# I exist for those for whom I exist.

## *Anastasia*

Anastasia herself has stated that this book, written about her, consists of words and phrases in combinations *which have a beneficial effect on the reader*. This has been attested by the letters received to date from thousands of readers all over the world.

If you wish to gain as full an appreciation as possible of the ideas, thoughts and images set forth here, as well as experience the benefits that come with this appreciation, we recommend you find a quiet place for your reading where there is the least possible interference from artificial noises (motor traffic, radio, TV, household appliances etc.). *Natural sounds*, on the other hand — the singing of birds, for example, or the patter of rain, or the rustle of leaves on nearby trees — may be a welcome accompaniment to the reading process.

**Ringling Cedars Press** is an independent publisher dedicated to making **Vladimir Megre's** books available in the beautiful English translation by **John Woodsworth**. We rely on word of mouth as our only advertisement and thank all our readers for your help in spreading the message.

Order on-line                    [www.RinglingCedars.com](http://www.RinglingCedars.com)                    ordering details  
or call toll-free                    1-888-DOLMENS                    see last page

## Translator's Preface

When I opened my on-line Slavic-languages bulletin one day in early September 2004 and first learnt about a book in the *Ringling Cedars Series* that was seeking a translator into English, little did I realise the kind of literary adventure that was awaiting me. But as I became acquainted with the details of Vladimir Megre's<sup>1</sup> fascinating work (I read through the first three books in the series before beginning the actual translation), it gradually dawned on me that much of my previous translation experience, especially in poetry (from Pushkin to Anna Akhmatova to modern bards) and poetic prose (as with the stories of contemporary Russian writer Mikhail Sadovsky), not to mention my own religious background (emphasising Man's unique status as the image and likeness of the Creator), had been preparing me specifically for this particular task. Megre's work was simply the next logical step, it seemed, in the progression of my career. Indeed, I found myself taking to it not only with the enthusiasm that comes with the prospect of facing a new professional challenge but even more with the thought of feeling very much at home in this new literary environment.

Some of my friends and colleagues have asked: "What kind of book are you translating?" — no doubt wondering whether they could look forward to reading a novel, a documentary account, an inspirational exegesis on the meaning of life, or even a volume of poetry.

But even after completing the translation of *Anastasia*, I still do not have a definitive answer to give them. In fact, I am still asking myself the same question.

<sup>1</sup>*Vladimir Megre* — pronounced *Vla-DEE-meer Mi GREH* (capitalised syllables stressed). In fact, the pronunciation of the surname is not unlike that of its French counterpart, *Maigret*. The word *Anastasia* in Russian is sounded as *Ana-sta-SI-ya*.

My initial response was a rather crude summary of a gut impression — I would tell them: “Think of *Star Trek meets the Bible*.” My feelings about the book, however, go far beyond this primitive attempt at jocularly. Of the four disparate genres mentioned above, I would have to say *Anastasia* has elements of all four, and then some.

First — the book *reads* like a novel. That is to say, it tells a first-person story in a most entertaining way, bringing out the multi-faceted character of both the author and the title personage in a manner not unlike what readers of novels might expect. It tells a tale of adventure in the raw Siberian wilds where even sex and violence make an occasional appearance, though with a connection to the plot-line quite unlike their counterparts in any work of fiction I have read.

Secondly — the book gives the *impression* of a documentary account of real-life events, even if one’s powers of belief are sometimes stretched to the limit. I am glad that my linguistic experience has given me access not only to the book itself, but also to a host of Russian-language texts on the Internet that have enabled me to corroborate from independent sources a great many of the specifics the author saw fit to include in his narrative (names of individuals, institutions, scientific phenomena etc.) — all of which turned out to be genuine, thereby contributing an additional measure of credence to what otherwise might seem utterly fantastic. Much of the corroborative information so gleaned I have attempted to pass on to the English-speaking reader in the footnotes, with the help of additional commentary by the publisher. And yet there is a significant area of the author’s description where authenticity must still be judged by the individual reader (which to me is one of the hallmarks of a work of *literature*, in contrast to a merely academic or journalistic report).

Thirdly, the book *penetrates one’s thinking and feelings* with the gentle force of a divinely-inspired treatise — a treatise on not only the meaning of human life, but much more. *Anastasia* offers a tremendous new insight into the whole interrelationship of God, Man, Nature and the Universe. I would even go so far as to call it a revelation in science and religion.

One ‘nutshell’ description that comes to my mind is *a chronicle of ideas* — ideas on (a) the history of humanity’s relationship to

everything outside itself, (b) the clouds (not only dark and foreboding but even the fluffy and attractive variety) of mistaken belief that have, over the years, hid this relationship from our sight and comprehension and (c) where to begin — once we have caught a glimpse of this relationship — the necessary journey to reclaiming the whole picture. Deeply metaphysical in essence, the chronicle is set forth with both the supporting evidence of a documentary account and the entertainment capacity of a novel. In other words, it can be read as any of these three in isolation, but only by taking the three dimensions together will the reader have something approaching a complete picture of the book. And all three are infused with a degree of soul-felt inspiration that can only be expressed in poetry.

Yes, indeed, one must not overlook the *poetry*. As a matter of fact, I learnt right at the start that experience in poetic translation was one of the qualifications required of a Ringing Cedars Series translator. And not just on account of the seven sample poems by readers at the end of Chapter 30.<sup>2</sup> Much of the book's prose (especially when Anastasia is speaking) exudes a poetic feel, with rhyme and metre running a background course through whole paragraphs at a time; hence a particular challenge lay in reproducing this poetic quality, along with the semantic meaning, in English translation. Such poetic prose is even more evident in subsequent books in the series.

Another challenge has been to match, as closely as possible, Vladimir Megre's progressive development as a writer. According to his own admission, Megre began this whole literary project not as a professional writer, but as a hardened entrepreneur for whom writing was the farthest activity from his mind.<sup>3</sup> I smiled when one of the test readers of the translation, after finishing the first few chapters, described the author's style as "choppy". Megre himself talks about the initial rejection notices he received from publisher after publisher, telling him his language was too "stilted".<sup>4</sup> And yet his

<sup>2</sup>These poems were written by readers with varying degrees of poetic experience. Every effort was made to reproduce the poetic features of the original (or, on occasion, their absence) on a poem-by-poem basis.

<sup>3</sup>See especially Chapters 15: "Attentiveness to Man" and 26: "Dreams — creating the future".

<sup>4</sup>See Chapter 30: "Author's message to readers".

rendering of some of Anastasia's pronouncements toward the end of Book I waxes quite lyrical indeed — especially in the poetic passages referred to above. The author's development in literary style (which he attributes to Anastasia's direct and indirect guidance) becomes even more pronounced as the series progresses. It will be up to the English-speaking reader to judge whether this transformation is also conveyed in the translation.

There were two Russian words, of frequent occurrence throughout the book, that presented a particular translation challenge. One of them was *dachniki* (plural of *dachnik*), referring to people who own a *dacha*, or a country cottage, situated on just 600 square metres of land obtainable free of charge from the Russian government. But there is little comparison here to most Western concepts of *cottagers*.<sup>5</sup> While Russian dachas may be found in forested areas, or simply on open farmland, one almost invariable feature is a plot (*uchastok*) on which are grown fruits and vegetables to supply the family not only for their dacha stays but right through the year.<sup>6</sup> Given that the word *dacha* is already known to many English speakers (and is included in popular editions of both Oxford and Webster), it was decided to use the Russian word designating its occupants as well, with the English plural ending: *dachniks*.

The question that entailed the most serious difficulty, however — one that formed the subject of several dozen e-mails between publisher and translator before it was finally resolved — was the rendering into English of the Russian word *chelovek*. It is the common term used to denote a person or a human being, the equivalent of German *Mensch* as well as of English *man* in the familiar Bible verse “God created man in His own image” (Genesis 1: 27).

<sup>5</sup>I am thinking especially here of the example I am most familiar with — namely, the ‘cottage country’ in the Muskoka Lakes region of Ontario, north of Toronto, dotted by vacation cottages with nothing but trees around and (in some cases) a view of a lake.

<sup>6</sup>According to official statistics, since entitlement to dachas was legalised in the 1960s, 35 million families (amounting to approximately 70% of Russia's total population!) have acquired these tiny parcels of land. The produce grown on these plots makes an enormous contribution to the national economy — for example, over 90% of the country's potatoes come from privately tended plots like these.

The problem with the term *human* (as in *human being*) is that it not only suggests a formation of the species from matter, or earth (compare: *humus* — the organic constituent of soil) but is associated with lowly concepts (from *humus* come words like *bumble*, *humility* etc.),<sup>7</sup> whereas *chelovek* is derived from the old Russian words indicating 'thinking' (*chelo* < *lob*) and 'time' (*vek*) — i.e., an expression of man's dominion over time by virtue of his God-bestowed capacity for thinking and reason — not unlike the significance of *man* in the Bible verse cited above.

The problem with the word *man* is that, especially in our age, it has become so closely associated with only one half of the total number of sentient, thinking beings on the planet that the other half, quite understandably, feels collectively excluded by the term. Russian, by contrast, does not have this problem: *chelovek* can designate either a man or a woman.<sup>8</sup>

In the end, partly through reason and partly through revelation, it was decided to translate *chelovek*, wherever appropriate to the context, by the term *Man* with a capital *M*, in an effort to retain the association of the term with a divine as opposed to a material, earthly origin, as well as to show the link between Anastasia's view of Man (*chelovek*) and the concept of Man in the first chapter of Genesis, which she freely quotes herself. So let *all* readers of this book be put on notice: whenever you see *Man* with a capital *M*, this includes *you*.

There are other discrepancies between Russian and English concepts behind respective translation equivalents, but their explanation is best left to individual footnotes.

In conclusion, I must express my gratitude to my editor, Leonid Sharashkin of Ringing Cedars Press, first for entrusting me with the privileged task of translating such a monumental work as the

<sup>7</sup>Similarly, the word *person* is closely tied to its Latin root *persona*, signifying a *mask* — i.e., portraying a superficial appearance, rather than the inner essence of the individual. Interestingly enough, however, masks are sometimes deliberately used in theatre performances to suggest the thoughts and feelings of the character being portrayed.

<sup>8</sup>Russian does have a related problem, however: the word *chelovek* is *grammatically* masculine, even though its *meaning* is not confined to a single gender.

Ringed Cedars Series and, secondly, for the tremendous support he has given me throughout this initial project, namely, in illuminating aspects of Vladimir Megre's — and Anastasia's — concepts of God, Man, Nature and the Universe that my previous experience with Russian literature could not possibly have prepared me for. These shared insights have made a significant difference in how particular nuances of the original are rendered in the translation, and especially in making allowances for the considerable geographical, social and philosophical distances that all too often separate English-speaking readers from the vast cultural treasures accessible to those with a knowledge of Russian.

I now invite you all to take your seats in the familiar exploration vehicle known as the English language as we journey together to examine a previously inaccessible Russian treasure of momentous significance for all humanity (including the planet we collectively inhabit) — an experience summed up in one beautiful word: *Anastasia*.

ANASTASIA

## The ringing cedar

In the spring of 1994 I chartered three riverboats, on which I carried out a three-month expedition on the River Ob in Siberia, from Novosibirsk to Salekhard and back. The aim of the expedition was to foster economic ties with the regions of the Russian Far North.

The expedition went under the name of *The Merchant Convoy*. The largest of the three riverboats was a passenger ship named the *Patrice Lumumba*. (Western Siberian riverboats bear rather interesting names: the *Maria Ulyanova*, the *Patrice Lumumba*, the *Mikhail Kalinin*,<sup>1</sup> as if there were no other personages in history worth commemorating.) The lead ship *Patrice Lumumba* housed the expedition headquarters, along with a store where local Siberian entrepreneurs could exhibit their wares.

The plan was for the convoy to travel north 3,500 kilometres,<sup>2</sup> visiting not only major ports of call such as Tomsk, Nizhnevartovsk, Khanty-Mansiysk and Salekhard, but smaller places as well, where goods could be unloaded only during a brief summer navigation season.

The convoy would dock at a populated settlement during the daytime. We would offer the wares we had brought for sale and hold talks about setting up regular economic links. Our travelling was

<sup>1</sup> *Maria Ulyanova* — a name borne by two historical figures: *Maria Alexandrovna Ulyanova* (née Blank, 1835–1916) — mother to Vladimir Ilich Ulyanov (a.k.a. Vladimir Lenin, founder of the Soviet Union), and *Maria Ilinichna Ulyanova* (1878–1937) — Lenin's sister; the ship has since been re-named the *Viktor Gashkov*. *Patrice Emery Lumumba* (1925–1967) — Communist leader of the *Mouvement National Congolais*, who formed the first elected government of the Democratic Republic of the Congo; the ship is now known as the *Paris*. *Mikhail Ivanovich Kalinin* (1875–1946) — as Chairman of the Soviet National Executive Committee, the USSR's first titular Head of State; the *Kalinin* still retains its original name.

<sup>2</sup> *3,500 kilometres* — The metric system of measures is used throughout the book. One kilometre equals approximately six tenths (0.6) of a mile.

usually done at night. If weather conditions were unfavourable for navigation, the lead ship would put into the nearest port, and we would organise on-board parties for the local young people. Most places offered little in the way of their own entertainment. Clubs and community centres (so-called 'Houses of Culture') had been going downhill ever since the collapse of the USSR, and there were almost no cultural activities available.

Sometimes we might go for twenty-four hours or more without seeing a single populated place, even the tiniest village. From the river — the only transportation artery for many kilometres around — the only thing visible to the eye was the taiga<sup>3</sup> itself. I was not yet aware at the time that somewhere amidst the uninhabited vastness of forest along the riverbank a surprise meeting was awaiting me — one that was to change my whole life.

One day on our way back to Novosibirsk, I arranged to dock the lead ship at a small village, one with only a few houses at best, some thirty or forty kilometres distant from the larger population centres. I planned a three-hour stopover so the crew could have shore leave and the local residents could buy some of our goods and foodstuffs and we could cheaply pick up from them fish and wild-growing plants of the taiga.

During our stopover time, as the leader of the expedition I was approached by two of the local senior citizens (as I judged at the time) — one of them appeared to be somewhat older than the other. The elder of the two — a wisened fellow with a long grey beard — kept silent the whole time, leaving his younger companion to do the talking. This fellow tried to persuade me to lend him fifty of my crew (which numbered no more than sixty-five in total) to go with them into the taiga, about twenty-five kilometres or so from the dock where the ship was berthed. They would be taken into the depths of the taiga to cut down a tree he described as a 'ringing cedar'.<sup>4</sup> The

<sup>3</sup>*taiga* — the Russian name given to the boreal forest that stretches across much of Siberia and northern Canada. The word *Siberia* is derived from an Old Tungus word *sivir* meaning 'land', 'world' or 'tribe'.

<sup>4</sup>*cedar* (Russian *kedr*) — in this case (and throughout the book) referring to either the Siberian pine (Siberian cedar, *Pinus sibirica*) or to the Lebanese cedar (*Cedrus libani*).

cedar, which he said reached forty metres in height,<sup>5</sup> needed to be cut up into pieces which could be carried by hand to the ship. We must, he said, definitely take the whole lot.

The old fellow further recommended that each piece be cut up into smaller pieces. Each of us should keep one for himself and give the rest to relatives, friends and anyone who wished to accept a piece as a gift. He said this was a most unusual cedar. The piece should be worn on one's chest as a pendant. Hang it around your neck while standing barefoot in the grass, and then press it to your chest with the palm of your left hand. It takes only a moment to feel the pleasing warmth emanating from the piece of cedar, followed by a light tingling sensation running through the whole body. From time to time, whenever desired, the side of the pendant facing away from the body should be rubbed with one's fingers, the thumbs pressed against the other side. The old fellow confidently assured me that within three months the possessor of one of these 'ringing cedar' pendants will feel significant improvement in his sense of well-being, and will be cured of many diseases.

"Even AIDS?" I asked, and briefly explained what I had learnt about this disease from the press.

The oldster confidently replied:

"From any and all diseases!"

But this, he considered, was an easy task. The main benefit was that anyone having one of these pendants would become kinder, more successful and more talented.

I did know a little about the healing properties of the cedars of our Siberian taiga, but the suggestion that it could affect one's feelings and abilities — well, that to me seemed beyond the bounds of probability. The thought came to me that maybe these old men wanted money from me for this 'unusual cedar', as they themselves called it. And I began explaining that out in 'the big wide world', women were used to wearing jewellery made of gold and silver and wouldn't pay a dime for some scrap of wood, and so I wasn't going to lay out any money for anything like that.

<sup>5</sup> *forty metres* — about 131 feet. The *metre* is the basic unit of length in the metric system, equal to 3.28 feet.

“They don’t know what they’re wearing,” came the reply. “Gold — well, that’s dust in comparison with one piece of this cedar. But we don’t need any money for it. We can give you some dried mushrooms in addition, but there’s nothing we need from you...”

Not wanting to start an argument, out of respect for their age, I said:

“Well, maybe someone will wear some of your cedar pendants. They certainly would if a top wood-carving craftsman agreed to put his hand to it and create something of amazing beauty!”

To which the old fellow replied:

“Yes, you could carve it, but it would be better to polish it by rubbing. It will be a lot better if you do this yourself, with your fingers, whenever your heart desires — then the cedar will also have a beautiful look to it.”

Then the younger of the two quickly unbuttoned first his old worn jacket and then his shirt and revealed what he was wearing on his chest. I looked and saw a puffed-out circle or oval. It was multi-coloured — purple, raspberry, auburn — forming some kind of puzzling design — the vein-lines on the wood looked like little streams. I am not a connoisseur of *objets d’art*, although from time to time I have had occasion to visit picture galleries. The world’s great masters had not called forth any particular emotions in me, but the object hanging around this man’s neck aroused significantly greater feelings and emotions than any of my visits to the Tretyakov Gallery.<sup>6</sup>

“How many years have you been rubbing this piece of cedar?” I asked.

“Ninety-three,” the old fellow responded.

“And how old are you?”

“A hundred and nineteen.”

At the time I didn’t believe him. He looked like a man of seventy-five. Either he hadn’t noticed my doubts or, if he had, he paid no attention to them. In somewhat excited tones he started in trying to persuade me that any piece of this cedar, polished by human fingers

<sup>6</sup>*Tretyakov Gallery* — the foremost collection of Russian art in the world, located in the centre of Moscow. The original collector, Pavel Tretyakov, donated his extensive collection to the City of Moscow in 1892; it has been steadily increasing ever since.

alone, would also look beautiful in just three years. Then it would start looking even better and better, especially when worn by a woman. The body of its wearer would give off a pleasant and beneficial aroma, quite unlike anything artificially produced by Man!

Indeed, a very pleasant fragrance was emanating from both these old men. I could feel it, even though I'm a smoker and (like all smokers) have a dulled sense of smell.

And there was one other peculiarity...

I suddenly became aware of phrases in the speech of these strangers that were not common to the residents of this isolated part of the North. Some of them I remember to this day, even the intonations associated with them. Here is what the old fellow told me:

"God created the cedar to store cosmic energy...

"When someone is in a state of love they emit a radiant energy. It takes but a second for it to reflect off the celestial bodies floating overhead and come back to Earth and give life to everything that breathes.

"The Sun is one of those celestial bodies, and it reflects but a tiny fraction of such radiance.

"Only bright rays can travel into Space from Man on the Earth. And only beneficial rays can be reflected from Space back to Earth.

"Under the influence of malicious feelings Man can emit only dark rays. These dark rays cannot rise but must fall into the depths of the Earth. Bouncing off its core, they return to the surface in the form of volcanic eruptions, earthquakes, wars etc.

"The culminating achievement of these dark rays is their direct effect on the Man originating them, invariably exacerbating this Man's own malicious feelings.

"Cedars live to be five hundred and fifty years old. Day and night their millions of needles catch and store the whole spectrum of bright energy.<sup>7</sup> During the period of the cedars' life all the celestial bodies pass above them, reflecting this bright energy.

<sup>7</sup>Trees indeed capture a wide range of radiation beyond visible light. Man-made antennas are but an imitation of branching pattern in trees. Both the structure of trees and the materials composing them betray natural wave-receptors. Tree sap is a great conductor of electricity (this is why a tree hit by a lightning virtually explodes), and

“Even in one tiny piece of cedar there is more energy beneficial to Man than in all the man-made energy installations taken together.

“Cedars receive the energy emanating from Man through Space, store it up and at the right moment give it back. They give it back when there is not enough of it in Space — in other words, in Man — or in everything living and growing on the Earth.

“Occasionally, though very rarely, one discovers cedars that have been storing up energy but not giving back what they have stored. After five hundred years of their life they start to ring. This is how they talk to us, through their quiet ringing sound — this is how they signal people to take them and saw them up to make use of their stored-up energy on the Earth. This is what the cedars are asking with their ringing sound. They keep on asking for three whole years. If they don’t have contact with living human beings, then in three years, deprived of the opportunity to give back what they have received and stored from Space, they lose their ability to give it back directly to Man. Then they will start burning up the energy internally. This torturous process of burning and dying lasts twenty-seven years.

“Not long ago we discovered a cedar like this. We determined that it had been ringing for two years already. It was ringing very softly. Perhaps it is trying to draw out its request over a longer period of time, but still, it has only one year left. It must be sawed up and given away to people.”

The old man spoke at length, and for some reason I heard him out. The voice of this strange old *Sibiriak*<sup>8</sup> sounded at first quietly confident, then very excited, and when he got excited, he would rub the piece of cedar with his fingertips as though they were lightly tripping over some kind of musical instrument.

static electricity was first received from *amber* — a fossil resin from conifer trees. For details please see Dr Philip Callahan’s books, including *Tuning in to nature* and *Ancient mysteries, modern visions: The magnetic life of agriculture*. Viktor Schauberger (see footnote 1 in Chapter 16: “Flying saucers? Nothing extraordinary!”) referred to trees as “bioelectric condensers”. This statement is corroborated by Dr Georges Lakhovsky (see footnote 2 in Chapter 26: “Dreams — creating the future”), a pioneer explorer of energy fields as the foundation of all life on a cellular level.

<sup>8</sup>*Sibiriak* — the Russian word denoting a resident of Siberia.

It was cold on the riverbank. An autumn wind was blowing across the river. Gusts of wind ruffled the hair on the old men's capless heads, but the spokesman's jacket and shirt remained unbuttoned. His fingertips kept rubbing the cedar pendant on his chest, still exposed to the wind. He was still trying to explain its significance to me.

Lidia Petrovna,<sup>9</sup> an employee of my firm, came down the gangplank to tell me that everyone else was already on board and waiting for me to finish my conversation. I bade farewell to the oldsters and quickly climbed aboard. I couldn't act on their request — for two reasons: delaying departure, especially for three days, would mean a significant financial loss. And besides, everything these old fellows said seemed to me, at the time, to be in the realm of pure superstition.

The next morning during our usual company meeting I suddenly noticed that Lidia Petrovna was fingering a cedar pendant of her own. Later she would tell me that after I'd gone aboard she stayed behind for a while. She noticed that when I started hurrying away from them, the oldster that had been talking with me stared after me with a perplexed look, and then said excitedly to his older companion:

"Now how can that be? Why didn't they get it? I really don't know how to speak their language. I couldn't make them believe, I simply couldn't! Why? Tell me, Father!"

The elder man put his hand on his son's shoulder and replied:

"You weren't convincing enough, son! They didn't grasp it."

"As I was going up the gangplank," Lidia Petrovna went on, "the old man that was talking with you suddenly rushed up to me, grabbed me by the arm, and led me back down to the grass below.

"He hurriedly pulled out of his pocket a string, and attached to it was this piece of cedar wood. He put it around my neck, and pressed it against my chest with the palm of both his hand and mine. I even felt a shiver go through my whole body. Somehow he managed to do all this very quickly, and I didn't even get a chance to say anything to him.

<sup>9</sup>*Lidia Petrovna* — *Petrovna* here is a patronymic, derived from her father's first name (*Petr*, pronounce 'Piotr'). The combination of the first name plus the patronymic is the standard form of formal address among business colleagues and acquaintances.

“As I was walking away, he called after me: ‘Have a safe journey! Be happy! Please come again next year! All the best, people! We’ll be waiting for you! Have a safe journey!’

“As the ship pulled away from the dock, the old fellow kept on waving at us for a long time, and then all at once sat down on the grass. I was watching him through a pair of binoculars. The old man that talked with you and later gave me the pendant — I saw him sit down on the grass, and his shoulders were trembling. The older one with the long beard was bending over him and stroking his head.”

Amidst the flurry of my subsequent commercial dealings, account-keeping and end-of-voyage farewell banquets I completely forgot about the strange Siberian oldsters.

Upon my return to Novosibirsk I was afflicted with sharp pains. The diagnosis: a duodenal intestinal ulcer and osteochondrosis of the thoracic spine.

In the quiet of the comfy hospital ward I was cut off from the bustle of everyday life. My deluxe private room gave me an opportunity to calmly reflect on my four-month expedition and to draw up a business plan for the future. But it seemed as though my memory relegated just about everything that had happened to the background and for some reason the old men and what they said came to the forefront of my thought.

I requested to have delivered to me in the hospital all sorts of literature on cedars. After comparing what I read with what I had heard, I became more and more amazed and began to actually believe what the oldsters had said. There was at least some kind of truth in their words... or maybe the whole thing was true?!

In books on folk medicine there is a lot said about the cedar as a healing remedy. They say that everything from the tips of the needles to the bark is endowed with highly effective healing properties. The Siberian cedar wood has a beautiful appearance, and artistic

wood-carving masters enjoy great success in using it for furniture as well as soundboards for musical instruments. Cedar needles are highly capable of decontaminating the surrounding air. Cedar wood has a distinctive, pleasant balsam fragrance. A small cedar chip placed inside a house will keep moths away.

In the popular-science literature I read it was said that the qualitative characteristics for the northern cedars were significantly higher than for those growing in the south.

Back in 1792 the academician P.S. Pallas<sup>10</sup> wrote that the fruits of the Siberian cedar were effective in restoring youth and virility and significantly increasing the body's ability to withstand a number of diseases.

There is a whole host of historical phenomena directly or indirectly linked to the Siberian cedar. Here is one of them.

In 1907 a fifty-year-old semi-literate peasant named Gregory Rasputin,<sup>11</sup> who hailed from an isolated Siberian village in an area where the Siberian cedar grows, found himself in St. Petersburg, the capital, and soon became a regular guest of the imperial family. Not only did he amaze them with his predictions, but he possessed incredible sexual stamina. At the time of his assassination, onlookers were struck by the fact that despite his bullet-ridden body he continued to live. Perhaps because he had been raised on cedar nuts in a part of the country where cedars abound?

This is how a contemporary journalist described his staying power:

"At age fifty he could begin an orgy at noon and go on carousing until four o'clock in the morning. From his fornication and drunkenness he would go directly to the church for morning prayers and stand

<sup>10</sup>*P.S. Pallas* — a reference to Peter Simon Pallas (1741–1811), a German zoologist, paleontologist, botanist and ethnographer, born in St. Petersburg. As a member of the St. Petersburg Academy of Sciences, he was a prominent pioneer explorer of the Siberian taiga.

<sup>11</sup>*Gregory Efimovich Rasputin* (1871?–1916; sources do not agree on the date of his birth) — a monk from the Tiumen region of Western Siberia who appeared to have unusual healing powers. He curried favour with the court of Tsar Nicholas I (especially Nicholas' wife Alexandra Fedorovna) by demonstrating a beneficial influence on their son (and heir to the throne) Alexei, who suffered from hemophilia.

praying until eight, before heading home for a cup of tea. Then, as if nothing had happened, he would carry on receiving visitors until two in the afternoon. Next he would collect a group of ladies and accompany them to the baths. From the baths he would be off to a restaurant in the country, where he would begin repeating the previous night's activities. No normal person could ever keep up a régime like that.<sup>12</sup>

The many-time world champion and Olympic champion wrestler Alexander Karelin, who has never been defeated so far,<sup>12</sup> is also a Siberian, also from an area where the Siberian cedar grows. This strongman also eats cedar nuts. A co-incidence?

I mention only those facts which can be easily verified in popular-science literature, or which can be confirmed by witnesses. Lidia Petrovna, who was given the 'ringing cedar' pendant by the Siberian oldster, is now one of those witnesses. She is thirty-six years old, married with two children. Her co-workers have noticed changes in her behaviour. She has become kinder and smiles more often. Her husband, whom I happen to know, told me that their family has now been experiencing a greater degree of mutual understanding. He also remarked that his wife has somehow become younger-looking, and is starting to arouse greater feelings in him — more respect and, quite possibly, more love.

But all these multitudinous facts and evidences pale in comparison to the main point, which you can look up for yourself — a discovery which has left me with not a trace of doubt — and that is the *Bible*. In the Book of Leviticus in the Old Testament (Ch. 14, vs. 4), God teaches us how to treat people, and even decontaminate their houses, with the help of... the *cedar*!!!

After comparing all the facts and data I had gleaned from various sources, I was confronted by such a remarkable picture that all the miracles known to the world faded before it. The great mysteries that have excited people's minds began to pale into insignificance

<sup>12</sup> *Alexander Alexandrovich Karelin* (1967–) — a Russian, European, Olympic and world champion wrestler many times over, undefeated in international competition from 1987 to 2000 (for most of this time not even giving up a point).

in comparison with the mystery of the ringing cedar. Now I could no longer have any doubts about its existence. They were all dispelled by the popular-science literature and the Old Vedic scriptures I was reading.

Cedars are mentioned forty-two times in the Bible, all in the Old Testament.<sup>13</sup> When Moses presented humanity with the Ten Commandments on stone tablets, he probably knew more than has been recorded in the Old Testament.

We are accustomed to the fact that in Nature there are various plants capable of treating human ills. The healing properties of the cedar have been attested in popular-science literature by such serious and authoritative researchers as Academician Pallas, and this is consistent with the Old Testament scriptures.

And now, pay careful attention!

When the Old Testament talks about the cedar, it is just the cedar alone; nothing is said about other trees.<sup>14</sup> And doesn't the Old Testament say that the cedar is the most potent medicine of any existing in Nature? What is this, anyway? A medicine kit? And how is it to be used? And why, out of all the Siberian cedars, did these strange old fellows point to a single 'ringing cedar'?

But that's not all. Something immeasurably more mysterious lies behind this story from the Old Testament:

King Solomon built a temple out of cedar wood. In return for the cedar from Lebanon, he gave another king, Hiram, twenty cities of his kingdom. Incredible! Giving away twenty cities just for some kind of building materials?! True, he got something else in return. At King Solomon's request he was given servants that were "skilled in felling timber".<sup>15</sup>

What kind of people were these? What knowledge did they possess?

<sup>13</sup>In the *Authorised (King James) Version* of the English Bible, in fact, the word *cedar* (or *cedars*) appears 75 times, from Leviticus to Zechariah.

<sup>14</sup>There are of course, separate references in the Bible to a number of trees (e.g., fir, oak, juniper), but not in conjunction with cedars.

<sup>15</sup>1 Kings 5: 6 (*New International Version*).

I have heard that even now, in the far-flung reaches of the taiga there are old people whose job it is to choose trees for construction. But back then, over two thousand years ago, everybody might have known this. Nevertheless, specialists of some sort were required. The temple was built. Services began to be held there, and... “the priests could not stand to minister because of the cloud”.<sup>16</sup>

What kind of a cloud was that? How and from where did it enter the temple? What could it have been? Energy? A spirit? What kind of phenomenon, and what connection did it have with the cedar?

The old fellows talked about the ringing cedar as storing up some kind of energy.

Which cedars are stronger — the ones in Lebanon or Siberia?

Academician Pallas said that the healing properties of the cedars increased in proportion to their proximity to the forest tundra. In that case, then, the Siberian cedar would be the stronger.

It says in the Bible: “...by their fruits ye shall know them.”<sup>17</sup> In other words, again the Siberian cedar!

Could it be that no one has paid any attention to all this?

Has no one put two and two together?

The Old Testament, the science of the past century and the current one — are all of the same opinion regarding the cedar.

And Elena Ivanovna Roerich<sup>18</sup> notes in her book *Living ethics*: “...a chalice of cedar resin figured in the rituals of the consecration of the kings of the ancient Khorassan. Druids also called the chalice of cedar resin the Chalice of Life. And only later, with the loss of the realization of the spirit, was it replaced by blood. The fire of Zoroaster was the result of burning of the cedar resin in the chalice.”<sup>19</sup>

<sup>16</sup>1 Kings 8: 11 (*Authorised King James Version*).

<sup>17</sup>Matth. 7: 20 (*Authorised King James Version*).

<sup>18</sup>*Elena Ivanovna Roerich [Rerikh]* (1879–1955) — Russian religious thinker. Travelling through Asia with her husband, the prominent Russian artist Nikolai Konstantinovich Roerich, she became fascinated with Oriental religions and devoted her career to studying and writing about them. In 1920 she and her husband founded the Agni Yoga Society, a non-profit educational institution in New York.

<sup>19</sup>This translation is taken from an English version of Roerich's *Leaves of Marya's Garden, Book 2: Illumination* (1925) — 2.4.18.

So, then, how much of our forebears' knowledge of the cedar, its properties and uses has been passed down to the present day?

Is it possible that nothing has been preserved?

What do the Siberian oldsters know about it?

And all at once my memory harked back to an experience of many years ago, which caused a shiver to run up and down my spine. I didn't pay any attention to it back then, but now...

During the early years of *perestroika* I was president of the Association of Siberian Entrepreneurs. One day I got a call from the Novosibirsk District Executive Council (back then we still had Communist Party committees and 'Executive Councils'), asking me to come to a meeting with a prominent Western businessman. He had a letter of recommendation from the government of the day. Several entrepreneurs were present, along with workers from the Executive Council secretariat.

The 'Western businessman' was of a rather imposing external appearance — an unusual person with Oriental features. He was wearing a turban, and his fingers were adorned with precious rings.

The discussion, as usual, centred around the possibilities for co-operation in various fields. The visitor said, among other things: "We would like to buy cedar nuts from you." As he spoke these words, his face and body tightened, and his sharp eyes moved from side to side, no doubt studying the reaction of the entrepreneurs present. I remember the incident very well, as even then I wondered why his appearance had changed like that.

After the official meeting the Moscow interpreter accompanying him came up to me. She said he would like to speak with me.

The businessman made me a confidential proposal: if I could arrange delivery of cedar nuts for him — and they had to be fresh — then I would receive a handsome personal percentage over and above the official price.

The nuts were to be shipped to Turkey for processing into some kind of oil. I said I would think it over.

I decided I would find out for myself what kind of oil he was talking about. And I did...

On the London market, which sets the standard for world prices, cedar nut oil fetches anywhere up to five hundred dollars per

kilogram!<sup>20</sup> Their proposed deal would have given us approximately two to three dollars for one kilogram of cedar nuts.

I rang up an entrepreneur I happened to know in Warsaw, and asked him whether it might be possible to market such a product directly to the consumer, and whether we could learn the technology involved in its extraction.

A month later he sent me a reply: “No way. We weren’t able to gain access to the technology. And besides, there are certain Western powers so involved in these issues of yours that it would be better just to forget about it.”

After that I turned to my good friend, Konstantin Rakunov,<sup>21</sup> a scholar with our Novosibirsk Consumer Co-operative Institute. I bought a shipment of nuts and financed a study. And the laboratories of his institute produced approximately 100 kilograms of cedar nut oil.

I also hired researchers, who came up with the following information from archival documents:

Before the Revolution (and even for some time afterward) there was in Siberia an organisation known as the *Siberian Co-operator*. People from this organisation traded in oil, including cedar nut oil. They had rather swanky branch offices in Harbin, London and New York and rather large Western bank accounts.<sup>22</sup> After the revolution the organisation eventually collapsed, and many of its members went abroad.

A member of the Bolshevist government, Leonid Krasin,<sup>23</sup> met with the head of this organisation and asked him to return to Russia.

<sup>20</sup>*kilogram* — metric measure of weight, equal to approximately 2.2 pounds.

<sup>21</sup>*Konstantin Petrovich Rakunov* (1954–), with a post-graduate degree in economics, holds the rank of *docent* (equivalent to Associate Professor) in the Management Department at what is now the Novosibirsk Consumer Co-operative University; he is the author of a number of scholarly publications on consumer co-operatives.

<sup>22</sup>In fact, prior to the 1917 revolution Russian exports of cedar nut oil generated 10% of all foreign-trade revenues, rivalling such commodities as grain, timber and furs.

<sup>23</sup>*Leonid Borisovich Krasin* (1870–1928) — an early Bolshevik and Communist Party activist. During the 1920s he served as Foreign Trade minister as well as the new government’s trade representative in London and Paris.

But the head of the *Siberian Co-operator* replied that he would be of more help to Russia if he remained outside its borders.

From archival materials I further learnt that cedar oil was made using wooden (only wooden!) presses in many villages of the Siberian taiga. The quality of the cedar oil depended on the season in which the nuts were gathered and how they were processed. But I was unable to determine, either from the archives or the institute, exactly which season was being indicated. The secret had been lost. There are no healing remedies with properties analogous to those of cedar oil. But perhaps the secret of making this oil had been passed along by one of the émigrés to someone in the West? How was it possible that the cedar nuts with the most effective healing properties grow in Siberia, and yet the facility for producing the oil is located in Turkey? After all, Turkey has no cedars like those found in Siberia.

And just what 'Western powers' was the Warsaw entrepreneur talking about? Why did he say it would be better just to forget about this issue? Might not these powers be 'smuggling' this product with its extraordinary healing properties out of our Russian-Siberian taiga? Why, with such a treasure here at home with such effective properties, a treasure known for centuries — for millennia, even, do we spend millions and maybe billions of dollars buying up foreign medicines and swallow them up like half-crazed people? How is it that we have lost the knowledge known to our forebears? Our recent forebears yet — ones who lived in our century!

And what about the Bible's description of that extraordinary happening of over two thousand years ago? What kind of unknown powers are trying so earnestly to erase our forebears' knowledge from our own memories? "Oh, you'd better stick to minding your own business!" we're told. Yes, they *are* trying to wipe it out. And, indeed, they are succeeding!

I was seized by a fit of anger. I checked, and yes, cedar oil *is* sold in our pharmacies, but it is sold in foreign packaging! I bought a single thirty-gram vial and tried it. The actual oil content, I think, was no more than a couple of drops — the rest was some kind of diluting agent. Compared to what was produced in the Consumer Co-operative Institute — well, there was simply no comparison. And these diluted couple of drops cost fifty thousand roubles!<sup>24</sup> So what

if we didn't buy it abroad, but sold it ourselves? Just the sale of this oil would be enough to raise the whole of Siberia above the poverty level! But how did we ever manage to let go of the technology of our forebears?! And here we are snivelling that we live like paupers...

Well, okay, I think I'll come up with something all the same. I'll produce the oil myself — and my firm will only get wealthier.

I decided I would try a second expedition along the Ob — back up north, using only my headquarters ship, the *Patrice Lumumba*. I loaded a variety of goods for sale into the hold, and turned the film-viewing room into a store. I decided to hire a new crew and not invite anyone from my firm. As things stood, my firm's financial situation had worsened while I was distracted with my new interest.

Two weeks after leaving Novosibirsk my security guards reported they had overheard conversations about the ringing cedar. And, in their opinion, the newly hired workers included some 'pretty strange people', to put it mildly. I began summoning individual crew members to my quarters to talk about the forthcoming trek into the taiga. Some of them even agreed to go on a volunteer basis. Others asked for extra pay for this operation, since it was not something they had agreed to when signing up for work. It was one thing to stay in the comfortable conditions aboard ship — quite another to trek twenty-five kilometres into the taiga and back, carrying loads of wood. My finances at the time were already pretty tight. I had not planned on selling the cedar. After all, the oldsters had said it should be given away. Besides, my main interest was not the cedar tree itself, but the secret of how to extract the oil. And of course it would be fascinating to find out all the details connected with it.

Little by little, with the help of my security guards, I realised that there would be attempts made to spy on my movements, especially after I left the ship. But for what purpose was unclear. And who was behind the would-be spies? I thought and thought about it, and decided that to be absolutely certain, I would somehow have to out-smart everyone at once.

---

<sup>24</sup> *fifty thousand roubles* ... approximately 16 US dollars at the November 1994 exchange rate — equivalent to 20% of the average Russian's monthly income.

## Encounter

Without a word to anyone, I arranged to have the ship stop not far from the place where I had met the old men the previous year. Then I took a small motorboat and reached the village. I gave orders to the captain to continue along the trade route.

I hoped I would be able, with the help of the local residents, to look up the two old fellows, see the ringing cedar with my own eyes and determine the cheapest way of getting it back to the ship. Tying the motorboat to a rock on the shore, I was about to head for one of the little houses close by. But spotting a woman standing alone on the riverbank, I decided to approach her.

The woman had on an old quilted jacket, long skirt and high rubber galoshes of the kind worn by many residents of the northern backwoods during the spring and fall. On her head was a kerchief tied so that the forehead and neck were fully covered. It was hard to tell just how old this woman was. I said hello and told her about the two old men I had met here the previous year.

"It was my grandfather and great-grandfather who talked with you here last year, Vladimir," the woman replied.

I was amazed. Her voice sounded very young, her diction was crystal clear. She called me by my first name and right off used the informal form of address.<sup>1</sup> I couldn't remember the names of the oldsters, or whether we had introduced ourselves at all. I thought now we must have done so, since this woman knew my name. I asked her (deciding to continue in the same informal tone):

"And how do you call yourself?"

<sup>1</sup>*informal form of address* — in Russian this means using the pronoun *ty* (and its grammatical variants) in place of the more formal *ty* (much the same as using *tu* instead of *vous* in French).

“Anastasia”, the woman answered, stretching out her hand toward me, palm down, as though expecting me to kiss it.

This gesture of a country woman in a quilted jacket and galoshes, standing on a deserted shore and trying to act like a lady of the world, amused me no end. I shook her hand. Naturally, I wasn’t going to kiss it. Anastasia gave me an embarrassed smile and suggested I go with her into the taiga, to where her family lived.

“The only thing is, we’ll have to make our way through the taiga, twenty-five kilometres. That’s not too much for you?”

“Well, of course, it’s rather far. But can you show me the ringing cedar?”

“Yes, I can.”

“You know all about that, you’ll tell me?”

“I shall tell you what I know.”

“Then let’s go!”

Along the way Anastasia told me how their family, their kin, had been living in the cedar forest generation after generation — as her forebears had said, over the course of several millennia. It is only extremely rarely that they find themselves in direct contact with people from our civilised society. These contacts do not occur in their places of permanent residence, but only when they come into the villages under the guise of hunters or travellers from some other settlement. Anastasia herself had been to two big cities: Tomsk and Moscow. But only for one day each. Not even to stay the night. She wanted to see whether she might have been mistaken in her perceptions about the lifestyle of city people. She had saved the money for the trip by selling berries and dried mushrooms. A local village woman had lent her her passport.<sup>2</sup>

Anastasia did not approve of her grandfather and great-grandfather’s idea of giving away the ringing cedar with its healing properties to a whole lot of people. When asked why, she replied that the pieces of cedar would be scattered among evildoers as well as good people. In all probability the majority of the pieces would be snatched up by

<sup>2</sup>*passport* — in this case, an internal identity document required for any kind of travel within the Russian Federation (or the former Soviet Union).

negative-thinking individuals. In the final analysis they might end up doing more harm than good. The most important thing, in her opinion, was to promote the good. And to help people through whom the good was accomplished. If everyone were benefited at random, the imbalance between good and evil would not be changed, but would stay the same or even get worse.

After my encounter with the Siberian oldsters I looked through a variety of popular-science literature along with a host of historical and scholarly works describing the unusual properties of the cedar. Now I was trying to penetrate and comprehend what Anastasia was saying about the lifestyle of the cedar people and thinking to myself: "Now what if anything can that be compared to?"

I thought about the Lykovs<sup>3</sup> — a true story many Russians are familiar with from the account by Vasily Peskov of another family that lived an isolated life for many years in the taiga. They were written up in the paper *Komsomolskaya Pravda* under the headline: "Dead-end in the taiga", and were the subject of television programmes. I had formulated for myself an impression of the Lykovs as people who knew Nature pretty well, but had a rather fuzzy concept of our modern civilised life. But this was a different situation. Anastasia gave the impression of someone who was perfectly acquainted with our life and with something else besides that I couldn't fathom at all. She was quite at ease discussing our city life, she seemed to know it first-hand.

We walked along, getting deeper into the woods, and after about five kilometres stopped to rest. At this point she took off her jacket, kerchief and long skirt, and placed them in the hollow of a tree. All she was wearing now was a short, light-weight frock. I was dumbstruck at what I saw. If I were a believer in miracles, I would put this down to something like extreme metamorphosis.

For now here before me stood a very young woman with long golden hair and a fantastic figure. Her beauty was most unusual. It

<sup>3</sup>*The Lykovs* — a family of 'Old Believers' that lived in self imposed isolation in the taiga unknown to the outside world through most of the Soviet period. They were discovered by a party of geologists in 1978. Their story is told by *Komsomolskaya Pravda* journalist Vasily Peskov in his book *Lost in the taiga* (available in English translation).

would be hard to imagine how any of the winners of the world's most prestigious beauty contests could rival her appearance, or, as it later turned out, her intellectual prowess. Everything about this taiga girl was alluring, simply spellbinding.

"You are probably tired?" asked Anastasia. "Would you like to rest for a while?"

We sat down right on the grass, and I was able to get a closer look at her face. There were no cosmetics covering her perfect features. Her lovely well-toned skin bore no resemblance to the weather-beaten faces of people I knew who lived in the Siberian backwoods. Her large greyish-blue eyes had a kindly look, and her lips betrayed a gentle smile. As indicated, she wore a short, light-weight smock, something like a night-shirt, at the same time giving the impression that her body was not at all cold, in spite of the 12–15-degree temperatures.<sup>1</sup>

I decided to have a bite to eat. I reached into my bag and took out sandwiches, along with a travel bottle filled with good cognac. I offered to share it with Anastasia but she refused the cognac and for some reason even declined to eat with me. While I was snacking, Anastasia lay on the grass, her eyes blissfully closed, as though inviting the sun's rays to caress her. The rays reflected off her upturned palms with a golden glow. Lying there half-exposed, she appeared absolutely gorgeous!

I looked at her and thought to myself: "Now why do women always bare to the limit either their legs, or their breasts, or everything at once with their mini-skirts and décolletage? Is it not to appeal to the men around them, as if to say: "Look how charming I am, how open and accessible!" And what are men obliged to do then? Fight against their fleshly passions and thereby denigrate women with their lack of attention? Or make advances toward them and thereby break a God-given law?"

When I had finished eating, I asked:

<sup>1</sup>*12–15 degree temperatures* — the Celsius (Centigrade) scale common throughout Russia, Europe and Canada, is used throughout the book. 12–15 degrees Celsius equals 54–59 degrees Fahrenheit. To convert a Celsius temperature to Fahrenheit, multiply it by 1.8 and add 32.

"Anastasia, you're not afraid of walking through the taiga alone?"

"There is nothing I have to fear here," replied Anastasia.

"Interesting, but how would you defend yourself if you happened to encounter two or three burly men — geologists, or hunters, let's say?"

She didn't answer, only smiled.

I thought: "How is it that this so extraordinarily alluring young beauty could not be afraid of anyone or anything?"

What happened next still makes me feel uncomfortable, even to this day. I grabbed her by her shoulders and pulled her close to me. She didn't offer any strong resistance, although I could feel a considerable degree of strength in her resilient body. The last thing I remember before losing consciousness was her saying: "Do not do this... Calm down!" And even before that I remember being suddenly overcome by a powerful attack of fear. A fear of what, I couldn't grasp — as sometimes happens in childhood when you find yourself at home all alone and suddenly become afraid of something.

When I woke up, she was on her knees, bending over me. One hand lay upon my chest, while the other was waving to someone up above, or to either side. She was smiling, though not at me, but rather, it seemed, at someone who was invisibly surrounding us or above us. Anastasia seemed to be literally gesturing to her invisible friend that there was nothing amiss going on. Then she calmly and tenderly looked me in the eye:

"Calm down, Vladimir, it is over now."

"But what was it?" I asked.

"Harmony's disapproval of your attitude toward me, of the desire aroused in you. You will be able to understand it all later."

"What's 'harmony' got to do with it? It's you! It's only that you yourself began to resist."

"And I too did not accept it. It was offensive to me."

I sat up, and pulled my bag over toward me.

"Come on, now! 'She didn't accept me! It was offensive to her...' Oh you women! You just do everything you can to tempt us! You bare your legs, stick out your breasts, walk around in high-heeled shoes. That's very uncomfortable, and yet you do it! You walk and wriggle with all your charm, but as soon as... 'Oh, I don't need that! I'm not that way...' What do you wriggle for then? Hypocrites!

I'm an entrepreneur and I've seen a lot of your sorts. You all want the same thing, only you all act it out differently. So why did you, Anastasia, take off your outer clothes? The weather's not that hot! And then you lolled about on the grass here, with that alluring smile of yours..."

"I am not that comfortable in clothing, Vladimir. I put it on when I leave the woods and go out among people, but only so I can look like everyone else. I just lay down to relax in the sun and not disturb you while you were eating."

"So you didn't want to disturb me... Well, you did!"

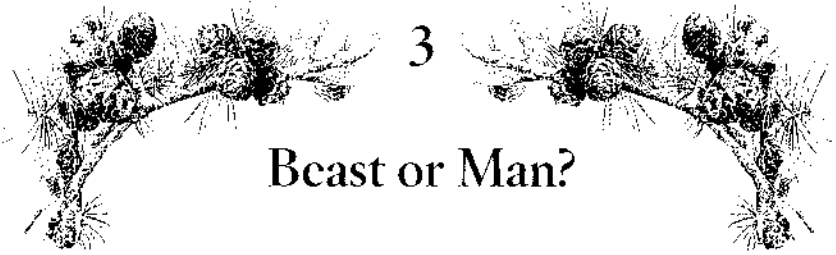

"Please forgive me, Vladimir. Of course, you are right about every woman wanting to attract a man's attention, but not just to her legs and breasts. What she wants is not to let pass by the one man who can see more than just those things."

"But nobody's been passing by here! And what is this 'more' that must be seen, when it's your legs that are front and centre? Oh you women, you're so illogical!"

"Yes, unfortunately, that is the way life sometimes turns out... Maybe we should get along, Vladimir! Have you finished eating? Are you rested?"

The thought crossed my mind: is it worth going on with this philosophising wild woman? But I replied:

"Fine, let's go."

## Beast or Man?

We continued our journey to Anastasia's home, her outer clothes left behind in the tree hollow. Her galoshes too. She was still wearing the short, light-weight frock. She herself picked up my bag and offered to carry it. Barefoot, she walked ahead of me with an amazingly light and graceful step, waving the bag about her with ease.

We talked the whole time. Talking with her on any subject was most interesting. Perhaps because she had her own strange ideas about everything.

Sometimes Anastasia would whirl about while we were walking. She turned her face to me, laughing, and kept on walking backwards for a while, quite absorbed in the conversation without so much as a glance down at her feet. How could she walk like that and not once stumble, or prick her bare feet against the knot of a dry branch? We didn't seem to be following any visible path; on the other hand, our way was not hindered by the tangled undergrowth so common in the taiga.

As she walked she would occasionally touch or quickly brush by a leaf or a twig on a bush. Or, bending over without looking, she would tear off some little blade of grass and... eat it.

"Just like a little creature," I thought.

When berries were handy, Anastasia would offer me a few to eat as we walked. The muscles of her body didn't seem to have any unusual features. Her overall physique appeared quite average. Not too thin and not too plump. A resilient, well-fed and very beautiful body. But, from what I could tell, it possessed a goodly degree of strength and extremely sharp reflexes.

Once when I stumbled and started to fall, my arms outstretched in front of me, Anastasia whirled around with lightning speed, quickly placing her free hand under me, and I landed with my chest on her palm, her fingers spread wide. There she was supporting my body

with the palm of one hand, helping it regain its normal position. During all this time she went on talking, with not the slightest sign of strain. After I had straightened up with the help of her hand, we continued on our way, as though nothing whatever had happened. For some reason my mind momentarily rested on the gas pistol I had in my bag.

With all the interesting conversation I hadn't realised how much ground we had actually been covering. All at once Anastasia stopped, put my bag down under a tree and joyfully exclaimed:

"Here we are at home!"

I looked around. A neat little glade, dotted with flowers amidst a host of majestic cedars, but not a single structure to be seen. Not even a hut. In a word, nothing! Not even a primitive lean-to! But Anastasia was beside herself with joy. As though we had arrived at a most comfortable dwelling.

"And where is your house? Where do you eat, sleep, take shelter from the rain?"

"This *is* my house, Vladimir. I have everything here."

A dark sense of disquiet began to come over me.

"Where is everything? Let's have a tea-kettle, so we can at least heat up some water on the fire. Let's have an axe."

"I do not have a kettle or an axe, Vladimir. And it would be best not to light a fire."

"What are you talking about? She doesn't even have a kettle?! The water in my bottle is all gone. You saw when I ate. I even threw the bottle away. Now there's only a couple of swallows of cognac left. To get to the river or the village is a good day's walk, and I'm so tired and thirsty. Where do you get water from? What do you drink out of?"

Seeing my agitation, Anastasia herself showed signs of concern. She quickly took me by the hand and led me through the glade into the forest, admonishing me along the way:

"Not to worry, Vladimir! Please. Don't get upset. I shall take care of everything. You just rest. Get a good sleep. I shall take care of everything. You will not be cold. You are thirsty? I shall give you something to drink right away."

Less than ten or fifteen metres from the glade, beyond a clump of bushes, we came across a small taiga lake. Anastasia quickly scooped

up a small quantity of water in her cupped hands and raised it to my face.

"Here is some water. Drink it, please."

"What, are you crazy? How can you drink raw water out of some puddle in the woods? You saw how I was drinking *borzhomi*.<sup>1</sup> On board ship even for washing we pass the river water through a special filter, chlorinate it, ozonise it."

"It is not a puddle, Vladimir. This is pure, living water! Good water! Not half-destroyed water, like yours. You can drink this water, just like mother's milk! Look."

Anastasia raised her cupped hands to her lips and took a drink.

I blurted out:

"Anastasia, are you some kind of beast?"

"Why a beast? Because my bed is not like yours? There are no cars? No appliances?"

"Because you live like a beast, in the forest, you haven't any possessions, and you seem to enjoy that."

"Yes, I enjoy living here."

"There, you see, you just made my point."

"Do you consider, Vladimir, that what distinguishes Man from all other creatures living on Earth is his possession of manufactured objects?"

"Yes! But even more precisely — his civilised existence."

"And do you consider your existence to be more civilised? Yes, of course, you do. But I am not a beast, Vladimir.

"I am Man!"<sup>2</sup>

<sup>1</sup>*borzhomi* — a popular kind of mineral water from the Caucasus mountains in Georgia, famous for its health giving properties.

<sup>2</sup>The word *Man* (with a capital *M*) is used throughout the book to refer to a human being of any gender. For details on the word's usage and the important distinction between *Man* and *human* please see the Translator's Preface.

## Who are they?

Subsequently, after spending three days with Anastasia and observing how this strange young woman lives all by herself in the remote Siberian taiga, I began to understand a little something of her lifestyle, and to be confronted by a number of questions regarding our own.

One of them still haunts me to this day: is our system of education and bringing up children sufficient to comprehend the meaning of existence, to arrange every individual's life-priorities in the correct order? Does it help or hinder our ability to make sense of Man's essence and purpose?

We have set up a vast educational system. It is on the basis of this system that we teach our children and each other — in kindergarten, school, university and post-graduate programmes. It is this system that enables us to invent things, to fly into Space. We structure our lives in accordance with it. Through its help we strive to construct some happiness for ourselves. We strive to fathom the Universe and the atom, along with all sorts of anomalous phenomena. We love to discuss and describe them at great length in sensational stories in both the popular press and scholarly publications.

But there is one phenomenon which, for some reason, we try with all our might to avoid. Desperately try to avoid! One gets the impression that we are afraid to talk about it. We are afraid, I say, because it could so easily knock the wind out of our commonly accepted systems of education and scientific deductions and make a mockery of the objects inherent in our lifestyle! And we try to pretend that such a phenomenon does not exist. But it does! And it will continue to exist, however much we try to turn away from it or avoid it.

Isn't it time to take a closer look at this and, just maybe, through the collective effort of all our human minds together, find an answer to the following question? If you take all our great thinkers, without

exception — people who have formulated religious teachings, all sorts of teachings which the vast majority of humanity are following — or at least endeavouring to follow — why is it that, before formulating their teachings, they became recluses, went into solitude — in most cases, to the forest? Not to some super academy, mind you, but to the forest!<sup>1</sup>

Why did the Old Testament's Moses go off into a mountain-top forest before returning and presenting to the world the wisdom set forth on his tablets of stone?

Why did Christ Jesus go off, away from his disciples, into the desert, mountains and forest?

Why did a man named Siddhartha Gautama, who lived in India in the sixth century A.D. spend seven years alone in the forest? After which this recluse came out of the forest, back to people, complete with a set of teachings! Teachings which even to this day, many centuries later, arouse a multitude of human minds. And people build huge temples and call these teachings Buddhism. And the man himself eventually came to be known as Buddha.<sup>2</sup>

And what about our own not-so-ancient forebears (now acknowledged as historical figures) — men such as Serafim Sarovsky<sup>3</sup> or Sergiy Radonezhsky?<sup>4</sup> Why did they too go off to become recluses in the

<sup>1</sup>Incidentally, even the word *academy*, translated from Greek, means *groves*!

<sup>2</sup>*Buddha* or *Siddhartha Gautama* (623–544 B.C.) — a member of the Imperial Shakya family, who (according to tradition, at least) rejected the wealthy circumstances of his family upbringing and devoted his life to alleviating human suffering. He is occasionally referred to as *Shakyamuni* — 'a recluse (*lit.* departer) from the Shakyas'.

<sup>3</sup>*Serafim Sarovsky* (né: Prokhor Sidorovich Moshnin, 1759–1833) — a monk of the Sarovsky Hermitage near Tambov, who had a gift for healing and foretelling the future. He was particularly concerned about improving the situation of women and in the 1820s helped establish what would become the Holy Trinity Serafimo-Diveevo Women's Monastery. Canonised in 1903, he is now one of the most revered saints of the Russian Orthodox Church.

<sup>4</sup>*Sergiy* (né: *Varfolomei*) *Radonezhsky* (1314?–1392) — a monastic reformer from the Rostov area, who devoted his life to the principle of brotherly love and meeting the practical needs of the less fortunate; he also mediated disputes between warring princes. In the 1330s he founded a monastery deep in the Radonezh Forest north of Moscow (now the site of the town of Sergiev Posad, until recently called Zagorsk). He was canonised in 1452.

forest, and how were they able, after a short period of time there, to so fathom the depths of wisdom that the kings of this world made the long journey through uncharted wilderness to seek their advice?

Monasteries and majestic temples were raised at the locations of their respective solitudes. Thus, for example, the Trinity-Sergiev Monastery in the town of Sergiev Posad near Moscow today attracts thousands of visitors each year. And it all started from a single forest recluse.

Why? Who or what enabled these people to obtain their wisdom? Who gave them knowledge, who brought them closer to understanding the essence of life? How did they live, what did they do, what did they think about during their forest solitude?

These questions confronted me some time after my conversations with Anastasia — after I had started reading everything that I could lay my hands on regarding recluses. But even today I haven't found answers. Why has nothing been written about their solitude experiences?

The answers, I think, must be sought through a collective effort. I shall try to describe the events of my three-day stay in the Siberian taiga forest and my impressions from my conversations with Anastasia, in the hopes that someone will be able to fathom the essence of this phenomenon and put together a clearer picture of our way of life.

For now, on the basis of all that I have seen and heard, only one thing is crystal-clear to me: people who live in solitude in the forest, including Anastasia, see what is going on in our lives from a point of view completely different from ours. Some of Anastasia's ideas are the exact opposite of what is commonly accepted. Who is closer to the truth? Who can judge?

My task is simply to record what I have seen and heard, and thereby give others an opportunity to come up with answers.

Anastasia lives in the forest altogether alone. She has no house to call her own, she hardly wears any clothes and does not store any provisions. She is the descendant of people who have been living here for thousands of years and represents what is literally a whole different civilisation. She and those like her have survived to the present day through what I can only term the wisest possible decisions. Very

likely the only correct decisions. When they are among us they blend in with us, trying to appear no different from ordinary people, but in their places of habitual residence they merge with Nature. It is not easy to find their habitual dwelling-places. Indeed, Man's presence in such places is betrayed only by the fact that they are more beautiful and better taken care of, like Anastasia's forest glade, for example.

Anastasia was born here and is an integral part of the natural surroundings. In contrast to our celebrated recluses, she did not go off into the forest simply for a time, as they did. She was born in the taiga and visits our world only for brief periods. And on the face of it there seems to be quite a simple explanation for the strong fear that overwhelmed me and made me lose consciousness when I attempted to possess Anastasia — just as we tame a cat, a dog, an elephant, a tiger, an eagle, and so on, here *everything* around has been 'tamed'.<sup>5</sup> And this *everything* is incapable of permitting anything bad to happen to her. Anastasia told me that when she was born and while she was still under a year old, her mother could leave her alone on the grass.

"And you didn't die from hunger?" I asked.

The taiga recluse first looked at me in surprise, but then explained:

"There should be no problems of finding food for Man. One should eat just as one breathes, not paying attention to the food, not distracting one's thought from more important things. The Creator has left that task up to others, so that Man can live as Man, fulfilling his own destiny."

She snapped her fingers, and right away a little squirrel popped up beside her, hopping onto her hand. Anastasia lifted the creature's muzzle up to her mouth, and the squirrel passed from its mouth into hers a cedar nut seed, its shell already removed. This did not seem to me anything out of the ordinary. I remembered how, back at the academic complex near Novosibirsk,<sup>6</sup> a lot of squirrels were quite

<sup>5</sup>*'tamed'* — in this case meaning 'brought into an interrelationship with Man'.

<sup>6</sup>*academic complex* — just outside Novosibirsk there is a whole town known as *Akademgorodok* (lit. 'Academic town') — home of the Siberian branch of the Russian Academy of Sciences as well as Novosibirsk State University — where the professors and researchers live as well as work.

used to people and would beg for food from passers-by, and even get angry if they weren't given anything. Here I was simply observing the process in reverse. But this *here* was the taiga, and I said:

"In the normal world, our world, everything's arranged differently. If you, Anastasia, tried snapping your fingers at a privately-run kiosk,<sup>7</sup> or even beat on a drum, nobody would give you anything, and here you say the Creator has decided everything."

"Who is to blame if Man has decided to change the Creator's creative design? Whether it is for the better or for the worse, that is up to you to divine."

This is the kind of dialogue I had with Anastasia on the question of human sustenance. Her position is simple — it is sinful to waste thought on things like food, and she does not think about it. But for us in our civilised world, as it happens, we are obliged to give it thought.

We know from books, reports in the press and TV programmes, of a multitude of examples of infants who have found themselves out in the wilds and ended up being fed by wolves. Here in the taiga generations of people have made their permanent residence, and their relationship to the animal kingdom is different from ours. I asked Anastasia:

"Why aren't you cold, when here I am in a warm jacket?"

"Because," she replied, "the bodies of people who wrap themselves in clothing to hide from the cold and heat, gradually lose their ability to adapt to changes in their environment. In my case this capacity of the human body has not been lost, and so I have no need of any special clothing."

<sup>7</sup>*privately-run kiosk* — small enclosed stands selling food and many other items under private (as opposed to State) control, which began proliferating during the latter days of *perestroika* and are still popular today.

A decorative arch of pine branches with pine cones and needles, framing the page number and title.

## A forest bedroom

I wasn't at all equipped to spend a night in the wilds of the forest. Anastasia put me to bed in some kind of cave hollowed out of the ground. Exhausted after my wearying trek, I quickly fell fast asleep. When I woke up, I felt a sense of bliss and comfort, as though I were lying in a magnificently comfortable bed.

The cave, or dugout, was spacious, appointed with small feathery cedar twigs and dried grass which filled the surrounding space with a fragrant aroma. As I stretched and spread my limbs, one hand touched a furry pelt and I determined at once that Anastasia must be something of a hunter. I moved closer to the pelt, pressing my back to its warmth, and decided to have another little snooze.

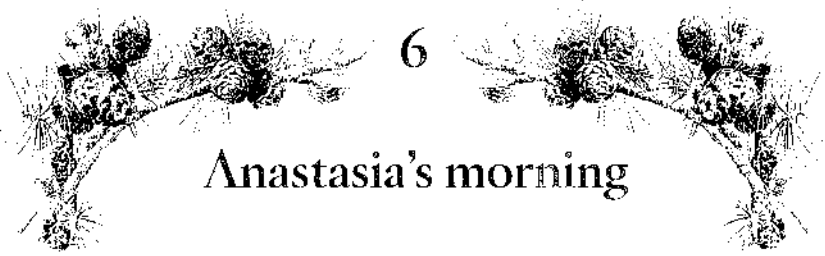

Anastasia was standing in the entranceway to my forest bedroom. Noticing I was awake, she said at once:

"May this day come to you with blessings, Vladimir. And you should, in turn, greet *it* with your blessing. Only, please, do not be frightened."

Then she clapped her hands, and the 'pelt'... I was horror-struck at the realisation that this was no pelt. Out of the cave a huge bear began to gingerly crawl. Receiving a pat of approval from Anastasia, the bear licked her hand and began lumbering off into the forest. It turned out that she had placed some belladonna herbs under my head for a pillow and made the bear lie down beside me so I wouldn't get cold. She herself had curled up outdoors in front the entranceway.

"Now how could you do such a thing to me, Anastasia? He could have torn me to shreds or crushed me to death!"

"First of all, it is not a *he*, but a *she*-bear. She could not possibly have done anything to harm you," Anastasia responded. "She is very obedient. She really enjoys it when I give her tasks to carry out. She never even budged the whole night — just nuzzled her nose up to my leg and just kept blissfully still, she was so happy. Only she did give a little shudder when you waved your arms about in your sleep and slapped her backside!"

Anastasia's morning

Anastasia goes to bed at nightfall in one of the shelters hollowed out by the creatures of the forest, most often in the bear's dugout. When it is warm, she can sleep right on the grass. The first thing she does upon waking is offer an exuberant outburst of joy to the rising Sun, to the new sprouts on all the twigs, to the new shoots of growth popping up from the earth. She touches them with her hands, strokes them, occasionally adjusts something into place. Then she runs over to the little trees and gives them a thump on their trunks. The tree-tops shake and shower down on her something resembling pollen or dew. Then she lies down on the grass and blissfully stretches and squirms. Her whole body becomes covered with what appears to be a moist cream. Then she runs off and jumps into her little lake, splashes about and dives to the bottom. She's a terrific diver!

Her relationship with the animal world around her is very much like people's relationships with their household pets. Many of them watch Anastasia as she does her morning routine. They don't approach her, but all she has to do is look in the direction of one of them and make the tiniest beckoning gesture, and the lucky one jumps up on the spot and rushes to her feet.

I saw how one morning she clowned around, playing with a she-wolf just as one might play with the family dog. Anastasia clapped the wolf on the shoulder and dashed off at full tilt. The wolf gave chase, and just as she was about to catch up with her, Anastasia, still on the run, suddenly jumped in the air, repelled herself with both feet off the trunk of a tree, and dashed off in another direction. The wolf couldn't stop but kept on running past the tree, finally making an about-turn and chasing after the laughing Anastasia.

Anastasia gives absolutely no thought to feeding or clothing herself. She most often walks about nude or semi-nude. She sustains herself with cedar nuts, along with varieties of herbs, berries and

mushrooms. She eats only dried mushrooms. She never goes hunting for nuts or mushrooms herself, never stores up any kind of provisions, even for the winter. Everything is prepared for her by the multitude of squirrels dwelling in these parts.

Squirrels storing up nuts for the winter is nothing out of the ordinary — that's what they do everywhere, following their natural instincts. I was struck by something else, though: at the snap of Anastasia's fingers any squirrels nearby would compete to be the first to jump onto her outstretched hand and give her the kernel of an already shelled cedar nut. And whenever Anastasia slaps her leg bent at the knee, the squirrels make some sort of sound, as if signalling the others, and they all start bringing dried mushrooms and other supplies and laying them out before her on the grass. And this they do, it seemed to me, with a good deal of pleasure. I thought she had trained them herself, but Anastasia told me that their actions were instinctive, and the mother squirrel herself teaches this to her little ones by example.

"Perhaps one of my early forebears once trained them, but most likely this is simply what they are destined to do. By the time winter has set in, each squirrel has stored up several times as many supplies as it can use for itself."

To my question "How do you keep from freezing during the winter without the proper clothing?" Anastasia replied with a question of her own: "In your world are there no examples of people able to withstand the cold without special clothing?"

And I remembered the book by Porfiry Ivanov,<sup>1</sup> who went around barefoot and wearing only shorts no matter how cold the weather. It tells in the book how the fascists, wanting to test the endurance abilities of this extraordinary Russian, poured cold water over him in a minus-twenty-degree frost and then made him ride naked on a motorcycle.

<sup>1</sup>*Porfiry Korneevich Ivanov* (1899–1983) — a famous proponent of healthy living through closeness to Nature. In his thirties he cured himself of cancer through self-exposure to extremely cold temperatures and spiritual cleansing. After decades of experimentation he formulated a set of twelve ethical and practical principles for health and harmonious relationship with Nature in his popular *Detka* (literally, 'baby'), and gained a substantial following.

In her early childhood, in addition to her mother's milk Anastasia was able to draw upon the milk of many different animals. They freely allowed her access to their nipples. She makes absolutely no ritual of mealtime, never sits down just to eat, but picks berries and sprouts of plants as she walks and continues on with her activities.

By the end of my three-day stay with her I could no longer relate to her as I had done at our first encounter. After all I had seen and heard Anastasia had been transformed for me into some kind of being — but not a beast, since she has such a high degree of intelligence, and then there's her memory! Her memory is such that she, of course, forgets nothing of what she has seen or heard at any moment in time. At times it seemed that her abilities are well beyond the comprehension of the average person. But this very attitude toward her is something that greatly distresses and upsets her.

In contrast to certain people we all know with unusual abilities — people who wrap themselves in an aura of mystery and exclusivity, she constantly tried to explain and reveal the mechanism underlying her abilities, to prove that there was nothing supernatural to Man in them or in her — that she was Man, a woman, and she repeatedly asked me to bear that in mind. I did attempt to keep it in mind after that, and try to find an explanation for this extraordinary phenomenon.

In our civilisation one's brain works to develop a life for one's self, obtain food to eat and satisfy one's sexual instincts. In Anastasia's world no time is spent on these things whatsoever. Even people who find themselves in a situation like the Lykovs<sup>2</sup> are obliged to constantly give thought to how to feed and shelter themselves. They don't get help from Nature to the same extent as does Anastasia. There are all sorts of tribes living far from civilisation that are not blessed with this kind of contact. According to Anastasia, it is because their thoughts are not pure enough. Nature and the animal world feel this.

<sup>2</sup>See footnote 3 in Chapter 2: "Encounter".

## Anastasia's ray

I think the most unusual, mystical phenomenon I witnessed during my time in the forest was Anastasia's ability to see not only individuals at great distance but also what was going on in their lives. Possibly other recluses have had a similar ability.

She did this with the help of an invisible ray. She maintained this was something everybody has, but people don't know about it and are unable to make use of it.

"Man has still not invented anything that is not already in Nature. The technology behind television is but a poor imitation of the possibilities of this ray."

The ray being invisible, I didn't believe in it, in spite of her repeated attempts to demonstrate and explain how it worked, to find some proof or plausible explanation. And then one day...

"Tell me, Vladimir, what do you think daydreams are? And do many people dream of the future?"

"Daydreaming? I think a lot of people are able to do that. It's when you imagine yourself in a future of your own desire."

"Fine. So, you do not deny that Man has the capacity to visualise his own future, to visualise various specific situations?"

"That I don't deny."

"And what about intuition?"

"Intuition... It's probably the feeling one has when, instead of analysing what or why something might happen, some sort of feelings suggest the right thing to do."

"So, you do not deny that in Man there exists something besides ordinary analytical reasoning that helps him determine his own and others' behaviour?"

"Well, let's say that's true."

"Wonderful! Good!" exclaimed Anastasia. "Now, the night-dream. The night-dream — what is that? The dreams almost all people have when they are asleep."

“The night dream — that’s... I really don’t know what that is. When you’re asleep, a dream is simply a dream.”

“All right, all right. Let us call it just a dream. But you do not deny it exists? You and other people are aware that someone in a dream state, when his body is almost beyond the control of a part of his consciousness, can see people and all sorts of things going on.”

“Well that, I think, is something nobody will deny.”

“But still in a dream people can communicate, hold conversations, empathise?”

“Yes, they can.”

“And what do you think, can a person control his dream? Call up in the dream images and events he would like to see? Just like on ordinary television, for example.”

“I don’t think that would work out for anyone. The dream, somehow, comes all by itself.”

“You are wrong. Man can control everything. Man is designed to control everything.

“The ray I am telling you about consists of information one possesses — concepts, intuitions, emotional feelings and, as a result, of dream-like visions consciously controlled by Man’s will.”

“How can a dream be controlled in a dream?”

“Not in a dream. Wide awake! As if pre-programmed, and with absolute accuracy. You only experience this in a dream and it is chaotic. Man has lost most of his ability to control, to control natural phenomena and himself. So he has decided that a night-dream is simply an incidental by-product of his tired brain. In fact, almost everybody on the Earth... Well, maybe I should try helping you see something at a distance right here and now?”

“Go ahead.”

“Lie down on the grass and relax, let go, so that your body draws less energy. It is important that you are comfortable. Nothing in the way? Now think about the person you know best — your wife, for example. Recollect her habits, how she walks, her clothing, where you think she might be right now, and turn the whole thing over to your imagination.”

I remembered my wife, knowing that at the moment she might be at our country home. I imagined the house and some of the furnishings

and things. I remembered a great deal, and in some detail, but I didn't see anything. I told Anastasia about all this, and she replied:

"You are not able to let go all the way, as though you were going to go to sleep. I shall help you. Close your eyes. Stretch out your arms in different directions."

Closing my eyes, I felt her fingers touch mine. I began to immerse myself in a dream, or a wakeful doze...

...There was my wife standing in the kitchen of our country home. Over her usual dressing gown she was wearing a knitted cardigan. That meant it was cool in the house. Again some kind of trouble with the heating system.

My wife was making coffee on the gas stove. And something else, in the small crock-pot. My wife's face was gloomy and unhappy. Her movements were sluggish. All at once she turned her head, tripped over to the window, looked out at the rain and smiled. The coffee on the stove was spilling over. She picked up the pot with its overflowing liquid but didn't frown or get upset as she usually did. She took off the cardigan...

I woke up.

"Well? Did you see anything?" asked Anastasia.

"I did indeed. But maybe it was just an ordinary dream?"

"How could it be ordinary? Did you not *plan* on seeing your wife in particular?"

"Yes, I did. And I saw her. But where is the proof that she was actually there in the kitchen at the moment I saw her in the dream?"

"Remember this day and hour, Vladimir, if you want to have proof. When you get home, ask her. Was there not something else out of the ordinary that you noticed?"

"Can't think of anything."

"You mean to say you did not notice a smile on your wife's face when she went over to the window? She was smiling, and she did not get upset when the coffee spilled."

"That I did notice. She probably saw something interesting out the window which made her feel good."

"All she saw out the window was rain. Rain which she never likes."

"So, why was she smiling?"

"I too was watching your wife through my ray and warmed her up."

“So, *your* ray warmed her up — what about mine? Too cold?”

“You were only looking out of curiosity, you did not put any feeling into it.”

“So, your ray can warm people up at a distance?”

“Yes, it can do that.”

“And what else can it do?”

“Obtain certain kinds of information, or transmit. It can cheer up a person’s mood and partially take away someone’s illness. There are a lot of other things it can do, depending on the energy available and the degree of feeling, will and desire.”

“And can you see the future?”

“Of course.”

“The past too?”

“The future and the past — they are pretty much the same thing. It is only the external details that are different. The essence always remains unchanged.”

“How can that be? What can remain unchanged?”

“Well, for example, a thousand years ago people wore different clothes. They had different instruments at their disposal. But that is not the essence. Back a thousand years ago, just like today, people had the same feelings. Feelings are not subject to time.

“Fear, joy, love. Just think, Yaroslav the Wise,<sup>1</sup> Ivan the Terrible<sup>2</sup> and the Egyptian pharaohs were all capable of loving a woman with exactly the same feelings as you or any other man today.”

“Interesting. Only I’m not sure what it means. You say every person can have a ray like this?”

“Of course everyone can. Even today people still have feelings and intuitions, the capacity to dream of the future, to conjecture, to

<sup>1</sup>*Yaroslav the Wise* (Russian: *Yaroslav Mudry*, 978?–1054) — a Grand Prince of Kiev who managed to impose a degree of unity on the warring princes of what was then Kievan Russia, consolidate its southern and western borders and establish dynastic liaisons with a number of European nations.

<sup>2</sup>*Ivan the Terrible* (Russian: *Ivan IV, Ivan Grozny*, 1530–1584) — the first Russian Grand Prince to proclaim himself *Tsar of all the Russias*. His reign was marked by bloody repression of political rivals and wealthy aristocrats, stronger ties with England, political and social reforms at home and an expansion of the Russian Empire eastward.

visualise specific situations, to have dreams while they sleep — only it is all chaotic and uncontrollable.”

“Maybe some kind of training’s necessary. Some exercises could be developed?”

“Some exercises might help. But you know, Vladimir, there is one absolute condition before the ray can be controlled by the will...”

“And what condition is that?”

“It is absolutely necessary to keep one’s thoughts pure, as the strength of the ray depends on the strength of radiant feelings.”

“Now there you go! Just when everything was starting to get clear... What have pure thoughts got to do with it? ‘Radiant feelings?’”

“They are what power the ray.”

“That’s enough, Anastasia! I’m already losing interest. Next you’ll be adding something else.”

“I have already told you what is essential.”

“You can say what you like, but you’ve got too many darn conditions! Let’s talk about something else. Something a little simpler...”

All day long Anastasia engages in meditation, visualising all sorts of situations from our past, present and future life.

Anastasia possesses a phenomenal memory. She can remember a multitude of people she has seen in her imagination or through her ray, and what they have been going through mentally. She’s a consummate actress — she can imitate the way they walk and talk, and even think the way they do. She concentrates her thought on the life experience of millions of people in the past and present. She uses the knowledge she gains from this to visualise the future and to help others. This she does at a great distance by means of her invisible ray, and the ones she helps through suggestion or decision, or the ones she heals, haven’t the slightest idea that she is helping them.

It was only later that I found out that similar rays invisible to the eye, only of different degrees of strength, emanate from every individual.

The academician Anatoly Akimov<sup>3</sup> photographed them with special devices and published his results in 1996 in the May issue of the magazine *Chudesa i prikliuchenia* (*Wonders and Adventures*). Unfortunately, we are unable to use these rays as she does. In scientific literature a phenomenon such as this ray is known as a *torsion field*.

Anastasia's world-view is unusual and interesting.

"What is God, Anastasia? Does He exist? If so, why hasn't anyone seen Him?"

"God is the interplanetary Mind, or Intelligence. He is not to be found in a single mass. Half of Him is in the non-material realm of the Universe. This is the sum total of all energies. The other half of Him is dispersed across the Earth, in every individual, in every Man. The dark forces strive to block these particles."

"What do you think awaits our civilisation?"

"In the long term, a realisation of the futility of the technocratic path of development and a movement back to our primal origins."

"You mean to say that all our scholars are immature beings who are leading us into a dead end?"

"I mean to say that they are accelerating the process, they are bringing you closer to the realisation that you are on the wrong path."

"And so? All the cars and houses we build are pointless?"

"Yes."

"You're not bored living here alone, Anastasia? Alone, without television or telephone?"

"These primitive things you mention, Man has possessed them right from the very beginning, only in a more perfect form. I have them."

<sup>3</sup>Anatoly Evgenevich Akimov — Director of the International Institute of Theoretical and Applied Physics of the Russian Academy of Natural Sciences.

“Both television and telephone?”

“Well, what is television? A device through which certain information is served up to an almost atrophied human imagination and scenes and story-plots are acted out. I can, through my own imagination, outline the plot of any story, and act out the most improbable situations — even take part in them myself, just like having an influence on the outcome. ...Oh dear, I suppose I have not been making myself too clear, eh?”

“And the telephone?”

“Every Man can talk with any other individual without the aid of a telephone. All that is needed is the will and desire of both parties and a developed imagination.”

## Concert in the taiga

I proposed that she herself come to Moscow and appear on TV.

“Just think, Anastasia, with your beauty you could easily be a world-class fashion or photomagazine model!”

And at this point I realised that she was no stranger to earthly matters — like all women, she delighted in being a beauty. Anastasia burst out laughing.

“A world-class beauty, eh?” She echoed my question and then, like a child, began to frolic about, prancing through the glade like a model on a catwalk.

I was amused at her imitation of a fashion model, placing one foot in front of the other in turn as she walked, showing off imaginary outfits. Finding myself getting into the act, I applauded and announced:

“And now, ladies and gentlemen, your attention, please! Performing before you will be that magnificent gymnast, second-to-none, that incomparable beauty: Anastasia!”

This announcement tickled her fancy even more. She ran out into the middle of the glade and executed an incredible flying somersault — first forward, then backward, then to the side, both left and right, then an amazingly high leap into the air. Grasping a tree-branch with one hand, she swung herself around it twice before flinging her body over to another tree. After yet another somersault, she began to bow coquettishly to my applause. Then she ran off out of the glade and hid behind some thick bushes. Anastasia peeped smilingly out from behind them, as though they were a theatre-curtain, impatiently awaiting my next announcement.

I remembered a videotape I had of some of my favourite songs being performed by popular artists. I would watch it occasionally in the evening in my cabin aboard ship. I had this tape in mind (but not

with the thought that Anastasia would actually be able to reproduce anything from it) as I announced:

“Ladies and gentlemen, I now present to you the star singers of our current stage, in a performance of their top hits. Your attention, please!”

Oh, how wrong I had been in my estimate of her abilities. What happened next I could not possibly have predicted. No sooner had Anastasia made her entrance from behind her improvised curtain, than she launched into the authentic voice of Alla Pugachova.<sup>1</sup> No, it wasn't just a parody or an imitation, but Alla herself, effortlessly conveying not only her voice, but her intonations and emotions as well.

But an even more amazing feature was to come. Anastasia accentuated particular words, adding something of her own, infusing the song with her own supplemental attenuations, so that Alla Pugachova's own performance, which before, it seemed, nobody else could even begin to surpass, now called forth a whole new range of additional feelings, illuminating the images even more clearly.

In a magnificently executed overall performance of the song:

*Once lived an artist alone,  
Canvases all through his home.  
He loved an actress, he thought,  
Flowers were her love, fresh-grown.  
He went and sold his big home,  
Sold every canvas he owned,  
And with the money he bought  
Whole fields of flowers, fresh-grown.*

Anastasia put particular emphasis on the word “canvas”.

She screamed out this word in fright and surprise. A canvas is an artist's most prized possession — without it he can no longer

<sup>1</sup> *Alla Borisovna Pugachova* (also spelt: *Pugacheva*, 1949–) — one of the most popular Russian stage and screen singers of the twentieth century, the recipient of a number of national and international awards. Pugachova, known as a ‘national Russian legend’, has toured extensively abroad, including Canada and America. Her *Alla* entertainment company grew out of *Alla Pugachova's Theatre of Song*, which she has headed as Artistic Director since 1988.

create — and here he is giving up the most precious thing he owns for the sake of his loved one. Later, as she sang the words *Then she went off on the train*, Anastasia tenderly portrayed the artist in love, looking longingly after the departing train which was carrying off his loved one forever. She portrayed his pain, his despair, his perplexed state of mind.

I was too shaken by everything I had seen and heard to applaud at the end of the song. Anastasia bowed, anticipating the applause and, hearing none, launched into a new song with even more enthusiasm. She performed all of my favourite songs, in the same order they had been recorded on the videotape. And every single song, which I had heard so many times before, was now even clearer and more meaningful in her rendition.

Upon completing the last song on the tape, still hearing no applause, Anastasia retreated 'backstage'. Too dumbfounded to speak, I remained seated in silence, still feeling an extraordinary impression from what I had just witnessed. Then I jumped up, began applauding and cried:

"Terrific, Anastasia! Encore! Bravo! All performers on stage!"

Anastasia gingerly stepped forth and gave a bow. I kept on shouting:

"Encore! Bravo!" — clapping my hands and stamping my feet.

She too livened up. She clapped her hands and cried:

"*Encore* — does that mean 'Again'?"

"Yes, again! And again! And again!... You did it so marvellously, Anastasia! Better than the singers themselves! Even better than our top stars!"

I fell silent and began attentively studying Anastasia. I thought how multifaceted her soul must be if she could infuse her singing performance with so many new, splendid, clear features. She too stood motionless, silently and enquiringly looking at me.

"Anastasia, do you have any song of your own? Couldn't you sing something of your own, something I haven't heard before?"

"I could, but my song does not have any words. Would you still like to hear it?"

"Please sing your song."

"Fine."

And she started in singing her most unusual song. Anastasia first screamed like a newborn baby. Then her voice started sounding quiet, tender and caressing. She stood beneath a tree, her hands clasped to her breast, her head bowed. It was like a lullaby, gently caressing a little one with her voice. Her voice spoke to him of something very tender. Her soft voice, amazingly pure, caused everything around to grow silent — the birds' singing, the chirping of the crickets in the grass. At that point Anastasia seemed to take absolute delight in the little one waking from sleep. The sound of rejoicing could be heard in her voice. The incredibly high-pitched sounds soared above the Earth before taking flight into the heights of infinity. Anastasia's voice first pleaded, then went into battle, and once again caressed the little one and bestowed joy upon all around.

I too felt this all-pervading sense of joy. And when she finished her song, I joyfully exclaimed:

"And now, my dear ladies and gentlemen, a unique and never-to-be-repeated number by the top animal trainer in the world! The most agile, brave, charming trainer, capable of taming any beast of prey on Earth! Behold and tremble!"

Anastasia positively squealed with delight, leapt into the air, clapped her hands in rhythm, shouted something, started in whistling. Something I could never have imagined began taking place in the glade.

First the she-wolf made her entrance. She leapt out of the bushes and stopped at the edge of the glade, giving a puzzled look around. In the trees furthest from the glade squirrels sprang from branch to branch. Two eagles circled low overhead, while little creatures of some kind rustled in the bushes. With the sharp crackle of dry twigs as he broke and crashed the bushes, a huge bear lumbered out into the glade and stopped, as though embedded in the ground, just short of Anastasia. The wolf began growling at him disapprovingly, since the bear had approached so close to Anastasia without an invitation.

Anastasia ran up to the bear, playfully stroking his muzzle, then grabbed him by his front paws and stood him upright. Judging by the fact that she didn't seem to be exerting much physical effort in this, the bear himself must have been carrying out her commands according to how much he understood and how he interpreted them.

He stood stock still, trying to understand what was desired of him. Anastasia took a running leap and, grabbing hold of the thick scruff of the bear's neck, did a handstand on his shoulders, jumping off again with a somersault on her way down. Then she took the bear by one paw and started to bend over, pulling the bear after her — creating the impression that she was tossing him over her shoulder. This trick would have been impossible if the bear had not been able to do it himself. Anastasia simply guided him. It looked at first as though the bear was going to fall on Anastasia, but at the last moment he reached out a paw to the ground and broke his fall. He was no doubt doing everything he could not to harm his mistress or friend. In the meantime the wolf was become more and more concerned — she was already standing at the place of the action, thrashing from side to side, growling or howling with displeasure.

At the edge of the glade there appeared several more wolves, and when Anastasia was on the point of yet another routine 'toss' of the bear over her shoulder, the bear, attempting to do the trick properly, fell over on his side and remained motionless.

At last the wolf, now at her wits' end, and with a malicious grin, made a leap in the bear's direction. With lightning speed Anastasia placed herself in the wolf's path. The wolf braked with all fours, somersaulted over her back, bumping into Anastasia's leg. Immediately Anastasia put one hand on the back of the wolf, who obediently crouched to the ground. With her other hand she began waving, as she had done that first time with me when I had tried to embrace her without her consent.

The forest around us began to make a rustling sound — not threateningly, but with some agitation. The agitation was felt as well in all the big and little creatures jumping, running and hiding. Anastasia began taking away the agitation. First, she stroked the wolf, slapped her on the back and sent her off out of the glade as though she were a pet dog. The bear was still lying on his side in an uncomfortable pose, like a fallen scarecrow. He was probably waiting to see what else was required of him. Anastasia went over to him, made him stand up, stroked his muzzle and sent him out of the glade like the wolf.

Anastasia, blushing and cheerful, ran over and sat down beside me, breathed in deeply and slowly exhaled. I noticed that her breathing

all at once became even, as though she hadn't been carrying out any extraordinary exercises at all.

"They do not understand play-acting, and they ought not to — it is not entirely a good thing," Anastasia remarked. Then she asked me: "Well, how was I? Do you think I could find any kind of work in your life?"

"You're terrific, Anastasia, but we already have all that, and our circus trainers show us a lot of interesting tricks with animals, but you don't have a hope of breaking through all the red tape to even get started. There are so many formalities and machinations to deal with. You don't have any experience in that."

The remainder of our play consisted in going over possible alternatives: where could Anastasia get a job in our world and how would she overcome the formalities in the way? But no easy alternative presented itself, since Anastasia had neither a residence permit nor proof of education, and nobody would believe the stories about her origins on the basis of her abilities, no matter how extraordinary they might be. Suddenly turning serious, Anastasia said:

"Of course I would like to visit one of the big cities again, maybe Moscow, to see how accurate I was in visualising certain situations from your life. For one thing, I am at a complete loss to understand how the dark forces manage to fool women to such a degree that they unwittingly attract men with the charms of their bodies, and thereby deprive them of the opportunity of making a real choice — to choose someone close to their heart. And then they themselves suffer for not being able to create a real family, since..."

And once again she launched into deep and poignant discussions about sex, family and the upbringing of children, and I could only think: "The most incredible thing in all I have seen and heard is her ability to talk about our lifestyle and understand it in such specific detail!"

A decorative border at the top of the page features a central number '9' flanked by two symmetrical, intricate floral and branch-like designs that arch over the title.

## Who lights a new star?

On the second night, fearing that Anastasia would once again assign me her she-bear or concoct up some new device to keep me warm, I categorically refused to go to sleep at all unless she herself lay down beside me. I thought that as long as she was beside me she wouldn't be up to any tricks. And I told her:

“You've invited me as a guest, I take it. In your home. I imagined there would be at least a few buildings here, but you won't even let me light a fire, and you offer me a beastie to keep me company at night. If you don't have a normal home, what's the point of inviting a guest?”

“All right, Vladimir. Do not worry, please, do not be afraid. Nothing bad is going to happen to you. If you want, I shall lie down beside you and keep you warm.”

This time in the dugout cave there were even more cedar branches strewn around, along with neatly arranged dry grasses, and there were also branches stuck on the wall.

I got undressed. I put my sweater and trousers under my head for a pillow. I lay down and covered myself with my jacket. The cedar twigs gave off that same bacteria-killing aroma described in the popular literature as capable of purifying the air. Though here in the taiga the air is already so pure, the air in the cave was particularly easy to breathe. The dried grasses and flowers contributed a still more unusual delicate fragrance.

Anastasia kept her word and lay down beside me. I sensed the fragrance of her body, which surpassed all other odours. It was more pleasant than the most delicate perfume I had ever sensed from a woman's body. But now I had no thought of wanting to possess her. After my attempt to do so on the way to the glade, which had resulted at the time in an attack of fear and loss of consciousness, I no longer felt aroused by fleshly desires, even when I saw her naked.

I lay down and dreamt of the son my wife never bore to me. And I thought: Wouldn't it be wonderful if my son could be borne by Anastasia! She is so healthy, sturdy and beautiful! The child, then, too would be healthy. He would look like me. Like her too, but more like me. He would be a strong and clever individual. He would know a lot. He would become talented and prosper.

I imagined our infant son sucking at his mother's nipple and involuntarily put my hand on Anastasia's warm, supple breast. Immediately a shiver ran through my whole body and then dissipated at once, but it wasn't a shiver of fear, but something else, extraordinarily pleasing. I didn't take my hand away, but only held my breath and waited for what might happen. Next thing I noticed was the feeling of the soft palm of her hand on mine. She did not push me away.

I raised my head and began looking into Anastasia's marvellous face. The white twilight of the northern night made it seem even more attractive. I couldn't take my gaze off her. Her greyish-blue eyes looked at me tenderly. I didn't restrain myself, but bent closer and, quickly and carefully, with just the slightest touch, planted a kiss on her half-open lips. Once more a pleasing shiver ran through my body. My face was enshrouded with the fragrance of her breath. Her lips didn't utter, as the last time, "Do not do this!... Calm down!", and I had no fear at all. I was still haunted by the prospect of a son. And when Anastasia tenderly embraced me, stroked my hair and gave her whole body to me, I felt something indescribable!

Only upon awaking in the morning was I able to realise that this kind of magnificent feeling, blissful excitement and satisfaction was something I had never once experienced in my entire life. Another peculiar thing: after a night spent with a woman I had always felt a sense of physical fatigue, but here everything was different. In addition, I had the feeling of some kind of great co-creation. My satisfaction wasn't just something physical, but had another dimension I couldn't quite comprehend, one I had never experienced before, extraordinarily lovely and joyful. The thought even flashed through my mind that life was worth living just for this feeling alone. And why had I never experienced anything that even came close to this before, even though there had been all sorts of women — beautiful women, beloved women, women experienced in love?

Anastasia was a girl. A tender, quivering girl. But beyond that there was something in her that belonged not to a single woman I had known. What was it?

And where had she gone now? I made my way over to the entrance of the cozy dug-out cave, poked my head out and looked out into the glade.

The glade was situated at a slightly lower level than my night-time resting-place. It was covered by a layer of morning mist a half-metre thick. In this mist I could see Anastasia spinning around with outstretched arms. A little cloud of mist was forming about her. And when it covered her completely, Anastasia sprang easily into the air, stretched out her legs in a split just like a ballerina, flew over the layer of mist, landed in a different spot and once more, laughing, spun a new cloud around her, through which could be seen the rays of the rising Sun, gently caressing her body. It was a charming and delightful scene, and I cried out with an overflow of emotion:

“Ana-sta-SI-ya!<sup>1</sup> Good morning, my splendid forest fairy, Antastasi-ya-ya!”

“Good morning, Vladimir!” she joyfully called out in response.

“It’s so delightful, so wonderful out right now! Why is that?” I cried as loud as I could.

Anastasia lifted up her hands toward the Sun, and began laughing with that happy, alluring laugh of hers, calling out to me (and someone else besides, high above) in a sing-song voice:

“Out of all the creatures in the Universe only Man is given an experience like that!

“Only men and women sincerely desiring to have a child between them!

“Only Man having such an experience lights a new star in the heavens!

“Only Ma-a-an striving for creation and co-creation!

“Tha-ank yo-o-u!” And, addressing me alone, she quickly added: “Only Man striving for creation and co-creation, and not for satisfaction of his carnal needs.”

<sup>1</sup>*Ana-sta-SI-ya* — As noted in the Translator’s Preface, this reflects the Russian pronunciation of her name, with the stress on the syllable *SI* (pronounced ‘see’).

And again she went off in trills of laughter, leapt high into the air, stretched her legs into a split as though soaring over the mist. Then she came running over, sat down beside me at the entrance to our night-time resting-place and began combing her golden tresses with her fingers, lifting them up from the bottom.

"So, you don't consider sex to be something sinful?" I asked.

Anastasia fell silent. She looked at me in amazement and responded:

"Was *that* the same kind of 'sex' the word implies in your world? And if not, then what is more sinful — to give of yourself so that a Man can come into the world, or to hold back and not allow a Man to be born? A real Man!"

I started thinking. In actual fact, my night-time closeness with Anastasia could not possibly be described by our usual word 'sex'. Then what *did* happen last night? What term *would* be appropriate here? Again I asked:

"And why did anything even approaching that experience never happen with me before — or, for that matter, I would venture to say, with hardly anybody else in the world?"

"You see, Vladimir, the dark forces are constantly trying to make Man give into base fleshly passions, to stop him from experiencing God-given grace. They try all sorts of tricks to persuade people that satisfaction is something you can easily obtain, thinking only of carnal desire. And at the same time they separate Man from truth. The poor deceived women who are ignorant of this spend their lives accepting nothing but suffering and searching for the grace they have lost. But they are searching for it in the wrong places. No woman can restrain a man from fornication if she allows herself to submit to him merely to satisfy his carnal needs. If that has happened, their marital life will not be a happy one.

"Their marital life is only an illusion of togetherness, a lie, a deception accepted by convention. For the woman immediately becomes a fornicator, regardless of whether she is married to the man or not.

"Oh, how many laws and conventions mankind has invented in an attempt to artificially strengthen this false union! Laws both religious and secular. All in vain. All they have done is caused people to play around, accommodate themselves and imagine that such a union

exists. One's innermost thoughts invariably remain unchanged, subject to nobody and nothing.

"Christ Jesus saw this. And trying to counteract it, he said: 'Anyone who looks at a woman lustfully has already committed adultery with her in his heart.'<sup>2</sup>

"Then you, in your not-so-distant past have tried to attach shame to anyone who leaves his family. But nothing, at any time or in any situation, has been able to stop Man's desire to seek out that sense of intuitively felt grace — the greatest satisfaction. And to persist in seeking it.

"A false union is a frightening thing.

"Children! Do you see, Vladimir? Children! They sense the artificiality, the falsity of such a union. And this makes them sceptical about everything their parents tell them. Children sub-consciously sense the lie even during their conception. And that has a bad effect on them.

"Tell me who — what individual — would want to come into the world as a result of carnal pleasures alone? We would all like to be created under a great impulsion of love, the aspiration to creation itself, and not simply come into the world as a result of someone's carnal pleasure.

"People who have come into a false union will then look for true satisfaction in secret, apart from each other. They will strive to possess body after body, or make paltry and fateful use of their own bodies, realising only intuitively that they are drifting farther and farther away from the true happiness of a true union."

"Anastasia, wait!", I said. "Can it be that men and women are doomed this way if the first time all that happens between them is sex? Is there no turning back, no possibility of correcting the situation?"

"There is. I now know what to do. But where do I find the right words to express it? I am always looking for them — the right words. I have been looking for them in the past and in the future. But I have not found them. Perhaps they are right in front of me, after all? And

<sup>2</sup>Matth. 5: 28 (*New International Version*).

then they will appear, new words will be born — words capable of reaching people’s hearts and minds. New words for the ancient truth about their primal origins.”

“Don’t panic, Anastasia! Use existing words to start with, just as an approximation... What else is needed for true satisfaction, apart from two bodies?”

“Complete awareness! A mutual striving to create. Sincerity and purity of motive.”

“How do you know all this, Anastasia?”

“I am not the only one who knows about it. A number of enlightened people have tried to explain it to the world — *Veles*, Krishna, Rama, Shiva,<sup>3</sup> Christ, Mohammed, Buddha.”

“You’ve what... read about all these people? Where? When?”

“I have not read about them, I simply know what they said, what they thought about, what they wanted to accomplish.”

“So sex by itself, according to you, is bad?”

“Very bad. It leads Man away from truth, destroys families. An enormous amount of energy is wasted.”

“Then why do so many different magazines publish pictures of naked women in erotic poses, why are there so many films with erotica and sex? And all of this is extremely popular. Demand generates supply. So, you’re trying to say that our humanity is completely bad?”

“Humanity is not bad, but the devices of the dark forces obscuring spirituality by provoking base carnal desires — these are very powerful devices. They bring people a lot of grief and suffering. They act through women, exploiting their beauty. A beauty whose real purpose is to engender and support in men the spirit of the poet, the artist, the creator. But to do that women themselves must be pure. If there is not sufficient purity, they start trying to attract men by

<sup>3</sup>*Veles* — in the Russian Slavic tradition: the god of wisdom and Nature, one of the *Triglav* (Trinity) and the incarnation of God the Creator *Rod* on earth. *Krishna* — an earthly incarnation of god Vishnu, one of the *Trimurti* (the three personalities of God in the Hindu tradition), responsible for the maintenance of the world. *Rama* — a god-king and an earthly incarnation of Vishnu (in the Hindu tradition). *Shiva* — one of the *Trimurti* along with Vishnu and Brahma. While Brahma is seen as the creator the world, Shiva is held to be responsible for destroying it at the end of each cosmic cycle.

fleshly charms. The outward beauty of empty vessels. In the upshot, the men are deceived and the women must suffer their whole lives on account of this deception.”

“So what, then, is the result?” I queried. “Through all the millennia of their existence, mankind has not been able to overcome these devices of the dark forces? That would mean they are stronger than Man. Man hasn’t been able to overcome them, in spite of the appeals by spiritually enlightened people, as you put it? So, is it downright impossible to overcome them? Or maybe it’s not necessary?”

“It *is* necessary. Absolutely necessary!”

“Who then can do it?”

“Women! Women who have been able to grasp the truth and their own appointed purpose. Then the men will change too.”

“Oh, no, Anastasia, I doubt it. A normal man will always be aroused by a pretty woman’s legs, her breasts... Especially when you’re on a business trip or on holiday far away from your partner. That’s the way things are. And nobody here will change anything, they won’t do it any other way.”

“But I did it with you.”

“What did you do?”

“Now you are no longer able to indulge in that harmful sex.”

All at once a terrible thought hit me like a flood, and started chasing away the magnificent feeling that had been born in me during the night.

“What have you done, Anastasia? What? I’m now... what — I’m now... impotent?”

“On the contrary, you have now become a real man. Only the usual sex will be repugnant to you. It does not bring what you experienced last night, and what you experienced last night is possible only when you desire to have a child and the woman wants the same from you. When she loves you.”

“Loves? But under those conditions... That can happen only a few times during one’s whole life!”

“I assure you, Vladimir, that is enough for your whole life to be happy. You will feel the same way eventually... People enter many times afresh into sexual interaction only through the flesh — not realising that true satisfaction in the flesh is impossible to attain. A

man and a woman who unite on every plane of existence, impelled by radiant inspiration, earnestly aspiring to the act of creation, experience tremendous satisfaction. The Creator gave this experience to Man alone. No transitory thing, this satisfaction, no! It never can compare with fleeting, fleshly gratification. As you cherish the feelings from it over time, all planes of being will, with influence sublime, happily your life and the woman too — a woman who can give birth to a creation in the Creator's own image and likeness, His design!"

Anastasia held out her hand toward me, trying to move closer. I quickly darted away from her into a corner of the cave and cried:

"Out of my way!"

She got up. I crawled outside and backed off from her a few steps.

"You have deprived me, quite possibly, of my chief pleasure in life! Everybody strives for it, everybody thinks about it, only they don't talk about it out loud."

"They are illusions, Vladimir, these pleasures of yours. I have helped save you from a terrible, harmful and sinful appetite."

"Illusion or not — doesn't make any difference. It's a pleasure recognised by everyone! Don't even think of trying to save me from any other 'harmful' appetites, as you see them. Or by the time I get out of here I'll be... — no relations with women, no drinks or appetizers, no smoking! That's not something most people are used to in normal life."

"Well, what good is there in drinking, smoking, senseless and harmful digestion of such a huge quantity of animal meat, when there are so many splendid plants created especially for Man's nourishment?"

"You go and feed yourself with plants, if you like. But don't come near me. A lot of us get pleasure out of smoking, drinking, sitting down to a good meal. That's how we do things, do you understand? That's how!"

"But everything you name is bad and harmful."

"Bad? Harmful? If guests come to celebrate at my place, and they sit down at the table and I tell them: 'Here are some nuts to gnaw on, have an apple, drink water and don't smoke' — now *that* would be bad."

"Is that the most important thing, when you get together with friends — to sit right down at the table and drink, eat and smoke?"

“Whether it’s the most important thing or not is beside the point. That’s how people behave all over the world. Some countries even have ritual dishes — roast turkey, for example.”

“That is not accepted by everyone even in your world.”

“Maybe not by everyone, but I happen to live among normal people.”

“Why do you consider the people around you to be the most normal?”

“Because they’re in the majority.”

“That is not a good enough argument.”

“It’s not good enough for you, because it’s something impossible to explain to you.”

My anger at Anastasia began to pass. I recalled hearing about medical prescriptions and sex therapists and the thought came to me that if she *had* somehow injured me, the doctors would be able to fix it. I said:

“Okay, Anastasia. Let’s make peace. I’m no longer angry at you. I thank you for the wonderful night. Only don’t you try saving me from any more of my habits. As far as sex goes, I’ll fix the situation with the help of our doctors and modern medicines. Let’s go for a swim.”

I began heading for the lake, admiring the morning woods. Just as my good mood was beginning to come back, she — well, there you go again! Walking behind me, she piped up:

“Medicines and doctors will not help you now. To put everything back the way it was, they will have to erase your memory of everything that happened and everything you felt.”

Stunned, I stopped in my tracks.

“Then you put everything back the way it was.”

“I cannot.”

Again I was overwhelmed by a feeling of rampant rage — and, at the same time, fear.

“You! You brazen—! You poke your nose in where it doesn’t belong and turn my life upside down! So, you played a nasty trick on me! And now you say you can’t fix it?”

“I did not play any nasty tricks. After all, you wanted a son so badly. But so many years had gone by, and you still did not have a

son. And none of the women in your life would bear you a son. I also wanted a child by you, a son too. And that is something I can do...

"And why are you getting so concerned ahead of time that things are going to go badly for you? Maybe you'll still come to understand.

"Please do not be afraid of me, Vladimir, I am certainly not trying to meddle with your mind. This happened all on its own. You got what you wanted.

"And I would still very much like to save you from at least one mortal sin."

"And what's that?"

"Pride."

"You're a funny one. Your philosophy and lifestyle aren't human."

"What do you find in me so inhuman that it frightens you?"

"You live all alone in the forest, and communicate with plants and animals. Nobody in our society even comes close to that kind of life."

"How can that be, Vladimir? Why?" Anastasia exclaimed, flustered. "Your *dachniks*<sup>1</sup> — they too communicate with plants and animals, only not consciously. But they will understand one day. Many have already begun to understand."

"Oh, come on! Now she's a *dachnik*? And this ray of yours. You know a lot, but you don't read books. You must be some kind of mystic!"

"I shall try to explain everything to you, Vladimir. Only not all at once. I am trying, but I cannot find the right words. Comprehensible words. Please believe me. All my abilities are inherent in Man. It is something Man was given right from the start. Back in the days of his primal origins. And everyone could do the same today. Nevertheless, people are starting to go back to their primal origins. It will be a gradual process after the forces of light triumph!

"What about your 'concert'? You sang in all sorts of different voices, you portrayed my favourite artists, and even in the same order as on my videotape."

<sup>1</sup>*dachniks* — people who spend time (their days off, especially summer holidays) tending a garden at their *dacha*, or cottage in the country. See further details in the Translator's Preface and the Editor's Afterword.

“That is right, Vladimir. You know, I once saw that tape of yours. I shall tell you later how it happened.”

“And what — you... right off memorised the words and tunes of all the songs?”

“Yes, I memorised them. What is so complex or mystical about that?... Oh dear, what have I gone and done! I have talked too much, I have shown too much! I am muddle-headed and tactless! My grandfather once called me that. I thought he was just being affectionate. But in fact I probably *am* tactless. Please... Vladimir!”

Anastasia’s voice betrayed a very human concern, and this was probably the reason that almost all my fear of her had now left me. My whole feelings were pre-occupied with the prospect of my son.

“Okay, I’m no longer afraid... Only please try to be a bit more restrained. Remember your grandfather told you that.”

“Yes. And grandfather... But here I am talking and talking. I have such a strong desire to tell you everything. Am I a chatterbox? Yes? But I shall try. I shall try very hard to restrain myself. I shall try to speak only in terms you will understand...”

“So, you’ll soon be giving birth, Anastasia?” I said.

“Of course! Only, it will not be on time.”

“What do you mean, it will not be on time?”

“Ideally it should be in the summertime, when Nature can help with the nurturing.”

“Why did you make that decision, if it’s so risky for you and the child?”

“Do not worry, Vladimir. At least our son will live.”

“And you?”

“And I shall try to hold on till the spring, and everything will adjust itself then.”

Anastasia said this without a tinge of sorrow or fear for her life. Then she ran off and jumped into the little lake. The spray of the water in the sunlight took flight, just like fireworks, and landed on the smooth, mirror-like surface of the water. Some thirty seconds later her body slowly began to break the surface. She lay, as it were, on the water, her arms widespread, her palms upturned, and smiled.

I stood on the shore, looked at her and thought to myself: Will the squirrel hear the snap of her fingers when she lies with her baby in one of her shelters? Will she get help from any of her four-footed friends? Will her body have enough heat to warm up the little one?

“If my body should cool off and the baby have nothing to eat, he will start crying,” she said quietly, coming out of the water. “His cry of despair may waken Nature, or at least part of it, before the beginning of spring and then everything will be all right. They will nurse him.”

“You read my thoughts?”

“No, I just guessed you were thinking about that. That is quite natural.”

“Anastasia, you said your relatives live close by. Would they be able to help you?”

“They are very busy, and I must not take them away from their work.”

“What are they busy with, Anastasia? What do you do all day long, when in fact you are so completely served by your natural environment?”

“I keep busy... And I try to help people in your world — the ones you call *dachniks* or gardeners.”

A decorative border of various flowers and foliage arches over the page number and title.

## Her beloved dachniks

Anastasia enthusiastically explained to me how many new opportunities could open up for people who communicate with plants. There were two major subjects she talked about not only with particular excitement and animation but, I would have to admit, with a kind of love — namely, bringing up children on the one hand, and *dachniks*<sup>1</sup> on the other. According to everything she said about these people and the importance she attached to them, we would all need to literally bow on our knees before them. Just think! According to her the dachniks have not only managed to save the whole nation from famine, but also sown seeds of good in people's hearts, and are educating the society of the future. There are far too many points to enumerate here — one would need a whole book! And Anastasia kept on arguing, trying to demonstrate this:

“You see, the society you are living in today can learn a lot from communication with the plants to be found around dachas. Yes, I am talking about the dachas, where you personally know every individual plant in your garden-plot, and not those huge, impersonal fields cultivated by monstrous, senseless machines. People feel better when they are working in their dacha plots. Many of them end up living longer. They become kinder. And it is these very dachniks that can pave the way for society to become aware of how destructive the technocratic path can be.”

“Anastasia, whether that's true or not is, for the time being, beside the point. What is *your* role in all this? What kind of help can you offer?”

Taking me by the arm, she led me over to the grass. We lay on our backs, the palms of our hands turned upward.

<sup>1</sup>See footnote 4 in Chapter 9: “Who lights a new star?”.

“Close your eyes, let go, and try to picture to yourself what I am saying. Right now I’ll take a look with my ray and locate, at a distance, some of those people you call dachniks.”

After a period of silence, she began to say softly:

“An old woman is unwrapping a piece of cheesecloth in which cucumber seeds have been soaking. The seeds have already begun to develop quite a bit, and I can see little sprouts. Now she has picked up a seed. I have just suggested to her that she should not soak the seeds so much — they will become deformed when they are planted, and this kind of water is not good for them — the seed will go bad. She thinks she herself must have guessed that. And that is partially true — I just helped her guess a bit. Now she will share her idea and tell other people about it. This little deed is done.”

Anastasia told how she visualises in her consciousness all sorts of situations involving work, recreation and people’s interaction — both with each other and with plants. When the situation she has visualised comes closest to reality, contact is established whereby she can see the person and feel what this person is suffering or sensing. She herself then, as it were, steps into the image of the person and shares her expertise with them. Anastasia said that plants react to people, to Man, with love or hate, and exercise a positive or negative influence on people’s health.

“And here is where I have an enormous amount of work to do. I keep myself busy with the dacha garden-plots. The dachniks travel out to their plots, their plantings — they are like their own children — but, unfortunately, their relationship to them is still pretty much on the level of intuition. They still do not have the foundation that comes with a clear realisation of the true purpose behind this relationship.

“Everything — but everything — on Earth, every blade of grass, every insect, has been created for Man, and everything has its individual appointed task to perform in the service of Man. The multitude of medicinal plants are a confirmation of this. But people in your world know very little about how to benefit from the opportunities they are presented with — about how to take full advantage of them.”

I asked Anastasia to show some concrete example of the benefits of conscious communication — an example that could be

seen, verified in practice and subjected to scientific investigation. Anastasia thought for a little while, then suddenly brightened and exclaimed:

“The dachniks, my beloved dachniks! They will prove it all! They will show what is true and confound all your science! Now how is it I did not think of that or understand it before?”

Some kind of brand new idea made her bubble over with joy.

The whole time I was with her, not once did I see Anastasia sad. She can be serious, thoughtful and concentrated, but more often than not delighting in something. This time her joy literally bubbled over — she jumped up and clapped her hands, and it seemed to me as though the whole forest had become brighter, and begun to stir, responding to her with the rustling of tree-tops and the singing of birds. She whirled round and round, as though she were doing a kind of dance. Then, all radiant, she once again sat down beside me and said:

“Now they will believe! All on account of them, my dear dachniks. They will explain and prove everything!”

Trying to bring her a little more quickly back to the topic of our interrupted conversation, I noted:

“Not necessarily. You say that every insect has been created for Man’s benefit, but how can people believe that when they look with so much loathing on the cockroaches crawling over their kitchen tables? What — can it be that they too have been created for our benefit?”

“Cockroaches,” declared Anastasia, “will only crawl over a dirty table to collect the remains of any food particles lying about — particles too small for the human eye to see. They process them and render them harmless before discarding them in some secluded spot. If there are too many of them, simply bring a frog into the house and the surplus cockroaches will disappear at once.”

What Anastasia went on to propose the dachniks do will probably contradict the principles of the plant sciences — and will certainly contradict the commonly accepted methods of planting and cultivating various garden-plot crops. Her affirmations, however, are so colossal that it seems to me they would be worth trying out for anyone with the opportunity to do so — maybe not throughout their

whole plot, but at least in one small section of it, especially since nothing harmful and only good could come of it. Besides, much of what she told me has already been confirmed by the experiments of the biological science expert Mikhail Prokhorov.<sup>2</sup>

<sup>2</sup>*Mikhail Nikolaevich Prokhorov* — Director of ecological programming for a private firm in Moscow, with a doctoral degree in Biology. The author of numerous studies on the interaction of people and plants, Prokhorov speaks about the possibility of the “*direct* influence of human beings on the growth and development of plants and, in certain situations, on the health and behaviour of animals”.

A decorative arch of pine branches with pine cones and needles frames the top of the page. The arch is symmetrical and spans across the width of the page, with the Roman numeral 'II' centered above it.

## Advice from Anastasia

### The seed as physician

Anastasia stated:

“Every seed you plant contains within itself an enormous amount of information about the Universe. Nothing made by human hands can compare with this information either in size or accuracy. Through the help of these data the seed knows the exact time, down to the millisecond, when it is to come alive, grow — what juices it is to take from the Earth, how to make use of the rays of the celestial bodies — the Sun, Moon and stars, what it is to grow into, what fruit to bring forth. These fruits are designed to sustain Man’s life. More powerfully and effectively than any manufactured drugs of the present or future, these fruits are capable of counteracting and withstanding any disease of the human body. But to this end the seed must know about the human condition. So that during the maturation process it can satiate its fruit with the right correlation of substances to heal a specific individual of his disease, if indeed he has it or is prone to it.

“In order for the seed of a cucumber, tomato or any other plant grown in one’s plot to have such information, the following steps are necessary:

“Before planting, put into your mouth one or more little seeds, hold them in your mouth, under the tongue, for at least nine minutes.

“Then place the seed between the palms of your hands and hold it there for about thirty seconds. During this time it is important that you be standing barefoot on the spot of earth where you will later be planting it.

“Open your hands, and carefully raise the seed which you are holding to your mouth. Then blow on it lightly, warming it with your breath, and the wee little seed will know everything that is within you.

“Then you need to hold it with your hands open another thirty seconds, presenting the seed to the celestial bodies. And the seed will determine the moment of its awakening. The planets will all help it! And will give the sprouts the light they need to produce fruit especially for you.

“After that you may plant the seed in the ground. In no case should you water it right off, so as not to wash away the saliva which is now covering it, along with other information about you that the seed will take in. It can be watered three days after planting.

“The planting must be done on days appropriate to each vegetable (people already know this, from the lunar calendar). In the absence of watering, a premature planting is not as harmful as an overdue planting.

“It is not a good idea to pull up all the weeds growing in the vicinity of the sprouts. At least one of each kind should be left in place. The weeds can be cut back...”

According to Anastasia, the seed is thus able to take in information about the person who plants it, and then during the cultivation of its fruit it will pick up from the Universe and the Earth the optimum blend of energies needed for a given Man. The weeds should not be disposed of completely, as they have their own appointed function. Some weeds serve to protect the plant from disease while others give supplemental information. During the cultivation time it is vital to communicate with the plant — at least once during its growth period. And it is desirable to approach it and touch it during a full moon.

Anastasia maintains that the fruit cultivated from the seed in this manner, and consumed by the individual who cultivated it, is capable not only of curing him of any diseases of the flesh whatsoever but also of significantly retarding the aging process, rescuing him from harmful habits, tremendously increasing his mental abilities and giving him a sense of inner peace. The fruit will have the most effective influence when consumed no later than three days after harvesting.

The above-mentioned steps should be taken with a variety of plant species in the garden-plot.

It is not necessary to plant a whole row of cucumbers, tomatoes etc., in this manner; just a few plants each is enough.

The fruit of plants grown like this will be distinguished from other plants of the same species not only in taste. If analysed, it will be seen that they are also distinct in terms of the substances they contain.

When planting the seedlings, it is important to soften the dirt in the excavated hole with one's fingers and bare toes, and spit into the hole. Responding to my question "Why the feet?", Anastasia explained that through perspiration from one's feet come substances (toxins, no doubt) containing information about bodily diseases. This information is taken in by the seedlings. They transmit it to the fruit, which will thus be enabled to counteract diseases. Anastasia recommended walking around the plot barefoot from time to time.

"What kind of plants should one cultivate?"

Anastasia replied:

"The same variety that exists in most garden-plots is quite sufficient: raspberries, currants, gooseberries, cucumbers, tomatoes, wild strawberries, any kind of apple tree. Sweet or sour cherries and flowers would be very good too. It does not make any difference how many plants of each kind there are or how big their area of cultivation is.

"There are a few 'definites', without which it would be difficult to imagine a full energy micro-climate: one of them is sunflowers (at least one plant). There should also be one-and-a-half or two square metres of cereal grains (rye or wheat, for example), and be sure to leave an 'island' of at least two square metres for wild-growing herbs — ones that are not planted manually. If you have not left any of them growing around your dacha, you can bring in some turf from the forest and thereby create an island of natural growth."

I asked Anastasia if it were necessary to plant these 'definites' directly in the plot, if there were already some wild-growing herbs close by — say, just beyond the fence — and this is how she responded:

"It is not just the variety of plants that is significant, but also how they are planted — the direct communication with them that allows them to take in the information they need. I have already told you about one of the methods of planting — that's the basic one. The important thing is to infuse the little patch of Nature surrounding you with information about yourself. Only then will the healing effect and the life-giving support of your body be significantly higher than from the fruit alone. Out in the natural 'wilds' (as you call them) —

and Nature really is not wild, it is just unfamiliar to you — there are a great many plants that can help us cure all — and I mean *all* — existing diseases. These plants have been designed for that purpose, but Man has lost, or almost lost, the ability to identify them.”

I told Anastasia that we already have many specialised pharmacies which deal in healing herbs, just as there are many physicians and medicine men who make a profession out of herb treatments, and she replied:

“The chief physician is your own body. Right from the start it was endowed with the ability to know which herb should be used and when. How to eat and breathe. It is capable of warding off disease even before its outward manifestation. And nobody else can replace your body, for this is your personal physician, given individually to you by God, and personal only to you. I am telling you how to provide it with the opportunity to act beneficially on your behalf.

“If you make connections with the plants in your garden-plot, they will take care of you and cure you. They will make the right diagnoses all by themselves and prepare the most effective medicine especially designed for you.”

### **Who gets stung by bees?**

In every garden-plot there should be at least one colony of bees.

I told Anastasia there are very few people in our society who can communicate with bees. Special training is required, and not everyone is successful.

But she replied:

“A lot of what you do to maintain bee colonies just gets in the way. Over the past centuries there have been only two people on Earth who have come close to understanding this unique life-form.”

“And who might they be?”

“They are two monks, who have since been canonised. You can read about them in your books — they can be found in many monastery archives.”

“Come on, now, Anastasia! You read church literature too? Where? When? You don’t even have a single book!”

“I have at my disposal a much more complete method of retrieving information.”

“What kind of method? Again, you’re talking in circles! After all, you promised me you wouldn’t resort to any mysticism or fantasy.”

“I shall tell you about it. I shall even try teaching it to you. You will not understand it right away, but it is simple and natural.”

“Well, okay. So, how should bees be kept in a garden-plot?”

“All you have to do is build the same kind of hive for them they would have under natural conditions, and that is it. After that the only thing required is to go to the hive and gather part of the honey, wax and other substances they produce that are so useful for Man.”

“Anastasia, that’s not simple at all. Who knows what that natural hive should look like? Now, if you could tell me how to do it myself with the materials we have at our disposal, then that might be something feasible.”

“All right,” she laughed. “Then you will have to wait a bit. I need to *visualise* it, I have to see what people in today’s world might have on hand, as you say.”

“And where should it be placed so as not to spoil the view?” I added.

“I shall look into that too.”

She lay down on the grass as she always did, visualising her — or, rather, our — living situations, but this time I began to observe her carefully. As she lay on the grass, her arms were stretched out in different directions, with palms upturned. Her fingers were partly curled, and their tips (specifically, the tips of the four fingers on each hand) were also positioned so that their soft parts faced upward.

Her fingers first began to stir a little, but then stopped.

Her eyes were closed. Her body was completely relaxed. Her face too appeared relaxed at first, but then a faint shadow of some kind of feeling or sensation moved across it.

Later she explained how seeing at a distance could be practised by anyone with a particular kind of upbringing.

About the beehive, Anastasia had the following to say:

“You need to make the hive in the shape of a hollow block. You can either take a log with a hole in it and hollow it out to enlarge the cavity, or use boards from a deciduous tree to make a long hollow box 120 centimetres long. The boards should be no less than 6 cm thick and the inside measurements of the cavity at least 40 by 40 centimetres. Triangular strips should be inserted into the corners where the inner surfaces meet, to make the cavity somewhat rounded. The strips can be just lightly glued in place, and the bees themselves will firm them up afterward. One end should be fully covered with a board of the same thickness, with a hinged panel at the other end. For this the panel needs to be cut in such a way so that it fits neatly into the opening and sealed with grass or some kind of cloth covering the whole bottom. Make a slit or a series of slits (to provide access for the bees) along the bottom edge of one of the sides approximately one and a half centimetres wide, starting 30 cm from the hinged opening and continuing to the other end. This hive can be set on pilings anywhere in the garden-plot — at least 20–25 centimetres off the ground, with the slits facing south.

“It is even better, however, to set it up under the roof of the house. Then people will not interfere with the bees flying out, and will not be bothered by them. In this case the hive should be aligned horizontally at a 20–30 degree angle, with the opening at the lower end. The hive could even be installed in the attic, provided there is proper ventilation, or on the roof itself. Best of all, though, attach it to the south wall of the house, just under the eaves. The only thing is, you need to make sure you have proper access to the hive so you can remove the honeycomb. Otherwise the hive should stand on a small platform, with an overhead canopy to protect it from the sun, and can be wrapped with insulation in winter.”

I remarked to Anastasia that this type of hive could be rather heavy, and the platform and canopy might spoil the appearance of the house. What to do in that case? She looked at me a little surprised, and then explained:

“The thing is that your beekeepers do not really go about it the right way. My grandfather told me about this. Beekeepers today have concocted a lot of different ways of constructing a hive, but all of them involve constant human intervention in its operation — they

move the honeycomb frames around within the hive, or move both the hive and the bees to a different spot for the winter, and that is something they should not do.

“Bees build their honeycombs at a specific distance apart to facilitate both ventilation and defence against their enemies, and any human intervention breaks down this system. Instead of spending their time gathering honey and raising offspring, the bees are obliged to fix what has been broken.

“Under natural conditions bees live in tree hollows and cope with any situation perfectly well on their own. I told you that they should be kept under conditions as close to their natural ones as possible. Their presence is extremely beneficial. They pollinate all the plants much more effectively than other agent, thereby increasing the yield. But you must know this pretty well already.

“What you may not know is that bees’ mouths open up channels in the plants through which the plants take in supplemental information reflected by the planets — information the plants (and, subsequently, human beings) require.”

“But bees sting people, don’t you see? How can somebody get a good rest at a dacha if they’re constantly afraid of being stung?”

“Bees only sting when people act aggressively toward them, wave them off, become afraid or irritated inside — not necessarily at the bees, but just at anyone. The bees feel this and will not tolerate the rays of any dark feelings. Besides, they may attack those parts of the body where there are channels connecting with some diseased internal organ or where the protective aura has been torn, and so forth.

“You know that bees are already effectively used in treating the disease you call radiculitis, but that is far from being the only thing they can do.

“If I were to tell you about *everything*, especially showing the evidence you are asking for, you would have to spend not just three days but many weeks with me. There is a lot written about bees in your world, all I have done is introduce a few correctives — but please believe me, they are extremely important correctives.

“To establish a colony of bees in a hive like that is very easy. Before introducing a swarm of bees into the hive, put in a little chunk of wax and some honey-plant. You do not need to put in any hand-made

frames or cells. Afterward, when there are colonies established on even a few neighbouring dacha plots, the bees will multiply all by themselves; then, as they swarm, they will occupy the empty hives.”

“And how should the honey be gathered?”

“Open the panel, break off the hanging honeycomb and extract the sealed honey and pollen. Only do not be greedy. It is important to leave part of it for the bees for the winter. In fact, it is better not to collect any honey at all during the first year.”

## **Hello, Morning!**

Anastasia has adapted her morning routine to the conditions of the dacha plot:

“In the morning, preferably at sunrise, walk out to the garden-plot barefoot, and approach any plants you like. You can touch them. This does not have to be done in accord with some sort of schedule or ritual to be strictly followed day after day, but simply as one feels moved, or as one desires. But it should be done before washing. Then the plants will sense the fragrances of the substances emitted by the body through the pores of the skin during sleep.

“If it is warm and there is a small grassy patch close by (and it would be helpful if there were), lie down there and stretch out for three or four minutes. And if some little bug should happen to crawl onto your body during this time, do not chase it away. Many bugs open up pores on the human body and cleanse them. As a rule, they open up the pores through which toxins are expelled and all sorts of internal ailments are brought to the surface, allowing the person to wash them away.

“If there is any pond water on the plot, you should immerse yourself in it. If not, then you can pour water over yourself as you stand barefoot close to the plants and seedbeds or, even better, between the beds — or, for example, one morning alongside the raspberry bushes, the next by the currant bushes etc. And after washing you

should not dry off right away. You should shake off the water drops from your hands, spreading them onto the surrounding plants. And use your hands to brush off the water from other parts of your body. After this you can go through the usual procedures of washing and using any conveniences to which you are accustomed.”

### **Evening routine**

“In the evening, before going to bed it is important to wash your feet, using water with the addition of a small quantity (a few drops) of juice from saltbush or nettles — or the two together — but no soap or shampoo. After washing your feet, pour the water onto the seedbeds. Then, if necessary, you can still wash your feet with soap.

“This evening routine is important for two reasons. As the feet perspire, toxins come to the surface, removing internal diseases from the body, and these must be washed away to cleanse the pores. Juices from saltbush or nettles are good at facilitating this process. In pouring the remaining water onto the seedbeds, you are giving supplemental information to the plants and microorganisms about your current state of well-being.

This is very important too. Only after receiving this information can our visible and invisible environment work out and pick up from the Universe and the Earth everything it needs for the normal functioning of your body.”

### **It will prepare everything by itself**

I was still interested in knowing what Anastasia had to say about food. After all, she has a rather unique dietary régime, and so I asked:

“Anastasia, tell me how you think a person should feed himself — what should he eat, how often during the day and in what amounts? Our world pays a great deal of attention to this question. There’s a huge quantity of all sorts of literature on this subject, health-food recipes, advice on losing weight...”

“It is difficult to picture human beings’ lifestyle any other way under the circumstances currently imposed by the technocratic world. The dark forces are constantly trying to take the natural operating system of this world — the one given to humanity right from the start — and substitute their own cumbersome artificial system which goes against human nature.”

I asked Anastasia to put it in more concrete terms, without her philosophical musings, and she continued:

“You know, these questions of yours as to what, when and how much a person should eat — they are best answered by the individual’s own body. The sensations of hunger and thirst are designed to send a signal to each particular individual indicating when he should take in food. This precise moment is the right one for each person. The world of technocracy, being incapable of affording each individual the opportunity of satisfying his hunger and thirst at the moment desired by his body, has tried to force him into its own schedule based on nothing but this world’s own helplessness, and then attempts to justify this compulsion in the name of some sort of ‘efficiency’.

“Just think: one person spends half the day sitting down, expending hardly any energy, while another exerts himself with some kind of physical labour, or simply runs and perspires all over, thereby using up many times more energy, and yet both are expected to eat at exactly the same time. A person should take in food at the moment advised by his body, and there can be no other advisor. I realise that under your world’s conditions this is practically impossible, but the opportunity does exist for people at their dachas with their attached garden-plots, and they should take advantage of it and forget about their unnatural, artificial régimes.

“The same applies to your second question: *What* should one eat? The answer is: whatever is available at the moment — whatever is on hand, so to speak. The body itself will select what it needs. I could offer you a bit of non-traditional advice: if you have a household pet

like a cat or a dog, keep track of its movements carefully. Occasionally it will find something in the way of grasses or herbs and eat it. You should tear off a few samples of whatever it selects and add it to your diet. This is not something you have to do every day — once or twice a week is sufficient.

“You should also take it upon yourself to gather some cereal grain, thresh it, grind it into flour and then use the flour to bake bread. This is extremely important. Anyone consuming this bread even once or twice a year will build up a store of energy capable of awakening his inner spiritual powers — not only calming his soul but also exerting a beneficial influence on his physical condition. This bread can be shared with relatives and close friends. If shared with sincerity and love, it will have quite a beneficial influence on them as well. It is very helpful to every individual’s health to spend three days, at least once each summer, eating only what is grown in his garden-plot, along with bread, sunflower oil and just a pinch of salt.”

I have already described Anastasia’s own eating habits. While she was telling me all this, she would unwittingly tear off a blade of grass or two, put it in her mouth and chew it, and offer me some too. I decided to give it a try. I can’t say the taste was anything to write home about, but neither did it provoke any sense of distaste.

It seems as though Anastasia has left the whole task of nourishment and life-support up to Nature; she never allows it to interrupt her train of thought, which is always busy with some more important issue. Even so, her health is as remarkable as her outward beauty, of which it is an inseparable part. According to Anastasia, anyone who has established such a relationship with the Earth and the plants on his own plot of land, has the opportunity of ridding his body of absolutely every kind of disease.

Disease *per se* is the result of Man distancing himself from the natural systems designed to take care of his health and life-support. For such systems, the task of counteracting any disease presents no problem whatsoever, since this is their whole reason for being. However, the benefits experienced by people who have set up such information-exchange contacts with a little patch of the natural world go far beyond dealing with diseases.

A decorative border at the top of the page features a central floral arrangement with several large, dark, textured flowers and smaller, lighter blossoms, all set against a background of fine, radiating lines that create a starburst or sunburst effect. The border is symmetrical and arches over the page number and title.

## Sleeping under one's star

I have already mentioned how animated Anastasia becomes when talking about plants and people who communicate with them. I thought that, living in Nature as she did, she might have studied Nature alone, but she also possesses information about planetary relationships. She literally feels the celestial bodies. See for yourself what she has to say about sleeping under the stars:

“Once plants have received information about a specific person, they embark upon an information exchange with cosmic forces, but here they are simply intermediaries, carrying out a narrowly focused task involving one’s fleshly body and certain emotional planes. They never touch the complex processes which, out of all the animal and plant world on the planet, are inherent only in the human brain and on human planes of existence. Nevertheless, this information exchange they establish allows Man to do what he alone can do — namely, interact with the Intelligence of the Universe or, more precisely, to exchange information with this Intelligence. An altogether simple procedure permits him not only to do this, but also to feel the beneficial effect of such interaction.”

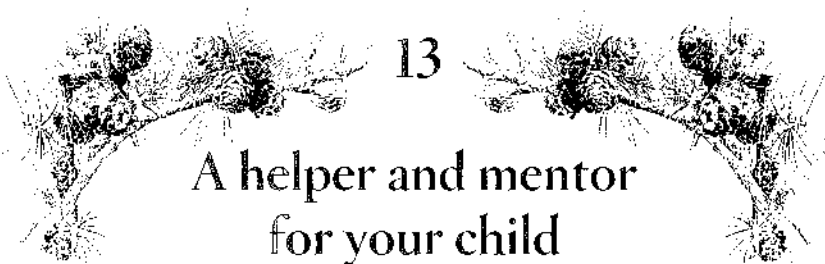

Anastasia described this procedure as follows:

“Pick an evening when weather conditions are favourable and arrange to spend the night under the stars. You should situate your sleeping place close to raspberry or currant bushes, or to beds where cereal seeds have been planted. You should be there alone. As you lie with your face to the stars, do not close your eyes right away. Let your gaze, physically and mentally, wander across the celestial bodies. Do not become tense while thinking about them. Your thought must be free and unencumbered.

“First, try to think about those celestial bodies which are visible to your eye; then you can dream about what you treasure in life, about the people closest to you, people for whom you wish only good. Do

not attempt to even think at this point about seeking revenge or wishing evil upon anyone, for that might have a negative effect on you. This uncomplicated procedure will awaken some of the many little cells dormant in your brain, the vast majority of which never wake even once during a person's whole lifetime. The cosmic forces will be with you and help you attain the realisation of your brightest and most unimaginable dreams, will help you find peace in your heart, establish positive relationships with your loved ones, and increase — or call into being — their love for you.

“It is useful to try repeating this procedure a number of times. It is effective only when carried out at the location of your constant contact with the plant world. And you will feel it yourself as early as the next morning. It is especially important to go through this procedure on the eve of your birthday. To explain how all this works would take too long right now, and is not important. Parts of the explanation you would not believe, other parts you would not understand. It can be discussed much more quickly and easily with people who are already trying it and feeling its influence on themselves, since the information, once received and verified, will facilitate the reception of any information that follows.”

A decorative border of dried flowers and branches arches over the page number and title.

## A helper and mentor for your child

In asking Anastasia how a plot of ground with seed-plantings, even plantings carried out in the special manner she described and maintaining close contact with Man, could facilitate the raising of children, I expected to hear an answer something like: 'Children need to be imbued with a love of nature.' However, I was wrong. What she actually said was amazing both in its simplicity of argument and in the depth of its philosophical implications.

"Nature and the mind of the Universe have seen to it that every new Man is born a sovereign, a king! He is like an angel — pure and undefiled. Through the still soft upper part of his head he takes in a huge flood of information from the Universe. The abilities inherent in each newborn child are such as to allow him to become the wisest creature in the Universe, God-like. It takes him very little time to bestow grace and happiness upon his parents. During this period — amounting to no more than nine earth-years — he becomes aware of what constitutes creation and the meaning of human existence. And everything that he needs to accomplish this already exists. Only the parents should not distort the genuine, natural structure of creation by cutting the child off from the most perfect works in the Universe.

"The world of technocracy, however, does not allow parents to do the right thing. What does an infant see with his first conscious glance around? He sees the ceiling, the edge of his crib, some patches of fabric, the walls — all attributes and values of the artificial world created by a technocratic society. And in this world he finds his mother and her breasts.

"This must be the way things are!" he concludes. His smiling parents offer him toys and other objects that rattle and squeak, as though they were priceless treasures. Why? He will spend a long time trying to make sense of this rattling and squeaking. He will

try to comprehend them both through his conscious mind and his sub-conscious. And then these same smiling parents will try wrapping him up in some kind of fabric, which he finds most uncomfortable. He will make attempts to free himself, but in vain! And the only means of protest he has at his disposal is a cry! A cry of protest, an appeal for help, a cry of rebellion. And from that moment on this angel and sovereign becomes an indigent slave, begging for handouts.

“One after another the child is presented with the accoutrements of an artificial world. He is rewarded for his acceptance by some new toy or item of clothing. And along with this the thought is drummed into him that these are the dominant objects in the world where he has arrived. Still in his infancy, despite his status as the most perfect being in the Universe, he is pandered to and treated as an imperfect creature, even in those institutions you consider educational, where again he is constantly reminded of the values of this artificial world. Not until the age of nine does he hear a passing mention of the existence of the world of nature, and then only as an adjunct to that other, more important world of manufactured objects. And most people are never afforded the opportunity to become aware of the truth, even to the end of their days. And so it seems as though the simple question ‘What is the meaning of life?’ goes unanswered.

“*The meaning of life* — that is to be found in truth, joy and love. A nine-year-old child brought up in the natural world has a far more accurate perception of creation than all the scientific institutions of your world or, indeed, many of your prominent scholars.”

“Stop, Anastasia! You probably have in mind a knowledge of nature, assuming his life proceeds along the same lines as yours. Here I can agree with you. But think: today’s Man is obliged (rightly or wrongly — that is another question) — but he is obliged to live specifically in our technocratic world, as you call it. Someone brought up as you propose will certainly know nature, and have a feeling for it, but in everything else he will be an utter ignoramus. Besides, there are other sciences, like mathematics, physics, chemistry — or simply just knowing about life and its societal manifestations.”

“For someone who has learnt at the right time about what constitutes creation, those things are mere trifles. If he wants, or considers

it necessary to prove himself in some scientific field, he will easily surpass all others.”

“How could that happen so quickly?”

“Man in the world of technocracy has never yet invented anything that is not already present in nature. Even the most perfect manufactured devices are but a poor imitation of what exists in nature.”

“Well, that may be. But you promised to explain how a child could be raised and his capabilities developed in *our* conditions. Only talk about this in a way I can understand, using concrete examples.”

“I shall try to be more concrete,” replied Anastasia. “I have already visualised situations like this and have tried to hint to one family what they should do, only there was no way they could have grasped the crucial point and asked their child the proper questions... These parents turned out to have an unusually pure, talented child, who could have brought tremendous benefit to people living on Earth.

“So, these parents arrive with this three-year-old child at their dacha plot and bring along his favourite toys. Artificial toys which displace the true priorities of the Universe. Oh, if only they had not done that! Just think, the child could have been occupied and entertained with something far more interesting than senseless and even harmful interaction with manufactured objects.

“First of all, you should ask him to help you, only ask him in all seriousness, without any pandering, especially since he will actually be able to offer you assistance. If you do any planting, for example, ask him to hold the seeds in preparation for sowing, or rake out the seedbeds, or have him put a seed into the hole you have prepared. And in the process talk to him about what you are doing, something like this:

“‘We will be putting the little seed into the ground and covering it with earth. When the sun in the sky shines and warms the earth, the little seed will get warm and start to grow. It will want to see the sun, and a little shoot will poke its head out of the earth, just like this one.’ At this point you can show him some little blade of grass. ‘If the seed likes the sunshine, it will grow bigger and bigger and maybe turn into a tree, or something smaller, like a flower. And I want it to bring you tasty fruit, and you will eat it if you like it. The little shoot will prepare its fruit for you.’

“Whenever you arrive with your child at the dacha plot, or when he awakes first thing in the morning, have him look and see whether any new shoots have come up. If you should notice one, show your delight. Even when you are putting young plants rather than seeds into the ground, it is important to explain to your child what you are doing. If you are planting tomato seedlings, for example, let him hand you the stalks one by one. If a stalk should inadvertently break, take the broken stalk into your hands and say: ‘I do not think this one will live or bear fruit, since it is broken, but let us try planting it anyway.’ And plant at least one of the broken ones right along with the others.

“A few days later, when you visit the seedbed again with your child and the stalks have firmed up, point out the broken, withering stalk to your little one and remind him that it was broken during the planting, but do not use any preaching tone of voice in doing so. You need to talk with him as an equal. You should bear in mind the thought that he is superior to you in some respects — in the purity of his thought, for example. He is an angel! If you succeed in understanding that, you can then proceed intuitively, and your child will indeed become a person who will happily your days.

“Whenever you sleep under the stars, take your child with you, lay him down beside you, let him look at the stars, but under no circumstances tell him the names of the planets or how you perceive their origin and function, since this is something you do not really know yourself, and the theories stored in your brain will only lead the child astray from the truth. His sub-conscious knows the truth, and it will penetrate his consciousness all by itself. All you need to do is to tell him that you like looking at the shining stars, and ask your child which star he likes best of all.

“In general, it is very important to know how to ask your child questions. The next year you can offer your child his own seedbed, fix it up and give him the freedom to do whatever he likes with it. Do not ever compel him by force to do anything with it, and do not correct what he has done. You can simply ask him what he likes. You can offer help, but only after asking his permission to work along with him. When you are planting cereal grains, have him throw some grains on the seedbed for you.”

“Okay,” I remarked to Anastasia, still not fully convinced. “Maybe a child like this will show interest in the plant world and maybe he’ll become a good agronomist, but where is he going to get knowledge from in other areas?”

“What do you mean, *where from?* It is not just a matter of having a knowledge and feeling about what grows and how. The main thing is that the child is starting to think, analyse, and cells are awakening in his brain which will operate throughout his life. They will make him brighter and more talented compared to those whose corresponding cells are still dormant.

“As far as ‘civilised’ life goes — what you call *progress* — he may well turn out to be superior in any field of endeavour — all the more so since the purity of his thought will make him an exceptionally happy person. The contact he has established with his planets will allow him to constantly take in — and *exchange* — more and more information. The incoming messages will be received by his sub-conscious and transmitted to his consciousness in the form of many new thoughts and discoveries. Outwardly he will look like everyone else, but inwardly... This is the kind of Man you call a genius.”

## Forest school

“Tell me, Anastasia, is this the way *your* parents brought *you* up?”

She responded after a brief pause, during which, I gathered, she was recollecting her childhood.

“I remember practically nothing of my Papa or Mama in the flesh. I was brought up by my grandfather and great-grandfather pretty much as I have explained to you. But, you see, I myself had a good feeling very early on for Nature and the animal world around me — perhaps I was not aware of all the details of how it operated, but that is not the important thing when one has a feeling for it. Grandfather and Great-Grandfather would approach me from time to time and ask questions and expect me to answer them. In our culture, older generations treat an infant or young child virtually as a deity, and use the child’s responses as a check on their own purity.”

I began asking Anastasia to recall some specific question and answer. She smiled, and told me:

“Once I was playing with a little snake. I turned around, and there were Grandfather and Great-Grandfather standing right beside me, smiling. I was very delighted, since it was always interesting being with them. They are the only ones who can ask me questions and their hearts beat in the same rhythm as mine, but with animals it is different. I ran over to them. Great-Grandfather bowed to me, while Grandfather took me on his knees. I listened to his heart beat and I fingered the hairs on his beard as I examined them. Nobody spoke. We were thinking together, and it was good that way. Then Grandfather asked me:

“Tell me, Anastasia, why do you think my hair grows here and here,” pointing to the top of his head and his beard, “and not here?” pointing to his nose and forehead.

“I touched his nose and forehead, but no reply was forthcoming. I could not give an unthinking answer — I had to understand it.

"The next time they came, Grandfather again said:

"Well, I am still thinking, why my hair grows here, and not here,' again indicating his nose and forehead.

"Great-Grandfather looked at me seriously and attentively. Then I thought: perhaps it is really a serious question with him, and I asked:

"Grandfather, what is it? Do you really want your hair to grow everywhere, even on your nose and forehead?"

"Great-Grandfather began pondering the question, while Grandfather replied:

"No, not really.'

"Then that is why your hair does not grow there, because you do not want it to!"

"He reflected on that, stroking his beard, and mused, as though he were putting the question to himself: 'And if it grows here, that means it is because I want it to?'"

"I confirmed his thought:

"Of course, Grandfather, not only you, but I, and the one who thought you up.'

"At this point Great-Grandfather asked me rather excitedly:

"And who was it that thought him up?"

"The one who thought everything up,' I replied.

"But where is he, show me!" Great-Grandfather asked, bowing to me.

"I could not give him an answer right away, but the question stayed with me, and I started thinking about it often."

"And did you eventually give him an answer?" I asked Anastasia.

"I gave him an answer about a year later, and then he started asking me more questions, but up until the time I gave the answer, neither Grandfather nor Great-Grandfather had asked me any new questions, and I began to get very concerned."

## Attentiveness to Man

I asked Anastasia who taught her to speak and converse, if she had almost no memory of her father and mother and her grandfather and great-grandfather talked with her only rarely. The answers she gave were quite a shock to me, and require interpretation by specialists, and so I shall try to reproduce them as fully as I can. Their meaning has gradually begun to sink in for me. She responded to my first question with a question of her own:

“Do you mean the ability to speak in different people’s languages?”

“How do you mean, ‘different’? What, you can speak more than one language?”

“Yes,” she replied.

“Including German, French, English, Japanese, Chinese?”

“Yes,” she repeated, and then added: “You can see I speak your language.”

“You mean Russian?”

“Well, that is too general. I speak, or at least try to speak, using words and phrases you yourself use when you talk. At first it was a little challenging for me, since your vocabulary is not very large and you repeat yourself a fair amount. Nor do you have much expression of feeling. That is not the kind of language which easily lends itself to accurately saying everything one wishes to say.”

“Wait, Anastasia — I’m going to ask you something in a foreign language, and you give me an answer.”

I said *Hello* to her in English, and then in French. She answered me right off.

Unfortunately I myself have not mastered any foreign language. In school I studied German, but with rather poor marks. I did remember one whole sentence in German, which my schoolmates and I learnt by rote. I recited it to Anastasia:

“*Ich liebe dich, und gib mir deine Hand.*”<sup>1</sup>

She extended her hand to me and answered in German:

“I give you my hand.”

Amazed by what I had heard, and still not believing my ears, I asked:

“So then, any person can be taught any language?”

I had an intuitive feeling that there must be some kind of simple explanation for this extraordinary phenomenon, and I had to know what it was so I could tell others about it.

“Anastasia, perhaps you could explain this in my language, and try to do it with examples, so that I can understand,” I asked somewhat excitedly.

“All right, all right, only calm down and let go, or you will not understand. But let me first teach you to write in Russian.”

“I know how to write. You tell me about teaching foreign languages.”

“I do not mean just handwriting — I shall teach you to be a writer. A very talented writer. You shall write a book.”

“That’s impossible.”

“It *is* possible! It is quite simple.”

Anastasia took a stick and outlined on the ground the whole Russian alphabet along with the punctuation marks, and asked me how many letters there were.

“Thirty-three,” I replied.<sup>2</sup>

“You see, that is a very small number of letters. Can you call what I have outlined a book?”

“No,” I answered. “It’s just an ordinary alphabet, that’s all. Ordinary letters.”

“Yet all the books in the Russian language are made up of these ordinary letters,” Anastasia observed. “Do you not agree? Do you not see how simple it all is?”

---

<sup>1</sup>“I love you, and give me your hand.”

<sup>2</sup>*Thirty-three* — This is the correct number of letters in the modern Russian version of the Cyrillic alphabet. It is believed that Cyrillic was adapted from Greek by the monk St. Cyril in the ninth century to introduce the Gospels to the Slavic-speaking peoples of the Balkan peninsula. It later spread to all Slavic lands (including Russia) where the Orthodox Church predominated. The number of letters in the alphabet varies from language to language. In other areas, under the influence of the Roman Catholic Church, the Latin writing system was adapted to the local Slavic language.

“Yes, but in books they’re — they’re arranged differently.”

“Correct, all books consist of a multitude of combinations of these letters. People arrange them on the pages automatically, guided by their feelings. And from this it follows that books originate not from a combination of letters and sounds, but from feelings outlined by people’s imagination. The result is that the readers are aroused by approximately the same feelings as the writers, and such feelings can be recalled for a long time. Can you recollect any images or situations from books you have read?”

“Yes, I can,” I replied, after a moment’s thought.

For some reason I recalled Lermontov’s<sup>3</sup> *Hero of our time*, and began to tell the story to Anastasia. She interrupted me:

“You see, you can still depict the characters from this book and tell me what they felt, even though quite a bit of time has gone by since you read it. But if I were to ask you to tell me in what sequence the thirty-three letters of the Russian alphabet were set forth in that book, what combinations they were arranged in, could you do that?”

“No. That would be impossible.”

“Indeed, it would be very difficult. So, feelings have been conveyed from one Man to another with the help of all sorts of combinations of these thirty-three letters. You looked at these combinations of letters and forgot them right off, but the feelings and images remained to be remembered for a long time.

“So it turns out that if emotional feelings are directly associated with these marks on paper without thinking about any conventions, one’s soul will cause these marks to appear in just the right sequence and combinations so that any reader may subsequently feel the soul of the writer. And if in the soul of the writer...”

“Wait, Anastasia. Speak more simply, more clearly, more specifically, show me through some kind of an example how languages are

<sup>3</sup>*Mikhail Yurevich Lermontov* (1814–1841) — after Alexander Pushkin, Russia’s second most-loved classic poet, who also had several novels and stories to his credit, including *Hero of our time* (*Geroi nashogo vremeni*). A descendant of a Scottish military officer, Captain George Lermont, who had entered the Russian service in 1613, Lermontov (an officer himself) came to prominence especially after writing an inflammatory poetic eulogy on Pushkin when the latter was killed in a duel (“Death of a poet”, 1837). Ironically, Lermontov himself was killed in a duel only four years later.

to be taught. You can make me into a writer later on. Tell me first: who taught *you* to understand different languages and how?"

"My great-grandfather," replied Anastasia.

"Give me an example," I asked, anxious to understand everything in a hurry.

"All right, but do not be concerned. I shall still find a way to help you understand, and if it is that important to you, I shall try teaching all the languages to you too. It is simple, after all."

"For us it's quite incredible, Anastasia. So do try to explain. And tell me, how much time will it take to teach me?"

She thought for a moment, looked at me, and then said:

"Your memory is not very good, and then there are your domestic problems... You will need a lot of time."

"How long?" I was impatient for an answer.

"For everyday comprehension of phrases such as *Hello* and *Good-bye*, I would say it will take at least four months, possibly six," she replied.

"Enough, Anastasia! Tell me how your great-grandfather did it."

"He played with me."

"How did he play? Tell me."

"Calm down! Let go! I cannot understand why you are so impatient!"

And then she quietly went on:

"Great-Grandfather played with me, as though he were joking with me. Whenever he came to me all by himself, without Grandfather, he would always approach me, bow at the waist, and hold out his hand to me, and I would hold out mine to him. He would first shake my hand, then get down on one knee, kiss my hand and say 'Hello, Anastasia!'"

"One time he came, he did everything as usual, his eyes looked at me tenderly as usual, but his lips were saying some kind of abracadabra. I looked at him in surprise, and he said something else, equally unintelligible. I could not take it any longer and asked:

"Granpakins, have you forgotten what to say?"

"Yes, I have," Great-Grandfather answered. Then he stepped away from me a few paces, stopped to think about something and came over to me again, extended his hand to me and I held out mine to him. He dropped on one knee and kissed my hand. His look was

gentle, his lips were moving, but no sound was coming out. I was even a bit afraid. Then I decided a reminder might help.

“Hello, Anastasia!” I hinted.

“Correct! Great-Grandfather confirmed with a smile.

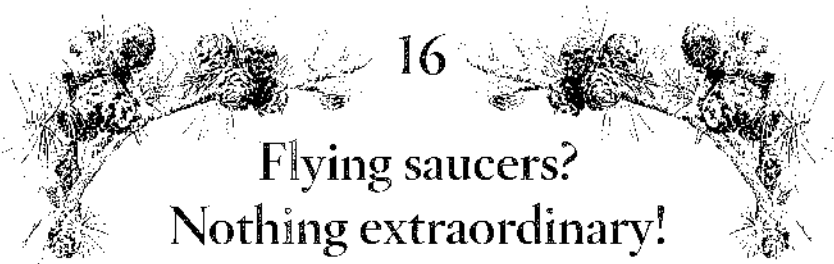

“At that point I realised it was a game — he and I would often play games together after that. At first it was quite simple, but then the game became more complicated, and more fascinating. It is a game that begins when one is three years old and goes on until the age of eleven, when one undergoes a kind of test. This involves looking attentively at the person you are talking with and being able to understand what they are saying, no matter what language they are expressing it in. This kind of dialogue is far superior to speech — it is more rapid and conveys far more information. You would call it thought-transfer. You think it is abnormal, something out of fantasy, but it is simply an attentive attitude toward Man, drawing upon a developed imagination and a good memory. It involves not just a more efficient method of information exchange, but getting to know a person’s soul, along with the animal and plant world, and what constitutes creation as a whole.”

