Morton called this phenomenon *telegony*.<sup>2</sup>

<sup>2</sup>The 'zebra' was actually a quagga, an equine mammal of South Africa, with zebra-like stripes, which is now extinct. The experiment, conducted by a Scottish peer, the Right Honourable George Douglas, 16th Earl of Morton (1761-1827), was reported in a communication he wrote to the Royal Society of London in 1820 and described in many journal pieces of the past -- for example, by J.C. Ewart of the University of Edinburgh in an 1899 article "Experimental contributions to the theory of heredity. A. Telegony" published in the *Proceedings of the Royal Society of London*, vol. 65 (1899), pp. 243-51; and later in Menia S. Tye's article "Pre-natal influences" in *The American Journal of Nursing*, vol. 7, n° 5 (February 1907), pp. 362-67 (see esp. p. 365; here, as in some other sources, the experimenter's titular name is misspelt *Marton*). Tye also mentions a female hybrid resulting from the first

Specialists in animal husbandry quite often encounter this phenomenon in their practice. Any dog-breeding club, for example, will dispose of even what was the most thoroughbred dam if it happened to mate with a mongrel. That particular dam would no longer produce thoroughbred pups, even if it were to be mated with the most thoroughbred sires.

Pigeon breeders will not hesitate to kill even the most precious purebred pigeon if it has been violated by a non-thoroughbred male pigeon. Practice has shown that it will never produce purebred offspring.

Scientists in various countries have done a great many studies showing that this phenomenon also extends to people. There have been instances where white parents have given birth to black children — where a black-skinned baby has come into the world as a result of a liaison between the grandmother or mother of the birthing woman and a black man. The cause of this phenomenon always turns out to be a previous relationship with a black man on the part of the girl or one of her direct progenitors.<sup>3</sup>

But these are clearly distinguishable cases. How many others are there that are not clearly distinguishable? After all,

---

union. And she subsequently observes (p. 366): “It would seem as though the Israelites had some knowledge of telegony, for in Deuteronomy we find when a man died leaving no issue, his wife was commanded to marry her husband’s brother, in order that he might ‘raise up seed to his brother’” (italics ours).

<sup>3</sup>While dozens of scientific articles on telegony were published in the 19th and the first two decades of the 20th century — by such luminaries, for example, as pioneer statistician Karl Pearson (1857-1936), subsequent acceptance of theories based on Gregor Johann Mendel’s (1822-1884) ‘laws of heredity’ brought the concept of *telegony* into disrepute and many considered it “disproved”. However, present-day genetics is far from being able to fully explain the mechanisms of heredity, and throughout the 20th century a great many prominent scholars have been conducting experiments and drawing conclusions quite at variance with the materialistic approaches of ‘official’ (‘orthodox’) science.

pre-marital relations are the 'in' thing today. That being the case, there's no point in blaming the woman if she is not a virgin when she marries. It is our society, our monstrous sex propaganda and sex industry that have made her that way.

In the West parents supply their school-age children with condoms, realising that they're no longer chaste. But what they don't know is that there is no condom that can counter the 'paternal impression phenomenon', or telegony. This is evidenced in concrete examples in the case of both people and animals.

Many ancient teachings and religions also speak about the phenomenon of telegony. Even though they may call it something else, the substance is the same. Both scientists and wise-men of old have determined that the first man in the life of a virgin leaves his imprint on her in spirit and in blood — a mental and physical portrait of her offspring to come. All other men who enter into intimate relations with her thereafter for child-bearing purposes have nothing to offer her but their semen and diseases of the flesh.

Isn't this what's behind the current massive lack of understanding of fathers and children? Not to mention the degradation of our whole human society of today?

A multitude of specific examples testifies to the involvement of some kind of energy in the conception of children. But if that is the case, then it is not just scientists but the public at large that should know about it.

It is probable that our recent forebears had some inkling of it. They tried to make sure that a girl entering into marriage was a virgin beyond the shadow of a doubt. It is possible that this is what lies behind the custom in many cultures of locking the newlyweds in a separate room, and subsequently hauling out and putting on display the blood-stained sheet in confirmation of the bride's virginity.

Earlier ancestors of ours, however, did not consider virginity in itself sufficient to qualify someone to be a continuer of

the line. They maintained that if a woman was engaged in intimate relations with one man while thinking about another, the resulting offspring would bear resemblance to the one she was thinking about.

Such statements indicate that people of old assumed — and quite possibly knew for certain — that the most important factor in conception was *thought*. Or, more specifically, the *energy of thought*.

The phenomenon of telegony also testifies to this. A woman, perhaps sub-consciously, retains information in her memory about the first man in her life. As a result, a child is born who either fully or partially resembles *him*.

At first I hesitated to write about this subject for fear of provoking unpleasant questions among parents and their children, and between spouses — let them be happy in their ignorance. However, such happiness has not been all that noticeable. And perhaps one of the reasons it is not particularly noticeable is a lack of knowledge as to the culture of conception.

The question of sex education courses for children in schools has been an issue for some time now. People argue over whether they should be introduced or not. If such courses touch only upon the use of condoms, there's no point in introducing the courses at all. If, however, children are told about the woman's chief purpose, about the correct approach to conceiving children, in that case the subject is absolutely essential. For that, however, the instructors must have a thorough grounding in the very essence of the question, and have appropriate literature available. It is a subject that *must* be discussed, even though the mass media, unfortunately, serves up nothing but sex propaganda.

There is a lot of talk in so-called democratic countries about human freedom. But can a Man be called truly free when important questions of life are hidden from him, and

in their place allegedly beneficial perversions are fobbed off on him through some kind of supposedly 'free' propaganda? In a situation like that it turns out that Man is 'liberated' only from a true and happy human life.

Still, I wouldn't have written about telegony if I hadn't learnt from Anastasia about how to correct this situation, even if the marriage-bound woman has already had a relationship with another man.

Not only that, but it turns out that the Vedruss people had a momentous rite through which 'stepchildren' could become one's own in blood and spirit.

Our pagan ancestors, the Vedruss all the more so, were very well acquainted with what is known in modern medicine as the 'paternal impression phenomenon'. And through the help of special rites they were able to protect their young people against it.

With the aid of particular acts or rites, wise-men, too, were able to erase the genetic code of the 'first sire' and make even girls who had been raped during enemy attacks absolutely clean. As proof of this, they were not afraid to let their sons take such women in marriage.

However, there is one 'but'. It is impossible to understand and reproduce pagan (and especially Vedruss) rites simply through a knowledge of their outward aspects. They must be experienced through *feeling*.

What's the use in just writing about it? It is essential to *love*, it is essential to prepare for the appearance of the child, it is important to give birth only at home, at the very place of conception.

"To preserve love in the family for ever, it is essential to combine — into one — three points, three feelings, three planes of being". But what's the point in simply re-stating the words? An intellectual understanding is far from sufficient — it must be felt. The philosophy of our forebears must be *felt*.

And the first essential act must be one of sheer repentance in respect to our forebears, who are now called pagans, who have been slandered and whom we have betrayed. We betrayed the traditional Slavic culture of our fathers and mothers — a culture that lasted for tens of thousands of years. Instead we started calling Christianity ‘traditional’ for Rus’.<sup>4</sup> But in Rus’ it has been around for a mere thousand years. There’s no way it can be classified as ‘traditional’.

Why is *repentance* necessary? For the simple reason that if we go on thinking of our ancestors as wild, dull-witted barbarians (as we are urged to believe) but still adopt their rites, those rites will have no effect. After all, all such rites are founded on a knowledge of the Cosmos, of the designated purpose of the planets and on a knowledge of the power of mental energy, the power of thought.

Even if we try harnessing the tremendous energy of our thought with the aid of their rites, we shall not obtain any positive results, since our thought will be contradicted by another thought of ours — namely that the Vedruss people were ignorant.

Hence a paradox: you’re an ignorant fool, but your acts are marvellous. The one excludes — or, at least, contradicts — the other.

Perhaps the culture of our forebears is being deliberately concealed from us? After all, a bunch of ignorant and disoriented people cut off from their roots are easier to control. Perhaps this is God’s retribution to our civilisation? Popular wisdom says “What you sow, that shall you reap.”<sup>5</sup> We have

<sup>4</sup>*Rus’* (pron. *ROOS*) — the name of the East Slavic state of the first millennium of the Common Era (A.D.). See footnote 5 in Book 7, Chapter 12: “The ultimate taboo”.

<sup>5</sup>Compare Galatians 6: 7: “whatsoever a man soweth, that shall he also reap” (*Authorised King James Version*).

broken the ties with our forebears, and consequently the threads linking us with our children are also being broken.

We can get another glimpse of the elevated culture of our pagan forebears in the question of conception of children by examining the traditions that are even today preserved in modern China and especially Japan, where a man and woman about to enter into intimate relations for the purposes of conceiving a child undergo a special rite of purification. The beliefs of Ancient China, Japan, India and Ancient Greece — and these are traditionally ancient pagan countries — lay tremendous emphasis on the matter of conception.

So what, then, can anyone do who desires to bring forth good offspring? Should they first spend a lot of time studying the volumes of literature on this subject — besides spending a lot of time on studying treatises on choosing one's soulmate, and on the education of children?

I can tell you right off: there's absolutely no need to waste part of one's own life on such study. I myself spent several years — not *studying* such sources, but simply familiarising myself with them, and I came to the sudden realisation that the Vedruss people have condensed all their monumental works into a system of simple, cheerful and rational rites covering all events of one's life. It gives the impression that God Himself helped them in formulating these rites, as well as in understanding the essence of Man's existence.

Before attempting to apply the experience of our ancestors, we need to determine: which ancestors? I mean, how many years ago? And which territories of present-day Russia were settled by our forebears?

As is known, history textbooks, including those written in Russian, tell about people's lives in Egypt and Rome of five thousand years ago. These countries have carried out (and are still carrying out) archaeological excavations, which draw huge crowds of tourists every year. *Russian* history, on

the other hand, if we take the word of even our own history books, covers a mere thousand-year period.

That would mean our country's territory before that time was somehow home to a culturally backward people, or maybe there wasn't anybody there at all? Either that, or possibly somebody's been deliberately hiding our history from us? Indeed, they have. I have already written about this,<sup>6</sup> but now I should like to present some archæological data.

I shall tell you about Arkaim, a place which has a direct connection with the question of telegony. According to Anastasia's grandfather, it was there that three and a half thousand years ago a remarkable discovery was made.

<sup>6</sup>See, for example, Book 6, Chapter 5: "The history of mankind, as told by Anastasia".

## CHAPTER SIX

# Into the depths of history

### Arkaim — Academy of the wise-men

In 1952 satellites sent back to the Earth photographs of several unusual circles clearly delineated on the surface of the Southern Ural steppe. No one doubted that these circles had been artificially produced, though nobody could say exactly what they were.

A debate was raging in both scientific and occult circles of the time as to where one should look for the original Indo-European homeland. Not without some justification scientists posited that the many European peoples, as well as those of India, Persia and part of Asia, could be traced back to a single source — a mystery people known as *Proto-Indo-Europeans*.

Many researchers have dreamt of finding the remains of the land where once lived the legendary White Aryan race. Researchers have been attempting to reach the fringes of the lost ancient and precious knowledge which the ancient Aryans possessed.

When excavations began in the Arkaim Valley, archæologists announced to the academic world that an ancient city dating back more than forty centuries had been unearthed, and that it had been inhabited by people of the ancient Indo-European civilisation. The researchers started calling Arkaim 'a city, a temple and an observatory, all at the same time.

Whoever is interested in the academics' hypotheses can read about them in specialised literature on the subject.

I shall pass on what Anastasia's grandfather told me about Arkaim. The logic of his thinking is much more accurate and intriguing than the logic underlying the scholars' scientific hypotheses.

He stated right off:

"Arkaim is not a city and not a temple. The part about the observatory is true, but that's not the main thing here. Arkaim is an *academy* — that's what it would be called today. It was in Arkaim that the teachers of the wise-men lived and worked. Here they engaged in research on the Universe; they also determined the interrelationship of celestial bodies and their influence on Man. Their tremendous discoveries were never recorded, nor did they make long speeches in public. Through their many years of research they worked out the rites, presented them to the people and subsequently kept track of how effective they were. They made corrections as required. They were able to sum up their lengthy researches in a brief word or two which signified the substance of their discovery.

"For example, there are some very early rites, such as the Saviour of the Honey<sup>2</sup> (14 July) and the Saviour of the Apple<sup>3</sup>

---

<sup>1</sup>*Arkaim* (pron. *ar-ka-EEM*) — located in the Chelyabinsk Oblast of Russia, near the border of Kazakhstan. For further information on Arkaim, see: Genadii B. Zdanovich, "Arkaim Archaeological Park: a cultural-ecological reserve in Russia", Chapter 20 in: Peter G. Stone & Philippe G. Planel, *The constructed past: experimental archaeology, education and the public* (Oxford & New York: Routledge, 1999), pp. 283–291.

<sup>2</sup>*Saviour of the Honey Feast Day* (Russian: *Miodovy Spas*) — a Russian Orthodox Church holiday (actually celebrated 14 August) to mark the beginning of the Assumption Fast. New gatherings of honey are brought to churches on that day for blessing before sharing with parishioners.

<sup>3</sup>*Saviour of the Apple Feast Day* (Russian: *Yablochny Spas*) — a Church holiday coinciding with Transfiguration Day, celebrated at the mid-point of the Assumption Fast (actually 19 August). On this day farmers take grapes to the churches — or, in their place, apples from the new crop.

(19 July). People did not use any new-crop apples until the Saviour of the Apple feast, or any new gatherings of honey until the Honey feast.

“Through their lengthy researches and observations the wise-men discovered that up until this date the apple does not give any significant benefit to Man, even if it is ripe. And this goes far beyond just the apple. Many berries, edible herbs and root vegetables beneficial to Man ripen before the Apple feast. If Man began to eat apples too soon, he would not have room left for the produce that was more beneficial to him at this very time.

“It was these wise-men who discovered that the particular sequence of fruit and vegetable ripening in Nature is no mere coincidence. It is this very sequence that constitutes Man’s divine dietary régime, which the science of the centuries to follow would be searching for in vain.

“Volumes of treatises could be written about how they conducted their research. The wise-men, however, never compiled any, and did not burden people with the task of reading them. They imparted their conclusions to people — in ready-made form — in just a few words. And people believed the wise-men. Their advice invariably proved true in life.

“Besides, there is no comparison between the Vedruss wise-men and their counterparts in Greece, the Egyptian priests or today’s acclaimed academic lights. The Vedruss wise-men never received any honours or rewards for their remarkable discoveries. They could not accumulate wealth or power that, say, the Egyptian priests enjoyed. And they were not given the kind of adoration showered upon many in church hierarchies today. The only thing a wise-man could expect upon arriving at a certain settlement was food and any replacement clothing or footwear he might need, as well as a place where he could lay his head, though some wise-men might decline the offer of shelter in favour of sleeping under the stars, in the open air.

“Beyond that he enjoyed the people’s sincere, unfeigned respect. Over the centuries such an arrangement ensured the selection of only the best teachers and thinkers among the people.

“The receptive populace also showed their gratitude by building, according to the wise-men’s own designs, complexes like Arkaim where the wise-men could retreat for meditation and a mutual sharing of thoughts. Here they would tell each other of their discoveries and describe the rites they had come up with based on their discoveries. It was something on the order of a supreme academic council.

“Most of the time ordinary people didn’t even know who was behind any given rite, or whom they had to thank for a particularly insightful and effective rite.

“There was one wise-man, for example — an acclaimed philosopher, astronomer and psychologist — who devoted ninety years to the study of how to combat the phenomenon we know today as telegony.

“He discovered a cure and offered people an effective remedy, consisting of a rite of only fifteen minutes in duration. True, the preparation for the rite took a lot longer. Why don’t you ask Anastasia, Vladimir — she might tell you about it.

“Only I’ll say right off: this rite can be felt only through an understanding of the *feelings of love* possessed by our distant ancestors, the philosophy of their love. The further back you manage to go with your thought, the more you’ll be able to make sense of the rite.”

To be more thoroughly persuaded of the truth of what Anastasia’s grandfather has said regarding Arkaim, let us take a look at its architecture.

Arkaim has the form of a circle with an exterior diameter of approximately 160 metres. As you can see, that’s rather small for a city. But I shall still call it a city, as scholars at the moment are doing.

It is surrounded by a two-metre-wide perimeter trench, outside a massive exterior wall. The wall was five and a half metres high and five metres thick. There were four entrances in the wall, the largest facing south-west; the other three were smaller, located on opposite sides.<sup>4</sup>

All the entrances led directly into the only ring road, about five metres wide, which separated the dwellings attached to the outer wall from the inner ring of walls.

This ring road was covered with logs, under which, for the whole length of the street, ran a dug-out two-metre-wide ditch, which connected with the perimeter trench. Thus the city had its own storm-drainage system: surplus water would seep through the logs into the ditch and eventually into the perimeter trench.

All the dwellings attached to the outer wall, like lemon sections, had doorways on the main street. No more than thirty-five dwellings were discovered around the outer circle. That's not much, even for a village.

Next we see the mysterious ring of the inner wall, which was even more massive than the outer one. Three metres thick, it reached a height of seven metres.

According to the excavation findings, there was no entrance through this wall except for a small passageway at the south-east point. Hence, another twenty-five interior dwellings, identical to those around the outer perimeter wall, were practically cut off from everything by the thick, high inner wall. In order to reach the little passageway to the inner ring, one had to travel the whole length of the ring road. This had a hidden significance. Anyone entering the city had to travel the same path as the Sun.

Finally, Arkaim was 'crowned' by a central plaza almost square in shape, approximately 25 by 27 metres.

<sup>4</sup>*opposite sides* — i.e., north-east, north-west and south-east.

Judging by the traces of fires spread out in a particular pattern, this plaza was used for some kind of rites.

Thus we see the schematic figure of a Mandala — a square inside a circle. In ancient cosmogonic<sup>5</sup> texts the circle symbolises the Universe, the square — the Earth, our material world. Ancient men of wisdom, who had a perfect knowledge of the structure of the Cosmos, saw how naturally and harmoniously it was constructed. And so in building a city, it was like re-creating the Universe in miniature.

Arkaim was built according to a pre-determined plan as a single complex whole, oriented with extreme precision to celestial bodies. The design resulting from the four entrances in Arkaim's outer wall forms a 'right-facing' swastika, reflecting the clockwise movement of the Sun.<sup>6</sup>

The swastika (in Sanskrit, 'connected with good', 'the best success') is one of the most ancient sacred symbols. It is encountered as far back as the Upper Paleolithic period<sup>7</sup> in the cultures of many of the world's peoples — including those of India, Ancient Rus', China and Egypt, as well as of the mysterious Mayan people in Central America, to name but a few. The swastika may be seen in old Orthodox icons. It is the symbol of the Sun, success, happiness and creativity. Correspondingly, a backwards ('left-facing') swastika symbolises darkness and destruction — the 'night-time Sun' of the dwellers of ancient Rus'.

Both swastikas were used, as may be seen on ancient ornaments — in particular, on the Aryan jars found around

<sup>5</sup>*cosmogonic* — relating to cosmogony, the astrophysical study (or a theory or model) of the origin and evolution of the Universe.

<sup>6</sup>*clockwise movement of the Sun* — that is, as seen from the Northern Hemisphere.

<sup>7</sup>*Upper Paleolithic period* — a period of between 40,000 and 10,000 years ago (also known as the late Stone Age, particularly in reference to Africa), before the advent of agriculture.

Arkaim. This has a deep significance. Day takes the place of night, light the place of darkness, and a new birth takes the place of death — and this is the natural order of things in the Universe. Hence in antiquity there was no such thing as a ‘good’ or ‘bad’ swastika — they were perceived as a unified entity (like the energy of *yin* and *yang*<sup>8</sup> in the Orient).

Arkaim was outwardly beautiful: the ideal circular city marked by distinctive gate-towers, burning torches and a beautifully formed façade — probably featuring some kind of meaningful sacral pattern. Everything in Arkaim, after all, was fraught with meaning.

Each dwelling was attached on one side to either the outer or inner wall, and faced either the main ring road or the central plaza. In the improvised ‘entrance-hall’ to each dwelling was a special watercourse, which emptied into the ditch under the main street. The ancient Aryans were thus provided with a sewer system. Not only that, but each dwelling had its own well, furnace and a small cupola-shaped storage area.

From each well, above the water-level, two earthen pipes branched out. One led to the furnace, the other to the storage area. What for? Quite brilliant, actually. We all know that if you glance down a well, you will invariably feel a current of cool air. So, in the Aryan furnaces this cool air, passing through an earthen pipe, created such a strong draft that it was capable of melting bronze with no need for bellows. There was a furnace like that in every dwelling, and all the ancient blacksmiths had to do was to perfect their craft and compete with their artistic rivals! The other earthen pipe leading to the storage area ensured a lower temperature there.

<sup>8</sup> *yin, yang* — the two opposite (though complementary) principles of Chinese philosophy (see footnote 2 in Book 7, Chapter 23: “Significant books”).

The famous Russian astroarchaeologist Konstantin Konstantinovich Bystrushkin researched Arkaim as an astronomical observatory and came to the following conclusion:

Arkaim is not just a complex installation, but it is subtle in its complexity. In examining its schematics, one can easily see parallels with the well-known Stonehenge monument in England. For example, the diameter of the inner circle of Arkaim is always reported as being exactly 85 metres. In fact, it is a circle with two radiuses — 40 metres and 43.2 metres. (Try drawing it!) Compare that to the radius of Stonehenge's Aubrey Hole ring,<sup>9</sup> which is also 43.2 metres! Stonehenge and Arkaim are positioned at approximately the same latitude, and both are at the centre of a bowl-shaped valley. The distance between them is almost 4,000 km...

Researchers have determined that on the basis of all the known facts, Arkaim amounts to a *horizon observatory*. Why a 'horizon' observatory, specifically? Because the measurements and observations made there are based on the moment of the rising and setting of the Sun and the Moon on the horizon. The recording of the moment of 'disengagement' (or 'touch-down') of the lower edge of the disc on the horizon allows the accurate determination of the place of this event. If we keep track of sunrises on a daily basis, we shall note that the actual point of sunrise shifts from day to day. Reaching its northern limit on 22 June, this point then moves south to its opposite apogee on 22 December. This is part of the cosmic order.

That means there are four visible points of observation of the Sun each year — two points of sunrise (on 22 June and

<sup>9</sup>*Aubrey Hole ring* — a ring of 56 pits ('holes') thought to have held posts forming a timber circle — named after the poet and antiquary John Aubrey (1626-1697) who discovered them in the seventeenth century.

22 December) and two corresponding points of sunset on the western horizon. Add to these two more points — namely, sunrise and sunset during the equinox (22 March and 22 September). This offered a sufficiently accurate determination of the length of a year. However a year is made up of a whole host of singular events, and these can be determined with the aid of that other celestial body, namely, the Moon. Regardless of the complexity involved in its observation, people of old knew the laws of its movement across the empyrean. Here are a few of them:

(1) The full moon which occurs closest to 22 June is observed at the point of the winter solstice (22 December) and vice-versa.

(2) Lunar events can be observed near the points of the solstice on a nineteen-year cycle ('high' and 'low' Moon).

As an observatory, Arkaim allowed astronomers to follow the events of the Moon. It is possible to note eighteen astronomical events just on these huge circular walls alone! Six of them are connected with the Sun and twelve with the Moon (including the 'high' and 'low' Moon). By comparison, researchers at Stonchenge were able to identify only fifteen cosmic events.

In addition to information about these amazing factual events, the following data were obtained: the Arkaim unit of measurement of length is 80 cm. The centre of the inner circle shows a displacement from the centre of the outer circle by a factor of 5.25 Arkaim units, which is close to the Moon's orbital inclination: 5°9' plus or minus 10 minutes. In Bystrushkin's opinion, this reflects the correlation between the orbits of the Moon and the Sun (for the terrestrial observer). Correspondingly, Arkaim's outer circle is dedicated to the Moon, its inner circle to the Sun. Not only that, but astroarchæological measurements have shown a link between some of Arkaim's parameters and the wobbling of the Earth's

axis — this is getting into some pretty sophisticated science, even in terms of modern astronomy.

And so we see that by any stretch of the imagination Arkaim hardly falls under the category of ‘city’.

Its extremely small rooms offer no accommodation for families, but serve as an ideal space for philosophical reflections. Historians know that in ancient times so-called ‘wise-men’ were considered to be scientists and teachers. Consequently, it is possible that Arkaim, as one of the most celebrated scientific centres, could have belonged exclusively to these ‘wise-men’. There were simply no other scientists around in those times.

It is also known that the wise-men devised and adjusted their rites on the basis of their knowledge of the Cosmos.

The question is: what has become of these unique rites today? What kind of obscurantism has destroyed them or is concealing them from people’s view?

### **What is the message of Sungir?**

And now I should like to bring to your attention some even more sensational news, eclipsing that of even the pyramids of Egypt or the ruins of Ancient Rome.

This information is also needed, as Anastasia’s grandfather said, in order to better understand the phenomena and knowledge of the Universe prevalent in our ancient forebears’ time. And for that we have to delve as deeply as possible into history.

The Siberian recluse said, furthermore:

“If your thought can dig down to three thousand years ago, you will begin to gradually feel the knowledge of three millennia. If it can go as deep as five thousand years, then five millennia, though not everything you discover will be comprehensible to you. You actually need a minimum of nineteen thousand years.”

This attempt to dig into our country’s historical past seemed to me utterly unfeasible. I was already prepared to go off to India or Tibet where, it is said, one can learn more about our ancestors than here at home. But, as it turned out, there was no need to go anywhere. Everything was available right here, and now I invite everyone reading these lines to cast his thought about our forebears more than nineteen thousand years back in time.

The archæological finds I am about to describe were made (by mere chance) on the outskirts of the city of Vladimir, which, according to official sources, is approximately 1,015 years old.

In 1955, while excavating a clay pit mine for the Vladimir Ceramics Factory, Alexander F. Nacharov discovered in one of the buckets the bones of some very large animal, which had been resting at a depth of three metres. Archæologists were informed about the discovery.

The first excavations thereafter simply astounded the scientists. Buried on the site were the remains of people, jewellery, clothing ornamentation and everyday objects, all testifying to some kind of ancient culture. Further investigation confirmed that our ancestors had arrived on the banks of the Klyazma River<sup>10</sup> as early as the Old Stone Age, approximately 25,000 years ago.

<sup>10</sup>*Klyazma River* — a tributary of the Oka, which in turn flows into the Volga at Nizhny Novgorod east of Moscow. Vladimir is one of the major cities on the banks of the Klyazma.

Now somebody could be wondering whether they might have run about on all fours, dressed in home-made skins and carrying clubs! Not at all. The scientists were amazed by another finding.

On the skeletons themselves or close by were a whole lot of jewellery and ornaments which aided in reconstructing the appearance of the clothing worn by these ancient people — something similar to either overalls or a perfectly civilised dress.

The finding is such that if we are not going to relegate these remains to the category of buried extra-terrestrials, then we shall have to completely revise our whole historical outlook on the world.

In one of its halls the Vladimir State Museum of History and Ethnography mounted a special exhibition dedicated to these unique findings. It put out a booklet stating that the Sungir site is the most interesting archæological monument in Russia, and is known to archæologists the world over. It has hosted a number of international scientific conferences.

Sungir represents one of the northernmost settlements of Ancient Man in the Vladimir Region on the Great Russian Plain. In terms of richness of both objects and state of preservation of such ancient remains, it has no comppeer anywhere in the world.

Thanks to the collaborative efforts of archæologists, geologists, paleontologists and paleobotanists, we have a fairly clear picture of how people lived back then, in this incredibly distant time-period.

Here, on the edge of a glacier, was where the tundra used to begin, dotted here and there with islands of fir, pine, birch and alder groves. The animal world was quite diversified.

According to the booklet, "ancient Sungirians hunted the reindeer, wild horse, Arctic fox, wolverine, bison, brown bear, wolf, Arctic hare; they also went after the black grouse, junglefowl and herring gull. And of course, they hunted the

mammoth — a huge animal, now extinct, almost four metres tall and weighing six tonnes. This represented for them a much sought-after trophy: meat, skins (indispensable in constructing dwellings) and tusks (a solid and superb material for the preparation of both weapons and ornaments.”

The inventory of objects made from bone and horn is most interesting: shaft adjusters, hoes, spearheads, arrowheads and beads from mammoth tusks, jewellery made from the fangs of the Arctic fox. A small silhouetted figure of a large-headed horse came to be recognised as a rare example of primitive art. This famous Sungir horse was decorated with tiny dotted ornaments and red ochre. The number of dots on the figure — a multiple of five — testifies to the use of a quinary counting system among inhabitants of the site. A seven-based system points to the knowledge possessed by people living 25,000 years ago. But it is the unique burial sites of these ancient people that have brought global fame to Sungir.

In 1964, in a heavy layer of ochre-coloured rock, was found the skull of a woman; lower still were the remains of an elderly man. On his chest was a pendant made from a pebble, while on his arms were twenty-five plate bracelets made from mammoth tusks. In addition, on the skull, all along the arms, legs and torso almost 3,500 beads were arranged in rows. The pattern of their arrangement on the skeleton allowed scientists to reconstruct the embroidered costume of this ancient Sungirian. It was reminiscent of the fur clothing worn by Arctic peoples today. At the bottom of the shallow grave they discovered a knife and some kind of scraper made of flint.

Just as much a treasure was the next burial site, unearthed some five years later.

This grave contained the remains of an adult body, but without a skull. Beside it lay a necklace of mammoth-tusk beads, a ring and a pair of reindeer antlers. But farther back, at 65 cm below the upper grave, were found two skeletons of children.

A boy of twelve or thirteen and a girl between seven and nine had been placed in the grave in a stretched position, their heads pressed tightly against each other. Children on their way to 'the next world' were accompanied by hunting weapons made from mammoth tusks: eleven darts, 3 daggers and two spears made out of split and straightened tusks, one 2.5 metres and the other 1.5 metres long. The grave also yielded mammoth-tusk 'rods', very expressive figurines of a horse and a mammoth, carved discs of an apparently ceremonial nature and connected with the worship of the Sun and the Moon. The children's clothing, too, was embroidered with thousands of little beads, and fastened across the chest with pins made of bones. The back of the costume had been outfitted with threads of beads in the shape of animal tails.

This finding testifies to the complex rite of burial and the developed religious beliefs of the ancient people of the Stone Age. One may confidently assume that they believed in the afterlife.

Multidisciplinary archaeological investigations have been going on at Sungir, with a few interruptions, ever since 1956. For almost twenty years the project was under the supervision of the famous archaeologist Dr Otto Nikolaevich Bader.<sup>11</sup> Anthropologist M. M. Gerasimov,<sup>12</sup> along with his students

<sup>11</sup>*Otto Nikolaevich Bader* (1903-1979) — an internationally recognised archaeologist of Soviet Russia, accorded membership in the Italian Institute of Prehistory and the Society of Prehistoric Archaeology in France. As early as 1924 he was appointed head of the Archaeological Division of Moscow's Central Industrial District Museum, and, in 1931, Academic Secretary of Moscow State University's Institute and Museum of Anthropology. He went on to hold a number of other prominent positions in Russian academe.

<sup>12</sup>*Mikhail Mikhailovich Gerasimov* (1907-1970) — a prominent Soviet anthropologist, archaeologist and sculptor, who specialised in the re-creation of the outward appearance of a human being on the basis of skeletal remains. He has created reconstructed portraits of historical figures such as Yaroslav the Wise, Tamérlaine, Ivan the Terrible and Schiller.

G. V. Lebedinskaya<sup>13</sup> and T. S. Surnina succeeded in reconstructing the external appearance of the ancient Sungirians.

As is known, anthropologists are often able to reconstruct a person's face with sufficient accuracy on the basis of the skull. This offered a rare opportunity indeed to gaze upon the faces of ancient people — an opportunity I decided to take advantage of. A wise, intelligent-looking face on the adult male. A slightly sad expression on the young girl's face, a thoughtful one on the boy's.

And yet the presumptions about hunting, and especially the mammoth, I believe, were not entirely accurate.

I brought Anastasia's grandfather to this unique exhibition in the Vladimir museum. The old fellow slowly made his way around the displays, without stopping at any of them. Then he stood in the middle of the hall and bowed four times, each time shifting his position by ninety degrees. When I told him about the scientists' conclusions, he began to refute a good deal of it, explaining:

"These people, Vladimir, never hunted mammoths. Mammoths were their household animals, and a very great help to families, also a way of transporting heavy loads. They performed a greater variety of tasks than elephants do today in India, which are controlled by *mahouts*, or drivers.

"Standing on a mammoth, the Sungirians could gather fruit from very tall trees and store them in woven bags and baskets, and then carry them to wherever they liked.

"In the domain glades, the mammoths cleared out young underbrush from the forest encroaching on the glades or, depending on the task assigned, would shake and then pull

<sup>13</sup>*Galina Viacheslavovna Lebedinskaya* (1924-) — a specialist in remains reconstruction. Following Gerasimov's death in 1970, she succeeded him as head of the Waxed Reconstruction Laboratory at the Ethnographical Institute of the Soviet Academy of Sciences.

up trees so as to enlarge the glade. Whenever people had to move from one place to another, they would load their belongings, utensils and food supplies onto the mammoth.

"This was a very kind and industrious household animal. Even a small child could put his fingers around the end of its trunk and lead it about at will. Indeed, children often played with the mammoth, making it suck up water into its trunk and then give them a shower. The mammoth took great pleasure in watching how the youngsters jumped and squealed with joy.

"The mammoth was especially delighted, too, when his wool was combed out and removed by a special, rake-like instrument. A Man would wash the wool, dry it and then use it for his own purposes, for example, in making a bed.

"There was absolutely no need for these people to *bunt* the mammoth. This can be deduced just from the information available in the booklet, which contains quite a few contradictory statements."

"Why contradictory?"

"Think about it. They list all sorts of wild game which could easily be caught in sufficient numbers with the aid of special traps. If a Man killed a mammoth, which weighs six tonnes, he could not possibly eat all its meat right off."

"But what if there were a whole lot of people?"

"There couldn't have been that many. Back in those times people didn't live packed tight together the way they do now in cities or towns. Each family tribe had its own lands. Each family had their own territory, their own home. On an area of three square kilometres might be living fewer than a hundred people. Even collectively, they couldn't eat a six-tonne mammoth in just a few days, even if they didn't consume anything but meat during that time. The rotting meat would start to decompose and attract a huge number of insects. It could have started an epidemic."

“But maybe they invited people from other territories to some kind of feast?”

“What sense would there be in travelling several kilometres just to eat meat which there was enough of at home?”

“But if you say the mammoth’s decomposing carcass could run the risk of provoking an epidemic, the very same threat could be posed by a household mammoth when it died.”

“Vladimir, a mammoth would never die in the family surroundings. When it got old and felt death approaching, it would walk a little ways from the house and trumpet three times, before heading off to a cemetery for mammoths, where it died. You should have known that yourself, as that is what wild elephants do in India today. Before they die they trumpet and then leave the herd.”

“So that means we have a very distorted understanding of how the ancient people fed themselves?”

“Yes, that’s right. Perhaps it’s an attempt to justify your current barbarity in regard to the treatment of animals. The farther you go back into history, the fewer people you’ll encounter eating meat. They had a sufficient supply of growing things to sustain themselves. As for animals, they took from them only what the animals themselves gave to Man — milk and eggs, for example. Meat could have been harmful to the stomachs of the first people.

“Another argument in favour of the premise that hunting was not a basic source of food for primitive people is its illogicality by comparison with other ways of obtaining food.”

“What other ways?”

“From tamed, domesticated animals. Picture to yourself a Man whose household includes a female mammoth, a cow and a goat, all of which can be milked, yielding a daily supply of top-quality fresh produce. This Man’s household also includes domesticated fowl: a goose, a duck, a chicken, all of which provide eggs with little effort on his part. He has the

opportunity of gathering honey and pollen from bees, and a great many root vegetables and edible herbs are also at hand.

“Then all of a sudden it appears as though the Man is going out of his mind. He kills all his domestic animals — which, apart from everything else, have also been guarding him when he is asleep — eats them and begins hunting for wild game, thereby putting himself in danger without guaranteeing himself and his family a regular supply of fresh produce.

“In place of friendly surroundings and the love expressed to him by his household animals, he ends up with nothing but an aggressive environment in which it is virtually impossible, one might say, for his household to survive.”

“But did the first people really begin right off to domesticate and train their animals? Maybe that came along at a later period?”

“There would have been no later period for Man if he had taken an aggressive stance from the start. You must be acquainted, after all, Vladimir, with situations where an infant alone in the forest may be fed even by carnivorous wolves — the very same forest where a pack of wolves could tear an adult to pieces. What would account for the discrepancy in their attitude toward Man?”

“I really can't say.”

“Because in the first instance the infant Man has no aggression, while in the second we have aggression and fear which create unease in the surrounding environment.

“The first people had no sense of fear or aggression. It was love that was dominant in them, along with a genuine interest in the world around them. Consequently, it was no effort to domesticate or train animals and birds. Their primary concern was to determine the purpose of every creature they encountered on the Earth. This they did. As far as the animals go, you already know that they find their own highest benefit in Man's feelings of love and care for them.

“Meat was first consumed by a less-than-complete Man, one drained of the energy of Love. It seems that he either went out of his mind or was infected with the most terrible disease — a disease which has come down to the present day.”

“But what connection can there be between *love* and Man’s first consumption of meat?”

“There is a direct connection. A Man living in love is incapable of killing.”

“Possibly. But can you determine why these children died 25,000 years ago? Why were they buried in such an unusual manner, head to head like that?”

“I could tell you, of course, but it would be a very long story. Besides, it is not important for you to know *why* they were overcome by death, but *for what purpose*.”

“For what purpose?”

“There you go again, Vladimir, constantly asking questions. Too lazy to think for yourself. Only don’t blame me for speaking like this, the way you did back in the taiga when you let resentment take over. Think, instead, on the whole point of my telling you things. What I say will bring you more harm than good if you don’t begin to think for yourself.

“I speak, and you listen, and instead of working out your own conclusions in your thought, you are merely taking note of mine. You have set yourself up a goal of finding conditions in the past under which love could remain with people forever, and then reintroducing them in this present day. That’s fine, the path is correct, and the goal is the most important of all.

“You are trying to determine how many ages ago love began to dwell with people. Look: here is a date right before your eyes. Think about it. Right in front of you lie two child skeletons. Their death at such a young age is meaningless unless people can realise what important information is concealed in their burial.

“Their death will acquire meaning if you retrieve this information right now.”

I didn't resent the old fellow for his remark on my laziness of mind. I had long realised that he was using some kind of methods of his own, trying again and again to teach me how to control my thoughts by alternative means. But I, after all, did not go through the same school as they, training their thought from childhood. I went to an ordinary school, which quite possibly serves to do just the opposite — to switch thought off.

So here I am standing in front of these child skeletons, straining myself mentally, without being able to grasp how I can look on them and learn at least something about the love that existed 25,000 years ago — if it existed at all at that time.

“It did exist,” the old fellow suddenly said.

“What made you decide that? There's not a word about love on the museum signs.”

“Not a word, but so what? Look carefully. Judging by the skeletons, these are children. The boy is twelve and a half. The girl, she's eight.

“On their skeletons are hundreds of bone beads. On the basis of their arrangement your scientists have determined what kind of clothing the children were wearing. But is that all the bone beads can tell us?”

“What else can they tell us?”

“That their parents, Vladimir, loved these children very much. They loved their children and they loved each other. Only loving parents could get involved in such time-consuming ornamentation of their children's clothing. We can also tell that they had more than enough free time for artistic pursuits and for designing and then making fine clothing.

“Note that the objects found in the grave include absolutely no weapons capable of killing.”

“What about the darts? Aren't those weapons?”

“Of course not. And they’re not even harpoons for catching fish, since there are no barbs on the ends. The end of the object they’ve called a ‘dart’ is not even sharp. A thin, lightweight dart like that could hardly kill or even wound any creature.”

“Then what was this object used for?”

“For training and controlling animals. See how it resembles a stick animal trainers use today? Elephant drivers, for example, use sticks like that to control their charges.”

“But why did they need to make them out of bone? They could have also taken a real stick and not wasted time straightening out the bone and putting ornaments onto it.”

“A wooden stick couldn’t last very long. Animals, on the other hand, get accustomed to a single object — its shape and even the smell it acquires from contact with the master’s hand.”

“Right, then — everything you say sounds rather convincing, but there are other objects which resemble arrowheads. And arrows were meant for killing.”

“In the case of these specific people, who were not of the very earliest period of human life on the Earth, arrows were intended for scaring away carnivorous beasts when they attacked.

“There are also some objects that look like hoes. These, indeed, were instruments for planting seeds and digging up roots.”

“But the jewellery? Look, this necklace is made from the fangs of an Arctic fox. And scientists assume that the clothing was made from leather. So, they killed animals after all!”

“Your scientists are right about their clothing being made of leather, but there was absolutely no need to kill any animals for this purpose. There were reptiles which shed their old skin on a regular basis. Reptiles might die for some reason, and then ants would eat out their insides, leaving the skin untouched, which turned out to be very useful for making clothing. Given

such circumstances, it would be silly to waste time on killing an animal, cutting up the carcass, processing and drying the skin or softening it. What for? Since it was possible to acquire a ready-made skin in an ideal condition. In the Divine Nature all Man's needs have been provided for in advance. As for the necklace from a fox's fangs, it was a lot simpler to take them from a skeleton already worked over and dried by Nature."

At this point I'm going to interrupt, for a moment, Anastasia's grandfather's account about the archæologists' unique findings.

In the booklet put out by the Vladimir State Museum there are drawings showing two exhibit halls — the Sungir Architectural Park and the Sungir Museum Complex. It mentions that international conferences have been organised around these unique findings.

However, I would not advise any great haste to visit the excavation site of this ancient civilisation. There are no actual pavilions on the site — only the remains of unfinished construction. And the archæological work is not proceeding at any intensive pace. The State has no funds for such important projects. They are going ahead, one might say, thanks to the level of enthusiasm both of the scientists involved and of the local authorities.

I arrived at this unique place on a weekend. In one of the pits I saw two men taking soil samples from the side of the pit and carefully placing them into plastic bags. They turned out to be workers from the State Archæological Institute. They confirmed that Sungir is considered the richest archæological site for the study of Ancient Man anywhere in the world.

The Vladimir Museum exhibition is the only one of its kind in Russia. They said that tourists sometimes visited the Sungir excavation site, but mainly tourists from Japan, since there is an even fuller exhibition on Sungir at the Tokyo National Archæological Museum.

It seemed pretty strange that the people in the Land of the Rising Sun show more respect to our ancient forebears living on our country's territory than we do ourselves. Thank you, Japanese friends, for protecting the culture of our joint forebears.

We talk about Russia's lofty mission, about spirituality and the need to support the national image, but what support can we talk about if foreign tourists see our relationship to history through their own eyes?

Well, the only thing we can do is hope that possibly our more civilised descendants will learn what secrets still remain to be discovered in Sungir.

I managed to find out that 25,000 years ago our forebears were civilised people, who knew how to love passionately and preserve love forever.

### A family-centred society<sup>14</sup>

To all appearances, in order to bring back lost effective traditions and rites capable of preserving love in families, it would seem necessary to obtain full information about the life of our forebears.

To this end we must delve even deeper into our historical past, right down to the family-community-centred society,

<sup>14</sup>Here and throughout this section of the chapter, the Russian term for *family* is *rod / rodovoi*, which refers not just to the *family* in any particular moment of time, but rather to the *tribe, clan or family line*, which includes all forebears in addition to the present generation and all future descendants. See also footnote 7 in Book 4, Chapter 33: "School, or the lessons of the gods".

when a husband and wife who loved each other created a friendly family community together with their children, grandchildren and great-grandchildren.

In today's world a husband and wife simply cannot hold on to even their closest relatives — their children. No sooner do their offspring approach adulthood than they try to get out from under their parents' wing. They go off to live in a university residence, or rent an apartment — often at considerable expense, but they still go.

And we're not just talking about children! Many couples separate even before children come along, or shortly after their appearance.

The family-community-centred society existed many millennia in Rus' before the princes came along. It was characterised by an absence of divorce and stronger family units, in comparison with subsequent social structures in our history. Only genuine love is capable of starting a family line. In the past it was much easier for grown children to leave the family than today. I'm talking about the early period in Rus', before the arrival of the princes.

If two young people who loved each other weren't happy with their relationships with their parents, they could leave home and set up their own dwelling on whatever territory they took a fancy to. They could start by nourishing themselves on what they found in the forest; then they would till the ground and establish a household. But they didn't go away. That means the founders of the family line treated them with understanding and love.

We need to study this period and from it draw into our modern way of life grains of logic capable of helping build strong families today.

But how, by what means can we access information about this era in people's lives, when Russian history describes only the Christian period?

Another factor necessitating an investigation into our people's historical past is the importance of determining whether the ancient rites and culture disappeared all by themselves, having outlived their usefulness, or whether the traditions of many millennia were deliberately destroyed.

If they disappeared all on their own, then there is no point in digging into the historical past, since the people themselves rejected their ancient culture, not seeing it as useful, which means it would not be accepted today either.

If, on the other hand, the ancient traditions were deliberately destroyed, then we must look into the question of by whom and for what purpose. We must seek them out, find them and present them to society for evaluation.

It is possible the ancient rites and traditions conceal within themselves such important secrets of human existence that without uncovering them we shall continue to move toward an abyss, die out and torment ourselves with family strife. We often talk about large-scale wars. Family conflict, however, is often more painful for each of its participants than news about war in Iraq or events in Israel.

Recalling everything I knew about Ancient Russian history, I decided that, strange as it might seem at first glance, the only thread leading through the vast labyrinth of historical falsehoods was the conqueror Genghis Khan<sup>15</sup> — in other words, the three-hundred-year period of the so-called 'Tataro-Mongol Yoke' in Rus'. Why? Because this period began shortly after the Christianisation of Rus', when the traditions of our ancestors had not yet been completely annihilated.

<sup>15</sup>*Genghis Khan* (Mongolian: *Cbinggis Khayan*; real name: Temujin, 1162-1227) — the founder, reformer and unifier of the State of Mongolia (1206). After uniting the nomadic tribes of north-east and central Asia, he organised campaigns of conquest throughout Asia and Eastern Europe, thus forming the largest contiguous empire in world history.

Not only that, but Genghis Khan was just about the brightest, most interesting and enlightened personality of his time. It is not only that he and his descendants conquered half the world, but it is fascinating to see how they did it.

I can tell you right off that their army played only a secondary role in this process. We know from various historical sources that Genghis Khan sent expeditions to many lands, as far away as China and India, which supplied him with wise-men. He spent a great deal of time conversing with men of wisdom. He was attempting to determine the purpose of human existence on the Earth, and to find immortality. In other words, he was gathering the wisdom of various peoples and could well have possessed information about the social structure of Ancient Rus'.

And it turned out, in fact, that he did. I am convinced that it was thanks to this information that his family, his sons and great-grandchildren were able to hold the so-called élite of many countries in subjection over the centuries. And I mean exactly that — it wasn't countries or their peoples that he held in subjection, but their élites that were usurping the peoples of these countries.

Somebody might wonder what on earth the knowledge of ancient family traditions and love-preserving rites has to do with the successful subjugation of states.

You shouldn't be surprised — there is a simple direct relationship, and such knowledge is more powerful than millions of soldiers' swords or even the most state-of-the-art weaponry.

I shall not bother describing the whole three-hundred-year period of the Tataro-Mongolian hold on Rus'. I shall cite just one episode — albeit a very typical and interesting episode — the subjugation of the Vladimir-Suzdal principality, on which I have collected information from various sources. Let's try to arrive at some conclusions together.

### A mysterious manoeuvre

Chronicles, modern historical sources and church literature all talk about a mysterious and even secretive manoeuvre on the part of Batu Khan<sup>16</sup>, grandson to Genghis Khan, on the outskirts of the city of Vladimir in 1238. What is the mystery here? This is how the chronicles tell it:

“Having taken Riazan<sup>17</sup> in 1237, in the spring of 1238 Batu Khan and his cavalry pushed their way into the city of Suzdal...” As subsequently reported in a multitude of ecclesiastical sources, he burnt Suzdal, exterminated part of the population and took the remaining part captive. A lot is said in these sources about the “atrocities committed against the people”.

Secular historians, on the other hand, describe the situation more accurately and impartially. Thus, for example, in the materials available in the Vladimir-Suzdal State Museum the event is described as follows:

<sup>16</sup>*Batu Khan* (also known as *Baty*, 1205-1255) — the son of Jochi and grandson of Genghis Khan, who inherited the leadership of the so-called *Golden Horde* (Mongolian: *Altan Ordyn Uls*; Russian: *Zolotaya Orda*) — part of the Mongol Empire that covered much of present-day Russian territory (along with Ukraine, Kazakhstan and the Caucasus) for almost three centuries, beginning in the 1240s.

<sup>17</sup>*Riazan* — a city on the Oka River south-east of Moscow (see footnote 6 in Book 5, Chapter 17: “Questions and answers”).

The Tatars set up their camps at the city of Vladimir, while they themselves went and took Suzdal, and plundered the Holy Mother of God (cathedral), and burnt the prince's court, and burnt the monastery of Saint Dmitry, and plundered others; and the old monks and nuns, and the priests, and the blind, and the lame, and the deaf, and the labour-weary and all other people were slaughtered, while the young monks, and monks, and priests, and their wives, and the deacons with their wives, and their daughters, and their sons — all these were led away to the Tatars' camps, and they themselves went to Vladimir.

As we can see, Batu Khan did not take anywhere near the whole population captive. And he killed off the old high-ranking monks and took the young ones captive. He didn't burn and plunder the whole city, but only the prince's residence along with Suzdal's churches and monasteries.

And now let us try to solve a superhistorical mystery. Why (as the document says) did the Tatars "set up their camps at the city of Vladimir, while they themselves went and took Suzdal"?

Any military historian — as, indeed, any modern army commander — will tell you that this manoeuvre completely goes against standard military tactics.

To establish a camp under the walls of a major fortified city and then leave it and move one's troops to a smaller target — that is tantamount to suicide.

The distance between the cities of Vladimir and Suzdal at the time was equivalent to 35 kilometres. With the roads rendered impassable by the spring rains, it was a good day's journey on horseback.

The taking of Suzdal required a minimum of several more days, and then a day's journey back.

It wouldn't have taken any more than a day for the soldiers defending Vladimir to go out of their fortified city on a foray

and rout the defenceless enemy camp. All they had to do was seize the spare horses, the spare quivers of arrows, the supplies, the wall-storming ladders and stone-throwing devices, and they would have shorn the enemy not only of the possibility of launching an attack on them, but of their battle-readiness in general.

But they never went out. Why not? Perhaps they didn't know that Batu Khan's troops had left the camp? But they knew. They could have easily seen that from their battlements; besides, their scouts would have reported it.

Possibly Batu Khan's forces were in such great numbers that more than enough guards had been left behind to repel an attack on the camp?

This is the way historians initially explained it. They said the Golden Horde's troops numbered almost a million. Then they changed their minds and reduced their estimate to 130,000, some even to as few as 30,000.

Naturally it is tempting to explain one's defeat by citing the enemy's significantly superior numbers. More objective scholars have begun to say that moving a million-strong army at that time was an absolute impossibility.

A million swordsmen together with equipment would mean three million horses. If a herd like that were kept in one place, even in the summertime, they would die of hunger, since the grass all around would be trampled down. And in the wintertime no amount of feed supplies would be enough.

So the figure was reduced to either 130,000 or 30,000. A humiliating figure indeed. With a scant hundred and thirty thousand men Batu Khan quietly went about conquering Russian principalities and whole countries too.

But even this figure is inflated. To subjugate the Russian princes of that time using the knowledge left by Genghis Khan to his descendants, there was simply no need for even a fifty-thousand-strong army. All that was required was knowledge

of the way of life of the Russian people, Russian families, and the proper strategy based on such knowledge.

After setting up camp at the city of Vladimir, Batu Khan did not go with a whole army to Suzdal, but sent a small detachment to take it. This is why the people of Vladimir did not leave their fortified city to rout the camp and destroy the enemy's military facilities.

Do you know how many days and nights it took for Batu Khan's small detachment to conquer one of Rus's spiritual capitals of the time, surrounded as it was by more than a half-dozen monastery fortresses — this legendary city of Suzdal?

No time at all. He simply arrived, entered the city and burnt the prince's residence. The prince, meanwhile, had fled together with his armed garrison. It was no effort to cut down every last one of the high-ranked clergy and take the young monks captive. And the Mongols later caught up with the prince and his garrison at the Sit' River and destroyed them too.<sup>18</sup>

*How could that be?* someone may wonder. Where were the brave Russian people, their indomitable and freedom-loving spirit?

I can tell you right off that there was nothing wrong with the Russian people and their spirit. Logic suggests that the people applauded Batu Khan's small detachment on its return journey from Suzdal. They served *kvass* and *braga*<sup>19</sup> to the warriors along the whole route back to their camp at Vladimir.

The reason is that the people of that time did not look upon Suzdal as *their* city. Rather, they viewed its royal inhabitants as traitors and its clergy as foreign aggressors and enslavers.

<sup>18</sup>This battle took place 4 March 1238. Prince Yuri Vsevolodovich was beaten and beheaded by the detachment commander Burundai, who later presented the prince's head to Batu Khan as a trophy.

<sup>19</sup>*kvass* — a Russian fermented drink made from rye bread or vegetables; *braga* — a mild Russian alcoholic beverage.

This led to the flare-up of a number of rebellions on the part of the people against unbearable oppression.

Documents at the Vladimir-Suzdal State Museum put it this way:

By the end of the thirteenth century Suzdal had eight monasteries. Founded by the princes and representatives of the Christian religion, they played a major role in assimilating new territories and served as fortresses in the event of enemy aggression. ...

In the late fifteenth and early sixteenth centuries the Church owned a third of the best lands in the country and was endeavouring to subjugate the power of the Grand Princes to itself. From the end of the fifteenth century on, the State made repeated attempts to limit the landholdings of monasteries and churches, along with attempts at secularisation (in other words, complete eradication). The question of land provoked two ideological tendencies within the Church: *Josephism*<sup>20</sup> and the *Non-Possessors Movement*.<sup>21</sup> The first defended the monasteries' property interests, while the second emphasised the idea of inner self-perfection and condemned the monasteries' acquisitive pursuits. The ideological leader of the Josephites

<sup>20</sup>*Josephism* (Russian: *Iosifianstvo*, also known as the *Possessors Movement*) — a movement defending the ownership of land by the Russian Orthodox Church, led by Iosif (Joseph) Volotsky (or Volokamsky; secular name: *Ivan Sanin*, 1439–1515), later recognised as a saint. Not to be confused with the 20th-century use of the same term, designating a movement opposing the Russian Orthodox Church's kowtowing to communist authority following the 1917 revolution (in this case named after Metropolitan Iosif [Joseph] of Leningrad).

<sup>21</sup>*Non-Possessors Movement* (Russian: *nestiazbatel'stvo*) — an opposition movement to Josephism, rejecting church land-ownership, led by *Nil Sorsky* (secular name: Nikolai Fedorovich Maikov, 1433–1508) and a Greek immigrant, *Maxim Grek* (secular name: *Mikhail Trivolis*, 1475–1556).

was Father Joseph, abbot of the Volokolamsky Monastery, while the Non-Possessors Movement was championed by a monk of the Kirillo-Belozersky Monastery, Nil Sorsky. The monasteries and clergy of Suzdal, as major landholders, came down solidly on the side of the Josephites. However, in the sixteenth century the authority of the Grand Princes did not manage to carry out its intended secularisation of the Church's wealthy landholdings, which continued to increase, even though on a limited scale.

Quite a trick! A third of Russian lands ended up in the hands of the Constantinople-derived<sup>22</sup> clergy and its puppets. Monasteries were transformed into large-scale slave-owners. And it wasn't the monks who tilled the ground and raised cattle, but the peasant serfs.

The princes were already trying to reclaim part of the country they had lost. But that was by no means easy!

And just how was this 'enriching' the souls of the peasants, whose primordial family lands had now become monasterial property at one fell swoop? What was offered to people in exchange for their centuries-old traditions and rites, which were now labelled 'barbarian'? The same archival documents show what happened here:

#### **Fees and penalties imposed on the peasant serfs of the Pokrovsky Nunnery in 1653**

From each household — two altyns,<sup>23</sup> a chicken and lamb's wool from the first shearing.

<sup>22</sup> *Constantinople* (original name: *Byzantium*, now *Istanbul*) — the seat of the Greek Orthodox Church, from which the Russian Orthodox Church was derived.

<sup>23</sup> *altyn* — a mediæval coin worth three kopeks (derived from the Tatar word for 'gold'). A kopek is worth 1/100 of a rouble.

On the purchase of a:

Horse — 2 dengas.<sup>24</sup>

Cow — 1 denga.

On the sale of:

Grain, horses, cows, hay — 1 altyn for each rouble received.

Log houses — 1 denga per internal corner.

For settling disputes:

Regarding field-lands — 2 altyns, 2 dengas.

Regarding household lands — 4 altyns, 2 dengas.

Court fees:

For travel to the site of a dispute — 1 denga per verst.<sup>25</sup>

For travel in cases of acquittal — 2 dengas per verst.

From the guilty party — 1 altyn for each rouble assessed.

From the vindicated party — 7 altyns, 2 dengas.

For taking an oath — 4 altyns, 2 dengas.

Wedding fees:

From the groom — 3 altyns, 3 dengas.

From the bride for a table — 2 altyns, 2 dengas.

From a groom from outside the district — 2 grivnas.<sup>26</sup>

From holiday beer-making

for weddings or funerals — 1 bucket of beer.

<sup>24</sup>*denga* — a mediæval coin worth half a kopek. The plural of this word (*den'gi*) is the current Russian generic word for 'money'.

<sup>25</sup>*verst* (Russian: *versta*) — an old Russian measurement of length, approximately equivalent to 1 kilometre.

<sup>26</sup>*grivna* (also known as *grivennik*) — an old Russian coin worth ten kopeks.

Penalties:

For alcohol distillation for one's self without a permit, or for sale — 5 roubles, a beating with a cane, and arrest.

For consumption of wine except on holidays — 8 altyns, 2 dengas, and a beating with a cane.

And here is a description of the property of the highest-ranked church official:

**List of people and property  
belonging to Metropolitan Illarion**

16 elders, 6 overseers in charge of properties, 66 personal bodyguards, 23 servants, 25 singers, 2 sextons, 13 bell-ringers, 59 craftsmen and labourers. In total: 180 persons.

Weaponry numbering 93 pieces, silver dishes weighing 1 pood<sup>27</sup> 20 pounds, pewter dishes weighing more than 16 poods, 112 horses belonging to the Metropolitan's horse farm, 5 carriages, 8 sleighs and chariots, 147 books.

*(From the inventory of the Metropolitan's household, 1701)*

A most extraordinary document. It is free of any kind of historical inaccuracies. It simply provides an impartial inventory of the Metropolitan's household property. However, it also begs a great many questions.

What kind of properties did the Metropolitan have that required the services of six overseers? Why a whole twenty-three servants for one man? And were the ninety-three pieces of weaponry also intended for the conducting of church rites?

<sup>27</sup>*pood* (rhymes with 'food') — an old Russian unit of mass approximately equivalent to 16.4 kg. A pood was divided into 40 funt (pounds).

Note that none of this was the monastery's property — it was just the Metropolitan's personal effects. The monastery had its own.

Just who was such a large contingent of guards supposed to protect the Metropolitan from? He had more bodyguards than the first American presidents.

The large contingent of guards, like the high monastery walls, were designed to protect the Metropolitan from the Russian people, of course. The walls of the Suzdal monasteries had no strategic significance in terms of military policy.

But why then do almost all historical sources describe the high monastery walls with their embrasures as fortresses, designed to protect the people from the enemy? Why were not these so-called fortresses capable of holding out for at least a month?

Because they weren't at all designed for defence against any external aggressor, let alone a smart one.

For the soldiers under Genghis Khan's grandson, in any case, such fortifications were no more than a distraction. If the possessors of these mock fortresses had not acceded to the enemy's demand for immediate surrender, the Mongols would have thrown up an embankment a little higher than the walls and dragged their stone-throwing devices up onto it. There are many possible scenarios here. One of them involved putting a bag into the stone-launcher attached to a long rope, and launching the bag over the monastery wall. Before it hit the ground, the bag would become undone, showering the people hiding behind the wall with infected meat. After that, all they had to do was shoot the people as they attempted to escape through the main entrance gate.

The only thing that the high monastery walls served as a protection against was their own people, the peasant serfs — or, rather, the monastery slaves — who from time to time rebelled.

It was none other than the Constantinople clergy who applied their lofty 'spirituality' to the inculcation of serf law<sup>28</sup> in Rus'.

One document from the Suzdal Museum archives attests to the following:

Church landholdings prevailed in Suzdal in the seventeenth century, as they had before. Monasteries and the Metropolitan's residence were major feudal landlords, with enormous financial resources at their command, not to mention the free labour of many thousands of peasants.

Thus, the Spaso-Yevfimiev Monastery<sup>29</sup> placed fifth among all Russia's church-based feudal landlords. Its prosperity depended wholly upon land grants and contributions. In the second half of the seventeenth century the earlier established fiefdoms did not increase in size, as the inordinate expansion of monastery lands was held in check by the State. The peasants were subject to a double exploitation — first by the landowners (the *corvée* and tribute system) and secondly by the State (taxes payable in both money and kind).

<sup>28</sup> *serf law* (Russian: *krepostnoye pravo*) — a feudal system prevalent in Russia (as in other European countries), binding the peasants to the land, subjecting them to the will of the landowners, church and political authorities. In Russia it was introduced by the Law Code (*Sudebnik*) in 1497 and not officially abolished until 1861. Even after abolition, most peasants, being granted no land of their own, had no choice for survival except to continue in their servile relationship with the landowners. Slavery-like conditions persisted throughout the Soviet period: peasants could not leave their village without a special permission from the authorities, and were compelled to do unpaid labour.

<sup>29</sup> *Spaso-Yevfimiev Monastery* — one of Suzdal's principal monasteries, founded in 1352 by Boris Konstantinovich, Prince of Suzdal and Nizhegorod, as a fortress designed to protect the city from enemies both within and without.

Or take this quote from a similar document on the history of the Sviato-Pokrovsky Nunnery:<sup>30</sup>

The full and free life enjoyed by the nuns was made possible by the labours of peasant serfs and the enormous staff of servants; the landholdings of the Pokrovsky Nunnery grew, thanks to rich donations and grants on the part of Russia's most élite families, including princes and tsars.

So there we have it: more lands — more serfs and more wealth.

But let us return to the thirteenth century.

What, then, actually happened with the arrival of Batu Khan's detachment at Suzdal? And where do traditions and love enter the picture?

The population of Suzdal at that time was fewer than 4,000 inhabitants. It consisted mainly of the prince's armed garrison and servants, craftsmen and clergy with their host of unpaid servants, hiding from the people behind the monastery walls.

All around Suzdal and Vladimir lived tens of thousands of peasant families, who were the only ones capable of worthily resisting an aggressor. But they didn't do this, they didn't rise up in arms, they didn't go to the monastery walls to protect the clergy. To put it simply, they hated the clergy. Note that they didn't hate God, only their oppressors. The people loved and revered God.

<sup>30</sup>*Sviato-Pokrovsky* (lit. 'Holy Veil') *Nunnery* — situated close to the Spaso-Yefimiev Monastery, founded in 1364 by the then Prince of Suzdal, Andrei Konstantinovich (brother to Boris), in gratitude for protection from a violent storm. It received special attention from the Grand Princes of Moscow, including Vasily III and later Ivan the Terrible (the first to proclaim himself tsar).

It was for this reason that the people didn't rise to the defence of the city of Vladimir.

Batu Khan waited six days before storming Vladimir. He waited until the news spread that it wasn't the people he was taking captive, but their enslavers.

He waited and took the well-fortified city in a single day. It was to this end that he made the foray against Suzdal. The foray was of no military importance, but it served to deprive the authorities of support from the populace at large.

And then what did the Mongols do?

Realising that they could find no better overseers and tax collectors than the princes in collaboration with the clergy, they began to issue the princes licences to govern and the right to collect taxes from the Russian people, a portion of which was to be handed over to the Horde. Many monasteries were exempted from taxation.

All of this is confirmed by specific documents. Just so people don't go pointing the finger at me or the scientists or secular historians, let us turn directly to literature from the Church itself.

There is a fairly decent historical book published by the Sviato-Pokrovsky Nunnery — with the blessing of Evlogii,<sup>31</sup> Archbishop of Vladimir and Suzdal, which states:

Saint Fiodor, the first Bishop of Suzdal, was from a Greek family. He arrived in Rus' in 987<sup>32</sup> in the entourage accompanying Saint Michael from Constantinople.

<sup>31</sup>*Evlogii* (secular name: Yuri Vasilevich Smirnov, 1937–) — consecrated Archbishop of Vladimir and Suzdal in 1990. He is an author of two books: *Éto bylo chudo Bozhie* (This was God's miracle) and *Premirnoe sluzhenie* (A humble service).

<sup>32</sup>987 — the year before the official 'Christianisation' of Rus' by Vladimir I of Kiev (988), through his baptism at the hands of Saint Michael of Kiev — see footnote 6 in Chapter 4: "Wedding rites" above.

Saint Michael baptised Grand Prince Vladimir at Korsun,<sup>33</sup> and subsequently became the first Metropolitan of Kiev.<sup>34</sup>

After the baptism of the Kievans in 988, the prince, who had been accorded apostolic status, travelled around the Russian cities together with his sons and Saint Michael, on a zealous proselytising campaign. Bishoprics were established in Chernigov, Belgorod, Pereyaslavl, Novgorod and Vladimir-Volynsk.<sup>35</sup>

As can be seen from these reports, as well as from other sources, foreign ideologists were descending upon Rus' en masse. Complete with hired bodyguards and the prince's own contingent, they began to travel around the Russian cities, breaking down foundations that had been in place for millennia, planting an ideology profitable to the Church and government of the day and establishing foreigners in charge of cities.

Many historical documents testify to how the people resisted, though it appears they were poorly organised, and they did not expect treason on the part of their own prince. It was this treason that was largely responsible for the massive foreign invasion that befell Rus'. The saddest part was that it was done in the name of God. What an incredible sacrilege!

What if Prince Vladimir and the bishops from Constantinople actually believed sincerely in Christ's commandments?

<sup>33</sup>*Korsun* (also known by its Greek name *Chersonesos*) — on the southern tip of the Crimean Peninsula, in what is now Ukraine.

<sup>34</sup>St-Michael was appointed first Metropolitan of Kiev by Nicholas II Chrysoberges, who served as Patriarch of the Eastern Orthodox Church in Constantinople from 984 to 996.

<sup>35</sup>*Chernigov, Belgorod* etc. — names of major cities in Ukraine and Russia. *Pereyaslavl* is now known as *Riazan* (see footnote 6 in Book 5, Chapter 17: "Questions and answers").

But subsequent events show that their real masters were the exact opposite of God. They were the servants of this opposite, with the advanced ability to manipulate the people, to subjugate to themselves their spirit and their will. They suggested to Man: *you are God's slave*, actually meaning: *you are my slave*. And Man began to forget that God has not and cannot have slaves. Man is the son of God, His beloved son.

All the quotations reproduced in this book are taken from historical documents. I gained access to them not by going to some super-secret archives, but simply by paying 15 roubles<sup>36</sup> to get into the State Museum and 30 roubles for the right to take pictures. I photographed the displays set up for general viewing. One of them was entitled: *Monasteries as ecclesiastical feudal landlords*.

And that is by no means the only official State source. There are many of them.

One that exerts an immeasurably greater influence, for example, especially on the young, is a Grade 10 high-school textbook published by Prosveshchenie<sup>37</sup> in 2003 and recommended by the Ministry of Education of the Russian Federation. This is a high-quality publication under the editorship of A. N. Sakharov<sup>38</sup> and V. I. Buganov.<sup>39</sup> On page 63 it says:

<sup>36</sup> 15 roubles — equivalent to approximately US\$0.50 at the time.

<sup>37</sup> *Prosveshchenie* (lit. 'Enlightenment' or 'Education') — a general educational publishing house founded in 1931 (named *Uchpedgiz* up until 1964) as a state-controlled enterprise for the publication and distribution of textbooks and educational literature. The textbook in question is entitled: *Istoria Rossii s drevneishikh vremen do kontsa XVII v.* (History of Russia from the earliest times up to the end of the 17th century).

<sup>38</sup> *Andrei Nikolaevich Sakharov* (1930–) — historian, author of books on the politics, ideology and culture of Ancient Rus'. Not to be confused with the nuclear physicist and political activist Andrei Dmitrievich Sakharov (1921–1989).

Along with this the Church persecuted the old folk pagan culture and came out against the Roman model of Christianity, calling it 'Latinism' and apostasy. This damaged Rus's relations with countries confessing the Catholic faith, and contributed to Rus's isolation from Western European culture. Church facilities began to introduce slave labour. Some clerics and monasteries engaged in usury and victimised people. There were cases where prominent politicians active in the Church took part in political machinations. Thus there frequently arose a discrepancy between the words of the Church and its deeds, and this provoked a feeling of discontent among the people.

The textbook also mentions that Prince Vladimir, who baptised Rus' in 987, "...was the son of Sviatoslav<sup>40</sup> by a slave of his mother's named Malusha. Consequently he was accorded a secondary ranking among the Prince's sons".

It further states:

Vladimir spent more than two years in foreign parts, and when he was approaching Novgorod, he had with him a strong Varangian<sup>41</sup> contingent. He quickly took control of

---

<sup>39</sup> *Viktor Ivanovich Buganov* (1928–1996) — historian, author of books on the sociopolitical history of Russia from the 11th to 18th centuries. He has also published a number of chronicle manuscripts.

<sup>40</sup> *Sviatoslav* (?–972) — Grand Prince of Kiev, who brought many lands — as far away as the Oka River (near present-day Moscow), the Balkans and the Caucasus — under the control of Rus'. He also established alliances with the Hungarians and the Bulgars.

<sup>41</sup> *Varangians* (Russian: *Varyagi*, equivalent to *Vikings*) — Scandinavian (mainly Swedish) explorers and traders who used the Dnieper River through Russia and Ukraine as a conduit to the Mediterranean and Black Sea merchants. According to the Chronicles, they had significant interaction (and intermarriage) with the Slavs and took an active part in the political life of Ancient Rus'.

Novgorod and began preparing for his trek south. Along the way Vladimir conquered Polotsk, where he killed the reigning Varangian prince Rogvolod and his sons, raping Rogvolod's daughter Rogneda and forcibly taking her to wife.<sup>42</sup>

The textbook goes on to describe how the Kievan prince Yaropolk, Vladimir's brother, came to negotiate with him. "No sooner had he entered the hall than Vladimir's bodyguards ran their swords through him."

We also read an account of the baptism and the imposition of a sacramental obligation to pay the Church 10% of the tribute collected from the people. It should be remembered that at that time the Church was in subjugation to the Patriarchate of Constantinople (Russia still did not have its own patriarch), which means that 10% of the tribute money collected from the Russian people was at the disposal of Constantinople.

Might it not be in historical facts like these that we uncover an answer to the question as to why the people didn't rise to the Church's defence when Peter the Great closed a third of all Russian monasteries and melted down church bells to produce cannon, or when Catherine the Great went about 'secularising' (i.e., confiscating) monastery landholdings, which meant that formerly wealthy monks were obliged

<sup>42</sup>*Rogvolod* (also spelt: *Rogvold*, *Rogvald*, *Rogrvald*, *Ragnvald*, 936–982 or 920–978, depending on source) — Scandinavian-born Prince of Polotsk (on *Polotsk* — see footnote 7 in Chapter 4: "Wedding rites" above). *Rogneda* (also spelt: *Ragnbild*, 962–1002) — reportedly a descendant of the Ynglings royal family of Norway. She bore Vladimir four sons (including Sviatoslav the Wise) and two daughters. It is also reported that after being divorced by Vladimir she entered a convent and took the name *Anastasia*. Her story was the basis for composer Alexander Nikolaevich Serov's (1820–1871) opera *Rogneda*, which had its première in 1865.

to beg for food and live at the mercy of the tsar. Or, when the Bolsheviks started killing clerics and blowing up churches, why some of the people themselves participated in the plunder of church property.

My remarks on the subject of the Church are based on historical facts and documents. I have resolved to call upon sensibly-minded members of the Church hierarchy and its wise elders who I am sure are out there, to transform the modern Church into a highly spiritual institution, one capable of helping society escape from its economic and spiritual crisis.

### Love and the State's military preparedness

But what link can there possibly be, readers might wonder, between the conquest of Russia and *love*? The connection is quite direct. After seizing Russian lands, enslaving the Russian peasants, prohibiting rites capable of leading to love, the Constantinople assault force thereby began to hinder the formation of strong loving families and especially family domains. This meant, in effect, the immediate imposition of serf law.

Love among slaves, as a rule, is a most unhappy love.

In order for the feeling of love ignited in young people to be preserved, one's own Space is required. If it is not there, love, as a rule, vanishes. And what Space could be possessed by slaves? None at all.

Let's think: why, over the many millennia before the princes came to Rus', was our territory never conquered? There

was the Egyptian army, after all, and the Roman legions, but all these hosts with all their well-trained and well-equipped soldiers did not succeed in conquering our lands.

To answer this question, let us suppose that Genghis Khan's troops had launched an invasion of pre-Christian Rus'.

At that time, the territory of our present-day country was inhabited almost exclusively by people living in family communities. At the approach of any army, no matter what its size, the members of the community would hide part of their food supplies, take the remainder with them — along with their household livestock — and head off into the forest. Their horses and cows were loaded up with family belongings.

An invading army could move into a territory only so far as the provisions they carried with them allowed. But this was already an army on its last legs. The return journey would be impossible.

They couldn't go hunting in the forest, as that had to be done in small groups (any larger groupings would scare away the game), but once they penetrated the forest, small groups would quickly fall into traps and perish.

They ate, for the most part, the meat of their own emaciated horses, whose numbers kept rapidly decreasing, so that any kind of movement became exceedingly difficult.

Our ancestors would set up a whole bunch of clever traps all along the route of the foe's retreat, both in the forests and on the rivers. For example, they would sink a huge tree with prickly branches and stretch a cable tied to the tree across the water and fasten its other end on the shore. Whenever a boat approached the spot, the tree would float to the surface and catch the side of the boat in its branches, and then sink again, overturning the boat in the process. In the meantime the retreating soldiers would be met with a hail of arrows and harpoons launched from the shore.

But when the retreating soldiers stepped out on the bank, after gathering together the rest of the troops that had been spread out along the flotilla, there was nobody to be seen.

The people annihilated any enemy that invaded their Motherland. After all, they had something worth protecting. This was no abstract Motherland defined only by a beautiful word with not even a clump of native soil to back it up. They had their own family land, the same land that their ancestors had called home, and now it was where they lived along with their families, children, grandchildren and great-grandchildren.

And there was love in their families. And they protected their dear mothers, fathers and children. They protected their love! And that was why they could not be conquered.

## CHAPTER SEVEN

# Russia erased

Anastasia's grandfather and I rode along in silence. As we approached Suzdal and could see its buildings in the distance, I said to him:

"Look, there's Suzdal! It's a city around a thousand years old. Part of the Vladimir-Suzdal Principality. In fact it was one of the religious capitals of that period."

"Why are you going there, Vladimir?"

"I want to pay another visit to the museum, and take a look at the ancient sites, so's I can get a picture of how people lived over the past millennium."

"Try to get a picture *before* going into the city. Everything that lies around it is worth immeasurably greater attention than the city itself."

"All around are just fields," I protested, "with the occasional dilapidated village here and there. No information to help with the picture."

"Vladimir, stop the car. We shouldn't be talking while driving."

"Don't be afraid, I'm a good driver."

"I'm not afraid. I know, and so I'd better be quiet."

I pulled over to the side of the road and stopped the car. After a few moments I realised that I couldn't really drive and have this conversation at the same time. The difficulty was that, just like Anastasia, her grandfather sometimes spoke with certain special intonations, so powerful that the listener could perceive visible images, almost like holograms in space. This kind of speech allowed the possibility of showing scenes

of the past or future, or even on another planet, as Anastasia once did.<sup>1</sup>

It's hard to tell just what is behind this phenomenon. Possibly hypnosis, possibly some kind of mysterious abilities enjoyed by people of the priestly class. Or maybe it was something possessed by everybody living on the Earth back in ancient times. A talented actor on stage can also create all sorts of pictures and images for an audience with the help of intonations and his own emotions — albeit not as vivid and detailed as those of Anastasia's. Still, it is actors above all others who confirm, through their mastery, the existence of such possibilities in Man.

It turns out that people of long ago didn't need television, with its huge network of personnel and technology, including satellites even. It turns out that in losing his natural, God-given abilities, Man replaces them with awkward artificial substitutes which are far less perfect. And he even boasts about it, calling his inventions a significant achievement.

The saddest part is that mankind today is losing its capacity for logical thinking. This is more than just a sad state of affairs. It is a most frightful epidemic, capable of transforming modern humanity into a bunch of mad rodents, devouring one another and destroying their own living environment. Suicide-rodents.

What Anastasia's grandfather was to tell me in the field needs to be understood. It gives rise to the following conclusion: in losing the ability to think logically, the people of the Earth no longer are able to see and understand the unenviable situation they are being pushed into. Judge for yourselves.

I had stopped the jeep at the side of the road. The grey-haired oldster got out and headed into a field. I followed along behind. Before long he stopped and bowed low to the ground, saying:

<sup>1</sup>See Book 4, Chapter 22: "Other worlds".

"Health to your thoughts and aspirations, dear people!"

He uttered this greeting most sincerely and with such a tone that it seemed as though there really were people standing there in front of him. Then something happened that I can't put a name to, at least not for now.

At first there was some sort of stirring in the air, and a barely noticeable mist arose from the earth. It seemed to be congealing, and soon afterward I could clearly see the outlines of some kind of human figure becoming increasingly distinct. And, finally, there standing before us was an elderly man with a powerful physique. A headband encircled his light-brown hair. He had a calm expression on his face, with just a trace of despondency. Behind him, in the distance, I could see gardens, copses and beautiful wooden mansions. It looked as though the barren fields of a moment ago were now populated with a whole lot of families.

The man standing before us was speaking in inaudible tones to the Siberian elder. The vision lasted for several minutes. Then it slowly began to dissipate, as though being erased by an invisible hand. What was being erased was the genuine Rus', not a Rus' someone had simply thought up. The vision disappeared altogether when Anastasia's grandfather turned in the direction of Suzdal. He stood there silently staring toward the city, then turned to me and asked:

"What, do you think, Vladimir, was the original purpose of the city we see in the distance?"

"What's thinking got to do with it? Everybody knows this from their history: Suzdal was where the clergy was cloistered. The first Christian bishops lived here. The monasteries and the kremlin<sup>2</sup> where the élite lived are still preserved today. That's a historical fact."

<sup>2</sup>*kremlin* — the Russian word describing a fortress in the middle of a city, the most famous example being the Kremlin in Moscow.

“Yes, you’re right, historical. But all Russia’s ancient cities have two histories. The original history is more significant.”

“I guess we’ll never be able to rediscover the original history.”

“We *shall* know, Vladimir. You will figure it out through your own logic and you will even be able to see it. But start by determining the reason these cities sprang up, along with their original purpose.”

“I would say their purpose lies in the fact that they made it easier to live together and defend themselves against enemy invasion. For example, apart from the clergy and the élite, Suzdal was home to many craftsmen. They produced equestrian harnesses, carts, sleighs, earthenware pots, ploughs and harrows. They would sell these items and live off the proceeds.”

“Who did they sell them to?”

“To the peasants, of course,” I responded.

“That’s it,” the old fellow confirmed. “They sold or bartered their handicrafts for produce. And the produce came into the city from all the many outlying domains.”

“Yes, of course.”

“But which d’you think came first, which was primary in this place — the domains or the city?”

“The domains, I would say. The builders and the craftsmen would want to eat every day. If they started to build things in the open fields, there would have been nowhere to get their food from.”

“Correct. So we’ve come to the conclusion that a little more than a thousand years ago the fields around this city were the site of marvellous, rich domains. And the place where the city of Suzdal sits now was the site of their *kapishche*.<sup>3</sup>”

“What is a *kapishche*?”

“It’s a place where people gathered together from all around for fairs, to exchange goods and procure household

<sup>3</sup>*kapishche* — pronounced *KAH-peesh-cheh*.

effects. They shared experiences with each other. They put on massive celebrations with singing and dancing, and some of which were designed to help people find their soulmates.

“This was also the place the elders of the families gathered for a *vieche*<sup>4</sup> and adopted unwritten rules for living. They could censure a wrongdoer for his crime, although such instances were rare. Their censure was even a more fearful sentence than physical punishment.”

“And who was in charge of this whole land?”

“A hired hand. I really can’t think of an alternative term. A hired hand was the administrator in the *kapishche*. But he wasn’t really *in charge*. Rather, he carried out the decisions taken by the elders.

“For example, when they desired to put in a new tethering-post or a new road or build a big barn, it transpired that people from each domain would be assigned to carry out that decision. Sometimes the hired hand would be required to find other hired workers like himself.

“It was also his job to keep the whole *kapishche* clean and neat. Let’s say they had a fair, and after it was over, people dispersed to their homes. Then the tethering-posts might have had to be fixed and the horse-droppings cleaned up all over the place. This task would be carried out by the hired hand and his assistants. If he performed his work carelessly, the elders could sack him from his job. And then either the hired hand would go and look for work at another *kapishche*, or he would stay where he was, but be demoted to a hired hand’s assistant. It was difficult for the elders to maintain hired help, as just about everyone wanted to live in their own domains. Thus it might happen that hired hands for *kapishches* could be acquired from foreign lands.

<sup>4</sup>*vieche* — a council in ancient Russia. See footnote 5 in Chapter 1: “Love — the essence of the Cosmos” above.

“The Vedruss social order of Rus’ before the princes rose to power lasted for many thousands of years. It was superior to all the state social orders we know today, and it extended to all the continents of the Earth.

“When the Earth was overcome by corruption, Egypt and Rome fell into slavery, but the Vedruss social order in Rus’ still lasted five-and-a-half thousand years.”

“But why did the Vedruss social order give way to corruption, too?”

“Which are you most interested in — Rome, Ancient Egypt or Rus’? Pretty much the same thing happened in all three.”

“If they’re pretty much the same, then let’s go for Rus’. I already know that it was subject to external invaders, resulting in the destruction of the traditions and culture of the great Vedruss civilisation.”

“There were invasions, but there’s much more to it than that. The Vedruss social order underwent its first changes in other lands, back when there was no foe to invade. There were no armies. There were no wars or military campaigns, because there was nothing that could lead to them. The whole Earth at the time was made up of marvellous domains. People’s culture and concepts were truly outstanding. Everybody knew that to take vegetables or fruit out of someone else’s orchard by force or stealth was not only improper — it was useless and dangerous to one’s self.

“Only through produce that was given freely and with desire could benefit be acquired.

“Neither was it considered proper to take household animals from someone else’s domain by deceit or by force. A cow would not have let a stranger come close. And somebody else’s dog might have shown itself to be not a friend, but a foe. And a horse might have taken the occasion to throw a rider if it were not its own.

“With concepts like these, who would dare invade? Such concepts made invasions absurd. Corruption, in the main, came from ignorance, or rather from treason or betrayal, even in little things, of the culture of one’s forebears, their way of life. The family chain leads us to God. To betray one’s forebears’ meaning of life is tantamount to killing God within one’s self.

“Yes, in Rus’, of course, the people were deceived, through the priests’ well-honed manipulative techniques — techniques which are still active in our own time. Back then the elders overlooked this subtle play, and their mistake is still being paid for by subsequent generations even today.”

## CHAPTER EIGHT

# The elders' mistake

### From a hired hand to a prince

At the beginning of the present era many countries were already ruled by emperors, pharaohs or tsars. The form of government under which a large state is controlled by one Man is unnatural. It has never brought and will never bring a good, happy life to a single nation on the face of the Earth. This form of government benefits the priests, who manipulate countries through their rulers. It is difficult, after all, to negotiate with all the people at once, a lot easier to deal with just a single individual.<sup>1</sup>

Only in Rus' they did not succeed in setting up a single ruler. Everyone there was guided by the tribal elders' council. These councils were not something that could be corrupted or forced, under threat, into a decision that would lead to the oppression of the people. Who would make such an obscene decision for one's children?

Several times, through various subterfuges in different places, the priests' assistants attempted to set up a princely authority, a single ruler over the people. In this particular area, for example, events unfolded as follows.

One day a stranger from afar arrived at the Vedruss kapishche situated where Suzdal is now. Like the wise-men, itinerant minstrels, and craftsmen, he was offered food and lodging.

<sup>1</sup>The first section of this chapter, told to the author by Anastasia's grandfather, is presented without identifying quotation-marks.

The stranger stayed two weeks, but did not engage in any useful activity. The hired hand in charge questioned him:

“What useful contribution, stranger, can you make to our *kapishche*?”

And the stranger replied:

“None at all, but to you personally I can render an invaluable service. I have heard rumours that the elders are not happy with you. In a year, maybe even half a year, you will be let go. If you take *my* advice, on the other hand, the elders will be crawling on their knees before you. You can have your pick of girls from any domain to wife, whereas right now there’s not a single one that would live with you. I can make it so that it will be your decisions, and not those of the tribal elders, that will be carried out.”

The hired hand in charge of the *kapishche* (and part-time janitor) agreed. He listened to the stranger, an agent of the priests. And the stranger proposed:

“When people gather for a fair at the *kapishche* from all around and stay until the following morning, during the night you will cut your face with a knife, and leave the *kapishche* along with your trustworthy assistants, so that you can return in the evening with broken-winded horses. During the night I and my assistants (they are already here in the guise of artists and craftsmen), will take the horses away from their tethering-posts, and you will bring them back in the evening, saying you recaptured them from the miscreants.