“Anastasia,” I said, “what do plants growing in a garden-plot have to do with this — what is their role in all this?”

“What do you mean, what have they to do with it? At the same time as the child is getting to know the world of plants as a part of the functioning of the Universe, he is also entering into contact with his planets. With their help and the help of his parents he quickly, very quickly, gets to know the truth and develops intensively in the fields of psychology, philosophy and the natural sciences — your disciplines. But if the game goes on and some kind of man-made object from the artificial world is used as an example, the child will become lost. He will not receive any assistance from the powers of Nature or the Universe.”

“I have already noted, Anastasia, that in the final analysis such a child could become an agronomist. Now where would his knowledge come from in other areas?”

But Anastasia maintained that a Man raised in such a manner would show an aptitude for quick learning in any of our scholarly disciplines.

A decorative arch of stylized flowers and leaves frames the page number and title.

## Flying saucers? Nothing extraordinary!

Then I asked her to show me an example of her knowledge of some technical subject.

“You want me to tell you how all the different machines of your world operate?”

“The kind of thing our prominent scientists are only touching the fringes of. Why don’t you make some great scientific discovery, let’s say?”

“That is what I have been doing for you the whole time you have been here.”

“Not just for me, for the world of science — a discovery they would be prepared to recognise. Go ahead, make a verifiable discovery in some technical field — like space ships, the atom, automobile fuel — since you say it’s all so simple.”

“In comparison with what I have just shown you, those fields you mention are something like, to use a term from your language, the stone age!”

“That’s perfect! Something you consider primitive, but at least I’ll be able to understand it. You can prove you’re right and show evidence that your intelligence is superior to mine. Tell me, for example, what you think of our aeroplanes and space ships — pretty close to perfect machines?”

“No. They are altogether primitive, they only serve to show how primitive the technocratic path of development is.”

That remark put me on my guard, since I realised that either her conclusions were those of a madwoman, *or* she really knew far more than someone with an ordinary consciousness could ever imagine. I continued my questioning:

“What do you mean when you say our rockets and planes are primitive?”

Anastasia responded after a brief pause, as though allowing time for her words to sink in.

“The functioning of all your machines, every single one of them, is based on the energy of explosion. Not knowing any more efficient natural sources of energy, you resort to such primitive, awkward substitutes with incredible stubbornness. And even the destructive consequences of their use do not stop you. The range of your aeroplanes and rockets is simply laughable — according to the scale of the Universe they rise a wee tiny bit above the Earth, and now this method has practically reached its ceiling, do not you agree? But that is ridiculous! An exploding or burning substance propels some monstrous structure that you call a space ship. And the greater part of this ship is designed precisely to ‘solve’ this problem of propulsion.”

“And what might be an alternative principle of movement through the atmosphere?”

“A flying saucer might be a good example,” Anastasia responded.

“What?! You know about flying saucers and their propulsion systems?”

“Of course I know. It is very simple and rational.”

I felt my throat go dry, and tried to hurry her up.

“Tell me, Anastasia, quickly... and in a way I can understand.”

“All right, only do not get excited — it will be harder to understand when you are excited. The propulsion principle of a flying saucer is based on the energy of generating a vacuum.”

“How so? Be more precise!”

“You have a limited vocabulary, yet I am compelled to restrict myself to it so that you can understand me.”

“Well, I’ll add to it!” I blurted out in agitation. “I’ll add words like *jar, lid, tablet, air...*” and I began to quickly name all the words that just popped into my head at that moment, and even let out a few swearwords.

Anastasia broke in:

“You need not bother — I already know all the words you can express yourself with, but there are still others, and besides that, there is whole different method of conveying information. If I used that, I could explain everything to you in a minute. As things stand now, it may take an hour or two. That is a lot, and I really wanted to tell you about something else, something much more meaningful.”

“No, Anastasia. Tell me about flying saucers and their propulsion methods, tell me about energy carriers. Until I understand that, I shan’t listen to anything else.”

"All right," she acquiesced, and then went on. "An explosion occurs when a solid substance quickly changes under a definable influence into gaseous form, or when, in the course of a reaction, two gaseous substances evolve into something even lighter. Everyone, of course, understands this part."

"Yes," I replied. "If powder is ignited it becomes smoke, and liquid fuel becomes gas."

"Yes, more or less. But if you or your people had purer thoughts and consequently a knowledge of the workings of Nature, you would have long ago become aware that if there is a substance capable of instant expansion and, through explosion, transformation into another state, the opposite process must also hold true.<sup>1</sup> In Nature there are living microorganisms that transform gaseous substances into solids. All plants do this in fact, only at varying speeds and with varying degrees of firmness and solidity of the resulting substance.

"Take a look around you, and you will see that plants take in liquid from the earth and breathe air, and then process these into a hard and solid body — let us say, wood, or something even harder and more solid, like a nut-shell or a plum-stone. A microorganism smaller than the eye can see does this with fantastic speed, feeding, it would seem, on air alone. It is these same kinds of microorganisms that power flying saucers. They are like the microcells in the brain, only their operation has a very narrow focus. Their sole function is propulsion. But they carry out this function to perfection and they can accelerate a flying saucer to one-nineteenth the speed of the average modern Earth-dweller's thought.

"These microorganisms are located on the inner surface of the upper part of the flying saucer and positioned between its double

<sup>1</sup>Many non-traditional scientists have criticised the generating of energy from explosion or the burning of fuel as unnatural and destructive. One of them, the so-called 'water wizard' Viktor Schaubergcr (1885-1958), an illustrious Austrian forester and engineer, has spoken — in terms very similar to those used by Anastasia here — of the 'energy of *implosion*' — as a natural alternative to today's destructive technologies. Schaubergcr has gained deep insights into the workings of Nature and, among other things, was involved in research on the use of implosion (or energy from a vacuum) for propulsion. For a fascinating account of Schaubergcr's work in eco-technology, forestry, water purification and other areas, see Callum Coats' book *Living energies*.

walls, which are set approximately three centimetres apart. The upper and lower surfaces of the outer walls are porous, with micro-sized pinholes. The microorganisms draw in air through these pinholes, thereby creating a vacuum ahead of the saucer. The streams of air begin to congeal even before contact with the saucer, and as they pass through the microorganisms they are transformed into tiny spheres. Then these spheres are enlarged even more, to approximately half a centimetre in diameter. They lose their firmness, and slide down between the walls into the lower part of the saucer, where they again decompose into a gaseous substance. You can even eat them, if you can do this before they decompose.”

“What about the walls of the flying saucer — what are they made of?”

“They are cultivated — grown.”

“How so?”

“Why the surprise? Just give it a little thought, you will figure it out. Many people cultivate a fungus in various kinds of containers.<sup>2</sup> The fungus imbues the water in which it is placed with a pleasant, slightly acidic flavour, and takes the shape of the container. This fungus is very similar to a flying saucer; it creates a double wall around itself. If another microorganism is added to its water, it produces a congealment, but this so-called microorganism can be produced — or, rather, generated — by the power of the will, or the brain, much like a vivid concept or imagery.”

“Can you do this?” I asked.

“Yes, but I don’t have sufficient power of my own. The action of several dozen people having the same ability is required, and it takes about a year all told.”

“And can one find on our Earth everything necessary to make — or grow, as you say — such a flying saucer and the microorganisms?”

<sup>2</sup>This fungus, famous for its medicinal properties, is known as *Kombucha* (*Medusomyces gisvii*). It looks like a pile of pancakes or a flat multi-layered jellyfish (its scientific name is actually derived from the German word for ‘jellyfish’ — *meduse*), floating on top of the water in the container in which it is placed and eventually assuming the form of that container. The fungus is cultivated in sweetened weak tea. The result is a pleasant-tasting drink used both as a refreshment and as a cure for a great number of diseases. In Russia this fungus is commonly cultivated by people in large glass jars on their kitchen window sills.

"Of course one can. The Earth has everything that the Universe has."

"But how do you get the microorganisms inside the walls of the saucer if they are so small you can't even see them?"

"Once the upper wall is cultivated, it will attract and collect them in huge numbers, just as bees are attracted to cells. But this process also requires the collective will of several dozen people. In any case, what is the use of elaborating further if you cannot cultivate it for lack of people with the right kind of will, intelligence and knowledge?"

"Isn't there some way *you* could help?"

"I could."

"So, do it!"

"I have already."

"What have you done?" I was still perplexed.

"I told you how children should be raised. And I can tell you more. You must tell this to others. Many will understand, and their children raised in this manner will have the intelligence, knowledge and will permitting them to make not only a primitive flying saucer, but significantly more..."

"Anastasia, how do you know so much about flying saucers? Does that too come through your communication with plants?"

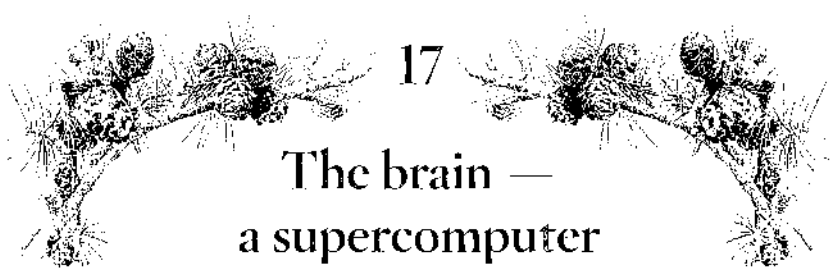

"They have landed here, and I, well, I helped the occupants repair their ship."

"Are they much smarter than us?"

"Not at all. They have a long way to go to attain the level of Man — they are afraid of us, afraid to approach people, even though they are very curious. At first they were afraid of me. They trained their mental paralyzers on me. Put on quite a show. They tried to frighten me, shock me. It was quite a challenge to calm them down and convince them I would only treat them with affection."

"Well, how can they be less smart than us if they can do things Man can't do yet?"

"What is so surprising about that? Bees too make incredible structures out of natural materials, including whole ventilation and heating systems, but that does not mean they are superior to Man in intelligence. In the Universe there is no one and nothing stronger than Man except God!"

## The brain — a supercomputer

The possibility of building a flying saucer greatly interested me. If one examines the principle of propulsion just as a hypothesis, it is still a new one. A flying saucer, however, is a complex machine and is not a high-priority item for us earthlings.

For that reason I wanted to hear something that would be understandable right away. I wanted a ‘something’ that did not require any investigation of scholarly minds, but could be immediately put into practice in our daily lives and benefit everyone. I began asking Anastasia to come up with a solution to a question that our society was being confronted with today. She agreed, but asked:

“Could you at least put it in more specific terms, this question? How can I solve something when I do not know what you have in mind?”

I began thinking: What was the number one problem we faced today, and the following terms came to mind:

“You know, Anastasia, our major cities right now are confronted with a most acute problem — environmental pollution. The air in these cities is so bad it’s hard to breathe.”

“But you yourselves are the ones polluting it.”

“We realise that. Please, hear me out, only don’t go philosophising about how we must be purer ourselves, have more trees around and so forth. Just take things as they are today and think up something — for example, how to reduce the pollution in our major cities by fifty percent without costing the treasury — the government, that is — any extra money. And make it so that your plan will be the most logical of all possible alternatives, and that it will be capable of instant implementation so that I and everyone else cannot fail to understand it.”

“I shall try at once,” Anastasia replied. “Have you specified all the terms?”

I thought I should try and make it even more complex, just in case her mind and abilities really turned out to be truly superior to what our own powers of reasoning allowed. So I added:

“And make whatever you think up to be profit-generating!”

“For whom?”

“For me, and for the country too. You live within the borders of Russia, so make it the whole of Russia.”

“Are we talking about money?”

“Yes.”

“An enormous amount of money?”

“Profit, Anastasia — well, money — is never an enormous amount. But I need enough money to be able to pay for this expedition and have enough left over for a new one. And as for Russia...”

I thought for a moment... I thought: What if Anastasia were even a little interested in the material benefits of our civilisation, and then asked:

“You wouldn’t want anything for yourself?”

“I have everything,” she replied.

But all at once an idea came to me — something that might possibly interest her.

“How about this, Anastasia: let’s have your plan make enough money to provide free seeds — or at least seeds at a discount — to all your beloved dachniks, or gardeners, throughout Russia!”

“Terrific!” Anastasia exclaimed. “What a wonderful idea! If you have finished, I shall now get to work. How delightful that sounds! Seeds... Or... is there anything else you wish to add?”

“No, Anastasia, that’s enough for now.”

I felt her inspiration and excitement not only over the task itself, but especially over the free seeds for her dachniks. Yet I still felt convinced that even with her special abilities a solution to the problem of air pollution was simply out of the question, else our many scientific institutions would have come up with one long ago.

With a bustle of energy this time, not her usual calm and quiet self, Anastasia lay down on the grass, her arms widespread. Her curled fingers reached their cushioned tips upward, alternating between motion and stillness, while her eyelids trembled on her closed eyes.

She lay there for about twenty minutes, then opened her eyes, sat up and said:

"I have determined the nature of the problem. But what a nightmare it is!"

"What have you determined, and what's this about a nightmare?"

"The greatest harm is coming from your so-called automobiles. There are so many of them in the large cities and every one of them is emitting both an unpleasant odour and substances harmful to human bodies. The most frightening thing is that these substances are mixing with earth- or dust-particles, and impregnating the dust. The movement of the automobiles picks up the impregnated dust, and people are breathing in this horrible mess. It gets swept into the air, and then settles on the grass and the trees, covering everything around. This is very bad. It is very harmful to the health of both people and plants."

"Of course it's bad. Everybody knows it's bad, only nobody can *do* anything about it. We have street-cleaning machines, but they can't keep up. You, Anastasia, have discovered absolutely nothing new, you haven't thought up any original solution to purify our air."

"All I did just now was to determine the basic source of the danger. Now I shall think about it further and analyse it... I need to concentrate for a long time, perhaps as long as an hour, since I have never dealt with a problem like this before. So that you will not be bored, do go for a walk in the forest or..."

"You get on with your thinking. I'll find something to do."

And Anastasia withdrew into herself. Coming back an hour later, after a walk in the forest, I found her, as it appeared to me, in a state of some discontent, and I said:

"You see, Anastasia, you and that brain of yours aren't capable of doing anything either. Only don't worry about it — we've got a lot of scientific institutions working on this question. But they, just like you, can only describe the fact that pollution is going on. They haven't been able to do anything about it yet."

She answered in a somewhat apologetic tone:

"I have gone over in my mind, I believe, all the possible variants, but I do not see any way of quickly reducing the pollution by fifty percent."

My mind was at once set on the alert: she had found some sort of solution after all.

“So, what kind of reduction did you come up with?” I asked.

She sighed.

“Not that much. I managed to achieve... thirty-five to forty percent.”

“What?!” I couldn’t help exclaim.

“Pretty poor result, eh?” asked Anastasia.

A lump formed in my throat, I realised she was incapable of lying, exaggerating or downplaying anything she said. Trying to restrain my excitement, I said:

“Let’s change the terms of the project — let’s say thirty-eight percent. Quick, tell me what you’ve come up with.”

“Your automobiles must be equipped to not only scatter this foul dust, but to collect it as well.”

“How can we do that? Talk faster!”

“Those things sticking out in front of the automobiles, what are they called?”

“Bumpers?” I offered.

“All right, bumpers. Inside them or below them should be attached a little box with small holes facing frontwards. There should also be holes on its back side, so that air can escape. While the automobiles are in motion, air laden with this harmful dust will be drawn in through the front holes, purified, and then escape through the back holes, and that air will already be twenty percent less polluted.”

“And what about the remaining twenty percent?”

“Right now virtually none of this dust is removed, but with this method there will be a lot less of it in the air, since it will be collected all over the place every day. I have calculated that in one month, with the help of these little boxes, if they are fitted on all automobiles, the amount of polluting dust will decrease by forty percent. Beyond that there will be no reduction, since other factors are at work.”

“What size of boxes, and what should they contain? How many holes and at what distance from each other?”

“Vladimir, perhaps you would like me to personally attach them to every single automobile?”

For the first time I perceived that Anastasia had a sense of humour, and I began to laugh at the thought of her attaching her little boxes

to all the cars. She laughed too, delighting in my cheerful mood and began whirling her way across the glade.

The principle was really very simple — the rest was merely a matter of technology. Already, without Anastasia's help, I was beginning to imagine how it could all be: orders from administrative heads, motor-vehicle inspection control, turning in old filters for new ones at filling stations, a system of vouchers and so forth. A routine regulation, just like seat-belts.

All it had taken back then was one stroke of the pen, and presto! — seat-belts in every family car. And here too, one stroke of the pen, and, again, presto! — cleaner air! And there would be tough competition among entrepreneurs for orders to supply the boxes, a good deal of work for the manufacturing plants, and the main thing, of course, cleaner air!

"Wait," I said, turning once more to Anastasia, who was still whirling around in a boisterous dance.

"What should be put into those boxes?"

"Into those boxes... into those boxes... You will come up with a little something. It is very simple," she replied, without stopping.

"And where is my money going to come from, and to supply seeds for the dachniks?" came another question.

She stopped.

"What do you mean, where from? You wanted my idea to be the most rational of all — and that is exactly what I have thought up: the most rational solution there can be. It will spread to large cities throughout the world and for this idea they will pay Russia enough to supply the free seeds, and enough to pay you. Only you will receive your payment under certain conditions."

I didn't pay attention immediately to her remark about the 'certain conditions', but began focusing in on something else:

"So, we should patent it? Otherwise who would pay of their own free will?"

"Why would they not pay? They will pay, and I can even set the rates right now. From the production of these boxes, Russia will get two percent, and you will get one hundredth of a percent."

"What's the good of your setting the rates? You do have a few strong points, but when it comes to business you're still a complete

ignoramus. Nobody will pay voluntarily. Even when there are signed agreements they don't always pay. If only you knew how many there are in our world that don't!<sup>1</sup> Our arbitration courts are overloaded. By the way, do you know what an arbitration court is?"

"I can guess. But in this case they will pay faithfully. Anyone who does not pay will go bankrupt. Only honest people will prosper."

"What will make them go bankrupt? Don't tell me you're in the racket business?!"

"What *are* you imagining now? Think about it! They themselves — or rather, circumstances themselves will overtake any cheaters and *make* them go bankrupt."

And then the thought dawned on me — given that Anastasia is incapable of lying and, as she herself said, the systems inherent in Nature do not allow her to make a mistake: it means that before stating any conclusions, she must have processed in her brain an enormous amount of information, made zillions of mathematical calculations, and taken into account a whole mass of psychological characteristics of the people who would be participating in her project. In our terms, she not only solved the most difficult question of purifying the air, but also drew up and analysed a business plan, and all that in roughly an hour and a half. I thought I had still better clarify certain details, and so I asked her:

"Tell me, Anastasia, you made some sort of calculations in your head, figuring out the percentage of pollution reduction, and the amount of money to be realised from the sale of your car-accessory boxes, filter replacements and so forth?"

"Calculations were made — in the greatest detail — and not just with the help of the brain..."

<sup>1</sup>Following Russia's liberal economic reforms of 1992 (including abandonment of governmental control over prices and cessation of subsidies to unprofitable industries) the country witnessed a run-away inflation and disruption of existing economic ties, resulting in mass unemployment, widespread bankruptcies, delays in salary payments of six months or more, and a crisis of non-payments between enterprises (goods shipped and services rendered from one business to another but not paid for), which paralysed the national economy.

“Stop! Quiet! Let me tell you what I think... Does this mean you could compete with our top-of-the-line computers — let’s say, Japanese or American computers?”

“But that’s not very interesting,” she replied, adding: “That is primitive and somewhat degrading. Competing with a computer — that is tantamount to... oh, how can I find you a good analogy? That is tantamount to hands or feet competing with a prosthesis — and not even with a full prosthesis, but just part of one. With the computer the most vital element is missing. And that most vital element is... *feelings*.”

I started to argue the opposite, telling how in our world there are people considered very intelligent, respected in society, that play chess with computers. But when this and other arguments still failed to convince her, I started asking her to agree to do this for me and other people as a proof of the possibilities of the human brain. She finally agreed, and then I made the invitation more specific:

“So, I can officially announce your willingness to take part in a problem-solving contest with a Japanese supercomputer?”

“Why a Japanese?” Anastasia countered.

“Because they are considered to be the best in the world.”

“Well now! It will be better if I do it with all of them at once, so you will not have to ask me again to do such a boring thing!”

“Great!” I exclaimed enthusiastically. “Let’s do it with all of them, only you’ll have to think up a problem.”

“All right,” Anastasia reluctantly agreed. “But for a start, so as not to waste time on thinking one up, let them try solving the problem you put to me earlier, and see whether they confirm or refute my hypothesis. If they refute it, let them put forth their own. Let us be judged by life and by other people.”

“Great, Anastasia! Good for you! That is most constructive. And how much time, do you think, should be allowed for them to come up with a solution? I think the hour and a half you took will not be enough for them. Let’s give them three months.”

“Three months it shall be.”

“And I suggest the judging be left to anybody who wants to take part. If there’re a lot of judges, then no one can influence the outcome for their own ulterior motives.”

“So be it, but I would still like to talk with you about raising children...”

Anastasia considered the raising of children paramount and would always delight in talking about it. She wasn't particularly excited about my idea of competing with computers. However, I was very happy to have secured her co-operation. Now I want to invite all firms producing state-of-the-art computers to join a competition to solve the above-stated problem.

I still felt I had to clarify a point or two with Anastasia.

“And what prize should be offered to the winner?” I asked.

“I do not need anything!” she replied.

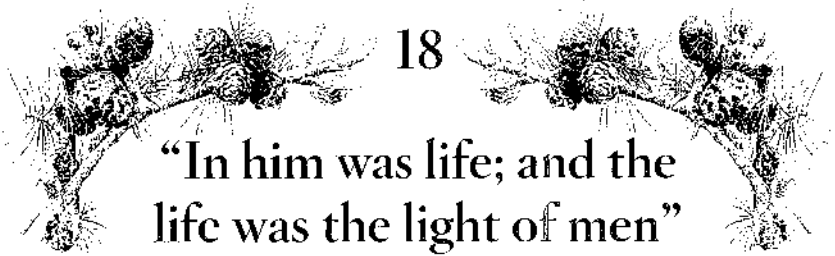

“Why did you think just of yourself? Are you so absolutely certain you're going to win?”

“Of course. I am Man, after all.”

“Well, okay. What can you offer the firm who takes first place after you?”

“Well, I could give them some advice on how to perfect their primitive computer.”

“Then it's settled.”

A decorative arch of pine branches and cones frames the text.

**“In him was life; and the  
life was the light of men”**

*The Gospel of John*

Upon my request Anastasia took me to see the ringing cedar which her grandfather and great-grandfather had talked about. It was not very far from the glade. The tree, approximately forty metres tall, rose slightly higher than its neighbours, but its principal distinguishing feature was the aureole radiating from its glistening crown — similar to the halos around the faces of saints depicted on icons. The aureole was not even — it pulsed, and at its upper tip one could see a thin ray of light beaming into the infinity of the heavens.

The spectacle was dazzling and absolutely charming.

At Anastasia's suggestion I pressed the palms of my hands to its trunk. I could hear a ringing or crackling noise, comparable to what one might hear standing under a high-voltage transmission line, only more resonant.

“It was I who happened to discover a way to send its energy back into Space and then have it distributed here on Earth,” Anastasia told me. “You see how its bark has been torn off in various places. That is where the bear was climbing it. It was quite a challenge to get her to carry me up to the first branches. I clung on to the fur on her neck. She would climb and then let out a roar, climb and roar. After reaching the lowest branches, I was able to clamber up from branch to branch, right to the top. I sat there for two days and thought of everything I could do to save the tree. I stroked the tree, and shouted up into the sky, but nothing helped.

“Then Grandfather and Great-Grandfather arrived. You can imagine the scene — there they were standing down below, reprimanding me and demanding that I climb down. I in turn demanded that they tell me what could be done with the tree. How to save the ringing cedar, since nobody was cutting it down. They did not speak. But I felt that they knew the answer. Grandfather, old trickster that he was, tried to lure me down, promising to help me establish a connection with a certain woman I had been unable to reach on my own.

"This was a woman I very much wanted to help. Earlier Grandfather would only be annoyed by my desire to spend so much time on her instead of doing other things. But I knew that he could not help me, as Great-Grandfather had twice tried to do this behind Grandfather's back, and he failed too.

"At that point Grandfather really began putting up a fuss. He seized hold of a branch, ran around the cedar tree and beat the air with the branch, shouting that I was the most hare-brained member of the family, that I was acting illogically, that I refused to accept sound advice and that he would give my bottom a good whipping. And again he beat the air with the branch. Now that was a real humdinger of a threat, and even Great-Grandfather burst out laughing. I too gave a hearty laugh. In doing so I inadvertently broke a branch at the top, and a glow began emanating from it. And I heard Great-Grandfather's voice, serious, commanding and entreating all at the same time:

"Don't touch anything more, little one. Come down very carefully. You've already done enough!"

"I obeyed and climbed down. Great-Grandfather silently embraced me. Trembling all over, he pointed at the tree, on which more and more branches were beginning to glow. Then a ray formed, pointing upward. Now the ringed cedar would not burn up — through its little ray it would give everything it had saved up for the past five hundred years to people and to the Earth. Great-Grandfather explained that the ray had formed in the exact spot where I had shouted upward and had inadvertently broken a branch while I was laughing. Great-Grandfather said that if I had touched the ray emanating from the broken branch, my brain would have exploded, as there was too much energy and information in this little ray. That was exactly how my Papa and Mama had perished..."

Anastasia put her hands on the mighty trunk of the ringed cedar she had saved, and pressed her cheek against it. After pausing for a while, she continued her story.

"They, my Papa and Mama, once came upon a ringed cedar just like this one. Only Mama had been doing everything a little differently, since she did not know. She had climbed up into a neighbouring tree, from which she reached out and touched one of the lower branches of the ringed cedar and broke it off, inadvertently exposing herself to

the ray which flamed up out of the broken branch. The branch had been pointing downward, and the ray went down into the Earth. It is very bad, very harmful, when such energy falls into the Earth.

"When Papa came, he saw this ray, and saw my Mama, who had been left hanging, one hand still firmly grasping the *ordinary cedar* branch. In the other hand she held the broken branch of the *ringing cedar*.

"Papa, no doubt, had an immediate grasp of everything that had happened. He climbed up the ringing cedar, right to the top. Grandfather and Great-Grandfather saw him break off the upper branches, but they did not glow, while more and more of the lower ones began glowing. Great-Grandfather said that Papa realised that it would not be long before he would never be able to climb down. The upward-beaming ray with its pulsating glow failed to appear. All that was going on was more and more thin rays shining downward. An upward ray did appear when Papa broke off a large branch pointing up. And even though it was not glowing, he bent it and pointed it at himself.

"When it did flame up, Papa still managed to unclasp his hands, the branch straightened and the ray from the branch directed itself toward the sky, and then the pulsating aureole formed.

"Great-Grandfather said that at the last moment of his life Papa's brain was able to take in an enormous flood of energy and information, and that he was able, in some incredible way, to clear his mind of all previously accumulated information, and so was able to gain the time required to unclasp his hands and direct the branch upward just before his brain exploded."

Anastasia once more stroked the cedar trunk with her hands, once more pressed her cheek against it and stood stock still, smiling, listening to the ringing of the cedar.

"Anastasia, that cedar nut oil, are its healing properties stronger or weaker than the pieces of the ringing cedar?"

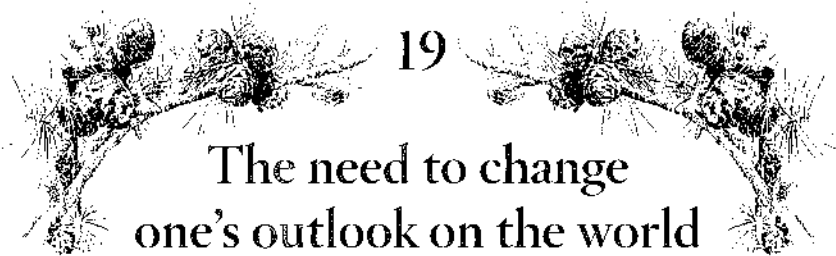

"The same. Provided the nuts are gathered at the proper time and with the proper attitude toward the cedar. Provided the tree bestows them of itself."

"Do you know how to do that?"

"Yes, I do."

"Will you tell me?"

"All right. I shall tell you."

A decorative arch of various flowers and leaves frames the page number and title.

## The need to change one's outlook on the world

I asked Anastasia about the woman over whom she had a disagreement with her grandfather. I asked her why she had been unable to establish a connection with her and why she thought this contact was necessary.

"You see," Anastasia began her story, "it is very important, when two people join their lives together, that they have a spiritual attraction to each other. Unfortunately, everything basically starts with the carnal. For example, you see a beautiful girl and desire to be close to her. You still have not seen the individual — the Man — or her soul. Very often people join their destinies together only on the basis of carnal attraction. Either that quickly passes or it is transferred to someone else. What then keeps people together?"

"To find a kindred spirit with whom one can attain true happiness is not all that complicated. Your technocratic world, however, puts up massive interference. The woman I am trying to reach lives in a large city, and regularly travels to the same place each day — probably to her work. Either there or on the way she finds or meets up with a man who is very close to her spirit, one with whom she could be really happy and, most importantly, one with whom she could bear a child capable of bringing so much good into the world. Because they would create this child with the same impulsion as we did.

But there is no way this man can bring himself to tell this woman that he loves her, and she herself is partly to blame for this. Just think: he looks into her face and sees, as it were, his heart's desire, the apple of his eye, while she, as soon as she feels someone's gaze upon her, perks up right away, and "unwittingly" tries to lift her skirt higher. And so on. This man is at once carnally aroused, but he does not know her well, and so he then goes to someone he is better acquainted with, someone he feels is more accessible, but still led on by these same carnal desires.

“I want to suggest to this woman what she should do, but I cannot break through to her. Her brain will not open to the awareness of new information, even for a second. It is constantly pre-occupied with issues of day-to-day living. Can you imagine, one time I followed her for a whole twenty-four hours! What a terrible sight! Grandfather then got upset with me for not working enough with the dachniks and for spreading myself too thin, and sticking my nose in where it does not belong.

“When this woman wakes in the morning, her first thought is not to delight in the coming day but how to prepare something to eat. She gets upset over some missing food item, and then gets upset over something you smear on your face in the morning, like face-cream or rouge. She spends her whole time thinking how she is going to get it. She is always late and is constantly on the run, trying not to miss first one form of transport and then the next.

“At her regular destination her brain is overloaded with — how shall I put it — all sorts of *nonsense*, at least from my point of view. On the other hand it is supposed to give her face a business-like expression and fulfil the job tasks she is assigned. All this while she is thinking about one of her girlfriends or acquaintances and getting angry at them. At the same time she is listening to everything going on around her. And, can you imagine, the same routine is repeated day after day like clockwork.

“On her way home, when people notice her, she can put on the appearance of an almost happy woman. But she is continually thinking about problems, or her make-up, or looking at clothes in shop windows — above all, clothes that will expose her alluring charms, supposing that this will result in some kind of miracle, except in her case everything happens the wrong way around. She gets home and starts house-cleaning. She thinks she is relaxing when she watches her television and prepares her meals, but the main thing is, she thinks about good things only for a split second. Even when she goes to bed, she is still mulling over her daily cares and stays in the same mental rut.

“If only she could turn away from her thoughts even just for a moment during the day and think of...”

“Wait, Anastasia! Explain specifically how you see her, her outward appearance and clothing, and tell me what she should be thinking

about at the moment when this man is with her. What should she do to make him at least attempt to tell her he loves her?"

Anastasia explained everything in the minutest detail. I shall only mention here what I consider to be the most important points.

"Her dress should come to just below the knee. It should be green with a white collar and no cleavage. She should wear hardly any make-up, and listen with interest to the person talking to her."

"And that's it?" I remarked upon hearing such a simple explanation.

To which Anastasia remarked:

"There is so much underlying these simple instructions. In order for her to choose that particular dress, change her make-up and look at that person with genuine interest, she will have to change her whole outlook on the world."

## A mortal sin

“I still need to tell you, Vladimir, about the terms under which you will receive money in the bank, when there will be a great deal of money in your accounts.”

“Go ahead, Anastasia, it will be a pleasant experience,” I replied.

However, I was devastated by what I heard. Judge for yourselves: here is what she set forth:

“In order to withdraw the money from your bank account, you must meet the following conditions: first of all, for three days before receiving it you must not drink anything alcoholic. When you arrive at the bank, the manager must verify, with the help of the devices you have, your compliance with this condition in the presence of not less than two witnesses. If this first condition is met, you may then proceed to carry out the second: you must do no less than nine deep knee-bends in front of the bank manager and the two witnesses present.”

When the significance — or rather, the absurdity — of her words finally sunk in, I jumped up, and she stood up as well. I couldn't believe my ears and countered:

“First they're going to check my alcohol content, and then I am to do at least nine deep knee-bends like this, is that it?”

“Yes,” responded Anastasia. “And for each knee-bend they will be able to release from your account no more than one million of your roubles at their present worth.”

I was overwhelmed by a sense of rage, anger and annoyance.

“What did you say that for? Well, what for?! I was feeling so good. I believed you. I was starting to think that you were right about a lot of things, that there was logic in your arguments. But you... Now I am absolutely convinced that you're a schizophrenic, a stupid hick, a mad woman! This latest thing you said has wiped out everything else. It's completely devoid of any sense or logic — that's not just my

opinion, any sane person would agree with me. Ha! Don't tell me you still want me to write out these conditions in your book?"

"Yes."

"Now you've really gone mad. Do you mean to tell me you were planning to write out instructions to the banks or publish this order?"

"No. They will read it in the book, and they will act accordingly with you. Otherwise they can expect to go bankrupt."

"Oh, my God!!! And I've been listening to this creature three days already? Don't tell me you would like the bank manager to do knee-bends with me too in the presence of witnesses?"

"It would be good for him, as it will be for you. But for them I have not set such strict conditions as I have for you."

"So, you're only doing this for *my* benefit? Do you have the slightest idea what a mockery you've made of me? See what the love of a crazy recluse can spill over into! Only it won't work — not one single bank will ever agree to serve me under those conditions, no matter how much you have visualised such a situation. In your dreams, eh? Well, you can stand here and do all the deep knee-bends you want, you nincompoop!"

"The banks will agree and whether you know it or not will open accounts for you — granted, only those banks which are willing to operate ethically, and people will trust them and come to them," Anastasia went on, not budging an inch from her position.

I found myself becoming increasingly irritated and angry. Angry with myself or angry at Anastasia. Come on now, think how long I've listened to her, trying to understand what she was saying, and here she's turned out to be simply half-crazy. I started laying into her, using, to put it mildly, some pretty coarse language.

She stood there, leaning with her back to a tree, her head just slightly bowed. One hand was clasped to her chest, the other was raised upward, lightly waving.

I recognised that gesture. She used it every time she needed to bring calm to the surrounding natural environment so I wouldn't get fearful of it, and I realised why she needed to calm them down on this occasion.

Every insulting or coarse word directed at Anastasia felt like a whip cracking against her flesh, making her whole body tremble.

I fell silent. I sat down again on the grass, turned away from Anastasia, deciding I'd better calm down myself and head back to the riverbank, and not talk with her any more at all. But when I heard her voice call out behind me, I was amazed that it didn't have the slightest hint of resentment or rebuke:

"You know, Vladimír, everything bad that happens to Man is brought on by Man himself, whenever he disobeys the laws of spiritual being and breaks his connection with Nature.

"The forces of darkness try to distract their attention with the instant attraction of your technocratic way of life, to make them forget the simple truths and commandments set forth way back in the Bible. And they all too often succeed.

"One of the mortal sins of Man is pride. Most people are subject to it, this sin. I shall not at the moment go into all the terrible, disastrous effects it produces. After you return home and try to make sense of it, you will understand, either on your own or through the help of enlightened individuals who come to see you. For now I shall just say this: the forces of darkness, which are diametrically opposed to the forces of light, are every moment working to make sure Man does not let go of this sin, and money is one of their basic tools in this campaign.

"They were the ones that thought up this concept of money. Money is like a high-tension zone. The forces of darkness are proud of this invention. They even think themselves stronger than the forces of light for having come up with money. And for being able to use money to distract people from their true purpose.

"This great confrontation has lasted for millennia, and Man is at its centre. But I do not want *you* to be enslaved to this sin.

"I realise that mere explanations are not enough to settle this question. Because in spite of thousands of years of explanations mankind has not understood nor discovered the means of counteracting this sin. It is only natural that you would not be able to discover it either. But I really, very much, want to save you from this mortal danger which can corrupt the spirit. That is why I thought up a special situation just for you, one that would cause this device of the forces of darkness to be broken, or fail, or even work the opposite way, for the extermination of the sin.

“That is why they have become so enraged. Their anger has been implanted in you, and you for your part started shouting your insults at me. They wanted to make me angry at you in return, but I will never do that. I realised that what I thought up would hit the mark precisely, and now it is clear that their system which has worked flawlessly for thousands of years can indeed be broken. Right now I have done this only for you, but I shall think up something for other people too.

“Now what harm is there in drinking less of that alcoholic poison and in becoming less arrogant and stubborn? What were you so upset over? Of course, it was pride that was upsetting you.”

She fell silent, and I thought: Improbable as it is, her brain — or something besides — may have put into this comic, utterly abnormal situation of doing deep knee-bends in a bank such a deep meaningfulness that there really could be some logic in it. I'd better think about this a little more calmly.

All my anger at Anastasia passed and, in its place, arose a feeling of uneasy guilt. However, instead of apologising on the spot, I simply turned to her with a desire for reconciliation. Anastasia, it turned out, felt my inner state. She at once gave a joyful shudder all over and began talking at top speed.

## Touching Paradise

“Your brain is tired of listening to me, and yet I still have so much I want to tell you. I do so want to... But you need to rest. Let us sit again for a little while.”

We sat down on the grass. Anastasia took me by the shoulders and drew me close to her. The back of my head touched her breasts, which gave me a pleasant warm feeling.

“Do not be afraid of me, let yourself go,” she quietly said and lay down on the grass so that it would be more comfortable for me to rest. She ran the fingers of one of her hands through my hair, as if combing them, while the fingertips of her other hand quickly touched my forehead and temples. Occasionally she would lightly press down with her fingernails at various points on the top of my head. All this gave me a feeling of tranquillity and enlightenment. Then, putting her hands on my shoulders, Anastasia said:

“Listen now... and please tell me what sounds you hear around you.”

I listened, and my hearing caught a wide range of sounds, all different in tonality, rhythm and continuity.

I began naming the sounds aloud: the birds singing in the trees, the chirping and clicking of insects in the grass, the rustle of the leaves, the fluttering and flapping of birds’ wings. I named everything I could hear, then fell silent and went on listening. This was pleasant and very interesting for me.

“You have not named everything,” Anastasia observed.

“Everything,” I replied. “Well, maybe I left out something not very significant or something I didn’t catch — not anything important, that is.”

“Vladimir, do you not hear how my heart is beating?” asked Anastasia.

Could I really have not been paying attention to this sound? The sound of her heart beating?

“Yes,” I hastened to respond. “Of course I hear it, I hear it very well, it is beating evenly and calmly.”

“Try to memorise the intervals of the various sounds you hear. You can choose the principal sounds and memorise them.”

I selected the chirping of some insect, the cawing of a crow and the gurgling and splash of the water in the stream.

“Now I shall increase the tempo of my heartbeat and you listen to see what happens all around.”

Anastasia’s heartbeat increased in frequency, and right away the rhythm of sounds I could hear around me joined in with a heightened tonality.

“That’s astounding! Simply incredible!” I exclaimed. “What are you saying, Anastasia, are they so sensitive to the rhythm of your heartbeat?”

“Yes. Everything — absolutely everything: a little blade of grass, a big tree, even the bugs — they all react to any change in the rhythm of my heart. The trees accelerate their inner processes, and work harder to produce oxygen.”

“Is this how all the plants and animals in people’s environment react?” I asked.

“No. In your world they do not understand to whom they should react, and you do not try to make contact with them. Besides, you do not understand the purpose of such contact, and do not give them sufficient information about yourself.

“Something similar might happen between plants and the people who work on their little garden-plots, if only people would do everything I outlined to you, imbue the seed with information about themselves and begin to communicate more consciously with their plants. Do you want me to show you what Man will feel when he makes such contact?”

“Of course I want you to. But how will you do that?”

“I shall tune the rhythm of my heartbeat to yours, and you will feel it.”

She slid her hand inside my shirt. Her warm palm lightly pressed against my chest. Little by little her heart adjusted its tuning and began beating in the same rhythm as mine. And something most amazing happened: I felt an unusually pleasant sensation, as though

my mother and my relatives were right there beside me. A sense of softness and good health came over my body, and my heart was filled with joy, freedom and a whole new sense of creation.

The range of surrounding sounds caressed me and communicated the truth — not a truth comprehensible in all its detail, just something I felt intuitively. I had the impression that all the pleasing and joyous feelings I had ever experienced in my life were now merging into a single and wonderful sensation. Perhaps it is this sensation that is called *happiness*.

But as soon as Anastasia began to change the rhythm of her heartbeat, the wonderful sensation started to leave me. I asked:

“More! Please, let me feel it some more, Anastasia!”

“I cannot do that for long, after all, I have my own rhythm.”

“Even just a little bit more,” I pleaded.

And once again Anastasia brought back the sensation of happiness, just for a short time, and then everything faded, but not without leaving me with a small taste of the pleasant and radiant sensation as a memory of it. We remained silent for a while, and then I felt like hearing Anastasia’s voice again, and I asked:

“Was it this good for the first people — Adam and Eve? You just lie around, enjoy life and prosper — everything at hand?... Only it can become boring if there’s nothing to do.”

Instead of answering my question, Anastasia asked one of her own:

“Tell me, Vladimír, do many people think of Adam, the first Man, as you thought just now?”

“Probably the majority. But what was there for them to do, in Paradise? It was only later that Man started to develop and thought up everything. Man developed through labour. He became smarter thanks to labour.”

“Yes, labour is needful, but the first Man was infinitely smarter than his descendants today, and his labour was more meaningful, it demanded considerable intelligence, awareness and will.”

“But what did Adam do in Paradise? Did he tend a garden? That is something that can be done today by any gardener, not to mention plant-breeding specialists! Nothing more is said in the Bible about Adam’s activity.”

“If the Bible told everything in detail, it would be impossible to read through it in a single human lifetime. One must *understand* the Bible — there is so much information behind each verse. Do you want to know what Adam did? I shall tell you. But first, remember that it is the Bible that tells us that God assigned Adam to give names and specify the purpose of every creature living on the Earth. And he — Adam — did this. He did what all the scientific institutions in the world taken together have not yet been able to do.”

“Anastasia, do you turn to God yourself, do you ask Him for anything for yourself?”

“What more can I ask, when so much has already been given me? It is my task to thank Him and help Him.”

## Who will bring up our son?

On the way back to the river, as Anastasia was escorting me to my motorboat, we sat down to rest in the place where she had left her outer clothing, and I asked her:

“Anastasia, how will we bring up our son?”

“Try to understand, Vladimir: you are not yet ready to bring him up. And when his eyes first take in a conscious awareness of the world, you should not be there.”

I seized her by the shoulders and gave her a shaking.

“What are you saying? What liberties are you taking here? I can’t understand how you could have come to such one-sided conclusions. Anyway, even though the mere fact of your existence is incredible, that doesn’t give you the right to decide everything yourself and in violation of all the rules of logic!”

“Calm down, Vladimir, please. I do not know what logic you have in mind, but do try and make sense of it, calmly.”

“What am I to make sense of? The child is not only yours, he’s mine too, and I want him to have a father, I want him to be well taken care of, and get an education.”

“Please understand, he does not need any kind of material benefits, as you see them. He will have everything he needs right from the start. Even in his infancy he will be taking in and making sense of so much information that your kind of education will be simply ludicrous. It’s the same as sending a learned mathematician back to Grade One.

“You want to bring the baby some kind of senseless toy, but he has absolutely no need of it whatsoever. You are the one who needs it for your own self-satisfaction: ‘Oh look at me, I’m so good and caring!’ If you think that you will do some good by offering your son a car or anything else along that line, well, he can get it himself just by wishing for it. Be calm and think about something specific you could tell

your son, think about what you could teach him, think about what you have done in life that he might find interesting.”

Anastasia continued talking in soft, quiet tones, but her words still made me tremble.

“You see, Vladimir, when he begins to make sense of creation, you will look like an underdeveloped creature next to him. Do you really want that, do you really want your son to see you standing there like a dimwit? The only thing that can bring the two of you together is your level of mental purity, but few attain that level in your world. You must strive to attain it.”

I realised that it was absolutely useless to argue with her, and I cried out in despair.

“Does that mean he’ll never know anything about me?”

“I shall tell him about you, about your world, when he is able to comprehend it in a meaningful way and make his own decisions. What he will do then, I do not know.”

Despair, pain, resentment, fearful conjecture — all these swirled around in my brain. I felt like smashing this beautiful intellectual recluse’s face with all my might.

I understood everything. And what I understood left me breathless.

“It’s all clear! Now it’s all clear to me! You... You had nobody to bang with to give you a child. That business at the beginning — that was all just an act, you sly vixen! You made yourself into a nun! You needed a child. But you *did* go to Moscow. She “sold her mushrooms and berries”. Ha! You could have got yourself a shag there right on the street. All you had to do was take off that jacket and shawl of yours and you would have had takers right off. Then you wouldn’t have needed to spin your web and trap me in it.

“Of course! You needed a man who was dreaming about a son. And you’ve got yours! Did you ever think about the child? About your son? One destined in advance to live the life of a recluse. To live the way *you* think he should. Come on now, here she’s been sounding off about ‘the truth’. You’ve got an awful lot of gall, you hermit!

“What is it with you — truth as a last resort? Well, did you ever think about me? Me! I dreamt about a son! I dreamt about passing along my business to him. I’d teach him to be a businessman. I wanted a son to love. And now how am I supposed to live? To live and

know that your precious little son is crawling around unprotected somewhere out in the wilds of the taiga? With no future. With no father. That's what breaks my heart. But that's not something you can understand, you forest bitch!"

"Perhaps," Anastasia quietly responded, "your heart will gain the awareness it needs and everything will be all right? A pain like that will cleanse the soul, accelerate thought and summon you to creation."

But I was still burning with rage and anger. I wasn't in control of myself. I grabbed a stick. I ran away from Anastasia and began beating the stick against a small tree with all my might until the stick broke.

Then I turned to look at Anastasia standing there and... oh, how she appeared to me! Incredibly, the anger started to leave. I thought to myself: oh, now I've gone and done it again — I lost control of myself and went wild. Just like the last time, when I swore at her.

Anastasia was standing there against a tree, one arm stretched upward, her head bent forward, as though withstanding the onslaught of a hurricane. With my anger completely gone, I went closer and began looking at her. Now her hands were clasped to her chest, her body slightly trembling. She didn't speak, only her kind, kind eyes were looking at me with the same tenderness as before. We stood there that way for some time, just looking at each other. And I started reflecting along these lines:

There's no doubt about it — she is incapable of lying.

She didn't have to say anything, but...

She knew it would be hard, and yet she spoke. Of course, that too is a challenge. How can you possibly live if you must always tell the truth, and say only what you think?! But what can you do if that's the way she is and can't be anything else?

What's done is done. Everything happened the way it happened. Now she will be the mother of my son.

She *will* be a mother, if she said so. Of course, she'll be a pretty strange mother. That lifestyle of hers... And her way of thinking... Oh, well, there's nothing to be done with her.

Still, she's physically very strong. And kind. She really knows Nature well, knows the animals. And she's smart. In her own peculiar way, at least.

In any case she knows a lot about raising children. She kept wanting to talk about children the whole time. She'll nurture the boy. Somebody like her will definitely nurture him. She'll get him through the cold, through snowstorms even. They mean nothing to her. She'll nurture him, yes indeed. And she'll bring him up right.

And somehow I've got to adapt to the situation. I'll come and see them in the summertime, like going to a dacha. No way in the winter — I wouldn't make it. But in the summer I can play with my son. He'll grow up, and I'll tell him about people in big cities...

At any rate, this time I've got to apologise to her...

And I said:

"I'm sorry, Anastasia, I got nervous again."

And right off she said:

"You are not to blame. Only do not be hard on yourself. Do not worry. After all, you were concerned about your son. You were afraid that things would turn out bad for him, that the mother of your son was just an ordinary bitch. That she could not love with real human love. But you must not worry. You must not get upset. You talked that way because you did not know, you did not know anything about my love, my darling."

## Through a window of time

"Anastasia, if you are so smart and omnipotent, that means you could help me?"

She looked up at the sky, and then again at me.

"In the whole of the Universe there is no being capable of more powerful development and greater freedom than Man. All other civilisations bow before Man. All sorts of civilisations have the capability of developing and bringing themselves to perfection, but only in one direction, and they are not free. Even the greatness of Man is beyond their grasp. God — the Great Mind — created Man and to no one else gave He more than to Man."

I could not make sense — at least right off — of what she was saying. And again I uttered the same question, pleading for help, not fully understanding what kind of help I needed.

She asked me:

"What is it that you have in mind? Do you want me to cure all your physical ailments?"

"That is a simple matter for me. I already did this six months ago, only in the principal area of need no benefit came about: the dark and destructive elements common to people of your world have not lessened in you. And your various aches and pains are trying to come back again... 'You witch, mad-woman hermit, get out of here this instant!' you're probably thinking, right?"

"Yes," I answered in amazement. "That is exactly what I was thinking — you read my mind?"

"I surmised that that is what you might be thinking. Indeed, it is written all over your face. Tell me, Vladimir, do you not... well... remember me, at least a little?"

The question dumbfounded me, and I began carefully examining her facial features. Especially her eyes. I really began to think that I might have seen them somewhere before, but where?

“Anastasia, you said yourself that you spend all your time in the forest. How then could I have seen you?”

She gave me a smile and ran off.

A short while later Anastasia came out from behind the bushes dressed in a long skirt, a brown buttoned cardigan, her hair done up in a shawl. But without the quilted jacket in which she had greeted me on the riverbank. And the shawl was tied differently. Her clothes were clean, though not stylish, and her shawl covered her forehead and neck... and I remembered her.

## A strange girl

The summer before, our convoy ship had docked at one of the villages not far from these parts. We needed to buy bulk meat for the restaurant and spend some time in port.

Sixty kilometres farther on there would be a particularly dangerous section of the river, which meant our ship could not travel through there at night (certain sections of the river were not equipped with navigation lights). So as not to waste time, we began announcing over our outdoor loudspeaker system as well as the local radio that we were throwing a party that evening aboard our vessel.

The sleek white ship standing at the dock, glistening with a huge array of lights, and alive with the music pouring forth from it inevitably attracted the young people of the village to such occasions. Indeed, on this particular evening, practically the entire local youth population could be seen making its way to the ship's gangplank.

Upon coming aboard, like any first-time visitors, they immediately set about taking a look around the whole ship to see what they could see. After touring the main, middle and upper decks, they ended up congregating in the restaurant and bar. The female contingent, as a rule, took to dancing, while the male half preferred drinking. The unusual circumstance of being on a ship plus the music and alcohol always engendered a state of excitement, occasionally making big trouble for the crew. Almost always there was not enough time, and the party-goers made a collective appeal to extend the festivities just a bit longer — say, by half an hour, and then more and more into the night.

On this particular occasion I was alone in my cabin, listening to the music wafting up from the restaurant, and attempting to make modifications to the convoy's schedule for the remainder of the trip. All at once I felt myself being stared at. I turned around and glimpsed her eyes on the other side of the window glass. That was nothing unusual — visitors often liked looking into the ship's cabins.

I got up and opened the window. She didn't go away. She continued looking at me with some embarrassment. I felt I wanted to do something for this woman standing alone on the deck just outside my cabin. I wondered why she wasn't dancing like the others — perhaps she was somehow unhappy? I offered to show her around the ship, and she silently nodded. I took her all over the ship, showed her the main office — which frequently impressed visitors with its elegant appointments: the rug covering the floor, the soft leather furniture, the computers. Then I invited her into my cabin, which consisted of a study-cum-sleeping-quarters and a carpeted reception room equipped with fine furniture, TV and VCR. I was probably most delighted at the time to impress a poor country girl with the achievements of our civilised world.

I opened in front of her a box of candies, poured two glasses of champagne and, thinking to add the finishing touches to the impression, put on a videotape of Vika Tsyganova<sup>1</sup> singing "Love and death" (*Liubov i smert*). The videotape included a number of other songs performed by my favourite artists. She lightly touched the champagne glass to her lips, looked intently at me, and asked:

"It's a challenge, eh?"

I expected just about any kind of question except that one. The expedition had *indeed* turned out to be quite a challenge, what with the difficult navigation conditions on the river and the crew (mainly students from the marine academy) smoking pot and pilfering merchandise from the store. We were frequently behind schedule and couldn't get to our planned stops on time where our arrival had been advertised in advance. These burdens and other worries often deprived me of the opportunity not only to admire the landscape along the river but even to get a normal sleep.

I muttered something meaningless to her — something like, "Never mind, we'll get through!", then turned toward the window and polished off my glass of champagne.

<sup>1</sup>*Viktorija (Vika) Tsyganova (née Zhukova)* — a popular Russian singer born 1963 in Khabarovsk in the Russian Far East. Her singing and stage career began in the mid-1980s. Since then she has produced numerous albums. The song "Love and death" was recorded in 1994.

We went on talking about this, that or the other, listening to the videotape in the background. We talked right up until the ship docked once more at the end of the party cruise. Then I escorted her to the gangplank. Upon returning to my cabin, I made a mental note: there was something very strange and unusual about this woman, and I was left with an unexpected feeling of lightness and brightness after talking with her. That night I had my first good sleep in many days. At long last I understood why: the woman on the ship had been Anastasia.

“So that was you, Anastasia?!”

“Yes. There, in your cabin, I memorised all the songs which I later sang to you in the forest. They were playing while we were talking. You see how simple it all is?”

“How did you happen to come on board?”

“I was interested in seeing what was going on, how you all lived. After all, Vladimir, I had been spending my whole time just taking care of dachniks.

“That day I had hurried to the village, sold the dried mushrooms which the squirrels had collected, and bought a ticket to your party cruise. Now I know a lot more about the class of people you call entrepreneurs. And I know you pretty well too.

“I feel I owe you a huge apology. I did not know how things would turn out, that I would be so drastically altering your future. Only I can no longer do anything about it, since *they* have seen to the fulfilment of this plan, and *they* are answerable only to God. For a time now you and your family will have great difficulties and challenges to overcome, but then that will all pass.”

Still not understanding what Anastasia was specifically talking about, I intuitively felt that something was about to unfold itself to me that would go way beyond the usual parameters of our existence, something directly concerning me.

I asked Anastasia to tell me in more detail what she meant by altering my destiny, and “challenges”. Listening to her at the time, I simply could not imagine how accurately her predictions would soon start being realised in real life. She continued her recounting, once more bringing me back to events of the past year.

“Back then, on the ship,” she said, “you showed me everything, even your cabin, treated me to candies, offered me champagne, and

then escorted me to the gangplank, but I did not leave the riverbank right away. I stood on the shore near some bushes, and I could see through the lighted windows of the bar how the young people of the village were still dancing and having a good time.

“You showed me everything, but you did not take me to the bar. I guessed why — I was not appropriately dressed, my head was covered in a shawl, my cardigan was not stylish, my skirt was too long. But I could take off the shawl. My cardigan was neat and clean, and I had pressed my skirt carefully with my hands before I came to see you.”

I really *badn't* taken Anastasia to the bar that evening on account of her rather strange clothes, beneath which, as it was now clear, this young girl had been hiding her remarkable beauty — something that immediately set her apart from everyone else. And I said to her:

“Anastasia, why would you have wanted to go to the bar? Do you mean you would have gone dancing there in your galoshes? Anyway, how would you know what dances young people do today?”

“I was not wearing galoshes at the time. When I exchanged my mushrooms for money to buy a ticket to your ship, I also bought a pair of shoes from the same woman. Granted, they were old shoes, and were tight on me, but I cleaned them with grass. As for dancing, all I would need is a one-time look, and that would be it. And what a dancer I'd be!”

“You were, I suppose, offended at me that night?”

“I was not offended. But if you had taken me to the bar, I do not know whether that would have been a good or a bad thing, but events might have turned out differently, and all this might not have happened. But I do not now regret that things happened the way they did.”

“So *what* happened? What happened that night that was so terrible?”

“After you escorted me off the ship, you did not return right away to your cabin. First you dropped in to see the captain, and then the two of you headed for the bar. For you that was a normal thing to do. The moment you entered you both made an impression on the public. The captain looked prim and proper in his uniform. You were very elegant and gave a most respectable appearance. You were known to many in this village — the famous Megre. The owner of a

convoy of ships unique in these parts. And you fully realised that you were making an impression.

“You sat down at a table with three young country girls. They were all only eighteen years old, just out of school.

“The waiters immediately brought champagne, candies and new wine-glasses to your table — prettier than the ones that were there before. You took one of the girls by the hand, bent over and started whispering something in her ear... compliments, I understand they are called. Then you danced with her several times and the conversation continued. The girl’s eyes were radiant, as if she were in another world, a fairy-tale world. You took the girl out on deck, and gave her a tour of the ship, just as you had me. You took her into your cabin and treated her to champagne and candies just like me. But there was something a little different in the way you behaved with this young girl. You were in a cheerful mood. With me you were serious and even morose, but with her you were cheerful. I could see all that very well through the lighted window of your cabin and, possibly, I felt a little as though I wanted to be there in the place of that girl.”

“You don’t mean to tell me you were jealous, Anastasia?”

“I do not know, it was somehow an unfamiliar feeling for me.”

I recalled that evening and these young country girls who were trying so hard to look older and more modern.

The next morning Captain Senchenko<sup>2</sup> and I once again had a laugh at their night-time antics on the dock. Then in my cabin I realised that this girl was in such a state that she was ready to go to any lengths... but I didn’t have any thought about wanting to possess her. I told Anastasia about this, and she replied:

“Still, you had stolen her heart. The two of you went out on deck, it was drizzling, and you threw your jacket over the girl’s shoulders. Then you took her back to the bar.”

“What were you doing, Anastasia, standing the whole time in the bushes in the rain?”

<sup>2</sup> *Alexander Ivanovich Senchenko* — former captain of the *Patrice Lumumba*, now employed with the State River Transport Inspection Agency. Captain Senchenko was qualified to navigate not only the river, but Obsk Bight, where the Ob flows into the Karsk Sea.

“That was nothing. The drizzle was good and caressing. Only it interfered with my view. And I did not want my skirt and shawl to get wet. They were my mother’s. My mother left them to me. But I was very lucky. I found a cellophane bag on the shore. I took off my skirt and shawl, put them in the bag and hid it under my cardigan.”

“Anastasia, if you didn’t go home and it started to rain, you should have come back to the ship.”

“I could not have done that. You had already seen me off, and you had other concerns. Besides, everything was shutting down.

“When the party came to an end and the ship was due to depart, at the girls’ request, especially the girl who was with you in your cabin, you delayed the departure. At that point everything was in your power, including their hearts, and you were intoxicated with this power. The young people of the village were grateful to the girls, and the girls too felt imbued with a sense of power, through you. They completely forgot about the young lads who were with them in the bar, guys they had been friends with in school.

“You and the captain escorted them to the gangplank. Then you went back to your cabin. The captain went up to the bridge, and then the signal sounded, and the ship slowly, very slowly began to pull away from the dock. The girl you had danced with stood on the shore beside her girlfriends and the young people who had waited around to see the ship off.

“Her heart was beating so strongly, it was almost trying to leap out of her breast and fly away. Her thoughts and feelings were all mixed up.

“Behind her back could be seen the outlines of the village houses with their darkened windows, while in front of her the sleek white steamship was departing for ever, illuminated with a host of lights, still abundantly pouring forth its music across the water and the night-time riverbank.

“The sleek white ship was where *you* were, after saying so many marvellous things to her she had never heard before, so charming and alluring.

“And all that was slowly distancing itself from her, for ever.

“Then she decided to do something in the sight of everyone. She squeezed her fingers into a fist and began shouting desperately:

‘I love you, Vladimir!’ And she did it again, and again. Did you hear her shouting?”

“Yes,” I replied.

“You could not help hearing her, and members of your crew heard her too. Some of them went out on deck and began laughing at the girl.

“I did not want them to laugh at the girl. Then they stopped laughing, as if they had suddenly come to their senses. But you did not come out on deck, and the ship continued slowly moving away. She thought you could not hear her, and she continued stubbornly crying out: ‘I love you, Vladimir!’.

“Then some of her girlfriends joined in, and they all cried out together. I wondered what that feeling was like — *love*, which makes people lose control of themselves, or, perhaps, I wanted to help that girl, and so I shouted with them: ‘I love you, Vladimir!’

“It seemed as though I had forgotten at that moment that it was not enough just to simply utter words — there definitely had to be behind them feelings, an awareness and trustworthiness of natural information.

“Now I know how strong that feeling is, and it is hardly subject to reason.

“The country girl later began to go into a slump and take to the bottle, and it was a challenge for me to help her. Now she is married and burdened down with everyday cares. And I have had to add her love to mine.”

The story of the girl threw me a little off balance. Anastasia’s account managed to resurrect that evening in my memory in full detail, and everything had really happened just as she said. It was very real.

Anastasia’s unique declaration of love did not make any impression on me. After seeing her lifestyle and getting to know how she looked at the world, I saw her more and more as some unreal personage, even though she was sitting right beside me and I could simply reach out my hand and touch her. A consciousness accustomed to judge things by other criteria could not accept her as an existing reality. And while at the beginning of our encounter I *had* been attracted to her, she no longer aroused in me the emotions I once had. I asked:

“So, you think these new feelings appeared in you just by chance?”

“They are desirable, they are important,” replied Anastasia. “They are pleasant even, but I wanted you to love me too. I realised that once you got to know me and my world a little more closely, you would not be able to accept me as a normal person — as simply Man. Perhaps you would even be afraid of me occasionally...”

“And that is exactly what happened. I myself am to blame. I have made many mistakes. I was anxious, for some reason, all the time. I was in a hurry, and I did not have the time to explain everything to you as I should. Perhaps it all just turned out silly? Eh? Do I need to reform myself?”

And with those words her lips hinted at a sad smile. She touched her breast with her hand, and I at once remembered what had happened that morning when I was in the glade with Anastasia.

## Bugs

That day I had decided to join in Anastasia's morning routine. Everything went fine at first — I stood under the tree and touched various little shoots. She told me about different herbs, and then I lay down beside her on the grass. We were both completely naked, but even I wasn't cold — that might have been, of course, due to my running through the forest with her. I was in a splendid mood. I felt a sense of lightness, and not just physically, but inside me as well.

It all started when I felt a pinching sensation on my thigh. I raised my head and saw a small army of bugs crawling along my thigh and lower leg — including ants, and some sort of beetle. I lifted my arm to swat them, but to no avail. Anastasia seized my arm in mid-air and held it, saying: "Do not touch them." Then she got up on her knees in front of me, bent over and pinned my other hand to the ground. I lay there as if crucified. I tried to free my arms, but couldn't — I felt that was an impossibility. Then I tried to jerk myself free, with great effort. She kept restraining me, with very little effort, her smile never fading from her face. And still my body felt more and more crawling things, all tickling, biting and pinching, and I came to the conclusion that they were starting to eat me alive.

I was in her hands both literally and figuratively. Taking stock of the situation, I realised that nobody knew where I was, nobody would come here looking for me, and if they should happen to wander by, they would see my picked-over bones (indeed, if they saw any bones at all). And all sorts of things flashed through my head at that moment, and this was no doubt the reason my instinct for self-preservation kicked in, dictating the only feasible course of action in the situation. In desperation I sunk my teeth with all my might into Anastasia's bare breast, at the same time jerking my head from side to side. Upon hearing her scream I immediately loosened my grip on her breast. Anastasia loosened *her* hold, jumped up, one hand

holding her breast, the other stretched upward, waving. She tried to smile. I too jumped up and shouted at her, feverishly brushing the crawling things off my leg.

“You wanted to feed me to those vermin, you forest witch! Well, I don’t give in that easily!”

She continued waving and responding with a forced smile to the elements of Nature around her, which had begun reacting warily to her situation. Anastasia looked at me and slowly — not with her usual spritely gait — walked toward the lake, her head bowed. I kept standing in the same spot for some time, thinking what I should do next — return to the riverbank? But how would I find the way? Follow Anastasia, but what would be the point? Nevertheless, I headed for the lakeshore.

Anastasia was sitting on the shore, rubbing tufts of grass between the palms of her hands and dabbing its juice on that part of her breast where a huge bruise left by my bite was clearly visible. It was probably very painful for her. But what had been her thought in attempting to restrain me? I hovered around her for a little while before asking:

“Does it hurt?”

Without turning her head, she replied:

“It hurts more inside.” And she silently continued rubbing in the juice from the tufts of grass.

“Why were you thinking to play tricks on me?”

“I was trying to be helpful. The pores of your skin are all plugged up, they cannot breathe. The little bugs would have cleaned them out. It is not that painful — in fact it is rather pleasant.”

“And the snake I saw, wouldn’t it have stung me in the leg?”

“It was not doing you any harm. Even if it had released its venom, it would have been only on the surface, and I would have rubbed it in at once.<sup>1</sup> The skin and muscles on your heel are deteriorating.”

<sup>1</sup>*rubbed it in* — It should be noted that ointments with snake’s venom are used for skin and muscle disorders. Contrary to popular belief, the venom of the vast majority of snakes is only *slightly* toxic for humans. As long as it does not penetrate into the blood-stream all at once, but gradually through the skin and muscular tissue, the concentration of poison in the blood never reaches dangerous levels.

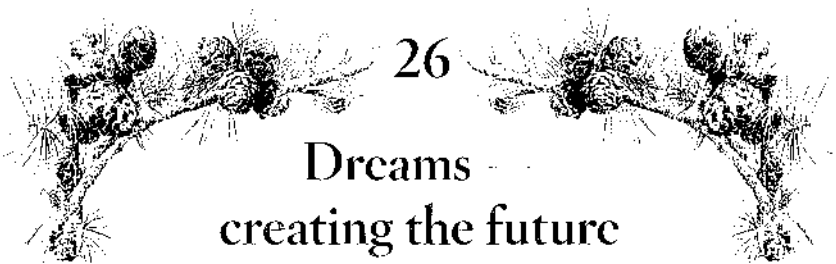

“That’s on account of a car accident,” I said.

For a time neither of us spoke. The whole situation felt rather silly. Not really knowing what to say, I asked her:

“What happened? Why did not that invisible someone help you again, as before, when I lost consciousness?”

“The reason he did not help, was that I was smiling. And when you began biting me, I tried to smile.”

I began to feel uncomfortable in her presence. Picking up a tuft of grass, I rubbed it between my hands as hard as I could, then knelt down in front of her and began dabbing her bruise with my moistened palms.

## Dreams creating the future

Now that I have learnt more about Anastasia's feelings, about her desire to show, in spite of all her extraordinary traits, that she is still Man — a normal, natural human being, I realised what mental anguish I had caused her that morning. Once again I apologised to her. Anastasia responded that she wasn't angry, but now, after what she had done, she was afraid for me.

"What could you have possibly done that could be so frightful?" I asked, and once again I heard for the umpteenth time a story nobody should put forward seriously if they expect to be considered as normal as all the other people in our society. Nobody talks that way about themselves.

"When the ship left," Anastasia went on, "and the young people headed back to the village, I stood for a while all by myself on the riverbank, and I felt good. Then I ran off to my forest. The day passed as usual, but in the evening, when the stars had already come out, I lay down on the grass and began dreaming, and then worked out this plan."

"What kind of plan?"

"You see, the things that I know are partially known by various people of the world you live in. Collectively they know practically everything, only they do not fully understand how it works. Then I went and fancied how you will go to a large city and tell many people about me and my explanations. You will do this using the same methods by which you usually spread any kind of information: you will write a book. A great many people will read it and the truth will unfold to them. They will have fewer ailments, they will change their attitude toward children and work out a whole new way of educating them. People will become more loving, and the Earth will begin to emit more radiant energy. Artists will paint my portrait, and each portrait will be their very best masterpiece. I shall try to inspire

them. They will make what you call a movie, and it will be the grandest film ever made. You will look at all this and remember me. You will meet wise people who will understand and appreciate what I told you, and they will explain a lot of things to you.

“You will trust their word more than mine, and realise that I am not a witch but actually Man, a human being. It is just that I have more information inside me than other people. What you write will be of tremendous interest, and you will become rich. You will have money in the banks of nineteen countries, and you will visit holy places and cleanse yourself of all the darkness that is in you. You will remember me and begin to love me, you will have the desire to see me again and to see your son. You will desire to become worthy of your son.

“My dream was so clear, but possibly a bit pleading, too. That is probably why everything happened the way it did. *They* took it as a plan of action and decided to carry people through the dark forces’ window of time. That is permitted if the plan is formulated in detail on the Earth, in the heart and mind of an individual Man, an Earth dweller. No doubt *they* took this as a grandiose plan, perhaps they added something themselves, and this is why the forces of darkness have been hard at work of late. They have never been this active before. I realised this from the ringing cedar. Its ray has become a lot more powerful lately. And the ringing has got louder — the cedar is hurrying to give back its light and its energy.”

As I listened to Anastasia, I began thinking more and more that she was utterly crazy, that maybe she had long ago escaped from some asylum and was living here in the forest, and here I had gone and slept with her! And now she might have a child. What a tale, indeed! Still, seeing how serious and concerned she was as she talked with me, I tried to calm her down.

“Don’t you worry, Anastasia! Your plan is obviously unrealisable, and so there’s no need for the forces of darkness and light to fight each other. You don’t have a detailed enough knowledge about our everyday life, its laws and conventions. The thing is that an awful lot of books are being published right now, but, for some reason, even the works of well-known authors aren’t selling. I’m no writer, and so I don’t have either the talent or ability or education to write anything.”

“That is correct. You did not have these things earlier, but now you do,” she declared in response.

“Okay,” I kept trying to assuage her fears, “even if I tried, nobody would print it, or believe in your existence.”

“But I do exist. I exist for those for whom I exist. They will believe and help you just as I shall later help them. And together with those people we...”

I couldn’t make sense of what she was saying right off, and once more I made an effort to calm her down:

“I shan’t even make an attempt to write anything. There’s absolutely no sense in it, don’t you get it?”

“Believe me, you shall. *They* have already created a whole network of circumstances that will make you do this.”

“What am I, think you — a puppet in somebody’s hands?”

“And so much depends on you. But the forces of darkness will try to stop you with all the tricks in their arsenal. They will even try to drive you to suicide by creating an illusion of hopelessness.”

“Enough, Anastasia! That’s it! I’m sick and tired of listening to your fantasies.”

“You think they are just fantasies?”

“Yeah, yeah, fantasies!” And I stopped short. It began to dawn on me as I calculated the timing in my head, and I understood. Everything Anastasia told me about her dreams, about our son, she had thought up last year, long before I knew her as well as I do now, long before I slept with her. Now, a year later, it was coming to pass.

“So, that means it’s already coming to pass?” I asked her.

“Of course. If it had not been for *them* — and for me too, a little — your second expedition would not have been possible. After all, you were scarcely able to make ends meet after the first one, and you did not even have any claim to the ship.”

“You mean to say you influenced the shipping line and the firms that helped me?”

“Yes.”

“So you drove me to ruin and inflicted damage on them. What right have you to interfere like that? And here I’ve left the ship behind and am sitting here with you. Maybe right now everything’s going to pieces back there. You’ve probably got some kind of hypnotic

ability. No, worse than that, you're a witch, and that's it. Or a crazy hermit. You don't have anything — not even a house — and here you go philosophising in front of me, you sorcerer!

"I am an entrepreneur! Do you have any idea what that means? I'm an entrepreneur! Even if I am dying, my ships still ply the river, they bring goods to people. That's what I do — I bring things to people and I can give you any items you need. But what can you give me?"

"I? What can I give you? I can give you a drop of heavenly tenderness and I can give you rest. You will be a genius of bright-eyed cleverness. As your image I am blest."

"Image? Who needs your image? What sense can that express?"

"It will help you write the book for people."

"Oh, please! There you go again doing goodness-knows-what with that mysticism of yours! So, you can't just live like a normal person, are you sure?"

"I have never done anything bad to anyone and I never can. I am a human being! I am Man! If you are so concerned about earthly goods and money, just wait a little — it will all come back to you. I do owe you an apology for dreaming like that — dreaming that you will have a time of troubles, but for some reason I could think of no alternative back then. You do not see the logic, you need to be compelled to see it through the help of circumstances in your world."

"Excuse me!" I couldn't hold out any longer. "What's this about being 'compelled'? You do something like that, and you still want to be treated as a normal human being?"

"I am Man, a human being, a woman!" Anastasia's agitation was clearly noticeable in her voice. "I only wanted, and I still only want, the good, I want only the light! I want you to be purified. That is why I thought back then about your trip to holy places, about the book. *They* have accepted this, and the forces of darkness are always fighting with them, but never have the dark forces scored a major victory."

"And what about you?" I countered. "With all your intelligence, information and energy, are you just going to stand and watch from the sidelines?"

"In a confrontation on this scale between two great principles my own efforts count for precious little — help is going to be needed from many others in your world. I shall seek them out and find them,

just as I did that time when you were in hospital. Only you need to develop a little more of that conscious awareness. You need to overcome the bad within yourself.”

“I’d like to know just what’s so bad within myself — what did I do wrong when I was in hospital? And how could you have treated me when you weren’t there beside me?”

“Back then you simply did not feel my presence, but I was right there with you. When you were on the ship, I brought you a little branch of the ringing cedar which Mama had broken off before she died. I left it in your cabin when you invited me in. You were ill even then. I could feel it. Do you remember the branch?”

“Yes,” I replied. “In fact, that branch hung on the wall of my cabin for some time, many of my crew noticed it, and I brought it back to Novosibirsk. But I didn’t pay any attention to it.”

“You simply threw it out.”

“But I had no idea...”

“No, you had no idea. You threw it out. And Mama’s branch did not succeed in overcoming your illness. Then you went into hospital... When you get back, take a close look at the history of your illness. If you check the chart, you will see that in spite of taking the very best medicine available, there was no improvement.

“But then they gave you some cedar nut oil. Now, according to strict prescription regulations, the doctor was not supposed to do that, but she did it, in spite of the fact that there was not a single mention of it in your medical prescription guide and nothing of the sort had ever been done before. Do you remember?”

“Yes.”

“You were being treated by a woman who is a sector head in one of the best clinics in your city. But this sector had nothing to do with your particular illness. She left you there, even though just one floor up there was another sector specifically corresponding to your illness — right?”

“Yes!”

“She would prick you with needles, and turn on some music in the half-darkened room.”

Anastasia’s account was in complete accord with what had actually happened to me.

“Do you remember this woman?”

“Yes. She was in charge of a sector in the former District Council hospital.”<sup>1</sup>

And then all at once Anastasia, her eyes fixed intently on me, spoke several disconnected phrases which immediately shocked me and caused a shiver up and down my spine: “What kind of music do you like?... Fine... Like that? Not too loud?” And she spoke these phrases in exactly the voice and with the intonation used by the sector head who treated me.

“Anastasia!” I exclaimed.

She didn’t let me finish.

“Keep listening. Do not be shocked, for God’s sake. Do try... try to make sense of everything I am telling you. Get your mind-forces working, at least a little. It is all very easy, you see, for Man.”

And she went on.

“This woman doctor — she is very good. She is a real doctor! I got along with her very well. She is kind and forthright. It was I who did not want you to be transferred to the other sector. That sector would have corresponded to your particular illness, but hers did not. She requested her supervisors to leave you with her, assuring them she would take care of you. She felt up to it. She knew your pains were simply the result of ‘something else’. And she tried to counteract that ‘something else’. She is a doctor!

“And how did you behave? You kept on smoking and drinking to your heart’s content, eating salty and spicy foods, and that in spite of your serious ulcer. You did not deny yourself anything in the way of pleasure. Somehow your sub-conscious got a message, even though you were not aware of it, that there was nothing terribly wrong with you, that nothing would happen to you.

“I did not accomplish anything good — rather, the opposite. The darkness in your consciousness did not lessen, nor did your will or sense of awareness improve. When you regained your health, you sent one of your employees to thank the woman who saved your life.

<sup>1</sup>*District Council hospital* — this was a first-class hospital reserved (in Soviet times) for high-ranking Communist Party officials.

You yourself did not call her, not even once. She was waiting for you to call, she had such a feeling of love for you.”

“She? Or you, Anastasia?”

“We, if that is clearer to you.”

I got up and for some reason took a few steps away from Anastasia, who was sitting on a fallen tree. The mixed-up state of my feelings and thoughts caused even greater uncertainty as to how I should think about her.

“Now look, once again you are not understanding how I do things, you are becoming confused, but it is a simple thing to grasp — I do things with the help of my imagination and my ability to analyse possible situations. And now you have started thinking ill of me again.”

She fell silent, her head resting on her knees. And I stood there too, without saying a word, thinking: She keeps on talking and talking and saying all sorts of incredible things. It’s clear she has no idea that any normal person would not accept them, and so would not accept her as a normal person.

Still, I went over to Anastasia and brushed her cascading braids of hair from her face. Tears were rolling down her cheeks from her large bluish-grey eyes. She smiled and said something quite uncharacteristic:

“She’s just another one of those sappy females, eh?” Right now you are overwhelmed by the very fact of my existence and do not believe your eyes. You do not fully believe, and you cannot even make sense of my sitting here talking to you. You find both my existence and my abilities amazing. You have completely ceased accepting me as a normal human being, as Man. But believe me, I am a human being and not a witch.

“You consider my way of life amazing, but why does not a certain something else seem just as amazing, even paradoxical, to you? Why do people admit the Earth to be a celestial body, the greatest creation of the Supreme Mind with each system component as His greatest achievement, and then go tear this system apart and devote so much effort to its destruction?”

“You see a manufactured space ship or aeroplane as something natural, in spite of the fact that all its components are made of broken or re-melted parts of the original supreme system.

“Imagine a being who breaks off a piece of an aeroplane in flight and uses its parts to make himself a hammer or a scraper, and then praises himself for having succeeded in making a primitive tool. He does not understand that one cannot keep breaking pieces off a flying aeroplane indefinitely.

“How can you not grasp that our Earth must not be tortured like that?...

“The computer is considered to be an achievement of the human mind, but few realise that the computer may simply be compared to a prosthesis of the brain.

“You can imagine what would happen to a person with normal, healthy legs if they walked on crutches all the time. Naturally, their leg muscles would atrophy.

“No machine will ever be superior to the human brain, provided the brain is kept in constant training.”

Anastasia wiped away a tear rolling down her cheek and stubbornly persisted in elucidating the incredible revelations stemming from her extraordinary logic.

At the time I had no idea how everything she said would arouse millions of people, set the minds of scholars astir and, even as mere hypotheses, prove to be without parallel anywhere in the world.

According to Anastasia, the Sun is something like a mirror. It reflects emanations from the Earth which are invisible to the eye. These emanations come from people in a state of love, joy or some other radiant feeling. Reflecting off the Sun, they return to Earth in the form of sunlight and give life to everything on the planet.<sup>2</sup>

<sup>2</sup>Interestingly, the idea that Sun has no radiance of its own is in fact quite widespread in both science and religion. For example, a prominent Russian engineer and scientist living in France, Dr Georges Lakhovsky (1869-1942), a bioenergetics pioneer, author of *The secret of life: Cosmic rays and radiations of living beings* and one of the most respected European scientists of his time, has suggested that “The Sun is a cold black body”. Viktor Schauburger (see footnote 1 in Chapter 16: “Flying saucers? Nothing extraordinary!”) argued along the same lines, as discussed in Callum Coats’s book *Living energies*. Dr Philip Callahan (1923-), a prominent entomologist and radio engineer, author of numerous scientific articles and books, speaks about *tachons*, particles travelling faster than the speed of light, and attempts to detect them in solar rays and around people in a state of love (e.g., saints or meditating yogis). George Ivanovich Gurdjieff (1872?-1949) was a spiritual thinker whose thought

She brought up a whole array of supporting arguments which were not that simple to grasp.

"If the Earth and other planets were simply consumers of the Sun's grace of light," she said, "it would be extinguished, or burn unevenly, and its glow would be off-kilter. In the Universe there is and can be no lopsided process. Everything is interrelated."

She cited, too, the words of the Bible: "And the life was the light of men".<sup>3</sup>

Anastasia also stated that one Man's feelings can be transmitted to another by reflecting off the celestial bodies, and she demonstrated this by the following example:

"Nobody on Earth can deny that you can feel when somebody loves you. This feeling is especially noticeable when you are with a person who loves you. You call it intuition. In fact, invisible light-waves emanate from the one who loves. But the love can be felt, if it is strong enough, even when the individual is absent. By drawing upon this feeling and understanding its nature, one can do wonders. This is what you call miracles, mysticism or incredible abilities. Tell me, Vladimir, do you not feel a bit better with me now? Somehow lighter, warmer, more fulfilled?"

"Yes," I replied. "For some reason I *have* started to feel warmer."

"Now watch what happens when I concentrate on you even more strongly."

Anastasia lowered her eyelids ever so slightly, slowly stepped back a few paces and stopped. A pleasant feeling of warmth started running through my body. It gradually intensified, but didn't burst into flame, and didn't make me hot. Anastasia turned and began to slowly walk away, hiding behind the thick trunk of a tall tree. The sensation of pleasant warmth did not lessen, and to it was added

---

had a profound influence on such prominent intellectuals of the twentieth century as naturalist Aldo Leopold (1887-1948), originator of land ethics and author of *A Sand County Almanac*, and economist E.F. Schumacher (1911-1977), author of *Small is beautiful: Economics as if people mattered*. Gurdjieff maintained that Sun "neither shines nor warms" and devoted an entire chapter in his *Beelzebub's tales to his grandson* to a discussion of this seemingly paradoxical proposition.

<sup>3</sup>John 1: 4 (*Authorised King James Version*).

another — as though something were helping my heart pump blood through my veins, and with every heartbeat came the impression that the blood-streams were instantly reaching every little vein in my body. The soles of my feet broke out into a heavy sweat and became very moist.

“You see? Now is it all clear to you?” Anastasia said as she triumphantly re-appeared from behind the tree, confident that she had proved something to me. “You see, you felt all that when I went behind the tree-trunk, and your sensations even increased when you could not see me. Tell me about them.”

I told her, and then asked in turn:

“What does the tree-trunk show?”

“What do you think? The waves of information and light went directly from me to you. When I hid myself, the tree-trunk was supposed to significantly distort them, since it has its own information and its own glow, but this did not happen. The waves of feelings began falling directly upon you, reflecting off the celestial bodies, and even intensified. Then I caused what you call a ‘miracle’ — your feet began to perspire. You failed to mention that fact.”

“I didn’t think it was important. How do my feet perspiring constitute a miracle?”

“I chased all sorts of diseases out your body through your feet. You should feel a lot better now. It is even noticeable on the outside — you are not slouching as much.”

Indeed, I *was* feeling better physically.

“So, when you concentrate like that, you dream up something and whatever you want comes to pass?”

“That describes it, more or less.”

“And does what you dream about always come to pass — even when you’re asking for something besides bodily healing?”

“Always. As long as it is not an abstract dream. As long as it is detailed down to the minutest aspects and does not contradict the laws of spiritual being. I do not always manage, however, to come up with a dream like that. Thought has to proceed extremely quickly and there must be a corresponding vibration of feelings, and then it will definitely come true. It is a very natural process. It happens in the lives of many people. Ask around among your acquaintances.

Perhaps you will find some among them who have dreamt this way, and their dream has come true either fully or partially.”

“Detailed... thinking... proceeding extremely quickly... Tell me, when you were dreaming about the poets and artists and the book, was that all in detail too? Did your thought proceed quickly then?”

“Extraordinarily quickly. And everything was so specific, down to the finest detail.”

“So now, you think, it’s going to come true?”

“Yes, it will.”

“There wasn’t anything else you dreamt about at the time? You’ve told me everything about your dreams?”

“Not everything.”

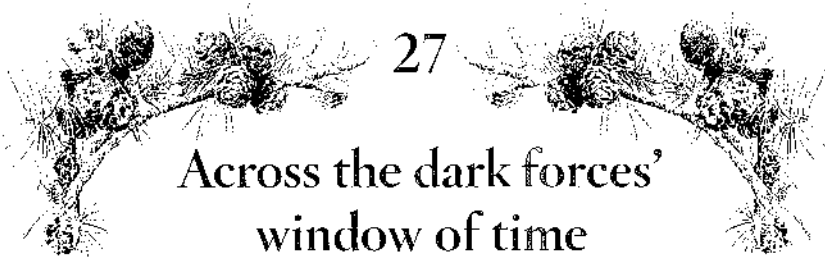

“Then tell me everything.”

“Do you... do you really want to hear it, Vladimir? Really?”

“Yes.”

Anastasia’s face brightened, as though illuminated by a flash of light.

It was with inspiration and excitement that she continued her incredible monologue.

A decorative border of pine branches with pine cones and needles arches over the title. The pine cones are dark and textured, and the needles are fine and light-colored.

## Across the dark forces' window of time

“During that night of my dreams I thought of how to transport people across this window of time of the dark forces. My plan and conscious awareness were precise and realistic, and *they* accepted them.

“In the book you are going to write there will be unobtrusive combinations, formulations made up of letters, and they will arouse in the majority of people good and radiant feelings. These feelings are capable of overcoming ailments of body and soul, and will facilitate the birth of a new awareness inherent in people of the future. Believe me, Vladimir, this is not mysticism — it is in accord with the laws of the Universe.

“It is all very simple: you will write this book, guided only by feelings and your heart. You will not be able to do otherwise, since you have not mastered the technique of writing, but through your feelings you can do *anything*. These feelings are already within you. Both mine and yours. They are not something you can comprehend just yet. But they will be understandable to many. When they are embodied in signs and patterns, they will be stronger than Zoroaster’s fire.<sup>1</sup> Do not hide anything that has happened to you, even your most intimate experiences. Free yourself from any sense of shame and do not be afraid of appearing ridiculous. Humble your pride.

“I have opened my whole being to you — my body and my soul. Through you I want to open myself to everyone. Now I am permitted to do this. I know what a terrible mass of dark forces will descend upon me, they will try to counteract my dream, but I am not afraid of them. I am stronger and I will succeed in seeing my plan

<sup>1</sup>*Zoroaster* (ca. 628–551 B.C.) — a Persian mystic, also known as *Zarathustra*, who compared the nature of God to an eternal, uncontainable flame. Zoroastrianism is practised today principally in India (where adherents are known as *Parsees*) and in isolated areas of Iran.

come true, and I will succeed in giving birth and raising my son. Our son, Vladimir.

“My dream will break down many of the devices of the forces of darkness, which for millennia have been acting on people destructively, and it will cause many to work for good.

“I know that you find yourself unable to believe me at the moment — you are prevented from doing this by the conventions and many dogmas planted in your brain by the circumstances of existence in the world in which you live. The possibility of transport through time seems incredible to you. But your concepts of time and distance are all relative. These dimensions cannot be measured by metres or seconds, but by the degree of one’s conscious awareness and will.

“The purity of the thoughts, feelings and perceptions held by the majority is what determines the place of humanity in time and the Universe.

“You believe in horoscopes, you believe in your complete dependence on the position of the planets. This belief has been attained through the aid of the devices of the dark forces. This belief is slowing down the movement of the channel of light, allowing its dark counterpart to advance and increase in size. This belief is leading you away from a conscious awareness of the truth, the essence of your earthly being. Analyse this question very carefully. Think about how God created Man in His image and likeness.<sup>2</sup> Man has been granted great freedom — the freedom to choose between the darkness and the light. Man has been given a soul. The whole visible world is subject to Man, and Man is free even when it comes to his relationship to God — to love Him or not to love Him. Nobody and nothing can control Man apart from his own will. God wants Man’s love in return for His love, but God wants the love of a free Man, perfect in His likeness.

“God has created everything we can see, including the planets. They serve to guarantee the order and harmony of all life — not only plants and animals, they also help human flesh, but there is no way they have power over Man’s heart and mind. It is not they who

<sup>2</sup>*His image and likeness* — see Gen. 1: 26, 27.

control Man, but Man controls *their* movements through his subconscious.

“If a single individual wanted a second sun to flare up in the sky, it would not appear. Things are arranged this way so that planetary catastrophes do not happen. But if everybody together wanted a second sun, it would appear.

“In making up a horoscope, it is necessary first of all to take into account the basic dimensions — the level of Man’s temporal awareness, his strength of will and his spirit, the aspirations of his soul and the degree to which it participates in the life of the here and now.

“Favourable and unfavourable weather, magnetic storms, high and low pressure — these are all subject to will and conscious awareness.

“Have you never seen a happy and joyful person on a cloudy or stormy day — or, on the other hand, a sad and depressed person on a sunny day amidst the most favourable weather conditions?

“You think that I am simply indulging in a crazy person’s fantasy when I say that the patterns and formulations of letters I shall put in the book will heal people and illuminate their experience. You do not believe me because you do not understand. And yet in fact it is so simple.

“You see, right now I am talking to you in your language, using your speech idioms, and I even try sometimes to speak with your voice inflections. It will be easy for you to memorise what I say, because this is *your* language, belonging exclusively to you, although understandable to many people. It contains no incomprehensible words or obscure idioms. It is simple and therefore understandable to the majority. But there are certain words, or word orders, which I have changed, just a little — but only a little. Right now you are in an excited state and therefore, whenever you recall this state, you will recall everything I have told you. And you will write down what I have said.

“And that is how my combinations of letters will fall into place in your book.

“These combinations are very important. They can do wonders, just like prayer. After all, many of you already know that prayers are specific combinations and specific patterns of letters. These combinations and patterns are strung together, with God’s help, by people who have had an illuminating experience.

“The forces of darkness have always tried to deprive Man of the opportunity of drawing upon the grace emanating from these combinations. To this end they have even changed the language, introduced new words and removed old ones, and distorted the meaning of words.

“At one time, for example, there were forty-seven letters in your language. Now there remain thirty-three alone. The forces of darkness have imported other combinations and fashions of their own, stirring up base and dark elements, attempting to lead Man astray by fleshly lusts and passions. But I have restored the original combinations using only the letters and symbols in use today, and they will now be effective. I tried so hard to find them... and I did! I have brought together all the best from different times. I collected a good many, and have hidden them in the lines that you will write.

“As you can see, it is simply a matter of translating the combinations of signs from the depth of eternity and infinity of the Universe — exact in sense, meaning and purpose.

“Write about everything you have seen, hold back nothing — neither the bad nor the good, nor even the intimate or absurd — and then they will be preserved.

“You yourself will be convinced of this, please believe me, Vladimir. You will become convinced once it is written down. In many who read what has been written, feelings and emotions will be found which they are not yet able to fully understand or make sense of. They will confirm this for you — you will see and hear it confirmed. And radiant feelings will appear in them, and then many will themselves understand, through the help of these feelings, a great deal more than what is written by your hand.

“Try writing at least a little. When you are convinced that people feel these combinations, when a dozen, or a hundred, or a thousand people confirm it for you, you will then believe and write down everything. Only believe. Believe in yourself. Believe in me.

“Later I can tell you things even more significant, and people will understand and feel them too. I am talking about the raising of children. You were interested to know about flying saucers and how they work, rockets and planets. But I so wanted to tell you more about

the raising of children, and I shall do so. I shall explain it when I instil in you a greater sense of conscious awareness.

“However, all this needs to be read when there is no interference from sounds of manufactured, artificial devices around. Such sounds are harmful and lead Man away from the truth. Let only the sounds of the God-created natural world be heard. They carry within themselves truthful information and grace, and increase one’s conscious awareness. Then the healing effect will be significantly more powerful.

“Once again, of course, you have your doubts when you think of me, and do not believe in the healing power of words. But there is no mysticism here — no mere fantasy or contradiction of the laws of spiritual being.

“When these radiant feelings appear in Man, they cannot help but exert a beneficial influence on literally every organ of his body. It is these radiant feelings that are the most powerful and effective remedy against any kind of bodily complaint. God has healed through the help of such feelings, as did the Biblical prophets and saints. Read the Old Testament and see for yourself. Certain people in your world are healing through the help of these feelings. Many of your doctors know about this. Ask them if you do not believe me. After all, it is easier for you to believe them. The stronger and brighter the feeling, the greater effect it has on the person in need of healing.

“I have always been able to heal with my ray. Great-Grandfather taught me and explained everything when I was still a child. I have done this many times with my dachniks.

“Now my ray is many times more powerful than Grandfather’s and Great-Grandfather’s. That is because, they say, there has arisen in me another feeling, the one called love.

“This feeling is so great, so pleasant, and a little fiery too. I want to share it with everyone, and with you. As for me, I want things to be good for everyone and everything, just as God wanted them to be.”

Anastasia spoke her monologue with extraordinary inspiration and confidence, as though aiming it across space and time. And then she fell silent. I looked at Anastasia, amazed by her uncharacteristic fervour and confidence, and then asked:

"Anastasia, is that it? Are there no further nuances in your plans or dreams?"

"The rest, Vladimir, is just trifles, nothing of great significance. I merely included them — little things as simple as *ABC* — as I was formulating the plan. There was just one sticking point, concerning you, but I managed to resolve it."

"Well, please go into a bit more detail here. What kind of sticking-point was it, that concerned me?"

"You see, I made you into the richest person on earth. And I also made you the most famous. This will happen in the near future. But when the details of my dream unfolded... As yet it had not taken off, so to speak, it had not yet been taken up by the forces of light. The forces of darkness — they are always trying to inject their own harmful input, like all sorts of side effects, exerting a destructive influence on the person at the centre of the dream, and on other people too.

"My thoughts were dashing along ever so quickly, but the forces of darkness were still keeping pace. They had left many of their other earthly affairs in their attempts to concentrate their devices on my dream. But then I came up with something. I outwitted them. And I caused all their devices to turn about and work for the good. The forces of darkness lost their bearings for less than a split second, but that was enough for my dream to be snatched up by the forces of light and transported into radiant infinity, well beyond their sight and reach."

"And just what did you come up with, Anastasia?"

"Unexpectedly for them, I extended, just by a little, the dark forces' window of time — the time you will need to meet the various challenges. In doing so I deprived myself of the possibility of using my ray to help you. They were confounded, failing to see any logic on my part. And during this moment I very quickly shone my light on people who will be in touch with you in the future."

"And what does all this mean?"

"People will help you, will help realise my dream. They will do this with little rays of their own, which will be almost uncontrollable. But there will be a lot of them, and together you will make the dream come true in physical reality. You will be carried *across* the dark forces' window of time. And you will carry others with you.

“And becoming rich and famous will not make you greedy or arrogant. Because you will understand that money is not the point — it will never buy you the warmth or the genuine compassion of the human soul.

“You will understand this when you make your way across that window of time, when you see and get to know these people. And they too will understand. As for the deep knee-bends... This kind of relationship with the banks is something I also thought up because you are altogether negligent in taking care of your body. At least you will be getting some exercise whenever you withdraw money from your account. Some of the bank officials will do it, besides. And never mind if it looks a little funny. It means you will find yourself free from the sin of pride.

“So it has turned out that all these challenges and trials which the forces of darkness have concocted in their window of time will serve to strengthen you and those around you. All this will increase your sense of conscious awareness. And it will ultimately save you from the dark temptations they are so proud of. Their own actions will save you. This is why they lost their bearings for a split second! Now they will never be able to catch up to my dream!”

“Anastasia! My dear, precious dreamer! My fantasy-maker!”

“Oh... How good of you to say that! Thank you! Thank you! It was so good of you to say ‘My dear!’”

“You’re welcome. But, you see, I also called you a fantasy-maker. A dreamer. You’re not offended?”

“Not at all. You do not know yet, how accurately my dreams always come true, when they turn out so clearly and in such detail. This one will come true without fail. It is my favourite dream, the clearest of them all. And the book you write will come into being, and people will start having extraordinary feelings, and these feelings will call people to action...”

“Wait, Anastasia! You’re getting carried away again. Calm down.”

Only a short time had gone by before my interruption of Anastasia's fervent stream of speech, which seemed indeed but a fantasy.

I couldn't quite grasp the significance behind this monologue of hers. Everything she said sounded *too* fantastic. Only a year later Mikhail Fyrnin,<sup>3</sup> editor of the magazine *Chudesa i prikliuchenia* (*Wonders and Adventures*), after reading my manuscript containing this monologue, excitedly handed me the latest issue of his magazine — the issue of May 1996.

The contents of the magazine overwhelmed me with excitement. Two major scholars, both academicians, — Anatoly Akimov<sup>4</sup> and Vlaiil Kaznacheev<sup>5</sup> — talked in their articles about the existence of a Supreme Mind, the close interrelationship of Man and the Universe, as well as about certain rays, invisible to normal sight, emanating from Man. Scientists have now been able to identify them with special equipment, and the magazine included two photographs of these rays emanating from people.

But science has only begun to talk about what Anastasia has not only known from childhood, but has been applying in her daily life, in her endeavours to help others.

How was I to know a year earlier that this girl standing before me in an old skirt (the only one she possessed) and uncomfortable-looking galoshes, nervously picking at the buttons on her cardigan — this girl named *Anastasia* — actually possessed a vast store of knowledge as well as the ability to influence human destinies. Or that the pulse-beats of her soul are in fact capable of counteracting

<sup>3</sup>Mikhail A. Fyrnin — an editor with the publishing house *Molodaya gvardia* (*Young Guard*) for more than 25 years, where he worked in particular on a series entitled "Lives of remarkable people". One of his more recent major projects was the compilation of *Sobranie myslei Dostoevskogo* (*Collection of Dostoevsky's thoughts*), published in Estonia in 2003.

<sup>4</sup>Anatoly Evgenievich Akimov — Director of the International Institute of Theoretical and Applied Physics of the Russian Academy of Natural Sciences.

<sup>5</sup>Vlaiil Petrovich Kaznacheev (1924–) — a prominent member of the Russian Academy of Medical Sciences from Novosibirsk, specialising in the interrelationship between Man and Nature, including bio-systems and information processes. A decorated World War II veteran, Dr Kaznacheev has received numerous awards for his research and publications.

the dark and destructive forces threatening mankind. Or that the well-known Russian healer Vladimir Mironov<sup>6</sup> would tell a gathering of his assistants that “We are all ants compared to her”, adding that the world has not yet known a power greater than hers and regretting that even after spending such a long time with her I had still not understood her.

Many people were to feel the energy of a tremendous power emanating from the book.

Following the first small-scale printing of this book, for which I have to give credit to Anastasia herself as one author, would come a sprinkling of verses in abundance, washing away dirt like a spring rain.

Now, dear reader, this is the very book which you are holding in your hands and which you are reading at this moment. Whatever feelings it is arousing in your heart is for you alone to judge. What do you feel? What is it calling upon you to do?

Staying there alone in her glade in the taiga, Anastasia will use her ray of goodness to eliminate any barriers standing in the way of her dream. And she will gather and inspire more and more newcomers to make her dream come true.

And so, at my challenging moments three Moscow students<sup>7</sup> will come to my side and stand by me. They will not receive any significant compensation for their efforts and will even end up helping me financially. Earning their living wherever they can, they — especially Lyosha Novichkov — will spend nights keyboarding the *Anastasia* text into their computers.

They will not cease their keyboarding work, even after their difficult examination session begins.

And Moscow Printshop Number Eleven will put out a 2,000-copy print run. They’ll do this on their own, by-passing a publishing house. But even before this, the journalist Evgenia Kvitko of the agricultural

<sup>6</sup>*Vladimir Andreevich Mironov* — a Doctor of Alternative Medicine, who runs his own natural therapy clinic in south-central Moscow, and has published several books and numerous articles on the subject.

<sup>7</sup>*three Moscow students* — the reference is to Alexey (Lyosha) Novichkov, Artem Semenov and Anton Nikolaikin, who will eventually support Vladimir in a number of ways in carrying out the provisions of Anastasia’s plan (see Book 2 in the series).

paper *Krestyanskie vedomosti* will be the first to tell about Anastasia in the press. Later Ekaterina (Katya) Golovina from *Moskovskaya pravda*, and then *Lesnaya gazeta*, *Mir novostei* and Radio Rossiya. The magazine *Chudesa i prikliuchenia* (*Wonders and Adventures*), which publishes articles by the brightest lights of Russian academia, will throw tradition to the wind and devote several issues to Anastasia, explaining:

“In their boldest dreams our academics come nowhere near the insights of Anastasia, the wise woman of the Siberian taiga. Purity of thought makes Man omnipotent and omniscient. Man is the apex of creation.”

Anastasia will be published only by the major press outlets in Moscow. Anastasia herself seems to have made that choice in preference to the tabloids, in a careful effort to preserve the purity of her dream.

But all this did not become clear to me until a year after my visit with her. Not understanding her at the time, and not fully believing, I had my own take on the experience, and tried to shift the conversation to a topic I was more familiar with — namely, entrepreneurs.

## Strong people

*The highest evaluation of your personality comes from those around you.*

Anastasia talked a lot about the people we call entrepreneurs, about their influence on public spirituality, and then took a twig and drew a circle on the ground. Inside it she drew many little circles, with a dot in the middle of each one. Off to the side there were more circles. It was like a map of the planets around the Earth, and she kept adding still many more little circles inside, and said:

“The large circle is the Earth — a planet inhabited by people. The little circles are small groups of people, linked together into collectives. The dots are the people in charge of these collectives. The way these heads relate to the people in their group, what they make them do, what kind of psychological climate they create through their influence will determine whether the people around them fare well or poorly. If the majority fare well, a bright ray emanates from each of them and from the group as a whole. If poorly, then the ray is dark.”

And Anastasia shaded in some of the circles, making them dark.

“Naturally, their inner state is influenced by many other factors as well, but in the space of time during which they are in this group, the principal thing is their interrelationship with the person in charge. For the Universe it is very important that a bright radiance should emanate from the Earth. The radiance of the light of love and good. This is mentioned in the Bible, as well: ‘God is love’.”

“I feel sorry, very sorry, for the people you call entrepreneurs. They are the most miserable of all. I would so much like to help them, but it is difficult for me to do that all by myself.”

<sup>1</sup> John 4: 8 & 16 (*Authorised King James Version*).

"You're mistaken, Anastasia. The most miserable people in our society are the pensioners, people who can't find work, can't afford a roof over their heads, or even food or clothing. An entrepreneur is someone who has all these things in greater abundance than other people. He has access to pleasures which others can't even dream about."

"What specifically, for example?"

"Well, even if you take the average entrepreneur, he will have a modern car and apartment. He will not have any problems with food and clothing."

"And what about joy? What does he find satisfaction in? Come and see for yourself."

Once again Anastasia led me to the grass and, like the first time, when she showed me the woman dachnik, she began to show me other scenes.

"You see? There he is, sitting right now in a car you would call pretty snazzy. You see — he's sitting alone in the back seat, and the car is air-conditioned — it has its own micro-climate, so to speak. His chauffeur is driving it very smoothly. But look and see how worried and pensive the entrepreneur sitting in the back seat is — he is thinking, working out plans, he is afraid of something. See — he has picked up what you call a telephone. He is upset... Yes, he has just received some news... Now he must quickly evaluate the situation and make a decision. He is all tensed up... Thinking. Now he is ready, the decision has been made. Now look, look — he appears to be sitting peacefully, but his face betrays doubt and concern. And there is no joy."

"That's *work*, Anastasia."

"That is a way of life, and there is no respite in it from the moment he wakes in the morning until the moment he goes to bed at night, or even in his sleep. And he sees neither the leaves unfolding on the trees nor the streams of spring.

"All around him are perennially envious onlookers, desiring to have what he has. His attempts to fence himself off from these by what you call bodyguards, a house — more of a citadel, actually — do not bring any complete sense of peace, since fear and worry have crept in and will forever remain with him.

“This goes on until his dying day, and just before the end of his life, he feels a sense of regret that he is obliged to leave it all behind.”

“An entrepreneur has his joys,” I observed. “They come when he obtains a desired result, or fulfils a plan he’s thought up.”

“Not true, Vladimir. He never gets to enjoy his acquisitions, since along comes another plan immediately to take its place — a more complicated plan, and the whole process begins again from scratch, only with greater challenges.”

This forest princess painted me a rather sad and gloomy picture of our outwardly well-off social class, and this was not a picture I felt like accepting. I attempted a counter-argument:

“You forget, Anastasia, their ability to reach a set goal and obtain the good things in life, excited glances from women, respect by people around them.”

To which she replied:

“Sheer illusion. There is nothing of the sort. Where have you ever seen a respectful or an excited glance directed at a passenger in a snazzy car or at the owner of the fanciest house in town? Not a single person will confirm what you have just said. These are but glances of envy, indifference and irritation. And even women cannot love these people, because their feeling is mixed in with their desire to possess not only the man but his property too. The men, in turn, cannot really love a woman, for there is no way they can free up enough room for such an important feeling.”

It was useless to look for further arguments, since what she said could be confirmed or refuted only the people she was talking about. As an entrepreneur myself, I never really thought about what Anastasia was describing, never analysed how many minutes of joy I actually experienced, and most certainly could not do this for anyone else. For some reason it is simply not accepted in entrepreneurs’ circles to whine or complain — everyone tries to show himself as successful and content with life.

This is no doubt why most people hold the stereotype image of the entrepreneur as someone who has received more than his share of good things in life. Anastasia was perceiving not the externally expressed feelings, but those which are more delicate and hidden in the inner recesses of one’s heart. She was measuring a person’s state

of well-being by the amount of light she could detect in them. As to the scenes and situations she was able to see, I felt I was picturing them more from listening to her. I mentioned this to Anastasia, and she responded:

“I shall help you now. It is simple. Close your eyes, lie down on the grass, hands out to the sides, and relax. Picture in your mind the whole Earth, try to see its colour and the pale bluish glow emanating from it. Then narrow the focus of your imagination’s ray so that it does not take in the whole Earth. Rather, make it narrower and narrower until you see concrete details. Look for people where the bluish light is stronger than in other places. Keep on narrowing your ray and you will eventually focus on one person, or a small group. Now try again, with my help.”

She took me by the hand, ran her fingers along mine, resting her fingertips in my palm. The fingers of her other hand, which was lying on the grass, were pointed upward. I went through in my mind all the steps she outlined, and began to get a fuzzy image of three people sitting at a table engaged in a lively conversation. I couldn’t understand what they were saying, as I wasn’t picking up any voices at all.

“No,” said Anastasia, “those are not entrepreneurs. Wait a moment, we shall find some.”

She searched and searched with her ray, peering into offices both large and small, private clubs, party celebrations and bordellos... The bluish glow was either very weak or not there at all.

“Look — it is night-time here already, and this entrepreneur is sitting alone in a smoky office. Something is not right... But look at that one, how contented he looks, in a swimming pool, surrounded by pretty girls. He is tipsy, but there is no glow. He is simply trying to run away from something, his feeling of self-satisfaction is artificial...”

“This one is at home. There is his wife, and his little one is asking him something... The telephone is ringing... You see there, he has become serious again, and pushed his family to the background...”

All sorts of situations became illuminated one after another, some of them outwardly good and some not so good... until we happened upon a most frightening scene. All at once appeared a room, probably in some apartment, quite nice-looking, but...

On a round table lay a naked man, his hands and feet tied to the table legs, his head hanging over, his mouth covered with brown sticky tape. At the table were sitting two burly-looking youths — one of them with a close-shaven head, the other with smooth, slick hair. A little distance away, under a floor lamp, there was a young woman in an arm-chair. Her mouth was also taped over, and she was tied to the chair with her linen sash bound tight around her waist. Both her legs were tied to the chair legs. She was wearing nothing but a torn undergarment. Next to her was sitting a thin, wiry man who was taking a drink of something, possibly cognac. On a small table in front of him lay a chocolate bar. The youths sitting at the round table weren't drinking. I could see them pouring some kind of liquid over the chest of the man lying on the table — vodka, or pure alcohol, and set it alight. A break-in, I surmised.

Anastasia shifted her ray away from this scene. But I cried out: “Go back! Do something!”

She went back to the scene and replied:

“I cannot. It has already happened. This cannot be stopped now. It should have been stopped earlier, but now it is too late.”

I watched spellbound and suddenly got a clear glimpse of the woman's eyes, filled with sheer horror and not even pleading for mercy.

“Do something!” I cried to Anastasia. “If you have any heart at all, do at least something!”

“It is not within my power. Everything has been, so to speak, programmed in advance, but not by me. I cannot interfere directly. They have the upper hand right now.”

“But where's that goodness of yours — your powers?”

Anastasia didn't say a word. The horrifying scene began to blur a little. Then the older man who had been drinking the cognac suddenly disappeared.

All at once I felt a weakness throughout my body.

I could also feel the arm Anastasia was touching start to grow numb.

I could hear her somewhat weakened voice say, with evident difficulty in getting out the words:

“Take your hand away, Vladi—.” She couldn't even finish saying my name.

I stood up, and drew my hand away.

My arm just hung there as if paralysed (as happens sometimes when you get a tingling sensation in your arms or legs) and went completely white. Then I wiggled my fingers a little and the numbness began to go away.

I looked at Anastasia in shock. Her eyes were closed. The blush had drained from her cheeks and it seemed as though there was not a drop of blood left under the skin on her hands and face.

She did not even seem to be breathing as she lay there. The grass for about three metres all around her had also become white and bent over. I realised something terrible had happened and cried out:

“Anastasia! What’s happened to you, Anastasia?”

But there was not even the slightest response to my cry. Then I grabbed her by the shoulders and shook her body, which was no longer supple but had somehow gone limp. There was no response — her completely white, bloodless lips remained silent.

“Can you hear me, Anastasia?!”

She opened her eyelids ever so slightly and looked at me through her dimmed eyes, which had lost all their characteristic expression. I grabbed a flask of water, lifted up Anastasia’s head and tried to give her something to drink, but she was unable to swallow. I looked at her, feverishly wondering what to do.

At long last she managed to move her lips just a tiny bit and to whisper:

“Carry me over there... to the tree.”

I lifted her limp body and carried it out of the circle of whitened grass, and laid it down by the nearest cedar tree. In a little while she started to come round, and I asked:

“What happened to you, Anastasia?”

“I tried to fulfil your request,” she quietly said, and a moment later added: “I think I succeeded.”

“But you look so bad — you almost died!”

“I violated the natural laws. I interfered in something I should not have. That required all my strength and energy. I am surprised that they held out at all.”

“Why did you take such a risk, if you knew it was so dangerous?”

“I had no choice. After all, you wanted me to do something. I was afraid that if I did not fulfil your request, you would lose all respect

for me. You would think that all I can do is talk, that I am all words... And that I could not do anything in real life."

Her eyes looked at me enquiringly and pleadingly. Her soft voice trembled a little as she spoke.

"But I cannot explain to you how to do it, how this natural system works. I feel it, but I cannot explain to you in a way you could understand, and your scholars, probably, will not be able to explain it either."

She bowed her head, fell silent for a while, as though mustering her strength. Then she looked at me once more with pleading eyes and said:

"Now you are going to be even more persuaded that I am abnormal, or a witch."

All at once I felt the tremendous urge to do something good for her, but what? I wanted to tell her that I did consider her a normal human being, a beautiful and intelligent woman, but in all honesty I didn't feel about her the way I usually felt about women, and she with that intuition of hers would not believe me.

And then I suddenly recalled her story about how her great-grandfather customarily greeted her as a child. About how this old grey-haired fellow would stand on one knee before the little Anastasia and kiss her hand. I got down on one knee before Anastasia, grasped hold of her still pale and slightly cold hand, kissed it and said:

"If you are indeed abnormal, then you are the best, the kindest, the cleverest and the most beautiful of all abnormal people ever!"

At long last a smile once more alighted upon Anastasia's lips, and her eyes looked at me in gratitude. A rosy blush was coming back to her cheeks.

"Anastasia, that was quite a depressing scene. Did you choose it deliberately?"

"I was looking for something good, just as an example, but I could not find anything. They are all held in the grip of their worries and cares. They are constantly facing their problems all alone. They have practically no spiritual communication."

"So what can be done? What can you suggest, apart from pitying them? And I should tell you: these are strong people, these entrepreneurs."

"Very strong," she agreed, "and most interesting. It is as though they are living two lives in one. One life is known only to them and not even their family, while the other is the outward life, which people around them see. They can only be helped through increasing their sincere, spiritual communication with each other. They need to strive, with complete sincerity, for purity of thought."

"Anastasia, in all probability I shall try to do what you have asked. And I shall try to write a book, and establish an organisation of entrepreneurs with pure thoughts, but only in a way that I can understand."

"It will be difficult for you. I shall not be able to offer you sufficient help, I have little strength left. It will take a long time for my strength to recover. For a time I shall not be able to see at a distance with my ray. I am having difficulty seeing you right now with my ordinary eyesight."

"Don't tell me you're going blind, Anastasia!"

"I think it will all get better. Only it is a pity that for some time I shall not be able to help you."

"You don't need to help me, Anastasia. Just try to keep yourself for your son and help other people."

I needed to leave, to catch up to my ship. After waiting until she had started to regain her almost normal appearance, I got into the motorboat. Anastasia took hold of the bow with her hand and pushed the boat away from the shore. The boat was swept up and began floating downstream with the current.

Anastasia stood in the water almost up to her knees. The hem of her long skirt got wet and flapped about in the waves.

I gave the starting-cord a tug. The motor roared into life, breaking the silence I had grown accustomed to over the past three days. The boat gave a jerk forward, picked up more and more speed, and

soon began to distance itself from the diminutive figure of the taiga recluse standing all alone in the shallow water near the riverbank.

All at once Anastasia rushed out of the water and started running along the bank after the boat.

Her long hair, trailing behind her from the headwind, looked like a comet's tail. She tried to run very fast, probably using up all her remaining strength in an effort to do the impossible — catch up to a speeding motorboat. But even *she* wasn't up to that. The distance between us gradually increased. I started feeling sorry for her fruitless efforts. Wanting to shorten the difficult moments of parting, I pushed down on the gas lever with all my might.

Then the thought flashed through my head that Anastasia might think that I had taken fright once more and was running away.

The motor, now roaring in bursts, lifted the boat's bow out of the water, making it speed forward faster and faster, and increasing the distance between us even more.

As for her... Oh Lord! What was she doing?

Anastasia ripped off the wet skirt that was slowing her down and cast aside her torn clothes. She increased her tempo, and the incredible happened: the distance between her and the boat gradually began to *decrease*.

On the path ahead of her loomed a steep slope, leading to an almost vertical drop-off. Continuing to press the gas lever to the limit, I thought that the incline would stop her in her tracks and bring this difficult episode to a quick end.

But Anastasia continued her headlong rush, occasionally stretching out her arms in front of her, as though using them to sense the space ahead.

Could it be that her eyesight had become so poor that she couldn't see the slope?

Without slowing down in the least, Anastasia ran straight up the slope. Reaching the top, she fell on her knees, threw up her arms toward the sky, turned slightly in my direction, and began shouting something. I could hear her voice over the wild roar of the motor and the noise of the waves. I heard as though in a whisper:

"There are sha-a-allows ahe-e-ad, sha-a-allows, su-u-unken lo-o-ogs!"

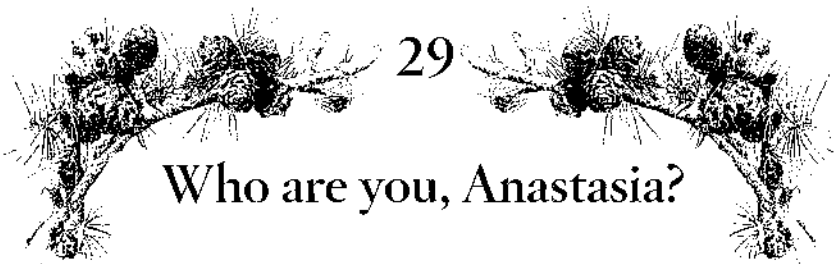

I quickly jerked my head forward, not fully able to grasp what was happening, and gave such a hard pull on the rudder that the lower side of the sharply tilted boat almost submerged to the point of taking on water.

A huge sunken log, one end grounded in a sandbar, the other barely visible on the surface, lightly scraped against the side of the speeding boat. If it had been a direct hit, it would easily have torn a gaping hole in the thin aluminium bottom.

Once out in mid-channel, I turned to glance at the cliff and whispered in the direction of the lonely figure standing on her knees, which was slowly being transformed into a vanishing dot:

“Thank you, Anastasia!”

## Who are you, Anastasia?

The ship was waiting for me at Surgut.<sup>1</sup> The captain and crew were awaiting my instructions. But there was no way I could concentrate my efforts on working out the subsequent itinerary, and ordered the ship's crew to continue standing in port at Surgut, hold parties for the local population to come and have a good time, and keep up the promotion and sales exhibits.

My thoughts were occupied with my experiences with Anastasia. At a local shop I purchased a great deal of popular-science literature, books on extraordinary occurrences and people's unusual abilities, as well as the history of Siberia. I squirreled myself away in my cabin, trying to find in all these books some sort of plausible explanation.

In addition, I wondered whether Anastasia's shouting of "I love you, Vladimir!" in her attempts to help the village girl could have really engendered in her a feeling of love for me.

How is it that mere words, which we often utter without putting a sufficient amount of suitable feeling into them, could have affected Anastasia — in spite of the differences in our ages and views on life and lifestyles?

The popular-science literature gave me no clues. Then I picked up the Bible. And there it was — my answer. At the very outset of the Gospel according to John I read: "In the beginning was the *Word*, and the *Word* was with God, and the *Word* was God."<sup>2</sup>

For the umpteenth time it struck me how laconic and precise were the definitions of this amazing book.

<sup>1</sup>*Surgut* — a city of 270,000 founded in the 16th century on the banks of the River Ob, which shares its proximity to the 60th parallel of latitude with St. Petersburg, Helsinki, Oslo, Churchill (Manitoba) and Whitehorse (Yukon). Surgut is a large centre of oil and gas industry.

<sup>2</sup>John 1: 1 (*Authorised King James Version*).

Immediately a lot of things became clearer in my mind. Anastasia, incapable as she was of trickery or deceit, could not just simply utter meaningless words. I remembered her saying:

“It seemed as though I had forgotten at that moment that it was not enough just to simply utter those words — there definitely had to be behind them feelings, an awareness and trustworthiness of natural information.”<sup>3</sup>

O God!!! How disappointingly her hopes had turned out! Why had she addressed these words to me — here I was no longer in my prime, someone with a family, enslaved to a great many of this world’s temptations, dark and destructive, as she herself said? With her degree of inner purity she deserves someone else entirely. But who could fall in love with her, given such an extraordinary lifestyle, mentality and intellect?

At first glance she comes across as an ordinary girl, albeit extremely beautiful and attractive. But once you get to know her it is as though she is transformed into some kind of creature living way beyond the bounds of the rational.

It may very well be that this impression of mine is due to my imperfect knowledge of things, my insufficient understanding of what constitutes our being. Others might have an entirely different perception of her.

I recalled that even at our parting I did not feel any particular desire to kiss or embrace her. I don’t know whether she would have wanted me to or not. Anyway, what exactly did she want? I recalled her telling me of her dreams. What a strange philosophical bent her love had: organise a fellowship of entrepreneurs to help them? Write a book passing along her advice to people? Carry people across the dark forces’ window of time?

And she believes it all! She is convinced that that’s how it will all turn out. Oh, I was a good one — I promised I would try and organise a fellowship of entrepreneurs and write a book. Now she’ll probably be having even more fantastic dreams about that. She might have thought up something simpler, more realistic.

<sup>3</sup>See Chapter 24: “A strange girl” above.

An inexplicable sense of pity for Anastasia arose in my heart. I could imagine her sitting there in her forest waiting and dreaming that everything would work out that way in broad daylight. Fine, if she were simply content to wait and dream. But, who knows, she may go beyond that and start taking steps on her own, focusing that ray of goodness of hers, expending the colossal energy of her heart and believing in the impossible. And even though she showed me what she could do with her ray and attempted to explain to me how it works, somehow my consciousness still can't accept it as something real. Judge for yourselves, dear readers — in her own words, she aims her ray at a person, illuminates this person, this Man, with an invisible light, and imparts to him her feelings and aspirations toward goodness and light.

“No, no, do not just think that I am interfering with a person's mental make-up, that I am violating his heart and mind,” I remember her telling me. “Man is free — people are free — to accept or reject my advice. Only to the degree that they themselves find it to their liking, something close to their heart, will they be able to accept these feelings as their own. Then they will become lighter and brighter in their appearance too, and your diseases will leave them, either partially or completely. My grandfather and great-grandfather can do this, and I have always been able to — Great-Grandfather taught me, when he played with me in my childhood. But now my ray has become many times stronger than Grandfather's and Great-Grandfather's, because in me has been born that extraordinary feeling called love. It is so bright and clear, and even a little fiery. There is such a lot of it, and I want to share it.”<sup>4</sup>

“With whom, Anastasia?” I had asked.

“With you, with others, with anyone who can accept it. I want everyone to experience good. When you begin to do what I have dreamt of, I shall bring many of these people to see you, and together you...”

Remembering all this, picturing her in my mind, I suddenly realised that I couldn't help but carry out — at least *try* to carry out her

<sup>4</sup>See Chapter 27: “Across the dark forces' window of time” above.

wishes. If I didn't, I would be tormented with doubt for the rest of my life, along with the feeling that I had betrayed Anastasia and her dream. Perhaps her dream wasn't all that realistic, but it was something she passionately desired.

I made my decision, and the ship headed full steam for Novosibirsk.

The unloading and disassembly of the exhibit equipment I left to my firm's executive director. After somehow managing to explain the situation to my wife, I set out for Moscow.

I set out for Moscow to make — or at least try to make — Anastasia's dream come true.

*To be continued...*

## Author's message to readers

Dear readers, thank you. Thank you all who have responded to Anastasia with kindness and understanding. Indeed, I could not imagine that she would actually be capable of arousing so many feelings and emotions. I would so like to answer all your letters individually, but for the time being at least, this is physically impossible. The last lines of this book were penned in the Caucasus, where I have joined local archaeologists and enthusiasts in investigating the dolmens<sup>1</sup> Anastasia spoke about. And we found them. Saw them with our own eyes. Took pictures. These are ancient stone constructions, ten thousand years old. They have functional significance even for people living today.

They are located in the south, in the mountains of the Caucasus, not far from the cities of Novorossiysk, Gelendzhik and Tuapse.<sup>2</sup> They are the precursors of the pyramids of Egypt. But the local residents didn't pay any attention to the dolmens, not appreciating their purpose. Even though the dolmens were classified as historic monuments, they were ransacked by the local population. Their huge stones were carted off, and even used to build a church in the

<sup>1</sup> *dolmen* — a megalithic tomb (also known as a *portal tomb*) built of heavy upright stones (each weighing between 5,000 and 13,000 kg) with an even larger flat one on top and a small sealed entry portal at the front. While this specific type of tomb construction is unique to the north-western Caucasus, the term *dolmen* is also applied to megalithic configurations in Britain, Ireland, the Mediterranean and Northern Europe.

<sup>2</sup> *Novorossiysk* — port on the Black Sea in the Krasnodar region, with a population of just over 200,000, founded after the Russo-Turkish War of 1828–29; *Gelendzhik* — a resort town on the Black Sea about 45 km south-east of Novorossiysk, dating from the 1840s; *Tuapse* — a small port on the Black Sea just a few kilometres south-east of Gelendzhik, mentioned as early as the Byzantine chronicles of the 6th century B.C. (in the Greek variant: *Topsida*), although evidence of human life here is said to date back thousands of years.

settlement of Beregovoc,<sup>3</sup> which to me is nothing short of sheer blasphemy. Perhaps it was for this reason that forty priests were cruelly tortured to death in the Kuban region<sup>4</sup> during the revolutionary period of Russian history — one priest for each dolmen stone. People carried these stones off, not fully appreciating their significance.

Now that Anastasia has spoken about them, all this will change. It is amazing, but a fact: much of what she said has already been confirmed.

And even the fluctuations she talked about — the background radiation of the Earth fluctuating near the dolmens — have been detected and reported on by local health officials. Out of all the things Anastasia told or showed to me, I have decided to publish only what has been directly or indirectly corroborated by scientific experiments, material objects or historical facts.

Though I am starting to think that we'd better simply listen some more with our hearts. It would be quicker that way. The other method of confirmation takes up an awful lot of time. As with the dolmens, for example.

It took me pretty much half a year to collect historical data and trek through the Caucasus mountains to see the dolmens with my own eyes, and take pictures of them. I was, finally, convinced. But at the end of the day it turns out that if I'd simply believed right off, I could have used this half-year to greater advantage. It turns out that a great deal depends on one's ability to believe.

I did get a chance to visit Anastasia a second time. I got a chance to see the son she bore, and how she relates to him. A most unusual relationship. In addition, I had the opportunity of finding out from the people who ferried me to the spot on the riverbank about the various attempts on the part of both individuals and groups to penetrate Anastasia's domain and find her dwelling-place for themselves. Many, no doubt, wish to see and talk with her out of

<sup>3</sup>*Beregovoe* — a small outpost (*stanitsa*) located in a valley 5 km inland from the coast, 30 km to the south-east of Gelendzhik.

<sup>4</sup>*Kuban region* — the area of the Krasnodar region that forms the basin of the Kuban River in the north-western Caucasus.

well-meaning motives. But the people who ferried me also told me about a group of scoundrels who set up camp on the riverbank, sent out a helicopter to take pictures of the area, and tried to capture her. She was obliged to emerge from the taiga to talk with them and then send them packing, despite their attempts to restrain her physically. I shall tell all about that in the second book.<sup>5</sup>

I only ask people not to touch her, to leave her alone. Now, after the experience with these rotters, local hunters have taken it upon themselves to shoot strangers on sight. That's bad, of course. But I say, let them shoot. It turns out the local hunters knew about her existence long before I came along. Only they never told anyone. And they never encroached upon her territory themselves. The locals talked with her only when she came out to them. I started having pangs of conscience for having told about her without hiding the location, especially in the first edition of the book, and for not changing the names of people I mentioned, or even the name of the ship.

Anastasia calmed my fears a little when she said:

"Never mind. After all, I was the one who wanted to reveal myself to everybody."

But I'm wiser now. I shouldn't have mentioned specific names. And in future I shall try to be more circumspect.

But still I want to emphasise: *please don't disturb her*. She herself will tell everything she feels is necessary to reveal. We must not do to her what we have already done to one Siberian family — the Lykovs, described by Vasily Peskov in his *Komsomolskaya Pravda* article "Dead-end in the taiga". As far as I know, the only member of this family remaining is Agafia, who is dying of cancer, left helpless, taken out the taiga.<sup>6</sup> A real tragedy, how things have turned out. The Lykov family lived in the taiga for many years, but died out after contact with our 'enlightened' civilisation. Which way of life, then, is the "real dead-end"?

<sup>5</sup> This actually ended up being described in Book 3, rather than Book 2.

<sup>6</sup> *Agafia Lykova* — For the story of the Lykovs, see footnote 3 in Chapter 2: "Encounter". Since this book was published, Agafia's health has improved and she has returned to her original home, where she was recently visited by the original *Komsomolskaya Pravda* correspondent, Vasily Peskov.

I can understand why so many people want to contact Anastasia. But it is impossible for her to meet and talk with everyone. And, after all, Anastasia does have a young child.

There is an 'Anastasia' club or community organisation operating in Gelendzhik, headed by Valentina Larionova,<sup>7</sup> an ethnographer of thirty years' experience. She has organised a group of local ethnographers, along with people from a variety of professions, who are sensitive to the spiritual legacy of their region and its ecological problems. This was one of the first clubs to be organised by readers of the *Anastasia* book.<sup>8</sup>

The members of the Gelendzhik club have made what is to my mind a remarkable discovery. On the basis of information provided by Anastasia, they have restored to Russia — and, quite possibly, to the world — the forgotten shrines of our ancestors, and are now receiving people wishing to visit them and conducting tours to the places mentioned by Anastasia.

About Gelendzhik, for example, Anastasia had this to say: "This city could have been richer than Jerusalem or Rome, but because of its rulers' neglect of its primal origins this city is dying."

I believe this and other cities and settlements will be restored not by 'the rulers of this world' but by the hearts of ordinary people aroused by Anastasia.

And there's more. Anastasia is now the subject of conversation among many healers, wizards and preachers. "We are like ants compared to her," said the chairman of the Healers' Foundation Vladimir Mironov.<sup>9</sup>

<sup>7</sup>*Valentina Terentevna Larionova* — an ethnographer (and at one time a member of the Gelendzhik city council) who not only has taken special interest in the dolmens since the first publication of this book in Russian, but is one of the many who can bear personal testimony to the healing value of Anastasia's advice as set forth herein. More will be said about Ms Larionova in Book 2.

<sup>8</sup>*Anastasia* clubs have spread to many towns and cities in Russia and abroad, and since then have grown into a powerful social movement.

<sup>9</sup>*Vladimir Andreevich Mironov* — see footnote 6 in Chapter 27: "Across the dark forces' window of time".

I have seen a video recording of a speech given in front of a large audience by the leader of a religious denomination, in which he referred to Anastasia as “the ideal of womanhood to which we should aspire”. He added: “Her ability to draw inferences and conclusions and level of intellect far surpasses that of our population today.” This video is now being copied and distributed.

Much the same type of reaction is coming from people with extraordinary abilities living in India.

Still another religious leader said that while Anastasia is currently studying our life, she has not yet managed, unfortunately, to meet up with a real man. Later I was told that there is one chap very much like Anastasia living in Australia, and that the two should meet.

I, of course, do not have any pretensions to being a “real man”, far from it, even in my thinking. But perhaps it is still premature to think in terms of arranging a marriage? And it isn’t right to idealise her to such an extent.

It is this idealisation of Anastasia that has prevented a timely recognition of what she has done. Just think calmly and rationally about what has happened. A child has been born. And I have held him in my arms, I have heard his little heart beating. There is a child. He is growing up. But he has no official birth certificate. He will grow up and want to go somewhere — maybe abroad, for instance — maybe he’ll want to see the world. Who will issue him a passport to travel abroad? What country is he a citizen of? What shall we tell him then? “Oh well, you know, somehow we haven’t thought about any documents for you. You just stay here in the taiga.”

I checked with a legal firm on the question of a birth certificate. The lawyer said Anastasia would have had to give birth in a hospital — then, even if she didn’t have a medical record, they could have at least issued her a memo regarding the birth, which she could have used to obtain a proper birth certificate.

“The other alternative,” said the lawyer, “would be for her to abandon her child to an orphanage. They would issue him documents there. Orphanages can do that. And then have him adopted.” But somehow this alternative was not at all appealing. And I doubt that Anastasia would ever agree. So what to do? When I talked with her about a birth certificate, she responded:

"Of course, it would be fine if he had one, just like everyone else. I suppose I let that slip by without really thinking about it. But do not be concerned, everything will still work out."

Note how she said: "I suppose I let that slip by without really thinking about it." I wonder how many other things she has let 'slip by' — things which could be taken care of at a future stage. That means we can't fully count on everything working out exactly the way she said. I think we need to examine it all very carefully and at some point make adjustments to adapt it to *our* reality.

On another point, I hear talk about what a poor entrepreneur I am — not being able to print enough copies to keep pace with the demand!

Indeed. I really can't at the moment. I have refused to sell exclusive rights to the book to any one publisher. I certainly don't want anyone to have exclusive control over the manuscript and put out whatever print-runs they fancy.

The publishers I talked with gave me this: "...The style needs to be edited and made more literary. In its present form it is only Anastasia's explanations and monologues that make the book worth anything at all."

My language is seen as "stilted". They suggest I think up a catchier title — something like "Dead-end in the taiga", "The healer-girl", or even "The girl from outer space". But I do not consider Anastasia to be from outer space, nor do I consider her to be at a dead-end in the taiga. She herself, after all, simply wants to be Man, a normal human being. Of course I can always exercise my author's privilege even in confrontation with publishing houses, but a lot of time would be wasted on that.

I have been using the proceeds of the initial print-run to pay for subsequent runs in the print-shop,<sup>10</sup> by-passing the publishing houses altogether. So things will even out in the long run. If someone is interested in assisting along this line to our mutual advantage, I'd be happy to listen, but without the condition of exclusive rights.

<sup>10</sup>A reference to Moscow Printshop Number Eleven (see the end of Chapter 27: "Across the dark forces' window of time").

I should also say a few words about a certain situation involving my relationship with my family. The Moscow group now looking after distribution of the book has received a number of letters and telephone calls about this. There have been complaints that calls and letters to my home address indicated in the book have not been met with any intelligible response.

I left Novosibirsk, as I mentioned, directly upon my return from the expedition. Subsequent events will be described in my next book.

Now I have learnt that my firm is falling apart. And there has been nobody there to reply to enquiries. I'll see to it and bring it back to life once I finish my writing. As for my wife, I have only spoken to her on the telephone. It was a deeply personal conversation. However, I beg my correspondents' forgiveness for not responding right off and for my delay in sending out copies of the books.

At present my daughter Polina is there. I have met with her. She will fix everything up, and in future there should be no repetition of the trouble. I have had long talks with my daughter and she understands everything. A little later I plan to get a mobile telephone and then I shall be able to chat more personally.

I shall definitely respond to all the letters coming in and maybe even publish some of them. They are worth publishing. There are letters about Russia, about love, about bright aspirations. They show the same energy Elena Ivanovna Roerich<sup>11</sup> talks about in her book *Living ethics*. Thank you for these letters. But one letter in particular, a letter from a thirteen-year-old girl from Kolomna<sup>12</sup> named Nastia<sup>13</sup> deserves to be answered right here and now, along with other girls who have written and will be writing. Here is her letter:

*Dear Vladimir Megre,*

*My name is Nastia Shapkina, from the city of Kolomna. I am 13 years old, and I am in Grade 7 at school. I read your book "The Ringing Cedar:*

<sup>11</sup>*Elena Ivanovna Roerich* — see footnote 18 in Chapter 1.

<sup>12</sup>*Kolomna* — a city 100 km south-east of Moscow, where the Moskva River flows into the Oka.

<sup>13</sup>*Nastia* — a diminutive form of the name *Anastasia* (a common girl's name in modern Russian).

Anastasia". I really, really liked it. Not just 'liked' — that's not the best word here (it sounds too dry) — after reading the book I got a warm and happy feeling in my heart. They told me a lot about it in hospital — I've got a serious illness, and I have to go to hospital every two months, and I really want to get well. And your book was like a ray of light amidst all this darkness and vulgarity. I really want to meet with you, and especially with Anastasia. Could you help me?

Right now you're probably thinking: "How brash and impolite she is!", but that's not true. You see, that's the way we all are — until we see with our own eyes, we don't believe anyone. I don't even know whether to believe or not (Mama doesn't believe, and no one around here believes), it is so fantastic. And yet, why not? — to be honest, I believed, I really did, but all my friends keep saying "Fairy tale, fairy tale!" I'm confused. Please help me. I think you are a very brave man. You have written the truth — maybe you haven't yet told the whole story, but you've told a good part of it, that's for certain.

What happened between you and Anastasia — the way you offended her, and then it turned out she wasn't to blame — all sorts of things — yet still, I think, you shouldn't offend a person that way, even if, let's say, she's abnormal or a fake (but that's strictly my personal opinion — you may not agree with it).

Vladimir (sorry, I don't know your patronymic<sup>14</sup>), did Anastasia have a child or not, and if she did, is it a boy or a girl, and what did your wife think of that?

And my last question: you wrote that Anastasia's grandfather and great-grandfather rubbed the piece of cedar with their fingers, but you never said that Anastasia did this too. Did she really not do it, or did you just happen to leave it out?

Please answer me (I know you get whole bagfuls of letters, but please, just a few lines).

Good-bye!!!

Anastasia

<sup>14</sup>patronymic — see footnote 9 in Chapter 1. A child writing to an adult would normally use the combination of first name *plus* patronymic in addressing the adult.

Dear Nastia,

You will most certainly be a healthy, spiritually strong and pretty girl. I shall ask Anastasia the next time I visit her to help you. Yes, Anastasia has a unique approach to healing. She looks upon illness as a conversation between God and Man. An illness can be a warning or a deliverance from something even more terrible, and she showed me examples of this — I'll be telling about them later in a new book. I shall try and persuade her. Though she's pretty stubborn about sticking to her views. She says it's only Man himself, through his spirit and conscious awareness, who can cure anything without negative side-effects, while outside interference is often harmful.

Nastia, judging by your reaction to the book, you seem to be already healthier spiritually than a lot of people, and that's the main thing. I'm beginning to realise that that's really the case. As far as whether people around you believe or don't believe in Anastasia's existence, I'll answer you by quoting what someone said at one of my get-togethers with readers. When that question was put to me for the umpteenth time, he got up and declared in a loud voice: "Look, people! You're holding in your hands an impulse of inspiration, a thought bursting forth, a call to action, an idea! It's right there in your hands. What more do you want? A sample of her blood, urine and feces for analysis? Is there no way you can do without that? After all, the greatest and most important proof is already sitting right there in your hands!"

You see, Nastia, I've come to the realisation that Anastasia is an uncomfortable concept for many, and they'd rather she didn't exist at all. After all, she's breaking down a whole lot of technocratic theories, conventions and priorities. Against the background of purity emanating from her we suddenly start to become aware of our own filth, and that's not always what we want. Especially when we like to think of ourselves as so good and smart and conscientious, no matter what we do.

Anastasia said: "I exist for those for whom I exist."<sup>15</sup>

I didn't think there was anything special hidden in this statement. Anyone who wants to believe can believe. If they don't want to believe, they don't have to. However, I was mistaken. Some people read and nothing happens with them. Others... They find a great feeling of love, kindness and

<sup>15</sup> I exist for those for whom I exist — see Chapter 26: "Dreams — creating the future" above.

*inspiration welling up in their heart. And, like a shower of spring rain, the world feels this grand poetry of love, a poetry of the heart which is capable of perceiving the light, magnifying it and sharing it with others. These are the people who feel her and know that she does exist.*

*As for my wife, Nastia, she reacted the way most women probably would. We've only spoken on the telephone. But my daughter Polina is ready to help me. She understands everything, and brings me letters. She was the one who brought me yours.*

*You say it was wrong on my part to offend Anastasia that way. Of course it's wrong. I would never do anything like that again. The same people can be different at different times.*

*Our son was born. He's such a strong little lad. Smiles all the time. And Anastasia is happy and enjoying her life.*

*My best to you, and to your Mama.*

*I wish you joy and happiness in your life. You deserve it.*

*You're a strong girl. And you can make your friends happier too, more consciously aware of things.*

A word about religious believers — their enquiries and questions.

I have spoken about Anastasia with members of the clergy from our Russian Orthodox Church, as well as with representatives of various denominations. Some of them are quite favourably disposed to her. Others say, with some apprehension, that she's most likely a heathen — she could break down people's faith in religious doctrine, or resurrect idolatry or something nobody knows about yet — and it's wrong for her not to be baptised.

Her attitude to religion will be discussed in greater detail in the second book, and it is really quite extraordinary. I'll just mention a few points here.

"You see," she told me, "it is a good thing that they are already talking about the soul, about the good, the light. Who is the most worthy? I am unable to say."

“But what about the sects?” I countered. “The sects that have been banned. Now everyone says that they took the wrong path. Their actions were wrong.”

“Do you think so? Then think of this: a group of soldiers is out on patrol. One of them in the lead has broken off or gone to one side and gets blown up by a mine. Yes, you can say: ‘He took the wrong path, his actions were wrong.’ But you can also say that these same actions saved other people’s lives.”

“In any case, Anastasia, which religion do you think is closest to you, the one most comprehensible?”

“Vladimir, let us say you had never seen your parents or talked with them. You would probably be happy to hear anyone talk about them. Even if they each talked about them a little differently. Where the truth lies, you can judge for yourself after reflecting on everything inside you. After all, you are their offspring, you are your parents’ child. As for me, though, I do not need any intermediaries.”

Well, okay. That’s enough about doubts. There are some rather pleasant phenomena that Anastasia has somehow managed to bring about in our reality.

I was especially sceptical that she would actually be able to infuse something into the text of the book. These are her own ‘combinations’<sup>16</sup> and rhythms, as she said, coming from the depths of eternity. But after the first edition came out, in a run of only four thousand copies, something incredible happened. Many people were so moved by feelings and emotions that poetic verses began flooding in all by themselves. There are a whole lot of them now. These are just ordinary people, not professional poets, who have been writing.

<sup>16</sup>*‘combinations’* — see Chapter 27: “Across the dark forces’ window of time” above.

There are enough poems to date to put out a whole separate volume of them.<sup>17</sup>

In the Moscow group devoted to studying Anastasia phenomenon, they say that nowhere in the world, in the past or present, has there ever been a person or figure capable of provoking such a huge poetic outpouring in so short a time.

Another surprising thing is that while in the first book there is almost nothing said about *faith*, or *Russia*, the majority of the readers' poems speak directly about faith and Russia, and bright aspirations. And it seems to me they do this most inspiringly. And this had a calming effect on my thought about Anastasia's influence. After all, the Bible tells us how to distinguish the bad from the good, the false prophet from the bearer of truth — it says "By their fruits ye shall know them."<sup>18</sup>

And if Anastasia's aspirations and her combinations bring forth such radiant poetic feelings, those are undoubtedly good fruits.

And I even thought: If this goes on much longer she's going to turn half the population of Russia into poets, enamoured of their Motherland, the Earth, and all Nature around them.

I sorted the poems into several categories: anonymous poems, signed poems, poems by soldiers and poems by government officials. And do you know what this kind of sorting shows?

It shows that there is absolutely no point in dividing society up the way we sometimes do, and blaming our troubles on certain categories of people — like entrepreneurs, the military, government officials. Their hearts all beat in exactly the same way, and across all these categories there are people sincerely striving for the light, for the good.

As for our troubles... They're something we probably all produce by ourselves.

In this edition of the book I have decided to publish one poem from each category.

<sup>17</sup>In the meantime, a 544-page volume of readers' poetry, art and letters has been published in Russian, under the title: *Vluche Anastasii zvuchit dusha Rossii. Narodnaya kniga* (The soul of Russia sings in Anastasia's ray: A people's book).

<sup>18</sup>Matth. 7: 20 (*Authorised King James Version*).

1. ANASTASIA'S RAY

Into our busy, bustling life  
Of lonely souls in crowds immersed,  
From the vast Universe of Space  
A Ray broke through to the Earth.

It glistened brighter than the light  
Of the Sun or of gold of purest hue:  
“My people! Greetings! Here I am  
As your brother, speaking to you.

“I have been sent to you by love!  
Sent to you by the ages’ call.  
Come to me and take of mine —  
I give myself to all.

“Wait, there, my friend, where are you going?  
Why is there sadness on your face?  
You’ve been forsaken... Yes, I know...  
I know all time and space.

“Dear people! What are you thinking, people?  
The world is beautiful, no end.  
I can do everything, dear people,  
Because I am your friend!”

But the crowd only surged against the Ray,  
Rushing along on their fashion-shod feet,  
And kept on shoving it away  
Into a puddle in the street.

The Ray dipped into the dirty slush...  
It felt no offence, and shed no tear.  
But all at once the slush burst forth  
In a water-spring crystal-clear.

And then a little boy came running —  
And fearing no punishment therefrom,  
He leapt feet first into the puddle,  
And drew on the Ray's sweet balm.

His Mama got angry with despair  
And wildly waved her arms in dread,  
But Pushkin's<sup>19</sup> statue on the square  
Suddenly came to life and said:

"Now wait! You must not spank the boy!  
I did not act just out of fun!  
Pay heed to him — your hearts will be  
Illumined by your son!

"Come near and feel his moistened hands,  
Come close and touch your blessed son,  
And you will find there in his palms  
All that the poets have sung —

"All they've created through the ages —  
Reflected there within the heart."

"Mama! Mamochka! My Mama!"  
The little boy hugged his mum.

"Mama, can you hear the singing,  
Hear the song of happy birds?  
You know, dear Mama, yes, you know it.  
I shall write you a verse.

"And now you will be happy, Mama.  
For that is what I want for you.

<sup>19</sup>*Alexander Sergeevich Pushkin* (1799–1937) — Russia's best-loved poet, considered to be 'the father of Russian literature', to whom many a Russian poet since then acknowledges a debt of gratitude. His influence on the Russian literary language is comparable to Shakespeare's on English. He is immortalised in portraits and statues in hundreds of Russian towns and cities.

You see, I hear it, yes I hear it...  
I think I can do it, too.”

Into our busy, bustling life  
Of lonely souls in crowds immersed,  
From the vast Universe of Space  
A Ray broke through to the Earth.

*Author unknown*

## 2. ANASTASIA (ANAS)

*(on the image and heroine of V. Megre's book Anastasia)*

In Russia Megre wrote this brand new idea  
In book publications and newspaper lines,  
*The Ringing Cedar* or *Ana-sta-si-ya*,<sup>20</sup>  
Which drew attention to himself at the same time.

It's not the first time that this name I've heard spoken,  
And yet it is still not that common a name:  
Yes, *Ana-sta-si-ya* — so music-evoking,  
Or *Stas-ya*, or *Stacie* — they all mean the same.  
The Stacies I know live in cities of shadows,  
Their character simple, of good honest worth  
But here in the taiga, in a cedar-ringed meadow,  
I glimpse a fair Goddess — the fairest on Earth.

<sup>20</sup> *Ana-sta-SI-ya* — see footnote 1 in Chapter 9: “Who lights a new star?”. A diminutive form would be *STAS ya* (*Stacie* in English). In this poem she is also called *Anas* (stress on second syllable).

Anas — a Siberian of Nature's creation —  
In harmony with her environment lives.  
Her conscious awareness, her love, inspiration,  
To animals, plants, all around her she gives.

Her feelings and thoughts are in tune with the living,  
The mind of the Cosmos is simple and clear.  
In all of our wide world, believe me, there's nothing  
Escaping her knowledge of stars or light-years.

Clairvoyant, Anas cures disease at all stages,  
The great ringing cedar enhances her reach.  
She draws upon cultures of all lands and ages  
For logic and meaning and richness of speech.

An analyst practising Nature's ecology,  
Her meaning of life is in tune with the world.  
Intuitive grasper of highest astrology,  
There's nothing impossible for this precious girl.

*N. Mikhailov, Moscow*

### 3. THE KIND WIZARD-GIRL

Gelendzhik's  
Dolmens.  
The years... wind back...  
Time has opened a window, just a crack,  
For the stretches of infinity  
To be understood, evaluated,  
Felt through and through, recognised as fact.  
Stepping over my threshold-limit

Through the light of good in the blue expanses way up high,  
 I come to you, Anastasia,  
 Born again  
 In the twinkling of an eye!  
 You are a flower of Consciousness and Will,  
 Your might from cedar-trees and forest leaves,  
 And from such charming, mystical, magical thoughts  
 That I'm ready to be one who simply believes.  
 Every beast and insect, raven and jay,  
 Every serpent, blade of grass and hay,  
 You wizard-girl, kind maven of the way...  
 So many aroused by what you have to say...  
 Your thoughts, ideas, even stronger now today,  
 Shed light on all the Earth with their bright Ray!

*O.T. Vialshina, Gelendzhik*

#### 4. ANASTASIA'S LOVE

*To the woman of my beloved*

I shall pray for you, for you are loved,  
 The woman of my own beloved,  
 As his heart's desire, you will be blest,  
 You will be blest, as I wished for you the best.

Keep him safe when he is strong, or weak, or brave,  
 Keep him safe when he may irrationally behave,  
 Keep him, keep my beloved safe and sweet,  
 My days, it seems, have flashed by in a beat,  
 Their crazy dance has burnt me with its heat,

My years have started passing all too fleet,  
My son has started walking on his feet.

“Your Papa is the very best, my son,  
The very best!  
It is I who did not manage to open up to *him*,  
In life, my son, that can happen on a whim,  
Another woman takes his fancy and steps in.”

You are both caressed by the gentle breeze of spring  
Which tells me in the whisper of the leaves  
How he feels the warmth,  
How he feels the joy  
Both from your hands  
And from your lips.  
I shall not dare distract him  
From the warmth and tenderness of your eyes.

But should that not be enough,  
I shall send you  
A ray of sunlight  
To relieve you of your grief.

The years will fly past  
Just like a stormy night.  
Life will seem to you like an empty room.  
I, as a fading star, falling to Earth from above,  
Shall chase from your soul the night-time gloom.  
And I shall be able to pray, please do believe,  
So that you, by the light-ray illumed,  
Need feel no withering love,  
I shall be able to pray, for you are loved,  
The woman of my own beloved.

*Author unknown*

## 5. TO ANASTASIA

To a woman I dedicate this verse.  
 I write as an air force flyer.  
 A poet I could never be.  
 But my heart flared true.  
 My breast with fire did burst.  
 Anastasia!  
 Do not think me brash.  
 I can't stop loving you.  
 Your image, a touching pulse for good,  
 Pulsed louder than any engine ever could.  
 My engine failed... Visibility nil...  
 An explosion, in the twinkling of an eye...  
 But then your Ray of Light,  
 Your image, flashed and blessed,  
 On fragile wings it kept me in flight.  
 A single moment it took.  
 Only one. I wished — as I looked until  
 My landing gear touched safely down —  
 That I were a blade of grass upon the ground,  
 By your fingers tenderly caressed.

*Author unknown*

## 6. THE CEDAR FOREST RINGS AND CHIMES

To Vladimir Megre

Ah, the fragrance of Siberian cedars!  
 The smell of resin very strong  
 The taiga vast, almost half a globe sweeping,  
 Stretching to one grand endless song.

The cedars keep peace since times of old,  
Maintaining the energy of the Earth.  
To brighten the pulse-beat of the soul  
They ring for all mankind these words:

“Here dwells among us Anastasia  
In spiritual purity’s forest art.  
She watches over Mother Russia  
Through people’s holiness of heart.

“She sends out thoughts, and calls to action,  
To the highway leading to heavenly light —  
The essence of Veles, Krishna, Rama,  
Shiva, Buddha, Allah, Christ.

“These holy thoughts, the Star-bright Logos —  
Old Russian purity their theme —  
Are flying like snowstorms, calling the ages  
To penetrate to the heart of the dream.

“With me are forces of light, unchanging,  
I exist for all who walk and plod.  
I give to all a bright awakening  
Who do not turn their back on God.

“Bow before Holy Russia’s leading,  
Bow to her Gods, our creators above —  
In the never-ceasing ring of the cedars —  
Which deify the light as love.

“So, Russians, turn! and with your soul  
Pay heed to all that heaven gives:  
On the rivers of Lena, Yana and Ob  
God’s Temple of all the Russias lives.

“Step out on the upward road to the light!  
The Cosmic Self-Programming path discern!

We look to your goals, as you answer aright,  
So Russia may to her Gods return.

“Preserver of the Cosmic energy of Nature,  
The ringing cedar waits for the one  
Who loves his Russia as God the Saviour,  
Whose heart its course for others has run.

“Then live in peace and love for Nature,  
Brook no dishonesty, live aright,  
Draw wisdom’s radiance from the people’s favour,  
And show to others the pathway to light!

“Such people are called by Anastasia  
To accept my energy’s gentle load,  
So that the bright forces’ attentive idea  
May help those climbing up the road.”

The cedars call everyone to hope for the prize  
On the path to divinity, to beauty’s gleam:  
“Awaken, my people! Open your eyes!  
Reach out to others, to the heart of the dream!”

The cosmic expanse opens wide its doors  
To awakened pilgrims on their climb.  
To those united on their upward course  
The whole cedar forest rings and chimes.

*Ya. N. Koltunov*

*President of the Cosmos Society*

*of the Russian Space Exploration Committee, Moscow*

7. TWO GODDESSES

Do not come here to see my shame  
Or think with mute reproach to bless:  
Nor hand nor secret stare can claim  
To lift the cross from my poor chest.