“In your wounded state you will ask the elders for an armed garrison for their own protection. They will agree. You will take my companions into your garrison: they will all meekly obey your command.”

The hired hand agreed to the criminal act. He did everything according to the stranger’s proposal.

When the ‘wounded’ man returned toward evening with the herd of stolen horses, he learnt that not only had the

stranger's henchmen stolen the horses — they had also killed three people, and burnt the smithy and a barn. The 'wounded' hired hand appeared before the elders. He told how he and his assistants had given chase to the miscreants, but they were outnumbered, and his assistants were beaten back. And then he began asking the elders for the resources to maintain a strong armed garrison. He asked them to grant him the authority to take decisions on his own in the interests of general security.

The elders were taken aback at the hideous crime and agreed to maintain the garrison, only they were unwilling to pull their own sons away from the domains. So it was decided to bring in strangers to form a garrison, and allot them a tribute from each domain. Other *kapishches* followed their lead and also began to create their own armed garrisons.

Indeed, since they now had power, the hired hands began transforming themselves into princes. They started waging war against each other, justifying this to the elders as a necessary preventative first strike.

The princes supposed they had achieved considerable authority. In fact, for centuries now, they have been strictly following the priests' advice, often without realising it. Such a system of authority came together all by itself. The hired hand remained a hired hand — he merely exchanged masters.<sup>2</sup> The new master was exceptionally cruel to his hired hands.

For thousands of years the priests' hired hands kept killing each other, conspiring and hatching their schemes, aspiring more and more lustily for power.

<sup>2</sup>In Russian, the word for 'prince', *kniiaz'* (formerly spelt *koniiaz*), is derived from *kon'* (horse) and originally meant 'a herder in charge of horses'. This original meaning of *koniiaz'* survived in parts of Russia until the 19th century. Also, a Russian proverb says: *iz griazi v kniazi* ('princes [are derived] from dirt') — preserving the memory of the fact that it was the most marginal members of the society that became the princes.

You surely know yourself from history how many deaths the path to princely power is strewn with. They even resorted to slaying their fathers and brethren. Pretty much the same thing came about in various countries, and little has changed, even today.

Thus the time of the princes had its start in Russia, too, just as it had in other lands long before. You know the rest of the story, I dare say. And the armed garrisons are still around today, still serving somebody's interests.

The armaments and weaponry may have changed, but the essence is still the same. And the crimes have not abated — they keep multiplying, and keep getting more and more sophisticated.

The elders made a mistake. It is a mistake which, if you form your own political party, you will not want to make again.

### **A mistake not to be repeated**

“What, precisely, was the elders' mistake?” I asked. “Was it in forming the garrisons with foreign mercenaries? But the way things have turned out now, a state can no longer survive without a militia or an army.”

“The garrisons here, Vladimir, are not the underlying cause. It goes a lot deeper, into the psychological.

“I don't know how to put it more clearly. It has to do with forgetting the precepts of our ancestors — God's precepts. Think about it: God gave each and everyone equal authority. Consequently, the only social structure that can claim

perfection is one where there is no centralised authority — where every individual is endowed with equal power.

“When you give somebody your vote, you are not bestowing authority on anyone. By voting for someone, you are simply placing them in subjection to the existing system, and voluntarily relinquishing the authority God has given you. And over the centuries most people’s minds have been perverted: it is the job of the ruler and the government to deal with all important questions for us, they think. These people’s thoughts don’t even touch the question of the order of life.”

“So, that means that there’s no longer any point in voting at all? We’ll never establish a party that way. By law, we have to vote.”

“Well, if you have to, then vote to make sure no one individual is able to control people’s lives.”

“If you’re talking about the *vieche*<sup>3</sup> gatherings they had in Vedic Rus’,” I said, “that’s totally impossible today. People can’t keep constantly coming together from different parts of the country. Besides, there’s no way a party like that can ever get registered.”

“Why do they need to come together? Just turn all the modern inventions at your disposal to a good purpose. Use any kind of communications link — the computer, for example. As for registration, isn’t that a bit ridiculous for a party of the majority of the people? You ought to be registrars yourselves.

“Anyway, securing some kind of registration isn’t the main point at issue. The main thing is not to allow the setting up of any centralised authority. Anybody working in the central apparatus, if it is absolutely necessary according to your law, should be strictly hired staff — with no access to financial control. Besides, money should never be concentrated in one place.”

<sup>3</sup>*vieche* — see footnote 5 in Chapter 1: “Love — the essence of the Cosmos” above.

"But the law requires all parties to elect a central committee," I observed.

"So, elect all party members to it, or at least every tenth person in the party."

"There's something else to think about here. I got really angry at first when you said the party's main goal was the restoration of love to families. I thought you were making fun of me, that you were trying to make me into a laughingstock."

"I remember."

"But now, I've given quite a bit of thought to this question and have come to the conclusion that it really is not just *one* of the main goals, but *the* main goal. And that the question of finding one's soulmate requires specific conditions to be set up, special events to be organised. The rites of Ancient Rus' should be made public, and we need to get not only science but also culture and ideological propaganda involved in working out these questions. They need to be resolved on the state level. The degree of civilisation of any given state needs to be judged on the basis of the number of happy, loving families living therein."

"Congratulations!"

"On what?"

"On understanding that."

"Congratulations are still premature. I can't for the life of me think of a way to formulate this goal without people laughing at its constitution, or at me, or at our future party."

"So, let them laugh."

"What d'you mean, *let them*? If people start laughing, then I'll be the only member of a party with a constitution like that. It will end up being an unregistered party with a laughable constitution, supported by a single individual, and an ordinary member of the party at that."

"Why just a single individual? There'll be at least two. I shall be supporting it as well. And the two of us will raise some money and hire ourselves an executive secretary."

“You serious? What, you’re going to join the party, too?”

“No. I shan’t be joining it. Anyway, as you point out, I can’t be registered under your law. But I’ll be supporting the Motherland Party with my whole heart from right there in the taiga.

“And if you’re concerned about there just being the two of us, remember that all great causes have always begun not with a mass of people, but with just a single individual. Years down the road, humanity will indeed laugh, but not at *you*. They’ll be laughing at themselves, and they’ll be happy.”

“Okay, I’ll try. I’ll give some more thought to drafting the constitution. And I’ll ask my readers to think about it, too.”

“If I were you, Vladimir, I’d ask Anastasia to tell more about the wedding rite. In the Vedruss culture, after all, it began right at birth.”

“I low on earth could a wedding rite begin at a Man’s birth?”

“Vedruss people considered the primary birth to be not the appearance of the body, but the illumination of love. Nobody in today’s world can illustrate this the way Anastasia can. *Ask her to re-create a picture of life in a Vedruss family.*”

I shan’t say where or how this meeting with Anastasia took place. I’ll start right away to set forth her description of one Vedruss family’s attitude toward love.

Whoever manages to make sense of it and feel the significance contained in the culture of their love, may also be able, perhaps, to figure out the great wisdom and cosmic dimension of the Vedruss rites.

## CHAPTER NINE

# The Creator's greatest gift

### Childhood love

It was with childlike joy and inspiration that Anastasia began telling me about the Vedruss rite associated with the energy of Love:<sup>1</sup>

The activities of the Vedruss people amounted to a continuous learning cycle. It was a great and joyous school of conscious being.

All Vedruss celebrations could be described as tests of mind and skill. They all involved, one might say, reminders to the adults, as well as wise lessons to the young. But even during the days of intense harvest gathering, the Vedruss people worked with a joyous heart. Their work was imbued with meaning that went beyond material creations.

Look, Vladimir — see, it is haycutting time. A magnificent, clear day. The whole settlement, from the littlest ones to the greatest, is heading out to the meadows with the first rays of the Sun. See, there go two drays carrying a whole family. Only the elder family members have stayed behind to keep the household animals company.

But the guys — the young lads — are riding horseback, with only collar-bands on the steeds and long lengths of rope

<sup>1</sup>Anastasia's story of the Vedruss family over this and the following three chapters is presented without identifying quotation marks.

in their hands. On these horses they will use these long ropes to cope with the task of dragging the stooks of hay over to the main stacks.

The stately *muzbiks*<sup>2</sup> in the carts hold their scythes poised, blades up, while their wives and older children sit beside them with their rakes, ready to start raking up the hay the men will be cutting.

Also riding on the drays are some very small children. What for? Just for the fun of it, out of curiosity, to mingle, frolic and play, and to observe the grown-ups on this day.

The people are by no means dressed in rags. See their clean white shirts, and the women wearing flowers entwined in their braids, and embroidered dresses. Why are they dressed up in their best, as if going to a celebration?

The answer, Vladimir, is that they are under no constraint to actually cut hay. They all have their own piles of hay back in their respective domains. Though naturally it does not hurt to have some community stacks in reserve.

The main thing, however — the tacit purpose behind all the general activity — is to show themselves at work in their neighbours' eyes. To steal furtive glances at each other, and give a chance to the young guys and girls to get to know each other in a common activity. That is why the young people, even from outlying communities, are so happy to turn out for the haymaking.

Now it has begun — look!

The scythemen are moving forward steadily, all in a row. Not one of them must fall behind. Their wives are raking up yesterday's cuttings to be dried, singing as they work. The

<sup>2</sup>*muzbiks* (English plural of *muzbik*, stress on last syllable) — the Russian term for a hardy male peasant, or rural dweller. In modern Russian the word is also used in a broader colloquial sense, roughly equivalent to 'guy' in American English usage.

young people gather the dried hay into stooks. Those slightly older will build the haystack.

See those two guys standing on top of the haystack? One of them is eighteen, the other, twenty. They are piling the hay on the stack which those six smiling girls are handing up to them.

The guys have taken off their shirts. Perspiration is streaming down their tanned skin. But they are trying to keep up with the merry girls below.

There are two guys up top, and there ought to be four girls throwing up the hay from below, but it turns out there are six of them down there, laughing and joking, trying to drown the lads in hay.

The guys' father comes over to the haystack to get a drink of water. He has quickly sized up the whole situation. His two sons are trying to keep up with the six girls. They simply cannot afford to get done in. Besides, in the group of nimble, laughing girls below there may be two brides for his sons. After taking a drink the father calls up to his boys:

"Hey, there, boys! I don't feel like cutting any more for now. How about I climb up there and help you? Seeing as how there are six down below instead of four."

"Why, Father?" answered the elder son, not slacking off for a moment. "There are two of us up here stacking hay, my brother and I, and we haven't even got warmed up yet!"

"It's as though I'm still asleep!" added the younger, as he somehow inconspicuously wiped the perspiration from his brow.

Down below the light-headed girls took notice of his movements. One of them called out over the general laughter:

"Watch out, don't let the sleepyhead get wet!"

The father broke into a smile of contentment, before re-joining the row of scythemen.

The train of four steeds, which the young men were leading by the bridle, was on its way to the haystack from the farthest

meadow. The last horse was led by the youngest, whose name was Radomir.<sup>3</sup> He had turned eight just before the start of the summer, and was now into his ninth year. But the boy Radomir was very well developed for his age.

But it was not only his physical height that elevated him above his peers. He had a quicker grasp of knowledge than did the others, and he excelled in festive games. And here at the haymaking he swelled with pride at having been given work usually assigned to kids just a bit older. He was in no way going to lag behind his elders.

He himself was trying to bind up the stooks as quickly as possible, and the horse obeyed him. Even though he brought up the end of the 'train', he was still not lagging behind.

Just a little distance away, a chorus of younger children could be heard in play, over by the edge of the forest. As soon as they took notice of the train of horses dragging the stooks, they rushed over to catch a ride on them.

The kids rushed headlong to their goal, only one little girl, barely four years old, lagged behind. The others had already reached the stooks when she took a mind to try a shortcut and anxiously started running across a swampy stretch of ground. This small swamp had almost dried up, but one could still find patches of elevated ground dotted around. The dear girl jumped from hillock to hillock, very close to the horses dragging the stooks. All at once, however, trying to jump to the next patch of ground, the girl slipped and took quite a fall, scratching her knee badly on a stick and getting her dress and her face all muddied in the process. She picked herself up,

<sup>3</sup>*Radomir* (pron. *ra-da-MEER*) — a name first encountered in the section entitled "A union of two — a wedding" in Book 6, Chapter 5: "The history of mankind, as told by Anastasia". See esp. footnote 2 in that chapter. The name *Liubomila* (with its endearing variants *Liubomilka*, *Liubomilochka* — pron. *liu-ba-MEE-la*, *liu-ba-MEEL-ka*, *liu-ba-MEE-lach-ka*, resp.) is encountered in the same chapter (footnote 4).

but fell back at once and started screaming at the top of her lungs, smarting with annoyance at her plight, just as the last of the stooks came by and began to recede into the distance.

The stately youth Radomir heard the little girl's cries. He brought his steed to a halt, and followed the sound of her cries to the swampy ground. Here he found a dear little girl with clothes and hands all muddied, sitting in the midst of a puddle, using her tiny fist to wipe away the tears, and bawling with all her might.

Radomir took hold of her under her arms, picked her up out of the puddle, set her down on a dry patch of ground safe from harm and asked:

"What're you bawling for, little one? Is it that bad?"

Still crying, she tried to explain through her tears:

"I was running, running — see — I was jumping from patch to patch, trying to catch up, only I took a bad fall. All the stooks had gone, and I was lagging behind. Now all the other kids are having fun riding on the stooks, and I ended up in this puddle."

"They haven't *all* gone," Radomir responded. "Look, I'm still here, and there's my stook. If you can stop your bawling, I'll give you a ride on it. Only you seem to have got so dirty all over. Now stop that screaming once and for all," he demanded. "It's making me deaf!"

Radomir took hold of the hem of the little girl's dress. Finding a clean patch of dress, he put it up to her nose and commanded:

"Come on, now, blow your nose!"

Completely taken aback by this move, the little girl let out a loud "Ow!" and covered the front of her exposed lower torso with her hands. Now she blew her nose hard — one! two! — and stopped crying. Radomir let down the hem of her dress, and stared with a critical eye at the filthy and dishevelled little girl standing before him.

"You'd better take your dress off altogether," he said.

"*Shan't!*" she declared firmly.

"Take it off, I shan't look. I'll rinse out your dirty dress in the lake. You can sit here in the tall grass while you wait. Here, you'd best take my shirt. It will go right down to your ankles — it'll be longer on you than your dress."

Radomir rinsed the little girl's dirty dress in the lake while she wrapped herself in his shirt and peeked at him through the tall grass.

As she sat there in the grass, the girl was struck by a piercing, frightening thought. She remembered once overhearing her grandfather telling her grandmother:

"A terribly scandalous act took place in the next settlement — some good-for-nothing lifted up the hem of a maiden's dress before marriage."

"If he lifted up her hem, it means he's crushed the poor dear's life," her grandmother had sighed.

The little girl decided that something must be crushed in her too, now that a strange lad had lifted up the hem of her dress. She examined her little arms and legs and, even though they seemed to be in working order, nothing crushed, her fear did not dissipate.

If grandfather and grandmother believed that lifting up a dress hem would crush something, then something of hers must be crushed, too.

The girl jumped up from the grass and called out to Radomir, who had been rinsing out her dress in the lake:

"You're a dirty good-for-nothing!"

Radomir straightened up, turned toward the girl standing in the grass wearing his shirt and asked:

"What're you carrying on about this time? I don't know what you want."

"I'm telling you, you're a dirty good-for-nothing. You dared lift up the hem of a maiden's dress before marriage. You've crushed everything of hers."

Radomir looked at the girl's mud-covered face for some time, then burst out laughing. After getting a hold of himself, he said:

"Well, you've heard the song but got it wrong! Sure, lifting up the hem of a maiden's skirt before marriage is a bad thing. But in my case, I didn't lift up the hem of a maiden's skirt."

"You did, you did! I remember, you lifted up the hem of my dress."

"*Your* dress, sure," Radomir agreed. "But then you're not a maiden, are you?"

"How come I'm not a maiden?" the girl asked in surprise.

"Cause all maidens have protruding breasts, but you don't. Instead of breasts all you have are two little spots which are hardly noticeable. That means you're not a maiden."

"Then who am I?" the little girl asked distractedly.

"You're still a 'little one'. Now you just sit there in the grass and don't say a word. I haven't the time to talk with you."

Once again he stepped into the water, finished rinsing out the dress, then wrung the water out of it and laid it out neatly on the grass to dry. Then he called out to the girl:

"Come down to the water, little one. You need to get your face washed."

She came to him obediently, and stood quietly while he washed her face.

"Now let's go to the stook, and I'll give you a ride."

"Let me have my dress back first," the girl asked, almost in a whisper.

"It's still too wet. You can stay in my shirt for the time being. I'll bring your dress along with me. It will have dried out by the time we get to the haystack and you can change there."

"No! Give me back my dress!" the girl insisted. "Maybe it's wet, but I'm going to put it on anyway. It can dry on me."

"Have your own way, spruce yourself up," said Radomir, as he handed her the wet dress and headed over to his horse.

The little girl quickly put on her dress. She rushed to catch up to Radomir at the stook.

"Here I am," she said, panting away. "And here's your shirt back."

"Okay. You're my bad luck charm. All the other lads are heading back already, and here I'm stuck with you. Climb aboard!"

He helped the girl climb onto the stook. He took hold of the bridle and they started off in the direction of the haystack.

The little girl sat on the stook in her wet dress, jubilant as it whisked smoothly over the ground. She was riding the stook all alone, not in twos or threes like the other kids. She sat there all by herself. Her face was beaming with joy, as though she had suddenly been turned into a goddess. If only her girlfriends could see her now, not as part of a train, but all alone. He was carrying her all by herself.

She noticed the way Radomir led the horse by the bridle, and couldn't take her eyes off his back. Her little heart began to beat faster. She felt a sensation of warmth permeate her whole body. Naturally, she was still too young to realise what was going on: she was in love.

Oh for the love of childhood! It is the ultimate of purity — the precious gift of God. Only why does it sometimes make an early start, and perturb a little one's heart? Why? What does it mean when it comes early like that? It turns out that there is truly great meaning in early love, something the Vedruss people well knew.

Upon arriving at the haystack, Radomir came back to the stook.

"Climb down, little one. Don't be afraid, I'll catch you."

Catching the little girl in his arms, he set her down on the ground and asked:

"Whose kid are you?"

"I'm from the next settlement. My name is Liubomila. My sister and I are visiting, helping our brother," she replied.

"Go on then, go to your sister," Radomir admonished, walking away. He did not turn back even once to look at the little girl.

She stood there, watching everything: how he untied the rope from the stook, climbed up onto a barrel from where he could leap onto his steed. Then he took off at a gallop to fetch a new hay stook.

### **Love as a fully fledged member of the family**

Little Liubomilka returned home with her sister. It was already the family's supper-time. But Liubomilka didn't want to sit down to the table. Clinging to her grandmother's skirt, she begged:

"Can we go for a walk together in the garden, Grammykins? I want to tell you about a miracle — just you alone."

Upon overhearing this request, the father protested:

"It's not proper, daughter dear, to go off when the family's about to sit down to table, let alone take your grandmother with you..."

But when the father looked into his daughter's face, he broke into a smile. The Vedruss people knew the grace of childhood love. They knew how to treat love kindly, to embrace it as a heavenly gift to the family, to refrain from making fun of it and to respect its every trace.

They valued the grace of its great energy, and so the diverse energies of Love would come to them with great joy.

"You and your grandmother go for a walk in the garden and eat some berries," said the father, feigning an air of nonchalance.

Little Liubomilka sat her grandmother down in a far corner of the garden and right off began excitedly telling her story:

"Grammykins, I was playing with my friends there at the haymaking, and they ran off to have a ride on the stooks. I didn't feel like joining them. I was just minding my own business. All of a sudden this most kind and handsome young lad stops his horse and comes up to me. Yes, indeed, Grammykins, he comes just as close as you and I are right now. And he was so handsome and kind. Here he stands in front of me and says: 'Little girl, I invite you...' No, he didn't say that. He put it another way. He said: 'Little girl, not only do I invite you, I *beg* you to take a little ride on my stook.' And I had a ride. There. You see, Grammykins? Has something happened with him?"

"Something's happened with you, granddaughter dear. And what might his name be?"

"I don't know. He didn't say."

"First of all, my little Liubomilochka, tell me the whole story, and try to remember the way it *really* happened."

"The way it really..." Liubomilka hung her head. "The way it really happened? I took a fall into a puddle, he came along and washed out my dress, then he gave me a ride on his stook, but I guess he never told me his name. He called me 'Little one', and when he left, he never once looked in my direction."

Liubomilka finished her story and began crying. She continued through her tears:

"I stayed standing there, and watched him go away. Only he never looked at me even once, and what his name was he didn't say."

The grandmother gave her granddaughter a big hug, stroking her dark blonde hair, as though stroking the energy of Love within her. And she whispered, as though saying a prayer:

"O great energy from God! Turn and help my granddaughter with your grace. Do not burn her still immature heart. Give her inspiration to take part in co-creation!"

Aloud she said to Liubomilka:

"Granddaughter dear, would you like this very good lad to always have eyes for you alone?"

"Yes, I would, Grammykins. I would!"

"Then you should not let him come by or see you for three years."

"But why?"

"When he spied you, you were all dirtied by the mud. He saw you as a crying, helpless little girl. That is the impression he still has of you. In three years' time, if you yourself make the effort, you will be older, smarter and more beautiful."

"I shall try. I shall try the very best I can. Only tell me, Grammykins, how should I try — what plan should I follow?"

"I shall share all my secrets with you, granddaughter dear. If you earnestly try to follow them, you will be more beautiful than all the flowers on the Earth, and people will rejoice at your presence. You will not need to wait to be chosen, you yourself will have your choice of lovers."

"Tell me, Grammykins, and I shall do everything you say. Only tell me faster!" Little Liubomilka was trying to hurry her grandmother up, tugging impatiently at the hem of her dress.

And, slowly and solemnly uttering the words, the grandmother told Liubomilka:

"You need to get up earlier in the morning. You spend your mornings just lazing around. You should get out of bed, run to the stream and wash yourself with pure spring water. When

you get home, have a little porridge to eat. But you always demand sweet berries instead.”

“But Grammykins, why should I try doing this all at home if he’s not there to see me?” Liubomilka asked in surprise. “He won’t see how I bathe in the stream and eat my porridge each morning.”

“That, of course, is something he won’t see. But your efforts will be reflected in your outward beauty. And the energy will be made apparent within.”

Liubomilka tried to follow her grandmother’s advice. She did not always succeed, especially that first year. But on those mornings her grandmother would come to her, sit down on her bed and say:

“If you don’t rise with the Sun and run down to the stream, you will not become more beautiful this day.”

And Liubomilka began rising early. By the second year she had become accustomed to the new regimen, and easily went through the routine of washing in the morning and cheerfully eating her porridge at breakfast.

Now the three-year waiting period recommended by her grandmother was almost at an end — only one month remained. People were gathering at the *kapishche*<sup>4</sup> from all around for this season’s fair. Liubomila and her elder sister Yekaterina watched as carriages regularly passed by their domain on the way to the fair. And all at once they noticed one carriage pull off the road and approach their gate, where the sisters were standing. And lo and behold, there in the carriage...

Liubomilka recognised him right off. There sitting with the other passengers and holding the reins was none other than her beloved Radomir, looking just a little older.

<sup>4</sup>*kapishche* — see footnote 3 in Chapter 7: “Russia erased” above.

The little girl's heart began trembling when the carriage came up to their gate and stopped. An older gentleman among the passengers, probably the father, said:

"Cordial greetings, my maidens. Please convey my respects to your father and mother, and all your elders. We would like a drink of your *kvass*. We forgot to bring our own along on the journey."

Liubomilka rushed into the house, calling out:

"They send all of you greetings. Where's the pitcher? Our pitcher with the kvass, where is it? Oh, yes, it's in the pantry, keeping cool." And off to the pantry she dashed, overturning a pail of water standing by the door in the process. Turning around, she rattled off to her grandfather and grandmother:

"Not to worry! I'll mop it up when I come back."

Grabbing hold of the pitcher, she ran out to the gate, where she stopped to catch her breath. Restraining her excitement, she opened the gate, walked out with stately stride and handed the pitcher of kvass to the gentleman.

While the father of the family was drinking the kvass, Liubomilka kept her eyes fixed on Radomir. But *he* had eyes for Yekaterina.

When his turn came to be handed the pitcher, he drank up the remaining kvass, then jumped down from the carriage and held out the pitcher to Yekaterina, saying:

"I thank you. This kvass was prepared by kind hands."

Liubomilka watched as the carriage drove off, then, running to the deep far corner of the garden, collapsed on the bench and began weeping bitterly.

"Why so sad again, Liubomilka?" Grandmother had come over and sat down beside her.

Through her tears the girl told her grandmother what had happened:

"They came to us and asked for kvass, and the boy was there who gave me a ride on the stook three years ago. He's even

more handsome now. I ran and brought the kvass in a pitcher. They all took a drink, and said how good it was. He took a drink too, and then gave the pitcher to Yekaterina. Not to me, Grammykins, but to *her*, my rival, Yekaterina. And it was her he thanked, not me. She's a real dingbat, that sister of mine. She must have been chatting him up while I was getting the kvass. He looked back at her and even smiled. My own sister — a rival! A real dingbat!"

"Why are you blaming your sister? She's not at fault. You are."

"Why am I to blame, Grammykins? What have I done wrong?"

"Listen carefully. Your sister made a colourful embroidery pattern, which she neatly applied to the sleeves of her dress. You wanted to do everything yourself, too, but on *your* dress the sewing didn't come out straight.

"Besides, your sister can speak in verse, she's better than anyone at singing *koliadki*,<sup>5</sup> and you're unwilling to talk with any wise-men who can teach you to recite and compose verse. The boy you've chosen — no doubt he's a pretty smart lad, he has an appreciation of beauty and intellect."

"Does that mean I have to study another three years, Grammykins?"

"Three, perhaps. But it could be five."

<sup>5</sup>*koliadki* (pron. kal-YAT-kee) - - songs traditionally sung during winter solstice celebrations, venerating the Sun and light which bring forth life and joy as well as bountiful harvests and family happiness. The term is derived from the ancient Slavic name of the winter solstice holiday - - *Koliada* (from *kolo* = circle, annual cycle) — the beginning of the new solar-year cycle. (The Latin word *calenda*, signifying the first day of a month, and English *calendar* are derived from the same root.) As part of the Koliada celebrations, children went from one house to another offering good wishes to the families, who offered them holiday treats in return. It was expected that the children would make up songs on the spot for each particular family — an opportunity for them to demonstrate their creative abilities. In the Russian Orthodox Church the term was later applied to what we would call Christmas carols. *Koliadki* are still practised to the present day.

### **True love will most certainly be reciprocated**

Ten years went by. One day Radomir was walking through one of the regular holiday fairs with his best friend, who had the unusual name of Arga.<sup>6</sup>

Arga had a flair for creating marvellous pictures and doing fantastic wood-carvings. He could fashion statues of clay that looked as though they were alive. This was a talent he had inherited from his grandfather. From his father was derived his blacksmith's art.

The two friends took little interest in the long rows of carts with their vast array of savoury offerings. Nor was the young men's attention attracted by the rows of assorted dishes and household utensils. In fact people did not come to the fair for any material acquisitions at all. The main attraction was talking with others, getting to know them, sharing their experiences with them.

The lads decided to head over to the place where they were getting ready for a colourful show by visiting performing artists. Suddenly they heard themselves being hailed:

"Radomir! Arga! I have you seen it yet?"

Radomir and Arga turned around to see who was calling to them. Three young men from among their community friends were standing a little distance away, engaged in animated conversation and beckoning Radomir and Arga to join them.

"Scen what?" asked Radomir as he approached.

<sup>6</sup>*Arga* — pron. *ar-GAH*.

“That extraordinary shirt,” answered one of the three. “It’s made from smooth fabric, and embroidered with very unusual ornaments. There’s probably some secret meaning in them.”

A second lad corrected him:

“The shirt’s really good, but the girl selling it is much prettier. I’ve never seen a maiden like that at any fair anywhere.”

“So, where do we find this marvel?” asked Arga.

The five boys headed over to the carts displaying jewellery and ornaments, marvellous handicrafts and fine clothing.

One cart in particular had drawn a bigger crowd than usual. Everybody was admiring an exceptionally beautiful shirt, hanging on a wooden hanger. The fabric was rippling lightly in the breeze, and people could see how different it was from the usual shirts made of coarse cloth, exuding, as it did, a feeling of lightness and tenderness. And the patterns embroidered on the collar and the sleeves were extraordinarily delicate and fanciful.

“A pattern like that is the mark of an accomplished craftsman,” Arga said aloud in excitement.

“Never mind the pattern, squeeze your way through the crowd and see who’s sitting beside it,” said a neighbour from their settlement.

After making their way around to the other edge of the small crowd, the friends managed to approach the cart and catch a glimpse of the maiden.

Her eyes were blue as the sky, her dark blonde hair in a tight braid was tied. Her eyebrows were like two brown arches, her lips betrayed just the faintest hint of a smile. Her movements were gracious, but seemed to be entwined with some kind of energy. It was some time before the lads could take their eyes off the maiden.

“She’s clever with her tongue, too,” the tallest of them quietly observed. “She can speak in verse and comes up with witty sayings.” Another added:

"She's kind of tender, but as aloof and inaccessible as a high cliff. Try talking with her."

"I can't," answered Radomir. "She's taken my breath away."

Arga spoke to her first:

"Tell me, fair maiden, are you the one who crafted this magnificent shirt?"

"I am," the maiden replied without raising her eyes. "I wove this shirt to while away the boredom, to make the winter nights shorter. Sometimes I would do some embroidery at dawn."

"And what kind of price are you asking for your handiwork?" Arga enquired, so that he could keep hearing the maiden's tuneful voice a little longer.

The maiden raised her eyes to look at the young lads and it seemed as though her gaze was carrying them away into heavenly heights. She let her gaze rest just for a moment on Radomir, thereby dissolving him, as it were, into the blue. From that point on he felt as though he were in some sort of unusual, unreal dream.

"What price again? Let me explain." The beautiful girl sitting on the cart went on: "I can give this piece without payment only to a kind and courageous young man. I shall ask only something trifling for myself as a souvenir — a colt, for example."

"What a beauty she is! And such a worthy reply, she's a true master!" Loud exclamations could be heard from the crowd. "A colt," she says — "just a trifle"! Yes, a real beauty all right, no doubt about it!"

The exclamations went on, but the crowd did not move along. Then suddenly the whole throng divided into two halves. There was Arga, leading a dun-coloured stallion by a halter rope. The steed was unbroken and hot-tempered, and kept bucking and prancing on the spot. Whispers spread through the crowd:

“Now that is quite a horse! Such a marvellous steed! Could the fine young man have decided indeed to give it away?”

Arga approached the cart and said:

“My father gave me this steed. I offer it to you, my beauty, in exchange for the shirt.”

“Thank you,” the maiden calmly replied. “But I did say, and people heard me say, that the shirt is not for sale. I can only give it away to you, or perhaps to some other young man fine and true.”

“Aha, the beautiful maiden is frightened!” Mocking voices rose from the crowd. “Of course, the steed is hot-tempered, and too flared up to handle for many a young man. A while ago she was expecting a tame and gentle mare, and now she’s got cold feet! See, she’s given up the game. So, anyone should be careful. It’s a downright shame when a steed is unbroken and hot-tempered.”

The maiden looked out at the crowd with an artful smile and jumped down from the cart with an amazingly lithesome style.

At this point all the exclamations from the crowd ceased at once. The girl’s torso was absolutely stunning, as though refined to perfection by a master artist. She stood before everybody standing around in all her beauty, smiling at the steed. She took three steps in Arga’s direction, seemingly floating toward him, barely touching the ground.

Completely taken aback, Arga suddenly let go of the halter-rope. The hot-tempered stallion reared on its hind legs. But the maiden managed to catch hold of the rope with her hand. And then...

And then, to everyone’s amazement, her left hand deftly squeezed the stallion’s nostrils. Letting go of the rope, she began caressing the steed’s nuzzle with her right hand. And the hot-tempered stallion all of a sudden calmed down. She inclined his head toward the ground. At first he put up some

resistance, but eventually began bowing to the ground — lower and still lower. And then the steed suddenly fell to its knees before the maiden.

A grey-headed oldster stepped forth from the crowd and said:

“Only the old wise-men know how to tame a beast like that, and not even all of *them*. But you are still a young maiden! What is your name? And whose girl are you?”

“I am Liubomila, from the next settlement. And whose am I? Nobody’s. I am simply the daughter of my father. And here he comes, that strict father of mine.”

“If only I *had* been strict!” said the father, who had just come back to the family cart. “What have you been up to this time, my little gal?”

“Nothing much. I’ve just been playing a bit with this little colt.”

“A bit? I see. Let the steed go. It’s time we got on the road home.”

### **Love, too, was teaching in the Vedruss school**

What had happened to Liubomila during these years? Where had she learnt such wisdom and agility all of a sudden? In the Vedruss school.

People studied their whole lifetime in this school, from their early childhood to their most advanced age. Every year they sat for exams. The school programme had appeared right at the beginning of creation in all its minute detail and

then become further enriched over the centuries. The wisdom was imparted unobtrusively. The lessons were not at all like those in your contemporary schools.

You once told me, Vladimir, about a certain expression used in your society. When it turned out that a child is mischievous and rude and bad habits show up in him, people would say that he was brought up by the street, that he's been granted too much freedom.

The Vedruss people had no fear about granting freedom to their children. It was common knowledge that the system of festivals and rites was so intricately and skilfully thought through that all children were absorbed in preparation for them. Even though it seemed as though they were playing, they were actually teaching themselves various disciplines, often without the help of adults.

Examinations in the Vedruss school were like one festival or celebration after another. With their help the adults taught the children, and they themselves learnt from the children.

Take the Festival of the *Koliadki*, for example. During the festival days children walk about and sing *koliadki* to all their neighbours. The verses and melodies, along with the accompanying dance movements, were all composed by the children themselves.

Children started preparing for their performances long before the start of the festivals, eager to learn from adults, their families, their peers and the wise-men as to the best way of mastering verse composition, along with singing and dance movements.

Not all children had the same abilities, of course. Those that were not as quick to learn as others would ask their parents to tutor them. And sometimes parents found they could use their children's thirst for knowledge to draw them into helping around the house and grounds.

A little boy might badger his grandmother, for example:

“Grammykins, dear, read some verse to me. Please do read, I beg you. I don’t want to fall behind and be worse than the rest. My friends might not take me with them to sing *koli-adki* next time.”

And the grandmother would answer:

“I’ve quite a bit to do. Perhaps you could help me, and then I would be able to read you some verse this evening.”

The child would be eager to help all day long and afterward would listen intently to his grandmother, and try to memorise all her verses or songs, and implore her to teach him the appropriate dance moves. Then he might implore his grandfather, and perhaps his mother and father, too, to tutor him just a little bit more. And he would be grateful to his parents when they offered him a lesson.

Compare this approach, Vladimir, with the lessons children get in schools today — in literature, let us say.

You are right, there is absolutely no comparison. The Vedruss children aspired to become poets themselves, right from a very young age.

The parade of merry festivals in the Vedruss period was a system that helped people learn about the order of the Universe and in turn teach their children the simple wisdom of life.

The wise-men were itinerant teachers and sources of information in regard to what was going on in the world. The *bayans*<sup>7</sup> and bards, too, not only reminded people of events of the past, but gave portents of the future, commending the world of marvellous feelings or reprehending unworthy ones.

Such lessons were constantly taking place in every settlement, but nobody would ever compel their children to attend.

<sup>7</sup>*bayan* (pron. *bah-YAHN*) -- see footnote 4 in Book 4, Chapter 33: “School, or the lessons of the gods”. On the role of bards, see Book 2, Chapter 10: “The ringing sword of the bard”.

It was felt that each teacher himself should attract children's attention to the stories of science he was planning to tell.

Over the centuries rules such as these helped perfect the abilities of the wise-men-teachers.

You asked, Vladimir, whether any wise-men-teachers, in an effort to attract children's attention, would simply play some sort of game with them instead of actually giving them a lesson in science or the arts.

Indeed, if such a thing were to occur, the wise-man would be relieved of his wise-man's status. In talking with their children at home, parents would perceive right off that the children had not been properly taught. News of his dishonourable conduct would be made known in other settlements, and no matter what community he thought to visit, he would probably be asked to leave.

Before the appearance of love within herself, the little girl Liubomilka made no attempt to attend the wise-men's lessons or listen to the songs of the bards and bayans. The parents would not have forced their children to attend, but might drop a surreptitious hint at an appropriate occasion.

It was Love that enfolded little Liubomilka in its energy. In Vedruss families the appearance of love was greeted as a new member of the family sent by God to help them. And they knew how they could, in harmony with Love, make the little girl's life marvellous. This was why the grandmother advised Liubomilka to go and study with the wise-men. Not just to study for the sake of studying, but with a specific purpose — to become the very best she could be for the one she loved. Liubomilka consented, and decided that the next time a wise-man presented himself who could teach people to sing songs with a beautiful voice, she would indeed go see him along with her friends.

But the wise-man they needed never came. Liubomilka decided she would simply go listen to the next wise-man that

showed up. She did, and began to listen to his lecture. This wise-man began talking about the specific function of various plants, the fragrances these gave off, and about how plants could be used to treat Man's diseases.

"What do I need this for?" Liubomila thought to herself. "Indeed, this is neither here nor there — everyone knows how to treat: Mama, grandmother, sister — they all know. And even if I should learn more than anyone else about the various herbs, how will that be noticed by my intended? He'll never notice it."

So Liubomilka listened to the wise-man without paying too much attention. She sat there on the log simply for her girl-friends' company. And sometimes she would get up, walk out and wander about the little glade. She was glad when the wise-man ended his lecture and everyone made ready to go home.

Then all of a sudden the elderly wise-man turned to Liubomilka:

"Tell me, little girl, you did not find my presentation interesting?"

"It's just that it's really of no use to me, it does not fit in with my secret aspiration," little Liubomilka informed the wise-man, almost in a whisper.

The wise-man-teacher broke into a faint smile. The perspicacious old fellow knew all about little girls' secret aspirations, and remarked:

"You know, little girl, you may be right — I can allow that this knowledge has nothing to do with you right now. After all, you are still pretty young. But for older girls I explain how they can become beautiful and create a Space of Love for the one they love. When *he* sees this Space of Love, he will definitely want to know who was able to co-create such beauty. And he will be so excited to meet whoever steps forward as its creator. I shall also reveal to the maidens the secret of how to

weave a garland, how to prepare a tea of herbs for their beloved, and what to use in washing in the morning to make their bodies smell flower-sweet. I shall further be explaining...”

Little Liubomiłka listened to the elderly fellow and began to regret more and more that she had not gone to his classes. He stayed in the settlement for more than a week. He revealed to the maidens important secrets, which she knew nothing about. And Liubomiłka asked the wise-man:

“Are you going to be staying much longer in our settlement?”

“I shall be on my way in a couple of days,” he responded.

“In a couple of days?” The little girl could not hide her disappointment. “Hmm, in two days... Then I would kindly, kindly beg of you to spend your last two nights with us.”

“I have already accepted invitations to other homes,” responded the wise-man. “But if it means so much to you...”

“Yes, I very, very much need to learn from you about the different herbs.”

Each evening the old wise-man spent his whole time talking with the love-smitten Liubomiłka. He knew that the inspiration of love would help this little girl grasp the essence of the subject in a day or so, while even a year might not be enough for some others.

When it was time for him to leave, Liubomiłka escorted the wise-man to the outskirts of the settlement, and he told her:

“After me another wise-man will be coming here. He will be talking about the stars and the Moon in the skies, about the Sun and about worlds invisible to our eyes. Whoever succeeds in understanding him will be able to light a guiding star in the skies for her beloved, and that star will shine for them both for ever.

“Then along will come a wise-man who knows how to tame wild beasts — indeed, how to render even the most

headstrong steed obedient to your beloved and a faithful friend to him.

"A bard, too, should be coming to you. He knows how to write verse and come out with such songs that many people will fall in love first with the voice, then after that, everything expressed in the song. And he can also teach dance."

"Tell me please, which wise-men should I not bother going to hear?" Liubomilka suddenly said to the old fellow. "After all, I can't spend all my time listening to wise-men."

Once more the old fellow, cleverly concealing a smile, answered the girl in all seriousness:

"Yes, you are right. If you go hear all of them day after day, then there simply will not be time enough for play. You do not need to go and hear every single one. Why, for example, would you want to learn how to draw? Or embroider clothes with ornaments and imbue them with meanings that only your heart knows? Why would you need this kind of teaching, if you have an older sister and she, I believe, will turn out to be an unsurpassed master thereof?

"And why would you, for example, go and learn how to instil feelings of kindness in a shirt you sew — a shirt that will protect its wearer from many ills?

"Or learn how to make fresh porridge with love for your dear ones, which will satisfy not only their flesh but their soul as well? The taste of that porridge will be unsurpassed. But that is something that can be done to perfection by your sister's friend who lives next door.

"And when you want to obtain a beautiful dress or shirt to present to someone as a special gift — a gift that will arouse everyone's elation — you can always ask your sister and she will come up with a marvellous creation.

"And if, in the end, you want to treat someone to an extraordinary dish of porridge or kvass, you can always ask your sister's friend."

"I *shan't ask anybody!*" Liubomilka suddenly blurted out, even stamping her foot, quite forgetting herself. "Those are my rivals!"

"Rivals? In what way?" the old fellow asked in all seriousness.

And Liubomilka did not blush but responded:

"There's this boy — he's the best of the bunch, only he doesn't pay any attention to me, 'cause these dingbats managed to grow up ahead of me. They kept smiling at him all the time. I saw it when they danced the *kborovod*<sup>8</sup> at the kaphishe. And I'm supposed to present him with a shirt my sister made? And kvass prepared by her girl-friend? No way! *Never!*"

"But why should it not be that way? You say he is the best of all the lads."

"He is the best. That I know for sure."

"Then answer me, why should not the best lad receive the very best shirt as a gift, and the best porridge, and kvass besides? And..." The old wise-man paused, and very quietly, almost to himself, he added: "I think it is only just for him to have the best bride of all."

"*Bride?*" Liubomilka's cheeks flushed.

"Yes, bride," replied the wise-man. "Indeed, should you not wish him only good? Let him have the best bride of all!"

Liubomila looked at the wise-man, not able to utter a word. She was filled with feelings which set her on fire. And

<sup>8</sup>*kborovod* (pron. *bur-a-VOT*) — a circle dance accompanied by choral singing, traditionally popular among Russians, Ukrainians and Belarusians. The *kborovod* is one of the ancient rites venerating the Sun. The dancers would almost invariably move clock-wise, symbolising the movement of Sun across the sky (as seen from the Northern Hemisphere). The dance, music and song served to put the participants into a trance-like state, so as to help them reconnect with the spiritual forces permeating the Universe.

suddenly she began running off. But after a short distance she stopped, turned around, and cried out to the wise-man:

"I agree. He *does* deserve to have the best bride of all. And that bride will be *me!*"

Liubomilka eagerly paid a visit to every wise-man that came to the settlement thereafter. She was always the first to arrive and the last to leave, and the wise-men could hardly believe the surprising questions she asked. She memorised in her head everything the men of wisdom said. In a learning situation this is possible only when a child not simply *attends* the classes, but actually *comprehends* where he will apply the knowledge received.

When instruction proves too gruelling for the pupil, it can be counterproductive. When a Man has a specific goal that can be mastered through the study of various disciplines, learning for him becomes an exhilaration, and the assimilation of knowledge proceeds a hundred times faster.

And when love enters into the equation, the resulting effect is unsurpassed. Love is capable of scanning the thought of any wise-man. Just a few words spoken by the teacher can be sufficient not only to explain the whole subject to the pupil in the blinking of an eye, but even beyond that, to further engage his thinking.

Love — a great energy, the gift of God — was paramount in Liubomilka's instruction.

Back at home the little girl followed her Mama and grandmother's dinner preparations with great eagerness. She had

them explain all their actions in full detail, and tried her own hand at creating various dishes. And the little one came up with some rather unusual creations.

Once at *Maslenitsa*<sup>9</sup> a group of relatives had come to join in a meal. Two stacks of pancakes stood on the table — one of them cooked by the girl's mother and grandmother, the other by little Liubomilka herself. The guests found *her* pancakes much tastier than the others. And this now-not-so-little girl watched from a far corner of the room as her stack of pancakes began disappearing faster than the other.

When the whole family sat down to the table on a weekday, Grandfather would be the first to taste the cabbage soup from a wooden spoon. And he would say:

"I know for certain who made this soup. It has a pleasant and tender taste that no one else can match."

"Hear, hear!" the girl's father added. "Not only does it contain flowers from unusual herbs, but there is *feeling* in it."

Little Liubomilka found learning the disciplines no chore at all. In her life she became a craftsman without peer. She herself blossomed into an extraordinarily beautiful woman.

From the first wise-man she had learnt without realising it the truth of great love: if you wish to be close to God, become a goddess yourself.

<sup>9</sup>*Maslenitsa* — a traditional week-long celebration in late February or early March, marking the coming of Spring and involving the ritual preparing and eating of pancakes (symbolising the Sun). Russia's Orthodox Church later incorporated the holiday into its calendar, known in English as *Shrovetide* — the week prior to the beginning of Lent. For further information please see footnote 1 in Book 7, Chapter 22: "The marvellous Vedruss holidays".

## CHAPTER TEN

# Pre-wedding festivities

The children grew up. The time came to search for soul-mates. Festivities were a great help to young people in this important undertaking.

Young Vedruss people would gather in the evenings at a designated place, usually just outside the settlement. They would light a bonfire, chat among themselves or sing songs. And once a week there would be a common festivity involving three or four settlements all told at one of their favourite spots, where they would similarly light a bonfire, sing songs and chat among themselves. But there were some festivities which were especially useful in helping young people find their soulmates.

While such festivities were outwardly quite simple, their simplicity harboured a great inner significance.

### ‘Rucheyok’

There was a game called *Rucheyok*,<sup>1</sup> for example. Young people lined up in pairs, one couple after the other, took each other’s

<sup>1</sup>*Rucheyok* (stressed on last syllable) — the Russian word for a small stream.

hands and raised them high, forming an arch overhead. To start with, boys were paired with boys, girls with girls. The first pair — or anyone left without a partner — would go to the end of the ‘stream’ and, bending over, pass under the arch of raised arms to the head of the line.

Those passing through the ‘stream’ were not supposed to look up. They were to slap somebody’s arm at random, thereby selecting him or her as a temporary partner. Whoever was selected followed suit, and the two of them then stood at the head of the line of couples. Those left without a partner went to the end of the line and chose a new partner in a similar fashion.

The game was simple, but think about it, Vladimir: upon clasping hands for the first time, the young people could convey a great many feelings for each other without words: recognition, gratitude and love, or, on the other hand, revulsion. As the game went on, the couples switched, and it was easy to compare which pair of hands held the most pleasant feeling for you.

### ‘Chastushka-govorushka’

This ancient wedding game was the most complex of its kind. Modern *chastushki*, which people still sing today, are derived from it.

The game, known as *Chastushka-govorushka*,<sup>2</sup> can be described as follows. Two rows of people stood facing each other. One row was made up of young men, the other of young maidens. The last girl in the row dedicated a four-line *chastushka* to the last chap in the men’s row, standing opposite

her. Her singing would be accompanied by dance movements. Directly she finished, the rest of the girls quickly stamped their feet twice and clapped their hands three times. And if the lad standing opposite her did not succeed in composing or recalling from memory a worthy response, the girl started singing a new *chastushka* to the next young man in line.

If the lad managed to come up with a worthy answer in the time allotted, the conversation would continue between them with the use of poetic witticisms. But that did not happen very often.

In spite of the fact that young Vedruss people knew a great many verses, still, not everyone was able to think up a worthy reply in the brief time available, especially since their rivals were trying their hardest to distract them from the sidelines by all their stamping and clapping.

At one of these get-togethers of young people from different settlements, Liubomila was present. Radomir's five friends who had caught a glimpse of this extraordinary girl at the fair kept stealing glances at her. His closest friend, Arga, could not take his eyes off her at all.

---

<sup>2</sup>*Chastushka-govorushka* (*che-STOOSH-ka ga-va-ROOSH-ka*) -- The word *chastushka* (plural: *chastushki*) denotes a type of humorous, satirical or ironic four-line verse in trochaic tetrametre, sometimes sung to musical accompaniment. It is often compared to the limerick in English. The word *chastushka* is derived from the verb *chastit'* (to talk fast). In the name of this game it is paired with the rhyming word *govorushka*, a derivative of the verb *govorit'* (speak).

When the *Rucheyok* game began, the usually bold and decisive Radomir walked under the couples' raised arms with the full intention of taking Liubomila's hand and making her his partner. But all of a sudden he got 'cold feet'. He could feel her as he passed by between the two rows. He would have felt her even if his eyes had been closed. But as he approached the spot in the 'stream' where she was standing opposite her girl-friend, he slowed down ever so little, and found himself moving as in a dream. He ended up choosing a lad from a neighbouring settlement.

His friend Arga, however, turned out to have more self-confidence. When it came his turn to pass through the 'stream', Arga picked Liubomila right away, grabbed her hand and took up a position with her at the head of the line of couples, much to the envy of all the other young men.

Afterward they questioned him:

"What was it like when she held your hand? Did she squeeze it tight or not?"

"I don't know," Arga replied. "I cannot remember aught. It just seemed as though my hand caught on fire. Touch and see for yourselves — it still feels hot."

"What a gal!" the fine young lads exclaimed in amazement on the spot. "She's so hot with passion, it's as though she's burning with a flame from some mysterious fire!"

Radomir in turn heard all of this without saying a word. His own internal yearnings had been burning for some time — ever since that day he first discerned this wondrous girl at the fair. He had been thinking about her day after day, first thing upon waking in the morning. She even appeared to him in his dreams, but even there, it seemed, he could not bring himself to touch her.

Always successful in any undertaking, Radomir had a reputation as a poet, but now all of a sudden even the simplest of words to describe her utterly failed him.

When the *Chastushka-govorushka* game got going, he stood in the middle of the row of young men, next to his friend Arga. Liubomila was almost at the end of the maidens' row. When it came her turn to sing and dance the *chastushki*, she began her song with ease. At once it was clear to all that here was an extraordinary maiden indeed, impossible to beat.

She switched themes in a flash. She sang couplets no one had ever heard before. One after the other she won out over all the young men, even though she herself was the youngest of all.

When it came Arga's turn, he was still able to give a response to the crafty maiden, albeit not without a bit of a glitch. He replied to Liubomila with a quatrain, but she, without even waiting for the stamping and clapping, suddenly changed topic and offered up such a smooth new witticism in verse that Arga was completely thrown off the track and didn't even attempt to counter with one of his own.

Next it was Radomir's turn. Liubomila began singing to him, jauntily dancing to the rhythm of her verse:

Bold and eloquent you are,  
Much you know, oh yes!  
D'you recall how in the lake  
You once washed my dress?

Some listeners laughed, thinking Liubomila was making a joke with her couplet. Some, including Radomir himself, could not figure out what it was all about. And, not being able to figure it out, he found it impossible to offer any kind of answer.

So Radomir could give no response to Liubomila. When the stamping and clapping came to an end, signifying the deadline for reply was up, he realised that his time had irretrievably gone by. This was something he could not allow. As

though completely forgetting himself, he now began moving toward Liubomila — first one step, then a second, then a third. By this time he had come right up close beside her. Everybody fell silent, wondering why the rules of the game had been defied.

Radomir stood silently before Liubomila. And all at once, against this background of silence everyone standing in the rows heard Radomir utter, with audible aspiration, the Vedruss declaration of love:

“With you, my marvellous goddess, I could co-create a Space of Love to last forever.”

Everybody waited with bated breath to hear what response this fiery-tongued maiden would come up with.

But all of a sudden she became very meek. At first she deferentially lowered the gaze of her fiery eyes, but then raised them again. Tears began rolling down her cheek and she whispered:

“I am ready to help you in your grand co-creation.”<sup>3</sup>

Finally Radomir recognised in the maiden standing before him the same little girl whose dress he had washed in the lake so many years ago. He recognised her, and took her by the hand. As they walked along side by side, they no longer had eyes for anyone else. The two rows of young people stood facing each other in silence as they watched the couple's love head into eternity.

<sup>3</sup>See the section “A union of two — a wedding” in Book 6, Chapter 5: “The history of mankind, as told by Anastasia”.

## CHAPTER ELEVEN

# The wedding rite

The Vedruss wedding rite, Vladimir, is something you already know about. You wrote about it in *The Book of Kin*.<sup>1</sup> Let me remind you of the essence of these great acts.

It was the lovers' task to jointly choose a place for their future domain. They would usually go out beyond the perimeter of the settlement where *he* lived with his parents, and then inspect the area around the settlement where *she* lived. And there was no need for the lovers to let their parents know of their intentions, as everyone in the settlements had an awareness and comprehension of the deed that this was leading to.

On their chosen plot of land, measuring a hectare or more, the lovers drew up plans for their real life together. Their task was to mentally envision a house and arrange a whole lot of plants so that every part worked together with each other in harmonious precision.

Liubomila and Radomir quickly found a spot for their future domain. As though by mutual agreement, they had each gone outside the boundaries of the settlement to a spot where there was a small grove of trees and a stream flowing by almost unnoticed from a small spring.

Radomir had been here before. He had sat here alone, dreamt about the future, about his future life together with his beloved.

<sup>1</sup>See the section entitled "A union of two — a wedding" in Book 6, Chapter 5: "The history of mankind, as told by Anastasia".

Liubomila had twice come by on her faithful fast-running horse without Radomir. She herself, without knowing why, had once halted her horse by the stream, walked over to the grove, let down her hair, put on a headband and stood for a long time by a goodly young birch tree.

Now the lovers stood on the spot together.

"I was really pleased when I came here on my own," said Radomir. "I would very much like to continue our family line here."

"And *I* like this place, too," Liubomila whispered.

Early the next morning, as soon as the dawn broke, Radomir brought to the place they had selected more than a dozen rods in a cart and long willow shoots, along with some small posts and a scythe. No sooner had he begun to cut the grass than he saw Liubomila approaching on her steed at a gallop. Radomir was absolutely delighted at the sight, and his heart started trembling. The beautiful girl leapt down from her horse, before it had come to a full stop, three metres short of the as yet unmarked boundary line of their plot, and dashed over to Radomir.

"I greet you with the dawning day, creator," she said to Radomir, smiling. "The day has turned out to be a fine one, and I decided to bring along some coloured ribbon to mark out the places for our future plantings."

"Thank you for brightening the day," replied Radomir.

The lovers did not kiss nor even embrace. According to Vedruss custom, anything like that was not seemly to do before the wedding. And there was a considerable significance to be perceived in this: they did not make a daily routine out of kisses and embraces before their children were conceived. And therefore, when the moment for conception arrived, their energies were at their peak potential. And they never set up dates for themselves.

Each one would visit the selected spot on their own whenever they wished.

Radomir was always the first to arrive with each day's dawn. Liubomila would follow suit on her steed.

Within a week Radomir had constructed a shelter resembling a magical little house. It was two-and-a-half metres wide and three metres deep. He dug the rods into the ground, made the walls out of interwoven branches, and covered it with a combination of rods and branches.

The lovers covered the whole thing with dried grass, and Liubomila spread a fabric cloth over the interior walls and ceiling. And she made two beds with straw on the bottom, hay on top, each bed covered with a cloth.

When the magical little house was ready, the lovers would often rest and spend the night there, but they did not enter into intimate relations. Such intimacy before the wedding, before creating the 'nest', was considered an affront to their future children.

Besides, the young people had a lot to keep them busy. Radomir brought a large board, on which he carved the plan for their plot, indicating all the points of the compass, including the rising and setting of the Sun and the risings of the Moon. Wind-speed and direction for both daytime and nighttime were also recorded.

Liubomila would often go to the perimeter of the plot, where she would stand for a long time, picturing in her mind their future plantings. She would also check with Radomir's plan to make sure they would not have any harm from the wind or shade.

When winter came, Liubomila made less frequent visits to their love domain. She would spend her days weaving fabric in her parents' home, and embroidering a shirt for Radomir with love.

But Radomir came again and again to their future domain. He continued to obtain and note down information on wind movements, and memorised how the snow lay in the plain.

This is how the Vedruss people over the years made a weather calendar. Every Vedruss family had boards inscribed with such plans and were able to accurately describe the weather to come for a year in advance — two and three years ahead, even. It might seem as though it would have been easier simply to copy a calendar like that from one their parents had made, but it would not have been entirely accurate. The landscape would be just a little bit different, and a copse or a hillock might be able to protect a plant from the wind. The wintertime snowdrifts, too, could be different.

By the time spring arrived, the design was already complete in Radomir's and Liubomila's thought, and in early spring they began once more to live in their little house. The task now before them was to mark out all the planting areas with posts, ribbons and branches, and harmonise their ideas with each other. Radomir also had to dig a well and fence off the waterspring.

There were only two weeks left until they could put the seedlings into the ground, and the lovers began preparing for the wedding.

First they went to the settlement where the groom lived, and then to the bride's. They would pay a visit to every house, inviting its residents to their wedding. In every house their arrival was eagerly anticipated. Everyone wanted to see their love and decide on a gift for their future living home. When the young couple visited a garden, a house or a household courtyard, they would speak briefly to the residents. Just a sentence to each one — something like *Oh, what a splendid apple tree you have!* *Your cat has a knowing look!* or *Your bear is a real worker, very considerate!*

To any resident hearing the lovers praise a tree growing in the garden or the household cat, this was a sign of appreciation of the resident's worthy life. It also indicated that the young couple, too, would like to have a plant or an animal like that.

The couple was not invited into the house nor given anything to eat. This was not just a random practice on the part of the Vedruss people. It would not have been deemed considerate for the young lovers to refuse an invitation for a visit and a meal, but if they had started making extended visits, they would not have had enough time to go round to all the families before the wedding.

Arga, who had known Radomir from childhood, broke the rules slightly. When the lovers paid a visit to his house and began talking with his father, Arga suddenly ran off and fetched a marvellous colt from the stable — the one that had earlier caught the fancy of the whole settlement. He started talking excitedly:

“Please, accept this steed as a present from me. Just as before, he has not let anyone near him since Liubomila made him submit that day at the fair.”

The father gave his son a sly smile and said:

“Perhaps, Arga, you are not letting any horse-breakers near your steed? For some reason you don’t seem to want to break him in yourself.”

Arga replied, slightly embarrassed:

“I haven’t been breaking him in. I decided to leave this stallion forever free. But now I’ve changed my mind. Take this steed as a present from me.” And he handed the reins to Liubomila.

“Thank you,” replied Liubomila. “But I cannot accept this steed, seeing as he is already accustomed to another. But if he has a colt, we shall gratefully accept it indeed.”

When the young couple had completed the round of the domains, and the wedding day that had been announced to all finally arrived, young and old began hastening at daybreak to the designated spot.

People lined up along the perimeter of the plot of land which the young couple had staked out with dry branches.

Right in the centre, next to the shelter, a little mound rose out of the ground, decorated with flowers. Radomir mounted the hillock, and excitedly outlined the plan for the future domain before the gathering.

And each time the young man pointed to a spot where some sort of plant was to grow, someone would step forth from the circle of listeners and go over to the place Radomir was indicating. And this Man held in his hands a seedling of the plant Radomir had named. And each contributor who stepped forth was accorded a bow from the people in turn. After all, each contributor had earned the young couple's praise during the visits to the domains for having been able to grow a marvellous plant. This meant that he was worthy of the praise of the Creator, the Father of all, the all-loving God.

After announcing their design, Radomir came down from the mound and went over to the spot where his Liubomila was following the whole procedure with excitement and trembling. He took her hand and led her solemnly to the little mound, where the lovers now stood together before the whole gathering.

Then Radomir once again addressed the crowd:

"I was not alone in creating this Space of Love. Here beside me, and standing before you, people, is my marvellous inspiration."

The girl — or, more properly, a maiden — initially lowered her gaze before the gathering.

Every woman has her own beauty. But there can be moments in every woman's life when she shines above the rest. Such moments are absent in our modern culture. But back then...

Now Liubomila raised her eyes to focus her gaze on the assembly.

The excitement of the whole throng before her merged into a single exultation. The girl's face shone with a radiant

smile, not of impudence but of courage. She was filled to overflowing with the energy of Love. Her cheeks were aflush with a brighter than usual glow. The people and the whole Space around them were captured by the warmth radiating from her luxuriantly healthy body and her sparkling eyes. For a moment everybody froze in rapture.

The young goddess stood before the people, shining in all her beauty. The people, in turn, could only admire the most delightful vision.

This was why the maiden's parents waited before beginning their solemn procession, accompanied by the elderly and younger members of the whole family, to the mound where the loving couple was standing.

Stopping at the mound, the family first bowed to the young couple, and now the mother asked the maiden, her daughter:

"All the wisdom of the family line lies in you, my daughter. Tell me, do you see the future of the land you have chosen?"

"Yes, Mama, I see it," replied Liubomila.

"Tell me, daughter dear," the mother continued, "do you like everything about the future you have been shown?"

"I really do like the design. But still I should like to add just a little something."

Quickly jumping down from the mound, Liubomila all at once ran through the crowd to the edge of her future garden, where she stopped and said:

"Here is where an evergreen should grow, with a birch beside it. When a breeze blows from that direction, it will first meet the branches of the pine, then the birch, and after that the breeze will ask the trees of the garden to sing a tune. It will not be repeated exactly the same way each time, but it will always be a delight to the soul. And here," the maiden added, running off a little to one side, "here flowers are to grow. First there will be a flush of red, then over here, a little later, violets will spring up, and burgundy over there."

Liubomila, all aglow like a fairy, started dancing around her future garden. And once more the people remaining in the circle set themselves in motion, hurrying about to carry the seeds in their hands to the spots on the ground the high-spirited girl had pointed out.

Upon finishing her dance, she once more ran up to the mound. Here, standing next her chosen one, she said:

“Now the Space here will be splendid in its sheen. The earth will produce a most marvellous scene.”

“Tell, my daughter, for all to hear,” her mother once more addressed her, “who will be crowned to reign over all this marvellous Space around? Of all the people living on the Earth, upon whom could you bestow the crown?”

Turning to her fiancé, the bride responded:

“He is worthy to wear the crown whose thought is able to create a future that will be splendid all around.”

With these words the girl touched the shoulder of the young man standing beside her. He got down on one knee before her. And the girl solemnly placed on his head a most beautiful crown, a garland woven from nice, sweet-smelling grasses by the maiden’s own hand. Then, running her fingers thrice through her fiancé’s hair with her right hand, she took hold of his head with her left and drew it a little closer to herself. Then Radomir, now crowned, stood up, while Liubomila ran down from the mound and bowed her head ever so slightly before him in a sign of meekness.

Now, as was the custom, the young man’s father, accompanied by his whole family, made its way over to the mound. As they approached, they stopped in respect, and the father asked his son, who was standing over the whole assembly:

“Who are you whose thought is capable of creating a Space of Love?”

And Radomir replied:

“I am your son, and I am the son of the Creator.”

"A crown has been placed upon your head, a sign of a great mission to come. You who are wearing the crown, what will you do as you reign over your domain?"

"I shall create a future that all around most splendid will remain."

And the father asked again:

"Where will you gain the strength and inspiration, my son, and crowned son of the Creator?"

"In Love!"

Another question:

"The energy of Love is capable of wandering through the whole Universe. How will you manage to see the reflection of universal love on the Earth?"

"There is one girl, Father, and for me she is the reflection of universal love on the Earth."

With these words the young man came down to where Liubomila was standing, took her by the hand and led her back up to the mound. Whereupon the two families merged into a single group, sharing hugs and jokes and laughter.

Then the young man thanked everyone, and they all began to plant their living gifts in the spot Radomir had indicated earlier. Those not assigned a specific spot set about to walk around the perimeter of the plot which had already been marked out and to the sound of the *kborovnd* threw the seeds they had brought with them into the ground. Within the space of a few minutes a marvellous garden had been planted.

Once again the young man wearing the crown held up his hand, and, when all was quiet, said:

"Let all the creatures given to Man by the Creator live together with us in friendship!"

And those who had brought animals as gifts approached the shelter, carrying a kitten or a puppy or a wee calf on a lead, or even a bear cub. Arga, Radomir's friend, gave them the colt he had promised.

Then people quickly fashioned tree branches into a wicker fence to attach animal pens to the shelter. And soon the dwelling which just a short time ago had been used by people as sleeping quarters was now filled with animals, who were similarly young. And there was tremendous significance in this. For in mixing with each other this way, these animals would forever live together in friendship, caring for and helping each other.

After accepting the gifts, the young couple once again thanked everybody, and then a joyful celebration with songs and khorovods began. The young people, however, withdrew with their families each to their own house. They would not see each other again until after two nights and one full day had passed.

During this time the best craftsmen of both settlements carried the pre-built framework of a log-house to the new domain, put a roof on top, laid down the floor and filled all the seams with moss and grass. And the women placed their best fruits of their harvest in the new home. The two mothers covered the bed with a linen counterpane. And by the second night every last one of the visitors was gone from the domain. The energy of Love lingered over it in anticipation of the young lovers' coming.

“Look what happens, Vladimir,” said Anastasia, after finishing her account. “The Vedruss family, in this case little Liubomila’s family, accepted the appearance of the feeling of love in the little girl as the gift of God. And they treated the

appearance of this feeling as that of a new member of their family, sent by God, as a helper in the raising of their little girl — perhaps as the primary helper. As a result, the girl's grandmother helped her understand what the great energy of Love wanted of her, pointing to concrete actions in a simple language comprehensible to a child.

“The little girl was inspired to start learning various disciplines, the pristine wisdom of being, and worked to perfect her own spirit and body.

“Who was primarily responsible, Vladimir, for Liubomila's success — her grandmother, the wise-men-teachers, the girl herself, or the great inexhaustible energy of Love?”

“I would say that if you took away the energy of Love, then all the other participants in the girl's upbringing would hardly be capable of getting even half of that done. But without them, the energy of Love would have a hard time setting the girl on the right path all by itself.”

“So then, what happened was a joint creation, and joy was shared by all from its contemplation! Well, that is precisely what God wants of Man.”

“I agree. The wedding rite itself is a festive masterpiece altogether unsurpassed in beauty, significance and rationality. If you compare it to modern wedding rites, it looks as though we've all transformed ourselves into a bunch of occult idiots. What are young people left with today, after a modern wedding? Memories of gadding around in a car, for some reason, to the ‘eternal flame’,<sup>2</sup> a drunken spree in a café or restaurant, cries of *Gor'ko, gor'ko!*,<sup>3</sup> and public kisses wasting energy that

<sup>2</sup>*'eternal flame'* (i.e., at the tomb of the unknown soldier) — Such a visit shortly after the wedding ceremony is a common practice among Russian newlyweds.

<sup>3</sup>*Gor'ko, gor'ko!* (lit. ‘Bitter, bitter!’) — the traditional call at Russian wedding receptions for the bride and groom to kiss (and thereby sweeten the bitter wine).

should be saved for the conception of a child. Whereas after the Vedruss wedding rite the couple is left not with just memories but with an actual house built with joy by the finest craftsmen, a garden with a multitude of growing things planted by the hands of relatives as well as friends and neighbours who contributed to the young lovers' design."

"In reality, Vladimir, they are left with an actual Space of Love. A sacred, living, truly Divine nest, where the conception of a child may subsequently be expressed.

"The witnesses at a Vedruss wedding rite comprise not just two friends, as happens today, but all the relatives from the whole area, and they create designs not on pieces of paper but in a living creation on the earth.

"The young people in turn sit an examination together, describing their design for their future domain in front of the whole community. I would say their presentation is on an incomparably higher level than today's doctoral dissertations.

"Of course the materialisation of living Space — the house, the homestead, the beauty of the actions used to create these, all play an undoubtedly important part. But there is one incredible aspect that is just as important. See who actually marries the young couple. Not the parents, not some random official in the Civil Registration Office or a priest whom they often see for the first and the last time.

"Liubomila herself places the crown on Radomir's head, in front of the whole gathering! This is an act that God's children are indeed entitled to fulfil. It is a psychological factor that is not as simple as may seem at first glance.

"A Man who lets his love be registered by some random person is already relieving himself, on a subconscious level, of the responsibility for the subsequent fate of his family. Liubomila, by contrast, takes this responsibility upon herself.

"There are many formalities placed between modern couples registering their marriage and God. These include the

blessing by the parents, the registration at the Civil Office and a priest in the church. By contrast, nobody stands between the Vedruss couple and God. Consequently their marriage can be blessed only by God Himself.

“And even before the crowning, He really makes this into an actual manifestation. He sends them mutual love. The Vedruss people knew how to accept it and make it eternal.

“And what happened, one might ask, *before* conception in the Vedruss period?”

## CHAPTER TWELVE

# Conception

The wedding rite had now taken place. But the young people did not simply hop into bed to engage in the wedding-night activities we know about today, following a drunken spree. Their relatives did not make them lie in bed and then display the bloody sheet to the wedding guests the next morning, as has been done in many wedding rites, especially in the Caucasus.<sup>1</sup>

The young lovers went off, each to their respective parents' homes. They slept, and then made their ablutions. And in the execution of this whole custom there is a great significance.

The excitement associated with the approval of the domain's design quickly passed. The excitement associated with the wedding itself, where their attention was totally occupied with each other in a climax, may have had a pleasurable dimension, but it was still accompanied by a degree of nervous tension.

At their parents' homes they rested and slept off the excitement, while of course still thinking about each other.

Two days later they experienced their first encounter as husband and wife. And by this time everything was ready for the conception of their child. It was not just a question of material benefits. The house, the warm enclosure for their animals, the vegetable garden and the orchard were all very important, of course. But equally important was the mental and physical state of the young couple.

<sup>1</sup>Once more, this chapter is a continuation of Anastasia's narrative.

Radomir awoke before dawn. And without a word to anyone, he put on his garland and picked up his shirt that had been hand-embroidered by his mother. Then he headed off to the spring-fed stream.

The moon illumined his path through the pre-dawn darkness, while garlands of stars twinkled in the heavens. After washing in the stream, he put on his shirt and quickly made his way to his sacred creation. The heavens began to brighten.

And there he stood alone on the spot where the two villages recently celebrated their joy — the place he created through his dream.

The power of the feelings and sensations within a Man at such a moment can scarcely be comprehended by anyone who has not experienced them at least once for himself.

It can be said that these sensations and feelings are Divine in nature. And they have increased in quivering anticipation of the first ray of dawn, in which... *There she is! His most marvellous Liubomila!* Illumined in the dawn's rays, she ran to greet him and their co-creation.

The vision incarnate ran to meet Radomir. While perfection, of course, knows no real limit, it seemed as though time had suddenly stopped for the two of them. Enveloped in the mist of their feelings, they entered their new home. The table was spread with delicacies, and a tempting fragrance of dried flowers wafted from the embroidered counterpane on the bed.

"What are you thinking about right now?" she asked him in a heated whisper.

"About *him* — our future child," and Radomir gave a quiver as he looked at Liubomila. "My, how beautiful you are!" No longer able to contain himself, he very tenderly touched her shoulder and cheek.

It was not just that Liubomila and Radomir felt a joy in their hearts, they kept looking at each other in silent delight.

*My husband*, Liubomila whispered to herself without making a sound. *My husband, I thank heaven and the whole Universe. O righteous God, what happiness You give to people — the happiness of living a life in love!*

*My wife*, Radomir thought as he looked at Liubomila. He closed his eyes and opened them again so as to see her all of a sudden afresh. As though she were the best vision in the world. As though the most important goddess in the world had appeared before him. But it was not just 'as though' he saw the goddess Liubomila before him. Radomir saw a goddess in real life.

The warm breath of Love enveloped the twosome and carried them away to heights unknown.

Nobody in a million years would ever be able to describe in detail what occurs between *him* and *her*, when people merge together into one for the purposes of co-creation and bring forth the image of themselves and of God in a mutual impulse of love.

But the god-people of the Vedruss culture knew for certain that when two people are joined together by an unexplainable miracle, each of them subsequently maintains his or her individuality. At the same time, the Universe shudders at that unexplainable moment upon seeing the vision of the infant's Soul tripping barefoot through the stars, making its way to the Earth, thereby embodying in itself the twain — plus a third — in one.

The dawn progressed into a happy day. And the Sun was rising over the Earth. It shone more brightly with its delicate ray on the spot where the gods stood on the Earth. And the energy of Love, God's gift to the earthly gods, illuminated them with a light greater than the Sun, invisible, radiating blessings. And the energy of Love celebrated in joy!

Is this energy intelligent? It is! Like all feelings — particles of mind — it was considered by God to be the most

important of all. When the grand creation of the Earth was given birth by God, he told Love:

“Hasten, My Love, hasten, do not stop for rational contemplation. Hasten with your last spark. Envelop them with your great energy of grace — all My future sons and daughters in your embrace.”<sup>2</sup>

And now, when Liubomila and Radomir’s conception took place in love, Love called out to God:

“You are invisible, Great Creator. But Your children are visible. I too was invisible. Now my reflection on the faces of Your children I see. They are Yours and, in a way, mine to be. I want to nurse their children and understand how You, Great Creator, were able to foresee when you gave to them, as a gift from You, the whole of me. How You could likewise foresee earthly grace. Show Yourself in all Your beauty and grandeur for all Your children to see.”

God responded to Love in a whisper of a barely noticeable breeze:

“I Myself would not presume to distract My children from their grand and inspired co-creation. And I beg you, My Love, do not burn these young hearts in an impulse of your own delight. I remember how with the grace of your energy you once set Me alight. I feel you are also burning our children with your delight.”

“My God, I do not burn, I only warm them. When You said ‘our children’, I gave just a little shudder, and for a moment my energy in turn increased in me. But I restrained them, I declined to burn them. You distinctly said ‘our children’, which means they must also be, at least a little bit, mine.”

“Those who are born in love will understand who their mother and father are.”

<sup>2</sup>See Book 4, end of Chapter 6: “First encounter”.

It might not be easy, Vladimir, to understand, but you must try. The intimate relations involved were by no means the lead factor in the Vedruss conception of children. What people do in bed today, calling it 'love-making', is a mere mockery of Love and a debasement of God. The satisfaction of fleshly needs lasts but for a moment, and I would venture to say that it cannot compare with even a hundredth part of what has been determined in God's plan for Man.

The Vedruss people did not see each other as an object of fleshly desire. They saw something quite different altogether.

When the desire came to Liubomila and Radomir to create a child, they did not see him as being separate from themselves. The culture of feelings was quite different in those times. The husband and wife, in their love, saw in each other their own child. And, consequently, their caresses were quite different from today. People were not drawn to each other by the passion of copulation, but by the grand aspiration to co-creation.

And Radomir embraced Liubomila almost as his own child. He tenderly stroked her hair with his hand, touched her supple breasts, gently caressed her shoulders and kissed the palms of her hands. Her hands touched his face and his shoulders. She tenderly clasped him by the neck and drew him to her breast as though comforting a child...

There are many treatises in the world which try to teach the subject of intimate copulation. But there never has been, and never will be, a treatise capable of outlining the Vedruss approach to conception.

The lovers' bodies were not the focus of attention. The bodies simply carried out people's will and desire. People at that moment found themselves living in a different dimension. When the great and worthy act was accomplished, they returned to the Earth. The satisfaction they derived was no fleeting fancy. It remained with them eternally, as though lifting Man one step higher in the direction of Divine perfection.

At the actual moment of conception, Radomir seemed to be in a state of oblivion, as though he had not yet returned from a dimension he had never known before. He kissed Liubomila as though she were his own child, and fell asleep in a blissful dream. Men cannot help but fall asleep, perhaps because of an innate desire to return there once again.

But Liubomila did not sleep. She felt within herself, or so it seemed, an extraordinary particle of being. She rose from the bed and went over to the window, where the Sun was streaming through, dividing the windowsill into bright and shady sections.

Liubomila ran over the line with her finger where the light and dark met. She took off the flaxen ribbon encircling her wrist and put it on the same line. The Vedruss people always marked the day and moment of conception.

Then on the spot where the wedding took place they planted a tree whose trunk would be sure to grow straight. A second tree was planted at the moment when the border between light and dark coincided with the flaxen ribbon marking on the windowsill. The second tree was planted in the shadow of the first. This act allowed them to forever remember the moment at which they conceived the child. A horoscope calculated from this point will always be more accurate. The Vedruss people knew about the positioning of the planets and their influence on the flesh; nevertheless, in spite of the planets, they were able to accomplish successful deeds, since it was a great energy that they possessed.

Subsequently they poured the birthing water there, and buried the placenta there in the earth. And when he got older, a Man would go to sleep in the same spot on the anniversary of his conception. The position of the planets slightly varied from year to year, and a Man could feel all the information coming from the Cosmos on the night of such a sleep — not with his mind, but rather with his feeling, in his subconsciousness — right up to God's creation of everything earthly. And if there were any sorrow or disease, the dream could eliminate it on the spot with ease. But only very rarely could any disease of the flesh affect the Vedruss people.

The place of conception served them as a place to sleep and to become consciously aware of the whole order of the Universe.

## CHAPTER THIRTEEN

# Telegony can be overcome

“Anastasia, I heard that the wise-men knew how to overcome the phenomenon of telegony, i.e., the consequences of previous relationships. If a woman has had a prior relationship, then the first man, as is now known, will undoubtedly exert an influence on the appearance and character of a child fathered by another man — the woman’s husband, for example.

“If they go through the wedding rite you spoke of, does that mean that the consequences of the woman’s previous relationship will be eliminated once and for all?”

“Vladimir, the child does not always have to resemble the previous partner. When the new events in the woman’s life and the sensations of her feelings are sufficiently bright, the information about prior unsuccessful relations will be erased. Still, the Vedruss people had a rite which could help erase old, unwanted information. It purifies both the man and the woman, and three thoughts must participate. Whose thoughts those are, try to guess on your own.”

“It would be better for you to tell me yourself, Anastasia. My brain is overtaxed as it is from too much information.”

“Fine, I shall tell you. But it is very important that people learn to draw the conclusions they need for themselves.”

“At some point they will learn, but for right now *you* had better explain it, seeing as how the question is so important.”

“Then give me a full formulation of a question as to what interests you.”

“What d’you mean, a ‘full formulation?’”

“Vladimir, you are aware, are you not, that this phenomenon touches not only women, but, in equal measure, men. A man’s previous relationships can also exert an influence on his future children. And the most upright and chaste girl can bear a child which is not her own, if the man is not a virgin. You know about that, Vladimir?”

“Yes, Anastasia, unfortunately I do. I read how one soldier on his way home from army service had too much to drink at the railway terminal and slept with an Asian prostitute. He came back to his village and married a girl who had been waiting for him. They produced a child who had swarthy skin and slanting eyes. Everybody started blaming the girl, but there wasn’t a single Asian anywhere in the vicinity. I thought, though, that it wasn’t really that necessary to bring up the subject of men.”

“It is *vitally* necessary to talk about men too. They are to play the principal role in the rite.

“The rite consists in this. The man must set up their bed in the open air under the stars on the spot where the couple live in natural surroundings. He should prepare the bed for himself and the woman. They should fast for three days and sleep three nights under the stars. And before they go to sleep, each time the man should wash the woman and himself with spring water. The man should rub the woman down with flaxen fabric, but not rub himself down, just get the water drops off himself with his hands. The man should be still wet when he lies down in the bed with the woman. During those three days they should not let themselves indulge in intimate relations.

“While they are falling asleep under the stars, on the first night they should forgive each other for all past transgressions and right away, right from that very first night, visualise their future child.

“The man should think about how their child should be like the woman, and the woman about how the child should resemble the man.

"After these three days have gone by, they are free to engage in fleshly intimacy, while the planets will erase all the information they might be harbouring about the past, about children that have never been conceived.

"But before entering into intimate relations, the man has an obligation to place a garland upon the woman's head. In the normal Vedruss wedding rite this is done by the girl: she places the crown on the head of her chosen one, but in this variant it is the man who is to crown the woman.

"This rite does not necessarily pertain to couples who have jointly sought out and found their own domain and have started to live in it."

"Why not?"

"The search itself, and the first three days of preparing the site, will purify them if they spend three days thinking of their future child without actually conceiving it... "

"Anastasia, what about the third thought? You did say three thoughts had to take part at the same time."

"Yes, I said that, and in the case we are looking at there *were* three thoughts. By the third night, while the man and woman were sleeping under the stars, they were already receiving help from the thought of their future child."

"And where might he have been?"

"Where all children await earthly embodiment before conception.

"So here, Vladimir, is the whole rite which a great wise-man came up with and freely offered to people. He himself rejoiced at how effective the rite proved to be, and there was a subsequent increase in the number of happy families.

"Did you understand everything, Vladimir, and can you now try your hand at telling people about this rite?"

"Of course, I understand, and I shall tell it all in time."

"And you will not add anything to this account of mine?"

"No, I shan't."

“Then I can say that the rite will not be effective.”

“In what way? Why not?”

“There is no participation on the part of our ancestors’ thought.”

“Yes, I remember your grandfather saying that we need to apologise to them.<sup>1</sup> I shall remind my readers of this. Although it’s still not entirely clear to me why it is up to our generation in particular to apologise. After all, *we* were not the ones responsible for hiding their culture from people’s eyes, or for its demise.”

“Of course one could think that ‘*we* are not to blame’. But it would be better if a different thought came to mind.”

“A different thought? What kind?”

“Upon our generation has fallen the great honour and grace of restoring the culture of our forebears, to bind up the torn threads that have remained, linking us with them. Only then will great discoveries begin to take place among mankind. Only then will their thoughts be able to help ours. For now, their thoughts — in view of our lack of understanding — feel constrained to withstand us.

<sup>1</sup>See the reference to ‘repentance’ in Chapter 5: “Conception involves more than flesh” above.

## CHAPTER FOURTEEN

# The psychology of Man's genesis and appearance in the world

In regard to this question, I have to say right off that according to Anastasia's information, the process of conception and carrying a child — as well as its appearance in the world as a Man — is not primarily a physiological, but a psychological one. It is the highest form of joint creation between a man and a woman. It is the apex of achievement of their thoughts, feelings and intellect.

Initially such an affirmation met with some scepticism on my part, as, indeed, I think, on the part of many of my readers. So I shall reproduce here my more detailed dialogue with her on this topic.

"Anastasia, how can you say that it is mainly psychological? After all, it's a real material foetus that develops in the mother's womb. The woman experiences actual physiological sensations, sometimes even painful ones. There have been lots of popular scientific books written on the subject of carrying a child and its appearance in the world, and these often go into great detail about what a pregnant woman should do, how she should act on a physiological level. When you come right down to it, physiology is primary, after all."

"Yes, sadly, such an opinion has indeed been thoroughly rooted in human society. It means that the principal component of the human self has been either relegated to the background or eliminated completely. The result is that people have come into the world who are, in essence, quite the opposite of God's likeness.

“Think about it, Vladimir: the foetus in the mother’s womb lives and develops not because someone has written a bunch of treatises on the subject, but because this was the original thought of the Creator — indeed, of Nature. To interfere with this eminently perfect process is tantamount to replacing what is natural and perfect by something that is artificial and less perfect.

“The *physiology* involved in the formation of human flesh was pre-programmed by the Creator and is quite capable of developing all by itself, without bothering the mother or father with a need to control this process.

“On the other hand, the *psychology and philosophy* of birth — a process on an immeasurably higher level — is wholly dependent on the mother and father. It is a joint creation by Man and God.

“The appearance of pain at the moment of birth is a sign of an erroneous psychological approach to the birth process on the part of the parents.

“Many, many animals give birth to their offspring in natural surroundings and none of them perish or experience suffering. Nor did the Creator come up with any thought of pain for His most beloved creation, Man. Just as loving parents would never conjure up the thought of pain for their children.

“As she fulfils her highest purpose — that of co-creating God’s Man — the woman who has carried the Divine child within herself receives a reward ordained by the Creator. This reward is the feeling of bliss and the chain of joyful ecstasies during labour, but certainly not pain. Quite to the contrary, the process of giving birth to a Man should be a joyful and pleasant one.

“It is Man himself, deceived by the occult sciences and suggestions from the dark side, who by his own intrusion has made childbirth painful for the mother and a fatal shock for the baby.”

"What's this about a shock, Anastasia — a shock fatal for the baby at that? The baby just gets born."

"Yes, it gets born, but it does not understand why it is being so rudely torn out of its pleasant and perfect Space and why its mother suffers and experiences pain. The mother's pain occasions untold mourning on the part of the child."

"What, is it possible for a mother to give birth without any pain at all?"

"Not only is it possible without pain, but with a supreme and most pleasing joy and delight!"

"You know, Anastasia, our modern medicine is equipped to do just that — it can guarantee an almost painless childbirth with the help of anæsthetics."

"Anæsthetics can lessen the mother's physical pain, Vladimir, but they increase the mental pain for the infant, since anæsthetics cut him off from contact with his mother. Such a state instils in him fear and a lack of self-confidence, which continue even into adulthood, even into his most advanced years. They prevent him from being born again."

"But why does something like that happen?"

"When a Man is living in his mother's womb, he feels a coziness there — he feels comforted, cared for, peaceful. On the physical plane his needs are completely met. He is free of the problems plaguing Man in everyday life, he is allowed to experience the whole order of the Universe.

"Over the nine months all the information about the marvellous order of the Universe, about Man's purpose right from the beginning of creation, is imparted to him.

"The world he knows inside his mother's womb is vast and marvellous.

"And then all of a sudden, something rudely tries to thrust him out of this world of supreme grace. Every woman knows: this means the labour has begun — an inevitability, or so it seems — and hence people do not think about the effect it

might have on the infant. Few women in today's world realise that they do not have to frighten their baby — on the contrary, they can caress their child during labour, talk with it, express their thoughts to it, invite it to be born into the world. And this need not be accompanied by any sensation of stress or pain.