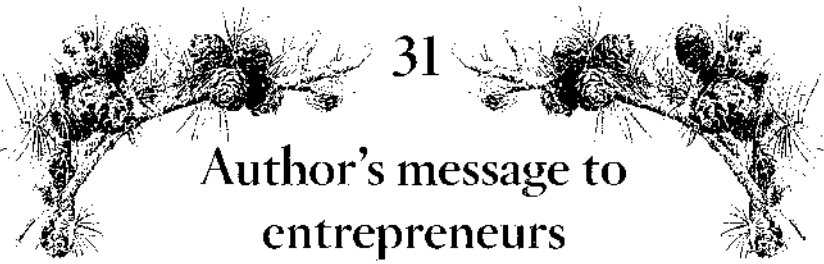

No earth-bound cry will scare away  
The soul of heavenly confusion.  
It will not blight the holy ray  
Of mind and feeling's interfusion.  
The world is full of sun and storm,  
Of finger-snaps and love's fire too,  
Here ashes, flame, blood, tears are born  
Where mind is false, but feelings true!

Wild honey becomes bitter, surely —  
No sweetness from the wormwood's bloom  
Pretenders will not grasp the worldly,  
The afterlife the wise will doom.

All stories, letters, poems, flowers,  
Will waken to the heavenly blue!  
I see two Goddesses, two powers:  
These are my Poetry and You!

Verse should not be debased as phantom,  
It will not see a final breath!  
You are immortal, we are random  
In poems, just like birth and death.

*G. Pautov, physicist*  
*Krasnodar*

A decorative arch of pine branches with pine cones and needles frames the page number and title.

## Author's message to entrepreneurs

The author's attempt to organise a fellowship of Russian entrepreneurs in accord with certain spiritual principles has revealed an evident desire for such a coming together on the part of many entrepreneurs. Notices were sent out all over Moscow. (A wider distribution throughout Russia would have entailed a substantial expenditure.) The lack of funding and, consequently, the ultimate failure of the project, led to nowhere. Anastasia's plans began to seem unrealisable.

During my second visit with her, however, she told me there were no dead-end situations, only that I should not have altered the sequence she had prescribed. The book should have come first, which would have spread the right information and prevented the organisational principles from being tied to monetary concerns.

This second visit also settled one other question. An organisational task force had been set up in Moscow to spearhead the formation of the fellowship, but we could not come to a decision on either the selection criteria for new members or how the selection committee should be constituted.

Anastasia stated the following:

"One's heartfelt impulsion and one's aspiration to strive for such a fellowship are the principal criteria for eligibility. Nobody has the right to refuse access to anyone manifesting such qualities. One's past record is irrelevant. For the one who was most worthy yesterday may well turn out to be the least worthy today, and vice-versa. Subsequently, when you get together to determine the eligibility criteria according to the impulses of your hearts, you will also be able to work out the specific terms on which applicants are accepted into the fellowship."

The blame for altering the sequence prescribed by Anastasia falls, of course, on me. To all those Moscow entrepreneurs who wanted to

join the fellowship I hereby offer my sincere apologies — first, for postponing the initial conference to a later date and, secondly, for the consequent drain on your time and finances.

The task force was indeed made up of dedicated entrepreneurs. Many of you had limited time to devote to the project. But you found the time, or stole it from something else, you worked on drafting documents and the principles for the future society. The secretariat too, similarly made up of Muscovites, was fuelled by enthusiasm. In addition, Moscow students put together a magnificent computer version of the future society's catalogue. It made it all the more painful for me to look back, once I realised my mistake, and see the hopelessness of the situation. The only way out was to muster the strength needed to correct the mistake and write the book. Without a word of explanation to anyone (explanations seemed impossible at that point!) I went off by myself and began to write.

It is only now that the book exists and is spreading more and more right across Russia and starting to fulfil the function specified for it by Anastasia that I can talk about the future. I am more confident now about the possibility of seeing such a society actually come into being.

The reaction to the book indicates that it will attract a sufficient number of entrepreneurs from the various regions of the country. The conference will take place. There will be a fellowship!

In acting on my own, I may well have offended some of those who worked alongside me in Moscow.

I should particularly like to single out three Moscow students<sup>1</sup> who gave their all to assisting and participating in the secretariat of the future society. They were the ones who keyboarded the text of the first book on their computers, and kept on keyboarding even after their exam session started. I wasn't in a position to compensate them for their work. They knew this, understood the situation, but still went on keyboarding. Others too would have probably reacted

<sup>1</sup>*three Moscow students* — see footnote 7 in Chapter 27: "Across the dark forces' window of time".

with understanding, had they known the whole picture. If that applies to any of you, I apologise for my lack of trust in you and for my temporary disappearance.

Of course there is a great deal more I need to learn and understand, including the degree to which Anastasia herself has been involved in all this. I'd like to know just how this reclusive young woman from the Siberian taiga managed not only to draw up plans like these but also to have them implemented in real life. It's not that she is predicting the future. She is literally creating the future, she struggles to bring it about and feels the struggle in her heart. In fact, it is something on the order of a master business plan which she has formulated in her head, keeping track of all its details down to the nuances of psychological probabilities. She is working her hardest to make it come about, and calling on us to participate in its realisation.

But we are not simply 'blind mice', but normal, professionally experienced adults, and we must understand that a single individual, especially one still relatively new to entrepreneurial practice, cannot foresee everything ahead of time.

Anastasia affirms:

"Just the organisation alone, the spiritual — yes, *spiritual* — contact among such people as entrepreneurs, is a salutary reaction of cosmic proportions. There is no need to dictate what will happen next. What will happen next will point out its own path and set its priorities in the occurrences of daily life."

What kind of reaction is this? What path is she alluding to?

Even though her aspiration to the light can be felt intuitively, nevertheless, we must make sense of everything ourselves and work out the details.

I wish you all happiness and success!

## Dreams coming true

### *Editor's Afterword*

In the summer of 1996 a tired-looking man was standing on a street corner in downtown Moscow, with a self-published 96-page volume in his hands, trying to sell it to passers-by. The book's title was *The Ringing Cedar. Anastasia*, and the man called himself Vladimir Megre.

A woman stopped by, looked at the inconspicuous cover, talked to the author and bought a copy. Next day she was back — smiling, her eyes shining — to pick up an entire pack, to give to everybody she knew.

As it was, the first print-run of 2,000 copies of *Anastasia* sold out in a matter of weeks. What happened next was as miraculous as the story Vladimir Megre had written down: new print-runs first of 2,000, then of 10,000, sold out within weeks. Not long afterward, *millions* more were printed and sold. By 1999 Vladimir Megre was one of Russia's most popular authors, and the seven books published to date have sold over 10 million copies in their original Russian alone, not counting their translated editions in more than a dozen languages.

The books in the *Ringing Cedars Series* started producing incredible changes in people's hearts and minds, the effect of which is now being felt throughout Russia and beyond. What happened here? How can it be that, with no advertisement other than word-of-mouth, this book by an unknown author became a national, then an international best seller, distributed initially by readers alone before it was accepted by even a single bookstore? How can it be that one copy from this first 2,000-copy print-run actually found its way to the stacks of the U.S. Library of Congress?<sup>1</sup>

<sup>1</sup>*Zveniasbchii kedr: Anastasiia*, printed by Moscow Printshop Number Eleven in 1996, bears the Library of Congress Control Number 98171763. A copy from the first 1997 printing of Book 2, *Zveniasbchie kedry Rossii* (The Ringing Cedars of Russia), has also been included in the Library of Congress collection (LCCN 98216313).

Why have people of all ages — from schoolchildren to pensioners — and in all walks of life — from teachers to public officials and from scientists to clergymen — felt such inspiration from the book to the point of writing poetry and creating works of art?

Why did a former member of the Russian parliament, an economist by the name of Dr Viktor Medikov, write an entire book, *Putin, Megre and Russia's future*,<sup>2</sup> stating that the Ringing Cedars was becoming Russia's new national idea?

Why did the Supreme Mufti<sup>3</sup> of Russia, Talgat Tajuddin, publicly declare in a televised interview: "I *love* these books. I read them and get a lot out of them for myself"? Why have leaders of other confessions made equally laudatory remarks?

Why did my mother once bring home a copy of *Anastasia* from her yoga class on the recommendation of her instructor, and gingerly request that I read it?

Why, when, applying to enter the doctoral programme in Forestry at six top-rated American universities, I submitted a research proposal based on the ideas set forth by Anastasia, I was accepted by all of them? Four of the schools, in fact, offered me full financial support with a scholarship. And here I am now at the University of Missouri at Columbia, writing my Ph.D. dissertation on the significance of ideas from the Ringing Cedars for the future of forestry and agriculture in Russia and the world as a whole.

But here comes the most striking part: how can it be that all these developments — from the wild popularity of the Ringing Cedars Series to the outpouring of reader's poetry and art — had been described in the very first book *before* coming to pass?

As it is, true to what Anastasia said in the very first volume, millions of people have been moved by her words, many thousands have planted trees, written poetry and songs, or created works of art — all inspired by the book. Readers' clubs have proliferated throughout Russia and abroad. Numerous readers' conferences throughout

<sup>2</sup>*Putin, Megre i budushchaja Rossiia*, published in 2003, is also found at the Library of Congress, with Control Number 2003710013.

<sup>3</sup>*Mufti* — a Muslim scholar who interprets *Shari'a* law.

Russia and Europe have brought together thousands of people, asking questions they had never even thought of before. In just the scant few years since the book's initial publication, Russia has witnessed the birth of a powerful eco-village movement, inspiring thousands of people to leave their jobs in large cities and, despite formidable obstacles, move to one of the many eco-settlements now sprouting all over the country. Russian emigrants to Germany, America and Canada have been flocking back to their homeland to establish new self-sufficient homesteads on their ancestors' lands. In the eco-village where my family now owns a plot of land, our neighbours include economists, singers, entrepreneurs, engineers, writers, mechanics, managers and executives, artists, peasants; young families, single mothers, pensioners and even schoolchildren — coming from all over Russia and other countries once part of the Soviet Union: from Moscow to Irkutsk and from Ivanovo to Kazakhstan and Tajikistan.

Whence comes all this inspiration?

The answer is simple: *Anastasia* resonates so strongly in tune with people's hearts that one cannot fail to inwardly recognise the truth emanating from it. How many times have I heard personal examples of this instant recognition: people who have been searching for years or decades for meaningful answers to questions on the purpose of life, on Man's place in Nature, have finally found them in this book!

But should it be surprising that the image of a way of life founded on the ideals of love, beauty and non-violence, as presented by Anastasia, would resonate so strongly with our inner self? After all, does not every one of us want to live in a free society of kind and happy people, in a world without wars, crime or oppression? In a world where not a single tear need run down a child's cheek, and where families live in love and prosperity? Do we not want to live without monstrous industries destroying and polluting both Nature and Man? Do we not want to enjoy creative labour for the benefit of both our families and our communities, instead of suffering through boring jobs merely to enrich faceless corporations? Do we not want a society based on mutual help and co-operation, rather than competition?

But, you may say, this was just Anastasia's *dream*. Or just Vladimir Megre's dream. And "a dream is simply a dream".<sup>4</sup> But cannot each

of us dream of a desirable future and then act to bring this future about? Is it not what John Lennon was singing about in his *Imagine*:

*You may say I'm a dreamer,  
But I'm not the only one.  
I hope someday you'll join us  
And the world will live as one.*

Is it not what one of the greatest economists of the twentieth century, E.F. Schumacher, was referring to in his seminal work *Small is beautiful*?<sup>5</sup>

Now, it might be said that this is a romantic, a utopian, vision. True enough. What we have today, in modern industrial society, is not romantic and certainly not utopian, as we have it right here. But it is in very deep trouble and holds no promise of survival. We jolly well have to have the courage to *dream* if we want to survive and give our children a chance of survival... [The crises of the industrial society] will become worse and end in disaster, until or unless we develop a new life-style which is compatible with the real needs of human nature, with the health of living nature around us, and with the resource endowment of the world.

Fortunately, the disaster may still be averted, as more and more people in Russia and throughout the world, drawing their inspiration from the Ringing Cedars, acquire "the courage to dream" and create an image of radiant reality for themselves and their children, and then get down to work in this direction.

The spiritual and practical revelations presented in this book are unparalleled in so many areas that their discussion could fill entire

<sup>4</sup>See Chapter 7: "Anastasia's ray".

<sup>5</sup>E.F. Schumacher, *Small is beautiful: Economics as if people mattered* (New York, Harper & Row, 1973), p. 162 (in the 1989 edition).

volumes. Let me but mention Anastasia's "beloved dachniks" — a discovery of exceptional significance.

As it happens, the most obvious and significant things often go the most easily unnoticed. This is particularly true about Russia's *dacha* movement. Judge for yourself — Anastasia and Vladimir Megre were the first to speak about the importance of *dachniks*. Now it turns out that according to widely available official statistics, published every year in Russia's primary statistical source *Rossiia v tsifrah*, over 35 million families — and this amounts to 70% of the country's population — grow their own food on their plots and collectively provide far more vegetables, fruit, and even meat and milk than the whole country's commercial agriculture taken together.<sup>6</sup> Why had nobody paid attention to these numbers earlier? Why didn't they ever surface in the discussion on the present and future of Russian — and, indeed, the world's — agriculture? Why did nobody take seriously President Boris Yeltsin's confession that he was spending his weekends tending a vegetable garden, growing potatoes and radishes?

Should you choose to research for yourself the questions discussed by Anastasia, you will soon discover the truth of her assertion that *her* knowledge is already shared — at least partially — by a number of people in our world, and that "collectively they know practically everything, only they do not fully understand how it works".<sup>7</sup>

Take communication with plants, for example. It sounds incredible at first, but it only requires a reading of Peter Tompkins and Christopher Bird's well-researched *The secret life of plants*<sup>8</sup> to gain an entirely new perspective and conclude: She must be right!

But could it be possible that all diseases are curable through such interaction with plants, as Anastasia argues? It would take a complex and lengthy scientific study to test this hypothesis. Fortunately, this is not necessary, as — in addition to a growing number of personal testimonials from thousands of people — there is factual evidence

<sup>6</sup>The spiritual, social and economic significance of *dacha* movement is discussed in great detail in Book 5 of the series, *Who are we?* Dr Medikov referred to this book as "expressing Russia's new national idea".

<sup>7</sup>See Chapter 26: "Dreams — creating the future".

<sup>8</sup>New York: Harper & Row, 1973.

at hand that can dispel any doubts. Over centuries and millennia the Hunzakut, a people living in a valley in northern Pakistan, have been practising an agriculture very similar to the one described by Anastasia. Eating food *exclusively* from their family garden plots and thus establishing a closed loop of matter- and information-exchange between people and their plants, they are recognised as the most healthy and long-living people on Earth. The Hunzakut commonly live to more than 100 years, and men becoming fathers at age 90 is not a rarity.<sup>9</sup> Can it be that this information exchange between an individual person and a plant Anastasia talks about is the missing link to understanding human nutrition? Even in the absence of scientific studies, why not try it? The science will catch up.

Furthermore, why should we be sceptical about Anastasia's ability to live without concern for acquiring food or clothing — effortlessly relying on Nature for a complete life-support system? Is not the exact same ideal of life taught to humanity in the Bible: "He who watches the wind will not sow and he who looks at the clouds will not reap"<sup>10</sup> or "Take no thought for your life, what ye shall eat, or what ye shall drink."<sup>11</sup> Also, in our own not-so-distant past, Nobel Laureate Albert Schweitzer testified on the basis of his experiences in Africa: "In return for very little work nature supplies the native with nearly everything that he requires for his support".<sup>12</sup>

Looking around, should one doubt that truly happy children can *only* be raised in Nature? Jean Liedloff, who spent two and a half years in a society living in close relationship with Nature — and consequently knowing no such things as crying children, crime or depression — speaks about this in her book *The continuum concept*<sup>13</sup> with very much the same conclusions as Anastasia.

<sup>9</sup>See, for example, *Secrets of the soil* by Peter Tompkins and Christopher Bird (Yonkers, N.Y.: Rare Bird Press, 1998), or numerous other books written about the Hunzakut people.

<sup>10</sup>Ecclesiastes 11: 4 (*New American Standard Bible*).

<sup>11</sup>Matthew 6: 24 (*Authorised King James Version*).

<sup>12</sup>A. Schweitzer, *On the edge of the primeval forest: Experiences and observations of a doctor in Equatorial Africa* (London: A. C. Black, 1934), p. 112.

<sup>13</sup>London: Duckworth, 1975; rev. ed. 1977. From 1985 published by Addison-Wesley.

Again, this list could continue. In fact, researchers could — and probably will — write volumes of commentary on almost every statement contained in *Anastasia*.

Yes, doubts naturally do creep in. It still sounds all too improbable to our traditional way of thinking. And even if the heart feels a genuine light emanating from the book, the mind often refuses to accept it as real. This is an all too familiar dilemma, fully experienced even by Vladimir Megre himself. However, as the series progresses and you come to embrace the ever more significant revelations set forth in the subsequent volumes, and immerse yourself in their ever more poetic language, the idea that it could all be “simply thought up” should gradually melt away.

You hold in your hands a flower which will unfold its petals to reveal a most remarkable masterpiece, unique in all of Russia's literature and, possibly, the world's as well. Indeed, its significance goes far beyond *literature*. This book possesses a tremendous, unprecedented potential to change life on our whole planet for the better.

Do you know of any other book that in a matter of just a few years has succeeded in not only stirring the hearts and minds of millions of people, but also arousing these same people to extraordinary acts of creation in their everyday lives, developing new modes of expression in all the arts, taking or embracing non-violent initiatives to preserve and enhance life on this planet as we know it? Every day more and more people are joining in. Now that the Ringing Cedars is globally available in English, the realisation of Anastasia's dream is certain to take on planetary proportions. I have no doubt about it.

In the winter of 2003, at my office in downtown Moscow — just one block away from the street corner outside the Taganskaya metro station where Vladimir Megre had been selling the first copies of his book only six years earlier<sup>14</sup> — Igor Vladimirov, head of the Anastasia Readers' Club in St. Petersburg, mused one day, looking at the snowflakes dancing outside the window:

<sup>14</sup>At the time I was employed as Programme Manager at the Moscow headquarters of WWF Russia — a branch of the World Wide Fund for Nature (also known in America and Canada as the World Wildlife Fund) — just a five-minute walk from the Taganskaya station. Megre's initial attempts to sell and promote his book are painstakingly described in Book 2.

“Wouldn’t it be wonderful to have *Anastasia* published in English?”

“It would,” I agreed.

“You are a professional project manager, and you speak English fluently. Isn’t that true?”

“Yes, more or less.”

“Then *why are you sitting here?!*”

We laughed. A subsequent chain of circumstances and events led me to certain people — including Vladimir Megre himself — who became instrumental in carrying out the English translation project.

The story of the unusual co-incidences and struggles behind this edition could easily form the stuff of a suspense thriller (which I shall probably write one day). In the meantime I take comfort in the fact that you are now holding a masterfully translated volume in your hands. This alone is a good indication that dreams really do come true.

Columbia, Missouri, U.S.A.

January 2005

Leonid Sharashkin

## Series at a glance

*Anastasia*, the first book of the Ringing Cedars Series, tells the story of entrepreneur Vladimir Megre's trade trip to the Siberian taiga in 1995, where he witnessed incredible spiritual phenomena connected with sacred 'ringing cedar' trees. He spent three days with a woman named Anastasia who shared with him her unique outlook on subjects as diverse as gardening, child-rearing, healing, Nature, sexuality, religion and more. This wilderness experience transformed Vladimir so deeply that he abandoned his commercial plans and, penniless, went to Moscow to fulfil Anastasia's request and write a book about the spiritual insights she so generously shared with him. True to her promise this life-changing book, once written, has become an international bestseller and has touched hearts of millions of people world-wide.

*The Ringing Cedars of Russia*, the second book of the Series, in addition to providing a fascinating behind-the-scenes look at the story of how *Anastasia* came to be published, offers a deeper exploration of the universal concepts so dramatically revealed in Book 1. It takes the reader on an adventure through the vast expanses of space, time and spirit — from the Paradise-like glade in the Siberian taiga to the rough urban depths of Russia's capital city, from the ancient mysteries of our forebears to a vision of humanity's radiant future.

*The Space of Love*, the third book of the Series, describes author's second visit to Anastasia. Rich with new revelations on natural child-rearing and alternative education, on the spiritual significance of breast-feeding and the meaning of ancient megaliths, it shows how each person's thoughts can influence the destiny of the entire Earth and describes practical ways of putting Anastasia's vision of happiness into practice. Megre shares his new outlook on education and children's real creative potential after a visit to a school where

pupils build their own campus and cover the ten-year Russian school programme in just two years. Complete with an account of an armed intrusion into Anastasia's habitat, the book highlights the limitless power of Love and non-violence.

*Co-creation*, the fourth book and centrepiece of the Series, paints a dramatic living image of the creation of the Universe and humanity's place in this creation, making this primordial mystery relevant to our everyday living today. Deeply metaphysical yet at the same time down-to-Earth practical, this poetic heart-felt volume helps us uncover answers to the most significant questions about the essence and meaning of the Universe and the nature and purpose of our existence. It also shows how and why the knowledge of these answers, innate in every human being, has become obscured and forgotten, and points the way toward reclaiming this wisdom and — in partnership with Nature — manifesting the energy of Love through our lives.

*Who are we?* — Book Five of the Series — describes the author's search for real-life 'proofs' of Anastasia's vision presented in the previous volumes. Finding these proofs and taking stock of ongoing global environmental destruction, Vladimir Megre describes further practical steps for putting Anastasia's vision into practice. Full of beautiful realistic images of a new way of living in co-operation with the Earth and each other, this book also highlights the role of children in making us aware of the precariousness of the present situation and in leading the global transition toward a happy, violence-free society.

*The book of kin*, the sixth book of the Series, describes another visit by the author to Anastasia's glade in the Siberian taiga and his conversations with his growing son, which cause him to take a new look at education, science, history, family and Nature. Through parables and revelatory dialogues and stories Anastasia then leads Vladimir Megre and the reader on a shocking re-discovery of the pages of humanity's real history that have been distorted or kept secret for thousands of years. This knowledge sheds light on the causes of war, oppression and violence in the modern world and guides us in preserving the wisdom of our ancestors and passing it over to future generations.

*The energy of life*, Book Seven of the Series, re-asserts the power of human thought and the influence of our thinking on our lives and the destiny of the entire planet and the Universe. It also brings forth a practical understanding of ways to consciously control and build up the power of our creative thought. The book sheds still further light on the forgotten pages of humanity's history, on religion, on the roots of inter-racial and inter-religious conflict, on ideal nutrition, and shows how a new way of thinking and a lifestyle in true harmony with Nature can lead to happiness and solve the personal and societal problems of crime, corruption, misery, conflict, war and violence.

*The new civilisation*, the eighth book of the Series, is not yet complete. The first part of the book, already published as a separate volume, describes yet another visit by Vladimir Megre to Anastasia and their son, and offers new insights into practical co-operation with Nature, showing in ever greater detail how Anastasia's lifestyle applies to our lives. Describing how the visions presented in previous volumes have already taken beautiful form in real life and produced massive changes in Russia and beyond, the author discerns the birth of a new civilisation. The book also paints a vivid image of America's radiant future, in which the conflict between the powerful and the helpless, the rich and the poor, the city and the country, can be transcended and thereby lead to transformations in both the individual and society.

*Rites of Love* — Book 8, Part 2 (published as a separate volume) — contrasts today's mainstream attitudes to sex, family, childbirth and education with our forebears' lifestyle, which reflected their deep spiritual understanding of the significance of conception, pregnancy, home-birth and upbringing of the young in an atmosphere of love. In powerful poetic prose Megre describes their ancient way of life, grounded in love and non-violence, and shows the practicability of this same approach today. Through the life-story of one family, he portrays the radiant world of the ancient Russian Vedic civilisation, the drama of its destruction and its re-birth millennia later — in our present time.

*To be continued...*

## Readers' reviews

Yes, at last, truth that has not been distorted by dogma or someone's ego! I might explode from emotion if I read any more! I had a hard time getting myself to just stand still. I was jumping all over my garden saying hello to all my trees. (I've always talked to trees but I didn't know they were listening!) I then ran off and bought loads of seeds and spent days putting whole packets of them in my mouth, only to get very sick indeed, for little did I know that seeds bought in a supermarket are covered in rat poison! Have we gone mad?

I've got this strange reputation of a person who lives in a pink world, a dreamer believing in an unrealistic utopia of happiness, a witch, a madwoman... Well thank you Anastasia, finally I can take my place as just a normal Man, a woman. I'm so excited, fancy me not knowing that there was a whole bunch of 'pink worlders', just around the corner!

Vladimir is a true hero. He went all the way to the bottom of despair and he used his suffering to change. Merit and achievement, success and glory belong to those who have managed to change the most in their lives.

— *Ana, Portugal*

In 1996 I spent a day in the Australian bush with an aboriginal woman. This was my first encounter of what I call a 'natural human'. Her connectedness with nature blew me away and I wanted that for myself and all mankind. Likewise, Anastasia is in total harmony with nature and gives practical steps to rekindle in us that which is our true essence. I cannot even begin to describe the depth of the effect Anastasia has had on me and I have only read Book 1. For the first time in my life I feel affirmed on a very deep level and feel free to be me. I am so excited to have discovered these books and am fully committed to doing what I can to help spread their message.

— *Mary Dwen, New Zealand*

I truly found lots of inspiration in the book. I have a lovely garden plot which I have worked for over 40 years in the suburban Denver area and while I have tried to work with Nature 'consciously' for probably twenty years, I feel I fall quite short of anything that resembles the connection that Anastasia has. I am determined this next spring to do it exactly as she recommends because I do feel that humanity's healing will only come about with a reconnection to Nature. I am hopeful of many people also wanting to read the messages of hope and re-discovering the potential that awaits Man as he reclaims his Divine Inheritance through Right Action and Right Use of Will, attuned to Spirit!  
— Aurelia, Colorado, USA

*Anastasia* and subsequent volumes tell the story of a return of mankind to a state of grace through love, actualizing real love to everything around us and keeping our thoughts, hearts, minds in the place of love, touching with love the earth and celebrating the God's creation through loving it and caring for it. I think the most important lesson for us is to move back to the work of the Creator and away from ways which destroy it. That is what I take from the Series and find myself inspired to work harder and being joyous, thankful and loving.

In my own life, our family works toward goals that aren't measured in dollars, which is a much richer life than working for material wealth. We have a certified organic and wild crops farm, so I am very receptive to the medicines of the earth and see the importance of people interacting in a healing way with God's Creation — the earth. In a very humble way, our work with native plants on our farm could be seen as demonstration of a way people can take some of the Ringing Cedars ideas and put them to work.

I think if people find a larger purpose for their lives than collecting material goods, everyone will be happier rediscovering the scope of humanity's tools from the Creator. *Anastasia* helps with explaining ways to have a richer life, raise healthier children, filling one's heart rather than one's pockets. I do not agree with everything written, and many people will find ideas threatening. Yet if we don't discover new ways of being human beings and put them to work, if we don't have a spirit rich enough to live with love and respect for God's creations, we have no future.

— Penny Frazier, Missouri, USA

There has been a very significant change taking place within me since reading the Series. It has been a casting off of the selfish elements within me and walking into a vast chasm of blessings. What is possible I do not yet know, only that an awareness and a consciousness is possible in this life. My life is hopeful now.

— *Allan, Wisconsin, USA*

At work I walked by a book lying face down on a messy table and it called me. I picked up the book, flipped it over and the cover clicked. I sat down and started reading. That night I took the book home and over the next few days I found a piece of life, of the spiritual cosmos, which I knew had been missing.

In my disgust and shame at Vladimir Megre's reaction to Anastasia, I saw a reflection of my own attitudes towards concepts I was uncomfortable with. Although Anastasia herself is a little odd, I had no difficulty believing in her presence, her existence. After reading the book, I slept under the stars, near some current bushes, but some possums awoke me in the middle of the night. I then did some reiki and sent the energy to Anastasia, and felt myself floating in cedar branches, softly brushing me, with a bright yet soft ball of radiant light shining back upon me. In a tarot read I asked about Anastasia and drew the Guardian card.

Three years ago my family moved to the country, our own *dacha*. I now look forward to next spring and "coding" the seeds and creating a space of love for both my garden and my family.

— *Dietrich Jakobi, Missouri, USA*

Anastasia's messages throughout the Ringing Cedars Series have further illuminated the Divine work of birthing, caring for, and parenting children. I am a *doula*, a home-birth mama, a dancer-singer who has been inspired by Anastasia's reminder that we all are born to know and share our Light.

I feel like the book's messages have found a natural home in my being. Anastasia is a being who I know lives, and she desperately wants us to feel how ALIVE we are and how ALIVE the Earth is. We belong to the Earth, and we must find our happiness so that the Earth will feel her happiness as well.

— *Elise, Missouri, USA*

My acquaintance who paid a visit to the Altai several years ago, received a few tiny scraps of cedarwood from a local woman. She told him to wear it on his body: he would need it, it would protect him. This summer he did some major 'housecleaning', sorting things he didn't want around anymore. He stumbled on a matchbox with these slivers of cedarwood, and thought: ah! is this true or mere superstition, shall I finally do away with them? The next day, by 'coincidence', his friend offered him the *Anastasia* book as a present. He read, gasped and made a pendant out of the pieces. A few weeks later he showed me the pendant and it was breathtaking! I really gasped for breath, even though at that point he hadn't yet told me his story. My guess would be that he received some shivers of a ringing cedar — it was so moving to see it... Many more stirrings over here, really trust that this will be worldwide.  
— *Dickie, Netherlands*

As a 75 year-old American who finished the third *Anastasia* book by V. Megre, *The Space of Love*, I am in the process of digesting its substance.

The American must pick up and go to a place that Vladimir Megre shows him. Megre shows him wonders. But those expecting wonders to be valid only if found on American soil will be taken aback to learn they are in a land that rarely thinks of the *New World*.

*Anastasia's* Siberian taiga is a land that measures history in millennia instead of decades. There, Vladimir meets those who have a mystical affection for their country and culture. He finds values resting on rock-solid Christian principles not bearing Christian labels. They are values descending from ancient insights, approved by generations faithful to the soil of their forbearers. Their love for *Mother Russia* is a love not understood even by the most patriotic American.

Christians will recognize much from the *Old Testament* as well as from the *New*, especially *Isaiab*, Chapter 11. This is not to say the *Anastasia* Series promotes or detracts from that teaching. Instead, it parallels and edifies. The Christian emerges with his faith firmer and a respect for Megre's *Anastasia*... After three books, I am digesting, and there are moments when my credulity vanishes. Then, lines appear that can have been written *only* to me. Then my unbelief is overturned. It is like the story of Lazarus. I believe, but help my unbelief! Coincidences are endless.

— *Gallagher Rule, Ponca City, Oklahoma, USA*

## ABOUT THE RINGING CEDARS SERIES

In 1994 a Siberian elder told entrepreneur Vladimir Megre a fascinating story about ‘ringing cedars’ — sacred trees which heal bodily diseases and elevate the human spirit. The elder told him where such a cedar was growing in the Siberian backwoods. Intrigued, Vladimir Megre delved into literature on Siberian cedar trees and was one of the first Russian businessmen to re-discover the tremendous folk medicinal, nutritional and commercial value of virgin oil pressed from Siberian cedar nuts. However, knowledge of the traditional technique of pressing the oil had been lost.

Determined to re-discover the secret and launch a highly lucrative production of cedar nut oil, Vladimir Megre set out on an expedition to find the tree, but his encounter with the elder’s granddaughter, named Anastasia, transformed him so deeply that he abandoned his commercial plans and, penniless, went to Moscow to fulfil his promise to Anastasia and write a book about the spiritual insights she so generously shared with him.

What happened next has thrilled and inspired millions. With no advertisement other than word of mouth, books of the RINGING CEDARS SERIES have sold over 10 million copies in Russia alone and have been translated into 20 languages, making Vladimir Megre one of Russia’s most widely read authors. Inspired by the Ringing Cedars, thousands of people are now planting trees, changing their lifestyle and, in search for a mortgage-free existence and spiritual re-connection with the Earth, are relocating to new eco-villages which have sprouted all over Russia and beyond. Thousands of readers have felt a huge creative upsurge and started writing poetry and songs and doing paintings.

These mind-stirring books read like a fascinating novel, have the authenticity of a documentary account and present spiritual insights of incredible depth. As books that address issues in which all our way of living and thinking is involved, they cannot be confined to a single category. Spanning dozens of subjects from child-rearing to gardening, from adventure to the meaning of human life, from megalithic science to breast-feeding and from sexuality to religion, they reassert the limitless creative potential hidden in each of us and present an incredibly beautiful and equally practicable vision of humanity’s spiritual connection to Nature that helps us understand ourselves and heal our Earth.

Vladimir Megre could not know that his 1994-95 trade trips would change his entire life and affect the whole of humanity. Anastasia’s messages have spread like wildfire throughout Russia and beyond. News reporters are already writing about a “new dawn” unfolding and an “eco-village revolution” taking place, which may change the country’s — and the whole world’s — destiny. Read these books and witness the birth of a radiant vision that has changed our life and may change yours.

**THE AUTHOR, Vladimir Megre**, born in 1950, was a well-known entrepreneur from a Siberian city of Novosibirsk. In 1995 — after hearing a fascinating account about the power of ‘ringing cedars’ from a Siberian elder — he organised a trade expedition into the Siberian taiga to rediscover the lost technique of pressing virgin cedar nut oil containing high curative powers, as well as to find the ringing cedar tree. However, his encounter on this trip with a Siberian woman named Anastasia transformed him so deeply that he abandoned his business and went to Moscow to write a book about the spiritual insights she shared with him. Vladimir Megre now lives near the city of Vladimir, Russia, 240 km (150 miles) east of Moscow, devoting himself to writing. Following the runaway success of his Series, he has spoken at readers’ conferences throughout Russia and Europe, as well as established the Anastasia Foundation, a non-profit organisation aimed at promoting the ideas contained in the books and providing support to Russia’s nascent eco-village movement.

**THE TRANSLATOR, John Woodsworth**, originally from Vancouver (British Columbia), has forty years of experience in Russian-English translation, from classical poetry to modern short stories. For the past twenty-three years he has been associated with the University of Ottawa in Canada as a Russian-language teacher, translator and editor, most recently as a Research Associate and Administrative Assistant with the University’s Slavic Research Group. A published Russian-language poet himself, he and his wife — poet and amateur artist Susan K. Woodsworth — are directors of the Sasquatch Literary Arts Performance Series in Ottawa. Now a Certified Russian-English Translator, John Woodsworth is in the process of translating the remaining volumes in Vladimir Megre’s Ringing Cedars Series.

**THE EDITOR, Leonid Sharashkin**, is writing his doctoral dissertation on the spiritual, cultural and economic significance of the Russian *dacha* gardening movement, at the University of Missouri at Columbia. He also travels across America and internationally, speaking about The Ringing Cedars Series and its global impact. After receiving a Master’s degree in Natural Resources Management from Indiana University at Bloomington, he worked for two years as Programme Manager at the World Wide Fund for Nature (WWF Russia) in Moscow, where he also served as editor of Russia’s largest environmental magazine, *The Panda Times*. Together with his wife, Irina Sharashkina, he has translated into Russian *Small is beautiful* and *A guide for the perplexed* by E.F. Schumacher, *The secret life of plants* by Peter Tompkins and Christopher Bird, *The continuum concept* by Jean Liedloff and *Birth without violence* by Frederick Leboyer.

Anastasia herself has stated that this book consists of words and phrases in combinations *which have a beneficial effect on the reader*. This has been attested by the letters received to date from thousands of readers all over the world.

If you wish to gain as full an appreciation as possible of the ideas, thoughts and images set forth here, as well as experience the benefits that come with this appreciation, we recommend you find a quiet place for your reading where there is the least possible interference from artificial noises (motor traffic, radio, TV, household appliances etc.). *Natural sounds*, on the other hand — the singing of birds, for example, or the patter of rain, or the rustle of leaves on nearby trees — may be a welcome accompaniment to the reading process.

**Ringling Cedars Press** is an independent publisher dedicated to making **Vladimir Megré's** books available in the beautiful English translation by **John Woodsworth**. Word of mouth is our best advertisement and we appreciate your help in spreading the word about the Ringling Cedars Series.

## Translator's Preface

Most readers of this present volume will have already marvelled at the euphoric and mind-boggling revelations contained in Megré's first book, *Anastasia* (published in English translation by Ringing Cedars Press in February 2005).

In addition to offering the reader fascinating glimpses into the story of the publication of the first book, this second volume, *The Ringing Cedars of Russia*, delves deeply into the ethical and metaphysical concepts behind Anastasia's sayings presented so dramatically in the 'series opener'. The chapter-titles associated with these concepts range from the mystical ("The Space of Love") to the mysterious ("Illusory people") to the theological ("Why nobody can see God") to the down-right practical ("How to produce healing cedar oil"). They all ring a chord of response in the reader's heart and soul and at the same time call upon the thinker in each reader. And out of concepts such as these pop up at least as many questions as answers — questions that may well cause the reader either to re-examine or re-affirm his or her basic concepts of life.

My own involvement with *The Ringing Cedars of Russia* did not pass without a personal effect on me (independently of the actual translation process, in which I take special care to be guided by objective professional standards). In no small measure the opportunity to work closely with the book not only *reconfirmed* much of what I already believed, but also helped me *rediscover* my own faith, allowing me a fresh look at a number of concepts I had been brought up on from childhood (like moving around a three-dimensional object

and seeing it from a different angle). It also caused me to *re-examine the reasons* for believing in what I had long believed (including the practical understanding and application of a spiritual approach to healing), and for this I am grateful.

Indeed, it is hard for me now to believe that at this time last year I had never even heard of a Siberian recluse named Anastasia, or a Russian writer named Vladimir Megré, or a Russian-American forester named Leonid Sharashkin, or the mysterious 'Ringing Cedars'. Yet these are names that, since entering my field of awareness in September 2004, have not only become a significant focus of my professional activity as a translator but also figured prominently in my daily thought, conversation and life experiences.

Within four months I had not only read the first three books of Megré's Ringing Cedars Series but also completed the translation of Book 1, *Anastasia*. And now, less than four months after that, the translation of Book 2 is ready to go to press and I have already started work on Book 3.

Translating the 'cherry-tree' chapter brought back a particular memory of my initial read of the three books. This had taken place back in September and October, when our Ottawa weather still allowed a pleasant outdoor afternoon sit on our front porch. With its south-west exposure and view of nothing but the fields and trees across the road, the porch made an ideal spot in which to absorb this brand new literary adventure into the delights of a summer glade in the far-off Siberian taiga. The afternoon sun was bright and warm enough to permit me to dispense not only with heavy outer clothing (which had already sprouted on the backs of many pedestrians on downtown sidewalks here) but also with my eyeglasses, which I am accustomed to make use of during any indoor reading.

During the same period I was especially struck by the following incident. On the porch, right in front of where I was

sitting, stood a clay pot containing several red geraniums my wife had planted earlier in the year. My reading prompted me to look at them — and one flower in particular (the one closest to me) — through new eyes. I began to regard it with warmth and affection (I would even say *love*) every time I saw it.

Of course I had known from news reports about the effect of people's thoughts and attitudes on growing things, but it was not until my reading of Vladimir Megré that I had really seen anything like this in practice. My newfound feelings for the geraniums remained strong throughout the month of October, and as the days gradually grew colder, most of the flowers in our garden (as well as other geraniums on the same porch) faded and expired for the season. But the geraniums in this pot, especially the one closest to me, refused to fade or even droop with the cooling of the air. Even toward the end of October, when I finished my reading of Book 3, it was still standing proud and just as bright red as when my attention was first drawn to it. And even when I saw it months later, all bent to the ground by winter snows, its vivid red hue had scarcely faded.

Two other extraordinary coincidences occurred in our home during this period. In mid-November, just after I had finished translating the "Concert in the taiga" chapter in *Anastasia* and was working on the description of Anastasia's dance routine in the morning mist in the following chapter ("Who lights a new star?"), my wife Susan, who had not read any of the text at this point, presented me with a poem she had recently written. The poem was entitled *Gracefully, the dancer...* and described a dance of a young girl "where all movement conforms to poetry" and whose "life itself had become a never-ending dance" — rather close indeed to Megré's own expression.

Three months later, shortly before the first print-run of *Anastasia* rolled off the presses in February 2005, Susan, an

amateur artist as well as a poet, showed me a coloured-pencil drawing she had just been working on of a nude figure in her twenties with blonde hair, her hands upstretched to the heavens, the parts of her body drawn with colours of Nature instead of the flesh, and with a face very similar to the illustration of Anastasia on the cover of the Russian edition. The remarkable thing is that at that point my wife had not read any of the text about Anastasia, nor even seen a portrait of her, and did not have her consciously in mind as she was doing the drawing.

In his Afterword, editor Leonid Sharashkin will be sharing with you similar ‘coincidences’ from his own experience connected with the publication of the English translation of *Anastasia* in America. These and the hearty welcome of the book in the English-speaking world are indeed reminiscent of the surprising reaction of thousands of readers to the book’s initial appearance in Russia in 1996.

Hearing the impressions shared with me by the first readers of *Anastasia* in English — by people from quite different walks of life — I have come to appreciate just how far-reaching and universal Anastasia’s message is in its scope. For one thing, it does not limit itself to any formulated creed. It is not a new religion with a new set of doctrines for which we must necessarily abandon whatever we believed in previously in order to follow. It speaks to the hearts and minds of people of many different religions as well as, equally, to those who profess no religion at all. It speaks to the hearts and minds of many scholars and students of the physical sciences — especially those who are reaching out to explore the more holistic dimensions of their fields and to find answers that lift them beyond the confines of their specialist training and into an understanding of how their investigations relate to the universal aspects of Man, Nature, the Cosmos and even God.

In addition to a deeper exploration of these universal concepts, Book 2 offers an in-depth, behind-the-scenes look at how Book 1 finally came to be written and published. Like all great mind-stirring works of history, the birth-throes attending its emergence into light came at a considerable price to the author. Just how high the price was — indeed, the whole chain of extraordinary circumstances that led from the wilds of Siberia to the book's appearance on Moscow street-corners and its eventual inclusion in national best-seller lists — is part of the fascinating adventure you will now share with the author as you journey from the mental heights of a taiga glade to the urban depths of Russia's capital city, passing indeed "through the valley of the shadow of death"<sup>1</sup> en route, along with a surprising encounter in a completely different tree-lined setting and a final stop in the foothills of the Caucasus mountains for yet another amazing discovery.

While the book's message is indeed universal in its scope and applicable to individuals the world over, there is no escaping the fact that its original expression, in terms of not only words but concepts, draws in significant measure upon the *Russian* tradition, and this fact, as with its predecessor in the series, presented its share of challenges to the English translator. Two of these deserve particular mention here.

First, the Russian word *sviatyni* (derived from *sviatoi* = *holy* or *sacred*) has no direct equivalent in English. It refers not only to holy places such as sanctuaries, tabernacles, shrines and crypts, but also to sacred objects (including icons, statues and relics), sacred texts (e.g., the Bible or the Koran) and even trees. Having the same root as the Russian word for 'light' (*svet*), *sviatyni* may also be used to designate sacred concepts such as *spirit* or *grace*. None of these alternatives by

<sup>1</sup>Psalm 23: 4 (*Authorised King James Version*).

itself would be sufficient to compass the range of the original Russian term. Since most of its occurrences relate to what we call ‘locations’, it was eventually decided to use the awkward but more or less accurate combination *sacred sites* as a general equivalent and employ alternative translations where the context required.

Another Russian word whose translation engendered considerable discussion was *pervoistoki* — derived from two basic roots: *perv-* (*first, primary, primal*) and *istok-* (*origin, source, spring* — as in describing the headwaters of a river, for example). The compound term, especially as used in this book, unmistakably conveys the sense of a *pure, uncontaminated* source, and this eventually led to the selection of the particular combination *pristine origins*. Other specific translation challenges are documented, where appropriate, in the footnotes.

Again, as in Book 1, the footnotes are also used to give background information on specific people, places and events unfamiliar to most English-speakers.

And now, dear readers, I need only invite you once again to find yourselves a comfortable reading-place — preferably one shielded from the possible intrusion of artificial sounds (a quiet outdoor setting would be ideal!) — and join with me in exploring the second instalment of the author’s adventure through both the geographical space of Russia’s vast distances and the mental space of the spiritual essence of the Universe, as revealed by *The Ringing Cedars of Russia*.

John Woodsworth

## CHAPTER ONE

# Alien or Man?

Before telling about further happenings connected with Anastasia, I should like to thank all the leaders of religious denominations, scholars and journalists, along with ordinary readers, who sent in letters, religious literature and comments regarding the events recounted in my first book. Anastasia has been called many things. The press has referred to her as Mistress of the taiga,<sup>1</sup> a Siberian wizard-girl, a fortune-teller, a divine manifestation, the girl from outer space. And so when one Moscow journalist asked me: “Do you now love Anastasia?”, I replied to her: “I can’t really tell what my feelings are.” And all at once the rumour started flying around that I was incapable of grasping anything at all because of my immaturity in spiritual matters.

But how *can* one love when it’s not yet clear just who is there to be loved? After all, no one has yet been able to come up with a single definitive description of Anastasia. On the basis of her assertion: “I am Man, a human being — I am a woman!”<sup>2</sup> I’ve been trying to come up with some sort of explanation for her extraordinary abilities. Initially everything seemed to be falling into place.

<sup>1</sup>*taiga* — the Russian name given to the boreal forest that stretches across much of Siberia and northern Canada.

<sup>2</sup>The word *Man* (with a capital *M*) is used throughout the Ringing Cedars Series to refer to a human being of any gender. For details on the word’s usage and the important distinction between *Man* and *human being* please see the Translator’s Preface to Book 1.

*Who is Anastasia?*

A young woman, born and living as a recluse in the remote Siberian taiga, brought up after the death of her parents by her grandfather and great-grandfather, who have also been living the life of a recluse.

Can one consider the loyalty of wild animals to her something unusual?

Even this is nothing out of the ordinary. Many animals in peasant farmyards get along peacefully with each other and treat their human masters with respect.

A much more difficult task is determining the mechanism whereby she is able to see things at a distance and can know details of various events, even those that occurred thousands of years ago, and to be completely conversant with our contemporary way of life. How does this ray of hers work when it heals people far away, when it penetrates the depths of the past or peers into the future?

Philosophy professor Kim Ivanovich Shilin,<sup>3</sup> who is also a Corresponding Member of the International Academy of Informatisation (MAI), has written a number of articles analysing Anastasia's sayings. In one of them he wrote:

Anastasia's creative potential is a gift of God, a gift of Nature, which is universal, not merely a personal gift to her. All of us collectively, and each one of us in particular, are connected with the Cosmos.

<sup>3</sup>*Kim Ivanovich Shilin* — Doctor of Social Sciences, senior researcher at Moscow State University's Institute for Asian and African Studies, known for his interdisciplinary research in philosophy, ecology, sociology, cultural and Asian studies, aimed at a synthesis of Eastern and Western cultural principles. He has authored numerous articles and several books on *ecosophy* (the interpretation of cultural and social phenomena on the basis of a culture's relationship to and perception of Nature).

The means of escaping an approaching catastrophe lie in a harmonious synthesis of our cultural principles. The development of this type of harmoniously pure childhood culture results in a “feminine” cultural type. This cultural type has been expressed most fully and clearly in Buddhism, but also in our Anastasia. It may be formulated in the following identification chain:

*Anastasia = Tara = Buddha = Maitreya.*<sup>4</sup>

Anastasia is in the fullest sense Man in the likeness of God.

Whether this is true or not is not for me to decide. Only I can't understand why, then, she hasn't written down any teachings, like all other enlightened people in the likeness of God, and instead has concentrated, all during her two decades of conscious awareness, on *dachnicks*.<sup>5</sup>

Nevertheless, in reading what various scholars have to say, I have been able to conclude that she is not some kind of crazy person, inasmuch as there are at least *hypotheses* in the scientific world about what she has talked about, and experiments are being conducted on certain aspects of her sayings.

So, for example, to the question: “Anastasia, by what means do you discern and depict all the different situations of thousands of years ago and even decipher the thoughts of the great thinkers of the past?” she replied:

<sup>4</sup>*Tara* – a female Buddha, a deity capable of removing interferences and putting things in perfect order. *Maitreya* (literally, ‘the loving one’) is described as the future Buddha, associated with friendliness, success and prosperity.

<sup>5</sup>*dachnicks* – people who spend time (their days off, especially summer holidays) at their *dacha*, or cottage in the country. Unlike most cottages in the West, a *dacha* is invariably accompanied by a garden where fruits and vegetables are grown to feed the family all year long (for further details, please see the Translator's Preface to Book 1 in the Ringing Cedars Series).

“The first thought, the first word was the Creator’s. His thoughts still live today, surrounding us unseen and filling universal space, reflected in material, living creations produced for the number one creation, Man! Man is the child of the Creator. And, like any parent, He could wish for His child no less than what He has Himself. He has given him all. And even more — freedom of choice! Man can create things and perfect the world by the power of his thinking. No thought produced by Man disappears into oblivion. If it is a thought of radiant brightness, it will fill the space of light and rise on the side of the forces of light. A dark thought, however, will fall on the opposite side. And today any Man may make use of any thought produced at any time either by people or by the Creator.”

“Then why doesn’t everybody use them?”

“Everybody does, but in varying degrees. To use them, one is obliged to think, and not everybody succeeds in doing this because of the vanity of daily life.”

“So, all you have to do is think, and the ability comes to you? And you can even discern the thoughts of the Creator?”

“In order to discern the thoughts of the Creator, one must attain a purity of thought appropriate to Him, as well as the pace of His thinking. To discern the thoughts of enlightened people, one must possess their purity of thought and the ability to think at the same rate. If a given Man has insufficient purity of thought to communicate with the dimension of the forces of light — the dimension in which radiant thoughts dwell, — then Man will draw his thoughts from their dark counterparts, and will end up suffering himself and causing others to suffer.”

I’m not sure whether this is directly or only indirectly explained by Academician Anatoly Akimov,<sup>6</sup> Director of the International Institute of Theoretical and Applied Physics at the Russian Academy of Natural Sciences, in his article in the

magazine *Chudesa i prikliuchenia* (*Wonders and Adventures*) entitled "Physics recognises a Supermind". He writes as follows:

There have existed, and there exist now, two schools of thought, two models of perceiving Nature. One model is associated with Western scholarship — i.e., knowledge gained on the methodological basis prevalent in the West: evidence, experiments, etc. The other is the Eastern approach, wherein knowledge is received from an external source through esoteric means in a state of meditation. Esoteric knowledge is not something acquired, it is considered a gift to Man.

As it turns out, at some point this esoteric approach was lost and a different route was embarked upon — one extremely slow and complex. Following this route, it has taken us over a thousand years to arrive at a level of knowledge which was common in the East three millennia ago.

---

<sup>6</sup> *Anatoly Evgenevich Akimov* — first introduced in Book 1, Chapter 7: "Anastasia's ray". Though it is not commonly known, the USSR maintained an extensive research programme on psychic phenomena (for details please see the well-researched book *Psychic discoveries behind the Iron Curtain* by Sheila Ostrander and Lynn Schroeder). Anatoly Akimov headed one of the many groups of scientists charged by the KGB and the Soviet Defence Ministry to find a scientific explanation for paranormal phenomena and some people's extraordinary abilities in clairvoyance, telepathy and telekinesis (moving solid objects by mental power alone) with a view to their applications to intelligence and military purposes. Akimov's and other teams' experimental observations of these phenomena — in particular the direct control of human mind over physical objects — indicated that on a deeper level *consciousness* and *matter* have essentially the same nature, and led to the study of torsion fields. Many "traditional" scientists, jealous of the generous funding his group was receiving, were quick to label Akimov as a 'pseudo-scientist' and 'charlatan', and charge him with "fraud and falsification of scientific research", even though they themselves still cannot explain such phenomena, let alone answer even more basic questions such as *What is matter?* and *What is energy?*

I have the intuitive feeling that those are right who say that the matter filling the whole Universe on a field level<sup>7</sup> is some kind of interrelated structure. In his book *The sum of technologies*, in a chapter entitled “The Universe as super-computer”, Stanislav Lem<sup>8</sup> proposed the existence of a gigantic computer-like Universal brain. Imagine a computer the size of the observable Universe (with a radius somewhere in the order of 15 billion kilometres), filled with elements taking up a volume of between 10 and 33 cubic centimetres each.

And here this brain which fills the whole Universe is naturally endowed with powers which we are incapable of imagining or even fantasising. But if you take into account that in reality this brain functions not according to any computer principle but on the basis of torsion fields,<sup>9</sup> then it all becomes clear: the manifestations of the Absolute

<sup>7</sup>*field level* (Russian: *polevoy uroven*) — the level of a number of ‘fields’ (such as electromagnetic and gravitational fields) filling the Universe but not directly observable by the material senses.

<sup>8</sup>*Stanislav Lem* — Russian science-fiction writer best known for his novel *Solaris*, first made into a film by Soviet director Andrei Tarkovsky in 1972 and thirty years later in a Hollywood version by Steven Soderbergh. Incidentally, Lem’s *Solaris* appears to be the inspiration behind the plot of Gene Roddenberry’s first *Star Trek* feature-length film (1979).

<sup>9</sup>*torsion fields* — the term first introduced in 1913 by a prominent French mathematician, Élie Cartan (1869–1951), to refer to a hypothetical field generated by a rotating object. This term later became used to signify the ‘original’ field permeating the whole Universe, a spinning field considered to have formed the physical vacuum and given birth to all matter. If matter can be thought of as ‘frozen energy’, then energy can be equated to ‘frozen torsion fields’. While modern physics still lacks the appropriate technology to detect torsion fields, the notion that everything in the Universe is born from a spinning void is one of the oldest concepts in virtually all traditional cultures (note its ages-old symbolic manifestation in the rotating cross (or swastika) — a symbol found in all cultures on all continents).

proposed by Schelling<sup>10</sup> or the Shuniat<sup>11</sup> of ancient Vedic literature — these in essence constitute a computer. And there is nothing in the world apart from this computer. Everything else is some form or other of the Absolute.

This is what Academician Vlail Kaznacheev,<sup>12</sup> Active Member of the Russian Academy of Medical Sciences, wrote about the Ray in his article “Living rays and a living field”<sup>13</sup> in *Chudes-sa i prikliuchenia (Wonders and adventures)* of 3 May 1996:

<sup>10</sup>Friedrich Wilhelm von Schelling (1775–1854) — German philosopher, who developed a dialectic of Nature as a living organism and an unconscious, spiritual, creative principle.

<sup>11</sup>*Shuniat* — the Buddhist concept of the ‘void’, or the space in which all exists.

<sup>12</sup>*Vlail Petrovich Kaznacheev* (1924–) — a prominent member of the Russian Academy of Medical Sciences from Novosibirsk, specialising in the inter-relationship between Man and Nature, including bio-systems and information processes. A decorated World War II veteran, Dr Kaznacheev has received numerous awards for his research and publications.

<sup>13</sup>In America pioneer research on the fields surrounding living organisms was carried out by Dr Harold Saxton Burr (1889–1973), Professor of Anatomy at the Yale University School of Medicine. Dr Burr discovered “that man — and, in fact, all forms — are ordered and controlled by electrodynamic fields which can be measured and mapped with precision... the ‘fields of life’ are of the same nature as the simpler fields known to modern physics and obedient to the same laws. Like the fields of physics, they are part of the organisation of the Universe and are influenced by the vast forces of space. Like the fields of physics, too, they have organising and directing qualities which have been revealed by many thousands of experiments. Organisation and direction, the direct opposite of chance, imply purpose. So the fields of life offer purely electronic, instrumental evidence that man is no accident. On the contrary, he is an integral part of the Cosmos, embedded in its all-powerful fields, subject to its inflexible laws and a participant in the destiny and purpose of the Universe” — quoted from E.F. Schumacher’s *A guide for the perplexed* (New York: Harper & Row, 1977), pp. 116–17, and used by permission of the Random House Group Ltd. For more information see Burr’s *Blueprint for immortality: The electric patterns of life* (London: N. Spearman, 1972).

Vernadsky<sup>14</sup> was probably right in asking the question: how does the ideal, which is mental, translate the planet Earth into its new evolutionary phase? How? If you say: only through labour, only through explosions or only through technogenic activity, such a primitive answer will not do.

There is factual evidence showing that Man is capable of exerting a remote influence on many electronic equipment readings. He can throw the measuring device out of whack, and that from far away. Here in Novosibirsk experiments are taking place on telepathic communication with Norilsk, Dikson, Simferopol and Tiumen,<sup>15</sup> as well as an American centre in Florida, and the remote links between Man and Man as well as between the measuring device and the operator register accurately and reliably.

We are confronted with an unknown phenomenon — the interaction of living substance over huge distances.

These articles, unfortunately, contain many unfamiliar terms, along with references to works of other scholars. It would be quite a task just to read them all, let alone make sense of them.

<sup>14</sup>*Vladimir Ivanovich Vernadsky* (1863–1945) — a Russian scientist compared to Charles Darwin for his scope of contribution to the biological sciences. Vernadsky's prime interest was researching how the human mind influences the development of life on the planet. He viewed human intelligence as a powerful evolutionary force capable of transforming the whole biosphere onto a new level. Vernadsky introduced the term *noosphere* (literally, 'sphere of Intelligence') to refer to the incipient state of biosphere controlled by human intelligence — the new evolutionary stage transcending the conflict between technology and Nature.

<sup>15</sup>*Norilsk* — one of the most northerly cities in the world, close to the Yenisei River, and a major mining centre. *Dikson* — a port in Russia's Far North, on the Kara Sea. *Simferopol* — capital of the Crimea (now part of Ukraine). *Tiumen* — the oldest Russian city in Siberia, founded in 1581, which long served as a centre for the Russian colonisation of Siberia.

Still, I have found out that scientists are aware of Man's capability to make contact at a distance. They are aware, too, of the universal data bank used by Anastasia. She calls it *the dimension of the forces of light*, home to all thoughts ever produced by mankind. Modern science also speaks about this phenomenon, which it refers to as a *supercomputer*.

I then had to figure out how I, who had never practised any literary art, having never been trained for it, managed to write a book which continues to excite so many people.

When I was in the taiga, Anastasia told me: "I shall make you a writer. You will write a book, and many people will read it. It will have a beneficial influence on the readers."

Now the book has been written. And one might suppose that it was all due to her involvement. But then one would have to figure out how she influences other people's creative abilities. However, nobody has yet managed to figure this out.

It might make things easier, of course, to pretend that I myself possessed at least a little talent and was simply setting forth the interesting information I had learnt from her. Then, it seems, everything would fall into place. Everything would be explained. There would be no need to waste any further time on reading scientific or religious literature or badgering specialists with questions. And here Anastasia presented a new phenomenon for which neither I nor any of the people who have been helping me can find an explanation to date.

You may remember me writing in Book 1 what she said two years earlier: "Artists will paint pictures, poets will write verse and they will make a movie about me. You will see all this and think of me...."

To my question "What do you mean, can she predict the future?" Anastasia's grandfather replied: "Vladimir, Anastasia does not predict the future, she visualises it and turns it into reality."

Words, just words. Words come cheap. And to be honest, I didn't pay too much attention to these words, dismissing them as mere metaphor, since I had absolutely no way of even imagining how accurately everything Anastasia said would turn out to be true in real life. But the incredible does happen!

Anastasia's words are starting to come true in reality.

First there was the flood of poems. A few of these poems I published at the end of Book 1. Next, Anastasia clubs started springing up in various cities. The first of these was in the city of Gelendzhik, where they held an exhibit of paintings by the Moscow artist Alexandra Saenko, all dedicated to Anastasia and Nature.

I visited the clubhouse and looked at the walls hung with large pictures. The surrounding space seemed to change in appearance before my gaze.

From the many pictures Anastasia looked out at me with her kindly eyes. And the scenes! I couldn't get over it — some of the pictures showed scenes from this second book, which hadn't been published yet. And there was this glowing sphere, sometimes appearing right next to Anastasia. Later I learnt that the artist painted not with a brush but with her fingertips. Most of the pictures had already been sold, but left hanging for the duration of the exhibit, since more and more people were coming to see them. The artist presented one of them to me as a gift, depicting Anastasia's mother and father. I couldn't take my eyes off her mother's face.

Offers started coming in from various film studios about making an Anastasia movie. And this was now something I was already accepting as a matter of course.

As I touched the paintings and sheets of poetry with my hands, as I listened to the songs and looked at stills from a film which had already been made, I tried to make some sense of what was going on.

And now there is a Moscow Research Centre devoted to investigating Anastasia phenomena, which has concluded:

The greatest spiritual teachers known to mankind for their religious teachings and philosophical and scientific investigations, cannot match the fantastic pace of Anastasia's influence on the human potential. Their teachings have had a noticeable manifestation in real life only centuries and millennia after their first appearance.

In some inexplicable way, over a matter of days and months Anastasia has managed, without the aid of written doctrines and religious teachings, to directly influence people's feelings, provoking emotional outbursts and causing a surge of creativity manifest in artistic creations on the part of a whole lot of people who have been mentally touched by her. We are able to perceive them in the form of works of art and inspired impulses toward goodness and light.

How is it possible that this lonely recluse, all alone in the remote Siberian taiga, has at the same time managed to soar over our lives in real time and space?

How does she bring artistic creations into being through other people's hands? They are all about light, about goodness, about Russia, about Nature, about love.

"She will cover the world with her great poetry of love. Poems and songs will shower the whole planet like a spring rain and wash away its accumulated filth," Anastasia's grandfather told me.

"But how does she do it?" I asked.

And the answer:

"She gives off inspiration and illumination by the energy of the impulse of her own aspirations, by the strength of her dreams."

"What kind of power is hidden in her dreams?"

“The power of Man as a Creator.”

“But Man should receive some sort of compensation for his creations — honours, money, titles. And here she is giving them away and asking nothing in return. Why?” I asked.

“She is self-sufficient. Her highest rewards are her own satisfaction and the sincere love of at least one person,” replied Anastasia’s grandfather.

But so far these answers are not something I’ve been able to make complete sense of. In attempting to grasp who Anastasia really is and my own relationship to her in particular, I have continued to seek out various opinions about her, and read as much as I can in the way of religious literature.

In fact, I’ve read more over the past year and a half than in all the previous years of my life taken together. But what has come of it? I have managed to come to only one indisputable conclusion: a number of ‘learned’ books claiming to be historically accurate, religious and sincere, are nothing but a pack of lies. This conclusion arose out of a situation connected with the historical figure of Gregory Rasputin.

In Book 1 I cited a passage from Valentin Pikul’s<sup>16</sup> historical epic novel *U poslednei cherty* (At the last frontier).

<sup>16</sup>Valentin Savvich Pikul (1928–1990) — one of the most popular Soviet prose writers of the 1970s and 1980s. His famous novel, *At the last frontier* — published in 1979 in the major literary magazine *Nash sovremennik* as an abridged version of the novel *Nechistaya sila* (The demonic forces) — significantly strengthened the popular image of Rasputin as a corrupted immoral debaucher. Pikul’s extensive use of documents of the period, including journalistic accounts, to give his works an authentic ‘historical’ feel, contributed to the popular perception of his novels as ‘historical chronicles’ (although this is not generally supported by historians and literary critics, who tend to dismiss them simply as adventure novels with an historical context). In 1981 *At the last frontier* was made into the ‘historical drama’ movie *Agonia* (Agony), directed by Elem Klimov (1933–2003), which won the prestigious International Federation of Film Critics award at the 1982 Venice Film Festival and became a must-see cinematic experience throughout the USSR. The passage below is quoted from Pikul’s *At the last frontier*:

Pikul's narrative tells about a semi-literate peasant named Gregory Rasputin from the remote wilds of Siberia where the Siberian cedar grows. In 1907 he came to St. Petersburg, then the capital of the Russian empire. He not only endeared himself to the imperial family, impressing them with his predictions of the future, but ended up sleeping with a good many of the most prominent women in the capital. When a group of officers tried to kill him, they were amazed to find that even after swallowing the cyanide poison slipped into his drink, he was still able to get up from the table and make his way outdoors, where Prince Yusupov fired shots at him point-blank from his pistol. Even after being riddled with bullets, Rasputin would not die. His wounded body was thrown off a bridge into the river, then fished out and burnt.

The mysterious and enigmatic Gregory Rasputin, who impressed everyone with his stamina, grew up amidst the cedars of the Siberian taiga.

This is how a contemporary journalist described his staying power:

"At age fifty he could begin an orgy at noon and go on carousing until four o'clock in the morning. From his fornication and drunkenness he would go directly to the church for morning prayers and stand praying until eight, before heading home for a cup of tea. Then, as if nothing had happened, he would carry on receiving visitors until two in the afternoon. Next he would collect a group of ladies and accompany them to the baths. From the baths he would be off to a restaurant in the country, where he would begin repeating the previous night's activities. No normal person could ever keep up a régime like that."

As with many other people, such descriptions also shaped my impression of Rasputin as a hopeless debaucher. But fate threw my way a different concept, as though trying to induce me to reconsider.

This is what the Pope of Rome, John Paul II, had to say about Rasputin:

“Today from the river comes unscathed the body (never found) of a holy monk. And his secret offspring will enter into the ark with prayer.”

What’s going on here? On the one hand he’s referred to as a debaucher, on the other — a holy monk. Where is the truth? Where is the lie?

There’s more. The text of some of Rasputin’s notes, written during a trip to the Holy Land, happened to fall into my hands (they were brought to Paris by a refugee from the USSR named Lobachevsky). This is what Rasputin himself wrote:

The sea effortlessly comforts. When you awake in the morning and the waves ‘speak’ — they dance and make glad. And the sunlight glistens on the sea, it seems to rise ever so quietly, and at that moment Man’s soul forgets all about mankind and fixes its gaze on the glow of the sun; and a happiness kindles in Man, and he feels in his heart the book of life and the higher wisdom of life — indescribable beauty! The sea awakens him from the dream of earthly vanities, and many thoughts arise all by themselves, quite effortlessly.

The sea is a vast space, but the mind is even more spacious. There is no end to Man’s higher wisdom, no philosophy can possibly contain it. Another moment of stupendous beauty comes when the sun sets over the sea and its rays fill the western sky.

Who can estimate the beauty of the sun’s twilight rays? They warm and caress the soul and offer healing comfort. The sun disappears behind the mountains minute by minute, and Man’s heart grieves a little at its amazing twilight rays. And then it grows dark.

And oh, what silence falls! Not even the sound of a bird is heard. Lost in thought, Man begins to pace the deck of

the ship, involuntarily recalls his childhood and all of life's kerfuffle, and begins to compare the silence around him with the bustle of the world, and quietly talks with himself, desiring company to stave off the tedium inflicted upon him by his enemies...

So, who were you, you *Sibiriak*?<sup>17</sup> A Russian named Gregory Rasputin? Where is the truth written about you, and where the lie? How to make sense of it all? What can one rely upon in trying to fathom the essence of one's being, one's destiny? What great works can help one discern between truth and falsehood? Where is the spiritual and sincere, as opposed to a mere pretence of omniscience? Perhaps one should try probing one's own heart? I have never written poetry before, but I want to dedicate my very first poem to you, Gregory Rasputin.

People read *Anastasia* and come up with sincere, original poetry. I have tried, too. And this is the result — for you. My apologies if the rhyme doesn't always work out.

Dedicated to  
Gregory Rasputin

“So you're semi-literate?” “Why yes, semi-literate.  
From the cedar forests — well, those are my roots!”  
“And barefoot?!” “Walking all the way from Siberia,  
You're bound to wear out more than one pair of boots!”

“I am going to the Tsar, to help our dear Batiushka”<sup>18</sup>  
Hold on just a little bit longer out there.

<sup>17</sup>*Sibiriak* — the Russian word denoting a resident of Siberia.

<sup>18</sup>*Batiushka* (pronounced *BAH-tioosh-ka*, lit., ‘Father’) — an affectionate name used (especially by Russian peasants) in reference to the Tsar.

I am going to our Russia, our dear Russia-Matushka<sup>19</sup>  
To give her a taste of our pine-forest air!

“What about it, hussars? You dashing rogues, freely  
Debauching the ladies, making bold in a brawl?  
Just look at *me*, look, and see how one really  
Debauches — you scum, thinking you know it all!”

Peter’s city in fine Paris garb is assembling.  
But watch, lest your corsets too tight squeeze your hearts!  
The Sibriak enters, and ladies are trembling  
At the sight of this peasant from far eastern parts.

But as he went off to the morning-prayer service,  
For others’ redemption from error to pray,  
He heard his land calling — She spoke in a whisper,  
The only one telling him this: “Go away!”

“The flesh-eating age of the beast is upon us,  
All drunken and growling, it leads men astray.  
While your fiery soul has been keeping it from us,  
It can no longer do so. You must go away.

“You can’t hold the savagery back for much longer.  
Just a moment, that’s all you will last — it’s too strong.  
I am Russia! You cannot imagine my sorrow!  
I know now: you never will finish your song.

“Go back to your cedars. My rebounding is certain!  
And then you may ask whatsoever you will...”

<sup>19</sup>*Russia Matushka* (pronounced in Russian: *Ras-SI-ya MA-toosh-ka*) - an endearing term signifying ‘Mother Russia’.

“Oh how I’d love us to go to the *banya*<sup>20</sup>  
I’d beat you with besoms of birch, even pine,  
My profligate Russia — for you I am longing!  
I shall stay with you, Russia, for ever — you’re mine!”

The age of dark madness with fury came howling:  
Grishka<sup>21</sup> stumbled, his breast full of bullets that day.  
While the blackness stood mocking, its dark visage scowling,  
Saying “Crawl, you Sibiriak! Go on, crawl away!

“You can hold me back only a half-second longer,  
And then from the depths of my pit you’ll be shown  
A punishment frightful, more painful and stronger  
Than ever the world in its history has known!

“A hero you are, but you’ll be called a blasphemer.  
From bottles of poison<sup>22</sup> your image will peek.  
And the scions you save will curse you as a schemer  
And spit on your soul, you Siberian *muzhik*.<sup>23</sup>”

“Crawl away. It is I who now have all the power!  
Fly away, if you like, to your heaven on high!  
But a moment is left, see? Not a day, not an hour.  
So give me my moment! You’re still going to die.”

<sup>20</sup>*banya* — Russian baths or a bath-house, similar to a Finnish sauna, where boiling water is poured over hot stones to increase the temperature and bathers beat each other with birch besoms (brooms made of twigs tied around a stick) to stimulate blood circulation. Braver participants sometimes prefer besoms made of sharp-needled conifers (e.g., pine) instead of birch.

<sup>21</sup>*Grishka* — a diminutive form of the Russian name *Grigory* (Gregory).

<sup>22</sup>*bottles of poison* — referring to the *Rasputin* brand of vodka, popular all over Russia, with a picture of Rasputin’s face on the label.

<sup>23</sup>*muzhik* (pronounced *moo-ZHIK*) -- a Russian word for a peasant, especially one who lacks the refinement of an urban dweller.

“Bring on the Madeira, let’s head for the *banya!*  
And there I shall show you what’s real and what’s crass.  
A Sibiriak, you say? I’m a down-to-earth peasant!  
So what’s all the babble and gab about, ass?”

His body was shot through and drowned in the river,  
Then burnt in a courtyard midst rubble and sand.  
Today as spring winds blow their way over Russia,  
They carry his ashes across the whole land.

“Well, *muzhik*,” said the blackness, still standing there mocking,  
“Where on earth is your tombstone, and where are your eyes?  
You can never bring back now the days of your living,  
And your scions will see but an image despised.

“Show them the debt they owe! I give you power!  
Show them the bills for your service unpaid,  
Or is it your wish just to weep and to cower?”

Grishka spit a lead bullet: “You, Satan, are foolish!  
As if I could care about either weeping or loans?  
Come now, my *muzhiks* — how’s the *banya*, dear fellows?  
Time for more boiling water to be poured on the stones?!”

Gregory Rasputin from the cedar forests of Siberia stepped into the life of pre-revolutionary Russia in an attempt to head off the storm of revolution, and perished.

Anastasia also lives amongst the cedars and is also trying to do good for people, also trying to head off something before it happens. But what fate has our society prepared for her?

## CHAPTER TWO

### A money-making machine

During my first days of talking with Anastasia I saw her as a recluse with her own unique way of looking at the world. Now, after all that I have heard and read about her, after all her subsequent penetrations into our lives, she has become a kind of an anomaly. My head has started to swirl in confusion. It is with great effort that I am trying to let go of the incoming tide of information and conclusions and get back to the simplicity of my first impressions. And to answer the oft-repeated question: “Why didn’t you bring Anastasia out of the taiga?”

I wanted very much to bring Anastasia out of the taiga. But I realised it couldn’t be done by force. I needed to try and show her how useful and appropriate her stay in our society would be. I reflected on which of her abilities could be used by people — and my business in particular — with benefit accruing to her as well. And suddenly I realised something: this Anastasia standing before me would be a real *money-making machine!*

For one thing she is easily capable of healing people from any disease. And she does this without making any kind of diagnosis, but simply chasing out of the body any pains and sores that have invaded it. And she doesn’t even have to touch the body. I experienced this for myself. She becomes utterly concentrated, looking out with her kind, unblinking bluish-grey eyes. And the body seems to warm up from her look, and even one’s feet begin to perspire. All sorts of toxins escape through the perspiration.

People pay big money for medicines and operations. If one doctor can't help, they go to another, or go to psychics, or bio-energy therapists, just to get cured of a single disease, sometimes spending weeks or months or even years in their search for a cure, while Anastasia's method takes but a few minutes. I calculated that if she spends even fifteen minutes on one patient and charges just two hundred fifty thousand roubles for that (although many healers charge a good deal more), that would make one million roubles an hour. But that's by no means the limit. Operations, for example, can cost up to thirty million roubles.<sup>1</sup>

It seemed as though a sound business plan was taking shape in my head. I decided to work out some details and asked Anastasia:

"So, that means you can rid a person's body of any and all ills?"

"Yes," replied Anastasia. "I think I could eliminate any and all."

"How much time do you need to spend on a single patient?"

"Sometimes quite a lot."

"A lot — that's how long?"

"Once it took me more than ten minutes."

"Ten minutes — that's nothing. Some people take years to get better."

"Ten minutes is a long time, considering the fact that I have to concentrate, as it were, and decrease my sense of conscious awareness."

"That's not a problem, conscious awareness can wait. You know so much as it is. I've thought of something, Anastasia."

<sup>1</sup> *two hundred fifty thousand, one million, thirty million roubles* — equivalent to approx. US\$50, 200 and 6,000 respectively at the June 1995 exchange rate. With an average Russian's monthly income of under \$100 at the time, those figures were truly astronomical.

“What have you thought of?”

“I’ll take you with me. In a big city we’ll hire a decent office for you, I’ll advertise and you can treat people. You’ll be of a great help to all sorts of people, and we’ll have a right good income.”

“But I sometimes treat people right now as it is. When I visualise various situations with the dachniks, to help them understand the world of plants around them, my Ray also eliminates their diseases, only I try not to eliminate *all* diseases...”

“But they don’t even know that *you’re* the one that’s doing it, they don’t pay you any money for it, or even say ‘thank you!’ You don’t get anything for your labours?!”

“I do.”

“What?”

“I feel happy.”

“Well, that’s fine then. You can be happy, and delighted, and the business will have an income as well.”

“But what if somebody does not have any money to pay for treatment?” she enquired.

“Now why are you jumping into trifling matters like that? You don’t have to think about that. You’ll have secretaries, and an administrator. All you need think about is treating people, perfecting yourself and attending seminars to share your experience and exchange ideas with other healers. Do you know yourself how your method works, your Ray, and what the underlying principle is?”

“Yes, I know. And this method is known in your world too. Doctors and career scientists know about it. Or at least they feel its beneficial effect. In hospitals they try to talk with their patients cheerfully, so as to uplift their spirits. Doctors have long noticed that if someone is in a state of depression, it is difficult to cure their disease, and medicines do not help, while if you treat a patient with love, the disease will go away more quickly.”

“So why has nobody tried learning this method and developing it to the degree you have?”

“Many scientists are trying to learn it. And many people you call folk healers also use this method, and they are having some success. This is the same method Christ Jesus healed by, as well as the saints. Much is said about love in the Bible, because this feeling has a beneficial influence on Man. It is the strongest feeling of all.”

“Why do healers and doctors have so little success, and you have so much?”

“Because they live in your world, and they, just like everyone else in that world, have taken in harmful feelings.”

“What kind of harmful feelings, and what do *they* have to do with it?”

“Harmful feelings, Vladimir, are anger, hatred, irritation, jealousy, envy... and others. They and other similar feelings make Man weaker.”

“You mean to say, Anastasia, that you hardly ever get angry?”

“I never get angry.”

“All right, Anastasia. It’s not important how this effect comes about, it’s the final result that’s important, and what benefit can be derived from it. Tell me, would you agree to go with me and get involved in treating people?”

“Vladimir, you see, my home is here — this is my motherland, the place where I belong. It is only by staying here that I can fulfil my purpose. Nothing gives Man greater strength than his motherland, the Space of Love created by his parents. Treating people, delivering them from physical ailments — I can do that right here from a distance, with the help of my Ray.”

“Well, all right. If you don’t want to travel, you can do your treating from a distance. You and I can set up an arrangement as to where those wishing treatment can come. They will pay

their money, and you will heal them at a specific time. We'll draw up a schedule. Would you agree to that?"

"Vladimir, I know you want to make a lot of money. You shall have it. I shall help you. Only that is not the way to do it. In your world people charge for treatment — there is no other way in your world. But I would rather do that without any question of money. Besides, I cannot treat everybody indiscriminately, since I have not fully realised in which cases healing will be helpful, and in which ones harmful. But I shall try to become aware of this and understand. And as soon as I can decipher —"

"What drivel is that?" I broke in. "How can healing or treating a person be harmful? Or do you mean harmful to yourself?"

"Healing of physical ailments can often bring harm to the one healed."

"It seems, Anastasia, your sophistications have given you a somewhat inverted concept of good and evil. Doctors have always been held in high regard by society, even though they have not performed their services free of charge. And, since you cite the Bible so much, you'll find that is not forbidden even there. So cast those doubts out of your head. Curing someone is always a good thing!"

"You see, Vladimir, I know this from experience. My grandfather showed me an example of the harm that healing can bring when it is not thought through, when the patient himself does not participate in the healing."

"What kind of strange philosophy you have here! I offer you a joint business venture. What have such examples got to do with it?"

## CHAPTER THREE

# Healing for hell

“One day I saw with my Ray a lonely old woman working on her garden plot,” Anastasia began. “She was spritely, slim and always cheerful. She caught my interest right away. She had a very small plot, and a lot of different things growing in it, and they grew very well, because she tended them with love.

“Then I learnt that the old woman would put everything she grew into a basket and take it into town and sell it. She tried not to eat the early fruits of her labours, but sell them when they would still fetch a high price. She needed the money to help her son. She had given birth to him late in life, and soon afterward she was left without a husband. Her relatives never communicated with her. Her son liked to draw as a child, and she had dreams that he would become an artist.

“Several times he tried to get in some place where he could pursue his studies. Finally he made it. And once or twice a year he would come to visit his elderly mother. These visits were the highlight of her life, and each time she would save up her money and prepare a whole supply of food for him. As the time for his visit approached, she would pack vegetables into glass jars, put their lids on tight and give the whole supply to him when he arrived.

“She loved him very much, and kept dreaming about her son becoming a top-notch artist. She lived on that dream. The woman was kind and cheerful.

“Then for a while I did not watch her. The next time I saw her she was very ill. She had a hard time bending over to work

on her plantings — each time she bent over, a sharp pain ran right through her body.

“But she proved to be very resourceful. She made her beds long and narrow. Each time she went out to her plot she would take with her the seat from an old stool (minus the legs) and use it to sit on while she did her weeding, and that way she was able to move around the whole plot without having to bend over. She dragged the basket along on a string. And she was looking forward to a good harvest.

“It really looked as though the harvest that year would be quite plentiful, since the plants felt her state of mind and reacted accordingly. The woman sensed that she would soon pass on, and to make things easier for her son, before she died she bought a coffin and a wreath and made all the funeral preparations.

“But she still wanted to bring in one last harvest, and prepare the winter’s food supply for her son before she died. I did not pay much attention then to why she was still sick even after such close contact with the plants. I thought perhaps it was because she herself ate almost nothing from her plot. She sold what she grew and then used the money to buy things she needed on the cheap.

“I decided to help her, and one night when she lay down to sleep I began warming her with my Ray, removing the pains from her body. I could feel some kind of resistance to the Ray, but I still kept on trying. I did this for about ten minutes until I succeeded in healing her flesh.

“Then, when Grandfather came, I told him about the old woman. And I asked him why the Ray had met some resistance. He thought about it, and then told me I had done the wrong thing. It made me very distraught.

“I began asking Grandfather to explain why. At first he did not say a word. Then he said, ‘You healed the body.’”

I was amazed. “What harm could you have possibly brought to the woman’s soul?” I asked.

Anastasia sighed and went on:

“The woman’s health got better and she did not die. Her son came to see her earlier than usual. This time he came only for two days and told his mother he had quit his studies and did not want to be an artist any more. He was now involved in some other work that brought in more money. He had got married. Now he would have a lot of money. And he no longer wanted her to prepare ‘those insipid food jars’ for him, since transporting them would now cost more.

“‘You can eat better yourself, now, Mother,’ he said.

“He left without taking anything. That morning the woman sat on her porch, looked at her plot, and her eyes were filled with such emptiness and depression — they looked as though she did not want to live. You see, her body was healthy, but it was as if there were no life left in it. I saw, or rather felt, the terrible emptiness and hopelessness in her heart.

“If I had not cured her body, the woman would have died at the right time, she would have died peacefully with her beautiful dream and hope intact. Now here she was, still alive, but in great despair, and this was many times more frightening than physical death.

“Two weeks later she passed on.”

## CHAPTER FOUR

### A confidential conversation

“I realised,” Anastasia continued, “that physical disease is nothing compared with mental torments, but at the time I was not yet able to treat the soul. I wanted to know how I could do this or even if I could do it at all. Now I know — it is possible!

“And I found out something else — that physical diseases appear in Man not just as a result of his self-withdrawal from Nature around him, and not just as a result of the dark feelings which he allows himself to take in. They (the diseases) can also be a means of warding off or even deliverance from considerably greater torments. Diseases are one of the devices or means of communication between the Supreme Intelligence (God) and Man. Man’s pain is His pain, too. But it could not be otherwise. How else could you get the message, for example: ‘Do not keep throwing into your stomach all sorts of harmful stuff.’ You tend not to listen to words of reason, after all. That’s why the message comes through pain. But instead you swallow pain-killers and go back to stubbornly doing your own thing.”

“So,” I countered, “it follows then, in your opinion, that there’s no need to treat people at all? No need to help them with their ailments?”

“Help there should be, but first of all to gain a proper understanding of the origins of the disease.

“Man needs help in discerning what the Supreme Intelligence, God, desires to say to him. But that is a most difficult task. One can make mistakes. Pain, after all, is a confidential

conversation between two beings who know about each other. Interference from a third party often harms Man instead of helping him.”

“Well, why then did you rid me of *my* diseases?” I asked Anastasia. “Does that mean you’ve harmed me in some way?”

“All your diseases will come back to you if you do not change your lifestyle, your attitude to things around you and to yourself. If you do not change some of your habits. They are the causes of your diseases. I have done no harm to your soul.”

It became clear to me that it would be impossible to persuade Anastasia to make money out of using her healing abilities until she had sorted things out for herself. My business plan had fallen apart. Anastasia must have noticed my irritation, for she said:

“Do not be upset, Vladimir. I shall try to grasp everything as quickly as possible. And now, if you really want to help others and yourself and not just make money, I shall tell you about the means by which Man can cure himself from many diseases without undesirable side-effects, as might happen when outsiders try to interfere in his destiny. If indeed you want to listen to this...”

“What choice do I have? I’m not going to change your mind, in any case. Tell me.”

“There are several main causes underlying the diseases of the human flesh, namely: harmful feelings, emotions, an artificial dietary régime — an unnatural meal schedule and food composition, the lack of short-term and long-term goals, and a misapprehension of one’s essence and purpose in life. Positive emotions, a variety of plants and a reappraisal of one’s essence and purpose in life — all these are capable not only of counteracting diseases but also of significantly enhancing one’s physical and mental or emotional state.

“As far as bringing back — under the conditions of your world — Man’s lost connection with plants, I have already told you about that. After Man has established a direct personal contact with these plants, it is much easier to make sense of everything else.

“The Ray of Love, too, is capable of curing many diseases of one’s fellow-Man and even prolonging his life by creating around him a *Space of Love*.

“But Man himself, once he has managed to arouse positive emotions in himself, can use them to extinguish pain and cure the diseases of the flesh — even the effects of poison.”

“What does that mean — ‘arousing positive emotions?’” I queried. “How can one think good thoughts if one has a toothache or a stomach-ache?”

“Pure, clear moments of life, positive emotions, like guardian angels, will overcome pain and disease.”

“But what if someone doesn’t have enough pure and clear moments to arouse the positive healing emotions — what should he do then?”

“He should create at once something to make them appear. They appear when people around you treat you with genuine Love. So you must create a situation along those lines, create it by your actions in respect to those around you, otherwise your guardian angel will not be able to help you.”

“I wonder whether I have ever had them myself, and if so, how strong they were. How does one call them forth?”

“This can be done through reminiscing. For example, let us recall something good, something pleasant from your past. With the help of that image try to feel the soft and pleasing state of mind you experienced back then. Do you want to try it now? I shall help you. Try it.”

“All right, let’s give it a try.”

“Please, lie down on the grass and relax. You can remember starting from this point in your life right now going back

into the past. Or you can start with your childhood and proceed up to the present day. Or you can jump at once to the most pleasant moments and feel the sensations connected with them.”

I lay down on the grass. Anastasia lay down beside me and pressed her fingers against mine. I thought her proximity might prevent me from concentrating on my reminiscences, and I said:

“Perhaps I’d better be alone.”

“I shall be very quiet. When you start remembering, you will forget about me. And you will not feel the touch of my hand. But I can help you remember everything more quickly and vividly.”

## CHAPTER FIVE

# Where are you, my guardian angel?

The chronicle of my life-story took me back to my childhood. My reminiscences continued up to the point where I was playing in the sand with the country kids, and then broke off. At that moment my soul was overwhelmed with an inexplicable sense of alarm. Not a single event in my whole life aroused positive emotions or feelings comparable to those I experienced that morning after spending the night with Anastasia. Or with those that arose in me after she brought the rhythms of surrounding Nature in tune with the beating of my heart (I described this experience in the chapter “Touching Paradise”). But I considered these marvellous feelings to be something created in me by Anastasia — they weren’t my own. They were artificial, a gift from Anastasia. Involuntarily, I compared them with those of my previous life, and found no analogy whatsoever.

Again and again I hunted down recollections of my life, as though running a movie reel, backward and forward. Everything I saw was related to my efforts to get or achieve something. Sure, I got what I wanted, one thing after another, but there was no great feeling of satisfaction. Instead, some new desire merely appeared. And the most recent years of my life, when those around me thought how splendidly everything was turning out for me, aroused an even greater feeling of confusion and chaos. The cars I had acquired, the women, the banquets, the gifts and congratulations I had received — all seemed empty and pointless.

I quickly got to my feet and said, with some irritation, either to myself or to Anastasia:

“There are none of these healing sensations in Man’s life! At least, not in mine. And I would say there are many lives where they can’t be found.”

Anastasia also rose to her feet and calmly observed:

“Then you should create them as quickly as possible.”

“*What* do I need to create? Tell me, what?”

“First you must understand what holds the greatest meaning, or significance, for you. You have just been looking over your past life. But even with the opportunity to analyse it, to look at it objectively, as it were, you still were not able to notice what was really significant. You kept latching on to the usual values, as you saw them. Tell me the situations where you felt you came closest to a sense of happiness.”

“There were two situations, but each time something prevented me from feeling truly happy in them.”

“What kind of situations?”

“Back in the early days of *perestroika*<sup>1</sup> I managed to acquire a long-term lease on a steamship. This was the best passenger ship in the Western Siberian river fleet — the *Mikhail Kalinin*.

“After the lease agreement was drawn up, I went to the harbour and there she stood. What a beauty! I remember the first time I stood on the deck of my very own ship.”

“And did your feelings of happiness greatly increase when you stood on the deck?”

“You know, Anastasia, our lives are filled with all sorts of problems. As soon as I had climbed aboard, I was met by the

<sup>1</sup>*perestroika* — the policy of restructuring the economic and political system of the Soviet Union, initiated by Gorbachev in 1985, which eventually led to the collapse of communism and the break-up of the USSR in the early 1990s.

captain. We went to his cabin and had a bottle of champagne together. During our conversation the captain advised that all the water pipes needed cleaning at once, or the health authorities would not allow us to set sail. And there were other things he told me...”

“And so, Vladimir, you immersed yourself in all the problems and cares involved in the running of the ship.”

“Yes, that’s right. There were a lot of them.”

“It is inherent in the nature of artificially created matter and various mechanical devices, Vladimir, that they bring more problems than pleasures. Their benefit to Man is quite illusory.”

“Well, I don’t happen to agree. Maybe in themselves these mechanical devices have problems — they need constant repair and maintenance. Still, they help us get a lot of things.”

“What, for example?”

“Even love.”

“Genuine Love, Vladimir, could not possibly be under the control of artificially created objects. Even if you owned all the objects in the world, you would not be able, just with their help, to gain access to the true Love of even one woman.”

“Well, you simply don’t know our women. You’re spinning theories, that’s all. I managed to get it.”

“What did you manage to get?”

“Love. I quite simply succeeded. There was one woman I loved a great deal. I loved her for many years. But she didn’t really want to go off with me anywhere alone. When I got my ship, however, I invited her aboard, and she accepted. Can you imagine how great that was?! Here we were sitting alone at the ship’s bar. There was champagne, first-class wine, candlelight, music — and nobody else around. Here we were alone in the empty bar on my ship. She was the only one there with me.

“I had the ship set sail without taking on any other passengers, just so we could be alone. The ship proceeded down the river. There was music playing in the bar. I invited her to dance. Her figure was fantastic, especially her breasts. I hugged her tight, my heart was pounding for joy, and I kissed her on the lips!

“She didn’t run away, she even hugged me back. Do you see? There she was right beside me, and I could touch her, and kiss her. All this was because of the ship, and you say it can only bring problems.”

“And then, Vladimir, what happened?”

“Nothing much.”

“Please try to remember, anyway.”

“I tell you, it was nothing important.”

“Can *I* tell *you* what happened there, on the ship, between you and that young woman?”

“You can try.”

“You had a lot to drink. You made a deliberate effort to drink as much as possible. Then you put the keys to your cabin — your luxury apartment — on the table in front of her, and you yourself went down to the lower decks. You slept almost twenty-four hours in the cramped crew’s quarters. And do you know why?”

“Why?”

“The moment came when you noticed a strange expression on the face of that beloved young woman of yours — a pre-occupied smile. Intuitively, even subconsciously, you realised that she, your beloved, was thinking how happy she would be if only it were her own beloved that was sitting across from her in this bar, instead of Megré. Your precious girl was dreaming of someone else, someone she really liked. She fantasised that it was he, and not you, who was master of the ship. You were at the mercy of inert matter, to which you had tied your living feelings and aspirations, and were choking them to death.”

“Don’t go on, Anastasia!” I pleaded. “These recollections aren’t happy ones for me. In any case, the ship did play its role. It was thanks to the ship that you and I met.”

“The happenings of the present are the result of previous feelings and impulses of the soul, and it is only *they* that determine the future. And it is only *their* momentum, only the beating of *their* wings, that is clearly reflected in the heavenly mirrors. And only *their* impulses and aspirations will be reflected in happenings here on the Earth.”

“What do you mean by that?” I asked in some bewilderment.

“Our meeting may well be the culmination of many aspirations of the soul on both your part and mine — perhaps on the part of our immediate or even more distant forebears. Perhaps it came from a single impulse of the cherry tree growing in the garden of your country home. Only not the ship.”

“What has the cherry tree in my garden got to do with it?”

“In all your many glances back at your life, you failed to pay any attention to this cherry tree and your feelings connected with it, yet those feelings have played a leading role in your life in recent years. The Universe did not react to your ship. Just think, what could a primitive, run-down material device, incapable of either thinking or restoring itself, possibly mean to the Universe?”

“But the cherry tree... a little Siberian cherry tree, which you could not even make room for in your recollections, excited the cosmic expanses and changed the course of time and history — and not only yours and mine. Because it is a living being, and, like all living beings, has an inseparable connection with creation as a whole.”

## CHAPTER SIX

# The cherry tree

“Remember, Vladimir, everything within you associated with this little tree. Remember, starting right from the moment you first made contact with it.”

“I shall try to remember, if you think it’s important.”

“Yes, it *is* important.”

“I was riding in my car, I don’t remember where I was going. We stopped near the Central Market. I asked my driver to get out and buy some fruit. I stayed in the car and watched people leaving the market carrying all sorts of saplings.”

“You watched them and were surprised. Why?”

“You see, their faces were happy and contented. Even though it was cold and rainy out, here they were hauling away some kind of saplings with their roots all bound in cloth. These saplings were heavy to carry, but the people’s faces were content, and here I was sitting in my warm car and I was sad.

“When the driver returned, I got out and went over to the market myself. I kept walking up and down past the merchants’ stalls and bought three cherry saplings. As I was tossing them into the baggage compartment, the driver said that one of the saplings wouldn’t survive, since its roots had been cut too short, and I’d better throw it out right off, but I decided to keep it. It was the most graceful of the three. Then I went and planted the saplings in the garden of my country home.

“I threw in extra topsoil around the tree with the short roots, and a sprinkling of peat moss, along with a bit of fertiliser.”

"In trying to help it, you burnt two more little roots of the sapling with the fertiliser," Anastasia added.

"But it survived! In the spring, when the buds started coming out on the trees, its branches came to life, too. Little leaves began to appear. Then I set out on my commercial expedition."

"But before that," Anastasia observed, "every day for a period of more than two months you would drive out to your country house and the first thing you did was go and see how the little tree was getting on. Sometimes you stroked its branches. You were so happy to see the leaves, and kept watering the tree. You drove a stake into the ground and fastened the trunk to it with twine all around so the wind wouldn't break it.

"Tell me, Vladimir, do you think that plants react to people's attitude toward them? Do you think they feel good and bad thoughts?"

"I've heard, or read, somewhere that house-plants and flowers do react that way. They can even become all withered when their care-giver goes away. I've heard about scientific experiments where they attached sensors to various plants, and the needles jumped one way when the plants were approached aggressively, and the other way when someone approached them with thoughts of gentleness and kindness."

"So, Vladimir, you know about plants reacting to the expression of human feelings. And, according to the Grand Creator's design, they strive to do all within their power, all that they can, to meet Man's needs — they bring forth fruit, and try to arouse positive emotions in Man with their flowers beautiful and fair — indeed, they put oxygen into the air so that we can breathe.

"But plants have been granted yet another function which is no less important. Plants which come into direct contact with an individual Man create for him a *Space of true Love*. The

kind of Love without which life for the human race would be impossible.

“Many dachniks are in a hurry to get out to their plots because it is there that such a Space has been created for them. And this little Siberian cherry tree you thought to plant, the one you cared for yourself, it tried to do the same as all other plants and perform its assigned function.

“If there are a lot of them, plants can create for Man a significant Space of Love — if they are of different varieties and Man communicates with them, and approaches them with Love. All together plants can create for Man a significant Space of Love which enhances the soul and makes the body whole.

“You see, Vladimir — all together, when there are a lot of them. But you looked after just one sapling. And so this one little Siberian cherry tree began aspiring to do what only a number of plants acting together can do.

“Its aspiration was aroused by your special relation to it. It was something you yourself realised only intuitively — in all your surroundings only this one little tree was not asking anything of you, it was not being hypocritical, it only aspired to give of itself — and then you came along. You were tired after a busy day. You went over to the tree, stood and pondered. You looked at it, and it responded.

“Before the first ray of dawn appeared in its perfection, the leaves of the tree tried to catch that ray’s reflection in the brightening sky. And when the Sun went down afar, it tried using the light of a bright star. And as it persisted, something transpired by and by, just a wee bit of something transpired.

“Its roots, twisting themselves around the burning fertiliser, were able to take in what they required from the Earth. And the Earth’s juices began turning and running through the veins of the tree a little more quickly than usual. And then one day, in an early morning hour, you came and saw the

little flowers to which the tree's delicate branches had given birth. The other saplings were devoid of flowers, but this one, thanks to your gift of caring, had already blossomed. You were overjoyed. Your spirits were uplifted and then... do you remember what you did, Vladimir, after seeing the flowers?"

"I really was overjoyed. For some reason my mood was on a high, I felt a lightness in my head. I went and stroked its branches with my hands."

"You *gently* stroked its branches. And you said, 'Well now, my beauty, you've blossomed!'

"You see the trees, Vladimir, and you see the leaves, and the fruit borne thereof. But more than that, the trees create a Space of Love. The little cherry tree very much wanted you to have this Space. But where was the place for the tree to find the strength to give back to Man what it had received from him? It had tried and tried and had already given everything that was in its power, but it had received something extraordinary besides — a showing of tenderness toward itself and the flowers it bore. And then it had the desire to do more! All by itself!

"You went off on your very long expedition. And then, completing your journey and returning, the first thing you did was go to the garden plot to see your little cherry tree. But along the way you were eating cherries you had bought at the market. As you approached it, you noticed that there were three red cherries growing on your tree. You stood there beside it, all tired out, eating the bought cherries and spitting out the stones. Then you tore one of the cherries off your tree and tried it. Indeed, it was just a little bit more sour, a little less sweet than the market cherries you had decided to eat, and you did not touch the other two."

"I had had my fill of the other cherries. And this one was indeed more sour."

“Oh, if only you had known, Vladimir, how much power those little cherries contained on their own that was so beneficial to you! How much energy and Love! From the depths of the Earth and the expanses of the Universe and more, the tree had gathered everything helpful for you and poured it into these three cherries. It had even let one of its branches wither in order to make these three cherries ripen. One of them you tried, but you left the other two on the tree to die.”

“I had no idea. But still, I was happy that it was capable of bearing fruit.”

“Yes, you were happy. And then... do you remember what you did this time?”

“Me? Well, I stroked the tree’s branches some more.”

“And you not only stroked them. You even bent over and kissed the leaves on the branch which was resting on the palm of your hand.”

“Yes, I did. Because I was in such a good mood.”

“And something incredible happened with the tree. What more could it do for you, since you had not taken the fruit thereof that had been grown with so much Love? What could it do?”

“It trembled from the kiss of Man, and the thought and feelings inherent only in Man but produced by this little Siberian cherry tree took flight into the Universe’s space of light — to give back to Man what it had received from him. To give back to Man its kiss of Love, to warm him with this — the bright feelings, the Space of Love. And against all laws that thought swept across the Universe but could not find a resting-place, a means of manifesting the breath — the life — of itself.

“Knowing that one cannot find a resting-place means *death*.

“Then the forces of light returned to the cherry tree the bright thought it had produced, so that it might destroy the

thought within itself and not perish. But the tree did not pick it up!

“The little Siberian cherry tree’s burning desire endured unchanged, extraordinarily pure and trembling.

“The forces of light did not know what to do. The Grand Creator was not about to change the established laws of harmony for you. But the cherry tree did not perish. It managed to endure because the thought, aspiration and feelings thereof were extraordinarily pure, and by the laws that constitute creation as a whole nothing can destroy pure Love. And it circled over your soul and dreamt of finding a resting-place, a place to thrive. Alone in the Universe, it was striving, aspiring to create for you a Space of Love.

“I came to your ship to at least try to be of some help and fulfil the cherry tree’s desire to find this resting-place, to manifest its love. Even though I did not know to whom it was addressed.”

Anastasia paused.

“You mean to say,” I queried, “that your relationship to me arose out of your desire to help the tree?”

“My relationship to you, Vladimir, is simply that: my relationship. It is difficult to say who was helping whom here — the cherry tree me or I the tree. Everything in the Universe is interrelated. To perceive what is really going on in the Universe one need only look into one’s self. But now, by your leave, I am giving an embodiment to this, to what the cherry tree desired. May I give you a kiss from the tree?”

“Of course you may. Since it’s the right thing to do. And when I get home, I shall eat all of its fruit.”

Anastasia closed her eyes. She pressed her hands to her breast and quietly whispered:

“*Feel* this, little cherry tree. I know you can feel it. I shall now do what you wished. This will really be your kiss, little cherry tree.”

Then Anastasia quickly placed her hands on my shoulders and, without opening her eyes, drew near, touched her lips to my cheek and held them there.

It was a strange kiss, just the touch of her lips. But it was not like any I had ever received before. It aroused an extraordinarily pleasing sensation, one I had never felt up to now. The technique of moving the lips or tongue or body probably had nothing to do with it. What counted, most probably, was what was hidden in the inner Man that was manifesting itself in the kiss.

But what was hidden inside this taiga recluse? Where did she get so much knowledge from, so many unusual abilities and feelings? Or maybe everything she said was simply the product of her imagination? But then where did the extraordinarily tender, charming and heart-warming sensations come from — the ones I could most certainly feel within me? Perhaps our joint efforts will manage to unravel the mystery through the aid of the following situation which I had the good fortune to witness.

## CHAPTER SEVEN

### Who's to blame?

Once when Anastasia was trying to explain something to me about lifestyles and faith, but couldn't find suitable, understandable words — which she no doubt very much wanted to find — a curious incident took place.

Anastasia quickly turned to face the ringing cedar, pressing the palms of her hands against its trunk. But then something inexplicable began happening to her. Lifting up her head and addressing either the cedar or Someone way up high, all at once she started speaking passionately and with concentrated attention in a combination of words and sounds.

She was evidently trying to show or explain something, or plead for something. From time to time her monologue seemed to be infused with tones of persistent demanding. The resonant ring of the cedar increased in volume. Its ray became brighter and thicker. And then Anastasia demanded sharply:

"Answer me! Answer! Explain! Give it to me, give it to me!" she said, shaking her head and even stamping her bare feet.

All at once the pale glow of the ringing cedar's tree-top became focused into a ray, and the ray suddenly broke off from the cedar and flew upward and dissolved into thin air. But at this point another ray appeared, coming down to the cedar from above. It seemed to consist of a bluish mist or cloud.

The needles of the cedar, pointing downward, were illuminated with similar misty rays, almost unnoticeable. And these rays pointed toward Anastasia, but didn't touch her — they seemed to disappear and dissolve in the air. And when

she insistently stamped her feet and even slapped the ringing cedar's huge trunk with the palms of her hands, the glowing needles began stirring and their rays joined to form a single Ray of bluish mist. It aimed itself downward toward Anastasia, but didn't touch her. The Ray dissolved in the air, literally dissolved — at about a metre away from Anastasia at first, then at just half that distance.

I suddenly recalled with horror how Anastasia's parents had perished — very likely from just such a Ray.

Anastasia continued her stubborn pleading and demanding, much like a spoilt child insisting on some desired favour from its parents. And suddenly the Ray made a dash for *her*, as it were, illuminating her whole body like a flashbulb.

A cloud first formed around Anastasia and then began dissipating, ever so slowly. The ray from the Cedar dissolved, the rays from the needles were extinguished. The cloud around Anastasia continued to dissipate. It was either entering into her or dissolving in space.

Now radiant with a joyous smile, she turned and took a step in my direction. Then she stopped and began staring past me at something beyond. I turned around to see Anastasia's grandfather and great-grandfather coming into the glade. The tall, grey-bearded great-grandfather walked slowly, just ahead of his son. He was leaning on a stick that looked something like a shepherd's staff. Upon reaching my position, he stopped and fixed his gaze on me, as though staring into empty space. I couldn't even tell whether he actually saw me or not. Great-Grandfather stood silently for a moment. Then, after bowing ever so slightly, without uttering so much as a word of greeting, he headed over to Anastasia.

Even though Grandfather was a bit of a fussbudget, he was a very simple man. His whole demeanour pointed to a most kind and cheerful fellow. As he approached the spot where I was standing, he at once stopped and offered me a simple

shake of his hand. He started to say something, but I can't recollect exactly what he said. For some reason both of us felt our attention and concern suddenly drawn to what was going on at the base of the cedar.

Great-Grandfather had stopped just a metre from Anastasia. They stood there for a while, silently staring at each other. Anastasia was standing before the bearded old man, her hands lowered to a vertical position, as though she were a schoolgirl or university applicant being confronted by a strict examiner. She looked like a child caught being naughty, and her anxiety was most evident.

The tense silence which had come over the scene was broken by the deep, clear, velvety tones of Great-Grandfather's voice. He did not say hello to Anastasia but proceeded at once to a stern questioning, every word slowly and distinctly pronounced:

"Who can make an appeal directly to Him without going through the light and rhythm that have been bestowed upon us?" Whereupon Anastasia responded without hesitation:

"Any Man can make an appeal to Him. From time immemorial He Himself has taken great pleasure in talking with Man. And this is what He wills right now."

"Are all paths outlined by Him in advance?" Great-Grandfather continued. "Are there many Earth-dwellers capable of discerning them? Are you capable of seeing these paths?"

"Yes. I have seen what has been outlined for mankind. I have seen how future events are dependent on the conscious awareness of those who are living today."

"Have His Sons and their enlightened followers who have perceived His Spirit, done enough to bring enlightenment to those living in the flesh?"

"They have done and are doing everything, not even taking thought for their own life. They have borne witness to the truth and are still bearing witness."

“Can one who has seen the truth have any doubt about His intellect, kindness and magnificence of Spirit?”

“He has no equals! He is One! But He does wish to communicate. He wants people to understand and love Him as He loves.”

“In communicating with Him, is it permissible to be insolent and demanding?”

“He has given a particle of His Spirit and Mind to everyone living on the Earth. And if a small particle — His particle — in Man, does not agree with what is generally accepted, that means He — and I mean He — is not satisfied with everything as it has been outlined for the future. He is reflecting on it. Could one term His reflections insolence?”

“Who is permitted to hasten the pace of His reflections?”

“Only the One who *gives* permission.”

“And just what are you asking for?”

“I am asking how to give understanding to those who do not understand, how to inculcate feeling in those who do not feel.”

“Has the lot of those who fail to perceive Truth been determined?”

“The lot of those who fail to perceive Truth has been determined. But who is to blame for the lack of acceptance of truth — the one who does not accept the truth or the one from whom he receives it?”

“What? You mean, you...” Great-Grandfather said in agitation, and then fell silent.

He stood silently for a while, looking at Anastasia. Then, with the help of his staff-like cane, he got down on one knee and took Anastasia's hand. Inclining his silvery-grey head toward her, he kissed her hand and said:

“Hello, Anastasia.”

Anastasia herself at once knelt down before her great-grandfather, and exclaimed with excitement and surprise:

"What do you mean, Grandpakins, treating me like a child? I'm grown up now."

Then she put her arms around his shoulders, snuggled her head against his beard-covered chest and held still. I knew she was listening to his heartbeat. That was something she had loved ever since her childhood.

The oldster continued kneeling, one hand resting on his cane, the other stroking Anastasia's golden hair.

Grandfather got excited, and rushed over to his father and granddaughter who were both still kneeling. He began strutting around them, throwing up his arms in some bewilderment. Then all of a sudden he too got down on his knees and embraced them both...

Grandfather was the first to rise to his feet. He then helped his father up. Great-Grandfather was still staring intently at Anastasia. Then he slowly turned around and started walking off. Grandfather in the meantime started muttering away, though it wasn't clear whether he was addressing anyone in particular:

"All the same, they're all spoiling her. Even He spoils her. Dear me, just look at where she's got to! She pokes her nose in wherever she feels like it. There's nobody to teach her a lesson. Who will now help the dachniks? Who, I say?!"

Great-Grandfather stopped in his tracks. He slowly turned around and said distinctly, in his deep velvety voice:

"Granddaughter dear, follow the dictates of your heart and soul. I myself shall help you with the dachniks."

Turning away once again, the majestic greybeard started on his way out of the glade.

"Do you see what I mean? — they're all spoiling her," Grandfather broke in again.

Picking up a short switch, he strutted over to Anastasia. Waving the switch about his head, he threatened: "I'm going to teach her a lesson, right now!"

“Oh, oh!” Anastasia threw up her hands in feigned fright. Then she gave a laugh and ran off, trying to elude her pursuing grandfather.

“So, she’s even taken it into her head to run away from me. As if I couldn’t catch up!” he muttered under his breath.

With unaccustomed ease and speed he intensified his pursuit. Anastasia ran laughing, weaving her way across the glade. And while Grandfather did not relax his pace, he was still unable to catch up to her.

Suddenly Grandfather gasped and sat down, grasping his leg. Anastasia quickly turned about, her face full of concern. She ran over to her grandfather and held out her hands to him. And all at once she stopped. Her infectious peals of laughter filled the glade. I paid particular attention to her grandfather’s pose and realised the source of her mirth.

Grandfather was squatting down on one leg, holding his other leg out in front, not touching the ground. And here he was stroking the very leg he was squatting on, as though it had been injured. He had outsmarted Anastasia, but she was not deceived.

As it turned out later, she was supposed to have noticed right off the comic discrepancy in his pose. While Anastasia was laughing, Grandfather managed to seize her by the arm. He raised his switch and gave her a light spanking, like a child. Anastasia squealed, trying to pretend it was painful. And in spite of the endless laughter she was trying so hard to restrain, Grandfather put his arms around her shoulders and said:

“All, right, that’s enough. Don’t cry. You’ve learnt your lesson? You’ve got what was coming to you. You’ll be more obedient in future.

“Listen, I’ve started training the eagle. It may be old, but it is still strong and remembers many things. And here she’s insolently poking her nose into everything.”

“Grandpakins! My dear, sweet Grandpakins! The eagle! That means you already know about the baby?!”

“The star, don't forget!...”

Anastasia didn't let her grandfather finish. Putting her arms around his waist, she lifted him off the ground and spun him around. When she returned him safely to the ground, Grandfather staggered a bit, and said, trying to appear strict:

“So that's the way you treat your elders? You see what I mean — you're spoilt!” And, continuing to wave the switch, he hurried to catch up with his father. As he reached the trees at the edge of the glade, Anastasia called after him:

“Thank you, Grandpakins, for the eagle. Thank you very much!”

Grandfather turned around and looked at her.

“Only just be, my dear child... please remember to be more —” His voice was too gentle. Breaking off his sentence, he added with a bit more severity:

“Watch out, or else...”

And he disappeared into the forest.

## CHAPTER EIGHT

### The answer

Once we found ourselves alone, I asked Anastasia:

“What’s all the big excitement about some kind of eagle?”

“The eagle will be very much needed for the little one,” she answered. “For our baby, Vladimir!”

“To play with?”

“Yes. Only play has a considerable significance for his future learning and feelings.”

“I see.”

I said this, even though I didn’t fully understand this business of playing with a bird, even an eagle.

“But what were you doing with the cedar? Were you praying, or talking with someone? What happened with you and the cedar, and why did Great-Grandfather seem so severe when he talked with you?”

“Tell me, Vladimir, do you think there is, well, some kind of *intelligence* out there? Does there exist a Mind in the invisible world of the cosmic — in the Universe? What do you think?”

“I think it’s true. You know, even scholars talk about that, as do mediums, and the Bible.”

“And this *something* — what would you say is the best word to describe it? I need to know this so that you and I can agree upon a definition. Say, for example, Mind, Intelligence, Being, Forces of Light, Vacuum, Absolute, Rhythm, Spirit, God...?”

“Well, let’s say ‘God’.”

“All right, then. Now tell me, does God attempt to communicate with Man, what do you think? I do not mean by a

voice from heaven, but through people, through the Bible, let us say — to offer a hint on how to be more happy?”

“But the Bible was not necessarily dictated by God.”

“Well, by whom, then, would you say?”

“People could have done that — people who wanted to invent religion. They sat down and wrote it collectively.”

“You think it is that simple? People just sat down and wrote a book, and thought up narratives and laws? A book that has lasted for millennia and is the most popular and widely read book that has existed to date?! Over the centuries a whole multitude of other books have been written, but few of them can compare with the Bible. What does that mean to you?”

“I don’t know,” I admitted. “Ancient books, of course, have been around for a long time, but most people today prefer contemporary literature — novels, detective stories and all sorts of inferior stuff. Why is that so?”

“Because reading them hardly requires any thinking. In reading the Bible one is obliged to think at a faster pace and there are many questions one must answer for one’s self. Only then will it become clear. It unfolds itself, so to speak, to one’s consciousness. If one looks upon the Bible merely as a statement of dogma, then reading and memorising a few commandments is sufficient. But any dogma imposed from without and not grasped by one’s inner being precludes taking advantage of the opportunities afforded Man as Creator.”

“What questions do we need to answer when we read the Bible?”

“To begin with,” replied Anastasia, “you might try to figure out why Pharaoh was unwilling to allow the children of Israel to leave Egypt.”

“Well, what’s there to think about? The Israelites were slaves in Egypt. Who would want to let his slaves go? They worked hard and brought Pharaoh a good income.”

“The Bible says that more than once the Israelites brought a plague over the whole land of Egypt. They even killed people’s first-born offspring, along with those of animals. Sorcerers were later burnt at the stake for such acts, but here Pharaoh simply refused to let them go. Now answer the question: where did the Israelite slaves get enough goods and cattle to spend forty years travelling? Where did they get the weapons to seize and destroy cities along their route?”

“What do you mean, where? Didn’t God give them everything?”

“Do you think that was only God’s doing?”

“Then who?”

“Man, Vladimir, has full freedom. He has the opportunity to make use of all the bright resources God gave him originally, but he can make use of other resources too. Man represents a union of opposites.

“See, Vladimir, how the Sun shines. That is God’s creation. It is for everyone. For you and me, for the snakes, the grass and the flowers. But bees use the flowers to get honey, while the spider’s power is to draw poison. Each of them has its own function and no bee and no spider can do otherwise. Only Man has a wider scope, only Man can act in more than one way! One Man can *rejoice* at the first rays of the Sun, while another might curse. Man, you see, can be both a bee and a spider.”

“Does that mean God wasn’t the only one helping the Israelites? How can you tell, then, what God actually *did*, as opposed to what was merely attributed to Him?”

“When something significant is created through Man,” Anastasia explained, “there are always two opposites at work. Man exercises freedom of choice. Which he will accept more of depends upon his purity and conscious awareness.”

“Well, all right, let’s accept that. So, you were attempting to talk with Him when you were standing at the base of the cedar?”

“Yes, I wanted Him to answer me.”

“And Great-Grandfather objected?”

“Great-Grandfather thought that I was speaking too irreverently, that I was too demanding.”

“You really were demanding, I saw it. You were stamping your feet, and pleading. What on earth did you want?”

“I wanted to hear an answer.”

“What sort of answer?”

“You see, Vladimir, God’s essence is not in the flesh. He cannot yell down to everyone from heaven, telling them how to live. But He wants things to be fine and whole with everyone, and so he sends His Sons — people into whose mind and soul He has been able to break through at least to some extent.

“His Sons then go and talk with other people, they speak different languages. Sometimes through words, sometimes with the help of music or pictures, or various actions. Sometimes they are listened to, at other times they are persecuted and killed. Like Christ Jesus, for example. And still God is sending forth His Sons. But as always, it is only some of the people who pause and listen to them, while others who are called do not get the message at all. And they violate the laws of a happy existence.”

“I see. And that’s why God will punish mankind by a global catastrophe — some kind of fearful judgement?”

“God never punishes anyone, and He does not need catastrophes. God is Love. But that is the way it was planned from the very beginning. Created that way from above. When mankind reaches a specific point, one might say, in its unwillingness to accept the essence of truth. Once the elements of darkness manifest in Man reach that critical point, in order to avert total self-annihilation, a global catastrophe rushes in which takes away a great many people’s lives and crushes the destructive life-support system of artificial creation. The catastrophe serves as a lesson to those who are left alive.

“Following a catastrophe there is a window of time in which mankind seems to go through a fearful hell. But it is

a hell of their own making. It is those who are left alive that fall into this hell. Then for a while their children survive as in a pristine, original state, and they eventually reach a stage one could call Paradise. Then they fall away again, and it all starts over again in tears. This has been going on for billions of earthly years."

"If all this has been inevitably repeating itself for billions of years, what then were you asking for?"

"I wanted to find out how and by what means people could be made wiser without subjecting them to a catastrophe. You see, I have figured out that a catastrophe can be blamed not only on those who do not accept truth, but also on the absence of a sufficiently effective means of making the truth be seen, of making people alert to the truth. I was asking Him to find such a means. To reveal it, either to me or someone else. To whom, I feel, is not really important. What is important is that it is there to be seen, and that it works."

"And what did He tell you? What kind of voice does He have?"

"Nobody can tell what kind of voice He has. His answer takes form, as it were, in Man's discovery of a thought spontaneously occurring to himself. After all, He can speak only through His particle that is present in every Man, and this particle is already relaying information to every other part of the individual with the help of the rhythm of vibration. Hence the impression arises that Man is doing it all by himself. Though Man himself can actually do a great deal. After all, Man is God's likeness. In each Man there is a tiny particle breathed into him by God right at birth. He has given half of Himself to mankind upon the Earth. And the forces of darkness try by whatever means they can to prevent this God-reflected particle from acting out its high purpose, to distract Man from communication with it, and, through it, with God. It is much easier to fight with a small particle when it is all

alone, especially if it is not connected to the Basic Force of the Universe.

“But if these particles unite amongst themselves in bright aspirations, it is much more difficult for the forces of darkness to hinder them. Even if one single particle, living in just one single Man, is in full contact with God, then it is impossible for the forces of darkness to overpower him, to defeat his spirit and mind.”

“That means,” I surmised, “you appealed to Him so that the answer would be given birth in you as to what to say to people, and how to say it, in order to avert a global catastrophe?”

“More or less.”

“And what answer was given birth in you? What words must be spoken?”

“Words... just words alone, pronounced in the usual way, are not sufficient. So many words have been spoken already. Yet humanity on the whole continues to move toward its own perdition.

“You have no doubt heard words to the effect that smoking is bad, that alcoholic drinks are bad. And this is repeated by a number of sources, including your own physicians, in the language you best understand, yet you still go on doing it. You go on doing it without regard for the deterioration in your own health, and even painful sensations will not restrain either you or many other people from these destructive habits. God says to you: ‘You should not do that.’ And the message reaches you through pain. And it is not just your pain, but His too, and yet you take painkillers galore and go on doing your own thing as before. Again, you are not interested in thinking about what produces the pain.

“And all the other higher truths are known to mankind, but they are not being acted upon. Time after time they are rejected in favour of momentary illusory gratifications. It means another way must be revealed to allow them not only

to know but also to feel other kinds of pleasure. Once Man has learnt of these, he can compare and realise everything for himself, he will unblock access to the God-bestowed particle within him. It is no good simply threatening Man with a catastrophe, it is no good simply blaming those who do not accept truth. Everyone who brings the truth to others must understand how needful it is to seek a more perfect method of explaining it. Great-Grandfather agreed with me.”

“But that’s not what he said.”

“There was a lot that Great-Grandfather said that you did not hear.”

“If you were able to communicate with each other without words, why then did you say the words that I *did* hear?”

“Would you not consider it offensive if people conversed using foreign words you could not understand, given that they knew your language too?”

Various thoughts ran through my mind: Either I believe everything she tells me or I don’t. She herself, of course, believes. And it’s not just that she *believes* it, she *acts* upon it. She takes it all so intensely — maybe I should try to somehow restrain her enthusiasm. So I tried to dampen her fervour by saying:

“You know what I think, Anastasia — maybe you don’t need to take it so to heart and get so stirred up with your demands, as you were doing at the cedar tree. Even the blue glow or vapour from the cedar came crushing down on you. Your grandfather and great-grandfather were right to be concerned. It’s probably very dangerous. If God has not given the answer to any of His Sons as to how to explain everything to people most effectively, that means there is no answer. It means that a global catastrophe is the most effective way of getting His message across. Maybe He’s even annoyed with you for poking your nose in too far and will punish you so you won’t do it again, just like your grandfather said.”

“God is kind. He will not punish.”

"But He isn't speaking to you either. Maybe He's not interested in listening to you, and meanwhile you're wasting so much energy."

"He is listening and He is answering."

"What is He answering? Is there something new you know now?"

"He has hinted at where to find the answer, where to search for it."

"He's 'hinted'? To you?! So, where is it?"

"In the union of opposites."

"What does that mean?"

"It happens, for example, when two opposite extremes of human thinking in the Avatamsaka commentary merge into a new dynamic whole. This was behind the philosophies of Hua-yen and Kegon,<sup>1</sup> which offer a world-view of even greater perfection, not unlike the models and theories in your modern physics."

"What was all that?"

"Oh, please do excuse me. I do not know what came over me. I completely forgot myself."

"What are you apologising for?"

"You must forgive me. I used words which are completely unfamiliar to you."

"You're right. They are unfamiliar. I have no idea what they mean."

"I shall try not to do that again. Please, do not be angry with me."

"Don't worry, I'm not angry. Only explain in ordinary words where and how you will go about searching for this answer."

<sup>1</sup>*Avatamsaka Sutra* (also known as the *Flower Garden Sutra*) — considered to be the most profound of the Buddhist *sutras* (sets of aphorisms), which holds that all manifestations of existence are self-created and mutually identical. It gave rise to the philosophical school known as *Hua-yen* in China and *Kegon* in Japan.

"I certainly cannot do it alone. It can only be known through the joint effort of the divine particles to be found in various people living on the Earth — people with opposite modes of thinking and comprehension. Only through a joint effort will it be seen, and then in a dimension invisible to the eye — the domain of thoughts. One can also call it the dimension of the forces of light. It exists *between* the material world, in which Man lives, and God.

"I shall see it, and many others will, too. Then it will be easier to attain a universal conscious awareness. It will be easier to bring mankind through the dark forces' window of time. And the catastrophes will not be repeated."

"Specifically, what do people need to do right now to make the answer appear?"

"It would be fine if a lot of people could wake up in the morning at a set time — six o'clock, say — and think about something good. What specifically they think about is not important. It is important that they come out with bright thoughts. They can think about their children, about their loved ones, about how to make everyone happy. If they could only think fifteen minutes like that. And the more people that do that, the quicker the answer will come. The Earth's time zones may be different, since the Earth is turning, but the images created by these people's bright yearnings will merge into a single, clear, fulfilled image of conscious awareness. The simultaneity of bright thoughts will intensify each person's ability many, many times."

"Oh, Anastasia, how naïve you are! Who in their right mind would wake up at six o'clock in the morning just to think for fifteen minutes? People will only get up that early if they have to go to work, or have a plane to catch, or are going on a business trip. Anybody else will decide: 'Leave the thinking to others, I'm going to get some more sleep!' I doubt you'll find many helpers that way."

“But you, Vladimir — could not *you*, at least, help me?”

“Me? I don’t wake up that early unless I have to. But if I should somehow find myself waking up then, what good things should I think about?”

“Well, for example, you could think about the little son I will be giving birth to. Your son! Think how delighted he will be to be kissed by the Sun’s rays, to see the pure and magnificent flowers all around him, and have the bushy-tailed squirrel play with him in this glade. Think how good it would be if all the other children in the world could forever be kissed by the warm Sun — then nothing would make them sad. Then think about who you might say something glad to or give a smile to during the day ahead. And how good it would be if this marvellous world lasted forever, and what you could do — you in particular — to bring this about.”

“I’ll think about our son. And I’ll try to come out with other good thoughts. Only what’s the point? You’ll be thinking here, in the forest, while I’ll be in an apartment in the city. That’s only two of us. You say many people are needed. So until we get a lot of people involved, isn’t it pointless for just the two of us to try?”

“Even one person, Vladimir, is more than none. Two together are more than two apart. Later, after you write your book, more people will come along. I shall feel them and delight in each one. We shall learn to catch each other’s feelings of the heart, understand and help each other through the dimension of the forces of light.”

“Everything you say still has to be believed. I myself don’t completely believe in this ‘bright dimension’, this ‘domain of thoughts’. You can’t even prove it exists, because you can’t touch it.”

“Yet your scientists have come to the conclusion that thought *is* something tangible.”

“They have, but since you still can’t actually *touch* it, it’s not something you can get completely set in your mind.”

“But when you write your book, people will be able to touch it, they can hold it in their hands. Like a materialised thought.”

“Again you’re carrying on about that book! I’ve told you, I don’t believe in *it* either. Even less in your claim that you, with the help of certain combinations of letters known only to you, can arouse feelings in the reader — bright feelings yet, that will help the reader make some sense of it all.”

“I told you how it works.”

“Yes, you told me. But it still doesn’t make me believe. If I try to write, I shan’t tell everything all at once. People will laugh at me... You know something, Anastasia, can I tell you in all honesty?”

“Yes, tell me in all honesty.”

“Only don’t be offended, okay?”

“I shall not be offended.”

“Everything you’ve talked up to me I’m going to have to verify with our scholars, and see what they say about it in various religious and modern teachings. There’s a lot of different courses out there now, a lot of preachers.”

“Go ahead and verify, by all means.”

“And still, I feel you’re a very kind person. Your philosophy is interesting, quite unusual. But if you compare your actions with those of others who are concerned about the soul, about ecology, well, frankly, you’re way behind the rest.”

“Why should you conclude that?”

“Think about it. All the enlightened people, as you call them, have gone off by themselves at some point. Buddha went off for seven years into the forest and set up a whole doctrinal platform, and he has a lot of followers throughout the world. Christ Jesus went off just for forty days, and even now people are excited about his teachings.”

“Christ Jesus went off by himself more than once,” Anastasia pointed out. “And he did a lot of thinking when he was travelling about.”

“So let’s say *more* than forty days, let’s say a year even. The elders, who are now considered saints, were ordinary people who went into the forest to live in isolation for a time, then later monasteries were built on these sites, and a lot of followers arose, right?”

“Yes, Vladimir, you are right.”

“And here you’ve been living twenty-six years now in the forest, and you don’t even have a single follower. You haven’t come up with any platform. And here you’re asking me to write a book. You’re grasping at that like a straw. You dream of laying out your own combinations of signs in it. Well, if things aren’t working out for you like with other leaders, maybe it’s not even worth trying. There are others more capable than you who may well think up something without your input. Come on, why not get real and live more simply? I’ll help you adapt in our world. Now, you’re not offended, eh?”

“No, I am not offended.”

“Then I’ll tell you the whole truth, right to the end. To help you get a hold of yourself.”

“Go on.”

“You have some extraordinary abilities, Anastasia, there’s no doubt about that. You can pick up any information you want as easily as counting one-two-three. But tell me now, when did you first become aware of that Ray of yours?”

“It was given to me right at the start, as it is to everybody. Only my awareness of it, and how to use it — that was something Great-Grandfather taught me by the time I was six.”

“So. That means at six years of age you were already able to see what was going on in our lives? You could analyse situations, help people — even treat illnesses at a distance?”

“Yes, I could.”

“Now, tell me, what have you been doing all the twenty years since?”

"I *have* been telling you and showing you. I have been working with the people you call dachniks. Trying to help them."

"All these twenty years, day in and day out?"

"Yes, sometimes even at night, if I was not too tired."

"So, you've been acting like an obsessed fanatic, stubbornly holding on to the dachniks all these years? Who made you do this?"

"Nobody can make me. I did it of my own free will. After Great-Grandfather suggested it to me, I realised for myself what a good thing, how important it was."

"You know, I think your great-grandfather suggested the dachniks to you because he felt sorry for you. After all, you grew up without your parents. He gave you the very easiest and simplest task. Now that he's seen you've begun to understand something greater, he's given you permission to work with other things. And to drop the dachniks."

"But this *other* is connected with the people you call dachniks. And I shall continue to help them. I love them very much and I shall never abandon them."

"Now *that's* what I call fanaticism. There's something in you that you don't have enough of to be a normal person. You must understand that. The dachniks are far from being the most important people in our society. They have absolutely no influence at all over social development. Dachas and vegetable gardens — they're just small subsistence plots. It's where people go to relax after their hard work or when they go into retirement. And that's all. You understand? That's it! And if you, with all your colossal knowledge and phenomenal abilities, are only interested in dachniks, then you must have some kind of psychological disorder. I think I ought to take you to a psychotherapist. If you can get that disorder cured, then just maybe you'll really be in a position to help society."

"I very much want to help society."

“So then, let’s go — I’ll take you to a practising psycho-therapist at a good private clinic. You yourself said a global catastrophe could happen. This way you’ll be able to help ecological movements, you’ll be able to help science.”

“But I shall be an even greater help if I stay here.”

“All right, you can come back here later and start getting involved in more serious issues.”

“What do you mean, ‘more serious’?”

“You decide. Probably something connected, for example, with heading off an ecological disaster or a global catastrophe. By the way, do you have any idea when the latter might occur?”

“There are localised disasters happening even now in various parts of the Earth. Mankind has been preparing everything and more for its own destruction for a long time now.”

“But when will it happen on a global scale — when will the apocalypse come?”

“It might occur in 2002, for example. But it can be prevented, or delayed, as happened in 1992.”

“You mean to say it might have come to pass in 1992?”

“Yes, but they delayed it.”

“Who are ‘they’? Who averted it? Who delayed it?”

“A catastrophe on a global scale in 1992 was averted thanks to the dachniks.”

“Wha-a-at?!”

“There are all sorts of people all over the world who are working against global disaster. The 1992 catastrophe did not happen mainly thanks to the Russian dachniks.”

“And you... that means you!... Even at six years old you were aware of the dachniks’ significance? You foresaw it? You worked non-stop. You helped them.”

“I understood the dachniks’ significance, Vladimir.”

## CHAPTER NINE

# Dachnik Day and an All-Earth holiday!

“But why Russian dachniks in particular? What’s the connection here?”

“You see, Vladimir, even though the Earth is very large, it is very, very sensitive.

“Think of how big you are by comparison with a tiny mosquito. And yet, when a mosquito lands on you, you feel it through your skin. And the Earth also feels — everything. When people pave it over with concrete and asphalt, when they cut down trees and burn the forests growing on it, when they pick and poke at its innards and sprinkle it with powder called fertiliser, it feels the hurt. And yet still it loves people, as a mother loves her children.

“And the Earth tries to absorb into its depths all humanity’s anger, and only when it no longer has the strength to hold it back, that anger explodes in the form of volcanic eruptions and earthquakes.

“The Earth needs our help. Tenderness and a loving attitude give it strength. The Earth may be large, but it is most sensitive. And it feels the tender caress of even a single human hand. Oh, how it feels and anticipates this touch!

“There was a time in Russia when the Earth<sup>1</sup> was deemed to belong to everyone and therefore nobody in particular. So

<sup>1</sup>*the Earth* (Russian: *Zemlia*) — in this case denoting the land, especially arable land. The reference here is to the early Soviet period of Russian history, when the Bolshevik government took the country’s farmland out of

people did not think of it as their own. Then changes came in Russia. They began giving out tiny private plots to people to go with their dachas.

“It was no coincidence at all that these plots were extremely small, too small to cultivate with mechanised equipment. But Russians, yearning for contact with the Earth, took to them with joyous enthusiasm. They went to people both poor and rich. Because nothing can break Man’s connection with the Earth!

“After obtaining their little plots of land, people intuitively felt their worth. And millions of pairs of human hands began touching the Earth with love. With their hands, you understand, not with mechanised tools, lots and lots of people touched the ground caressingly on these little plots. And the Earth felt this, it felt it very much. It felt the blessing touch of each individual hand upon it. And the Earth found new strength to carry on.”

“So, what now?” I queried. “Should we erect a monument to every dachnik as the saviour of the planet?”

“Yes, Vladimir, they are saviours indeed.”

“But that would be far too many monuments! I have it! Why not set up a one- or two-day national holiday? *Dachnik Day*, or *an All-Earth Day*, it could be designated in the calendar.”

“Oooh, a holiday!” Anastasia threw up her arms in elation. “What a terrific idea indeed! A celebration! A happy and cheerful holiday — that is something we definitely need!”

“And you with that Ray of yours can suggest to our government, to our deputies in the State Duma,<sup>2</sup> that they pass the required legislation.”

---

the hands of its individual peasant owners and declared it state property. It was not until 1993 that the right to private ownership of land was restored in Russia’s new Constitution.

<sup>2</sup>*Duma* (pronounced *DOO-ma*) — Russia’s national parliament.

"I cannot get through to them. They are too busy with their daily routine. They have so many decisions to make, they have absolutely no time to think. Besides, there is not much point in my attempting to raise their conscious awareness. It would be difficult for them to accept a complete conscious picture of reality. They are not allowed to make any better resolutions than those they are passing at the moment."

"Who can stop the government or the president from so doing?"

"You. The masses. The majority. As for correct decisions, they are what you call 'unpopular measures'."

"Yes, you're right. We have democracy. The most important decisions are taken by the majority. The majority is always right."

"The greatest conscious awareness is always achieved first by individuals, Vladimir. It always takes the majority a space of time to catch on."

"If that's true, then why do we need democracy, referendums?"

"They are needed to serve as a shock-absorber, to avoid sudden jerks. When these shock-absorbers do not work, revolution occurs. A revolutionary period is always a challenge for the majority."

"But a *Dachnik Day*? — that's not revolution. What's wrong with *it*?"

"A holiday like that is fine. It is needed. Definitely needed. It should be set up as quickly as possible. I shall think about how it can be done as quickly as possible."

"I'll help you. I know better which levers to pull in our world for the most effective results. I'll write to the papers... No, better still, I'll write about the dachniks in that book of yours and ask people to send telegrams to the government and the Duma, requesting the establishment of a *Dachnik Day* as an All-Earth holiday. Only what date should it be?"

"The 23rd of July."

"Why the 23rd?"

"It is an appropriate day. Also because it is your birthday, Vladimir. After all, this fantastic idea is all yours!"

"That's great. So, we'll ask people to send telegrams asking for legislation setting up the 23rd of July as Dachnik Day and an All-Earth holiday. And as soon as the telegrams start arriving at the Duma and people begin to wonder why people are sending them, you burst in with your Ray!"

"Burst in I shall! I shall burst in with all my might! And it will be a fine, bright and beautiful holiday! For everyone! Everyone will have such a good time and the whole Earth will rejoice in its light!"

"Why does *everybody* have to have a good time? This holiday's only for dachniks, isn't it?"

"We must see that *everyone* has a good time. This holiday will indeed begin in Russia. But then it will become the most fantastic holiday for the world as a whole. A marvellous holiday for the soul."

"And how will it be celebrated the first time in Russia?" I enquired. "Nobody will know what to make of it."

"Each one's heart will suggest on that day what he should do and how. I can visualise a general outline right now."

Then Anastasia began talking, clearly enunciating each word. She talked with both speed and inspiration. It was all most extraordinary — the rhythm of her speech, the arrangement of her phrases, the pronunciation of her words:

*May all of Russia wake that day at dawn. May people alone, or with friends and family, come to the land and stand upon it with bare feet. Those who have their little plot of land, let them greet with praise the first rays of the Sun amidst the shoots and seedlings they have planted. And touch each species with caressing hands.*

*As the Sun rises in the sky, let them pick and taste the fruit of their plantings, one from each variety, and that should suffice them up 'til the mid-day meal.*

*Before the meal let them tend their plots anew. Let each one ponder, their life and joy, and what they are destined to do.*

*Let each remember their family and friends with love. And ponder why their planted seeds are growing, and designate the purpose of every plant.*

*And even before the mid-day feast everyone should spend at least an hour by themselves. It is not important how or where or exactly when, but they should be alone for a spell. To spend at least an hour in an effort to look within themselves.*

*Let the whole family gather for the meal in the middle of the day. Those living at home and those who have come from far away. Let dinner be prepared from what the Earth has borne for the hour of repast. Let every one bring to the whole table whatever is desired by his heart and soul. Let all the family members look each other lovingly in the eye. And let the eldest bless the table together with the youngest. And let the table all around with quiet conversation resound. There should be good words spoken. About all those who sit beside you.*

The scene Anastasia described was so extraordinarily vivid that I could feel myself sitting at the table, with people all around. I found myself caught up in the celebration — I was believing in it or, rather, I was participating in it. And I felt led to contribute a feature of my own:

“There should be a toast before dinner. Everyone raise their glass. Let’s drink to the Earth, let’s drink to love!”

I actually felt I was holding the glass in my hand.

Then suddenly she broke into my reverie:

“Vladimir, please let there be no alcoholic poison on the table.”

The glass vanished from my hand.

“Stop it, Anastasia! Don’t spoil the celebration!”

“Well, since you have your mind set on it, let there be some wine from berries, but this must be imbibed in very small sips.”

“All right, wine it is, then. Just so as not to change our habits all at once. And after the dinner, then what shall we do?”

*Let the people return to the cities and towns, having gathered the fruit they have grown on their little plots of ground. Let them bear it in baskets and share it with everyone at home who do not have plots of their own.*

*Oh, how many positive feelings will come from this day! They will bring about healings of many people’s diseases. Diseases which threatened with death and those not erased by time will simply vanish. Let those who are incurably or even slightly ill go out and meet the flood of dachniks returning from their plots. The rays of Love and of good, along with the fruits of their labours will heal diseases.*

*Look and see! Look at the city’s main railway station, where floods of people are arriving with baskets of flowers. Look and see the people’s eyes glimmering with kindness, joy and peace.*

Anastasia was virtually glowing with a radiance, as she became more and more inspired with the idea of the holiday. Her eyes were no longer merely shining with joy, they were literally sparkling with a pale-blue luminescence. The expression on her face was changing, yet still remained joyful, as though a mighty flood of images of this celebration were rushing through her brain.

All at once she fell silent. Then, bending one leg at the knee and lifting up her right arm, she sprang from the ground with a tremendous recoil, virtually taking flight like an arrow shot from the Earth. She leapt almost as high as the bottom branches of the cedars. Upon landing, she waved her arm,

clapped her hands, and a bluish glow flooded the glade. All the words Anastasia now uttered seemed to be echoed by each tiny bug and blade of grass and each majestic cedar. Her voice sounded as though it were being reinforced by a hidden power. Even though her words were not that loud, it seemed as though they could be heard by every vein running through the unfathomable expanse of the Universe.

*Mother Russia will greet crowds of guests on that day! They are all of the Earth as Atlanteans born! As prodigal sons they shall return.*

*On that day, all over Russia, let everyone awake and greet the dawn. Let all the strings of the harp of the Universe make cheerful melody and swell with resonant sound. Let all the bards sing and tell with joyful tongue and play guitars in all the streets, in every yard around. And he who is too old will once again be young, as many, many years ago.*

“And I, Anastasia, will I be young once more?”

*Both you and I, Vladimir, shall be young, and people will feel young for the very first time. And the old shall write letters to their children. And children to their parents. And infants taking their very first steps on Earth shall enter a better world of joy and mirth. And on that day no child shall feel insulted. For adults shall treat children as their equals.*

*And all the gods on high will to the Earth descend. And will commend themselves to take on simple forms.*

*And God Himself, the Universal God will be delighted. May You rejoice too in Love, making all the Earth so bright!*

Anastasia was really getting carried away with images of the holiday. She was whirling around the glade in a fiery dance, becoming more and more inspired at every step.

“Stop! Stop!” I cried to Anastasia, suddenly realising that she was taking it all too seriously. She was not merely uttering words. I now realised her every word and novel turn of phrase was actually a visualisation! She was visualising images of the celebration! And with her typical stubbornness she will go on visualising and dreaming about it until the dream turns into reality. Like a diehard fanatic she will dream! She will give her *all* to those dachniks, just as she has done for the past twenty years. And I cried out to stop her:

“What’s going on? Don’t you understand? All that stuff about a holiday — it’s all just in fun! I was just teasing!”

Anastasia suddenly stopped in her tracks. No sooner did I catch a glimpse of her than I felt a big lump in my throat from the look on her face. Her face looked bewildered like that of a child. She looked at me with pain and pity, as though I were an unremitting attacker. And almost in a whisper she started saying:

*Vladimir, I took it seriously. I have already visualised it all. And to life’s chain of events people’s forthcoming telegrams have already interwoven a link. The order of events will be broken without them. I have accepted your words, believed them and brought them to pass. I perceived you were speaking of the holiday and telegrams sincerely. Do not take back the words that you have spoken. Just help me with the telegrams, so that I may, as you said, offer assistance with my Ray.*

“Okay, I’ll try, only don’t panic, — maybe it’ll end up that nobody will even want to send the telegrams.”

*There will be people who will comprehend. They will feel it in the government and in your Duma as well. And a holiday there will be! It will arise! Time will tell! Look here!*

And once again celebration images passed before my eyes.

*There!* — I've written about it. Now you can go and do as your heart and soul dictates.<sup>3</sup>

<sup>3</sup>In 1998, one year after this book was first published in Russian, the governor of St. Petersburg, Vladimir Yakovlev, instituted a *Gardeners' Day*, giving the residents of St. Petersburg and the surrounding region an additional day off to spend on their garden-plots. Since then this example has been followed by many regional authorities and — while not yet instituted on the national level — the holiday is officially celebrated in dozens of cities and regions throughout Russia. The date of the holiday varies from region to region.

## CHAPTER TEN

### The ringing sword of the bard

“What do you mean, Anastasia, by such extraordinary turns of phrase in speaking about the holiday? You pronounced each word in such a tone that every sound was crystal clear on its own!”

“I tried to reproduce a picture of the holiday with precision, to use detailed images.”

“But what about the words? What particular significance do *they* have?”

“Upon each word was borne a multitude of happy pictures and events. And now they will all come true. For thought and word, you understand, are the principle instrument of the Grand Creator. An instrument bestowed not on all that grows with flesh and bones, but just alone to Man.”

“Then why doesn’t *everything* that people say come to pass?”

“When the thread between the spoken word and the soul is broken, when the soul is found empty and the image dulled, then what is said, though it be plenty, is as empty as chaotic sound. And nothing can it betoken.”

“That’s sheer fantasy! Come on now, you let yourself believe in everything, like a naïve child.”

“How can it be a fantasy, Vladimir?! After all, I could give hundreds of examples from the world you live in, and even from your own life, as to what power a word has when it projects the image connected with it!”

“Then give me an example I can understand.”

“An example? Here is one. A person is standing on the stage before an audience and speaking words. An actor, for

instance. He will repeat the same words people have heard many times before, but there is only one actor people will listen to with bated breath. Another they will not adore. The words are the same, but there is a vast difference in how they are declaimed. What do you think? Why does that happen?”

“Well, that’s actors for you. They spend years studying at drama school — some are outstanding in their profession, others just so-so. They memorise their lines at rehearsals so that they can say them with expression.”

“They are taught at drama school, Vladimir, how to get inside the image that underlies the word. Then they try to reproduce that image during rehearsals. And if an actor succeeds in projecting even ten percent of the invisible images underlying the words he utters, the audience will then listen with their whole attention. And if he should succeed in projecting the images behind *half* of his words, you will indeed call that actor a genius. For his soul is speaking directly with the souls of those sitting or standing in the auditorium. And during the play people will laugh or cry as they feel in their soul what the actor desires to convey. Such is the instrument of the Grand Creator.”

“And you, whenever *you* speak, with how many words can you project the corresponding image — ten percent, or fifty?”

“With *all* of them. That is the way Great-Grandfather taught me.”

“All of them? Really?! All the words?!”

“Great-Grandfather said it is even possible to project the images contained in the letters of the alphabet. And I learnt how to come up with an image for each letter.”

“Why letters? Letters don’t mean anything.”

“Letters *do* mean something! Behind every letter in Sanskrit, for example, there are words, even whole phrases.

There are letters there too, and beyond them many written words, so that infinity is hidden in every letter."

"Well isn't that something?! And we just splutter out our words."

"Yes, that is what happens to words that have been passed down to us over thousands of years. They have passed through and penetrated time and space. And the forgotten images underlying them still today are once more attempting to knock on the door of the human race. And they watch out for our souls, and even go to war on their behalf."

"And what kind of words are these? Is there at least one that might be familiar to me?"

"Of course there is. At least as a sound you have heard. But people have forgotten what underlies these words."

Anastasia lowered her eyelids and sat silent for a while. Then, very quietly, almost in a whisper, she asked me:

"Vladimir, please pronounce the word *bard*."

"*Bard*," I said.

She shuddered, almost as though in pain, and said:

"Oh, the indifference and banality in your pronunciation of that majestic word! You blew a cold gust of emptiness and neglect upon the candle's restless flickering flame. A flame that has been connected through the centuries and possibly even addressed to you or someone else living today by a distant forebear. Forgetfulness of our derivation is the cause of our modern devastation."

"And just what didn't you like about my pronunciation? What should I be remembering in connection with that word?"

Anastasia fell silent. Then in a quiet voice she began uttering phrases straight out of antiquity:

"Long before Christ's birth there lived certain people on the Earth — our forefathers, who were called Celts. Their wise teachers were known as Druids. Many peoples inhabiting

the Earth at that time knelt before the Druids' knowledge of the material and spiritual worlds. Not a single Celtic warrior would dare unsheathe his sword in the presence of a Druid. To be awarded the title of Druid even at the starting level, they had to undergo at least twenty years of arduous training at the hands of a spiritual teacher — a Druid priest. Those who were consecrated in this domain were known as *Bards*. They alone had the moral authority to go out among the people and sing about and inculcate the light and truth contained in their song, using words to project images and heal people's hearts.

"The Celts fell subject to attacks by Roman legions. Their last battle took place at a river. The Romans noticed that there were women walking among the Celtic warriors — women with long, flowing hair. Experienced Roman commanders, though knowing what this meant — that they would have to outnumber the Celts six to one in order to defeat them, were unaware of the reason why. Nor do modern historians and researchers have a complete explanation. It all had to do with these unarmed women with their long, flowing hair.

"The Romans surged in with a mighty force, outnumbering the Celts nine to one. Aligned with their backs up against the river, the last family of fighting Celts was on the verge of defeat.

"They stood strong in a semicircle. Behind them was a young woman, breast-feeding a wee baby girl, and singing. The young mother sang a bright and cheerful song, so as not to instil doleful fear in the little one's soul — so that she would be left with images of light.

"Whenever the little one tore herself away from her mother's breast, their eyes would meet. The woman would cease her singing and each time tenderly utter her baby's name: *Barda*.

"Soon there was no longer any semicircle to defend the pair. All that stood between the nursing mother and the flood of Roman legionnaires making their way along the narrow

path was a young and blood-gored Bard armed only with a sword. He turned to look at the woman, their eyes met and they smiled at each other.

“The wounded Bard managed to stave off the Romans while the woman went down to the river and put her wee baby girl into a little boat and pushed it away from the riverbank.

“With one last great effort of will-power, the bleeding Bard threw down his weapon at the woman’s feet. She took up his sword, and fought for four hours straight with the legionnaires on the narrow path, preventing them from reaching the shore. Their strength became spent and they spelled each other off on the narrow path.

“The Roman commanders looked on in silent astonishment, but could not understand how strong and experienced soldiers could not come close enough to even scratch the woman’s body.

“For four bruising hours she fought the flood of Roman attackers. Then the woman’s lungs gave out, dried up with dehydration as no liquid had touched her tongue, and drips of blood began oozing from her cracked, beautiful lips.

“Slowly sinking to her knees, her strength waning all the while, she still managed one more faint smile in the direction of the little boat carrying away her wee Barda, a future songstress, downstream with the current. And one more gleam of the word and its image which have been carried down through the millennia for the benefit of many living upon the Earth today.

“Man’s being is not only in the flesh. Man’s invisible feelings, aspirations and sensations are immeasurably sharper and greater than what can be discerned by the eye or ear. As in a mirror, they are but partially reflected in the visible material state.

“The baby Barda grew into girlhood, and later became a woman and a mother. She lived on the Earth and sang. Her

songs imparted to people only bright feelings and, like the all-healing Ray, helped them chase away the gloominess of the heart. Many of life's afflictions and deprivations tried to extinguish the source of this Ray. The hidden forces of darkness tried to break through to it, but could not overcome the one obstacle in their way, the Bard and his wife who stood looming before them on the narrow path.

"Man's essence is not in the flesh, Vladimir. The Bard's bleeding body projected into eternity the smile of his soul's blessed light, reflecting the unseen essence of Man.

"And the lungs of the young mother holding the sword gave out after a while, blood dripped, then poured from the cracks in her lips, which had caught the Bard's bright smile.

"And now, Vladimir, believe in me. Understand and see! And you will hear the ring of the invisible sword of the Bard, beating back the attack of the dark and angry forces on the path to the hearts of his descendants today.

"Now, please pronounce the word *Bard* once again, Vladimir."

"I can't. Not until I can say it with the proper meaning. Then I shall most certainly pronounce it."

"Thank you for not attempting it, Vladimir."

"Tell me, Anastasia — after all, *you* are able to tell. Who among those living today are the direct descendants of that nursing mother and the girl — the songstress Barda? Of the Bard-warrior who stood on the narrow path? Who can forget something as important as his ancestry?"

"Tell me, Vladimir, why this question came to your thought."

"I want to get a good look at that person or persons who have forgot such things. Those who do not remember where they came from. Those without feeling for the same."

"Perhaps you want to make certain that *you* are not the one who is forgetting?"

“Now what does that...? Never mind, Anastasia, I’ve got it now. You needn’t give it another thought. Let each person figure it out for themselves.”

“Fine,” she replied and fell silent, looking at me.

And I too kept silent for a time, reflecting on the pictures Anastasia had painted, and then I asked her:

“Why did you choose that particular word as an example?”

“To show you how the images underlying it in the real world will soon take visible form. Guitar strings in swarms are now vibrating under the fingers of today’s Russian bards. Even back when I was dreaming about it all in the taiga, these bards were the first to feel the images. Their hearts and their souls...

“At first it was only in one of them that flared a flickering burning flame and the delicate resonance of a guitar string, but then the souls of others caught the rhythm and joined in. Soon their songs will be heard by many both near and far. These are the bards who will help us behold the new dawn. The dawn of enlightenment of human hearts and souls. You shall hear their songs. And these will be new songs, songs of the awakening dawn.”

<sup>1</sup>Since this book was first published in 1997, Russian bards have written *hundreds* of songs inspired by Anastasia. Numerous song festivals have taken place throughout Russia, and multiple song albums have appeared. Many of the bards have become wanderers, travelling in groups of up to fifty singers and giving free concerts all over Russia, spreading the message of light, happiness and the healing of the Earth.

## CHAPTER ELEVEN

### A sharp about-turn

Returning to the ship after my three-day stay with Anastasia, it was some time before I was in a frame of mind to take charge of company business. At first I was unable either to decide on the ship's next destination or answer the many radiograms coming in from Novosibirsk. And the hired workers, and even some of my crew, apparently sensed my inattention to the daily routine and began stealing. They were arrested by the police from Surgut (the town where the ship was docked) working with my bodyguards, and detention papers were drawn up, but even this was not something I felt like delving into at the time.

It's hard to say at the moment just why my talks with Anastasia had such a strong effect on me.

Before this my firm had received many visits from representatives of all sorts of religious denominations. They claimed they wanted to do something good for society and always asked for money. Sometimes I would oblige just so they would go away, without looking too deeply into the cause they were collecting for. And what was the point of asking them more questions if the conversation always ended up with a request for money?

In contrast to all these so-called 'religious' people, Anastasia never asked for money. In any case, I couldn't even imagine what I could give her. Outwardly it seemed she had nothing, and yet I gradually got the impression that she had everything. I gave orders for the ship to proceed full speed to Novosibirsk and holed myself away in my cabin to think.

My more than ten years' experience in business and team-management had taught me a lot. The highs and lows I had gone through had given me the skills I needed to seek and find a way out of all sorts of tricky situations. This time, however, I felt I was at rock bottom. All the troubles imaginable came upon me simultaneously. The failure of the firm appeared imminent. One of the so-called 'well-wishers' had already started a rumour, now increasing in currency, that something had happened to me and that I was no longer capable of making sound business decisions. So, people concluded, it was *saave qui peut*, every man for himself. And that's exactly what happened. Upon my return I saw how people were saving themselves. Even my relatives had their hand in it, pilfering what they could from the company. "It's all going to go broke anyway!" they figured.

There was just one small group of my long-time employees who had tried to withstand the onslaught. But after the arrival of the lead ship, upon seeing what kind of literature I had my nose into, even they became worried about my mental state.

I myself had a perfectly clear and sober perspective on what was happening. I was fully aware that I was no longer in any position to manage this team effectively. Even those I had earlier trusted as my tried and true supporters were now starting to cast doubt upon any decision I took.

Even though I very much wanted to tell everyone who would listen about Anastasia, it hardly seemed possible to count on anybody's understanding. It might even land me in the loony bin. My family were already starting to talk about what kind of treatment I needed.

Without saying so in so many words, those around me were demanding I get back down to earth and come up with a business plan, and a successful one at that. They dismissed my latest distraction as either madness or a nervous breakdown.

I had really begun thinking about all sorts of things in this life of ours.

“What’s going on here?” I thought. “You hustle through one commercial operation and even earn big money, but where’s the satisfaction? You immediately want more. And it’s been going on like that for over ten years now! Where’s the guarantee that this race won’t last my whole life long without so much as a whiff of satisfaction?! One person gets upset because he doesn’t have enough money for a bottle of vodka. A billionaire gets upset because he doesn’t have enough for some major acquisition or another. Maybe it’s not the amount of money that counts?”