“After hearing the call of his mother and father, the child will perceive the labour contractions as a caress — an invitation to make his appearance of his own free will, to explore a world that is brand new to him.

“*To be born of his own free will* — that is an indication of great and extraordinary significance. All the information imparted by God during a birth like this will be preserved in him.

“When the woman experiences fear over her labour, this fear is felt by the child in the womb.

“When the woman experiences pain from her labour trouble and has thoughts only for herself, the child in the womb experiences *double* the amount of pain. He feels abandoned, and, above all, helpless and defenceless. Such feelings are harmful, and they are lasting. They wipe out the information the child has earlier received about the grand Creation, since they are in contradiction to it. In this kind of birth, the child feels for the first time in his life that he is not the master of the Universe, but a worthless nonentity, subject to some kind of external forces.

“His body is born, but the spirit of mastery and of a kind creator is not born in him. Such a Man will not become the likeness of the Divine. A mere slave of some other entity he will remain, and he will try his whole lifetime to free himself from slavery, but in vain.

“Earthly tsars, presidents, along with their bodyguards and service staff, are likewise the slaves of circumstance. They think they are deciding something of importance, and try to make their life a happy one, but life for them only becomes

more and more unhappy and hopeless, like the ever deeper blackening of both the air and the water.

"This thought of hopelessness suggested at the birth by pain, interferes with human society's ability to make the right decisions."

"Yes, Anastasia, a birth like that presents a very scary picture. Maybe that's why some women today opt for a Cæsarean section? That would prevent something like that from happening, eh?"

"It still happens. One could hardly explain such a procedure as the birth of a Man — it is more like a routine operation. Who is thereby causing the Man to emerge into the world — the mother, who has not given birth to the child, or the surgeon, who has torn the foetus out of the mother's body?"

"The infant, who has not yet appeared in the world, suddenly loses contact with his mother and, consequently, with the whole order of the grand Creation. Then he is forcibly torn from the womb. What for? Where to? And why so rudely? And why is he not in charge of anything himself? The whole world crashes before him!

"People believe a child is born into the world, while he, at the moment of birth, feels himself forlorn. And while it seems as though this infant Man has thrived, what has remained alive, in fact, is only his flesh. He will try to use what paltry remains he can reclaim of his spiritual substance to search for his Divine self throughout his life. And for this only his father and mother are to blame."

"Anastasia, as I understand it, it is on the women and on the way they carry and birth their children that the whole future of their offspring, not to mention the future of human civilisation, depends. Is that true?"

"Yes, it is true, Vladimir. But no less — in fact, in equal measure — does human birth depend on the *men*, on the fathers."

### When a man brings a child into the world...

“Hold on, hold on there, Anastasia. Explain what you mean when you say ‘a man brings a child into the world’. After all, men cannot actually give birth. They are physically incapable of giving birth.”

“There is a trap hidden in there, you see, Vladimir. In accepting the suggestion that birth is mainly a physiological procedure, the majority of people have thereby excluded the Great Spirit, the Father-Creator, from the birth process. More specifically, they have excluded God the Father from the birthing mother’s labour. It was God’s absence that first got reflected in the woman in the form of labour pains, and subsequently of general human suffering.”

“Can you explain in more detail the *man’s* rôle in the labour? And why is excluding him tantamount to excluding God? Should the father, or the man, attend to his wife’s labour?”

“It is quite unnecessary for the man to *attend* to the labour. It is sufficient for him to be by her side, but that is not the father’s main purpose.”

“But what, then, *is* his main purpose?”

“Iò comprehend that, you must realise that the mother’s womb nourishes the flesh of the foetus conceived in her from her beloved male partner. It feeds the flesh, and that is important indeed, but it is not *the* most important factor.

“The foetus reacts to the condition and feelings not only of the mother, but in equal measure to those of the father.

“When a husband talks with his pregnant wife, the foetus conceived does not understand the parents’ words, it does not

really comprehend the meaning of the words uttered to their full extent, but acutely perceives the *feelings* of the parents.

"Sometimes a man is led by an impulse of tender feelings to caress his pregnant wife's tummy or to put his ear to it and hear the baby's movements. Caresses like that are pleasing to the woman, but the foetus inside her, it would seem, does not perceive them physically, but it feels them on an immeasurably greater level.

"The feelings of the baby's mother and father come to him in a flood. He receives them with great joy, with supreme bliss.

"On the level of feelings, the foetus takes account of *thoughts* as well. When parents wait for their child in love and harmony and keep thinking about him, then from the very moment of conception he constantly dwells in the father's and mother's energy field, and this is very pleasing to him.

"It is through the mother's and father's feelings that the child feels the surrounding world outside his mother's womb.

"If a father at his pregnant wife's side hears and exults in the song of a nightingale, the foetus in the mother's womb will feel both the song and the father's joy. After he is born and grows up, he will continue to delight in the nightingale's song, just as he did in the womb.

"If the father or mother suddenly takes fright upon beholding a serpent, the child, once born, will be frightened at the same sight, too. In the womb, of course, he could not actually *see* the serpent, but through what his parents see, the information about it will be stored in his subconscious throughout his life.

"When a father, Vladimir, skilfully sings songs to his pregnant wife, their infant will sing no worse than his father as he grows up. If a father starts contemplating the stars in his mind, their offspring after birth will show an interest in the stars."

"I have also heard, Anastasia, of how a certain composer played the piano for his pregnant wife, repeating over and over again a tune he had composed which had caught his wife's fancy. But later the composer divorced his wife before the birth of their son.

"When the child had grown a bit, his mother put him in a music school. And one day she heard him performing his father's tune. The amazed mother decided that her son had somewhere discovered an old musical score, since this tune had never been performed at any concert, and the score had never been published. But upon entering the piano room, she saw that he was playing without any score at all. She asked her son:

"Who taught you to play this piece, son?"

"Nobody,' the boy replied. 'I just heard it somewhere, but I can't remember where. I like it. What about you, Mama?"

"I like it, too, very much,' replied the woman, and asked her son how he could have memorised it, since in school he had never started playing new works right off, even from a score.

"No, never right away, but this one took hardly any time at all to learn by heart, for some reason. It just seemed to be inside me. I want to continue it, and add to it in the same key."

"The boy continued to develop his father's melody which he had heard in his mother's womb. Like his father, he too eventually became a composer."<sup>1</sup>

<sup>1</sup>A very similar experience is recounted by Boris Brott, former conductor of the Hamilton Symphony Orchestra in Ontario (Canada), who as a young musician found himself able to play certain pieces sight unseen. It turned out these were pieces his mother, a professional cellist, had played during her pregnancy. His experience is cited by Toronto psychiatrist Thomas Verry in his book *The secret life of the unborn child* (New York: Random House, 1981), pp. 22-23.

"That is a good example you cited, Vladimir, and it is by no means the only one. Many examples point to the fact that child-raising effectively begins right from the mother's womb. And even a little bit earlier, before the conception even takes place."

"What d'you mean, earlier? Prior to conception, after all, there isn't anybody there yet."

"Remember, you were telling me about telegency, Vladimir, about how a child born to a woman may resemble the first man in her life, rather than the father with whom the material conception took place. This very phenomenon attests to the fact that someone who is not yet conceived, but just waiting his turn in the conception queue, can 'read' information about the father."

"Is there really such a thing as a conception queue?"

"There is. Just as soon as intimacy occurs between a man and woman, a spirit is born in space, ready for a material embodiment."

"What, even if they're just having sex for fun, without any thought of childbearing?"

"The spirit appears whenever the man experiences satisfaction."

"You mean, orgasm?"

"I do not like that word, Vladimir. It implies information which gives a false impression of the essence of the act."

"Okay, let's just call it satisfaction. But is there any way you can prove the existence of this spirit?"

"You yourself can find the proof, Vladimir, if you wish. After all, one person may grasp the essence of this phenomenon from just a few words spoken, while another may require years, even after being presented with a multitude of examples, and even then may still be reluctant to understand."

"Well, can modern science offer at least indirect proofs of what you are saying?"

“Of course.”

“What kind of science — biology, genetics? To tell the truth, I need to know, so that I can more easily search for proofs.”

“You will easily be able to find them in physics, Vladimir.”

“In *physics*? What’s physics got to do with it? You were talking about the spiritual — maybe I could try esoterics, but *physics*?”

“In physics there is a law of conservation of energy.”

“And what’s that law got to do with it?”

“During intimacy with a woman an unusually powerful energy builds up inside the man, and the moment comes when he releases it. According to the law of conservation of energy, it cannot simply disappear without a trace, but is capable of mutating from one state into another. In the situation we are talking about, it is precisely the man’s colossal energy and the lightning speed at which it is released that forms a spirit.”<sup>2</sup>

“Yes, I can agree with that. But at the same time it’s sad. How many spirits have men formed that haven’t ever obtained a material embodiment! They probably number many times more than the population of the Earth!”

“Yes, many times more.”

“Do they suffer, or do they just stay as senseless energy?”

“They have feelings. Their suffering is monumental.”

“What about the spirits that are conceived? Do they begin right off to feel their parents?”

<sup>2</sup>One of the most prominent scientists to study energy released during orgasm from the physical standpoint was the Austrian-American psychiatrist Wilhelm Reich (1897-1957). He named this universal life force *orgone* (from *orgasm*) and was even able to build working apparatuses capable of accumulating it and using it for therapy. In 1956 he was arrested and thrown into prison, where he died the following year. His *orgone* accumulators were destroyed by the U.S. government and his books burnt, including his monumental work *The function of the orgasm: Discovery of the orgone* (New York: Farrar, Straus and Giroux, 1986).

"Yes, right away. And they feel their father and mother in equal measure.

"Over the nine months in the mother's womb the parents can teach the living child a great deal. Such lessons need no repetition. The child will instantly memorise, with life-long retention, any information imparted by his parents.

"A father who possesses a thorough knowledge can 'carry' or shape, as it were, his child's spiritual and intellectual self.

"It is the father in particular who is responsible for the higher-level components of Man, and in this his role is indeed Godlike in nature.

"It is the father who gives birth to the Man's spiritual component. Fathers should spend the whole gestation period compiling the programme which shapes the spirit, character and intellect of the future Man."

"You are talking, Anastasia, in terms of a 'programme', of a father who has a thorough knowledge of the procedure of raising a child still in the mother's womb...?"

"I am not talking about the father *raising* his child, but about *giving birth*. The father does not do any 'raising' per se, but simply gives birth to the second, non-material self of his future son or daughter."

"I would say that we don't have any concept of that at all in our society. Our loss, no doubt. It is considered that the principal role of the father in a child's birth is finished after conception. Thereafter, in the best-case scenario, the father helps his pregnant wife with household tasks, makes sure all her needs are met."

"Unfortunately, that is all too often true."

"But, Anastasia, who then forms the Man's main spiritual component if the father doesn't understand his role in this?"

"Either circumstances, or someone who knows about it and uses it to forward his own agenda."

“So it turns out that men who are ignorant of the possibility of full participation in the formation of their future child right from conception are not raising their children in the fullest sense of the word?”

“Unfortunately, Vladimir, that indeed happens all too often.”

It seems I have only just begun to understand the significance of what Anastasia has said, which in turn has showed me the whole absurdity of our way of life. It may be that all our social upheavals are the result of the fact that the overwhelming majority of us, even when we are together with our children, have little in the way of a relationship to them in practice. We abandon them to the whim of fate, hand them over to somebody else. But at the moment I was having my conversation with Anastasia on this subject, it was not societal but rather personal circumstances that were calling forth sad feelings in me — hopelessly sad, perhaps — feelings that will remain with me my whole life. I didn’t even feel like continuing the conversation.

“You have gone pale, Vladimir,” Anastasia observed, noticing my condition. “Your eyes have dimmed. Why?”

“I have no strength left to talk about it, Anastasia.”

“I have a good idea of what has happened to you. But you will feel better if you can describe the cause of your unhappiness on your own.”

“What is there to describe? It’s perfectly obvious. When I realised the importance of the information you gave about childbirth, it made me realise, too, that I had not participated sufficiently in the birth of my own daughter, Polina. But back then neither my wife nor I had any idea of how we should relate to the question of childbirth.

“But *you*, Anastasia, had knowledge of this information. You bore a son, and a daughter, and I, it turns out, am once more on the sidelines. You knew this, and still, you didn’t tell

me in time what a father's supposed to do. Not only that, but I remember you telling me that I shouldn't see my son at all for some time, even after his appearance in the world. What did you do that for?"

"Yes, I did say that to you, Vladimir. But think about it yourself: what would you have begun to teach your son if you had stayed the nine months with me in the taiga? Do you want me to give you a hint as to the answer?"

"Go ahead."

"You remember, you asked me at that time to leave my family glade in the taiga, my Space of Love, which my parents had formed for me. You wanted me to give birth in a city, in a hospital. Then you said we had to send our son to kindergarten and the best schools, that you would make him into a businessman and that he would carry on your business."

"Yes, I did say that, but there was a lot I didn't know back then. Afterward I finally accepted that you would never be able to, or never want to, live in the city, but still, you did not invite me to stay with you in the taiga."

"If I had suggested it, would you have stayed?"

"I don't know, but quite possibly I would have."

"And what would you have done?"

"Like anyone else, I would have found some man's work to do around the home."

"But you should know, Vladimir, that I do not need any physical assistance. Everything here is all ready for willing service: the air, the water, the beasts and the grass. I asked about your activities in the hopes of finding out the most important thing, namely, where would your thoughts have been while awaiting the arrival of our son?..."

"So, you have nothing to say. After all, your thoughts were just like your words back then."

"And you might have regretted that you did not succeed in persuading me to live in the city. You even had a plan in mind

of taking me by force to give birth in a hospital. Yes? Admit it!"

"Well, yes, I did, but it didn't last very long."

"Now tell me, Vladimir, just how was our son supposed to react to such thoughts coming from his father? Such aggressive thoughts, besides."

"Yes, I see now, it wouldn't have been very good for him. And still, I'm sad that now I... In any case, it turns out that I'm not a fully-fledged father. And that means that you bore a son, and a daughter, too, who are not completely Man."

"Trust me, Vladimir, and don't be upset, and don't be sad. You *are* a fully-fledged father to our children. And our children have received everything in full measure. It turns out that our son is even a little overloaded with information and sensitivity — at one point my great-grandfather Moisey was not able to restrain himself and told him more than he should have."

"But how so? I wasn't with you during your pregnancy. I didn't compile any programme, I wasn't present at the birth, I did not invite my children to be born, yet you still say that I've come out a fully-fledged father. A moment ago, you were arguing quite the opposite."

## CHAPTER FIFTEEN

# A rite for a woman giving birth without a husband

“The Vedruss civilisation, Vladimir, had a great many rites. The word *rite*<sup>1</sup> is not entirely appropriate for such acts, but I simply cannot think of an alternative. Let us use it for the sake of brevity, only you must understand that in today’s language the Vedruss ‘rite’ could easily be termed a scientific and rational act on the part of Man, one grounded in the knowledge of all the diverse energies of the Universe and their interrelationship with Man’s soul. These rites, as you know, were thought out by generations of wise-men and enlightened thinkers, who also connected them with the stars. Subsequent generations checked their effectiveness in practice and perfected them as the years went by.

“One of these rites was for women who were carrying and giving birth to a child far from their husbands. Such situations did exist in the Vedruss civilisation, albeit rarely. It might happen that a woman’s husband was obliged to go on a long trek somewhere. His pregnant wife left at home carried out an outwardly simple rite, but one which lasted a long time and was very complex in terms of the mind and will. If the woman’s love for the child’s father was strong, she achieved

<sup>1</sup>The Russian word for ‘rite’, *obriad* (pron. *abr-YAT*), is derived from the verb *obriuzhat* (‘to dress, enrobe’), and initially signified ‘to dress [a spiritual concept into a material form]’, referring to an action (or symbol) based on deep spiritual insights and giving an actual physical embodiment to these insights.

her goal on her own and bore a fully-fledged child. She was assisted in this by the great energy of Love.”

“What actions did this rite involve, specifically? In our modern-day society there are also women who are obliged to carry a child and then give birth without their husbands around. Maybe the rite you speak of would apply to them.”

“Over the nine-month period, a pregnant woman whose husband is absent should spend at least three hours a day communicating with her child in the father’s name — sometimes also conversing mentally with the father about the future child. They might argue, but under no circumstances should they allow any suggestion of aggression to enter in, even during an argument. The parents’ dialogue should always proceed in a spirit of good will both toward each other and toward the child.

“The dialogue should preferably take place at the same time each day. The woman’s communication with the child in the father’s name may be divided into two segments — evening and morning. Approximately fifteen to nineteen minutes before engaging in this kind of mental dialogue, the woman should definitely take a small amount of easily digestible food or drink, which will be healthful both to her and to the child.

“The drink taken in preparation for the mental dialogue should not vary over the course of the nine months, and should not be used in any other circumstance or for any other purpose.

“I, for example, prepared a drink consisting of about a hundred grams of cedar milk, three drops of cedar oil and a pinch of pollen. I also took a little honey on a twig, mixed everything together in a wooden bowl and drank it in tiny swallows.

“The drink could also be made from other substances, only they must definitely be natural, ecologically clean and easily digestible by the mother’s body, as well as healthful and

pleasing to the child in the womb. This is very important. If the mother's drink is not healthful or pleasing to the child, he will associate the dialogue with his father with an unpleasant phenomenon and afterward reject his father and resist communicating with him.

"After the birth of the child the woman should take the same drink shortly before a feeding at which she plans to communicate with her nursling in the father's name.

"If the father does not return by the time the child ceases to take his mother's milk, the mother's drink should never be given to the child until the moment of his first contact with his father.

"The woman also needs to choose a star in the heavens through which to communicate with her beloved man. A star to think upon each time before initiating a mental dialogue with her child.

"In this mental communication, the woman should formulate as distinctly as possible a thought-picture of the child's father — his character, intonations and world-view — without falsification or embellishing any details. If she has a difference of opinion with him, she should try to explain her point of view, not aggressively but lovingly. Instead of blaming the *man* for the misunderstanding, she should point the finger to herself as incapable of setting forth thoughts understandably and convincingly.<sup>2</sup> Or possibly she should think more carefully about what her husband has said.

"In addition, during her dialogue the pregnant woman should stroke her tummy while cherishing an image of the father in her thought.

"And it is very important, while conversing mentally with her husband, to rule out all negative aspects that might have

<sup>2</sup>Compare Anastasia's dialogue with her great-grandfather in Book 2, Chapter 7: "Who's to blame?".

occurred earlier. It is vital to remember only the good while communicating with him.

“The woman should spend as much as possible of the nine-month period in real solitude. Then the child will feel both her and his father. And if the husband and father is not physically present, the child will still find himself in his father’s aura.

“If the woman carries out the aspects of this rite, the man will come back to her and to their child. Even if earlier his love was weak, or was not there at all, love will flare up in him with unaccustomed strength, and provoke him to good deeds.

“Many Vedruss women knew the effectiveness and power of this rite. Later the wise-men tried to erase it from women’s memories and turn to it only when they were confident that the woman was not harbouring any perverse feelings.”

“What kind of perverse feelings, Anastasia?”

“A woman in love could, through the help of this rite, seduce a man who was not in love with her — even if he were living with another wife and even if they had not had intimate relations.”

“But how could it happen if they had not had intimacy? Without intimacy a child could not have been conceived at all, and, in that case, who could she talk to about a father?”

“No matter what man she conceived with, she might try communicating with her child in the name of her most beloved, thereby drawing this man closer to herself. Not only that, but the child will even outwardly bear a greater resemblance to her most beloved, rather than the man who was actually with her. You should know that, Vladimir, from the phenomenon of telegony.”<sup>3</sup>

“Yes, I know, Anastasia, but why are *you* giving out this information that the wise-men suppressed? Now some women

<sup>3</sup>See Chapter 5: “Conception involves more than flesh” above.

will start luring men they fancy away from their families with the help of this rite. It shouldn't be published."

"You needn't be concerned about publishing it, Vladimir. I purposely left one particular aspect out of my description. Now it will not destroy any happy families."

"But if you were able to leave out some aspect, why didn't the wise-men do the same?"

"The wise-men did not know what to put in its place."

"If the wise-men didn't know, how could you possibly know? Besides, Anastasia, you said that the wise-men always checked the effectiveness of their rites in practice. But you didn't have the opportunity to do that."

"I did."

"When? With whom?"

Oh, God! I remembered Anastasia's words from many years ago. I didn't pay much attention to them back then, but now... She said:

"I shall restore to you the respect of your daughter and the love of your wife."<sup>4</sup>

It's incredible, but she did it! But why, then, is my wife not jealous of Anastasia? And why does my daughter have such respect for her? I went back to see my family this year. Anastasia was able to perform the incredible! I don't know how she did it, but she did it.

All our earthly institutions taken together — institutions that pride themselves on their technological achievements — are incapable of solving the number one problem on the Earth: *how to restore love and respect to families*. But she can. Oh, Lord! What colossal, truly Divine knowledge mankind is losing! Why? Who can give an answer?

<sup>4</sup>Originally conveyed through Anastasia's grandfather. See Book 2, Chapter 26: "Anastasia's grandfather".

And what strength of love Anastasia herself is worthy of! What she has accomplished will probably be appreciated more by our descendants than by people today. I felt like doing something very nice for her. I went over to Anastasia, got down on one knee and kissed her hand. She also got down on her knees and embraced my neck. I heard her heart beating, and sensed the extraordinary aroma of her hair, her intoxicating breath, the fragrance of mother's milk as though it was coming from my own mother's breast, and I whispered:

"What can I do to be worthy of you, Anastasia?"

But she didn't answer, only pressed my head a little more strongly to her breast. My life has probably never been blessed with happier seconds, hours or days than these.

## CHAPTER SIXTEEN

# Where should we have our babies?

How hard it is to write in a dry style, and yet it is absolutely necessary to determine, without agitation or emotion, where the best and most comfortable place is for parents and infants to go through the birthing process. In a hospital operation room or a home setting?

As far as I know, the first maternity homes appeared during the period of slavery in Ancient Egypt and Rome, where they were organised for pregnant slaves.

A birthing slave-mother stayed from five to nine days with her baby before returning to work. She was allowed access to her child for nursing and at nighttime. This continued from six to twelve months. It was different in different places, depending on how the slavemasters treated their slaves. After being weaned from its mother, the child was taken care of by specially trained slave-nurses. Later, when the child had grown, he would go off to be raised by other slaves, depending on the function designated for him by the overlord.

For example, boys might be handed over to specialists to be trained as warriors. After going through special physical training and psychological conditioning, these warriors, who knew not their parents, proved to be the most loyal to their slavemaster. They were brainwashed from childhood to consider him as father and mother — in short, God. There was even a religion worked out especially for the purpose of this brainwashing.

How close seems this situation from antiquity to our reality today! A maternity home — nursery — kindergarten —

school — college — and presto, the slave is ready. But since the slavemaster is invisible, the slave thinks he is free and, consequently, will not rebel.

The *élite* of Ancient Rome and Egypt, and even their middle classes, couldn't begin to imagine, even in their wildest nightmares, the birth of their own children outside the home.

They would first call in midwives, later doctors and soothsayers.

In Russia the first huts for birthing mothers were designated for prostitutes. Sometimes this category of women went off to give birth in a gypsy camp, where they would leave their unwanted children to be raised by the gypsies. The gypsies accepted them.

A 'maternity home' — or a maternity ward in a hospital — is utter nonsense. It is clear testimony to the loss of women's instinct to continue the family line, as well as to modern Man's ignorance, not only of his pristine origins but even of the fundamental culture of feelings — his loss of feelings of true love for his wife and child as being a part of himself and his legacy.

A child born in an institution cannot be exclusively yours. He belongs to someone else besides. The birthing process includes conception, carrying to term and the appearance of the infant in the world. And the last stage is no less significant than the rest. If you hand him over to strangers who are completely indifferent to both you and your offspring, then you have less than a full relationship to the birth. Consequently, you will not have fatherly feelings for him in full measure, and he will feel this, and afterward requite it with an absence of strong filial feelings toward you.

More than that, the love will not be what it could. Such a child will not be able to love — not just his parents, but life itself, since life was never, right from the moment of his appearance in the world, presented to him as something attractive.

Of course this lacuna can be compensated for by means of certain behaviour toward the newborn, but that is by no means easy.

The birthing of children among different peoples of the world can be considered more and more perfect the farther we go back in history, and primitive in the absurd today. In our modern world it has become tantamount to removing the appendix from the body of a sick person.<sup>1</sup>

And so I should now like to switch to a brighter note. In spite of everything, mankind is beginning to ponder the meaning of what has been happening.

In Russia, America and France, so-called 'schools of spiritual midwifery' have sprung up. There is also an organisation known as the 'Association for Prenatal Education' active in a number of countries.

Courses on home births are being offered in Moscow and St. Petersburg. People are trying to bring back the knowledge and traditions they have lost — the *love* they have lost.

Let us see how the birthing process took place in Vedruss families. According to Anastasia's account, it went as follows.

<sup>1</sup>An evident reference to a Cæsarean section, which in many Russian hospitals today is used in more than half of all births.

## CHAPTER SEVENTEEN

# The Vedruss birth

The birthing mother's mama and grandma would tell her what symptoms to expect on the eve of her labour. Liubomila's grandmother, in this instance, told her in detail how she gave birth to her own children.<sup>1</sup>

Vedruss women as a rule gave birth in their own homes, in a wooden tub, something like our bathtub, only shorter in length and not as deep. It was a container designed especially for childbirth. Afterward it served as a cradle for the newborn.

To start, it was filled with pure spring water, heated to body temperature. There were little ledges on the outside of the tub which served as footrests.

The edges of the tub were curved so that it was easy for the woman to support herself with her hands. The air temperature in the room was not measured with a thermometer back then. They said it should feel comfortable for a naked body in a state of repose, with no sensation of either heat or cold.

The tub for birthing mothers was placed on the floor and oriented so that the woman sitting in it would be facing toward the rising Sun. Another smaller container of water was placed beside it. On the bench next to the tub lay four plain, smooth-textured flaxen towels (without embroidery or designs).

<sup>1</sup>The first part of this chapter and the following two chapters are told in Anastasia's words, without identifying quotation-marks.

During a Vedruss birth only the husband was to be present in the room with a birthing mother. Even the couple's parents and close relatives, as well as experienced midwives, were excluded.

Just before labour began, the child's father would light a fire he had already prepared at the outer entrance to the domain, from which wafted sweet-smelling smoke. This was where the close relatives usually gathered, along with the midwife, and often a wise-man.

The birthing mother's and her husband's parents would bring in bundles and baskets of food and drink. They would sit down on benches under a tent-roof which had been set up earlier next to the fire-pit by the husband. Vedruss tradition forbade them from crossing the line into the domain. Nor was the birthing mother's husband permitted to go out to them, or even to talk with them at a distance.

Such rules were not the product of some kind of superstition, but the result of finely tuned psychological calculations. Nobody and nothing was supposed to distract the thought of the father, let alone the birthing mother, from the reception of their child.

The presence of the parents and midwife at the entrance to the domain, however, had a calming effect on the young parents-to-be. In case any abnormalities cropped up, they could always come in to help. But there was rarely a need for such assistance.

During the contractions the mother would constantly talk with her emerging child, giving him words of encouragement, helping him enter upon his new world without fear. The Vedruss people well knew how important it was to communicate both mentally and audibly with the new Man as he emerged into the world. As a result, all three — mother, child and father — were participants in the process.

It was also very important that the mother's first look at her newborn be without any fright at his appearance (a

temporarily snubbed nose, for example, or the birth-colour of his skin), that her gaze be tender and joyous.

The father would pick up the baby out of the water he had been born in, use his own mouth right off to suck the mucus out of his little mouth and nose, and place him on his mother's tummy. The mother would then offer the baby her breast. This prompted the expulsion of the placenta, which the father placed in a specially prepared container, before cutting the umbilical cord with a knife which had been disinfected over a flame, and tying it.

Then the father took the baby and placed him on a towel. After washing him, he wrapped him up in a second towel and placed him on the bed. Then he washed his wife's body, using water from the other container next to the tub, dried her off with a clean towel and led her over to the bed where the baby lay.

Next the father, using either his mouth or his hands, strained off a small quantity of milk from the mother's breast and sprayed it over a flaxen sheet, with which he covered the new mother and the infant lying on her tummy or breast.

After that, the father sat down and gazed silently at his wife. If she desired, he would talk with her, but even if she were asleep, he would not leave the room.

About fifteen minutes later, he would light the wood-fire he had earlier prepared in the hearth.

He would then pour out the birthing water, as well as the water the woman had used to wash herself, between the two trees which had been planted soon after conception. Here, too, was where the placenta would be buried.

The relatives that had gathered at the entrance to the domain would see the smoke from the chimney and understand this, along with the father's actions, to signal that the birth had taken place successfully. At this point they began exchanging congratulations and partaking of the food and drink

they had brought with them, after which they dispersed to their homes.

The Vedruss people understood that even in the womb the child could sense relatives' thoughts and feelings. And after coming into the world, he would continue to find himself in his parents' aura. If some kind of outsiders, even a relative with good thoughts about the child, happened to be in the birthing room, their feelings — even good ones — would be unfamiliar to the child, and put him on the defensive.

Besides, either deliberately or inadvertently, the relatives might distract the parents' thought from the infant. It was in the parents' mental field, after all, that the baby would feel the most comfortable.

A little experiment should help prove what Anastasia has said here.

Many women are aware that during breast-feeding they should not allow themselves to be distracted by random conversations and thoughts, especially on negative topics. They are concentrating their whole attention on their child, on his feeding, and mentally conversing with him.

For evidence that the baby really does feel the mother's thought, try entering the room where a mother is nursing her baby and strike up a conversation with her. The baby will at once feel uneasy, and may even stop his sucking and start to cry. He has become uncomfortable, and his Mama's thoughts about him have weakened or have wandered off somewhere.

But perhaps the baby was simply disturbed by the stranger's voice or odour?

I telephoned my daughter Polina. She picked up the receiver and started talking with me. Thirty seconds into the conversation I heard the cry of my granddaughter Mashenka.<sup>2</sup>

"Why is she crying?" I asked my daughter.

"I'm breast-feeding her, Papa," Polina responded. "She doesn't like it when I'm distracted."

I tried to end the conversation quickly. I did the same whenever I rang at an inopportune moment. My granddaughter would always start crying.

Many nursing mothers who are familiar with the culture of breast-feeding will confirm this phenomenon. But it does not happen, as a rule, with children of mothers who are unaware of the importance of mental contact with their nursling, who chat away at feeding time with all and sundry or spend the time thinking about their own problems. Why not? Because their child has no concept of mental contact with his mother. It is something he never had, and so has no point of comparison.

There's an old saying: *He took it in with his mother's milk.* What are our babies today taking in with their mother's milk?

Human society has learnt to create all sorts of satellites and intercontinental ballistic missiles. Yet at the same time it has lost something more important — the culture of giving birth to and raising Man. As a result, people end up aiming these missiles at each other.

Now what possible connection could there be between the culture of prenatal education, the breast-feeding of children and wars? A most direct connection, indeed!

<sup>2</sup>*Mashenka* (stress on first syllable) — an endearing variant of the name *Maria* (corresponding to *Mary* in English).

Many still remember the account of the Rostov serial killer Chikatilo.<sup>3</sup> He performed sadistic acts on young women and then killed them. Such maniacs have appeared in many other cities, terrorising the populace. Each time hundreds of policemen are despatched to hunt down and capture the killer.

But an interesting pattern emerges from this. It has been established that in the case of three Rostov maniacs, at least, their mothers had all made unsuccessful attempts to abort their foetuses in the womb. As a result, when the foetus was born and grew into manhood, it then began taking revenge against women.

Now tell me which is more important for high-school graduates: to get high marks in physics, chemistry and a foreign language, or to acquire a high knowledge of the culture of the conception, carrying and raising of a child?

I would say the latter is by far the more important. And yet the disciplines which present such knowledge are not even taught in the school curriculum. Hence there are graduates of schools, colleges and universities who give birth to children which they have conceived haphazardly. They often reflect on whether to give birth at all, or perhaps an abortion would be better?

They may end up giving birth, only what kind of babies are they giving birth to? The kind that not only should not be exposed to the achievements of physicists and chemists, but should even be kept as far away as possible from knives and sticks.

The birth of advanced spiritual thinkers is especially important in this age of scientific and technological progress.

<sup>3</sup>*Andrei Romanovich Chikatilo* (1936–1994) — a Russian serial killer in the city of Rostov-on-Don, who was convicted of murdering 52 women (mainly prostitutes) and children between 1978 and 1990.

It is a tragedy when a maniac like Chikatilo kills and tortures women. It is a blessing that nobody like him is sitting at the controls of nuclear missiles.

A blessing — a blessing, okay — but the caveat must be added: *for now*. The worst *will happen* if society does not change its attitude toward the culture of giving birth to Man.

Anastasia continued:

With their knowledge of this culture, Radomir and Liubomila effected the transition of their first-born son from his mother's womb to his new world quite smoothly and painlessly. Possibly, even joyfully both for themselves and for the infant.

Liubomila had an easy and fear-free birth, and a cheerful one, too. When the baby came, she let out not a cry of pain but a cry of joy, of welcome. She herself drew him out of the water and embraced him.

When Radomir washed Liubomila with pure water and then dried her off, he felt like kissing every corner of her body. He even wanted to get down on his knees before her. And he knelt beside the bed as his smiling Liubomila lay under the sheet with her newborn son. As he stood there on his knees, he said softly and penetratingly:

"Thank you, Liubomila. You have co-created a child, you are a goddess. You can make dreams come true."

"We have co-created a child, Radomir," Liubomila responded with a smile.

## CHAPTER EIGHTEEN

# Not Radomir's last battle

Many happy years went by. By now their children, grandchildren and great-grandchildren were living in domains of their own. But Radomir and Liubomila's love was as strong as ever. Even though their hair had gone grey, they grew happier with each passing year.

Radomir stood alone at the entrance to his domain. He looked at the road which led toward a little hillock and disappeared behind it. It was along this road that his sons and grandsons had headed off to battle two days ago. Even his teen-age grandsons had gone.

The enemy that lay ahead of them was most unusual. A prince had brought some sort of people from a foreign country who were all dressed in black and, for some reason, called themselves *monks*. In each settlement they visited, they declared that the entire populace had not been living a proper way of life, that their ancient beliefs and rites needed to be eradicated and that they should bow down to a different god.

The prince himself bowed down to it, as did his entourage and armed garrison. No sooner had the prince adopted a different faith than the men in black proclaimed his authority as coming from God.

Along with the men in black came soldiers dressed like those in the prince's garrison. They attacked each settlement in turn, demanding that everybody think differently about what they called 'God'. When they found people unwilling to bow down to the foreign 'God', they killed them with the sword and burnt their houses and orchards.

The tribal elders held a council to decide what to do. They called the monks and the prince before the council, but these only spoke to them of the 'higher good' their new 'God' would bring, thereby misleading them with a doctrine nobody could make head nor tail of. The elders were encountering a phenomenon they had never seen before. Whenever an out-and-out enemy had attacked the settlement before, men from all the families quickly formed a militia and collaborated in driving the foe from the land.

But here were monks carrying on about 'love' and 'meekness' — about 'blessings', and the marvellous life in Paradise awaiting anyone who submitted themselves to the new faith.

What the elders did not at first understand was that hiding behind the shield of these beautiful words was an entity which had definitely *not* been sent to them by God.

The God of the Vedruss people used no swords. The monks, on the other hand, were backed up by aggressive armed garrisons. Residents in some of the communities headed off to the woods, while others joined battle. Some immersed themselves in deep contemplation.

That day at dawn Radomir witnessed the departure of his grandsons from his own domain and his sons from neighbouring domains. They met at Radomir's domain early in the morning, as though they had planned it among themselves the night before.

*Of course, they planned this*, Radomir decided. After all, just the night before, his and Liubomila's eldest son had said:

"Tomorrow we're heading out for some war games. We shall learn how to keep enemies from invading our lands."

They departed, but still had not returned by the next day's sunset. And old Radomir kept watching the road.

Before long, a lone horseman emerged from behind the hillock, heading toward Radomir's domain at full gallop. On the spirited steed another grey-haired oldster, not unlike

Radomir himself, sat skilfully in the saddle. Squinting his eyes, Radomir recognised his old childhood friend Arga.

The grey-haired horseman climbed down from his steed with a groan and quickly began questioning Radomir:

"Who's left in your domain? Only talk fast."

"Liubomila's working on supper and our youngest great-grandson is after her with questions," Radomir calmly replied, adding: "It's strange, Arga, how you started asking me a question right off, without even saying hello."

"No time, I'm in a hurry. Get two horses right away, bring along Liubomila and provisions for three days, and bring your great-grandson with you, and come with me immediately."

"Where to?"

"To the woods, to the Drevlians.<sup>1</sup> There's one family there I know fairly well that will give us shelter. No foe will find us there in the dense forest. Perhaps the people will come to their senses as time goes by. Save your great-grandson, Radomir, and you'll save your family line."

"And here I thought you'd galloped over to *help* me, Arga. I see two Vedruss swords tied to your saddle. What do you need them for, if you're planning to hide out from our enemies tonight in some place in the woods?"

"The swords are just in case. I'm not about to fight anyone. Besides, there's a whole horde of them — we'd be utterly routed. What's the point of dying thoughtlessly like that?"

<sup>1</sup>*Drevlians* (Russian: *drevlianye*, stress on middle syllable) — the name applied to a collection of East Slavic tribes from the sixth to the tenth centuries along the Pripiat River in what is now Ukraine. The name is derived from the root *drev-*, signifying both 'of the woods' and 'of ancient origins'. Following their armed resistance to the invading Kievan princes, which resulted in significant bloodshed and executions among the civilian population, by the mid-tenth century their territories had been absorbed into the Kievan Rus' empire, while their popular resistance to the 'authorities' and the Christian church continued for many centuries thereafter.

“Yes, I know, Arga. You never fought with anyone. You never even tried to join in any of the manly games at *Maslenitsa* time.”<sup>2</sup>

“That’s beside the point. You and I both know, Radomir, that Man’s life may be eternal, that his soul may be reincarnated in turn in an earthly form. But for that to happen, Man must not reflect on death as death approaches, but instead direct his thought toward a marvellous future. Where his thought is to be found, there will Man be regenerated anew.”

“I know all that, Arga. You and I were both taught together by the wise-men.”

“Then you ought to recall, Radomir, that you can fall and be fatally wounded in battle, and be deprived of the opportunity to think about your reincarnation.”

“I remember, but, again, Arga, I cannot leave my family domain. It is alive, and it won’t understand if its friend and master suddenly betrays with disdain the Space which has given him its love and abandons it to be torn apart by an enemy.”

“*It is alive, and it won’t understand!*” You’ve always been overly sentimental, Radomir, and you still are today. Well, then, stay if you like. Go ahead and stay.”

Arga paced quickly back and forth, gave his horse’s mane a bit of a tousle, and again came over to Radomir. The two grey-headed oldsters stood facing each other without a word. Nobody can ever say what made their hearts beat back then — perhaps each was immersed in a whole range of thoughts of his own. Once more it was Arga who was the first to break the silence, as he began entreating with noticeable agitation.

“Stay, if that’s what you’ve decided, Radomir. But... but... do give me Liubomila and your great-grandson, and one of your steeds. At least let *them* depart and save themselves.

<sup>2</sup>*Maslenitsa* — see footnote 9 in Chapter 9: “The Creator’s greatest gift” above.

Stay yourself, if you like, if you are unwilling to part from your living Space."

Radomir gazed at his friend and replied:

"You can ask Liubomila about that yourself, Arga. I know you've loved her all your life. That was why you could never marry any other girl and set up your own family domain."

"Who? Me? I loved her? That's utter nonsense!" Arga exclaimed, as all at once he started pacing again, as though trying to persuade himself of the truth of his claim. "I'm an artist, and all my life my aim has always been to draw designs and carve small statues. What would I need a wife for? I'm your friend, and my intent was to help you save and extend your family line. As for Liubomila, I'd quite forgot about her."

"You are an artist, Arga, and a great one. And an ace of a wood-carver — the best around. Your little statues grace many of the houses in these settlements. And doesn't everybody concur that all the women you draw have a face resembling Liubomila's! Your carvings, too, look like her."

"*Look like her?* So what of it? It's just that I've tried to perfect a certain type of face in my pictures."

"You've taken pains to hide your love all your life, Arga," Radomir maintained. "And now you're hiding it again. I was at the pine tree which remains all by itself at the edge of the forest. I know you often liked to sit beneath it and carve your little statues. I recently came upon your hiding-place there, where you've stowed away your latest unfinished work — the one that shows a beautiful maiden taming a hot-tempered steed. That is something only Liubomila could do, as is known to both of us, me and you."

"*I loved, I didn't love, I carved, I drew.* That's beside the point — it's not what we're about now, do try to understand." Then, after a brief pause, Arga exclaimed, almost shouting:

"Radomir! Radomir, all your sons have been slain in battle, and all your grandsons too!"

Radomir maintained his outward calm, looked at Arga but refrained from speaking.

"Save yourself!" Arga continued to exclaim. "I saw them before the battle. I tried to dissuade them from joining such an uneven fray. Your eldest son, your first-born, he's made just like you, an exact copy, in fact..."

"Stop beating around the bush, Arga!" Radomir entreated his childhood friend, though showing no outward signs of concern. "Tell me, what did my eldest son say?"

"He said: 'We'll join the fray. We'll manage to hold off those 'black monks' at least for an hour or two.' I asked your son: 'Why should *you* die in strife? What good are those couple of hours to you?'"

"Our whole family decided this in a council meeting,' your eldest son replied. He said: 'May our parents, Radomir and Liubomila, enjoy at least two more hours of a happy life.'"

"Even though they were greatly outnumbered by the 'black monks' and their soldiers, your sons, along with some children from the next settlements away, managed to stave them off for a whole day. Eventually the monks slayed the children, hacking them to pieces, then went back to their lair again. Tomorrow morning they'll start heading for your domain."

Radomir listened to his friend but gave no response. Arga continued, agitatedly:

"I galloped over here to help you save your family line. You and I both know that reincarnation on the Earth is possible. But this way there will be a finer chance of being reincarnated in a body of a family member. Only your great-grandson this time is capable of extending the family line. Let me have Liubomila and your great-grandson, I'll help..."

All of a sudden Arga stumbled in his speech and paused. He began to peek past Radomir. Radomir turned and looked. Behind him, resting against a tree, stood Liubomila. Tears

were rolling down her cheeks. A trembling hand was clasped to her breast.

"Did you hear what Arga said?" Radomir asked Liubomila.

"Yes, I heard," she replied with a trembling voice.

"So why are you crying, Liubomila?" Radomir went over to her and began stroking her hair and kissing her hand. "Our children have surrendered their lives so that we can thrive one more day here in gladness. It is not right for us to spend it in sadness."

"No, it is not," smiled Liubomila through her tears.

"You are bright, my dear wife. You have gained the wisdom of the wise-men more mightily than anyone else. Think about how best the remainder of the day, the night and the morning, should be spent."

"I think, so as to do right by the children, we should enter into our Space of Love. Our grandson is there in need — it is time to feed him."

And, taking each other's hand, they headed for the entrance to their family domain.

Arga climbed into the saddle and cried out as they walked off:

"You're both mindless, sentimental old fools! You ought to save yourselves. You're not in a position to fight with anyone. If you're wounded, it's possible you might not succeed in sending a thought into space about your reincarnation. I'm getting out of here. I'm going to save myself. I recommend you do the same."

At the entrance to the domain, Radomir turned around and responded to his old friend:

"Save yourself, Arga. Gallop off to your hiding-place in the forest. We are tracing a different path to salvation."

Arga spurred on his steed, which rose on its hind legs and galloped off to the forest at full speed.

## CHAPTER NINETEEN

# From the stars will they return to the Earth

As they were walking toward the house, where their great-grandson Nikodim<sup>1</sup> was waiting for them, Liubomila said:

“I think, Radomir, that we should now begin a brand new game with our little great-grandson — the game of life.”

“What kind of a game is that?” Radomir asked in surprise. “I’ve never heard of it.”

“I’ve never played it either. But I learnt about it back in my childhood, when I happened to overhear two old wise-men talking with each other. The gist of the game is this: one person plays out all the different stages of life with a child, while the other recalls in detail, as fast as he can, everything he has known in his lifetime, and imparts this knowledge mentally to the child. And if the thought of the narrator is clear, the child memorises the story through his subconscious. And when he grows up, he finds all sorts of hints about life within himself.”

“Who d’you think should lead the playing with our great-grandson, Liubomila?”

“You do that, Radomir, while I tell him the story through my thought.”

“But how will you be able to impart to him all the wisdom of life in just one hour? After all, it’ll be time to put Nikodim to bed in an hour from now.”

<sup>1</sup>*Nikodim* (pron. *nee-ka-DEEM*) — a Russian name corresponding to *Nicodemus* in the Bible (see John 3: 1).

"I shall manage. You just start the game, and mark off the different stages of life with a clap of your hands."

Four-year-old Nikodim ran to meet them, his arms open wide. Radomir caught him and gave him a toss in the air. Then he set him back down on the ground and began to say:

"I recently heard tell of an interesting game. Would you like to play it?"

"I would," answered Nikodim. "But how is it played?"

"I shall name something from life in words, and you tell us what it's about without words, using actions and gestures. And Grandmother will watch you act it out."

"Terrific!" exclaimed Nikodim, as he started jumping for joy on the spot. "Let's start playing it right away."

"Okay, let's begin," said Radomir, clapping his hands. And he went on: "Once upon a time there was born into the world a little boy named Nikodim. He was just a wee little baby back then."

The boy at once lay down on the ground, flung out his hands and bent his little legs at the knees. "Waa, waa..." he bawled, imitating a baby.

Radomir clapped his hands and continued:

"In time the baby began to get up on his little feet and walk."

Whereupon Nikodim at once got up on his feet, and took a step as though it were his first, staggered a bit, and then dropped down to all fours. He crawled along for a metre or so and then got up again. But this time he was already walking steadily.

Another clap, and Radomir went on:

"The little one's interest connected with everything: he inspected the bugs, and the grass, and tried to detect how apples grew on trees. He reflected on why the Sun came up and why he felt so warmly affected by everything both in summer-time and when winter came."

Little Nikodim bent over to inspect a bug creeping over the grass, he looked up at the sky and jumped for joy, then all at once ran over to his grandfather, put his arms around the old man's legs, then he dashed over to his grandmother, who was sitting on the grass. Claspng her around the neck, he pressed his cheek against hers and gave her a kiss.

Radomir again clapped his hands and said:

"One day it happened that all the people left their domains. They did not travel along the roads, and where they were going was not heard. Perhaps they flew away like the birds, on their way to the stars.

"Then into the domain, where the little one had been left alone, came a foe who burns houses and hacks down orchards with an axe."

Little Nikodim listened to his great-grandfather's frightening tale. This time he stood motionless, without attempting actions or gestures, and finally said:

"I don't like this game. That should never happen in life."

"Yes, in life it shouldn't, you are right," Radomir replied to his great-grandson. "But this is a game, after all."

"Well, I shan't play it!" The boy stamped his little feet and cried out: "*I shan't!*"

"I'll take over," declared Liubomila, getting up from the ground. "When the little one caught sight of the foe, he called over the bear that he had played with when still just a wee mite. He took hold of the nape of the bear's neck, just as he had always done. He grasped hold of the bear's fur with all his might, and the bear lumbered off with him into the woods."

With these words Liubomila called out in the direction of a little grove of trees where their household animals lived:

"Hey there, brown bear, come over to me! Come on, come on, as quick as can be!"

Out from the grove emerged the bear and bounded over to Liubomila. When he came up beside her, she began stroking

its muzzle. Then she whispered something in its ear. She tousled the fur on its shoulder, then, grasping hold of it with her hands, sprang onto its back.

“Hey, giddy-up!” she called to the bear.

The bear ran around in a wheel formation with all his might, until halted by Liubomila.

“But why would our great-grandson go off to the forest on a bear, and not on a horse?” asked Radomir, and Liubomila replied:

“Of course, a steed could go faster than a bear over the fields, but a horse would be helpless indeed in the woods, while the bear will find food and shelter there. Besides, in the woods the bear will offer the best protection. So there’s your answer. Let’s go on with the game...

“So, the bear ran off into the forest and hid the child there from the foe. He took care of him until the boy grew up to be a man.

“When he had grown, one day the young lad caught sight of a girl in the forest, who had come to pick berries in a glade. They liked each other right off, and later got married. They found a spot on the ground which would be hidden from malevolent eyes, they built a domain and began to bear children. And all their relatives who had flown off to the stars long ago, came back to the Earth.”

As he drifted off to sleep, little Nikodim thought about the game, but he did not find it entertaining.

During this time Liubomila and Radomir walked about their family domain and recalled the life they had lived there. It had been a thoroughly joyful experience.

Liubomila laughed like a child when Radomir tried to portray her as a little girl standing amidst the tall grass.

“D’you recall? You remember how you called out back then that I was a good-for-nothing, ’cause I had raised the hem of

your dress? I dried your tears with your dress, and you talked about being dishonoured.”

“Yes, I remember it all,” his wife responded, laughing. “But I thought of something just now: you could have dried my tears with the edge of your shirt.”

“I was a smart boy, I was. I decided: why soil and mess my shirt, when I was going to have to wash out your dress in any case?”

“Yes, you were a smart boy. But still, you did lift up the hem of my dress, you good-for-nothing!... Oh, look at our spot, the wedding mound! New flowers have come up. And look how tall and majestic the cedar has grown! It was so small when we planted it on our wedding day.”

Liubomila pressed the palm of her hand to the trunk and rested her cheek against it. She stood there without saying a word. Radomir, as love-struck as ever, put his arms around her shoulders as before and said:

“Where shall we sleep tonight — here or in the house?”

“Wherever you say, my darling.”

The next morning a detachment of fifty soldiers entered the domain. With them were two monks dressed in black. The soldiers saw an old man standing by the cedar, and an old woman beside him, her back pressed against his. Each of them held two swords in their hands.

“You see?” the elder monk called out to the soldiers. “You see the infidels standing there? These infidels have borne children. Don’t use your arrows — hack them to pieces with your swords.”

Two warriors approached the elderly couple from different sides, their swords raised. They tried to land a blow, but Radomir managed to turn back the foe and disarm one of the warriors with his sword. And Liubomila warded off the attack against her. Then the old people repelled a second attack, then a third. After that the soldiers began fighting with each of them by twos. But Radomir had two swords in his hands, which flashed like lightning. He warded off both attacks simultaneously, but did not shed the soldiers' blood.

The grey-haired Liubomila laughed as she, too, repelled both attacks on her.

"Everyone step back," shouted the elder monk. "They are being helped by an unclean force! Everyone step back. Everybody shoot at them with your bows."

Those wielding the swords retreated. Others prepared their bows, but as soon as they had reached for their bowstrings the old couple threw down their swords, turned to each other and embraced. Radomir whispered something to Liubomila, and she smiled in response.

"What're you waiting for? Shoot!" shrieked the monk. "*They* are infidels! *You* have been sent by God! Shoot or I'll curse you!"

One arrow went into Liubomila and two into Radomir. But as though they did not feel any pain, the old couple still stood there embracing as before.

The arrows flew. The ground was covered in blood. And Liubomila and Radomir slowly sank down, or perhaps they flew off to the stars. As their bodies lay on the ground, the elder monk, the priest's emissary, looked into their faces and said to himself: *They were not thinking about death as death approached. Their thoughts were of life. Their faces show no fear nor sorrow. What must be done to prevent them from being reincarnated again?* He stood there in fear, feverishly trying to come up with a solution.

All at once behind his back rose a murmur of agitation. The monk turned around and saw six soldiers lying dead on the ground beneath the apple tree. Each of their hands was clutching an apple core.

The monk knew right away what had happened. The high priest's emissary knew that the Vedruss orchards produced marvellous fruit, but it could only be eaten when the garden's owner gave it of his own free will. The Vedruss people treated their trees and flowers as living beings, which repaid them with their love. When the trees and flowers saw how strangers acted toward the people who had bestowed their love upon them, the apple tree called up other juices from the depths of its roots and infested its fruits with an extremely strong poison.

"Don't touch it! Don't eat anything here!" cried the monk. "I told you, this is a devil's tribe, and the place here is unclean. I command you in the name of the Almighty to cut down everything, but everything, here."

"Look!" yelled one of the soldiers. "Look over there!", waving his hand in the direction of the entrance to the domain.

Everybody turned to see a bear heading out of the domain by leaps and bounds. On top of it, clinging on to its fur, rode a little boy. The bear rushed out of the domain and made a headlong dash for the woods.

"After them! Go get them!" shrieked the monk. "Don't come back until you have hacked the little vermin to pieces."

He knew that if even one of the Vedruss people escaped, their whole line could be regenerated on the Earth. But he did not tell this to the soldiers. To them he simply kept referring to the 'will of God'.

"Go get 'em! God commands you to rout out everything unclean from the Earth! You see how unclean it is here?!"

The detachment's commander ordered a dozen soldiers to follow the bear, catch up to it and kill the boy. The soldiers

jumped on their steeds and headed out after the bear at a gallop.

In the meantime the bear was bounding quickly toward the forest. But it could not keep up such a feverish pace for long. And the pursuers, galloping as they were at full speed, were gradually catching up. The distance between the bear and the horsemen slowly but surely narrowed. They were only about a hundred metres from the forest when one of the pursuers caught up. Racing alongside, he raised his sword to kill the child. But the bear suddenly rose on its hind paws and took the blow on itself. The horse with the rider struck out to one side and reared. In the meantime, the wounded bear continued streaking toward the forest. Now it had a mere fifty metres to go, but by this time the detachment of horsemen had almost caught up, swords in their hands at the ready.

But then all at once the soldiers noticed another horseman, this one all on his own, heading out from the woods directly toward them. An old man was sitting with ease in the saddle, his grey hair and beard waving in the breeze. Each of his hands brandished a sword, while he controlled his steed with his legs alone.

"Giddy-up! Giddy-up!" the old man called, and spurred on his horse which was already moving at an incredible gallop.

"He's ready to fight us. Make ready for battle with this crazy old man!" the detachment commander shouted to the rest.

"But he's all alone, and there're ten of us," a warrior protested. "He's just an old man, what's there to be afraid of? We need to get on with the chase!"

"Yes, he's alone, but he's a *Vedruss*! Make ready for battle, whoever's not a timid goose!"

The elderly attacker on his steed galloped around the detachment of horsemen. With his swords he managed to disarm the two outer warriors and cut the saddle-girth from two

of the horses, at which point his own extraordinary steed was wounded by an arrow.

But the old fellow did not direct his wounded steed toward the forest, but galloped along the edge of the woods, causing the whole detachment to pursue this course as well. When they got to the lone pine tree at the edge of the forest, his horse stumbled and the rider fell. The old man jumped up from the ground and started running toward the pine. He was looking for something in the grass at the time the detachment caught up with him.

The pine tree took seven arrows in its chest, but the eighth pierced Arga's breast. The thrown Vedruss rider lay on the ground, but did not groan. A stream of blood flowed from his chest. The pine tree, being wooden, could not lament the wound, while Arga's thought rose to the heavens in a state of doom:

*I don't ask for myself any reincarnation,  
But I give them my thought for their future creation,  
To add to their joy and their great inspiration.  
Get together, reincarnate, and live without end,  
Radomir, Liubomila: I'm no foe, but your friend!*

The Vedruss lay there on the ground, but did not utter a sound. Even in his weakened state, he was still able to press a little statue of his beloved to his breast.

"*Good shall prevail!*" he whispered to his beloved, almost in a wail. And the wooden pine tree wept. A rather strange-looking pitch began showing itself, flowing down its trunk.

All at once the Vedruss opened his eyes and his vision was clear. And, barely able to enunciate the words, he blurted out:

*Don't be sad, little pine tree, it's all nonsense here.  
My thought will break through these bad times of barbarity.  
Once more there will flourish bright ages of clarity.  
To all earthly goddesses the morn will give hail  
And my thought will imply to them: Good shall prevail!*

The soldiers on their steeds did not succeed in catching up to the boy on the bear. They tried to penetrate the forest, but the forest did not turn out to be a friendly place for them. Their steeds began snorting in fear, and no clear path under their feet remained. The soldiers returned and explained to the monk that the boy had been slain.

A few years went by, and people began to say that while they were mushroom-picking in the woods, they caught sight of a boy about ten or older. He would peer at them from the bushes, but seemed afraid to come near. And there was always an old lame bear with him.

Some time later, two young boys got lost in the forest and became frightened. A youth came toward them and gestured them to follow him. He led them to the edge of the woods, right to the road which led to their settlement, while he himself retreated once more into his forest hiding place. After this incident people stopped being afraid of the forest youth. And when, a year later, he headed out of the woods one day toward a group of young lasses gathering berries in the glade, the girls were not afraid of him and did not run away.

The youth was blue-eyed and of slender build. He was dressed in clothing woven from grasses. He stood at the edge of the glade. One lass in particular caught his eye, whose name was Praskovia. In truth, he could not take his eyes off her, and everyone suddenly stopped picking berries and stared at the youth.

Then very slowly, so as not to frighten them, he took several steps toward the group of girls, and stopped. Seeing that the maidens were not running away and were not afraid of him, he approached young Praskovia, stood facing her, smoothed out his hair and blurted out, though not without some stumbling:

“Together with you, my fair maiden, I could create a Space of Love to last forever!”

Praskovia had absolutely no idea as to what these words meant, but for some reason her cheeks flushed with a rosy glow and she began to talk with the young lad.

“Where do you live?” she asked. “Everybody says you live in the forest, all on your own.”

“For the time being I live on the Earth alone,” replied the youth.

“Alone? But where are your parents, then? No one exists without some kind of family.”

“They are living. My father and mother, and elder brothers, and my sisters. And my grandfather Radomir, and my grandmother Liubomila.”

“And where do they dwell? In the forest as well?”

“They have flown way up high to the stars in the sky. They will come back down to the Earth from afar when I have found my intended. I shall create and form a Space of Love all around, and this is where our children will be born.”

“But how will you look for your intended in the forest?”

“I shall not need to look — she has already been found.”

“And who is she?”

"*You*, my maiden — you are the most splendid of all. I ask you now to come with me to my Space, which I have already begun to create. I shall build a house, but... there are just a few tools I need to get. Not having them yet, I have constructed a shelter in the meantime. I have been observing from afar how it is done."

The maidens whispered amongst themselves and made fun of the youth. By this time they had become quite unafraid.

Praskovia did not answer his proposal right away, but withdrew to her group of maidens. The young man stood a little apart, looked to the sky and opened his arms wide, as though apologising to someone, then slowly turned and headed away from the glade.

A hush fell over the maidens. Praskovia watched him depart and then all at once called out loudly and confidently to the youth:

"Wait for me here tomorrow. I'll steal the tools you need from my father as a dowry."

The youth quickly turned around, and ran over to Praskovia. The maidens saw him smile for the first time. And all their cheeks flushed with a rosy glow. The young man's smile was extraordinary, and his eyes were beaming all the while.

"How handsome he is! Too bad he didn't pick me!" whispered one of the girls.

"I'm ready to go with him, too," another announced all of a sudden.

In the meantime the young man said to Praskovia, not seeing anyone around:

"You mustn't steal. That is not a kind deed."

"I was only joking. My father will be glad to give me anything I need."

From that point on, nobody ever again laid eyes on the pair — they saw neither the forest youth nor the maiden Praskovia, who had gone off with him to goodness-knows-where.

## CHAPTER TWENTY

### Even in chaos there is a purpose

“Life continued on the Earth,” Anastasia went on. “But it was not the same life as before. The great Vedruss civilisation, its traditions, rites and culture, which had existed for tens of thousands of years, were replaced by a chaotic, barbarian order of human society. In our state the period of slavery began with Kievan Rus<sup>1</sup> and continues to the present day.”

“But wasn’t the Vedruss civilisation destroyed even earlier in other territories of the Earth? I remember you saying, Anastasia, that the Vedruss way of life was prevalent among the inhabitants of what is now Germany, England, Poland and the Baltic countries.”<sup>2</sup>

“Yes, I did say that. It was all one people, one language, one culture. If you look closely, Vladimir, you will see that they all resemble each other even in outward appearance. This despite the fact that for more than two millennia there was a good deal of blood-mixing between them and Asian peoples.”

“But why did things come about like that, Anastasia? You said it was a great civilisation and a great culture, yet in the blink of an eye this civilisation was destroyed by the sword, fire and arrows.”

<sup>1</sup>*Rus* – see footnote 4 in Chapter 5: “Conception involves more than flesh” above.

<sup>2</sup>A reference to Anastasia’s declaration in Book 6, middle of Chapter 4: “A dormant civilisation”.

“Not *destroyed*, Vladimir. That word is not really appropriate. As long as there are at least nine people on the planet who are striving for a conscious awareness of the Divine earthly being, the Vedruss civilisation is alive. But now, after all, there are not just nine people, but hundreds of thousands who are discovering more and more the truth within themselves and are changing their way of life at the core. They will soon number in the millions, but for now these hundreds of thousands should be seeking for the answer to the puzzle within themselves, for an understanding of how the disaster came about.”

“But what if they don’t understand? On our Internet site there’s a whole lot of people who’ve been trying for several years now to determine what specific mistake mankind permitted to slip through in the Age of the Image.<sup>3</sup> There’s a discussion forum there, known as “The mistake of the Age of the Image”. But so far nobody’s managed to make out what that mistake might be. There’s a lot of variants, but no overall answer here. It may not come for another thousand years! Maybe nobody will ever be able to determine the mistake.”

“They will. Perhaps in a day, or perhaps in five to nine years. They will find the answer.”

“How can you be so sure?”

“Think about it, Vladimir. It was only a short time ago that people did not even talk about the subject at all, and there were not even any attempts to *think* along these lines. Now you tell me yourself that a whole lot of people are endeavouring to solve the mystery. Thought is switched on. Just like a little shoot from a seed, it will find its way to the light.”

“It will find it someday, perhaps. People today are mainly involved in the routine of their everyday life. Your grandfathers and you have had the opportunity to do a lot more

<sup>3</sup>*Age of the Image* — see the section on “Vedism” in Book 6, Chapter 5: “The history of mankind, as told by Anastasia”.

reflecting. Besides, you have access to a huge amount of information about the past, and then, naturally, you have your own view of things. Why not share it? At least give people a hint?”

“In other words, Vladimir, you are asking me to switch people’s thinking off?”

“Now why would *I* be the one who wants to switch it off? Why would a simple hint have that kind of result?”

“If everybody who is trying to work out the solution today in their thought takes the hint as ‘gospel truth’, their thinking will immediately cease operations. Then they’ll be expecting even more hints. And you may be sure that the hints will come — in fact they’ll quickly pour down in showers upon them. That is precisely what is happening right now. People are getting hints right and left about what is healthy to eat and drink, how to dress, where the best resorts are, how to live, where to search for God. And what is the result? Life progressively gets worse. God created the order of the Universe with His thought, and He gave thought as a gift to Man. But somebody is constantly trying to bring it to a halt.”

“Does that mean you know the answer, but you don’t want to talk about it?”

“I do not know the answer, but I can presuppose.”

“Well, what presuppositions have you come up with, for example, pray tell?”

“Perhaps a period of chaos was needed, a period of mistakes, so that mankind might have a complete account of it and not repeat it in the future. Similar phenomena have emerged in history when mankind is on the verge of a great discovery — a discovery of universal proportions.”

“Now *that*, Anastasia, is what I call a good and encouraging presupposition. Your story about the Vedruss family, Liubomila and Radomir, had a very sad ending — quite unlike your usual optimism.”

“Vladimir, why have you decided that the story has come to an end? Life continues, and so not a single story about life can ever be considered to have come to an end.”

“I remember how the great-grandson, Nikodim, went off with Praskovia and continued the family line, but I still feel sorry for specific individuals like Radomir, Liubomila and others. The story about *them* cannot be continued. One can talk only about continuing the family line. If there’s something more you can tell me, then please do tell me, Anastasia.”

“Fine, I shall tell about events that took place in the very near future.”

## CHAPTER TWENTY-ONE

### ‘Soulmate gatherings’

The time came when people started to realise the need of searching for their soulmates. Earlier they had been taught that the lovers themselves should find each other by the whim of fate. Of course that is true, but then Man may also control his own destiny. Or at least give fate a hint as to what Man desires of it.<sup>1</sup>

And so people in different towns began to organise special events to facilitate two soulmates getting to know each other. And they even applied some of the rites of the Vedruss period, with just a smidgen of adaptation to fit modern situations.

Every autumn, after the tasks of summer are completed, large gatherings take place in various towns, attended by young and old — anybody who has not yet been blessed with a happy home.

These are mainly your readers, Vladimir — those among them who have been endeavouring to build a domain to start up a happy family line.

These gatherings might go on in various towns over a period of two or three months. Your readers spread word of them ahead of time. And they come from different places and countries. Some might come for a week, some for a month. And your readers in particular have a significant advantage over others desiring to create a happy home. All the participants in these gatherings have a single goal — a conscious

<sup>1</sup>In the first part of this chapter, as well as in the following chapter, except as otherwise indicated, the narrative is presented by Anastasia herself.

awareness and concept of how to build a happy life for their future family.

"Wait, Anastasia, how is it that my readers specifically had a significant advantage? After all, many married couples apart from my readers have such a single goal in mind. There are often married couples, for example, among performing artists. But the majority of them get divorced, some several times over. They all have the same goal and aspiration, but there is no happy life for them."

"You and I are talking about *different* goals, Vladimir. One's profession cannot be — and should not be — a goal of life for a Man. In such cases, the Man would be debasing himself.

"Think about it — take a salesperson, for example. Is it in the nature of a son or a daughter of God to consider one's life goal to be simply selling things? Or driving a vehicle, or doing laundry, or going back and forth to a factory all the time to perform the same task over and over again?"

"Wait, Anastasia, you named off what may be necessary professions, but they're still not very prestigious. There are, however, some fairly prestigious professions — or, rather, professions everybody holds in high regard. For example, everybody knows about surgeons and cosmonauts, military commanders and marshals, or presidents of countries."

"But their significance, Vladimir, lies simply in the fact that they have created a bigger illusion of importance and significance than others. Who knows? Possibly *someone* has tempted one of them — a commander or a president, let's say — by the illusory significance of these particular professions or positions just so as not to allow his own spirit to develop — a spirit which is capable of accomplishing the acts of the Universe. The deeds such people have accomplished are not interesting to God. But when a Man builds his own corner of Paradise on the Earth and founds the happiest family

line you can imagine, his deeds not only resemble those of God's — he actually becomes a god himself.

“And the readers who came to these gatherings had a noble goal, the same for both women and men. Their advantage was that both men and women were creating through their dreams a way of life for their future families. When they met together, they had a subject of common interest to talk about.”

You know, after all, Vladimir, how often in modern families there is rarely a single topic of conversation of interest to both marriage partners. They have nothing in common, no common aspirations. Two people get married and live together in the same dwelling, but each of them thinks and dreams only of what is of interest to them individually. People like that become strangers to each other, and their cohabitation ends up in nothing but irritation.

The people who come to the gatherings are not married, but even those unacquainted with each other feel closer than many marriage partners.

They go on excursions together and organise fashion shows in which first women — and then men — of all ages take part. The clothes modelled at these shows have either been bought in stores or sewn by the women themselves.

The evenings are spent in playing wedding games in town squares or somewhere in one of the glades. One of them is *Rucheyok*, which I told you about before.

And there is no feeling of embarrassment, no concealing that they are seeking to find themselves a life companion. And women who are left to deal with life with children and no husband bring their children along to these nuptial gatherings. And they reveal the purpose of the trip to the children. The children's thought and participation help them a great deal in their search. Here, I shall show you a scene from one of these gatherings.

Look, a summer theatre in the open air. A full audience, comprised of adults and children of various ages.

See how they are introducing themselves from the stage. Those who are bold enough get up on stage, where they are each given five to ten minutes to talk about themselves and answer questions. Sometimes they introduce themselves in a humorous fashion, or sing and dance a *chastushka-govorushka*. They have full freedom in their choice of repertoire. Take a look.

A girl who looked to be in her mid-twenties came out on stage. She sported a fashionable hairdo and a skin-tight outfit. She had barely taken two steps in the direction of the microphone when she did a somersault and burst out laughing. After that she took a turn around the stage, strutting the catwalk like a professional model. Straightening her hairdo, she approached the microphone and purred teasingly:

“Hey, guys! Is this chick hot, or what?”

From the audience rang out peals of laughter and loud applause, and the girl went on talking about herself in a humorous vein.

“Hey, the way I look, you know, that’s not even my greatest asset. I graduated from the Family Domain Academy with top honours. That means I’m tops at cooking, too. And I can rid your body of any ailment, you name it, and, hey, I can make one really coo-ool bed! And I can give you children that’ll grow up big and strong...”

“I’m not after anyone in particular, but here’s a contest for you guys. But like they say, ‘this ain’t no cakewalk’. The

contestants can do whatever they like to show what stuff they're made of. And the winner is... the one I fall in love with!"

After this a young boy came up the microphone and said:

"Hi! I'm Dima.<sup>2</sup> That's what they call me. And I'm eleven. Well, maybe not quite eleven yet, but I shall be very soon — this December... My Mama's name is Svetlana, or Svetlana Nikolaeвна. She's a great restaurant cook. That is, she used to work in a restaurant, but now she doesn't... At first she cried when she stopped working there, but now she does fine catering for a whole bunch of rich people. She put an advert in the paper and they ring her up on the telephone...

"I'm in school. Mama says I'm not a very bright student, but I know I'm doing okay. It's just that I really don't need fives — threes<sup>3</sup> are perfectly good enough for me...

"My Mama and I are here to look for her future husband and my future Papa. Then we'll have a jolly friendly family... My Mama's a really nice person. She's pretty, even though there's no way she can lose weight. She's still pretty!... Mama and I have been spending lots of evenings talking about how we'll live as a complete family. Right now we're in a one-room flat for which we have a monthly rent to meet. But when we're a whole family we'll treat ourselves to a house and plant a garden...

"Mama's already been given land, and we lived there in a tent for a whole month this summer. It was really neat!...

"She — my Mama, that is — she didn't come up here with me on the stage, she's shy. But I've been tellin' her: you've got

<sup>2</sup>*Dima* (pron. DEE-ma) — an informal variant of the Russian name *Dmitri*.

<sup>3</sup>*fives* (piatyorki), *threes* (troiki) — part of the marking system in all Russian educational institutions: 5 — excellent (= A), 4 — good (= B), 3 — satisfactory (= C), 2 — unsatisfactory (= D), 1 — fail (= F).

to show yourself! If you don't show yourself, then why did we come all this way and waste a whole lot of money which we've been saving for a house?...

"Hey, there, Mama! C'mon up onto the stage!" the boy called out into the audience.

But nobody made a move toward the stage. Then the audience started clapping in unison, urging the boy's mother to go up to the stage.

Finally, a short, slightly plumpish woman of about thirty could be seen making her way to the stage. She stood beside her son, her cheeks flushed a bright red with embarrassment. She put her arms around the boy's shoulders and gave him a big hug, but couldn't bring herself to speak. Then the boy, in a very businesslike manner, took a crumpled piece of paper out of his trouser pocket, unfolded it and began to read what was written on it:

"My Mama and I live in the Briansk Oblast, in the city of Novozybkov.<sup>4</sup> There used to be a lot of radiation there, but now there's not so much, and there's going to be even less in the future. Here at the gathering we're listed under number 2015. If anybody wants to, they can write to us. That's all."

The boy's mother took him by the hand and they started heading over to the stage exit under noisy applause from the audience. But when they got to the edge of the stage, the boy suddenly released himself from his mother's grasp and quickly, almost running, went back to the microphone.

"I forgot to say — I mean, I didn't write it down, that's why I forgot. My Mama can play the guitar and sing really

<sup>4</sup>*Novozybkov* (pron. *na-va-ZIP-kaff*) — a city of some 45,000 people not far from Briansk, a major centre located 350 km south-west of Moscow, not far from Chernobyl, just across the Ukrainian border, where a devastating nuclear accident occurred on 26 April 1986, spreading radiation clouds for hundreds of kilometres around. An *oblast* is a territorial division similar in status to a state or province.

cool songs with it, even though they're sad. And my Mama can draw, too. She's drawn a house and a garden... And I, too, can help build a family. And even help build a house... When the elections were held in our town, I got hired to put up campaign posters. And we're gonna be having elections again soon."

Once more the audience thundered their applause, and the boy headed back to his mother. She took his hand, and they came down off the stage and took their seats in the audience.

Then four men got up from their seats at the same time and headed for the stage. The first looked around fortyish, and he walked with a bit of a limp. But the other three beat him to it, and he ended up last in the queue for the microphone. One by one, the men went up to the mike and said something about themselves, but they didn't make any public proposals of marriage. That simply wasn't done at gatherings like this. People were supposed to write notes. But the fact that they went up on stage was a good indication of their desire to get better acquainted with the mother and her son. When it came the lame man's turn at the mike, he said:

"My name's Ivan.<sup>5</sup> I have my own flat in Moscow. I'll soon be forty years old. I'm a former paratrooper, discharged as an invalid by a medical review board three years ago. I make something on the side in multi-level marketing, but I'm tired of it. I've still got a pup tent, an axe and a mess-kit, which my buddies gave me. Right now my dream is to set up this tent in Briansk Oblast around the town of Novozybkov. Next to your tent, Dima. I'll be glad to work in return for a place

<sup>5</sup>*Ivan* (pron. ee-VAHN) — considered to be one of the most common names in Russia, derived from the Biblical name *Ioann*, which corresponds to *John* in English.

to deploy my tent. I've been trained in bunker construction, and can put up a log house, only I'm not sure how to get an orchard or vegetable garden going."

"I know, I can show you!" cried out Dima, jumping up from his seat.

A day or two later Svetlana Nikolaevna, her son Dima and the former paratrooper Ivan left the gathering.

"Anastasia," I pleaded, "tell me, please, how did life turn out afterward for these three people?"

## CHAPTER TWENTY-TWO

# A nuptial rite for women with children

Their lives unfolded quite well. Ivan invited Svetlana and her son to come for a visit, and they stayed a week in his apartment. After that they corresponded with each other. When spring came, Ivan let his Moscow flat to tenants for a goodly monthly rent, while he himself went off to Novozybkov. He set up his pup tent next to Svetlana and Dima's tent.

The former paratrooper had everything needed for life in field conditions, including a camp stove that could be used for heating. Ivan eagerly set about digging trenches for the foundation of their future house. He was assisted even more eagerly by Dima, who visited with his mother on weekends. With the onset of the summer holidays, they all began sleeping in the tents. Each evening they would gather round a fire and talk about plans for their future domain.

One evening when it came time to go to bed and the fire was burning low, Dima said:

"In normal families a husband and wife sleep together in one room, and their children in another. Is it okay if I sleep in your tent, Ivan, and you and Mama in ours?"

"But we aren't husband and wife just yet," Svetlana protested.

Ivan rose to his feet and held out his hand to Svetlana, helping her up. Solemnly, with just a slight trembling, he pronounced:

"With you, fair goddess, and with our fine young son, I could co-create a Space of Love to last forever."

And Svetlana quietly responded:

“We are ready to help you in your grand co-creation.”

Dima jumped for joy and clapped his hands. Then, under a starry sky, they performed the nuptial rite to become husband and wife, as well as the rite of adoption at the same time, whereby Dima became Ivan’s own son.

“Maybe you intended to say, Anastasia, that the boy Dima became Ivan’s *adopted* son?”

“He became his *very own* son. And Ivan became Dima’s very own father.”

“But how could that be, Anastasia? It goes against all the laws of biology!”

“But it does not go against Heaven. The Vedruss people knew the laws of Heaven. Ivan, Dima and Svetlana were familiar with the Vedruss nuptial rite for women with children. They performed it.”

“What kind of rite is that? How did they know about it?”

“You described it.”

“I never wrote about it.”

“Don’t forget, Vladimir, I’m telling you about events that will happen in the future. And you will describe this rite. I am going to tell you about it.”

This rite derives its principal power from the thoughts and desires of three people who want to build a future together. Women play a central role in preparing for this rite. The woman should be able to explain to her child the necessity of living as a family, the necessity of having a father and creating a domain together with him, building a house and planting an orchard. When a child shows or generates an interest in such a project, he must be brought into the search for a future spouse and father. Every mother knows her own child better than anyone else. There is no single formula for achieving the

desired result — it will be different for every mother. The main thing is to achieve one's goal.

Many children do not immediately desire to welcome some other person into their home. And in the absence of such a desire on the part of the child to have a father and join in the mother's search, it is better not to introduce anyone else into the home.

The mother plays a central role in preparing for the nuptial rite only at the beginning stages. At the moment when the rite is actually performed, the motive energy source will be the thought of the child.

If a man and woman have decided on co-habitation while the woman's child is still very small, they can live together without performing the rite until the child grows a little and acquires his own conscious awareness of what family life means. The man and woman should make joint efforts, too, toward this end. If the child grows up accepting his stepfather as his own father, the nuptial rite is still necessary, since it is able to transform an adopted son or daughter into the father's own — in terms of both blood and spirit. This rite can exert a tremendous beneficial influence only if it is performed on the ground of their future family domain, regardless of whether it was first started by the man or the woman. What is important is that it is to everybody's liking, especially the child's.

The rite should take place in the open air, under the stars. There should be a fire burning, or three candles. Svetlana and Ivan were lucky: after their mutual declaration of desire to co-create their life together, there were lots of stars in the sky, the fire was still burning, so they did not have to wait for another night, but got married right away. And they did everything just the right way.

Ivan and Svetlana stood in front of Dima. Ivan looked up at the stars and spoke first:

"Here, on the ground of our family domain, I wish a happy life for our family line. I wish to build a house and plant an orchard.

"I ask you, Dima, for your agreement to allow me to be wedded to your mother for ever, and for you to become my own son."

"I shall be very happy if you, Ivan, will live with my mother and me. Perhaps I shall even become a better pupil. And can I call you Papa?"

"Of course," replied Ivan.

Then it was Svetlana's turn to speak:

"Thank you, my son, for helping me find a husband. I agree to become his faithful wife. A wife should take care of her husband. With your permission, my son, I shall surround Ivan, your father, with loving care."

"Of course, Mama. You should most certainly take care of Ivan. And I shall take care of him. Let us buy Papa a new prosthesis. I saw him wrapping his old one around with insulation tape."

It is not important to pronounce the same words each time in this rite. The most important aspect is thought, which should be heard by the planets currently standing above the marital pair and their child or children. For this it is necessary to bring a wide-mouthed vessel of some sort — a glass, or a mug, for example — out of which each participant should take a drink of water (at least three swallows), and then pour water on their hands and wash their hair. Then all three should lie down on the grass for no less than nine minutes head to head, hold each other's hands and look up to the starry sky, mentally asking the planets above them to help them build a happy life for their family line, and requesting love to take up residence in the family domain. This will happen if the thought of all three of them is sincere and strong.

It is not necessary for the *love* to be strong at the moment of the wedding. A strong mutual sympathy or attraction is sufficient. Love will undoubtedly grow stronger with time. It almost always happened within a year or two among the Vedruss people.

This is a very powerful rite, but it is not occult. When astronomers and psychologists restore at least a part of the knowledge people used to have, they will understand its cosmic power.

Have you understood, Vladimir? This is something in which plants, water, the Earth, the planets and human thought all take part. As the people's aspirations merge into a single whole, they will harness the elements into forwarding their cause in accordance with Divine essence of the Cosmos.

You most certainly know already, Vladimir, the close interconnection between the faraway planets in the heavens and the blades of grass and flowers and bugs and everything else living on the Earth. The ebb and flow of the tides are governed by the planets.

Of course, there is a lot in human life which is influenced by the planets, but in this particular instance, the three people performing the rite, uniting into one, charge the planets with the task of making their union beneficially strong. Man's request to the planets, when his goal corresponds to God's programme, is treated by the planets as a great gift, giving them a feeling of pride in themselves and in Man. His conscious, earnest appeal sets many of the planets in the sky into a rousing, propitious acceleration. The heavenly bodies located at that precise moment above the people lying on the ground, form a wordless alliance to assist these people in their deeds.

This discovery was made by a wise-man, after a period of ninety years leading up to it, in which he observed the planets and compared them with people's deeds.

When the wise-men-scholars were endeavouring to understand this rite, they came to the conclusion that in some miraculous fashion, either the planets or the power of various cosmic energies can erase unpleasant reminiscences of one's past life from human memory, making room for new, bright sensations.

Not only that, but these energies unite three people together in ecstasy.

Remember, Vladimir, how you were telling me about telegony. Modern science has learnt that there is some kind of energy which participates in the formation of the physical bodies of animals and people. Note that these energies are invisible to the eye and are not contained in visible matter, but their power is effective. Besides, their participation comes about by the will of Man. When they act in accordance with human will, their effectiveness increases a hundredfold.

It is important to point out that the essence of the rite we have been discussing is such that, in contrast to telegony, there is no invasion of the old liaison into the new alliance, but that it completely extirpates the energies of the old alliance and endows the participants with new strength, and gives them new life.

“Wow! It's such a brief rite, and yet the results are extraordinary. It really creates blood ties among them.”

“Brief, you say? Think about it carefully, Vladimir. The preparation for this ‘brief’ rite, as you call it, may take several years.”

The rite must be preceded by two important customs.

Take the first — here is an example: the mother needs to prepare her child ahead of time, then — pay close attention, Vladimir — Ivan started by saying that he wanted a place to set up his tent and offered to do household work in return.

This point actually comes from a different rite. Every 'old stag' — as old or middle-aged bachelors used to be called — was supposed to spend one month a year working in a woman's home, either for a widow living alone or one living with children. He was not obliged to spend the whole month with the same widow. The bachelor could work a week for one, and then go on to another. This custom, of course, was not designed just to offer aid to single women. Its aim was to get people acquainted with each other and help them create a family.

A bachelor might come to a widow and say:

"Madam, I am looking for work, you see. Would you happen to have anything for me?"

If the woman did not like the man's looks at first sight, she might reply:

"Everything here's been done over and over again. Besides, I can't afford to pay anything right now."

On the other hand, if she liked the man, she might give him some sort of work to do for two or three days. Then she could offer him more work. It did not really matter how knowledgeable or skilful he was. The main thing was whether the two people liked each other or not.

If there was a mutual attraction, the woman might ask the man to stay longer than a month and, if he stayed, start calling him her *primak*.<sup>1</sup> And after a year of co-habitation they could either get married or go their separate ways.

"Tell me, Anastasia, after this rite, would the newlyweds still need to go to the Civil Registration Office?"

"People can go through with whatever formalities are necessary in life, but these can never interfere with what is most important."

<sup>1</sup>*primak* (stress on last syllable) — roughly equivalent to an 'associate' (a person one has tentatively joined with).

## CHAPTER TWENTY-THREE

### High-society ladies

As I was completing the preceding chapter, it came to me that a rite like this could be successfully applied in our day, too. People in many parts of Russia today, mainly readers of the Ringing Cedars Series, are gathering together in groups, each family taking a hectare of land, planting orchards, building houses and setting up their own little Motherland. They are doing this, by and large, as families. But these groups also include a significant number of single women.

The settlement I have visited the most often is the one near the city of Vladimir, which numbers at the moment more than sixty domains under construction. Already, children are growing up who have been born in them. But there are also single women who have taken a hectare and are building their domain, sometimes with the help of their children, but sometimes all by themselves. Can you just see it? A woman builds a house all by herself, and plants an orchard. It's not just a little dacha on a mere 600 square metres of ground that she is putting up, but an actual domain that she is building.

Is it hard for them? In a financial sense, yes. I know one woman who has rented out her Moscow apartment and is building a house in a field on the proceeds.

Because of insufficient funds, she is not always able to hire tradespeople, so she does a lot of the work herself. And she does it joyfully. She has a goal, and takes joy in progress toward that goal. The progress may be slow, but it still more than compensates for all the challenges, and makes them seem insignificant by comparison.

After collecting information from various communities, I came to the conclusion that I should write a book about them as soon as possible. This will be a truly historic book. Our descendants ought to know how their new and happy civilisation got its start, and who started it.

In the meantime I asked the wife of one of the founders of the *Rodnoye*<sup>1</sup> settlement in Vladimir Oblast to describe some of the unmarried women and what they were doing. Here are her brief descriptions:

**Evgenia T.** — born in Moldavia, 53 years old, a geologist, a real beauty, with a smile that would outshine Hollywood stars. She has an apartment in Malakhovka near Moscow, but she doesn't go to it. She says: "My home is here."

She first came to have a look around in 2003. She went mushroom-picking in the woods.

"They warned me," says Evgenia, "they said that's not your average forest! But I told them: 'I'm a geologist, I shan't get lost.' I spent twelve hours wandering within a three-kilometre radius! My legs were practically broken by the time I got back around midnight. 'This is my place!' I said. I rented out my flat in Malakhovka for 10,500 roubles a month.<sup>2</sup> I was able to start building with the money I received. I rented a house in Studentsovo, close to my plot. Turned out the furnace hadn't been lit in ten years, and the house was falling apart. I pulled out a nest from the chimney — I hadn't been able to light a fire.

<sup>1</sup>*Rodnoye* (pron. *rad-NAW-yeh*) — the name of the settlement in question, literally meaning 'one's own' or 'native', derived from the root *rod-* ('kin' or 'family'). For further information on this Slavic root, see footnote 1 in Book 4, Chapter 24: "Take back your Motherland, people!"

<sup>2</sup>Note that in terms of the then current official exchange rate, *one* thousand roubles would be roughly equivalent to US\$35, but closer to US\$70 in terms of actual purchasing power.