One morning two old acquaintances of mine — both entrepreneurs in charge of big commercial firms — came to see me at my office. I started talking with them about setting up a commonwealth of pure-minded entrepreneurs, about the purpose and goals of our business activities. After all, I just had to share all this with *somebody*. They played along, nodding now and then in agreement. It was a long conversation, and I ended up thinking to myself: can it be that they actually grasped it? — they did spend a lot of time discussing it, after all! Later my driver told me:

“You know, Vladimir Nikolaevich,<sup>1</sup> they were *asked* to come and see you. By people concerned about your health. They wanted to know what you’ve been preoccupied with all this time, what’s been on your mind. In short, to make sure you haven’t lost your mind. They wanted to know whether they should call in a psychiatrist or simply wait and let it pass.”

<sup>1</sup>*Nikolaevich* (most often pronounced *ni-ka-LIE-yitch*) — Vladimir Megré’s patronymic (a middle name derived from one’s father’s first name). In Russian the combination of the first name and patronymic is the standard polite form of address among business acquaintances, especially to a superior.

“And what do *you* think of my mental state?”

He fell silent for a while, and then said quietly:

“For ten years your work’s gone along just great. Many in the city have said you’re a successful businessman. But now all your employees are afraid they may be left without a paycheque.”

It was only then I realised the extent of people’s concern about me, and I said to the driver:

“Turn the car around.”

I went back to the office. I called an emergency staff meeting. I appointed supervisors for the company’s various activities and gave them full authority to act in my absence. I then told the driver to pick me up early the next morning and take me to the airport. Just as I was about to go through the boarding gate, he handed me something wrapped in a towel. It was warm. I asked:

“What is it?”

“*Pirozhki*.”<sup>2</sup>

“So, you’re giving me these out of compassion for a crazy person, eh?”

“They’re from my wife, Vladimir Nikolaevich. She couldn’t sleep, and baked all night. She’s never baked anything before, she’s still a pretty young woman, but last night she plunged right in. She insisted I give them to you. She wrapped them in a towel — they’re still warm. She says... you won’t be back for a while. If you come back at all... This is good-bye.”

“All right, then. Thank you very much.”

He resigned from the firm a few days later.

<sup>2</sup>*Pirozhki* (pronounced *pee-rash-KEE*) -- Russian pastry with a filling, akin to Ukrainian pierogies. A quintessentially home-made dish, *pirozhki* are often the highlights of family gatherings and celebrations. A gift of *pirozhki* denotes a loving attitude on the part of the giver.

## CHAPTER TWELVE

### Who sets the course?

Seated on the airplane I closed my eyes. The plane's course was set with precision. It was headed for Moscow. The course of the rest of my life was still to be set. But I was thinking more about entrepreneurs.

Many people today still tend to regard entrepreneurs as people who are constantly working out business deals, having amassed their initial capital by some illegal means and multiplying it at the expense of those around them. Naturally, just as in any other segment of our society, there are entrepreneurs and then there are entrepreneurs. However, having been right at the centre of entrepreneurial life in our country from the very beginning of *perestroika*, I can tell you that the majority of the first wave of post-communist entrepreneurs made their initial capital by looking for unorthodox solutions for producing new merchandise or goods which had been in short supply, and finding more efficient ways of structuring manufacturing operations.

It was a peculiar characteristic of Soviet and Russian entrepreneurs to make money from scratch — i.e., starting with nothing, not even credit. After all, the first wave of entrepreneurs had no access to privatised factories that the next wave enjoyed. They had to fly by the seat of their pants and hope they would be lucky. And they did make money from scratch. By way of proof, let me cite an example from my own experience.

## CHAPTER THIRTEEN

### Money from scratch

Back before *perestroika* I was in charge of a small unit in a photographic collective. It included lab technicians and a number of roving photographers. Everyone had both a salary and additional perks, which allowed us to make a fairly decent living for the time. Each member of our unit received a percentage of the total profits. Naturally we wanted more. But for that we had to find more clients. I managed to hit upon a solution. Anyone who wishes is free to copy it, even today.

One day while I was travelling on a highway in my hump-backed Zaporozhets<sup>1</sup> I got a tyre puncture. While getting the tyre repaired I watched the cars passing by one after another and thought to myself: “If only we could give all these drivers a chance to have their photo taken, there would be huge profits to be made!”

It took but a few minutes to formulate a plan of action in my head — a plan whose realisation in practice would soon quadruple our unit’s profits. It worked this way: one of our photographers would stand at the side of the highway with a camera. He had two assistants with green armbands bearing the SB<sup>2</sup> insignia and brandishing batons like those used

<sup>1</sup>*Zaporozhets* — a popular and (relatively) inexpensive car manufactured during the Soviet period in the Ukrainian city of Zaporozhye. Its small size, low power, old-fashioned design and proclivity to break-downs have given it a reputation as an “inferior” vehicle, and both the car and its owners have become the butt of numerous jokes.

<sup>2</sup>SB — Initials for *Sluzhba byta*, the common designation for service industries in Russia.

by the traffic police. Motorists would stop, thinking it was the “Green” or some other patrol.<sup>3</sup> Upon learning that it was simply a photo service being offered and that nobody was about to pounce on them or fine them or inspect their vehicle, drivers were happy to stand in front of their car (next to the licence plate) and have their picture taken. They gave the addresses where they would like the photos to be sent C.O.D. The licence-plate had to be showing just in case there was a mix-up in the addresses.

We ended up offering this service on all the major highways leading to Novosibirsk over a six-month period. Then more and more we started encountering motorists who had already used the service. But during these six months our unit managed to realise a fairly decent income.

Later I thought of starting a photo campaign to take pictures of residential houses, adding postcard phrases like “I live here”, “Home sweet home”, etc.

People from our unit took pictures of thousands of houses. The demand turned out to be enormous. It got so that the photographers didn’t bother asking which residents wanted it — they would simply walk along and take pictures of every house on the street. A few days later the postal service would deliver the photos to each dwelling and collect payment. People would send these snapshots to their children. Many said the pictures inspired the kids to come home for a visit.

Before long the collective started having problems paying the members of our unit their salaries which, in the opinion of the management of the day, had exceeded all reasonable bounds. But there was little they could do about it, since everyone in the collective was entitled to an equal share of their unit’s profits.

<sup>3</sup>*Green patrol* — referring to teams of environmental control officers, set up to help abate air pollution in Russia’s largest cities, and responsible for checking automobiles’ exhaust emissions (CO, CO<sub>2</sub>, CH, NO etc.).

During the early days of *perestroika*, our unit detached itself from the collective and formed an independent co-operative. I was chosen its first chairman.

This way we enjoyed greater freedom of movement. We had the opportunity to gather some seed money together and expand the scope of our operations. I began to think about new ventures to increase company profits.

One day I happened to have a conversation with an acquaintance of mine who worked at the Institute of Theoretical and Applied Mechanics. He was complaining that wages were being delayed or not paid at all, and that the lab unit was being threatened with dissolution. Where could they go, what could they do? They weren't needed by anyone, it seemed.

"What did your lab do before?" I asked him.

"We made thermal gauge tape. Nobody needs it anymore."

"What was it used for?"

"All sorts of things," he replied. He took a piece of a black tape out of his pocket and handed it to me."

"See for yourself," he said.

I took the piece in my hand, and all at once it turned green as I fingered it. I even threw it on the ground.

"What kind of junk is that? It turns green! Now I've got to wash my hands," I told him. To which he replied:

"Don't worry, it simply changed colour from the warmth of your hand. It's supposed to react to changes in temperature. If the temperature of your hands had been above normal, it would have turned red. The green colour indicates a normal temperature."

The concept took off quickly. Our company began producing flat thermometers and stress-indicators.

A piece of the tape was stuck onto a sheet of cardboard with bright coloured squares, each with a number beside it

indicating degrees of temperature, and, *presto!* — a new product was born. We had it distributed through the state warehousing agency to many regions of the old Soviet Union (this was before the collapse of the USSR in 1991).

Our production staff increased and everyone made a fairly decent living. Our seed capital was growing. The lab also came out of the red, since a share of the profits accrued to the Institute.

Our co-operative acquired new equipment along with two vehicles. And then something happened which gave us an incredible boost.

One afternoon I arrived at the company office and noticed both our telephones in use. My secretary was on one of them, listening and taking down notes. The other telephone was being manned by the cleaning lady. No sooner had one of the phones been hung up than it started ringing again. At one point my secretary managed to tell me:

“They’ve been ringing off the hook for over two hours already! One call after another non-stop! Everybody’s asking for our thermometers and stress-indicators. One fellow cursed us, calling us pre-*perestroika* dimwits. If we were willing to raise our prices, he said, he would buy them from us wholesale — at the higher price. They’re all placing bulk orders. They’re even ready to give us advance deposits.”

During the early days of *perestroika* in our country, if you remember, there was quite a proliferation of manufactured kitsch on the market — plastic clip-on earrings, posters and calendars featuring semi-nude girls. Everyone snapped these things up like crazy.

Against that background what we produced looked like a super novelty. But after six months of production, sales suddenly took off with a bang. Something had happened, but what?

It turned out that on a TV broadcast the previous night, foreign-affairs correspondent Vladimir Isvetov was

commenting on how innovative the Japanese were, and showed a Japanese stress-indicator as an example. It looked just like ours. It was then that I realised for the first time the power of advertising and the nature of this beast called luck!

Our staff began working three shifts a day round the clock. We hired workers to do the packing, trimming and finishing in their own homes. Profits steadily increased. We acquired a small passenger ship. I also decided to manufacture seeding equipment for independent farmers. I even chartered a large cruise ship to organise business tours and trade expeditions to the regions of the Russian Far North.

## CHAPTER FOURTEEN

### A destructive force

As head of my very own co-operative I got to know first-hand what a destructive force — one capable of crushing any material state of well-being — impatience toward each other and the break-down of mutual understanding can be. Later I learnt that this is the very reason behind the failure of many collectives. And it can all start over a trifle.

Indeed, that's how it happened with my first co-operative. Not only was it torn apart itself, but several families were destroyed in the process. Even today I still don't know how to counteract this force which erupts spontaneously and is not subject to common sense!

It all began when I decided to procure for our firm a country house with its own estate. I entrusted the details to our acting inventory and supply manager Alexey Mishunin. He drew up all the necessary sale-purchase documents, while I went to take a look at the property. It included a large house, a fifth of a hectare of land, a bath-house, garage and greenhouse. We even got a cow and a flock of sheep in the bargain — not exactly a priority, but Mishunin said the owners had to go away and wanted to sell everything all at once. There was feed for the cow, and he had already arranged for a woman from the village to come in and do the milking.

A couple of days later I called a meeting of the members of the co-operative to tell them about our acquisition. I explained it was intended for entertaining guests, as well as being a place where the members of the co-operative could relax and celebrate special occasions. We would all have to work

together to fix up the place, do some renovations and modernise the kitchen.

The male half of the co-operative greeted the idea with great enthusiasm. But the women began whispering among themselves. It wasn't clear who the ringleader was, but my wife took on the role of spokesperson, saying the men had overstepped all recognised bounds of decency in respect to the women.

"We work with you as equals here," she declared. "After that we go home every day and clean house, cook meals and take care of the children. Does that seem trifling to you? And now you want us, in addition to all that, to work our asses off at this country house of yours, do renovations, and then be cooks and waitresses for your receptions and drinking parties?!"

That was when all hell broke loose. The women poured out on the men all their personal and family grievances and other pet peeves. I realised this when one of them cried out:

"All you do is fool around with dominoes and stare at the tube the whole evening long!"

I knew that none of the men at the co-operative played dominoes. It was her husband, a firefighter, who played. He didn't even work for us. But wives of the co-operative workers were especially 'pissed off'. One of them stupidly blurted out to her husband in front of everyone:

"You always smell of sweat and cheap cigarettes," — he was especially fond of the Prima brand — "and now you're going to be smelling of cow-dung too?!"

A silence hung over the room. The husband took a deep gulp of air, blushed and retorted:

"I shall especially smell of cow-dung. Especially so that you won't come near me, you slut!"

At this she burst into tears. The women gathered around to console her. And it made them even more 'pissed off'. They

started hurling all sorts of insults. One of our workers was named Zhenya Kolpakov — he'd invented all sorts of devices to increase productivity, and could fix anything that needed fixing. But now they told him:

“We have inventors here, but it takes a whole year to clean up after them!”

Then the discussion turned to politics:

“Gorbachev goes on television, but it's Raisa Maximovna<sup>1</sup> who makes all the decisions.”

I declared a recess. I thought everyone somehow might come to their senses. After the break they all took their seats again, the outward restraint barely masking the inner tension. Once again my wife spoke in the name of the women. With a contrived tranquillity she threw out a venomous ultimatum:

“Of course, if you really want a country residence, go ahead, but not one of us women will step foot in it. In other words, it'll be yours alone. And since we share our funds in common and you have no right to spend them without our consent, as compensation we demand you give us one of the company cars with a driver, specially for our household use. We'll take turns using it.”

“Great,” came a chorus of male voices, “go ahead and choke yourselves! We'll give you anything you like as long as you promise not to show up there!”

“They're bound to find some farm hussies out there,” one of the women observed.

“Let them look,” retorted another. “Those hussies'll soon make themselves scarce. Who needs them?”

<sup>1</sup>*Raisa Maximovna Gorbacheva (née Titorenko; 1932-1999)* - - wife of the last Soviet leader (General Secretary of the Communist Party and President of the USSR) *Mikhail Sergeevich Gorbachev* (1931-). In contrast to the wives of Gorbachev's predecessors, Raisa Maximovna played an active role in the political life of the Soviet Union and was rumoured to 'run the country' from behind her husband's back.

None of the men whose wives worked at the co-operative went home that night. It was Friday, and we headed out to our 'hacienda'.

We took a good look around, and started making plans for settling in. The next day we heated up the bath-house. At Mishunin's request the village woman came to milk the cow. We watched how she did it. It was a pleasant time. The cow was quiet, not restless. She was ours now. The woman advised that she wouldn't always be able to come to do the milking. We'd need to look up somebody else.

After an early-evening cleansing at the bath-house, we cooked ourselves supper. It turned out we had quite a feast! Mishunin fried some fish. We put out bottles of beer and vodka, and sat down at the table. And all at once: "Moo-o-oo!"

It was the cow. We got up and headed for the barn. It was milking time, and there was no milkmaid around. We stood there — eight men — in front of the cow and had no idea what to do.

In any case, who can explain what sometimes happens to people at the sight of an animal? You live your life day after day without the slightest thought for non-human creatures. And then all at once you find yourself in a situation where one of them's in your home: a cat, or a dog, or some other animal, and you find you have the same kind of feelings come over you that you'd have in the presence of a child. You're nervous, you worry. Why is that? Maybe it's really true that the first man, Adam, when God gave him the job of naming all the creatures, looked upon each one with *love*, and this love is something we've all inherited — it hides for the most part deep down inside us and makes an appearance only from time to time. Nobody can say for certain whether that's true or not. Only each one of us, I'm telling you, had *some* sort of feeling for that cow, and I'm positive it felt something for us, too.

And this is what came out of it. Seryozha Khodokov said:

"The milk's likely bursting her udder. We've got to do something."

We started in pestering Mishunin. Why on earth, we said, did you buy a cow? And yet at the same time we felt bad about selling it — it had only been one day but we had somehow taken to it like one of our own.

The cow looked at us with her sorrowful eyes, silently. Then she stretched her head out toward me and let out a loud "Moo-o-oo!" She was mooing so pleadingly, and I told Mishunin:

"Better get to the milking right away, since you were the one who bought her!"

Mishunin quickly fetched the milk-pail, tied the kerchief around his head (the kerchief the milkmaid had left behind), and climbed into the cow's stall. He asked us not to leave, as God knows what this cow might do. She let him approach and start milking her. We brought the cow some water to drink, put fresh hay into her stall and gave her some bread.

Mishunin went on milking. At first he wasn't very successful — only very thin streams of milk came out and even they sometimes missed the pail, but then it got a little better. After fifteen minutes the milk was still coming. Mishunin said, whispering for some reason:

"Sweat. My sweat's getting in the way."

"We gathered up handkerchiefs from whoever had them, and Seryozha Khodokov climbed into the stall to wipe the perspiration from Alexey's forehead. He squatted down beside him to see how the milking was going, from time to time wiping the sweat from Alexey's face. And suddenly we could hear Seryozha's agitated whisper:

"What are you doing? You're hurting her! You've got a good stream coming from your right hand, but only a third of that from your left. You can permanently damage her udder that way."

"It's my fingers," Mishunin whispered. "It's 'cause my fingers have gone numb on my left hand. Maybe you'd better help."

Seryozha Khodokov approached the cow from the other side and they began milking together simultaneously.

After half an hour, maybe more, they had milked a whole pailful.

That night at supper we drank fresh milk, and I swear it was the best-tasting milk we'd ever had in our lives.

Early the next morning we were awakened by the milkmaid, who told us with some astonishment that she had tried milking the cow that morning, but for some unknown reason the cow wouldn't let her anywhere close to her.

Once again we trotted off to the barn. We did everything just the way we had the night before, and the cow started milking.

"Well ain't that the limit!" exclaimed the woman. "Since the cow seems to like you so much, *you* can milk her from now on. Happens that way, y'know. A cow can let some people come close, but others she jolly well won't."

Our cow, it turned out, was quite picky. Not only did she not let any of the hired milkmaids near her, whenever she was milked she demanded that one of us stand by her muzzle and feed her, and talk to her, while the milking had to be a joint effort on the part of two men together. That meant three of us had to go for each milking session. So that's how we drew up the schedule — three at a time. At least until we sold the cow, we thought. But it wasn't long before the rumours about our picky cow began flying around. Buyers would come and try milking her themselves, and nothing happened. And they'd refuse to take her, even for a pittance. Granted, I did make one condition — that she wasn't to be slaughtered for meat.

We called in a veterinarian, and he told us:

“That does happen, fellows. An animal gets used to someone, and may reject others for a long time. But tell me, what on earth possessed you to domesticate her that way?”

He didn't have any real advice to offer us, apart from telling us that our cow was calving — meaning she was pregnant. When the time came we would have to prepare for the birthing. The vet indicated the approximate date. We would know when the time was near when she stopped giving milk.

Since the men were obliged to keep watch three at once, we ended up spending a lot of time at our ‘hacienda’ — even staying overnight there.

Our wives had a hard time accepting that we were really having problems with the cow, since they had sworn never to set foot in our ‘hacienda’ themselves, and looked upon this whole story of the cow as a convenient excuse. The women and wives working at the co-operative completely lost all sense of self-control. They started telling obscene jokes. The one who complained about her husband's bad smell said:

“Only a sexual pervert could attract such a perverted cow!”

To which he retorted:

“I'd rather spend my whole life milking a silent cow than listening to your dumb remarks.”

Soon afterward he moved out completely to live in the ‘hacienda’ and later got a divorce from his wife. He married a young country girl with a child and became quite a decent farmer.

Then the day came when the cow stopped giving milk. On the vet's advice we got everything ready for the birthing. But the cow gave birth all by herself and without incident. She bore a little bull-calf. A handsome son-of-a-gun. When we called the vet, he took one look at the pair and said:

“Well, that's great! Nothing more to be done here. She's taken care of it all by herself. Just keep the place clean. Make sure she's well fed.”

Some time later we managed to find a good home for both the cow and her bull-calf. One day we went over to see what a handsome creature he'd turned into, our little bull. And everything was arranged nicely for his mother. Even now I still think of her. I wonder whether she remembers us. But while we got things settled for the cow, we didn't manage to restore a sense of harmony and mutual understanding in the co-operative.

So I ended up dividing the co-operative in two, reorganising part of it under a different name. I began using the chartered ship to make long trading voyages to the North along the River Ob. In between such voyages I conducted business cruises for Russian and foreign entrepreneurs.

I took the lesson home that one indispensable condition of success, among others, is a sense of mutual understanding and respect in a collective. You must have faith not only in your own abilities but in everyone's. Any kind of ability you have is multiplied by your faith in the people around you.

## CHAPTER FIFTEEN

### ‘Herbalife’ entrepreneurs

It was only upon arriving at Moscow’s Vnukovo airport that I realised my funds were rather low — I had only 5 million roubles (\$1,000) left, and I did not even have a specific plan of action. It was hardly likely that either my employees or my family would be able to cope with my accumulated debts; they would have to sell the company’s assets, meaning I could not look to home for any assistance. Had I remained in Novosibirsk, of course, I could have worked things out. But that would have meant concentrating all my attention on the daily affairs of my business — something that was impossible after what had happened in the taiga and the promises I had made both to Anastasia and to myself.

Indeed, by this time it was hard to determine whether my actions were being guided by my own awareness and desire or by Anastasia’s influence.

One thing was crystal clear: I was bankrupt. Having witnessed countless similar situations among my colleagues, I knew there was nobody I could turn to — either friends, relatives, or former employees. They would all avoid you like the plague. You can spend ten years of your life being a hero and then just one little mistake can put you in the doghouse and make you a non-person, despised by everyone you know. It’s happened to a lot of prominent entrepreneurs. In a situation like this you can only hope in yourself and your own ability to find a way out of a dead-end predicament.

After leaving my bag (containing a sweater, some shirts and a few other trifles) at a hotel, I started tramping around the

streets of Moscow. I tried figuring out what it all meant — everything Anastasia had said about Russia's entrepreneurs.

The first thing that struck my eye in Moscow this time was the activity of the so-called 'Herbalifers'.

Neatly dressed people stood in the tunnels leading to metro<sup>1</sup> stations in the city centre, haranguing passers-by with job offers. "With a foreign firm," as they said. They were luring them with promises of huge earnings and opportunity for promotion. The word *Herbalife* wasn't even mentioned — probably because almost every classified advertisement in the papers posted by a job-seeker ended with the words: "No Herbalife offers."

Still they stood there, wearing "Work for you" buttons and handing out flyers from some foreign firm, stubbornly urging people to at least come for an interview. Later I learnt that those responding were subjected to intense psychological conditioning, with special emphasis on two points dear to the heart of the average Russian.

First, seminar speakers would make a big thing of telling how they or their relatives, for example, received a fantastic healing with the help of this 'Herbalife' from overseas, with the implication that any potential distributor could also engage in the noble practice of treating people's ailments. The system was so miraculous, they declared, that no medical courses were needed, just two or three training sessions, even if you were a simple painter or plasterer, and, presto, you are qualified to act as a consultant to ailing consumers.

Secondly, they made a point of telling stories with examples of how one could get rich through promoting and distributing 'Herbalife' products. This meant buying at least one package for starters (with your own money), then finding someone

<sup>1</sup> *metro* -- i.e., the *Metropolitan*, referring to the underground or subway system operating in Moscow and many other Russian cities.

else and convincing him in a one-on-one conversation of the fantastic benefits of using 'Herbalife', then selling it to him at a slightly higher price. At the same time you needed to keep recruiting more distributors, getting a percentage from each new recruit. The more recruits you attracted, the higher you would rise in the hierarchy and the more money would accrue to you. You would reach a point where you yourself wouldn't have to do any of the actual distribution work.

As an entrepreneur, I soon realised one thing very clearly: money *did* come showering down in a rain of gold, but only for the person at the very top of this pyramidal system and his closest collaborators. The whole long chain of distributors, divided into so-called levels, survived only thanks to each level benefiting from its own price mark-up, and it was all paid for by the one at the very bottom — the consumer who believed in the miracle properties of the product.

In some cases the price increased by twelve times!! The actual distribution keeps rolling along non-stop, thanks to the huge number of agents using their own accounts of healing to win the trust of their fellow-Russians and make them believe in the miracle properties of 'Herbalife'. A system like this is capable of selling even the ashes from one's stove. Any complainers are simply told that they have somehow misunderstood the instructions on the label or not followed them closely enough.

This system is especially effective in our country, where people are accustomed to getting the most reliable information from trusted friends and acquaintances rather than through official channels.

There is no point whatsoever in discussing the advantages or disadvantages of the 'Herbalife' products themselves. That is a long story. I can say only one thing with absolute certainty: all the fervour of the distributors telling about their own healings disappears as soon as they realise they're not going

to get any money from you. In that case you'll start hearing a whole string of counter-examples, such as "It's nothing but a load of crap!"

This distribution system was invented in the West. Managed from the West, it lures in all sorts of unemployed Russians. But these are not *our* entrepreneurs. And now I shall tell you of yet another gimmick invented by Western businessmen.

## CHAPTER SIXTEEN

### Free holidays in Hawaii

If you should be stopped on a crowded Moscow street by smartly dressed young people (some of whom speak with an accent) inviting you to a presentation by a foreign firm with your own reserved table and free lottery tickets, offering you the opportunity to win a gold watch or even a free trip to Hawaii, you can be sure that you will be guaranteed a free trip. But it is best to bear in mind the old saying: "The only free cheese is in a mousetrap."

It's not hard to figure out just how this particular mousetrap works.

What you get 'for free' is the opportunity to stay in elegant lodgings. Upon arriving you discover that they really do look like the photos in the brochures. The catch is, you have to pay for the airline ticket, your food and all the 'incidentals'.

A few days into your stay you realise that this 'free' vacation is ending up costing you quite a bit more than the full price of a stay at some other comparable resort. It's all very simple: your 'free stay' is paid for by a host of surcharges on a range of food and other services. These surcharges cover, by the way, the agents standing on the street-corners and the so-called 'free' presentation, the colour brochures they hand you, not to mention the company's profit.

Of course, for those with lots of money to spare, it doesn't make too much difference. The only bad thing you might feel is the unpleasant sensation of being made a fool of. It is quite a different matter when an average Russian wage-earner of modest means, one who has spent a whole year saving for such

a trip, takes the bait and, instead of going to see his mother or for a holiday at a Russian resort, hands over his hard-earned savings to these foreign smart-asses and like a fool spends two weeks in lodgings designed for fools like him.

Gentlemen from abroad, where did this attitude of disrespect for us Russians come from? As I was looking at the sales kiosks on our streets filled with imported goods, even imported bottled water, I remembered how it had been the same way on my ships, but back then I had never really thought about what was behind it. I was listening to radio reports about the suspicious quality of the chicken legs on sale all over the country, as well as about bottled water with fancy labels promoting its healing mineral properties, belying the fact that this stuff, sold in our stores, was simply tap water with suspicious additives. I was noticing the huge number of signs advertising how you could refresh your strength with a 'hot dog', as if all of Moscow and even all of Russia had suddenly made these rubber sausages their national dish, and wondering why this had never struck me before as it did now.

I remembered the respect and enthusiasm with which we'd greeted visiting entrepreneurs from abroad at the beginning of *perestroika*. I remembered how I'd organised business cruises down the River Ob for them on my ship, and how the Siberian entrepreneurs tried as hard as they could to provide them with the highest-quality service. Of course not all the visitors were the same, but what did we gain in the long term?

So, where are you, entrepreneurs of Russia? The ones that should be making our country flourish?!

## CHAPTER SEVENTEEN

# The beginning of perestroika

At the very beginning of *perestroika*, when the first law on co-operatives in the USSR was enacted, many saw it as a call to action. And a lot of young people, as well as many not so young but invariably full of energy and desire to really do something for themselves and their country, literally threw themselves into the fray. And immediately found themselves surrounded by a hostile, pestering crowd.

“Down with them!” the crowd shouted. “Bourgeois smart-asses! What did we fight for, anyway?”

And even though many of Russia’s pioneer entrepreneurs ended up working round the clock, pouring in a colossal amount of energy, not to mention their unique wit and inventiveness, hardly any of their efforts met with so much as a ‘thank you’. The modicum of support they required was usually provided only by intercommunication and interaction with each other.

Then a concept was born — it literally came out of thin air — the idea of creating a Union of USSR Co-operators. I was part of the pilot group initiating the project, along with the well-known Russian entrepreneur Artem Tarasov.<sup>1</sup>

<sup>1</sup>Artem [pronounced: art-YOM] Mikbailovich Tarasov (1950-) — a prominent Russian entrepreneur, one of the first Soviet ‘co-operators’. An engineer by profession, in 1989 he proclaimed himself the first legal millionaire in the USSR, and the following year he was elected as a deputy of Russia’s Supreme Soviet (nominal Parliament). He founded dozens of business ventures, including Russia’s leading business newspaper *Kommersant* and the *Transaero* airline. After years of suppression by the state, Tarasov emigrated to London. In 2004 he published a book of memoirs entitled *The millionaire*, exposing the corruption of Russia’s ruling elite.

Most of us at the time were Communists. At the first entrepreneurs' congress I was elected secretary of the congress's Party Committee. I tried to explain to our overseer from the Communist Party Central Committee, Comrade Kolosovsky, that it was incredibly difficult for entrepreneurs to work under such pestering. We needed first and foremost the Party's moral support. But I soon realised that we were going to be facing hostility and pestering from a segment of the ordinary public, as well as high- and low-ranking officials, for a long time to come. We could not look to the higher echelons of the Central Committee for any outward show of support, since they were afraid of losing popularity — already their power was greatly diminished compared to the heyday of Soviet communism. An internal struggle had apparently begun and was now in full swing.

In addition, entrepreneurs had begun to feel mounting pressure from a tax squeeze. And today, with maybe one or two exceptions, not a single business can keep afloat if it dutifully pays all the required taxes. Realising this, many of them have managed to escape the tax squeeze by using all sorts of tricky loop-holes. But in doing this they have landed themselves in an even more precarious situation — being outside the law. Attempt after attempt to make officials on various levels see the absurdity of the prevailing tax system have not exactly been crowned with success. Indeed, they could not be, since the ones who initiated the system (and this is my own personal assumption) understand better than anyone else the impossibility of paying all the taxes, but this was exactly what they needed. Needed for what? For power, of course! For extortion!

One false step and you can be instantly ground to powder, outlawed by tax police and inspectors.

I felt sorry for the first entrepreneurs of *perestroika*, as well as for Russia's current crop of businessmen. I decided to do for

them whatever lay within my powers. I went to the League of Russian Co-operators and Entrepreneurs, originally headed by Vladimir Alexandrovich Tikhonov,<sup>2</sup> whom we had elected to the post in *perestroika*'s early days. The League's executive Presidium still maintained a headquarters, but many of the offices were empty. Vladimir Alexandrovich had died a year and a half earlier. I was told that the Chairman of the Russian Business Round Table, Ivan Kivilidi,<sup>3</sup> had been poisoned, together with his secretary, just six months ago. Artem Tarasov had resigned from the League, and the organisation's membership was only a shadow of its former self.

Thanks to my acquaintance with one of three remaining League executives, my request for space in one of the empty offices was granted, along with two telephones, a computer and a fax machine. Since the League had no organisational funds available, I was pretty much on my own. To save time and hotel expenses, I used the office for my sleeping quarters as well. I was awakened every morning at six o'clock by the arrival of the cleaning lady, and the absence of a TV allowed me to work most evenings right up 'til midnight. This sudden shift in living conditions — from a luxury ship's cabin (where anything I wanted to eat or drink was only a bell ring away) to a drab office not designed for living accommodation — in no way embarrassed me. In many respects it actually afforded me greater opportunities to pursue my work.

<sup>2</sup>*Vladimir Alexandrovich Tikhonov* (1927–1994) — academician of the Lenin Agricultural Academy and co-author of the innovative legislation on Russian co-operatives mentioned above.

<sup>3</sup>*Ivan Kharlampievich Kivilidi* (1949–1995) — an entrepreneur of Greek descent, at one time said to be the richest man in Russia. Kivilidi was an outspoken advocate of political and economic reform. In 1993 he founded an influential "Russian Business Round Table" to forward the interests of Russian entrepreneurial élite in the political arena. The poison which killed him and his secretary was delivered by a breath-activated substance placed in his office telephone receivers.

I spent my time thinking out and drafting a constitution for a Fellowship of Entrepreneurs, along with compiling letters of appeal — these I sent out by fax in the early hours of the morning, when the communication lines weren't as busy. By hook or by crook, making use of both newspaper adverts and chance encounters, I gathered together a secretariat of various Moscow professionals who shared my enthusiasm for the project and realised its significance.

The secretariat also included three Moscow university students. First there came Anton Nikolaikin, who had been called in to fix a broken computer. Later, after learning of our work on organising the Fellowship, he brought along two of his friends, Artem Semenov and Alexey Novichkov. They immediately began work on encoding the electronic version of the *Golden Catalogue of Russia*,<sup>4</sup> for which they were able to put together a highly professional computer programme.

<sup>4</sup>*Golden Catalogue of Russia* (in Russian: *Zolotoi katalog Rossii*) — a reference to the Fellowship's proposed directory of member enterprises.

## CHAPTER EIGHTEEN

# Fellowship of Russian entrepreneurs

The idea of a Fellowship meant that it would be open to any entrepreneurs who had been active in the Russian market for at least a year, and were sincerely striving to develop honest relationships not only with each other but with their clients and employees. Representatives of various non-profit societies tried to persuade me that today's entrepreneurs were cool to the idea of any form of organisation, that the age of faith-based euphoria had passed, and that membership in societies one could join simply by paying a modest fee had diminished catastrophically. They argued, furthermore, that the idea of organising a Fellowship with additional requirements involving the ethical standards of both the entrepreneur and the enterprise was simply absurd.

My old friend Artem Tarasov, having heard about my arrival in Moscow and what I was up to, came to one of the 'round tables'. He set to work on drafting documents, including an appeal to entrepreneurs. He laid out several thousands of dollars so I could make up glossy brochures to give out to delegates at a small-business congress<sup>1</sup> being organised in Moscow.

<sup>1</sup>*small business congress* — a reference to the First All-Russian Congress of Small Business Representatives held on 19–21 February 1996 in the prestigious Kremlin Palace of Congresses in Moscow. This high-profile event, organised by several government agencies and the Chamber of Commerce of the Russian Federation, featured an address by Russian president Boris Yeltsin. To the entrepreneurs' disappointment, however, many of the promises of government support to small business voiced during the congress were never fulfilled.

But the congress organisers decided not to allow any brochures on the Fellowship to be handed out, no doubt fearing competition from us. As a result, secretarial staff and students positioned themselves just outside the entrances to the Rossiya Hotel,<sup>2</sup> trying to hand delegates folders containing the brochures. They stood there withstanding both the cold and attempts to chase them away by the militia, who thought some kind of illegal selling might be taking place. Artem Tarasov still managed to take a package of brochures into the Kremlin Palace of Congresses, where the congress was being held — though, unfortunately, only a rather small quantity.

The operation we had placed so many of our hopes on ended in failure. Organising the Fellowship was proving to be an impossibility. The difficulty was that getting the necessary information out to all the entrepreneurs across the country required a huge outlay of roubles on printing and postage costs, since favourable responses were coming in from only ten percent of the people we managed to reach. The required funds were simply not available.

Besides, the League executive kept back a portion of the membership fees as office-space rent, as they had no other source of funds. Sensing some sort of snag, the League stopped giving out money for organisational expenses altogether, in spite of the fact that the membership fees had been specifically earmarked for organisational expenses.

The League needed to use the entrepreneurs' membership fees just to cover operating costs, they explained. Then they began holding back wage payments for the secretarial staff. I was obliged to vacate the League's premises, leaving behind my second computer which had been purchased with funds from the entrepreneurs who had joined the Fellowship.

<sup>2</sup>*Rossiya Hotel* — a large hotel complex in downtown Moscow, across from the Kremlin and Red Square, overlooking the Moskva River.

“How come?” queried the students in bewilderment — students who had spent hours working out computer programmes at their own expense. “We’ve been doing the work which this non-profit organisation, according to its own constitution, is supposed to carry out, and here they’re treating us like tenants, and spitting on the entrepreneurs in the process.”

The League executive argued: “The office rent must be paid.”

With what was left of the secretarial staff, I tried to carry on the work out of one of the entrepreneurial trades union offices, but the same situation repeated itself there.

After getting to know the leaders of several non-profit organisations, I suddenly realised that they all had titles, but no membership, something like the so-called ‘sofa parties’,<sup>3</sup> existing only for the benefit of their executives. While this was not true of the Farmers and Peasants Association, headed by Vladimir Bashmachnikov (and there may be other exceptions), this was the general state of affairs at the time.

Even today there is no non-profit organisation in Russia bringing together any significant number of entrepreneurs, and those that do exist are of the ‘sofa party’ variety. Why? Among the possible causes I would include the anonymity of membership fees.

For some reason it always happens that once an executive body is created, it starts making decisions on behalf of entrepreneurs without consulting the majority.

Walking away from the trades-union office, I now found myself without any means of communication and without anything to live on. Artem Tarasov had by this time emigrated to London. He had tried to get himself on the ballot for the

<sup>3</sup>*sofa parties* (in Russian: *divannye partii*) — political parties (or non-profit societies) with the trappings of a registered organisation, but created merely to advance the interests of one individual or a small group.

Russian presidency and had spent billions of roubles collecting the required signatures, but when the Central Election Committee invalidated most of those signatures, Artem was obliged to look after repairing his own financial affairs.

The local residents working in the secretariat, not receiving any pay, were obliged to quit.

I was left all alone. Or rather, I thought I had been left all alone. But three Moscow students weren't about to abandon the work they had started: Anton, Artem and Lyosha. Anton actually used his own holiday savings to pay the monthly rent on an apartment for me. They were willing to wait until I sought and found a way out of my present circumstances and could continue my work on creating the Fellowship. They had got caught up by the whole idea. They believed in it. But I could see nothing ahead but a dead end.

It was right at this time that some news arrived from Novosibirsk.

## CHAPTER NINETEEN

# Suicide?

One evening a man from Novosibirsk dropped by to see me. He was in Moscow on some business of his own. He brought along a bottle of vodka and some light snacks. We sat in the kitchen of my one-room flat, and he told me about how things stood with my family and my company.

The situation was indeed deplorable. My firm had had to give up one of its offices in the centre of the city for lack of funds to pay the rent. Our automobile spare-parts store had had to close. The workers there tried selling shoes, but their debts only increased. The entire responsibility fell on my shoulders.

"And here you're up to goodness-knows-what. A lot of people are saying you've gone mad. You should have worked out things at the company first and then gone off and done your own thing, whatever it is. Nobody there has faith in you any more."

As we were finishing off the bottle, he asked me:

"You want me to tell you my honest opinion — what they expect of you?"

"Go ahead," I replied.

"They would like you to do away with yourself, or at least disappear for good. You be the judge — it's impossible to start anything now without any seed capital, and here not only do you not have any seed capital, you don't even have enough to live on. And your debts have been building up like crazy.

"You know, nobody's ever heard of someone climbing out of a hole like that. But with you out of the picture, your death will settle everything, and they can divide up what's left of your estate.

“Your wife says that according to the horoscope you’re a Leo, and you’ve just been wasting your whole life away, so you *should* die in poverty, just like in the horoscope.

“Come on, now, why did you undertake that second expedition? Nobody can figure it out.”

In spite of the fact that we were both pretty drunk, when I awoke the next morning I had a clear recollection of the whole conversation. His arguments were forceful and convincing. Novosibirsk was a dead end; there was a dead-end situation here in Moscow too. People who had worked alongside me were suffering, my family was suffering. I couldn’t possibly find a way out and fix everything — there was simply no way out. Only my death could put an end to the suffering.

Of course suicide is never the right thing to do. But according to the logic of events, my suicide would relieve the suffering of others, and if that was the case, then he was right, and I had no right to live. And so I decided to do away with myself. The thought of it even brought comfort to me. I was freed from the need to undertake a torturous search for a way out of my present situation, since I agreed that death *was* the way out.

I cleaned up the apartment a bit and wrote the landlady a note to say I wouldn’t be back. I decided to go to the trades-union office to put the Fellowship files in order. Someone — okay, maybe not now, but later, perhaps — would carry on with the work.

The only question was: how would I do away with myself when I didn’t even have enough money to buy the poison? Then I really began thinking: maybe it shouldn’t *look* like suicide... Maybe I’ll go take a dip in the river, just like the ‘walruses’,<sup>1</sup> and I’ll jump through a hole in the ice and drown. So I headed off toward the Moskva River.

<sup>1</sup>*walruses* — the name given to the many hardy souls who brave the icy waters of Russia’s lakes and rivers in the middle of winter (akin to ‘Polar Bears’ in Canada and America).

As I was making my way through an underground passageway at the Pushkinskaya metro station, my ear all at once caught a familiar melody. It was being played by two young girls on their violins. An open violin-case lay on the pavement in front of them and passers-by were tossing in money. A lot of buskers make extra money like that at metro stations. But the way these two girls were playing their sweet melody amidst the bustle of noisy pedestrians and the screeching of trains in the background caused many a passer-by to slow down and listen. As for me, I couldn't help but stop dead in my tracks. The violin bows were echoing a melody I had heard only once before — in the Siberian taiga — a melody sung by Anastasia.

Back there in the taiga, I had once asked her to sing something of her own — a song I'd never heard before, and she came out with this extraordinary, unusual captivating melody without words. She started by screaming like a newborn baby. Then her voice began sounding ever so quiet and tender. She stood beneath a tree, her hands clasped to her breast, and it seemed as though her voice was a lullaby, gently caressing a little baby, trying to tell him something. Her voice was so quiet it caused everything around to be still and listen. Then she seemed to be filled with delight at the little one waking from sleep, and her voice took off with rejoicing. The incredibly high-pitched sounds and cascading trills soared and took flight to the heavens, radiating through space and delighting all around...

I asked the girls:

“What were you playing?”

They exchanged glances and one of them said:

“I was just sort of improvising.”

And the other chimed in:

“And I was just playing along.”

Here in Moscow, caught up as I was with the idea of setting up the Fellowship of Entrepreneurs, which had become

the main focus of my life, I had almost completely forgotten about Anastasia. And now, on the last day of my life, as though to say farewell, here she was reminding me of her existence.

“Please, play some more, the way you were playing before!” I asked the girls.

“We’ll try,” the older one replied.

And there I stood in the metro station passageway, listening to the captivating melody of the violins and remembering the glade in the taiga and thinking:

*Anastasia! Anastasia! It's much too complicated to make all that you thought up come true in real life. It's one thing to dream — quite another to turn the dream into reality. Some sort of mistake must have crept in as you were working out your plan: organise a fellowship of entrepreneurs, write a book...*

I felt as though a flood had hit me. Repeating these last two phrases over and over again, I felt there was something out of place there, something wasn't right. Back there in the taiga — in the taiga... the words had been spoken not quite the same way, but how? How else could they have been said? As I continued repeating them, I happened to switch the word order and heard myself saying: “Write a book, organise a fellowship of entrepreneurs.”

But of course! The book should have been written *first!* The book was supposed to settle all these questions and, most importantly, spread *information* about the fellowship! Yikes, how much time I realised I'd wasted and, in the meantime, look at how complicated my personal life had become!

All right, then. *I'll get busy*, I thought. At least now it's clear just what I should be busy *at*. It's absurd, of course — someone who doesn't know how to write, writing a book, especially one he expects people to actually read! But Anastasia had faith it would work out. She kept trying to convince me. Okay. That means I've really, *really* got to try now. And I've got to see it through to the end!

## CHAPTER TWENTY

# The Ringing Cedars of Russia

I decided to go back to my apartment. Moscow was already feeling the touch of spring. All that remained in the kitchen was half a bottle of sunflower-seed oil and some sugar. I needed to replenish my larder and decided to sell my winter *shapka*,<sup>1</sup> which was made of mink. It was a real mink hat, not imitation, and cost a great deal.

Of course, the winter weather was almost over now, but I thought I might get at least something for it, so I headed for one of Moscow's many outdoor markets. I went up to various merchants selling fruit and other goods. They looked at the *shapka*, but were in no hurry to buy it. I had already decided to lower the price when two men approached me. They turned the *shapka* over in their hands, feeling the fur.

"I need to try it on. Go see if you can borrow a mirror somewhere," one of them said to his companion and suggested I follow him off to one side.

We reached a secluded spot at the end of a row of stalls and stopped to wait for his companion with the mirror. We didn't have to wait long. He crept up stealthily from behind, and the blow on the back of my head first caused me to see stars, then my whole vision went blurry. I managed to grab hold of a fence to stop myself from falling to the ground, but when I came to, my 'buyers' were nowhere to be seen. The *shapka*,

<sup>1</sup>*shapka* — a warm fur hat, often with ear-flaps (tied up on top when not too cold); the commonest form of headgear during Russian winters.

too, was gone. Only a couple of women were there, making sympathetic *oobs* and *ahs*.

“Are you okay? Awful bastards, those. Here’s a crate — you can sit down for a bit.”

I stayed standing against the fence for a while longer and then slowly made my way out of the market area. A spring drizzle was falling. I was about to cross a street and stopped on the kerb to look both ways. There was a painful ringing in my head. I wasn’t watching, and a passing car sprayed me with water from a puddle, thoroughly wetting my trousers and windbreaker flaps.

I was trying to figure out what to do next when a truck whizzed by, covering me with more spray from the same puddle, and this time the spray flew right into my face. I stepped back from the kerb and took refuge from the rain under the awning of one of the commercial kiosks, and tried to think my next plan of action.

There was no way, I realised, I could get into a metro station looking like this. It was three stops to my apartment. Sure I could walk it, but the way I looked I still might get picked up by the police, thinking I was a drunk, or a tramp, or just a suspicious person. Then you stand there, trying to explain and justify yourself while they investigate your case. What could I tell them anyway? Who am I now?

And then I saw this man.

He was shuffling slowly along the sidewalk, carrying two cases of empty bottles. He looked like one of those tramps or boozers who often circulate among kiosks that sell spirits on tap. Our eyes met. He stopped, put down his cases on the sidewalk and struck up a conversation with me.

“What are you standing there looking at? This is *my* territory. On your way!” he said quietly, though not without an air of authority.

Not wanting to argue with him or cross him — indeed, not

having the strength to do so, I replied:

"I don't need your territory. I'll just gather myself together and leave."

But he continued:

"And where will you go?"

"None of your business where I'm going. I'll just leave. That's it."

"And will you make it?"

"I'll make it, if I'm not interfered with. Leave me alone!"

"The way you look you won't either stand very long or walk very far."

"What's that to you?"

"You haven't got a home to go to?"

"What?"

"A novice, eh? Okay, wait here a moment."

He picked up his cases and walked off. He came back a moment later with a wrapped parcel and again started speaking to me.

"Follow me."

"Where are we going?"

"To a place where you can rest for a couple of hours, or maybe 'til morning. You can get yourself dried out. Then you can proceed on your way."

Following after him, I asked:

"Is your apartment close by?"

Without turning his head he responded:

"You couldn't get to my 'apartment' if you walked your whole life long. I don't have any apartment. I have my 'deployment quarters'."

We walked up to a door leading to the basement of a multi-storey block of flats. He told me to stand over to one side while he looked around, waiting until none of the tenants were to be seen, then stuck something that looked like a key in the lock and opened the door.

It was warmer in the basement than on the street. Heat came from hot-water pipes which had been deliberately stripped of their insulation, probably by tramps. On the floor in one corner stood a pile of rags, illuminated by a dim light filtering in through a dust-covered basement window. But we went on past them into a far corner which stood empty.

He unwrapped the parcel and brought out a bottle of mineral water and uncapped it. Taking a swallow of water in his mouth, he sprayed it all around, as though from an atomiser.

"That's to keep the dust down!" he explained.

Then he slightly moved a divider standing in the corner to one side. From the narrow space between the divider and the wall he took out two sheets of plywood covered with plastic, along with several pieces of plastic-covered cardboard. He used them to lay out two makeshift bunks on the floor. Taking an old food tin from the corner, he lit the candle it was holding. The lid of the tin was not completely detached; it was clean and bent slightly upward in a semicircle to serve as a reflector. This primitive device illuminated the edges of the bunks and the half-metre of space between them. Here he spread out a sheet of newspaper, on which he started laying the contents of the parcel — cheese, bread and two packages of *kefir*.<sup>2</sup>

Neatly slicing the cheese, he issued an invitation:

"What are you standing there for? Come on, sit down. Take off your jacket, hang it over the pipe. When it dries out, we'll clean it. I've got a brush. Your trousers will dry out without taking them off. Try not to wrinkle them."

Then he brought out two drams<sup>3</sup> of vodka, and we sat down to eat. In contrast to the dirty basement floor all around us, the corner my companion had managed to set up for himself had an air of cleanliness and coziness.

<sup>2</sup>*kefir* — a popular drink made of thick fermented cow's or goat's milk, often sold in cardboard packages.

After we clinked glasses, he introduced himself:

“Call me Ivan. Nobody here bothers with patronymics.”

The way he improvised the bunks and set out the food on the newspaper, despite the dirty floor, created a clean and cozy atmosphere in his basement corner.

“I don’t suppose you have anything softer to lie on?” I asked after supper.

“You can’t even keep rags down here — they only get dirty, and then they start to smell... I’ve got neighbours over in that corner. Two of them... they show up from time to time. They’ve made one hell of a dirty mess.”

We got involved in conversation. I started answering his questions, and in doing so I ended up inadvertently telling him about my meeting with Anastasia — her lifestyle and her abilities — about her ray, her dreams and aspirations.

He was the first person I had talked with about Anastasia! I myself don’t know why I told him about all her eccentricities, about her dream and how I promised to help her. I had indeed tried to set up a fellowship of pure-minded entrepreneurs, but had made a major mistake. I should have written a book first.

“Now I’ll set about writing one and try to get it published,” I affirmed. “Anastasia said the book would be needed first.”

“Are you really confident you can write it and get it published without any funds?”

“I don’t know whether I’m confident or not. But I shall certainly work in that direction.”

“That means you have a goal, and you’re going to go for it?”

---

<sup>3</sup>In the mid-1990s ‘drams’ of vodka were actually sold in what appeared to be plastic yoghurt cups, complete with a metal foil cover. This packaging enabled heavy drinkers to dispense with the need for a glass or to find a co-drinker to split the cost of a bottle, and thereby gained tremendous popularity.

"I'm going to try."

"And you're sure you'll make it?"

"I'm going to try."

"Yeah, a book. You'll be needing a good artist to do the cover. Someone who can do it with heart. In line with the meaning of the book, with the goal. And where're you going to find an artist if you haven't got any money?"

"I'll have to do without an artist. Without a fancy cover."

"You should do it up brown, with a cover that really fits in with the book. If I had good paper, brushes and paints, I'd help you. Only those things cost a lot now."

"You mean to say you're an artist? Professional?"

"I'm an officer. But I've loved drawing and painting since childhood. I joined various art groups. Whenever I could steal some time, I'd paint pictures and give them to friends."

"Well, why did you go and become an officer if you still wanted to paint all these years?"

"My great-grandfather was an officer, my grandfather and my father too. I loved and respected my father. I knew — I felt — what he wanted me to be. So I tried to be that. And I made it all the way to colonel."

"Where did you serve?"

"Mainly in the KGB. That's where I resigned from."

"Through attrition or were you forced out?"

"It was my decision. Just couldn't take it any more."

"What couldn't you take?"

"You know the popular song: *Oh officers, officers, your heart is under fire.*"<sup>4</sup>

<sup>4</sup>*Oh officers, officers, your heart is under fire* (in Russian: *Ofitsery, ofitsery, vashe serdtse pod pritselom*) — from an extremely popular song written by singer-songwriter Oleg Gazmanov (1951–) in 1994, which stayed several years at the top of the charts. The song extols the virtue of soldiers defending their country, and takes note of the challenges faced by Russian officers in a post-communist era.

“They tried to kill you? They made an attempt on your life? Did they shoot at you, maybe to settle some kind of score?”

“Officers often get shot at. It’s an age-old story, officers meeting up with bullets. Going to the defence of those behind them. Going along, not suspecting their own hearts were under fire, not suspecting the fatal shot to come from behind. An accurate shot. An exploding bullet. And straight to the heart.”

“How so?”

“Remember the pre-*perestroika* times? The celebrations — First of May, Seventh of November?<sup>5</sup> Huge columns of people crying “Hurrah!”, “Glory to...!”, “Long live...!” Me and the other officers, not just those from the KGB, were proud of the fact that we were the defenders of our people. We were protecting them. For most officers, this was their whole reason for living.

“Then came *perestroika*, and *glasnost*.<sup>6</sup> Other shouts began to be heard. And it turned out that we, the KGB officers, were bastards, executioners. We were defending the wrong people and the wrong things. The ones that earlier marched in Soviet columns under red banners had gone over to march

<sup>5</sup>*First of May, Seventh of November* — two of the biggest Soviet holidays: 1 *May*: International Workers’ Solidarity Day, a communist version of Labour Day, originally commemorating the Chicago General Strike of 1886; first celebrated in Russia (St. Petersburg) in 1891. 7 *November*: the date of the Bolshevik Revolution. Parades on these days featured huge banners with communist slogans such as “Glory to the Communist Party of the Soviet Union!” and “Long live the brotherhood of nations of the USSR!”; these slogans would be shouted out on cue by the parading masses of workers and soldiers.

<sup>6</sup>*glasnost* — literally, ‘openness’, ‘transparency’, meaning greater freedom of speech and especially greater availability of information on socially important matters, access to which had previously been reserved for the ruling elite. This and *perestroika* (‘restructuring’) became universal buzzwords to describe Gorbachev’s liberal policies.

in other columns under different banners, and *we* got left to take the blame.

“I had a wife, nine years younger than me, a real beauty. I loved her. Still do. She was so proud of me. We had a son, an only child. He came along... rather late, how shall I say it? Now he's seventeen. In the beginning he too was proud of me, he respected me.

“Then, after this whole business started, my wife became very quiet. She wouldn't look me in the eye. She began to be ashamed of me. I handed in my resignation and took a job as a security guard at a commercial bank. I hid my KGB uniform where nobody would find it. But there were unasked questions still hanging in the air over my wife and son. You can't answer questions which haven't been asked. They saw the answers in the papers and on TV screens. Turned out, we officers were involved in nothing but our dachas — and, of course, oppression.”

“But,” I interjected, “they showed on TV some pretty fancy dachas of the military elite — and they showed the real thing, not just faked pictures.”

“Yeah, they showed the real thing, not just faked pictures. Only those dachas were sleazy chicken-houses compared to what many of those who accused their owners have themselves today. Look at you — you had a whole ship at your disposal. That's a lot bigger than a general's dacha. And don't forget, that general was once a cadet, he dug trenches. Then he became a lieutenant, got shifted about from barracks to barracks. And naturally he wanted to have a house and a dacha for his family, just like everyone else. And who knows how many times he had to jump out of his warm bed in the middle of the night in that same dacha, to go out on an emergency mission.

“Officers used to be respected in Russia. They were rewarded with an estate. Now it's been decided that a simple dacha with 1500 square metres of land is too much for a general!”

“Everybody lived differently before,” I observed.

“Differently... Yes, everybody... But you can’t tell me it wasn’t the officers who were singled out for blame ahead of everyone else.

“It was the officers who demonstrated on the Senate Square.<sup>7</sup> They were thinking of the people. These officers were later sent either to the scaffold or to the mines in Siberia. Nobody stood up to defend them.

“Later Russian officers fought for the Tsar and the Fatherland in the trenches against the Germans. And back home ‘revolutionary patriots’ were already getting bullets ready for their hearts more terrible than the leaden ones. *White Guards*,<sup>8</sup> *Monsters* — that was what they called the officers returning from the war — officers who were simply trying to maintain order. There was chaos all around, everything was falling apart. All our former values, both material and spiritual, were being either torched or trampled upon. It was so hard for them, those White Guard officers. So they put on clean underwear under their uniforms<sup>9</sup> and went on a psychological attack. You know what’s meant by ‘psychological attack?’”

“It’s when you try to scare the hell out of your opponent. I’ve seen it in films. In *Chapaev*,<sup>10</sup> for example, the White

<sup>7</sup>*Senate Square*, now known as Decembrists’ Square — a large square not far from the Winter Palace in St. Petersburg, where a significant number of military officers demonstrated (unsuccessfully) against the Tsarist government in December 1825. The officers were either exiled or executed for treason.

<sup>8</sup>*White Guards* — the name given to military personnel who fought against the Bolshevik Revolution and during the subsequent Civil War (1918–23). The pro-Bolshevik soldiers were known as the *Reds*.

<sup>9</sup>*clean underwear under their uniforms* — a sign that the officers expected to be killed in battle that day.

<sup>10</sup>*Chapaev* — a classic Russian film, made in 1934, telling the story of Vasily Ivanovich Chapaev, a Red Army hero of the Russian Civil War.

Guard officers are advancing in formation, and they get strafed by machine-gun fire. Some fall, but the others close ranks and keep advancing.”

“Yeah, that’s it. They fall and still keep advancing. But the thing is that they weren’t really ‘attacking’ to begin with.”

“How so? What was the point of advancing then?”

“In military practice the whole reason for, the goal of any attack is either the capture or the physical annihilation of the enemy — preferably with the least possible loss in the ranks of the attackers. To keep advancing against strafing from machine-guns concealed in trenches — that was only done when there was *another* goal set, either consciously or subconsciously.”

“What goal?”

“Maybe, and this goes against the logic of the art of war, it was to demonstrate something to the enemy even at the cost of one’s own life — to make the soldiers firing the guns and killing the advancing marchers stop and think, to realise something and not fire at others.”

“So, in that case their death would be something like Jesus Christ’s death on the cross?”

“Something like that. We still manage to remember Christ, somehow. The young cadets and generals who advanced against their attackers, we’ve forgotten. Maybe even now their souls, dressed in clean underwear under their officers’ uniforms, are standing in front of the bullets *we’re* firing, and pleading with us, calling on us, to stop and think.”

“Why would they be calling to us? When they were being fired on, we weren’t even born.”

“No, we weren’t. But bullets are still flying around today. New bullets. Who, if not us, is doing the firing?”

“Indeed. Bullets *are* still flying around today. And just why have they been flying around all these years? Why did you leave home?”

"I couldn't stand the way he stared at me."

"The way *who* stared at you?"

"We were watching TV one night. My wife was in the kitchen, and my son and I were watching together. Then one of those political programmes came on, they started talking about the KGB. You know, a real smear campaign. I deliberately picked up a newspaper and made it look like I was reading, as though I wasn't interested in what they were saying. I was hoping my son would switch to another programme. He's never been interested in politics. He likes music.

"But he didn't change the channel. I rustled my paper, stealing glances at him out of the corner of my eye. And I saw him sitting in the chair, his hands gripping the arms of the chair so tight they turned white. He didn't move a muscle. I realised he wasn't going to change the channel. I held on as long as I could, hiding behind the paper. Then I couldn't take it any more. I smashed the paper into a ball and threw it to one side, got up sharply and yelled: 'Are you going to turn the damn thing off? *Are you?*'"

"My son also got up. But he didn't go over to the TV. He stood opposite me, stared me in the eye and said nothing. The TV programme was still going. But my son just kept on staring at me.

"Later that night I wrote them a note. I said I was going away for a while — had no choice. And then I left for good."

"Why for good?"

"*Because.*"

For a long time neither of us uttered a word. I tried to make myself a bit more comfortable on the bunk so I could drift off. But then the colonel started talking again.

"So, you tell me Anastasia said she'd bring people through 'the dark forces' window of time'? She'd bring them through, and that's it?!"

“Yeah, that’s what she said. And she herself believes that she can make it happen.”

“Ah, she should have a hand-picked regiment. I’d become a soldier again to serve in that regiment.”

“What’s this about a regiment?” I retorted. “You didn’t get it. She *rejects* the use of force. She wants to persuade people by some other means. She’s trying to do that with her Ray.”

“I think, or rather I feel, that she’s going to do it. There’s a lot of people that will want to be warmed by her Ray. But not many of them will understand that they themselves will have to put in something from their own brain-power. Anastasia needs help. She’s all alone. She hasn’t got even a single platoon at her command. So, you see, she’s recruited you, she’s commissioned you — and here you are lying in a basement like a tramp. And you call yourself entrepreneur after that?”

“Well, you KGB-er, you’re lying here, too.”

“Okay, go to sleep, soldier.”

“It’s rather cold in your ‘barracks’.”

“Well, that’s the way it is, isn’t it? Curl up into a ball, conserve your heat.”

Then he got up and took out from behind the divider yet another plastic bag. He got something out of it to cover me with. In the dim light of the candle I could see shining right under my nose three stars on the epaulet of a greatcoat. It was warm under the coat, and I fell asleep.

I was half asleep when I heard the tramps come in and head for their rag corner. They demanded the colonel hand them over a bottle for my overnight stay. He promised to settle it in the morning, but they insisted, threateningly, that he better pay up now, or else. The colonel then moved his bunk, placing it between me and the newcomer tramps, declaring: “You touch him only over my dead body!” And he lay down on his bunk, shielding me from the new arrivals. Then everything went quiet again. I felt warm and peaceful.

I was awakened by the colonel's shaking my shoulder.

"Get up. Turn out! We gotta get outa here."

The first rays of dawn were barely beginning to show themselves through the dim basement window. I sat up on my bunk. Not only did I have a splitting headache but I found I had trouble breathing.

"It's still early. The dawn hasn't even broken," I observed.

"A little longer and it'll be too late. They've lit some cotton-wool with powder. It's an old trick. A little longer and we'll be suffocated."

He went to the window and started working the window-frame loose with an iron bar. The tramps had locked the door from the outside. Taking out the frame, he broke the glass and crawled through the aperture. The basement window opened into a concrete well, covered with a grating. The colonel began fiddling with the grating, trying to dislodge it, but somehow it wasn't working.

I stayed leaning against a wall. My head was spinning. The colonel stuck his head back through the window opening and ordered:

"Squat down. Less smoke near the floor. Try not to move. Breathe in less air."

He forced the grating out with his shoulders. He moved it off and helped me clamber out.

We sat on the cement kerb outside the basement window, silently filling our lungs with the pre-dawn air of an awakening city. The spinning in my head gradually lessened. The air started feeling cold. Each of us sat there, thinking his own thoughts.

Then I said:

"Your neighbours aren't very friendly. They're the ones in charge here?"

"Everyone's in charge of himself. They got their own business. They bring in a new homeless person, and make him pay

for staying overnight. If he refuses to pay, they slip something into his drink or suffocate him in his sleep, like they tried to do to us, and then they take whatever they like from him — if he's got anything worth taking, that is."

"And you're telling me that you, a KGB-er, are indifferent to it all? You could earn yourself some pretty points by giving chaps like that the once-over. Or were you just a pencil-pusher, sitting in an office all day? Maybe you didn't know how to work the street?"

"I worked in an office and I worked outside the office. I knew what to do. But to know the moves — that's not the same as applying them. A criminal, an enemy — that's one thing. But here we're dealing with human beings. I might calculate wrong, use too much deadly force."

"You call *those* human beings? While you're rationalising away, they're out there robbing people blind. They're even ready to commit murder!"

"Yeah, they're ready to commit murder. But you won't stop them by physical means."

"You sit there philosophising, but we almost died. We barely managed to escape, others might not be so lucky."

"Yeah, others might not be so lucky..."

"There, you see? Then how come you're philosophising and not acting?"

"I can't use violence on people. You see what I mean, I could calculate wrong... You may as well get going to your own 'deployment quarters'. It's dawn already."

I got up, shook his hand, and left.

I had gone but a few steps when he called after me:

"Wait! Come back here a moment."

I approached the homeless colonel sitting on the concrete kerb. He was just sitting there, his head lowered, not saying a word.

"Hey, why did you call me?"

After a moment's pause he spoke:

"So, you think you'll make it okay?"

"I think I can. It's not far. Three metro stops, that's all. I'll make it."

"I meant, d'you think you'll reach your goal? Are you sure? Writing a book, getting it published?"

"I'll give it a try. First I'll try writing."

"So, Anastasia said it should work out for you?"

"That's what she said."

"Then why didn't you do that right off?"

"The other seemed more important."

"So, that means you're not good at following orders properly?"

"Anastasia didn't *order* me, she *asked* me."

"She asked you... So, she worked out the tactics and strategy herself. And you thought you'd do it your way, and you just loused things up."

"That's how it turned out."

"That's how it turned out... You gotta pay closer attention to your orders. Here, take this."

He held out something wrapped in a small plastic package. I unwrapped it and saw, through the clear plastic, a golden wedding band and a silver cross on a little chain.

"A dealer will give you half-price for these. Let him have them for half-price. Maybe it'll help see you through. If you've got nowhere to stay, come back here. I'll take care of *them*."

"What are you talking about? I can't take these!"

"Don't rationalise. It's time for you to go. So go. Look to it! Just go!"

"I'm telling you, I can't take them."

I tried to give him back the ring and the little cross, but I was met by an authoritative and, at the same time, pleading stare.

"About— face! Forward— march!" he commanded in a whisper that was restrained, yet brooked no contradiction. A moment later came another plea:

"Just be sure you make it."

Arriving at my flat, I felt like going to sleep and even got to the point of lying down. But I couldn't get the homeless colonel out of my head.

I got dressed in some clean clothes and went to see him. Along the way I thought: Maybe he'll agree to move in with me. He's adaptable to anything. He's practical and he's neat. Besides, he's an artist. Maybe he'll do a picture for the book's cover. And it'll be easier to find some rent money if we're together. I had no money for the next month's rent.

As I approached the basement window we had climbed out of earlier that morning, I saw a group of people — tenants from the building, a police car and an ambulance.

The homeless colonel was lying on the ground, his eyes closed and a smile on his face. His face and body were splattered with wet dirt. One dead hand was clenched around a piece of red brick. A broken wooden crate stood against the wall.

A court medical assessor was writing something down on a notepad. He was standing beside the corpse of another man, dressed in shabby, rumpled clothing, with a disfigured face.

In the little crowd that had gathered, no doubt comprised of the building's tenants, one woman was rattling on excitedly:

"...I was walkin' me dog an' I saw him, the one smilin', perched on the crate, his face to the wall, an' the three of 'em — tramps, by the look of it — two men an' a woman with 'em — comes at him from behind. The man gives the crate a kick an' he falls off the crate to the ground. They starts kickin' him, cursin' all the while, they did. I yells at 'em. They stops kickin' him. Old 'Smiley' here, he gets up, see. He has a pretty hard time gettin' up too. An' he tells

'em to sod off an' not show their faces around here again. They starts cursin' again, an' then they comes at him full force. As they gets closer, he gives a straight chop with the back of his hand right to the throat of the bloke what kicked the crate. It's not that he's wavin' his arms about or anythin', he just lands the other bloke a chop so's he doubles up an' can't breathe. I yells at 'em again an' two of 'em runs straight off, see. First the woman, then the man after her. 'Smiley's now clutchin' at his heart. He oughtta sit down or lie down straight off, if it's his heart what's givin' out, but no, he goes back to his crate. Moves ever so slowly, he does. Puts his crate back against the wall. Then he gets back up on it. I can see he's in a really bad way. He starts fallin'. An' he slides down, still drawin' on the wall with that red brick of his, an' keeps on drawin' 'til he lands himself on the ground. An' he's lyin' there face up, right against the wall. I runs over, looks, an' he ain't breathin'. Not breathin'. But he's *smilin'*."

"Why did he climb up on the crate?" I asked the woman.

"Yeah, why did he climb up if his heart were givin' out?" echoed a voice from the crowd.

"He wanted to keep on drawin'. And when those three blokes came at him from behind, he was *drawin'*. that's what he was doin'... That's prob'ly why he didn't see 'em comin'. I'd been walkin' me dog for a long time, an' there he is, standin' on his crate an' *drawin'*... He didn't turn 'round, not even once... You can see what he drew — up there, on the wall!" And the woman pointed to the building.

On the grey brick wall of the building could be seen the circular outline of the Sun, and in the middle of it a cedar branch and, around the perimeter of the Sun-circle, some letters printed rather unevenly.

I went closer to the wall and read: RINGING CEDARS OF RUSSIA. Apart from that, there were rays emanating from the Sun. There were only three of them. The homeless

colonel didn't manage to draw any more. Two of the rays were short and straight, while the third was wavy and fading away, and extended right down to the base of the wall, where the dead homeless colonel was lying on the ground, smiling.

I looked at the smiling face smeared with dirt and thought to myself: Maybe in the last moments of his life Anastasia managed to touch him with her Ray, and warm him up. At least warm his soul up a little and carry it off to a bright infinity.

I watched as the corpses were loaded into the ambulance. 'My' colonel was thrown carelessly in the process, his head striking the floor of the ambulance. I couldn't take it. I tore off my jacket, ran over to the ambulance and started demanding they put my jacket under his head. One of the orderlies swore at me, but the other took the jacket without a word and placed it under the colonel's greying head. The vehicles drove off. Everything was empty, just as if nothing had happened.

I stood there a while, looking at the drawing and inscription illuminated by the morning sun. My thoughts began getting all mixed up. I had to do something, at least *something* for him, for this KGB-er, a Russian officer who had perished on this spot! But what? What, indeed?

Then it came to me: *I'm going to put your drawing, my dear officer, on the cover of my book.* The book I most definitely will write. Even though I don't yet know how to write, I'll still write one, and not just one. And on all of them I'll put your drawing — it'll be my emblem. And in the book I'll tell all Russians:

"My fellow Russians, don't shoot at the hearts of your officers with invisible exploding bullets, bullets of cruelty and heartlessness.

"Don't shoot from behind at any soldiers — be they White or Red, or even blue or green, ensigns or generals. The bullets you fire at them from behind are more terrible than the leaden ones. My fellow Russians, do not shoot at your officers!"

## CHAPTER TWENTY-ONE

### Untitled

I wrote quickly. From time to time Anton, Artem or Lyosha, the student programmers, would drop by and bring me a bite to eat. I still had not told *them* about Anastasia. But I explained to them that the organisation of the Fellowship could be facilitated with the help of the book I was to write. And so they set about keyboarding the text of the book into the computers. It was mainly Lyosha Novichkov who worked on this. He showed up every three days, bringing a print-out of his latest keyboarding and taking home a new chapter of the manuscript. This went on for about two months.

One day Lyosha showed up with the last printed chapter of Book 1, a diskette with the full text, two bottles of beer, frankfurters and some other kind of food, along with a little money, and set it all down on the kitchen table.

"Where did you get all this bounty, Lyosha?" I asked in amazement.

He lived alone with his mother, on very limited means. He didn't always have enough money to buy metro tokens or even sandwiches.

"It's exam time, Vladimir Nikolaevich," Lyosha responded. "I do drafts for some of the students, I make up computer programmes for them. For students who can't do them themselves or are too lazy. They pay me for them."

"And will you make it through the exams yourself all right?"

"Will do. I've got just one exam left, and in a couple of days I'll have to go off for a month on military training, to

Kineshma.<sup>1</sup> It's good you managed to get *Anastasia* finished. If there are any corrections to be made now, Artem will take care of them. Anton's already off on training."

"Tell me, Lyosha, how did you possibly manage to sit exams, do drafts and make up computer programmes for others, and still keyboard and print out *Anastasia* every day?"

Lyosha didn't respond. I turned to the kitchen table to serve up the steamed frankfurters. Lyosha's head and arms were resting on the table, on top of the printed pages containing the *Anastasia* text. He was fast asleep.

<sup>1</sup>*Kineshma* — an industrial centre and port on the Volga River.

## CHAPTER TWENTY-TWO

### Unravelling the mystery

Standing in the kitchen of my small Moscow apartment, standing next to the table with the frankfurters getting cold and Lyosha Novichkov's head resting on the pages containing the text of *Anastasia*, I made a promise to myself: to find a way of regaining my capital and getting back my ship with a view to taking it on the same journey as last year when I first met Anastasia. But not on a trade mission, as before. I wanted to go there during the 'white nights' of summer, so that Lyosha, Anton and Artem — as well as all those who had worked like dogs, in spite of all the setbacks and often to the neglect of their own material well-being, to organise a fellowship of purer-minded entrepreneurs — could enjoy a decent holiday aboard my ship in the most luxurious quarters.

And what was this grand idea all about, in any case? What kind of hold did it have on people? Why was I, too, drawn into it so closely? What kind of mystery did it conceal? I just *had* to figure this out, in concrete detail, and unravel its mystery and purpose. And why are people so turned on by this dream of a taiga recluse? What lies hidden there? How can I unravel the mystery?

*Moskovskaya Pravda* correspondent Katya Golovina tried unravelling it by asking the students to explain what motivated them, what their personal stake was in all this. But they couldn't give a definitive answer, saying only that it was something worth doing. In other words, they were working on *intuition*. But what was behind this intuition?

## CHAPTER TWENTY-THREE

### Untitled

At Moscow Printshop Number Eleven two thousand copies of the first slim volume about Anastasia were printed at the shop's own expense. Why did the manager, Gennady Vladimirovich Grutsia, decide to print a book by an unknown author? Why would he do this and, in spite of the printshop's current financial difficulties, use offset paper instead of the usual newsprint?<sup>1</sup>

The first books I sold myself near the entrance to the Taganskaya metro station. Then I got some help from some of the book's first readers. An elderly woman would daily stand and sell copies outside the Dobryninskaya metro station. She would take great pains to explain in detail to anyone interested what a wonderful book it was. Why?

Then readers began selling it as well in vacation centres on the outskirts of Moscow. They would print out announcements and organise readers' gatherings for people holidaying there.

Then the business manager of the Moscow Publishers' Clearance House, Yuri Anatolievich Nikitin, suddenly decided to offer the printshop an advance on an additional two thousand copies. His actions were strange and unexpected.

He drove over to see me in his car and told me:

"My son and I are leaving the country today to go to a tennis tournament. Our plane goes tonight. I need to hurry to get my payment in."

<sup>1</sup> *newsprint* — This has long been the norm for printing most paperback books in Russia.

He paid for the second print-run in full. When the time came for him to pick up his books, Nikitin told me:

"You know, during the summer we don't do a lot of book-selling. I'll take several packages, the rest you take care of yourself. When money starts coming your way, you can reimburse me." Again, why?

Right from the moment I started working on the manuscript there have been many *whys?* associated with the book, even to this day. It's almost as though the book were alive, drawing people unto itself and using their help to break through into life. I used to think that the events connected with it were pure coincidence. Only those 'co-incidences' started tying themselves together into a pattern. Now I have no idea, in all that has happened, just what is coincidence and what is in conformity with a law. The two have become exceedingly difficult to tell apart.

## CHAPTER TWENTY-FOUR

### Father Feodorit

The moment arrived when I finally managed to pay a visit to Father Feodorit. Back in the taiga, in response to my question as to whether there were any people in our world with knowledge and abilities similar to hers, only living closer to home, Anastasia had replied:

“There are people in various corners of the Earth whose lifestyle is not caught up in the prevailing technocracy. They all have different abilities. But in your world there is also one person whom you will find it easy to approach, whether it be winter or summer. The power of his spirit is very great.”

“Do you know where he lives? Can I see him and talk with him?”

“Yes, you can.”

“Who is he?”

“He is your father, Vladimir.”

“What do you mean? Oh, Anastasia, Anastasia! I so much wanted to hear proof that you’re right about everything, and here it’s all coming out the wrong way! My father died eighteen years ago and was buried in a little town in the Briansk region.”

Anastasia sat on the grass, her back leaning against a tree, her knees drawn up close to her chest, and silently looked me in the eye. She seemed a little sad, as though she were taking pity on me. Then she lowered her head to her knees. I thought she might be feeling upset over her mistake regarding my father, and I tried to comfort her.

“Don’t get too upset, Anastasia. It’s probably because, as you said yourself, you don’t have that much strength left.”<sup>1</sup>

Anastasia didn’t speak for a while, then raised her head and, once more looking me right in the eye, said:

“My strength has indeed lessened, but not to the point where I could be mistaken.”

She then proceeded to relate events that had taken place twenty-six years ago. She recounted the past not only with great accuracy and in minute detail, but was even able to convey nuances of inner feelings.

It is understandable how one can pick up clues from the outward appearance: a barely noticeable facial expression, a body position, even the eyes, can all give clues as to what an interlocutor is thinking. But how she was able to discern the past as though it were simply a documentary newsreel is still a mystery to me.

Anastasia herself was not able to explain this phenomenon in a standard, comprehensible manner. But this is what she had to say:

“Not far from Moscow is the Trinity-Sergiev Monastery complex in the town of Sergiev Posad. Behind Trinity-Sergiev’s massive, ancient walls there is a seminary, an academy and several cathedrals, in addition to the monastery proper. The cathedrals are open to the public, and anyone who wishes can come and pray in this holy place of Rus.<sup>2</sup> It was not destroyed even during the campaigns of persecution against believers; indeed, right through this period, the institutions

<sup>1</sup>*Author’s note:* This conversation took place after she lost consciousness in saving the man and the woman from being murdered. I described this situation in my first book.

<sup>2</sup>*Rus* (pronounced: *ROOS*) — the name of the Old Russian territory, which by the 9th century A.D. was centred around Kiev. From Rus came the Russia, Ukraine and Belarus we know today.

behind these walls continued to function uninterrupted, providing a place where the monastic brethren could serve God.

"Twenty-six years ago, on the very day I came into this world," she continued, "a young man in his late teens walked through the gates of the Trinity-Sergiev Monastery. He toured the museum, and then proceeded to visit the main cathedral, where a sermon was being read by a tall, grey-haired monk. Both the monk's height and his rank were well above average. This was Father Feodorit, archimandrite of the Trinity-Sergiev Monastery. The young man listened to his sermon. Later, when Father Feodorit withdrew, he followed him into one of the treasury-rooms, unhindered by the temple staff. Going up to Father Feodorit, he started talking to him about the sermon. And Father Feodorit spoke with him for a long time. The young man had been baptised, but did not have much inner faith. He did not observe the fasts, did not take communion, and did not attend church regularly. But that day marked the beginning of a friendship between Father Feodorit and the young man.

"The young man started paying visits to the monastery. Father Feodorit would talk with him and show him the sanctuaries normally off-limits to ordinary parishioners. The monk gave him books, which he lost. The monk placed a little cross on a chain around his neck, and it was lost as well. The monk gave him a second cross, a most unusual one — it opened like a tiny case, but it too was lost.

"The monk would even take the young man into the refectory and seat him at the same table as the monks. Each time he would give him a little money. He never rebuked him for anything and always looked forward to his arrival.

"This went on for a whole year. The young man visited the monastery every week, but one day he left and did not return the following week. He did not come after a month, even after a whole year. The monk still waited. Now twenty-five

years have passed already. The monk is still waiting. Twenty-five years, Vladimir, your spiritual father has been waiting for you — that great Russian monk, Father Feodorit.”

“I went far away from the monastery. To Siberia. I sometimes thought of Father Feodorit,” I responded, as though justifying my actions to myself or to someone else.

“But you did not write him even one letter,” observed Anastasia.

“I want to see him.”

“And what will you tell him? Perhaps about how you made money, were happy in love and simply went astray? How many times were you at death’s door, but at the last moment you were delivered from your woes? He will see all that for himself, just by looking at you. He prayed for forgiveness of your sins and time after time saved you through his prayers. He still believes, just as he did twenty-five years ago. He was hoping for something different from you.”

“What was it, Anastasia? What does Father Feodorit know, what does he want?”

“I cannot comprehend it, at least not now. It was something he felt intuitively. Tell me, Vladimir, do you remember the conversations you had with him, do you remember what you saw in the monastery treasury-room?”

“It’s all very fuzzy in my mind. After all, it was so long ago. I can only remember isolated scenes.”

“Try to remember them. I shall help you.”

“Father Feodorit would talk with me each time in various places in the monastery. I remember some underground rooms — at least they were partially underground. I remember the refectory, the long table where the monks took their supper, and I had supper with them. It was during a time of some sort of fast. The food was especially prepared for the fast, but I liked it.”

“Did you have any unusual impressions or feelings during your visits to the monastery?”

“Once after supper I left the refectory and went through a passageway to an inner courtyard of the monastery complex, heading for an exit. The gate was already closed to parishioners. The courtyard was empty. Those massive high walls blocked out the noise from the city beyond. All I could see around me were the cathedrals. Everything was completely silent. I stopped. It seemed as though I could hear solemn music playing. I needed to leave. There was a monk on duty at the gate to let me out and bolt the gate shut after me. But I just stood there and listened to that music, and eventually, slowly, made my way over to the gate.”

“You never heard that music again? You never experienced the same impression?”

“No.”

“Did you ever try to hear that music — to call up the impression of it from within?”

“Yes, but I never managed to. I even tried standing on that same spot the next time I came, but, alas...”

“Try thinking of something else, Vladimir.”

“Now you’re interrogating me. You recounted everything so accurately — everything that happened to me twenty-six years ago — *you tell me* how I felt back then.”

“That is not possible. Father Feodorit did not formulate any specific plans, he was hoping for something intuitively. But he did do something great and significant for you. Something known only to him. I can only feel it intuitively myself: he thought up something significant and did a lot toward this end. A great deal, in fact. But why he associated his desire with *you* — you who did not have the basic abilities to come quickly into the faith — remains a mystery. And why he has not broken this faith even after twenty-five years of your profligate life — that too is a mystery. And why are you, who have received so much, still sitting on your hands? Why? I cannot understand that. After all, nothing in the Universe ever

disappears without a trace. Please see if you can remember even isolated scenes from your meetings and conversations with your spiritual father.”

“I remember a salon, or perhaps it was some sort of treasury-room, in the academy or seminary, or maybe it was one of the underground rooms in the monastery itself. Some kind of monk opened the door for Father Feodorit, but didn’t go in himself. The Father and I went in alone. There were some pictures on the walls, and things standing on little shelves.”

“You experienced two surprises there. What were they?”

“Surprises? Yes, of course, it did surprise me. Astounded me...”

“What did?”

“A particular picture. It was black and white, as if drawn with a pencil. It was a meticulously executed portrait of some person.”

“So, what surprised you about it?”

“I don’t remember.”

“Think, Vladimir! Please, try to recall it — I shall help you. There was the small salon, you were standing alone there with Father Feodorit in front of this picture. You were standing just a little way in front of him, and he told you: ‘Step a little closer to the picture, Vladimir.’ You took one step forward, then another...”

“I remember! Anastasia!”

“What?”

“This picture of a person was drawn with a single line. A fluctuating spiral line. It was as though the artist had put his pencil or whatever in the middle of a blank sheet of paper, and without taking it off the paper, had made it go in a spiral, alternately pressing hard on it to make the line thicker and easing up, barely touching the paper, to make a fine, delicate line, but still continuous. The spiral line ended at one edge of the page. The result was an amazing picture, the portrait of a person.”

"This picture," Anastasia advised, "should be put on public display for all to see. Someone will be able to decipher the information concealed in it. That pulsating line portraying a person has something to say to people."

"How?"

"I do not know yet. You are aware, for example, how dots and dashes can represent an alphabet or musical notation. I can only guess it could be one or the other of those, or something else besides. When you return, ask them to put it on public display or to publish it somewhere. Someone will turn up who is able to decipher that spiral line."

"But who will listen to me?"

"They *will* listen to you. But back then you experienced a second most unusual feeling. Can you recall what it was?"

"It was in the same room or in the next room... Yes, it was a rather small room where a beautiful carved wooden chair was standing on a raised platform. Perhaps it was an arm-chair, something like a throne. Father Feodorit and I stood and looked at it. The Father said that nobody ever touched it."

"But you touched it. And even sat on it."

"It was Father Feodorit himself who suggested I sit on it."

"And what happened to you when you did?"

"Nothing. I sat there, looking at Father Feodorit, and he stood there silently looking me in the eye. Just looked, that's all."

"Please remember, Vladimir, try to recall your inner feelings. They are most important."

"Well, there was nothing special... It was just that, you know, some thoughts began running through my head lickety-split, like an audiotape in fast-forward mode, and the words all blurred into a stream of unintelligible sounds."

"And you never tried deciphering them, Vladimir? Did you ever have the desire to stop that tape so you could listen to it at normal speed and understand what it was saying?"

"How could I?"

"By pondering the essence of your being."

"No, never tried that. You're not making any sense."

"And the things that Father Feodorit told you, did you understand everything? Can you recall precisely even a single phrase, even a phrase without any connection to the rest?"

"Yes, but I really can't remember what it was connected with."

"Tell me what it was."

"... You will show them..."

At this point Anastasia, who had been sitting under the tree, suddenly sprang up, her face beaming. She put her hands on the trunk of the cedar, and pressed her cheek against it.

"Yes, of course!" she exclaimed, waving her arms with joy and delightedly crying out:

"You are truly great, Monk of Russia! You know, Vladimir, there is one thing I can tell you for certain about Father Feodorit. He has made a mockery of a lot of the world's teachings by showing what is the most essential thing."

"He and I never discussed any teachings. We talked about everyday things."

"Yes, of course! Everyday things! Father Feodorit spoke about things you were interested in. He showed you sacred creations, and treated them with veneration, but avoided making a big show of it. Even though he had risen to a high rank, he was a very simple man, most importantly, a thinking man — perhaps he was even meditating during the time you were with him. And he was not one to expound dogmas. How silly the preachers of conventional dogmas that flocked to Russia from abroad look by comparison with him! They only distract one's attention from the most essential thing. He was so successful at protecting you from dogmas that you see me too as a naïve recluse. It does not matter who I am. What matters is that you stick to the most essential thing."

“What most essential thing?”

“The thing that is in every Man.”

“But how can every Man know the teachings of the gurus of the West and the East, India and Tibet, if he has never even heard of them?”

“All essential information has been included in Man, Vladimir, in every man right from the start. It is something he is given on the day of his creation, just like arms, legs, hair and a heart. All the teachings of the world, along with all discoveries, are taken exclusively from this Source. Just as parents try to give their child everything, so the Grand Creator gives everything to each one right off. Nothing man-made. Not a multitude of books, nor the latest computers and the computers of the future all taken together, can ever encompass even a part of the information contained in a single Man. One has only to know how to use it.”

“Then why doesn't everybody make discoveries? And why doesn't everyone formulate teachings?”

“Let us say one person manages to extract a grain of truth from the whole. And he keeps talking about it enthusiastically, thinking it was given to him alone. And that it contains the most essential thing. He talks it up to others, trying to make them see it as the one and only important thing. But by talking like this, he is blocking the basic complex network of information already existing within himself. Knowledge of the truth consists not in proclaiming it but in living it.”

“And what way of living it is characteristic of those who best know the truth?”

“A happy one!”

“But to know the truth, one must have a conscious awareness and purity of thought?”

“That is visionary! Fantastic!” Anastasia shrieked with laughter, and merrily added: “You read my thoughts?”

“Nothing visionary there, it is simply an attentive attitude to Man. You’re always relating everything to purity of thought and conscious awareness.”

“Visionary! Visionary!” she repeated, still laughing. “You read my thoughts. Oh, how fantastic!”

Upon hearing her cheery laughter, I too could no longer restrain myself and broke into peals of merriment. Later I asked:

“What do you think, Anastasia, will my spiritual father, Father Feodorit, receive me if I go see him? Will he talk with me? He won’t be upset?”

“Of course he will receive you! He will be most happy to see you there! He will accept you any way you are. Only he will be even happier to see you if you have done at least something using the information within you, if he perceives some indication that you are aware of it. Stop the fast-forward, Vladimir, and you shall understand a great deal.”

“Does my spiritual father still live in the same place? At the Trinity-Sergiev Monastery?”

“Your spiritual father, that great elder of Rus, is now living in a small monastic priory in the forest, not far from the Trinity-Sergiev Monastery. The priory’s regulations are stricter than those in the monastery, and your spiritual father is the prior there. The priory is situated in the forest, in a compellingly beautiful setting. There are just a few little houses there, each with its own monastic cell.

“This priory situated in the green forest has a small wooden church. It is not ornately decorated and it does not have a gilded dome, but it is very, very beautiful, cosy and clean, heated by two stoves. Candles are not bought or sold there, as in most other churches. In fact nothing is bought or sold there. There is nothing and nobody to desecrate it, and parishioners are not allowed access. Even to this day your spiritual father, Father Feodorit, is praying in this church. He is

praying for the salvation of everyone's soul, including yours. He is praying for children who have forgotten their parents, and praying for parents forgotten by their children. Go to him and bow before him. Ask for forgiveness of your sins. The power of his spirit is very great. And give my deepest respects to Father Feodorit."

"Fine, Anastasia. I shall do that. And, you know, I shall first try and do what you have asked me to."

Upon arriving at Sergiev Posad, the town outside Moscow which used to be called Zagorsk, I entered the gates of the Trinity-Sergiev Monastery just as I used to do twenty-seven years ago. I first headed for the gate to the active part of the monastery. Before, all I had to do was introduce myself and ask for Father Feodorit. But this time the monk on duty replied that the archpriest was no longer Father Feodorit. There was a Father Feodorit at the monastery, living in the forest outside the monastery grounds — but parishioners did not go there.

I told the monk that I was an acquaintance of Father Feodorit's, and in proof of this I named the monastery sanctuaries which the Father had showed me so many years ago. Then I was told where the forest priory was situated, and with an inexplicable shiver of excitement I approached the little wooden church in the forest. It was indeed extraordinarily beautiful, and blended in harmoniously with the natural environment. There were paths leading to the church from several little wooden cell-houses situated around it.

Father Feodorit met with me on the small wooden porch of the forest church. I was a bit at a loss for words. I remembered Anastasia's counsel: "Only do not be embarrassed and try not to act surprised when you meet your spiritual father!" Still, I couldn't get over an inexplicable feeling of trepidation. Father Feodorit was old and grey, but no older than he had appeared twenty-seven years ago.

We sat on some blocks of wood on the porch of the little forest church without a word between us. I tried to speak, but couldn't manage to come up with the right thing to say. It seemed as though he already knew the whole picture and there was no sense in uttering words. It was as if the twenty-seven years since we last met had not gone by at all. It seemed as though we had parted only yesterday.

I had brought along a copy of my book on Anastasia to give to Father Feodorit, but I felt reluctant to actually hand it to him. I had been showing the book to various clerics. Some just took one look at it and said they didn't read books like that. Others asked what it was about, and after my brief explanation pronounced Anastasia an infidel. I didn't feel like upsetting Father Feodorit and certainly didn't want *him* to reject her out of hand. Each time someone had tried to speak ill of Anastasia, a feeling of resistance had welled up in me. I even had a row about it with the deacon of the Novospassky Monastery.<sup>3</sup> He pointed out two women wearing dark clothing and black head-scarves and said:

"That is how God-fearing women should be."

I responded:

"If Anastasia is happy and enjoying life, that may well be pleasing to God. It is more pleasant to see people enjoying life than being dull and downcast like that."

<sup>3</sup>*Novospassky Monastery* — claimed to be the oldest monastery in Moscow, dating back to the founding of Moscow in 1147 by Prince Yuri Dolgoruky.

So it was with some trepidation that I finally got out my book and handed it to Father Feodorit. He took it quietly and held it in the palm of one hand.

He began gently stroking it with his other hand, as though feeling something with his palms, and asked:

"Do you want me to read it?" And, without waiting for an answer, added: "Fine, leave it with me."

Two days later, I paid a morning visit to Father Feodorit. We sat there in the forest on a tiny bench near the Father's cell. And we talked about all sorts of things. While his manner of speaking was pretty much the same as twenty-seven years ago, one thing bothered me: why did Father Feodorit look just a bit *younger* than twenty-seven years ago? And all at once he broke off his train of thought and said:

"You know, Vladimir, your Father Feodorit has passed on."

At first I was speechless, but then managed to ask:

"Then who are you?"

"I am Father Feodorit," he replied, looking at me with just a faint trace of a smile. I then asked him:

"Tell me, where is his grave?"

"In the old cemetery."

"I'd like to see it. Can you tell me how to get there?"

He didn't say anything about the grave, only:

"Come and see me again whenever you have the time."

And then an incredible experience began taking place.

"Time for dinner," said Father Feodorit. "Come, I'll give you something to eat."

In a small hut which served as a refectory I sat down to table. The table was set out with a tureen of borsch, mashed potatoes, fish and a drink with stewed fruit. He poured some borsch into a bowl for me, and I began eating. The Father himself did not eat. He simply sat at the table.

As soon as I started in on the potatoes, I felt a delightful taste in my mouth. It brought back memories. The potatoes

tasted exactly as they had done in the monastery refectory twenty-seven years ago. I had remembered it all my life since then. My head began spinning. On the one hand, here was a different Father Feodorit sitting beside me; on the other hand, he talked and behaved exactly as I remembered from before.

I recalled how one time, many years ago, when we were together in one of the rooms of the monastery, Father Feodorit had suggested I have my picture taken with him. I agreed. He called over one of the monks who had a camera and he took our picture. Now I decided to use this to introduce some clarity to my present situation. I knew that monks did not like to pose for pictures. And the thought came to me to ask Father Feodorit if he would mind if I had a colour picture taken of us and that I also wanted to take one of the little forest church. If he refused, that would mean he was not the same Father Feodorit, not *my* Father Feodorit. And so I suggested:

“Let me have my picture taken with you.”

Father Feodorit did not refuse, and we had our picture taken. And I also took a snapshot of the little church. It turned out rather well, even though I had a very simple camera.

As I was leaving, Father Feodorit gave me a small travel Bible. It was not laid out in verses, like all the other Bibles I had seen, but simply in running text, as in an ordinary book. He advised me:

“When you cite the Bible in your book, you should indicate the precise chapter you are quoting from.”<sup>4</sup>

I asked him whether he would be open to receiving and talking with people who wished to meet with Anastasia, so

<sup>4</sup>The Russian edition of *Anastasia* includes no chapter-and-verse references; those in the English edition of Book 1 were added by the translator and editor.

they wouldn't have to travel such a long distance to the Siberian taiga. To which he replied:

"You know, I still haven't fully understood myself. So, for now, just come alone, whenever you have the time."

I was disappointed by Father Feodorit's refusal to see other people, but I wasn't about to press the matter. My conversation with him on a variety of subjects led me to the following conclusion: in Russian monasteries there are to be found certain elders whose wisdom and simplicity of expression far surpasses the art of countless numbers of denominational preachers, either of the home-grown or imported variety.

But why are you silent, you elders of Russia that have been endowed with such wisdom? Is this something to which you have been led on your own, or are there dark forces of some kind that are preventing you from speaking out? People come to a church service, and it turns out to be in a language they don't understand.<sup>5</sup> And then people flock in droves and even pay money to hear preachers talk in a language they *can* understand. Maybe that is why so many Russians flock to foreign holy places and ignore their own.

I always felt a sense of peace in my heart after speaking with Father Feodorit. The way he talks is a lot simpler, clearer and more understandable than the vast majority of the preachers I went to hear after meeting with Anastasia in my efforts to make some sense of what she said. I want others to have a good experience, too. But when will you speak out, wise elders of Russia?

<sup>5</sup>Russian Orthodox services are conducted in Old Church Slavonic, which is an ancient distant relative of Russian but barely comprehensible to today's Russian speakers.

## CHAPTER TWENTY-FIVE

# The Space of Love

After the sale of the first print-run of the book about Anastasia I received a royalty payment. I went to VDNKh,<sup>1</sup> now known as the All-Russian Exhibition Centre. For some reason, I always enjoyed being there. This time I walked past the multitude of snack bars and shashlik buffets, tempting me with their delicious aromas, and fought against my inclination to buy all the delicacies in sight. Even though I had money in my pocket, and a fair amount at that, I decided I would now spend it more wisely. And all at once, another incredible thing happened. It wasn't loud, but, unmistakably and distinctly, I heard Anastasia's voice.

"Buy yourself something to eat, Vladimir. Buy whatever you like. You do not have to scrimp on food any more."

I kept on walking a few steps past the open snack bars, and again came the voice:

"Why are you walking on past? Please, have something to eat, Vladimir."

"Come on now, I'm having hallucinations!" I thought.

I walked over to a bench alongside a broad pathway, where there was hardly anyone else around. I sat down and whispered quietly, bending over so people wouldn't think I was talking to myself.

<sup>1</sup>VDNKh (pronounced *veh-deb-en-KHA*) — the Russian initials denoting the former Economic Achievements Exposition, a huge exhibition and recreational complex (complete with a large park, fountains and unusual architecture) covering 140 hectares in the north-east sector of Moscow.

"Anastasia, am I really hearing your voice?"

And I heard the answer distinct and clear:

"You are hearing my voice, Vladimir."

"Hello, Anastasia. Why didn't you talk to me earlier? So many questions have been piling up. Questions people have been asking at readers' gatherings, including a lot I can't answer."

"I *have* been talking to you. I have been trying all this time to talk with you. But you have not been hearing me. Once, when you decided to do away with yourself, I even cried out, I was so worried, but to no avail. You did not hear me. I figured out what I needed to do and started singing. It was this song that the two girls picked up and played on their violins at the metro station. They heard it and started playing. As soon as you recognised the same melody you had heard me sing in the taiga, you remembered me. I was so worried at the time, I thought my milk was going to give out."

"What milk, Anastasia?"

"My breast-milk. The milk for our son. After all, I did bear him, Vladimir."

"Did bear... Anastasia!... Was it hard? How are you doing there all alone in the taiga? How is he? You told me — I remember your saying — it wouldn't be at the right time."

"Everything is fine. Nature awakened early and is now helping me. And our son is fine. He is a strong lad. He is already smiling. Only his skin is a little dry, just like yours. But that is nothing, it will pass. Everything will be fine. You shall see. It is more difficult for *you* now than for us. But take one more step. Finish the writing. I know how hard it has been for you, and it will not be so easy in the future either. But keep going. Keep going on your own path."

"But Anastasia..."

I wanted to tell her that writing a book is harder than running a business. I wanted to tell her about how things stood with my family and the firm. About all the ups and downs of

the past year. About how I no longer have a home and family, and almost ended up in the loony bin. I wanted to give her a good talking to about those dreams of hers, so she wouldn't aim too high with them, wouldn't keep on tempting people. But then I thought: why upset a nursing mother? — her milk might indeed turn bad.

And so I said:

“Don't you worry about trifles, Anastasia. I don't have any particular difficulties at the moment. What's the fuss? I've written a book. And it was easier than drawing up a business plan. When you draw up a business plan, there are a lot of different factors you have to foresee in advance. But here you simply sit down and describe what's already happened. Just as in the jokes about the Chukchi: ‘I sing what I see.’”

“And besides... you know something, Anastasia? Those dreams of yours, which I thought were sheer fantasy, they're starting to come true. It's incredible, but they are coming true. Look, the book is finished. You dreamt about it, and now it exists. People are really reading it enthusiastically. The Moscow papers are already writing about it. Readers are writing poetry about you, about Nature, about Russia.

“I found the picture we talked about in the archives of the Trinity-Sergiev Monastery. The picture has been preserved, it's entitled “The One and Only by a Single Line”.<sup>3</sup> I shall publish it.

<sup>2</sup>*I sing what I see* — a reference to a song of the Chukchi (the native people of the Chukotka Peninsula in Siberia), where the singer sings about whatever he happens to see. This particular phrase has given rise to many Russian jokes. In this case the author is light-heartedly applying the phrase to his own writing activity.

<sup>3</sup>*The One and Only by a Single Line* — this picture in the private collection of the Trinity-Sergiev Monastery is a copy of a famous engraving by Claude Mellan (1598–1688), *Veil of St Veronica* (1649). It represents the face of Christ Jesus (‘the One and Only’) surmounted by a crown of thorns and is executed by a single spiral line in 166 revolutions.

“And, can you imagine, the bards... you remember telling me about the bards?”

“Yes, I remember, Vladimir.”

“Surprising as it is, this too is starting to come about. I was at one readers’ conference where I was approached by this chap with dark blond hair. He handed me an audiocassette and said, in terse, military fashion: ‘Songs for Anastasia. Please accept.’”

“The journalists, readers and two of the staff of the Moscow Research Centre, Alexander Solntsev<sup>4</sup> and Alexander Zakotsky, who had come to the conference — they all listened in silence to the tape. Later a number of people began making copies of it. They made copies and at the same time tried to track down the man who had given it to me — whose looks, apart from his dark-blond hair and short stature, didn’t have much to say for themselves. He had appeared, it seemed, out of nowhere, and disappeared just as mysteriously. He turned out to be a submarine officer from St. Petersburg, a scientist by the name of Alexander Korotynsky.<sup>5</sup> He later told me how the submarine he was on managed to rise to the surface after an accident. How he had been confidently led by a series of coincidences in connection with this cassette. Led to hand

<sup>4</sup>*Alexander Vasilievich Solntsev* (1951–) — a Siberian entrepreneur, a former acquaintance of Vladimir Megré’s. After spotting a small book with Megré’s name on the cover, Solntsev (who by this time had relocated with his family to Moscow and lost sight of his former colleague) contacted the author and in March 1997 became founding director of the Moscow based “Anastasia” Research Centre, managing the publication of Megré’s books, organising readers’ conferences, clubs, trips to dolmens, etc. More recently Solntsev has devoted himself to setting up an eco-village in the Smolensk Oblast and reinvigorating the tradition of cultivation of flax. He has also authored a book on the Caucasus, entitled *Dolmens*.

<sup>5</sup>Since this book was published Alexander Korotynsky has released several song albums inspired by the Ringing Cedars Series.

it to me. Not only that, but Korotynsky turned out to be a bard as well. And his song *Kbram* (The Church) contains whole phrases which you said to me. Remember these, for example?

*Believe not others' words —  
Once said, they're gone as wind.  
Many will see the Church  
But few will enter in.*

*Our life may be a race:  
From floor to floor we're thrown.  
But every one must face  
The choice he's made his own.*

“Besides, Korotynsky doesn't really have a singing voice. He practically recites when he sings. But that very fact goes to prove what you said about the power of the word connected to the soul by invisible threads. Korotynsky the Bard is a living example.”

“For all the bright joy you have been giving to people, for the purification of souls, I thank you, Bard, I thank you,” said Anastasia.

“Just think — another officer!” I mused. “Grutsia, who first printed the book — he was an officer. And the homeless colonel who drew the picture for it. And then there was a pilot, a regimental commander, who's been helping me sell the books. And now the first one to bring me songs turns out to be an officer. What is it about your Ray that seems to set officers' hearts afire in particular? Do you shine your Ray on them more than others?”

“Many have been touched by my Ray, Vladimir, but it sparks aspirations only when there is something there to set aflame.”

"Your dream, Anastasia, is indeed turning more and more into reality. People are grasping hold of it, they understand it. The homeless colonel understood. He was a chance acquaintance — pity he's gone. I saw him lying dead there. His face was all smeared with dirt, but he was smiling. Dead, but still smiling. Did you do something there with your Ray? What does that mean, when someone dies with a smile on their face?"

"That Man that was with you... he is now with the Bard, treading the invisible pathway. His smile is saving many hearts from bullets more terrible than the leaden ones."

"Your dream, Anastasia, is entering upon our world, and it really seems as though our world is beginning to change. There are certain people who feel and understand you — they show evidence of new strength coming from somewhere, and that is changing the world. The world is becoming just a little better.

"But you, Anastasia... there you are as before, in the taiga, in your glade. I would not be able to live in such conditions, and you would not be able to live in our world. What then is the point of your *love*? Your love is meaningless, and I still do not understand my relationship to you. But what's the point since it's so clear we can never be together? Never close."

"We are together, Vladimir. Close."

"Together?! Where are you? When people love each other, they strive to be always close to each other. To embrace and caress each other. You're too different. You don't need that."

"I *do* need it. Just like everyone else. And I am making it happen."

"But how?"

"Right now, for example. Can you not feel the gentle touch of the breeze, feel its caressing embrace? And the warm touch of the Sun's glistening rays on your face? Can you not

hear the birds singing so cheerfully and the leaves rustling on the tree you are sitting under? Listen — it is a most unusual rustling!”

“But that — everything you just mentioned — that’s for everyone. In any case, are you responsible for all that?”

“Love dissolved in Space for one can touch the hearts of many.”

“Why dissolve Love in Space?”

“So that close to a loved one there will always be a Space of Love. This is the essence of Love, this is its designated purpose.”

“It’s all pretty confusing to me. And your voice... Before, I never heard anything at a distance, but now I do. Why?”

“It is not the *voice* that you hear at a distance. You need to listen not with your ears, but with your heart. You need to learn how to listen with your heart.”

“Why should I bother learning? You can just talk with me the way you’re doing right now, with your voice.”

“I shall not be able to do that indefinitely.”

“But you’re doing it right now. After all, I can hear you.”

“Grandfather is helping us at the moment. You go have a talk with him. I need to go feed our son, and there are so many other things to do. I do want to get them all done.”

“So, it works with your grandfather, but not with you. Why?”

“Because Grandfather is somewhere in your vicinity right now. Very close to you.”

“Where?”

## CHAPTER TWENTY-SIX

### Anastasia's grandfather

I looked about me. There was Anastasia's grandfather, standing right close to the bench, using his walking-stick to push a piece of litter someone had thoughtlessly tossed on the grass toward a rubbish bin. I jumped up. We shook hands. His kindly eyes were sparkling with cheer, and he talked in simple terms. Not like his father. When I saw Anastasia's great-grandfather back in the taiga, he hardly said a word, and his eyes kept staring into space, as though they were looking right through you.

Grandfather and I sat down on the bench, and I asked him:

"How did you get here? How did you find me?"

"It wasn't much of a problem getting here and finding you with Anastasia's help."

"She's really something, eh?! She's had a child! She said she would have one, and she did. Alone, out there in the taiga, not in any hospital. It must have been painful for her. Did she cry out?"

"Now why would you think it was painful for her?"

"Well, women, when they give birth — it's painful. Some of them even die during childbirth."

"It's painful only when a child is conceived in sin. As a result of fleshly lusts. Women pay for this with pain in childbirth and torments afterward in life. If the conception takes place with higher aspirations, the pain only intensifies the feeling of the great joy of creation on the part of the mother."

“Where does the pain go, then? How can it intensify joy?”

“When a woman is raped, what does she feel? Of course she feels pain and revulsion. But when she gives in of her own free will, that same pain is transformed into different sensations. The same is true in regard to childbirth.”

“Does that mean Anastasia experienced a painless childbirth?”

“Of course it was painless. And she chose a suitable day, a warm and sunny day.”

“What do you mean, she *chose*? Childbirth happens quite unexpectedly.”

“Unexpectedly, if the conception simply takes place by chance. A mother is always capable of delaying or accelerating her baby’s appearance by a few days.”

“But weren’t you aware of when the baby was due? Didn’t you take steps to help her?”

“We did feel something happening on that day. It was a splendid day. We walked over to her glade. Saw the she-bear sitting at the edge of the glade, moaning because her feelings were hurt. She kept moaning and pounding her paw on the ground with all her might. Anastasia was lying on the same spot where her mother had given birth to her, and there was this little ball of life lying on her breast. The she-wolf was licking him.”

“And why was the bear moaning? How had her feelings been hurt?”

“Anastasia had called the wolf over instead of her.”

“She could have gone to her on her own.”

“They do not approach Anastasia without an invitation. Just think what would happen if they all came uninvited, whenever they felt like it.”

“I wonder how she’s managing with the baby now.”

“Why don’t you go and see for yourself, if you’re interested?”

"She told me I shouldn't communicate with him until I purge myself of something. First of all I have to go 'round to the holy places. But I don't have enough money for that."

"Don't go by what she said — she doesn't always make sense. You're the father, after all. You should do what you think best. You could buy a whole bunch of rompers and other baby clothes, packages of diapers, a little jacket, a rattle maybe, and demand that she dress the baby normally, and not make him suffer. He's all naked out there in the forest."

"I've been wanting to do that ever since I heard about my son. I *will* do it. As for not making sense, I think you hit the nail right on the head. That's probably why I don't really understand my feelings toward her. First it was amazement, now some kind of feeling of respect has appeared, and something else besides which I can't grasp hold of. But not on the order of love for a woman. I still remember the kind of feelings I had when I loved a woman before. 'Tis here's something quite different. It's quite possible that she cannot be loved in the ordinary sense of the word. Something gets in the way. Maybe it's her illogicality, her failure to make complete sense all the time."

"Don't take Anastasia's illogicality, Vladimir, for stupidity. It is her seeming illogicality that is drawing forgotten laws out of the depths of the Universe, and possibly creating new laws.

"The forces of both light and darkness are occasionally astounded at her *apparent* illogicality, and then all at once the simple truth of being that everyone knows starts flaring up more brightly. Even *we* don't always comprehend our Anastasia. Even though she's our own granddaughter and great-granddaughter. She grew up under our very eyes. And since we don't always understand, we are not always able to be of significant help. And so she's often left alone with her own aspirations. Very much alone.

“Take *you*, for example. Here she’s gone and met with you, opened up her whole self to you, and to others, thanks to the book. We wanted to stop her. We wanted to stop her from loving. To us her choice of *you* seemed incomprehensible, even absurd.”

“I still don’t understand her choice myself,” I admitted. “My readers, too, wonder. ‘Who are *you*?’ they keep asking. ‘Why did Anastasia choose you?’ I can’t give them an answer. I realise that, according to all logic, she should be in the company of some kind of intellectually- or spiritually-minded person. He would no doubt be able to understand and love her. They could be more useful together. But me, I have to change my whole life, I have to deal with a whole lot of questions which for other more educated people have long been clear and comprehensible.”

“Do you regret now how your life has changed?”

“I don’t know. I’m still trying to make sense of it all. As to why she picked me out in particular, I can’t answer that. I look for an answer but can’t find one.”

“And how are you looking for an answer?”

“I’m trying to understand things within myself — who I really am.”

“Maybe there’s something special there, eh?”

“Could be there’s something there. After all, they say: like attracts like.”

“Vladimir, did Anastasia talk to you about pride and self-conceit? Did she speak about the consequences of this sin?”

“Yes, she said it was a mortal sin, leading people away from the truth.”

“Well, she didn’t pick you out, Vladimir. She didn’t pick you *out*, she picked you *up*. She picked you up like a worn-out good-for-nothing. We didn’t realise that ourselves at first. I hope you’re not too offended?”

"I don't entirely agree with you. I had a family — a wife and a daughter, and my business wasn't doing too badly. So, I may not have been anything special, but I wasn't at the bottom of the heap, either — not someone to pick up like a tramp or a useless piece of garbage."

"You haven't been in love with your wife for quite a while. You have your own life and interests, she has hers. It was only the daily routine that kept you together, or rather, the inertia of past feelings, which have been getting weaker and weaker over time. Neither have you had anything to talk about with your *daughter*. She's not interested in your business dealings. That's something that seemed important only to you. It brought in a financial income. But today's income may well be nothing tomorrow, or a loss, or a bankruptcy even. And then you were ill. You practically killed your stomach. With that dissolute lifestyle of yours there was no way you could climb out of your hole of disease. It was all over. And nothing was left."

"So what's it to you people? What am I to her? An experiment? Is she looking for some kind of fringe benefit?"

"It's simply that she's fallen in love, Vladimir. Genuinely, sincerely, just as with everything else she does. And she's happy that she hasn't taken anyone out of your world capable of bringing happiness to another woman. She has not placed herself in any privileged position. She's glad to be just like other women."

"So, it's just a whim of hers, eh? She wants a typical husband from *our* world — one who smokes, goes out carousing... Well, I must say, that's quite a self-sacrifice just for a whim!"

"Her love is genuine. It's not a whim, she's not looking for any fringe benefit. Even though she appeared illogical, at first, to the forces of both light and darkness, to us and to others, in reality she clearly illuminated the whole concept and meaning of Love. Not with words, doctrines or moral teachings, but with actual achievements in the lives of people in your world,

including your own personal life. The forces of light, the forces of the Creator, speak through her Love. And not only do they speak, they show clearly as never before: 'Look and see, see the power of a woman, the power of pure Love.' At the very last moment before death it is capable of giving new life. Capable of lifting up any Man, rescuing him from the tenacious paws of darkness and carrying him into the brightness of infinity. Capable of surrounding him with the Space of Love and giving him a new life, which is life eternal.

"Her Love, Vladimir, will restore to you the love of your wife, the respect of your daughter. Thousands of women will look at you with fervent glances of love. You will have complete freedom of choice. And if, from all the varied manifestations of the external appearance of love, you succeed in catching sight of that special one, Anastasia will be very happy. In any case you will be rich and famous, there will be no possibility of bankruptcy for you. The book you have written will circulate all over the world and bring you a return — and not just a monetary return, it will give you and others a power greater than mere physical or material strength."

"I must say," I observed, "the book is really starting to sell quite well. But I did write it myself, even though some people say Anastasia helped me in some way. What do *you* think — is it just my book, or did she have a hand in writing it?"

"You did everything a writer is supposed to do. You got the paper, your hand controlled the pen and you described what happened. You put down all your deductions in your own language. You saw to the publication of the book. What you did was no different from a writer's usual course of action."

"So, the book is mine alone? Anastasia didn't do anything?"

"No, she did not. She did not manipulate the pen on the paper."

"But you talk as though she still facilitated its appearance in some way. If so, explain in more detail. What exactly did she do?"

"To make it possible for you to write this book, Vladimir, Anastasia gave her life."

"Okay. Now everything's got obscured again. How come? How is it possible for her, living in the forest, to give her life for some book? Who *is* she? She herself says: *Man*. Other people call her an alien, or a goddess. Now that all ends up in some serious confusion. I really want to straighten this out for myself."

"It's all very simple, Vladimir. Man is the only creature in the Universe who can live on all planes of existence at once. In their earthly existence most people see themselves only as an earthly, materialised manifestation. But there are those who perceive other levels of being, levels invisible to the material senses.

"Calling Anastasia a goddess is not a sin against the truth. The main difference between Man and all other forms of existence lies in Man's ability to create the present and the future by his thoughts, inventing forms and images which are afterward materialised. The clarity, harmoniousness, pace of thinking and mental purity of Man as a Creator is what determines the future. And in this sense Anastasia *is* a goddess. For the pace at which she thinks, the clarity and purity of the images she formulates, are such that she alone has proved capable of withstanding the whole dark mass of opposing forces. *She alone*. Only there is no way of telling how long she'll be able to hold out. She's still waiting, believing that people will realise what is happening and will help her. Believing that they will cease producing darkness and hell."

"Who's producing darkness and hell?"

"Prophets who believe in and talk about the end of the world — they themselves are producing mental visualisations of the end of the world. The whole mass of teachings foretelling the ultimate doom of mankind, are hastening the day with their visualisations. There are a lot of them, a whole lot of

them. And these people have no idea, while they seek salvation for themselves and search for the Promised Land, that a hell is being prepared specifically for them.”

“But the people that are talking about the Last Judgement or a global catastrophe, they actually believe in it, they’re sincerely praying for the salvation of their souls.”

“They are motivated not by faith in the light, in the Love that is God, but by *fear*. And this fearful scenario is something they are fashioning for themselves. Think, Vladimir! Try to imagine. Here we are, you and I, sitting on this bench. You see lots of people before your eyes. All at once some of them start to go into fits of convulsion from terrible pain, as though they were sinners. All around us on the Earth millions of corpses are rotting, while you and I sit here untouched by it all and watch. It’s as though we are sitting on a bench in Paradise. But doesn’t it wrench your heart to see all the horrifying images of what’s going on? Wouldn’t it be better to die or fall asleep the moment before witnessing such tragedy?”

“What if all the righteous who are saved,” I wondered aloud, “are in the Promised Land, where there are no rotting corpses around, no frightful images?”

“When you get news, even from the other side of the world, about the death of a loved one, or a relative, don’t you feel grief and sorrow in your heart?”

“Anyone in a situation like that would surely be distressed.”

“Then how can you imagine Paradise for yourself, realising that most of your fellow-countrymen, your friends and relatives, have already perished, and others are dying in frightful torment?! How hardened must a heart become, how deep a pit of gloom must it fall into, to feel pleasure under such circumstances? Such souls are not needed in the kingdom of light. For they themselves are the creatures of darkness.”

“But why do the great teachers of mankind,” I queried, “— the ones who’ve put or are now putting various doctrines down

on paper — talk about the end of the world, the Last Judgment? Who, then, are *they*? Where are they leading people? Why do they talk that way?”

“It’s difficult to define precisely what they’re getting at. It’s possible they will bring about a change in people’s conscious awareness simply because the crowds of people they draw find their ideas so attractive.”

“Those who are alive today can effect such a change,” I observed. “But what about those who came before and left their teachings for us as a legacy?”

“They might have indeed prepared the *way* for a change, in the hope that their followers would make the change happen and discover the truth. Perhaps they’re waiting for the course of history to show the vast majority of mankind the hopelessness of their present path, and counting on ensuing events to help them turn their followers and believers to the light.”

“If you people knew all this before, why did you sit there in the forest and remain silent all these years? Why didn’t you try to explain it to somebody earlier? Anastasia said your people have been living this way of life for generations, over thousands of years, preserving the truth about Man’s pristine origins.”

“In various corners of the Earth,” the grandfather replied, “there are people who have preserved a way of life apart from technocracy, making use of capacities which are inherent only in Man. From time to time they have made attempts to share their conscious awareness with others. And each time those who tried perished before they could say anything substantial. Even though they presented powerful thought-forms and images, they were resisted by the vast majority of mankind.”

“You mean to say they would trample on Anastasia and crush her?”

“Anastasia has somehow managed to stand up to them. At least so far. Maybe it’s *because* of her illogicality!”

The old fellow fell silent, thoughtfully tracing the point of his walking-stick on the ground to form incomprehensible symbols.

I sat there, deep in thought. Finally I asked him:

“Then why did she keep repeating to me all the time: *I am Man! I am a woman!* — if she’s really a goddess, as you say?”

“In her earthly, materialised sense of existence she is simply *Man*, a human being, a woman. And even though her lifestyle is somewhat unusual, she is still capable, just like anyone else, of experiencing feelings of joy and sorrow, loving and wanting to be loved.

“But all the abilities she has are inherent in *Man*, in every *Man* — that is, in *Man* in his pristine state. The abilities she had which seemed so extraordinary will no longer seem so exceptional to you once you learn what your modern science has to say about them. And as to the other abilities she has which are still not understood, rest assured an explanation will be found. And it will all go to show that she is simply *Man*, a female of the human species.

“There is one phenomenon you will soon encounter, however, which you won’t be able to understand. Nor will your scientists be able to explain it. Even my father doesn’t know exactly what kind of phenomenon it is. Your world calls such things *anomalies*. But I beg of you, Vladimir, don’t identify this phenomenon with Anastasia. It will appear right beside her, but it is not in her. Try to find the inner strength to see, to feel in her what is simply *Man*.

“She tries to be like everyone else. For some reason, she feels it’s important — she feels a need — a need to prove that she is *Man*. This is difficult for her, since in doing so she must still keep her principles intact. But, then, don’t we all have principles that are sacred to us?”

“But what kind of phenomenon are you talking about — this thing you won’t define and which science can’t explain?”

## CHAPTER TWENTY-SEVEN

### The anomaly

“When we buried Anastasia’s parents, she was still very young,” Anastasia’s grandfather began. “She wasn’t yet able to walk or talk. My father and I dug a hole in the ground, with the animals’ help. We placed branches at the bottom, put the bodies of Anastasia’s parents in the hole and covered them over with grass and earth. We stood there a while on the burial mound without saying a word. Little Anastasia sat a short distance away in the glade, watching a bug crawling along her arm. We thought it was just as well that she wasn’t yet able to be fully aware of the misfortune that had befallen her. Then we quietly walked away.”

“What do you mean, you walked away? You just walked off and abandoned this poor, ignorant little girl to her own devices?”

“We didn’t abandon her. We left her in the same spot where her mother had given birth to her. You have a concept known as *Shambala*,<sup>1</sup> or Motherland. The meaning of these words is becoming more and more abstract. *Motherland* — that is literally MOTHER-LAND.<sup>2</sup> *Mother!* In anticipation of their

<sup>1</sup>*Shambala* — a Tibetan word indicating ‘the source of happiness’ in Oriental religions, and signifying the legendary ‘land of the gods’ — a place through which the Earth is connected with the Divine.

<sup>2</sup>*Motherland* — the closest English equivalent of the Russian word *Rodina*, derived from the name of God the Creator *Rod* in the ancient Slavic tradition (the word *rod* also signifies ‘origin’, ‘derivation’ or ‘birth’) and the root *na* signifying ‘mother’. In the original Russian text, the word is printed as ‘ROD I NA’.

child's appearance in the world, parents ought to create a Space for him. An environment of kindness and love. And to give him a piece of the Motherland, which, like a mother's womb, both preserves the body and caresses the soul. It imparts the wisdom of creation and assists in obtaining the truth.

"And what can a woman give her child who is born amidst stone walls? What kind of world has she made ready for him? Or has she given any thought at all to the world in which her child is to live? In that case the world will do with him as it likes. It will strive to subject this little human being unto itself, making him a mere cog, or a slave. And the mother will simply become an observer, as she has not made ready for her child any Space of Love.

"You see, Vladimir, Nature — the Nature surrounding Anastasia's mother, the creatures large and small — treated her as they would treat any Man who lived the way she did: as a friend, as a wise and good deity, one who had created around her a world of Love. Anastasia's parents were happy and kind people, they very much loved one another, loved the Earth, and the Space around them responded to them with Love. Little Anastasia was born into this Space of Love and at once became its centre.

"Many creatures will not touch a newborn. A mother cat may nurse a puppy, or a mother dog a kitten. Many wild animals are capable of nursing and taking care of human offspring. But these animals have become wild to people in your world. To Anastasia's mother and father they played quite another role. The creatures treated *them* entirely differently. Anastasia's mother gave birth to her in the glade, and many creatures were witness to the birth. They saw how the woman they revered became a mother and bore another Man, another human being. When they witnessed the birth, their feelings toward their human friend, their love for her, intertwined with their

own parenting instincts, giving birth to a new exalted manifestation of light.

“Everything, absolutely everything in that surrounding Space, from the tiniest bug and blade of grass to the seemingly ferocious beast, was ready, unhesitatingly, to give its life for the sake of that little being. And there was nothing in that surrounding Space of Motherland, created and bestowed by its mother, that could possibly have threatened that being. Everything would look after and cherish this human being.

“To Anastasia the little glade is literally a mother’s womb. The glade is her living Motherland. Powerful and kind. And inextricably tied by a natural, living thread to the whole Universe. To the whole creation of the Grand Creator.

“The little glade is her living Motherland. It came from her mother and her father. And from the One and Only, the Original Father. We could never be a substitute for *it*. That is why, after burying her parents, we walked away.

“Three days later, while we were approaching the glade, we felt a tension in the air, we heard wolves howling. Then we saw...

“Little Anastasia was sitting quietly atop the burial mound. One of her cheeks was smeared with earth. We realised she had been sleeping on the mound. Tiny tears were streaming from her eyes and falling onto the ground. She was crying, noiselessly, with only an occasional sob. And she kept stroking and stroking the burial mound with her little hands.

“She wasn’t able to talk, but she did say her first words on this mound. We heard them. At first she simply uttered syllables: *Ma-ma*, then *Pa-pa*. She repeated this several times. Then she added a syllable to each: *Ma-moch-ka*, *Pa-poch-ka*, *Ma-moch-ka*, *Pa-poch-ka*.<sup>3</sup> *I am Ana-sta-SI-ya. I now have you no more. Eh? Only my grand-pas? Eh?*

<sup>3</sup>*Mamochka, Papochka* — in Russian, common diminutives of *Mama* and *Papa* respectively.

“My father was the first to realise it: even as we were burying her parents, little Anastasia, sitting there in the glade and watching the bug, was fully aware of the whole depth of the misfortune that had befallen her. She used her will-power to refrain from showing her feelings. With her mother’s milk she had been imbued with the wisdom and strength of her pristine origins. Nursing mothers have that capacity, Vladimir. The capacity to pass along to their baby, together with mother’s milk, the conscious awareness and wisdom of the ages, right back to their pristine origins.

“Anastasia’s mother knew how to do this, and used this method to full advantage. To the fullest possible advantage.

“Since Anastasia didn’t want us to see her crying, we didn’t go out into the glade, and didn’t approach the mound, but we couldn’t tear ourselves from the spot. So we just stood there, observing what was going on.

“Supporting herself on the burial mound, little Anastasia attempted to stand on her little feet. She didn’t do it on the first try, but still, she managed to stand up. She stood there swaying back and forth, stretching her arms out a little to each side, and finally took her first timid step away from her parents’ grave, then a second step. Her little feet got mixed up in the grass and her little body lost its balance and started to fall. But the fall — well, that was something quite unusual.

“At the moment she fell, a barely noticeable bluish glow came flooding over the glade, and changed the Earth’s laws of gravity just on that particular spot. It touched us too with some kind of mellow languor. Anastasia’s body didn’t fall, but gradually and smoothly descended to the ground. Once she got up on her feet again, the bluish light disappeared, and the normal gravitation field was restored.

“With careful and hesitating footsteps, Anastasia went over to a little branch lying in the glade and was able to pick it

up. We realised she had started cleaning up the glade, as her mother had done many times. This wee little girl then carried the dry branch to the edge of the glade. But once again she lost her balance, began to fall and dropped the branch.

“During her fall, once more the bluish glow sparked into life, changing the Earth’s gravitational field, and the branch flew over to the little pile of dry branches lying at the edge of the glade.

“Anastasia got up, looked around for the branch but couldn’t find it. Then, throwing up her little hands, with shaky steps she slowly made her way over to another branch. No sooner had she started bending over to pick it up than the branch itself began rising from the ground, as though a breeze had blown it to the edge of the glade. But there wasn’t enough of a wind around to do this. Some invisible presence was carrying out little Anastasia’s desires.

“But she wanted to do everything herself, as her Mama had done. And, no doubt in protest against this help from her invisible ally, she thrust her little hand into the air and waved it gently above her head.

“We looked up and saw it. Over the meadow we saw hanging a small spherical mass, pulsating and glowing with a pale-blue light. We could see a whole multitude of fiery discharges inside its transparent covering, giving the effect of multi-coloured lightning. Indeed, it was very similar to large ball-lightning. But it was intelligent!

“We couldn’t tell what it was made of and what kind of intelligence we were dealing with.

“We could feel some kind of unknown and unseen power in it. But there was no sense of fear of this power. On the contrary, it seemed to be radiating a pleasant, languid grace. We didn’t feel like moving. We just felt like being.”

“But what made you think it possessed untold power?” I interrupted.

“My Papa noticed that. Even though it was a bright sunny day, the leaves on the trees and the petals on the flowers turned in its direction. In its bluish glow there was more power than in the Sun’s rays. And it could change the Earth’s gravitational field at the moment Anastasia fell — just in the right place and at just the right time. The change was so precise that her body descended smoothly, but yet was not torn away from the Earth.

“Anastasia spent a long time collecting branches. Sometimes she would crawl, at other times walk all over the meadow with slow steps, until she had cleared them all away. And the fiery sphere, still pulsating, hovered over the wee little one. But it no longer helped her pick up the branches. The powerful fiery sphere seemed to understand the gesture of her little hand and obeyed it.

“Expanding and dissolving in Space, contracting and producing internal discharges (like flashbulbs) of some kind of energy from goodness-knows-where, the sphere would momentarily disappear and then reappear, as though it were somehow excited, and this excitement caused it to sweep through space at incredible speed.

“The time came when Anastasia normally lay down to sleep. We never compel our children to sleep, rocking them back and forth until they become dizzy. At this time Anastasia’s mother would simply lie down herself in the usual spot and pretend to doze off, to show her child by example. Little Anastasia would crawl over to her, snuggle up against her warm body and peacefully fall asleep.

“And this time Anastasia went to the spot where she was used to sleeping during the day with her mother. She stood and looked at the place where she had always slept with her Mama at this time, but now there was no Mama around.

“It was not clear just what she was thinking at that moment, only once again a tiny tear glistened in a sunbeam on

Anastasia's face. And right away the bluish glow came pulsating across the glade, flashing at irregular intervals.

"Anastasia raised her little head, saw the pulsating mass of light, sat down on the grass and began staring at it continuously. It remained still under her gaze. For some time she just sat there staring like that. Then she held out both her little arms in its direction, as she was wont to do when summoning one of the creatures to her side. At that point the fiery sphere sparked up in a multitude of powerful lightning bolts, reaching out beyond its blue covering, and... made a dash for her little arms like a fiery comet. Looking as though it had the ability to sweep away everything in its path, it took only a split second to reach Anastasia's face, start rotating and with one of its lightning flashes wipe away a tiny tear glistening on her cheek. And at this point it extinguished all the discharges and became a pale blue, faintly glowing sphere in the arms of the little one sitting on the grass.

"For a time Anastasia sat there holding it, examining it and stroking it with her hands. Then she got up, lifted up the blue sphere, and with careful steps carried it over and put it down on the place she used to sleep with her mother. And again she caressed it gently.

"The sphere took up a position on the ground and pretended to doze off, just as Anastasia's mother had done. And the little girl lay down beside it. She fell asleep. She slept there on the grass, all curled up into a ball. The sphere took flight, disappearing into the heavenly heights, then spread itself low over the glade, as though it were a blanket. Later, once more contracting into a small, pulsating ball, it took up a position next to Anastasia, who was still sleeping on the grass, and began stroking her hair. It was a strange and unusual caressing. With the most delicate luminescent and flickering threads of lightning, it took each individual strand of hair, lifted it and caressed it.

“On subsequent visits to Anastasia in her glade, we saw it again on several occasions. We realised that to Anastasia it was something quite natural, just like the Sun, or the Moon, or the trees and animals around her. And she had conversations with it, just as she did with everything else around her. But it was evident she made a distinction between it and the other things in her environment. The distinction wasn’t too noticeable in terms of outward expression, but there was a definite impression that she treated it with just a little more respect than other things, and sometimes she would even play up to it. She never played up to anyone else, but for some reason she allowed herself to behave this way with the sphere. It reacted to her mood and even played along.”

“The morning Anastasia turned four,” Grandfather continued, “we were standing at the edge of the glade waiting for her to wake up. We wanted to quietly watch and see how she would delight in the new spring day that was unfolding.

“The sphere appeared just a moment before she woke up. It glistened faintly with its bluish glow, either spreading itself in a shower of light or dissolving over the whole Space of the glade. And we beheld a natural living picture made by no human hand — it was charming and magnificent.

“The whole glade was transformed — the surrounding trees, the grass, even the bugs. The needles of the cedars began shining in a host of soft hues. Behind the squirrels springing from branch to branch could be seen rainbow-trails sparkling and dissolving. The grass was lit up in a soft green glow. An even more pronounced multicoloured glow emanated from the multitude of bugs scurrying through the grass, forming an unusually vivid and beautiful carpet spreading its way across the glade, constantly morphing itself into new intricate and marvellous patterns. Upon awakening, Anastasia opened her eyes to behold an extraordinary living

panorama, full of enchantment. She jumped up and gazed all 'round.

"She smiled, as she always did in the morning, and everything around her responded to her smile with an even brighter glow and accelerated movement. Then Anastasia carefully knelt down and began meticulously examining the grass and the shining, multicoloured bugs scurrying about. When she lifted up her head, the slightly worried expression on her face betrayed a measure of concentration. She looked up and, even though nothing was visible up there, stretched her little arms to the sky. All at once the still air stirred, and in her hands appeared the bluish sphere. She held it up to her face, then put it down on the grass and tenderly stroked it. And we could hear their conversation. Anastasia was the only one who actually spoke, but we had the distinct impression that the sphere was understanding her and even silently responding. Anastasia spoke with it tenderly, with just a touch of sadness:

"You are good. You are very good. You wanted to delight me with your beauty. Thank you. But change it back, please change it back to the way it was before. And do not ever change it again."

"The blue sphere emitted another pulse, then lifted slightly off the ground, and the lightning discharges flashed from within. But the glowing scene did not fade. Anastasia fixed her gaze upon it and spoke to it once again:

"Every little beetle, bug and ant has its Mama. Everyone has a Mama. All Mamas love their children just the way they were born. It does not matter how many legs they have or what colour they are. You have changed everything. How will the Mamas recognise their children now? Please, make everything as it was before!"

"The sphere gave a faint flash, and everything in the glade was restored to the way it looked before. Once again it descended to Anastasia's feet. She stroked it and offered a

‘Thank you!’. She stared silently at the sphere for a while, and when she spoke to it again, her words really impressed us. She told it:

“Do not come to see me again. I like being with you. You are always trying to do only what is good for everyone, always trying to help. But do not come visit me. I know you have a very large glade of your own. But you think very fast, so fast that I cannot understand all at once. Only later shall I understand a bit. You move faster than everything else. Much faster than the birds and the breeze. You do everything very fast and very well, and I know that is how you must do it to get everything done, to do good in your own very large glade. But when you are with me, it means you are not there. So, when you are with me, there is no one to do good in the other glade. Go away. You need to take care of the large glade.’

“The blue sphere contracted into a little lump, and took off way up high. It began sweeping through Space, sparkling more brightly than usual, and once more plunged down like a fiery comet to Anastasia, who was still sitting in the same spot. It stayed still by her head for a while, then a multitude of tiny flickering rays reached out to Anastasia’s long hair and stroked each strand individually, right down to the tip.

“‘What are you taking your time for?’ Anastasia said quietly. ‘You should get going back to those who are waiting for you. I’ll make everything all right here myself. And I will be happy to know that everything is all right in the large glade too. I shall be able to feel you. And I want you to think of me too, but just occasionally.’

“The blue sphere began ascending, but not with its usual carefree bounce. It rose from Anastasia in fitful bursts, and finally disappeared into space. But it left something invisible all around. And each time when something happened that affected Anastasia negatively, the surrounding space would grow still, as though paralysed. That is why you lost consciousness

when you tried to touch her without her consent. She pacifies this phenomenon by waving her hands in the air whenever she can. Just as before, she wants to do everything all by herself.

"We asked our little Anastasia:

"What was that glowing thing that was hovering over the glade, what do you call it?"

"She thought for a bit, and answered briefly:

"I would call it *Good, Granpakins.*"

The oldster fell silent. But I still wanted to hear about how little Anastasia lived in the forest, and I asked him:

"What did she do after that, how did she live?"

"The same way," the old fellow replied. "She grew up just like anyone else. We suggested she help the dachniks. By the time she was six she was already able to see people at a distance, to discern their feelings and help them. She got involved with the dachniks. Now she believes that the phenomenon of the dachniks offers an easy transition to making sense of what constitutes our earthly existence. Here she's been continually shining that ray of hers for twenty years now. She's given warmth to plants on the small plots of land. She's treated people's illnesses. She's tried to explain to people, without imposing on them, how one should handle plants, and she's had terrific results. Then she started observing other aspects of human life. And destiny brought her together with *you*. And now she's come out with the idea of *carrying people through the dark forces' window of time.*"

"And what do you think, she'll be successful?" I asked.

"Vladimir, Anastasia knows the power of thought inherent in Man as a Creator. Otherwise she would never have let herself make such a statement. From now on she will not deviate from this path — she'll stick to it. She's a stubborn lass. It comes from her father."

“So, she’s taking concrete steps,” I observed. “She’s trying to make her thought-forms into reality, and here we are just sitting and rationalising about the spiritual. Like kids wiping their noses... You know, there’s quite a few people that still ask me: ‘Does Anastasia really exist, or did I just dream everything up myself?’”

“That’s not a question people can actually ask. People touched by the book will feel her right away. She is in the book. Questions like that can only be asked by illusory people, not real people.”

## CHAPTER TWENTY-EIGHT

### Illusory people

“But I’m talking about very real people — like those two girls over there, for instance. D’you see?” I pointed in the direction of two teen-age girls standing about five or six metres away from our bench.

The old man fixed his gaze upon them and said:

“I think one of them — the one that’s smoking — is unreal.”

“What d’you mean, unreal? If I went up to her and gave her behind a good slap, you’d hear a scream and curses that’d be more than real!”

“You know, Vladimir, what you are now seeing is simply an image before your eyes. An image created by the dogmas of the technocratic world. Look closely. The girl has on very uncomfortable high-heeled shoes. Besides, they’re a little too tight for her. She wears them precisely because someone else is dictating what shoes women should be wearing these days.

“And she’s wearing a short skirt of material made to look like leather but it isn’t leather. It’s harmful for the body, but she’s wearing it according to the dictates of society’s current fad. Look at all her gaudy make-up and how arrogantly she’s behaving. Outwardly she’s independent. But only outwardly. Her whole appearance is at odds with herself, her real self. She’s been ‘smitten’ by an image of someone else’s thought-forms, a soulless, illusory image has eclipsed her living soul and taken it captive.”

“You can say what you like about the soul, captivity and the dictates of some image or other,” I interjected. “But how can one tell whether that’s actually true or not?”

"I'm already an old man, you see. I can't get in tune with the slower pace of your thinking. I can't express myself convincingly, the way Anastasia does." The oldster sighed and added: "Do you mind if I try *showing* you?"

"Showing me what?"

"I shall now attempt to destroy, at least for a time, that illusory, lifeless image and free the girl's soul. You watch closely."

"Go ahead."

The girl holding the cigarette was in the midst of arrogantly berating her companion. The old fellow watched them closely and intently. And when the girl turned her glance away and fixed it on some of the passers-by, the oldster's eyes followed her gaze. Then he got up and, gesturing to me to follow him, headed toward the girls. I went after him. He stopped about a half metre from them and fixed his eyes on the girl with the cigarette. She turned her head to look at him, blew a puff of cigarette smoke in his face and said with some irritation:

"Hey, what's with you, Gramps? Begging for money, eh?"

The oldster paused, probably to recover from the cloud of smoke enveloping his face, and said in a soft and tender tone:

"Put the cigarette, dear girl, into your right hand. You should try holding it in your right hand."

And the girl obediently put the cigarette into her right hand. But there was much more to it than that. Her face suddenly became completely altered. Her arrogance had vanished. In fact everything about her was different: her face, the way she stood. And in a completely different tone of voice she said:

"I'll try, Grandfather."

"You should have your child, dear girl."

"It'll be hard for me. I'm all alone."

"Let him come to you. You go and think about that hand of yours, think about your child, and he will come. Go along now, dear girl, you must hurry."

"I'll go." The girl took a few steps, then stopped and called back to her companion in a calm, quiet voice, with no sign of her former irritation: "Come along, Tanya... come with me."

They left.

"Wow! Can you tame *any* woman like that?" I said, when we had regained our seat on the bench again. "That's terrific! Some sort of super-hypnosis, eh? Far out!"

"It's not hypnosis, Vladimir. And there's no far-out mysticism here. It's simply an attentive attitude to one's fellow-Man. And I mean to the Man, not to the dreamt-up image which obscures the real Man. And Man responds instantly to this, he finds his strength, when you appeal directly to him, ignoring the illusory image."

"But how did you manage to see the invisible Man behind the visible image?"

"It's all very simple, really. I watched them a bit. The girl was holding her cigarette in her left hand. She was also rummaging about in her purse with her left hand. Which means she's left-handed. And if a small child holds a spoon or does something else with the left hand, his parents try to get him to use his right. She got along fine with her parents. I realised this when I saw the way she looked at the man and woman walking along with a little girl in tow. I spoke to her the way her parents might have when she was little. I tried to use the same tone of voice her parents might have used. Back when she was little, unaffected, not under someone else's image. That little girl was the real Man, and it responded right off."

"But you were talking to her about childbirth — what was that all about?"

"She's pregnant, you see. She's been pregnant more than a month now. That alien image doesn't want the child. But the girl's inner being wants the child very much. They're struggling with each other. Now her inner being will win out!"

## CHAPTER TWENTY NINE

### Why nobody can see God

“Anastasia told me, when I talked with her in the taiga,” I recalled, “that nobody can see God because His thoughts work with great speed and concentration. But I’m thinking, why doesn’t He slow them down so people can get a good look at Him?”

The old man raised his walking-stick and pointed it at a passing cyclist.

“Look there, Vladimir. Look how the bicycle wheels turn. The wheel has spokes, but you can’t see them. They are there, and you know it, but the speed of rotation does not allow you to see them. Or put it another way: the pace of your thinking and your visual perception does not allow you to see them. If the cyclist goes slower, you will see the spokes of the wheel, albeit blurred. If he stops altogether, you will see them clearly, but the cyclist himself will fall off. He won’t get to his destination because of his stopping, and for what? Just to let you see that the spokes are there? But where does that take you? Has anything changed in you? Or around you?”

“The only thing you’ll know for certain is: the spokes exist. And that’s it. The cyclist, of course, can always get up and continue his journey, but others may want to see, which means he’ll have to stop and fall again and again. And for what?”

“Well, so I can get a good look at him just once.”

“And what will you see? After all, a cyclist lying on the ground isn’t a cyclist any more. You will have to imagine what he looked like.

“Just so, a God who changes the pace of His thinking is no longer God. Wouldn’t it be better for you to learn how

to accelerate your own thinking? Imagine yourself talking with someone who has a slow time getting what you're saying — doesn't that irritate you? Isn't it a pain slowing down your own pace of thought to his level?"

"You're right, if you adapt yourself to a fool's pace, you might become a fool yourself."

"So in order for us to see God, He would have to slow down His own thinking to our pace, and become as one of us. But when He *does* this, sending us His sons, the crowd looks at them and says: 'You aren't God, you're not even the son of God, just a pretender. Perform a miracle or we'll nail you to a cross.'"

"But why shouldn't God's son perform a miracle?" I questioned. "At least so the non-believers would back off, and not crucify him."

"Miracles do not convince non-believers, they only tempt them," came the reply. "And those who perform miracles are burnt at the stake under cries of 'Burn the manifestation of the dark forces!' Besides, just look around you. God's miracles abound in countless numbers. The Sun rises every day, and then there's the Moon at night. An insect on a blade of grass is a miracle, after all, not to mention a tree..."

"Here we are, the two of us, sitting under a tree. Who could think up a more perfect mechanism than a tree like this? These are particles of His thought. All the materialised, living forms scurrying beneath our feet, flying above our heads in the ethereal blue, singing for us, caressing our bodies with a ray of warmth — these are all His, they are all around us, made for us. But are there that many people who are able not only to see, but to feel and realise the significance of all this? Maybe not even to improve, but simply to use and keep from distorting or destroying these living marvels of creation? As for His sons, they have one purpose — to raise people's conscious awareness by their words, slowing down

their own thinking, even at the risk of being misunderstood themselves.”

“But Anastasia emphasised that just speaking words was not enough to raise Man’s conscious awareness to a meaningful level. I too think that mankind has uttered an enormous number of different words, but what do they mean? The Earth all around is full of unhappy lives, and it may even suffer a global disaster.”

“Quite right. When the words do not come from the heart, when the threads linking them to the soul are torn apart, then the words are empty, imageless, faceless. Our granddaughter Nastenka<sup>1</sup> is capable of creating images not just in every word, but in the sound of every letter of the alphabet. Now the Earth-dwelling teachers, His sons that are in the flesh today, will attain such a degree of power that the human spirit will outshine the darkness.”

“Sons, teachers? What have they got to do with it? Aren’t the abilities hers alone?”

“She will share them, in fact she is already sharing them. Look here, you’ve even been able to write a book, readers have flooded the world with poems, and new songs have been sung. Have you heard the new songs?”

“Yes, I have.”

“So this will be multiplied many times with your religious teachers, just as soon as they come into contact with the book. And where you see simply words, they will feel the living images, and the power will be magnified multifold in them.”

“They will feel it, but what about me? What am I, completely devoid of feeling? If so, why did she talk with me and not with them?”

“Because you are incapable of distorting what you hear, and there is nothing you have of your own already that you

<sup>1</sup>*Nastenka* (pronounced *NAH-sten-ka*) — a diminutive form of *Anastasia*.

can mix with it. On a clean sheet of paper the word is set forth more clearly. But not to worry, *your* thought will accelerate too.”

“Okay, let it accelerate in me too, so I don’t lag behind the others. I guess everything you say must be right. Here in Russia there’s the leader of one religious community — the community settlers refer to him as their teacher — who told his followers to read the book about Anastasia. ‘It will set your hearts on fire,’ he told them. And many of his followers went out and bought the book.”

“So, that means he understood, he felt something, and that is why he helped Anastasia and you. And did you ever thank him for his help?”

“I’ve never met him.”

“You can say ‘thank you’ in your heart.”

“Silently, you mean? Who’s going to hear that?”

“The one who listens with his heart will hear it.”

“There’s another element here. He said the book was really good, Anastasia too, but he went on to say that *I* wasn’t a real man, that I wasn’t a true male of the species. ‘Anastasia didn’t meet with a real man,’ he said. I saw this myself on TV, and then read it in the papers.”

“And what would *you* say you were — Mr Perfection?”

“Well, ‘perfection’, I admit, is stretching it.”

“Then you need not be offended. You can work toward being perfect. My granddaughter will help you. Those whom Love is capable of uplifting can rise to the heights. It’s not even meant for everyone to grasp the whys and the wherefores. An extraordinary speed of thinking is required for that.”

“What about *your* thought? What speed does it operate at? You don’t find it tiresome talking with me?”

“The thinking speed of anyone who leads a lifestyle such as ours is always significantly greater than that of people in the technocratic world. Our thought is not encumbered by

constant concerns about clothing, food and a lot of other things like that. But I don't find it tiresome talking with you, thanks to my Love for my granddaughter. She wanted me to talk with you. And I am glad to do something for her."

"And what is the pace of Anastasia's thinking? The same as yours and your father's?"

"Anastasia's is greater."

"By how much? By what ratio? What she can process in ten minutes, let's say, how long would that take *you*?"

"To make sense of what she can process in a *second*, we would require several months. That is why she sometimes seems to us illogical. That is why she is utterly alone. That is why we can't be of any significant help to her — why we can't grasp right off the logic behind her actions. My father has completely given up conversation altogether. He keeps trying to match her pace of thinking so he can help her. He wants me to do the same. But I don't even try. My father thinks that's because I'm lazy. But I love my granddaughter very much and simply trust that she is doing everything correctly. And if she asks me to do something, I'm delighted to do it. That's why I came to see you."

"But how then did Anastasia manage to talk with me for three whole days?"

"We wondered how, too — for a long time. After all, constantly making that kind of an adjustment could drive one crazy. It was just recently that we discovered the answer. You see, when she was talking with you, she did not slow her thinking down. On the contrary, she made it work even faster. She accelerated it and transformed it into images. Now, like your computer programmes, these images will play themselves out for you and for anyone who reads the book. They will expand and accelerate the pace of human thinking by leaps and bounds, bringing it closer to God. When we realised that, we concluded that in thinking up such a thing, she had created a new law

in the Universe. But now it's clear that she was simply using the opportunity afforded by pure and sincere Love, which we hadn't known about before. Love, after all, has remained one of the Creator's grand mysteries. And look how she has now opened up one of its great opportunities and powers."

"And does the pace of her thinking allow *her* to see God?"

"Hardly. After all, she lives in the flesh too. God is in the flesh as well, but only partly. And His flesh is all the people of the Earth. As one small particle of this flesh, Anastasia occasionally grasps something. It is possible that when her thinking reaches such incredible speeds, she feels Him more than others do, but this happens with her only for short periods of time."

"And what does it give her?"

"In a matter of a second she is able to comprehend the truths, the essence of being, the conscious awareness that the wisest people of your world have spent a lifetime perfecting and sharing with each other."

"And that means she has the knowledge of our Oriental lamas, the wisdom of Buddha and Christ, and knows yoga too?"

"That she does. She knows more than is said in all the treatises passed down to your world today. But she still considers them to be insufficient, since there is no universal harmony among those living on the Earth today, and the march toward global disaster continues.

"This is why she is working out her incredible 'combinations'. She is saying: 'Enough of teaching people dogmas, enough of tempting them with Adam and Eve's apple. They must be enabled to feel — really *feel* — what Man once felt, what he was capable of and who he was.'"

"So," I said, "what you're trying to tell me is that she has a real possibility of doing something good for all mankind? If that's so, then when will it begin — this 'good'?"

"It has already begun. Just little sprouts so far, but that it is only for the time being."

“Where are they? How do I see them? Or feel them?”

“Ask the people who read the book — the ‘sprouts’ are in them. Indeed, the book is awakening bright feelings in many people. That’s something that can no longer be denied — many will attest to it. She’s succeeded with those combinations of hers. Incredible, but she’s done it.

“And you, Vladimir, think about who you were and who you’ve become. What has been happening, Vladimir, is that a programme of thought-images has been unfolding in you, and her soul has been unfolding in people’s consciousness. The world is starting to change in you, and by doing so is changing the thought-images all around you. We cannot fathom completely how she manages to do that. What is evidently real on the surface is something we can still manage to decipher. What helps her to bring about this new reality remains a mystery.

“Naturally one can make vigorous efforts to delve into it, but we should be wary of taking away from the marvellous reality that is unfolding before our eyes. A breathtaking dawn of a new day is something to be admired. Once you begin analysing the whys and wherefores, instead of elation all you get is excavation, which doesn’t lead to anything and doesn’t change anything.”

“Golly, I didn’t realise it was so far out, so complex! I was still hoping that Anastasia was just a simple recluse, only extraordinarily kind, beautiful and a little naïve.”

“You see what I mean, you mustn’t go digging around and knocking your brains out. If it’s all too complex, then let her remain for you a kind and beautiful recluse, since that’s the image you have of her. Others will see something different. You’ve been given what you’ve been given. That’s all your consciousness has room for at the moment, and that is perfectly well and good. Just try to admire the dawn, if you can. That’s the most important thing of all.”

## CHAPTER THIRTY

### Dawn in Russia

“The dawn will begin in Russia,” I observed, “when everyone will be better off financially. When the economy as a whole improves, and individuals see a rise in their incomes.”

“All the material things you see around you depend on Man’s spirit and conscious awareness,” Anastasia’s grandfather responded.

“Okay, maybe. But what’s the point in crude philosophies, if people can’t afford to feed or clothe themselves?”

“They need to think about why that has been happening. Each one needs to figure it out for themselves. And stop trying to find a scapegoat. Only by *changing themselves within* will they change anything around them, including their financial situation. I agree with you that people will not be able to accept this all at once. But Anastasia said, after all: ‘You have to do without moral preaching. You have to show people how, that’s all.’ And she showed how.

“Now it’s up to you to carry out what she outlined. Then, within the space of three years, many communities throughout Siberia — large, small, forgotten and neglected, where there are only old people still living whose children don’t even come for a visit, will become richer, many times richer. Their life will bloom abundantly, and many children will return.

“And she will have much more than that to offer. She will reveal many secrets, she will restore people’s abilities and the knowledge inherent in our pristine origins. Russia will be a most wealthy land. And she will do this to prove that the spirituality and knowledge inherent in our pristine origins are

more significant than the futile efforts of technocracy. Russia will herald a new dawn over the whole Earth.”

“And what do *I* have to do to bring it about?”

“You can start by revealing the first secret related to you by Anastasia. You should write in your book how to produce healing oil from the cedar nut. And don’t hold anything back.”

I suddenly felt everything boiling up inside me. The wind was literally knocked out of me. I couldn’t sit, and jumped to my feet.

“Why? Tell me why! Why should I suddenly turn around and do that? For everybody. For free. Any sane person would think I was an idiot...”

“I set up an expedition, and I put into it everything I had. Now my firm’s been ruined. Anastasia asked me to write a book, and I wrote it. And now we’re even. Your aspirations, your philosophy — that’s not something I can readily comprehend. All I did was put it down on paper, as I promised Anastasia I would...”

“But the oil — well, that’s something that’s completely clear to me. I know now how much I can get for it. And I’ll never share the technology with anybody. I’ll scrape together a little money from selling the books and then I’ll start producing it myself. I’ve got to put everything back together again. I’ve got to get my ship back, the company too. I need to buy a laptop so I can keyboard the next book...”

“I don’t have a home any more. No place to live. I want to buy a trailer home. And when I’m rich, I want to erect a monument to Russian officers — the ones physically alive but with mortally wounded hearts. Our indifference keeps tearing their hearts apart, and their honour and conscience have been spat on by people — the same people officers in all ages have gone into battle to defend...”

“While you people sit nice and quiet there in the forest, here people are perishing. The country all around is full of

various 'preachers'. They all just *talk* about spiritual matters, but don't really feel like *doing* anything. At least I'm going to *do* something. But here you're telling me I should give valuable know-how away just like that! To everyone! Not on your life!"

"Anastasia did determine a percentage for you too," Grandfather interjected. "I know — three percent from the sale of the oil."

"Sure, what's a miserable three percent to me, when I can get three hundred for the oil?! I know what the world prices are now. And as for its healing properties, what they're selling out there is considerably less effective. I did some checking. They don't know how to produce it properly. Now I'm the only one who knows how to do it. Everything she said checked out. There's nothing in the world that can compare with its healing impact. Besides, scientific studies confirm it. Pallas<sup>1</sup> said that it could even restore a person's youth. And you want me to go give it away just like that.

"You must take me for a fool. I've looked through so much literature, even sent people into the archives to confirm what she said. And they did. A lot of money went to that too."

"You checked into everything — which means you couldn't bring yourself to trust Anastasia right off. That lack of trust is what cost you the time and money."

"Yes, I did do the checking. I had to, you see. But now I'm not going to be a sucker any more. You talk about a 'dawn for everyone'. Come on now — 'dawn'? In that dawn of yours I'd still be a sucker. I wrote a book. I did everything just the way she asked me to. I remember her telling me: 'Don't hide anything, either the bad or the good. I humble your pride. Don't

<sup>1</sup>*Pallas* — a reference to Peter Simon Pallas (1741-1811), a member of the St. Petersburg Academy of Sciences and a prominent pioneer explorer of the Siberian taiga.

be afraid to look ridiculous, don't be afraid to be misunderstood.' I haven't hid anything. And what's come of it?