“I spent the winter in the village alone. Sometimes I would go visiting, to Koniayevo.<sup>3</sup> I was sparing with the wood, lighting a fire only every other time. In the fall I laid a foundation and put in a four-metre-by-four-metre log *banya*.<sup>4</sup> I spent the whole winter caulking the walls with tow. I now know the sound of falling snow.

“I would go about the house wearing three pairs of trousers and three sweaters along with a jacket and a *shapka*.<sup>5</sup> But when I worked outdoors I got by with not so much clothing.

“In the spring I took a knife and scraped the rest of the bark off the timber frame. I now have a house which looks as though each log has been finely planed. I can hear the snow melting.

“I needed someone to fix the furnace. So I got dressed warmly and took a fishing rod (with no hook) and went down to the pond where some men were fishing (God forbid they should see my ‘tackle’). I got into conversation with the men and ‘caught’ myself a furnaceman. And whenever I needed a tractor, I just went out onto the road and stopped the first one that came along.”

Evgenia’s got herself a vegetable garden — it’s all in order, everything’s coming up. The first year she put in a lavatory and a summer kitchen made of wattle. When there’s absolutely nothing left to eat, she makes up some porridge with fish oil. She’s a marvellous cook. Her feverish activity has been giving everyone a pain in the neck — the locals

<sup>3</sup>*Koniayevo* (pron. *kan-YA-ye-va*) — like neighbouring Studentsovo, a village in Vladimir Oblast, close to the eco-settlement under discussion.

<sup>4</sup>*banya* — a Russian bath-house, similar to a Finnish sauna. For a more detailed description see footnote 20 in Book 2, Chapter 1: “Alien or Man”.

<sup>5</sup>*shapka* — a warm hat, usually made of fur, with ear-flaps, to keep one’s head warm in winter.

tend to shy away from us — but her house is already up!  
She says what she thinks.

**Liubov E.** — born in the Far East, 58 years old, lived 27 years in Perm<sup>6</sup> and 20 years in Tsimliansk in Rostov Oblast.<sup>7</sup> She's an ichthyologist, worked with fish conservation, now retired.<sup>8</sup> She has a mother 84 years old and a son, 30, who lives in Perm (two grandsons); another son, 18, lives in Tsimliansk.

This year she began counting time in reverse, says she's now 57. She began setting up her domain in 2003. She came for ten days, cut down the wild grass, planted a hedge (fir, pine, birch, aspen, linden, maple). An ideal plot indeed. In the winter she brought 50,000 roubles with her — all her mother's savings. She put up a house-frame and covered it with asphalt roofing... In the spring she arrived with her ex-husband; he dropped her off on his way to Perm. They worked on the plot together. She says if it had been like this before, she would never have left him. She arrived in the summer, on 6 July (she was hurrying to get here in time for the Feast of Ivan Kupala<sup>9</sup>).

She really loves holidays. She sings, plays the guitar and dances. She gets a pension of 2,000 roubles a month. She took a leave of absence from her work for the summer. She's got enough money, except for travel expenses... The

<sup>6</sup>*Perm* — a major city of over a million inhabitants 1,500 km east of Moscow.

<sup>7</sup>*Rostov Oblast* — a large territorial jurisdiction of just over 100,000 km<sup>2</sup> north and east of the Sea of Azov (north of the Black Sea). Its administrative centre is Rostov-on-Don. The town of Tsimliansk (stress on last syllable) dates from the construction of an electric power station on the nearby Tsimliansk Reservoir in 1961.

<sup>8</sup>*retired* — The normal retirement age in Russia is 60 for men, 55 for women.

community has helped her buy bricks, cement and timber. She herself spent a month laying the foundation under the furnace, then she put in the foundation for the house frame, put in uprights under the floor joists, caulked the whole house, made an awning and built a summer stove. She dragged around barrowfuls of rocks, sand and crushed stone. She thought she couldn't do it, but she could! She got stronger, lost weight, and began swimming across the lake and back (something she couldn't do earlier). She took off ten years (she dreamt of looking just a year younger). Her eyes sparkle, she's always smiling, and she's made friends and gets along with everybody... She's building the house for herself and her mother, and hopes the two of them can move in come spring. She wants her son and grandchildren to come and see her from Perm, and stay for a while so they can see whether they might want to live there... She's got no money, and no source of income. She does have an old Italian violin which her father brought back from the war. Fifteen years ago experts appraised it at between ten and fifteen thousand dollars minimum, without restoration. She really hopes she can sell it — it's

---

<sup>9</sup>*Ivan Kupala* — the ancient Russian Summer Solstice holiday, later adopted by the Orthodox Church under the name of a Christian saint, *Ivan Kupala* — the Russian name for St John the Baptist, whose official day of 24 June in the Orthodox Church's Julian calendar falls on 7 July by our modern (Gregorian) calendar. Even in their present form, the Ivan Kupala celebrations preserve key traits of the pagan festivities, including letting burning wheels run downhill into water (to symbolise the descent of the fiery, masculine energy of the Sun-god Yarila into the water -- the feminine element of Mother Earth), jumping over a bonfire with one's intended mate, bathing in the lakes and rivers, searching for a 'fern's blossom' (symbolising a spiritual insight into the workings of Nature) and picking medicinal plants throughout the night. One of the main festivities of the pre-Christian era, the Summer Solstice was traditionally the day on which weddings were 'played out', more or less as a game.

a violin ready to be played, not just a museum-piece. If she pulls it off, the work will go faster; if not, she'll have to do everything herself. But you can't lay down a floor or ceiling without boards. She's very concerned over the lack of funds, but the house is getting built... She'll be coming again in September, for a month. This past winter she visited her grandchildren in Perm, and paid a visit to her new domain on the way back — just for one day, to walk around, and stand in her own place, even though she could have taken a direct train to Rostov...

**Natalia D.** — born in Vologda,<sup>10</sup> came here from Moscow, has two children — daughters two and five years old.

She's been living in a tent since the end of May. She's divorced, and wants to take her children out of the city to avoid having them turned into puppets of the system. The summer's been cold and rainy, but not a single complaint from Natalia. They brought in an old trailer for her. She's peeled off all the old wallpaper and given it a thorough cleaning. She wants to cover it with board siding and put in insulation, so she's buying up boards... She has no money. Her husband provides enough to feed the children. She's now living with them, and earning a living by working in the old field, helping the men put in the foundations. She dreams of staying on in the domain — even if not for this winter, then at least for the following one. She's studying all the different house plans that she can build herself (including an adobe and a dugout). The children have become calmer and more cheerful.

<sup>10</sup>*Vologda* (pron. *VAW-lag-da*) — a city of more than 300,000, located 400 km north of Moscow. Like Moscow, Vologda's first recorded mention was in 1147.

When she drops by Liuba<sup>11</sup> E.'s house and sees what *she's* managed to do, she says: "Well, if you can do it, I can, too. After all, I'm younger and stronger than you." *She'll do it!*

She's always smiling, and has a terrific singing voice. She's got a college-level education. A beautiful soul!

Sorry to be so emotional, but I just love them all so much...

**Nadezhda Z.** — a farmer from Belarus. After the Chernobyl disaster they lived near Azov,<sup>12</sup> then spent a year at Paretskoye in the Suzdal area (while waiting for a field), and this past year they've been living in someone else's house at Koniayevo.

This summer she began construction on her own house. Two grown-up children are currently living in Moscow. Her daughter and sister have also taken plots. They all want to get together. The husband and children work. Nadezhda looks after the household, supervises the construction, and works on building the house herself... For many years she was part of a professional dance ensemble. She has the poise of a ballerina, even when she's pushing wheelbarrows full of manure... You can't help but admire her! The family has two dogs, four cats (mousers), rabbits, hens (Smirnov breed, preserved in homesteads during revolutionary times), a goat, and pigeons.

The house is awash in all sorts of flowers, both plain and exotic. She has an encyclopædic knowledge of everything she needs to know about. Her husband and children support her, but she has to do everything herself; they're

<sup>11</sup> *Liuba* — an informal variant of the name Liubov, a name which literally signifies 'Love'.

<sup>12</sup> *Azov* — a port on the Don River, not far from Rostov-on-Don.

leading their own lives for the time being. She is firmly and confidently building the future.

She recently broke her right arm (falling off a bicycle which her children gave her as a fiftieth-birthday present, so that she could get around everywhere). She took one day off. The very next day she was back forking hay (winter fodder for the animals). Now she's painting and planing the boards. When I asked her how she does it, she smiles: "With one hand tied behind my back!" She's always smiling, she loves to sing, she's the life of any party, she's everyone's darling, a real storehouse of knowledge, and our consultant to boot. She's tiny and slender, a support for the whole family. She's successful in everything she puts her hand to — house, construction, animals, vegetable garden, canning preserves, and what fruit liquors she makes!!! She hasn't any apartment or house to go back to, and by the fall she'll have to vacate the house in the village, as the owners are returning. She'll be spending the winter in her new house!

This information I obtained a year ago. Now all the heroines described have already finished building and none of them plan to retreat from their goal. No doubt it was women such as these the poet<sup>13</sup> had in mind when he said:

*She'll stop a wild horse on the gallop,  
And enter a but all in flames.*

<sup>13</sup>*the poet* -- These lines dedicated to simple Russian village women (particularly their bravery in saving others) are taken from the epic poem *Moroz, Krasny nos* ('Frost, Red-nose'), written in 1864 by the celebrated Russian poet Nikolaj Alekseevich Nekrasov (1821-1878). Later he would write another epic poem (in two parts), entitled *Russkie zhenshchiny* ('Russian women').

And I would add: *She'll build the domain herself, and take her man into eternity.* But where is this man of hers? When will she have a chance to meet with him if she's engaged in such a big undertaking from morning 'til night?

How many bright young women in various parts of the country dream about co-creating a family domain! And it would be good if they could find their life partner before creating it.

I've thought about the possibility of organising a data bank where such women could register, and men could pay them a visit as temporary workers. Maybe the women could even choose themselves soulmates. It shouldn't be that the men choose them, but that they should choose the men.

We have an expression: *a high-society lady*,<sup>14</sup> meaning a woman who is 'in' with the élite crowd of the rich and famous. But what is this 'high society', if the in-crowd has nothing better to offer society at large than spread gossip in the tabloids? But if you marry one of these ladies, as many men have noted, you get nothing but caprices and unreasonable demands thrown at you.

It has come to me that the real 'ladies of high society' are the married and unmarried women of today who are building their family domains and are getting ready to give birth therein to healthy children, or pass along what they have built to their children already born.

Good can come only from them — good which will benefit not only single men but the nation as a whole. The children they bear will be the face of our future civilisation.

And Anastasia's grandfather could not have been more right when he spoke of the vital importance to resolve

<sup>14</sup> *a high-society lady* (Russian: *zhenščina iz vysshego sveta*) — literally, 'a woman from a higher world'. Note that the Russian word *svet* (world) can also signify 'light'.

questions of the family on the national level. How they are being resolved today, the Russian families themselves know better than anyone — and not just *Russian* families.

Somehow we have got to resolve the question of organising events which will be able to assist these women, or rather assist the men to get acquainted with women who are setting up their own little Motherland.

I hereby request the administrators of the *Anastasia.ru* website to consider ways to better facilitate such acquaintanceships on-line. Perhaps each unmarried woman or man among my readers could post their address and contact coordinates on the site. I would remind anybody who doesn't have a computer that there are Internet clubs in almost every city, where they can read information from websites, as well as post offices which offer Internet access services.

For my part, I shall formulate here the text of my greeting to men of all countries where my books are available, and would ask all the translators in Europe and America to highlight it.

*Gentlemen!* I know that many of you, and especially those who are not yet involved in family life, would love to meet that unique woman with whom you could find joy in a lifetime companionship. But where to find such a woman? Just about the only recourse you have is to apply to one of the many marriage bureaus around. Beware, however, that almost all of them give priority to outward characteristics, as well as age, with only a little attention paid to character and life-goals. And even this 'little' has not been confirmed for certain. But what *is* for certain?... Women have shown up offering their youth, beauty and smiles, all ready to sign a marriage contract with you on the condition that you are rich and can guarantee them an abundance of material benefits. Already in Moscow there are cafés where beautiful

women gather to offer themselves to rich suitors. This is no new phenomenon.

“But what’s wrong with it?” certain men might think. “I’m a man of some means and I can afford to sign a marriage contract with a young and beautiful girl. All she has to do is take care of my needs in bed and make me the envy of everyone at social gatherings. After all, if you have relationships with young people, you’ll become younger yourself.”

All this is fine and dandy, but there is one *but*. What does your young cohabiter think and dream about? She is, after all, a living being and capable of attraction and affection, only the object of her affections is by no means *you*. So along comes the desire, sooner or later, to free herself from you, whom she sees as an obstacle on the road to happiness. So then, even if she doesn’t resort to putting out a contract on your life (such things occasionally do happen, as you know), or to slipping poison into your morning coffee, it doesn’t take much more than a thought — a subconscious thought at that — to get you permanently out of the way. And even though you may think you are bringing into your home a kind and tender beauty, in fact you are bringing home a poisonous serpent. The distinction between the two is only in external appearance, and so, instead of placing this serpent in an aquarium behind impenetrable glass, you are putting her beside you in your bed.

Perhaps, as a counter to the destructive phenomena of our life, some women have shown themselves to be harbingers of a new and happy civilisation. In building a family domain, they are not merely putting a roof over their head, they are actually laying the foundation for a whole new life. *An actual foundation!*

A dying billionaire, for example, will be revived and will regain his youth upon meeting a woman like that. A

prosperous businessman will flounder without her. It is not money that prolongs life, but the thought of your beloved and the Space of Love which the two of you have co-created together. And insofar that it guarantees the conditions requisite for a quick and conscious reincarnation, it not only prolongs life, but makes life eternal.

No matter what words I have written, no matter what arguments I have put forward, they will not succeed in touching your heart the way an acquaintanceship with such women can. I would urge you to make every effort to get to know these earthly goddesses of eternity.

And it is quite possible that this encounter will be similar to the one Anastasia told me about.<sup>15</sup>

<sup>15</sup>The whole of the following chapter is narrated by Anastasia.

## CHAPTER TWENTY-FOUR

### Millennial encounter

One day a girl in her mid-twenties by the name of Liuba came to one of the 'soulmate gatherings'. She was wearing an embroidered linen blouse and a plain skirt whose hem reached just below the knees. A small travel-bag was slung on a strap over her shoulder, but it contained nothing more than a few rather plain outfits.

The girl walked up and down the street in the hopes of finding some sort of privately run lodging for the night. During the gatherings all hotels (both for Russian and foreign visitors) and *pension* rooms had been booked up in advance. Besides, Liuba could not afford an expensive hotel room, and so she was looking for plainer lodgings. But there was no chance of finding any privately-run accommodation during the nuptial gatherings. With little hope of success, Liuba asked a woman who happened to be coming out of the gate in front of a private house:

"Hello, there. Could you tell me please, whether you might have any rooms available in your house for overnight accommodation? I'm looking for something not too expensive."

The woman replied:

"Not much chance of that, dearie. Everything's been booked up for ages. All the visitors make arrangements in advance through the housing office. You're just wasting your time. You'd better head for the railway station, or you won't find a place to sit down even there."

"Thanks for the advice. I'll probably do that," Liuba responded and headed down the street in the direction of the terminal.

“Wait a minute, dearie. Come here,” the woman called out, and Liuba came back to her.

“I’ll tell you what you can do. Try knocking or ringing the bell five houses down. There’s a doorbell right at the gate — try ringing it. Maybe an old woman will come out — one that looks like Baba-Yaga.<sup>1</sup> She’s Greek, and has a hooked nose. My husband says that all Greek women are beautiful when they’re young, but when they get old, they all end up looking like Baba-Yoshkas.

“Anyway, dearie, you can ask and see if she’s got any rooms. Before, when her husband was still alive, she used to have all sorts of people stop over, but he died, and she hasn’t let a single person in these past three years now. Anyway, you can always try asking — she just might give you a room.”

“Thanks, I’ll try,” replied Liuba. And she went along to the house the woman pointed out. She rang the bell once, and a minute later she tried it again, right at the gate, but nobody came out. Finally, after ten minutes had gone by, the door creaked open, and a bent-over old woman came out. She came down the grapevine-lined path and opened the gate, groaning at every step. She started in speaking without any formalities of saying hello.

“What you knockin’ at my gate for, girl?” she asked with a tone of annoyance.

“I wanted to ask you about a room. A kind lady, your neighbour, suggested I should.”

“She was not bein’ no kind, she was laughin’ at you. I haint had no roomers for ages.”

<sup>1</sup>*Baba-Yaga* (stress on final syllable), also known as *Baba-Yosbka* — a witch (usually portrayed as an old hag with a hooked nose), who, despite her threatening looks and habits (in the Christian period her image was often demonised to represent evil), actually offers help to the good and punishes the evil in traditional Slavic folk-tales.

"I know, she told me that too. But I've been looking all day and I haven't found anything, so I decided to ring your bell, just on the off-chance."

"Just on 'off-chance', eh? Well, you won't find any 'off-chance' with me. You've *all* come here just on 'off-chance'... So, just like everyone else, you have come here to find yourself 'a bloke'?"

"I want to meet my intended. Please, forgive me for bothering you. I'll head down to the station and spend the night there."

It began to drizzle, and the old woman grumbled:

"To hell with these girls! To hell with them! And now — it's started: rain. Fine, I will set you under this tent-roof in my garden. There is this hammock there, and this bench, and nails for you can hang your clothing up. And for this you will pay me five hundred roubles each night."

"Five hundred?!" exclaimed Liuba in surprise.

"And just how much was you thinkin' it will be? What, you imaginin' that you are come to visit your relations?"

"Okay, I'll give you five hundred. Only I wanted to stay here ten days. Never mind, I'll just stay for five. I agree to your terms, Granny."

"Then come. You can see where you will sleep and pay me this money each day in advance."

Five days went by. On the fifth morning Liuba began neatly packing her plain-looking clothing away in her bag. The old woman approached her, groaning and leaning on her cane.

"So you already start packin', eh, girl? You leavin'?"

"Yes, Granny. It's been five days now."

"Five days. You got your ticket?" the old woman asked, sitting down on the bench.

<sup>2</sup>Granny (Russian: *babushka*, pron. *BAH-boosh-ka*) -- a more or less respectful term of address to senior women.

"Yes, I bought a single/return ticket before I left home. The return is actually for five days from now, but I think I'll be able to exchange it at the station and get one for today or tomorrow."

"No chance of that — not with everyone and her dog comin' and goin' around here these days. I will tell you something, girl, you stay with me five days more until your ticket will be good."

"I can't. I've got no money left to pay you."

"No worry. No need to pay, you just stay."

"Thanks, Granny!"

"Thanks,' she says... Only your stayin' will not do you any good!"

"Why d'you say that?"

"I been watchin' you. That is no good way to look for 'a bloke' these days. Why you are up at dawn each day? What is the use? All 'a blokes' are still asleep that time of day. But *you* — you go to bed right early. Right when all this partyin' begins, this is when you decide to go to bed for each night! All those 'a blokes' keep partyin' 'til midnight, while you are in bed at ten. Besides, you dress like a nun, no makeup. That is no good way to find 'a bloke' today."

"I'm preparing my body, you see, Granny, for my encounter with my intended. And so I try to maintain a strict daily routine. I don't make myself up so that he can recognise me."

"Recognise?! You, girl, you sound like you are 'a mite daft in the head!'"

"That's what my Mama says, too. But there's nothing I can do about it. I often have dreams about him looking for me all over the globe and not being able to find me."

"Dreams? You have been dreamin'? Here too?"

"Yes, twice already. Once it seemed I was walking in a huge garden, and he was there, too, only there was no way we could approach each other. And it seemed as though I could hear

his voice, calling to me over and over: 'Where are you? Where are you?'"

"You heard? A voice? You know, you probably ought go see a doctor, girl. What is all this about an 'intended' bein' pounded in your head? To a point where you even hear voices, in your dreams?!"

"Sometimes I dream that I lived with him once a long, long time ago. And we had children and grandchildren."

"Once upon a time? Well, girl, next thing you be tellin' me you can say what he look like!"

"Yes, I can: he's half a head taller than me, with light brown hair. And hazel eyes. And a kindly smile, only a little gap between two of his teeth. And he walks in a proper, dignified fashion."

"A gap between his teeth? His walk? But what if someone else should come?"

"They've come. My Mama's always after me about that at home, saying that my dreams will keep me an old maid forever."

"An old maid? Of course, 'an old maid'. You will never find your 'bloke' that way, not with those dreams of yours. You know, girl, I will tell you something. Here, take my rainbow shawl. Put it over your shoulders, and tie it just little more fashionably. And go walk along the embankment later tonight."

"Thank you, Granny, for your concern. But I can't cover up my blouse with a shawl. You see, I did the embroidery myself. It came to me in a dream. And it seems as though at some time in the past I was wearing this embroidered blouse when I was taking a stroll with my intended in the garden."

"Embroidered? Takin' a stroll? Well, girl, you... Well, God be your judge. There is some milk there on a table, and I have made scones. Have a bite to eat! I will just scoot to my neighbours' for a bit."

The old woman hobbled off with a groan, muttering all the while to herself: *She will put me in my grave yet. I must be daft. I took her in, and now I cannot help worry about her. I will go talk to my neighbour's son, see if he will show her some attention. Yes, he will show her some attention. He is dark-haired, and she wants light brown with a gap between his teeth, but there is nobody like that among my neighbours. She will put me in my grave!*

That morning Liuba began wandering around the public garden. She picked up a *pirozhok*<sup>3</sup> with potato filling for lunch. As she was walking past a restaurant, a group of men were just coming out of the door. They were laughing and chatting away in some foreign tongue. When they saw Liuba, they spoke to her in their own language. Liuba didn't understand and walked on past. Right off the men began talking with other girls.

Then, all of a sudden, without turning around, she could feel someone detach himself from the group of cheerful foreigners and come after her. She knew for certain that *she* was his specific target. She even counted his footsteps without quickening her own pace, and for some reason her heart started to tremble. She could feel his breath behind her, and all at once the foreigner began addressing her in a language she couldn't understand:

*“Mit dir, die wunderschöne Göttin, dürfte ich den ewigen Raum der Liebe schaffen.”*<sup>4</sup>

Liuba could not decipher the German words. But for some reason she found herself whispering:

<sup>3</sup>*pirozhok* (pron. pee-ra-ZHOK) -- a Russian pastry with a meat, vegetable or fruit filling, akin to a Ukrainian pierogie. See footnote 2 in Book 2, Chapter 11: “A sharp about-turn”.

<sup>4</sup>*Mit dir ... schaffen* -- German for: ‘With you, marvellous goddess, I could create an eternal Space of Love’.

"I'm ready to help you in your grand co-creation!" and she turned around to look at the stranger.

There before her stood a young man, half a head taller than she. Light brown hair, hazel eyes, a kindly smile and a small gap between two of his teeth. He held out his arms to Liuba, and without realising quite what she was doing, Liuba snuggled her head against his chest. He hugged her trembling body as though he had known her for an eternity.

The unseen planets in the heavens began to quiver for joy. Oh, how many events did they need to create to arrange the threads of destiny for the ages! But it worked! They met and they embraced!

Radomir with his marvellous Liubomila! And even if they don't remember the past, their souls will create a future to marvel at.

People on the beach couldn't figure out why the young couple were creating some kind of design or sketch in the sand. They were speaking different languages, but it seemed as though they understood each other. First they would discuss the drawing, then argue a bit, and then all of a sudden come to an ecstatic agreement.

Carried away as they were with the drawing, Liubomila and Radomir did not know, either, that they were sketching in the sand a design of the splendid family domain which they had created just before their wedding five thousand years earlier.

"There should be a pond here, a round one," said Radomir in his own language, and dug a little round hole in the sand to represent the pond.

"But not that shape," whispered Liubomila. "It should definitely be oval," she countered, changing the round hole to an oval shape.

"Yes, exactly, an oval pond is much better," Radomir agreed, as though suddenly remembering something.

That evening they came back to the house where Liubomila was staying. She asked her elderly landlady permission for her companion to drop in for the evening. The landlady agreed.

With a smile on her face, Liubomila drifted off to sleep in the hammock, while he sat on the bench, gently rocking the hammock and delicately fending off flies with a small tree-branch. And he sang something very, very soft.

From a window in the house, the old woman peered at them through a crack in the curtain, until just before dawn.

In the morning on the little table in front of the house stood milk and scones, covered with a white linen tablecloth. There was also a note, written in an ageing hand. Liubomila read it aloud:

“I have gone away on errands. Will not be back for couple of days. Look after house. To look after it, stay in my big room. There is food in a fridge...”

Liubomila and Radomir left town together. But where did they go? The ages will show where their family line will be reborn.

## CHAPTER TWENTY-FIVE

# Anastasia's wedding

As I bade farewell to Anastasia's grandfather, I said to him:

"You'll have to forgive me for my misunderstanding back in the taiga, when we were talking about the party's goals and activities. Now I realise that the stronger the family's role in the State, the more loving families will be living in it, and the more order there will be in the nation as a whole.

"We must restore the customs and rites which our ancestors thought through. They only need to be somehow adapted to our modern age. Anyway, I'm beginning to realise that they are not even 'rites' in the traditional sense of the word. They constitute the great science of life. And the wise-men were the greatest scholars and wisest teachers of all.

"Apart from that, you know what I'm regretting right now? I'm regretting that I knew nothing of these rites back before my first encounter with Anastasia. About how they help in using the planets for the benefit of families. I didn't know that, and so Anastasia had to bear a son, and then a daughter, without being wedded."

Anastasia's grandfather gave me a sly look and, smiling through his grey moustache, said:

"And so, now you know that, you're concerned as to whether Anastasia bore her son and daughter by you?"

"No, I wouldn't say I'm terribly concerned. But still, it wouldn't hurt for Anastasia and me to go through the appropriate rite."

"It's a good thing, Vladimir, that you have these regrets. It means you're beginning to understand the essence of being,

and where human society finds itself at the moment. But you need not feel regret when it comes to Anastasia. She was married before you spent that first night with her.”

It was several minutes before I could get over the shock and regain enough composure to speak. Finally I sputtered:

“To whom? I didn’t go through any wedding ceremony. I remember that for certain.”

“You didn’t. It was enough for us that she went through it alone. For three days my father couldn’t get over her weird behaviour. It was the kind of gaffe that not a single man of wisdom could have thought up in a million years. But the upshot is, she’s married.”

“To whom?”

“Maybe, to you.”

“But I never went through a wedding. And what’s this about ‘maybe’? What, you don’t know for certain?”

“What she did, Vladimir, nobody can evaluate, at least not yet. It’s entirely possible she created this magnificent rite herself and thereby offered all women the opportunity of making their illegitimate children legitimate. It’s entirely possible she created something in Heaven, besides. What she has created, perhaps only a wise-man would be in a position to evaluate. I’d better tell you everything in order.”

And Anastasia’s grandfather recounted to me the following:

That first time you came with Anastasia to her glade and were getting ready to go to bed in the dugout, *we* had to come to our granddaughter’s glade, too.

“Why?” you might ask.

She summoned us. We felt her summoning us and my father and I came to the lake.

Anastasia was standing on the shore, holding in her hands a crown of flowers woven together. She was all prettied up in

her very best, just like a bride. As we approached, my father asked her in a rather severe tone:

“Anastasia, what events prompted you to prevent the flow of our evening thoughts?”

“Oh, Grandpakins and Great-Grandpakins, I have no one else to present myself to but you. You alone are capable of comprehending me.”

“Then speak,” allowed my father.

“I am now about to get married, and I’ve summoned you as my witnesses.”

“Get married?” I queried, “*get married?* And where is your bridegroom?”

I was not supposed to speak when Father was leading the dialogue. He gave me a stern look. She didn’t respond to *me*, but to him as the elder:

“When the wedding rite is performed, the young couple are first asked how they will set up their life, what Space they will co-create.”

Father knew about that, and agreed, without violating any rules. But here, it seems, our granddaughter somehow managed to ‘switch off’ our consciousness, as you say in your language — either that or she charmed us as in a marvellous dream.

Anastasia began talking about her future neighbours. You know how she can create holograms with her thought, don’t you, Vladimir?... Yes, I thought so.

Only this time over the surface of the lake she changed the pictures of the future of the Earth at an incredible rate of speed. Her pictures were incredibly clear and involving.

In one scene there were people walking along flower-lined allées, self-confident and with dignified smiles. Another portrayed angelic-looking children running through a meadow to a river. In a third, we seemed to be looking down on a lake from a great height and seeing the reflection of the whole planet.

And there were a great many scenes and episodes showing marvellous landscapes of extraordinary beauty.

And all at once a single Man appeared over the lake, as though out of a mist. And everything else suddenly disappeared. This Man stood in the middle of the lake all by himself, looking at us. Presently, another man approached from his right, then a maiden of extraordinary beauty, then a second, and a third. After that they were joined by two little twin boys holding hands. A whole lot of people were standing around, all tall and slim. They looked at us with kindly smiles, which made a pleasant feeling of warmth run through our bodies. At that very moment we heard the voice of our granddaughter:

“Grandpakins and Great-Grandpakins, look: these are your descendants thinking about you with warm smiles on their faces. Look, Great-Grandpakins Moisey — you see the boy standing at the end, he looks like you and his gaze is radiant with your soul.”

When all the holograms disappeared, leaving us standing there with extraordinary feelings, Anastasia all at once said:

“What do you think, who can place the crown upon my head?”

And my father, feeling absolutely no sense of subterfuge, enquired (as was customary in the wedding rite):

“Maiden, who may place the crown upon your head?”

And she replied:

“I place the crown upon my own head in the sight of you, of Heaven and of my own destiny.” And with that she placed the crown upon her own head.

“And where is the one you have chosen to wear the crown?” Father asked.

“He is getting ready to go to sleep. But even when he is awake, he is sleeping, too. He knows nothing about our rites. You will need to ask him again, after several years sweep by.”

"You have violated the rules, Anastasia," said Father, sternly. "The ancient science of the wise-men. Two people ought to take part in the rite. People can only get married to each other. The wedding rite has not taken place."

"Believe me, Great-Grandpakins, it has. I am now married in the sight of Heaven. Two people *should* take part in the rite. But, after all, it is customary to ask one first, and then the other, as to their desire to be wed.

"I was asked, and I gave *my* consent for all to hear. My chosen one is still thinking about his, and he can think for as long as he likes as the years go by. Nobody has ever defined how much time is permitted between the two questions. It could be a moment, it could be ten years. But even if in the negative might be his reply here, I shall remain married in my own sight. And the covenant of the ages I shall not defy."

Father wanted to say something more. He had even started speaking when a huge peal of thunder resounded from the sky, drowning out all his words. And he turned and started walking off, paying no attention to the path under his feet, as he was wont to do when he got agitated about something. I could just barely keep up with him as he walked, but I heard how fast he was talking, as though to himself:

"She's a stubborn lass, cunning and clever, not an easy one to countermand. It seems that she is being eternally pandered to by Heaven itself. She is changing the very correlation of the planets. Does that mean women now have the opportunity of wedding themselves and begetting their children on a lawful basis? We must figure out what Anastasia has done, but first, all ought be returned to the existing laws of being. They have not endured these many ages for nought. To do this, we must come up with a weighty objection. But I was not able to: she's greatly cunning and clever, but I... Aha, I've discovered a way to object and make her wedding rite of none effect."

All at once Father did a sharp about-turn and headed for the lake. As we approached the shore, but had not yet emerged from the bushes, we saw over the lake an extraordinary light, albeit barely noticeable — and the stars reflected in the water. It looked as though they were falling into the lake in a shower. And there was our granddaughter, sitting all by herself on a fallen pine log, wearing her floral crown. She was looking in the direction of the dugout where you were sleeping, and softly singing.

My father did not emerge from the bushes. He listened to her song, and then said:

“She is wedded.” And he tapped with his staff on the ground, adding: “Nobody has the power now to annul her marriage. In terms of strength it knows no equal, and... whether she was married by Heaven or by herself on her own, it makes no difference.”

“And what did Anastasia sing?” you ask, Vladimir. “What song?” It was this one:

*By my own hand in wedlock I am crowned —  
 And now to be your woman I am found.  
 You are, you know, the only man for me.  
 Our dreams shall all be brought to life, you'll see.  
 On Planet Earth, our Terran world of blue,  
 Our son will happy be with me and you.  
 Our daughter will be fair and quick of mind,  
 To many a Man they will be good and kind.  
 By Heaven I am joined with you together.  
 You know I am your woman now for ever.  
 The grandchildren we have will live afar —  
 We'll see them on that big, bright, distant star.*

*To be continued...*

# A voyage of self-discovery

## *Translator's Afterword*

*And the Lord said unto me,  
Arise, take thy journey before the people...*  
— Moses (Deut. 10: 11)

It has been a long and interesting journey indeed. This journey began for me in the autumn of 2004 — in a manner of speaking, aboard ship. The ship was the *Patrice Lumumba*, and belonged to one Vladimir Nikolaevich Megré, a seasoned entrepreneur who traded up and down the Ob River in Western Siberia, selling produce and manufactured goods brought from southern cities to northern villages and buying up local handicrafts in return. As with the vast majority of Megré's readers, the description of the *Lumumba* in Book 1, Chapter 1 ("The ringing cedar"), served as my first introduction to the much more powerful (mentally speaking) literary vessel known as the *Ringing Cedars Series (RCS)*.

I was invited on board the *RCS* by its editorial 'Captain', Leonid Sharashkin, who had in turn been commissioned by 'Admiral' Megré to sail across the seas and bring the ship's precious cargo of ideas to the land of Anglophonia. I was hired as an English-speaking 'navigator' familiar with this new land's linguistic waters, and equipped by forty years' experience in Russian-English translation to present these ideas in a format capable of reaching the hearts and minds of Anglophones. The adventure sounded promising, and, admittedly impelled by a sense of divine guidance, I gladly signed on, eager to set sail with a *Yo-heave-ho!* (or *Ey-ukhnem!* — as the Volga boatmen

were said to chant). Eight times (count them!), no sooner had we delivered a shipment to its destination than we went back for more.

Now, as we approach a layover of indefinite duration (following the completion of our ninth voyage), I can look back and honestly say that the experience really has delivered on its promises — these trips have been truly rewarding in terms of both excitement and education,<sup>1</sup> and I am actually going to miss the many ups and downs that my editor and I have been tossed about by in this particular venture in literary navigation. Part of me will be sad, at last, to disembark onto terra firma (safer, perhaps, but not nearly as exciting), but I shall content myself with the 'glad' part — watching from afar as the nine shipments of ideas we helped deliver begin bearing fruit in the consciousness and lives of Americans, Australians, Britons, Canadians, New Zealanders, South Africans and countless others who for some reason have had the English edition of the *RCS* land in their hands.

From a translator's point of view, each of the linguistic shoals, sandbanks and icebergs we met along the way (not to mention the occasional typhoon!) offered a particular challenge. Some of these challenges were more formidable in appearance than others. My editor and I soon discovered that the task at hand was not just a matter of translation, pure and simple, for we were soon confronted in our journey by a whole host of cultural phenomena (references to people, places, institutions, historical events and cultural traditions) that would not be as familiar to Westerners as they were to native Russian readers of the Series, and hence required (sometimes substantial) research and documentation.

<sup>1</sup>One of the 'educational' rewards was a 'side-trip' around to the other side of a 'mountain', which provided fresh insight into my own beliefs and faith. See Translator's Afterword to Book 6.

Mindful of the lessons of the *Titanic*, I hope we were at least moderately successful in resisting the temptation to place too much trust in technology or to become over-confident and over-reliant on our own previous professional experience.<sup>2</sup> The above-mentioned challenges, both large and small, were met through constant reference to both paper-published and on-line 'charts' (Russian and English dictionaries, thesauruses, encyclopædias and Google searches) — sometimes it came down literally to 'phone a friend', and on several occasions to a prayer for more of that 'divine guidance' that had urged me to climb aboard in the first place! Not only that, but results were checked over and over again before being entered into the final 'log'.

On occasion we even found ourselves exploring hitherto uncharted waters and had to navigate, as it were, by the seat of our pants. For example:

How to describe a Russian *dacha* and its primary function as a vegetable-raising centre to North Americans (and other anglophones) raised on vacation cottages with their swimming, boating and sundry recreational facilities?<sup>3</sup>

How to select a suitable English equivalent for the word *chelovek* — a Russian word that still designates a human being of either gender — when faced with a choice between (a) *human*, derived from words associated with lower concepts (like the ground) and (b) *man*, which originally (like *chelovek*) described a 'thinking, intelligent being' of either gender but has since become narrowed in meaning to include (in popular parlance, at least) only half the human race?<sup>4</sup>

<sup>2</sup>Certain aspects of technology, I admit, were most definitely a time-saving boon. Thank goodness for e-mail and the Internet!

<sup>3</sup>See Translator's Preface to Book 1.

<sup>4</sup>See Translator's Preface to Book 1 (especially the 2nd edition).

How to portray *dolmens* and other ‘sacred sites’ to a culture more accustomed to high-rise construction sites and Internet web sites?<sup>5</sup>

How to put across the concept of one’s millennia-old *Rodina* (‘Motherland’) to readers whose roots in their current place of residence may go back no more than a few years or even mere months?<sup>6</sup>

How to express concepts of the pre-Christian Vedic Russian culture in an intelligible manner to English-speakers, when such concepts are still unfamiliar to many Russians themselves in their native tongue?!<sup>7</sup>

How to reproduce the author’s plethora of writing styles (from ‘choppy novice writer’ to authentic-sounding ‘blue-collar dialogue’ to the ‘poetic prose’ of Anastasia’s metaphorical descriptions — not to mention poetry itself) in such a way as to convey to the reader not only the semantic meaning, but, just as importantly, the *literary feeling* of the original work?<sup>8</sup>

It is the RCS’s readers (even more than its literary critics) who will be the ultimate judges of our success in meeting these challenges.

Then, beyond the translation questions (which, after all, can sometimes get bogged down in the nitty-gritty of historical etymology and psycholinguistic nuances), lies the broader issue of how the Series as a whole is reaching an anglophone readership far more attuned to Gene Roddenberry’s *Star Trek* or J. K. Rowling’s *Harry Potter* than to the *Holy Bible* or the

<sup>5</sup>See Translator’s Preface to Book 2.

<sup>6</sup>See Translator’s and Editor’s Afterword to Book 4.

<sup>7</sup>See Book 6, Chapter 5: “The history of mankind, as told by Anastasia”.

<sup>8</sup>Again, see Translator’s Preface to Book 1.

*Bhagavad Gita*<sup>9</sup> — a readership that is only too ready and willing to embrace phenomena that lie outside traditional physical perception, provided that the works presenting them are duly confined to the 'Fiction' or 'Occult' shelves of their local library, bookshop or video store.

After all, one doesn't have to read too far into the *RCS* before encountering passages that look as though they might be right at home in a *Star Trek* episode or a sci-fi novel — Anastasia's telepathic ray,<sup>10</sup> for example, or the "fiery sphere" described to the author as watching over Anastasia as a baby.<sup>11</sup> Or her later reference to the not-so-mythical fire-breathing "Gorynytch Serpent".<sup>12</sup>

It is all too easy, on the basis of such examples, to dismiss the whole Series as just another (albeit very intricately woven) sci-fi yarn. It is all too easy, *upon first glance*, to classify Anastasia's descriptions (in this present volume, for example) of so-called 'pagan' rites in the pre-Christian Vedic Russian civilisation as just another fanciful foray into the esoteric, or the occult. Or to pass off the *RCS* as yet another entry in the 'wishful thinking' category, where a number of critics have pegged recent 'feel-good' films such as *The Secret*.<sup>13</sup>

What distinguishes the *RCS* from science fiction (or, at least, from the vast majority of science fiction works) is the

<sup>9</sup>*Bhagavad Gita* — a sacred Hindu text written in Sanskrit; the name literally means 'Song of the Divine One'.

<sup>10</sup>See Book 1, Chapter 7: "Anastasia's ray".

<sup>11</sup>See Book 2, Chapter 27: "The anomaly".

<sup>12</sup>See Book 4, toward the end of Chapter 3: "The first appearance of *you*".

<sup>13</sup>*The Secret* — a film produced by Rhonda Byrne for Prime Time Productions, directed by Drew Heriot. Since its release in 2006, the film has stirred up a good deal of excitement along with a heavy barrage of criticism. In my view, this work does indeed hint at a great truth, but one with much deeper ramifications than suggested by the superficial treatment presented on screen (which seems to be focused more on effects than underlying causes).

fact that it attempts to show how even such 'far-fetched' accounts as those mentioned above could actually refer to naturally occurring, scientifically explainable phenomena rather than just mere literary inventions or the occult fantasies of the human mind.<sup>14</sup> After all, in 1865, Jules Verne's *From the Earth to the Moon* was written and received as a science-fiction classic, only to turn into scientific reality a little more than a century later with the success of the Apollo XI Moon mission on 20 July 1969.<sup>15</sup> As for the charge of 'occultism', Anastasia (through the author) takes great pains, especially in Book 6, to distance her concept of the Universe from any kind of occult phenomena. These only lead mankind, she says, to being "completely disoriented as to the Space created by God".<sup>16</sup> And in regard to the "rites of love" in particular (described in

<sup>14</sup>See, for example, the technical explanation of the 'flying saucer' phenomenon presented in Book 1, Chapter 16: "Flying saucers? Nothing extraordinary!". The above-mentioned Book 1, Chapter 7, includes a reference to experiments on 'rays' by the Director of the Russian Academy of Natural Sciences' International Institute of Theoretical and Applied Physics. And the account of the 'fire-breathing serpent' in Book 4, Chapter 3, also includes a logical explanation for what is generally dismissed as a mythical phenomenon.

<sup>15</sup>It is interesting to note, too, that a number of *Star Trek*'s 'inventions' have already become 'science fact', within mere decades of their presentation as 'science fiction' — the 'medical tricorder', for example — a *Star Trek*-inspired device under development at the University of Alberta. See: Jodie Sinnema, "Scientists test 'tricorder' to root out disease". *The Edmonton Journal*, 16 September 2005, p. B1. In fact, a whole array of books may be found dealing with the factual aspects of *Star Trek* — e.g.: Lawrence M. Krauss, *The physics of Star Trek*. With a Foreword by Stephen Hawking. New York: Harper Collins, 1995. Still another 'science fiction' TV series of the 1990s (this one all too short-lived) — *SeaQuest DSV* — featured a commentary at the end of many of its episodes by Dr Robert Ballard, Scientist Emeritus in the Department of Applied Ocean Physics and Engineering at the Woods Hole Oceanographic Institution, relating the series' science fiction to science fact.

<sup>16</sup>See Book 6, Chapter 8: "Occultism".

the present book), Anastasia's grandfather assures the author: "None of these rites was characterised by occult superstition, as today. Each one served as a school of higher learning, an examination by the Universe."<sup>17</sup>

*'Anastasia says...' 'Anastasia's grandfather does...'*

Yes, in almost any discussion of Vladimir Megre's *Ringed Cedars Series* among its readers, phrases like these tend to trip off the tongue without a second thought, leaving many outsiders (and even some 'insiders') to wonder: *Who is this Anastasia?* Which brings us to what may be the most frequently asked readers' question of all — one which Québec writer Mado Sauvé chose as the opening sentence of her review of the Series in the Spring 2007 issue of *Le Journal Vert*:

*"Anastasia existe-t-elle ?" (Does Anastasia exist?)*

I have a feeling Sauvé expresses what is on many readers' minds as she continues:

Does she really live in the Siberian taiga or was she born of the imagination of a clever entrepreneur? Even after reading the first four [books] of the Series ... it is still difficult to answer this question.<sup>18</sup>

A broad range of opinion on this issue has indeed been expressed to date by *RCS* readers collectively — from those who dismiss her as a mere figment of the author's imagination to those who see her as the reincarnation of some ancient

<sup>17</sup>Quoted from Chapter 1: "Love — the essence of the Cosmos".

<sup>18</sup>Original: "Vit-elle vraiment dans la taïga sibérienne ou est-elle née de l'imagination d'un habile entrepreneur? Même après avoir lu les quatre premiers [livres] de la série ... il est encore difficile de répondre à cette question." — Mado Sauvé, "Le mystère de la déesse russe". *Le Journal Vert* (printemps 2007).

prophet. But to me this only begs a further set of questions: *What does it mean, to 'exist'? Is 'existence' an objective or a subjective state? Is 'existence' confined to material perception, or can it be determined by non-material criteria (faith, for example)?* Megré quotes Anastasia herself as saying:

"I exist for those for whom I exist."<sup>19</sup> What could that possibly mean?

In pondering the question of the existence of Megré's Anastasia and her family, it might be worthwhile considering a few other personages whose existence has been a subject for questioning over the ages — names like Shakespeare, Santa Claus (Father Christmas), Job in the Old Testament and even Christ Jesus in the New. In a civilisation so reliant upon physical, material evidence as the primary, if not the only criterion for proof of existence, perhaps it is little wonder that sometimes figures with a larger-than-life reputation fall prey to public suspicion as to their very existence. Are we not almost globally educated to be sceptical about anything that departs from a society-defined, materially determined norm?

Such is the case with the man considered to be the greatest writer the English-speaking world has ever produced. No simple village-dweller, some have said, could have possibly produced all the time-tested plays and sonnets credited to the Bard of Avon.<sup>20</sup> And yet few today would deny that the

<sup>19</sup>Quoted from Book 1, Chapter 26: "Dreams — creating the future".

<sup>20</sup>For a sampling of the controversy surrounding Shakespeare's authorship, see: George McMichael & Edgar M. Glenn: *Shakespeare and his rivals. A casebook on the authorship controversy*. New York: Odyssey Press, 1962; H. N. Gibson, *The Shakespeare claimants: a critical survey of the four principal theories concerning the authorship of the Shakespeare plays*. Oxford & New York: Routledge, 2005; Mark Anderson, *'Shakespeare' by another name*. New York: Gotham Books, 2005.

writer universally known as *Shakespeare* actually existed in some form. After all, his masterpieces did not magically appear one day out of a vacuum!<sup>21</sup>

Many people today, not only in America but elsewhere in the world, are familiar with the appeal of a little eight-year-old girl named Virginia O'Hanlon to the editor of the New York's *Sun* newspaper in September 1897:

"Some of my little friends say there is no Santa Claus. Papa says, 'If you see it in 'THE SUN it's so.' Please tell me the truth: is there a Santa Claus?"

And few can forget the key phrase (italicised below) from veteran newsman Francis Church's memorable reply, even if they are not as familiar with the writer's name or his remarkable justification for this reply:

Virginia, your little friends are wrong. They have been affected by the skepticism of a skeptical age. They do not believe except [what] they see...

*Yes, Virginia, there is a Santa Claus.* He exists as certainly as love and generosity and devotion exist, and you know that they abound and give to your life its highest beauty and joy...<sup>22</sup>

<sup>21</sup>The thought has often come to me over the past few years that, given the powerful ideas and intricately crafted literary structure evident throughout the *RCS*, if it should somehow turn out that the whole story of Anastasia was entirely the author's invention, then Vladimir Megré would have to be considered one of the world's cleverest and most gifted writers since Shakespeare! Even if most of his information were drawn from a variety of secondary sources, weaving them all together into a plausible plot-line over two-thousand-plus pages of text could be considered nothing short of a major literary feat. On the other hand, it would be no denigration of Megré's writing skills to accept that he has simply described pretty much what he actually witnessed, *in some form*, from experience.

And lest anyone hasten to dismiss Santa Claus (in contrast to Shakespeare) as a completely mythical figure, it should be remembered that St Nicholas was indeed a real human being in the flesh. He was the Bishop of Myra in what is now western Turkey, back in the 3rd century C.E. It was his reputation for secret giving to the needy that eventually evolved into the popular story of the world's ultimate holiday gift-giver.

A similar question hangs over the Old-Testament character of Job in the Bible. According to Dummelow's Bible commentary:

It has always been a question whether the book of Job is to be regarded as history or parable. Among the Jews themselves the prevailing opinion was that it was strictly historical, though some of their Rabbis were inclined to think that the person of Job was created by the writer of this book in order to set forth his teaching on the problem that was vexing human thought. ... The opinion of Luther is probably the correct one, viz. that a person called Job did really exist, but that his history has been treated poetically.<sup>23</sup>

---

<sup>22</sup>Francis Pharcellus Church, editorial in *The Sun* (New York City), 21 September 1897 (*italics—JW*). (The full text of the editorial is available in many on-line sources.) Many books and cinema films have echoed Church's thesis in different ways, notably director George Scaton's 1947 film classic *Miracle on 34th Street*. In the 1994 re-make under the same title (this one directed by Les Mayfield), Santa's existence is 'proved' in a court of law by reference to the phrase *In God we trust*, which appears on the reverse of every American one-dollar banknote. This is cited as evidence of the United States government's endorsement of the existence of an entity based on faith alone.

<sup>23</sup>Rev. J. R. Dummelow, *A commentary on the Holy Bible*. New York: Macmillan, 1908, p. 292. According to Dummelow, *Daniel* is another biblical figure whose historical existence is a matter of some controversy (see *Commentary*, pp. 525–526).

Can we expect a similar commentary to be written about the person of Anastasia a millennium or two hence?

While *Job* may indeed have been mainly an allegory written for moral instruction, what of that most celebrated among the human figures of the Bible — namely, *Christ Jesus*,<sup>24</sup> whose life and works form the very foundation of the whole movement of Christianity? Many Christians believe Jesus to be the earthly incarnation of God Himself; others accept him, rather, as God's Son and messenger to mankind, but there are few indeed who deny his historical existence. And yet the authenticity of the Gospel records is occasionally called into question, and not just by atheists.

It is instructive to examine the writings of two late-nineteenth-century spiritual thinkers on this point — one of them a peasant philosopher in Russia and the other the founder and leader of a world-wide Christian movement headquartered in America. While neither of them actually question Jesus' existence themselves, both shed a non-traditional light on the ultimate significance of that 'existence'.

On 12 May 1888 the Molokan<sup>25</sup> peasant writer Fedor Alekseevich Zheltov (1859–1938), a deeply committed Christian, sent a treatise he had just written to Leo Tolstoy (whom he regarded as a mentor), entitled "On life as faith in Christ".

<sup>24</sup>While *Christ* and *Jesus* are often used synonymously, the two words are quite distinct in meaning. *Jesus* (*Jesous*) is a Greek adaptation of the Hebrew first name *Yhōshbūa* (lit. 'Jehovah saves'), identical to the Old-Testament name *Joshua*, while *Christ* (*Khristós*) is the Greek translation of the Hebrew *Māshiyakh* ('Messiah', or 'the anointed one'), and can be thought of more as Jesus' title, or the spiritual, immortal idea he embodied (the message itself as distinct from the messenger). For a further explanation of the distinction, see: Mary Baker Eddy, *Science and health with Key to the Scriptures*. Boston: Trustees under the will of Mary Baker Eddy, final English edition 1911, p. 333.

Toward the end of the treatise he makes a rather startling declaration:

None of the actions and events accompanying Christ's sermon are a stumbling-block for me — I do not rely upon them as a basis for understanding truth, and it makes no difference to me whether they happened or did not happen, or how they happened, whether they were imaginary or real, whether the Gospels were written by the apostles or by someone else — none of that makes a difference nor is it dear to me. What is dear to me is only the truth which Christ imparted — it in itself is a precious jewel and my task is to know its price and to know why it is so precious.<sup>26</sup>

About two decades later, on 1 December 1906, the discoverer of Christian Science,<sup>27</sup> Mary Baker Eddy (1821–1910), published a statement<sup>28</sup> in the weekly magazine she had

---

<sup>25</sup>*Molokans* — a Christian sect which broke away from the Russian Orthodox Church in the mid-16th century, rejecting ecclesiastical hierarchy and its alliance with government and militarism and insisting God must be worshipped primarily in one's heart and mind. They left their initial alliance with the Doukhobors, who, unlike the Molokans, preferred oral Scriptural traditions over written texts. Toward the end of the nineteenth century many Molokans went to America, while large numbers of Doukhobors emigrated *en masse* to Canada, their trip financed largely by Leo Tolstoy and his followers. Interestingly, like the Doukhobors, the Vedic 'wise-men' Anastasia describes also favoured an oral method of teaching; they were able to sum up volumes of detail in just a few words and a single easily remembered rite — see the first section of Chapter 6 ("Into the depths of history") in the present volume.

<sup>26</sup>In: Ethel Dunn (ed.), *A Molokan's search for truth: the correspondence of Leo Tolstoy and Fedor Zbeltov*. Translated by John Woodsworth. Original editor: Andrew Donskov. Berkeley (Calif), USA: Highgate Road Social Science Research Station and Ottawa, Canada: Slavic Research Group at the University of Ottawa, 2001, p. 48.

<sup>27</sup>*Christian Science* — see footnote 1 in Book 6, Translator's Afterword.

founded, the *Christian Science Sentinel*, detailing her professional relations with Rev. James Henry Wiggin (whom she had hired as a publishing consultant) and refuting public allegations that he had had a hand in the authorship of her seminal work *Science and health with Key to the Scriptures*. In this statement she reports Rev. Wiggin as asking her the question:

“How do you know that there ever was such a man as Christ Jesus?”

To which she replies (in part):

I do not find my authority for Christian Science in history, but in revelation. If there had never existed such a person as the Galilean Prophet [i.e., Jesus], it would make no difference to me. I should still know that God's spiritual ideal is the only real man in His image and likeness.

It is evident that for both Zheltov and Eddy it was not the *person* of Christ Jesus that was sacred and significant, but the *ideas* (the ‘Christ ideas’, one might say) that Jesus presented to the world — ideas which could be effectively practised in our age and their practice taught to others, as Eddy proved not only by her own remarkable works of healing, but, more importantly, by the thousands upon thousands of spiritual healings brought about by her students, their students and students of their students, right up to the present day.<sup>29</sup> For

---

<sup>28</sup>Reproduced in: Mary Baker Eddy, *The First Church of Christ, Scientist, and Miscellany*. Boston: The First Church of Christ, Scientist, 1925, pp. 317–319.

<sup>29</sup>Many of these healings have been verified by the medical profession or other eye-witnesses and published as testimonies. See especially: Yvonne Caché von Fettweis & Robert Townsend Warneck, *Mary Baker Eddy: Christian healer*. Boston: The Christian Science Publishing Society, 1998; *A century of Christian Science healing*. Boston: The Christian Science Publishing Society, 1966; Robert Peel, *Health and medicine in the Christian Science tradition: principle, practice and challenge*. New York: Crossroad, 1988.

these students, textbook study and class instruction, while an acknowledged help, inevitably have taken second place to individual prayer, to their own direct mental and spiritual connection to God as their ultimate Teacher and ultimate Healer.<sup>30</sup>

And, lest there be any doubt as to how Eddy viewed her own role as a presenter of the science of spiritual healing to the world, in her later years she stated unequivocally: "Those who look for me in person, or elsewhere than in my writings, *lose me instead of find me.*"<sup>31</sup>

So now, perhaps, we can look at the *Journal Vert* reviewer's question "Does Anastasia exist?" in a new light.<sup>32</sup> It was the same question Sauvé had put to me in an interview in preparation for her review, where she quotes my reply (in French) along these lines:

<sup>30</sup>Eddy also makes some very similar statements to Anastasia's regarding occultism and mysticism. In *Science and health* (p. 569), she foresees an occult-free future for mankind: "The march of mind and of honest investigation will bring the hour when the people will chain, with fetters of some sort, the growing occultism of this period." And in the same work (p. 80), she observes: "[Christian] Science dispels mystery and explains extraordinary phenomena; but Science never removes phenomena from the domain of reason into the realm of mysticism."

<sup>31</sup>M. B. Eddy, *The First Church of Christ, Scientist, and Miscellany*, p. 119 (*italics*—*JW*). Similar sentiments are expressed in other places in her writings—see especially the article "Deification of personality" in her *Miscellaneous Writings* (Boston: The First Church of Christ, Scientist, 1925, pp. 307–310). Note also Eddy's statement in *Science and health* (p. 82) in her discussion of the importance of writers' thoughts and ideas over their personages: "Chaucer wrote centuries ago, yet we still read his *thought* in his verse. What is classic study, but discernment of the *minds* of Homer and Virgil, of whose personal existence we may be in doubt?" (*italics*—*JW*).

<sup>32</sup>For one thing, in the 'club' of those with a questionable historical existence, these 'Siberian recluses' appear to be in pretty good company.

I believe that Anastasia certainly exists in some form, but not necessarily in a fleshly body visible to our material eyes, even though I would not rule that out. As I see it, there is no doubt that she exists as a very powerful idea and that she is a force of inspiration. She exists in the words, in the rich thoughts of feelings and promises as transcribed by Megré.

And today I would add (in the spirit of Zheltov): "She exists in the hearts of them who are ready to seek out and apply for themselves the ideas she presents, and this is what is truly dear to me."

Does that mean that the author's portrayal of Anastasia as a living human being is irrelevant or unimportant? Not at all. For some readers, accepting her as a bodily personage, at least to begin with, may be extremely helpful. By identifying with a figure who expresses what seem like incredible qualities of the Divine and yet still affirms "I am Man",<sup>33</sup> many readers may get their first glimmer of awareness of their own innate capacities. But the more they read — especially in a second or third examination of a text they have read before — their initial impressions may gradually evolve away from personage and more into idea.

When Francis Church identified the real Santa Claus with the spiritual qualities of "love and generosity and devotion", he did not thereby obliterate the image of a jolly old man in a sleigh from a young child's mind, but enriched her temporary image of 'Santa' with a new dimension, a new idea. As the child grew older and developed her reasoning capacities, she would have been able to retain this new idea in her thought even when she no longer clung to the old image of a personal gift-giver.

<sup>33</sup>See (for example) the middle of Book 1, Chapter 26: "Dreams -- creating the future".

In each of the cases we have looked at, we can witness the *evolution of an image* at work in individual human thought.<sup>34</sup> In Book 6, Chapter 6 (“Imagery and trial”), Anastasia describes the *image* as “an entity of energy invented by human thought, ... created by a single Man or by several together”, and further likens it to an actor’s portrayal of a dramatic *persona* on stage — a portrayal in which “the invented image acquires a temporary embodiment”. Note that the portrayal of one and the same *persona* will vary from actor to actor, and even from performance to performance by the same actor, especially as the actor gains new insight into the deeper dimensions of the character he is portraying.<sup>35</sup>

But just as Zheltov’s image of the central figure of the New Testament evolved into one focused more on the truth itself than the person of its human embodiment, just as Eddy (a real-life historical figure who frequently found herself targeted by both adoring worshippers and malicious critics) finally urged her followers to stop looking to her as a person and start practising the truths she revealed by healing their own

<sup>34</sup>Note also Megré’s observation in Book 7, Chapter 3 (“You create your own fate”): “*the power of the energy of thought has no equal in the Universe: everything we see, including ourselves, is created by the energy of thought.*” Yet he also relays Anastasia’s warning that the ‘energy of thought’ which we all possess is vastly underutilised. In Book 5, Chapter 12 (poignantly entitled “Do we have freedom of thought?”), after taking account of all the distracting subjects on which people tend to waste their thinking capacities, Anastasia concludes: “All told, the average Man spends only 15 to 20 minutes of his life reflecting on the mystery of creation.”

<sup>35</sup>Anastasia goes on (in the same chapter) to show the effects of collective images held by members of a society — images of others, of themselves and of the world as a whole. And in Chapter 3 (“Why does love come and go?”) of the current book she points out the vital role played by *image* in finding (and keeping) one’s soulmate and how one’s image may change or stay the same independently of the real person (see especially the section entitled “False images”).

and others' mental and physical ailments, so Anastasia, whatever personal form she may possess, urges (through Megré) a similar charge upon her would-be followers.<sup>36</sup>

In Book 2, for example, in reply to the author's query as to whether *she personally* might have been helping him in a particular situation, Anastasia tells him:

Everything in the Universe is interrelated. To perceive what is really going on in the Universe one need only look into one's self.<sup>37</sup>

And in Book 3 when Vladimir expresses curiosity as to the extent of her abilities — “Can you answer any question confronting science today?” — Anastasia offers the following reply:

<sup>36</sup>Does ‘practising the truths’ revealed by Anastasia mean that every single reader should start looking for a plot of land in the country with a view to setting up his or her own ‘family domain’? Anastasia herself recognised that this would not be feasible for everyone at the present time, although she does promote this option as especially suited to providing an ideal nurturing-ground for discovering one's inner being, even if it starts off with just a simple flower-pot on the window-sill (see Book 5, Chapter 15: “Making it come true”). In Book 8 she outlines the benefits which the ‘domain’ movement will have even on those still living in the city (see the section “Let's create” in Book 8, Chapter 10: “*The Book of Kin and A Family Chronicle*”). While I can definitely see the logic in Anastasia's own recommended vehicle of expression for the ideals she shares, I would think there may be as many avenues for putting these ideals into practice as there are individual readers of her books. The important thing is to keep in mind that these ideals *are eminently practicable* in some form — i.e., they are like seeds destined to push their way above and beyond one's mental soil into the fresh air and sunshine of one's whole life (see Translator's Preface to Book 2 for one small personal experience along this line). In many cases this will bring joy to others as well as to one's self.

<sup>37</sup>Quoted from Book 2, Chapter 6: “The cherry tree”.

Many of them, perhaps. But every scientist — *indeed, every Man* — can find the answers. Everything depends upon the purity of one's thoughts, and the motive for asking.<sup>38</sup>

Over and over again she emphasises that the ideas and powers she possesses are within the grasp of every individual on the Earth, because they all come from the same source, i.e., the Creator (God). Over and over again both she and her grandfather keep urging Vladimir (and, by extension, every reader of the *RCS*) to resist the temptation to rely upon *them* as a personal source of wisdom and seek instead to find and utilise the ideas within themselves.

"Try not to wallow in all your information and contemplations, Vladimir," Anastasia's grandfather exhorts in Book 4. "Decide what's real for yourself."<sup>39</sup>

And in Chapter 1 ("Love — the essence of the Cosmos") of the current volume he accuses Vladimir of "laziness of mind" for constantly pestering him with questions when he should be looking for the answers within.<sup>40</sup> Subsequently he admonishes:

"I speak, and you listen, and instead of working out your own conclusions in your thought, you are merely taking note of mine."<sup>41</sup>

Similarly, time and again Anastasia urges Vladimir not just to accept her conclusions at face value, but to reason things through for himself by logical thinking — a capacity which (as

<sup>38</sup>Quoted from Book 3, Chapter 6: "Forces of light" (*italics—JW*).

<sup>39</sup>Quoted from Book 4, Chapter 33: "School, or the lessons of the gods".

<sup>40</sup>He teases Vladimir on this point: "So, there's not enough information out there and you've come to me to get it, eh?" Note also his advice to Vladimir regarding the problem of getting legislative approval for setting up family domains: "You ought to be deciding your own course of action, without any kind of advice" (Book 8, Chapter 9: "A fine state of affairs").

<sup>41</sup>Quoted from Chapter 6: "Into the depths of history".

her grandfather points out), when not actively cultivated, is in danger of being lost by mankind.<sup>42</sup>

She, too, warns the author against “laziness of mind”. In Book 8, Chapter 5 (“Divine nutrition”), when Vladimir confesses: “It’s still not too clear to me just how I should be thinking”, she gently assures him: “It will become clear if you are not too lazy to think.”

Again in Book 8, Anastasia cautions Vladimir to be wary of relying on words alone. When asked by Vladimir about the role of words, she replies:

...it is not the words that are important, but, rather, people’s conscious awareness. Words, of course, are necessary to bring it forth. A conscious awareness of eternal life will help perfect Man’s way of life.<sup>43</sup>

Words are similar to outward appearances: they often play an important role in shaping one’s initial conscious awareness of an idea. But, like one’s early person-focused impressions, they tend to fall away as the image evolves in the direction of the Divine.

Hence, if one is truly to follow Anastasia, it would seem wise to heed her own advice and start seeking her out (as many readers are already doing) not in person, and not just in words about her (as fascinating as those may be), but in *idea* — the idea which, she says time and again throughout the Series, exists in every single one of us, if we are only alert enough to harness our mental capacities to discover our own innate

<sup>42</sup>See the middle of Chapter 7 (in the present volume): “Russia erased”.

<sup>43</sup>Quoted from Book 8, Chapter 13: “A new civilisation”. See the Editor’s Afterword to the present volume for a delightful illustration of the dangers of putting too much stock in printed books and words at the expense of one’s own logical thinking and feelings.

purity and power of thought in the likeness of our Creator. And then to start applying this idea to renewing and improving our day-to-day lives.

And because the evolution of an image is primarily an *individual* phenomenon (although yes, it may at times be collective, i.e., a shared individual experience), we shouldn't be surprised if our own discovery of Anastasia and her idea appears to evolve in a different way or at a different pace from that of other readers, or is different from the perception we ourselves had in a previous reading.<sup>44</sup> Like an actor honing a portrayal on stage from performance to performance, each one of us is evolving our own image of her as a *persona*. But the more we seek and find her not so much "in history, but in revelation" — the more we focus on the message rather than on the person of the messenger — and within our own hearts and minds, the stronger a position we shall be in to discover harmony within ourselves and with others, and the more deeply we shall be able to comprehend and appreciate her own beautiful self-declaration: *I exist for those for whom I exist.*

The power of the 'Anastasia idea' presented throughout this Series was certainly one of the reasons I signed on to these 'voyages' three years ago, and the fascinating concepts that have multiplied therefrom have indeed made the whole venture most worthwhile.

<sup>44</sup>In a remarkable little book entitled *The five clocks*, former University of Toronto linguistics professor Martin Joos (pron. *Yose*, rhyming with 'dose') states that one of the hallmarks of great literature is the capacity to convey a variety of different meanings to different individuals, or to the same individual upon each successive reading. The dedicated writer, he says, can enable the searching reader "to educate himself indefinitely far beyond what the writer put into the text in the first place". — Martin Joos, *The five clocks*. New York: Harcourt Brace, 1967, p. 42. There is no question, to my mind, that this 'capacity' Joos describes is eminently inherent in the writings of Vladimir Nikolaevich Megré concerning Anastasia.

Anastasia's (and her grandfather's) emphasis on the need for logical thinking and a conscious application of universal ideas to one's life-practice is a clear example of how the *RCS* eminently transcends what is popularly classified as *science fiction*. In my Translator's Preface to Book I, I described the work (and, by extension, the Series) as a *chronicle of ideas* — a metaphysical treatise

...set forth with both the supporting evidence of a documentary account and the entertainment capacity of a novel. In other words, it can be read as any of these three in isolation, but only by taking the three dimensions together will the reader have something approaching a complete picture of the book. And all three are infused with a degree of soul-felt inspiration that can only be expressed in poetry.

Having completed the whole Series, I would now add that it is a chronicle which touches upon very many of the disciplines traditionally defined as 'academic', but in the context of their interrelation with each other and their application to our daily human life. As I look back over the *RCS*, apart from its obvious focus on ecology and environmental science, I can think of references to astronomy, biology, chemistry, physics, forestry, agriculture, horticulture, geology, archæology, engineering, architecture, medicine and the healing arts, psychology and psychotherapy, sociology, criminology, political science, economics, philosophy, religion, drama, literature, music and poetry, linguistics, foreign languages and quite possibly several more — all presented with a view to their application to everyday life, including work and leisure activities, along with love, marriage, family and other interpersonal relationships. The voyage of the *RCS* has taken in all these 'ports of call' along the way, and not just from a sailor's point

of view (try an astronaut's perspective!). The voyage, indeed, reaches unto the very stars!

In line with the 'Moses' epigraph above, I have now taken my journey. And by the time you read this, you may well have already taken yours, at least once. But I trust the ideas you have *taken in* along the way will stand you in good stead for many ages yet to come.

As your English-speaking 'navigator', I salute you and wish you a hearty *Bon voyage!* as you set out on (or continue) your own voyage of self-discovery in the likeness of the Creator.

See you on a star! *On a star see ya!*<sup>45</sup>

Ottawa, Canada

# The Book of Happiness

## *Editor's Afterword*

"Papa, which do you like better — your computer or us, your family?" my daughter Lada enquired of me one morning as I was sitting at work in my home office.

"What? Of course I like *you* better. Why?" I replied, still glued to the screen.

"It's just that you spend all day long in front of computer, but I'd rather you played with me, or come see the pumpkins Mama and I've planted. Even when we go for a walk all together, all you do is think about your work — you barely notice us!"

"Well, that's true" I admitted. "But I do need to earn money, too — to pay for the piece of land we plant our garden on, for example. In other words, to afford things that are important in life."

"Nonsense!" she protested. "It's all arranged like that on purpose — so as to make you think that everything important in life you can buy for money — to make you think money's the most important thing of all."

As I turned to face her, Lada looked me straight in the eye and added, tugging at my sleeve:

"You know, Papa, I really feel you need to come with me to my tree house. I'll teach you three lessons on how to live happily ever after... without money."

Seeing the seriousness of the issue, I rose from the desk. Lada took me by the hand and escorted me to her green 'classroom'.

Half an hour later, as she finished delivering her three lessons and made sure I grasped their key concepts, Lada surprised me with a fresh demand:

“And now, before you go, you must promise me that you shall never ever share what I have just taught you — with anybody.”

“How come?” I queried. “If the path you outlined to me can really lead people to happiness, I thought you would encourage me to tell others about it!”

“Don’t you know about what happened with *The Book of Happiness*?”

“What *Book of Happiness*? Never heard of it.”

Lada crossed her hands on her knees, sighed, and began telling me the story.

Once upon a time, in a large city with dirty, polluted air, there lived a man who had lost his happiness. It seemed as though he had searched for it everywhere — including behind the sofa and under his desk — but happiness was nowhere to be seen. It occurred to the man that his cat might have taken his happiness outside and hid it somewhere — so he searched all around his apartment block, but found nothing.

Exhausted by the search, he decided to spend the following day — his day off — in the woods, picking mushrooms. And so he did — he put on his big rubber boots and his backpack, took a knife and a large basket woven out of willow twigs — and headed off.

He had a very good day, and even forgot his grief over the lost happiness. By the time the Sun was setting, his basket

was so full of beautiful large mushrooms it was hard to lift off the ground. The man was ready to go home, but now he couldn't find his way out of the forest. There was no visible path. He tried going in one direction — which he hoped would lead him out onto the paved road — but ended up in a swamp. He had no electric torch, no flashlight, and in the fading twilight it was hard to see the way, so the man decided to spend the night in the forest, and try to find his way home the following day.

He made a bed out of dry pine needles under a tall pine tree, put his backpack under his head for a pillow and tried to go to sleep. But the mosquitoes attacked him, putting sleep out of the question. So he just lay there, immersed in his thoughts. Finally he drifted off into a dream.

The man awoke suddenly in the middle of the night. The forest was dark and quiet all around, but far off in the distance, over to one side, he could make out what seemed to be a light glistening midst the branches. Thinking it could be a house, or a lamppost on the road, the man picked himself up and walked in the direction of the light, slowly making his way through the darkness.

After a while he found himself emerging from the dense bushes into a glade. There was no house or lamppost anywhere in sight, but in the centre of the glade there was a moss-covered hillock radiating a soft, golden light. As the man approached the hillock, he saw an old book in a leather binding lying on the top. The light was coming from the book!

The gold lettering on the cover read: *The Book of Happiness*. He opened it and began to read.

The book opened with a promise to show the reader how to find his happiness.

*Wow, this is exactly what I need!* thought the man as he hefted the heavy tome from the moss and hurried out of the glade, taking the book with him.

Perhaps it was the light coming from the book, or perhaps his own insight, but he now felt confident as to which way he should go. And, indeed, it wasn't long before he found the path, then the paved road, and began walking along the empty night-time highway in the direction of the town, his mushroom-filled basket in one hand and *The Book of Happiness* in the other.

Dawn was breaking in the sky when he reached the outskirts of the city and, soon afterward, his home. Despite his heavy load he felt neither tired nor sleepy. He put the basket down by the front door, took off his rubber boots, plunged onto the sofa and immersed himself in reading.

He finished the whole book that same day and it delivered on its promise. It brought him his happiness back. His happiness turned out to be lying behind the bookshelf — the only place he had not looked when searching for it. Presently he remembered that at one time he had indeed put his happiness on top of this bookshelf to save space in his small flat. Then he had added more books on top, which had apparently pushed the happiness over and caused it to fall behind.

When the man — following the instructions from the Book — regained his happiness, it was all covered in dust, hair and cockroach feces, but he wiped it clean and it began to look like new once more.

So as not to lose it again, he decided to carry it with him all the time. He attached it to a watch chain he bought specifically for this purpose, and now carried his happiness in his pocket.

For days and weeks he found himself in a state of bliss and joy. But seeing the unhappy people all around him — on the sidewalks of the streets, in offices and shops — he could not help but go back in his thought to the very last statement contained in the Book, namely:

*You shall not show this book to others.*

*But just why, he thought, can't I share The Book of Happiness with others to make them happy? This can't be fair — seeing how much suffering and injustice there is in the world!*

Gradually, as he contemplated the world around him, his feeling of happiness began to give way to a sense of disquietude, which over time became unbearable. Eventually the man resolved to try sharing the Book with just one man — a fellow-worker who had spent his week compiling some sort of production reports on his computer and who looked particularly lean and unhappy.

And so one day he brought the Book with him to work and, toward the end of their shift, entered his workmate's cubicle. Explaining its significance, he lent the Book to him for just one night, on his earnest promise that he would return it the next morning. That night, as he was going to sleep, lying in his bed and clasping his chained happiness to his chest, he felt blissful and fulfilled once more at the thought of sharing the path to happiness with even one fellow-human being.

The next morning, however, a sticky feeling of unease crept into him when he saw that his workmate he had lent the book to the night before was not in his office. The man managed to bear this uncertainty until noon, trying to console himself with the thought that his friend must be finishing the last page of the Book at home and would appear at the end of the corridor any moment.

As this did not happen by the lunch break, the man obtained his colleague's home address from the manager (who had been trying to reach him by phone the whole morning, without success) and ran over to his place. There, he found the door of the apartment wide open, and his workmate gone. With him was gone, too, *The Book of Happiness*.

At first the man found it hard to live with the nagging thought that he himself had not heeded the Book's warning and was now to blame for its disappearance. But as the days

turned into weeks and weeks into months, the sensation of loss gradually wore down, and life returned to normal.

Then one morning a year later, as the man was walking to the office, he sensed a strange agitation in the air. Everywhere people could be seen shouting and running, and a huge queue had formed in front of the neighbourhood bookstore. With a dark feeling of foreboding the man made his way through the crowd to the bookshop window where, lo and behold, a hundred copies of the latest sensational release were on display. He gasped as he read, in large golden letters on the cover of each book — *The Book of Happiness*.

At this moment the store window lost its ability to withstand the pressure of the human bodies leaning against it and it shattered. Pieces of broken glass showered down on the crowd. A moment later a flood of people rushed to the display case and emptied it. Dozens of people were now running away from the bookstore, each clasping a volume to their chest. One of these people was the man who had found this book more than a year ago in the forest.

He rushed back to his apartment and leafed through his prize. There was not a shred of doubt left — this was an exact reprint of *his* Book, apparently made from the copy stolen a year earlier by his workmate. Strange as it may seem, though, the man did not feel angry at him, but rather quivered in excited anticipation as to what would come next.

For the next few days the whole city was caught up in a reading frenzy. Nobody seemed to go to work or even go outdoors. The whole populace, young and old, were staying home and reading the amazing yet simple revelations of *The Book of Happiness*. And yes, more than one soul puzzled over the last sentence in the Book:

*You shall not show this book to others.*

They questioned themselves as to why this restriction was imposed and, more importantly, why the Book had gained such tremendous circulation despite this reservation. But the general welfare resulting from the wide distribution of the Book and its ideas was so palpable that these questions were soon forgotten.

For the next two weeks, few businesses were open in the city, as all citizens joined in a spontaneous festival to celebrate their new awareness and congratulate each other on the new era that the discovery of this remarkable book had ushered in upon them.

And when the people did return to their workplaces, they were so overfilled with happiness that they took to their routine tasks with joyous enthusiasm. The bakers were baking tastier bread, the builders were laying stronger foundations for new buildings, and the policemen became more polite than ever before (!) — while not just crime, but even traffic accidents seemed to completely disappear overnight.

Weeks passed, and the whole city and the surrounding countryside were transformed in such a remarkable, beneficial fashion that everyone was going to bed with smiles on their faces in excited anticipation of what new joys the next day would bring. And only the man who had originally discovered the Book seemed to have any recollection of the warning it contained in its final line. Yet the warning, even for him, seemed to pale into insignificance.

Months went by. As he came out of his apartment block one morning into the blossoming of the Spring, his ears were blasted by the sound of nearby police-car sirens, which no one had heard for a very long time. He hurried around the corner just in time to see two policemen shove an arrested felon into a patrol car and take off. The elderly lady left standing on the pavement was explaining to passers-by that a young delinquent had assaulted

her and tried to wrench her happiness from her. Her attacker had complained that she possessed more of it than he himself..

The next day similar incidents started to take place all over the city, as more and more people began to suspect their neighbours, colleagues or just passers-by of usurping a larger portion of happiness than they were entitled to.

Before long, all hell broke loose. Shooting began in the streets and neighbourhoods. People were murdered for the tiny pieces of happiness they were desperately trying to cling on to. The police department was overwhelmed. Days later, the police themselves joined the trend and raided homes to carry out whatever happiness remained — “for government needs”. Rumours had it, however, that police were keeping the confiscated happiness for their personal greed, and even fighting over it amongst themselves.

A large portion of the populace fled the distressed city, most of the businesses closed, and of the few individuals who remained, nobody so much as cared even to remove the rotting corpses of the slain men, women and children from the streets and squares that just a few weeks ago had been home to — as it had seemed at the time — boundless happiness.

As the man who had originally found *The Book of Happiness* in the woods was making his way stealthily along a completely deserted avenue leading to the city’s main square, he suddenly heard the squeaking of brakes, a lone gunshot, the clapping of car doors, and the receding noise of a motor. When it finally died away in the distance, he mustered his strength and turned the corner into the plaza where the incident had happened only moments earlier. There, by the fountain, lay the man who had stolen the original of the Book a year ago and — in a pool of fresh blood nearby — the hefty leather-bound volume, opened to the last page.

*You shall not show this book to others — read the final line.*

Centuries went by. Wind and water had eaten away stone, concrete, and metal; paved streets and squares had given way to trees and meadows. Virtually nothing now betrayed the traces of the former city, concealed as it was in a lush, dense forest. The few ruins that remained had been fenced off and designated as historical monuments, occasionally drawing the odd tourist group from a faraway urban centre.

One day a visitor with a basket woven from willow twigs separated from his group and, lured by the most beautiful mushrooms he had ever seen, wandered deep into the forest, off the beaten path. Late in the afternoon, as he was crossing a large glade on his way back to the tourist camp, he stumbled over something in the high grasses. He reached down and brought up a thick book in a leather binding with gold lettering. *The Book of Happiness*, read the title.

*Wow!* thought the man. *This must be a real oldie -- and probably worth a fortune.* Hiding it from his companions, he returned to the camp and when alone in his tent, took out the book, opened it and started reading.

He read all through the night, feeling no drowsiness nor fatigue. When he emerged from his tent in the morning, the world presented itself to him in a new and happy light. *There's only one thing I cannot grasp*, he thought as he watched his fellow-campers busying themselves around a fire. *Just why does it say: "You shall not show this book to others"?*

Lada finished her account, and we spent some time sitting there quietly without saying a word, listening to the breeze ruffling through the treetops and the crickets chirping in the grass.

“Do you know what the surest way to keep a secret is?” Lada finally asked, breaking the silence.

“No idea,” I confessed. “What is it?”

*“To forget it!”*

Then she opened the palm of her hand in which, it turned out, she had been clasping all the while three little round clumps rolled from some kind of herb.

“But I have an even better solution, one especially for you,” she continued. “This is a special kind of grass that helps keep secrets. You go ahead and eat these clumps. If you eat enough of them, you will still be able to remember the three lessons I taught you, but you will not be able to share them with others. But if you eat too many of them, you will forget everything I told you — either way you won’t be able to share them with others.”

“And how much is ‘enough’? If I eat all three, will I still remember the lessons myself?” I enquired.

“That,” Lada observed, “you will find out for yourself after you’ve eaten them!”

Noticing our prolonged absence, my wife Ira came looking for us in the far corner of the garden.

“And just what might you be doing here?” she asked with a smile, finally spotting us under the tree.

“We... ah...” I hesitated, looking at my wife and daughter by turns as I swallowed down the last bit of the third clump. “We... were playing tree house!”

“Aha, I see,” Ira gave me an understanding look and started on her way back to the house. “Come when you’re

hungry, lunch is ready. Though I gather you've just had some snacks!"

"Hey, Mama!" Lada called out after her. "D'you happen to know, what's the most important thing in life?"

Ira turned and confidently replied:

*"Life is!"*

"Wow, you got it right this time!" Lada jumped up and clapped her hands for joy. Then she turned to me, beaming with pride and delight at the degree of mutual understanding our family had achieved.

I hope the three clumps were just enough.

## THE RINGING CEDARS SERIES AT A GLANCE

*Anastasia*, the first book of the Ringing Cedars Series, tells the story of entrepreneur Vladimir Megré's trade trip to the Siberian taiga in 1995, where he witnessed incredible spiritual phenomena connected with sacred 'ringing cedar' trees. He spent three days with a woman named Anastasia who shared with him her unique outlook on subjects as diverse as gardening, child-rearing, healing, Nature, sexuality, religion and more. This wilderness experience transformed Vladimir so deeply that he abandoned his commercial plans and, penniless, went to Moscow to fulfil Anastasia's request and write a book about the spiritual insights she so generously shared with him. True to her promise this life-changing book, once written, has become an international bestseller and has touched hearts of millions of people world-wide.

*The Ringing Cedars of Russia*, the second book of the Series, in addition to providing a fascinating behind-the-scenes look at the story of how *Anastasia* came to be published, offers a deeper exploration of the universal concepts so dramatically revealed in Book 1. It takes the reader on an adventure through the vast expanses of space, time and spirit — from the Paradise-like glade in the Siberian taiga to the rough urban depths of Russia's capital city, from the ancient mysteries of our forebears to a vision of humanity's radiant future.

*The Space of Love*, the third book of the Series, describes author's second visit to Anastasia. Rich with new revelations on natural child-rearing and alternative education, on the spiritual significance of breast-feeding and the meaning of ancient megaliths, it shows how each person's thoughts can influence the destiny of the entire Earth and describes practical ways of putting Anastasia's vision of happiness into practice. Megré shares his new outlook on education and children's real creative potential after a visit to a school where pupils build their own campus and cover the ten-year Russian school programme in just two years. Complete with an account of an armed intrusion into Anastasia's habitat, the book highlights the limitless power of Love and non-violence.

*Co-creation*, the fourth book and centrepiece of the Series, paints a dramatic living image of the creation of the Universe and humanity's place in this creation, making this primordial mystery relevant to our everyday living today. Deeply metaphysical yet at the same time down-to-Earth practical, this poetic heart-felt volume helps us uncover answers to the most significant questions about the essence and meaning of the Universe and the nature and purpose of our existence. It also shows how and why the knowledge of these answers, innate in every human being, has become obscured and forgotten, and points the way toward reclaiming this wisdom and — in partnership with Nature — manifesting the energy of Love through our lives.

*Who are we?* — Book Five of the Series — describes the author's search for real-life 'proofs' of Anastasia's vision presented in the previous volumes. Finding these proofs and taking stock of ongoing global environmental destruction, Vladimir Megré describes further practical steps for putting Anastasia's vision into practice. Full of beautiful realistic images of a new way of living in co-operation with the Earth and each other, this book also highlights the role of children in making us aware of the precariousness of the present situation and in leading the global transition toward a happy, violence-free society.

*The book of kin*, the sixth book of the Series, describes another visit by the author to Anastasia's glade in the Siberian taiga and his conversations with his growing son, which cause him to take a new look at education, science, history, family and Nature. Through parables and revelatory dialogues and stories Anastasia then leads Vladimir Megré and the reader on a shocking re-discovery of the pages of humanity's history that have been distorted or kept secret for thousands of years. This knowledge sheds light on the causes of war, oppression and violence in the modern world and guides us in preserving the wisdom of our ancestors and passing it over to future generations.

*The energy of life*, Book Seven of the Series, re-asserts the power of human thought and the influence of our thinking on our lives

and the destiny of the entire planet and the Universe. It also brings forth a practical understanding of ways to consciously control and build up the power of our creative thought. The book sheds still further light on the forgotten pages of humanity's history, on religion, on the roots of inter-racial and inter-religious conflict, on ideal nutrition, and shows how a new way of thinking and a lifestyle in true harmony with Nature can lead to happiness and solve the personal and societal problems of crime, corruption, misery, conflict, war and violence.

*The new civilisation*, the eighth book of the Series, is not yet complete. The first part of the book, already published as a separate volume, describes yet another visit by Vladimir Megré to Anastasia and their son, and offers new insights into practical co-operation with Nature, showing in ever greater detail how Anastasia's lifestyle applies to our lives. Describing how the visions presented in previous volumes have already taken beautiful form in real life and produced massive changes in Russia and beyond, the author discerns the birth of a new civilisation. The book also paints a vivid image of America's radiant future, in which the conflict between the powerful and the helpless, the rich and the poor, the city and the country, can be transcended and thereby lead to transformations in both the individual and society.

*Rites of Love* — Book 8, Part 2 (published as a separate volume) — contrasts today's mainstream attitudes to sex, family, childbirth and education with our forebears' lifestyle, which reflected their deep spiritual understanding of the significance of conception, pregnancy, homebirth and upbringing of the young in an atmosphere of love. In powerful poetic prose Megré describes their ancient way of life, grounded in love and non-violence, and shows the practicability of this same approach today. Through the life-story of one family, he portrays the radiant world of the ancient Russian Vedic civilisation, the drama of its destruction and its re-birth millennia later — in our present time.

*To be continued...*

# Rites of Love by Vladimir Megre