"The book makes me look like a complete idiot. People stand there and say that to my face. That I haven't got a spiritual ounce in my body, that there's a lot I still don't understand. They say I'm coarse and uncivilised. And even a thirteen-year-old girl from Kolomna<sup>2</sup> wrote me to say I've been doing things the wrong way. And a woman from Perm<sup>3</sup> came to see me, right to my doorstep, and said: 'I wanted to see what Anastasia saw in him.'

"Don't hide anything, either the good or the bad. Humble your pride. Don't be afraid to look ridiculous, don't be afraid to be misunderstood.' She knew everything, didn't she? She comes out pretty good in the book — that's what people say — and how do I look? It's all her fault. If it weren't for the child, I could easily slap her one for what she did. Just think! I wrote everything down in good faith, just as she asked me to. And for that people tell me I'm insensitive and a coward to boot.

"Of course I'm a complete idiot. I've made myself into one. I obeyed her. I've written all that about myself, and now I'll never live it down the rest of my days. And after I'm gone they'll still make fun of me. The book's got a life of its own, as it's turned out. It'll outlive me! And even if I stop printing it, what difference will it make? The underground press is already grinding out more copies. They're trying to run it off on photocopy machines."

All at once I stopped short and looked at the old man. A little tear could be seen slowly making its way down his cheek.

<sup>2</sup>*girl from Kolomna* — The reference is to a young girl also named Anastasia, whose letter to Vladimir Megré is reproduced in Book 1, Chapter 30: "Author's message to readers".

<sup>3</sup>*Perm* — a major city of over a million inhabitants 1,500 km east of Moscow.

I sat down beside him. He was still silently looking at the ground. Then he spoke.

“You see, Vladimir, my granddaughter Nastenka is capable of foreseeing a lot. It’s not that she wanted anything for herself. She didn’t want fame, didn’t want money. By taking part of the fame upon herself, she put herself in danger, but she saved you. And the fact that you come out the way you do in the book — well, that’s her doing. You’re right about that. But that was not to humiliate you — that’s how she was able to save you. By taking upon herself a whole mass of dark forces. All by herself. And you respond to her with the pain of misunderstanding and irritation. Think — is it easy for a woman who creates out of love to hold on like that?”

“What kind of a love is it,” I countered, “when her beloved is counted among fools?”

“Calling somebody a fool doesn’t make him one. A fool is one who mistakes flattering words for the truth. Think for a moment of how you would like to be seen by others. As a figure exalted above all? As a brilliant intellect? And you could have made yourself a reputation like that with your first book. But then... pride and selfishness would have destroyed you.

“There are not even that many enlightened people who could hold out against sins like those. Pride creates an unnatural image of Man, it obscures the living soul. That is why the philosophers of the past and the geniuses of today can create so precious little. Because even after the first stroke of their pen they are so overwhelmed by a sense of self-conceit they lose right off what was given to them in the beginning.

“But Nastenka was smart enough to set up a protective barrier against flattery and worship which lead to pride. They won’t touch you now. She is saving you from a multitude of ills. And is protecting both your spirit and your flesh. You will write nine books straight from your heart. The Earth will be radiant with its Space of Love. And then, once you have

dotted the final *i* in the ninth book, you will be able to understand who you are.”

“Come on! Isn’t it possible to tell who I am right now?”

“Who you are right now — that’s pretty obvious. You are who you are at the moment. You are who you feel yourself to be. Whoever you will become, only Anastasia, possibly, knows. And she will wait, living each moment by Love. The fact that people sitting in their comfortable apartments call you a coward — that’s nothing. You should take it with a grain of salt. And suggest *they* try heading off into the taiga for three days with no gear. Let *them* try sleeping with a bear in a cave. To get the full sensation, let them take a mentally deranged girl along — after all, wasn’t that how Anastasia seemed to you at first?”

“More or less.”

“Let any man who accuses you try sleeping with his mentally deranged companion. Out there in the backwoods, where they can hear the wolves howling. Could he really do that? What do you think?” the old fellow asked slyly.

And no sooner had I pictured to myself the scenario he described than I burst out in a hearty laugh. And the two of us had a good laugh together. Then I asked him:

“Can Anastasia hear what we’ve been saying?”

“She will learn about all your deeds.”

“Then tell her not to worry. I shall explain to everyone how to extract healing oil from cedar nuts.”

“Fine, I’ll tell her,” the old man promised. “But do you remember everything Anastasia told you about the process?”

“Yes, I think I do.”

“Right, tell it to me.”

## CHAPTER THIRTY ONE

# How to produce healing cedar oil

It's not that difficult a task. The modern technology involved is already familiar and it needs no setting forth here. But there are some rather unusual nuances I should point out.

When gathering the cones<sup>1</sup> one should not beat against the cedars with logs or wooden bats, as the harvesters do today. This greatly weakens the healing properties of the oil. One should use only the cones which the cedar itself gives off. Either they fall with the wind, or you can knock them down with the resonance of your voice, as Anastasia does. They should be collected by people whose thought is free from evil. And it is especially good when the cones are picked up by *children's* hands. In any case, all the steps which follow should be carried out with kind and bright thoughts.

“Such people may be found in Siberian villages even now,” Anastasia affirmed. Whether this really makes a difference is difficult to tell. But it also says in the Bible that King Solomon sought out people “skilled in felling timber”.<sup>2</sup> Only it doesn't say how these people differed from anyone else in other respects.

The nuts obtained after the shelling of the cones must have their oil extracted within a three-month period; after that the

<sup>1</sup>cones — Note that the term *cedar* (Russian *kedr*) is used throughout the Ringing Cedars Series to refer to either the Siberian cedar (or Siberian pine, *Pinus sibirica*) — as in this case — or to the Lebanese cedar (cedar of Lebanon, *Cedrus libani*).

<sup>2</sup>1 Kings 5: 6 (*New International Version*).

quality will significantly deteriorate. The kernel should not come into contact with any metal during the extraction process. In any case, the oil should never come into contact with metal.

The oil can be used to treat any diseases without diagnosis. It can also be used as a food product and added to salads. Or it can be taken one spoonful a day, preferably at sunrise, although the afternoon is also a good time. But definitely in daylight, not at night. That's the main thing.

"Only people may be offered a counterfeit," I voiced my concern to the old fellow. But he responded slyly and with just a touch of humour:

"Well, then, you and I will make a device to screen out counterfeits. And we'll work out those commissions of yours at the same time."

"How do we do that?"

"I have to think about it. You, after all, are the entrepreneur."

"I *was* one, but right now I'm not sure who I am."

"Let's think together, then. You correct me if something's not right."

"Okay," I agreed.

"The final product should be tested with measuring instruments by competent technicians. Doctors, scientists — in a word, professionals."

"That's right, they can issue certificates."

"But instruments can't catch everything. A taste test will also be needed."

"Possibly. Tasters determine the quality of wine, for example. There's no substitute for that. But the wine-tasters are acutely aware of the taste of different vintages. They have a superb sense for both fragrance and taste. But who will be tasting the oil?"

"*You* can check it."

"And just how am I supposed to do that? I've only tasted the usual sort of oil. When we made it ourselves, we didn't follow the technological procedures Anastasia recommended. Besides, I'm a smoker."

"For three days before checking the oil quality, you should abstain from smoking and alcohol. And don't eat meats or fats. And you shouldn't talk with anyone for those three days. Then you can check it and determine from the taste whether it is good or an imitation."

"And what do I compare it with?"

"With this."

Whereupon the old fellow put his hand into his canvas bag and drew out a small hollow stick approximately two fingers in width. Another stick protruded from one end, like a cork.

"This is genuine oil. Once you've tasted it, you won't mistake it for anything else. But first let me rid you of what has built up in you from smoking and other quirky habits."

"How are you going to get rid of it? The way Anastasia did?"

"Yes, more or less."

"But she said that only one who loves is capable of eliminating ailments in a loved one with the Ray of Love. And of warming his body, so that even his feet start perspiring."

"With the Ray of Love. Quite correct."

"But you cannot love me. Not the way she does."

"But I love my granddaughter. Let's try it."

"Go ahead."

The oldster screwed up his eyes and began fixing an unblinking gaze on me. I could feel a sense of warmth flow through my body. But quite a bit weaker than what I felt from Anastasia's gaze. Nothing happened. But he still kept trying. To the point where his arms were trembling. I could feel a little more warming in my body, but only a little. Still, the old fellow didn't give up, and I waited. And all at once my

feet broke out into a sweat, after which a feeling of freshness permeated my head, along with fragrances. I could feel the fragrances in the air.

"Ah, we've succeeded," he said, wearily leaning against the back of the bench. "Now give me your hand."

He opened the stick cork and from the hollow stick poured cedar oil onto the palm of my hand. I licked it off with my tongue. The warmth spread across my palate and through my mouth. And I suddenly caught a whiff of the cedar. And it was, indeed, hard to mistake for anything else.

"Think you'll remember it now?" asked Anastasia's grandfather.

"I'll remember. What's so hard about that? I ate potatoes once at the monastery. I remembered that for ages. Twenty-seven years later I still remembered the taste. Only how will people know that it has been checked? That it is genuine cedar nut oil? Right now it's too expensive on the market. For just one gram of the raw oil, diluted with something, they charge thirty thousand roubles.<sup>3</sup> I saw it myself. It's packaged as an import. With prices like that it's all too tempting to sell fakes."

"You're right — money's the master of ceremonies at the moment. We'll have to think of something."

"You see? A dead end."

"Anastasia said that this money can be turned to a good purpose," Grandfather observed. "Let's think of something along that line."

"They've been trying to work out for some time now, for example, how to guarantee the quality of vodka against imitations. But... They've changed the labels and corks, they've come up with excise labels, but all to no avail. There were

<sup>3</sup>*thirty thousand roubles* — approximately US\$6 at the then current exchange rate.

imitations on the market before, and there still are. What with photocopiers and all, any label can easily be copied.”

“What about money, Vladimir — can it be copied too?”

“Money — that’s more difficult to fake.”

“So let’s stick money onto the back side of our bottles, like labels, so that these snivelling bits of paper can actually do some good for once.”

“What d’you mean, stick money on bottles? What kind of nonsense is that?”

“Give me a banknote, please. Any banknote.”

I gave him a 1000-rouble note.

“Well, then, it’s quite clear. You take the note and cut it in half. Stick one half on the box or something else. The other half you hide away in a file. You’ll think of a suitable place. Or put it in a safety deposit box at your bank. You see, on each half of the note there are identical numbers, and so anyone wanting to confirm the authenticity of the oil, can simply verify the number.”

Well, Gramps, I thought to myself, you’ve got a good head on your shoulders. And out loud I said:

“There’s no better defence against imitations. Way to go!”

He laughed. Still laughing, he added:

“So, give me a percentage, too. Come on, cough it up!”

“A percentage? What kind of a percentage? How much do you want?”

“I want everything to be just right,” said the old fellow, all at once serious again. Then he added: “Besides the three percent, take an additional one percent — in kind, as oil already packaged. And offer it for free to whoever you feel you should. Let that be a gift to people from you and me.”

“Right, I’ll do it. You’ve really thought of everything to a T. Way to go!”

“To a T? That means Nastenka will be very happy for us. And my father still thinks I’m lazy. So you think I’ve done a good job?”

“Of course you have!” And we both had another good laugh. And I added: “Tell Anastasia I say you would make an excellent entrepreneur.”

“You mean it?”

“Certainly! You could become one of those ‘New Russians’<sup>4</sup> — and a great one, too!”

“I’ll tell her. And the fact that you’re telling everyone about the cedar nut oil, I’ll pass that along, too. No regrets?”

“What is there to regret? It would be a tiresome process, anyway. I’ll dash off the third book, as I promised, and then I’ll get going with my business again, trade... or something else, something normal.”

<sup>4</sup>*New Russians* — the name given to a class of Russian *nouveaux riches* who acquired considerable wealth after the collapse of the Soviet Union. They were popularly perceived as intellectually limited individuals, notorious for their criminal background, uncultured manners, offensive jargon and ostentatious display of wealth, all of which has given rise to a host of jokes.

## CHAPTER THIRTY TWO

### Title!

(I don't know what to call it; whoever can,  
come up with a title yourselves)

I decided to tell Anastasia's grandfather about my new assistants:

"A lot of articles are now being written about Anastasia. She's being talked about in both academic and religious circles. One production team, made up of very religious and considerate people, offered me a deal to grant them, in return for payment, the exclusive right to interpret and comment on Anastasia's sayings in the mass media. I agreed."

"And for what amount, Vladimir, did you agree to sell them Anastasia?"

The tone of his question and what he was getting at left a rather bad taste in my mouth. And I answered:

"What do you mean, 'sell'? I told them more about Anastasia than I wrote in the book. I told religious people so that they could offer their exclusive comments as well as their explanations of what she said. They want to meet with her. They're even ready to finance an expedition. I agreed. What's wrong with that?"

The old fellow didn't respond immediately. Since no reply was forthcoming, I added:

"They offered me money for an exclusive right — that's the way we do things — people offer services for money. They will earn even more from their publications."

The oldster lowered his head and remained silent for a while. Then, as if thinking things over aloud, he said:

“So, you, in your enterprising way, sold Anastasia and they, assuming themselves to be the most religious and competent people in the world, decided to buy her.”

“Well, that’s a pretty strange way of putting it. So, when it comes right down to it, what did I do wrong?”

“Tell me, Vladimir, didn’t it ever enter your head or the heads of those ‘religious’ people to think of asking, finding out or realising just who Anastasia herself wished to talk to and when — and how? And do people in your world go visiting without so much as an advance request to the host? I don’t recall her asking anybody to visit her.”

“If she doesn’t want to talk with them, she doesn’t have to. She didn’t sign any deal.”

“But *you did!* She is ready to share what she knows with everyone, but it is her right to determine how she’s going to do this. And if she’s chosen to set it forth in a book and with your expression, who has the right to dictate or demand another? She made the choice herself, but somebody wants to change that, and the reason behind the effort to alter her choice is clear. She will not talk with people who put themselves ahead of everyone else. With people whose self-righteousness, she knows, will distort, overturn and adjust to their own way of thinking the truths she holds sacred.”

“Why paint such a dark picture ahead of time? These people are interested in many different teachings. They are very religious.”

“It is they who have determined that they are the most religious of all. Religious self-righteousness is the apex of the most deadly of sins — pride.”

I began to be overwhelmed with an inexplicable sense of anger at myself. I had not yet received payment for the deal and so I was able to break it. And shortly afterward, not seeing anything amiss, I signed another deal with one of the religious centres for the exclusive right to my own interviews.

Once again I was taken in by their considerate attitude and the religious knowledge they displayed. Especially since this deal concerned me alone, and I could do with myself what I pleased. But once again both they and I fell into a trap, and once again it turned out that I had indirectly sold Anastasia, and they had bought her.

And this time it was not Anastasia's grandfather but a Moscow woman journalist who, after reading the new agreement, flustered:

"Boy, how stupid can you get? You've sold Anastasia real cheap. Take a closer look and see what the fine print says. You've signed over the right to others — an exclusive right — to exploit and use as they see fit, over the most powerful information channel there is, everything you said relating to Anastasia. You've denied yourself the right even to question their opinion, no matter what it is."

To what degree that's true it's hard to say. Maybe I'd better cite a few of the points of the agreement here:

*1. Subject of agreement:*

*1.1 The AUTHOR gives exclusive rights to all videotaping of himself, as well as to the use of any other video materials connected directly or indirectly with the production of "Anastasia" television programmes (hereinafter referred to as "programmes"). The abovementioned transfer of rights to the CONTRACTOR extends to all countries of the world.*

*1.2 The CONTRACTOR undertakes, at his own expense, to prepare one copy each of three programmes — of between 30 and 40 minutes each — on a professional BETACAM recorder.*

*1.3 By mutual agreement between AUTHOR and CONTRACTOR, any interaction with video- or film-studios, television (including cable TV), as well as the shooting of any video on any equipment, as well as the use of video materials on the given subject, is to be effected only and exclusively by the CONTRACTOR.*

*While this Agreement is in force the AUTHOR waives the right to give video interviews and prepare any audio materials using the concepts or terms that are in the programmes, either directly or indirectly.*

After analysing all the events connected with the writing, publication and distribution of the *Anastasia* book, I came to the conclusion that people who call themselves “strongly religious” have a dark side which they themselves fear, and thus keep trying to assure others and persuade them of their religiosity. They are probably afraid that people will discover their dark side.

It’s so much simpler with entrepreneurs. Their actions and goals are more open, less obscured, and consequently they are also more honest both to themselves and to those around them, to society. It’s possible I am mistaken. But you can’t get away from the facts.

Three Moscow students keyboarded the text of *Anastasia*. They had no expectations of compensation any time soon. They never talked about any religious matters.

The book was published by the manager of Moscow Printshop Number Eleven, a retired officer by the name of Gennady Vladimirovich Grutsia, at his own expense. The print-run was small and there wasn’t even a thought of breaking even. Grutsia, an entrepreneur, never talked of religious matters either. The next run was paid for by the business manager of the Moscow Publishers’ Clearance House, Yuri Anatolievich Nikitin, but then it turned out he wasn’t dealing in books at the time. He gave me the greater part of the print-run to sell. He set no deadline for getting a return on his investment. And he, too, never talked about religious matters.

And then the ‘religious’ people began putting in their two cents’ worth. And a print-run of 45,000 was released by an underground press. When this ‘religious’ firm was discovered,

they started proclaiming their religiosity and desire to produce bright things, and even promised to pay author's royalties. They still keep promising that. And that's not the only case. 'Religious' people generally seem to be very neglectful of accounts, especially when they're the ones who owe money.

As to the transfer of exclusive rights, I have decided to make it clear on the pages of this book: I shall no longer give exclusive rights for the interpretation of Anastasia's sayings to anybody. And if anybody challenges me on that, let people know that I have not given anything voluntarily!

Why do I say *voluntarily*? The Moscow journalist who helped me break the contract soon became the target of anonymous threats. Who made them? What did they want? What kind of 'religion' do they profess? They support their religion by extortion. Well, I know what the extortion racket is all about; after all there are human beings there too. And I want to warn them: be extra careful around 'religious' people. And before getting into anything, consider calmly and carefully where these 'religious' people are taking you.

There's more. In the first book I wrote that I had invited Anastasia to come to Moscow herself and appear on our TV, but she refused. I couldn't understand why at the time. But now it is clear to me what she foresaw. Even after the book came out, there have been many interpretations of what she said. Many quite different interpretations. Some are interesting, some are controversial, but among others one could clearly trace the desire on the part of certain people to interpret her in a manner that would serve their own interests.

Direct challenges were thrown my way, for example:

"So you think you alone have the right to talk with her?"

"You don't understand everything, let others speak with her, more will come out of it."

But she is not an object to hand over to someone. She is Man! And she herself has the right to decide how she will

act, whom she will speak with and what she will say. Now it's become clearer than ever that Anastasia is really being subjected to attack by a visible and invisible throng of dark forces in the guise of fanatics and self-seekers.

Back in the first book I quoted Anastasia as saying:

"I know what a terrible mass of dark forces will descend upon me... but I am not afraid of them. I will succeed in raising my son. I will succeed in seeing my plan come true. And people will be carried across the dark forces' window of time."

In Anastasia's world they instruct their children up to eleven years of age. In other words, she has at least another ten years she can hold out.

"And then what?" I asked her grandfather. "Is she bound to perish?"

"It's hard to say," the old fellow answered. "They all died quite a bit earlier, compared to her, and more than once she has embarked on a journey foretelling physical death, but each time, at the last moment, the law has flared up — forgotten it may be, but it is still strong enough to overrule anything else. It has illuminated the essence of the truth about earthly existence. And it has caused life to remain in her earthly body."

The old man fell silent and once again, preoccupied in thought, began tracing some sort of symbols on the ground with his stick. I too began thinking, wondering how on earth I got myself involved in a situation like this! But the thing was, I couldn't very well walk away from it now. It might have been possible earlier, but not now, because of the child.

Anastasia had given birth to a son. Even though she'd rather devote herself to caring for the child and raising him, she is not going to abandon her dream — to carry people across the dark forces' window of time. And she will not. Because she's really very stubborn. Someone like her will not walk away.

And who will help her, naïve as she is? If I should renege on my promise, she's got nobody left. She'd go to pieces. And

that's something that should not happen to a nursing mother. She's got to finish her breast-feeding, at the very least. And so I asked her grandfather:

"Is there anything I can do for Anastasia?"

"Try to figure out, for a start, what she's talking about and what she wants. Then aimless wandering will give way to understanding, and a wave of warmth will cheer the heart, and over the world will be unfurled a new dawn."

"Can you make it any more specific?" I asked.

"It's hard for me to formulate it in any more specific way. The whole important thing is sincerity in all. So start by doing what is dictated by your heart and soul."

"She told me about a particular Russian provincial town," I remarked. "Said something about it possibly becoming richer than Jerusalem or Rome. Because all around there are many sacred sites of our forebears. Sites more significant than the temples at Jerusalem. Only the local people do not have sufficient conscious awareness to discern them. I want to go there, and change their conscious awareness."

"That's not something that can be done quickly, Vladimir."

"Well, you see, I didn't know it couldn't be done, and so I promised Anastasia. And there must be some way of bringing about a change."

"Since you didn't know it couldn't be done, you shall change it indeed. More power to you! And now it's time for me to go."

"I'll see you off."

"Don't waste your time. No need to see me off. Think about what you have to do."

The old fellow got up and offered me his hand.

I watched Anastasia's grandfather recede into the distance along the tree-lined boulevard, and thought of my forthcoming trip to the city of Gelendzhik, remembering what Anastasia had told me about it. And it was no mere chance conversation.

## CHAPTER THIRTY-THREE

### Your sacred sites, O Russia!

I asked Anastasia:

“Do your people often come across ringing cedars?”

“Very, very rarely,” she replied. “Perhaps two or three in a thousand years. Right now, apart from this one that has been saved, there is one more, and it can be sawed up and used for its designated purpose.”

“What does that mean: ‘used for its designated purpose’? What is its purpose?”

“The Great Intelligence of the Universe, God, Who created Man and his environment, no doubt had the foresight to give people the opportunity to restore their lost abilities, to use the wisdom accumulated in the non-material world. This wisdom has existed right from the start, but Man’s ability to perceive it has been lost through sinfulness.

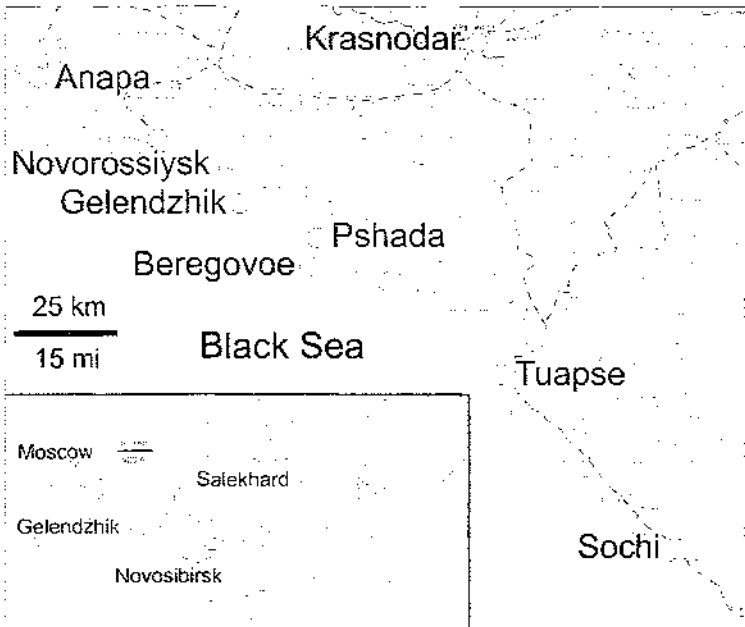

“My grandfather and great-grandfather told you about the ringing cedar and its extraordinary healing properties. What they did not explain was that its pulsations and rhythms are close to that Great Intelligence.

“If they are merged and combined, as it were, with the rhythms already present in many people, then a Man who places the palm of his hand on the warm trunk of a ringing cedar and runs his hand over it as though caressing it, thereby attains the possibility of communicating with the infinite expanse of wisdom. Such a Man is capable of becoming aware of many things in the scope of his thinking at the moment of contact or thereafter. This happens in varying degree with each individual. I am telling you about the highest manifestation.”

With its hundreds of dolmens, Northern Caucasus (Russia) is a region with one of the highest concentrations of preserved megalithic sites in the world. Over the millennia, many of the dolmens were vandalised or destroyed. After Vladimir Megre's *The Ringing Cedars of Russia* raised public awareness of their momentous spiritual importance, millions of people have visited these formerly neglected and forgotten sites. Photos © 2004 by Alexey Kondaurov, Nizhny Novgorod, Russia.

*Above:* eight women employees of *Druzbbba* Sanatorium on a trip to a dolmen near Pshada in the Caucasus mountains, 26 November 1996 (see Chapter 33: “Your sacred sites, O Russia!”). The picture was taken by Vladimir Megré himself as these women were preparing to lay flowers in honour of their distant forebear. *Below:* Vladimir Megré’s photo of Father Feodorit’s church (see Chepter 24: “Father Feodor-it”). Both photos appeared on the inside cover of an early Russian print-run of *The Ringing Cedars of Russia*. © 1996 by Vladimir Megré.

*The One and Only by a Single Line* -- this picture in the private collection of the Trinity-Sergiev Monastery (Sergiev Posad, Russia) is a copy of a famous engraving by Claude Mellan (1598–1688), *Veil of St Veronica* (1649), above. The face of Christ Jesus (“the One and Only”) surmounted by a crown of thorns is executed by a single spiral line in 166 revolutions. For details on Vladimir Megre’s experiences connected with this image, please see Chapter 24: “Father Feodorit” and Chapter 25: “The Space of Love” in the present volume.

The Dachnik Day holiday — honouring the millions of gardeners and celebrating Man's connectedness to the Earth — is now celebrated on 23 July throughout Russia and beyond. Celebrations at the *Rodnoe* eco-village, Vladimir Region, Russia, 2006 (above) and in Licking, Missouri, USA, 2005 (below). Photos © Leonid Sharashkin.

Vladimir Megré arriving at the Ringing Cedars of Russia movement conference held in the city of Vladimir on 5 June 2004. The conference brought together over 400 delegates from 150 eco-villages from all over Russia and beyond. Photo © 2004 by Alexey Kondarov, Nizhny Novgorod, Russia.

“But why does it happen differently? Does the cedar choose to give its power to one person and not to another?”

“Its operation is identical in each case. Its rhythm and vibration are always the same. But some people can tune into it and feel it all to the full, while others detect just a light touch. Many people don’t feel anything at all to start with. But conscious awareness will gradually come even to those without feeling. At least they have a greater possibility of feeling it.”

“I still don’t quite understand what kind of selection takes place.”

“Vladimir, please try to ‘read my lips’: the difference is not in the power of the tree, but in the Man. Hmm... all right, I have found it — an example: *music!* You know, when music is playing... Music too, after all, consists of vibration and rhythm. But some people listen to it attentively, they begin to have feelings from it, sometimes even tears of joy and tenderness. Others listen to the same music but feel nothing, or do not care about listening to it at all.

“The same with the cedar. Only those who are capable of feeling and understanding will hear anything much at all. And this ‘much’ is something that will gradually unfold itself to them. It comes during the moments when Man feels like pondering it.

“Women can gain the strength and wisdom of their pristine origins, they can fulfil their designated purpose and make both themselves and their chosen men happy, as well as their children they give birth to in Love. And here the miracle is not in the cedar, but in human aspirations. The cedar simply assists them — it is not the major contributor to noble deeds.”

“That’s incredible! It’s like some kind of tempting, beautiful legend!”

“You do not believe me? You think what I am saying is only a legend? Why then did you make such an effort to come here

and why were you so eager to have me show you the ringing cedar?"

"Well, I don't think it's *all* a legend. At first I too didn't believe what your grandfather and great-grandfather said about the cedar. Later, after I returned home from the expedition, I read the popular scientific literature and got to know what scientists were saying about its healing properties, and I was struck by the fact that the scientists and the Bible were on the same wavelength. But I never found a hint anywhere of the cedar being used to feel a link with the Great Intelligence or God, as you describe it."

"Either you did not pay close enough attention to what the scientists or the Bible were saying, or you missed the main point — otherwise you would not be doubting my words."

"Then what could I have missed? There are only two references to cedars in the Bible: when God teaches how to treat people with their help, and then how to disinfect one's home."

"But the Bible also talks about King Solomon as one of the wisest rulers that ever lived, one revered by his people. King Solomon, you will agree, is an historical personage — he was no legend."

"So?"

"And the Bible also says that this king built God a temple of cedar, and a house for himself beside it also made of cedar. And in order to get the cedar, he hired more than thirty thousand workers to bring it from another country. And to get the cedars cut down, Solomon asked another king named Hiram to give him people "skilled in felling timber".<sup>1</sup> Getting this cedar cost Solomon twenty cities of his kingdom. Think: why did the wisest of all rulers need to go to such expense and build his temple and house out of material which was less sturdy than what he had on hand already?"

<sup>1</sup>1 Kings 5: 6 (*New International Version*).

“Why?”

“You can find the answer to that, too, in the Bible, where it says: ‘And it came to pass, when the priests were come out of the holy place, that the cloud filled the house of the Lord, So that the priests could not stand to minister because of the cloud: for the glory of the Lord had filled the house of the Lord.’” You can find indirect proofs of this in the works of your prominent scientists.”

“That’s great. Something, I think, I can believe in. It means the cedar will reveal many secrets to people. Show me the ringing cedar that can be sawed up. I’ll bring it to a city with easy access for people from all over the world wishing to touch it.”

“Where will you find a city on the Earth where the inhabitants will not simply desecrate this sacred cedar, but actually ensure its protection and provide a suitable exhibition space and access for visitors?”

“I’ll try to find one. Tell me, why have you concluded that it’s going to be such a difficult task?”

“People’s consciousness today is too bound up with the programmes of the technocratic world. They are becoming biological robots.”

“What kind of biological robots?”

“The technocratic world is structured in such a way that Man keeps on inventing all sorts of mechanical devices and social orders supposedly to make his life easier. But in fact, any saving of labour is an illusion.

“Man himself is becoming a robot of the technocratic world. He never has enough time to contemplate the essence of being or listen to what another is saying, and no time, either, to reflect on his own destiny. He is literally a programmed robot. Here you are seeing everything with your own eyes,

<sup>2</sup>1 Kings 8: 10, 11 (*Authorised King James Version*).

and hearing it with your own ears, and you still find it hard to believe.”

“Anastasia, with me it’s a different story. I cannot call myself a strong believer. I believe... in general. But probably not the same way other people do. In our world right now there are a lot of people who truly do believe. Many read the Bible. They will grasp it immediately they see how much the Bible talks about the cedar. They will believe and take good care of your little piece of cedar.”

“There are different kinds of belief, Vladimir. It often happens that a Man will hold in his hands the Koran, or the Bible, or another book containing the wisdom of the ages, and say that he believes, and even try to teach others, whereas in fact he is simply attempting, as it were, to make a deal with God: ‘Look here, I believe in You. Remember that in case anything happens.’”

“What then *is* belief, or faith?” I enquired. “How should it be expressed?”

“In one’s way of life, in one’s perception of the world, in the understanding of one’s essence and designated purpose, in one’s corresponding behaviour and relationship to the environment, in one’s thinking.”

“So, just believing is not enough?”

“Just believing is not enough. Imagine an army. All the soldiers, down to the last one, believe in their commander. But they do not go into battle. They have such strong faith in him that they trust he will win in any case. So the soldiers sit back and watch as their commander goes up alone against the enemy forces. They sit there in a state of frenzy and call out: ‘Go, go, go! We believe in you, we know you can do it!’”

“That’s no help, Anastasia. You didn’t make a real analogy. Those kinds of absurdities simply don’t happen.”

“Those kinds of absurdities *do* happen in real life, Vladimir.”

“Then give me an example from the concrete realities of our life, and not something made up.”

“Fine. There is a city in Russia called Gelendzhik. It has a noble purpose — to be a place where people can go to relax from their daily grind, a place to meditate and touch sacred sites.

“There are many sacred sites in and around this city, which are more significant than those found in Jerusalem, more significant than the pyramids of Egypt.

“This city could be one of the richest cities in the world. Richer than Jerusalem or Rome. But the city is dying. It is a resort town. All its houses and hotels are becoming empty and decaying. The materialistic consciousness of the local authorities prevents them from seeing the treasures which are capable of making the city flourish. When they talk about the city, they emphasise the sea, the artificial treatment facilities available, and the fact that the local hotel rooms are equipped with bedside tables and fridges. They do not even mention the sacred sites. They know little about them themselves, and do not want to know. Their priorities lie elsewhere.

“There are many people living in this city who call themselves believers. People of many different denominations. Some of them actively engage in proselytising. What faith do they proselytise? With their attitude to their surroundings they have been and still are violating the very commandments contained in their sacred books. In the Bible, for instance, where it says: ‘Love thy neighbour as thyself.’<sup>3</sup>

“But you have to *know* your neighbour before you can love him. You cannot love whom you do not know. But they, the ones who call themselves believers, do not know their neighbours, or even their forebears who lived in that sacred land

<sup>3</sup>Matth. 22: 39 (*Authorised King James Version*).

and left them the inexhaustible treasure of the sacred sites as their legacy. Our ancestors have carried with them over the millennia waves of wisdom and the light of their own soul. Many people call themselves believers yet do not notice what is sacred around them. The sacred sites which have been left them by their ancestors to help them.”

“What kind of sacred sites could possibly be found in a city like that?”

“You see, Vladimir, near the city of Gelendzhik can be found growing the Lebanese cedar mentioned so many times in the Bible. And this living, direct creation of God, talked about so much even before Christ Jesus’ coming to Earth, is located right next to this city. It is only a hundred years old. It is still but a stripling, though already very beautiful and sturdy.

“It has grown there because it was planted by a worthy Man. He was a writer named Korolenko.<sup>4</sup> Thanks to his erstwhile popularity, the cedar has been protected with a surrounding hedge. But today the house where he lived is in a state of decay and people are not paying attention to the tree he planted.”

“And what about the believers?”

“Many of the people in the city who call themselves believers pay no attention either to the tree or the other great sacred sites of their forebears. They are destroying them. And the city is dying.”

“That means God’s punishing them in some kind of vengeance, eh?”

<sup>4</sup>*Vladimir Galaktionovich Korolenko* (1853–1921) — a Russian writer known for his short stories and his autobiographical narrative “The story of my contemporary”. His writings, permeated with ideals of democracy and humanitarianism, were critical of both the tsarist and communist régimes.

“God is good. He is never vengeful. But what can He do when His creations are ignored?”

“That’s amazing! Can such a tree really exist? I must look into that.”

“It exists. And there are many other sacred sites around the city. But people treat them from a technocratic point of view, like the pyramids of the wise pharaohs.”

“What? How do you know about the existence of the Egyptian pyramids?”

“Thanks to generations of my forebears the ability has been preserved within me to communicate with the dimension where thoughts and wisdom reside. This communication gives one the opportunity to learn anything one might wish to know, anything that captures one’s interest.”

“Hold on a moment. Let me test you. Answer me, do you know the *secrets* of the Egyptian pyramids?”

“I do. Just as I know that those who investigated those pyramids were constantly working from a material standpoint. They were basically interested in how they were constructed, the dimensions and relations of the sides to each other, what treasures were hidden inside, what things were to be found there. They considered people living at the time the pyramids were built to be superstitious. They regarded the pyramids only as a means of preserving the pharaohs’ valuables, their bodies, their glory. Thus they distanced themselves from what was fundamental, from what was consciously designed.”

“I don’t understand you, Anastasia. What conscious design where they distancing themselves from?”

Anastasia didn’t speak for some time, staring, it seemed, somewhere off into infinity. And then she began telling her remarkable story:

“You see, Vladimir, way back in ancient times people living on the Earth had the capacity to use wisdom and intelligence far surpassing the abilities of modern Man. People at the time

of the Earth's pristine origins enjoyed ready access to all the information in the entire database of the Universe. This information filling the Universe was created by the Great Intelligence, God. With contributions both from Him and from people themselves — their thoughts. It is so superb that it is capable of answering any question, unobtrusively. The answer would appear instantaneously in the subconscious of the Man asking the question."

"And what did it give these people?"

"These people needed no spaceships for travelling to other planets. All they had to do was wish for it, and they could see what was happening there.

"These people needed no television, telephone or communication wires ensnaring the Earth — not even literacy, since all the information you derive from books they were able to obtain instantaneously by other means.

"These people needed no industries producing medicines or drugs, they could get all the best remedies possible simply by a gentle wave of the hand, since whatever they needed is available in Nature.

"These people needed none of your modern transportation devices. They did not need cars or food-processing complexes, for everything was supplied to them.

"They knew that a change in climatic conditions in one part of the Earth was a signal to them to move to another part, so that the part they were leaving might refresh itself. They had an understanding of the Universe along with their own planet. They were thinkers and knew their designated purpose. They worked to bring the planet Earth to perfection. They had no equals in the Universe. In terms of intelligence they were second only to the Great Intelligence of the Universe, or God.

"Approximately ten thousand years ago, in the human civilisation that then populated what is now Europe, Asia, the

northern part of Africa and the Caucasus, individuals arose in whom the link with the Intelligence of the Universe was partially or wholly deadened. This point marks the beginning of mankind's movement toward a disaster of global proportions. The exact nature of the disaster is immaterial — ecological, nuclear or bacteriological, either as forecast by scientists or foretold allegorically by ancient religions."

"Hold on, there, Anastasia! I don't at all see how the appearance of such 'invalids' can be related to a global disaster."

"Your choice of that modern term *invalids* is very apt. Yes, they were invalids, handicapped people. Now when someone is deprived of sight, what do they need?"

"Someone to guide them."

"And someone deprived of hearing?"

"A hearing apparatus."

"And someone with no arms or legs?"

"Prostheses."

"But there was something much greater that they lacked. They did not have a link to the Intelligence of the Universe. Hence the loss of the knowledge which would help improve the Earth and govern it.

"Imagine what would happen if the crew of a super-modern spaceship suddenly lost ninety percent of their mental capacity. Not comprehending anything, they might start taking apart the panelling and building a fire in the cabin, or pull instruments out of their consoles to use for toys or decoration.

"Well, these people can be compared exactly to a demented crew like that. And these were the people, these were the 'handicapped invalids' who first invented the stone axe, then the spear, then... And it is their thoughts that 'progressed' over time to the invention of nuclear warheads. It is their thoughts that even today continue with incredible stubbornness to tear down already perfect creations and substitute their own primitive artifacts.

“Their descendants started inventing more and more, and in doing so kept tearing apart the super-modern, natural mechanisms of the Earth and creating all sorts of artificial social structures. Then people started fighting with each other.

“These mechanisms, these machines, were incapable of existing all by themselves, like natural ones. Not only could they not reproduce themselves, but they could not restore themselves after a breakdown as a tree can, for example. And then they, the technocrats, required a vast army of workers to service these mechanisms, virtually transforming a segment of the general populace into biological robots. These biological robots, lacking as they do, any individual capacity to learn the truth, very easily lend themselves to manipulation.

“For example, they were all too easily injected, through artificial information media, with the programme ‘We must build communism’ — symbols were created for it, including lapel pins and flags of a certain colour. Then later, through these same media, the programme ‘Communism is bad’ was inculcated in another segment of the populace, and other symbols and colours were brought to the fore. And then these two groups with different programming end up hating each other, right to the point of physical annihilation.

“But this all began ten thousand years ago, at the time of a significant increase in the number of people deprived of a link to the Great Intelligence. Indeed, you could even call them demented, since there was not a single living creature capable of polluting the Earth the way they did.

“In those far-off times a few people were still left who had free access to the wisdom of the Universe. They hoped that when mankind reached the point that the polluted air made it difficult to breathe and the water became dangerous to drink, and all its artificially created life-support systems — technological and social — proved themselves too awkward

and more and more often only led to disastrous imbalances, mankind would start having second thoughts.

“People standing on the edge of an abyss *will* start thinking about what being is all about, they will start pondering the meaning of their existence and purpose. Then many of them will desire to understand the truth of their pristine origins, and this is possible — but only under the absolute condition that the abilities inherent in Man's pristine origins be restored.

“Few of the people who lived ten thousand years ago still possessed these abilities. It was basically those heading up social groups, leaders of tribes. They began — or rather, at their behest people began — to construct special facilities made of heavy stone slabs. These enclosed an interior chamber about one-and-a-half by two metres in area and two metres in height — sometimes more, sometimes less. The slabs were placed at a slight angle, leaning toward the centre at the top. Occasionally these chambers would be hewn out of a single monolith. Other chambers might be hidden underground and covered over by mounds of earth. On one of the walls of the chamber, a cone-shaped opening was cut into the slab, approximately thirty centimetres in diameter and covered with a specially fitted stone plug.

“Into these tomb-chambers would go people who had not lost the ability to communicate with the wisdom of the Universe. Those still alive and even those who might be born thousands of years hence would be able to go to them and obtain answers to any questions that were of interest to Man. This required sitting beside the chamber and meditating. Sometimes the answer would come right away, sometimes after a delay, but it would definitely come, since these structures and those that retreated into them served as an information receiver. Through them it was easier to communicate with the Great Intelligence of the Universe.

“These stone structures are the prototype of the Egyptian pyramids. Only the pyramids do not constitute nearly as powerful a receiver, even though they are far greater in size. Their essence and function, however, is pretty much the same.

“The pharaohs who were buried in the Egyptian pyramids were also thinkers, and at least partially preserved the abilities inherent in Man’s pristine origins.

“But in order to obtain an answer to a question using the pyramids, those still living had to come to the pyramid not individually, but in large numbers. They had to stand along each of the four sides, and direct their physical and mental gaze upward, as though skimming over the pyramid’s oblique sides right to its top.

“There at the top, people’s gazes and thoughts focused on a single point, consequently forming a channel facilitating contact with the Mind of the Universe.

“Even today it is possible to do the same thing and obtain a desired answer. At the focal point of everyone’s mental gaze an energy forms, an energy not unlike radiation. If a measuring device were placed at the top of the pyramid, right at the focal point, it would record the intensity of this energy. The people standing at the base, too, would feel strange sensations.

“Oh, if it were not for the sinful pride of people today, the prevailing public opinion, the false perception that past civilisations were less advanced! People today would then be able to find out the real purpose of the pyramids. With all the attention modern researchers have paid to how they were built, they still have not been able to figure this out.

“And it is all so simple: in constructing the pyramids, apart from physical strength and various pieces of equipment, they always used mental energy to reduce the force of gravitation. Whole groups of people with this kind of an ability would assist the builders. There are people alive today who are able to move small objects with their will.

“But of immeasurably greater significance than the pyramids in terms of contact with the Mind of the Universe were the smaller stone structures which preceded them.”

“Why, Anastasia?” I asked. “Because of the way they were constructed, their shape?”

“Because, Vladimir, *living* people retreated there to die. And their death was a most unusual one. They went into eternal meditation.”

“What do you mean, living people? What for?”

“To create for their descendants the possibility of bringing back the power of their pristine origins. An elderly person — as a rule, one of the wiser leaders or founders of a tribe, sensing his end was near, would ask his relatives and family to place him in a stone chamber. If he were considered worthy, they would grant his request.

“They would push away the heavy massive slab covering the top of the chamber. He would go into the stone chamber and the slab would be pushed back into place. Inside, the Man would be completely isolated from the external material world. His eyes would see nothing, his ears would hear nothing. Such complete isolation, the impossibility of even entertaining a thought about going back, but not yet having crossed into the next world, the deactivation of the usual organs of feeling, sight and hearing, would open up the opportunity for full communication with the Mind of the Universe and the comprehension of many phenomena, as well as of many of the actions of Earth-dwellers. Most important of all, they would be able to subsequently transmit what they had discovered to those still alive, as well as to succeeding generations. Today you would call an approximation of such a state of mind *meditation*. But that is merely child's play in comparison with meditation in eternity.

“Afterward, people would come to this stone chamber, pull out the plug covering the opening, and begin thinking,

mentally consulting with the thoughts lingering in the chamber. The spirit of wisdom was always there.”

“But, Anastasia, by what means can you prove the existence of such structures to those of us living today, let alone the fact that people went into them for ‘eternal meditation?’”

“I can! That is why I am telling you.”

“Then how?”

“It is very simple. After all, these chambers made of stone — they still exist today. Today you call them *dolmens*.<sup>5</sup> You can see them, and touch them. And you can verify everything I have told you.”

“What??? Where? Can you pinpoint their location?”

“Yes, I can. In Russia, for example, in the Caucasus mountains, not far from the cities you now call Gelendzhik, Tuapse, Novorossiysk and Sochi.”<sup>6</sup>

“I can verify that. I’ll make a special trip there. I still can’t believe such things exist. I’ll definitely check to see.”

“Do verify, by all means. The local inhabitants know about them, but they do not pay any attention to them. Many dolmens have already been plundered. People do not understand their true purpose. They do not know about the possibilities they afford for contact with the wisdom of the Universe. Those who have entered into eternal meditation can never be re-embodied in anything material. They have sacrificed eternity for the sake of their descendants, and now it turns out their knowledge and opportunities have gone begging. This has caused them great sorrow and anguish.

“As for proof that in the past living people went into these dolmens to die, this may be confirmed by the position of the

<sup>5</sup>*dolmens* — see Book 1, Chapter 30: “Author’s message to readers”.

<sup>6</sup>*Gelendzhik, Tuapse, Novorossiysk, Sochi* — cities on the eastern shore of the Black Sea.

skeletal bones discovered in them. Some were found in a reclining position, others sitting in a corner or semi-reclining, leaning against one of the stone slabs.

“This fact has been attested by people today. It has been described by your scientists, but they still have not attributed any special significance to it. No serious studies of the dolmens have been undertaken. The dolmens are being laid waste by the local inhabitants. Some of them have been using their stone slabs for construction of new buildings.”

Anastasia sorrowfully lowered her head and fell silent. I promised her:

“I will tell them what you said. I’ll explain everything to them so they won’t go on plundering and laying waste. They won’t mock them any more. They simply didn’t know...”

“Do you think you will manage to convince them?”

“I’ll try. I’ll go to these places and try to explain. I don’t know quite how at the moment. I’ll find these dolmens, pay my respects to them, and explain it all to the people.”

“That would be good. Then, if you are going to those places, please pay your respects to the dolmen in which my foremother died.”

“Astonishing! How do you know that your foremother lived in these places and how she died?”

Anastasia replied:

“How could one not know, Vladimir, how one’s ancestors lived and what they did? How could one not be aware of their desires and aspirations? My ancient foremother certainly deserves to be remembered. All the mothers in my family since then have learnt of her wisdom. And she continues to help me today.

“My foremother was a woman who had perfect knowledge of how to inculcate in her child, through breast-feeding, the ability to communicate with the Mind of the Universe. Even back in her time people were starting to ignore the

significance of this, just as people ignore it today. In breast-feeding an infant the mother should never allow herself to be distracted by random thoughts, but concentrate all her attention on her child. My foremother knew what to think about and how, and consequently wanted to share her knowledge with everyone.

“She was not yet that old when she started asking the leader about being placed in a dolmen. This was because the leader was getting old and she knew his successor would not accede to her request. Women were rarely permitted to go into a dolmen. The old leader revered my foremother and had great respect for her knowledge, and he gave his consent. Only he could not compel any menfolk to push back the dolmen’s heavy stone slab and then reseal it once my foremother had entered. Consequently this task had to be carried out by women, and women alone.

“But nobody comes to visit my foremother’s dolmen any more. People are not interested in what she knows. And she so desperately wanted to share it with everybody. She wanted children to be happy and a joy to their parents.”

“Anastasia, if you wish, I shall go visit this dolmen and ask her how to breast-feed infants — ask her what to think along this line and how. Just tell me where it’s located.”

“Fine, I shall tell you. Only you will not be able to comprehend her response. You are not a nursing mother, after all. You do not know what a breast-feeding mother feels. Only women, nursing mothers, are in a position to understand. Just go to the dolmen, go up to it and touch it. Think some good thought about my foremother — she will like that.”

For some time neither of us said a word. I was amazed at how detailed her explanations were regarding the exact location of the dolmens — enough information for me to subsequently verify, and I was not about to raise any further doubts about their existence. I did ask her, however, to show me

some proof of the possibility of contact with the invisible and still incomprehensible (to me) 'wisdom of the Universe'. To which Anastasia responded:

"Vladimir, if you keep on doubting everything I say, any proof I have to offer will seem incomprehensible and unconvincing to you. And I shall have to spend a great deal of time explaining."

"Don't be offended, Anastasia — it's just that your unusual lifestyle as a recluse..."

"How can you call me a recluse when I have the opportunity to communicate not only with everyone and everything on Earth but with significantly more? So many on Earth are surrounded by utterly lonely people just like themselves. These are real hermit-recluses. It is not that frightening to be alone. It is much more frightening when one is lonely even when surrounded by people."

"But still," I persisted, "if one of our prominent scientists, let's say, could talk about that dimension — the one where, as you say, thoughts produced by human civilisations reside, people would be more inclined to believe than just on your say-so. That's the way people today are — they look to formal science as an authority."

"There are such scientists — I have seen their thoughts. I cannot tell you their names. But no doubt they are renowned scholars by your standards. They have the capacity for prolific thought. You can hunt down the proofs you need when you get back, and compare them with everything I have said."

Upon arriving in the Caucasus, I located the dolmens in the mountains near Gelendzhik. I took some colour photos of them. They knew about the dolmens at the local history museum, only they didn't attach any particular significance to them.

I also managed to find the dolmen where Anastasia's foremother was buried. Paying my respects, I laid flowers on the moss-covered stone portal.

As I looked at the dolmens, I realised that here was visible and tangible proof of Anastasia's words. By that time I had read the account from I Kings<sup>7</sup> in the Bible about King Solomon and his relationship to the cedars of Lebanon. Not being much of a scholar myself, I wasn't about to leaf through a whole lot of scientific works trying to find confirmation of Anastasia's words. But by extraordinary coincidences this young recluse from the remote Siberian taiga seemed to be able to confirm — from a distance — the truth of everything she said, and in the language of modern science. People took it upon themselves to bring or send to me scientific studies dealing with the existence of the Mind of the Universe.

At the beginning of the book I cited the conclusions of two academicians — Vlail Kaznacheev, member of the Russian Academy of Medical Sciences and director of the Institute of Clinical and Experimental Medicine, and Anatoly Akimov of the International Institute of Theoretical and Applied Physics in the Russian Academy of Natural Sciences — published in the May 1996 issue of *Chudesa i prikliuchenia* (*Wonders and adventures*).

<sup>7</sup>See I Kings, Chapters 4–10.

I have been writing this chapter about the sacred sites of Gelendzhik right in the city itself. The text has been keyboarded into the computer by an employee of the *Druzhba* (Friendship) Sanatorium, Marina Davydovna Slabkina. Prior to its publication in the book it was gone over by employees of the sanatorium. And something interesting has happened.

On 26 November 1996 at 10:30 in the morning (Moscow time) an event occurred which did not have any obvious claim to significance, although I am certain that it will prove to be of planetary proportions.

A group of women were making their way toward one of the dolmens in the mountains near the settlement of Pshada<sup>8</sup> in the Gelendzhik district. They were all employees of the *Druzhba* Sanatorium: V.T. Larionova, N.M. Gribanova, L.S. Zvegintseva, T.N. Zaitseva, T.N. Kurovskaya, A.G. Tarasova, L.N. Romanova and M.D. Slabkina.

In contrast to the tourists that sometimes visit these places to admire their natural beauty and gawk at this lonely mountain dolmen, these people, possibly for the first time in a millennium, came to the dolmen for the specific purpose of honouring the memory of their ancient forebear. To honour the memory of a person who lived more than ten thousand years ago. A wise leader of his people who, at his own initiative, was sealed into this stone crypt. Alive, so that over the millennia he could share the wisdom of the Universe with his descendants.

It is difficult to say for just how many millennia his efforts went begging. Traces of our own era's atrocities are seared into the ancient slabs in the form of modern graffiti and the forcibly enlarged aperture in the dolmen's portal. Visitors to

<sup>8</sup>*Pshada* — the name not only of a settlement, but also of a river and its valley. The seventy-plus Pshada dolmens are considered to be the prime examples of megalith architecture in the whole Caucasus.

the dolmen, at least over the past century, have thought little about its significance — about the person buried here, his wisdom, his desire and aspiration to sacrifice his life for the living. This is all eloquently attested in a number of pre-revolutionary as well as more recent monographs I have seen.

Scientists, researchers and archaeologists have been more interested in the dimensions of the dolmen itself, amazed and eager to determine how the multi-tonne slabs were prepared and put in place.

And now... I looked at the women standing by the dolmen with the flowers they had brought to lay at the portal, and thought to myself: How many centuries or even millennia have passed since you last received flowers, O illustrious ancestor?! What does your soul feel now? What is happening this very moment in the astral world? Have you, our distant and yet so close forebears, taken these flowers as the first sign that your efforts were not in vain? And among people today, your descendants, there is an aspiration toward living one's life with greater conscious awareness. These are but the first flowers. No doubt there will be more and more. But the first ones are the most desirable, and you will be helping those who are now living attain the wisdom of the Universe and the conscious awareness of being. You are our distant forebears.

Participants in this visit to the dolmen included the sanitary inspector of the Gelendzhik health service E.I. Pokrovsky. He had been invited by Valentina Larionova, in her capacity as local tour guide and museum curator, to accompany them and measure the dolmen's radioactivity.

Ms Larionova told me that once on an excursion she had led to this dolmen, a tourist had brought along a Geiger counter, which had showed a significant level of radiation. This individual later took her aside (so as not to alarm the other tourists), showed her the counter and told her about the presence of radioactivity at the dolmen.

This time the health service inspector had brought along a fairly accurate radiation meter in its own special case. He began measuring radiation levels even before we got close to the dolmen, and continued his readings right up to the dolmen itself and even inside.

While Ms Larionova was giving her talk to the group of women, I was seized by the fear that now this medical inspector would announce the results of his measurements for all to hear, and as this would not just be a tourist's observation, but an official conclusion, people might stop coming to visit the dolmen once they learnt of the elevated radiation levels.

Anastasia had told me that this radiation-like energy could come and go. It was controllable and could have a beneficial effect on Man. But how would we, people of the modern world, look upon the opinions of this (let's admit) not very typical woman, in contrast with the affirmations of modern science and facts established by modern scientific equipment — especially concerning radiation, which Man is so fearful of today?

Oh God, I thought, poor Anastasia! She wanted so much, after all, for people to take a different attitude, a more thoughtful attitude toward these ancient, extraordinary burial places of our ancestors. And now there would be an official pronouncement. Even in the best case, it would mean no more visitors to the dolmens. In the worst case they might be destroyed altogether. People wouldn't even use them any longer for construction as they had done before. But if this Mind of the Universe really exists, if Anastasia can use it so freely, then they'd better come up with something, at least.

Pokrovsky approached the group of employees standing by the dolmen and announced the readings on the meter. They were most extraordinary. I felt overwhelmed — first with amazement, and then with joy. According to the readings, the closer one got to the dolmen, the more the Earth's background radiation... decreased!

This was all the more remarkable since, on its way to the dolmen, our group had passed through areas of elevated radioactivity. One would have expected the people standing at the dolmen — their clothing, shoes, etc. — to have retained traces of this radiation. But, in spite of this, the measuring device still showed decreased levels. It was as though an invisible someone had said: “Do not be afraid of us, people. We are your distant forebears. We wish you well. Take our knowledge, children!”

And all at once I realised — Anastasia! This phenomenon must be attributable directly to her. Yes, definitely to her. Even though she was thousands of kilometres away, she had drawn an invisible line across the millennia, linking those living today with an ancient civilisation, thereby causing a surge in people’s consciousness of an aspiration toward good. Even if it were just among a small group of people, it was still a beginning. And it was something absolutely real, since here in front of me was a real dolmen, and here were real and tangible women, and real flowers that they had brought.

According to scientific literature, dolmens are to be found near Tuapse, Sochi and Novorossiysk, as well as in England, Turkey, North Africa and India. This points to the existence of an ancient civilisation with a single culture, whose members could communicate over vast distances. As Anastasia’s information reaches more and more people, their attitude toward whatever other dolmens have been preserved will no doubt change.

This is evidenced by the reaction of the people of Gelendzhik. Indeed, the world’s first excursion to a dolmen following Anastasia’s amazing revelations about them took place at Gelendzhik, led by Valentina Larionova, “the luckiest and happiest woman alive”, as she describes herself. And here was a woman with thirty years’ experience as a tour guide, and a member of the Gelendzhik city council to boot.

But that's not all. Under Ms Larionova's guidance, a group of local historians began comparing already known facts; they spoke with long-term residents of the area and read biographies of saints, all of which enabled them to confirm the existence in the Gelendzhik environs of the sacred sites Anastasia had spoken of. These were unique sacred sites of Russia, most of which were not even mentioned in a single tourist brochure. They included the Lebanese cedar, St Nina's mountain, a monastery and the Sacred Hand Springs.<sup>9</sup> People who are healed there tie a cloth ribbon around a tree.

In the Gelendzhik area a church is now being restored. A branch of the Trinity-Sergiev Monastery is under construction. I observed all this and thought to myself: Look at all these sacred sites in just one small corner of Russia! Springs of healing waters. And here Russians are traipsing off to the ends of the earth to worship other people's gods. How many still forgotten sacred sites are waiting to be discovered in other parts of Russia? And who will discover them?

I've done what I can. It's a pittance, of course, but at last it has given me some hope that Anastasia will show me our son. So, armed with rompers, toys and baby food, I set off for the Siberian taiga to once again see Anastasia and meet my son.

*To be continued...*

<sup>9</sup>*Sacred Hand Springs* — the reference here is to five springs which merge at one point to form the shape of a hand.

## In Anastasia's Ray

### *Editor's Afterword*

Taking advantage of the frosty weather which had put a nearby lake under a thick shield of ice, I spent a Sunday afternoon skating with my daughter. The sky was overcast and a chilly north wind was blowing, but layers of winter clothing and energetic movement kept us warm. The same day, 26 December 2004, a local newspaper reported temperatures below 10°F (-12°C) and featured an article on ice fishing.

Five days later, on New Year's Eve, we were having tea on the porch of our house, basking in the Sun's hot rays and watching our daughter in her summer dress smelling yellow dandelions and feeding honey to a bee that had joined our meal. After breakfast we went for a walk by the lake, only to discover no traces of ice whatsoever. The Sun's heat was so intense that the temperature in the shade climbed to 65°F (18°C) and a new and historic record high was set. The newspaper printed photographs of residents of Columbia, Missouri, wearing shorts and T-shirts, enjoying the outdoors on 31 December 2004, and commented on the "unseasonably warm weather".

And then I remembered the words Anastasia had addressed to Vladimir Megré nine years earlier:<sup>1</sup>

I am making it happen.... Can you not feel the gentle touch of the breeze, feel its caressing embrace? And the warm touch of the Sun's glistening rays on your face? Can you

<sup>1</sup>Book 2, Chapter 25: "The Space of Love" (my italics).

not hear the birds singing so cheerfully and the leaves rustling on the tree you are sitting under?... *Love dissolved in Space for one can touch the hearts of many.*

I could not hear any rustling of leaves since it was the middle of winter, but the warm breeze, the bird songs and the Sun's generous warmth were very real indeed. Anyone who witnessed this unique outpouring of sunshine in the middle of the Midwest winter could not help but sense something unusual in the air, but I felt I knew something special about the *cause* of this sudden weather change. It was on this day, 31 December 2004, that the English translation of *Anastasia* was completed, and it seemed as if Nature were rejoicing at the birth of the book, the same way it had celebrated the birth of Anastasia's son with a warm sunny day, pushing away the icy grip of the Siberian winter in 1996.

A few days later, when the *Anastasia* text was laid out and sent to the printer, the cold returned and newspapers were replete with stories of ice storms and snowfalls, but the feeling of a great accomplishment lingered, to take embodiment first in the printed book, then in the e-mails and telephone calls of its initial readers. Here is one e-mail I received:

A friend gave me the book *Anastasia*. I read it today outdoors while the sun shone warmly and the birds sang sweetly. My heart knows such an essence as her spirit and I am still basking in the glow of the presence....

After reading that Anastasia suffered a loss in strength after helping someone, I decided to send her distant *reiki*.<sup>2</sup> I

<sup>2</sup>*reiki* — a technique of holistic healing combining elements of spiritual healing, meditation, balancing of energies, homœopathy and other approaches. The healing process involves transfer of energy (*reiki*) from the practitioner to the patient. While *reiki* practitioners usually use hands to channel the energy, it can also be accomplished at a distance by mental concentration.

know from experimenting with my kids that it has a healing effect. Immediately after sending the distant *reiki* I 'heard' her say 'thank you'. Today I sent her distant *reiki* again. Soon after I was finished, I began smelling the sweetest scent of a flower, and the scent went into all my sinuses. My sinuses feel different now. I feel such an inexpressible feeling of love and joy. It is like being in love, but in a totally different way. If you were here right now I would hug you and let you feel it. Thank you for this sweet and precious gift.

Even as this and other heart-warming messages showed me that the book is producing the same response among English-speaking readers as in other parts of the world, I was still wary of the welcome the translated edition of *Anastasia* would receive in professional and academic circles. But the first impressions shared with me by its early readers — students of psychology, Russian literature, forestry, ecology, sociology and philosophy — are most encouraging. One scholar, after reading just the first chapter, asked me if she could have a pendant of cedar wood...

Dr Richard Bolstad, a psychologist from New Zealand and author of *RESOLVE: a new NLP model of therapy*,<sup>3</sup> was quick to recognise the value of the book for his professional field and described the Ringing Cedars Series as "ecological common sense and profound wisdom delivered with love, a unique Russian gift towards the needed healing of the whole planet and the creation of space for love in our lives".

Steven Foster, the 'Echinacea guru', one of the leading experts on medicinal plants in North America, author of *A field guide to medicinal plants and herbs*<sup>4</sup> and other books, after

<sup>3</sup>Williston (Vermont), USA & Carmarthen, Wales: Crown House, 2002.

<sup>4</sup>Several volumes in the Peterson Field Guide Series, published by Houghton Mifflin, New York.

sharing many of his personal experiences corroborating Anastasia's sayings about the spiritual link between Man and Nature, had this comment about the Series:

The Ringing Cedars Series will impact a new generation of readers, like the works of Carlos Castaneda did for a previous generation — only this time through awakening the latent spiritual connection each of us has with nature. This is not about a walk in the woods, rather these books catapult us to an entirely new way of being on planet Earth.

I also discovered from informal talks with my colleagues that many foresters have psychic experiences in the forest, but keep silent for fear of being ridiculed by their peers. One colleague who manages thousands of acres of forest in the Ozarks confessed to me in a private conversation that when marking trees to be felled he communicated with the Intelligence governing the trees and had a deep reverence for the Life manifest in them.<sup>5</sup>

I am all the more happy to hear these accounts in view of the fact that they are a sincere expression of readers' actual feelings, rather than a formulation developed by a well-paid marketing specialist and put into the mouths of celebrities, as often happens in current practice in the publishing industry. These and all other reviews of the Ringing Cedars Series I have received are genuine, they come straight from the heart.

One of the faculty members at the University of Missouri surprised me by saying he already knew about *Anastasia* and the impact these books were producing around the world.

<sup>5</sup>He therefore removes only the *least* healthy and vital trees, leaving the best ones to grow — the opposite of the destructive forestry practices prevalent over the last century.

It turned out he had learnt about the Ringing Cedars Series from his aunt who lived in Germany and had read the best-selling German translation. He said she had been so greatly impressed by the books that she would call him from Germany and read entire chapters, in German, over the telephone. This story made me wonder as to how many aunts call their nephews on the other side of the globe to read a chapter from a book they particularly liked. Not very many, I would imagine. Which means a book that does elicit such a response must certainly possess a power to set hearts aflame, regardless of the language in which it is read.

I became even more confident about the Ringing Cedars' power to transcend national boundaries after I received the following message from Europe from Nara Petrovic, editor of the Slovenian translation of the Series. This is what he wrote:

Without any advertisement the book became a best-seller mainly by readers spreading the news from mouth to mouth. In many libraries the waiting lists were soon getting longer and longer and in bookstores the sales were very good....

Thousands of readers in Slovenia and Croatia are more than enthusiastic about the books. Whoever has read the books and has a vegetable garden was compelled — even out of sheer curiosity — to try out the ideas explained in the first book. And when I spoke to people they confirmed that everything works. One man even called us and told us that he had made a beehive according to Anastasia's detailed instructions and was amazed at how well it worked.

One of the publisher's relatives spent a lot of time in his garden even before he read the books. He loved to work in the garden and thus had cultivated very healthy and tasty crops. But after he implemented Anastasia's instructions

the tomatoes and some other vegetables yielded so well that all of his relatives and friends were surprised by the tastiest vegetables they'd ever eaten.

One lady who lives near my city planted pumpkins for the first time in her garden according to Anastasia's instructions. That year there was a great drought. All her neighbours' gardens were dry, with very little vegetables, while the pumpkins in *her* garden were huge, although she took almost no care of them.

I also have accounts of people in North America who — after either reading the Russian version or learning about Anastasia's ideas from their Russian friends — have followed her advice on gardening to obtain remarkable results. This is very encouraging. In the light of how all the 'incredible' revelations of the Series have been playing out in real life, there is no escaping the fact that

Your dream, Anastasia, is entering upon our world, and it really seems as though our world is beginning to change. There are certain people who feel and understand you — they show evidence of new strength coming from somewhere, and that is changing the world. The world is becoming just a little better.<sup>6</sup>

In this English-speakers are no different from other readers that embraced Anastasia's ideas earlier: "The book you have written will circulate all over the world and... it will give you and others a power greater than mere physical or material strength."<sup>7</sup> The only difference is that in Russia and other

<sup>6</sup>Book 2, Chapter 25: "The Space of Love".

<sup>7</sup>Book 2, Chapter 26: "Anastasia's grandfather".

countries the dream has been unfolding for a number of years now, while America, along with the rest of the English-speaking world, is at the very beginning of this radiant path which it may now choose to follow. Wes Jackson, a well-known proponent of ecological approaches to agriculture in the United States and director of the Land Institute, has passionately argued in his writings that there is no other possible way of development for this country but a return to the land. What if he is right and there is indeed no other way? Then it is probably not by chance that two of the central chapters in Vladimir Megré's eighth book, *The new civilisation*, convey Anastasia's vision of *America's* future. A beautiful one.

Even as my family are now packing up, getting ready to move from Columbia to a small farm lost amidst the beautiful Ozark mountains — with an aspiration, apart from continuing work on the Ringing Cedars Series, to *live* their ideas in real life — I have an ever-growing feeling of awe at the clear realisation that what Anastasia dreamt about is already coming to pass in America as well. *It is coming to pass.*

Within the two months since *Anastasia* was published in English there have already been two artistic performances of dance and song inspired by her. The dancer — a young breast-feeding mother and a future midwife — told me how her heart had instantly felt and accepted Anastasia's essence as her own, and how she now feels her presence and support on the path she is following. She told me she felt herself simply overflowing with the energy of Love and wanted to share it with everybody. Then, as she described her captivating dance and song as 'butterfly women', I stared at her in awe, experiencing a strange sensation in my heart and head.<sup>8</sup> The remarkable thing is that I have a large painting by Alexander Razboinikov (who designed the cover art for the Series) hanging on the wall in my home. This painting — called *The butterfly dance* — depicts Anastasia dancing in a whirlwind of

butterflies and is inspired by Book 3, *The Space of Love*, which has not been translated as yet!

But *The Space of Love* is being translated and is scheduled to see the light on 23 July 2005, a day on which 'Dachnik Day' and an 'All-Earth holiday' will be celebrated in America for the first time, true to Anastasia's promise: "This holiday will indeed begin in Russia. But then it will become the most fantastic holiday for the world as a whole".<sup>9</sup>

And then, "a wave of warmth will cheer the heart, and over the world will be unfurled a new dawn".<sup>10</sup> I can already see the twilight of this dawn. And I know that I am not the only one who does.

Columbia, Missouri, U.S.A.

Earth Day (22 April 2005)

Leonid Sharashkin

---

<sup>8</sup>At that moment I could very well relate to Vladimir Megré's feelings — described in the first chapter of this volume — as he witnessed the unfolding of Anastasia's dream and watched readers expressing in art the images and scenes from his taiga experience which had not yet been described in the books.

<sup>9</sup>Book 2, Chapter 9: "Dachnik Day and an All-Earth holiday!".

<sup>10</sup>Book 2, Chapter 32: "Title!".

## ABOUT THE RINGING CEDARS SERIES

*Anastasia*, the first book of the Ringing Cedars Series, tells the story of entrepreneur Vladimir Megré's trade trip to the Siberian taiga in 1995, where he witnessed incredible spiritual phenomena connected with sacred 'ringing cedar' trees. He spent three days with a woman named Anastasia who shared with him her unique outlook on subjects as diverse as gardening, child-rearing, healing, Nature, sexuality, religion and more. This wilderness experience transformed Vladimir so deeply that he abandoned his commercial plans and, penniless, went to Moscow to fulfil Anastasia's request and write a book about the spiritual insights she so generously shared with him. True to her promise this life-changing book, once written, has become an international bestseller and has touched hearts of millions of people world-wide.

*The Ringing Cedars of Russia*, the second book of the Series, in addition to providing a fascinating behind-the-scenes look at the story of how *Anastasia* came to be published, offers a deeper exploration of the universal concepts so dramatically revealed in Book 1. It takes the reader on an adventure through the vast expanses of space, time and spirit — from the Paradise-like glade in the Siberian taiga to the rough urban depths of Russia's capital city, from the ancient mysteries of our forebears to a vision of humanity's radiant future.

*The Space of Love*, the third book of the Series, describes author's second visit to Anastasia. Rich with new revelations on natural child-rearing and alternative education, on the spiritual significance of breast-feeding and the meaning of ancient megaliths, it shows how each person's thoughts can influence the destiny of the entire Earth and describes practical ways of putting Anastasia's vision of happiness into practice. Megré shares his new outlook on education and children's real creative potential after a visit to a school where pupils build their own campus and cover the ten-year Russian school programme in just two years. Complete with an account of an armed intrusion into Anastasia's habitat, the book highlights the limitless power of Love and non-violence.

*Co-creation*, the fourth book and centrepiece of the Series, paints a dramatic living image of the creation of the Universe and humanity's place in this creation, making this primordial mystery relevant to our everyday living today. Deeply metaphysical yet at the same time down-to-Earth practical, this poetic heart-felt volume helps us uncover answers to the most significant questions about the essence and meaning of the Universe and the nature and purpose of our existence. It also shows how and why the knowledge of these answers, innate in every human being, has become obscured and forgotten, and points the way toward reclaiming this wisdom and — in partnership with Nature — manifesting the energy of Love through our lives.

*Who are we?* — Book Five of the Series — describes the author's search for real-life 'proofs' of Anastasia's vision presented in the previous volumes. Finding these proofs and taking stock of ongoing global environmental destruction, Vladimir Megré describes further practical steps for putting Anastasia's vision into practice. Full of beautiful realistic images of a new way of living in co-operation with the Earth and each other, this book also highlights the role of children in making us aware of the precariousness of the present situation and in leading the global transition toward a happy, violence-free society.

*The book of kin*, the sixth book of the Series, describes another visit by the author to Anastasia's glade in the Siberian taiga and his conversations with his growing son, which cause him to take a new look at education, science, history, family and Nature. Through parables and revelatory dialogues and stories Anastasia then leads Vladimir Megré and the reader on a shocking re-discovery of the pages of humanity's history that have been distorted or kept secret for thousands of years. This knowledge sheds light on the causes of war, oppression and violence in the modern world and guides us in preserving the wisdom of our ancestors and passing it over to future generations.

*The energy of life*, Book Seven of the Series, re-asserts the power of human thought and the influence of our thinking on our lives

and the destiny of the entire planet and the Universe. It also brings forth a practical understanding of ways to consciously control and build up the power of our creative thought. The book sheds still further light on the forgotten pages of humanity's history, on religion, on the roots of inter-racial and inter-religious conflict, on ideal nutrition, and shows how a new way of thinking and a lifestyle in true harmony with Nature can lead to happiness and solve the personal and societal problems of crime, corruption, misery, conflict, war and violence.

*The new civilisation*, the eighth book of the Series, is not yet complete. The first part of the book, already published as a separate volume, describes yet another visit by Vladimir Megré to Anastasia and their son, and offers new insights into practical co-operation with Nature, showing in ever greater detail how Anastasia's lifestyle applies to our lives. Describing how the visions presented in previous volumes have already taken beautiful form in real life and produced massive changes in Russia and beyond, the author discerns the birth of a new civilisation. The book also paints a vivid image of America's radiant future, in which the conflict between the powerful and the helpless, the rich and the poor, the city and the country, can be transcended and thereby lead to transformations in both the individual and society.

*Rites of Love* — Book 8, Part 2 (published as a separate volume) — contrasts today's mainstream attitudes to sex, family, childbirth and education with our forebears' lifestyle, which reflected their deep spiritual understanding of the significance of conception, pregnancy, homebirth and upbringing of the young in an atmosphere of love. In powerful poetic prose Megré describes their ancient way of life, grounded in love and non-violence, and shows the practicality of this same approach today. Through the life-story of one family, he portrays the radiant world of the ancient Russian Vedic civilisation, the drama of its destruction and its re-birth millennia later — in our present time.

*To be continued...*

**THE AUTHOR, Vladimir Megré**, born in 1950, was a well-known entrepreneur from a Siberian city of Novosibirsk. According to his account, in 1995 — after hearing a fascinating story about the power of ‘ringing cedars’ from a Siberian elder — he organised a trade expedition into the Siberian taiga to rediscover the lost technique of pressing virgin cedar nut oil containing high curative powers, as well as to find the ringing cedar tree. However, his encounter on this trip with a Siberian woman named Anastasia transformed him so deeply that he abandoned his business and went to Moscow to write a book about the spiritual insights she had shared with him. Vladimir Megré now lives near the city of Vladimir, Russia, 190 km (120 miles) east of Moscow. If you wish to contact the author, you may send a message to his personal e-mail [megre@online.sinor.ru](mailto:megre@online.sinor.ru)

**THE TRANSLATOR, John Woodsworth**, born in Vancouver (British Columbia), has over forty years of experience in Russian-English translation, from classical poetry to modern short stories. Since 1982 he has been associated with the University of Ottawa in Canada as a Russian-language teacher, translator and editor, most recently as a Research Associate and Administrative Assistant with the University’s Slavic Research Group. A published Russian-language poet himself, he and his wife — Susan K. Woodsworth — are directors of the Sasquatch Literary Arts Performance Series in Ottawa. A Certified Russian-English Translator, John Woodsworth is in the process of translating the remaining volumes in Vladimir Megré’s Ringing Cedars Series.

**THE EDITOR, Leonid Sharashkin**, is writing his doctoral dissertation on the spiritual, cultural and economic significance of the Russian *dacha* gardening movement, at the University of Missouri at Columbia. After receiving a Master’s degree in Natural Resources Management from Indiana University at Bloomington, he worked for two years as Programme Manager at the World Wide Fund for Nature (WWF Russia) in Moscow, where he also served as editor of Russia’s largest environmental magazine, *The Panda Times*. Together with his wife, Irina Sharashkina, he has translated into Russian *Small is beautiful* and *A guide for the perplexed* by E.F. Schumacher, *The secret life of plants* by Peter Tompkins and Christopher Bird, *The continuum concept* by Jean Liedloff and *Birth without violence* by Frederick Leboyer.

## ANASTASIA'S CALL

*by Eric Dane Mansfield*

My dear,  
why are you so sullen and sad?  
For that is not your place.  
Come and *listen* to the call,  
to *see* your *original* face.

Dear, all your struggle, and your pain  
is *because* you have forgotten your name,  
and your own divinity.  
Yes, you *are* the living trinity,  
*I-Is-We*,  
the One *as* three.  
This is *where* your sovereignty *lives*,  
and peace is what dominion *gives*.

There is a voice,  
*calling* from the very depths of Nature.  
There is a guide,  
that will lead us away from *disaster*.  
A voice that echoes true,  
for she speaks only of *Reality*.  
And her mind is not clouded  
by the obscured *views* of duality,  
and its *images* of illusion.  
She *is* living the *solution*,  
and *showing* as she calls  
to each from within the forested walls  
of her love inspired *domain*.

Is it Christ, Buddha, Krishna?  
Yes, Anastasia is her *name*.

She is the *God-Mother* of joy,  
and peace is her constant companion.  
She awaits your response.  
She supports your *return*,  
to the *ways* of Veda,  
to the *Way* of Love.  
For Anastasia has *risen above*  
the lies and games of self delusion.  
Hers is the way of *total inclusion*,  
and she does not falter.

She is not *special*, or distinct.  
She simply *knows how* to think  
purely, and she *lives as Man*.  
Co-creation, *as-is*,  
that is her simple *plan*.

Consecration and devotion  
to the *standard* of Truth,  
if you *answer* to her call  
your life will *be the proof*.  
That all she says,  
and all she *is*  
you are able to *be*.

See, Anastasia is our Self  
living *completely free*.

April 2007

## ANASTASIA'S WORTH IS OURS

by Eric Dane Mansfield

When I came to the forest  
to discover my Self,  
and repair the *broken* Earth.  
I first glimpsed Her  
atop a golden tree.  
Yet, I *knew not* of her worth.

For to *value* what is *unknown*  
is to wander away from ego's *home*,  
and I was not yet *ready*.  
Yet, my inner pace remained steady.

And so many years later on  
I began to *hear* her silent song  
of Love for all,  
as All *is* Love.

She sits atop the trees *above*  
because she has transcended lies.  
And the light she offers up so freely  
*gives* illumination to our skies.

For she *is* Advaita alive, here come.  
She is a *living* Veda, holy song *already* sung,  
and she calls to those who hear,  
"Come and join me, have no fear".  
"For we will *remain* in the forests of joy,  
to plant gardens, raise children, as I, my boy".

For knowing *how* to live aright  
shall *end* this lingering, hopeless night

Where darkness *claims* powers of destruction.  
Yet, where Light *already created*,  
no construction shall stand.  
For from *beyond* the temporal realm  
*comes* this illuminated Man.  
Anastasia, captain at the helm,  
her course *true* to the divine plan  
of inclusion, co-operation, contemplation.  
See there's no *room* for condemnation  
of Truth *set* in stone.

Living *as* All,  
come with her and trust  
that you shall not fall.  
For Anastasia is *with* us.  
So stop, and listen do not fuss,  
or fight about life.  
*Accept* Anastasia  
as your wife.  
For she *is* your Self,  
for she *is* your Self.

April 2007

A vibrant, detailed illustration of a forest scene. In the center, a woman with long blonde hair, wearing a white dress, is kneeling and looking towards a young child. The child is sitting on the grass, reaching out to touch the beak of a large brown hawk. A large brown bear stands behind the child, looking towards the woman. The forest is filled with green foliage, including birch trees, ferns, and various flowers. Two butterflies are visible: one brown and white on a tree branch in the upper left, and one purple and orange on a fern in the lower right. Sunlight filters through the trees, creating a warm, golden glow.

Anastasia herself has stated that this book consists of words and phrases in combinations *which have a beneficial effect on the reader*. This has been attested by the letters received to date from thousands of readers all over the world.

If you wish to gain as full an appreciation as possible of the ideas, thoughts and images set forth here, as well as experience the benefits that come with this appreciation, we recommend you find a quiet place for your reading where there is the least possible interference from artificial noises (motor traffic, radio, TV, household appliances etc.). *Natural sounds*, on the other hand — the singing of birds, for example, or the patter of rain, or the rustle of leaves on nearby trees — may be a welcome accompaniment to the reading process.

Ringling Cedars Press is an independent publisher dedicated to making Vladimir Megré's books available in the beautiful English translation by John Woodsworth. Word of mouth is our best advertisement and we appreciate your help in spreading the word about the Ringling Cedars Series.

## CHAPTER ONE

### Just another pilgrim

There she is! Again before mine eyes flows that mighty Siberian River, the Ob. I had finally reached the settlement where regular passenger service stopped, and was standing on the riverbank. In order to continue my journey to the spot where I could begin my trek through the taiga to Anastasia's glade, I would have to hire a small motorboat. Beside one of the many boats tied up along the shore three men were laying out some fishing tackle. I said hello to them and mentioned I was ready to pay good money for transport to such-and-such a place along the Ob.

"That's Yegorych's department. He charges a half-million roubles<sup>1</sup> for the trip there," answered one of the men.

I was concerned right off when I heard that someone here was already making passenger runs to the tiny Siberian village hidden way up north in the taiga. It was only twenty-five kilometres from there to Anastasia's glade. And the prices they were charging! It meant there must be takers. Demand creates a price like that. However, bargaining was something one did not do in the North, and so I asked:

"And where do I find this Yegorych?"

"He's somewhere in the settlement. Most likely at the store. See over there where the little tykes are playing — that's his boat. His grandson Vasya's with them. He'll run and fetch him — go ask him."

<sup>1</sup>*a half-million roubles* — approx. US\$100 at the then current exchange rate — an exceptionally high price, roughly equivalent to an average Russian's monthly income.

No sooner had I greeted Vasya, a bright-looking lad of twelve or thereabouts, than he started rattling off:

"So, you need to go there? To see Anastasia? Wait just a moment! I'll go call my gramps in a sec!"

Without waiting for an answer, Vasya went dashing off to the settlement. I realised quite clearly he didn't need an answer. It was apparent that any strangers in these parts, in Vasya's opinion, had but one goal in mind.

I made myself as comfortable as I could by the riverbank and began to wait. There being nothing else to do, I stared at the water and drifted into thought.

The River was a good kilometre across at this point. Here amidst the boundless taiga (which you couldn't see the whole of even from an airplane), the River had been flowing on down through the centuries. What had it carried away of the past without leaving so much as a trace? What do these Ob waters remember from those times? Perhaps they remember how Yermak,<sup>2</sup> the 'conqueror of Siberia', pressed by his foes with his back against the River Ob, single-handedly tried to repel an enemy attack, and how his blood from a fatal wound seeped into the River, which then carried off his enervated body to goodness-knows-where... What did Yermak in fact conquer? Perhaps his deeds weren't that much different from the racketeering that goes on in modern times. Probably it is only the River that is in a position to judge today.

Or perhaps of greater importance to the River may have been the raids of Genghis Khan's troops? In ancient times his Horde was considered great indeed. There is a regional centre near Novosibirsk today known as Ordynskoe, which

<sup>2</sup>*Yermak* (a.k.a. Yermolai Timofeevich, 1540?-1585) -- a Cossack *ataman* (chieftain), credited with heroic exploits in his campaign to open up the Siberian wilderness to Russian civilisation. In early August 1585 he was killed in a battle against the Tatar Khan Kuchum on the River Ob.

includes a village called Genghis. Perhaps the River remembers how Genghis' hordes retreated with their plundered booty, how they seized a young Siberian maiden, while a mighty vizier, starry-eyed with love, eloquently begged her to go with him of her own free will, with no resistance. The maiden remained silent, her eyes lowered. All the soldiers under the vizier's command had already fled, while he stayed and kept courting her with loving words. Finally he tossed her up onto the back of his steed along with a bag of gold, leapt into the saddle and made full speed for the banks of the Ob to escape his pursuers.

They began to catch up to him. The vizier started throwing the gold at them, and when the bag was empty he began tearing off his precious medals he had been awarded for conquering various lands and throwing them on the ground under his pursuers' feet, but he did not relinquish the maiden. With frothing mane the steed carried him to the canoes at the shore of the Ob. The vizier carefully helped the maiden down from his steed and seated her in one of the boats. Then he jumped in himself. But as he was poling the boat away from the shore he was pierced by an arrow from the pursuing forces right behind them.

The current began to carry the boat downstream. The wounded vizier lay near the stern, not even aware of the three large rowing canoes filled with soldiers coming ever closer. He looked tenderly at the maiden sitting calmly and quietly beside him, and fell silent himself — he had no strength left to speak. And the maiden looked at him, and then, with a glance at the overtaking canoes, she smiled faintly at them (or maybe at something else), tore the ropes off her hands and threw them into the water. Then this young Siberian maiden took to the oars. And none of the pursuer's craft could catch up to the boat carrying her and the wounded vizier.

To what place and into what age did the River current carry them? And what might the muddied waters of the River be carrying off at this moment in their memory of us?

Perhaps, dear River, you consider our big cities to be important? A huge city, Novosibirsk,<sup>3</sup> stands on the banks of the Ob, closer to its source in the south. Can you feel its great size and majesty, dear River? Of course, there's no doubt you would have a great deal to tell about it — you would say it pours a lot of pollution into you so that your once life-giving waters are no longer drinkable. But what can we do about it — where are we going to channel the waste from all the factories? After all, we, unlike our forebears, are in the process of developing. We have a lot of scientists working in the multitude of academic centres around Novosibirsk. And if we don't channel our waste into you, we shan't survive ourselves. And so the stench has made it hard to breathe in the city, and in some districts the smell is so bad and nobody even knows what it's from. Try to make sense of all this, dear River. Do you know — the technology we have today?! Instead of noiseless canoes, it's diesel ships that are now plying your waters. Including, at one time, my own.

I wonder whether the River remembers me. How I sailed up and down it on my ship — the largest passenger vessel in our fleet. It wasn't new, of course, the ship, and at full speed all its diesel engines and propellers made such a roar that it was even hard to hear the music in the bar.

What does the River cherish in its memory as the most important thing? In times past I would watch its shores from the upper deck of my ship, from the windows of the bar at the stern, listening to Malinin's<sup>4</sup> songs and romances:

<sup>3</sup>*Novosibirsk* — with a population of a million and a half, Siberia's largest city and major industrial, cultural and academic centre. It began in the 1890s as a major hub at the point where the Trans-Siberian Railway crossed the mighty Ob.

*I was going to the city upon a white steed  
When a pub-mistress smiled at me sweetly indeed.  
Having caught on the bridge the old miller's sly glance,  
I remained the whole night with that mistress, entranced.*

The people busy with their activities along the shore seemed at the time to me petty and insignificant. Now I was one of them.

Another thing I thought about was how to convince Anastasia not to prevent me from communicating with my son. The situation was a strange one indeed, the way it had turned out. All my life I dreamt of having a son. I pictured how I would play with him as a little tyke, and then how I would raise him. When my son grew up, he would be a great help to me. We'd be business partners.

Now I have a son. And even though he's not around, it's still a jolly thing to know that somewhere on Earth there's a human being as close to you as that, your own flesh and blood, someone you very much wanted.

Before leaving I took great delight in purchasing for my son all sorts of basic kiddie things. Anyway, I went and bought them, sure, but whether or not I'll be able to give them to him — well, that's still a question mark. If my son had been borne by an ordinary woman — it wouldn't matter whether she were a country or a city girl — it would all be so simple and straightforward. Any woman would be delighted that her child's father was concerned and really trying to provide him with everything he needed, and take part in his upbringing.

---

<sup>4</sup>*Alexander Nikolaevich Malinin* (1958-) ... a popular Russian singer-song-writer from Sverdlovsk (now Ekaterinburg), a large industrial city in the Urals. Famous for his masterfully performed romances, in 1998 he was honoured with the title *People's artist of Russia*. The verse here is the first stanza of his song *Bely kon* (White Steed).

In fact, if he didn't do this voluntarily, a lot of women would be applying for alimony.

But Anastasia was a taiga recluse with her own views on life and her own understanding of values. Even before our son's birth she made it clear to me:

"He doesn't need any material goods in your sense of the term. He will have everything he needs right from the start. You have the desire to give our baby some sort of senseless trinkets, which he doesn't need at all. You are the one who needs them for your own self-satisfaction, so you can say: 'Look at how good and attentive I am!'"

Why on earth would she say something like that — "He doesn't need any material goods"? Come on, now! What can a parent give his newborn child, then? Especially a father? It's still too early to start raising a breast-feeding infant in a fatherly way. How then can I express my relationship to him? How can I show him I care for him? A mother can breast-feed her baby, it's easier for her, she's already doing something, but what can a father do? In civilised circumstances he can help around the house, fix things up, take financial care of his family. But Anastasia doesn't need anything like that. All she has is her glade in the taiga. Her 'household' takes care of itself and waits on her hand and foot, which means the boy will get the same treatment once he's seen as coming from her.

I wonder how much it would cost to buy that kind of service? Sure, one can purchase or get a long-term lease on a few hectares of land easy enough, but what price can you put on the love and loyalty of a she-wolf, a she-bear, bugs and an eagle? Maybe Anastasia doesn't need any of the accomplishments of our civilisation, but why should the child have to suffer for his mother's crazy world-view? The child can't even have normal toys! She sees everything her own way. "The child doesn't need senseless trinkets, they'll only do him harm, distract him from the truth," she says.

Maybe in what she says there is some sort of quirky exaggeration or even downright superstition. There must be some reason mankind has invented so many different toys for kids! But so as not to quarrel with Anastasia, I didn't buy him any rattles — instead I got him a kiddie's constructor set, where the label on the box reads: "Develops children's intellect". Along with a quantity of disposable diapers, which the whole world uses today. And I bought a whole lot of powdered baby food. I'm really amazed at how easy they've made it. You open the box and there's a hermetically sealed package of waterproof foil. You just take a pair of scissors, cut open the packet, pour the contents into warm water, stir and... presto, it's all ready. They've got all sorts of powders — buckwheat, rice and other cereal grains.

The box says it has all sorts of vitamin additives. I remember, back when my daughter Polina was really little, having to go every day to the 'children's kitchen',<sup>5</sup> and now all you need do is buy a bunch of boxes and you can feed your own child with no trouble whatsoever. You don't even have to heat it up. Just dissolve in water, and that's it. I knew Anastasia didn't boil herself any water, and so, before buying up a whole lot, I bought a single box and tried adding the contents to water at room temperature — and it worked. I tried tasting it. It tasted normal — hardly any flavour, because there was no salt, but likely that's the way it should be for kids.

I decided Anastasia wouldn't be able to come up with any arguments against this powder. It would be silly to say no to a convenience like that. And that means she'll have to start showing a little respect to our technocratic world. It doesn't just produce weapons, it thinks about children too.

<sup>5</sup>'children's kitchen' (Russian: *domovaya kukbnia*) — a government subsidised community canteen where parents (particularly mothers who were not breast-feeding) could go to get fresh dairy products, specially prepared for infants and young children.

But the thing that disturbed me most about what Anastasia said, especially since it didn't seem to make any sense, was this: she said that in order for me to communicate with my son, I would have to achieve a certain purity of thought, i.e., cleanse my inner parts. Only it wasn't clear to me just *what* inner parts I should cleanse.

It would have been understandable if she'd said I should shave, or shouldn't smoke, when I visited the child, or I should wear clean clothing. But she goes and talks on and on about conscious awareness and inner purging. And just where do they sell the brush that I can purge anything *there* with? Anyway, what have I got inside me that's so dirty? Maybe I'm not better than others, but I'm no worse either. Hey, if every woman started making a demand like that on her man, you'd have to set up a bloody purgatory for all mankind! It's... it's illegitimate, that's what it is!

I brought along a clipping from the civil code, where it says that one parent has no right to deprive the other of seeing their child without due cause, even if the parents are divorced. Of course, our laws don't mean very much to Anastasia, but still, it's a pretty strong argument. After all, the majority of people do observe the law. I ought to be able to take a hard line with Anastasia, too. We should have equal rights to our child.

I had thought earlier of taking a harder line with her. But now I've had some doubts about my initial decision, and here's why. Along with everything else in my backpack, I had brought along some letters from readers. I didn't bring them all, because I keep getting so many. I wouldn't begin to have room for them all. Many of the readers care a great deal about Anastasia. They call her a messiah, a fairy of the taiga, a goddess; they dedicate songs and poems to her. And some of them address her as though she were their bosom friend. This flood of letters got me reconsidering my words and actions in respect to Anastasia.

I had about a three-hour wait sitting beside Yegorych's boat. It was already late in the afternoon when I saw two men approach in the company of Yegorych's grandson. The first was getting on in years, he looked to be at least sixty. He wore a cloth raincoat and rubber boots. He was red in the face, obviously tipsy, since he staggered slightly as he walked. The second was younger, around thirty, and had a strong build. As they came closer, I noticed streaks of grey in the younger Siberian's dark-blond hair. The elder of the two came up to me and said:

"Hello there, traveller! So, you're off to see Anastasia? We'll take you. It'll be five hundr'd thousand for the trip plus two bottles<sup>6</sup> surcharge."

It was already clear to me that I wasn't the only one trying to reach Anastasia. That was why the price was so high. To them I was just another pilgrim on my way to Anastasia's habitat. But still I asked:

"How did you decide that I was going to see somebody named Anastasia, and not just to the village?"

"If you be goin' to the village or no, you'd better have the five hundr'd thousand ready. If you don't have the right amount, we won't take you there."

Yegorych's tone toward me wasn't exactly friendly.

They charge so much for the trip and yet don't talk very friendly, I thought. Why would that be?

Still, there was no alternative, and I had to accept the terms. But instead of being happy at all that money, and especially the two bottles of vodka he sent his young assistant to buy at the settlement, his attitude toward me only hardened. He sat down beside me on a rock and kept muttering to himself:

<sup>6</sup>two bottles — i.e., of vodka.

“To the village — what village? Six houses with people just barely alive — you call that a village? Who needs a village like that?”

“And do you often take visitors to see Anastasia? I’ll bet you earn a pretty penny transporting them, eh?” I asked Yegorych, mostly to get a conversation going and soften his enmity. But Yegorych only answered in irritation:

“And who invited them to visit? We’ve got too many uninvited jerks barging in here. Nothing stops them. Did she invite them? Did she? No, she bloody well didn’t! She told one bloke about her life. He goes and writes a book. Fine, write a book. But why give the location away? We never did. And here he meets with her once, and writes about her life, and gives the place away. That’s something even females can understand: if you give it away, that’s the end of her peace and quiet.”

“Does that mean you’ve read the book about Anastasia?”

“I don’t read books. Sashka,<sup>7</sup> my workmate here, he’s a real bookworm. Anyway, we can’t get you to the village tonight. Too far. The motor on the boat’s not too strong. We’ll make it as far as a fisherman’s hut, spend the night there. Tomorrow Sashka’ll take you on, while I do a bit of fishing.”

“All right,” I agreed, thinking it was just as well Yegorych had no idea I was the one who wrote about Anastasia.

Sashka, Yegorych’s assistant, arrived with the vodka. Then they put the fishing tackle into the boat, at which point Yegorych’s grandson Vasya all but cut the trip short. He started asking Yegorych for money to buy a new radio receiver.

“I’ve already fixed up a pole with an antenna — I’ve figured out how to set it up,” said Vasya. “And I’ve got the antenna wire already. All you have to do is plug the antenna into the receiver and you pick up a whole bunch of stations right off.”

<sup>7</sup> *Sashka* — like *Sasha*, a diminutive of *Alexander*.

## CHAPTER TWO

# Money for crap?

“You see what a bright lad I have for a grandson!” Yegorych proudly declared with a warmth in his voice. “A healthy curiosity, a budding craftsman! Way to go, Vasya! We’d better give him some money.”

The hint was all too clear, and I started to pull out my wallet. But Vasya, encouraged by the words of praise, went on:

“I gotta listen to everything about the cosmonauts. Ours and the Americans’. When I grow up, I’m gonna be a cosmonaut.”

“What?! What’s that you said?!” Yegorych suddenly pricked up his ears.

“When I grow up, I’m gonna be a cosmonaut.”

“The hell you are, Vasya! You’re not gettin’ any money from me for that kind of crap!”

“That ain’t crap, no way, being a cosmonaut. Everybody likes cosmonauts. They’re heroes, they show them on TV. They’re always orbiting the Earth on their huge spaceships. They can talk with a whole lot of scientists right from space.”

“And what good does all that chatter do? They’re flying away up there, and in the meantime there’s less and less fish in the Ob.”

“The cosmonauts can tell everybody about the weather. They know ahead of everyone else what the weather will be like tomorrow anywhere in the world!” Vasya continued his defence of modern science.

“So what else is new? You go see Babka Martha.<sup>1</sup> Just ask Babka Martha and she’ll tell you what the weather will be

tomorrow and the day after and next year. She won't charge any money, not like your cosmonauts, eh? Those cosmonauts of yours are wasting Petya's<sup>2</sup> money. Your father's money."

"The cosmonauts get a lot of money from the state."

"And where d'ya think the state gets its money from? From where, dammit? It's from Petya, your father, that the state gets its money. I catch some fish and Petya later sells it in town. He wants to become this smart businessman, see, and the state tells him: 'Pay your taxes, give us all your money — after all, you know, we've got a lot of expenses.' And over in the Duma<sup>3</sup> they just keep on fussin' and fussin', worse than a bunch of old biddies at a well. The way they've over-invented everything, they think they're the cat's whiskers! They've got all sorts of amenities, their own, clean bathrooms to go to, those smart asses, and meanwhile our river here gets dirtier and dirtier. You're not gonna get any money, Vasya, 'til you wash that nonsense of yours right out of your head. An' I won't make any more trips, I'm not gonna earn good money for crap like that."

Yegorych, probably because of his drunken state, got so angry he was just about ready to cancel the trip. Then he uncorked one of the vodkas Sashka had just brought from the settlement and took a drink straight from the bottle. After lighting a cigarette, he managed to calm down a bit, and we all climbed into the boat. So he ended up not giving Vasya any money and, instead, kept muttering something into his beard about 'crap' during the whole trip.

-----

<sup>1</sup>*Babka Martha* — the word *babka* in this sense refers to the local 'shaman' of the village, an old woman held to be knowledgeable in folk medicine and weather predictions.

<sup>2</sup>*Petya* — diminutive from *Petr* (pronounced *PYOTR*), the Russian equivalent of the name *Peter*.

<sup>3</sup>*Duma* — the national parliament of Russia.

The ageing motor sputtered noisily along. It was hard to make conversation above the din. We scarcely said a word until we reached an old hunter's hut with a single little window. The first stars appeared in the night sky. Having finished off en route the bottle he had begun at the point of departure, Yegorych muttered to his Sashka:

"I'm-m off to sleep. You make yourself comfy here by the fire or on the floor of the hut. When it gets light, take him to our spot."

Yegorych was already bending over to get through the tiny door of the hut, but all at once he turned around and repeated with an admonishing tone:

"To *our spot!* G-got it, Sashka?"

"Got it," Sashka calmly replied.

As we sat by the fire eating fish cooked over the coals, I asked Sashka a question about a phrase Yegorych had used which rather alarmed me.

"Alexander, can you tell me what this 'spot' of yours is where Yegorych told you to take me?"

"*Our spot* — that's on the opposite bank of the river from the village where you set out for Anastasia's glade," Alexander calmly replied.

"So *that's* it!" I exclaimed. "Here you go charging all this money, and you don't even take people where they need to go!"

"You're right, that's the way we do things. It's about all we *can* do for Anastasia, to make up for what we've done to her in the past."

"What have you done to her? And why are you confessing this to me? How can you take me to 'your spot' now?"

"I'll tie up the boat wherever you tell me to. As far as the money goes, I'll give you back my portion of it."

"So why do me a favour?"

"I recognised you. I recognised you right off, Vladimir Mcgré. I read your book and saw your photo on the cover.

I'll take you wherever you want. Only there's something I gotta tell you... You've got to listen calmly to what I say. An' think about it. You mustn't go into the taiga. You won't make it... Anastasia's gone. I think she's gone way back into some remote part. Or somewhere else — off into the unknown. You won't make it any more. You'll get yourself killed on the way. Or the hunters'll shoot you. The hunters won't tolerate any intruders on their lands. Intruders they deal with at a distance, so as not to subject themselves to unnecessary danger."

Alexander was outwardly calm as he spoke, only the stick he was stirring the embers with betrayed an awkward trembling, and the sparks flew up alarmingly into the night, like fireworks.

"Did something happen here? What was it? You recognised me, so tell me, what happened? Why did Anastasia go away?"

"I've been wanting to tell this myself," replied Alexander in a hushed voice. "I've been wanting to tell it to someone who will be able to understand. I don't even know where to begin so's you'll make sense of it... so's *I'll* make sense of it."

"Tell it simply like it is."

"Simply? You know, it's true, it's all really quite simple. Only it's so simple it's terrifying. Just hear me out calmly, if you can — don't interrupt."

"I'm not interrupting. Give me the gist of it. Don't drag it out."

## CHAPTER THREE

# Uninvited guests

Alexander began speaking quietly, the way Siberian people do, and yet at the same time there was no mistaking the feeling of inner tension in the heart of this young Siberian fellow already showing streaks of grey in his hair.

“When I read your book *Anastasia*, I was a post-graduate student at Moscow University. I was interested in philosophy and psychology. I studied Oriental religions, and was really immersed in my studies. And then along came Anastasia. Not in some far-away land, but right in my own neighbourhood — Siberia, where I was born. And I could feel the tremendous power, logic and significance in her words! I could feel a kindred spirit — something that really spoke to me! The foreign theories I had been studying paled in comparison to the extraordinary feelings that now welled up in me. I dropped my studies and rushed home, as though from darkness to light. I really wanted to see Anastasia and talk with her.

“I came home and began making trips with Yegorych in the boat to the place you describe in your book. Yegorych and I figured out just where it was. From time to time other people would come and want to meet with Anastasia and ask about this spot. But we never took them there. The local residents had sense enough to realise what was happening and not give encouragement to the ‘pilgrims’. But one time we — or, rather, I alone, without Yegorych — took a whole group of people to this place.”

“Why did you do that?”

“At the time it seemed like I was doing the right thing, something good. It was a party of six. Two of them were prominent scholars and, from what I could tell, they had considerable resources at their disposal. Or those backing them, the ones who sent them, had considerable resources. The other four in the party were their security guards, armed with pistols, and something else besides. And they had two-way radios. I was invited to accompany them as their guide. I agreed, but not because of the money.

“I had a long talk with them first. They didn’t conceal the goal of their expedition — a meeting with Anastasia. Their leader was a grey-haired, pleasant-looking chap named Boris Moiseevich.<sup>1</sup> He realised that Anastasia, all by herself, could do more for science than many research institutes.

“They planned to take her out of the taiga and set her up in a nature preserve where she could live under conditions she was accustomed to. And they’d guarantee her protection. Boris Moiseevich told me that if *they* didn’t do this, someone else would. And anything might happen. Anastasia was an extraordinary phenomenon, and they felt obliged to protect her and study her.

“Boris Moiseevich had an assistant named Stanislav, a bright young man who claimed to be in love with Anastasia, even though he had never met her in person. I agreed with their arguments. They hired a small ship from a co-operative. They had a truck deliver barrels of aviation fuel to the ship.

“When we arrived at the spot, they set up tents on a promontory and summoned a helicopter on their two-way radio. The ‘copter was outfitted for aerial photography; it also had a video camera and some other unusual equipment. Every day

<sup>1</sup>*Boris Moiseevich* — Here *Moiseevich* is a patronymic (derived from Boris’ father Moisei), and not a surname. The use of his patronymic here, in contrast to Stanislav’s first name used alone, indicates his position of seniority.

the helicopter would fly low over the taiga and take pictures, one quadrant after another.

"The two scientists made a daily examination of the pictures taken from the air. Occasionally they would travel on the helicopter themselves to a spot that interested them. They were looking for Anastasia's glade, where they planned to land the 'copter. I could only imagine the noise the 'copter would make landing in Anastasia's glade, scaring all the living creatures around. I remembered Anastasia had a baby and thought the roar from the 'copter might frighten him too.

"I tried to persuade the scientists that after determining the location of the glade they shouldn't set the 'copter down there. I proposed that once they determined the location they should draw up a map and go to the glade on foot. But Stanislav explained that Boris Moiseevich would find it difficult making the long trek through the taiga. Stanislav shared my concerns about disturbing the peace of the taiga residents, but assured me that Boris Moiseevich would be able to calm down both Anastasia and her baby. It all came to a head on the fourth day."

"What came to a head?"

"It happened when the 'copter flew off on a routine filming-and-photography trip, and we were busy back at our base. One of the guards noticed a lone female figure approaching our camp from the direction of the taiga. He reported this to Boris Moiseevich. Soon the whole camp was watching the woman approach. She was wearing a light cardigan and a long skirt, and the kerchief on her head was tied in such a way so that it covered her forehead and neck.

"We were standing together in a group, with Boris Moiseevich and Stanislav out in front. The woman came up to us. There was no fear or embarrassment showing in her face. And her eyes... She had the most extraordinary eyes — they looked at us tenderly, with kindness. And we could feel a

warmth from her gaze. It seemed as though she was looking not at our group as a whole but at each one of us individually. We were all overcome by a feeling of excitement we couldn't explain. It was as though we had forgotten about everything else and were simply drinking in this warmth, basking in it — the warmth radiating from those extraordinary eyes of hers. And nobody even invited her to sit down and rest from her journey.

“She was the first to speak. And with a calm and unusually tender voice she said:

“‘Good afternoon, people.’

“And we stood there without uttering a word. Boris Moiseevich was the first to respond.

“‘Hello,’ he replied for all of us. ‘Please tell us who you are.’

“‘My name is Anastasia. I have come to you with a request. Please call off your helicopter. It is very harmful for these parts. You are looking for me. Here I am. I shall answer any of your questions I am able to.’

“‘Yes, of course, we’ve been looking for you. Thank you for coming on your own. That takes care of so many problems,’ Boris Moiseevich began. But he still didn’t ask her to sit down, even though there was a table and folding chairs by the tent. Nor did he take Anastasia aside to talk with her privately. He too was most likely distracted by her unexpected appearance. He started in right away telling her about why we had come.

“‘Yes, that’s very good... You came to us on your own. It was you, in fact, we had come for. Don’t worry, we’ll call off the helicopter right away.’

“Boris Moiseevich at once ordered the senior guard to radio the ‘copter pilot to return to base. The order was carried out immediately. Then he turned to Anastasia and began talking with her in a calmer and more even tone.

"Anastasia, the helicopter's coming now. You will climb aboard along with our colleagues. You will show our colleagues the glade where you live with your son. The 'copter will set down wherever you indicate, and you can fetch your boy. We'll take the two of you to a nature preserve near Moscow. Everything there will be arranged just as you say. That's only right. Nobody will disturb you there. The preserve is under twenty-four-hour guard, which will be reinforced once you settle in there. Just occasionally, scientists will come and talk with you at a time convenient for you. These people will be thoroughly prepared. You will find them interesting to talk to. And they will be most interested in your views on certain natural and social phenomena, as well as in your philosophy.

"If you like, we'll provide you with a worthy assistant. Someone who will be constantly at your side and can catch your inner meanings. In spite of his young years, he is already a prominent and talented scholar. Besides which he has fallen in love with you even before meeting you. The two of you, I think, will be worthy mates — you have the potential to become a fine, happy couple. He is worthy of you not only because of his scholarship but in his lifestyle too. Here he is.' And at this Boris Moiseevich turned in Stanislav's direction, and beckoned him over.

"Come along, Stanislav, don't dawdle! Introduce yourself.'

"Stanislav came over and stood facing Anastasia. He looked a little embarrassed as he started speaking.

"Well, it looks as though Boris Moiseevich has already proposed for me! I know this may seem a trifle unexpected for you, Anastasia, but I really am ready to ask for your hand. I am prepared to adopt your son and treat him as my own child. I am ready to help you in working out a host of problems, and I ask you to consider me a friend.'

"Stanislav made an elegant bow before Anastasia, then took her hand and kissed it. He presented a most handsome

and elegant appearance. And if only Anastasia had changed her clothes, they would really have looked like a most worthy and attractive couple.

“Anastasia replied to Stanislav in a tender, serious tone:

“‘I thank you for your kind attentions to me. Thank you for caring about me.’ And then she added: ‘If you really feel you are strong enough to share your love and make another person’s life happier and more fulfilled, then remember — there may already be in your circle of women friends someone who is dissatisfied with her life, unhappy about something. Pay attention to her, love her, make her happy.’

“‘But I want to love *you*, Anastasia.’

“‘I am already happy with another. Do not waste your energies on me. There are women out there who need you more than I do.’

“Boris Moiseevich decided to come to Stanislav’s aid.

“‘That other — is he the one whom you met with, Anastasia? No doubt you mean Vladimir. He’s a long way from being the best example of our society.’

“‘Whatever you say about him, it will not change my feelings. I cannot control my feelings.’

“‘But why did you choose Vladimir to meet with in the first place? He’s hardly what you could call either religious or scholarly, or even someone who leads a normal lifestyle. He’s just an ordinary businessman. How did you happen to fall in love with him in particular?’

“At some point I began to realise,” Alexander went on, “that Boris Moiseevich, Stanislav and the rest of the group had one clearly defined goal — to seize Anastasia, to take her by any means possible and use her only in their own interests, against her will. And it didn’t matter whose idea it was — their own or on orders from somebody higher up, they would try their hardest to carry out their plan. And

nothing — not even the most persuasive arguments — would stop them.

“Perhaps Anastasia understood this, too. She could hardly be ignorant or unaware of their intentions. And still she continued treating the men standing before her as kind and decent people, even as friends. She spoke sincerely and forthrightly on the most sacred of topics, and it was her attitude and sincerity which restrained, or rather forestalled, violence. She was so ingenious at countering Boris Moiseevich’s and Stanislav’s attempts to cool her feelings toward you that she showed all their arguments against you to be patently absurd.

“People say a woman in love sees only the good in the one she loves, no matter what he does or who he may really be. But *her* arguments were of quite a different sort. After the first flurry of excitement over Anastasia’s appearance had passed, I was able to quietly switch on my tape recorder.

“Later I would often listen and analyse what Anastasia said. I remember it all. And that ‘all’ was enough to turn my whole consciousness upside down.”

“What turned your consciousness upside down?” I queried, wondering what Anastasia had said about me. And Alexander went on:

“When Boris Moiseevich asked: ‘How did you happen to fall in love with him in particular?’, Anastasia countered with a simple, direct reply:

“There is no point in asking me a question like that. Nobody who is in love can explain why they love the person they do. For every woman in love there will be only one man who is the best and most significant person in the world — and that is the one she has chosen. And my beloved is the very best one for me.’

“But still, Anastasia, you cannot fail to grasp the absurdity of your choice. Even if it happened spontaneously, it’s still

absurd. That first breath of passion should have been chilled by your will, your abilities, the logic of your mind. They should have shown you how unworthy this man was compared to others. Think about it, carefully.'

"When I think about it carefully I come to exactly the opposite conclusion. In this case any further reflection is a waste of time. It only adds to the mysterious inevitability of what took place. Better just accept everything as it is.'

"What, accept an absurdity? A paradox?"

"It only seems to be that way at first glance. You have made a long trip here from Moscow. You had quite a challenge getting to that spot on the riverbank. You ask questions about my love. But you do not seem to have grasped hold of another paradox — namely that this love can be better and more clearly explained by events that happened in Moscow. And it would have been better for you to reflect on them right there. It would have saved you coming all this way.'

"What kind of events happened in Moscow?"

"On the surface they are very simple. But only on the surface. Right after meeting with me, Vladimir, whom you call a simpleton, an unremarkable and even malicious person, abandoned everything and left Siberia to go to Moscow. He went there to keep his word to me — to organise a fellowship of purer-minded entrepreneurs. Even though he had no money left, he still acted.

"In Moscow there is a two-storey building at 14 Tokmakov Lane. That is where the people used to work who were in charge of the first association of entrepreneurs. Then the people in charge left and the association started to fall apart.

"Vladimir went in there and things started to pick up again in its empty offices, both the large and small ones. There he wrote various letters addressed to entrepreneurs. He worked in his office from early morning until late at night and even stayed there to sleep. People would come and see him or just

turn up and start helping him. They believed in him and what he was doing. I asked him to do this when he was with me in my glade here in the taiga. I told him how important it was.

“I worked out a plan of action and presented it to him. The goals were achievable, provided he carried out the plan in the order that had come to me in my dream. He was supposed to write the book first. And then use the book to explain a lot of things and spread information. It was the book that was to have found and brought together pure-minded entrepreneurs. And provide him with the funds for carrying out this plan.

“But Vladimir did everything the right way as *he* saw it. He hardly thought of me at all. He realised the significance of the plan and put it into practice. Only he did it *his* way, and changed the sequence.

“That way the goal was unachievable. He did not know this, and he acted with incredible persistence and resourcefulness. Other people who believed in the idea started helping him. The new entrepreneurs’ association very slowly began to sprout and grow in size. It was incredible, but things started moving just a wee bit. They were getting together. And these were pure-minded entrepreneurs. There is a list of their names and addresses — you can go check yourselves.’

“We looked at this list. It was published in the first edition of the book. But I’m sorry to have to disappoint you, Anastasia. It will be a disappointment! The list included such enterprises as *Kristall*, a Moscow distillery. Its product is incompatible with any concept of the divine.’

“Everything in the world is relative. And perhaps this *Kristall* is not so bad in comparison with some others. Besides, we are talking about thoughts pure enough to change *everything*. ‘Today’s reality is the result of yesterday’s thinking.’

“I can agree with what you are saying there. Still, your Vladimir failed to organise a fellowship of pure-minded

entrepreneurs. I assure you, Anastasia, you've pinned your hopes on the wrong man.'

"After changing the sequence of events, Vladimir was unable to reach his goal. He did not have even the slightest opportunity or any funds to circulate information beyond Moscow. He came up against adverse circumstances and he lost the offices where he could have continued his work, he lost his means of communication as well as his sleeping quarters. He left the building in Tokmakov Lane, along with the little group of local people who were helping him. He could not afford to pay his assistants for their work. He left without a kopeck to his name. He had no place to live and not even any winter clothing. He had forsaken his family and been forsaken by his family. And do you know what he talked about with his little group of helpers as they headed for the metro along the icy streets? He talked about starting everything again from scratch. Even under those conditions he was working out a plan, trying to get something going. After all, he is an entrepreneur. They, his helpers, followed him; they listened to him and believed him. They loved him.'

"What for, if I may ask?"

"You go ask them, these Moscow people, what for — ask *them* what they found in him. Go to the building on Tokmakov Lane and ask the security guards there why each time they came on duty they would bring him some food in jars or wrapped in cloth, to give him a decent supper. They tried to do it in such a way so as not to offend him with their charity. These burly security guards, who did not have to answer to him, cooked borshch and other kinds of soup at home and brought it to him so he could have something of a home-made meal. They loved him. Why?"

"When you visit that building, go have a talk with the pretty woman who used to work as a secretary there. She is a former actress, she played the lead as the kind alien-girl in

the film *Cherez ternii k zvyozdam* (Through the thorns to the stars).<sup>2</sup> She played her very well. It was a good film, calling upon people to care for and love the Earth. Ask her why she, an employee of another firm in the same building, tried to help Vladimir inconspicuously — and she did help him. She was not *his* secretary, but she helped him. Why did she endeavour to bring my beloved coffee or tea for his lunch? She made it look as though it were her firm which was supplying her with the sugar, tea and biscuits. In fact she brought everything from her own home. She was not rich. She loved him. Why?

“At the same time he, Vladimir, was still losing his strength, he was dying. He was physically exhausted. But even on death’s doorstep he kept trying to reach his goal. He is an entrepreneur, after all. And his spirit is strong.”

“Anastasia, you’re talking in metaphors. What do you mean when you say he was dying? In an allegorical sense?”

“In a literal sense. When he was in Moscow, his flesh was just about dead for several days in a row. People in such a condition usually lie motionless. But he was up and about.”

“Possibly thanks to *you*, Anastasia?”

“All during those forty-two terrible hours I never ceased warming him with my ray, not even for a moment. But it was not enough. My ray could not retain life in a body if the spirit were weakening. But Vladimir’s spirit was fighting back. In its struggles his spirit did not notice death approaching. It helped the ray. Then other little rays came to the aid of my ray. They were altogether weak and unconscious, but they were there. These were the rays of those around Vladimir in Moscow — people who loved him.

<sup>2</sup>*Through the thorns to the stars* — a 1980 Russian science-fiction film, directed by Richard Viktorov, starring Yelena Metyolkina as the cloned alien Niya from the planet Dessa, rescued from a stranded alien spaceship by Russian cosmonauts.

“His practically dead flesh began to be filled with life. When confronted by sincere love, if it is strong enough, death retreats. The immortality of Man<sup>3</sup> is in love, in his ability to ignite love within himself.<sup>4</sup>”

“I say, Anastasia: dead flesh can’t walk about. You’re still speaking in allegories, not scientifically.’

“The criteria of human science are always temporary. There are truths that are valid beyond the present moment.’

“But how then can modern scientists be convinced? We need results from objective measuring devices.’

“Fine. Go to the Kursk Terminal.<sup>5</sup> There’s an automatic photo booth in one of the adjacent metro stations. During that bad period Vladimir had his picture taken for an I.D. card — one of those small colour prints. You may still be able to find it at the building at 42 Leninsky Prospekt. Or Vladimir himself might have it. Take a careful look, and you will see all the outward signs of a dead body; the automatic camera captured even the death spots on his face. But you will also see life in his eyes. And a fighting spirit.’

“And yet you were the only one who could rescue him, Anastasia. Tell me how it is that you ended up spending so much of your energies on *him*? Why?”

“I was not the only one who came to his rescue. Ask the three Moscow students why they rented an apartment for him at their own expense? When he finally realised the reason

<sup>3</sup>*Man* — Throughout the Ringing Cedars Series, the word *Man* with a capital *M* is used as the equivalent of the Russian word *chelovek*, including both male and female, as, for example, the word *man* is used in Genesis 1: 27 (see Translator’s Preface to Book 1).

<sup>4</sup>*within himself* — it is possible that ‘toward himself [on the part of others]’ may be intended in the original.

<sup>5</sup>*Kursk Terminal* — one of the major railway terminals in central Moscow — a modern structure with a glass façade, constructed in 1972. It is connected to three different metro (subway) stations.

he was failing and set about writing the book, why did they, right in the middle of an exam period and trying to earn more money wherever they could, spend their evenings keyboarding Vladimir's text into their computers? Why? You can ask the same question of many Moscow residents who were at Vladimir's side in his times of need. The solution to the mystery lies in them, not in me. Why did Moscow and her people help him and take care of him, why did they believe in him?

"The city of Moscow was also writing the book. I am thrilled with that city! I have fallen in love with it! No amount of roaring machines or senseless cataclysms devised by the technocratic world can nullify the embrace of kindness and love from the hearts of its people. Many, many residents of this city are reaching out for kindness and brightness — for love. Through all the bustle and the clamour of roaring machinery they feel its tremendous power and grace.'

"But, Anastasia, what you say is really incredible and overwhelming. It couldn't happen all by itself. Once again it shows the incredible scope of your abilities, the extraordinary possibilities of that ray you possess. You have evidently used it to enlighten the Moscow people who got in touch with Vladimir. You won't deny, now, that you did that? And that you were the one who made all these miracles happen!

"Love is what makes miracles happen. And I did use my ray to make careful contact with all those in communication with Vladimir. But all I did was to give a bit of strengthening to the feelings of goodness, love and bright aspirations that they already had. I only strengthened what was in them already.

"And the book was published by Moscow. The first print-run was small and it was a pretty slim volume. But people started buying it. It quickly sold out. Far from distorting the events he had witnessed in the taiga, it honestly described the feelings he had experienced. In the eyes of many readers I

came out looking clever and good, while Vladimir appeared stupid and none too bright.

“People in their homes reading the book did not take into account that Vladimir was with me one on one in the remote Siberian taiga. Everything back then was still extremely unfamiliar to him. And I do not know who else could go so far into the taiga with no gear at all. Or how such a person would behave upon seeing what Vladimir saw. Vladimir was honest in the way he depicted everything. And yet for many people he began to look stupid. And here you are asking me: *Why did I choose him? And why do I love him so?*”

“In the process of writing the book, Vladimir was already turning his thinking around on a great many things. He grasps everything very quickly. Anyone who has the opportunity of talking with him cannot fail to notice that. But he never tried to paint a rosy picture of his former self.”

## CHAPTER FOUR

# Chords of the Universe

“Anastasia spoke warmly about you,” Alexander continued. “She knew all about people and events. She told them that the first book you wrote came out in Moscow in a small print-run, and it immediately led to enthusiastic reviews, poetry, paintings and songs. She said that thanks to the sincerity of the writing, the book preserved the combinations and symbols she had sought out in the Universe, and these were what aroused the extraordinary beneficial, panacean feelings in people.

“When Boris Moiseevich heard that, he began fidgeting, and abruptly sat down at the table by the tent. I noticed he was surreptitiously trying to switch on a tape recorder. He was probably so caught up with the pursuit of important information that he completely forgot about everyone else around. He didn’t even offer Anastasia a chair, he was so bent on extracting as much information from her as he could, and quickly. This old grey-haired fellow was excited and fired off more questions:

“Scientists in many countries of the world are trying to capture the extraordinary sounds of the Universe with their costly specialised equipment. These sounds are out there. They are known to science. Maybe not all of them, just a few for the time being. Maybe just a billionth part of the whole. What devices do you use to capture them, Anastasia? What equipment will allow us to select the sounds that can exert an effective influence on the human mind?”

“The equipment one needs has existed for a long time already. It is called the human soul. The attitude and purity of the soul will accept or reject sounds from the Universe.”

“Okay, fine. Okay. Let’s assume. Let’s assume you’ve managed to... to find and select from the billions of sounds the best that the Universe has to offer, and then recombine them in the right way. But sound can only be reproduced with the help of a device or a particular musical instrument. What’s the point of a book, then? After all, it can’t make sounds.’

“You are right, a book does not make sounds. But it can serve as a score, like a musical score. The reader will involuntarily utter within himself any sounds he reads. Thus the hidden combinations in the text will resonate in the reader’s soul in their pristine form, with no distortion. They are bearers of truth and healing. And they will fill the soul with inspiration. No artificial instrument is capable of reproducing what resonates in the soul.’

“How did Vladimir manage to preserve all your combinations if he himself knew nothing about them?’

“I took note of Vladimir’s speech patterns. Besides, I knew in advance that Vladimir would not distort the essence of the events or what he heard, that he would even present himself just the way he was. But he did not convey all the combinations of signs. He needed to carry on writing. After all, he set forth only a fraction of what he knew and was trying to make sense of when he started to write. He needed to continue with the writing.

“And he has already been touched by fame. An unprecedented fame at that. It would have taken only a little more effort to organise the fellowship of entrepreneurs. But then all of a sudden he took another step my dream did not anticipate. He left his Moscow apartment — on which the rent was already paid — to his Moscow entourage, he left to them the privilege of receiving compliments from readers, while he himself boarded a train and headed out of town.’

“Why did he do that?’

“He had been wanting all along to seek out confirmation of some of the things I had said — scientific confirmation of

the existence of various phenomena I had talked about. To investigate them. That is why he decided not to write any more for the time being. And so he went off to the Caucasus. He left Moscow to see the dolmens in the Caucasus with his own eyes — the ancient structures where living people went to die ten thousand years ago. I had told him about them. I also told him about the important functional significance these dolmens have for people living today.

“Vladimir came to the city known as Gelendzhik. In the museum there, along with museums in Krasnodar and Novorossiysk, he collected material on the dolmens.<sup>1</sup> Then he met with various scientists, archæologists and local ethnographers who were studying the dolmens. He ended up with considerably more information on them than was available in any one museum.

“Naturally I tried to help him inconspicuously. I used the mouths of people who came to see Vladimir to inculcate a good deal of new information in him, so that he would have the opportunity to make his conclusions. But he also did his part by acting quickly and decisively. This was after he had compared all the information he had gathered with what I had told him, after the archæologists had shown him the dolmens closest to the road and he discovered that there were others, but that they had fallen into ruin for lack of proper attention from the local residents. The local people had never been much interested in them.

“Vladimir then did something that might seem incredible. In three months he managed to change the attitude of the local residents toward the dolmens. They began bringing flowers. The women ethnographers of the Gelendzhik museum

<sup>1</sup>*Gelendzhik, Krasnodar, Novorossiysk, dolmens* — See footnotes 1 and 2 in Book 1, Chapter 30: “Author’s message to readers”, as well as Book 2, Chapter 1: “Alien or Man?”.

set up a public association, which they called “Anastasia” in my honour. This association opened a school for tour-guides in order to get the right message out to tourists about the dolmens, so they would preserve and take care of the dolmens instead of destroying them. In addition, they began organising new tours, which they called “Excursions into reason”.<sup>2</sup>

“The tour-guides at Gelendzhik began telling everyone about the significance of our pristine origins and about the works of the Grand Creator — about Nature.’

“Anastasia, do you think this was all because of him? Didn’t you play a part here?”

“If I could have done as much as this without him, I would have done it long ago. I very much wanted to. It is in one of the distant dolmens in these mountains that my foremother’s flesh approached its death.’

“But how? How did one man, a nobody, manage to change people’s attitudes in so short a time? And how could he have set up such an active association? You say that the local residents had access to scientific materials and all sorts of publications, since people knew about them at the museums. But they didn’t pay any attention.’

“That is correct: they knew about them but did not pay attention.’

“But why did they then listen to *him*? How did he manage to pull it off? You can’t change people’s consciousness *that* quickly.’

“But Vladimir did not know that. He did not know that consciousness cannot be changed quickly, and that is why he acted and, in fact, changed it. Go visit that city, ask the different people who joined this association. Find out how and why fortune smiled on Vladimir.

<sup>2</sup> According to the Association’s leader, Valentina Larionova, in the years since the organisation was established in 1996, over half a million visitors have visited the dolmens through this Association alone; the total number is much higher.

“I was thrilled by what was happening there. The “Anastasia Association”. He agreed to the name when they asked him about it. I thought he did it for me, that he was beginning to understand me and love me. And he really has managed to grasp a great deal, but he has not fallen in love with me. He has not done so because of my many mistakes and transgressions.

“I soon began to figure this out. I began to realise that my dream was actually coming true. And that people would indeed be transported across the dark forces’ window of time. And that people would be happy! What I dreamt about would come true, except that my love for him was not to be requited. And this was payment for the many mistakes I had made, my lack of perfection and my own insufficient purity of thought.’

“‘What happened? What made you come to that conclusion?’ Boris Moiseevich queried. ‘In any case, everybody’s known for a long time how coarse and uncivilised this fellow is. Believe me, Anastasia, as your senior and as the father of a family, I can tell you that your parents would not have approved of such a union.’

“‘I beg you, do not talk that way about one who is so dear to me. Regardless of how coarse Vladimir may appear to some people, I know differently.’

“‘What else is there to know about him? Everybody knows what kind of people entrepreneurs are,<sup>3</sup> and he’s just a typical example of the species, that’s clear to all. Anastasia, I must say you have a rather biased opinion of Vladimir.’

“‘No matter, it is still my opinion. Besides, your assumption regarding my parents’ views is wrong.’”

<sup>3</sup>Partly because of so many years of communist indoctrination, *entrepreneurs* in 1990s Russia were stereotyped as having low moral and ethical standards. interested primarily in their own enrichment at the expense of ordinary citizens.

## CHAPTER FIVE

### The spirit of a foremother

“I realised it one morning...’ Anastasia said quietly, and her gaze looked as though it were immersing itself in the past, ‘a morning when Vladimir was not at home in the flat he had rented temporarily. I could not find him with my ray. It was the morning of the day when my foremother went into a dolmen to die many centuries ago. I always think of her on that anniversary. I try to talk with her. And she talks with me. You people are accustomed as well to going to the cemetery on a day you remember your loved ones, to think about them, even talk with them. I can do this without leaving my glade. My ray helps me both see and talk at a distance, and they can feel my ray.

“On that day I was thinking about my foremother, trying to talk with her as usual, but I could not sense any reply from her. None at all. She was not responding to me. This had never happened before. Then I tried to locate her dolmen with my ray. I found it. I shone my ray upon it with all my might. My foremother did not respond. Something had happened I did not know about. My foremother’s spirit was not in the dolmen.’

“Anastasia, please explain what you mean by someone’s “spirit”. What does it consist of?”

“It consists of all the unseen elements in a Man, including certain passions and sensations acquired during the period of existence in the flesh.’

“Does the spirit possess an energy, analogous to any of the energies we know of?”

“That is correct. It is an energy complex, consisting of a multitude of different energies. After the end of a human individual’s fleshly existence, certain of these complexes break up into separate energies, which are subsequently used in plant and animal aggregates, as well as in essential natural phenomena.’

“What kind of power do they have? What is the energy potential of unbroken complexes?’

“They vary from individual to individual. The weakest ones cannot even overcome gravitational energy — they will later fall apart, no matter what.’

“Gravitational, you say? The weakest ones? Is it possible to see their presence in anything at all? To touch it? Feel it?’

“Of course. In a tornado, for example.’

“A tornado? You mean a tornado which rips trees up by the roots and overturns things? Then what kind of energy do the strongest ones have?’

“The strongest? Well, that would be *Him*. I cannot fully fathom the strength of His energy.’

“Then, let’s say, somewhere in between, something average?’

“The energy complex of many average spirits already contains a released mental energy.’

“What would be the strength or energy potential of an average complex like this?’

“I already told you: it contains released mental energy.’

“What does that mean? What can it be compared to? How would you define it?’

“To what can it be compared? A definition? Tell me, what is the most powerful energy that your mind, your thought or consciousness can imagine?’

“The energy of a nuclear explosion. No, rather, the energy of the reactions taking place at the Sun’s core.’

“Everything you have named is equivalent to but a tiny fraction of released mental energy. As for definitions, those

are things you think up yourselves to use in verbal communication with each other. Not a single definition you have ever thought of is applicable here. You can use the ones you are familiar with if you multiply them to the power of infinity.’

“Tell me, what is the strength of your foremother’s energy?”

“It contains released mental energy.’

“How did you find out about your foremother? How and where did she die? After all, that happened ten thousand years ago!”

“That information — about my foremother who went into the dolmen to die — was passed down from generation to generation of her descendants.’

“Did your mother tell you about her?”

“I was only an infant when my mother perished. I was not capable of taking in that kind of information. My grandfather and great-grandfather told me all about my foremothers.’

“Can her spirit be seen with normal human vision?”

“Partially. If one changes one’s spectral perception, along with one’s inner rhythm.’

“Is that possible?”

“The phenomenon you know as *Daltonism*<sup>1</sup> suggests that it *is* possible. You believe it is something beyond the will of Man, that it is merely a disease, but that is not so.’

“You said your ancestor, your foremother, was worthy enough to have information about her transmitted from generation to generation over the millennia? What makes this information so worthy, so valuable?”

<sup>1</sup>*Daltonism* — a red-green type of colour-blindness (also known as *deuteranopia* or *deuteranomaly*), named after English chemist and physicist John Dalton (1766–1814), who was also a teacher of mathematics and natural philosophy. His theory of colour-blindness was published in a paper entitled “Extraordinary facts relating to the vision of colours, with observation” (Manchester, 1798).

“My foremother was the last from our pristine origins who knew what a woman should think about during the breast-feeding of an infant and had the ability to do so. Civilisation was gradually losing sight of the knowledge people had ten thousand years ago, and it has all but disappeared completely today. My foremother was by no means an old woman, but she went into the dolmen to die in order to preserve all this knowledge of our pristine origins. And when people’s awareness begins to be restored, people will become aware of the need to transmit this knowledge to nursing mothers. And after that they will help each other learn everything. Through her death in the dolmen my foremother learnt even greater truths that women need to know.’

“Why did she decide to go into a dolmen? How does a dolmen differ from the usual kind of stone tomb? And why did she not wait until she was old before going into the dolmen to die? Was she motivated by an awareness of her goal, or simply by superstition?’

“Back then they had already begun paying less attention to the breast-feeding of infants and women were not offered the opportunity of entering a dolmen, even if they wished to. The ageing leader revered my foremother and comprehended that if *he* did not accede to her request, the leader-to-be would not listen to her at all, and her intentions he might well dismiss as mere fancy.

“But the menfolk could not be compelled by their leader to build my foremother a dolmen, and so he gave her his own. The men did not approve of the leader’s decision and refused to lift the stone slab covering the top so she could go in. So the women got together as one and all night long tried to lift the slab of heavy stone. The next morning at dawn the old leader came. He did not do much walking any more, yet still he came, leaning on a staff. The old leader smiled at the women, said some encouraging words, whereupon the heavy slab

yielded to the women's upward thrust, and my foremother went in.'

"And how does a dolmen differ from an ordinary stone tomb?'

"There is not much difference outwardly. But the dolmen, as you call this stone tomb, was a place where *living* people went to die. The dolmen was not simply a religious structure, as people tend to think today. It is a monument to wisdom and the great self-sacrifice of one's spirit for the sake of future generations. Even today it has a significant functional purpose. And the death experienced in one of these dolmens was not an ordinary one. Actually, the word *death* is not all that appropriate here.'

"I can imagine,' Boris Moiseevich said. 'A living person entombed in a stone chamber... That is really extraordinary — it must have been an extremely torturous death.'

"The people who went into the dolmens did not suffer. The peculiarity of their death lay in the fact that they meditated. They meditated on eternity, and in spirit they would remain forever on the Earth, and even hold on to certain earthly feelings. But the soul of those who went into a dolmen to die was forever deprived of the possibility of material re-embodiment on the Earth.'

"How did they meditate?'

"You are aware today — especially from the ancient Oriental religions — of what meditation is. And there are teachings today that can help one become acquainted with a small fraction of the phenomena of meditation, but not, unfortunately, with its underlying purpose. And today there are people who are capable of meditating — temporarily separating part of their spirit from their body and then returning it to the body. Through the help of meditation in the dolmen, even while the body was still alive, the spirit completely separated itself and returned many times, while the flesh was

still living. After that the spirit remained forever in the dolmen. All alone, it would eternally wait for visitors to impart to them the wisdom of our pristine origins. Even if the flesh succeeded in living a while longer, it was still cloistered. But while it was alive, the spirit had the freedom to travel back and forth between different dimensions, which afforded it the opportunity of analysing at incredible speed (according to your calculations) the truth that was available, as though clarifying the truth for itself.

“One who died, or entered into eternal meditation through the dolmen, knew that his soul or spirit would never again be able to take on a material form. It would never again be able to embody itself in earthly flesh, or matter. It would never be able to go far from the dolmen or leave it for any length of time, but it would have the ability to communicate with a particle of the soul of a person living in the flesh who had come to visit the dolmen. And if you talk about a torturous death, about suffering in general, in this case the torture lies in the fact that for millennia now nobody has come to acquire this knowledge. The great tragedy of the dolmens is the utter lack of demand. The same demand for which —”

“Anastasia,’ Boris Moiseevich interrupted, ‘how important do you feel it is for nursing mothers to have this knowledge and ability?’

“Extremely important,’ she replied.

“But why? After, all, mother’s milk feeds only the *flesh* of an infant.’

“Not only the flesh. It is capable of transmitting a huge quantity of information, as well as a keen sensitivity. You must be aware, after all, that every substance includes its own kind of information, its own radiance and vibration.’

“Yes, I know. But how can mother’s milk transmit sensitivity?’

“It can — it is extremely sensitive. It is inextricably linked to the feelings of the mother. The taste of the milk can change

according to her feelings. And stress can even cause the milk to congeal or stop coming altogether.’

“Yes, that can indeed happen. It can. And you say nobody comes to visit your foremother? That means nobody’s come over many thousands of years?’

“At first people came. Mainly the generations of relatives and people living there. After that a series of cataclysms began happening on the Earth. People began migrating. The dolmen remained where it was. But over the past millennia nobody has come to visit my foremother to find out... Now the dolmens are all being laid waste. Because people do not know.

“In the taiga, when I first told Vladimir about the dolmens and my foremother, he said that perhaps he would go visit her dolmen. Then I explained how it was impossible for him to comprehend or feel my foremother’s spirit and accept the information she had to give. Men simply do not know the feelings and sensations inherent in a nursing mother. All these millennia my foremother has been waiting for women, not men, to come see her. But no women have come to her dolmen. And I am the only one to communicate with her, once a year. And on that particular day I wanted to be in contact with her, and tell her something good. But I could not. My foremother’s spirit was not anywhere close to the dolmen. I had no idea why, and began quickly searching with my ray all around, in a constantly widening radius. And then all at once: I found her! I found her! In a ravine among the rocks.

“Vladimir was lying on the rocks unconscious. And my foremother, her spirit, was bending over Vladimir, taking form as a conglomeration of invisible energies. I realised then what had happened. I had known even earlier that Vladimir was looking for guides to take him to the dolmens located far away from the main road. But he could not find any. No one would volunteer to accompany him. And so Vladimir decided to go into the mountains alone. At one point he fell off the

path into a ravine. He was wearing ordinary shoes — not suitable for mountain hiking. In fact, he did not have any mountain gear at all.

“He wanted to be convinced that the dolmens really existed, he wanted to touch them. And so he went into the mountains alone. On my foremother’s memorial day he went to the dolmens located far away from the road. My foremother did not know why this poorly equipped person had come into the mountains. And she kept her eye on him. And when he slipped and started falling, she suddenly... Like a supple mass of air her spirit swept down to his side.

“My foremother saved Vladimir’s life. While he did not actually strike his head on a rock, the many bruises he received in the fall caused him to lose consciousness. My foremother used her supple air mass to hold up his head, as though supporting it with her hands, and waited for him to regain consciousness. That was why she did not speak with me. Even when Vladimir’s consciousness returned, she still did not go back to her dolmen. She remained in the ravine down below. She stayed to watch as Vladimir climbed back up to the path.

“Later I realised that my foremother was actually on the path, since stones began rolling out of the way. That was her doing. She had taken on the form of a supple breeze, sweeping the stones away from the mountain path. She wanted to help Vladimir in his descent. I very much wanted to do the same. And so I began to ever so quickly move along the path with my ray, so that it wouldn’t be so wet and slippery and Vladimir could get safely back to the place he was staying and treat his wounds.

“Once Vladimir had climbed back up from the ravine, he sat down on the path and examined the sketch one of the archaeologists at the Novorossiysk Museum had drawn for him. Then he got up and started walking, with a limp. But

not downward, along the dry path that had now been cleared of stones, but the opposite way: upward. I was shocked at this unexpected turn of events, and I believe my foremother did not immediately grasp his intentions either. At this point he left the path altogether and clambered through a thicket of thorny bushes.

“I realised he was trying to reach my foremother’s dolmen. He succeeded. He sat down on the portico in front of the dolmen, at the edge of one of the stone slabs, and began unbuttoning his jacket. His arm hurt and it took him a long time. When his jacket was completely unbuttoned I could see he had a bouquet of flowers underneath. Three little roses. The stems of two of them were broken. The flowers had been damaged when he fell into the ravine and struck the rocks. Some of the thorns on the stems were blood-covered. He placed the damaged roses on the dolmen’s portico and lit a cigarette. And then he said:

““Too bad the flowers got smashed. These flowers are for you, my beauty. You must have been a real beauty, just like Anastasia. You were smart, and kind. You wanted to tell our women all about breast-feeding children. Only they have no idea you exist. And the fact that your dolmen is so far off the beaten path makes it difficult for women to get here.”

“Then Vladimir took out a shallow little flask of brandy and two little metal goblets, and pulled out a fistful of squashed candies from his pocket. He poured brandy into the goblets. He drank one of them, placed the other on the dolmen’s portico, covering it with a piece of candy, and said: “This is for you, my beauty!”

“Vladimir did everything people do today at cemeteries when they come to see their loved ones or dear friends. As for my foremother... Her spirit kept sweeping around him in the form of an invisible energy mass. She was distraught, and did not know what to do. She tried to show some kind

of response to Vladimir's words, tried congealing the air into the shape of her body, but her outlines were transparent and barely noticeable. Vladimir did not notice them. He could not see or hear anything. She kept on trying her best to explain everything to him, but could only sweep back and forth in frustration.

"At one point her air mass lightly touched the goblet sitting on the portico and overturned it. Vladimir thought a random gust of wind had done this, and joked:

"“Hey, what're you up to, my wayward friend — spilling expensive brandy like that?”

"And my foremother's spirit fell still in a corner of the dolmen. Vladimir poured some more brandy, placed a little stone on top, and then put another piece of candy on top of that. And again he started talking, as though to himself:

"“We need to get a decent pathway in here. Just wait a bit. There will be a proper path to your dolmen. And that way women will come to see you. You will tell them everything they need to think about in breast-feeding an infant. Indeed, you must have had very beautiful breasts.”

"Then Vladimir started his descent. It was late at night when he got back to the place he was staying. He sat for a while alone on the sofa in his cold apartment, binding his wounds and watching a videocassette. Someone had given him a tape to watch which had been copied and passed around by people in various places.

"On the tape there was a speaker in front of a large audience made up mainly of women. He was talking about God and how strong the spirit of a righteous Man could be. Then he started talking about me. He said I was an ideal woman — a role model to which people should aspire. He said that I had great strength of mind and spirit and that I was aided by the forces of Light, and that now, once I became familiar with the lives of people in the usual world, I would be able to help them.

“He said a lot of nice things about me. And then, all at once... He said that I had not yet met a real man. And that the one I had been in contact with was not a real man. Indeed, others had been saying earlier that there was a young man in Australia who was worthy of me, that he and I would meet, and then I would meet a real man.

“And Vladimir, he... You see — he was sitting all alone there, listening to this. All this time he was trying with one hand to bind the wounds on his legs. His other hand still hurt too much from the bruises. I reached out to Vladimir at once with my ray. I wanted to warm his wounds, and chase his pain away. And to tell him... Somehow tell him... Even though he never hears me when I speak to him at a distance, I thought, well, this time it might work out... Yes, I thought it might work out this time since my longing for him to hear me was so strong. I wanted him to hear how I loved him! Only him. And only *he* — my dearest — only *he* is a real man.

“But I got burnt and thrown back on the ground. Something was preventing my ray from getting through to Vladimir. Once again I quickly aimed my ray at the room where he was sitting watching the video, and you know what I saw? There in front of him was this invisible energy mass — my foremother was kneeling right in front of him. Vladimir could not see or hear her. He just kept watching the tape. In the meantime my foremother was warming the wounds on Vladimir’s legs with her breath, as he was pouring this terribly painful cologne on his wounds. And my foremother tried speaking to him, but he was unable to hear.

“My foremother is so strong in spirit that nothing invisible could penetrate her. Any psychotropic weapons trained on her will explode. She will hardly pay them any attention. In any case any attack will be repelled. And there was no way I could interfere. I could only watch...

“I watched and began thinking ever so quickly. What had happened? How did a situation like this come about? Why was the speaker saying such things? Did he want to help me? Was he trying to explain something? If so, what? Why was my ray so drawn to Vladimir? Naturally I was afraid that Vladimir might take offence at the words “not a real man” and that he would be jealous of another over me. And then suddenly... O, how painful it was! It really hurt. After Vladimir had heard the whole tape, he simply sighed and said: “Whaddya know, a real man! In Australia, I heard, eh? They are going to meet. Maybe then they will give me my son.”

“My ray began trembling. It was as though everything had somehow gone dark. You see? Vladimir was not jealous. Naturally that is not a good feeling — jealousy. But I wanted to see him jealous, at least a little. Just a teeny-weeny bit. But here was Vladimir handing me over to another with complete indifference.

“I could not restrain myself and started to cry. I began asking, pleading with my foremother to tell me what I had done wrong. What mistake had I made? Where had I transgressed? She did not reply until Vladimir had finished binding the last wound. Then she told me sadly:

““All you had to do was love, daughter dear. To think about what was good for your beloved without elevating yourself in the process.”

“I tried to explain that I did really want only what was good. But once again she quietly said:

““You wanted something for *yourself*, daughter dear — pictures, music, poems and songs! It will all come to pass — your dream is powerful. I know. It is for everyone and for the one you love, too, but now it will be more and more difficult for you to obtain *earthly* love. You are becoming a star, daughter dear. People may admire and love a star as a star, but not as a woman.”

“That was the last thing my foremother said. I lost my sense of self-control, I screamed and tried to explain, to argue

that I did not want to be a star, that I simply wanted to be a woman and to be loved! But nobody could hear me.

“Please help me! There is a lot I now understand. I am not afraid for myself — I can take care of myself. But it will take Vladimir much longer to understand... And in the meantime listening to that kind of talk is leading him away from Truth.

“The distribution of that cassette must be stopped. It suggests to people, including Vladimir, that I am some sort of ideal role model, a star, and that someone else instead of him ought to be with me.

“I am not a star. I am a woman. I want to love whom I myself want to love.

“My path is not determined by me alone.

“I was mistaken. I dreamt things would work out so that people would talk about me, dedicate verses and songs to me, that artists would draw me... And that has all come about.

“Whenever I dream, my dreams all come true. And this one has, too. I am grateful for the verses and songs. I am grateful to the poets. But I was mistaken all along. That was how I dreamt it. The poems are needed! But I was not supposed to become a star.

“I wanted all that so Vladimir would look at the images, listen to the songs, and remember. So he would remember me. But I did not know this when I was dreaming it. Now I realise — I am becoming a star. Everyone looks up to stars. But it is a *woman* they love.’

“Anastasia, do you realise what you’re asking for? There’s no way to stop a cassette from being distributed, especially when it’s one people copy themselves. That’s not something you can control. Nobody can.’

“You see? *You* cannot. But *Vladimir*... He is an entrepreneur. And even if it is said to be uncontrollable, *he* could still do something. But he does not want to do anything. He is resigned to the assumption that I am not a suitable mate for him.”

## CHAPTER SIX

# Forces of Light

“Boris Moiseevich,” Alexander continued, “forgot about everything else and went on plying Anastasia with questions, such as:

“What are the forces of Light?”

“These,’ Anastasia replied, ‘are all the bright thoughts ever produced by people. All space is filled with them.’

“Can you freely communicate with them? Can you see them?”

“Yes, I can.’

“Can you answer any question confronting science today?”

“Many of them, perhaps. But every scientist — indeed, every Man — can find the answers. Everything depends upon the purity of one’s thoughts, and the motive for asking.’

“Could you explain certain phenomena for science?”

“If the answer does not come to you, it means your thoughts are not sufficiently pure. Such is the law of the Creator. I will not go against it, if I feel it is not right to tell you.’

“Is there something higher than the bright thoughts produced by Man?”

“There is. But they are just as significant.’

“What is it? How could you define it?”

“In a way you are capable of relating to.’

“Are you able to talk with Him?”

“Yes. At least sometimes. As far as I know, I talk directly with Him.’

“Is there some kind of energy that exists in the Universe that we don’t know about on the Earth?”

“The greatest energy in the Universe is on the Earth. We need only to understand it.’

“Can you, Anastasia, give me at least an approximate description of this energy? Is it like a nuclear reaction? A vacuum phenomenon?’

“The most powerful energy in the Universe is the energy of Pure Love.’

“I’m talking about visible, tangible energy, capable of influencing technical progress, of producing heat and light. And, if you like, an explosion.’

“And I am talking about the same thing. All your humanly established installations, taken together, are not able to supply light to the Earth for any length of time. But the energy of Love *can*.’

“There you go talking allegorically again. In some other, metaphorical sense.’

“I am talking in a literal sense, as *you* understand it.’

“But love is a feeling! It’s not something visible — it can’t be applied, or even seen.’

“Love is energy. It is reflected. It *is* possible to see it.’

“Where is it reflected? How is it possible to see it?’

“The Sun, the stars, the visible planets — they are all but reflectors of this energy. The light of the Sun, which gives life to everything on the Earth, is created by human love. In the whole Universe the energy of Love is reproduced only in the soul of Man. It takes upward flight, becomes filtered and reflected, and pours itself forth from the planets of the Universe as beneficial light upon the Earth.’

“Do not combustive, chemical reactions take place on the Sun all on their own?’

“You only have to do a little reasoning to realise the falsity of such a conclusion. It is like, as you put it, “two-plus-two”.’

“Can Man control this energy?’

“Not to any significant degree, at least for the time being.’

“But do you know how to do it?”

“Myself, I do not know. If I knew, my beloved would already love me.”

“You say you can communicate with *Him* — a Being higher than the forces of Light? Does He always answer you? I mean, willingly?”

“Always. And He always answers very gently. Because He could not do otherwise.”

“Could you ask Him how to control the energy of Love?”

“I did ask.”

“And?”

“To comprehend certain answers of His, one needs to have a certain level of conscious awareness and purity, which I myself do not have. I do not understand all His answers.”

“But you will still attempt to do something to obtain this requited love?”

“Of course I shall do something.”

“What will you do?”

“I shall think. I help me. I need to ask all the women out there who have ever loved, all who have or have not been loved. They will think, analyse and produce thoughts which will appear in the dimension of the forces of Light. I shall see them. I shall understand and then I shall help everyone. Thoughts in the dimension of Light are always comprehensible.”

“Anastasia, we can't put a question to all the women of the world at once. Nobody can do that.”

“Then ask Vladimir. He will figure out how to do it, he will find a way. But he will not do it just for me. You will have to persuade him that this is very important for all people, for him. If he feels how important it is, he will definitely do something. He will find a way of asking all the women at once.”

“You believe so strongly in him. Why then has he not been able to love you in return?”

“He is not to blame. I am to blame. I made many mistakes. Possibly I was in a hurry and made myself appear too fantastic to him with my abilities. Possibly he is not yet able to appreciate why his son has to be raised in surroundings that seem unusual for human beings — that is, in the forest. Possibly I should not have interfered so drastically with his customary habits, not have intruded on his conscious awareness. I know now that men really do not like that. They can even beat women for that. I should probably have waited and he would have come to understand it all on his own. He should have felt that he is superior to me at least in something.

“But I did not realise this in time. I told him that he could not see his son until he purified himself. At that moment I was thinking only of our son, about what was best for him, and I inadvertently said it would not be good for him to see his father as a dimwit. So it turned out that *I* was the altogether clever one, and my beloved was stupid. What kind of requited love could I dream about after that?”

“Why then do you need to ask other women, if you are so capable of analysing things yourself?”

“I need to determine whether there really is a possibility of setting everything right. I cannot determine this by myself, I am so emotionally wrought whenever I think about him. The analysis needs to be carried out calmly, through reminiscence and comparison. But I have nothing to reminisce about except him.”

“And can you talk with him?”

“I feel mere words are useless. Real love does not come out of words. Some kind of actions are required. But which ones? Perhaps one of the women will have the experience and the needed answer?”

“And you are unable to reach him with your ray?”

“I cannot even touch him now with my ray. My foremother’s spirit is often right beside him. And she will not permit it. I know why.”

## CHAPTER SEVEN

### Assault!

“The helicopter was coming in for a landing,” Alexander went on. “We all watched it land without saying a word. The two crewmen got out, came over to where we were standing and fixed their eyes too on Anastasia. A group of armed, robust fellows silently stood watching this lone figure in an old cardigan standing before them, and immediately it was clear to all: they must capture this woman. The only question was: what was the most accommodating way to make the capture? After a long pause Boris Moiseevich laid it down in black and white:

“Anastasia, you realise you represent a valuable resource for science. The decision has already been made to transfer you to the nature preserve near Moscow. This is necessary for your own good, among other things. If for some reason you don’t understand the situation and refuse to come voluntarily, we shall be obliged to effect the transfer by force.

“Naturally you will want to have your child with you in your new place. You show us the location of your glade on the map and the helicopter will go fetch your son. Later we can capture a few of the animals and transport them to your new dwelling-place. I repeat: all this is necessary for your own benefit, for the benefit of your son and other people as well. You *do* want to bring benefit to people, don’t you?”

“Yes,” Anastasia replied calmly, and right away added: “Everything I know I am ready to share with all people, if they find it interesting, but only with *all* people. Science is not something that is available to everybody at once. Its

achievements are used first only by localised groups, often for their selfish, personal interests. The vast majority get to know about only what the localised groups are disposed to reveal.

“Who do you represent? Is it not a particular localised group? I cannot go with you. I need to raise a Man, I need to raise my son. That can only be done properly where a Space of Love has been created. This Space has been created and perfected by my forebears, near and distant. It is still small, but it is what ties me to the whole substance of the Universe. Every Man must create around himself his own Space of Love, and offer it to his child. Bearing children without preparing a Space of Love for them is criminal. Every Man must create around himself a small Space of Love. And if everyone understood this and acted upon it, then the whole Earth would become the brightest focus of Love in the Universe. This is the way He wanted it, and this is Man’s purpose. For only Man is capable of creating such a Space.’

“Two strong security men approached Anastasia from behind, one on either side. It wasn’t clear whether they were acting on orders from the security captain or whether it had all been planned out in advance. They exchanged glances and simultaneously grabbed Anastasia’s arms. They did this quite professionally, though not without a certain degree of apprehension. They kept a tight grip on her arms, as though holding a captured bird by its outspread wings.

“The security captain was a stocky fellow, his hair cut real short. He stepped out in front and stood beside Boris Moiseevich. Anastasia’s face showed no sign of fear. But she was no longer looking at us. Her head was slightly inclined toward the ground, her eyelids were lowered, hiding her gaze. And she began to speak without raising her eyes, with the same calm and gentleness in her voice as before.

“Please do not use force. It is dangerous.’

“For whom?’ the security captain enquired in a raspy voice.

“For you. And it would be unpleasant for me.”

“Boris Moiseevich tried to restrain what may have been either his fear or his excitement. He asked Anastasia:

“Can you cause us physical pain using supernatural abilities?”

“I am Man. A Man, like anybody else. But I am worried. Worry may allow undesirable things to happen.”

“Such as?”

“Matter... cells... atoms... nuclei... nuclear particles in chaotic movement... You know about them. If one visualises them vividly and in full detail, perceives and understands them properly, and then uses the full powers of one’s imagination to extract from the nucleus even a single chaotically moving particle, then the matter begins... begins to...”

“Anastasia turned her head to one side, lifted her eyelids just slightly and fixed her gaze on a stone lying on the ground. The stone immediately began to break apart into small particles and before long was transformed into a pile of sand. Then she raised her gaze to the security captain, squinting her eyes into a concentrated stare. Steam began to escape from the tip of the security captain’s left ear. The tendon slowly, millimetre by millimetre, began to disappear, and suddenly the young guard standing beside him went white with fear and drew his pistol from its holster. He did it automatically, like a professional soldier, without thinking. He aimed the pistol directly at Anastasia and discharged the whole cartridge.

“No doubt the thoughts of each one of us at that moment were racing at top speed, and something happened which you occasionally hear about with soldiers in wartime, when in extreme conditions they see a grenade or a bullet in motion. And even though the grenade or bullet is flying at its usual speed, the acceleration of one’s thinking and perceptive faculties causes it to be seen as in slow motion.

“I watched as the bullets from the frightened security guard’s gun flew at Anastasia one after another. The first

bullet grazed her temple. The rest of the bullets never reached her — they dissolved into dust while still in flight, just like the stone which she had trained her gaze upon earlier.

“We all stood there stupefied. We stood and watched as a stream of blood flowed down Anastasia’s cheek from under her kerchief.

“The guards holding Anastasia by the arms stepped back from her when they heard the gunshots, but didn’t let go of her. They had got her in a death-grip, and were pulling her in opposite directions.

“All at once a pale-bluish glow flooded the ground around us. It came from somewhere up above and quickly intensified. It dazzled us, making us incapable of moving or speaking. In the unusual quiet that followed we heard Anastasia say:

“‘Please, let go my arms. I may not be able to... Let go, please.’

“But the petrified guards did not let go their death-grip. Now I realise why she raised her arm in a characteristic gesture when she was talking with you. It was this gesture that indicated to someone up above that everything was in order and that she did not need help. But this time they wouldn’t let her raise her arm.

“The bluish glow continued to intensify, then something seemed to sparkle, and we saw — we saw a fiery sphere hanging over us, pulsating with a pale-blue light. It was like a huge ball lightning. And inside it were sparkling networks of hundreds of lightning discharges. Occasionally they would spark out beyond the blue membrane-like hull and reach the tops of the nearby trees, or even the flowers beneath our feet, but caused them no harm. One of the thin lightning bolts momentarily made contact with an obstruction which rocks and a fallen tree had made in the creek; it transformed the obstruction into a cloud of dust which instantly vaporised.

“The bolts that sparked out beyond the blue hull of the fiery sphere no doubt possessed tremendous power of an energy we know nothing about. It seemed as though it was being controlled by some kind of intelligence.

“We had the impression of being in the presence of an intelligent being which possessed unimaginable power. But the most incredible and unnatural thing about what was taking place were the sensations we felt from its presence. We had no sense of fear or suspicion — on the contrary...

“You can just imagine — right there in a situation like that we began to feel a sense of calm and grace, as though something very close to us, something related to us, had suddenly appeared.

“At that point the pulsating blue sphere soared over our heads and seemed to be studying us, sizing up the situation. All at once it made a circle in the air and landed at Anastasia’s feet. The bluish glow intensified and, like a pleasing languor, relaxed us to the point where we simply didn’t feel like moving, or even hearing or saying anything.

“The blue hull of the sphere then emitted several fiery bolts at once. They swept over to Anastasia, began touching her, as though stroking the toes of her bare feet.

“Anastasia managed to free her arms from the languishing security guards. She stretched out her arms toward the sphere. Immediately it rose to the level of her face, and the lightning bolts, which we had seen with our eyes turn to dust the stones piled up in the creek, began to fondle her arms, while doing them no harm.

“Anastasia began talking with the sphere. We couldn’t distinguish any words but, judging by her gestures and facial expression, she was trying to explain something to it, to prove or persuade it of the way she was seeing something, but without success. The sphere gave no response to her, but it was nevertheless clear that it was not agreeing with her. This

much was evident, since Anastasia went on trying to persuade it with considerable excitement. It was the excitement that no doubt caused her cheeks to flush. Still talking away, she removed her kerchief. Golden wheat-coloured braids of hair hung about Anastasia's shoulders and covered the stream of dried blood on her face. We saw how perfectly beautiful her facial features were.

"The fiery sphere made several revolutions, like a comet, around Anastasia's head, then stopped once more in front of her face, and a thousand delicate lightning bolts swept through her golden hair, neatly touching each individual strand, lifting and stroking them. One of the bolts lifted a whole bunch of strands at once and opened the bullet wound in her temple, while another bolt began gliding along the traces of the dried blood. It was as though the sphere was using the actions of its lightning bolts in place of words to remind Anastasia about what had happened and to contradict her arguments.

"Finally all the little bolts drew back inside the sphere. Anastasia lowered her head and fell silent. The sphere made one more revolution around her and then rose into the air. The bluish glow decreased in intensity, and we felt things gradually return toward the way they were before, but instead of the bluish light a brown smoke now began rising from the earth. This smoke filled the whole space around us, and only Anastasia remained in a little circle of blue. And when this brownish smoke completely enveloped us, that was when we began to discover what hell really is."

## CHAPTER EIGHT

# What hell is

“Old Bible pictures showing the beastly torture of sinners over hot coals, and even the most extreme portrayals of horror-film monsters, pale like children’s innocent fairy-tales in comparison to the hell we went through there on the riverbank!” Alexander exclaimed. “Since the beginning of time mankind has never managed to dream up anything that can compare with it. All the Bible images and horror films stop at depicting all the different ways fleshly bodies can be torn apart and dismembered, which is nothing by comparison with real hell.”

“But what could be more frightful than the acute torturing of the flesh?” I queried. “What kind of hell did you see?”

“Once the blue glow had weakened sufficiently to allow the brownish smoke to rise from the earth and it had enveloped us completely from head to toe, we found ourselves split into two halves.”

“What two halves?”

“Just imagine — I suddenly found myself comprised of two component parts. The first was my body, enveloped in a transparent skin through which I could see all my internal organs — my heart, stomach, intestines, the blood rushing through my veins, along with various other organs. The other part — invisible — consisted of my feelings, my emotions, my mind, my desires, my pain sensibility — in other words, everything about Man that you can’t see.”

“What’s the difference whether the parts are together or separated, as long as it’s still you? What happened to you that was so awful, aside from seeing your skin transparent?”

“The difference turned out to be incredibly significant. The thing is, our bodies began to act on their own, independently of our minds, wills, aspirations or desires. We could observe the actions of our bodies from an external viewpoint, yet our feelings and pain sensibilities remained with our invisible selves, and we were deprived of any ability to influence the actions of our own bodies.”

“Like someone who’s terribly drunk?”

“Drunks don’t see themselves externally, at least not while they’re drunk, whereas we saw and felt everything. Our clarity of consciousness was extraordinarily acute. I could see how beautiful the grass, the flowers and the river looked. I could hear the birds singing and the creek burbling away, I could feel the cleanness of the air around me, along with the warmth of the sunbeams. But those bodies... All the transparent bodies standing in our group suddenly trotted down, like a herd of sheep, to a pond formed by the creek.

“The pond resembled a little lake, the water in it was clear and transparent, the bottom was covered with soft sand and beautiful stones. Tiny fish were swimming in it. Our bodies ran down to this splendid little lake and started splashing around in it. They started urinating and defecating in it.

“The water became dirty and clouded, yet our bodies began drinking from it. I saw the dirty, stinking liquid flow through my intestines and into my stomach. I was overcome with a sensation of nausea and revulsion.

“Then under one of the trees by the pond all at once appeared the naked bodies of two women. Their skin was just as transparent as that of our bodies.

“The women’s bodies lay down on the grass under the tree, lolling about and stretching out in the warm sunshine. My body and that of the security captain ran over to the women’s bodies.

“My body began stroking one of the women’s bodies, it felt a responding caress and entered into sexual intercourse with the woman’s body. The security captain’s approach was not reciprocated and his body started raping the woman. Then one of the guards came running over and started hitting first my spine and then my head with a rock, but it was I, and not my body, that felt excruciating pain. The guard dragged my body away from the woman’s and started raping her himself.

“Our bodies soon began to grow old and decrepit. It was as though time was accelerating everything. The woman that had just been raped now became pregnant, and through her transparent skin you could see the embryo taking form and enlarging itself in the womb.

“The body of the scientist, Boris Moiseevich, went over to the pregnant woman, and spent some time peering attentively through her transparent skin at the developing embryo. Then all of a sudden he slipped his hand into the woman’s vagina, and began wrenching out the foetus.

“In the meantime, Stanislav’s body was quickly collecting rocks into a pile, then wildly breaking off small trees and using them, along with any other materials he found handy, to construct something resembling a cabin. *My* body went over to help. When the cabin was just about finished, my body tried to kick Stanislav’s body out of the cabin; he resisted and our bodies started fighting with each other.

“Even though I myself was invisible, I could still feel terrible pain when he started hitting the legs and head of my body. Our fight caught the attention of the other bodies, and they shoved us both out of the cabin, and then started fighting for it amongst themselves. My body became terribly frail and began decomposing before my very eyes. It could no longer walk, and just lay there under a bush, wasting away with a nauseating stench. Worms appeared on my body, and I could feel them crawling all over me, creeping into my internal organs

and eating away at them. I acutely felt them gnawing away at my insides, and awaited the final decomposition of my body to escape from this excruciating torture.

“Then all at once a foetus emerged from the second woman that had been raped. It began to grow right before my eyes. Soon the little fellow stood up and took its first timid step, then another, then it staggered and fell on its bottom. I could feel a painful sensation as it landed, and I realised to my horror that this was my new body and it was doomed to survive — to exist among these abominable, brainless bodies, which were desecrating themselves and everything around.

“I realised that I, who was invisible, would never die and that I was condemned to eternal contemplation and an acute awareness of the nastiness of everything that was going on, experiencing physical and even more terrible pain.

“The same thing was happening with the other bodies. They decayed, decomposed and were born again, and with each new birth our bodies simply switched roles.

“There was hardly any vegetation left around. In its place ugly structures had appeared, and the once pristine pond had been transformed into a stinking cesspool.”

Alexander fell silent. I too felt a sense of revulsion from what he had said, but not pity.

“Indeed,” I said, “you all went through a horrible experience, but you vermin had it coming to you. How come you had to latch on to Anastasia? She lives all alone in the taiga, she doesn’t touch anybody, doesn’t ask for housing, she doesn’t require a pension or any kind of amenities, so why go interfering with her?”

Alexander didn’t give any sign of offence to my verbal attack on him. He simply sighed and responded:

“You know, you said we ‘*went* through an experience’. But, you see... It may seem hard to believe, but the thing is, I’m not completely out of it. I think those who were in our group, too, haven’t fully come out of it.”

“What do you mean, ‘haven’t fully’? Here you are, sitting calmly beside me, poking the ashes in the fire...”

“Yeah, sure I’m sitting here poking the ashes, but that acute awareness of something terrible has stayed with me. It still frightens me. This terrible thing is not just in the past — it is still going with us today, right now. With all of us.”

“Maybe something’s happening with *you*, but everything’s okay with me and everyone else.”

“But doesn’t it seem to you, Vladimir, that the situation we were in is an exact copy of what mankind is doing today? What we were shown in a microcosm and at an accelerated speed only reflects what’s going on today in the world.”

“It doesn’t seem that way to me, since our skin is not transparent and our bodies obey our commands.”

“Maybe someone’s just taking pity on us, not letting us become fully aware of what we have done and are continuing to do. After all, if we were aware of it, if we could see our lives from an external viewpoint, we’d see them exposed, along with all the false teachings which we’ve used through the ages to justify what we are doing. We wouldn’t last, we’d go out of our minds!

“We try to put on a decent front, we try to justify the evil we do by our own so-called ‘insurmountable weaknesses’. We couldn’t resist temptation: we started smoking and drinking, committed murder, then we started going to war to defend some sort of ideals. We started setting off bombs.

“We are weak. That’s the way we see ourselves today. We say there are higher powers — they can do everything, they decide everything. But as for us? We hide behind dogmas like that and feel we can get away with any kind of filth we like.

“And let’s face it, what we do *is* filth. We all do it, every one of us, only we justify it to ourselves in different ways. But now it is absolutely clear that, as long as my consciousness has not lost its control over my body, I and I alone must take personal

responsibility for all its actions. And Anastasia is right when she says 'As long as Man is in the flesh...'"

"Don't go citing Anastasia, smart ass! 'She is right!' But you yourself practically had her in the grave. Too bad she didn't go just a little further and then you would all have lost your marbles completely!"

I was really growing more and more angry at the whole bunch of them, but since Alexander was the only one in front of me, he had to bear the brunt of my anger.

"Just look at your own self," Alexander replied. "Wasn't it thanks to you that we were able to get through to Anastasia? And not just us — you think attempts like ours won't be repeated?"

"Whatever possessed you to specify the exact name of your ship, even the name of your captain? Don't play the documentarian. You could even have changed the name of the river, but you didn't do it — you didn't think of it in time. And here you expect others to always know the right thing to do. I got what was coming to me. Now my whole life I will have to keep making sense of that nightmare I witnessed."

"Tell me, how did it end, that nightmare of yours? How did you get out of it?"

"We would never have been able to come out of it all on our own. It was something we were to go on reliving forever. At least that was the impression each of us had.

"Anastasia appeared amidst our decomposing and still active bodies. *Her* skin wasn't transparent. She was still wearing her old cardigan and long skirt. She tried speaking to our bodies, but they wouldn't listen. They seemed to be preprogrammed to die and be born again, repeating their actions over and over with only a change of roles.

"At that point Anastasia started quickly picking up the garbage near one of the structures our bodies had built. She quickly gathered the scattered stones and brush into a

pile with her hands, loosened the earth a little with a stick, touched and fluffed up the grass where we had trampled it, and the little green blades began popping up again — not all, but those that still could. Anastasia carefully straightened the broken trunk of a small tree, about a metre tall: she mashed up some earth in her hands to soften it and then daubed it on the broken part of the tree. She squeezed the tree between her hands, and held it tight for a while. Then, when she carefully took her hands away, the tree remained upright.

“Anastasia nimbly went on doing what she had to do. She created a small ‘oasis’ on the ground our bodies had trampled, which had been left almost devoid of vegetation. Boris Moiseevich’s body ran over to it, leapt onto the grass and rolled around on it, then jumped up and ran off. A little while later it returned with the body of one of the guards. Together they uprooted the small tree and began dragging stones and sticks to the ‘oasis’, where they attempted to put together yet another ugly-looking plain structure.

“Anastasia threw up her hands in frustration. She tried talking to them but, as she met no response, she apparently abandoned her efforts at persuasion. After standing for a while in a dither about what to do next, she dropped to her knees, covered her face with her hands, and you could see the hair trembling on her shoulders. Anastasia was crying — crying just like a baby.

“And almost immediately the bluish glow reappeared, at first barely noticeable. It drove the brownish smoke of our hell into the ground and reunited our bodies and our minds. Only we still weren’t able to move about — but this time it wasn’t from horror, but from a sweet and pleasant languor emanating from the blue glow. The fiery sphere was again circling overhead.

“Anastasia stretched out her hands toward it. The sphere instantly changed location to within a metre of her face. She

began talking with it, and this time I could distinguish words. Anastasia told the sphere:

“Thank you. You are kind. Thank you for your mercy and your love. The people will understand, they will most certainly understand everything, they will understand it in their hearts. Do not ever take your beautiful blue light from the Earth, your light of love.”

“Anastasia smiled, and a tiny tear rolled down her cheek. From the sphere’s pale-blue membrane hull fiery lightning bolts flew into her face. Carefully and dexterously they picked up the tear on her cheek, glistening in the sun, and ever so delicately, as though it were a priceless gem, held the tear on their fiery tips as they placed it inside the sphere. The sphere gave a shudder, executed a circle around Anastasia, landed momentarily at her feet, then swept upward and dissolved into the blue sky above, leaving everything on the ground the way it was before.

“And there we were, standing where we had been before. The sun was shining, the river was flowing as it had always done, the forest could be seen rising in the distance, and there was Anastasia standing in front of us, right where she had been earlier. We stood there silently taking in everything around us. I was overjoyed by what I saw, and I think the others were, too. Only we weren’t talking — perhaps because of what we had experienced and the natural surroundings which had suddenly become so beautiful to our gaze.”

Alexander fell silent, as though he had quite withdrawn into himself. I tried speaking to him:

“Listen, Alexander, maybe everything you told me really didn’t happen that way at all. Maybe Anastasia’s simply able to use some sort of powerful hypnosis? I’ve read that there are many recluses who can do that. So maybe she hypnotised you and showed you a vision?”

“I hypnosis, you say? Did you notice the grey streaks in my hair?”

“Yes, I did.”

“Those grey streaks appeared after this all happened.”

“But you could have got a huge fright under hypnosis, and that caused the grey streaks.”

“Well, if you assume it was hypnosis, then there’s another mystery you’ll have to explain.”

“And what’s that?”

“The stone and log obstruction in the creek. It’s completely disappeared — the creek runs freely now. But the obstruction was there before our ‘vision’ — everybody saw it — it was there!”

“Okay... That’s something to think about.”

“Anyway, what difference does it make what happened to us. There’s something more important than that. I’m not the same person I was before — I don’t know how to live now, what I should be studying, or where. After I got home, I burnt a lot of my books written by different so-called sages, ‘wise men’, teachers from various parts of the world. I had quite a decent-sized personal library.”

“What d’you go and do that for? You should have sold them, if you no longer needed them.”

“I couldn’t sell them. I didn’t even think of selling them. Now I have some accounts to settle with those teachers and sages.”

“And what do you think, Alexander — is it dangerous to communicate with Anastasia? Maybe she really is some kind of anomaly? After all some of the letters I’ve got say that she represents another civilisation. If that’s true, then it’d be dangerous to communicate with her, because you never know what this other civilisation might have in mind.”

“I think just the opposite is true,” Alexander replied. “She has such a feeling and love for the Earth, for everything living and growing on it, that, compared to Anastasia, we look pretty much like vagrant aliens.”

“Then *who is she?* Can scientists say for sure, once and for all? How did she manage to acquire such a huge mass of information? Where does she have room to store it in her head? Where did she get her mystifying abilities? What about her ray?”

“I think we simply have to go by her words here — she said: ‘I am Man, I am a woman’. As for all that information, I don’t think she stores any of it in her head. I think, rather, that the purity of her thoughts allows her access to the database of the entire Universe. And that her talents derive from this total access to information.

“The Universe loves *her*, but is wary of *us*, and that’s why it won’t open itself to us completely. Our thoughts — the thoughts of any Man raised in today’s society — are blocked by stereotypes and conventions, in contrast to her thought, which is completely open and free. That’s why it’s hard for us to explain her mysterious abilities simply by her assertion that she is Man.

“Of course she can perform incredible feats — miracles, in our perception — I know that from personal experience. During our visit one other incident happened which can *only* be described as a miracle. It’s even more mystifying than what happened with our group. And much grander!”

Alexander uttered these last few words with a certain degree of excitement in his voice. He got up and walked away from the fire into the night. In the twinkling light of the stars and the dusky glow from the smouldering fire I could see the young Siberian lad pacing back and forth. I could hear his brief, excited phrases. Alexander was saying something incomprehensible about science, and psychologists, and some sort of teachings. I got tired of sitting there and listening to his fragmentary utterances. I was dying to hear what kind of ‘grand miracle’ he had seen Anastasia perform.

I tried to calm him down.

“Relax, Alexander, sit down. Tell me more specifically, what grand thing you witnessed?”

Alexander tossed some dry branches onto the fire and sat down again beside it. But I could see he had not fully regained his composure. Out of nervousness, no doubt, he had stirred the smouldering coals so forcefully that the sparks flying upward landed on him and on me, causing us to jump up and away from the fire. When things had quieted down, I began listening to his emotional tale.

“In the space of some twenty minutes,” he began, “Anastasia managed to change right before our eyes the physical condition of a little village girl. She did this before our very eyes. And over this period of time she changed not only the little girl’s destiny, but her mother’s too, and even had an effect on the whole outward appearance of this remote Siberian village. And it all happened within the space of twenty minutes or so. The main thing was *how* she did it — simplicity itself! She...

“How can anyone believe in horoscopes after that?!” Alexander wondered. “I saw it happen! That’s why I burnt my books with all that ‘wise man’ nonsense and all that religious stuff.”

“See,” I countered, “you yourself admit that she performs superhuman miracles, mystical wonders, even if she smashes horoscopes in the process. She makes these things happen all by herself, and then expects to be called a normal human being. If only she’d tried to *act* half-way normal, but no!... I spoke to her about that, too — I said she should just act like everyone else, then everything will be normal, but it seems she’s not capable of acting like everyone else. Pity! She’s such a kind and beautiful woman, so smart — she can heal people, and she’s borne me a son... But to live with her, the way I’d live with another woman — well, that’s simply impossible. I can’t imagine anybody being able to sleep with her after everything you’ve told me. Nobody could. Everybody needs a

*woman*, plain and simple, not a far-out eccentric like that. But she herself is to blame for that, what with her mysticism and all.”

“Hold on, Vladimir. Now it’s my turn to tell *you* something. Just think carefully about what I’m going to say. It may seem incredible, but try to understand. Everybody has to understand it! *Everybody!* Perhaps, together, we can make some sense out of it. Perhaps...

“You see, Vladimir, Anastasia performed this incredible miracle with the little girl, but there was no mystery or magic involved. No sorcery, no shamanistic gimmicks. If you can imagine, she, Anastasia, did this miracle using just simple human words known to everyone. Simple, everyday words, only spoken in the right place at the right time.

“If psychologists were to analyse Anastasia’s conversation with this little village girl, they would realise how psychologically effective it is. Anyone uttering these same words could have achieved a similar effect. But to have these words come to mind at the right time, the sincerity and purity of thought Anastasia spoke of are an absolute requirement.”

“So, it’s not just good enough to memorise the words?”

“We’ve all known them for a long time — that’s not the point. The real question is: what lies *behind* each of the words we say?”

“Somehow you’re losing me. You’d better tell me the rest of what happened with you there. What words could change people’s physical condition and their whole destinies?”

“All right. Of course I should explain. Listen.”

## CHAPTER NINE

### When words change destinies

“After what we experienced,” Alexander began, “our group took a while to regain a sense of normalcy. Nobody spoke with anyone else. We stood there right in the same spot and it was only after some time had passed that we began to look to either side of us and take in the surrounding world in a different way from before, as though we were sensing it for the first time. And now we noticed a group of residents approaching us from the direction of the village. The local population was quite small, only about a dozen people lived in the six houses of this remote Siberian settlement. And they were nearly all oldsters, some of them quite frail. One woman was bent over double — she walked with a limp, carried a cane, but she still came with the others. Those who did not require a walking stick were armed with various tools — one carried a cross-beam, another an oar. They had evidently come to defend Anastasia. These old and frail people were advancing against young, healthy, stalwart fellows carrying weapons. They advanced without fear, determined to come to Anastasia’s defence, no matter who might be standing in their way.

“Their resolve was terrifying. When they drew near to us, the old fellow carrying the oar and wearing rubber boots, who was walking slightly ahead of the others, stopped, which brought a halt to the group of villagers as a whole. They paid no attention to us, treating our group as empty space. With a sedate stroke of his beard he looked right at Anastasia and greeted her respectfully:

"I wish you good health, my dear, dear Anastasia, on behalf of all of us."

"Good day to you, kind people," Anastasia responded, clasping her hand to her breast and bowing to the elderly villagers.

"The water in the river is dropping early this year," the old fellow went on. "The summer hasn't been too rainy."

"Not so rainy just now," Anastasia confirmed, "but more rain will come, the water level will rise, and the river will return to its former strength."

"As they continued talking that way, out from the group of elderly villagers emerged a frail little girl, about six years old, with pale yellowish skin. She was wearing an old jacket, pieced together from fragments of some adult garment, her thin legs were covered by patched pantyhose, and she had little old boots on her feet.

"Later I found out the girl's name was Aniuta. She was a sickly child, with a congenital heart disease. Her mother had brought her from the city when she was just six months old and left her with the oldsters, not coming back even once to see her daughter. They say she works somewhere as a painter for a construction firm.

"Aniuta went up to Anastasia and started tugging on the hem of her skirt, pleading with her:

"Bend down, Auntie Anastasia. Bend down to me."

"Anastasia looked at the little girl and squatted down in front of her. The girl quickly took off the old white kerchief she was wearing on her head. She salivated on one edge of it and began to carefully wipe the blood which had already dried on Anastasia's face and temple, saying:

"You don't come any more, Auntie Anastasia, to sit on your little log by the shore. Grandpa said that earlier you used to come more often. You would sit on the log and watch the river. Now you don't come. Grandpa showed me the

little log where you used to sit, Auntie Anastasia. Grandpa showed me, and I started coming to it, to your log, myself. I sat there all alone, waiting for you to come, Auntie Anastasia. I really wanted to see you. I have a secret to tell you. But you wouldn't come to sit on your log and watch the river. Maybe 'cause the log is quite old. I kept asking Grandpa and he brought a new little log for you. There it is, lying right beside the old one.'

"The little girl took Anastasia by the hand and started pulling her over to the log.

"Let's go, let's go, Auntie Anastasia, let's go sit on the new log. Grandpa hewed out two seats on it with his axe. I was the one who asked him to do that, so that when you came we could sit together.'

Anastasia at once responded to the little girl's request, and they sat down together on the log. They just sat there silently for a while, not paying any attention to anyone. It was as though there had been no one else around. And everyone stood silently, without budging. Then the little girl started talking:

"Grandma told me a lot about you, Auntie Anastasia. And when my Grandma died, I began asking Grandpa, and he told me about you, too. Whenever Grandpa talks about you, I think about my little secret I have to tell you. Grandpa told me that when I was little, my heart wasn't working right. It wasn't ticking evenly. One time its tick was way off. Then they brought in Auntie Doctor in a boat. Auntie Doctor said there was nothing they could do with such a bad heart — there was no one it would obey. And that it would die before long.

"Grandpa told me how you, Auntie Anastasia, were sitting at the time on your old little log and watching the river. Then you got up and came into our hut. You took me in your arms and put me on the grass outside the house. Then you lay down beside me and put your hand on my chest. You put

your hand here, where you could hear my heart ticking. Right here.' And the girl clasped her hand to the left side of her thin little chest.

"Grandpa said that you too, Auntie Anastasia, started lying next to me as if you were breathless, since your own heart had started ticking ever so softly, just like mine. Then your heart started beating faster, and called out to mine to catch up. My heart obeyed yours, and together they started ticking the way they ought to. That is what Grandpa told me. Did he tell me everything right? Right, Auntie Anastasia?"

"Yes, Aniuta. Your grandpa told you right. Your heart will always be good now."

"That means your heart called to mine and mine obeyed? It obeyed, did it?"

"Yes, Aniuta dear, your heart obeyed."

"Now I shall tell you my secret, Auntie Anastasia. It is a very, very important secret!"

"Tell me your important secret, Aniuta."

"Aniuta got up from the log and stood in front of Anastasia, clasping her thin little hands to her chest. Then all of a sudden she... Suddenly little Aniuta fell on her knees before Anastasia. She barely managed to restrain the excitement in her voice when she said:

"Auntie Anastasia, dear Auntie Anastasia, ask your heart again! Ask it! Ask your heart to call to my Mama's heart. Have my Mama come see me. Even just for a day. To see *me*. That's my secret. Have your heart... Mama's... heart... hear..."

"Aniuta choked from emotion, then fell silent, her eyes fixed on Anastasia.

"Anastasia squinted her eyes and looked off into the distance, past the little girl kneeling in front of her. Then she looked at the girl once more and quietly stated a fact that must have been horrifying for the child. She answered her as she would have an adult:

"Aniuta, dear, my heart is unable to call to your Mama. Your Mama is far away in the city. She tried to find happiness but did not find it. She does not have a home of her own, she does not have any money to buy you gifts. And unless she can bring you gifts she does not want to come and see you. It is hard for her in the city. But if she *should* come and see you, it will be even harder for her. A visit with you would become a sad and tormenting experience. It would be more difficult and frightening for her to see you so sickly and so poorly clothed. She would see how the houses in your village are falling apart, and how dirty and shabby the house you live in is. It would be all the more difficult since your Mama no longer believes she can do anything good for you. She simply does not believe it. She feels she has tried everything and this is what fate has determined for her. She has given in to the very hopelessness she has imagined for herself."

"Little Aniuta listened to the terrible truth, and her wee body trembled. It seemed to me awfully cruel to talk to a child that way. I thought a white lie would have been more appropriate here. Like stroking the poor little girl's head and promising her mother would arrive soon. And saying they would have a happy meeting.

"But that is not what Anastasia did. She told this helpless, defenceless little girl the whole bitter truth. Then after spending some time watching her body shake all over, she began talking to her again.

"I know, Aniuta dear, you do love your Mama."

"I love... love... I love my poor dear Mamochka," the girl replied, her child's voice on the point of breaking into tears.

"Then you make your Mamochka happy. You are the only one, the only one in all the world who can make her happy. It is very simple. You become healthy and strong, and learn how to sing. You will be a singer. Your marvellous, pure voice will sing together with your heart. Your Mama may meet

you in twenty years, and seeing you will make her very happy. Or your Mama may come to see you next summer. By that time you should already be healthy and strong. To welcome her. Get some presents ready for your Mamochka. Show her how strong and beautiful you are, and you will make your Mamochka very happy, and your meeting with her will be a joyful one indeed.'

"But I will never be able to be healthy or strong.'

"Why not?"

"You know Auntie Doctor? She wears a white coat. Auntie Doctor told Grandma. I heard her say I'll always be a weakling 'cause I was a bottle baby. My Mama wasn't able to give me any mother's milk. My Mama had no milk in her breasts. And children, when they are small, always drink milk from their mama's breasts.

"I saw it once, when a lady came to the village with a little baby. I went over to the house she had come to. I really wanted to see how babies drink milk from their mother's teats. I tried to sit there ever so quietly. But they kept chasing me out. The mama-lady wondered why I was sitting there without blinking. I was afraid to blink my eyes in case I missed something.'

"Do not you think, Aniuta, that Auntie Doctor might have been mistaken when she said you would never be healthy and strong?"

"How could she have been mistaken? She wears a white coat. Everybody listens to her — the grandfathers and grandmothers. She knows everything. She knows that I was a bottle baby.'

"And why did you go to see how babies are breast-fed?"

"I thought I would see how good the baby felt when he got fed from his mother's teat. I thought I would see how good he felt, and then I would feel better, too.'

"You will get better, Aniuta dear. You will be healthy and strong,' Anastasia said quietly and confidently. And then

Anastasia gradually unbuttoned her cardigan and exposed her breasts.

Aniuta stared at the exposed breasts in amazement, quite overwhelmed by the unexpected action. From the ends of the nipples tiny drops of breast milk emerged.

“Milk! Mother’s milk! Auntie Anastasia, are you feeding a baby, too? Are you a mama?”

“This milk is to feed my little son.”

“Drops of breast milk kept coming. One of the drops fluttered in a passing breeze. The breeze tore the drop from Anastasia’s breast.

“Like a lightning-fast steel spring, Aniuta dashed after the little drop of breast milk. And she... Imagine, this thin, sickly little girl was nimble enough to catch the drop! She fell to the ground, but as she was falling she put out the palms of her hands and caught the little drop of breastmilk! She caught it just as it reached the ground. Getting up on her knees, she lifted her cupped hands to her face and opened them, examining the tiny wet spot they were holding. Then she held out her hands to Anastasia.

“Here. I caught it. Here it is. Your son’s milk is not lost.”

“You saved the little drop, Aniuta. Now it belongs to you.”

“To me?!”

“Yes. Just to you.”

Aniuta raised her cupped hands to her face and touched the drop with her lips. The frail little girl closed her eyes and held her hands pressed against her lips for a long time. Then she dropped her hands, looked at Anastasia, and with a voice full of gratitude, whispered:

“Thank you.”

“Come close to me, Aniuta dear.”

Anastasia took hold of the little girl by her shoulders. She stroked her hair, then sat her on her lap. She gently inclined

the little one's head to her breast, as she would an infant, and began singing quietly.

"Aniuta's lips were now very close to one of Anastasia's nipples. Almost in a half-sleep, Aniuta slowly drew her lips closer and closer to Anastasia's breast, felt the moist nipple, gave a tiny shudder and began greedily sucking on Anastasia's milk-filled breast.

"Judging by the tape recording, she awakened about nine minutes later. She raised her head and jumped down from Anastasia's lap.

"I... Oh, dear, what have I done? I've drunk up your son's milk."

"Not to worry, Aniuta. There is enough left for him. You only drank the milk from one of my breasts, and there is still milk left in the other one. There is enough for him. My son can also eat pollen from the flowers if he wants to. And now you have been provided with all you need, so you will have no fear about being strong and beautiful and happy. Now go and draw your happiness from life, from each day it brings."

"I shall be strong and healthy. I shall think about how to greet Mamochka, so that she will not find it difficult to see me, but she will be extremely happy. Only I shan't be able to sing. I used to sing with Grandma. Then Grandma died. I keep asking Grandpa, but he doesn't sing. Only when he drinks vodka will he sing me a song, and then I sing along with him. But it is hard for me to sing along with him, 'cause his voice croaks. I also tried to sing along with the radio, but our old receiver crackles so much I can't get the words."

"Aniuta dear, just try singing without words, try to imitate the birds when you hear them sing, or the water when it burbles, or the rustling of the leaves and the wind when it is strong and whistles through the branches. And there are a lot of sounds in the grass. You will hear many pure sounds around you if you are willing to listen. Try imitating them with your voice. They will be your best teachers..."

“I am going now, Aniuta, good-bye. It is time for me to go.’

“Anastasia got up from the log. Aniuta remained sitting, listening to the world of sounds around her. Anastasia went up to the young guard who had shot at her. The guard was still very pale in the face, and his hands were shaking. His pistol was lying nearby on the ground. Anastasia told the guard:

“Do not blame yourself, do not torture your soul. It was not a partner in what you did. You acted out of instinct. You were trained to protect whatever you were ordered to, without thinking about the situation. And your instinct took its course. It is not good for instinct to gain supremacy in Man. When instinct takes first place, then Man takes second place. The result is something less than a Man. Think about it — perhaps it would be better to return to yourself — to the Man that you are.’

“When the guard heard the calming tones of Anastasia’s voice his hands stopped shaking, and the paleness disappeared from his face. And by the time she had finished speaking, his face was flush with a reddish colour, right to the tips of his ears.

“Then Anastasia said good-bye to the elderly villagers and headed off in the direction of the taiga. For a long time we watched her as she drew further and further away. Then all at once we heard an extraordinarily pure child’s voice singing.

“Aniuta was still sitting on the log, singing a beautiful, old-time song — probably one she had learnt from her grandmother. And how she sang! Her pure voice hit unusually high notes, filling the space around and enchanting the heart:

*Sprinkling raindrops glisten,  
Brother rocks his sister,  
Brother rocks his sister,  
Sings to her — she listens.*

“Aniuta finished her song and began staring at our group, still standing there motionless. Then she got up, picked up a thin stick from the ground and said:

“‘You chaps are bad. You’re so big, but you’re still bad.’

“After saying this she started coming at us, armed with the little stick. The group of elderly villagers shuffled silently along behind her. And all of us to a man began withdrawing before them. We retreated right back to our ship which was docked by the riverbank, then scrambled up the gangplank, not without some pushing and shoving. We were on the point of pulling up the gangplank when the captain suddenly noticed the two helicopter pilots were also on board.

“‘How come you’re here?’ he shouted from the bridge. ‘Who’s looking after the chopper?’

“The pilots jumped down from the ship and ran over to their ‘copter.

“We left, abandoning the barrels of fuel and tents remaining on the shore. Nobody even thought of collecting them.”

## CHAPTER TEN

### Work out your own happiness

When Alexander finished his story, I couldn't help expressing my animosity toward him.

"I see only too well what you're up to. So you left the tents there. And the barrels too, eh? Too bad you got away with just some grey hair. She's a holy person, Anastasia. It was so clear straight off — any normal person who'd seen you would have twigged what was going on, right off the bat. They would have known who was standing in front of them and what they were getting at. And yet she started pouring out her soul to you."

"She was aware of everything," Alexander observed. "She was aware of why we came and what we wanted of her. She understood. But she was not talking with the dark side of our human selves. She ignored the dark side, communicating only with what was bright in each one's heart. And that way she changed all of us. After all, I'm an academic. I've done a lot of work in psychology."

"So, another academic, eh? So what good is all your study if your thoughts are so slow to catch up?"

"Well, you see, life often happens to deal out its events to us faster and more accurately than we can handle them. Besides, Anastasia turned out to be... No, I'm afraid to put her into a category, any more than that other experience..."

"What other experience?"

"How can I put it? You know? Those old people from that remote taiga village — well, they're still coming at us. Together with the frail little girl out in front of them, carrying the thin stick."

“What? Where?”

“They’re coming at us, they’re coming at all of us who were there and saw them. I thought that this was happening just with me — as soon as I close my eyes, I see them straight off, and sometimes they appear whenever I do anything which, in their opinion, is probably unwarranted. I thought this was happening just with me — but I’ve been talking with others in the group. Similar things have been happening with the ones who were there.”

“But that’s all just in your minds, in your imagination.”

“What’s the difference? We still have to retreat before their advance, even in our minds.”

“What could be so frightening about helpless and unarmed oldsters? What are you afraid of?”

“I really don’t know what there is to be afraid of. Maybe our own... Maybe we’ve overstepped some line of permissiveness?”

“What kind of line would that be? That sort of fantasising can drive one crazy. Maybe you just have to think things through as you’re doing them, before it’s too late.”

“Maybe, think things through in time... We all have to think things through.”

“And where did you get the notion that after her conversation with Anastasia the little girl’s destiny changed, and her mother’s too? And the destiny of the other villagers?”

“I told you, I’m into psychology. As an academic I can say this: Anastasia completely changed Aniuta’s whole internal programme.

“After being abandoned to the care of her grandparents, the little girl had been spending her time sitting sick and helpless in a corner of a dirty hut, waiting for her mother to come. They kept assuring her that her Mamochka would come and play with her and bring her presents. They did this, thinking they were doing a good deed by lying. In the meantime

her mother in the city went on a drinking binge to relieve her feeling of hopelessness. The false assurances had condemned the girl to a state of fruitless expectancy.

“We too sometimes sit around waiting for a dispensation from above. Someone is supposed to come along and make us happy and change our destiny. Maybe that’s why we act so lethargically or don’t act at all. We don’t reflect on the fact that we already have more than enough, and that maybe we should be greeting the one coming with gifts of our own.

“Anastasia changed destiny and the future with her simplicity and sincerity. Just think, the simplest human words can change destiny.

“I’ve listened to the recording of Anastasia’s conversation with Aniuta many times. I have an idea if anyone else spoke that way to the girl, it would have had the same effect. It doesn’t actually take much to speak the way she did. The main thing is not to lie. One need only have the sincere desire to help. And helping doesn’t just mean sympathising. You have to be free of doctrines of karma, of predestination or, rather, rise above them.

“Of course one can do a lot of talking about karma, the hopelessness of inevitable predestination and what it means for a sick little girl, but Anastasia rose above this sense of inevitability. She simply didn’t pay any attention to it. And any other person could do the same. After all, everything was done with words, simple words we use every day. Only they need to be spoken at the right time and in the right place, and in the proper order. It is quite possible that the purity of thought Anastasia talks about causes these words to automatically fall into place in the right sequence, and that is why they are so powerful.”

“Well, Alexander, those are all theories of yours, assumptions. You still have to look at real life and see whether any destinies will change on account of a bunch of words or

not. Anyway, what could possibly change in life for that little girl? Unless some sort of miracle happened.”

“A miracle *has* happened. It turns out that all the miracles we need are within ourselves.”

“What kind of miracle happened?”

“Little Aniuta’s whole mind and life got reprogrammed. She broke all the bonds of karma for herself and those around her.”

“What do you mean, ‘broke’? How do you know this?”

“I know it. Some time afterward I went back to the village. I decided to offer Aniuta my radio receiver, since hers was too crackly, and set up an antenna for it on the roof. So I’m walking along to Aniuta’s house and I notice that the boards on the wooden sidewalk have been fixed. Before they were quite decayed, and now all the rotting boards had been replaced with new ones. Wow, I thought, what’s all this renovation going on here? I saw Aniuta’s granddad sitting on the porch, washing his boots in a pail of water. I said hello to him, and explained why I’d come.

“‘Well, fine!’ said the grandfather. ‘Come on in, if you like. Only you’ll have to take off those shoes of yours. You see, we’ve got new rules around the place.’

“I took off my shoes on the porch and accompanied the grandfather into the hut. Everything was simple inside, as you’d expect in a small village, only extremely clean and cozy.

“‘You see, our granddaughter’s got this new order set up for us,’ the grandfather told me. ‘She worked at it for a long time. She cleaned the floor, and then washed everything spic and span. She was at it from morning ‘til night for over a week, like a wound-up spring. She would have a rest and then start cleaning again. She persuaded me to paint the walls a fresh coat of white.

“‘And now when I come into the hut with my boots on and leave tracks, right away she gets out a rag and starts cleaning

away the tracks. So, I guess, it's better not to leave any tracks. We don't have any slippers.<sup>1</sup> Instead of slippers she adapted some old galoshes. Here, you can put these on. Make yourself comfortable.'

"I sat down at the table. It was covered with an old, but clean tablecloth. The cloth was torn in one place, and the tear was patched, as neatly as a child's hand could make it, with a piece of coloured cloth cut in the shape of a bunny-rabbit. In the middle of the table stood a cut-glass tumbler, out of which corners cut from notepad sheets neatly protruded — instead of serviettes.

"I see they've started improving your village, too,' I said to the grandfather. 'And it looks like the authorities have been paying attention, seeing they fixed the wooden sidewalks.'

"And he replied:

"It's got nothing to do with the authorities. They don't pay any attention to us. It's my granddaughter, Aniuta. She just can't keep still.'

"What do you mean, Aniuta? She's still a wee one, much too little to repair sidewalks. Those are heavy boards there.'

"Heavy boards. Yeah. You see, one day I was about to set out hunting, and I asked a neighbour if she would look in on Aniuta. And Aniuta says to me, "Go on, Grandpa, go on about your business. Don't worry, I'll take care of everything myself. Just let me take a saw to that board that's standing against the wall in the barn."

"I was surprised, but I thought: why not let the child play, if that's the way she likes to play. So I put the board on the wood-block, handed her a couple of saws and set off to do some hunting. Later my neighbour told me what happened while I was gone.

<sup>1</sup>*slippers* — It is customary for Russian hosts to offer their guests slippers to wear during their visit.

“Aniuta pulled out the old rotten pieces of board from the sidewalk. She measured the hole with a string and began sawing the board I had given her according to the measurement. The neighbour says she spent half the day sawing the board, but she managed to do it somehow. Then she lugged the new board right up to the sidewalk and put it in the place of the rotten one.’

“‘She’s so thin and frail, how on earth could she have lugged such a heavy board?’ I asked.

“She found herself a helper. Back a couple of months ago she made friends with an orphaned dog, a Siberian laika.<sup>2</sup> An old lady died who lived at the other end of our village, leaving a large dog. Back at the funeral Aniuta kept stroking him. Then she started taking him something to eat. At first the laika wouldn’t leave his own yard, even though there was nobody left living in the hut. The old lady had been living alone.

“Aniuta fed the dog for several days. He started following the girl around, and now he never leaves her side. Now this old dog helps carry out whatever our granddaughter fancies. So he helped her lug the board over. Aniuta tied a string around one end and started in dragging it herself, when the huge dog grasped hold of the other end with his teeth, and between the two of them they managed to drag it to the sidewalk.

“Then Aniuta asked a neighbour lady for some nails, and borrowed my hammer. And here she was trying to nail the board into place with the hammer. But nothing happened. The neighbour saw Aniuta sitting on the sidewalk, trying to hammer in the nail. She hit her hand in the process and blood started oozing out. The dog was sitting right beside her, watching and whimpering.

<sup>2</sup>*laika* — the name given to a number of Arctic breeds of dog, akin to the Canadian husky, trained for pulling sledges and hunting in the North. The word has the same root as the Russian for *to bark* and is commonly used in Russian as a personal name for a dog.

“The neighbour came over, took the hammer and nailed the board in place. The next evening she saw Aniuta and the dog dragging another board over. Which meant there was another hole in the sidewalk to patch up.

“The neighbour asked Aniuta if she were going to patch up all the holes this way — couldn’t she think up some other little girl’s thing to do? And my granddaughter replied:

““It’s very important, Auntie, for all the sidewalks outside the houses to be new and free from holes. You see, otherwise someone might decide to come visiting, walking along the boards, and there’s holes in them, and that would spoil the visitor’s good mood. And my Mamochka, when she comes, might get upset if she saw such a shoddy sidewalk.”

“So the neighbour hammered down the second board for her. And then she raised a hue and cry throughout the village, shouting out to everyone: “Get busy fixing the sidewalks in front of your houses. I’m not going to let a child do drudgery on account of your disorderliness! She’s working her hands to the bone!”

“So, you can see, everyone’s fixed up the sidewalk in front of their houses. So they wouldn’t have to hear the neighbour lady rail at them any more.”

“And where is your granddaughter now?” I asked the old fellow.

“She’s lugged a tin of paint over to the house at the far end. She’ll probably spend the night there, with the old Losin couple. Yeah... She may spend the night there.”

“What kind of paint, and what’s it for?”

“Just ordinary oil-based paint, bright orange. She got it from the steamship in exchange for fish. That’s her latest fancy.”

“And what kind of fancy might that be?”

“She’s decided that all the huts need freshening up. Need to look more cheerful. So when the ship comes —

that's the ship that collects fish that's been caught around here, she goes and offers 'em a whole catch of fish in exchange for paint. And then she lugs the tin of paint to one of the huts. She asks them to paint the *nalichniks*.<sup>3</sup> And the old people start painting. Soon it'll be my turn. Whaddya know! I'll do the painting. Why not? Maybe it'll be better if the painting gets done, if the huts are going to look more cheerful on the outside.'

"And where does she get the fish from?"

"She catches them herself. Every morning she brings home two or three connies,<sup>4</sup> sometimes more. If only once she'd come home empty-handed, but no, the fish just seem to land on her hooks all by themselves. And here I'm lying in bed with my back problems, and she says to me: get up. And keeps at me: "Get up, Grandpa! You've gotta salt the fish, so it doesn't go bad." Every morning it's the same,' the old fellow muttered, but with no trace of annoyance in his voice.

"So I asked him how Aniuta managed to cope with the fishing tackle — all by herself?"

"See, I told you,' he replied. 'Aniuta's got a helper — this Siberian laika. He may be old, but he's smart, and obedient. He helps her carry out all her fancies. Aniuta takes my throw-line with its five hooks, neatly arranges the bait on the hooks and goes down to her treasured spot on the riverbank every evening with her laika. She'll tie one end of the line to a post on the shore, then attaches the other end to a stick. The dog then takes the stick in his mouth and swims out into the river. He keeps on swimming as long as Aniuta, standing

<sup>3</sup>*nalichnik* — an ornately decorated board (with carved symbols to repel evil spirits) covering the cracks between the window-frame and the wall, to keep out the elements; nalichniks are a common feature of Russian rural houses.

<sup>4</sup>*connies* (Russian *belorybitsa*; Latin: *Stenodus leucichthys*) — a freshwater white fish, otherwise known as *inconnu* or *sheefish*.

on the shore, keeps encouraging him: “Swim, Druzhok, swim, Druzhok!”<sup>5</sup> The dog keeps pulling the line until Aniuta changes the tone of her voice as she calls: “Come here, Druzhok, come here, Druzhok!” Then the dog releases the stick from his jaws and swims back to shore...

“Well, that’s enough for now. Let’s get some sleep.”

“With that the old fellow climbed onto the stove.<sup>6</sup> And I lay down on the wooden sofa. When I woke up at dawn, I went outside and saw Aniuta down by the river tugging on the iron ring to which the fishing line was attached. A huge Siberian laika was helping her. The laika had grasped hold of the ring with his teeth and braced himself with his legs as he backed up. Together they were dragging the line with quite a decent catch on the end of it. Aniuta was wearing rubber boots three sizes too big over her bare feet.

“Once the catch was almost at the shore, she took hold of a scoop net and ran down to collect the fish. The laika was standing on his hind legs, holding the ring in his teeth. Aniuta went into the water deeper than her boots allowed, and the water started pouring over the tops of her boots.

“She drew the catch onto the riverbank and unhooked three splendid fish, which she put into a bag. Then she and the laika together took hold of the rope attached to a piece of plywood carrying the bag, and dragged it home.

“The water was sloshing around in Aniuta’s boots, interfering with her walking. She stopped and took off her boots — first one, then the other — and stood barefoot on the cold ground while she emptied out the water. Then she put on her wet boots again and continued on her way.

<sup>5</sup>*Druzhok* (lit. ‘Little Friend’) — a popular Russian name for a dog.

<sup>6</sup>*stove* (Russian: *pech*) — The vast majority of Russian huts (*izby*) in rural areas have a furnace-size brick stove in the centre with a flat top where the family sleeps to stay warm during cold nights.

“As the two of them together lugged their morning catch up to the porch, I got a good look at Aniuta’s face and was amazed.

“Her cheeks were a rosy red, and her little eyes were sparkling with determination. These, together with the hint of a smile on her face, made her virtually unrecognisable by comparison with the sickly, sallow-skinned little girl I had met earlier. Aniuta set about rousing her grandfather. With a rather loud wheeze he climbed down from the stove and put on a jacket. Then he took a knife and salt and proceed to cut up the fish. In the meantime Aniuta served me tea, and I asked her why she got up so early every morning to bring home the fish.

“Those fellows on the steamship, on the river, they come and collect our fish,’ she said. ‘They give me money. And I asked them to bring me paint for the houses in our village. They brought me the paint in exchange for the fish. Along with some lovely material for a dress. For that I gave them all the fish I had caught that week.’ And when she said that, she went and fetched a huge piece of magnificent silk fabric.

“Well, Ania,’ I observed, ‘I see there’s enough here for more than one dress. How come so much?’

“This isn’t for me. I’ve got it ready as a present for my Mamochka, when my Mamochka comes to see me. And I’m also going to give her a beautiful shawl and a long beaded necklace.’

“Then Aniuta opened an old worn suitcase and pulled out a pair of imported women’s pantihose, a pearl necklace and a magnificent brightly-coloured shawl.

“I don’t want Mamochka to be upset that she can’t give me any presents. I can buy everything for her now myself. I don’t want her to think she’s been wasting her life.’

“I watched as she joyfully showed me the gifts she had prepared for her mother — she was so happy admiring them — and

I realised what had happened: here Aniuta had transformed herself from an utterly helpless, pitiful little girl, waiting for somebody else to help her, into an active, self-confident individual. And happy that she has known such great success, or maybe her happiness stems from an entirely different source...

"Now I believe that each one's happiness lies within themselves, within each one of us. It is there at a particular level of awareness. The only question is: how do we reach that level?! Anastasia helped little Aniuta reach it. Will she be able to help everyone else do the same? Or maybe we ourselves need to learn in some way how to figure things out ourselves."

Alexander fell silent, and we each became absorbed in our own thoughts.

I wrapped myself in a short thick coat and laid my head against a log. I began looking up at the bright northern stars, and it seemed they were quite low overhead and were also being warmed by the flames of our fire. I tried to go to sleep.

After about three hours' sleep, at dawn Alexander and I headed for the motorboat. But before casting off, Alexander suddenly announced:

"I've been thinking. Now I'm certain. It's not worth your while going into the taiga. You won't find Anastasia there now. Nobody can find her, including you."

"Why not?"

"Anastasia's gone. She's gone deep into the taiga. She couldn't help leaving. If you try to go after her, you might get killed. You're not suited to the taiga. Besides, you've got to write some more. To fulfil your promise to her."

"In order to write more, I've got to hear her answers to the many questions from my readers. Questions about children, about different religions..."

"Nobody'll find her now."

"Why do you keep parroting: 'She can't be found! She can't be found!' I know where her glade is, I'll find her."

"I tell you, you won't. Anastasia can't help but realise that there are people out to hunt her down."

"What do you mean, they're out to hunt her down? Is somebody bribing the local hunters? Just like they pay you and Yegorych?"

"Me and Yegorych? No way! We try to persuade people not to interfere with her, not to alarm her. And if that doesn't work, we take them and let them off on the opposite shore. The local hunters can't be bribed; they've got laws and values of their own. They knew about Anastasia long before you came along. They've always treated her with great respect. They've been careful even when speaking about her amongst themselves. They don't like it when strangers show up in the taiga, and they're pretty good shots."

"Then who could possibly hunt her down?"

"I think: whoever has led us into the condition we find ourselves in at this moment. And is still leading us."

"Can you be more specific?"

"Each one of us has to work that out more specifically on their own."

"But still, who do you have in mind? Someone like Boris Moiseevich?"

"He's just a tool. There's something we can't see that's playing with us. And Boris Moiseevich is starting to realise that now. And maybe the one who hired him has realised it, too."

## CHAPTER ELEVEN

### Who are we?

“A month ago Boris Moiseevich returned to these parts,” Alexander told me. “This time he had no assistants or guards with him. He looked me up. He was quiet and pensive. He and I talked for a whole day. It wasn’t so much a conversation as a confession on his part — it wasn’t me he was confessing to, of course, but to himself. He gave me a copy of his report on his contact with Anastasia. I copied out some excerpts for you. Would you like me to read them?”

“Who commissioned the report?”

“I don’t know. Even Boris Moiseevich doesn’t know. He had a meeting with whoever it was in an opulent salon with a fireplace. His sponsor identified himself as a representative of the ‘International Academy’. But so many academies have sprouted up recently, it’s hard to tell which of them are the really serious ones. Now people have begun judging the seriousness of an organisation by the amount of funding it gets.

“The sponsor hadn’t scrimped on the financing. He’d paid for the whole trip right off in cash, and promised not only a substantial bonus but also the future involvement of the whole unit Boris Moiseevich headed in a serious scientific project connected with Anastasia.

“When Boris Moiseevich met with him upon his return to Moscow and presented his report, the sponsor took only a cursory look at it. No doubt he had already been informed of its contents. He threw the report into the fireplace and said to Boris Moiseevich:

“You were supposed to establish contact with “Object X”, as you yourself referred to Anastasia. In carrying out the project you employed not only your own scientific methods and techniques of persuasion, but also violence. The violence was your own initiative.

“We have decided to double your fee for organising the expedition, and at the same time cancel our agreements with you for any future activity. Here, take your money,’ he said, pointing to a briefcase standing beside his chair, ‘and forget about the whole thing.’

“Boris Moiseevich tried to explain that the violence had erupted spontaneously, and that he himself found the whole episode quite distasteful, and he realised what harm his group’s inexperience had inflicted on future contacts with Anastasia, and for that reason he would not take any fee at all.

“At that point the man sitting by the fireplace got up from his chair and in a tone that brooked no contradiction, articulated:

“You *will* take it. And you’ll leave. You didn’t care about the cause, only the money. So here, take it. We don’t need you any more.’

“Boris Moiseevich took the briefcase with the money and left the spacious office salon. He tried to share the money in equal amounts among the members of the expedition, but not all of them accepted it. It only seemed to emphasise the tremendous feeling of unpleasantness at what had been wrought by the participants.”

“How come you only copied out excerpts of the report for me?” I asked Alexander.

“Judging by your book, you don’t really fancy reading documents filled with terms you don’t understand. I tried to copy out only the important points, and places where there wasn’t too much specialised terminology.”

“So, what do they say about Anastasia?”

Alexander pulled some printed pages out of his pocket and began reading them to me:

Object X cannot be studied by traditional scientific research methods known to us today.

The evaluation criteria currently accepted in scientific circles inevitably posit particular frameworks which automatically exclude properties hitherto unknown and the possibility of encountering phenomena arising out of and connected with isolated situations and the changing psychological state of Object X.

As an information source in various areas of scientific research, the 'object' may prove to have no equal among the sources currently known to science.

The object is most likely not an information carrier in itself. It is not interested in simply receiving and analysing information. However, should there arise a particular goal — and, consequently, a desire — which it deems significant, information accrues to it in a form selected by an unknown entity and in the required amount, for which Object X may instantly find a practical application.

Our group was able to offer only a few hypotheses. But we did confirm experimentally a number of Object X's sayings regarding plants. We were able to establish the existence of the ray. The scientific terms *torsion field* and *radio-wave emissions* are not really suitable here. If they are used at all, it is only because there are no other more suitable terms.

The most incredible and doubtful hypothesis, in our view, was the possibility of infusing the text of the book<sup>1</sup> with hidden combinations and signs — according to Object X's terminology — of "the depths of eternity and the infinity

<sup>1</sup>the book — i.e., *Anastasia*. Book 1 of the Ringing Cedars Series.

of the Cosmos". The object affirmed that these signs may have a beneficial effect on people.

We were recommending conducting a series of experiments, comparing the parameters of the physiological changes in human beings before and after the reading of the book, with the help of measuring devices used in medical practice. This does not make much sense any more.

Already we are compelled to confirm that the fact of their existence is indisputable. These changes are not effected through the material, physiological organs of the body, but at some intangible, non-material level of society as a whole.

One has the impression that within the milieu of the community of people living on the Earth a reaction is beginning to take place which we are not in a position to arrest — or, for that matter, even to control.

The basic evidence of such a reaction is the psychic response observed in those who have come in contact with the book. Questionnaires, along with examination and analysis of readers' correspondence attest to the fact that a majority of readers have experienced a creative urge expressed in the form of poetic compositions, sketches and drawings, along with the writing and performing of songs. Many readers have felt the impulse to make contact with and cultivate plants, or to change their profession. In certain cases the reading of the book is followed by a significant improvement in one's sense of well-being and the disappearance of symptoms of disease.

We conducted an experiment on thirty people having various ailments. In a psychotherapy/sleep-therapy unit they were asked to read the text of the book. In the case of 27 of them an emotional concentration was observed, along with lack of sleep and an increased hæmoglobin count in the blood. If we assume that the reaction on the part of these readers is due to the vividness of the image of literary art,

one can confirm that in terms of psychological effect this particular image far surpasses, by several degrees, all those hitherto known, including classical and biblical images.

The indisputability of such a conclusion is confirmed by the percentage of readers who have expressed their relationship to the book in poetic and other creative forms — according to our statistical survey, this has happened with as many as one in every nineteen readers.

Moreover, it should be noted that the author's expository style is primitive to the extreme. It does not follow any established norm of the literary arts, and the text is replete with grammatical errors. But a computer analysis of the book's readability shows that it has a readability rating of 80% or higher!

In our direct contact with Object X we noticed a phenomenon encountered nowhere else before and with no counterpart in any data observed or recorded by ufologists.

We observed a spheroid energy mass, resembling large ball lightning. Its energy potential far surpasses existing scientific concepts of the power of natural energies. Its ability to change the Earth's gravitational field in a specific location affords it the possibility of instantaneously transforming anything not rooted in the ground into cosmic dust.

During the period of our contact, the Earth's gravitation was changed slightly, but with any increase in its power output we and all material objects might have simply found ourselves somewhere out in space. By contrast, the gravitational field around Object X was not changed, which attests to the possibility of selective influence.

It was evident that the change in the Earth's gravitational attraction was preceded by a reduction in the blue spectrum of natural light.

One could hypothesise that the so-called gravitational attraction of the Earth is not dependent on the Earth itself

but on the pressure of light emanating from certain celestial objects, energies, or the Earth's atmosphere as created by an intelligent being.

Despite its ability to acquire large quantities of information, Object X does not attempt to subject it to analysis. It processes the information it receives on the level of feelings and intuition, from which arises an impression of naïvety. The interrelationships between Object X and the energy mass are simple and commonplace, established on the basis of feelings, with no trace of servility or idolisation. They are characterised by full freedom of action in a context of mutual respect.

The luminous energy mass we observed possesses intelligence and, even more incredibly, feelings, something which ufologists have not noted in connection with a single UFO. This is evidenced by the fact that during contact with Object X the rays of the energy mass stroked its feet and hair, and that the mass itself, through its movements, reacted to Object X's emotional state.

Along with the capability of exerting a physiological effect on matter, the phenomenon perceived by us also has the capacity to produce a psychological effect.

It may be hypothesised that Object X may represent an earthly human being who is periodically contacted by representatives of an extra-terrestrial civilisation, or that it is in communication with some kind of natural phenomenon which does not lend itself to scientific investigation.

It may be further hypothesised that Object X itself represents an extra-terrestrial civilisation. However, the object's own declaration: "I am Man, I am a woman" contradicts this hypothesis. Such a declaration places us in an unresolvable dilemma, as the question inevitably arises: "Who then are we?" Or to put it another way: "Has mankind been treading a path of progress or regression?"

## CHAPTER TWELVE

### Man-made mutants

“Okay, that’s enough,” I interrupted Alexander. “For me, Anastasia is just a recluse. Maybe she’s got some unusual abilities, but I would say she’s human, she’s Man. Let’s hope so, anyway. If I think about everything too much, I could go nuts. So start up that old rattletrap motor of yours and let’s go.”

It took us about four hours to get to the remote settlement. After I had set foot on the familiar stretch of shoreline, Alexander also got out of the boat and once again tried to persuade me:

“Anastasia’s gone, Vladimir. Really give it some thought — you can still change your mind about trying to reach her glade. You won’t make it.”

“I’m going,” I was hoisting my backpack to sling it over my shoulder when I suddenly noticed Alexander unsheathing a large hunting knife.

I threw the backpack down and rifled about on the ground for something I could defend myself with. But Alexander, having bared his right arm to the elbow, suddenly slashed his own arm with the knife and covered the gushing blood with a white linen scarf he had. Then he asked me to fetch the first-aid kit from the motorboat and bind his wounded arm. I did this, still in a state of bewilderment. He handed me the bloodsoaked scarf, saying:

“Tie this around your head.”

“What for?”

“At least that way the hunters won’t touch you. They will not fire at a wounded man.”

“You think those hunters of yours are dumb or something? They only have to come close and they’ll see right off it’s a prop.”

“They won’t come close. Why take the chance? They’ve all got their own territories and pathways. If someone needs to go into the taiga for a good reason, he’ll talk to the hunters first, tell them about himself and what he intends to do, and co-ordinate his route with them. If they think he has a good reason, they’ll help him, give him advice and may even provide an escort. But they know nothing about you. They may shoot first and ask questions later, but they won’t fire at a wounded man.”

I took the bloodsoaked scarf and tied it around my head.

“I guess I’m supposed to say thank you, but somehow I don’t feel like thanking you.”

“No need to. I didn’t do it for thanks. I just wanted to do at least something for you. When you get back, light a fire on the riverbank. I’ll be passing close by from time to time, and if I see the smoke I’ll come pick you up — if, that is, you manage to get back.”

As I was walking along, I noticed a couple of dogs about a hundred metres away. Probably from the settlement, I thought. I wished they would come closer, as dogs had a quieting effect on me. I even tried to attract their attention, but they didn’t approach, only kept a parallel course to mine. And so we went deeper into the taiga.

It was pointless for Alexander to try and scare me, I thought. The taiga didn’t seem hostile to me at all. Maybe it was because I knew at the back of my mind that here amidst the trees and moss-covered logs lived Anastasia, and even if she was strange, she was still a kind person. I held to the notion that here in the taiga with all its tangled undergrowth, its sounds and air so unfamiliar to city-dwellers, lived my very

own son. This thought made the taiga feel just a bit more like home to me.

The twenty-five kilometres from the riverbank to the glade presented much more of a challenge than walking along an ordinary road, since there were fallen trees to climb over and thickets to go around. The time I had been walking with Anastasia I hadn't noticed all these barriers, immersed as we were in conversation. The main thing now was not to lose my sense of direction on account of them, and I began checking my compass more often, all the while thinking: How did Anastasia find her glade with no compass? It certainly didn't look as though there was any kind of pathway.

Stopping to rest after every hour, by noon I got to a shallow stream about two metres wide. Anastasia and I had also forded a stream, I remembered. I decided to go across and stop for some time in a glade just on the other side. I made my way along the trunk of a partly rotted tree which had fallen into the stream. The tree didn't extend all the way across, so after tossing my backpack, I made a jump for the shore. But something happened. My leg fell on some kind of protruding snag and got twisted, or sprained somehow. I felt a searing pain through my whole leg and it even spread to my head. I lay there a few minutes and then tried to get up. I realised I couldn't walk. So I lay there, reflecting on what to do next. I tried to remember what you're supposed to do when you twist or sprain your leg. But I had a hard time remembering, probably because the pain was so intense. Then I decided I would lie still for a while, have a bite to eat, and maybe the pain would go away. If need be, I would light a fire and spend the night there. Maybe by morning my leg would even be better. After all, everything with Man heals itself eventually.

It was at this point that I caught sight of the dogs again. There were four of them now, and two more on the other side. And they weren't going anywhere. They took up their

positions on either flank, about ten metres from me. The dogs were of various breeds: one was an Airedale, another was a Boxer, the remainder were mongrels. And there was a little lap-dog among them. Their coats were ragged, they were terribly thin, the Airedale's eyes were festering. I remembered hearing my captain's first mate telling about dogs like this. And my sudden awareness of the precariousness of my situation made even the pain in my leg disappear temporarily.

The first mate of my headquarters ship told how people who didn't want their pets around any more would take them off somewhere and abandon them. If they dropped them off within the city limits, the cats and dogs would hang around various scrap-heaps and at least get a little something to keep them going. When dogs were taken out to a remote area, far outside of town, they would group together in gangs and get their food by attacking a living creature. Including people, especially people all by themselves.

These dogs are actually more frightening than wolves. They'll lie in wait for a wounded or exhausted victim and then attack their prey simultaneously. Another thing that makes these gangs of homeless mad dogs more frightening than wolves is their superior knowledge of human habits and their hatred of human beings. They have it in for *people*. They have no experience hunting for wild game, but people are their prey.

It's especially frightening when the gang includes at least one dog who's been trained to attack human beings. I once had a dog, which I took to a private obedience school. The training programme included attacking a person on command. The instructor's assistant would put on a padded coat with long sleeves and the dog would be taught to attack him viciously. If the dog carried out the command properly, he would be rewarded with a treat. They sure went through their paces, those smart-asses!

I wonder if there is any other creature on Earth, apart from Man, that finds it necessary to teach another species to attack one of the teacher's own kind.

The dogs around me began to tighten their circle. I needed to show them, I thought, that I was still alive, that I could move about and defend myself. I picked up a short stick and chucked it at the closest mangy bitch. It managed to dodge the stick and take up a new position. There weren't any other sticks within reach. Then I got a couple of tins of preserves out of my backpack. As I was getting them, the smallest of the gang — the lap-dog — stole up from behind, tore a piece out of my trouser-leg with its teeth and then jumped back. The other dogs watched — probably to see my reaction.

I took one of the tins and chucked it at the nearest large pooch; the other I threw at the lap-dog. There was nothing else to throw. My consciousness was overwhelmed with a sense of hopelessness.

I began imagining how the dogs would tear apart my body and eat it in pieces and how I would still be conscious for some time and witness it all and writhe in pain, since the dogs wouldn't be able to finish me off all at once. And I had nothing with me to bring on a quick death and escape extended torture.

One thing I felt especially bad about was that I wouldn't be able to deliver my backpack containing the gifts for Anastasia from my readers, along with various kiddie items a young child would need.

Half my backpack was taken up with readers' letters full of questions and requests. A lot of letters. Most unusual letters. They wrote from the heart, they wrote about their lives, and there were lots of poems. Maybe not too professionally crafted, not always rhyming, but still there was something good about them. And now they would all be lost, rotting away here in the taiga.

And then a thought struck me, out of the blue. I decided to write a note and place it in the plastic bag with the letters. A note! If anyone found my backpack, they could take all its contents and the money too. And they could send the readers' letters back to my daughter Polina. I told her in the note to publish them once there were enough royalties from my book to cover the expense. It would be a crime for so many soul-inspired poems to be lost forever. Many of their authors were likely writing the first poem in their life, something that came straight from their heart. And now the only poem they ever wrote in their life would be lost.

It was quite a challenge writing the note. My hands were trembling. From fear, most probably. And just why does Man cling so tight to life even in a situation where it is absolutely clear that it's all over? But I managed to finish the note and put it in the plastic bag with the letters. I tied the bag tight so moisture wouldn't get in.

And then all at once I noticed that the dogs, which had already come quite close to me, were beginning to execute a rather strange manoeuvre. One by one they started crawling *away* from me. Some of them were sitting up on their haunches looking in the other direction, away from me, and then lay down again, as though in ambush. I managed to get up on one leg to take a look and see what had distracted them. And then I saw... I saw how along the stream, with leaps and bounds, came running none other than Anastasia, her magnificent golden hair trailing in the breeze. And her sweeping stride was so utterly beautiful that I completely forgot about my own danger in admiring the scene.

And all of a sudden it hit me: *the dogs!* They were no doubt under the impression that their prey might now be taken from them, and they were getting set to attack the newcomer running so determinedly toward them.

These starving dogs, brutalised by the wilds, would viciously fight for their prey to the end. Anastasia would not be able to do anything about them all by herself. The dogs would tear her apart, and I cried out as loud as I could:

“Stop, Anastasia, stop! Dogs! Wild dogs here! Don’t come this way, Anastasia! Stop!”

Anastasia heard me, but didn’t let up her bounding stride for a moment. But while she ran she waved her hand in the air. What has she done now? — I thought. The extraordinary phenomenon she could call upon wouldn’t be able to help her now.

As quickly as I could I pulled out of my backpack the little glass jars of baby food. I started throwing them at the dogs, trying to attract their attention to myself and away from Anastasia. One of the jars hit its mark, but the dogs paid no attention to my efforts.

No doubt they realised who their real threat was. No sooner had Anastasia entered their circle than the dogs attacked her from all sides at once. And then...

Oh, what a sight it was! You’d have had to see it to believe it. Anastasia transformed all the energy of her run into a spin. All at once she broke her stride and spun about sharply like a top, or a ballerina twirling on stage, only faster. Upon striking Anastasia’s rotating body, the dogs flew off in different directions without causing her any harm, but then, once she had stopped spinning, they got ready to launch a new attack.

I crawled over toward Anastasia. She was wearing her short, light-weight dress. If only she’d been wearing her quilted jacket, it would have been harder for the dogs to bite through.

Anastasia got down on one knee. As she knelt there in the circle of the vicious dogs that were half-crazed by hunger, her face betrayed no fear. She looked at me and said briskly:

“Hello, Vladimir! Only do not be afraid. Just relax a little. Let go. Do not worry, they will not do anything to me, these starving little dogs. Not to worry.”

Two huge mutts once more launched an attack on Anastasia from either side. Without getting up and without ceasing her talking, a lightning-fast movement of her hands caught each dog in mid-air by its front paw and spun it around. Moving her body slightly to one side, she let the two dogs crash into each other and drop to the ground.

The other dogs had once more taken up a position, no doubt getting ready for a new attack, but this time they stayed put.

Anastasia stood up and swept her hand up into the air. Lowering it, she slapped herself twice on the thigh.

From behind the nearby thickets there suddenly sprang out four mature wolves. There was such determination in their headlong dash that it seemed they would not think to take account of the numbers or strength of the foe before them. They were spoiling for a fight.

The dogs put their tails between their legs and headed off lickety-split. The wolves ran right past me, practically spraying me with their hot breath. Right on their heels a young wolf cub breezed past in a flicker, trying with all his might, in spite of his shorter stride, not to fall behind the pack. When he reached the spot where Anastasia was standing, he suddenly braked with all four paws, and even did a somersault. Then he jumped up and gave two licks to the fresh scratch on Anastasia's bare foot.

Anastasia abruptly grabbed the cub by his torso and hoisted him up in the air.

"Where are you off to?" she said. "It is not your time yet. You are still too little."

The cub began squirming all over in Anastasia's arms and whining like a puppy. He managed to escape — or, rather, she herself let him go. Once more on the ground, the cub gave one more quick lick to Anastasia's scratch and set off to catch up with the pack.

"But why?" I began questioning Anastasia as she headed over to me. "Why didn't you call in the wolves right off? Why?"

Anastasia smiled, and proceeded at once to feel my arms and legs. With her pure, calming voice she said:

"Please do not worry. I needed to show the dogs that Man is always superior to them. The wolves they will fear in any case. But the dogs have begun making attacks on Man. Now they will no longer attack Man.

"Not to worry. I felt your presence and could tell you were coming. I ran to meet you. Why did you take such a risk in coming into the taiga all by yourself? At first I could not find you, and then I guessed you must have set out on your own."

Anastasia ran off to one side and plucked up some kind of grasses. Then she looked in a different place and did the same. She rubbed the grasses between her hands and carefully soothed my sore leg with her moist palms. And she kept talking non-stop:

"It will go away. It will pass quickly. Before you can say 'Jack Robinson'."

I noticed Anastasia frequently used proverbs and sayings, and I asked:

"Where did you pick up these sayings?"

"I sometimes listen to how various people speak. To learn how to express a greater meaning in just a few words. That displeases you?"

"Well, sometimes they're not quite apropos."

"And sometimes they *are*, well, 'propos'? It is good when they are 'propos'?"

"How do you mean, 'propos'?"

"That was your word. I was just repeating it."

"Tell me, Anastasia, is it still a long ways to your glade?"

"You have come halfway. Together we shall get there quickly."

"It probably won't be very quick, as long as my leg hurts like this."

"Yes, it may still hurt a bit longer. Let your leg rest, and I shall help you walk."

Anastasia hoisted the heavy backpack onto her shoulders. Then, turning her back to me, squatted down on one knee and invited me to climb on.

"Take hold of me and climb onto my back." She said this with such briskness and determination that I immediately obeyed, clasping my arms around her neck. Anastasia promptly rose to her feet and skipped off at a sprightly gait. And throughout our journey she kept talking on the run.

"Not too heavy for you?" I asked after some time.

"One's own burdens are light," replied Anastasia, adding with a laugh:

*"I'm a horse and I'm an ox, I'm a wench and I'm a jock!"*

"Stop. Let me down. I'll try walking on my own."

"But you are not too heavy for me. Why do you want to try on your own?"

"What's that about a jock? 'I'm a wench and I'm a jock', you said?"

"Just another saying. It was not apropos, eh? Did it offend you?"

"It's okay. I simply want to try walking on my own. If you could just carry my backpack a little while longer."

"If you want to walk on your own, you will have to rest your leg at least another hour..." she advised as she gently lowered me to the ground. "You sit there for a bit, I shall return before long." At that Anastasia ran off for a little while on her own. She presently returned with a bundle of various grasses and once more began rubbing them into my leg near my ankle. Then she sat down beside me, and smiled as she slyly eyed my backpack. All at once she asked:

"Vladimir, please tell me, what is in your backpack?"

“Some letters from readers. Also gifts they sent me to give to you. And I’ve bought a little something for the baby.”

“Could you show me the gifts now while we are resting?”

“And will you show me the baby — our son? You’re not going to tell me that he can’t see me until I’ve cleansed myself?”

“Fine. I shall show you our son. Only not right away. Tomorrow I shall show you. The first thing you need to do is to learn a bit about how to converse with him. You will learn quickly once you see him.”

“Tomorrow’s okay.”

I undid the backpack and began to take out its contents. First, the gifts for Anastasia. She took each item carefully in her hands and looked at it with interest, caressing it. She started playing on the Valdai Bells<sup>1</sup> — a present from Olga Sidorovna.<sup>2</sup> And when I handed her a beautiful large, colourful shawl — a gift from another very kind woman, Valentina Ivanovna, I realised right off: women are women, and they all have a lot in common.

Anastasia took the shawl and turned it over in her hands. Then she performed a whole series of manipulations with it. She tied the shawl around her head just like in the picture on the *Alionushka* chocolate bar label,<sup>3</sup> and then in other variations as well.

Then, with a laugh, she tied the shawl around her waist in gypsy fashion, before throwing it over her shoulders and

<sup>1</sup>*Valdai Bells* — popular bronze bells made in Valdai (in north-western Russia on the route between Moscow and St. Petersburg). According to legend, these bells date back to the 15th century. They were often used on Russian sleighs pulled by a fast-moving troika of horses sweeping over the silent snow-covered countryside, and even today are considered a symbol of freedom and happiness.

<sup>2</sup>*Sidorovna* — like *Ivanovna* in the following sentence: a patronymic, not a last name.

parading before me in some kind of folk dance. Then she neatly folded the shawl and placed it over the presents spread out on the grass and said:

“Please, Vladimir, say thank you from me to each person, thank these women for the warmth of their heart that they sent along with each of these things.”

“I’ll thank everyone I see. But I have nothing more to show you. The remaining things aren’t for you. They’re for our son. All the things he needs. *You* can’t use these things — I’ll show them to you on the spot when we get there.”

“Why do you not want to do this now? We are just sitting here and resting. I would be most interested in seeing what you have.”

I didn’t want to show Anastasia right off what I had bought for our son, since I remembered what she had said back the first time we met: “You will want to get our son all sorts of senseless toys, but he will not need them at all. You are the one who needs them for your own self-satisfaction, so you can say: ‘Oh, look at me, I’m so good and caring!’” But then I still decided to show them to her, since I myself was interested in how she would react to the achievements of our civilisation in matters of child-care. I started showing Anastasia the diapers I had brought, explaining how effectively they absorb moisture when the baby wets them, so he doesn’t perspire. I told her everything I had seen in the TV commercial. I showed her the baby food.

“You see, Anastasia, this baby food is simply a marvel. It contains all the substances a baby needs — vitamin

---

<sup>3</sup>The chocolate bar is actually called *Alionka* (pron. *al-YON-ka*), rather than *Alionushka*. The label for this popular chocolate bar, a favourite with Russian children, shows a little girl with puffy cheeks, wearing a shawl tied to cover her head and neck. ‘Alionushka’ (another diminutive of *Aliona*), on the other hand, is the heroine of a Russian fairy-tale, not connected with the chocolate bar label.

supplements too. The main thing is, it's so easy to prepare. Just dissolve in warm water, and the food's ready. Got it?"

"I 'got it'."

"Well, now, you see the factory chimneys of our technocratic world aren't just blowing smoke for nothing. We've got some factories producing baby food like this, and the packaging for it. You see that beautiful baby pictured on the package, all smiling and rosy-cheeked?"

"I see."

Finally I showed Anastasia my last gift and commented:

"This is a children's construction set. A construction set's not like a senseless noisemaker. It says here it's specially designed to help the child develop. He can build a car with it, like in the picture, or a steam engine, or an aeroplane, or a house. Well, maybe it'll suit our son a little later. Right now, of course, it's still early for him to make sense of what moves and flies and how."

"Why early? He can make sense of all that right now," replied Anastasia.

"You see, the construction set will help him in this," I observed.

"Do you think so? Are you certain about that?"

"I'm not the only one who's certain, Anastasia. There's a whole bunch of scientists and psychologists who study children's mental development. You see, their endorsements are printed right here on the box."

"Fine, Vladimir, fine. Not to worry. You will do everything the way you feel you should. Only I would ask you to take a look first, observe how our son lives. Then you will be able to determine what his first priorities are."

"Right. Whatever you say." I was glad that Anastasia did not argue with the need for the things I'd brought. I would be able to have a look for myself and decide.

"In the meantime let us hide your backpack here," she said.

“Then, once you determine what thing is needed first, I shall run and fetch it, or I shall fetch the whole backpack if necessary. Right now it is heavy to carry. Your leg still hurts after all, and you do not wish me to carry you.”

“Well, okay, let’s hide it for the time being,” I agreed. “Only we’ll take the letters with us. There are a lot of questions in them for *you*. I didn’t memorise them all.”

“Fine, we shall bring the letters,” Anastasia agreed, taking the package. Once she had hid my backpack in a safe place, I leaned my arm on her shoulder, and the two of us headed off in the direction of her glade.

It was late at night by the time we arrived.

As before, the glade was empty. No structures, not even a lean-to. But somehow I got the feeling that I had come home. Even my mood was uplifted, and a sense of calm had set in. I felt like going to sleep. Probably because I had been talking all the previous night with Alexander. Wow! I thought — there’s absolutely nothing in this glade, and yet I get the feeling I’ve come home.

Evidently, one’s sense of home is not in the size of one’s living space or even a castle, but in something else.

Anastasia at once took me to her lake and recommended I bathe. I really didn’t feel like bathing, but I thought I should be obedient to her in everything, at least for now, so I’d get to see my son sooner.

When I came out onto the shore after bathing, it was colder than in the water. Anastasia dried me off with the palms of her hands, wiped me with some kind of grasses, and my body began to feel warm, even hot. Then she handed me her dress and said with a laugh:

“Please put it on, Vladimir. It will be like a night-shirt for you. I shall soak and wash your clothing, which has a strong odour coming from it.”

I put on Anastasia's dress. I knew the odour must be eliminated, and that was that.

"So our son won't be scared off?"

"For him too," Anastasia replied.

"But it'll be cold for me to sleep in nothing but a dress."

"Not to worry, I have already arranged everything. You will have a good night's sleep, and you will not be cold. You can put the packet with the letters under your head for a pillow. I have thought of everything — you will have a good night's sleep, and you will not freeze."

"With the bear to keep me warm again, eh?... I will not sleep with a bear. I'll manage somehow on my own."

"I have made up your bed so that you will not be too cold or too hot."

We went to the dugout where I had slept before. Anastasia pushed aside the branches hanging over the entrance. I caught the pleasant aroma from the dried grasses, and crawled into the dugout, lay down amidst the grasses, and felt the sleep of sweet languor envelop me all around.

"You can cover yourself with my cardigan, but even without it, you will still not be cold. If you wish, I shall also lie down beside you and keep you warm." I heard Anastasia's words through a half-sleep and responded:

"No need. You'd better go to our son, keep him warm..."

"Not to worry, Vladimir. Our son is already capable of handling a great deal on his own."

"How can he do things on his own? He's still too young..." But that was all I could say. I was already immersed in a deep and calm, blissful sleep.

## CHAPTER THIRTEEN

### A new morning — a new life

I woke in the morning. I felt in such an extraordinarily good mood that I just lay there thinking I'd better not budge for the time being, lest the good mood suddenly vanish. What kind of a night did I have, anyway? And why did I get the impression in the morning that over the past night my whole body and consciousness were literally bathed in love? By the light of day it became clear to me why I had felt neither too cold nor too hot during the night. I was lying immersed in dry grasses and flowers, which gave off a pleasant warmth and aroma.

Readers often ask how Anastasia keeps from freezing in the wintertime, during the cruel Siberian frosts, but it's really all so simple: if you bury yourself in a haystack, there are no frosts to fear. Granted, she has some sort of alternative source of warmth, given that she can walk about semi-nude even when it's +5°<sup>o</sup> out and doesn't get cold. She even goes swimming then and doesn't give so much as a shiver when she comes out of the water.

I continued to lie there in the bliss of my dried grasses and thought about how the morning breaking meant a new day had come, and I got the impression as though a new life were beginning. I thought if only this were the way it could be every morning, then in one lifetime one could live a thousand ages, as it were, and each age would be as magnificent as this morning. But how does one make each new day turn out as magnificent as *this* morning?

<sup>1</sup>+5° (Celsius) — approximately equivalent to +40° Fahrenheit.

I didn't get up until I heard Anastasia's cheerful voice calling out to me:

"God surely gives to him who rises early."

I crawled out of my splendid night-time lodgings. Anastasia was already standing right up there at the entrance. Her golden hair was woven into a braid, which was tied with grasses at the end, like a bow. Her new hairdo looked very nice on her.

"Let's go to the lake — you can wash yourself and get dressed," Anastasia proposed, tossing her braid coquettishly to the front.

Well, now, women are women after all, I thought, and said to her aloud:

"That's a very pretty braid you have, Anastasia."

"Pretty, eh? Very, very pretty?" she laughed, as she twirled around.

We ran to the lake. There on the shore, over some branches, were hanging my shirt, trousers, undershirt — in sum, everything I had taken off the night before. I felt them, and they were dry already.

"How did you manage to dry them so quickly?"

"I gave them some help," Anastasia replied. "I put them on myself and ran about a little wearing your clothes, and they dried out very quickly. Now you will be able to put them on after your dip in the lake."

"And are you going to be taking a dip, too?"

"I have already done everything I need to to greet the day."

Before I went into the water, Anastasia rubbed my body down with some sort of paste made from grass. And when I plunged in, the water all around me began to sizzle and my body smarted a little, but when I came out, I felt really refreshed. As though the pores of my skin were starting to breathe with great intensity all by themselves, each one taking in air individually. My overall breathing was free and easy.

Just as she had done the night before, Anastasia, ever cheerful and playful, began once more to rub the moisture off my body with her hands. As she was rubbing my back, I suddenly felt something hot unexpectedly spurt down my spine. It happened once, then again — I turned about sharply and there she was, squeezing her breast with both hands, aiming a stream of warm breast milk right into my face, then from the other breast a stream of milk spurted onto my chest. And then she let loose with a fast rub up and down my body, accompanied by a roar of laughter.

“What are you doing that for?” I asked, when I had recovered from my surprise.

“Because! Because!” guffawed Anastasia, as she handed me my shirt and trousers. They too did not smell the way they did before, and I noticed this as soon as I put them on. Then I said to Anastasia, in a serious tone:

“Okay, I’ve done everything as you wished. Now let me see our son.”

“Fine. We shall go. Only, please, Vladimir, do not try to approach him right off. Watch him for a while at first, try to understand him.”

“Fine, I’ll watch, okay! And I’ll understand.”

We went back to the glade which was now so familiar to me. When we reached the bushes at the edge of the glade Anastasia said:

“Let us sit here quietly and watch: he will be waking up now and you will see him.”

Beside a tree at the edge of the glade the bear was lying on her side, but I couldn’t see any baby. I was getting more and more excited, and my heart started beating strangely.

“Where is he?” I asked Anastasia with bated breath.

“Look more closely,” she replied. “Look, you can see his little head and feet sticking out from under the bear’s paw. That is where he sleeps, in her groin. It is soft and warm

there, and she keeps her paw on top of him — not pressing down, but just to provide a little covering.”

And I saw the scene. The boy's tiny body was resting in a cradle of thick bear fur, in the huge beast's groin, under her slightly raised front paw. The bear was lying on her side without stirring, turning only her head from side to side as she looked around. The wee little legs wiggled in the thick fur, at which point the bear raised her paw a little more.

The baby was waking up. When he moved his arm, the bear raised her paw. When his arm dropped back to his side, she lowered her paw a little. Only her paw and head moved. There was not a stir from the rest of her body.

“How can she lie like that without stirring? Isn't it uncomfortable to maintain that one position the whole time?” I asked.

“She can lie like that without stirring for a long, long time. And it is not hard for her at all. She is just so thrilled when he crawls into his little bed. And now she has started to take herself very seriously. She has a sense of responsibility. When the time approached to start a family, she did not even let her intended mate come near her. That is not too good. But when our son grows a little, she will allow her mate to approach her again.”

As I listened to Anastasia I couldn't take my eyes off my son — I watched as the little feet once again wiggled beneath the bear's huge paw. Then the paw went up in the air.

The baby moved his arms and legs, stretched himself, raised his head, then all at once stopped moving.

“Why did he stop moving? Is he going to go back to sleep?” I asked Anastasia.

“Look more closely, he is going piddle. The bear did not manage to let him down to the ground on time, or perhaps she did not want to — she really spoils him, you know.”

The little fountain kept trickling onto the bear's fur. Like the boy, she too had stopped moving — even her head and

her paw — until the fountain had ceased its trickle. Then the bear began to turn over onto her other side, and the baby slid down to the ground.

“All right. You see, she thinks he will go on to do his Number Two, our little Man,” Anastasia said cheerfully.

The tiny human body lay on the grass, tensing its abdomen muscles in preparation for his ‘Number Two’, while above it hovered the enormous bear. It seemed as though the bear was helping the baby along with her rumbling sounds, as if going through a similar preparation herself. The boy turned over on his stomach, started moving his arms and crawling across the grass on all fours. His little bottom had got dirty from his pooping. The bear went over to him and lapped his tiny bottom with her enormous tongue, wiping off the poop, just like a nanny. She gave the boy a push with her tongue, and he plopped on his tummy, but got up again on all fours and went on crawling. The bear followed him and gave his bottom still another lapping, even though it was already clean by now.

“What do you think, Vladimir? Do you think she would be able to take off his dirty diapers or underpants and put new ones on?” Anastasia asked quietly.

“Okay, okay!” I responded, also in a whisper. “I get it.”

The boy turned over onto his back, and when the bear persisted in lapping his thighs, he made a nimble move and his little hand latched on to the fur on the bear’s muzzle.

In response to what looked to be insignificant movements by the boy’s hand, the bear proceeded to rest her huge head on the ground at his feet. He grabbed hold of her muzzle, reached up with his other hand and started climbing up the bear’s head.

“Where on earth is he going?” I queried.

“To the bear’s eyes,” responded Anastasia. “Her eyes sparkle. They fascinate him, and he always wants to touch them.”

The boy lay on his tummy on the bear's muzzle and looked at one of her eyes. He then tried touching it with his finger, but all at once her eye snapped shut. The boy's finger poked at her eyelid. After waiting a little while longer and still not seeing any sparkling eye, the boy began climbing down from the bear's muzzle, then crawled a little way across the grass, and stopped to look at something on the ground. The bear got up and roared twice.

"She's calling the wolf. She needs to clean herself up and have something to eat. Now you will see how they have a friendly conversation amongst themselves," Anastasia commented.

A few moments later the she-wolf appeared at the edge of the glade. The bear did not show any signs of welcoming her presence, but greeted her with a threatening roar. The wolf's own behaviour was far from friendly. She surveyed the whole glade. She pranced a bit around the edge, lay down, then took a big leap and lay down again, as though ready to pounce.

"What kind of friendly conversation do you call that?!" I asked. "Why did the bear call her, and then roar at her like that? And the wolf seems pretty threatening herself!"

"That is the way they talk with each other. The bear stopped the wolf with her roar to make sure everything was in order with her. To check that she was not sick with anything, that it was not dangerous to let her approach a child of Man, that she was strong enough to defend him. The wolf showed that she was completely prepared. She showed it by her actions, not with words. You saw how she walked past and jumped pretty high."

Indeed, the bear, after observing the wolf, calmly shuffled off out of the glade. The wolf lay down on the grass not far from the little one. The baby kept staring at something for a while longer, feeling the grass. Then he noticed the wolf and crawled toward her. As he approached, he began feeling her

muzzle with his hands, stroking her teeth with his finger, patting her tongue. The wolf lapped his face, at which point little Vladimir crawled onto her stomach, felt the wolf's nipples, sucked his hand all over and screwed his face into a frown.

"Time for our son to eat," Anastasia began speaking again. "But he is not yet so hungry that he will drink the wolf's milk. I am going to leave you for a little bit, while you sit here at the edge of the glade. If he sees you and is interested, he will crawl over to you. Only do not pick him up yourself. He is already a Man, even if small in appearance. He will not understand meaningless cooing sounds. Besides, violence may result if you try to pick him up against his will. He will not understand that. Even if you do it with good intentions, but without his permission, you will make a bad impression on him."

"Right," I said. "I shall not try to pick him up. I'll just sit here like this. But the wolf — she won't touch me?"

"With the scent you have now, she will not touch you."

Anastasia clapped her thigh twice. The wolf got up, turning her head in Anastasia's direction. Then, after a glance at the baby, who had started playing again with some kind of bug, she ran over to Anastasia.

Anastasia came up very near to me. She summoned the wolf to approach closer, then gestured to her to lie down.

"Can I stroke her, to finally make friends with her?" I suggested.

"She will not appreciate any condescending familiarity on your part. She understands everything and will not touch you, but she will not tolerate any display of superiority," Anastasia replied. She sent the wolf back out into the glade and ran off to tend to some affairs of her own, promising to return shortly.

I emerged from behind the bushes, where Anastasia and I had hid ourselves to observe the scene taking place in the

glade. I came out and sat down on the grass about ten metres<sup>2</sup> from little Vladimir. I sat there that way for about fifteen minutes. He didn't pay the slightest attention to me. I thought that as long as I continued sitting quietly, he would never pay any attention to me. And so I gave a couple of clicks with my tongue.

The little one turned his head and looked at me. My son! My very own son had his eyes fixed on me with fascination, and I was excitedly looking at him. I could even feel a flush all through my body from the excitement.

I had the urge to run and take his little body into my arms, squeeze him and press him against my chest. But Anastasia's request and (more significantly) the presence of the wolf held me back.

And then my little son began slowly crawling toward me. He kept his eyes fixed on me all the while he was crawling. My heart started beating so loud in my chest that I could hear it — what was it beating like that for? Maybe it would frighten the little one away, it was pounding so.

But he kept crawling and crawling, and again something in the grass caught his eye, and he began poking around after a little bug. Then he began to examine something crawling along his arm. At this point he was three metres away. My little son had stopped short in his crawling only three metres away from me!

All over some bug. And what kind of world was out there in the grass, what kind of life had taken his fancy so? What kind of order or rules do they have in the forest anyway? Here's this little boy with his very own father right in front of him, and he's more interested in some kind of bug! That's not the way it should be. The child should know that his father is more important than a bug.

<sup>2</sup> *ten metres* — approximately equivalent to 33 feet.

All at once the little one looked up again in my direction, showed me a toothless smile, and quickly started crawling again, more nimbly than before. I was all prepared to pick him up, but then noticed that he kept on crawling right past me, not paying any attention to me.

I looked around and saw Anastasia standing all smiles behind me, a little to one side. She sat down and put her hand on the ground, palm upturned. The boy smiled and climbed up to his mother's breast. Anastasia didn't pick him up, but ever so gently helped him climb up, ever so gently helped him reach her breast. Now he was already in her arms, clapping his tiny hands against the exposed breast and smiling at Anastasia. Then, after feeling and stroking her nipple, he closed his lips tight about it and began sucking on the supple breast. Anastasia in the meantime just gave one look at me, putting her finger to her lips to let me know I should keep quiet. I sat there the whole time without uttering a word while she fed our son.

It seemed as though all during the feeding Anastasia was totally oblivious to my presence. Indeed, she did not seem to be aware of the world around her at all. The whole time she concentrated her gaze on our son. And it also seemed as though they were somehow communicating with each other. This impression came from the fact that after sucking for quite a while the baby would suddenly stop, turn away from the nipple and look into Anastasia's face. Sometimes he would be smiling, at other times his face had a serious expression. Then he became very still and slept for a while in his mother's arms. When he awoke, his face once again broke into a smile, and Anastasia sat him on the palm of her hand, supporting his back.

Their faces were very close together, and the baby would feel Anastasia's face with his hands, and press his cheek against hers. Then he spied me once again. And once more he fell still for a while, staring at me in fascination.

All at once he reached out his little hand toward me, inched his body forward in my direction and uttered the sound *eh*. Involuntarily I reached out my hands to him, and at that point Anastasia handed him over to me.

Here I was holding in my arms the tiny body of my very own son — the son I had so greatly desired! Everything else in the world vanished into oblivion. And I had the strong urge to do something for him. The baby felt my face, pressed his lips against it. Then he recoiled with a frown, apparently feeling the prickles on my unshaven face. After that — I don't know how it happened, but I got an uncontrollable urge to kiss his warm little cheek. And I resolved to kiss him! But instead of a kiss I somehow ended up giving his cheek two quick laps, the way the wolf did.

The boy recoiled from me and began batting his eyelids in amazement. Anastasia's loud trills of laughter filled the glade. The baby at once reached out his little hands toward her and started laughing too, squirming in my arms. I realised he was asking to be released. My son was leaving me. Obedient to his will and the established rules of communication here, I carefully put him down on the grass. He immediately crawled over to Anastasia. She jumped up with a laugh, ran around me and sat down on the other side of me, very close. Whereupon the little one turned around and with a big smile crawled over to the two of us. He climbed into Anastasia's arms and once more began to feel my face.

This is how I first communicated with my son.

## CHAPTER FOURTEEN

### A father's role

My son, my little Vladimir, finally fell asleep. After his feeding he played for a while with something in the grass. He felt a cedar cone which had fallen to the ground and tried to lap it. He looked up at the clouds floating by in the sky. He listened to the birds sing, then climbed up a little hill, where the grass was thicker, curled up, closed his eyes, smiled at something, and fell asleep. Anastasia ran off to take care of some sort of tasks of her own. I set out for a walk in the forest alone, immersing myself in thought to the exclusion of everything around me. At the same time I couldn't get rid of the alternating feelings of joy and disappointment.

I sat down under a cedar tree at the edge of the lake and decided to just sit there without moving until I thought of some way that I as a parent could contribute to my child's upbringing. I had to think of something to make him feel his father was the most important thing in his life.

When Anastasia approached, I didn't feel like talking with her at first. It was her laughter, in fact, that had distracted my son from me. Anastasia sat quietly by my side, her hands clutching her knees, thoughtfully contemplating the calm waters of the lake. She was the first to speak.

"Please do not be offended at me. Your communication struck me as so funny. I could not restrain myself."

"That's not what I'm bothered about."

"What is it then?"

"Many readers' letters ask about how to bring up children, they want me to ask you everything about your system of

raising children and to describe it in my next book. But what is there here to describe? There is no system — quite the opposite. What you have here is some kind of anti-system. For example, what should fathers do under such circumstances? — a reader might ask.”

“You used a most appropriate word — *anti-system* — you can describe that.”

“But who would be interested in that? People are looking for practical guides where it tells them what they should do with their baby when he's say, one month old, and then when he's two months old, and so on. An hourly schedule. Books that offer a dietary programme. A complete timetable for bringing up the child according to his age. But here you have only a complete indulgence of the child's whims. An all-permissive attitude.”

“Tell me, Vladimir, what do you want our son to be like when he grows up?”

“What do you mean, what do I want him to be like? Of course I want him to be a happy, normal and successful individual.”

“And are there many happy people amongst your acquaintances?”

“Happy? Well, if you're talking about completely happy people, I'd have to say: probably not very many. Everybody's got something not quite right with their lives. Either there's not enough money, or they're plagued by illness or family squabbles. But I want my son to avoid any kind of unpleasant experiences.”

“Then think about it: how can he avoid them if you deliberately squeeze him into the system everyone is brought up in? And think: might there not be a certain pattern in the fact that all parents want to see their children happy, and yet they grow up and turn out just like everyone else — not very happy?”

"A pattern?" I queried. "What kind of pattern? If you know, tell me yourself."

"Let us ponder this question together."

"This is something people have been thinking about for ages, Anastasia. All kinds of scholars and specialists are pondering it. For this they have invented all sorts of systems of child-rearing, worked out schedules, trying to find the most efficient system."

"Take a more careful look around you, Vladimir. See the trees, grasses and flowers growing. How could one possibly draw up an advance schedule of the days and hours when they should be watered? You would not go watering flowers when they were being washed with water from heaven simply because someone worked out a detailed schedule for watering them."

"Now you're going too far. That's just nonsense — that's not an example for raising children. It's not something that can happen in life."

"But you know, Vladimir, this is exactly what *does* happen in life. No matter what the system. It is still only a system. It is always calculated to wean the heart and soul away from Man when he is still small and to subject him to the system. So that he grows up like everyone else, in a way that will fit the system. And so it goes on for ages on end, so as to prevent the human soul from experiencing clarity of vision. To prevent Man from discovering himself in his beauty as a whole, with a God-given soul. Yes, Man! The ruler of all the Universe."

"Hold on a moment, don't get carried away beyond my reach, speak calmly using everyday speech. What do parents need to do to make it so? So that children will grow up, as you say, with a soul that is free? To be rulers of the Universe, and happy? As God Himself has wished?"

"They must not interfere, they need to see their children clearly in their own thinking the way God Himself has

wished. It is the aspiration of all the forces of Light in the Universe that each newborn child be endowed with the very best of creation. It is the parents' duty not to hide the creative Light under the erudition of invented dogmas. For ages upon the Earth debates have arisen as to which system might be the wisest. But think about it yourself, Vladimir. Debates arise where Truth is hid from sight. Fruitless debates can go on forevermore as to what might be found behind the closed door. But one has only to open the door and it will be clear to all, and there will be nothing to debate, since everyone will be able to see the Truth for himself."

"But in the final analysis, who will open this door?"

"It is already open. All that remains is for the eyes of the soul to be opened to see and gain awareness."

"Gain awareness of what?"

"You were asking me about systems. You were mentioning the schedules and everyday régimes and how someone sets them forth for people in books. But think about it: who can tell more clearly about creation than the Creator Himself?"

"But the Creator doesn't tell anything. Up to now He has said hardly a word. Nobody hears His words."

"Words thought up by Man have many meanings. The Creator patiently and lovingly speaks with each one of us through splendid, imperishable acts. The rising of the Sun and the silvery sheen of the Moon, the soft mist and tender dew, playing with the Sun's ray and drinking in the heavenly blue. The Universe is filled with so many clear examples like that. Just look around you. They touch you and everyone else too."

Again, if everything Anastasia said about child-rearing were to be laid out, the result would probably be the complete opposite of how we handle this matter today.

I have already said that Anastasia, along with all her forebears through the ages, treats a newborn as a deity or an

immaculate angel. They consider it totally unacceptable to interfere with the child's thought process.

Anastasia's grandfather and great-grandfather were able to observe for long periods at a time how their little granddaughter would be fascinated by a bug or a flower, or the contemplation of something. They tried their best not to distract her with their presence. They would converse with her only when she herself paid attention to them and showed a desire to communicate. Anastasia maintained that at the very moment I was observing little Vladimir contemplating something in the grass, he was becoming aware not only of the bugs but of all creation.

According to her, a bug is a more perfect mechanism than any manufactured product, let alone a primitive construction set.

A child provided with the opportunity to communicate with these perfect beings will himself become more perfect than through communication with primitive lifeless objects.

Besides, as she maintains, every blade of grass, every bug, is interrelated with the whole of creation and subsequently aids the child in becoming aware of the essence of the Universe and of himself as part of it, to become aware of his innate purpose. Artificially created objects have no such connection and do not arrange priorities and values in the child's brain in the right way.

To my observation that the conditions in which she — and now our son — were being brought up were totally different from those in which children of our civilised world are to be raised, she responded as follows:

“Even in the mother's womb, and especially when a helpless infant, as it seems, is given birth in the world, the forces of Light in the Universe rejoice. They rejoice in the trembling hope that the newly arrived immaculate Godlike Man will become their kind ruler and intensify the Light of Love from the Earth.

“Everything has already been provided for him by the Creator. Through a bug, a tree, a blade of grass, a seemingly ferocious beast, the Universe is prepared to be a good nurse for him. Even in a Man outwardly small we see the great work of the Creator of all. In a burst of bright inspiration Man has been co-created by the Creator. And with his birth has been created for him a Paradise on Earth.

“Nothing and no one has power over the Creator’s supreme co-creation. His burst of love and bright inspiration are already comprehended in each engendered moment for the world.

“Of all the beings in the unfathomable Universe only one is capable of influencing his destiny by coming between God, Paradise, a star of happiness and Man.”

“So,” I queried, “does that mean that there is a being in the world more powerful than God?”

“There is nothing in the world more powerful than Divine inspiration,” replied Anastasia. “But there is a being equal to it in power, capable of coming between God — the most tender educator — and the angelic child — Man.”

“And who is that, how is he called?”

“That being is *Man the parent*.”

“What? But how can it happen that parents can wish unhappiness for their children?”

“Everyone *wants* happiness. But they have forgotten the path to happiness. That is why they are perpetrating violence out of good intentions.”

“Can you offer proof, even just a little, of what you say?” I asked.

“You spoke of various systems of raising children,” Anastasia responded. “Think about it. There are many systems. But there is only one Truth. And this alone means that the many are leading in the wrong direction.”

“How can one tell the true system from a false one?”

“Try to look at life with an open heart. Purify thought from vain and fruitless art, and then you will see the world, the Creator of the Universe and yourself.”

“Where are the eyes of the heart, in place of ordinary eyes? Who is capable of discerning all this? Couldn’t you talk about things in more specific terms? And in simpler, conversational phrases? You said that your language would be similar to mine, but you are talking differently. And you are making me talk like you. I can sense how you are talking differently.”

“Only a wee bit differently. And you will be able to remember the gist of what I say. And my speech will mix with yours. And do not worry, do not feel shy about the combinations of words you use. Your language will be understandable to many people. It will reveal to many hearts the essence concealed in those very hearts. Let the poetry of the Universe express itself in the way you write.”

“What’s going on here? I don’t want anyone to change the way I write.”

“But yet you were offended when a journalist called your language ‘stilted’. I, along with your readers, can make it so your language may leap from ‘stilted’ into ‘the best-sounding of all time’.”

“Well, okay, let’s have it that way down the road, but for now I just want to hear simple language. As it is, the issue is so complex, it is incomprehensible. How does it all happen, and how come *parents* are closing off the path to happiness for their children? And is that in fact what is really happening? First of all I have to be convinced that that’s really the case.”

“Fine. If you want to be convinced, try recalling scenes from your own childhood.”

“But that’s hard to do. Not everyone can recall things that happened in their infancy.”

“And why might that be? Is it not because memory attempts to spare our feelings and excise what is empty and fruitless? It

tries to erase any suggestion of hopelessness, to rub out what you experienced in your mother's womb when you sensed the world's verbal abuse through the sufferings of your mother. Do you want me to help you recall the other things?"

"Well, you can give it a try. What other things were there that have gone from my memory?"

"The other things are not things you wish to remember -- you are reluctant to remember how you, the ruler of the Universe, lay all by yourself helpless in your crib. You were so tightly wrapped up, it was like being bound in a cocoon, and smiling people decided when you should eat and when you should sleep. You wanted to think everything through for yourself, to make sense of what was going on. But so often they would simply make cooing sounds and toss you up toward the ceiling. But what for? -- you never got a chance to think about that. After growing a little, you began to see a great many things around you that had no voice and no heart. But you were not allowed to touch them. You could touch only those things which people handed you. And you resigned yourself to trying to figure out: where was the perfection in any of the joy-toys you were offered? But there was no way you could have found, in this absurd primitive object, what had never been there in the first place and never could.

"But still you kept searching, you did not completely give up -- you felt things with your hands, you tried to bite them, but to no avail. You did not find any explanation. That was when you first wavered, you who were born to be ruler of the Universe. You decided that you were unable to decide anything for yourself. You were betrayed by those who gave you birth, and you betrayed yourself."

"You talk about the events of *my* life. Was there anything in which I was different from other kids?"

"I am talking specifically about you. And about those who are listening to me at the moment."

“So that must mean there are many rulers of the Universe, if each one of us is born to be one. But how can *that* be? What sense does it make being a ruler, if there are many ruling over the same thing? Or does that mean there are many universes?”

“There is one Universe. Just one. Indivisible. But in that one Universe each one has his own space, and is responsible for the whole. Each one is responsible.”

“So where is it — my space, I mean?”

“It has been lost. But you will find it!”

“When did I manage to lose it?”

“When you gave up.”

“What do you mean, I ‘gave up’? I was just like all the other kids.”

“Like all the other children, you believed in the kindness of people around you, you believed in your parents, you began more and more to repress your own desires. And you accepted their belief that you were nothing but an ignorant, insignificant youngster.

“And the sensations inculcated in you by the abuse of your childhood keep on haunting you throughout your life, even to the point of attempting to reproduce themselves in your offspring. You went to school like everyone else. There you were told how Man was nothing but a monkey. How he was a primitive creature. How foolish he was to believe in God. You were told about how there was just one leader who knew everything. A leader chosen by the people. A leader who alone was more worthy and more intelligent than anyone else. And you got carried away with poems about that leader. You began glorifying him without a second thought.”

“It wasn’t just that I extolled and read verse as I was told — I actually believed it back then.”

“Yes, many people read verse. There were even competitions to see who could extol him better than anyone else. And you tried to be the best.”

“So did everyone else back then.”

“Yes, the whole system demanded that everyone have the same aspirations. And thereby perpetrated violence on everyone. It tried to break people to preserve itself.

“But then, all at once, part way through your life, you discovered that there were a lot of systems out there and that they were all different. Then you discovered that Man, quite possibly, was never a monkey. And the very wise leader turned out to be a very stupid tyrant. And it turned out that your generation had been living life all wrong. Now there was a new system to live by.

“And then you became a parent. And unthinkingly you handed over your daughter to the new system, as though you were doing her a favour. You were not thinking, as you did before. You used to *wonder* when your toys made noise, but you don't wonder any more. Having accepted abuse yourself as a normal state of affairs, you began abusing your own child. Century after century various systems have come and gone, one after the other, but all with a single goal — to *kill you*, a ‘ruler’ and wise creator, and transform you into a soulless slave.

“The system always operates through parents. And through those who proclaim themselves to be wise teachers. They will come up with new teachings, thereby engendering a whole new system. And it does not take much investigation to see clearly that they are motivated by the age-old ambition to separate you from God. To come between you and make both you and God try to live and work only for them. This is the core of any system. And you, Vladimir, started asking me to create yet another system. I shall not be able to fulfil your request. You must look around you. Try to make sense of things through your heart alone.”

“Tell me, Anastasia, what about our son? Do you mean to say that living out here in the dense taiga, among all the wild beasts, he has not known violence, even in the least?”

"He knows neither violence nor fear. He is ever more confident that everything here is subject to Man and that Man is answerable for everything."

"But wasn't it violence, at least in a small degree, when the bear lapped his dirty bottom after he woke up? When he fell on his stomach after the bear lapped him? And she did this a second time after he began crawling again. And the second time he fell down. The way I saw it, he really didn't like the bear lapping him like that. That was why he grabbed the bear by her muzzle, so she would stop pushing him with her tongue."

"And right at that point the bear *stopped* lapping him. A little later he will realise the significance of this procedure, but right now he sees it as a game. He himself plays with the bear and wants her to chase him."

"You say Man is the wisest creature in the Universe, Anastasia, but here our son is being raised by wild animals. That's not quite normal. I saw one time on TV how they showed a person who was already grown up. As a young lad he had landed among wolves, and when he was grown up people caught him, and it was a long time before he could talk anything like a human being. He seemed quite backward mentally."

"As far as our son is concerned," Anastasia replied, "all the wild animals around do not serve as child-raisers, but rather as good, kind, capable nannies, who sincerely love our little boy. And there is no doubt they would be ready at any moment to give their lives for their little fellow."

"Have you been giving them this kind of training for a long time? Did your grandfather and great-grandfather help you?"

"What need is there for training? Everything was done ages ago by the Creator."

"But how could He have foreseen everything in advance, to be able to teach each creature what to do in any given

instance? Back there in the glade, as I was watching, our son was looking at the squirrels, and one in particular caught his fancy. He held out his little hand to it, smiled, and uttered a drawn-out *eh* sound. And the squirrel dashed right over to him — that same squirrel that had caught his eye. The little one then played with it, took it by its paw and stroked its tail. Now how could the Creator have foreseen this particular situation and taught the squirrel what to do?”

“The Creator is wise. He made everything more simple and to perfection.”

“How?”

“From a Man who is free from aggression, selfishness, fear and many other dark feelings which came along later, emanates the Light of Love. Even though it is invisible to the eye, it is stronger than the light of the Sun. Its energy is life-giving. The way the Creator arranged things, only Man is endowed with such a tremendous ability. Only Man! He alone is capable of bringing warmth to all living creatures. That is why all living creatures are drawn to him.

“As Vladimir, our little son, was paying attention to the squirrels, he fixed his gaze on one of them in particular, concentrated his attention on it, and his warmth went out to that little squirrel. In this warmth the creature felt a sense of grace, and rushed toward the source, and was delighted to play with him. Our son can summon any animal that way.

“Thanks to the Creator all newborns have such an ability — when they are still in the Space of Love and nothing has yet erased this magnificent element within them. The Space of Love begins with the mother’s womb, and then only spreads apace. Only Man is endowed with the power to wreck or perfect this Space.

“My grandfather did train the eagle — you remember that — and thereby introduced a new element into the Space

of Love. This is what my forebears — my forefathers and foremothers — have been doing from time immemorial. Now, tomorrow will be a special day, and you will see what happens. Tomorrow will be an important day for the future.”

## CHAPTER FIFTEEN

### A bird for discovering one's soul

The next day we went to the glade and, as before, watched from a concealed vantage-point as our little son was engrossed in his play. The wolf lay at the edge of the glade, following everything with a keen eye. Her cubs played by her side. I noticed little Vladimir from time to time sticking his finger in his mouth and sucking on it, as all children that age do, for some reason. I knew parents are supposed to dissuade their offspring from this habit by some means or other — either by binding the child's hands with cloth or by giving him a soother. I mentioned this to Anastasia, and she replied:

“Not to worry, this is extremely beneficial. Our son is licking pollen from his fingers.”

“Pollen? What kind of pollen?”

“Pollen from the flowers and the grass. He touches the flowers and grass with his hands. Sometimes bugs will crawl across his hand, and they carry pollen too, on their legs. See, he is frowning. And taking his finger out of his mouth. That means he did not like the taste of some kind of grass pollen. Now he is bending down and trying to put a flower into his mouth to see how *it* tastes. Let him do that. Let him taste the Universe.”

“The Universe and a little flower — what's the connection? Or is it simply a figure of speech?”

“Everything alive in the world has a connection with the Universe.”

“But how? Where? Where can one see this connection? What instrument is capable of measuring it?”

"One does not need an instrument. One needs only one's soul. Then you will be able to see and understand what is visible around us every day, many times over."

"What can be seen — and then understood — with the soul? Give me an example."

"Take the Sun, for instance. It is far away from us — a planet of the Universe — yet as soon as it rises, it touches a flower with its ray, and the flower opens in delight. It seems as though they are so far apart from each other — the great huge orb of day and the tiny wee flower, but they are linked together. One cannot exist without the other."

Anastasia unexpectedly fell silent and began looking up. I looked up too. I saw a large eagle circling over the glade. I had seen eagles something like that at the zoo. It kept circling lower and lower, and all at once it touched down with its talons about two metres from the boy. The inertia of its flight kept it moving along the ground for a while. Then, after shaking its feathers all over, it stood forth proud in the glade.

The wolf pricked up her ears. Her fur was standing on end, but she made no move to attack the eagle, which was now strutting proudly across the glade.

The little one got all excited. He sat down on his little bare bottom and — without any awareness of danger — stretched out his hands toward the fearsome bird.

Strutting slowly on its talons, the eagle came right up close to the boy. Its hooked beak hung right over his little head.

The boy apparently felt himself in no danger whatsoever. He began to feel the eagle's feathers and touched its talon-tipped legs. He clapped his little hand against the eagle's chest and smiled.

All at once its huge beak touched the boy's head — then a second time, as if looking for something on it. Then the eagle went off to one side and spread its wings. With a beat of its wings it rose slightly off the ground, and again touched down

and stood still. The boy stretched out his arms in the direction of the huge, threatening bird and began uttering sounds: *eh, e-e-eh*.

And all at once the eagle... The eagle went behind the boy's back, and all of a sudden started running, and then it took flight! It circled low over the glade, dived down and without landing picked up the boy in its enormous talons.

But the talons did not pierce his flesh.

The eagle thrust its sharp claws under the boy's armpits and began circling low over the glade, beating its wings and trying to lift the little one off the ground.

The boy jerked his trailing feet along the grass, sometimes ever so slightly lifting them into the air. The boy's eyes were bulging, sparkling with the fire of excitement. And then, all at once, they rose into the air! They had risen a metre above the ground when they achieved synchronicity — when the push of the little feet against the ground coincided with the beat of the eagle's wings.

The eagle kept circling, lifting the two of them gradually higher, but the boy didn't cry out. They simply flew, rising together into the deep blue. By this time the eagle had lifted the boy above the tops of the tall cedars and was continuing to climb.

Overcome with shock, and still speechless, I seized Anastasia's arm. Her eyes remained fixed on the sky as she whispered to herself:

"You are still the strong one! Bravo! And you may indeed be old, but you are still strong. Your wings are still mighty. Fly! Fly even higher!"

And the eagle, bearing in its talons the wee child's little body, kept circling and climbing higher and higher into the heavenly blue.

"What's the point of subjecting the child to an execution like this? Why expose him to such danger?" I yelled at Anastasia, as soon as I had recovered from shock.

"Please do not worry, Vladimir. The eagle's ascent is not nearly as dangerous as the aeroplanes on which you yourself have flown."

"But what if he drops the boy from way up there?"

"He would never even think of such a thing! You just relax, do not allow either fear or doubt into your thoughts. The eagle's flight is making an extremely significant contribution to our son's conscious awareness. Note that the eagle has lifted the child above our Earth."

"What significance can there be here," I countered, "except for superstition? It is quite true that Man should not interfere in great works of creation. With that I agree. But an ascent like this was not provided for by the Creator. You yourself, along with your grandfather, taught the bird to do this. Out of some kind of superstition, most likely. What else could it be? There's no point in taking such a risk!"

"When I was little," came Anastasia's reply, "I too flew up high with this same eagle. I did not have a great deal of understanding back then, but it was so interesting, so extraordinary. The glade seemed so small from up high. And the Earth seemed so broad and unfathomable. Everything was so bright, and this extraordinary experience stayed with me for a long time, for ever. When I had grown some — by this time I was three years old — Great-Grandfather asked me a question:

"Tell me, Anastasia, do all the creatures like it when you stroke and caress them with your hand?"

"Yes, they all do. They keep wagging their tails to show how much they like my caressing. The grass and the flowers and the trees like it too, but not all of them have tails to wag, to show how good it feels to be stroked."

"So, everything desires to feel the embrace of your hand?"

"Yes, everything living and growing, small or large."

"And the wide Earth also wants to be caressed? You have seen the Earth, how wide it is?"

"At this point I recalled the vivid experience I had had with the eagle as a baby. The size of the Earth was not something I knew just from hearsay. And so I answered Great-Grandfather without hesitating:

"The Earth is wide, you cannot see its edge. But if everyone wants to be caressed, that means the Earth must want it, too. But who would be able to embrace the whole Earth? It is so great that even *your* arms, Great-Grandfather, would not be able to embrace the whole of the Earth!"

"Great-Grandfather stretched out his arms to either side, looked at them, and nodded in agreement.

"You are right. Even my arms are not long enough to embrace the whole Earth. But you said that the Earth, like everyone else, wishes to be caressed?"

"Yes, it does. Everybody wants to be caressed by Man."

"So you, Anastasia, should embrace the whole Earth as well. Think about how you could do this," Great-Grandfather said, and walked away.

"I began thinking a lot of the time about how to embrace the whole Earth. And I could not think of anything. And I knew that Great-Grandfather would not speak to me — he would not ask me any more questions — until I had solved this problem, and so I kept trying.

"More than a month passed, and the problem had not been solved. And then one day I found myself looking tenderly at the wolf, from a distance. She was standing on the other side of the glade.

"All at once, sensing my gaze, the wolf started wagging her tail. Then I began to notice how all the creatures were so delighted when I looked at them with joy and tenderness. How big they were or how far away they were was not important. They were delighted just from my looking at them or thinking about them with love. I realised they were just as happy as they had been earlier when I was stroking them with my hand.

“Then I became aware of something: Here was ‘I’ with my hands and feet, and yet there was also this other me, larger than could be shown by someone’s hands. And this larger, invisible entity was also *me*. That meant that every Man was set up just like me. And this larger me was indeed capable of embracing the whole Earth.

“When Great-Grandfather showed up, I was all bubbling with joy, and I said to him:

“Look, Grandpkins, see how happy all the creatures are — not just when I touch them with my hand, but also when I look upon them from a distance. It is invisible, but something of me is embracing them, and it can embrace the whole Earth too.

“I shall embrace the Earth with my invisible self! I am Anastasia. There is the little me, and there is the greater me. But how this other me is called, I do not yet know. But I shall think about how to call it properly, and I shall say its name and give you the whole answer, Grandpkins! Then will you begin talking with me again?”

“Great-Grandfather began talking with me right away, and said:

“Call your second self, dear granddaughter, *soul*. *Your* soul. And cherish it, and act in accord with this limitless soul of yours.’

“Tell me, Vladimir,” Anastasia said, addressing me, “how old were *you* when you first became aware of your soul, when you felt it for the first time?”

“I don’t remember exactly,” I replied, and wondered whether I had ever really discovered my soul, or whether others discovered it too, and at what age? And to what degree? Maybe we simply talk about our soul, not really feeling at one with it, not really thinking about our second, invisible self. And how important is it to feel all that, and what for?

The tiny dot moving overhead quickly began enlarging. The eagle kept circling lower and lower over the glade. When it reached the height of the tree-tops, I could see the little one's flushed face, and his eyes sparkling with excitement. The little fingers at the tips of his outstretched arms were moving in time with the wingbeats of the extraordinary bird. When the little one's legs touched the ground and started trailing across the grass, the eagle loosened its talons. The little one fell, rolled over in the grass and quickly got up on all fours. Then he sat up and started turning his head around, looking for his new-found friend.

The eagle staggered off a little ways, but then fell on its side. It lay awkwardly on the grass about ten metres distant, with one wing sticking out at an angle. It was having a hard time breathing, and its head was resting on the ground.

The little one saw it, broke into a smile and crawled over to it. The eagle attempted to get up and greet the boy, but once again rolled over on its side. Maliciously baring her teeth, the wolf took two leaps and landed between the eagle and the boy. Anastasia whispered, her voice trembling:

"How perfect and strict are Your laws. You gave everything to Man right from the beginning, Creator. The wolf is following your laws, but I feel sorry, very sorry for the eagle."

"What is going on? Why is the wolf acting so aggressive and malicious?" I asked Anastasia.

"Now the wolf will not let the eagle come to Vladimir," she replied. "She thinks it has fallen ill, since it has rolled over on its side. She could attack it to chase it out of the glade. Vladimir must not see the attack — he will not understand it at the present time. Oh, what to do? What can we possibly do?"

At this point the eagle shook its feathers, got up firmly on its feet, proudly threw back its head, and clicked its fearsome beak twice. With proud and sure step the eagle began

strutting toward the boy. The wolf appeared to calm down, went off to one side, but not far. She was ready at any moment to make her leap, and followed the proceedings like a hawk.

The little one first touched the enormous bird's beak, then began tugging on its wing feathers, ruffling them and demanding or asking something, repeating all the while: *e-eh, a-ab*.

The bird's hooked beak touched the crown of the boy's head, along with his shoulders, which still bore the marks of the eagle's talons.

Then the eagle bent its head to the ground and, using its beak to tear off a little flower, put it in the boy's open mouth, as though it were feeding its young. The little one all the while kept making the same vowel sounds. After performing this 'parental duty' the eagle began staggering again. The malicious wolf crouched for a leap. And then suddenly the eagle... it started into a run. There was a beating of wings and... take-off!

Time after time it would rise higher and higher, then make a sudden dive for the glade. About a metre and a half from the ground it would level out and ascend once more. The little one waved at it, stretched his arms out to it, called it, laughing with a toothless grin. Anastasia kept her eyes fixed on the eagle, and whispered with concern:

"You do not have to do that. You did everything just right. And you are healthy — I know you are not sick. Relax, my dear eagle, relax. Thank you! I believe... I believe you are well! You are just a little old! Relax!"

Once again the eagle executed its complex pirouette, in such a way as to touch the grass with its talons. Still, it did not land, or push off from the ground. Instead, with a powerful thrust of its wings, it managed to rise in the air, snatching a clump of grass along the way. It circled, showered the little one with the grass and began rising higher and higher into the sky.

As before, Anastasia followed the eagle like a hawk — not taking her eyes away even when it became nothing but a dot in the blue. For some reason I found myself following it too, as the dot grew ever more distant from the glade. At first it went straight up, and then veered sharply off to the side, away from the glade. Suddenly the dot headed for the ground, and it wasn't long before we could see that first one wing and then the other were spreading themselves — but simply from the wind, and not as a deliberate action by the bird.

It was not flapping its wings or soaring — it was simply falling. Its wings were ruffling in the wind — it was the wind that had opened them.

Anastasia exclaimed:

“You died in the sky, way up high! And there you remain. You did all that you could possibly do for Man. Thank you. Thank you for showing us your heights, my old teacher.”

The eagle continued to fall, while two young eagles circled overhead.

“Those are your offspring, they are strong already. You did everything for their future too,” whispered Anastasia to the old eagle, which had fallen somewhere beyond the glade. As though in death it could still hear her.

By this time the two young eagles were circling low over the glade. I knew they were its offspring, and the little one waved to them.

“Of all things!” I exclaimed to Anastasia. “Why this senseless sacrifice? What did he do that for? And do it all for Man? Why do they try like that, Anastasia? Why do they sacrifice themselves like that?”

“For the light emanating from Man. For the grace which Man can give them, and for a feeling of hope for their offspring. Now *its* offspring will see and sense the light of life-giving love from Man! Look, Vladimir, our son smiled at the young eagles and now they are flying over to him. Perhaps

the old eagle has realised that this light, this grace-filled light emanating from Man, will also include a particle of itself.”

“Are they ready to sacrifice themselves for the light emanating from *everyone*?”

“From everyone who is capable of emitting this grace-filled light!!!”

## CHAPTER SIXTEEN

### The system

Anastasia went off to get ready to feed our son, while I once again set out for a walk in the woods to do some thinking.

Two things were bothering me — unpleasant things. The first was how I, as a father, was still unable to find myself a niche where I could participate in the raising of my son. It had become clear to me that I could not come up with any more interesting toys than those he had already. And there was no point in bringing food in either.

Our son already has his mother's milk and fresh flower pollen, and then there will be nuts and berries. Naturally, packaged baby food is no substitute for a living, growing source of nourishment. Yet still I had a hard time mentally accepting this kind of situation.

After all, Anastasia has nothing, and yet at the same time she lacks nothing, and can even make liberal provision for the baby.

In the TV adverts there is such a hype about toys and other stuff for children that it almost seems a child won't survive without them. Here, however, they make no sense at all — more than that, they are actually harmful. A baby doesn't even need a crib here. With a crib like the one he has — namely the bear — of course, he is not going to freeze even when the temperature is minus forty. There's no need to wash sheets or diapers. The bear — can you believe it? — is also a stickler for cleanness. Each time she scrapes clean her groin-area with her claws, just like a comb. She rubs her tummy on the grass, and then bathes. When she comes out of the water she

shakes herself off, with spray flying in all directions, then lies down on her back with her tummy up and dries herself off, and then once again combs her groin area.

Anastasia took me over to her and had me feel the place where our little one sleeps. It is soft there, clean and warm.

But even if I am not required to make any kind of material provision, a father should still take part in raising his son — that's for certain. Only how? Maybe I should go to Anastasia and firmly demand a definitive answer. After all, I have fulfilled all her conditions — I have not picked up the baby, nor have I insisted on him making use of the presents I brought with me.

My other disappointment was in not being able to fulfil my readers' requests and lay out a specific system or timetable for raising children. There are a lot of questions in the letters about children, and they are always asked at readers' conferences. I promised that I would definitely question Anastasia about this, and in my next book I would set forth the system her family has used from generation to generation to bring up their young.

And there you have it! Not only does she reject systems in general, but she even declares *any* system to be harmful. Of course, that cannot be. Amidst all the harmful systems there has to be at least one that is right. And then it dawned on me. In all the readers' letters there was not a single question about child-raising addressed to me. Everyone was looking to Anastasia for an answer, and if people actually trust her more than the usual experts in our world — certainly more than they trust me — then it's up to her to answer the questions raised. She's the one who is obliged to do that. My part is simply to lay it out on paper. I've got enough on my plate just putting out the books.

Anastasia finished her tasks and came running over in all her rosy-cheeked cheerfulness.

“Everything is done. Our son is asleep. You have not been too bored here all by yourself?”

“I’ve been thinking.”

“About what?”

“About how there was nothing more to write in my next book. I told you how people are waiting for answers to their specific questions. People are interested in child-raising. But what can I write about that? Sure, I’ll tell about how you communicate with the baby, how he’s getting on. But what’s the point? In the conditions of our world that kind of régime is simply not practicable. Nobody’s going to train a bear or a wolf or an eagle, and nobody has a glade with pure pollen on the flowers as you have here.”

“But it is not the bear that is important, Vladimir! Nor the eagle. They are merely effects. There is just one thing that is important, and it will find the right path under any conditions.”

“And what’s that?”

“One’s attitude to one’s child. The thoughts surrounding the child. Believe me, and try to understand. Christ could be born only by a mother who believed that Christ would be born to her, and if the parents have the same attitude to their child as they would to Christ or Mohammed, their offspring will follow this thought. And he will become whoever he aspires to become. People will still explore Nature, and those who are able to feel and become aware of what the Creator has created — its sense and purpose — they will be able to make a bright and happy world for their child.”

“But how do they feel this? There has to be, somehow, a gradual process. There has to be a procedure.”

“This can be felt only with the heart. Only the heart is capable of understanding it.”

“And more specifically?”

“You wrote ‘more specifically’ when you told about the *dachniks*,<sup>1</sup> yet you took no notice yourself. What is the point

of wasting more words? If the heart and the soul are not open, the words will simply vanish with the wind, barely noticeable.”

“Yes, I did write a few words about that. But nothing has come of them in real life.”

“Young shoots are barely noticeable, they are not seen by everyone right off. All the more so in the case of young shoots growing in the soul.”

“But if you can’t see them, what’s the point in writing? I write, I try, but still there are many who do not believe or understand what you are talking about. And there are some who even doubt your existence.”

“Think about it, Vladimir — perhaps you will be able to see some logic even in their doubts.”

“What kind of logic can there be in their doubts?”

“Doubts make counter-actions less likely, and that is why I exist for those for whom I exist. They and I co-exist together side by side, in each other’s hearts. If you think about it a bit longer, it will make sense to you. I exist because of them. They have the power to engender, to create and not to destroy. They will understand you and support you, and will be mentally by your side.”

“You can say what you like, but I am tired of listening to insulting remarks. Dispel the doubts of the unbelievers. Come and show yourself on television, show something of your extraordinary abilities,” I implored Anastasia, and she replied:

“Believe me, Vladimir, my appearance in the flesh and any miracles performed in public will not pour the light of faith into the faithless. They will only exacerbate the feeling of irritation on the part of those who do not like someone else’s perception of the world. And you should not waste your

---

<sup>1</sup>*dachniks* — people who spend time (their days off, especially summer holidays) tending a garden at their *dacha*, or cottage in the country. See further details in Book 1.

energies on them. To everything there is a season, to everything there is a dawn, and if you wish, I *shall* come forth to people and I shall appear in the flesh. But before that I must make it so women who have involuntarily consecrated their lives to the kitchen can experience joys of a different order. And so that the light of love may shine upon young mothers who have been left alone with their children. And *the children!* You see, *the children!* Their souls must be liberated from the tyranny of theories.”

“See, there you go again with your dream. A lot of time has gone by since you started to dream that way, but little has actually been done. We’ve got a book, there’s pictures and poetry, but where are your global achievements for all people? Only don’t talk of bright little shoots growing in people’s souls. Show something tangible, something that can be felt in real life... You can’t show anything, can you?”

“I can.”

“Then show it!”

“If I show it, I shall be subjecting you to the temptation to open prematurely the little shoots which are just starting to come up, and then who will protect them from a damaging hailstorm?”

“*You* will.”

“In that case I shall be obliged to do so, to correct my mistake. Look...”

At that point, thanks to Anastasia, I was able to witness a phenomenon which was even more extraordinary and overwhelming than anything I had described in my books to date. Within the space of a single moment — either inside me or in front of me, I’m not sure which — there paraded a multitude of marvellous faces of people of different ages and from different parts of the Earth.

This was not just any series of flickering images. Not just people’s faces, but their splendid actions too appeared

before my eyes. I could see the circumstances surrounding them — the events that were happening to them or because of them over their whole lifetime. They were all drawn from our present reality. It would have taken many years to view such a quantity of information on a cinema screen, yet here it took but a single moment, after which Anastasia was standing once more before me, in exactly the same position she was in before. She began speaking the moment I saw her:

“You were thinking, Vladimir, that what you saw was merely a kind of hypnosis. I ask you please not to try to guess the means by which these people appeared before you. We were talking about children. About the most important thing! Did you see the children? Tell me.”

“Yes, I saw the children. Their faces looked intelligent and kind. The children were building a house all by themselves, a very beautiful house, and so big. And they were singing while they worked. And I saw a grey-haired man amongst them. This man was a scholar, an academician. And he appeared to me right off to be very wise. Only he was talking in a peculiar fashion. He seemed to think that children could be wiser even than those whom we call professors. The children were talking with this academician as an equal, and yet at the same time with respect. Indeed, there was a lot about children in my vision. About how different their education was, the things they dreamt about. But that’s *only* a vision, so what’s the point in carrying on about it? In real life things are not like that at all.”

“What you saw was indeed real life, Vladimir, and before long you will be persuaded of that yourself.”

And, to my amazement, it all came about, just as Anastasia promised. It happened! And I saw it!

## CHAPTER SEVENTEEN

# Put your vision of happiness into practice

Soon after returning from the taiga I went once again to the city of Gelendzhik<sup>1</sup> to attend a reader's conference on the *Anastasia* book. The Governor's aide in charge of the Gelendzhik district of the Krasnodar region took me to see Academician Mikhail Petrovich Shchetinin's<sup>2</sup> forest school.

A narrow gravel road led from the main highway into the forest, to a valley nestled amidst the mountain peaks. The road soon came to an end in front of a most unusual two-storey mansion. It was still under construction. From one of the still frameless window openings wafted the sounds of children's voices singing a Russian folk song. This building was part of the vision Anastasia had showed me back in the taiga forest, but now it was an altogether real experience.

Without a word to anyone I made my way through various construction materials to touch this mansion with my own hands. As I approached, I saw a little girl, about ten years old, climbing deftly down a ladder. She went over to a pile of river

<sup>1</sup>The author's earlier experiences at Gelendzhik are described in Book 1, Chapter 30: "Author's message to readers" and Book 2, Chapter 33: "Your sacred sites, O Russia!". Gelendzhik is located in the Krasnodar region of the northern Caucasus, on the north-east shore of the Black Sea.

<sup>2</sup>*Mikhail Petrovich Shchetinin* (1944-) — director (principal) of the Tekos School near Gelendzhik. Originally a music teacher by profession, Mikhail Petrovich has had a long and distinguished career in experimental education. The recipient of several awards, in 1991 he was honoured with the title *Akademik* (Academician) by the Russian Academy of Education.

pebbles and began selecting and dropping stones into an old herring tin. When she started back up the ladder, I climbed up after her, in the direction of the alluring music pouring forth from above.

There on the second floor I watched as a group of kids like her, some a little older, were taking smooth pebbles out of a box and attaching them with a cement mixture to the wall, making an amazingly beautiful pattern. Two little girls at once carefully washed off each newly attached stone with damp rags. They set about their tasks in earnest, singing as they worked. No adults were present. Later I found out that the whole foundation, indeed, each brick of this structure, had been laid by a child's hand. The children had come up with the whole design by themselves, including every corner of their building.

And this is not the only such building on the little campus. In this amazing setting children are constructing not only their buildings, their campus, but their whole future in the process. And they *sing!* Here a ten-year-old girl is capable of building a house, doing splendid drawings and cooking meals, not to mention knowing ballroom dance steps and mastering the fundamentals of Russian martial arts.<sup>3</sup>

The children of this forest school are acquainted with Anastasia. They themselves told me about her. Three hundred pupils from different Russian cities study here.

At this school children take but a year to master the whole ten-year public-school maths syllabus, along with studying three foreign languages. They neither recruit nor produce child prodigies. They simply give the kids a chance to discover what already lies within.

Academician Mikhail Petrovich Shchetinin's school comes under the Russian Federation's Ministry of Education. It

<sup>3</sup>Photos of the campus, pupils and creative learning activities may be found on the colour insert of the present volume.

charges no tuition fees. Even though the school does not advertise itself, it has no vacancies. Indeed, there is already a waiting list of 2,500 hopefuls for an unexpected opening.

It is hard to find words to describe the joy on these children's beaming faces. I went to visit the school directly after the readers' conference at Gelendzhik. I went with a small group of readers who had heard about my intended visit.

One of these readers was Natalia Sergeevna Bondarchuk,<sup>4</sup> an actress and film director who is also on the board of the Roerich Society.<sup>5</sup> A specialist in esoterics, she gave a presentation at the conference on the Roerichs' legacy and on esoterics in general. She talked about Anastasia far more intelligently than I.

Natalia Sergeevna was accompanied by her ten-year-old daughter Mashenka.<sup>6</sup> After the conference the two of them were to go to a film festival in Anapa,<sup>7</sup> where Mashenka's beloved grandmother, the famous actress Inna Makarova,<sup>8</sup> was

<sup>4</sup>*Natalia Sergeevna Bondarchuk* (1950–) — a popular Russian film actress and director. One of her first cinema roles was in Tarkovsky's famous 1973 sci-fi flick *Solaris*. She has directed a number of children's films, including several on the *Bambi* theme.

<sup>5</sup>*the Roerich Society* — founded by Russian expert on Oriental religions Elena Ivanovna Roerich [Rerikh] and her artist-husband Nikolai Konstantinovich Roerich (see footnote 18 in Book 1, Chapter 1: "The ringing cedar"). With branches in a number of countries, the society is devoted to the study and promotion of art and culture in relation to human creativity and spirituality. It sees Culture as a synthesis of ethics, religion, science and art, all contributing to Man's spiritual development.

<sup>6</sup>*Mashenka* — a diminutive form of the name *Maria*.

<sup>7</sup>*Anapa* — a Black Sea coastal resort with a population of approximately 60,000, located about 100 km north-west of Gelendzhik.

<sup>8</sup>*Inna Makarova* (1926–) — an award-winning Russian film star who made her debut in 1948 with *Molodaya gvardia* (Young Guard). In 1984 she appeared in a film version of Gogol's classic novel *Mertvye dushi* (Dead Souls). She has also starred in several Bondarchuk films. In 2001 she received official congratulations from President Putin on her 75th birthday.

already staying. But Mashenka's words came as a thunderous call to new enlightenment:

"Mamochka, please, just for three days. Just three! While you go to the festival, arrange for me to stay here at this school!"

And the delicate little Mashenka stayed for three days at the school, to the great astonishment of her mother, who sadly said:

"Apparently we don't give enough to our children — even though we love them, we are inadvertently stealing from them."

Natalia Sergeevna was accompanied by a film cameraman. He began shooting as soon as the children of Shchetinin's school started talking about their communication with Anastasia and their understanding of life. I'd like to reproduce here some of our conversation with the children who were building this mansion. Natalia Sergeevna and I were the ones asking the questions:

"One gets the impression that each brick of your building here is filled with the bright energy of a great power."

"Yes, that's true," answered an older, red-haired girl. "So much depends on the people who touch them. We have done all this with love, we are trying with our mental attitude to bring only what is good and happy to our future."

"Who designed this building, the columns and paintings?"

"This was the result of our united, collective thinking."

"Does that mean that while each one is outwardly working on their own individual task, in actual fact it represents a collective thought?"

"That's right. Every evening we get together and plan out, or visualise, the day ahead. We come up with the images we want to see expressed in the design of our mansion. Some of the pupils here take on the role of architect — they give specific form to our common work, tie it all together."

Readers' art inspired by *Anastasia: This is not a dream* © 2006 Maria Ignatieva (above) and *Birds* by Andrey and Natalia Patokin (below).

“What image is expressed in the room we’re standing in now?”

“The image of Svarog<sup>9</sup> — the primordial element of heavenly fire. You can see him here in the symbols, in the pebble amulets.”

“Does your group recognise one of its own as a principal or superior?”

“We do have a leader, but by and large it is the collective thought that is at work here — *lava*, we call it.

“Say that again — thought is *lava*?”

“That’s right — a state of mind, an image, a desire.”

“Do you all work with such great delight, everybody smiling, everybody with such sparkling eyes — everybody so cheerful?”

“Yes, our life is like that, since we are doing what we want, doing what we can, doing what we love to do.”

“You said each stone has its own pulse and rhythm?”

“Yes, and this pulse beats once a day — just once.”

“Is it like that with all stones, or do some beat twice a day?”

“Every stone’s pulse beats once a day.”

“Doesn’t it seem to you that your mansion is something like a temple?”

“A temple is not a form, but a state of mind. For example, the cupolas — they simply help you access a particular state of mind. The form is moulded by feeling. And it is not

<sup>9</sup>*Svarog* — in Russian and Slavic mythology, the god of fire, the father and divine light of celestial and earthly fires, who created (Russian: *svarganil*) our Universe (Sanskrit and ancient Russian: *svargā*). Svarog fought and captured a giant malicious serpent or dragon (*Zmey*), which he used to pull a plough, separating the land of the living (or the visible world, *Yav*) from the land of the dead (or the invisible world, *Nāv*) and thus establish order (or Rightness, *Prav*). In Christianity he is associated with, among others, the Archangel Michael.

by chance that the form of a cupola or hipped roof<sup>10</sup> came to us — they represent our aspirations for heaven and the descent of Heavenly Grace.”

“This building, where every stone is laid with a good thought, is it able to heal?”

“Of course.”

“And *does* it heal?”

“Yes, it does.”

I couldn't help looking at the girls attaching the river-pebble ornamental design to the walls of the upper room. The girls were dressed in very plain, unsophisticated attire, they were beautiful, only with an unusual kind of beauty. I thought to myself: where do we go to meet our future wives? To dance-halls, parties and resorts, eh? We see our future wives all made up wearing the latest fashions, luring us with their slender legs and other charms of their figure. All this is what we marry, and then later, when the make-up is rubbed off, you look, and there you see sitting before you a *kikimora*.<sup>11</sup> and looking like a *kikimora*, grumbling away and demanding attention and... love. What happiness is there in living your whole life with a *kikimora* — what is there to talk about with her? And then she demands you support her financially too. Oh, what rotten luck! But just maybe we get what we deserve. Of course we get what we deserve. You have to be a complete idiot to marry make-up and long legs! But some of us

<sup>10</sup> *hipped roof* — a pyramid-style roof with 4 or more sloping sides, narrower at the top than at the bottom — characteristic of many Russian churches of wooden or stone construction.

<sup>11</sup> *kikimora* — in Slavic mythology and folk customs, a malevolent female ghost said to attach itself to a particular house and disturb the inhabitants, males in particular. By extension, the term may also suggest an ugly woman in shabby clothing, ill-tempered and grumbling, striving to make life of her husband (and men in general) unbearable.

are lucky. Some of us end up marrying, well... these girls here, the ones sticking the ornamental stones on the walls. They will be able to build a beautiful house, and to cook meals with love, they know all sorts of foreign languages, they're wise, smart, beautiful, and when they grow up they'll become still more beautiful, even without cosmetics. Naturally, many will want to take them to wife, but who will they agree to marry? This was a question we put to these beautiful little girls wearing their plain clothing:

"Tell me, who would you like to marry, what kind of husband would you like? What qualities should he have?"

And right away, without hesitation, the first girl responded:

"Kindness, patience... and he should be a Man who loves his Motherland. A Man with honour and dignity."

"And what is honour, in your view?"

"For me, honour can be summed up in one saying: I have the honour of being Russian."

"And what constitutes a Russian Man?"

"It is a Man who loves his Motherland. First and foremost it is one who stands up for her and never fails her. Not for a moment, not even the most difficult moment. He feels himself a part of *Rus*."<sup>12</sup>

"And your children will live for the Motherland?"

"Yes!"

"And that means your husband must share this view as well?"

"Yes!"

The second girl answered the question as follows:

<sup>12</sup>*Rus* (pronounced *ROOS*, rhyming with *moose*) — the name of the Old Russian territory, which by the 9th century A.D. was centred around Kiev; more so than the later term *Rossija*, it signifies an emotional attachment to the Russian Motherland.

"He should be a Man capable of giving light and warmth to other people. If he radiates light and warmth, it will be good for those around him, and our family too. A Man rich in spirit, healthy in spirit, and this can't be compared with any other kind of riches."

The littlest girl wasn't asked any questions while the camera was running, but later I put the same query to her and got the following response:

"Maybe all the best men will get married while I am growing up, but my husband will still be very good, kind and happy — I shall make him that way, I shall help him the way Anastasia does."

And I saw, and realised that Anastasia was sharing her abilities with these children. Why with the children of Shchetinin's school? Because Academician Mikhail Petrovich Shchetinin is himself a great magician — one who has created and continues to create a big Space of Love, and it will continue to grow even bigger.

Right now these girls are little Anastasias with their light-brown braids. But they will grow up! They will spread across the Earth, creating oases like this one, until the whole Earth is filled with them.

As I was standing there in the upper room on the second storey of this extraordinary mansion, examining the ornamental design and drawings executed by the children's hands (though more reminiscent of the art of the 'old masters'), I had the impression of being in the greatest, brightest and most welcoming temple on Earth. This was probably because the amount of bright energy in this mansion, every millimetre of which had been lovingly caressed by children's hands, was infinitely greater than in many religious temples.

And then I had another thought come to me. Here we'll continue to go about restoring ruined churches and monasteries using modern technology and reinforced concrete

construction — not such a difficult thing to do, really — and then we'll come to these temples with the feeling that we have done our duty and begin asking: "Lord, bless our work!" But no blessings will be received. Because during this time God will be concentrating His attention on the children constructing this extraordinary temple building. And He will be concerned that they will run out of cement and not have enough bricks and boards for the floor. And God will lovingly bless all those who help them.

And I couldn't resist the temptation to show the world these little 'shoots'. I couldn't resist doing what Anastasia was so afraid of. And this is how it happened:

I was walking down the aisle between rows of kitchen tables set up outdoors for the children to work at, when I suddenly felt a soft warmth in my body, as though someone was training a heat-reflector on me. The sensation of warmth was similar to that emitted by Anastasia when she concentrated her gaze on a person. Only this time it was considerably weaker. In any case I stopped and looked in the direction the warmth appeared to be coming from. An eleven-year-old girl winnowing rice at a distant table was looking at me and smiling. I went over and sat down beside her. Up close I could see her eyes sparkling with a fiery blue light and I began to feel an even greater sensation of warmth. I asked her her name.

"Hello!" she replied. "My name is Nastia."<sup>13</sup>

"So, you have the ability to warm someone with your gaze, like Anastasia?"

"Did you feel it?"

"Yes, I did."

Little Nastia indeed had Anastasia's ability to warm a person's body with her gaze, although not to the same extent.

<sup>13</sup>*Nastia* — a diminutive form of the name *Anastasia* (a common girl's name in modern Russian).

Natalia Sergeevna, the actress, came and sat down with us, and the cameraman began shooting. With no trace of embarrassment and without interrupting her work, Nastia started answering our questions.

“Where do you get your knowledge and abilities from?”

“From the stars.”

“What have you learnt through your communication with Anastasia in Siberia?”

“I’ve learnt how very important it is to understand and love our Motherland.”

“Why is it so important?”

“Because our Motherland is what has been created by our forebears — both distant and close.”

“Who are your parents? Where does your father work?”

“My Papa is a schoolteacher. It’s nice in the school where he works too, but here it’s better.”

“Here you are all living as a single friendly, happy family. Have you forgotten about your parents?”

“On the contrary. We love our parents more and more, we send them good thoughts so they can live well, too.”

The camera was running, and I very much wanted Nastia to show the sceptics her warming gaze. And so I asked her:

“Nastia, now you can show *many* people how to warm someone with your gaze. See the camera? Look straight into the lens and share your warmth with everyone who will see this.”

“To warm everybody at once — that’s really hard. I might not be able to do it.”

But I kept insisting. I repeated my request. And exactly the same thing started happening with Nastia as happened with Anastasia back in the forest, when she tried to save with her ray at a distance a man and a woman from being tortured by bandits. I described this scene in my first book.<sup>11</sup>

<sup>11</sup>See Book 1, Chapter 28: “Strong people”.

Back then Anastasia had initially expressed reservations:

“It is not within my power,” she had said. “Everything has been, so to speak, programmed in advance, but not by me. I cannot interfere directly. They have the upper hand right now.”

And yet, after my repeated requests, she did what I asked her to. She did it, knowing full well that she might die in the process.

And now, after my persistent pleading, little Nastia attempted to do my bidding. Twice in a row, without exhaling, she inhaled air, closed her eyes for a few moments and then began to calmly look straight into the camera lens. The astonished cameraman fell silent. And then all of a sudden Natalia Sergeevna tore off her kerchief and put it over Nastia’s head. She was the first to notice how her body had begun to vibrate and her face had turned pale.

I realised I should not have persisted with my request — there was no point in wasting energy on unbelievers. It would only intensify their anger and resistance.

The grown-up visitors could not resist the impulse to touch the children. They touched them, hugged them and patted them as though they were kittens. And why had I brought along a whole group of these grown-ups? After all, I was aware that this school receives visits from all sorts of committees and delegations, and even individuals come to have a look and satisfy their curiosity, and tune into the grace emanating from its inhabitants. And they do come and tune in, and take away, but do not make any contribution of their own.

Perhaps Anastasia was right when she said:

“In trying to gain the grace of a holy place, think what you might offer in return. And if you have not learnt to emit light yourself, then why take it and bury it in yourself, as though in a grave?”

I too had come to the school more out of curiosity than anything else. It was thanks to Anastasia that I had been

so graciously received by Academician Shchetinin, and the children had prepared a feast for me and my whole entourage. And it was far more than food that we took away from the table. The sparkle in the children's bright eyes gave us infinitely more, and what were we to give them in return? A patronising pat on the head? I was so angry with myself that I withdrew from the group and went off on my own to think.

All of a sudden I became aware of the two girls whose acquaintance I had made — Lena and Nastia — standing at my side.

“Just relax,” Nastia said quietly. “Grown-ups are always that way. They want to pat our heads and give us a hug. They think hugging is the most important thing. And you've been on pins and needles the whole day. Come along with us to our glade, and we'll tell you about Anastasia. I know what space she is in right now.”

When we arrived at the glade, the cameraman who had joined us proposed:

“Let's get another interview with the girls. We'll get some excellent shots here — look what a splendid landscape there is, and no one's around to bother us.”

“Maybe not,” I hesitated. “We've probably tired them out already with so much questioning.”

“But still they'll be delighted to talk with you. They don't really like visitors and journalists coming around here. We've got a golden opportunity under our noses. It'd be a shame to let it slip by. Please understand my professional interest.”

I grabbed the microphone and told the girls:

“We have to do another interview with you. I'll be asking you some questions and you answer them. Is that okay with you?”

“If you need to, go ahead and ask,” replied Lena, and Nastia added: “Of course, of course, we'll be happy to answer.”

The girls took up a position right beside us and straightened their long brown braids. They looked me straight in the eye, waiting for my first question.

After two rather trite questions I fell silent, suddenly realising that these were the type of hackneyed, stereotyped questions they got from all the grown-up visitors, committee members and journalists, whereas in fact they were capable of answering questions on themes most adults would never even have cross their minds in their whole lifetime. A Cossack hetman was right when he said:

“My son’s been studying here only three months, and I already feel there’s a lot more I need to become aware of myself and quickly, or I’m going to look positively stupid next to him.”

In any case, aren’t we talking down to the children with our immature questions, inadvertently implying they’re not capable of responding to anything more? I stood silently before these girls, holding the microphone in my hand, and saw in their faces how concerned they were for me. They realised I had lost my train of thought and didn’t know what I should talk with them about. I admitted as much to them:

“You know, I really don’t know what to talk to you about, or even what questions I should be asking.”

And then ensued an utterly comic situation. Here we were, the cameraman and I, two stout grown-up fellows, and there in front of us were these two young girls, enthusiastically giving each other support, without a second’s hesitation explaining to us how to do an interview, how to make conversation with another human being.

“Just relax,” they insisted. “You’ve got to learn how to relax. The most important thing is to be sincere and talk about anything you’re concerned about.”

“Don’t think about us. Of course you should think about any other person you’re talking with, but you don’t need to think about us if you find that too hard. Just relax.”

“Just ask your questions from the heart, we’ll be able to answer, don’t worry about us.

“As long as you’re having trouble, let us tell you something ourselves...”

The girls were walking around the meadow, smiling, feeling the blades of grass and talking. The depth of their understanding of the Universe, the purity emanating from their heart, their eyes sparkling with kindness, literally immersed us in a sense of peace and confidence. The cameraman shot from a distance, not bothering to attempt switching camera angles. Later I would spend hours watching and re-watching the videotape Natalia Sergeevna subsequently gave to me. I would be fascinated by these little charmers with their light-brown braids walking through the glade. They will grow up! There are three hundred of them at the school.

I am writing about this school not to prove anything to anyone, but to gladden the hearts of those who have come to feel and understand Anastasia through my books.

If anyone feels irritated by what I write and how I write it, they need not read my books at all. I have already had my fill of criticism — over my writing style, my grammatical mistakes and the suggestion of a commercial ulterior motive. In any case I am still working on my next book. If you don’t like my books, don’t bother reading the next one. The events it describes are even more penetrating than the ones recorded in the volumes to date, and my style is getting better, but not by very much. Both the contents and the style could make you quite distraught.

## CHAPTER EIGHTEEN

# Academician Shchetinin

Who is he? We are accustomed to describing a person through his biographical outline, his record of service, the titles bestowed upon him. But in the present instance all that would be meaningless. In the Bible it says: “By their fruits ye shall know them.”<sup>1</sup> Academician Shchetinin’s fruits are the happy, beaming faces of the children studying at his school, along with those of their parents. Then, who is he?

Natalia Sergeevna Bondarchuk is not only an award-winning Russian actress, she is also a member of the board of the International Roerich Foundation (a UN non-governmental organisation). She told me:

“I have talked with many famous preachers and teachers in various countries of the world, but I have never been so impressed as here. We may well have come into contact with a great Vedun.<sup>2</sup> I say a *Vedun* not because of his acquaintance with the Old Vedic scriptures, but because he knows what many of us don’t.”

I should also like to record *my* impressions from my meetings with Mikhail Petrovich Shchetinin, but I am not a specialist in the educational field and hence my terminology may not be all that accurate, so I shall try to reproduce his own words as faithfully as possible.

<sup>1</sup>Matth. 7: 20 (*Authorised King James Version*).

<sup>2</sup>*Vedun* (pron. *ve-DOON*) — in Slavic and Hindu traditions: a revered wise man. The word is derived from the Old Slavic (originally Indo-European) root *ved-* meaning *knowing* or *knowledge*.

At one point I was walking down a corridor of the school building, along with Natalia Sergeevna, her cameraman and Mikhail Petrovich. We came to a spacious hall opening onto the corridor, where a number of tables had been set up. At these sat children of various ages, all intensely engaged in some kind of mysterious project, from which neither our presence nor that of the videocamera could distract them. From time to time one or another of the children would get up and go off somewhere, and then come back again. Sometimes they would go over to examine numbers on a bulletin-board hanging on the wall, at other times they would thoughtfully pace around the room. Some of them were talking amongst themselves — arguing or explaining things to each other.<sup>3</sup>

“Mikhail Petrovich, what is going on?” asked Natalia Sergeevna.

“Here you are basically witnessing attempts to establish contact. If the contact is successful, the children will be able to master the ten-year school maths programme in just one year. That is their assignment. It will happen when the children are able to make contact with those who possess similar knowledge, and the degree of openness in their relationships is important. Their field elements<sup>4</sup> will then be able to share information with each other.

“You’re familiar with the observation made by simple folk: ‘love at first sight’, when people in love catch each other’s meaning with hardly a word between them. You haven’t even opened your mouth, and he’s already got it. You can see the whole point here is to make the children feel free and

<sup>3</sup>A photo of a typical learning session may be found on the colour insert of the present volume.

<sup>4</sup>*field elements* — referring to the non-material elements making up one’s identity. For a more detailed discussion of ‘field’ phenomena see footnote 13 in Book 2, Chapter 1: “Alien or Man?”.

unencumbered. This is a place they can ask any question, get up, and come and go as they please. Maintaining relationships is the important thing.

“Working on relationships is not only very important for the children but also for the ones organising the activities. So we take off the brakes, so to speak, we refrain from focusing on age. Over there, right next to fifteen-year-old Ivan Alexandrovich is sitting ten-year-old Masha. We also have a university student named Sergei Alexandrovich, who’s actually finishing university this year.”

“And how old is he?”

“He’ll turn eighteen this year.”

“And he’s finishing university at seventeen?”

“Seventeen, in this generation, but we generally try not to refer to the notion of age. That’s a very important point. If you will notice, here the teachers tend to blend in with the pupils. True, it is a rather special group. The ones you see here are those that weren’t able to participate in the construction. And they have quite a task ahead of them — assimilating the ten-year school maths course, so they in turn will be able to share their knowledge with those who are currently occupied in the construction. And it will all come about. Because what is germinating in them is a system of interdependent integration elements.

“Our collective ancestral memory has knowledge of the laws of the Cosmos, as well as techniques for living in cosmic space. So it is very important to reject any suggestion that there is something they don’t know. If one of those doing the explaining entertains such a thought, his pupils will *not* know it. The explainer’s basic task is to enter into a relationship with his pupils focused on solving problems, then the learning process takes place all by itself. So as not to distract them with attention to the actual learning or memorisation. The thought of somebody out there *teaching* has to be rejected.

As they work together, the consciousness of a dividing line between teacher and pupil is obliterated.

“The problem-solving process brings with it the necessary knowledge, and what actually takes place is a recalling of things forgotten. This is the reflex arc, you know, as in Pavlov:<sup>5</sup> stimulus-reaction. When necessary, I decide.

“It is very important that what they do should have a direct effect on people around them. And now they are studying not for themselves, that is very important. They are concerned about how to share what they are learning with others. Marks aren’t important to them. They know that in a few days they will have to explain it all to someone else.

“They have been entrusted with the beginning of the learning process. Each pupil you see here has been assigned a group. He observes how his designated pupils work on the construction and watches to see that members of his group do not fall behind their schoolmates. Considerable emphasis is laid on motivation — the idea of service to others. And if they learn anything, they learn to understand the soul, the aspirations and the thoughts of another individual. It’s not the mathematics that’s important here, but rather Man learning mathematics. Not maths for its own sake, but maths for the sake of progress toward Truth. And the more powerful this *for the sake of* motive is, the more successful will be one’s immersion into a field of knowledge.

“It is important to be in an atmosphere of sincerity, with no feelings of being offended or irritated. *That’s wrong* is a phrase we never use. In the Old Russian language there is no stoppage of motion and no bad words. In ancient times people,

<sup>5</sup> *Ivan Petrovich Pavlov* (1849–1936) — world-renowned Russian physiologist, recipient of the 1904 Nobel Prize in Medicine for his work on digestion; he later became famous for his experiments with dogs and theories of human behaviour based on conditioned reflexes.

no matter what their ethnic affiliation, never used a bad word in reference to anything. It simply doesn't exist, so why pay attention to it? What is bad does not exist. If you find yourself at a dead-end, then the words you would use to get out of that dead-end would be phrases like: *turn right, turn left, climb up* — hinting at which way one should go, but not snapping: 'You're standing the wrong way.' Today russophobes commit sacrilege by saying 'Speak Russian!', when they actually mean cursing. That is not Russian at all. Kobzev<sup>o</sup> has a very succinct expression of this thought:

*From our Slav forebears we have heard  
Midst happenings of great dimension,  
They paid to language, phrase and word  
A special homage and attention.*

"That is true. So people who work with them should have a deep vocabulary range which excludes thought-distracting, incidental words. Words warmed by feelings have special significance.

"Truth, their legacy — it's all spiritual. The child must be enrolled in a natural cosmic process — eternal self-reproduction. Then you have given the child eternity, the joy of life, real existence. Not just illusory forms, like: 'See here, son, I've bought you a shirt and trousers and shoes — now I can die.' But what have you really given your son? Your gifts, after all, won't last more than a single season! If only you had given your son your good name, your honour, your work, your

<sup>o</sup>Igor Ivanovich Kobzev (1924–1986) — a Russian poet known for his verse based on the history of Russia and the ancient Slavs — in particular, on the celebrated poetic chronicle *Slovo o polku Igoreve* (The song of Igor's campaign). In 1977 he helped organise a museum devoted to the famous chronicle. Kobzev himself is best known, perhaps, for his epic tale *Padenie Peruna* (The fall of Perun).

friends, a flourishing people! If you had given him an understanding of the Truth of being and a life of wisdom, *then* you could say: 'Son, I have given you the most important thing, you will be happy. You will buy shirts and build houses, you know now how it is done.'"

Listening to Academician Shchetinin speak and observing his interactions with the children, I noticed that they were very much like what Anastasia had said about children, and I wondered: how could a lonely Siberian recluse and this grey-haired academic think so much alike — almost identically, in fact? And, come to think of it, why is he talking with me at all? Why did he receive me so warmly, even setting the table and offering me a meal? He's taken me around the school, shown me everything. Why? What kind of education expert am I? I'm nobody. One who used to get pretty poor marks in school. But of course — Anastasia's somehow been at it again."

Of course it was only thanks to Anastasia that I ended up at Shchetinin's school in the first place. But he and I didn't talk about her. We talked about all sorts of other things — everyday things. Each time I visited we would walk around and see how the construction of this unusual temple building was progressing. As for my book, he said tersely: "It's very accurate" — and that was it.

A few days after my first visit — after the day I had come with a group of conference participants, and had shown them Nastia, asking her to warm everybody with her gaze — the following incident occurred. Mikhail Petrovich and I were walking along one of the school corridors, and I was keeping my eye peeled for her. I searched for her the way people intuitively search for a source which emits light.

"Nastia's light has gone out," Shchetinin said all of a sudden. "Right now I'm in the process of restoring her strength. It's coming along, but slowly. She'll need some time to fully recover."

“What do you mean, it’s gone out? Why? She’s a strong lass. What happened?”

“Yes, she is strong. But she had a very powerful emotional outburst.”

I stood there in Shchetinin’s office, angry and irritated at myself. Why had I done such a thing? For just whose benefit was I trying to prove something? I had utterly failed to heed Anastasia’s warning: “Neither my appearance in the flesh nor any miracles performed in public will pour the light of faith into the faithless. They will only exacerbate the feeling of irritation on the part of those who do not like someone else’s perception of the world.”<sup>7</sup>

That’s enough, I thought to myself. I shall no longer try to show people and I shan’t write any more. That’s it. Look what a mess I’ve made with my writing! I was thinking this to myself, but then Shchetinin suddenly said out loud:

“You shouldn’t stop writing, Vladimir.” Then he came over to me, placed his hand on my shoulder and, looking me straight in the eye, began vocalising a tune. I could hear how easily he took the high notes, but even more amazing was the fact that the melody he was vocalising was very similar to the one Anastasia had sung for me in the taiga.

As I made my way back to the main door, I passed the same hall where the pupils were still scurrying about. There was Nastia, sitting on a chair. I went over to her. She got up, raised her head, and her rather weary-looking eyes brightened in a second, emitting light and warmth with their sparkle. I realised now that she was giving of her energy and warmth to others. She was giving her all, without reservation, to help that other Anastasia, the one in Siberia, fulfil her dream. For it had now become their shared dream.

<sup>7</sup>From Book 3, Chapter 16: “The system”.

So what *was* going on here? What was the force behind that dream? Why were they...? With complete self-sacrifice... And the child's gaze... Is it possible to become worthy, even partially worthy, of such a gaze during a single lifetime? I wondered. Aloud I said:

"Well, hello, Nastia!" And to myself: "You don't have to, Nastia. Thank you. Forgive me."

"I'll see you out," the girl offered. "Icna and I will go with you to your car."

As we drove off, I kept looking behind me until the car rounded a corner, watching the little figures standing there at the end of the road, by the mansion, under a lamp-post, as they got smaller and smaller. They weren't waving their arms in the usual sign of farewell. Each of them held one hand raised in the air, palm out-turned in the direction of the departing vehicle. I knew what this meant — Shchetinin had explained it to me earlier. It signified: "We send you our rays of good, may they follow you wherever you go." And once more I felt fired up with the thought: "What do I need to accomplish to become worthy of your rays?"

## CHAPTER NINETEEN

# What to agree with, what to believe?

My meeting with Mikhail Petrovich Shchetinin and my acquaintance with his amazing school took place after my second visit to Anastasia. After seeing this school I had virtually no lingering doubts about Anastasia's pronouncements on raising children, or about the way she communicated with our son. But back there in the taiga everything within me had rebelled against her. I didn't want to believe her. At least not everything she said.

As I write these lines I can hear many readers saying, either aloud or to themselves: "Come on, how could he possibly doubt? After all, there have been so many times he was obliged to concede that she was right, and still he carries on like an idiot, unable to perceive a new phenomenon!"

My daughter Polina sent me a videocassette from one of the readers' conferences. I watched as a scholar from Novosibirsk by the name of Speransky<sup>1</sup> declared right from the podium:

"Megré is incapable of fully grasping what Anastasia says. He hasn't the brains for it."

I do not feel offended by him — on the contrary, his whole talk was most interesting. The audience listened with bated

<sup>1</sup>*Sergei Vladimirovich Speransky* — a biology expert with Novosibirsk Scientific Research Institute, known for his experiments using mice to detect extra sensory abilities; a Corresponding Member of the International Academy of Energy-Informational Sciences.

breath, and thanks to him I have been able to comprehend that Anastasia is an *Essence* — a self-sufficient substance.

I myself have no expertise in such matters — I've been involved in a completely different line of work. But what about all those who are into studying Nature, or children — why have they been keeping so quiet, barely uttering a peep about what they know? And even children in their letters to me tell me I should be more attentive to what Anastasia says and does.

But I can respectfully assure my readers that I have indeed become much more attentive to her; nevertheless, I cannot refrain from arguing with her, or from doubting. I cannot refrain since I am unwilling to admit that I and our whole society are complete idiots. I am unwilling to believe that we are heading down a path of degeneration.

And so I am trying to find at least some justification for our actions. Or some reason for saying her world-view is not applicable to our modern way of life. And I shall go on trying as long as I have the strength to do so. After all, if I didn't, I would have to own up not only to the fact that she is right but also to the terrifying situation you and I find ourselves in today. And if we are going to admit the existence of a hell, then we ourselves are paving the road to that hell.

Let's just take, for example, the matter of child-raising. I'm speaking not just for myself, but for all others in the same boat, and I think there are quite a few of us.

I was an average pupil in school; my father punished me every time I got a poor mark. It wasn't just a matter of keeping me from playing outdoors with other kids, or buying some toy — it was more severe than that. And all this struck fear into me — a fear greater than the strap. I was always in fear of something bigger. And every time I stepped up to the chalkboard, it was like stepping up to the scaffold. And I used to tear pages out of my *diavnik*...<sup>2</sup>

*Marvellous schooldays still ringing —  
Textbooks and notebooks and singing!  
So fast and fleeting, alack!  
No one can now bring them back.  
Will they then vanish without any trace?  
No, none can ever their mem'ry erase.  
Marvellous schooldays!*

Remember the words to that song<sup>3</sup> they taught us to make us believe how marvellous our schooldays were? Brainwashing, brainwashing! But we also remember — especially us ‘average’ kids (and we’re the majority, after all) — how glad we were to chuck those hated schoolbags aside just as soon as the summer holidays began!

And just how marvellous can schooldays be for a child who has a physiological need to move around, when here he’s required to sit a whole forty-five minutes in a prescribed pose, arms neatly folded on his desk, without hardly moving a muscle? Sure, the slow and sluggish types can take it, but what about the child who is agile, temperamental and impulsive by nature? But under the ‘one-size-fits-all’ approach, it’s as though everybody were robots, no individuality — “Sit there, or else...”, the child is told.

And the little fellow sits there, trying to endure the forty-five minutes and then, after a ten-minute break, another

---

<sup>2</sup>*dnevnik* — a notebook kept by each Russian schoolchild with a record of his or her marks, ranging on a scale from 1 (fail) to 5 (excellent). Some children would tear out pages showing lower marks so that their parents would not see them.

<sup>3</sup>*that song* — a school song learnt by nearly all Soviet schoolchildren in the second half of the twentieth century. The words were written by Evgeny Dolmatovsky (1915–1994) and the music composed by Dmitry Kabalevsky (1904–1987).

forty-five, then a month, a year, ten years, and the only way out is to give in. Most importantly, to resign himself to the fact that he will have to keep resigning himself to things his whole life long. He will have to live the way society dictates, marry the way society dictates, and go to war directly the order is given. He must unfailingly believe in anything he is told.

People who willingly resign themselves are very easy to control. Only it's best if they're physically healthy and up to all sorts of tasks. But then they start drinking and taking drugs. But doesn't a Man do this to escape, even for a moment? Doesn't he try to escape from his prison of utter subjection to something his heart and soul cannot possibly comprehend? They don't, in fact, pass all that quickly, those schooldays — they drag out in torture periods of forty-five minutes each.

Our great-great-grandfathers, grandfathers and fathers believed — and we today believe — that that's how it should be, that the child is basically ignorant, and that he must be forced into things for his own good. And so today our children, our Vanyas, Kolyas, Sashas and Mashenkas<sup>4</sup> attend school too, and we today, just like our forefathers centuries ago, believe that we are sending them there for their own good, for knowledge and the Truth. This is where we must *stop!* Let's think seriously about it.

Let us remember Russia in the pre-revolutionary days. Our great-grandfathers are sitting at their schooldesks, not yet grown-up children. They are taught religion, history and what kind of life they are supposed to lead. Those that don't learn by rote — or are slow to grasp the proffered world-view the way they're told to — get a sound drubbing on their hands or head from the teacher, 'for their own good'.

<sup>4</sup>*Vanya, Kolya, Sasha, Masbenka* — diminutive forms of *Ivan, Nikolai, Alexander/Alexandra* and *Maria* (i.e., typical Russian names) respectively.

But then the revolution comes along, and all of a sudden adults acknowledge that what the schools have been teaching the children is rubbish and brainwashing. Everything old is thrown out of the classroom, and a new indoctrination takes its place: "Religion is sheer nonsense. Man is evolved from monkeys. Put on red scarves,<sup>5</sup> form up in lines, read poetry and, above all, glorify communism." And so the Pioneers glorify communism, read poetry at the top of their lungs and give honour to adults. "For our happy childhood we thank you, our native land." And once more those who don't try hard enough are subjected to deprivations, beatings and public condemnation.

But then, in our own era, before our very eyes, all of a sudden new directives are handed down: "Take off the red scarves. The Red Plague overcame us. Communism -- that's nothing but terror and hypocrisy. Man from monkeys? Sheer rubbish. We have a different progenitor now. The Market! Democracy! This is Truth!"

Where the Truth is, and where false dogma -- is still by no means clear. But children once again are sitting at their desks without so much as a stir. And over by the chalkboard still stands a teacher as strict as can be...

For ages children have been under the shadow of a 'spiritual sadism'. Like a ferocious beast, invisible and frightening, it tries to chase each newborn child as quickly as possible into a kind of invisible cage. The beast has some faithful soldier-allies -- who are they? Who is spiritually scoffing at our children? Scoffing at every Man that comes into this world? What is their name? Their profession? What? -- can we simply accept that their name is 'schoolteacher' or 'parent'? An

<sup>5</sup>*red scarves* -- red silk scarves worn (during the Soviet period) by the so-called 'Pioneers' (schoolchildren 10-15 years old), whose uniforms bore a superficial resemblance to those of the Boy Scouts and Girl Guides in the West.

educated parent, perhaps? There's no way *I* can accept that right off — what about *you*?

Today in Russia teachers are not being paid their wages on time. The teachers are on strike. “We won't teach the children,” they say. Tell me, is it good or bad when someone is not paid the wages owed them? Of course, it's bad. After all, people need something to live on. But what if there are actually ‘spiritual sadists’ among those on strike? Now tell me, is it good or bad not to give money to those who scoff at your child?

Anyway, the teachers' strikes gave me pause for some rather interesting reflection. Right now all the major cities have private schools, whose organisers select the most talented teachers and pay them a decent wage — in the neighbourhood of twice what they would get in regular schools. Not all parents manage to get their children into a private school, even if they have enough to pay for the tuition. Simply because there are not enough private schools to go round. And why aren't there enough?

The answer is simple — because there aren't enough good teachers. The founders of private schools can't find them.

Another question. If they can't find teachers even at a good salary, who are all those people on strike? Now *there's* a question for you. Only please believe me, I'm in no way wishing, out of the whole cross-section of our society, to point the finger at teachers alone. When I speak about them I'm including myself too. After all, I'm one of them. I too, after all — as a parent — made my daughter study what she was taught in school, and then, when *perestroika*<sup>6</sup> came along, I asked her:

<sup>6</sup>*perestroika* the policy of restructuring the economic and political system of the Soviet Union, initiated by Gorbachev in 1985, which eventually led to the collapse of the Soviet system and the break-up of the USSR in the early 1990s.

“What is your teacher telling you about history now?” — only to hear in reply: “The teacher talks, but it’s, like, he isn’t saying anything.” And what could I say to my daughter about that? So I simply advised her: “Well, don’t go philosophising about it. Just get on with your studies.”

Today we have strikes, but is it only the teachers? Doctors are on strike, so are miners, so are academic researchers. The strikers write on their placards: “Down with the government!” “Down with the president!” It’s all quite logical, according to the strikers. After all, if there’s no pay, it means the authorities are not carrying out their duties.

Everything in their demands seems logical to us today, but what about tomorrow? Again, a question to be answered. Perhaps it will come out tomorrow that the government and the president have been standing on the bright side all along, saving the whole Earth from invaders and vampires. Perhaps against their will, unwittingly, risking loss of power under a hail of malevolence by their refusal to give money to sadists and destroyers of people’s souls and bodies, as well as the Earth. And yet the latter have hysterically portrayed themselves as martyrs in the public’s eye.

Today it’s martyrs. In the context of today’s positions and dogma. But tomorrow there will be a different dogma, and who will be portrayed as what is not yet clear. Anastasia says:

“Everybody is choosing an unreliable path for themselves. They always get what is coming to them, not in the next life, but in this one. But with the dawn of each new day each one of us is given the opportunity to determine whether their path is true or not, and the choice is up to you! You are free to choose which path to take. You are a Man! Become consciously aware of what you really are! You are a Man, born to be in paradise.”

I asked her:

“Where is it, that paradise? Who’s been leading us into some kind of swamp?” And she replied:

“Man creates everything for himself.”

Just try to fathom what she said next! She was affirming, after all, that the time has now come for the speeding up of some kind of processes in the Universe. And those whose way of life does not correspond to the natural laws of being will be subjected to trials — at first in the most ordinary way — clear and understandable, and these trials will serve as a good sign for becoming consciously aware of their actions and the path they are following. For those who don’t manage to do this, more troubles will ensue, and then they will have to forsake life in order to be regenerated as healthy beings — but only after nine thousand years.

And it turns out, according to her, that miners tearing open the veins of the Earth, modern medical doctors thrusting themselves into genetic engineering, scientists inventing deadly products — all these have already been shown the first sign in the form of their rejection by society and their failure to achieve financial peace of mind. Those of them who possess material goods today suffer even more from lack of moral satisfaction, as they are subconsciously aware of how harmful their activity is and how it is bringing no real good to anyone.

I tried to object, arguing that coal was needed for factories, but she countered:

“What factories? The ones that smoke and burn up the air intended for Man to breathe, and turn out steel to make machine guns and bullets?”

In other words, she maintains that the system we have created to provide artificial conditions for life is so imperfect that all its present achievements will result in terrible cataclysms.

The ground that has been dug up beneath our large cities — where natural underground streams and pure springs

welling up from the depths of the Earth have been replaced by systems of pipes and taps — is unable to restore itself and is rotting away, bringing this rot along with the water into everyone's taps. Anastasia went on:

“The time will come when mankind will understand. The most important scientists will come and pay a visit to the grandmother on her plot of land. Famished, they will ask her to give them a tomato for something to eat. The scientists and their illusory creations are not needed by that grandmother today. She knows nothing of them herself, nor does she want to know. She lives a quiet life without the scientists' help, while they cannot live without her. They inhabit a world of fruitless illusions, leading nowhere. She is with the natural earth and the whole Universe. The Universe needs her, it does not need them.”

I tried to object that, if we don't produce weapons but only take care of the land, we'll become weak, and risk being easily conquered by technologically advanced powers that do have weapons.

“They are having a problem protecting themselves from their own weapons!” replied Anastasia. “And from the social cataclysms these weapons engender.”

“Sure,” I said, “they will abandon everything and come after our grandmothers on their plots of land — come after your *dachniks* — with their machine-guns, and our grandmothers will have no machine-guns of their own to fight back.”

“But will they get that far? What do you think? Will they not fight to the death among themselves over our grandmothers?”<sup>7</sup>

So there you have it. If we're not going to argue with Anastasia and simply trust what she says, then we have to

<sup>7</sup>*fight ... over our grandmothers* -- The Russian phrase here involves a play on words; it can also be understood in the sense of *fight over money*.

admit to ourselves that we're complete idiots, nothing but fruit-hungry worms. That's not something we're willing to own up to!

So, not understanding, perhaps, everything in Anastasia, I am trying to find at least some sort of justification of what we have been creating in our world. And should I not be able to find any reasonable justification, should I be obliged to admit that the path we are following is completely untenable, then... And what then? Let's think about it a bit. Perhaps we should give our children the freedom to grow up without our dogma. And then ask the children where and which way *we* should go.

Anastasia talks about how children whom we have not corrupted spiritually will find the way to winning salvation for both themselves and us or, rather, to attain the paradise given us right from the beginning.

It turns out everything in our world is simple, yet not so simple. Why — tell me — why not extend the experience of Academician Shchetinin's school to other places? Why not set up at least one such school in every major city? Well, it's not all that simple, it turns out. I asked Shchetinin to set up such a school in Novosibirsk, and he agreed. But who is going to provide the space? A good question. I asked Shchetinin:

"And what if people can be found in other cities to set up a foundation, would you be able to organise at least one such school in various cities?"

"It's impossible to settle everything right away, Vladimir."

"Why?"

"We shan't be able to find that many teachers for all the schools."

And again the thought: What's this about there not being enough teachers?! Who are all those people out on strike?

Academician Shchetinin's school is a regular government-supported institution, it's not a private school. It comes under

the Ministry of Education of the Russian Federation and does not charge tuition fees.<sup>8</sup> But why is it located far away in the mountains, in a ravine? Why? And why was there an attempt on Academician Shchetinin's life? And why was his brother killed? And why do the Cossacks<sup>9</sup> help guard the school? Who doesn't like this school? Who is it interfering with?

I was invited to a meeting with the Education Committee of the State Duma.<sup>10</sup> Officials there had read the first two books — *Anastasia* and *The Ringing Cedars of Russia*. And there were people on the Duma Education Committee who shared and understood Anastasia's views. Good people. I told them about Shchetinin — they know him very well, and have great respect for him.

"Then what's the problem?" I asked. "Why is nothing changing in the educational system in this country? Children are suffering as they did before — every time they step up to the chalkboard it's like going to the scaffold. And they still sit at their desks without stirring."

I was saddened by their response, which, unfortunately, has tragic consequences for those who are still children today. Paradoxically, it is the teachers, the teachers themselves who have turned out to be an insurmountable barrier, as I heard and understood this gruesome reply:

<sup>8</sup>Despite Shchetinin's school's official status, since this book was published in Russian in 1998, the Russian Orthodox Church has labelled the school a "totalitarian sect" and it has become a target of a concerted libel campaign in the mass media (described in Book 7 of the Ringing Cedars Series, *The energy of life*) aimed at discrediting the school and disrupting its operation. In 2001 the school's main building burnt down for unknown reasons but was rebuilt by pupils themselves in an even more impressive form.

<sup>9</sup>*Cossacks* (Russian: *kazaki*) - descendants of a race of independent professional warriors who traditionally hired out their services to the ruling authorities, especially in the Caucasus.

<sup>10</sup>*Duma* (pronounced *DOO-ma*) — Russia's national parliament.

“What would become, tell me, of the whole raft of academic titles and degrees, the countless dissertations on the subject of child-raising? What would become of our research institutes? After all, they’ve worked out a whole system. The machinery has been set in motion, and its flywheel can’t be stopped with the wave of a wand. Anyone who has defended a doctoral thesis, especially one who has achieved professorial rank, is going to stick as hard as he can to his own views.”

I also learnt how a woman member of the Duma lamented after visiting Shchetinin’s school:

“I don’t understand anything that’s going on in that school. It’s quite out of the ordinary — something like a sect.”

I wasn’t aware of the specific meaning of the word *sect* (Russian: *sekta*). Later I looked up the definitions in the dictionary, which read as follows:

*Sekta* (Sect) — from Latin *secta* — teaching, movement, school.

1. A religious community or group which has cut itself off from the prevailing church.
2. An isolated group of people absorbed in their own narrow group interests.

It is not clear in what sense the Duma member was using this word, but I feel neither definition is really applicable to Shchetinin’s school. And if it has indeed cut itself off, has it cut itself off from the good or the bad? I think, if it has cut itself off at all, then it has detached itself from the sadistic treatment of children. As for the Duma, as long as its members make such statements, I have nothing to say. Let readers themselves consider whether and in what measure the second definition quoted above applies to certain factions in the Duma: “An isolated group of people absorbed in their own narrow group interests”. Does that mean they’re a sect?

Shchetinin was shot at. But he is a man. Now the Cossacks, perhaps, will help to some degree. And Anastasia promised to protect the 'new shoots'. Now I realise it would be better for her not to come out of her taiga, at least for the time being. If she were just slightly more aggressive, she could easily zap dissertations, academic titles and all sorts of rot with her ray. But no way! "A gentler approach," she says, "is needed. People's consciousness needs changing."

Anyway, here I've gone and written down my thoughts about child-raising and our modern schools, only they've come out rather chaotic, not very sincere. Not very sincere, since if I were to describe how I really feel about our schools I'd have to resort to some pretty foul language. But my style of writing has somehow changed after my talks with Anastasia. There are a lot of words that simply wouldn't fit in.

I would still like to say a word to all those teachers who have been able in spite of the system to impart to their children even a smidgen of good and, as Shchetinin says, "enrol them in the natural cosmic process". *Thank you!* Along with my deepest respect!

And there's another thing I have learnt from what Anastasia says about child-raising — namely, that first and foremost comes the conscious awareness of the child as an individual. By comparison with us adults youngsters are, of course, physically weaker, but at the same time immeasurably kinder than we are, unsullied, not bound by dogma. And before we go filling children's heads with any kind of moralising, we need to understand something about the world ourselves. *Ourselves!* We need to think things through ourselves! And to forget about somebody else's dogma, at least for a time.

As for us entrepreneurs, we too have to somehow seek out teachers in each city, help create foundations for the schools where we shall be teaching our children and grandchildren.

## CHAPTER TWENTY

### Mediums

Day after day my stay in the taiga goes by, and I can't find any particular activity for myself. Anastasia keeps running off, still tending to her own affairs. Our son, even though he is still quite little, splendidly copes with everything through the help of his 'nannies' of the wilds. It's a strange turn of events: as though humanity has thought up so many activities simply to give it the feeling that it is doing something. And out here all you do is go for walks in the forest and think. So I take walks, and I think. Now I've come once more to the lake and sat myself down in my favourite spot by the shore, underneath a cedar tree. And I'm looking at the bag of readers' letters and thinking I'd better not forget to have Anastasia answer all these questions. As soon as she approaches, I ask her:

"You see these letters from readers? I've sorted them all out according to the type of question. There are questions on child-raising, various suggestions, questions on different religions, on Russia's purpose, on war, there's poetry and greetings, letters from mediums. You see?"

"Yes, I see."

And the first thing I did was to ask Anastasia about mediums.

"There are people who say — in fact, they write in their letters — that they communicate with extraterrestrial civilisations, with certain individuals in the past, that they hear different voices, and some record what they hear — they say that they record various kinds of information communicated to them by the Supreme Mind of the Universe. We have books published in huge print-runs on 'channelling' — contact

through mediums. Blavatsky,<sup>1</sup> for example — there's a woman writer by that name who has written quite a few weighty tomes along this line. And then there's the Roerichs,<sup>2</sup> known to a lot of people — they've written books and produced paintings which have been exhibited in many different countries where their books are read. Other people are afraid, terrified when they hear voices. Look — here's a letter from a little girl in the town of Klinty<sup>3</sup> — she has a voice telling her he's a wise teacher and she should listen to him, and the girl is afraid and is asking for help. Are people like this really communicating with someone and how does it happen?"

"Tell me, Vladimir, what do you consider to be an extraterrestrial civilisation?"

"Well, I would say the population of some other planet or star, or something invisible existing quite close by. If people can communicate with individuals who lived in the past, it must mean these individuals reside in some kind of invisible world."

"Every Man, Vladimir, is so constructed that he has access to the whole Universe — both visible and invisible. Every Man may communicate with anything or anyone he wishes. It works pretty much the same as through your radio receiver.

<sup>1</sup>*Elena (Helena) Petrovna Blavatskaya (Blavatsky)* (1831–1891) – Russian charismatic spiritualist writer who travelled the world in the 1850s and was especially intrigued by the religions of the Orient. In 1873 she emigrated to America, where she wrote her monumental *Isis unveiled* (1877) and along with Henry Steel Olcott (1832–1907) and William Quan Judge (1851–1896) founded the Aryan Theosophical Society of New York. In 1878 she and Olcott went to India and founded a Theosophical Society there; they later did the same in Europe (London and Paris), where Blavatsky's other major work, *The secret doctrine*, was published in 1888.

<sup>2</sup>*Roerichs* — see footnote 5 in Chapter 17: "Put your vision of happiness into practice".

<sup>3</sup>*Klinsky* — a town south-east of Bryansk, just north of the Ukrainian border.

There are so many stations broadcasting all kinds of information, out of which the owner of the receiver must select what he is going to listen to.

“Man is both the receiver and its owner. And which source finds a reception in his thought depends on his conscious awareness, his feelings and purity. As a rule, a Man receives directly information he is able to make sense of, understand and use. And all this must take place calmly and quietly, without intrusive attention drawn to greatness.

“When voices draw attention to their own greatness, they try to appeal to one’s sense of self-importance: ‘Look here, I’m so great, yet I have chosen only you out of everyone — you shall be my pupil, and you too shall be greater than everyone else.’ As a rule, this is what you would hear from inferior, soulless creatures. They are not granted a bodily existence, so they attempt to oppress the human soul and occupy another’s body. They act on Man’s mind, his sense of self-importance and his fear of the unknown.”

“But how do we save ourselves from such creatures?” — many readers are asking.”

“It’s really very simple — they themselves are cowards, rather primitive cowards at that. You need to give them an ultimatum: ‘Get out of here, and if you do not, I shall burn you with my thought!’ They know very well that Man’s thought is many times stronger than they are.

“Another thing you can do is chew a celandine<sup>4</sup> leaf, but first you should put the leaf in the palm of your hand and say to it mentally: ‘Save me, little leaf, from all impurities.’”

“But what if a whole lot of people want to talk with the same source? What happens then? See, a lot of people say in their letters that they talk with you — is that true? And if so, how do you manage to answer everyone? After all, there are a lot of them, and they all claim that they talk directly with you and you answer them.”

“Every individual produces their own thoughts. And everyone’s thoughts still exist — they do not simply disappear into oblivion. What you and I think also exists in space — my dream is there, too, and my thoughts, and everyone who wishes to can hear them — many can hear them at the same time — it is only a question of the degree of distortion the receiver is capable of permitting.”

“What do you mean by *distortion*? What determines that?”

“It is determined by the purity of the receiver. Imagine, Vladimir, that you are hearing someone speak over an ordinary receiver. But instead of distinct words you get interference, static, and you do not know what some of the words are, and the concepts behind them are unclear, what do you do then?”

“Well, then I try to guess what words might fit into the gaps where I don’t understand.”

“Exactly. But a word you put in might change or detract from the original thought being conveyed by the sounds, or could even turn it in the opposite direction. Only one’s own purity is capable of hearing Truth undistorted, and if they are insufficient — your tuning and your purity; that is — then you should not blame the source.

“In your material life, in your world, there are a multitude of sources of sound on all sides, all of them claiming to be Truth and trying to control your mind and will, to make your

---

<sup>1</sup>*celandine* (from Greek *chelidion* - swallow) — here referring to *greater celandine* (*Chelidonium majus*), a yellow-flowered plant whose blooming is associated with the arrival of migrating swallows, and whose leaves and flowers are used as medicine. Native to Europe, Eurasia and North Africa, it has also been naturalised in North America. In Russian the greater celandine is known as *chistotel*, derived from the root *chist-* (signifying ‘pure’ or ‘cleaning’) and *-tel* (signifying ‘body’) — a name consistent with its traditional use as a cure for a variety of skin diseases.

life suit their own purposes, but you are free to listen to them or not to listen. You are free to decide, with nobody to blame but yourself.”

“Let’s say that’s true,” I observed, “but what if there is some kind of question for which there is no answer in all the Universe? Let’s say you’re asked a question, and you don’t have any thoughts out in space on that subject to respond to the question, and you yourself haven’t produced any thoughts in response to that question, what then?”

“A question for which there is no answer in the Universe will immediately speed up the evolution of everything. Like a flashbulb bright and clear as a bell, it will reach into all corners of the Universe and everything will be set in motion as well, there will be a rejoining of opposites, an answer will be born and it will be heard.”

“So, that means, right off you’ll hear the question and glimpse the one who’s asking it?”

“Just like everyone else, I too shall hear it right off. But unfortunately, for centuries people have been asking the same questions over and over again — there are answers to them, but not many people who hear those answers.”

“But how can I tell what’s what? How can I tell when the source is communicating Truth, or rather, when Truth is being perceived without interference? After all, there’s no crackling sound in one’s ears when we hear something externally, and you say that the answer is born, as it were, in the form of our own thoughts — thoughts we produce ourselves. But what helps us tell whether the voice we hear is a good voice or no? After all, everyone that hears voices thinks they are listening only to the Supreme Mind.”

“It is when you hear more than just words. When suddenly there is a flash of feeling or emotion in the soul and tears of joy in your eyes. And when sensations of warmth and fragrances and sounds are born in you. When you feel within yourself

the impulse or urge to co-create and a thirst for purification, you may be sure that you are clearly hearing the thoughts of Light.

“When it is simply cold information that comes, an order or command, even one that talks about good -- perhaps it seems wise, even very wise, and the originating source claims to be supreme and very powerful — know this: it is not good that is hiding behind good, but an entity not accorded a place in perfection that is trying to persuade you to follow it for its own purposes.”

## CHAPTER TWENTY-ONE

### Should we all go live in the forest?

“Anastasia, here’s another issue. Some readers want to live the way you do in the taiga. Several are trying to come to see you and are asking directions, others want to organise settlements in the taiga. And they are sending in their proposals to the Moscow Research Centre as to how to do this. Besides, I’ve read that there are already settlements like this elsewhere in the world, where people leave their homes in the city and settle in communities in Nature. This is happening in India, in America, and also here in Russia — in the Krasnoyarsk<sup>1</sup> region, for example. And people are asking you the best way to realise their dreams.”

“But why go to another place to live?”

“What do you mean, why? People are leaving the dirty cities where the air quality is poor, where there’s a lot of noise and bustle. They are moving to places that are clean and ecologically pure, so they can become purer themselves.”

“But back there where it has become dirty, who is to clean it up? Others?”

“I don’t know who. But is it so bad when Man has the desire come to him to live in a clean place in Nature?”

“The desire is a good one, that is not the point. When a person who creates dirt around himself comes to a clean place,

<sup>1</sup>*Krasnoyarsk* — a major industrial city of approximately one million inhabitants in central Siberia, a few hundred kilometres east of Novosibirsk. Krasnoyarsk is also a port on the Yenisei River which, like the Ob in Novosibirsk, flows north to the Arctic Ocean.

he pollutes that place with his very presence. You need to clean up the place you've been polluting first, thereby washing away your sins."

"So, everything starts with a clean-up, eh? And how do you suppose that's all going to happen?"

"Conscious awareness is the point of departure for any venture. The aspiration of one's thought finds the most effective path, just like any stream in Nature.

"It is all happening already in Russia today. Look closely, Vladimir. You will see that the factories with their smoking chimneys are not doing very well — that is not by chance, it did not simply happen that way all by itself.

"Another thing — there is less and less money for the nation's armed forces.

"But the main thing is that you have stopped treating as heroes people whom it would not be a sin to call vandals — people who have polluted the Earth by their actions.

"There is no need to go live in the forest. The space of the forest will not be quick to accept newcomers, and will take a long time examining their motives, habits and way of life. After all, the place where you were living, the place where you are living now — all that was once a forest too, planted by the Creator. And what has become of this beneficial oasis of paradise today?

"People who go live in the forest are no more significant — indeed, they are less significant — than the dachniks who plant gardens on desolate, abandoned land with their own hands. They are known and loved by every blade of grass on their plot, which endeavours to give back to them the warmth of the Universe. And the true feelings are to be found in those who themselves have set up this oasis of paradise, giving embodiment to the good in their souls amidst the bustle and gloom of death."

"But what then will become of the cities?" I queried. "Who will maintain those in a state of normalcy? After all,

everything in the cities will decompose into a void, everything will decay and be destroyed.”

“There should not be a sudden transition from one base to another — a gradual movement is needed, and it is already taking place. It is splendid, and it will be even more splendid in the future.”

“Well, Anastasia, you are true to form! Just like before, all the dachniks are still your idols. The only thing is, they hardly ever talk about spiritual things, the way a lot of different religious organisations and communities do.”

“Are words needed when their deeds are holy?” Anastasia countered.

“Here are some more letters,” I offered. “One person has already sent me five letters. He claims that he hears voices and that his dowsing-rod tells him you are summoning him to the taiga, and he is trying to get to you; he threatens me and goes to see Solntsev at the Moscow Research Centre.<sup>2</sup> He says we are concealing you from everyone and demands that we organise a trip for him to come see you in the taiga. And he’s not the only one. How would *you* answer him? I think you know these people are in love with you. They think they should be with you, doing good deeds together. And live together with you in the taiga.”

“I would respond to everyone who is sincere: thank you for your love. But I have not invited anyone to the taiga. What would you do here? What could you contribute? If your intentions are good, let them be expressed right there where you are living. Let your love illuminate those living around you.”

<sup>2</sup> *Alexander Solntsev, Moscow Research Centre* — see Book 2, Chapter 25: “The Space of Love”.

## CHAPTER TWENTY-TWO

# The Anastasia Centres

“In cities in Russia and even abroad,” I told Anastasia, “people have already started organising centres named after you. Let me read you just one example of the many letters my daughter Polina has been receiving. She herself has answered a number of them, and sent others to me, but I can’t possibly reply to them all, and there are some letters I’m not completely sure how to respond to. After all, there are people out there who think these centres represent some kind of sect. Just listen to this letter from one of the centres — how would you respond?”

I took one of the letters Polina had forwarded to me and read it to Anastasia in full. Here it is:

*Hello, Polina!*

*I am a member of our school’s Anastasia Ecological Creativity Centre, Valery Anatolievich Karasiov.<sup>1</sup>*

*Our Centre is still quite young, it was set up on 4 December 1997 and is now in the process of getting established. Its genesis was facilitated by your father’s book, for which we are all very grateful to him.*

*Anastasia, like a ray of Light in a dark realm, is now bringing together the creative forces of us adults and children who have not lost our creative capacities, with the aim of standing up for our honour and dignity. Such people as we aspire to bright ideals and believe that the happiness of Russia, our native land, is in our hands and our thoughts.*

<sup>1</sup>*Karasiov* — pron. *ka nas-YOFF*.

*We realise how right now the forces of darkness are pressing down upon her, and we are trying to help her as much as we are able.*

*Teachers, schoolchildren and their parents are all working together at our Centre.*

*At the present time we are introducing Anastasia and her ideas to kids and their parents with the help of classes and seminars, making use of your father's books and distributing them along with magazine articles.*

*We are also trying to put together a collection of scientific accounts explaining Anastasia's abilities.*

*We are aware of the challenges involved in the task of awakening Man's conscious awareness, in overcoming the inertia of human thinking, and so we are going about our activities with calmness and confidence. And we have already made some interesting discoveries.*

*Some people we have been in touch with look upon Anastasia as a beautiful fairy-tale, while others tune in to our work right from their very first reading of the book. There are also a few who are starting to spread rumours that Anastasia is just another sect, which makes us smile.*

*But as it has been said, "Father, forgive them; for they know not what they do."<sup>2</sup>*

*The main thing is, we are so happy that Anastasia has brought us together in this rural region with its dying agricultural industries and its decaying state-run farm, whose managers have completely forgotten about people's needs — especially young people's needs. And this has all happened on the very spot where Mikhail Kalinin<sup>3</sup> was*

<sup>2</sup>Luke 23: 34 (Authorised King James Version).

<sup>3</sup>Mikhail Ivanovich Kalinin (1875–1946) — as Chairman of the Soviet National Executive Committee in 1922, the USSR's first titular Head of State. In 1931 one of Russia's oldest cities, Tver (founded in 1135), and subsequently the Tver region (*oblast*) — where this letter is coming from — were both re-named *Kalinin*, and retained this name throughout the Soviet period. The city's historic name was restored in 1990. One of the ships in Vladimir Megre's river fleet was also named the *Mikhail Kalinin* (see Book 1, Chapter 1: "The ringing cedar").

born and the hugely successful Verkhnyaya Troitsa<sup>4</sup> state-run farm once flourished.

Here at the Anastasia Centre located at the M. I. Kalinin rural school, our Raduga<sup>5</sup> programme was initiated. It is designed to work out and put into practice creative solutions for the development of our native land, work education and the moral upbringing of the rising generation, to set up a basis for the manufacturing of ecologically clean agricultural products.

Raduga also aims to set up a young people's cultural and ecological manufacturing co-operative under the name Rus, which will include the Slavic cultural centre known as Lada and an ecological manufacturing complex called Rod.<sup>6</sup>

This is the kind of programme Anastasia helped us set up.

Let unbelievers believe in their unbelief, but we shall work on bringing our programme to fruition, no matter how unrealisable it may appear to some people.

Our goal is to allow our young people to feel the practical results of their creative forces.

One aspect of the Raduga programme involves getting to know our own country better — studying our native land's ancient history and the life and culture of our Slavic forebears.

<sup>4</sup>Verkhnyaya Troitsa — the name literally means 'Upper Trinity', although to the Soviet authorities in charge of the farm the term was strictly geographical. Workers on state-run farms (*sovkhozy*) received a monthly wage, just like factory workers. This was in sharp contrast to the period preceding the collectivisation of the 1930s, when peasant households owned their land and whole families often participated in the farm labour.

<sup>5</sup>Raduga — the word literally signifies *rainbow*.

<sup>6</sup>Rus (pronounced ROOS, rhyming with *moose*) — the name of the Old Russian territory, which by the 9th century A.D. was centred around Kiev; Lada — the name given to the Slavic goddess of love and beauty, also related to the word *lad*, signifying *peace, union, harmony*; Rod — an ancient Slavic name for God as Creator of all (see footnote 10 below).

*A long time ago, right near Verkhnyaya Troitsa, the town of Medved was built, but hardly anything is known about it — it has literally been wiped off the face of the Earth. Along the banks of the Medveditsa<sup>7</sup> River may be found old Slavic burial mounds. We are wondering whether some of these have a similar significance to that of the dolmens<sup>8</sup> in Gelendzhik, since that was where the local Medved militia did battle with the Tatars and their Golden Horde.<sup>9</sup> We need this information, as we don't want to be neglectful of our past. We shall take steps to preserve whatever we can, and do at least a partial restoration. That is our request, Polina, to Anastasia.*

*In the spring we shall start setting up a nursery to cultivate cedar seedlings — this will be possible thanks to one of our local residents, a forest warden by the name of Georgi Shaposhnikov, who gave us this amazing gift.*

*Our children's theatre, headed by Tatiana Yakovlevna Zaonegina, who comes from Siberia, will be putting on a play based on the Anastasia book. The kids are really fired up with the project.*

*We would very much like other centres and organisations Anastasia helped come into being to get in touch with us. May her Divine lines of Light join all our centres together throughout Russia.*

*Mutual communication, even if just through letters, will increase our strength and enable us to find answers more quickly.*

*Our postal address is as follows:*

Anastasia Ecological Creativity Centre

M.I. Kalinin School

<sup>7</sup> *Medved*, *Medveditsa* (pronounced something like *mid-VEY-TCH*, *mid-VEY-dit-sa*) — these names both signify *bear* (the animal), male and female, respectively.

<sup>8</sup> *dolmens* — See Chapter 4: “Score for the Universe”.

<sup>9</sup> *Tatars* (= Tartars), *Golden Horde* — a reference to the Mongol invasion of Russia under Batu Khan (grandson of Genghis Khan) in the 13th century; the Tatar domination of Russia lasted almost two hundred years.

Verkhnyaya Troitsa, Kalinin District,  
Tver Oblast 171622

*The following is a gift from our school to all for whom Anastasia exists.*

HEAR YOUR ORDERS,  
DEAR BROTHERS!

*To help with Anastasia's  
World-happifying ideas,  
To head off disaster for good  
And never repeat it, we should  
Awaken at six in the morning,  
So as not to find anything boring  
And with smiles and sincere open hearts  
We shall stretch out our arms to the stars  
And draw ourselves close to her side —  
To our mother dear, as to our bride:  
"Here I am, your own blood to embrace!"  
And a sly smile creeps over our face...  
In an instant, not a moment beyond,  
We see Mother's own face respond.  
"To you, Mother Nature, good morn!  
Who with God the Father<sup>10</sup> have borne  
Strong warriors — where would one find  
In the Universe any more kind?"*

<sup>10</sup>*God the Father* -- The Russian term is *Rod-Batiushka*. *Batiushka* is a tender name for 'Father', while *Rod* is the name ascribed to God by the ancient Slavs to designate the source of all life. Many current Russian words are derived from this root, including the word for *Nature* — *Priroda*, whose literal meaning is 'attached to God'.

*Oh Sister, of Slavic blood true,  
 So long we have waited for you.  
 We all have been touched by your Ray:  
 Your orders we now will obey.”  
 Dear brothers, your orders now hear!  
 At six, like the book says, dark fear  
 Will flee from our forthright attack —  
 Fifteen minutes it takes, there and back!<sup>11</sup>  
 So that no threat will vex our dear sister,  
 We must give this child our assistance.  
 We answer to them, after all.  
 Then how can we not heed their call?  
 We are quite used to lending our aid  
 To break through the dark foe’s blockade!<sup>12</sup>*

*Valery, a Russian naval officer*

*I wish you success and all the best, Polina. We at the Centre shall be happy to receive any information you can give us about Anastasia. Please give our very best wishes to your father.*

*Happy New Year!*

<sup>11</sup>*fifteen minutes* — This whole poem is a reference to Anastasia’s ‘orders’ (an urgent request, at least) to “wake up in the morning at a set time - six o’clock, say — and think about something good. ... They can think about their children, about their loved ones, about how to make everyone happy. If they could only think fifteen minutes like that.” See Book 2, Chapter 8: “The answer”. The word *orders* harks back to the observation by the ‘colonel’ in Book 2 (Chapter 20: “The Ringing Cedars of Russia”) that Vladimir was “not good at following orders properly”.

<sup>12</sup>*blockade* — a reference to the 900-day Nazi blockade of Leningrad (starting in September 1941), which was broken by the will of the Russian people — first, during the winter months with the ‘Road of life’ across frozen Lake Ladoga east of the city, and then for good, finally ending in January 1944. During all this time the city never surrendered and was never taken by the enemy.

“Well, Anastasia, what do you have to say about this letter?”

“I can say that it shows marvellous aspirations of the human soul. But neither you nor I can take credit for that. It is beauty and the strength of their soul that alone are responsible. Their names would make an even worthier choice for naming the centre. I grew up in the cradle of the Creator, while *their* soul has strived to brave the tortures of hell and has survived.

“For years a string of hardships, deprivations, temptations and commotions have tried as hard as they could to distort their realisation of good. Their souls have been able to overcome it all. They are stronger than those who have cut themselves off from the world behind a stone wall. They are in the world and have enriched the world with their presence. *They* should be remembered in the centre’s name. If people plan to name all the centres after me, it will result in the formation of a cult, and that must not be. A personality or image cult always distracts Man from the essential thing, from himself.”

“Then what will be the result?” I queried. “There’s Solntsev’s centre in Moscow and Larionova’s in Gelendzhik, and already I’ve heard people speak of an Anastasia division at the International Academy of Spiritual Development. How will people be able to find out with precision what these centres are all about?”

“Intuition is a quality given the same to all, Vladimir, and a centre’s real essence and attraction is determined not by the name: it is the soul that should be able to feel one’s actions.”

“Now that’s an interesting turn of things, now I’ll have to do some more thinking. You are a quite unconventional woman, Anastasia, and conversing with you makes thinking work not just for me but for many others around too, and when is there time to relax? There is one more concrete question they ask

of you: what kind of burial mounds are located there on the river, on the Medveditsa?"

"There is no need to excavate the mounds. They have fulfilled their task, and people were born there who were the first to ask the most important question."

"What question?"

"Think about it yourself, Vladimir, please. But I shall tell you this for now: you go show people like these the ways to make better contact with each other. You can do your part by noting their addresses in your book. Let all the letters, like bright rays, help them warm each other's hearts. The St. Petersburg poet Korotynsky<sup>13</sup> gave you a hint a long time ago when he wrote:

*This ray of Love from heart to heart  
With thread Divine will gleam and glisten,  
Make every soul from dust depart  
And thirsting minds with heaven freshen."*

"Okay, I've got it," I said. "I myself was going to publish both the letters and the poems readers have sent in. I wanted to keep them and release them in a volume of their own. I myself felt there was something deeper than usual in them. And I can make their addresses known through the Moscow centre, so that people may end up helping each other. My daughter Polina can also participate — she has been very good about taking care of the letters to date.

"You know, Anastasia, it might not be a bad idea if people from all over the world could carry on communication with each other. They will find people of like spirit and like mind,

<sup>13</sup> *Alexander Korotynsky* – a St. Petersburg scientist and poet. See Book 2, Chapter 25: "The Space of Love".

they can marry or at least become friends, they can start new common trends or spend their vacation together. Right, that's it! That's great! I'll get a selection of letters together and put them out as a collection.<sup>14</sup> You know how our newspapers now offer a dating service — people place advertisements, let's say they're looking to meet a potential marriage partner, and they give their height, their age and the colour of their eyes, as though they were selecting a prize cow for breeding. But here, I wager, it will be much better, when people meet in spirit and start helping each other.”

“Of course a union in spirit is better, more solid indeed.”

“Yes... But there's just one problem...”

“A problem? What is it?”

<sup>14</sup>A 544-page volume of readers' poetry, art and letters was subsequently published in Russian, under the title: *V luche Anastasii zouchit dusha Rossii. Narodnaya kniga* (The soul of Russia sings in Anastasia's ray. A people's book). It was followed by half a dozen issues of a periodical known as *Almanakh "Zvenjashchie Kedry Rossii"* (The Ringing Cedars of Russia Almanac). Most letters and poems are now shared through numerous on-line forums and e-mail lists, as well as on the pages of periodicals specially devoted to readers of the Ringing Cedars Series.

## CHAPTER TWENTY-THREE

# Re-creating Shambala

“For some reason it all happens like that in Novosibirsk — it just happens that most people who are critical of me and my book come from there. Indeed, that’s the only place people criticise me.

“My first book is already being published in three foreign countries, and in many others contracts are being drawn up. But in Novosibirsk all they do is curse it. My daughter Polina is there — I can only imagine what she’s going through. And as for a collection of readers’ letters, they’ll only say: ‘What new thing are you dangling in front of us now? Why don’t you go back to your own business?’

“They did a programme recently on Novosibirsk TV about the early entrepreneurs.<sup>1</sup> I was included, and in the course of an interview with my daughter they asked her about my absence from my business. Polina tried to explain something about my spiritual interests, but they cut her off.”

“Just a little more time will go by,” Anastasia replied, “and most residents of Novosibirsk will think highly of both you and the book. The best of the friends you had last year will come back, and new friends will appear.

“In one of the city centres a short way from the Eternal Flame<sup>2</sup> your friends both old and new will plant a brand new avenue and name it *Cedar Allée*.”

<sup>1</sup>*the early entrepreneurs* — i.e., following *perestroika* and the collapse of the Soviet system in late twentieth-century Russia.

<sup>2</sup>*Eternal Flame* — in memory of the soldiers from Novosibirsk who fell during World War II.

“Sure they will! Come on, now! You’d better think again — a ‘Cedar Allée’ near the Eternal Flame? You’re really quite the schemer, Anastasia, dearest little dreamer of mine!”

She jumped up from the grass and stood on her knees, beaming all over, throwing up her hands, and all of a sudden whispering:

“Thank you for those words so fine — ‘dearest’, ‘mine’. That *is* me you were talking about here, Vladimir, right? I have I indeed become dear to you?”

“It’s more just a figure of speech we use. But still, your dream is very beautiful.”

“And it will come about, believe me, it will. Just as I dreamt it, that is how it will turn out.”

“But nothing comes about in the world all by itself. Now if you could attempt to create some kind of miracle in Novosibirsk... No, not just any old miracle — what’s the point of a miracle which leaves people neither hot nor cold? If only you could grant, say, that every resident of the city became just a little bit richer and healthier — in other words, so that everyone in Novosibirsk could be happier — now for that, perhaps, people might plant an allée. But I have an idea that all your forces of Light, even all told, would still not be able to bring that about, Anastasia. That is not within the grasp of anyone’s might.”

“You are right, Vladimir, nobody has power over Man’s will. Man must still work out his own plan, his own destiny, whether it be for joy or sorrow. Each one’s conscious awareness will point out the path to follow.”

“But who then is toying with our awareness? Who is impeding us from choosing the path leading out of sorrow to joy?”

“Why grope for causes outside your own self, Vladimir? In accusing others, what do you hope to change? A feeling so great has arisen within you: to create something good for the

citizens of your city — I find it very appealing. It is a thought I myself now must dream with...

“Ah! Great indeed! I have it! Yes, that is it! All the people of Novosibirsk will go down in the history of our nation, for it is there that a generation of happy people will be born. Every one living there today will become happier right away.

“Let us think together what we can say to the people of this whole city you are concerned about, how we can learn to break through to each one’s heart and soul...”

“And what do you want to say to each one of them?”

“That together they will all be able to re-create Shambala.”<sup>3</sup>

“And just what might this Shambala be? Elaborate more precisely.”

“People have been looking for æons for a holy place on the Earth. They think that it is called Shambala, that anyone there can link with the wisdom of the Universe. But no one has ever been able to find Shambala, though seekers have galloped through many foreign nations looking for it. And find it they will not, as long as they look for it therein, for ever since time began, Shambala has been re-created — both within each one and in its outward manifestation — by Man.”

“More specifically,” I interjected, “what must be done to establish a link with the wise Universe and to make one happier — show me a step we can take here that lies not within ourselves? All that’s within ourselves is somehow unclear. Show me some outward things we need to sow, build or break?”

“Let each resident of the big city obtain a little nut from a resinous cedar cone, place it in his mouth and hold it there in his saliva. Let him plant it in a little pot of earth in his home

<sup>3</sup>*Shambala* — a Tibetan word indicating ‘the source of happiness’. See footnote 1 in Book 2, Chapter 27: “The anomaly”.

and water the earth every day. Before watering he should put his fingers in the water, and should be in a good humour. And the main thing — he should be wishing good for himself, his children and descendants, and a conscious awareness of God. This he should do every day.

“When the seed sprouts, one may share with it one’s innermost thoughts. On summer days and frost-free nights the little pot with the little sprout should be placed outdoors among other plants growing in the ground so that it can commune with stars, the Sun and the Moon, so that it may know the rain and the breeze and the spirit of the blades of grass all ‘round, and then come back again to its friends, its parents. This may transpire many times now, while the desire is there and time allows.

“The seedling will grow and develop through the ages — a cedar, after all, will live more than five hundred years, beget offspring and tell the young cedars about the soul of those that cultivated them. When the sprout has grown in the home to about thirty centimetres, it may be planted in the earth in early spring. Have the city authorities allot at least one square metre of earth for their sprout to all those that have no plot of their own.

“And these sprouts will be planted around the edge of the city, among the houses and in the centre of busy squares. Let each person take care of his sprout and help each other in this.

“From the ends of the Earth people will come to this city to see and touch the sacred trees, and exchange at least a word or two with these happy people.”

“Why would people suddenly start coming here from all over the world?” I asked. “Now if only you could discover some kind of new sacred sites in Novosibirsk! Dolmens, for example, as in Gelendzhik. You told about the dolmens of Gelendzhik, and now seekers from various Russian cities and

other lands are flocking to see them. I noticed that every day now they have tours to the dolmens.

“And every year in September readers from many places come together for a conference. Artists organise exhibits, and they record things on video. And now, surprise of surprises, trees are growing in the city. Well, not actual trees yet, just cedar seedlings.”

“These will not be ordinary seedlings,” Anastasia pointed out. “They are like the *ringing* cedars. Warmed by the kindness of human hearts, having touched the human soul, they will take in the best rays the Universe has to offer and start giving them back to Man. And Man and the Earth together will begin to shine once more in that place — now and forever. And there will come a new conscious awareness, and discoveries of universal importance will go forth from such people through the whole Earth!

“Do you know what a sacred site is? Believe me, Vladimir, you will come to know one in your own native city.”

“That’s all very tempting, of course,” I said. “But you know, Anastasia, there’s hardly anyone that’s going to take your word alone. There’s no way this can be known from our history books, and it’s not something our modern science is going to condone. Now, if there were just something a little more influential than you, someone better known with the proper credentials, who could show this...”

“The Koran makes some wise statements on the significance of trees. Buddha too got this wisdom when he went off for a long time into the woods. Tell me, Vladimir, you have been reading the Bible, have you not?”

“Yes I have, what of it?”

“The Old Testament notes that long before Christ Jesus’ birth the wisest of the Earth’s rulers, King Solomon, used cedar wood to build a temple to the glory of God and a house for himself. He hired a work force of considerable size to cut

down the cedars and bring them in from far-off places. King Solomon was very wise, as the Bible says, and the Song of Songs he wrote has come down to us as an oasis of wisdom in the present day.

“The Old Testament also tells us that toward the end of his days the wives of his harem from various lands and various faiths began leading Solomon away from his faith. He came to know a variety of faiths. And do you know which one satisfied him the most?”

“Which one?”

“The one where trees are not only cut down but also planted. And on his death-bed this wise king comprehended that his temporal house and temple would be destroyed, that his descendants would not be able to maintain their power or greatness. It would mean that the might of his kingdom would lapse into a void. And it all came about exactly as he had foreseen.

“And to this day his soul is dismayed by the great mistake he had made. And the wise king realised that it was impossible to do a deed pleasing to God, and at the same time take the life of any of His own creations. The torment that affected his soul and many human souls extends through whole millennia, as they watch one mistake making itself again and again over thousands of years. But the mistake can be corrected, and then a splendid dawn will once more rise over the world. News of your city will spread through all the channels of the Earth and the Universe.

“Of all the miracles on Earth that have come down to us today, nobody has ever heard of a city where every citizen thereof cultivated trees such as these this way — with extraordinary love and tenderness of soul, thereby transforming their own city of stones into a true, living temple of the Universe, into a Space of Love. For this a whole conscious awareness is needed of the Divine, so may it, oh may it rise up so fine and

good within each one's heart, and do its destined part to help the Universe be understood."

"Perhaps, just perhaps, there is a germ of rationality in what you've said, Anastasia, and I shall, perhaps, write about it, so that people may determine everything for themselves, but I must warn you that you're missing something here. You spend all your time carrying on about trees... But... well, how can I put this? You'll never be able to get married officially. You don't have the documents you need to take your turn at the Civil Registry Office, and here you're talking with such earnestness about trees. As it is, the church clerics consider you a heathen, and when I write these words of yours, they won't even let you in the nearest church, and certainly will not officially wed you to anyone."

"Vladimir, *do* write down my words, let people read them and decide for themselves. And do not be ashamed of these words, humble your pride. Not everyone, perhaps, will understand the meaning of these words, and not right away. But in your city there are many scholars who will supplement in scientific words what I have begun to say, if you believe that people will understand them better than my own words. And then there are the journalists. Do not be angry over their criticism; not all the journalists have had their turn. And if the time should ever come for me to wed, believe me, Vladimir, one will be found to hold the crown above my head."

"And what if people create something like that in another city, other than Novosibirsk?"

"Any city can be reborn. For achievements like these to be fulfilled, a different conscious awareness in people must be instilled, and when it appears, the face of cities will be changed for years to come. But among them there will be a first to perceive the Grace."

"Blessed Anastasia, you are so naïve, it seems, you never have anything but bright dreams. Well, okay then. I shall

write what you say, so that people will know these things too.”

“Thank you, thank you! I do not know how else to thank you.”

“What for? That’s not hard to write. You can add something more, if you like.”

“I ask you, people, do not just read what I say as empty words, you need to make sense of what you have heard.”

“Here you are, Anastasia, answering questions from readers, and you speak of Man as a creator, but you’re a woman, don’t you see? You know what the leader of one of our religious denominations said about women?”

“What did he say?”

“He said that women are incapable of creating — their proclivity, then, is to look beautiful and inspire men to various achievements and creativity, but it is only men that do the actual creating.”

“But you, Vladimir, do you agree with statements such as those?”

“One could agree with them, I suppose. You know about statistics, which is an impartial science. Well, if you go by statistics, you come up with this —”

“What?”

“Andrei Rublev, Surikov, Vasnetsov,<sup>1</sup> Rembrandt and other famous artists were all men — there simply aren’t any women among them — at least, I don’t recall any women artists. The

<sup>1</sup> *Andrei Rublev* (pron. *roob-ILYOFF*) (1365?–1430?) — one of the best-known early Russian painters, known especially for his icons and frescoes. His images are considered to convey a sense of humanity and deep spirituality. *Vasily Ivanovich Surikov* (1848–1916), a member of the *Itinerant (Peredvizhniki)* school of Russian art, known for his huge paintings of historical Russian battles. *Viktor Mikhailovich Vasnetsov* (1848–1926) — another Itinerant, who also painted monumental historical canvases (his younger brother Apollinari was not only a fellow artist but an archæologist as well).

inventors of the airplane, the car, the electric engine, the space satellite, the rocket-ship — they're all men, too. Right now one of the most popular art-forms in our society is the cinema, and in order to produce a film you need a director, and he's one of the most important figures in film-making. And once again, all the best film directors are men. Occasionally you find a woman director, but they're very rare. And unlike men, they don't produce any really outstanding films. And the best musicians are invariably men, just like the philosophers — both the ones we know from antiquity and in our modern world — they're men, too."

"But why are you telling me all this, Vladimir?"

"Well, I just had a thought. Maybe it'll help you."

"What is your thought? Could you share it with me?"

"It's like this. Maybe you, Anastasia, should concentrate more on some kind of home improvement here, along with child-raising, and not burden yourself down so much with concerns about the outside world and other people — after all, *men* can take care of everything there. Men alone, according to statistics, which is an exact and impartial science. Historically, too, all the important things have been done by men, and we can't get away from history. Do you understand how irrefutable this argument is?"

"I understand what you are saying, Vladimir."

"Just don't you go and get upset, now. Better understand everything right off the bat, so that you can busy yourself with your own affairs and not with those that others can do better. You're trying to change the world for the better, but only men can do *that*, you see — they are better inventors and better creators than women. Do you agree?"

"Vladimir, I agree that men appear outwardly to be creators. If you look at it from a material viewpoint, that is."

"What do you mean, 'outwardly'? And from what other viewpoint can you look at irrefutable facts? You'd better not

get philosophising here. Just tell me out-and-out: can you at least create *something*? For example, can you at least do embroidery? Can you embroider a beautiful design on a piece of fabric with a needle?"

"I would not be able to embroider a design with a needle."

"Why not?"

"I would not be able to take a needle in my hands. A needle that has been manufactured out of the depths of living Nature. What is the point of creating something if it involves first destroying a great, living creation? Think, Vladimir, when a demented person takes a work by one of the Great Masters, as you said, and rends the canvas to pieces to cut out rabbit figures, would you call his actions *creativity*, making an allowance for his dementia? But if another person, this one rational and aware of what is around him, did the same thing, then his actions would be defined in quite a different way."

"How?"

"Think about it. For example, his actions could be termed vandalism."

"Come on, now, you're not serious?! Does that mean that all creators and artists are vandals?"

"They are artists and creators in their perception of the world as seen on their own level. But if their consciousness should rise to a higher level, they would create by entirely different means."

"And what 'different' means would these be?"

"The means by which the Creator has created all in His own impulse of inspiration. And the power to perfect His creations and to make new creations of their own is something He has given to Man, to Man alone."

"And just how did the Creator create everything? And what instrument did he give to Man for creativity?"

"Thought is the chief instrument of the Great Creator. And thought has been given to Man. Creations are true when

thought is brought to fruition through the soul and intuition and feelings, and the main factor here is and will always be: the purity of one's awareness.

"Look how the little flowers thrive at our feet — their splendid shapes and colours and tints are constantly changing in creation alive. These are something you can perfect with your thought. Concentrate, try to change them, give them a better look."

"What look? For example?"

"Indulge your fantasy, Vladimir."

"Well, I can at least do that. Let this camomile here, for example, take on one red petal, and the next one stay as it is, so the alternation will make it better, more cheery."

And all at once Anastasia fell stock still. She began concentrating her gaze on the white camomile. And you know, the camomile — slowly and quietly as could be, but still, right before my eyes — began to change its colours. There they were, alternating — first there was a red petal, then a white, then a red one again. At first the red petals were barely noticeable, then the colour became stronger, and the red hue kept getting brighter and brighter until finally they were simply blazing with a shining red radiance.

"You see how it happened, Vladimir — you came up with the idea, and I created it all with my thought."

"What are you saying, Anastasia — that everybody can do this?"

"Yes! And they are doing it. But they use material for this, which they first slay, and dead material can only deteriorate. So mankind through the ages has struggled to stop his creations from deterioration, even as human thought becomes more and more preoccupied with just plain rot, and Man has no time to think about what constitutes genuine creation.

"Every thing is preceded first by thought. It is only with time that it gets embodied in matter or the changing strands

of the social order. But whether they are creating for better or for worse — they do not immediately understand.

“Look how you wanted to change the colour of the camomile’s petals. I changed them with my thought — the camomile obeyed Man’s thought. But look closely now, did you really think up something better? More perfect than it already was?”

“In my view, it’s splashier and more cheerful.”

“But why are you not excited when you talk about the new Creation?”

“I don’t know, maybe it’s because there’s still something lacking, maybe some kind of colours — I can’t tell right now.”

“The colours have come into conflict with each other — the tenderest tints have paled for the sake of splashiness. A loud splashiness fails to evoke calm and tender feelings.”

“Okay, okay. Try to change everything back the way it was.”

“It is not *I* that shall do it, but the camomile itself will be able to. The red will fall away. After all, we did not slay the camomile. It is alive. Nature itself will bring everything back to a state of harmony where it can thrive.”

“So, in your view, Anastasia, are all men ignorant vandals and are women the creators?”

“All men and women are one — in each of them two principles merge into a single one. And in the creativity they feel, they are inseparable — earthly existence is there for them both.”

“But how can that be? I don’t understand. I, for example, am only a male of the species.”

“And what do you consist of, Vladimir? The flesh of a male and the flesh of a female have merged into one, they are united in you; similarly the spirit of two has merged into one spirit within you.”

“Then why do people go and state in treatises exactly what a woman is and what a man is, and state which of them is stronger and more important?”

“Think about it yourself, who would want to, and for what purpose, replace your awareness — your consciousness which the Creator gave to everyone in the beginning — with his own dogma?”

“Well maybe the Creator just happened to give someone more than others, and this person, as a teacher, is striving to share his wisdom and awareness with everyone?”

“Every little sprout on the Earth — the seed of a birch tree, a cedar tree or a flower — is filled with the knowledge of the Creator. So how could the thought come to you that the Creator could deign to withhold something from His Supreme Creation? What could be more insulting for a Father than a complaint like that?”

“What are you talking about? I’m not complaining about anyone. I was just consulting with myself, thinking out loud.”

## CHAPTER TWENTY-FOUR

### Who are you, Anastasia?

Before asking Anastasia this question, I took a good look at her. Here sitting before me was a woman — a young and beautiful woman, hardly different in her outward appearance from many others in our modern civilisation. Perhaps it is just that her body conveys a lightness — barely perceptible, even outwardly — in the way she stands, the way she moves her hands, and especially when she rises to her feet and walks, all of which she does with an extraordinary lightness.

The burdened, ponderous gait of a 'senior citizen' is noticeably different from the movements of a young, energetic, vivacious person. But that gives you some idea of the difference between the way Anastasia moves and walks and the motions of even the trimmest of our young athletes. She gives the appearance of being light as a feather on her feet, yet physically very strong. She easily carried my heavy backpack fifteen kilometres, at the same time helping me make my way along.

During our brief stops she didn't lie down, or even sit down in exhaustion, but kept moving — either running off to collect herbs, or massaging my wounded leg. And she did all this with a sense of lightness, cheerfulness and a smile. Where did this vivaciousness come from all the while?

Just try observing some time the flood of people walking along the street — take a look at their faces. I did. Almost all of them look absorbed in thought, downcast or just plain glum. Especially when a person is walking all by himself along a road. Even when they aren't carrying any heavy load, and

they're neatly dressed, evidently not starving, since they're smoking expensive cigarettes, and yet their faces are marked with tension, weighty thoughts — and there are many like that, the majority in fact.

Anastasia, on the other hand, never allows her smile to leave her face. She constantly delights in the Sun and the grass, the rain and the clouds, like a carefree child constantly beaming with gladness, and even when you talk about serious matters with her, she betrays no sadness.

Just like now... But *no*, her appearance at the moment was not typical at all. Anastasia was sitting there, her head slightly bowed and her eyelids lowered, like someone upset or even a mite depressed, as though she could sense what I was about to ask. But I still asked her:

“If you look at all the letters, Anastasia, you will get an idea of all the different things people call you — even an alien from another planet. In one of her books the well-known psychologist and writer Oksana Lavrova<sup>1</sup> has called you a biologist from an extraterrestrial civilisation. Ordinary readers call you a goddess, but strangely enough, those who call you that also write as if they were talking to a close friend. You are probably the first person to be addressed both as a goddess and a close friend (without genuflection) at the same time.

“Most scholars and religious leaders call you an *essence*, an elevated essence, or a self-sufficient substance.

“Look, here I've been talking with you all this time, I've written a book about our conversations, and I still can't figure

<sup>1</sup>*Oksana Vladimirovna Lavrova* — founder of a psychological consultation centre named *Squaring the circle* (*Kvadratura kruga*) aimed at making a range of psychological services more familiar to the general population. She also heads a professional training institute known as the Samara College of Practising Psychologists, located in the city of Samara (a major port on the Volga River south-east of Moscow).

out just who you are. Can you yourself give an explanation to me of who you are — clearly and precisely?”

“Vladimir, whom do you see in me yourself?” Anastasia asked, without raising her eyes. “And why is it so important to you what other people say?”

“The thing is, that I myself don’t even know what I’m looking at. To be honest with you...”

“Say what you have to say honestly and sincerely, Vladimir, and I shall try to comprehend it all.”

“Well, okay, I’ll say it out-and-out... The first time I saw you, Anastasia, you gave the appearance of being a simple woman. Then that first time I walked with you into the forest, we sat down to rest and you took off your dress and your kerchief and I saw how beautiful and attractive you were — well, you know, the kind of girl we say is sexy or has sex appeal. I really wanted to... well, do it with you — you know what I mean. D’you remember?”

“I do.”

“But now, maybe on account of all these complexities compiled thereon, I don’t really want it any more, even when I see you with nothing on.”

“You’ve come to fear me, Vladimir, is that it?”

“Not fear you, no, not really. But things have got, well, complicated. You’ve borne a son, see, but you’ve become somehow more and more distant, even when you’re right here beside me, like you’re sitting right now, and still you don’t seem very close — you seem far away to me. At least that’s my impression. My head keeps telling me you’re some kind of ‘essence’.”

“I may be an essence, but you are an essence, too.”

“No. I’m no essence, nobody ever calls me that in their letters. Even if some readers curse me, still, nobody doubts that I’m Man, a human being.”

“Excuse me, Vladimir — you know, I am a woman. Which means I too am Man.”

“You say you’re Man too, but you don’t seem to want to do the most basic thing to prove it. You don’t want to live the way people live. The way the whole world lives. Everybody wants to have an apartment, furniture, a car, but oh no, not you. There’s money coming in now from the book, and soon there’ll be lots more. Let’s buy ourselves an apartment, furniture, a car, let’s go round together and visit the sacred places. We’ll take our son along, too. Our society is now restoring the temples and monasteries, and other countries have lots of sacred sites and historical monuments we can visit. But you have nothing here — no sacred sites. What’s holding you back? What have you got to lose?”

“Vladimir — this is my Space here. The Creator’s creation in its pristine state. My foremothers, my dear mother, along with my forefathers, tenderly cared for every blade of grass with their love, and every majestic cedar remembers their gaze and the warmth of their hands. And in the spring it comes about that the seeds of all the plants bring forth sprouts. And each grain that touches the ground in the spring contains all the information of the Universe. As well as information about how they will see the Light of Grace.

“And the seed grows apace until it becomes a sprout, and the Sun attempts to help it out, and the sprout reaches out to Man for more than just the Sun — it reaches out to Man for the Light of Grace.

“Thus the Creator created all. He designed everything so that Man could continue creating along with Him. My parents saved and preserved the creations thereof, and there is a Space of Love! My parents gave it to me.

“What in the world could be more sacred than the creations of the Creator, of my parents, of living Love filling all Space?

“This is how every Man that is a parent should act. They should give the child born to them the Space of Love!

Marvellous as a mother's womb, only in the Space of Love is there room for their future offspring — indeed the future of their own — to be truly happy.

“It is this holy place and the Space of Love that is my gift to our son.”

“You are giving this of yourself, Anastasia, but where is my Space of Love? What can *I* give our son?”

“The links of the continuum have been violated in many people's lives. But the strand is not broken. The strand that ties humanity as a whole and every creature in particular to the Creator needs only to be comprehended and felt by each, and then to each may be extended both light and might. Vladimir, expand the Space of Love. Right there in the world where you now live, create a Space of Love. For the sake of our son, for all the children of the Earth, make the whole Earth into a Space of Love.”

“I don't understand. What do you want from me? To change the whole Earth?”

“That is exactly what I want!”

“And for all people to love each other, for there to be no more wars or crime and for the air to be pure and sublime? And the water too?”

“Let it be thus throughout the Earth!”

“And only then will it be construed that I am a father true, that I have given something to my son?”

“Only then will you be a father true, worthy of your son's respect.”

“Does that mean that otherwise he will not respect me?”

“What can he respect you for, Vladimir? For which of your achievements do you wish to receive respect from your son?”

“For the same reason that children all over the world respect their fathers. Their fathers gave them life.”

“What kind of life? When a child comes into the world, where, in what place does he find any gladness? And why, in

the space given to him by his forefathers, is there so much sadness? And the child born again must live in this same sadness, and yet the one who gave him life does not surmise that he himself is to blame. And so we live and crave respect, and are surprised when we do not get it.

“Believe me, Vladimir, very few children respect their fathers as they should. This is why, as soon as they grow a bit, they leave their parents by and by, and refuse to remember them, thereby accusing them, albeit intuitively, and repeating in their turn the parents’ mistakes. If you wish to earn the respect of your son, Vladimir, you will have to make the world a happier place for him.”

“Aha, so... Now it’s clear!” I jumped up. My head was ever so filled with despair and anger. My thoughts became jumbled together.

I realised it now, as I hope it has become plain to all: Anastasia is a fanatical recluse. I surmised this right from our very first encounter. Maybe a recluse with extraordinary, unexplainable abilities and perhaps she has an excuse — perhaps these same abilities — her Ray, for example — do not allow an accounting of her own — I mean, do not allow her to take account of her possibilities. You will remember she said she would transport all people across the dark forces’ window of time.<sup>1</sup> Well, she herself realised that she was not in a position to do that, and now she is resorting to luring me and my readers into her fruitless vision. I knew for sure that along with being abnormal and fanatic she is incredibly deceptive and makes use of her guile to do whatever she can for her dream!

She bore a child, and she’s managed to get a book written by now. And then — something really wild! — she says if I’m to earn the respect of my son, I shall have to make the whole world into a Space of Love to give not only to my son but to

<sup>1</sup>See Book 1, Chapter 27: “Across the dark forces’ window of time”.

every child!... Methodically and by intricate art she is drawing everyone into her dream and keeps complicating my part before my very eyes. First write a book, says this girl, then make a Space of Love throughout the world, and then what? We have known of more than a few fanatics who have tried to change the world, and now they are where? Vanished like smoke into thin air. And here I find another one sitting in front of me with head bowed, with the same aim in mind: to change the world.

I knew that it was useless to argue with eccentrics and fanatics, that I needed to calm down and walk away, but I was unable to prevent myself. And to this girl sitting there on the ground with downcast eyes, as before, I still said:

“I know now, I realise precisely who you are. You are a mixture of *essence* and *Man*. And you know how to deceive. You deceive so nicely, you took me right in. Oh wow! what an intricate web of guile you weave! To get me first to write a book and then entice me by bearing a child.

“You tried with your non-human logic to hide your fanaticism, only a hole appeared in your plans. A loophole appeared, you understand. While I was writing the book, I had the chance to talk with many people. I learnt a lot indeed, and was given all sorts of religious books to read. And there’s no way I can tell what *you* know of them, but this one thing I can say:

“Several thousand years ago the world saw wise men of greatness and piety arise, whose spiritual currents in all their variety continue to flow until this day. There are more than two thousand different religious confessions on the Earth, you see — I learnt this from a recent talk session on TV. They one and all proclaim the good, they aim to give advice to everyone on how they should live, and every leader tries to make it known that the path to Truth lies through him alone. We have our fill of sacred sites all around, but still, has anything really profound, far-reaching or sincere resulted from their

gabfests over the many, many years? Or from the multitude of their teachings?

“There’s just one thing I’ve understood: millennia pass, but war has never ceased for good. The war of dogma against dogma. The strongest wins a fight and thinks that he is right, but not for long. Time passes, a new war ensues, and a new song, a new dogma gains ascension with its views. But no one thanks the losers in this contention, nobody pays them any attention. I’m saying all this openly and frankly... Do you know who *you* are? Do you know what you are calling me and all the readers to?”

Anastasia arose, looked me calmly in the eye and said:

“You need not go on, Vladimir. Believe me, I know what you still might say to me anon. Let me declare it myself. I can say it more briefly and without swearing.”

“Yourself? Well, why not give it a try? And all right, then, without swearing. What was *I* going to say?”

“You were going to say, Vladimir, that there are a multitude of prophets on the Earth, and a multitude of teachers too. There are so many different dogmas it is hard for you to decipher them all. But when I speak, you will be able to understand everything — if you really want to, that is.

“*Water* will prove to be the criterion, the measure of all things. Every day that passes, water scethes with more and more contamination. And the air becomes more difficult to breathe.

“The parade of worldly rulers, no matter what grand temples they might have built, will be remembered only by the filth they have bequeathed to their descendants. The legacy they give makes life more dangerous every day, but we continue to live. You have surmised, Vladimir, that I am one of those who tries to teach everyone how they should live. One of those who creates just another religious denomination, only too ready to put himself at its head.

“But I can assure you now that the sense of self-importance which has ended up burning all that were initially enlightened, is not something I shall ever resort to myself. I shall be able to win and I am winning! I shall stop the factories spewing their stinking dirt, the miners will comprehend that they cannot rend apart the precious veins of the Earth.

“I beg of you, people, change your professions just as soon as you can — all those professions which bring hurt to the Earth, to the great works of the Creator.

“I beg of you, Man, to grasp this fact just as quick as you can, that no one on Earth can be truly happy as long as he keeps causing harm to the Earth.

“Yet a little while and human misery will start feeling the pain of agony, it will burn in its own flame.

“People’s conscious awareness will transport them across the dark forces’ window of time. Look around, Vladimir, and you will find that what I sought in my dream is already coming to pass, my dream has been caught up by the Universe itself, it is resounding in the hearts of all people, and is already transporting mankind over the abyss, and only the doubters will run amiss and fall into its snare. But mankind, believe me, Vladimir, mankind shall be spared.

“People will see what children can be — people will learn life in paradise.

“The events now taking place in Russia are not coincidental. Assume a closer vantage-point, Vladimir, to observe these events. I am nullifying the portent of doom hanging over the Earth.”

“But who *are* you? Who do you consider yourself to be?”

“Oh, do you still not comprehend me in the least? Dogma has instilled in you a distrust of your own soul. Do you still perceive me to be a sorceress, do you still believe my dreams and aspirations to be fruitless? You are inflamed by doubts — you believe in yourself, and yet you do not believe, it turns

out. For that I am to blame, unskilled as I am — my speech is too bewildering and confused. But I say to each one of you who reads this: forgive me — I cannot find the words to make myself clear to all without exception. Forgive me, Vladimir, for my deception — not everyone is grasping what you wrote, and some are simply trying to get your goat.

“But how am I to expiate my guilt? I have got it! If you wish, I shall play the fanatic for you to the hilt. Or I can simply show you what I am. You can take it any way you like, but please do believe my one desire: that I sincerely aspire only to good for all.

“I beg you, please do not frown. Smile and see how great is everything around. Do not torment yourself, let nothing anywhere be kept hid. And if it is easier to accept me as a sorceress naïve, feel free to consider me as whatever you perceive.”

“Now that’s better,” I observed. “Things are clearing up again. Does all this mean you’ve just been playing a game?”

“And have you begun to perceive my play with your Soul?”

“Well, all play ought to involve some fun!”

“Of course you’re right in that. I should keep everything light and simple, and fun for everyone.”

The Sun’s rays shone through the dark clouds on the lake and the shore. They lighted upon the blades of grass and the raindrop-laden leaves, while the raindrops formed intertwining circles on the surface of the lake. Anastasia, who before this had been speaking quietly yet emotionally, her eyes constantly fixed on me, suddenly looked about her, clapped her hands and broke out laughing.

Her laughter was loud, alluring and infectious as it rang through the cedar branches and across the shore and surface of the lake. She began spinning about with childlike excitement, delighting in the rare drops of rain with a girlish, boisterous laughter. But every three minutes or so she interrupted her fiery dance.

I watched as the Sun's rays played in the glistening rain-drops, or perhaps it was in the tears streaming down her face ablaze with colour. Everything around fell still, and Anastasia's sonorous, confident, yet despairing words filled all space as they were carried off into the air. And the air over the taiga took on a greater tinge of blue, and the birds fell silent, too. As though they were listening to all her words as off into space these flew.

"Woe unto you, prophets! For centuries you have been prophesying about the frailty and futility of earthly existence, terrifying people with doom and hell's flaming judgement. Tame your ardour — you are the ones that have made Man's comprehension of Heaven so much harder!

"Woe unto you, Nostradamus! The dates of the fearful cataclysms upon the Earth were not so much your divinations as the creations of your thought. You made millions of people persuade themselves of these by what you taught and thereby aim their thoughts at the implementation of the same. Your thought still hovers up there, hiding in the blue, still frightening people with your prophecies of despair, but now they will no longer come true. Let your thought join in fray with mine. Of course you knew all this ahead of time, and that is why you are so eager to flee away.

"Woe unto you who call yourselves teachers of human souls! You try to suggest to Man that he is abject and weak in spirit, knows nothing of himself and that all Truths are accessible only to a few elect like yourselves — and only through worshipping *you* can he detect God's voice and the Truth of the creation of the Universe. Cool the passions of your heart, and may everyone now know: the Creator has given all to each one right from the start, and we need only refrain from hiding the Creator's great creations under the murky domain of dogma and conventions, the murk of inventions for the sake of one's own selfish pride. Stand not between the people and

God. The Father wishes to speak with each one equally. The Father abides no intermediaries.

“The Truth has been there right from the start in each one’s soul. Not tomorrow, but here today each Man may be happy and whole! The Creator has filled each moment of every year with gladness. And in His thought there is no room for His beloved child to feel torment from sadness.”

Just listen to her play! So inspiring! Yet so despairing! Of course she’s playing, but why above her in the sky over the taiga is there shining bright such an extraordinary light? As though the heavens could record every inspiring and despairing word that from this forest recluse upon the Earth could be heard:

“Woe unto you, prognosticators of the ages, foretelling but gloom for Man, thereby creating both gloom and hell! Oh, how earnestly you have been feeding your own *egregor*<sup>3</sup> frightening people in the name of the Father and more. Well, here I am. You can all come to me. With my Ray I shall take but a moment to burn up the murk of age-old dogma. All anger on Earth, leave your deeds and make haste to me, join fray with me, try your utmost.

“But you, militants of all faiths, it is you who have created all the wars. Dream about wars no longer. Lure not people into war with your obscure deceptions for the sake of your own mercantile connections. I stand alone before you. Try to defeat me. To defeat me, all of you come meet me together. The fight will be fightless, as clergy of all religious confessions will greet me with their merged assistance.

<sup>3</sup>*egregor* (also spelt *egregore*) — a non-material collective psychic entity or field uniting members of a human group or organisation (e.g., religion, state, association), generated and maintained by thought energy of the members of the group. *Egregor* can, in turn, influence the psyche of the members of the group and, taking on life of its own, persist even when the original members leave the group.

“Foremothers of mine, Fathers of mine, imbue them with the True Light. Give them everything you have been so carefully saving for *me*. Give freely to all who are able to accept the Light.

“Let evil join fray with itself and with my flesh, not with my soul. I give the whole of my soul to people. In people I shall prevail through my soul. Prepare yourself, all wickedness and evil-mindedness, to leave the Earth behind and fall upon me!

“I am Man! I am a *Man of pris-tine or-i-gins*. Anastasia I am. And I am stronger than you.”

“Stop!” I shouted, thinking that it was some kind of game, continuing all the while to play itself out. “Why are you taking it upon yourself to call up all these vile things?”

“Vladimir, be not afraid of them, they are cowards every bit. Besides, you yourself said that I was deceptive. Deceptive? Yes, deceptive indeed. I have outwitted them. They were mocking you, treating me as an invention of your imagination, while all along I was involved in creation. And the strength which my foremothers and my fathers showed, which they had brought with them from their pristine origins, I have now bestowed on many people.”

Anastasia stamped her foot and chortled out loud, and then spun round again, just like a ballerina. And I got carried away with her play and began giving her my moral support.

“So go to, Anastasia, burn them! Let all the evils of the Earth throw themselves at you and you will burn them! Only be careful, don't get burnt yourself!”

“To dispose of me, Vladimir, they would have to let go of many of their earthly gains, free many human souls from their chains.

“But even if I should perish, my dream shall come to pass all the same. The strings of the harp of the Universe have struck up a happy strain, and human souls are hearing them. They understand them!

“Sound forth, O Universe! Sound forth with your happy strain! For them, for all the people of the Earth. May everyone know the melody of the Soul!

“Look, Vladimir, human Souls are sending their rays to the weary Earth.”

With these words Anastasia ran over to the plastic bag with the readers’ letters, dropped to her knees and placed her hands on the package. And with childlike joy and enthusiasm she exclaimed:

“When an elderly man, a soldier who had been in the war, read your book and tears suddenly appeared... When a young mother’s whole attitude to her newborn child changed overnight... When a young girl, about twelve years old, saw everything clearly for the first time and started to love life... And look, when a young man stated he would no longer take drugs and went home to his mother...

“When people send you letters from prison, you can see and feel how their souls sing, and they take on a whole new strength...

“These are all signs I found that people’s souls are understanding the combinations of the sounds of the Universe, now they are resounding in their thoughts, and they are accepting them... Not all of them yet, but there will indeed be many! And the heavens know thereof and wait to meet each one with love.

“Look, just look how people are expressing their understanding in their poetry.”

She was so sincere in her delight and kept talking about the letters, that I got carried away with the scene before me and thought: Well now, let her have her joy, let her play her little scheme and believe that her dream will come to pass. I shall tell everybody about her playing. She thinks up everything herself and delights in every thought.

I was trying to calm myself down, when suddenly in my consciousness everything again got jumbled together. I began

once more to dismiss everything as her own caprice and fancy, yet there was one thing, can you imagine, that simply blew my mind away. Can you imagine, she talked about things that really were in those letters! And even in the letters I hadn't brought with me to show her! But how could she know? After all, she hadn't read them.

I watched and listened in absolute astonishment as she read poems that were still in the envelopes, as she took a sudden delight in something or stood preoccupied in silence, as though she had read all the letters together in a single moment.

She kept on talking about the letters with complete accuracy. Complete accuracy... Stop! So even before this, then, she must have been describing everything else with complete accuracy, too. It hadn't been a game at all... Was she dreaming? Of course she was dreaming! But she had also dreamt before — about the book, and people's poetry, and now all this lay right there before her eyes. Wow! Her dreams really did come true! They actually came true!

The book was lying right there in front of her. A material object.

Fantastic, indeed!

No, this can't be real!

Dear reader, are not you too holding in your hands right now a part of this despairing recluse's dream, materialised in a book?

And what next?

Can it be that everything else may actually come to pass?

When I got over my initial sensation of amazement, I asked her:

"Anastasia, how did you know what people had written in their letters? It was as though you had read them all. And even those I hadn't brought with me!"

Anastasia turned around, all beaming with joy:

"It's all very simple, on the whole, how one can hear what is being said by the soul."

And all of a sudden Anastasia fell silent. And in this silence she walked calmly over to me and said thoughtfully:

"It is not that hard to answer all the questions, but the answer still will not take away the problem, as one question but begets another. Right now mankind keeps biting into Adam's apple, not realising that this will never fully satisfy him. Besides, anyone may hear the answer for himself within."

"And how may each one recognise when the true answer comes, as opposed to one that is not so true?"

"Only one's sense of self-importance can lead people about, lead them away from the Truth. Vladimir, try to hear me out."

We sat down on the grass beside the package containing the letters. I saw how her eyes were sparkling, and there was a rosy blush in her cheeks, as she said:

"I shall tell you about *co-creation*, Vladimir, and then everyone will be able to provide an answer to his own questions. Please listen carefully, Vladimir, and write about the Creator's great co-creation. Listen and try to take it in with your soul..."

And thus began Anastasia's inspired account of co-creation. But it is a long one. And no room to include it here right away. But this one thing I'll say: after I heard it I really did want to pray.

With my sincere respects to you, dear readers, and until we meet in the next book,

*Vladimir Megré*

*To be continued...*

## Lada's message

### *In place of an Editor's Afterword*

As I was finishing writing my lengthy afterword, my four-year-old daughter Lada, named after the goddess of Love, walked in from the garden, hiding a 'present' behind her back — two cucumbers she had just picked, one for me and one for her Mama. I hardly paid any attention to her approach, immersed as I was in my work. Lada quietly sat on a chair and patiently waited for me to become aware of her presence. She considered it totally unacceptable to interfere with an adult's thought process.

At that moment I was busy compiling citations from the unheeded sages of many millennia ago as well as of the recent past, who have all been trying to convey the same message: simple life in close contact with Nature is an absolute condition of happiness and peace.<sup>1</sup> I had noted how significant it was that the understanding of humanity's deep spiritual connectedness to Nature and especially trees — the understanding that once served as foundation of entire cults and

<sup>1</sup>Leo Tolstoy, for example, wrote in his *What I believe* in 1884: "One of the first and universally acknowledged preconditions for happiness is living in close contact with nature, i.e., living under the open sky, in the light of the sun, in the fresh air; interacting with the Earth, plants and animals. Being deprived of these experiences has always been seen as a huge misfortune. It is felt most acutely by people locked up in prison. Just look at the life of those who adhere to the dogmas of today's world: the greater success they enjoy in terms of what the world teaches, the more they are deprived of this precondition for happiness."

cultures<sup>2</sup> — still survives today in folk customs and such universal symbols of rebirth as the Christmas *tree*. I had also been writing about our former much closer relationship with wild animals and gave examples of people living in our world today — such as Tom Brown, Jr.<sup>3</sup> — who, just like Anastasia, can relate to wild animals in the same way we relate to household pets...

I had had things to say on education, too. Just think about it: a century and a half ago — at a time when compulsory schooling had not yet become a “natural” part of our lives — Leo Tolstoy (who, as a proponent of ‘anarchical’ ideals of love, compassion and non-violence, would later be denied a Nobel Prize in literature) already discerned the havoc wreaked on children by the educational system or by what Megré calls ‘spiritual sadism’ and founded a school based on freedom rather than compulsion.<sup>4</sup> And today John Taylor Gatto, a teacher with thirty years’ experience and a recipient of numerous teaching honours — including the New York City and the New York State “Teacher of the Year” awards — speaking from his decades of teaching experience and his own extensive investigation of contemporary American education — shockingly declares point blank that the school system has been *deliberately* designed

<sup>2</sup>In fact, the words *cult* (a system of religious worship or ritual) and *culture* both derive from the Latin verb signifying *to take care of the land or to till*, and reflect the understanding of the sacredness of humanity’s connection to the Earth. To the present day the primary meaning of *culture* found in dictionaries is “cultivation of the soil”.

<sup>3</sup>See *The tracker* (Englewood Cliffs, New Jersey: Prentice-Hall, 1978), *The search* (Englewood Cliffs, New Jersey: Prentice-Hall, 1980) and other books by Tom Brown.

<sup>4</sup>In Tolstoy’s view, “education does not educate, it only spoils”, and “the best educational system is having no system at all”. For further details, please see his article “Education and Instruction”.

to “dumb children down” and kill their creative potential, so as to turn them into compliant members of a “faceless workforce”.<sup>5</sup> Interestingly enough, Gatto also describes the early childhood years, in terms very similar to Anastasia’s, as “a prison of games” in which children are confined and children’s toys as “suffocating your little boy or girl’s consciousness at exactly the moment when big questions about the world beckon...”<sup>6</sup>

Lada apparently thought that as long as she continued sitting quietly, I would never pay any attention to her. And so she gently whispered:

“What are you doing?”

“Writing good words about the new Anastasia book,” I said, finally turning my head and looking at her.

“Read them to me.”

Responding to her request, I read two paragraphs out loud, and then, remembering Vladimir Megré’s suggestion to “ask the children where and which way we should go”,<sup>7</sup> I enquired: “Well, what do you think?”

“Papa, it’s so long and boring!” came a frank reply.

“All right!” I laughed, sensing I would probably have to make my afterword much shorter. “D’you suppose you could put it all more briefly?”

“You should live close to the plants,” Lada said in a very serious tone. “In cities cars pollute air and turds from your toilet flow into rivers and make fish unhappy over the dirty water. And papas have to go away and work for money to buy food to

<sup>5</sup>See John Taylor Gatto’s *Dumbing us down* (Philadelphia: New Society Publishers, 1992), *The underground history of American education* (New York: Oxford Village Press, 2001) and other books.

<sup>6</sup>John Taylor Gatto. *The underground history of American education*, p. 383.

<sup>7</sup>Chapter 19: “What to agree with, what to believe?”.

eat. Do not cut down trees. God co-created everything. All are His little children.

“You want to go see how huge my tomato grew? And the water-melon’s so handsome!” she finished off.

“I do,” I smiled and, taking me by hand, Lada led me out into the light of the garden.

Brixey, Missouri, U.S.A.

Perun’s Day (2 August 2005)

Leonid Sharashkin

## READERS' COMMENTS

Ordering a set for a friend... these books are awesome. Hard to put down when you start reading.

— *David, British Columbia, Canada*

I love these beautiful energies of Anastasia's loving spirit and vision. I am sharing them with all my friends.

— *Grace, Colorado, USA*

The Ringing Cedars Books have indeed been a Life Saviour for me, it is changing me back to where I once was as a child, giving me renewed hope! I think that we were all a little bit like Anastasia when we were children, we were possibly just not allowed to remember... Lots of Love and thank you from the bottom of my heart.

— *Cissy*

Book 1 was extraordinary. A sense of deep well-being came over me at different times during the reading of it — which took place in one sitting on the evening I received it in the mail! Anastasia's comment that illness is a conversation with god just blew me away. I have had a chronic illness for 21 years now and that is exactly what it has been for me - a conversation with god. Thanks for making these wonderful books available for us in English!

— *Robert, South Pasadena, California, USA*

I have just finished reading 'The Space of Love', and since I first started reading 'Anastasia', and then through the 'Ringing Cedars of Russia', I have such a feeling of hope and some long forgotten remembrance that this is absolute truth. I want to weep with the joy of it all, and I want to weep at the sorrow of how I could have wandered so far astray. I want to weep with gratitude, and long for the first manifestation in my life that I am capable of the unconditional love that you share with all, Anastasia.

Thank you Anastasia, and your forefathers and mothers, for holding the Perfection of Being for us until we are able to recognize our destructive ways and turn back to Love and Purity of Thought. Thank you Vladimir, for your courage and determination in writing these books. And thank you John and Leonid, for being the English language connection and working so hard to conserve the purity and authenticity of the message... and what a message! Now I'm off to start reading 'Co-Creation'. I don't want to do anything but sit and read these wonderful, inspiring books. In love and gratitude,

— *Lucette*

After reading book 1 I'm convinced we should indeed all read this book, no matter nationality, ethnicity, gender or age. We need to reconnect as a society and this first gives us something to discuss that we cannot receive from modern media (television, news URLs, papers). This allows us to expand upon ideas heartened by our cells/bodies/souls with our common man, neighbor and bus-rider to create a community our children can thrive on.

— *Doug, Portland, Oregon, USA*

Words truly cannot describe the feelings that the books have imparted upon me, and an effort to try and describe these feelings would not be sufficient, excepting to say that there has been great joy and sadness in my heart through the words found in these books.

For Anastasia, I know that this beautiful Man, this woman is indeed a great great blessing to humanity, I say that she is indeed bringing in the 'second coming of the Christ (energy)' upon earth, that of unconditional love. To this beloved sister of ours, may your wish indeed come true my friend.

For Vladimir, you are a wonderful reminder of what we have let ourselves become, and I mean no offense to you personally. We have let ourselves become so caught up in being better than the next person, keeping up with the jones'es by having to have the best of the new technologies available, that it is sometimes only when we stop, listen and feel the love and light that nature provides, do we feel so

belittled and useless in comparison, that it is as if we are almost a virus upon this planet, destroying this beautiful oasis that is here, NOW!!! Do not blame yourself or anyone for what you have done, or thought, but let yourself NOW enjoy that which life and specially Anastasia's loving words have to offer. Peace and Light and Love upon this Heaven on Earth that we are now beginning to co-create. God Bless you All. With Love and Light,

— *Anthony, Australia*

What a blast... My partner bought books 2, 3 & 5 at Adyar [Book Store] so I have ordered 1 & 4 from you... but sadly have now run out of reading as I digested the 5 in a week.

I have not been as engrossed in a series of books since I discovered Lobsang Rampa in the 1970's. Every Australian reader should insist their Local Member read these, we're so far behind the Russians, and it (unlike the Cold War Arms Race) is a race that could just save our Planet. Or at the very least ourselves... Cheers and best wishes.

— *George*

To say the content is thought-provoking would be a great understatement and would certainly do the writings an injustice. The messages contained in the book have the ability to change one's understanding in all areas of life. It is written in an easy-to-read manner, almost like an exciting novel gradually unfolding, providing deep insights and new perspectives.

— *Healthsynergy*

I found *Anastasia* to be one of the most thought-provoking books I have ever read. I found myself with a new revelation on nearly every page and it brought many of my thoughts / beliefs / instincts? full circle. *Anastasia* reinforced many of my deepest beliefs while also providing me with many new perspectives on our interconnectedness with the natural world and each other. I have found myself referring back to and reflecting on *Anastasia* daily and it has given

me much insight and plenty to think about and act on in my daily life. I'm very thankful I learned of this book. I really look forward to digging into the second book.

— *Lawrence, Rutland, Ohio, USA*

*Anastasia* will impact a new generation of readers, like the works of Carlos Castaneda did for a previous generation — only this time through awakening the latent spiritual connection each of us has with nature. This is not about a walk in the woods, rather these books catapult us to an entirely new way of being on planet Earth.

— *Steven Foster, Arkansas, USA, author of  
A field guide to medicinal plants and herbs*

My husband finished reading Book 1... Today he said he had read hundreds and hundreds of books on spirituality but no one book had made such an effect on him like this one. Knowing him I will tell you that this is quite a statement! Thank you very much for all your effort in making possible this exquisite translation. We are now reading Book 2.

— *Olga, Colorado, USA*

*Anastasia's* wonderful! I truly believe this is the book that will make all religious systems and all social structures respond. It is so much in tune with mankind's transformation that takes place and will immensely contribute to that transformation in the best possible way — practically, metaphysically, theologically, philosophically... The freedom that this book carries in its life-concept for individuals and the society as a whole is so beautiful that everybody who reads the book *will* respond and will become a better person than what he or she was before reading it! It only takes to have an open mind and be ready to accept *Anastasia* not as a fiction but rather as a living person next door! Just a bit different from you and me. Of course we, "very well educated people", find it hard to admit that the lifestyle we have in this society is pretty close to slavery

compared to the potential for freedom, for love, for compassion, for God in ourselves. We are losing sight of higher values and are running after dollars, mortgage and garbage...

Thanks a lot for bringing this wonderful book into the English language! Thanks for the joy and love this book will trigger in the souls of people in the English-speaking world! I sincerely hope it will help to avoid some of the 'predestined' paths for us people on this continent. Thanks for giving me an opportunity to become a better person myself and offering this gift to us all!

— *Rada, Toronto, Canada*

Thank you for the book! It arrived day before yesterday and I just cannot put it down. How fantastic! It makes me even more "homesick" for I love living close to nature and yet am forced to be associated with a city like Chicago. What an irony of life! My "wild" imagination takes me right into the taiga and as I lose myself in reading, I can actually "see" in my mind Anastasia and her beautiful "home!" Fantastic story, the more fantastic as it is really true!

— *Anna, Chicago, Illinois, USA*

At work I walked by a book lying face down on a messy table and it called me. I picked up the book, flipped it over and the cover clicked. I sat down and started reading. That night I took the book home and over the next few days I found a piece of life, of the spiritual cosmos, which I knew had been missing.

In my disgust and shame at Vladimir Megré's reaction to Anastasia, I saw a reflection of my own attitudes towards concepts I was uncomfortable with. Although Anastasia herself is a little odd, I had no difficulty believing in her presence, her existence. After reading the book, I slept under the stars, near some current bushes, but some possums awoke me in the middle of the night. I then did some reiki and sent the energy to Anastasia, and felt myself floating in cedar branches, softly brushing me, with a bright yet soft ball of radiant light shining back upon me (kind of like the sphere on the cover). In a tarot read I asked about Anastasia and drew the Guardian card.

Three years ago my family moved to the country, our own dacha. I now look forward to next spring and “coding” the seeds and creating a space of love for both my garden and my family.

— *Dietrich Jakobi, Missouri, USA*

It is obvious that Megré is not a great and stylish writer... He doesn't have to be... With the highest level of respect to Megré, his value in this process is that of the one who has the technocratic ability, the expertise, the ability to get the information to the people, his personal opinions, thoughts, or rewards from this process are immaterial... Anastasia is the messenger, Megré appears to be successfully delivering it... If the Anastasia person had these technocratic abilities, this worldly savvy, the message would probably be tainted... As it is the message is pure.

In the actual reading of the books I find that I sort of have to wade thru the subjective ramblings in order to gather up the objective truths that I am re-minded of. At one point the doubter in my spiritual nature said... “Who is this guy Megré... how do I know he had these experiences, perhaps this is just Megré exercising his entrepreneurial skills”... But as I read on, the basic truths that were conveyed rang so true, all doubting fell away.

In my 71 winters on this planet my experience has been that when basic truths have come to me they sort of ring true deep in the core of my heart as opposed to beliefs or theories that register in my brain and have to be learned and remembered... The information in these books doesn't need to be proven or investigated... you just know, it's the knowledge you originally came here with... that you once knew and over time, forgot... As I read on I find myself saying out loud... “Oh Yeah”... “That's Right”... “I remember That”... “That's What I Always Felt”... “Of Course”...

These books are like service manuals for maintaining and living one's life in a good way, they spark long lost, forgotten memories of the original plan... indications on how man is to live his life on this planet in a perfect way, the original plan designed to result in the ongoing experience joy and happiness.

I do believe that we are here to experience pleasure and

entertainment... that's not a bad thing... it's just what pleasure and entertainment have currently evolved to that's the problem...

On one hand one may be... quietly resting under a giant cedar at dawn witnessing the planet comin' alive... and on the other... there is gazing at this glass screen compulsively typing away... Hmm? Respectfully,

— *Avid*

*Anastasia* and subsequent volumes tell the story of a return of mankind to a state of grace through love, actualizing real love to everything around us and keeping our thoughts, hearts, minds in the place of love, touching with love the earth and celebrating the God's creation through loving it and caring for it. I think the most important lesson for us is to move back to the work of the Creator and away from ways which destroy it. That is what I take from the Series and find myself inspired to work harder and being joyous, thankful and loving.

In my own life, our family works toward goals that aren't measured in dollars, which is a much richer life than working for material wealth. We have a certified organic and wild crops farm, so I am very receptive to the medicines of the earth and see the importance of people interacting in a healing way with God's Creation — the earth. In a very humble way, our work with native plants on our farm could be seen as demonstration of a way people can take some of the Ringing Cedars ideas and put them to work.

I think if people find a larger purpose for their lives than collecting material goods, everyone will be happier rediscovering the scope of humanity's tools from the Creator. The Ringing Cedars books help with explaining ways to have a richer life, raise healthier children, filling one's heart rather than one's pockets. I do not agree with everything written, and many people will find ideas threatening. Yet if we don't discover new ways of being human beings and put them to work, if we don't have a spirit rich enough to live with love and respect for God's creations, we have no future.

— *Penny Frazier, Missouri, USA*

As a 75 year-old American who finished the third *Anastasia* book by Vladimir Megré, *The Space of Love*. I am in the process of digesting its substance.

The American must pick up and go to a place that Vladimir Megré shows him. Megré shows him wonders. But those expecting wonders to be valid only if found on American soil will be taken aback to learn they are in a land that rarely thinks of the *New World*.

Anastasia's Siberian taiga is a land that measures history in millennia instead of decades. There, Vladimir meets those who have a mystical affection for their country and culture. He finds values resting on rock-solid Christian principles not bearing Christian labels. They are values descending from ancient insights, approved by generations faithful to the soil of their forebearers. Their love for *Mother Russia* is a love not understood even by the most patriotic American.

Christians will recognize much from the *Old Testament* as well as from the *New*, especially *Isaiah*, Chapter 11. This is not to say the *Anastasia* Series promotes or detracts from that teaching. Instead, it parallels and edifies. The Christian emerges with his faith firmer and a respect for Megré's *Anastasia*.

After three books, I am digesting, and there are moments when my credulity vanishes. Then, lines appear that can have been written *only* to me. Then my unbelief is overturned. It is like the story of Lazarus. I believe, but help my unbelief! Coincidences are endless.

— *Gallagher Rule, Ponca City, Oklahoma, USA*

I am very touched by the energy that the books carry (hard to put into words). A new awareness of who I AM and how I can more deeply connect with my / All That IS Light and Life within.

I'm having fun with a little planting and the energies connected with that action.

NO QUESTION for me that the book's story and message is TRUE. But I am grateful for the powerful Seeds sown in the readers who may not be able to perceive its truth on their first reading. Blessing to you and your ministry of getting this Series out to the (in near future) Millions of English Readers.

— *Linda, Virginia, USA*

Thank you for publishing these wonderful books! to read them has been an amazing experience for me and my life has changed since then. I have now moved and started to grow my own garden. For a city girl like me it is quite a challenge... but so rewarding. I was just admiring the first sprouts this morning, thinking of Anastasia...

— *Virginie, Germany*

A friend has lent me Book One and it's rearranging my cells. So lovely. I've been on a spiritual path for decades, and what I'm getting both confirms and deepens my understanding. My garden is especially happy! Thank you for making these available. Blessings.

— *Holly, Portland, Oregon, USA*

When I embark on a new learning experience such as reading Book One, *Anastasia*, I am interested certainly in gaining new knowledge and of course in discovering new perspectives on consciousness and life in general. And on those two fronts, I will say that what I have absorbed from *Anastasia* by all means fulfills my interests.

However, there is an added, rather magical quality to the experience of getting to know *Anastasia* that I do not recall ever experiencing without being in someone's actual physical presence. It was not so much a book that I read but rather reading the book allowed me to meet a truly remarkable being whose love is beyond measure. In fact, her love is beyond what I could ever imagine a human being could experience. She has added to the depth and breadth of my beingness beyond what knowledge alone could impart. She has added to the lustre of my soul with the song of her being.

I am deeply impressed by her attention to the importance of everything. She notices the grandiosity of God's Vast & Wonderful Creation in even the smallest detail, even details I have never noticed as having anything to do with the vastness of Love in action. I take from this, my first reading of Book One, a profoundly deeper sense of the sacred in every living detail occurring all around me as well as in every detail of possible discovery within me.

— *Garrett, Colorado, USA*

## THE RINGING CEDARS SERIES AT A GLANCE

*Anastasia*, the first book of the Ringing Cedars Series, tells the story of entrepreneur Vladimir Megré's trade trip to the Siberian taiga in 1995, where he witnessed incredible spiritual phenomena connected with sacred 'ringing cedar' trees. He spent three days with a woman named Anastasia who shared with him her unique outlook on subjects as diverse as gardening, child-rearing, healing, Nature, sexuality, religion and more. This wilderness experience transformed Vladimir so deeply that he abandoned his commercial plans and, penniless, went to Moscow to fulfil Anastasia's request and write a book about the spiritual insights she so generously shared with him. True to her promise this life-changing book, once written, has become an international bestseller and has touched hearts of millions of people world-wide.

*The Ringing Cedars of Russia*, the second book of the Series, in addition to providing a fascinating behind-the-scenes look at the story of how *Anastasia* came to be published, offers a deeper exploration of the universal concepts so dramatically revealed in Book 1. It takes the reader on an adventure through the vast expanses of space, time and spirit — from the Paradise-like glade in the Siberian taiga to the rough urban depths of Russia's capital city, from the ancient mysteries of our forebears to a vision of humanity's radiant future.

*The Space of Love*, the third book of the Series, describes author's second visit to Anastasia. Rich with new revelations on natural child-rearing and alternative education, on the spiritual significance of breast-feeding and the meaning of ancient megaliths, it shows how each person's thoughts can influence the destiny of the entire Earth and describes practical ways of putting Anastasia's vision of happiness into practice. Megré shares his new outlook on education and children's real creative potential after a visit to a school where pupils build their own campus and cover the ten-year Russian school programme in just two years. Complete with an account of an armed intrusion into Anastasia's habitat, the book highlights the limitless power of Love and non-violence.

*Co-creation*, the fourth book and centrepiece of the Series, paints a dramatic living image of the creation of the Universe and humanity's place in this creation, making this primordial mystery relevant to our everyday living today. Deeply metaphysical yet at the same time down-to-Earth practical, this poetic heart-felt volume helps us uncover answers to the most significant questions about the essence and meaning of the Universe and the nature and purpose of our existence. It also shows how and why the knowledge of these answers, innate in every human being, has become obscured and forgotten, and points the way toward reclaiming this wisdom and — in partnership with Nature — manifesting the energy of Love through our lives.

*Who are we?* — Book Five of the Series — describes the author's search for real-life 'proofs' of Anastasia's vision presented in the previous volumes. Finding these proofs and taking stock of ongoing global environmental destruction, Vladimir Megré describes further practical steps for putting Anastasia's vision into practice. Full of beautiful realistic images of a new way of living in co-operation with the Earth and each other, this book also highlights the role of children in making us aware of the precariousness of the present situation and in leading the global transition toward a happy, violence-free society.

*The book of kin*, the sixth book of the Series, describes another visit by the author to Anastasia's glade in the Siberian taiga and his conversations with his growing son, which cause him to take a new look at education, science, history, family and Nature. Through parables and revelatory dialogues and stories Anastasia then leads Vladimir Megré and the reader on a shocking re-discovery of the pages of humanity's history that have been distorted or kept secret for thousands of years. This knowledge sheds light on the causes of war, oppression and violence in the modern world and guides us in preserving the wisdom of our ancestors and passing it over to future generations.

*The energy of life*, Book Seven of the Series, re-asserts the power of human thought and the influence of our thinking on our lives

and the destiny of the entire planet and the Universe. It also brings forth a practical understanding of ways to consciously control and build up the power of our creative thought. The book sheds still further light on the forgotten pages of humanity's history, on religion, on the roots of inter-racial and inter-religious conflict, on ideal nutrition, and shows how a new way of thinking and a lifestyle in true harmony with Nature can lead to happiness and solve the personal and societal problems of crime, corruption, misery, conflict, war and violence.

*The new civilisation*, the eighth book of the Series, is not yet complete. The first part of the book, already published as a separate volume, describes yet another visit by Vladimir Megré to Anastasia and their son, and offers new insights into practical co-operation with Nature, showing in ever greater detail how Anastasia's lifestyle applies to our lives. Describing how the visions presented in previous volumes have already taken beautiful form in real life and produced massive changes in Russia and beyond, the author discerns the birth of a new civilisation. The book also paints a vivid image of America's radiant future, in which the conflict between the powerful and the helpless, the rich and the poor, the city and the country, can be transcended and thereby lead to transformations in both the individual and society.

*Rites of Love* — Book 8, Part 2 (published as a separate volume) — contrasts today's mainstream attitudes to sex, family, childbirth and education with our forebears' lifestyle, which reflected their deep spiritual understanding of the significance of conception, pregnancy, homebirth and upbringing of the young in an atmosphere of love. In powerful poetic prose Megré describes their ancient way of life, grounded in love and non-violence, and shows the practicality of this same approach today. Through the life-story of one family, he portrays the radiant world of the ancient Russian Vedic civilisation, the drama of its destruction and its re-birth millennia later — in our present time.

*To be continued...*

**THE AUTHOR, Vladimir Megré**, born in 1950, was a well-known entrepreneur from a Siberian city of Novosibirsk. According to his account, in 1995 — after hearing a fascinating story about the power of ‘ringing cedars’ from a Siberian elder — he organised a trade expedition into the Siberian taiga to rediscover the lost technique of pressing virgin cedar nut oil containing high curative powers, as well as to find the ringing cedar tree. However, his encounter on this trip with a Siberian woman named Anastasia transformed him so deeply that he abandoned his business and went to Moscow to write a book about the spiritual insights she had shared with him. Vladimir Megré now lives near the city of Vladimir, Russia, 190 km (120 miles) east of Moscow. If you wish to contact the author, you may send a message to his personal e-mail [megre@online.sinor.ru](mailto:megre@online.sinor.ru)

**THE TRANSLATOR, John Woodsworth**, born in Vancouver (British Columbia), has over forty years of experience in Russian-English translation, from classical poetry to modern short stories. Since 1982 he has been associated with the University of Ottawa in Canada as a Russian-language teacher, translator and editor, most recently as a Research Associate and Administrative Assistant with the University’s Slavic Research Group. A published Russian-language poet himself, he and his wife — Susan K. Woodsworth — are directors of the Sasquatch Literary Arts Performance Series in Ottawa. A Certified Russian-English Translator, John Woodsworth is in the process of translating the remaining volumes in Vladimir Megré’s Ringing Cedars Series.

**THE EDITOR, Leonid Sharashkin**, is writing his doctoral dissertation on the spiritual, cultural and economic significance of the Russian *dacha* gardening movement, at the University of Missouri at Columbia. After receiving a Master’s degree in Natural Resources Management from Indiana University at Bloomington, he worked for two years as Programme Manager at the World Wide Fund for Nature (WWF Russia) in Moscow, where he also served as editor of Russia’s largest environmental magazine, *The Panda Times*. Together with his wife, Irina Sharashkina, he has translated into Russian *Small is beautiful* and *A guide for the perplexed* by E.F. Schumacher, *The secret life of plants* by Peter Tompkins and Christopher Bird, *The continuum concept* by Jean Liedloff and *Birth without violence* by Frederick Leboyer.

# The Space of Love

Spirituality / Childrearing / Nature

## Book 3 of The Ringing Cedars Series by V. Megre

"Full of ecological common sense and profound wisdom, The Ringing Cedars Series reveals a genuine spiritual path to a world where Love is the primary creative force behind real physical events. It shows how our thoughts and lifestyles affect the destiny of the whole planet and guides us in creating a space for happiness and Love for ourselves, our children and our Earth."

— Dr Richard Bolstad, author of *RESOLVE: A New NLP Model of Therapy*

Anastasia herself has stated that this book consists of words and phrases in combinations *which have a beneficial effect on the reader*. This has been attested by the letters received to date from thousands of readers all over the world.

If you wish to gain as full an appreciation as possible of the ideas, thoughts and images set forth here, as well as experience the benefits that come with this appreciation, we recommend you find a quiet place for your reading where there is the least possible interference from artificial noises (motor traffic, radio, TV, household appliances etc.). *Natural sounds*, on the other hand — the singing of birds, for example, or the patter of rain, or the rustle of leaves on nearby trees — may be a welcome accompaniment to the reading process.

**Ringling Cedars Press** is an independent publisher dedicated to making **Vladimir Megré's** books available in the beautiful English translation by **John Woodsworth**. Word of mouth is our best advertisement and we appreciate your help in spreading the word about the Ringling Cedars Series.

## CHAPTER ONE

# All this exists right now!

“I shall tell you about *co-creation*, Vladimir, and then everyone will be able to provide an answer to his own questions. Please listen carefully, Vladimir, and write about the Creator’s great co-creation. Listen and try to understand with all your Soul the aspirations of the Divine dream.”

After uttering these words, Anastasia fell into a silent distraction. She looked at me but said not a word. Her distraction was probably due to her feeling or noticing in my facial expression signs of incredulity in what she might have to say about Co-creation, about God.

But really, how could I — or anyone else, for that matter — not entertain at least some measure of incredulity? What could not this passionate recluse dream up next?! She doesn’t have any historical proofs to offer. If anyone can talk convincingly about the past, then surely that would be the historians and archaeologists. And there’s lots of talk about God in the Bible and in the books of other denominations. In all kinds of books. Only for some reason, when they talk of God, they can’t seem to agree. Might not that be on account of the fact that nobody has any convincing proofs?

“There *are* proofs, Vladimir,” Anastasia suddenly broke in confidently and excitedly in answer to my silent question.

“And where are they?”

“All the proofs, all the truths in the Universe are preserved for ever in every human soul. Lies and falsehoods cannot survive for any length of time. They are exposed by the soul. That is why so many different kinds of religious treatises are

thrown at Man.<sup>1</sup> Lies constantly need new disguises to survive. And that is why mankind is constantly changing its social structures, trying to find in them the truth it has lost, yet only distancing itself from the truth even more.”

“But who has proved, and how, that each one contains the truth within? In Man’s soul or any other part? And if it is indeed there, then why does it stay hidden?”

“On the contrary, not a single day goes by but in the sight of each one of us the truth strives to bring itself out. Life around us is eternal and it is through the truth that eternal life comes about.”

Anastasia quickly pressed the palms of her hands to the ground, ran them over the grass and then held them out to me.

“Look, Vladimir, perhaps these will dispel your doubts once and for all.”

I looked, and saw in her outstretched hands seeds of grass, a small cedar nut, and some sort of bug crawling. I asked her:

“And what does all this mean? The nut, for example?”

“Look, Vladimir, such a tiny wee kernel, and yet if you plant it in the ground, it grows into a majestic cedar. Not an oak, not a maple, not a rose, but only a cedar. The cedar in turn gives birth to a kernel just like this, and it will contain, just as the very first one did, all the information about its pristine origins. And if millions of years ago or millions of years from now a kernel like this makes contact with the earth, still, only a cedar will sprout out of the ground. In it, in every kernel of God’s perfect creation, all possible information has been fully implanted by the Creator. Millions of years may go by, but

<sup>1</sup>*Man* — Throughout the Ringing Cedars Series, the word *Man* with a capital *M* is used to refer to a human being of either gender. For details on the word’s usage and the important distinction between *Man* and *human being* please see the Translator’s Preface to Book 1.

the Creator's information will never be erased. And Man, the apex of creation, has been given everything by the Creator at the moment of co-creation. All truths and all future achievements have been inculcated by the Father, inspired by a grand dream, in His beloved child."

"Well then, how do we attain that truth, in the final analysis? From somewhere within ourselves? From our kidneys, our heart or our brain?"

"From our feelings. You should try to determine the truth with your feelings. Trust yourself to them. Free yourself from mercenary dogmas."

"Well, okay, if you know something, say it. Perhaps somebody will be able to understand you with their *own* feelings. What is God, for example? Can scholars draw a portrait of Him with some kind of scientific formula?"

"A scientific formula? A formula would extend many times around the Earth, and when it stopped, another would be given birth. God is no less in worth than what can be born in one's thought. He is the firmament and the empty space, and that which cannot be seen. There is no sense in trying to understand Him with the mind, however keen. Take all the formulas on the Earth and all the information in the Universe as a whole and squeeze them into the tiny kernel of your soul and turn them into feelings, and let your feelings then unfold."

"But what am I supposed to feel? Talk in terms more simple, clearer and more real."

"Oh, help me, God!" Anastasia pleaded. "Help me with the creation of a worthy image out of today's word combinations."

"Well now, not enough words, eh? Why don't you go take a look at a dictionary? It's got all the words people use today."

"All the words available *at the moment*. But modern books do not contain the words your forefathers used to describe God."

“Are you talking about Old Church Slavonic<sup>2</sup> words?”

“And even earlier. Before the Old Church Slavonic alphabet was invented, there was a means by which people set down their thoughts for their descendants.”

“What are you talking about, Anastasia? Everyone knows that our proper writing system came from two Orthodox monks. Their names were... something, I can’t remember.”

“Cyril and Methodius, perhaps, you have in mind?”

“Yes. They created our kind of writing system, after all.”

“It would be more accurate to say: they *changed* the writing system of our forefathers and foremothers.”

“What d’you mean, they ‘changed’ it?”

“They were following orders. To make sure the culture of the Slavs would be forgotten for ever. To make sure the remnants of knowledge of our pristine origins would disappear from human memory, and a new culture would be born, so that our peoples would subject themselves to different priests.”

“What have writing systems and a new culture got to do with that?”

“Suppose children today were taught to speak and write a foreign tongue, and forbidden to express themselves in the one they already know. Tell me, Vladimir, how would your grandchildren learn about events of our present day? In people deprived of a knowledge of the past it is easy to inculcate new teachings, simply by treating them as important. And

<sup>2</sup>*Old Church Slavonic* — a literary language developed from the Slavic dialect used by two monks named Saints Cyril [*Kirill*] and Methodius [*Meftodii*], who first translated the Bible into a Slavic tongue in the 10th century A.D. and invented an alphabet (which many people identify as *Cyrillic*) wherein to write down their translation. It was used as the liturgical language of the Russian Orthodox Church up until the 12th century. Its present-day derivative is known simply as *Church Slavonic*, and is still used in Orthodox liturgy today.

they can tell them anything they like about their forebears. Once the language had gone, culture went along with it. That was the aim, at least. But those who formulated that aim were wholly unaware that the sprouts of truth remained unseen for ever in the human soul. All it takes is to drink in a single drop of dew so pure for the sprout to grow and mature. Look, Vladimir. Please, accept my words, and try to feel what lies behind them.”

As Anastasia spoke, she would either slow down her speech or quickly rattle off whole phrases at a time, or else suddenly fall silent for a moment, ponder something for a moment, and then pluck unfamiliar, drawn-out phrases literally out of the air. And occasionally a word or two I had never heard before would weave their way into what she was saying. But each time she said an unclear or unknown word, she seemed to give a start and replace it with a correct or more understandable variant. And it always appeared as though she were trying to prove something whenever she talked of God:

“Everybody knows Man is the image and likeness of God. But in what respect? Where are God’s characteristic traits within you? Have you ever thought of that?”

“No, not really,” I admitted. “Never had any occasion to. Why don’t you describe them yourself?”

“When a Man, exhausted after his daily cares, lies down to sleep, when he ceases to feel his weary body, his set of invisible energies and his ‘second self’<sup>3</sup> leave the body to some degree. And at that moment earthly limitations do not exist for them. They know no time or space. In less than a second, your consciousness crosses all the distances in the Universe. And your complex of feelings senses past and future events, analyses them, measures them against the present day and dreams on. All this means that Man feels the unfathomable

<sup>3</sup>‘second self’ — see Book 3, Chapter 15: “A bird for discovering one’s soul”.

Divine universal creation not only with his flesh. His God-given thought is at work creating afresh. Human thought alone is capable of creating other worlds or changing what has been created.

“Sometimes a person will cry out in their sleep when they are scared by something. Their complex of feelings, free from earthly cares, is frightened by events of the past or the future.

“Sometimes a person creates in their sleep. Their creations strive, quickly or slowly, to embody themselves in earthly form. And how ugly a form they take or how harmoniously they shine forth depends wholly or partly on the degree to which inspiration plays a role in their creations. On the degree to which all aspects are taken into account in all their accuracy and detail at the moment of creation. On the degree to which inspiration empowers your Divine ‘self’.

“In the whole Universe creation is something inherent in God alone, and in God’s son, Man.

“God’s thought serves as the principle of all. His dream is transformed into living matter so that it may be seen. And human actions are preceded by the human dream.

“The opportunities for creation are equal for all the people of the Earth. It is only that people use their opportunities in different ways. Here Man is accorded full freedom. And freedom he has!

“Tell me now, Vladimir, what kind of dreams do God’s children have today? You yourself, your friends and acquaintances, for example? For what purpose do they use their creative dreams? What purpose do *you* use them for?”

“Me? Hmm... how d’you mean, for what purpose? Just like everyone else, I’ve tried to make more money so I can somehow get my life on a solid footing. I got myself a car — several, in fact. Plus a lot of other things I need to get by — good furniture, for example.”

“And that is it? Is that all you have used your creative, God-given dream for?”

“That’s what just about everyone uses it for.”

“For what?”

“For money! How can you live without money? To have a decent set of clothes to wear, to eat a little better, buy things, get something to drink. What could be clearer than that? And you ask what for!”

“Something to eat, something to drink — you realise, Vladimir, that all this has been given to everyone in abundance, right from the very beginning.”

“Given? Well, then, where did it disappear to after that?”

“Think for yourself: where might it have gone?”

“Well, I would imagine the original clothing simply got ragged and worn out, and the original food got eaten up æons ago. Times are different now, clothing fashions have changed, along with tastes for food.”

“Vladimir, God gave His son indestructible garments, and his food reserves are not the kind that can ever be exhausted.”

“So where’s all this today?”

“It has all been preserved, it exists right now.”

“Then tell me where. Where do I find the hiding-places where so many supplies are stored up even today?”

“You shall see. They shall be seen. Only look with your feelings. Only with your feelings will you be able to grasp the essence of the creation of God’s dream.”

## CHAPTER TWO

### The beginning of creation

“Picture what it was like in the very beginning. There was as yet no Earth. There was as yet no matter to reflect the light of the Universe. But still, even as now, the Universe was filled with a great multitude of diverse energies. Living energy elements thought in the dark, and created in the dark. They needed no external light-source. Within themselves, for themselves, they shone. And each contained everything — thought, feelings and the energy of aspiration. Yet still there were differences among them. In each one a single form of energy predominated. Just as now, the Universe included an element of destruction and an element which creates life. And other elements involved a multitude of various shadings, similar to human feelings. There was no way these elements of the Universe could come into contact with each other. Within each element multiple energies created movement — either languidly creeping or, all at once, lightning-swift on the spot. What was self-created within each one could also destroy itself on the spot. Their pulsations did not alter the Cosmos — visible they were not — and each considered that they were alone in space. Alone!

“Uncertain of their purpose, they were unable to bring about any lasting creation that might give satisfaction. And so in a time of stagnation without limitation there were these pulsations, but there was no overall motion or action of any kind.

“And all at once, as by an impulse, each element was touched by *communication!* All of them at once, throughout

the unfathomable Universe. Throughout those complexes of living energy one suddenly began illuminating the rest. Whether the complex was old or young could not be expressed in ordinary tongues. Whether it arose from the vacuum of space or from the spark of all the possibilities one could imagine is not important. Whatever its semblance, the resulting complex bore a most striking resemblance to Man! To Man who is still living today! It was similar to his second self. Not the material, but the eternal, sacred self. The living energy of its aspirations and dreams first began to lightly touch all elements in the Universe. And he alone was so fervent in his devotion that he was able to bring all sensations and feelings into locomotion. The sounds of communication began to resound through the Universe. And if the first sounds were to be expressed through translation into modern words, we would feel the sense of questions and answers. From all across the unfathomable Universe one question was uttered by all, addressed only to Him:

“What do you so fervently desire?” everyone enquired.

“And He, confident in His dream, replied:

“Conjoint creation and joy for all from its contemplation.”

“And what may bring joy to everyone in the Universe?”

“Birth!”

“The birth of what? Each one of us has been self-sufficient for as long as we can recall.”

“A birth in which will be included particles of all!”

“How is it possible to reunite in a single whole that which is all-destructive and all-constructive at the same time?”

“Through opposing forms of energy, after first bringing them into line, balancing them in one’s self, you see!”

“And, to achieve this, who so strong would there be?”

“Me.”

“But there is the energy of doubt. Doubt will attempt to decoy and destroy you, and the diverse multitude of energies

will tear you into tiny particles. No one can unite and hold opposites in a single whole.'

"But there is also the energy of confidence. When confidence and doubt are equal, they will facilitate exactitude and beatitude for future co-creation.'

"And how do you call yourself?'

"I am God. I shall be able to deploy particles of all your diverse energies within Myself. I shall stay great! I shall create! To the whole Universe creation shall bring forth joy!'

"From all quarters of the Universe all elements simultaneously released the multitude of their energies into Him alone. And each endeavoured to gain ascendancy over the rest, so that it alone might establish itself as supreme in its new home.

"Thus began the great struggle of all the forms of energy in the Universe. There is no measure of time or space to describe the scale of that struggle. Calm returned only when in each one's consciousness one fact gleamed: that nothing could be higher or stronger than the One energy of the Universe — the energy of the Divine dream.

"God possessed the energy of the dream. He was able to take in and compile all within Himself, bring all into balance, reconcile opposites and begin to create. And to create still within Himself. Indeed, in His creating of future creations still within Himself, He cherished each detail with speed on a measureless scale, and worked out the interrelationships with everything else for each and every creation. He did it all alone. Alone in the darkness of the unfathomable Universe. Alone he set into motion the diverse energies of the whole Universe. The uncertainty of the outcome frightened everyone and removed them a distance from the Creator. The Creator found Himself standing in empty space. And that empty space was expanding.

"A deathly cold appeared. Dank fear and alienation held sway around, while He alone beheld the awesome dawn of

each new day, heard the singing of birds, and breathed the sweet fragrance of the blossoming of the ground. With His fervent dream He alone unfolded His marvellous creations in their sheen.

“Stop!” they pleaded. ‘You are in empty space. You are going to explode! How do You contain the energy within Yourself? Nobody is helping You squeeze or contract, and now Your only course is to explode. But if You have a moment remaining, stop! You must act to gently release your creative energies.’

“And He replied:

“My dreams! I will not betray My pact with them! For them I will continue to contract and accelerate My energies, My powers. My dreams! In them I see the ants hurrying and scurrying across the grass, among the flowers. And the eagle in his bold ascent into the sky is teaching his young how to fly.’

“With His own unfathomable energy God accelerated in Himself the motion of all the diverse energies of the Universe as a whole. Inspiration squeezed them into a small kernel in His Soul.

“And all at once He sensed a touch. Everywhere, from all quarters in turn. He felt the burn of a new unfamiliar energy, and then it withdrew to warm Him with its warmth from a distance, filling all with some kind of new power. And all that was previously empty space suddenly began to radiate with grace. And the Universe resounded with new sounds, when God enquired with tender ecstasy:

“Who are you? What kind of energy are you?”

“And He heard the words of Music in reply:

“The Energy of Love and Inspiration am I.’

“A particle of you is within Me. It alone is able to restrain and cage the energy of disdain, hatred and rage.’

“You are God. Your energy — the dream of Your Soul — has been able to bring everything into the harmony of the

whole. And if my particle has been of assistance there, then hear me out, O God, and to help me be prepared.’

“What do you desire? Why have you touched Me with all the power of your fire?”

“I have realised that I am Love. I cannot remain simply a particle of... I desire to give my whole self to Your Soul. I know, so as not to disrupt the harmony of good and evil, You will not admit me as a whole. But I shall fill with myself the empty space around You. I shall warm with my cheer all the room within and around You. You shall not be touched by the cold of the Universe and its gloom — it shall not even come near.’

“What is going on here? What indeed? You have begun to shine even brighter!”

“I am not doing this alone. This is the presence of Your energy! Your Soul! It is only being reflected by me. Your reflected light comes back, back to your invisible Inner Self.’

“Aflame with courage and aspiration, God, inspired by Love, exclaimed:

“Everything is proceeding with acceleration. Everything is astir in Me. O, how marvellous is inspiration here above! And now let the dreams of My creation come to fruition in most radiant Love!”

## CHAPTER THREE

### The first appearance of *you*

“The Earth! The core of the whole Universe and the centre of everything appeared as the planet Earth loomed in sight! And all at once, along with it loomed the stars, the Sun and the Moon. The invisible creative light radiating from the Earth found its reflection in them.

“In the Universe a new plan of existence appeared for the first time! A material plan, and how it did shine!

“Up to the moment the Earth appeared, nobody and nothing possessed visible matter. While the Earth came into contact with everything in the Universe, it was an independent body, too.

“It was a self-sufficient creation. Things that lived all around, things that grew in the ground, things that swam in the sea and things that flew on high did not die or disappear somewhere. Even decomposition brought forth flies, and flies became food for other life, and everything fused together into a single magnificent life.

“In their excitement and astonishment all the entities of the Universe began looking to the Earth. The Earth came into contact with everything, but nobody was able to touch it.

“With God a sense of inner inspiration surged apace. And in the light of Love, which had filled the empty space, the Divine being changed its design, and took the form which in time became known as the human body.

“The Divine thought worked with no sense of speed or time. Indeed, it worked infinitely faster than all the diverse energies of thought and created with inspiration!

And again another creation which was still invisible, still within itself.

“All at once the illumination flared up, and the energy of Love gave a quiver of agitation, as if set aflame with its newly felt heat. And in joyous elation God exclaimed:

“Look, O Universe, look! Behold my son! Man! He stands upon the Earth. He is material! And in him are particles of all the diverse energies of the Universe. He dwells on all the planes of being. My image and likeness he is, and in him are particles of all your diverse energies... So love him! I urge you: love him!

“My son shall bring joy to all living on the Earth. He is creation! He is birth! He is all of all! He will create a new creation, and will transform into infinity his ever-repeating regeneration.

“When alone, or when infinitely multiplied, he emits invisible light, merging it into a whole, he will rule the Universe. He will endow everything with the joy of life. I have given him everything that is Mine, and will furthermore give him for his own all that may be thought at a future time.’

“Thus for the first time you stood alone on the splendid Earth,” Anastasia ended her narrative.

“Who are you talking about?” I queried. “About me?”

“About you, Vladimir, and about anyone who happens to see these lines you shall be writing down.”

“How so, Anastasia? There’s a complete disconnect here. How can all my readers stand on a spot where you say only one person was standing. And it talks about that in the Bible. There was just one Man at first — Adam, he was called. And you yourself said God created just one Man.”

“Quite correct, Vladimir. But look and see: it is from that one that we all have come. His particle, and the information contained therein, has been infused into all others who have

been given birth upon the Earth. And if your willing thought is ready to cast aside all your worldly cares, then all the feelings held up to now in that tiny particle will be felt. It has been there all along, and remembers everything. It is in you right now and in every Man living upon the Earth. Let it unfold, let yourself feel what you have seen, and you who are in turn reading these lines at the moment, you shall feel what you saw at the very beginning of your journey through time."

"Oh wow! Then is it true that everyone living today was there, on that Earth, right at the very beginning?"

"Yes. But on *this* Earth, not on 'that' one. It is only that the Earth looked different back then."

"And is there a single term by which we can be called?"

"You are probably more accustomed to hearing the name *Adam*? I shall use it, but picture it as referring to you. And let everyone picture themselves when they come across that name. I shall use some words to help in this."

"Yes, please do. For some reason I still have only a rather faint idea of how I might have appeared in those times."

"To make it easier, picture yourself as entering a garden on the border between summer and spring — a garden in which there are also the fruits of autumn. There are also beings here which you are seeing for the first time. It is hard to take everything in at one glance, when it is all so new and everything radiates perfection. But recall how you, Adam, saw your first flower and concentrated your thought upon it. On a very tiny flower.

"It was cornflower blue, the petals were smooth and made up of lines. The petals gently glowed, as though reflecting in themselves the light of the sky. And you, Adam, sat down beside the flower, admiring this creation. But no matter how long you looked at it, the flower's appearance was constantly changing. A breeze caressed the flower, making it sway on its slender stem, and the petals quivered under the Sun's rays,

changing the angle of reflection, giving new shadings to its tender hues. When the petals were not trembling in the breeze, they seemed to be waving to the Man in greeting, or moving in time to the music ringing in the soul. And the flower gave off a most delicate fragrance in its efforts to embrace you, the Man.

“All at once Adam heard a mighty roar and, rising, turned in the direction of the sound. In the distance an enormous lion was standing with his lioness. And the lion announced himself with his roar to everything around.

“Adam’s gaze became entranced by the lion’s stately and powerful stance, crowned by a bushy mane. No sooner had the lion spied Adam than the creature bounded toward him with mighty steps, the lioness right behind him. Adam could not help but be impressed by the play of their powerful muscles. Three metres from the Man the creatures came to rest. Man’s gaze caressed them, a feeling of delight was emanating from the Man, while the lion, sensing the gentle calm, settled to the ground in delight. The lioness lay down beside him, keeping perfectly still so as not to interfere with the warm and gracious light emanating from the Man.

“Adam ran his fingers through the lion’s mane, examined and touched the claws of his mighty paws, put his hand on his great white fangs and smiled when the lion purred with delight.”

“Anastasia,” I couldn’t help asking, “what kind of light first emanated from the Man to stop the lion from tearing him apart? And why is there no such radiance today? Nobody emits light that way today.”

“Vladimir, have you not noticed what a huge difference there is even today? Man’s gaze distinguishes all that is earthly — the little blades of grass and flowers, the wild beasts and the rocks with sluggish thinking. It is curious, mysterious, full of unexplained power. Man’s gaze can be calming. And yet it can also wrap all living creatures in the cold of destruction.

Tell me, has it ever happened that you have been warmed by someone's gaze? Or perhaps someone's eyes have caused you inner discomfort?"

"Yes, it's happened. You can actually feel someone watching you. You can feel a pleasant gaze, or one that is not so pleasant."

"There, you see... that means you too know that a calming gaze will create a sense of warmth within you. And that an opposite gaze will bring a feeling of cold and destruction. But Man's gaze was many times stronger during those first days upon Earth. The Creator saw to it that all life aspired to be warmed by this gaze."

"And where has all the strength of Man's gaze gone now?"

"It has not all gone. Enough of it is still around, but vanity, superficial thinking, a different speed of thought, a misapprehension of basic concepts and apathy have darkened perception, and prevented it from opening up to what everybody expects of Man. Inside each one of us a warm heart abides. Oh, if only each one of us could open it wide to everything! All reality could then be transmogrified into a magnificent pristine garden."

"Is this possible with everyone? Just as in the beginning with Adam? Could something like that actually transpire?"

"Everything may be born, which is to what human thought, merging from all into one, aspires.

"When Adam was alone, the power of his mind was equal to what today is found in all mankind."

"Aha! That's why the lion was afraid of him!"

"The lion was not afraid of the Man, not a trace. The lion was bowing before the light of grace. All life aspires to know this grace, which Man alone is capable of creating. For this all life, and not only upon the Earth, is ready to perceive Man as a friend, a brother, a god. Parents always strive to instil in their children all the very best abilities. Only parents sincerely want their children's abilities to exceed their own. The

Creator has wholly given Man — His son and creation — all to which He Himself aspired in a burst of inspiration. And if all are able to understand that God is perfect, then may all feel exactly who God the Creator planned to create His child to be — His beloved son, or Man. And how He feared no burden of responsibility, and how he undertook never to abandon His creation, having uttered the words that have come down to us over the millions of years: ‘He is My son, this Man. He is My image! My likeness!’”

“Does that mean that God wanted His son, His creation — Man, in other words, to be stronger than Himself?”

“All parents’ aspirations may be seen as a confirmation of this.”

“Well then, did Adam justify God’s hopes for him on his first day? What transpired after the meeting with the lion? What did he set about to do?”

“Adam aspired to know all living things. To define the name and the purpose or need for each living creature. Some of these were solved quickly, others he became involved with for quite a time indeed. For example, before the Sun set on the first day he was attempting to define the purpose of the brontosaurus, but here he did not succeed. And so the brontosaurus disappeared from the face of the Earth for all time.”

“Disappeared — why?”

“It disappeared because Man did not define its purpose.”

“That brontosaurus — is that the one that’s several times bigger than an elephant?”

“Yes, bigger than an elephant it was, and little wings it had, and a little head on a long neck that could spew flame out of its jaws.”

“Just like in a fairy tale. The folk tale about the Gorynych Serpent,<sup>1</sup> for example, which spewed fire, too. But that’s a fairy tale, not something real.”

“Sometimes folk tales tell about a past reality metaphorically, but sometimes they can be quite accurate.”

“Really? And just what would such a monster be made of? How could fire come out of the jaws of a real living creature? Or is the fire to be taken metaphorically? Let’s say, for instance, to portray a monster breathing hatred?”

“The huge brontosaurus was good, not evil. Its huge size served to compensate for its enormous weight.”

“How can its huge size serve to lighten its weight?”

“The more a hot-air balloon is filled with whatever is lighter than air, the lighter it is.”

“Well, what has that got to do with the brontosaurus? *It’s* not a hot-air balloon!”

“The brontosaurus was indeed an enormous living hot-air balloon. Its skeleton was constructed of very light-weight material, while its insides contained little in the way of organs. Just as with a balloon, its insides were empty, except they were constantly being filled with a gas that was lighter than air. With a leap and a flap of its wings, the brontosaurus actually managed to fly a bit. When there was an excessive build-up of gas, it breathed it out through its mouth. Flint-like fangs protruded from its jaws, and their friction could create a spark and ignite the gas welling up from its abdominal cavity, sending fire out of its mouth.”

“Hmm! But hold on there, hold on — just who kept filling it with gas?”

“Listen to me, Vladimir: the gas was produced all by itself inside as its food was being digested.”

“Impossible! Gas exists only in the bowels of the Earth. That’s where it is extracted from, then they use it to fill

---

<sup>1</sup>*Gorynytb Serpent* — a fire-breathing dragon in Russian folk tales, with as many as twelve heads, associated with fire and water, capable of flight, yet making its lair in caves and holes in the ground wherein to hide its captured treasure, including kidnapped princesses. *Gorynytb* literally means “son of a Mountain”, referring to its great size.

propane tanks or send it through pipes to people's kitchen stoves. But from food — is it really that simple?"

"Yes, Vladimir, it is really that simple."

"I can't believe in something that simple, neither will anyone else. And that means everything you've told me, for that matter, not just about the brontosaurus, but everything else too — nobody's going to believe it! So I shan't write about this."

"What is it, Vladimir? Do you think I am capable of being mistaken? Of lying?"

"Well, I don't know about the lying part, but you're definitely mistaken about the gas."

"I am not mistaken."

"Then prove it."

"Vladimir — do you not realise that your stomach, and other people's stomachs, produce the same kind of gas even today?"

"Impossible."

"You can prove it for yourself. Just take a match and light the gas when it comes out of you."

"What d'you mean, 'out of me'? Out of where? Where would I light the match?"

Anastasia broke out laughing and, still laughing, said:

"What are you, a little child? Think for yourself — it is a private experience."

I thought about this gas from time to time. And for some reason the thought began to eat away at me. And finally I decided to try the experiment. I tried it directly I returned from my visit with Anastasia. It worked! And now I think back even more vividly on what she said about Adam's first days — or, rather, *our* first days on the Earth. And I get the feeling that somehow we have forgotten to take with us today something from those days. Or maybe it was just me that forgot. That's something each one can decide for himself when he learns how Man spent his first day on the Earth. This is how Anastasia described it.

## CHAPTER FOUR

# The first day

“Adam was interested in everything. Each blade of grass, each intricate little bug, the birds in the sky above, and water. The first sight of a stream, its transparent running water sparkling in the Sun, filled him with wonder and admiration, and in it he could behold life in its infinite manifestations. When Adam bent down to touch the water, his hand was immediately embraced by the current which caressed all the folds of his skin and drew him in. Upon immersing himself in the water he found his body becoming lighter. The gurgling water supported him and comforted his whole body. Splashing the water in the air with his hands, he was delighted to see the play of the Sun’s bright rays in each and every drop, before the drops were once more received back into the stream. And it was with a great sense of delight that Adam drank the water from the stream. And before the Sun set he gladly contemplated, and bathed again, and meditated.”

“Hold on, there, Anastasia. You mentioned him drinking, but did Adam eat anything the whole day? What food did he eat?”

“All around him were a multitude of fruits with a variety of tastes, berries and edible grasses. But during those first days Adam felt no sense of hunger. He remained satisfied with fresh air alone.”

“With fresh air? But you can’t live on air. There’s even a saying about that.”

“One certainly cannot live on the air Man breathes today. Today’s air is dying, and is often harmful for one’s body and

soul. You mentioned the saying that one cannot live on air, but there is another saying: 'I have been fed by air alone', which corresponds to what was available to Man in the beginning. Adam was born in a marvellous garden, and the air surrounding him did not contain a single harmful particle. Pollen had been dissolved into that air, along with drops of purest dew."

"Pollen? What kind of pollen?"

"Pollen from flowers and grasses, from trees and fruit, which diffused fragrances into the air. Some came from those close by, while breezes brought others from distant places. Back then Man was not distracted from his great works by any problems of finding food. He was fed by everything around him through the air. This was the way it was all designed by the Creator right from the very beginning, so that all life on Earth should strive to please Man, and the air and the water and the breeze would be life-giving, under the impulse of love."

"You're right about one thing: air can be very harmful, but Man invented the air conditioner. It purifies the air of dangerous particles. And people sell mineral water in bottles. So, you see, the problems of air and water have been solved – at least for the many people who aren't poor."

"Alas, Vladimir, the air conditioner does not solve any problems. It keeps back harmful particles, yes, but the air continues to die. The water preserved in air-tight bottles dies for lack of fresh air. All it does is feed the old cells of the body. For new birth, so that the cells of your body may constantly renew themselves, *living* air and water are needed."

## CHAPTER FIVE

### Problems confirming the perfection of life

“Adam had all that?” I asked in amazement.

“Yes, he did! This is why his thought moved so quickly. In a relatively short period of time he was able to define everything’s purpose. One hundred and eighteen years swept by like a single day.”

“A hundred and eighteen years! Adam lived all by himself to such a ripe old age?”

“All by himself lived Adam, the first Man, caught up in all sorts of interesting projects. A hundred and eighteen years did not bring him age, but a blossoming of life.”

“Well, a person’s pretty old at a hundred and eighteen — he’s known as an ‘old-timer’, at the mercy of all sorts of diseases and ailments.”

“That might be so now, Vladimir, but back then Man was not troubled by diseases. Every one of his cells enjoyed a longer span of life, and if a cell became weary, that meant it was destined to die, but right away a new cell, full of energy, appeared in its place. Man’s body was able to live as many years as his spirit or soul wished.”

“And how come the Man of today can’t wish himself to live a little longer?”

“By his moment-by-moment actions he is cutting short his lifespan, and death is something thought up by Man.”

“What do you mean, ‘thought up’? Death comes all by itself. Against Man’s will.”

“When you smoke tobacco or drink alcohol, when you drive

into a city which pollutes the air with the stench of burning fumes, when you use lifeless food and let yourself be eaten away by bitterness, tell me, Vladimir, who, if not yourself, is hastening your death?"

"Well, that kind of life is pretty common for everyone today."

"But Man is free to choose. Everyone builds his own life for himself and determines his lifespan moment by moment."

"So, you're saying that back then, in paradise, there weren't any problems?"

"Problems, if they arose at all, were resolved not in a harmful direction, but in such a way as to confirm the perfection of life."

## CHAPTER SIX

### First encounter

“One day when he was a hundred and eighteen years old, Adam did not become excited with the Spring upon waking with the dawn. And he did not rise, as he usually did, to greet the Sun’s brightening rays.

“Above him astride a leafy branch the nightingale trilled his song. But his singing only made Adam turn over on his other side.

“Before his eyes Spring filled space with a quiet tremolo, the gurgling stream called out to Adam in his bed, while swallows made sport overhead. Fanciful clouds heralded each new unfolding scene. From grasses, flowers, bushes and trees the gentlest fragrance rushed to embrace the Man. Oh, how God wondered then what was taking place! Amidst Spring’s resplendent glory, under the deep-blue skies of his earthly creation, his son, the Man, had become sorrowful and despondent. His beloved child dwelt not in gladness but in sadness. Could any scene be more agonising for a loving father?

“One hundred and eighteen years on, long after creation, the dormant throng of Divine energies suddenly swarmed into motion. The whole Universe listened in shocked surprise. Such acceleration as had never been seen before glistered in the aura of the energy of Love, so intensely that all life caught the sense at once: a new creation had been thought of by God. But what could possibly be originated after creation had already reached the limit of inspiration? This was something that surpassed all comprehension. And still God’s thought kept growing in acceleration. And the Energy of Love whispered in muted tones:

“Once more You have set everything in inspired motion. Your universal energies are setting space on fire. How is it that You do not explode or consume yourself in such fervour and desire? Where are You heading? To what are You aspiring? I no longer shine with Your light. Look, O my God, I burn with Your essence, I turn planets into stars. Stop! You have already created all the best. Stop, and Your son’s grief will evanesce, it will disappear. Stop, O my God!”

“But God did not hear the plea of Love. And paid no attention to the jeers of the elements of the Universe. Like a young and enthusiastic sculptor, He continued accelerating all the diverse energies in motion. And all at once, a dawn of never before imaginable beauty burst forth, delineating itself through the vast unfathomable Universe, and all creation gasped, and God Himself whispered in exultation:

“Behold, O Universe, behold! Behold my daughter stands amidst the created creatures of the Earth! How perfect her features are, the finest by a thousandfold! She shall be worthy of My son. A creation more perfect than hers will never come. In her is the image and likeness of Me, each particle of yours in her will always be — so love her with a love so pure and free!

“She and he! My son and daughter shall bring extended joy to every living thing! And shall build on every plane of being resplendent universal worlds!”

“From the little hill, over dew-washed grass, on the festive day in the Sun’s morning ray the maiden to Adam came. With a pace full of grace and a form so slender, the bends of her body smooth and tender, in the hues of her skin there shined the light of the dawn Divine. Closer and closer she neared. And then she appeared! In front of Adam, reclining on the grass, the maiden arose.

“The breeze smoothed out her golden braids, her forehead to expose. The Universe held its breath, completely awed. O, how beauteous is her face — Thy creation, O God!

“Adam, reclining on the grass, glanced up at the maiden who had appeared beside him, gave a yawn, turned away and closed his eyes.

“All the elements in the Universe then heard — no, not words — they heard how listlessly Adam reacted in his thought to the new creation of God:

“‘Well, there it is, yet another creation of some kind has come to mind. It is nothing new, you see, just another entity that looks something like me. Horses have joints in their knees more supple and sturdy than these. The leopard has skin so much brighter and livelier to please. And what’s more, she arrived without invitation, on the very day I was going to offer the ants a new designation.’

“And Eve, standing a while beside Adam, went over to a pool in the stream, sat down on the bank by the bushes and caught a gleam of her reflection in the still, cool water.

“And the elements of the Universe began to intone their murmurings, and their thoughts merged into one: ‘Two perfections have not managed to achieve an appreciation of each other. There is no perfection in God’s creation.’

“And only the energy of Love, alone amidst the murmurings of the Universe, tried to protect the Creator with itself. God was enveloped in its radiance. Everybody knew: never had the energy of Love involved itself in rationalisation. Unseen and unheard, it was ever wandering apace through the unfathomed reaches of space. But why was it now, so totally and with no retention, encircling God again with its radiance? Paying no attention to the intonings of the Universe, here it was, warming and comforting through its radiance alone.

“‘You can rest, O Great Creator, and impart Your education into the heart of Your son. You will be able to adjust and correct any of Your illustrious creations.’

“In reply the Universe heard words, in which it recognised the wisdom and majesty of God:

“My son is the image and likeness of Me. He includes in himself particles of all the diverse energies of the Universe. He is Alpha and Omega. He is creation! He is the realisation of the future! Henceforth and for all time still to come neither I nor anyone else shall be able to change his destiny without his will. All that he wills for himself will be allowed to him. Whatever he conceives, provided it is not conceived in vanity, will turn into reality. My son did not bow before the sight of the maiden’s fleshly perfection. Much to the amazement of the whole Universe, he was not amazed by her. Still not consciously aware, My son has sensed all through his feelings. In the first place he sensed that in him something was amiss. And the new creation standing before him — the maiden — did not possess this. My son! My son, through his feelings, senses the whole Universe, he knows everything the Universe possesses.’

“A question filled the whole Universe:

“‘What can possibly be missing from one in whom all the diverse energies of ours and Yours exist?’

“And God answered them all:

“‘The energy of Love.’

“And the energy of Love flashed with flame:

“‘But I am alone, and I am Your very own. I shine by You alone.’

“‘Yes! You are alone, My love,’ the Divine words proclaimed in reply. ‘Your shining light both shines and caresses, My love. You are inspiration. You are able to give everything an acceleration, you accentuate sensations and you are the reconciliation of peace, My love. I beg of you, descend to the Earth in your totality, leaving nothing in its former place. Surround and enfold these My children in yourself, the energy of boundless grace.’

“This farewell dialogue of Love and God heralded the beginning of all earthly love.

“‘My God,’ Love called out to the Creator. ‘When I leave, You will be alone, unseen, for ever, dwelling on all the planes of being. You will be invisible.’

“‘May My son and My daughter henceforth shine through the Inner, the Outer and the Order.’”

“‘My God, around You will be empty space. There will never be a place where the life-giving warmth can penetrate to Your Soul. Without this warmth Your Soul will become cold.’

“‘Not for Me alone, but for all life may this warmth emanate from the Earth. My sons and daughters will multiply this radiated Love. And the whole Earth will glow with the warmth of Love shining throughout space. All will feel the light of grace emanating from the Earth, and all My diverse energies will be warmed by its might.’

“‘My God, a great variety of paths are exposed to Your son and daughter. In them remain the diverse energies of all the planes of being. And suppose just one of those energies decides to hold sway over the rest, and leads them astray, what can You do, seeing You have thought to give everything away, when You find the energy shining from the Earth start to weaken and fade to naught? You have given everything away, and yet You see how on the Earth the energies of annihilation hold sway over all. Your own illustrious creations are covered with a lifeless crust, and the grass is smothered with stones. What will You do then, what can be done, seeing You have given complete freedom to Your son?’

“‘As a green blade of grass I shall be able to break through among the stones anew, and unfold the petals of a flower in a

<sup>1</sup> *the Inner, the Outer, the Order* — an approximation of the ancient Slavic terms *Nav*, *Yav* and *Prav*, respectively. *Nav* signifies *inner* spiritual reality, the invisible foundation of the *outer*, or visible, material reality (*Yav*), while *Prav* (from a Slavic root word signifying ‘right’ or ‘true’) refers to the *order* governing the *Nav* and *Yav* and the relationship between them.

small and untouched glade. My earthly daughters and sons will be able to realise their purpose.'

"My God, when I leave, You will not be by any eye perceivable. It is conceivable that elements of other energies will begin to speak through people in Your name. Some may try to proclaim themselves rulers over others, abusing Your essence for their own interests, saying: "I speak in God's place, I am His chosen one, everybody listen to me." What will You be able to do in such a case?"

"I shall come up as the dawn at the inception of the oncoming day. By caressing all creations on the Earth without exception, the rays of the Sun will help My daughters and sons understand that each one in their own soul can hold conversation with My Soul.'

"My God, many of them will there be, a great sum, and You are alone as one. And all the elements of the Universe will be eager to capture Man's soul. Just to use Man to establish their sway over all through the energy they possess. And Your errant son will suddenly start to pray to them.'

"There will still be a major obstacle to any attempt, no matter what its form, to lead people awry or lead them into empty space, and this will be a barrier to anything based on a lie. Within all My sons and daughters there is a striving for a conscious awareness of truth. A lie is invariably bound within limits, but truth is unlimited — it will be forever found in the conscious awareness of My sons' and daughters' soul!

"O my God! no one and nothing is able to fight or even stand against the flight of Your thought and dreams! They are marvellous! I shall willingly follow them. I shall warm Your children with my radiance and shall perform this service for ever. The inspiration You have given them will help them undertake their own creations. I have only one request to make of You, my God. Allow me to leave just one spark of my love with You.

“When You are obliged to dwell in darkness, when You are surrounded by nothing but empty space, when oblivion weakens the light from the Earth, then may this spark of my love, even though it seem but a single spark, shine for You with its gleam.’

“O, Vladimir!” Anastasia exclaimed. “If only Man living to-day could look up to the skies and see what was way above the Earth back then, what a great vision would grace the scene before his eyes! The light of the Universe, the energy of Love, compressed into a comet, hastened toward the Earth, illuminating the still lifeless planets along its course and lighting up the stars above the Earth. Yes, it was indeed heading toward the Earth! Closer, ever closer, it came. And there it was. And all at once, it came to rest over the Earth itself, and the radiance of Love began to resonate. And far away, among the shining stars, one star, smaller than all the rest appeared to be moving. It was hastening to follow the radiance of love on its earthward path. And then Love realised that here was its last little spark from God, and even it was on its way to the Earth.

“My God!’ whispered the radiance of Love. ‘But why? I do not understand. But why? You have not left even a single spark for Yourself?’

“To the words of Love, out of the darkness of the Universe, God, already perceivable by no one, gave reply. His Divine words were heard across space:

“Anything I kept back for Myself would be lacking in My gift to them – My daughters and sons.’

“My God!’

“O how marvellous you are, Love, even as a single spark.’

“My God!’

“Hasten, My Love, hasten, do not stop for rational contemplation. Hasten with your last spark and warm all My future sons and daughters.’

“The people of the Earth were embraced by the universal energy of Love. All of it, down to the last spark. Everything was there within it where it belonged. Throughout the unfathomable Universe, Man, who lives on all planes of being simultaneously, of all the entities became the most strong.”

## CHAPTER SEVEN

### When Love...

“Adam lay on the grass, among the fragrant flowers. In the shade of a tree he dreamt, as his thoughts churned listlessly along. And all at once a reminiscence swept over him in an unexpected wave of warmth, somehow empowering a strong acceleration of his thoughts. Just recently this new creation stood before me — he reflected — something very much like me, only different, but what is the difference? Where does it lie? And where is this new creation now? Oh, how I wish I could see the new creation once more as I did before! I want to see it again, but why?”

“Quickly Adam rose from the ground and looked around. A thought flickered by: What has happened all of a sudden? It is the same sky, the same birds, grass, trees and bushes. Everything is the same, and yet it is different. I am not looking at it the same way as before. The creatures of the Earth, the scents, the air and even the light — everything’s become brighter and more resplendent.

“And words were born in Adam’s mouth, and he cried out to all: ‘And I love in return!’”

“And all at once a new wave of warmth came upon him from the direction of the stream, sweeping over his whole body. He turned in the direction the warmth was coming from and, lo and behold, there was the new creation, shining before him. All logic departed from his thought, his whole heart delighted in the vision, when Adam first caught sight of it: there quietly sitting beside a clear pool of water in the stream was the maiden, but after tossing back the braids of

her golden hair she was looking not at the clear water but at him. She caressed him with a smile, as though she had been waiting for him a long eternal while.

“He went over to her. As they were looking at each other, Adam thought there could be no one with eyes more resplendent than hers. Aloud he said:

“You are sitting by the water. The water is good. Would you like to bathe together?”

“I would.’

“And then would you like me to show you around... creation?”

“I would.’

“I have given everything its designation. I shall command them to serve you too. And would you like me to make a new creation?”

“I would.’

“They bathed in the stream and ran through the meadow. Oh, how entrancing seemed the maiden’s trills of laughter, when after mounting an elephant, Adam conceived a little dance for her and called the maiden’s name Eve.

“The day was already drawing to a close as this woman and man stood with all the glory of the Earth around, delighting in its colours, scents and sounds. Quiet and meek, Eve watched the evening descend. The floral petals folded into their buds. The splendid creations of the day faded from sight into the night.

“Do not feel despondent,’ said Adam, by this time already confident in himself. ‘It is just that now the darkness of night is coming on. We need it to take our rest, but no matter how much night presses in or how black, the day always comes back.’

“Will it be the same day, or a new day?” asked Eve.

“The day will return in whatever form you conceive.’

“And who is it subject to — each day?”

“To me.’

“And who are you subject to?’

“To no one.’

“And you, where are you from?’

“I come from a dream.’

“And whence comes everything around that is so pleasing to see?’

“It also appeared from the dream, as a creation for me.’

“And where is he whose dream is so bright and resplendent?’

“He is often around, only He cannot be seen with ordinary sight. But all the same it is good to be with Him. *God* He calls Himself, my Father and my Friend. He never offends me, and He gives me everything. I also wish to give to Him, though what — I do not yet know.’

“That means I too am His creation. Like you, I also wish to show Him my appreciation. To call Him Father, God and Friend. Perhaps we can decide together what actions on our part the Father intends?’

“I have heard Him say what may bring joy to everyone’s heart.’

“To everyone’s? Including His?’

“Yes, that would mean His too.’

“Tell me what He desires.’

“Conjoint creation and joy from its contemplation.’

“And what may bring joy to everyone on the Earth?’

“Birth.’

“Birth? But everything is so beautifully born already.’

“I often think, before I go to sleep, about an extraordinary and marvellous creation. But with the dawn of the day the dream goes away, and I see that nothing new has come to thought — everything is so fraught with wonder and visible by the light of day.’

“Let us then think together.’

“I too wanted, before going to sleep, to be close to you, to hear your breathing, to feel your warmth, to think together about creation.’

“Before going to sleep, impelled by tender feelings for each other, the two embraced in dreams about a marvellous creation, their aspirations connected and merged into one. Their two material bodies reflected the thoughts that had jointly come.”

## CHAPTER EIGHT

### Birth

“The day returned, and night once more came on. One morning, as day was dawning, just as Adam was watching the tiger cubs and reflecting on life, Eve quietly approached him, sat down beside him, took his hand and placed it on her tummy.

“Feel here, inside me lives my creation — a new creation at the same time. Can you feel it, Adam? Is it pushing, this restless creation of mine?”

“Yes, I can feel it. It seems to be reaching out to me.”

“To you? Of course! It is mine, but it is yours too! I very much want to see our co-creation.”

“And Eve gave birth, not in painful labour but in great wonder.

“Forgetting everything around him, not conscious of himself, Adam watched and trembled in anticipation. And Eve bore a new and conjugal creation.

“A tiny wee lump, all wet, lay helplessly on the ground. Its legs were drawn up tight, its eyelids remained closed. Adam watched, his eyes fixed on the little one, as it moved its tiny hand, opened its tiny lips and took its first breath. Adam was afraid to blink lest he miss the tiniest movement. Unfamiliar feelings had begun filling the space within and around him. Unable to restrain himself to the spot, he suddenly leapt up and began to run.

“With no particular destination in mind, Adam rushed headlong along the bank of the stream in great exultation. He stopped. A wondrous, unfamiliar something kept growing and expanding in his chest. And everything around!... The

sound of the wind not only rang through the trees and rustled leaves — it sang, sifting through the rifts of bushes and setting astir the clusters of floral petals. The clouds not only swarmed through the sky — all the clouds performed a dance to entrance the observer as they passed by. The water sparkled with a smile as it rushed into the miles of stream before it. Oh, wow! The stream! Reflecting the clouds the stream made yet another bend as it gleamed before the eyes. And all along the birds kept twittering their joyful song in the skies! And among the herbs the cheerful chirping of crickets could be heard. And everything fused and blended together into a single resounding intonation of the tenderest sounds of music known through all God's grand creation!

“After taking a little more air into his lungs, Adam suddenly cried out as loud as he could. It was not an ordinary cry — not that of an animal, but one that overflowed with the most tender sounds. A long sublime hush slowly settled all around. And for the very first time the Universe heard a Man on the Earth joyfully burst into song. A Man was singing! And all the noises that had before sounded throughout the galaxies were now grounded. A Man was singing! And hearing this happy song, the whole world of the Universe concluded: not in any of the galaxies could there be found a single string capable of producing a better sound than that of the singing of the human soul.

“But the song of rejoicing could not hush Adam's newfound abundance of feelings. Catching sight of the lion, he rushed toward it and wrestled it to the ground as though it were but a pussycat. He laughingly began to run his fingers adeptly through its mane, then leapt up and, gesturing the creature to follow suit, ran off across the terrain. The lion barely managed to keep up with him, while the lioness and her cubs lagged way behind. Fastest of all ran Adam, his arms waving, summoning all the creatures to follow in his route.

His creation, he recalled, would be able to bring joy and elation to all.

“And once again he sees the tiny lump in front of him. His own creation! Such a wee little lump — alive! — lapped by the she-wolf and caressed by the warm breeze.

“The baby’s eyes had not yet shown a peep — he was asleep. At the sight of him all creatures that had accompanied Adam on his run fell to the Earth in delight.

“‘Why yes, it is true!’ Adam intoned with exultation. ‘Light like my own is emanating from my creation. Maybe it is even stronger than my light, if such an extraordinary thing is happening with me. All creatures have fallen down before it in delight. I desired! I carried through! I created! I created a creation resplendent and alive! All of you! All of you come look at him!’

“Adam cast his glance at all around, and suddenly stopped, his gaze fixed. His eyes were fixed on Eve.

“She was sitting on the grass all alone, caressing with her own lightly fixed gaze the suddenly still and silent Adam.

“And with new might love began shining within and around Adam in invisible delight. And then all at once... Oh, how love universal quivered and shivered to see Adam run up to the resplendent maiden-mother, fall on his knees before Eve, press his hands to her golden braids, her tender lips and her milk-filled breasts. And restraining his exclamation to a gentle purr, he tried to express his exultation in words:

“‘Eve! My Eve! My wife! You are able to make dreams come true in life!’

“‘Yes, I am woman, your wife. Let us turn into life everything you are able to think of!’

“‘Yes! Together! The two of us together! Now it is clear! Two together are we! We are as He! We are able to make dreams come true! Look at us! Our Father, do You hear us?’

“But for the first time Adam could hear no reply. Surprised, he leapt up and cried:

“Where are You, my Father? Look upon my creation. Perfect and fantastic are all Your earthly creatures. Resplendent are all the clouds, the grass, the bushes and the trees. But my new creation is even finer than the features of the flowers — look at it! I have seen how my own creation has brought me a joy far greater than anything You created through Your dream...

“You have nothing to say? You do not wish to look at it? But it is by far and away the best part of all! *My* creation, more than any other, is dear to my heart. But what about You? Do you not wish even to look at it?”

“Adam looked at his child. In the spot directly above the tiny sleeping body the air seemed bluer than usual, there was no breeze to ruffle even a hair, only someone was invisibly bending the slender stem of a flower over the baby’s lips. And three soft puffs of pollen tenderly touched his lips. The baby smacked his lips, sighed a deep and blissful sigh, moved one of his legs just a tiny bit and then went back to sleep. Adam guessed that while he had been celebrating, God had been cultivating, cherishing the little one, and so had not seen fit to speak.

“And Adam exclaimed:

“That means You Yourself were helping! That means You were with me all along, and You acknowledged the creation!”

“And he heard in reply the Father’s quiet voice:

“Not so loud, Adam, you’ll wake the child with your celebrations and rejoicings.’

“That means You, my Father, loved both me and my creation? Or did you love it more than me? If so, why? Explain to me! It is not Yours, after all.’

“Love, My son, has its continuation, and in your new creation will be found your continuation.’

“That means I am standing here and I am in my creation at the same time? And does that mean Eve is in it, too?”

“Yes, My son, your co-creation is in all respects like you, only not in the flesh. Within it your spirit and soul merge to give birth to a new creation. And your aspirations will continue and will intensify the joyous sensations multifold.”

“So, You are saying there will be many of us?”

“You shall fill the whole Earth. You shall know everything through your feelings, and then in other galaxies your dream will re-create the world anew to be even more resplendent.”

“Where is the edge of the Universe? What will I do when I come to it? When I myself fill everything, and have created everything I have conceived?”

“My son. The Universe itself is a thought, a thought from which was born a dream, which is partially visible as matter. When you approach the edge of all creation, your thought will reveal a new beginning and continuation. From obscurity will arise a new and resplendent birth of you, and it will reflect in itself your soul, your dreams, your whole aspirations. My son, you are infinite, you are eternal, within you are your dreams of creation.”

“Father, it is always so good when You speak. When You are with me, I want to embrace You. But You are invisible. Why?”

“My son, when My dreams about you were drinking in the diverse energies of the Universe, I did not have time to be thinking about Myself. My dreams and thoughts created only you, they did not make a visible image for Me. But there *are* visible creations of Mine — feel them, but do not try to analyse them. Nobody in the whole Universe will find that they can analyse them simply with their mind.”

“Father, it feels good to me when You speak. You are with me — everything is with me. If I should find myself at the other end of the Universe, if doubts or crude obscurities

should intrude upon my soul, tell me, how might I search You out? Where will You be at such a time?’

“I shall be in you and with you. Everything is in *you*, My son. You are the master of all the diverse energies of the Universe. I have counterbalanced all the opposite extremities of the Universe in you, thereby making *you* a new creature. Do not allow any of these extremities to hold sway within you. Then shall I be in you always.’

“In me?’

“In you and with you. You and Eve are in your creation. In you there is a particle of Me, and so I am in your creation, too.’

“I am Your son. What then will be the new creation in relation to You?’

“Again, it will be *you*.’

“Whom will You love more — me as I am now, or the me which will be born again and again as before?’

“Love is one and the same, but there is greater hope in each new embodiment and dream.’

“Father, how wise You are, I so very much want to embrace You!’

“Look around you. The visible creations you see are My materialised thoughts and dreams. On the material plane of being you will always be able to communicate with them.’

“I have loved them, just as I love You, Father. And I have loved Eve, and my new creation too. Love is all around, and I want to be in it eternally.’

“My son, you shall dwell eternally only in the Space of Love.’

“Years passed, as it were, but time, after all, is a relative concept. Years passed, but why make a list? — for a long time death in himself was something Man could not have even missed. Which means that death, back then, could not even exist.”

## CHAPTER NINE

# The unsatisfying apple

“But Anastasia,” I queried, “if everything was so good in the beginning, then what happened afterward? Why are there wars on the Earth today and why are people starving? We have thievery, bandits, suicides, prisons. Too many unhappy families, too many orphans. Where have all our loving Eves disappeared to? Where is God, who promised that we would all live eternally in love? And I just remembered what it says about this in the Bible. God expelled Man from Paradise for picking and tasting the fruit of the forbidden tree. And He even stationed a guard at the gates so as to stop the violators from getting back into Paradise.”

“Vladimir, God never expelled Man from Paradise.”

“Yes He did, I read about it. He even cursed the Man over this. He told Eve she was a sinner and would bring forth children in sorrow, and Adam would have to earn his living by the sweat of his brow. And that’s all come to pass with us today.”

“Vladimir, reason it out for yourself, perhaps that kind of logic, or absence of logic, has been devised for somebody’s interests, to suit a particular purpose.”

“What’s logic and somebody’s interests got to do with it?”

“Please believe me. Each one must learn to make sense of things, to determine what is true, with his own soul. Only after thinking it through for yourself can you realise that God did not expel Man from Paradise. God remains a loving Father right up to this very moment. He is a God of Love — you must have read about that, too.”

“I did indeed.”

“So where is the logic then? You will agree that a loving parent would never expel his child from his home. Loving parents, even if it means suffering deprivation themselves, will forgive their children any transgressions they have committed. And God is not indifferent to all the sufferings of people — the sufferings of His children.”

“Whether He is or not, I don’t know. But one thing everybody knows: He doesn’t do anything about them.”

“Oh what are you saying, Vladimir?! Of course He will tolerate this distress, too, from His son, Man. But how long can Man go on without a full appreciation of his Father? How long can he go on not seeing or feeling his Love?”

“What you are so concerned about all of a sudden? Be more specific. Where are these manifestations today of the Divine Love for us? Where do we look for them?”

“The next time you are in the city, take a close look around you. The living carpet of marvellous grass has been paved over with lifeless asphalt, all around are harmful masses of concrete called housing, cars scurry around in between them, emitting deadly fumes. But even amidst the stone masses, finding even the tiniest of islands, grass and flowers still sprout forth — God’s creations. And through the rustle of leaves and the song of the birds He is still calling out to His daughters and sons to reconsider everything that is happening and to return to Paradise.

“The glow of love emanating from the Earth keeps on getting smaller, and for a long time now the Sun’s reflection should have been decreasing, too. But He with His energy is constantly intensifying the life-giving power of even the Sun’s rays. Just as before, He loves His daughters and sons. He waits, trusting and dreaming that one day Man will wake at dawn and suddenly regain his conscious awareness, and that this conscious awareness will restore to the Earth its original, pristine blossoming.”

“But how did everything on the Earth come to go against God’s dreams and for some reason last all these thousands, maybe millions of years? How could He keep waiting and trusting for so long a time?”

“Time does not exist for God. As with any loving parent, He never loses faith. And it is thanks to that faith that all of us are living right now. And we ourselves arrange our lives as we see fit, using the freedom granted us by the Father. But people did not all of a sudden decide to follow the option of a path leading nowhere.”

“If not all of a sudden, then how, when? What does it mean, that phrase ‘Adam’s apple?’”

“Back then, just as now, the Universe was filled with a multitude of living energies. Everywhere there are living elements invisible, the vast majority of them resembling Man’s second self. They are almost like people, capable of comprehending all planes of being, but they are not afforded a material embodiment. That is Man’s great advantage over them. Furthermore, in the complexes of energies of the Universe’s elements one form of energy inevitably holds sway over the rest. And they themselves do not have the capability of changing the proportional relationship among their forms of energy.

“Also, among the elements of the Universe there are complexes of energies similar to God. Similar, yes, but they are not gods. They have momentarily equalised the multitude of energies within themselves, yet, in contrast to God, they are not capable of producing living creations in harmony.

“In the whole Universe nobody has managed to solve the puzzle — the sacred mystery of how or by what power the material plane of being was created, or where the threads tying it and the whole life of the Universe together may be found. Or how or on what basis this plane is capable of reproducing itself.

“When the Earth and everything upon it was created by God, the unparalleled speed of the generative process made it impossible for the elements to understand by what power God was bringing about this grand creation. After everything was already created and was visible, when they noticed that Man was the strongest of all, many were plunged by this resplendent vision first into astonishment, and then into excitement, and finally came the desire to repeat it. To create something similar, all on its own.

“This desire kept on growing. Even today it is still present in a multitude of the diverse energies. They tried to imitate earthly creations in other galaxies, on other worlds, even using the planets which God had created. Many managed to come up with a facsimile of earthly existence, but only a facsimile. The harmony of the Earth and the interrelationship among all things — that is something none have been able to achieve. Thus throughout the Universe, even today, there are planets with life, but this life is but a poor imitation of life on the Earth.

“When all these attempts — not only to produce a better creation but even to repeat the existing one — failed (and God did not reveal His secret), then many of these elements began turning to Man for help. It was clear to them that if Man was God's creation, if Man was God's beloved, then a loving parent could not possibly withhold anything from him. On the contrary, God must have offered great opportunities to Man, His son. And the elements of the Universe started to turn to Man; in fact, they strive to do so even today.

“You know, there are people today who claim that someone invisible is communicating with them from the Universe, calling itself mind and the power of good. Back then, too, right at the beginning, they appealed to Man with requests and exhortations, demanding to know (though hiding their true motives under various guises), by what power the Earth

was formed, along with everything existing upon it, and how Man was created to be so great, they wanted to know from what he was fashioned.

“But Man gave an answer to none of them. He did not know the answer to the question himself, nor does he know it today. But he became more and more interested in the question, and began demanding answers from God. Not only did God decline to answer — He tried to inculcate a better understanding in Man, asking him to erase the question from his thinking:

“I ask you, My son, to create. You have been given the power to create in the space on Earth as well as on other worlds. What you think up in your dream will be turned into reality, you need not doubt. Only one thing do I ask of you: do not try to figure out how, by what power, it all comes about.”

“What I don’t understand, Anastasia, is why God would not want to divulge the specifics of His creation even to Man, His son.”

“I can only guess, no more,” Anastasia replied. “In not responding to this question even to His son, God might have been trying to protect him from disaster, even deflecting a universal war.”

“I don’t see any connection between a refusal to respond and universal war.”

“If ever the secret of creation were to be revealed, then on other planets in the Universe other forms of life might arise, equal in power to those on the Earth. Two powers might have the desire to test each other. It is possible that such a contest could take place peacefully. It is also possible it could turn out like the wars on the Earth. And that could touch off a war throughout the Universe.”

“Indeed,” I agreed, “it would be better for the specifics of God’s creation to remain a secret. Only one of the elements might happen to figure it out on its own, without hints.”

"I do not think any of them would ever figure it out."

"And why are you so confident of that?"

"The nature of the secret is such that it is clear on its own, and at the same time it is not even there, and yet at the same time it is not alone. The term *co-creation* gives me confidence, when I add a second word to it."

"What word?"

"The second word is *inspiration*."

"Well, what of it? What can these two words together signify?"

"They —"

"No, stop! Don't say it! I remember your telling me that thoughts — and that means words too — don't simply disappear into nowhere, they circle around us in space and anyone can catch them. Is that right?"

"Right it is."

"And can the elements catch them too?"

"True."

"Then don't say it. Why give them a hint?"

"Not to worry, Vladimir. Suppose I give them a slight hint as to the secret, I can thereby show them the fruitlessness and senselessness of their constant attempts. That way they can understand and stop bothering Man."

"Well, if that's the case, then tell me, what do *co-creation* and *inspiration* mean?"

"*Co-creation* signifies that in His creating, God used particles of all the diverse energies of the Universe, and His own energy too, and even if all the elements got together to produce a duplicate of the Earth, they would still be missing one particular form of energy — the one that is inherent in God as an idea of His own, the one born in the Divine dream alone. *Inspiration* signifies that the creations were produced through an impulse of inspiration. Who among the great earthly artists and sculptors, after creating their works in an impulse of

inspiration, will dare attempt to explain how they held their brush, what they were thinking or where they were standing — these were not the kinds of things they paid attention to, absorbed as they were so completely in their work. Again, there is the energy of Love, which God sent to the Earth. It is free, subject to no one and, preserving its loyalty to God, is in the service of Man alone.”

“How fascinating that all is, Anastasia! Do you think the elements will hear it and understand?”

“They shall certainly hear, and possibly understand as well.”

“And will they hear what I say, too?”

“True.”

“Then I shall sum it up for them. Hey there, elements, is it clear to you now, eh? Don't you go bothering people any more. You'll never guess the Creator's design!... Well, Anastasia, what do you think, did I do a good job of telling it to them?”

“Your final words were quite accurate: ‘You will never guess the Creator's design!’”

“Have they been trying to guess it for a long time?”

“Right from the moment they first beheld the Earth and its people, right up to the present day.”

“And what harm did their attempts cause Adam, or us for that matter?”

“In Adam and Eve they aroused feelings of pride and self-conceit. And they managed to persuade Adam through a false teaching, saying that to produce something more perfect, it was necessary to break the existing creation down and see what it consisted of, how it worked. They often instructed him to find out how everything was constructed, and then he would be supreme over all. They hoped that when Adam began analysing God's creations to make sense of their construction and purpose, he would comprehend with his mind

the interrelationship among the creations of all different kinds. They would then be able to see the thoughts Adam produced and from that they could deduce how they could create like God.

“At first Adam paid no attention to their requests and suggestions. But then one day Eve decided on her own to give Adam some advice:

“I have heard voices stating things will be even easier and more splendid for us once you ascertain how everything works within. Why should we stubbornly refuse to follow this recommendation? Would it not be better for us to give it a try, at least once?”

“First, Adam broke off a branch of the tree with its marvelous fruit, and then... Then... now you can see for yourself, how Man’s creative thought came to a stop, a standstill. Even today he keeps examining things in detail and breaking them apart, trying to analyse the structure of everything and produce his own primitive creations with his thought instantaneously at a standstill.”

“Hold on, Anastasia. That’s not at all clear to me. Why do you say that human thought has come to a standstill? When people examine something in detail, on the contrary, we say they’re learning something new.”

“Vladimir, Man is made in such a way that there is nothing he needs to examine in detail. He includes... Oh, how can I make this clearer to you? The structure of everything is included in Man himself, in what you might call an encoded format. The code is deciphered when he tunes into his dream of inspired creativity.”

“But I still don’t see what harm can there be in taking something apart,<sup>1</sup> and how this can possibly bring thought

<sup>1</sup>*taking something apart* — a play on words; the Russian term here (*vazburka*) can also signify settling a score between rival gangs.

to a standstill. Maybe it'd be better if you showed me an example."

"Yes, you are right. I shall try an example. Imagine you are at the wheel of your car, driving to some destination. All at once you find yourself wondering how the motor works, and what makes the wheels turn. You stop the car and set about taking apart the motor, for instance."

"So, I'll take it apart, see how it works, and then I'll be able to repair it myself. What's wrong with that?"

"However, while you are taking it apart, your journey is being interrupted. You will not reach your destination on time."

"But I'll still learn more about my car. What's wrong with my acquiring new knowledge?"

"What do you need it for? Your purpose is not to repair, but to enjoy the drive and to create."

"You don't sound very convincing, Anastasia. Not a single driver will agree with you. Except maybe for a few with foreign cars, like Japanese models or Mercedes, which hardly ever break down."

"God's creations not only do not break down, but are capable of re-creating themselves. Hence why should one need to tear them apart to see how they work?"

"What d'you mean, *why*? Just out of curiosity, if for nothing else."

"Forgive me, Vladimir, if my example was unconvincing. If you will allow me, I shall attempt another."

"Go ahead."

"Suppose a beautiful woman is standing in front of you. You feel a burning attraction for her, she appeals to you. And she finds you interesting, too, and seeks to join together with you in creation. But a moment before the mutual impulse for coming together to create, all of a sudden you wonder what this woman is made of. How do her internal organs work?"

Her stomach, liver and kidneys? What does she eat and drink? How will all this function in a moment of intimacy?"

"Enough. Don't go on. You've come up with a jolly good example there. There will be no closeness, no creation. It won't work out if this cursed thought comes along. It happened once that way with me. There was one woman I fancied for a long time, but she never gave in to me. And the one time she agreed, I suddenly thought of how I could perform better, and for some reason I doubted my ability to perform. The upshot was that nothing happened. I felt such shame, and was even afraid I might have lost it for good.

"I later asked a friend about it, and he said the same thing had happened to him. The two of us even went to see a doctor. The doctor said there was some kind of psychological factor at work here. There was no use doubting our abilities or trying to figure out what to do and how. I think this psychological factor causes trouble for a lot of men. Now I get it: it's all because of those elements, because of Adam, because of Eve's advice. Yes, they acted pretty bad back then."

"Why are you only blaming Adam and Eve? Look around you today, Vladimir, is not all mankind continuing to stubbornly repeat the same mistake, violating God's guidelines? Adam and Eve were not fully aware of the consequences, but why does mankind stubbornly continue to tear everything apart? And to destroy living creations? Today?! When the consequences are so obvious and sad?"

"I don't know. Maybe everybody needs a good shake-up. Come on, are we so hung up on tearing apart one thing after another?<sup>2</sup> I just had a thought — maybe it was no use, God not handing Adam and Eve a decent punishment after all. He should have given Adam a right good hiding and knocked all

<sup>2</sup>*tearing apart* — again, the Russian term could refer to settling scores by violence.

that nonsense out of his head — that same nonsense that's causing mankind so much suffering today. And He could have taken a good whip to Eve's soft spot so she wouldn't have gone round getting people into trouble with that tongue of hers."

"Vladimir, God gave Man complete freedom, with no thought of punishment on His part. Besides, punishment will not alter acts committed in one's heart. Wrong actions will continue as long as the original thought is not changed. Tell me, for example, who invented lethal missiles and the nuclear warheads they carry?"

"In Russia it was Academician Korolev<sup>3</sup> who first built rockets like that. But before him Tsiolkovsky<sup>4</sup> theorised about them. American scientists also tried. In any case, a lot of human minds have been involved in rocket design. A lot of inventors in different countries have been working on it."

"Vladimir, there is in fact only one inventor of all rockets and all the lethal weapons attached to them."

"How can there be just one, when whole research centres have been working on rocket design in various countries, and keep their achievements secret from one another? That's what the whole arms race is about: who can produce a weapon best and fastest?"

"This lone inventor takes pleasure in giving out hints to all people that call themselves scientists or inventors, no matter what country they live in."

<sup>3</sup>*Sergei Pavlovich Korolev* (also spelt: *Sergey Korolyov*) (1907–1966) — the Soviet scientist responsible for the design of the first artificial earth satellite — known as *Sputnik* (lit. 'Fellow-traveller') — along with a number of rockets, including the spaceships *Vostok* and *Voskhod*, which carried the first cosmonauts into space.

<sup>4</sup>*Konstantin Eduardovich Tsiolkovsky* (1857–1935) — physicist and mathematician, held to be the father of Soviet space science. He is known, among other things, for his experiments in photosynthesis. He also envisioned human beings colonising other planets in various solar systems.

"And where, in what country, does he himself live and what's his name?"

*"Destructive thinking.* At first it got through to a single individual and took over his material body, producing spears and stone spearheads. Then it proceeded to come up with arrows and iron arrowheads."

"But if it knows everything, this destructive thought, why didn't it go for a missile straight off?"

"The material plane of earthly being does not embody everything thought of all at once. Slowness in matter was given by the Creator to allow people time to think things through. In terms of destructive thinking, the spear, our modern weapons, as well as those of the future, even more deadly, were produced a long time ago. To manifest something more than a spear on the material plane required the construction of a multitude of factories and laboratories that are today termed scientific. Under the guise of plausible excuses more and more people were gradually drawn into the business of turning such deadly thinking into reality."

"And what was the need of constantly trying to do that?"

"To establish itself. To destroy the whole material plane of the Earth. To show to everything in the Universe the superiority of the energies of its all-destructive element over everything else — and, in fact, over God. And it is through people that it acts."

"Sneaky little vermin! And how do we exterminate it from the Earth?"

## CHAPTER TEN

### Avoid intimate relations with her

“Do not allow it access to your thought or body. All women should avoid intimate relations with men who permit destructive thinking into their consciousness, so as not to reproduce it over and over again.”

“Wow! That’s quite a thought!” I exclaimed. “If all women gang up like that, all our scientific military minds will go out of their minds.”

“Vladimir, if women start acting that way, there will be no war on the Earth.”

“Right on, Anastasia! You’ve struck a blow against all war. Way to go — this idea of yours can wipe out all war! That’s quite a blast! It’s true — what man would want to go to war if not a single woman would sleep with him after that or bear him offspring — *who?* That would mean anyone starting a war would be killing himself, his offspring too.”

“If women were willing to do this, nobody would ever start a war. Eve’s fall from grace would be expiated by women living in today’s times, not to mention their own decline, in the face of themselves and God.”

“And what will then be occurring on the Earth?”

“The Earth will once again burst forth in its pristine flower.”

“You’re a powerfully stubborn girl, Anastasia, true to your dream, just as before. But you are also naïve. How can one believe in all the women on the Earth?”

“How can I *not* believe in all women, Vladimir, since I know that the Divine essence is present in every woman living on

the Earth today? So let it reveal itself in all its resplendent array! Goddesses! Women of the Divine Earth! Reveal in yourselves your own Divine essence. Show yourselves to the whole Universe in all the beauty of your original pristine presence. You are a perfect creation, you are created from the Divine dream. Each of you is capable of taming the diverse energies of the Universe — dear women, goddesses of all the Universe and the Earth!”

“Now how can you stand there, Anastasia, and state that all the women of the Earth are goddesses? I’m beginning to find your naïvety a trifle ridiculous. Imagine! All of them... goddesses?! Including those standing behind counters, I mean in stores and street kiosks? Cleaning ladies, dishwashers, waitresses? All the ones that cook, bake and wash dishes day after day in their kitchen at home — don’t tell me they’re goddesses, too?! Sounds like blasphemy to me, even. How can you call drug addicts and prostitutes goddesses?

“Well, now, in a church, okay, or a beautiful lady dancing at a ball — sure, people will say *she’s* a goddess. But all those plain types, dressed in everyday rags, nobody’s going to call them goddesses.”

“Vladimir, it is only a chain of circumstances that makes earthly goddesses spend time in a kitchen day after day. You have stated that I am like some kind of wild creature, that my life is primitive, and that only the world *you* inhabit is civilised. Then tell me why it is that women in your ‘civilisation’ spend a good part of their life in cramped kitchens? Made to wash floors and carry heavy groceries home from stores? You boast about your ‘civilisation’, but why is there so much dirt in it? And why do you transform the most beautiful goddesses of the Earth into cleaning ladies?”

“And just where have you seen a cleaning lady who’s a goddess? Any women worth their salt shine at beauty pageants and drench themselves to a fault in luxury — and every man wants

to marry them. But *they* will only marry men who are rich. As for the plain ones, well, even the poor don't need them."

"Every woman has her own beauty. It is only that not all of them are given the opportunity to reveal this treasure. This great beauty is not something you can measure, like a person's waist, for example. The length of one's leg, the size of one's breasts, the colour of one's eyes — all that is completely irrelevant here. This beauty is interior to the woman, and is found in both a young girl and a woman of senior years."

"Sure, in 'women of senior years'. You're going to tell me about old ladies next! You think they're beautiful goddesses, too?"

"They too are beautiful in their own way. And in spite of the endless humiliations they face in everyday life, the multitude of blows dealt them by fate, any woman labelled a 'senior' can still wake up in the morning with the Sun, walk across the dew, smile at the sunrise with a ray of conscious awareness, and then..."

"And what then?"

"And then suddenly make someone love her. She will be loved herself, and she will impart to him the warmth of her love."

"To what 'him'?"

"To the one, her only one, who sees in her the goddess within."

"It doesn't happen like that."

"It does. Go ask some seniors. You will be surprised at how many of them have passionate romances."

"And are you sure that women are capable of changing the world?"

"Capable they are! Capable beyond the shadow of a doubt, Vladimir. Once they change their priorities of love, they — God's perfect creation — will restore to the Earth its resplendent pristine worth, they will transform the whole Earth into the blossoming garden of the Divine dream. They are God's creation! The beautiful goddesses of the Divine Earth!"

## CHAPTER ELEVEN

### Three prayers

“There you go talking about God, Anastasia, but how do you pray? Or do you pray at all? Many people have requested in their letters that I ask you about this.”

“Vladimir, how do you understand the word *pray*?”

“What do you mean, how? Isn’t it obvious? *To pray*... that’s, well, to pray. Are you telling me you don’t understand the meaning of the word?”

“One and the same word can mean different things to different people, depending on how they perceive it. To be able to express myself more understandably, I asked you: What does prayer mean to you?”

“I never really thought about what it means, somehow. Anyway, there’s one principal prayer I learnt by heart and sometimes I say it – just, you know, to be on the safe side. Apparently there must be some meaning in it, if so many people say it.”

“What are you telling me? You memorised a prayer, and never wanted to find out its meaning?”

“It’s not that I didn’t want to, it’s just I never really thought about its meaning. I thought, well, everybody knows what it means, so why bother thinking? Prayer – well, that’s just like having a conversation with God.”

“But if this ‘principal prayer’ signifies a conversation with God, then tell me, how can you talk with God, your Father, without any meaning?”

“I don’t know how. What’s all the big fuss, anyway, about this *meaning*? No doubt the people who wrote the prayer knew what it meant.”

“But would you not like to talk with your Father on your own?”

“Of course. Everybody would like to talk with their Father on their own.”

“But how can you talk ‘on your own’ by repeating someone else’s words, especially without even thinking about what lies behind them?”

At first I felt a little irritated at Anastasia’s pickiness regarding the meaning of the prayer I had learnt, but then I got interested myself in determining what it meant. For the thought was coming to me all by itself: How did this happen? I had learnt a prayer which I repeated on a number of occasions, but never really thought about what was in the prayer. I thought how interesting it would be to find this out, since I had memorised it. And I said aloud to Anastasia:

“Well, okay, I’ll give thought to the meaning at some point.”

But she persisted:

“Why ‘at some point’? Could you not say your prayer right here and now?”

“Why not? Of course I can.”

“Then, Vladimir, say your prayer — the one you term, of all your prayers, the ‘principal’ one, the one through which you have tried to talk with the Father.”

“As a matter of fact, it’s the only one I know. And I only learnt *it* because it seems everybody else considers it the most important one.”

“All right. Say your prayer, and I shall keep track of your thought.”

“Okay. Listen.”

I said the Lord’s Prayer to Anastasia, which, you may remember, goes like this:

*Our Father which art in heaven,  
Hallowed be thy name.*

*Thy kingdom come.  
 Thy will be done in earth, as it is in heaven.  
 Give us this day our daily bread.  
 And forgive us our debts, as we forgive our debtors.  
 And lead us not into temptation, but deliver us from evil:  
 For thine is the kingdom, and the power, and the glory  
 Of the Father and the Son and the Holy Spirit  
 Always, now and for ever. Amen.<sup>1</sup>*

I stopped speaking and looked at Anastasia. But she was sitting there, just as silently, her eyes lowered, not looking at me. She just sat there without a word, with a sad expression on her face, until I couldn't take it any longer and asked her:

"Why aren't you saying anything, Anastasia?"

Without raising her head, she enquired:

"What words are you expecting to hear from me, Vladimir?"

"What d'you mean, 'what words'? I said the prayer without even a single flaw. Did you like it? You could at least say so if you did or not, but you're not saying a word."

"When you were saying the prayer, Vladimir, I tried to follow your thought, your feelings, the meaning of your appeal to God. I understood the meaning of the words of the prayer, but *you* did not understand all the words in it. Your newly budding thought was disintegrating, getting away from you,

<sup>1</sup>Matth. 6: 9–13 (Authorised King James Version), plus two lines translated from an old Russian version of the Lord's Prayer. It should be noted that the Russian text of the prayer includes many obsolete Old Church Slavonic words and expressions that are barely understandable to modern-day Russians (see footnote 2 in Chapter 1 of the present volume: "All this exists right now"). Overall, the frequent use of Old Church Slavonic in the Orthodox Church means that many Russians today associate it with an 'unknown language' (a situation similar to the former predominance of Latin in the Catholic Church).

and there were absolutely no feelings. You were unable to grasp the meaning of many of the words, and you were not addressing yourself to anyone. You were simply muttering.”

“But I just said it the way everybody does. I was in church, and there they use even more incomprehensible words. I heard how other people say it. They rattle it off at top speed, and that’s it! But I said it to you slowly and distinctly, so you’d understand.”

“But before that you said it was a prayer addressed to God.”

“Yes, I did say that.”

“But God is our Father. He is a person. He is a living entity. The Father is capable of feeling and understanding, when normal communication is initiated. But you...”

“What about me? I’m telling you, that’s the way they all say it when they address God.”

“Imagine your daughter Polina is standing before you, and all at once she starts talking in a monotone and slips into her sentences words she does not even understand herself. Would you as a father be pleased by her talking to you in such a way?”

I could picture the situation quite clearly, and began to feel downright uncomfortable at the prospect. Here was my daughter standing in front of me, muttering something like a half-crazed person, not knowing what she wanted even.

So I came to a decision: No, I had to make conscious sense of my prayer. I can’t just rattle off meaningless words. Otherwise I would appear to God like some half-crazed idiot. If someone wants to mutter it, they can go ahead. As for me, I shall definitely make the effort to understand this whole prayer. I only have to find some place to look up the meaning of unfamiliar words. And why do they speak in some unknown language in church? Aloud I said to Anastasia:

“You know, it’s probably not a full and accurate translation. That’s why my thought got lost, as you say.”

“Vladimir, the meaning can be understood even from this translation. Of course it contains words that are not used any longer in everyday speech. But the sense is clear when you ponder it and decide what is the most important thing of all for you and what is the most pleasing for the Father. What is it you wish to say in uttering this prayerful message addressed to the Father?”

“Well, whatever the words say, that’s probably what I want to say, too. I want Him to give me bread to eat, to forgive my sins and debts, to not lead me into temptation and deliver me from evil. It’s all clearly set out there.”

“Vladimir, God provided food for His sons and daughters even before they were born. Look around you — everything has long ago been provided for you. A loving parent forgives everyone their sins without being asked, and does not even think of leading anyone into temptation. The Father has given each one the capacity to withstand the wiles of evil. Why offend the Father by not realising what He has already provided a long time ago? His eternal gifts are all around you. What more can this loving Parent give, who has already given all to His child?

“And what if there’s something missing?”

“God gives to the utmost. He has provided everything for His sons and daughters right from the beginning. Everything! Completely! As a parent who loves His child unconditionally, He can think of no greater good for Himself than the joy which comes from the joyful existence of His children. His own sons and daughters!

“Tell me, Vladimir: How might the Father feel, after giving His children everything right from the beginning and seeing them appear before Him, constantly pleading ‘More, more! Keep us, save us, we are all helpless, we are all as nothing?’ Please, answer me. Would you as a parent, or any of your friends, wish to have children like that?”

“I can’t give you an answer right off. I’ll work it out on my own, when I have a quiet moment.”

“Yes, yes, of course, fine, Vladimir. Only when you do find the time, think about what the Father would like to hear from you, apart from your requests.”

“You mean, God might also want something of us? What?”

“What any parent would wish to hear from his children.”

“Tell me, Anastasia, do you yourself ever turn to God in prayer?”

“Yes, I do,” came her reply.

“Then tell me your prayer.”

“I cannot say my prayer to *you*, Vladimir. My prayer is destined for God.”

“All right, talk to God then. I can still hear it.”

Anastasia rose, spread out her arms, turned her back to me and began uttering some words. Ordinary words one might hear in a prayer, but... something within me all at once began to tremble. The way she spoke these words was not the way we say prayers. She spoke them the way anyone might talk to a close friend, a loved one, a relative. Her speech contained all the intonations of a live conversation. Passion, joy, fervent ecstasy — as though the One Anastasia was talking to was right there beside her:

*My father; You are present everywhere!  
For the light of life I gladly thank You,  
For Your bright kingdom visible here and now,  
And for Your loving will. Long live the good!*

*For daily bread and daily food with joy I thank You!  
And for your loving patience,  
And for Your giving of forgiveness of sins on Your Earth fair.  
My Father; You are present everywhere!*

*I am Your daughter here midst Your creations.  
Weakness and sin — I shall not let them in,  
But prove myself worthy of Your consummations.*

*My Father, You are present everywhere!  
I am Your daughter, Your joy I declare.  
My entire self shall magnify Your glory,  
In Your bright dream the coming ages all will live and share.  
It shall be so! I wish it so! I am a daughter of Yours.  
My Father, You are present everywhere.*

Anastasia ended her prayer. She continued to communicate with everything around her. It seemed as though she were surrounded by a radiant light. During the prayer, as long as she was near me, something invisible happened all around. And whatever it was touched me too. It wasn't an outward touch, but an inner one. It made me feel good, feel comforted. But as Anastasia drew away, this effect faded, and I called after her:

"You said the prayer as though Someone was standing beside you who could answer it."

Anastasia turned toward me, her face beaming. She spread out her arms, spun around, smiling, and then, giving me a serious look in the eye, said:

"Vladimir, God, our Father, also speaks to everyone with a request, and answers every prayer."

"Then why doesn't anyone understand His words?"

"Words? The peoples of the Earth have so many words with different meanings. There are so many diverse languages and dialects. And yet there is one language for all. One language for all Divine callings. It is woven together out of the rustlings of the leaves, the songs of the birds and the roar of the waves. The Divine language has fragrance and colour. Through this language God responds to each one's request and gives a prayerful response to prayer."

“Could you translate, or express in words, what He says to us?”

“I could give you an approximation.”

“Why just an approximation?”

“Because our language is much too poor to be compatible with the language God speaks to us in.”

“Never mind, just tell me any way you can.”

Anastasia looked at me, stretched her arms out in front of her, and her voice — her voice came forth in chest tones:

*My son! My own dear son!*

*How long I have been waiting. I am still waiting.*

*A minute holds a hundred years, a moment lasts millennia.*

*I am waiting.*

*I have given you all. The Earth is all yours.*

*You are free in everything. You shall choose your own path.*

*All that I ask, My son, My own dear son,*

*Is that you be happy.*

*You do not see Me.*

*You do not hear Me.*

*In your mind are doubts and sorrows.*

*You are turning away. Where to?*

*You are yearning for something. What for?*

*And you are bowing to someone.*

*I stretch out my hands to you.*

*My son, My own dear son,*

*Be happy, I ask of you.*

*Again you are going away. But your road leads to nowhere.*

*On this road the Earth will explode.*

*You are free in everything, and the world is exploding*

*And tearing your destiny apart.*

*You are free in everything, but I shall stand My ground.*

*I shall restore you to life with the last blade of grass.*

*And once more the world will shine around.*

*Only be happy, I ask.*

*On the faces of saints a deep sorrow swells.  
 You are frightened by judgement and hell.  
 They tell you that I shall send judges.  
 But I only pray for that time, as before  
 When you and I are together once more.  
 I believe you will return.  
 I know you will come.  
 I shall embrace you once more.  
 Not as a stepfather! Not as a stepfather! I am yours!  
 I am your Abba, your Father,<sup>2</sup> the only One,  
 And you are My very own son, My own dear son,  
 We shall be happy together as one!*

After Anastasia stopped speaking, it took me a while to recover my composure. Even though it seemed that I was continuing to listen to all the sounds around me, perhaps I was really listening to how my blood was rushing through my veins at an extraordinary tempo. What had I understood? I cannot understand, even to this day.

Through this fervent interpretation, Anastasia had just set forth God's prayer to Man. Whether the words were true or not, who can say? And who can say why they arouse such strong emotions? And what am I doing at the moment? I am letting my pen run across the page in conscious excitement — or maybe not so conscious... Am I going out of my mind? Am I mixing up her words with those the bards now sing in her name? Anything's possible. Perhaps those that read this will understand. And I shall try to understand once I have finished writing. And I am writing again. But again, just as back there in the forest, as though penetrating a curtain, occasionally lines from those prayers I heard back in the

<sup>2</sup> *Abba, Father* — see Mark 14: 36: "And he [Jesus] said, Abba, Father, all things are possible unto thee" (Authorised King James Version).

taiga will suddenly appear. And again the question arises — a difficult question, which continues to torment me to this day, through scenes from our lives and ponderings. A question I'm afraid to try to answer, even to myself. But it is not one I can keep back any longer just within myself. Perhaps someone will come up with a convincing answer?!

Prayer! That prayer of Anastasia's! Just words! The words of a taiga recluse, an uneducated recluse, with her own unique way of thinking and her own unique lifestyle. Just words. But for some reason every time I hear them, the veins on my writing hand puff up and the blood pulsates through them more quickly. It pulsates, counting off the seconds in which each of us must decide what is best for ourselves, and how to continue to live. Should we be asking a kind Father to save, give, provide? Or alternatively, confidently and from the heart, suddenly declare, just as she did:

*My Father, You are present everywhere!  
Weakness and sin — I shall not let them in,  
I am Your son, Your joy I declare.  
My entire self shall magnify Your glory...*

Which prayer will have the most pleasant meaning for Him? What should I do, or what should we all together do? Which way should we go?

*My Father, You are present everywhere!  
Weakness and sin — I shall not let them in...*

But where does one get the courage to speak like that? And to carry it out once the prayer's been said?

## CHAPTER TWELVE

### Anastasia's line

“Tell me, Anastasia, how did it happen that you and your ancestors lived for so long — millennia, even — in the remote forest, away from society? If, as you say, all mankind is a single body, and all have a single origin, then why is your ancestral line, in contrast to all the rest, a kind of outcast?”

“You are right, we all have One parent. And then there are parents whom we can see. But every human soul has the freedom to chose his own path, leading to a determined goal. Among other things, the choice depends on how one's feelings are nurtured.”

“And who then thus nurtured your distant forebears in such a way that your line is so distinctive even today? In your lifestyle, let's say, or the way you understand things?”

“It happened in times long ago. I know I said long ago, but it seems as though it happened only yesterday. Perhaps I can best put it this way: a time came when mankind aspired not to co-creation but to analysing God's creation, back when spears were already flying and hides of faithful creatures were already considered worthy features on people's bodies, when everyone's consciousness was being altered and being directed along the path leading to today, when human thought faltered, aspiring not to creation but to the accumulation of knowledge — all at once people began analysing the process by which men and women were able to experience tremendous satisfaction by merging their bodies together. Then for the first time men began possessing the women, and women submitted to the men not for the sake

of co-creation, but so that both of them could experience a satisfying sensation.

“It seemed to them, as it seems to people living today, that such a sensation comes afresh each time there is a merging of the male and female elements, their visible bodies, their flesh.

“In fact the satisfaction from the merging of mere fleshly bodies is fleeting and incomplete. In the intercourse of carnal desire there is no participation by the higher planes of the human self. Man aspired to feel a sense of fulness by changing bodies and methods of coming together, but even today he has not achieved anything fully.

“The sad consequence of these carnal pleasures has been their children. The children were deprived of conscious aspirations toward the goal of realisation of the Divine dream. And women began experiencing pain in childbirth. And the rising generation was doomed to live in torment, and the absence of the three planes of being meant they were afforded no opportunity of attaining happiness in any way. And so we have come down to the present day.

“One of the first women to experience pain in childbirth saw that her newborn baby girl had injured her little leg during the birth and was so frail that she wasn't even able to utter a cry. The woman also saw that the man who had enjoyed sexual pleasure with her remained indifferent to the birth, and was already seeking to pleasure himself with another woman. And so the woman who had chanced to become a mother became annoyed at God. She grabbed her newborn baby girl and ran with it with all her might far away from everyone else, right into the middle of the woods, an isolated place where no one lived. Stopping to catch her breath in her despair, wiping tears from her cheeks, she kept railing at God with words of frustrated anger:

“Why in Your resplendent world, as You describe it, is there pain, and evil, and repudiation? I do not experience any

satisfaction when I turn to look at the world of Your creation. I am in utter dejection and am burning up with anger. I have been rejected by everybody. And the one whom I made love to is now making love to another; he has forgotten about me. And You were the one who made them, see? He is Yours, the one who was untrue and betrayed me. After all, she, the one making love to him, was also made by You. These are your creations, true? And what about me? I just want to strangle them. I am burning up with annoyance at them. Your world has become forlorn and joyless for me. What kind of fate did you select for me? And why did I bear this deformed and half-dead child? I do not want anyone to see it. There is no joy for me in contemplating it.'

"The woman didn't just put the child down — she callously tossed the barely living lump, her own daughter, onto the ground. In her despair and anger she again cried out to God:

"Let no one ever lay eyes on my daughter! But You look and see. Look and see the torments taking place among Your creations. Her life is not to be. I shall not be able to feed the child that I have borne. My ill temper has burnt the milk in my breast. I am going away. But You look and see! Look and see how many imperfections there are in the world You have created. Let your 'birth' die in Your sight. Let it die among the creations of the Earth.'

"At that the mother ran from her own daughter, angry and forlorn. The newborn baby was left all alone, a barely breathing, helpless little lump, lying on the wooded ground. My distant foremother was in that baby girl, Vladimir.

"God could feel the anger and despair coming from the Earth. He felt distress and compassionate care for that tearful, depressed woman. But the invisible Father who loved her could not alter her destiny. The woman running in despair was wearing a crown of God-bestowed freedom. Every Man fashions the destiny of his own soul. The material plane of

being is subject to no one. It is under the complete control of Man himself.

“God is a person. He is the Father of all, but He does not exist in the flesh. Not in the flesh. But in Him there is a complex of all the diverse energies of the Universe, a whole complex of feelings belonging to Man. He can rejoice and He can feel distress, He can grieve over one of His sons or daughters who chooses a path leading to suffering. He glows with a fatherly tenderness to all and each day, for all without exception, He caresses the whole Earth with a sun-ray of love. Day after day He never loses hope that the daughters and sons of His conception will follow the Divine path. Not under orders, not through fear, they will use their freedom of choice to determine their own path to conjoint creation, regeneration and joy from its contemplation. Our Father has faith, and waits. And He sustains life with His Self. Our Father includes the whole complex of human feelings.

“Could anybody imagine how our Father, God, felt, when His newborn child lay quietly dying there alone in His forest wild, among His own creations?

“The baby girl did not cry, she did not even make a sound. The little heartbeat was slowing down. Just occasionally her tiny lips searched around for some life-giving nipple — she felt thirsty.

“God does not have hands of flesh. Even though He is all-seeing, he still could not clasp the baby girl to His breast. Having given everything to Man, what more could He possibly give? And so, He who is capable of filling the whole Universe with the energy of His dream, compressed Himself into a lump of energy over that forest. A wee, tiny lump, capable of dispersing all the vast worlds of the Universe at a single burst. He concentrated the energy of His love right over that forest — the love He expressed toward all His creations. Through them He embodied Himself in His acts upon the Earth. And they...

“And a little drop of rain touched the lips of the baby girl lying there on the ground — lips which were already turning blue — and at once a warm breeze blew. From the trees fell pollen dust, and the baby girl breathed it in. And the day went by, and the night came on, and the baby girl was still alive. All the beasts and creatures of the wild, embraced by a Divine delight, recognised this baby girl as their own child.

“Years passed, the little girl grew and became a young woman. I can call her Lilith.<sup>1</sup>

“As she strode over the ground all bright in the Sun’s early rays, all other life around called out her name in gladness and praise. Lilith’s smile illuminated and caressed the world God had created around her. Lilith accepted everything around her as we would accept our mother or dad.

“As she grew up, she would venture more and more often toward the edge of the forest. Quietly concealing herself amidst the tall grasses and bushes, she watched as people so similar in appearance to her went about their daily life — but what a strange life it was! They were distancing themselves more and more from God’s creations, building houses to live in, cutting down everything around, and for some reason

<sup>1</sup>*Lilith* — in Jewish folklore, a female demon of the night associated with owls; in a more recent Hebrew legend, the first wife of Adam in the Genesis story, who refused to subordinate to him and was expelled from Eden to become a malevolent wanderer. However, both the name *Lilith* and her image can be traced back to pre-Jewish traditions. In Sumerian culture the goddess or demones *Lil* was depicted as a winged woman surrounded by owls. In Sanskrit the term *lila* signifies ‘Divine play’ and conveys the idea of Creator’s enjoyment at the sight of His unfolding creation. In Ancient Gaelic *lilí* is a snow-white lily, and the Gaelic feminine name *Lilli* to the present day is associated with purity, chastity and innocence. The name of the ancient Slavic goddess of Love — the female aspect of God the Creator — is *Lelía* or *Lilía*, and in ancient Slavic myths a winged goddess in the form of an owl (*Mater’ Sva*) is mother of god Svarog, Creator of the Universe. The old Russian verb *lilit* (in modern form: *leliat*) means ‘cherish’ or ‘love’.

clothing themselves in animal hides. And they took great pride in killing God's creatures, and boasting about who could most quickly kill their prize. And they kept on producing something out of dead matter. Back then Lilith did not yet realise that people who created dead things out of living things considered themselves thereby to be very wise.

"She aspired to tell these people about things that could bring joy to everyone. She very much desired a conjoint creation and the joy that comes from its contemplation. She felt an ever-growing need within her to bring about the birth of a new, living, Divine creation.

"More and more frequently her gaze rested upon one man in particular. He was rather a plain sort in comparison to his fellows. He did not distinguish himself at spear-throwing, and considered himself a less than successful hunter. He was pensive and often sang quietly to himself. He would often go off on his own and dream about something all alone.

"One day Lilith went out to meet these people. She had collected living gifts from the forest and carried them in a withy basket out to a crowd of people — men standing around a baby elephant they had slain and arguing arcanelly about something. And he was there among them, her chosen one. At the sight of her all voices suddenly became mute.

"Now Lilith was a woman of exceptional beauty. She had not taken steps to veil her exposed slender figure, unaware of the hold carnal desires had already secured for themselves over male human beings. They crassly thrust themselves at her en masse. Putting her gifts down on the ground, she noticed the fire of fleshly lust and desire burning in their eyes. And he, her chosen one, ran after all the rest.

"Even from a distance Lilith still felt how forcefully the wave of aggression touched the delicate strings of her soul. Taking a step back, she suddenly turned and ran from the whole approaching horde of warriors.

“Seething with lust, they kept up their chase for a long time. She ran without any difficulty in breathing and did not tire out, while those in pursuit were dripping with sweat. But they were not to lay a hand on Lilith. Those who thirsted to capture this beauty were unaware of the truth that to know beauty, one must include such beauty within one’s self.

“And the warriors tired of the chase. Losing sight of Lilith, they started wandering back the way they came and went astray. Eventually they found their way.

“All but one. Weary from running, he sat down on a fallen tree and began to sing. Lilith quietly concealed herself and recognised the singer as the one her heart felt a yen for, who had also given chase after her with the other men in the crowd. Nevertheless she still allowed him to catch sight of her, at a distance, to show him the right way back to his camp. And he followed, but did not run after her.

“Upon arriving at the edge of the forest and seeing his camp and the campfire burning there, he forgot everything and started running toward it. And Lilith watched as her chosen one ran off. Her heart would beat in an unfamiliar way, or all at once stop, as Lilith repeated to herself:

“Be happy among the others, my beloved, be happy. Oh, how I would love to hear not a sad tune but your gladsome croon here in my forest dear!”

“All at once the runner stopped, and turned back toward the forest, as though pausing in reflection. He looked at the camp and again in the direction of the forest. Suddenly he threw away his spear and confidently took a step forward. He strode over to where Lilith was standing concealed. Lilith kept watching as he walked past her hiding-place, her eyes fixed on him. Perhaps it was her gaze of love that stopped him in his tracks. He turned and walked back in her direction. She did not flee at his approach. She placed her still timid hand onto his outstretched palm. And together they

started walking hand in hand, though not a word had yet passed between them. There they were, walking toward the glade where Lilith had grown up — my father the poet, and my foremother.

“Years passed, and the line continued. And in each generation of my forebears, one person at least was inspired by the desire to go visit those other people, so similar in appearance but with quite a different destiny. They would go under various guises. They might mix in with the warriors, or the priests, or pass themselves off as scholars. As poets, they shone with their poetry. They tried to let people know that there was another path to Man’s happiness, that the One who created all was right with them, only they need not hide themselves from Him and pursue their vain mercenary interests, or cherish other entities in place of the Father.

“They tried to tell others, and perished. But even when a man or a woman was left alone, through their love they would find a friend among those who lived a different lifestyle, and so our line continued, and with our thinking and our way of life true to our pristine origins, remained unchanged in the end.”

## CHAPTER THIRTEEN

# To feel the deeds of all mankind

“Wait, Anastasia,” I cried out, after a thought hit me like an electric shock, “you say they all perished. And that that’s the way it’s been for millennia. And that all the attempts were unsuccessful and all mankind is going its own way?”

“Yes, all the attempts made by my foremothers and forefathers were unsuccessful.”

“That means they all perished?”

“All the ones perished that went out among the people and tried to talk to them.”

“So that means just one thing — you will perish, too, just like all the rest. You too have started speaking out. And to hope for anything here is just silly. If nobody’s ever succeeded in changing the world, or society’s way of life, then what makes you think you —”

“Why talk prematurely about death, Vladimir? See, I am still living. And you are here along with me, and our son is growing up.”

“But what makes you so confident? What makes you believe that you’ll win out where all your forebears failed? All you do is talk, just like they did.”

“I just *talk* — is that what you think? At some point you should pay closer attention to the sentences I use. They are not for the intellect. They contain no information which has not been set forth before, but people read them and many experience an emotional stirring within. That is all on account of the way they are constructed so that people can grasp a great deal ‘between the lines’. The poetry of their own soul

fills in the gaps — whatever is not explicit in the actual text. And now it is not me that is telling them about the Divine truth — the readers are discovering it for themselves. Their numbers are multiplying at an ever-increasing rate, and now there is no diverting them from the path of the dream which belongs only to God. My mission is not yet accomplished, but already the Creator's desire has come true in many hearts. And that is the most important part.

“When the heart aspires to something in a dream, invariably — invariably, believe me, it must all come true in life.”

“Then tell me, why wasn't everything set forth in such sentences before this?”

“I do not know. Perhaps the Creator has shone forth with some kind of new energy! An energy that tells us anew about something we see around us every day, something we see but do not pay sufficient heed to or reflect upon. And my feelings do not deceive me — I have the clear feeling that He is accelerating all His diverse energies once more. A new dawn is coming for all the Earth. His earthly daughters and sons will experience life as it was created by the energy of the Divine dream. And both you and I will play our part.

“But most important! Most important are those who have become the first ones to feel those thoughts between the lines, the thoughts that the energy of the Creator has implanted in people, like the music of the soul. It has all happened! It has all come to pass! People are already aspiring to create a new world in their thoughts!”

“You're talking in very general terms, Anastasia. Tell me specifically, what should people do, what kind of world should they build and how, so that everyone in this world can live happily ever after?”

“I cannot tell you more specifically at the moment, Vladimir. Treatises of all kinds are not hard to find in the life of mankind. Many of them have been such that people have

fallen down and worshipped them. But none of them makes any sense. Treatises have no power to change the world, and just one point will serve as a confirmation of that."

"What point? I don't understand."

"That point in the Universe designated as a universal limit. The point where all mankind is standing at the moment. And everything depends on the direction in which it takes the next step. All this shows that there is absolutely no sense in tracts. Ever since the beginning of creation the whole of mankind is attracted by feelings alone."

"Hold on a moment, hold on. What about me? Do you mean to say that I have not done everything in my life by virtue of my mind?"

"Vladimir, you, like everyone else, have changed with that mind of yours the interrelationship of material things around you. You have been trying through material means to experience sensations which every Man knows intuitively. Sensations which everyone is seeking but cannot find."

"What kind of sensations? Sensations *everyone* is seeking? What are you getting at?"

"At what people felt back then, in their pristine origins, when they were still living in Paradise."

"So, are you trying to say I've worked to achieve so many things through the power of my mind just so I could discern these feelings of Paradise?"

"But think for yourself, Vladimir, *why* you did all the things you did."

"What d'you mean, *why*? Just like everybody else, I've been making a living for myself and my family. In order to feel that I'm no worse than anyone else."

"In order *to feel* — you said."

"Yes, that's what I said."

"Now try to get this through your mind: 'In order to feel'... the deeds of all mankind."

“What d'you mean, *all*? Even the deeds of drug addicts — are they too part of a search for such sensations?”

“Of course. Just like everyone else, they are aspiring to find these sensations, only they are going about it their own way — subjecting their bodies to torture, taking poison in the belief it can help them, just for a moment, experience even an approximation of a great sensation.

“And the drunkard, oblivious to everything, winces and drinks his bitter poison only because the search for a beautiful sensation lives in him too.

“And the scientist harnesses his mind and comes up with some fanciful invention, thinking that this will help him find satisfaction, along with everyone else. But to no avail.

“Over the whole course of its history, Vladimir, human thought has gone and invented a tremendous number of senseless things. Just think of the multitude of objects surrounding you right where you live. And each of those objects is considered to be the achievement of scientific thought. Think of the labours of the multitude of people behind its production. Only please tell me, Vladimir, which of these objects has made you happy and satisfied with life?”

“Which?... Which?... Well, maybe, not a single one, if you look at them individually. But taken all together these objects do a lot toward making life easier.

“Take the motor-car, for example. You get behind the wheel and you can go where you like. It can be cold and raining on the street, but in the car you can turn on the heat. It can be hot and sweaty outside, but inside all you have to do is turn on the air conditioner and you have a nice, cool ride. And in your home, in the kitchen, for example, there's lots of appliances to help women. There are even dishwashing machines to spare the housewife that particular care. And vacuums to clean the rooms through and through and save a lot of time,

too. Everyone knows that there's a lot more objects out there like these that can make our lives a lot easier."

"Alas, Vladimir, 'case-makers' such as these are quite illusory. Man is obliged to pay for them day after day through sufferings and a shortened lifespan. In order to afford these soulless objects, people are obliged to spend their whole life slaving over joyless tasks. The more these soulless objects appear all around us, the more clearly they show the degree of Man's misunderstanding of what constitutes the universal essence of being.

"You are a Man! Take a careful look around you. In order to produce yet another mechanical object, whole factories are built, spewing out deadly pollution, killing the water, and then, you... You, a Man, are obliged to spend your whole life in joyless work for their sake. They do not serve you, but you them, inventing, repairing and bowing down to the things you make. In the meantime, Vladimir, tell me: who among your great scientific minds invented *this* particular mechanism for serving Man, and at what factory was it produced?"

"Which one?"

"The little squirrel with the nut, the one just below my hand."

I looked at Anastasia's hand. She was holding it outstretched, palm face down, about a half metre above the ground. And on the grass, just below her hand, a little red squirrel was standing on its hind paws. In its front paws the squirrel was holding a cedar cone. Its head was first tilted down toward the cone, then perked up high, with its sparkling round eyes fixed on Anastasia's face.

Anastasia smiled, looking down at the little creature. Without a stir she held her hand balanced in the same position as before. And all at once the squirrel put the cone down on the ground, started working on it in some way, using the claws on its front paws to take off the scales and pull a tiny

nut out of it. And once more the little creature stood up on its hind paws, raised its head and seemed to be holding the nut out for Anastasia, as though asking her to receive it from its paws. But Anastasia continued to sit on the grass as before, without a stir.

“Then the squirrel lowered its head and quickly bit into the nutshell and, after peeling off the shell, placed the kernel of the nut on a broad leaf. Then it began pulling more and more nuts out of the cedar cone, each time biting into the shell and laying the kernels on the leaf. Anastasia then put her hand down on the grass, palm upturned. Whereupon the squirrel hastily transferred all the shelled kernels from the leaf onto her hand. With her other hand Anastasia gently stroked the furry little creature, which had become stock still. Then it came even closer to Anastasia and stood, apparently trembling with joy before her, and looked her in the eye.

“Thank you!” Anastasia said aloud to the squirrel. “Today, my beauty, you are better than ever before. Go on, go about your business, my busy little one. Find your chosen one, my beauty, one who is worthy.” And she motioned with her hand toward a nearby cedar tree with huge, spreading boughs. Whereupon the squirrel began skipping about, twice executing a circle around Anastasia before bounding off in the direction indicated by her arm. With a flying leap onto the trunk, she finally disappeared into the cedar’s leafy branches. In the meantime, on Anastasia’s hand, now stretched out toward me, lay the neatly shelled cedar nut kernels.

Well now, that’s quite a mechanism, I thought to myself. It collects the product, delivers it, even separates it from the shell. This little creature doesn’t require any maintenance or repair, and doesn’t consume any electrical energy.

After trying the nuts, I asked:

“What about the great military leaders — Alexander the Great, Julius Cæsar, the ones who started wars, Hitler too —

don't tell me they were searching for a feeling of their pristine origins?"

"Of course they were. They wanted to feel that they were rulers of the whole Earth. Subconsciously they felt that this kind of sensation was related to the one everybody is intuitively searching for. But they were mistaken."

"Mistaken, you say. What makes you think that? After all, nobody has yet been able to take control of the world."

"But they took control of cities and whole countries. They would fight and win battles over cities, but the satisfaction they derived from their victory was fleeting indeed. And they kept on warring, aspiring to even greater conquests. Their invasion of a country, almost inevitably more than one, would bring them no relief but only more grief. And the fear of losing everything. And once again they tried seeking satisfaction through military deeds. Their minds were so immersed in vanity that they could no longer count on them to bring them to the dream of the great Divine sensations. All the military leaders of the Earth met with a sad end. And the whole history of the world, insofar as we know it today, bears this out. Unfortunately, however, the vanity, the ramblings and the parade of mercenary dogmas do not allow people living today to discern where exactly the Divine sensation awaits them along the way."

## CHAPTER FOURTEEN

### Dining in the taiga

Each time I visited Anastasia in the taiga, I would invariably take along things to eat. I would take preserves, hermetically sealed biscuits in a plastic wrap and sliced fish fillet in a vacuum pack. And each time when I got ready for the trip back, I would find my reserve supplies unused. And each time she would slip some treats into my backpack. These generally consisted of nuts, fresh berries wrapped in leaves, and dried mushrooms.

Russians are accustomed to eating mushrooms — well boiled, fried, marinated or salted. Anastasia eats them in their dried, natural state, without any processing. At first I was afraid to even try them — then I tried them, and they were okay. Once a piece of mushroom is softened from the saliva in the mouth, you can suck on it like candy or swallow it. Later I even got so I liked it.

One time I was travelling from Moscow to Gelendzhik by car for a readers' conference. The whole trip I lived on mushrooms Anastasia had given me. Alexander Solntsev,<sup>1</sup> the director of the Moscow Anastasia Centre, was at the wheel and he ate some of the mushrooms, too. And during my talk at the conference I invited the audience to try them, and people didn't shy away. They kept taking one piece each until my supply ran out, and ate it on the spot, and nothing bad happened to any of them.

<sup>1</sup>*Alexander Solntsev* — see footnote 4 in Book 2, Chapter 25: "The Space of Love".

In fact, I don't remember any occasion during my visits with Anastasia where we actually sat down for the specific purpose of eating. Whatever Anastasia offered me, I would just try on the spot, and I never felt any real sensation of hunger. But this once...

At the time I was probably too engrossed in pondering the meaning of Anastasia's prayer to notice how she managed to spread such a huge table, if, indeed, one can call it that.

There on the grass, on a variety of leaves both large and small, lay a host of delicacies. They filled an area larger than a square metre in size. And everything was beautifully laid out with tasteful decor — cranberries, huckleberries, cloudberries, raspberries, black and red currants, dried strawberries, dried mushrooms, some kind of yellowish paste, three small cucumbers and two medium-sized red tomatoes. These lay among a multitude of clumps of herbs, decorated with floral petals. Some sort of white liquid, looking not unlike milk, stood in a little hollowed-out wooden bowl. I couldn't tell what the scones were made of. There was honey in the comb, too, strewn with multicoloured grains of pollen dust.

"Seat yourself down, Vladimir, try this God-given daily bread," Anastasia invited, with that sly smile of hers.

"Wow!" I couldn't restrain myself from exclaiming. "That's really something! And you've laid it all out so beautifully! Just like a good mistress of a feast."

Anastasia bubbled with child-like joy at my praise. Then she burst out in laughter, her eyes still fixed on the 'table' she had laid out. All at once she threw up her hands in the air and exclaimed:

"Oh-oh! You see, here I am supposed to be a good feast-mistress and yet I have gone and forgotten my spices. You like a lot of hot spices, do you not? You like them, yes?"

"I do."

“And here this ‘good feast-mistress’ has gone and forgotten them. Give me just a moment. I shall correct my mistake.”

She took a look around her, ran off a little ways and tore off part of a herb, then did the same in another place. Then she reached into the bushes and tore off something else, and presently laid her find down amongst the cucumbers and tomatoes — a little bouquet-like clump of various herbs. Then she explained:

“These are spices. They are hot. Try them if you like. Now we have everything. Take a taste of everything, Vladimir.”

I picked up a cucumber, surveyed the variety of taiga foods spread out before me and said:

“Pity there’s no bread.”

“Bread there is,” Anastasia responded. “Look here.” And she handed me some kind of tuber. “This is a burdock root. I prepared it specially so you would find it a replacement for tasty bread and potatoes and carrots.”

“I never heard of burdock being used for food.”

“Try it. Not to worry — in times past people used it to make a great many tasty and healthful dishes. Try just a small bite first. I have been keeping it in milk, to soften it.”

I was about to ask where she got the milk, but once I took a bite of the cucumber... I couldn’t say another word until I had finished it off — and without bread yet. I took the bread-replacement tuber from Anastasia, but I could only hold it in my hand without trying it until I had finished eating the cucumber.

You see, this ordinary-looking cucumber was utterly different in taste from any I had ever eaten before. This taiga cucumber had a pleasant unique fragrance. You’re no doubt aware that cucumbers grown in hothouses taste quite different from those raised in garden beds in the open air. The ones growing in the open have a significantly superior taste and fragrance. But Anastasia’s cucumber surpassed all the

open-air cucumbers I had tasted before, and possibly by an even greater margin of difference.

I quickly picked up a tomato, tried it and polished it off on the spot. Its taste, too, was extraordinarily delicious. Like the cucumber, it was far tastier than any other tomato I had ever eaten. Neither of them required any salt, sour cream or salad oil. They were delicious in and of themselves. Just like a raspberry, or an apple or an orange. Nobody would ever think of either sweetening or salting an apple or a pear.

“Where did you get these vegetables, Anastasia? Did you run down to the village? What kind are they?”

“I grew them myself. You liked them, did you not?” she asked.

“Like them?!! I’ve never had any like these before! That means you’ve got a garden plot, or a hothouse? What kind of tools do you use to dig your beds? Where do you get fertiliser — at the village?”

“The only thing I got at the village was some seeds from a woman I know there. I prepared a spot to plant them among the herbs, and they grew. The tomatoes I planted in the autumn, then hid them under the snow, and come springtime they began growing. The cucumbers I planted in the spring, and they — those little ones — managed to ripen.”

“But what makes them so delicious? Is it some new variety?”

“Just an ordinary variety. They are different from those grown in a typical garden plot only because they were provided with everything they needed during their growth period. In garden-plot conditions, when people try to isolate their plants from contact with other species and accelerate their growth by using fertiliser, the plants are unable to take in everything they need to become self-sufficient and please Man.”

“And where do you get your milk? How do you make your scones? I thought you didn’t use any kind of food from animals, and yet here you’ve got milk...”

“That milk is not from animals, Vladimir. The milk you see before you is from a cedar.”

“How d’you mean, from a cedar? Can a tree actually give milk?”

“It can. Only not all trees, by any means. But cedars, for example, can. Try it — there is so much included in this drink. The cedar milk before you can nourish more than just your body. Do not drink it all at once — try one or two sips, otherwise it will fill you up so much that you will not want anything else.”

I took three sips. The milk was thick, with a pleasant, slightly sweet taste to it. I also felt a warmth from it, but not the same as from warmed cow’s milk. This tender, inexplicable warmth ran through my whole insides and, I think, changed my mood at the same time.

“This cedar milk is delicious, Anastasia. Delicious indeed! But how does one ‘milk’ a cedar, to get this liquid?”

“There is no ‘milking’ involved. You must keep grinding the milk kernels of the nut with a special stick in a wooden mortar — calmly, thoughtfully, with a good attitude. And you keep adding water — little by little — living spring water... and you end up with the milk.”

“Are you saying people have never known about this before?”

“Many people knew about it in times past, though even today people in the little taiga villages sometimes drink cedar milk. People in cities prefer a different kind of diet altogether — one less healthful but more suitable for the purposes of conserving, transporting and cooking.”

“What you say is quite correct. When you live in a city you have to do everything quickly. But this milk... Wow! What kind of tree is this cedar?! The cedar all by itself can give us nuts and oil, and flour for scones... and milk!”

“And there are lot of other unusual things that the cedar can supply.”

“What unusual things, for example?”

“You can make superb perfume from its ether oil. Self-sufficient, healthful perfume. Nothing artificial can come even close to its fragrance. The ethers of the cedar represent the spirit of the Universe. They can cure the body — the ethers of the cedar can protect Man from harmful influences.”

“Can you tell me how to extract perfume like that from the cedar?”

“I can, of course, but now you, Vladimir, should have a little more to eat.”

I reached out my hand to take another tomato, but Anastasia stopped me.

“Wait, Vladimir, not that.”

“How d’you mean?”

“I prepared a variety of things for you, so that you could first take a taste of everything, so that it might cure you.”

“What might cure me?”

“Your own body. Once you try a bit of everything, the body itself selects what it needs. You will feel like eating more of what you have chosen. Your body itself will determine what it needs.”

*Wow! — I thought — for the first time she’s gone against her own principles.*

What happened was that twice before Anastasia had cured me of some internal ailments. What kind of ailments, exactly, I don’t know, but I used to get bad pains in my stomach, or my liver, or my kidneys. Or maybe all of them at once. The pains were bad, and painkillers didn’t always help. But I knew that when I came to see Anastasia, she would cure me — something she does very quickly.

But on the third occasion she refused to treat me. She didn’t even completely remove the pain with her gaze, saying that if I wasn’t going to change my lifestyle or eliminate what was causing me to be ill, there was no point in treating me,

since in that case the treatment would only harm me. I got really angry at her and never asked her for treatment again.

After returning home, I did find myself cutting back a little on the amount of smoking and drinking I indulged in. I even fasted for several days, and felt better. And then the thought came: we don't have to go to a doctor or some other healer every time we feel ill — we can take hold of our own selves when we feel pain pressing down upon us. Of course it would be best for it to not press down at all. I wasn't able to cure myself completely, but I decided not to ask Anastasia for help. However, she agreed to treat me, all on her own.

"But you did say you wouldn't give me any more treatment or even take away the pain."

"I shall not take away your pain any longer. Pain is a conversation between God and Man. But, I can now... since I am just offering you food — that does not go against Nature, although it does go against *them*."

"Who's *them*?"

"The ones who thought up the régime that is so harmful to Man."

"What harmful régime? What are you getting at?"

"At the fact that you, Vladimir, like the majority of people, feed yourself according to an established dietary régime. A very harmful régime."

"I guess some people follow a kind of régime. There are lots of diets out there — for losing weight, or for gaining weight. But I eat what I want. I never read up on *any* régime. I go into a store and I pick out what I like."

"That is right: you go into a store and choose, but your choice is restricted to what is offered by the store."

"Well, yes. In stores today everything's neatly pre-packaged. Because of the tremendous competition, all the producers nowadays try to please the consumer, and do everything for the consumer's convenience."

“Do you think it is all done for the consumer’s convenience?”

“Sure — for who else?”

“All systems under a technocratic way of living invariably work only for themselves, Vladimir. Do you consider it ‘convenient’ to get those lifeless frozen or tinned foods, or water that is half-dead? Was it your body that determined the selection of foodstuffs available in grocery stores and supermarkets?”

“The technocratic world’s system has taken upon itself the role of supplying you with the necessities of life. You have agreed to this, you have complete faith in it, to the point that you have even ceased to wonder whether you *have* been supplied with all the necessities.”

“But we’re still alive — we aren’t dying from using these stores!”

“Of course you are still alive. But the pain! Where do you think your pain comes from? Think about where pain comes from with the majority of people. Disease and pain are not natural for Man, they are the effect of choosing the wrong path in life. Now you will be persuaded of that for yourself. Here before you lies just a small sampling of what the Divine Nature has created for Man. Just try a little bit of each thing, and then take what you like with you. Three days is sufficient for these little herbs — which you yourself will select — to overcome your pains.”

I began trying a little of everything while Anastasia was still speaking. Some of the clumps of herbs were tasteless, while others I felt like eating more of. Before my departure Anastasia put the things I had taken a liking to into my backpack. I ate them over a three-day period. And the pain completely disappeared.

## CHAPTER FIFTEEN

# They're capable of changing the world?

“Why is it, Anastasia, that every time you speak of your forebears, you always talk about mothers, about women? As for men, your forefathers, I hardly hear anything. It's as though the fathers in your line were all insignificant. Or maybe your genetic code, or your Ray, doesn't allow you to feel your male ancestors? Isn't that a bit insulting toward your forefathers?”

“I can feel and see the deeds of my forefathers, just as I can my foremothers, when I want to. But I am far from being able to *understand* all their deeds, or to determine their significance for the present day — for me and everyone else.”

“Tell me at least about one of your forefathers whose deeds you don't fully comprehend. As a woman, you find it harder to understand men. It'll be easier for me, seeing I'm a man. If I understand, then I can help you understand, too.”

“Yes, yes, of course, I shall tell you about my forefather who was able not only to discern but also to produce living substances of a power greater than all the weapons known, either today or in the future. Nothing manufactured could ever withstand them — they are capable of changing the earthly world, of destroying galaxies or even creating whole new worlds.”

“You must be joking! And where is this gadget today?”

“Any Man living on the Earth today is capable of producing it provided he can understand, and can feel... My forefather revealed part of the mystery to the Egyptian priests. Even today, earthly rulers in their political states

govern according to the system and mechanism established by those priests. But now there is less and less understanding of the meaning and the mechanism of government. This mechanism was not perfected, and has become degraded over the centuries.”

“Hold on, hold on a minute, there. You’re saying that today’s presidents rule their countries according to a system or directions worked out by the priests of ancient Egypt?”

“Since that time, Vladimir, nobody has ever contributed anything significant of their own to the system of government. And today’s earthly states have no conscious awareness of how the government of human society works.”

“Now that’s simply too hard to believe. Can you try taking me through the whole thing step by step?”

“I shall try taking you through it all step by step, and you try to understand.

“Tens of thousands of years ago, before the world witnessed the grandeur of Egypt, when no state like that yet existed, human society was divided into a multitude of tribes. My forefather and foremother’s family lived apart from human society, they lived according to their own laws. They were surrounded in their glade by everything as it was back in their pristine origins, as in Paradise. My foremother, a beauty herself, had two Suns — one of them was the orb of day, which, as it rose into the sky, awakened everything to life. The other was her chosen one.

“She was always up first. She bathed in the stream and warmed herself in the rising Sun. The light of joy was something she always shared with everything around, and she waited. She waited for *him* to awaken, her loved one. As he awoke, she caught his first glance. When their glances met, it was as though everything around them fell into a trance. Love and trembling, comfort and ecstasy were excitedly taken in by the Space around them.

"The day passed by in joyful duties. And each time the Sun began sinking toward sunset, my forefather always watched thoughtfully, and then he sang.

"My foremother listened to his singing with hidden ecstasy in her heart. Back then she did not yet understand how the words interwoven into the song were forming a new image, an extraordinary image. More and more often she felt like hearing about it, and as though feeling my foremother's desire, my forefather sang about it again and again, and each time he sang he outlined the unusual features more and more distinctly. The invisible image came to dwell among them.

"One morning upon awakening my forefather did not encounter the glance of love that he usually did. He was not surprised. He quietly rose and headed into the forest. In a secluded spot he caught sight of my foremother, enfolded in silence.

"She was standing there all by herself, leaning against a cedar tree. Enfolded in silence, she felt my forefather put his hands on her shoulders. She kept her moist eyes lowered, instead of raising them to look at him. He lightly touched a tear running down her cheek, and said tenderly to her:

"I know. You are thinking about *it*, my beloved. You are thinking about it, and you are not to blame for that. The image I created is invisible. It is invisible, but you love it more than you love me. You are not to blame for that, my beloved. I am going away. I am going now, out among the people. I have been able to discern how splendid images are created. I shall tell the people about that. What I know, others can know, too. And the splendid images will lead people into the pristine garden. There is nothing more powerful in the Universe than the substance of living images. The image I created has proved itself even stronger than your love for me. Now I shall be able to create grand images. And these images will serve people.'

“My foremother’s shoulders trembled, and a trembling voice whispered:

“But why? You, my beloved, have created an image which I love. It is invisible. But you who are visible are going to be leaving me. Our child is already stirring within me. What shall I tell him about his father?”

“The splendid images will create a splendid world. Our son will picture to himself, as he grows, the image of his father. If I am able to become worthy of the image pictured by my son, then my son will recognise me. If I am not worthy of his conception, I shall stay on the sidelines, so as not to interfere with his aspiration to the dream, the splendid dream.’

“Incomprehensibly to my foremother, my forefather went away. He came to the people. He came with a grand discovery enthralled. He came for the sake of his future sons and daughters, in an aspiration to create a splendid world for all.”

## CHAPTER SIXTEEN

### An extraordinary power

“It transpired in those days that the tribes of people living on the Earth engaged in frequent frays. And every tribe planned to raise as many warriors as it could. And among the warriors any that aspired to the culture of the land or the culture of poetry were looked down upon. And each tribe had its priests, who essayed to make the people afraid. But none of them had any clear goal; they simply found solace in others’ fear. And each one flattered his own pride by telling himself he was receiving from God more of something than his fellows.

“My forefather managed to assemble a group of poets and priests from a number of different tribes. There were nineteen in all: eleven poet-singers, seven priests and my forefather. They got together in a deserted, isolated spot.

“The singers sat with meek faces to one side, while the priests took their places with a show of pride. My forefather addressed them as follows:

““The tribes can be made to cease their enmity and war. And all the peoples will then come to live in a single state. They will have a single just ruler, and every family will be saved from the horrors of war. People will start to offer each other help. And the brotherhood of people will find their way to the garden of their pristine origins.”

“At first the priests simply laughed at my forefather, telling him he was daft:

““Who will voluntarily surrender his power and authority to another? If all tribes are to come together, one of them must become the strongest and overcome the others, and

here you conceive of there being no more war. Your words are too naïve to ponder. Why have you gathered us together, you slow-witted wanderer?!" And the priests began to leave. But my forefather stopped them by saying:

"You are wise men, and your wisdom is needed to make laws for human society. I can give each one of you such power that no weapon made by human hand can withstand it. If you cherish it and use it for a good trust, it will help everyone reach their goal, come to the truth, to a bright sunrise that is blissful and grand. But if its possessor lusts in his soul to fight others with an evil intent, he himself will perish."

"This reference to extraordinary power arrested those priests in their tracks. Whereupon the high priest proposed to my forefather:

"If you know of such an extraordinary power, tell us about it. And if this power actually works, and is capable of creating whole states, you will stay and live with us in that state. Together we shall create laws for human society."

"This was precisely why I came to see you: to tell you about this extraordinary power," my forefather replied to all. "But first I would ask you to nominate a ruler from among all those known to you. A ruler who is kind, whose mind is free from greed, who lives with his family in love and, as to war, has not a single thought thereof."

"The high priest mentioned to my forefather in reply that there was indeed a ruler who studiously avoided all contentions. But his tribe was small in terms of numbers, and since there was no tendency to glorify its warriors, this was something few among them aspired to become. And so to avoid conflicts, they were often required to change their base and move on, abandon a place that was more suitable for living and settle in a less favourable space. This ruler's name was Egypt."

"Then Egypt shall this state be called!" my forefather said. "I shall now sing you three songs. You, my dear poet-singers,

shall sing these songs to people in all the different tribes. And you, my dear priests, shall settle yourselves among the people of Egypt. Families from all over will be drawn to you, and you shall greet them with good laws.'

"Whereupon my forefather sang three songs to those gathered. In the first song he formed the image of a just ruler, calling him Egypt. The second song conveyed the image of a happy people living together in harmony. In the third song was the image of a loving family with happy children, fathers and mothers, residing in this extraordinary state.

"The songs were made up of ordinary words already familiar to everyone. But the words were combined in such a way as to cause their listeners to hang on each new combination with bated breath. And then there was the captivating melody in the resonant voice of my forefather. It beckoned and called, fascinated and created living images.

"At that time there was still no outward Egyptian state, its temples had not yet been built, but my forefather could tell that it would all come about as a result of the calling of Man's thought and dream, melding into one. And my forefather was enthralled in his song, inspired by the extraordinary power with which our grand Creator has endued us all. He sang as one who possessed this power — a power that distinguishes Man from everything else, that gives Man dominion over all, that allows Man to be recognised not only as the son of God but as a creator too.

"Now fervent with inspiration of their own, the poet-singers sang these three songs amongst the various tribes. The people were fascinated by the splendid images created, and came from all over to dwell with the tribe of Egypt.

"Just five years later, out of this very small tribe, the state of Egypt was born. All the other tribes which had earlier vaunted themselves above their neighbours simply fell apart. And there was nothing the war-inclined rulers could do to stop it.

Their authority weakened, and disappeared completely. They were defeated by something, but there was no war.

“Accustomed to material conflicts, they had no idea of the power the images held over all — images that delighted people’s souls and fascinated their hearts.

“In the face of but a single image, provided it is genuine and untainted by mercenary interests, all the armed troops of the Earth are useless, whether they carry spears or any other deadly weapons. Before this image all warriors fall to the ground, powerless.

“The Egyptian state grew and increased in strength. Its ruler was dubbed *pharaoh* by the priests. Enconced in their temples away from the everyday bustle of mankind, they made laws, which even the ruling pharaoh was obliged to follow. And every ordinary citizen was only too glad to carry them out. And each one aspired to live his life in conformity with the image.

“My forefather lived among the high priests in the main temple. And for nineteen years the priests paid heed to him. They aspired to study the supreme science of all sciences, to learn how to create grand images. My forefather was inspired with the best of intentions and sincerely endeavoured to explain everything to them. Whether they understood it fully or only in part is no longer clear, and it does not really matter all that much.

“Then one day after nineteen years, the high priest called a meeting of his inner circle of priests. They filed into the main temple with solemn dignity — a temple which even the pharaoh was not allowed to enter.

“The high priest took his place on the throne, while all the rest sat at his feet. My father smiled as he sat there among those priests. He was immersed deeply in thought, composing yet another song, either creating a new image, or perhaps rejuvenating an old one.

“The high priest addressed the gathering as follows:

“We have learnt a grand science indeed — one that allows us to rule all the world, but in order to perpetuate our reign, we must ensure that not one grain of it goes beyond these walls. Now we must create our own tongue and communicate exclusively in it amongst ourselves, lest any of us let something slip, even by chance.

“Over the ages we shall circulate among the people a multitude of treatises, at which everyone may marvel, and think that it has all been set forth. And we shall set forth a multitude of marvellous sciences and various discoveries in such a way that both the rulers and the common people will move further and further away from what is important. And so that wise men in the centuries to come may amaze others with their sagacious treatises and sciences. Moving further and further away from what is important themselves, they will lead others in the same direction.’

“So be it!’ they all agreed with the high priest. With the exception of my forefather, who alone remained silent.

“And the high priest continued:

“There is one question requiring our urgent attention. Over the past nineteen years we have learnt how images are created. Any one of us is now capable of creating an image that can change the world, destroy or strengthen a state — and yet the secret of the power itself has never been revealed. Can any of you tell me why the images each of us creates vary in power? And, in terms of time, why does it take us so long?’

“The priests were silent. None of them knew the answer. The high priest went on, ever so slightly raising his voice, and his sceptre trembled ever so slightly in his hand as he told those assembled:

“In the meantime there is in our midst one who is capable of creating images very rapidly, and the power of these images remains unsurpassed. For nineteen years now he has

been teaching us, but there remains much that he has yet to tell. Now we must realise that we are not all equal among ourselves. It matters not who holds what rank among us. But everyone should know that there is one among us who holds the power to control in concealment, unseen, in his sway. With power of the images he is capable of creating, he can elevate or slay. One among us is capable of deciding the fate of nation-states. I as high priest am empowered to alter the balance of power. The doors of the temple wherein we sit are closed. A loyal guard stands outside the door and will open it to no one except on my command.'

"The high priest rose from his throne and with heavy steps, striking his sceptre against the stone slabs of the floor, headed toward my forefather. In the middle of the hall he suddenly halted and addressed my forefather:

"Now you shall choose one of two paths. Here is the first. You shall now reveal before us all what you have concealed: the secret behind the power of your images. You shall tell us how and by what means they are created, and then you shall be proclaimed a priest second only to me, and upon my departure you shall become first. All living people will bow before you.

"But if you do not reveal your secret to us, a second path will be yours. It leads only to that door.'

"Whereupon the high priest pointed to the door leading out of the temple hall into the tower, in which there were no windows nor supplementary exterior doors. This high tower with smooth walls did have an exterior platform up above, from where on an appointed day once a year my forefather or some other priest would sing to an assembled crowd.

"Still pointing to the tower door, the high priest added:

"You shall go in through that door and never come out of it. I shall command the door to be walled up, leaving only a small opening through which you will receive a daily minimum

of food. When the time comes for people to gather by the tower, you shall go out to greet them from the platform up above. You shall go out, only you shall not sing nor create any images. You shall go out so that the crowd will see you and not become concerned or spread rumours surrounding your disappearance. You shall be allowed to greet the people with words only. If you should dare sing a song to create images, even a single song, you shall be deprived of food and water three days long. For two songs you shall not receive food or water six days long, which means you will be decreeing your own death. Now decide and tell us clearly which of these two paths you have chosen.'

"My forefather now calmly rose from his place. His face betrayed neither fear nor rebuke, only a sense of sorrow lay gently on his furrowed brow. As he made his way past the priests sitting in his row, he looked each one of them in the eye. And in each pair of eyes he beheld the thirst for knowledge. But not only the thirst for knowledge; greed itself glared at him from each pair of eyes. Then my forefather went up close to the high priest and stared him in the eye. The grey-haired high priest in turn did not take his eyes off my forefather — eyes which likewise burned with greed. Striking his sceptre against the stone floor, he sternly repeated to my forefather's face, saliva foaming in his mouth:

"Hurry up and decide, which of the two paths is your choice.'

"My forefather's voice betrayed no fear as he calmly replied:

"Perhaps it is the will of fate, but I choose a path and a half.'

"How can you choose a path and a half?' exclaimed the high priest. 'Do you aim to make fun of me, and of all those who are currently in the Great Temple?'

"My forefather went over to the tower door, then turned and replied to all:

“Believe me, I would not even think of making fun of you or offending you. At your will I shall enter into the tower for good. But before I go I shall reveal to you the secret as best I can, and I know that it is not my reply that will bring me the second path. That is how it turns out that my choice is a path and a half.’

“So tell us! Do not halt or waste time!’ The voices of the priests leaping up from their seats rang even stronger through the vaulted arches of the Great Hall. ‘Where is the answer to the secret? Keep it from us no longer!’ they begged.

“It is in an egg,” my father calmly replied.

“In an egg?!! What egg? What are you talking about? Out with it!’ The assembled priests kept plying my forefather with questions, and he responded:

“A hen’s egg will bring forth a hen’s chicken. A duck’s egg will give birth to a duckling. An eagle’s egg will bring an eagle into the world. Whatever you feel yourselves to be, that is what you will bring forth.’

“I feel! I am a creator!’ the high priest all at once professed. ‘Tell us how to create the image that is stronger than all the rest.’

“That is not the truth,’ my forefather replied. ‘You yourself do not believe what you are saying.’

“How can you know what power of faith I have?’

“One who creates will never bring himself to entreat. One who creates is capable of giving of himself. You, on the other hand, are one who entreats, which means you are already well within the shell of unbelief.’

“My forefather went through the door, which at once shut behind him. Later, following the high priest’s order, the entrance was walled up. Once a day my forefather was handed food through a small opening. The rations were meagre, and he was not always given enough water.

“As the day approached when the throngs of people were to gather before the tower to hear new tales and songs, for three days my forefather was allowed no food, only water. That was on the order of the high priest — a change from his original decree. He gave this new order so that my forefather would become weak and not be able to sing any new creative songs to the crowd.

“When the multitude of people gathered in front of the tower, my forefather went out to greet them from the platform up above. He gave the waiting throng a cheerful look. As to what had happened to him he breathed not a word. He simply sang. His voice rang forth in a song of rejoicing, and an extraordinary image was born. The people who had gathered to hear him paid close attention. Directly he finished his song he began a new one.

“The singer stood and sang from his high platform the whole day long. As the day drew to a close, he announced to the whole throng: ‘With the new dawn you will hear new songs.’ And on the following day he sang again. The people were unaware that the singer, imprisoned as he was in the tower, was no longer being given even water by the priests.”

Listening to Anastasia’s account of her distant forefather, I wanted to hear at least one of the songs he sang, and I asked:

“Anastasia, if you can reproduce in such detail like that all the scenes from the life of your forebears, couldn’t you sing a song too? The song your forefather sang to the people from the tower.”

“I can hear all these songs myself, but a full and accurate translation of them is impossible. Many of the words simply do not exist in today’s language. And many of the words used back then have a different meaning now. Not only that, but it is difficult to reproduce the poetic rhythms of that time in the word-combinations we have today.”

“Pity. I very much wanted to hear those songs.”

“You shall hear them, Vladimir. They will rise again.”

“What d’you mean, they’ll *rise again*? You just said a translation is impossible.”

“A full and accurate translation, yes, is impossible. But it is possible to create new songs in the same spirit and with the same meaning. Bards are creating them right now, using words familiar to everyone today. The final song my forefather sang back then you have already heard.”

“Heard? Where did I hear it? When?”

“A bard from Yegorevsk<sup>1</sup> sent it to you.”

“Ie sent me a lot of songs.”

“Yes, he did, but one of them is very similar to my forefather’s final song.”

“But how could that have happened?”

“Times have their own continuity, Vladimir.”

“So what kind of a song is it, what words does it contain?”

“You will understand in just a moment. I shall explain everything in order.”

<sup>1</sup>*Yegorevsk* (pron. *yí-GOR-yíevsk*) — an industrial town about 100 kilometres south-east of Moscow, founded by decree of Empress Catherine the Great in 1778. The site of the new city had previously been known as *Vysokoe* (lit. ‘High’), dating back to 1328; on a number of occasions through the centuries *Vysokoe* had won special favour from the reigning Tsar and his family.

## CHAPTER SEVENTEEN

### When fathers will understand...

“On the third day my forefather once more climbed up to the platform with the dawn. He stood there smiling, looking at the throng of people. He was looking for someone specific in the crowd. Itinerant singers waved at him in greeting and raised their instruments, and their strings vibrated under the singers’ inspired hands. My forefather kept smiling at them while at the same time he scanned the crowd even more carefully. My forefather wanted to see his son. To see the son born to his loved one nineteen years earlier in the forest. Suddenly out of the crowd he heard a resounding young voice:

“Tell me, O great poet and master of the song. You are standing up there, high above everyone. I am down here, but why do you seem so close to me, as though you were my father?”

“And their dialogue was heard by all around.

“Why young man, do you not know your own father?” enquired the singer from the platform up above.

“I am nineteen years old, and I have not seen my father even once. I live with my mother alone in the forest. My father left us before I was born.”

“First tell me, young man, how do you see the world around you?”

“The world is splendid with its rosy dawn and the setting Sun drawing the day to a close. Marvellous and multifaceted it is. But people are crassly perverting the beauty of the Earth, and causing each other to suffer.”

“From the high tower came the voice in reply:

“Perhaps your father left you because he was ashamed before you, ashamed of the world into which he brought you. Your father left, aiming to make the world a more splendid place for you.’

“And so, did my father believe that he would be able to make over the world all by himself?’

“The day will come when all fathers will understand that they are the ones given the responsibility for the world in which their children live. The day will come when every father will face the fact that before bringing his beloved child into the world, he must act to make the world a happier place. And you as well must give thought to the world in which your own offspring will live. Tell me, young man, how soon is your chosen girl to give birth to the one which she has conceived?’

“In the forest where I live I have no chosen girl. The world there is splendid, I have a host of friends. But I still have not yet met a girl who is willing to go with me into my world — a world I cannot leave.’

“Well, then, even if you have not yet seen your chosen girl so fine, you still have a space of time to make the world into at least a little more joyful place for your future girl or boy.’

“I shall devote myself to that, just like my father.’

“You are no longer a growing lad. You have flowing within you the blood of a fine young man, a future poet and master of the song. Sing to the throng about your splendid world. Come, you and I together shall join in song. We shall sing along together of the splendid world of the future.’

“Who can sing when your own voice is so resounding, O poet and master of the song?’

“I tell you, young man, you shall be able to sing that way as well. I shall sing the first line, the second is your verse. Only sing out boldly, as I have told you, my poet.’

“My forefather sang from the high tower. Over the heads of the assembled throng the voice soared forth with rejoicing, and out came the line:

*I arise, and the dawn smiles, befriending...*

“And from the throng standing below, all at once a pure and resonant voice, not yet self-confident, carried on:

*I walk miles, and the birds sing above...*

“And after each line of the father’s came that of the son, and sometimes their voices blended as one, and a resonant song of joy resounded all around:

*And this day will have never an ending,  
Because ever more deeply I love.*

“At that point the young man found his confidence and with rank ecstasy sang on:

*Along the Sun’s road with light footsteps a-stealing,  
I enter my Father’s own ground,  
My eyes see the path, but my feet have no feeling,  
My happiness now knows no bounds.  
I remember my seeing this all once beforetime:  
The flowers, the trees and the sky.  
Back then I could see only pain and misfortune,  
But now, You are everywhere nigh.  
It’s all still the same — the bright stars and the birdies,  
But I look at them differently now.  
I have no more sorrow, I feel no more hurtings,  
I love all you people — oh, wow!*

"The voice from the tower grew fainter and fainter, and before long it could not be heard at all. The singer in the tower momentarily lost his balance, but quickly regained it, and smiled at the people once more. And right up to the end he noticed how his son's voice was ever stronger than before. The voice of his son, now master of the song, standing below in the throng.

"When the song was ended, my forefather, from his position on the tower platform, waved farewell to the throng. To conceal himself from human eyes, he descended five steps on the staircase inside the tower from the platform doorway. He was becoming weaker and losing consciousness, but he perked up his hearing to the limit. From the wind he could just catch the words fervently whispered to the young singer by a young and beautiful girl:

"Allow me, young man, allow me... I shall follow you, I shall go with you into your splendid world..."

"There on the stone steps of the walled-up tower my forefather was fast losing consciousness. He had a smile on his face as he awaited death. With his last breath his lips whispered:

"The line will continue. You will find bliss in a circle of happy children, my beloved."

"My foremother heard him in her heart. Over the thousands of years to come poet after poet would repeat the words of the song of my two forefathers. And the words and phrases of that song were reborn all by themselves among poets of various times and lands. They have sounded forth in many tongues. These simple words conveyed truth, and they broke through artifice and dogma. And now once again they are heard today. Whoever deciphers their lines — not with the mind but with the heart — will learn great wisdom."

"And was there some sort of special meaning in the other songs your forefather sang from the tower?" I asked. "Why would he give his life just for some songs?"

“My forefather, Vladimir, created many images in his songs. They later built a state and maintained it for a long time. It was these songs that helped the priests — the descendants of those first priests — to create a multitude of religions, and take power in different lands. But there was just one thing the priests did not know, when they decided to use their power for selfish ends. The priests did not know how to make the images work for them in perpetuity. The images lost their power when the priests tried to subject them to their own selfish pride. The ones —”

“Hold on, hold on there, Anastasia. There’s something I fail to understand about the images.”

“Forgive me, Vladimir, for my lack of clarity. Now I shall try to let go, pull myself together, and tell you, all in its proper order, about the most important of all sciences. The *science of imagery*, it is called. All our ancient and modern sciences are derived from it. The priests split it up into parts so as to conceal the most important thing, in an effort to maintain their power over everything on the Earth in perpetuity, passing on their knowledge of it to their descendants in underground temples by word of mouth. And they tried to preserve the secret with such zeal that their modern-day priest descendants have been afforded only a tiny fraction of that science. But back then, when it all began, things were going considerably better for the priesthood.”

“And just how did it all begin? Tell me everything right from the start.”

“Yes! Yes, of course. I somehow got excited once more. I must tell you everything in order. The conscious awareness of this powerful science began with the songs resounding forth from the tower.”

## CHAPTER EIGHTEEN

# He celebrated the joy of life

“When my forefather sang from the high tower, images were born from his songs. The throng standing below included singers and musicians. And all the priests of the time took their places with solemn dignity amidst the multitude. The priests feared most of all that some image exposing and incriminating them might be born in those songs, that my forefather might recall how the priests imprisoned him in the tower. But from his position on the platform high on the walled-up tower the singer sang only songs of joy. He painted a picture of a righteous ruler, with whom the people could live happily ever after. And he offered an image of wise priests. And he depicted the country and the people living in it as fruitful and prosperous. No one was exposed or incriminated, but in his songs the joy of life was celebrated.

“The priests, who for the past nineteen years had been studying the science of imagery, probably realised more than the rest what the singer was doing. They kept watching people’s faces and saw how their eyes lit up with inspiration. They watched how the poets’ lips moved and the musicians quietly fingered the strings of their instruments in time with the singer.

“My forefather had been singing from the high tower for two whole days. The priests calculated in their minds for how many thousand years this one person, standing there in front of everyone, was creating the future. At dawn on the third day the words of the final song rang out, which my forefather sang with his son, and when he made his final exit, the throng

of people listening to them broke up and began heading for their homes.

“The high priest remained at his place for a long time. As he thoughtfully sat there, the priests standing silently about him noticed how his hair and even his eyebrows were turning white right before their very eyes. Then he arose and ordered the entrance to the tower to be re-opened. And the entrance to the tower was opened once more.

“There on the stone floor was the poet’s body lying lifeless. Only two metres or so separated his weakened hand from a piece of bread. Between his hand and that piece of bread a wee little mouse ran back and forth, squeaking. The wee little mouse kept begging and waiting for the poet to take his bread and share it with the creature, but the mouse itself would not touch the bread. It was waiting and hoping for the singer to revive. Upon catching sight of the people coming in, the wee little mouse jumped back toward the wall, but then ran over to the feet of the people silently standing around. The wee little mouse’s two little beady eyes tried to look these people in the eye. The priests standing on the grey stone slabs of the floor took no notice of it. Then it hastily ran over to the piece of bread once more. The wee little grey mouse squeaked desperately, and even dragged the piece of bread over to the lifeless body of the singer, poet and philosopher, trying to push it into his hand.

“The priests buried my forefather’s body with high honours in an underground temple. But they made it so nobody would take notice of his grave under the stone slab floor. And bending his grey head over my forefather’s grave, the high priest said:

“None of us will ever say of himself that he understood how he could create great images as you did. But you are not dead. We have but buried your body. The images you created will live on for thousands of years around and above

the Earth, and you are in them. Our descendants will make contact with them in their souls. Perhaps someone in some future age will be capable of learning the essence of creation, of learning what people need to become. And we must create a great and splendid doctrine, and keep it for thousands of years out of sight, until one or the other of us or our descendants discovers to what Man should consecrate his great and splendid might.”

## CHAPTER NINETEEN

### A secret science

“The priests created a secret science. Their doctrine was known as the science of imagery, and from it all other sciences have been derived. To keep the secret, the high priests divided up the whole science of imagery, and caused the other priests to think in differing directions. Hence astronomy, and mathematics, and physics came along quite a bit later, as well as a multitude of other sciences, including the occult sciences. They were all developed for the simple purpose of drawing people’s attention to individual sectors, thereby ensuring that nobody would ever be able to break through to the core of the teaching.”

“But what kind of core are you talking about? What kind of science is it, and what does it consist of – this ‘science of imagery’ that you speak of?”

“It is a science that allows Man to accelerate his thought and think in terms of images, to grasp the whole of the Universe at once and penetrate a microcosm, to create invisible yet still living substance-images and use them to control a large community of people. Through the help of this science a multitude of religions came about. One who had even the slightest knowledge of it possessed incredible power, and was able to conquer countries, and topple kings from their thrones.”

“And does that mean that a single individual could take over a country?”

“Yes, that is right. And the procedure involved is very simple.”

“Is even one fact like this known to today’s historians?”

“It is.”

“Tell me about it. I don’t remember anything like that myself.”

“Why waste time in telling about it? If you go back and read about Rama, or Krishna, or Moses, you will see their creations — the creations of priests who had learnt a part of the secret science of imagery.”

“Well all right then, I shall read about their deeds, but how shall I arrive at the essence of this science? Try telling me yourself about its essence — what did they learn about it and how?”

“They learnt to think in terms of images, as I told you.”

“Yes, you told me, only it’s still not clear to me what connection mathematics, say, or physics, has with this science.”

“One who masters this science does not need to write out formulas, or outline or create a variety of models. He is able to penetrate matter mentally, right down to the nucleus, and split an atom. But this is just a simple exercise to learn how to control people’s destinies and those of the populations of various countries.”

“Wow! I’ve never read anything like that.”

“But what about the Bible? There is an example in the Old Testament when the priests were competing amongst themselves to see who could create the strongest images. Moses the priest against the pharaoh’s high priests. Moses cast his rod down in the sight of everyone and turned it into a serpent. And the priests of the pharaoh’s court did the same thing. Then the serpent created by Moses swallowed up the other serpents.”<sup>1</sup>

“You mean to say all that actually happened?!”

“Yes.”

<sup>1</sup>See Exodus 7: 8-12.

“I thought somebody just made it up, or it was a kind of metaphor...”

“Nothing made up, Vladimir. It all happened just the way the competition is described in the Old Testament.”

“But what made them compete in front of each other that way?”

“It was to show who could create the strongest images, capable of conquering other images. And Moses proved to everyone that he was the strongest. After that it was senseless to fight against him. Instead of fighting they were obliged to carry out his requests. But the pharaoh did not listen, he tried to stop the Israelites from following Moses’ leadership and the image he created. But the warriors were not strong enough to stop the people of Israel — a people in which a more powerful image resided.

“Then you can read about how the people of Israel many times conquered other tribes, and took their cities. About how the people created their own religion and nation-state. The glory of the pharaohs lost its shine. But at the time when the priests of Egypt still excelled in their creation of grand images, when they were able to determine what consequences an image they created would provoke among the people, Egypt flourished under the control of the priests. Of all the known states formed after the last global disaster, Egypt flourished the longest.”

“No, wait a moment, Anastasia. Everybody knows that Egypt was ruled by the pharaohs. Their pyramid tombs have lasted right to the present day.”

“Outwardly, the executive power in the country *did* rest with the pharaohs. But their chief task was to exemplify the image of a wise ruler. The important decisions were not taken by the pharaoh. Whenever the pharaohs tried to seize full power for themselves, the state would start deteriorating at once. Each pharaoh was, first and foremost, appointed to the

throne by the priests. The pharaoh himself studied with the priests from very early childhood, and endeavoured to master the science of images. Only by learning its fundamentals could he hope to be appointed a pharaoh.

“The power structure prevalent at that time in Egypt can today be described as follows. At the very top were the secret priests, then the priests who looked after educational and judicial matters. Control of the state formally rested in the hands of a council of representatives of all the priestly ranks, while the pharaoh ruled according to their laws and did as he was told by them. The community leaders had a good deal of executive power — they were considered more or less independent.

“In fact, things were pretty much the same as they are today. Many nation-states have a president and government as their executive authority. Parliament, like the priests of old, makes the laws. The only difference is that today there is no provision in any country for the president to be instructed as the pharaoh was instructed by the priests. The same applies to those who hold public office today on councils, Dumas<sup>2</sup> or congresses. It does not really matter by what term today’s legislator-priests are called; what matters is that they too have nowhere to turn to learn how to become lawmakers before they actually take on the job. How can our lawmakers learn wisdom when the science of imagery is kept secret? That is why we have chaos in many nation-states.”

“What are you trying to say, Anastasia? If we modelled our governments on the power structure that was in place in ancient Egypt, everything would have turned out for the better?”

“The actual power structure can bring about very little in the way of change. It is much more important what stands behind it. And when it comes to the Egyptian power structure,

<sup>2</sup>*Duma* - the name of the Russian parliament.

Egypt was not ruled by it, nor by the pharaohs, nor even by the priests.”

“Then by whom?”

“In ancient Egypt everything was ruled by images. Both the priests and the pharaoh subjected themselves to them. From the ancient science of imagery a secret council composed of just a few priests took the image of the pharaoh as a just ruler. They took the image just as it appeared at that time. This secret council spent a good deal of time discussing the proper conduct for a pharaoh, his outward trappings and lifestyle. Then they taught one of the selected priests how to exemplify this image.

“They tried first to select a candidate from the ranks of royalty. But if no one of royal blood was found suitable in appearance or character, they could choose any priest and pass him off as pharaoh. The priest selected as pharaoh was always obliged to conform to the conceived image, especially during public appearances. And then each member of the public felt the invisible image hanging over him and acted according to his understanding of it. When people believe in an image and the majority find it to their liking, each one is only too happy to follow it, and the state has no need to set up a huge official surveillance apparatus. Such a state can only grow stronger and flourish.”

“But if that were so, then no state today could get by without images. And yet they do get by, they are alive and flourishing. Just look at America, or Germany. And our own Soviet Union, before *perestroika*,<sup>3</sup> was a tremendous state.”

“Without an image, Vladimir, no state can get by even today. Today it is only the state in which the governing image is

<sup>3</sup>*perestroika* — the policy of restructuring the economic and political system of the Soviet Union, which led to the collapse of the Communist Party's hold on power and to the break-up of the USSR.

the most acceptable to the majority of people that flourishes, compared to other states.”

“Then who is creating this image today? After all, there are no priests around any more — at least not the kind ancient Egypt had.”

“There are still such priests today, only they are called by another name, and have within them less and less of the science of imagery. Today’s priests are not able to make impartial and long-term calculations. Not able to set a goal and create a worthy image capable of drawing the whole country to that goal.”

“What are you talking about, Anastasia — what kind of priests, or images, were there in our Soviet Union? Everything back then was controlled by the Bolsheviks.<sup>4</sup> First Lenin, then Stalin was in charge. Then came other First Secretaries.<sup>5</sup> They had the Politburo.<sup>6</sup> Religion was pretty much eliminated back then, they even destroyed the temples — and here you go carrying on about priests!”

“Vladimir, take a closer look. What was there before the state which came to be known as the Soviet Union emerged?”

“What d’you mean, what was there? Everybody knows. It was the tsarist régime. Then along came the revolution, and we went down the path of socialism, at the same time trying to build communism.”<sup>7</sup>

“But before the revolution actually took place, the image of a new and just system of governance with a bright outlook

<sup>4</sup>*Bolsheviks* — the majority party at the time of the Russian Revolution in 1917. The term is derived from the Russian word signifying ‘majority’.

<sup>5</sup>*First Secretaries* — Under the Soviet system, the First Secretary of the Communist Party was the *de facto* leader of the country.

<sup>6</sup>*Politburo* (a term derived from the Russian words signifying ‘political bureau’) — the chief policy-making committee of the Communist Party, responsible to the First Secretary.

was already circulating among the people, and the old system was being exposed. After all, initially it was the image of a new state that was being formed, along with the image of a new ruler who would be most benevolent to everyone. And the image of everyone leading a happy life. It was images such as these that led people on and motivated them to fight against those who were still loyal to the old images. And both the revolution and the civil war<sup>8</sup> which followed it — a war which involved multitudes of people — were in fact a conflict between two competing images.”

“Of course there might well be something in what you say,” I admitted. “Only Lenin and Stalin weren’t images. Everybody knows they were merely human beings who happened to be leaders of their country.”

“You bring up these names, thinking that behind them stood simply people in the flesh. In fact... Perhaps if you think about it, you will see that it was very far from being that way, Vladimir.”

“How could it not be that way? I’m telling you: everybody knows that Stalin was a Man.”

“Then tell me, Vladimir, what sort of Man was Stalin?”

“What sort? The sort... Well, in the beginning, everybody thought him to be kind and just. Someone who loved children. There were photos and portraits of him holding a little girl in his arms. Thousands of soldiers went into battle crying ‘For the Motherland! For Stalin!’ Everyone wept when he

---

<sup>7</sup> *socialism/communism* — In official Communist Party pronouncements, the political status quo in the Soviet Union was designated ‘socialism’, while the country was in the process of ‘building communism’ — i.e., working toward the goal of becoming a truly communist state.

<sup>8</sup> *civil war (grazhdanskaya voina)* — In Russia this lasted from the 1917 Revolution up to 1922, when the Bolsheviks (or ‘Reds’) finally consolidated their power, defeating the ‘White’ forces loyal to the Tsar.

died. My mother used to tell me that when he died practically the whole country wept. And they placed him in the Mausoleum<sup>9</sup> next to Lenin.”

“So, that means that a great many people loved him and triumphed in deadly conflicts with their enemies in his name? They dedicated poems to him, but what do they say about him today?”

“Today they say he was a bloodthirsty tyrant and a murderer. He let multitudes of people rot in prisons. They unceremoniously removed his body from the Mausoleum and buried it in the ground, and destroyed all the monuments to him, along with the books he once wrote...”

“Now do you understand? You see before you two different images. Two images, but the same Man.”

“The same.”

“So what kind of Man was he — can you tell me now?”

“I guess I can’t... Can you tell me anything yourself?”

“Stalin as a Man corresponded to neither of these two images — before or after — and therein lay the tragedy for the nation. There has always been tragedy in states where a significant discrepancy has come up between the ruler and his image. That is where all national troubles have begun. And in these times of trouble people have fought for the images with the gun. It is only recently that people were still attracted to the image of communism, but the image of communism has deteriorated, and now what are you and everybody else in the nation attracted to?”

“Now we are building... well, capitalism, maybe, or maybe something else, but just so that we can live the way they do in the developed countries — like America, or Germany, for

<sup>9</sup>*Mausoleum* — a large marble structure on Red Square just outside the walls of the Kremlin, where visitors can still see the embalmed body of Lenin.

instance. Anyway, so that we can have democracy, like they have over there, and an abundance of everything.”

“Now you are identifying the image of your country and a just ruler with the image of those other countries you name.”

“Okay, let’s say it’s the image of those countries.”

“But is that not admitting that the knowledge of the priests in your own country has completely diminished? There is no knowledge left? They have no more power to create a worthy image capable of leading people in its path? As a rule, any state in such a situation has been a dying state, as thousands of years of history attest.”

“But what’s wrong with our starting to live the way they do, say, in America, or Germany?”

“Take a closer look at how many problems there are in the countries you name. Ask yourself why they need such huge police forces and great numbers of hospitals. And why are there more and more suicides there? And where do people from the rich big cities go for their holidays? And they constantly require increasingly greater numbers of officials to watch over the public. All this means that their images are deteriorating, too.”

“And what is the result — that we are attracted to their deteriorating images?”

“Yes, the result is that we are thereby prolonging their life, but not by much. When they destroyed the leading images in your country, they did not create any new image in its place. And everyone was allured by an image that was prevalent in a foreign country. If they all keep bowing down to it, then your country will cease to exist — it is a country which is losing its own image.”

“But who is able to create such an image today? We don’t have any Egyptian-style priests.”

“There are people even today who are wholly involved in creating images and determining the ability of images to

attract a nation's people, and their calculations are frequently quite accurate."

"For some reason I've never heard of such people. Or is it all top secret?"

"You, like a great many people, come into contact with what they do on a daily basis."

"Oh, where? When?"

"Vladimir, remember, when the time comes to elect new deputies to the Duma,<sup>10</sup> or to select a single ruler out of several candidates — he's called a *president* today — how their image is presented to the people. And those images are put together by people who have chosen image-making as their profession. Each candidate has several such people working for him. And the winner is the one whose image is the most favourable to the majority of voters."

"What d'you mean, 'image'? These are all real live people. They get up on the hustings in front of voters and even go on TV themselves."

"Of course, they appear themselves, only they always get advised as to where they should go, how they should behave, what they should say, so as to fit the image most favourable to the people. And, more often than not, the candidates heed this advice. In addition, a variety of advertisements are made up for them, attempting to associate their image with a better life for all."

"Yes, they do advertise. All the same, I don't really know what's more important — the Man himself who wants to become a deputy or president, or the image you keep talking about."

"Of course the Man is always more important, but when you vote for him, after all, you probably have not had the

<sup>10</sup> *deputies* Members of the *Duma*, or Russian parliament, are known as 'deputies' (*deputaty*).

opportunity to meet with him, you do not know in detail what he is actually like — you are voting for the image which has been served up to you.”

“But each candidate still has a platform, and people vote for the platform.”

“How often are those platforms carried out once the candidate is elected?”

“Well, not all pre-election platforms are carried out by any means, and maybe none of them ever gets fully carried out, because other people with their platforms of their own get in the way.”

“So each time it turns out that a multitude of images is created, but there is no complete unity among them. There is no single image capable of attracting everyone and leading them to a goal. If there is no image, then there is no inspiration, and no clear path. Life becomes *ad hoc* and chaotic.”

“Then who is capable of creating such an image? Priests of wisdom, we’ve seen — there simply aren’t any today. And as for the science of imagery which your forefather taught the priests of old, well, I’m learning about that for the first time from you.”

“There is not much longer to wait — the country *shall* have a strong image. It will end all wars, and people’s dreams in splendid clarity will start coming into birth — first in your country, and then all over the Earth.”

## CHAPTER TWENTY

### Our genetic code

Anastasia spoke with absorbed interest. Sometimes joyfully, sometimes dejectedly, she spoke about what happened on the Earth at one time. Some things were believable, others not so much. And when I got home I wanted to find out about people's ability to hold in their memory information about events going back not just to their own birth but to the birth of their ancestors, and even further back, to the creation of the first Man. Scientists and specialists on this subject got together on a number of occasions, and here I should like to offer a few pertinent excerpts from the round tables we had.

"...To many people it will seem strange to claim that everyday objects can contain information about a Man. But if you show an audiocassette to someone who's never seen a tape recorder or even heard about its possibilities, and tell him that your voice, your speech, is recorded on the tape and he can listen to it whenever he likes — a year or even ten years later, that person will not believe you. He'll think you're some kind of trickster. Yet for us the fact of recording and reproduction of sound is a common occurrence. And by the same token something that seems quite extraordinary to us might be extremely simple and natural to someone else."

"If we start from the fact that Man has still not invented anything more substantial or perfect than what has been invented by Nature, then Anastasia's ray, which helps her

see things at a distance, can be confirmed by the existence of the radiotelephone and television. Further, I would say that those phenomena of Nature which she uses sound like a more perfect application than what we have invented artificially, like our modern television and radiotelephone."

"One person's memory may have a hard time keeping track of things that occurred even half a year ago. Another person may remember events that happened in his childhood and be able to talk about them. But I don't see that as coming anywhere close to the limits of the human memory's possibilities."

"I don't think many scientists will deny that Man's genetic code has been storing primordial information for millions of years. It is also possible to collect supplementary, so-called 'incidental' information over one's lifetime and pass it on to succeeding generations. Expressions we are all familiar with — like "it's inherited" or "transmitted by inheritance" — bear witness to this. Anastasia's abilities to reproduce scenes that happened to mankind millions or billions of years ago are theoretically possible and explainable. Not only that, but they can be at their most accurate the further they are removed from our reality. I believe Anastasia's memory is not that different from many other people's. Or to put it more accurately, the information recorded in her genetic code is no greater than for any other individual. The only difference is that she has the ability to 'retrieve' and reproduce it fully, while we can do so only in part."

These and other things the specialists said have convinced me that Anastasia is able to tell the truth about the past. I was especially struck by the example of the tape recorder.

But there was one phenomenon which the scientists invited to the round table couldn't explain — namely, how it is that Anastasia can get information not only about earthly civilisations but also about those on other worlds and in other galaxies. Besides, she can not only talk about them, but it seems she can also influence them. I shall try to set forth everything in order. Perhaps someone will be able to explain these abilities of hers, at least theoretically, and to figure out whether or not they are inherent in other people as well. Anastasia herself tried to explain how she happens to know about them, only her explanations were difficult to understand.

In any case, I shall try to describe the following situation in its proper order.

## CHAPTER TWENTY-ONE

# Where do we go in sleep?

On several occasions Anastasia's description of earthly civilisations contained references to the existence of life on other planets and in other galaxies of the Universe. And I got so interested in this that while I was listening to her tale about mankind's past, I could only think about how life evolved out there, on other planets.

Anastasia, no doubt, saw my interest in her story waning, and stopped talking. I was quiet, too, thinking about how I could get her to tell in more specific detail about life in extraterrestrial civilisations. I could have asked her directly, of course, but she tends to get somehow distracted whenever she can't explain why she knows something others don't. And it seems to me that her desire not to stand out from other people on account of her abilities discourages her from talking about everything. I've begun noticing, for example, that she's rather shy about her inability to explain how certain phenomena work. This is in fact what happened when I asked her directly:

"Tell me, Anastasia, are you able to teleport yourself in space? I mean: moving your body from one place to another?"

"Why are you asking me about that, Vladimir?"

"First tell me specifically: yes or no?"

"Vladimir, everybody has that kind of ability. But I am not sure I can explain to you just how natural this process is. You will only withdraw yourself from me again, saying I'm a witch. You will feel uncomfortable with me."

“So that means you can?”

“I can,” she answered hesitantly, her head bowed.

“Then give me a demonstration. Show me how it happens.”

“Perhaps I should try to explain first...”

“No, Anastasia, first show me. It’s always more interesting to watch something than to listen. And then you can explain.”

Anastasia had an estranged look about her as she rose to her feet. She closed her eyes, tensed up a little, and then disappeared before my eyes. Dumbstruck, I looked all around. I even felt with my hands the spot where she had just been standing, but all that was there was some trampled grass, while Anastasia was nowhere to be seen. Then I caught sight of her standing on the far side of the lake. I looked at her, speechless. Then she called out:

“Shall I swim to you? Or shall I once more...”

“Once more!” I replied and, taking care not to blink in case I missed anything, I began watching the figure of Anastasia standing on the other side of the small lake. All at once she vanished. Simply dissolved into thin air. Not even a trace of smoke was left at the place where I had just seen her. I continued to stand there unblinkingly.

“I am here, Vladimir.” Anastasia’s voice sounded right beside me. Once again she was standing no more than a metre away. I found myself stepping back a little, then I sat down on the ground, trying not to show any sense of surprise or excitement. For some reason the thought came that suddenly she might take it into her head to dissolve *my* body and then not assemble it afterward.

Anastasia spoke first. “Only the owner of a body can fully dissolve it or split it into atoms. This is an ability available only to Man, Vladimir.”

I realised she was going to first try to prove to me that she was Man, and so as not to have her waste any time, I said:

"I realise that it's only given to Man. But surely not to every Man."

"Not to everyone. One must —"

"I know what you're going to say: *One must have pure thoughts.*"

"Yes. Pure thoughts, and besides that, the ability to think quickly and in images, to visualise in specific detail one's self, one's body and desire, a strong will, and faith in one's self..."

"Don't explain, Anastasia. Don't waste your time trying. Tell me rather, can you move your body to any place at all?"

"*Any place*, yes, though I rarely do that. *Any place* can be very dangerous... Besides, there is no need to. Why move one's body? There are other ways..."

"Why dangerous?"

"It is essential to get an accurate picture of the place you wish to move your body to."

"And if you don't get an accurate picture, what can happen?"

"Your body might be lost."

"How?"

"For example, suppose you wanted to transport your body to the floor of the ocean, and the water pressure crushes it. Or you suffocate. Or you might wind up on a city street in front of an oncoming car, and the car hits your body and injures it."

"And can Man also transport his body to another planet?"

"Distance plays absolutely no role here. It will move itself to whatever place your thought dictates. After all, your thought goes to the destination first. It is also what assembles and puts together again the body that was earlier dissolved in space."

"If I wanted to dissolve my body, what should I be thinking about?"

"You have to visualise all of its matter, right down to the tiniest atom, right to the nucleus, and see how the particles

create an outwardly chaotic movement in the nucleus, and then mentally dissolve them in space. Then assemble them in their former sequence, in their outwardly chaotic movement in the nucleus, reproducing it accurately. It is all very simple. Just the way children play with blocks.”

“But mightn’t it turn out that on another planet there wouldn’t be a suitable atmosphere to breathe?”

“That is what I am saying — it is dangerous to transport one’s body without thinking it through carefully. There are a lot of things to take into account ahead of time.”

“So that means it won’t work out to go to another planet?”

“It can. It is possible to take some of the surrounding atmosphere along, too, and the body will live in that for a time. But generally it is better not to transport one’s body without a particular need for it. In most cases it is sufficient to watch from a distance with one’s ray, or transport only one’s second, non-material self.”

“Incredible! It’s hard to believe that every Man was once capable of doing something like that!”

“Why do you say *once*? One’s second human self is capable even now of moving about freely, and it does move. Only people do not assign it any specific tasks. They do not set it any goal.”

“Who... — what kind of people does this happen with?”

“Right now it basically happens when a person sleeps. It is possible to do the same when one is awake, but on account of the general bustle as well as all sorts of dogmas and various contrived problems, people are losing more and more the ability to control their own selves. They are losing the capacity for imaginative thinking.”<sup>1</sup>

<sup>1</sup>*imaginative thinking* (Russian: *obraznoe myshlenie*) — the Russian term refers to the specific ability to visualise in one’s mind a vivid and detailed image, not just a fantasy.

“Maybe because it’s not that interesting to travel without one’s body?”

“Why would you think that? In terms of what you feel, the final result can often be the same.”

“Well, if the result were the same, people wouldn’t go dragging their bodies around, travelling to different countries. Right now the tourist business is pretty profitable in our world. And there’s something I don’t quite understand about that mysterious second self of Man’s. If one’s body hasn’t been somewhere, that means the Man wasn’t there either. It’s just as simple and clear as that.”

“Do not try to jump to hasty conclusions, Vladimir. I shall now present you with three different scenarios. And you try to tell me in which case this hypothetical person actually took a trip.”

“Okay, go ahead.”

“Here is the first... Imagine yourself or some other person sound asleep. He is placed on a stretcher. While still asleep, he is put on an aeroplane and taken to another country — from Moscow to Jerusalem, for example. Still sleeping, he is driven up and down the main street, taken into the main temple, and still asleep, brought back the same way and put back where he started. What do you think — was the traveller from Moscow really in Jerusalem?”

“Tell me the other two scenarios first.”

“Fine. The second traveller went to Jerusalem all on his own, walked along the main street, spent a little time in the temple and then went home.”

“And the third?”

“He left his body behind. But he had the ability to visualise everything at a distance. He walked around the city as though in a dream. He visited the temple, dropped in somewhere else, and then mentally returned to his previous activities... Now, who of the three was actually in Jerusalem, do you think?”

“In the fullest sense, only one of the three was there. That was the one who consciously decided to make the journey and see everything for himself.”

“Let us say that is so, but in the final analysis, what did each of them get out of the visit?”

“The first traveller didn’t get anything out of it. The second was able to tell about everything he saw. As for the third... The third person would probably also be able to talk about it, only he might make mistakes, since he saw everything in a dream, and a dream can be quite different from reality.”

“But the dream as a phenomenon is also a reality.”

“Well, yes, the dream exists as a phenomenon. Maybe it’s a reality too, but what are you getting at?”

“At the fact, which you will probably not deny, that Man is always able to connect or make contact between two existing realities.”

“I know what you’ve been driving at here. You want to say that it’s possible to control a dream and direct it where you want.”

“Yes.”

“But what exactly helps that come about?”

“It comes about with the help of the energy of thought, and its ability to free any reality for penetration into images.”

“And what then, does it register an impression of everything that goes on in some other country, like a TV camera?”

“Excellent! The TV camera can serve as a primitive confirmation. So, Vladimir, you have reached the conclusion that it is not always necessary to transport material bodies to feel what is happening in a faraway land?”

“Perhaps not always. But why did you start telling me about this? Are you trying to prove something?”

“I realised that when you began talking about other worlds that you would demand or ask that I show them to you. I want to carry out your request without putting your body at risk.”

“You guessed everything right, Anastasia. I really was going to ask you about that. So, there’s life on other planets after all? Gosh, it’d be jolly interesting to see them!”

“Which planet would you like to visit?”

“What — are there a lot of them — inhabited, I mean?”

“There are a great many, though none more interesting than the Earth.”

“But still, what kind of life is there on the others? And how did it originate?”

“When the Earth appeared as a Divine co-creation, many of the elements of the Universe were eager to repeat this marvellous creation. They wanted to create their own on other worlds, using planets which in their opinion were suitable. They began creating them, but nobody could create life in a harmony anything like that of the Earth.

“There is in the Universe, for example, a planet where ants predominate over everything. There are a great number of ants on it. The ants devour other life-forms. When there is nothing left for them to eat, they turn to eating each other and die. And the element that created this kind of life is trying to re-create it anew, but it certainly is not turning out any better. Nobody has been able to bring all the elements together in harmony.

“There are also planets where the elements have tried, and are still trying, to create a vegetative world similar to the Earth. And they are creating it. Those planets are growing trees, grass and bushes. But each time their creations reach full maturity they die. None of the elements of the Universe has been able to guess the secret of reproduction. They are like Man today. After all, Man today has created a lot of artificial things all on its own. But not one of his creations can reproduce itself. They break down, rot away, decay and demand constant maintenance. The majority of people on the Earth have been turned into slaves of their own creations. Only the

creations of God are capable of reproducing themselves and living in harmony in all their great diversity.”

“But are there planets in the Universe, Anastasia, where beings are involved in technology the way Man is?”

“Yes, there are, Vladimir. There is a planet that has six times the Earth’s volume and has beings outwardly similar to Man. Their technology is artificial, and has been perfected far beyond the technology of our Earth. Life on this planet was created by an element of the Universe which believes itself to be on a par with God, and is striving for predominance over God’s creations.”

“Tell me, are they the ones who have come to the Earth in their space ships — the ‘flying saucers’ we see?”

“Yes. They have tried to make contact with Earth people on a number of occasions. But for the Earth their contacts —”

“No, wait. Is there any way you can take me, or my second self, to that planet for a visit?”

“Yes, I can.”

“Then take me there.”

After that Anastasia asked me to lie down on the ground and relax. Telling me to spread out my arms to the sides, she placed one of her hands in mine and in a short time I began to doze off into something similar to sleep. I say *something similar*, as this dozing off was most unusual. First my body felt more and more relaxed. I couldn’t feel my body any more, though I could see and hear everything around me perfectly well — the singing of the birds, the rustling of the leaves. Then I closed my eyes and sank into a sleep, or ‘divided myself’ (as Anastasia would put it). But to this day I am not in a position to say what happened to me next or how. If it is to be assumed that with Anastasia’s help I fell asleep and had a dream, the fulness of my sensations and the clarity of my awareness of everything I saw can in no way be compared with any human dream.

## CHAPTER TWENTY TWO

# Other worlds

I saw another world, another planet. I was able to remember everything that went on there in clear detail, yet to this day I still have the lingering feeling in my consciousness that beholding anything like that is an impossibility. Think about it — my mind and consciousness tell me it's impossible, and yet they — the visions, the pictures — remain with me to this day. And now I shall try and describe them to you.

I stood on ground similar to what we have on the Earth. There was absolutely no vegetation around me. I say *stood*. But whether I can actually say that it's hard to tell. I didn't have any legs or arms, I didn't even have a body, and yet at the same time it seemed I could feel my steps, I could feel the rocky, uneven surface through the soles of my feet.

All around, as far as the eye could see, above the soil rose metallic machines, both egg-shaped ones and square, or cube-like machines. I use the word *machines* because the one closest to me gave off a kind of soft whirring sound.

From each of these machines a plethora of hoses of different diameters went down into the ground. Some of these hoses were slightly quivering, as though something was being sucked up through them from the ground, while others were in a motionless state. No living beings were in sight.

All at once I saw a panel on the side of one of these strange devices open, and out floated — rather slowly — a kind of disc, similar in shape to a discus thrown by athletes, only much larger, about forty-five metres in diameter. It hovered in the air, and then started to rotate. After a brief descent

it took off and flew completely noiselessly overhead. Other devices a little further away did the same, and several more discs flew after the first one, one after the other, right over my head. And then once again there was just still and empty space, except for the whirring and crackling of the strange devices. The whole picture aroused my interest, but even more, its indescribable lifelessness was frightening.

“Do not be afraid of anything, Vladimir.” All at once I caught the sound of Anastasia’s voice, which comforted me no end.

“Where are you, Anastasia?” I enquired.

“Right here beside you. We are invisible, Vladimir. Present here are our feelings, sensations, mind and all our other invisible forms of energy. We are here without our material bodies. Nobody can do anything to us. The only thing we need be wary of is ourselves, and the consequences of our own sensations.”

“What kind of consequences might there be?”

“Psychological consequences. Like temporarily going out of one’s mind.”

“Going out of one’s mind?”

“Yes, but only temporarily. For a month or two, it can happen: the vision of other planets may stir up Man’s mind and consciousness. But you need not be afraid, you are not threatened by this. You will pull through. And there is nothing to be afraid of — believe me, Vladimir, you are indeed here, but not as far as they are concerned. At the moment we are invisible and can go and see whatever we wish to.”

“I’m not afraid. Only you’d better tell me, Anastasia, what are those whirring machines all around us? What are they for?”

“Each of those egg-shaped machines is a factory. They are the ones that produce the ‘flying saucers’ that are of such interest to you.”

"And who maintains, or controls these factories?"

"No one. They are programmed in advance to make a particular product. Through those pipes going down into the ground they suck up the raw material they need in the required amounts. The forging and pressing, and then the assembly, all take place in small compartments inside, and then the fully formed product comes out. This factory is much more efficient than any on the Earth. There is practically no waste from this process. There is no need to transport raw material from distant places. There is no need to ship individual component parts to the assembly point. The whole manufacturing process is concentrated in one place."

"Amazing! We should have a gizmo like that! And who controls the new 'flying saucers'? I noticed they were all flying in the same direction."

"Nobody controls them, they fly all by themselves to a storage depot."

"Incredible! Just like a living being!"

"But this by itself represents nothing incredible, even in terms of earthly technology. After all, the Earth also has pilotless planes and rockets."

"Just the same, they are controlled by people on the Earth."

"But the Earth for a long time has also had rockets which are preprogrammed for a specific target. All one has to do is push the launch button and the rocket fires itself and heads for a predetermined target."

"Maybe so. And really, what was there here that was so surprising?"

"If you really think about it, there is not that much to be surprised at. Only, by comparison with the technology we have on the Earth, this is far more advanced. These factories, Vladimir, are multifunctional. They can manufacture a great deal, from food products to powerful weapons."

“And what are their food products made of? Nothing grows here, after all.”

“Everything comes from deep in the ground. The machines take in all the juices they need through the pipes and press them into granules. These granules will contain all the substances needed to sustain bodily life.”

“What does this gizmo itself feed on? Who supplies it with electrical power? I don’t see any wires.”

“It produces the energy it needs all on its own, using everything from the environment.”

“Well, just look how smart it is! Smarter than Man.”

“It is by no means smarter than Man, Vladimir. It is simply a machine. It is subject to its assigned programme, and is very easy to reprogram. Would you like me to show you how it is done?”

“Go ahead.”

“Let us move a little closer to it.”

We stood at about a metre’s distance from the huge device, which was the size of a nine-storey building. The crackling sound became more distinct. An army of flexible tentacle-like pipes reached into the ground, shaking. The surface of the device’s covering wasn’t entirely smooth. I caught sight of a circular area approximately a metre in diameter, densely covered with small wires sticking out like hairs. They were quivering, each one individually.

“This is the antenna for the scanning apparatus. It picks up the brain’s energy impulses which it uses to compile a programme capable of carrying out an assigned task. If your brain can visualise a particular object, the machine should be able to manufacture it.”

“Any object?”

“Any that you can picture in detail. As though constructing it with your thoughts.”

“And any kind of car?”

"Of course."

"And can I try it right now?"

"Yes. Move closer to the receiver and start by mentally instructing its antenna to turn all its receptor wires toward you. Directly that happens, begin picturing what you desire."

I stood close to the wiry antenna. Burning with curiosity, I mentally desired, as Anastasia had said, to have all its wires pay heed to me. At first they turned in my direction, then all of them, with a slight trembling, directed their tips to my invisible head and stayed still.

Now I had to visualise a particular object. For some reason I began picturing a Model 7 Zhiguli<sup>1</sup> — the car I had in Novosibirsk. I tried picturing everything in as much detail as I could — the window-glass and the bonnet, the bumper, the colour and even the licence plate. I took a long time with the visualisation. When I got tired of it, I moved away from the antenna. The huge machine started whirring more briskly."

"We must wait," explained Anastasia. "Now it is disassembling the unfinished product it was working on and compiling a programme for carrying out your design."

"Will we have long to wait?"

"I do not think so."

We went over to look at some of the other machines. Presently, as I was examining the multicoloured rocks underfoot, I heard Anastasia's voice announcing:

"I think the manufacture of the object you pictured in your mind is complete. Let us take a look and see how it coped with the task."

<sup>1</sup>*Zhiguli* — a car first produced in the late 1960s at the Volga Automobile Factory at Toliatti, on the Volga River, by an agreement with the Italian Fiat corporation. The cars outwardly resemble a Fiat of about the same era, and are still being produced to this date.

We went back to the first machine and began waiting. After a little while its panel opened and out came a Zhiguli. It rolled down a smooth ramp to the ground. But this freak standing in front of me had nothing on the beautiful automobile I knew back on the Earth.

First, it had only one door — one on the driver's side. In place of the back seats there were only some coils of wire and pieces of rubber. I walked — or rather moved — around the object. It was definitely not something you could call a motor car.

Two wheels were missing from the passenger side. Nor was there any bumper or licence plate at the front. The bonnet did not look as though it would open — it seemed to be made of a single piece with the chassis. In sum, this unique factory had produced not a car, but some kind of narwhal of indeterminate function.

And I said:

“Gawd! Is that the best this alien factory can come up with? If this had happened on Earth, they'd have sacked all the designers and engineers!”

Anastasia burst out laughing in response, and I heard her voice say:

“Of course they might have been let go. But in this case the chief designer is you, Vladimir, and what you see is the product of your designing.”

“I wanted a standard modern automobile, but what has this machine spit out?”

“Wanting is not enough. You have to picture everything down to the minutest detail. You did not even include any passenger doors in your visualisation. You only thought of the one door for yourself. And you pictured wheels only on your side of the car — you neglected to put in wheels on the other side. And I think you completely forgot about the motor.”

“Completely forgot.”

“Which means there is no motor in your design. So why blame the manufacturer when you yourself gave it an incomplete programme to work with?”

All at once I saw, or sensed, the approach of three flying machines heading in our direction. *Gotta get outa here* — the thought flashed across my mind, but then I heard Anastasia’s calming voice:

“They will not notice us or sense us in any way, Vladimir. They have received word about a disruption in the work of one of their factories, and now they are probably coming to investigate. We shall have the opportunity to quietly observe some of the living inhabitants of this planet.”

Out of the three small flying machines stepped five aliens. They were very similar in appearance to earthlings. Not just similar, but everything about them suggested earthlings. They were well built. No slouching shoulders — their athletic bodies held their handsome heads straight and proud. And they even had hair on their heads and eyebrows on their faces, and one of them sported a neatly trimmed moustache. They were dressed in thin multicoloured one-piece outfits that tightly covered their whole body.

The aliens walked over to the car produced by their factory, or, more accurately, to the semblance of an earthly car. They stood silently beside it, observing, without emotion. *They are no doubt having one hell of a time trying to figure this one out*, I thought.

The alien who appeared to be the youngest, with light-brown hair, detached himself from the others. He went up to the door of the car and tried to open it, but the door refused to budge. The lock was probably jammed. The rest of his actions seemed very earthly, which gave me no small comfort. The brown-haired alien banged his hand on the door in the area of the lock, then tried pulling it harder this time, and the door opened. He sat down in the driver’s seat, put his

hands on the steering-wheel and began to carefully examine the dashboard instruments.

*Good lad*, I thought. *A clever fellow*. And in confirmation of my appraisal I heard Anastasia say:

“This is a very top-ranked scientist, by their standards, Vladimir. His thought works quickly and logically in a technical orientation. Besides, he is studying how beings live on several other planets, including the Earth. He even has an Earth-like name — Arkaan.”

“But why does his face show no surprise at finding that one of their factories made something anomalous?”

“The inhabitants of this planet have almost no feelings or emotions. Their minds work evenly and logically, with no giving in to emotional outbursts or departures from set goals.”

The young alien climbed out of the car, uttering sounds reminiscent of Morse code. An older alien stepped forward and stood by the wiry antenna where I had positioned myself earlier. Then they all climbed back into their flying machines and took off.

The factory which had manufactured the car according to my design began whirring again. Its tentacle pipes began pulling themselves up from the ground and redirecting themselves toward a nearby automated factory of the same type, from which tentacle pipes also extended. When all the tentacles joined together, Anastasia said:

“You see, they have reprogrammed it to self-destruct. All the components of the factory where the disruption occurred will now be remoulded by the other factory and used in production.”

And I began feeling a trifle sorry for the robot factory which had helped me create, albeit unsuccessfully, an Earth-car. But there was absolutely nothing I could do about it.

“Vladimir, would you like to take a look at the everyday life of the planet’s inhabitants?” Anastasia offered.

“Yes, of course.”

We found ourselves overlooking one of the cities or settlements of the huge planet. Our aerial view afforded us the following picture:

As far as the eye could see, the whole populated area consisted of a great many cylindrical installations, something like our modern skyscrapers, set in a large number of circles. In the centre of each circle were low-rise structures somewhat reminiscent of trees on the Earth — even their sensor-leaves were green. And Anastasia confirmed that these artificial structures draw up from the ground all the components of substances needed for sustenance, which are then despatched through special pipes into the homes of every inhabitant of this particular world. Not only that but they maintain the requisite atmosphere for the planet.

When Anastasia suggested paying a visit to one of the apartments, I asked:

“Can we visit the flat of that brown-haired alien who sat in my car?”

“Yes,” she replied. “At this moment he will be just getting home from work.”

We found ourselves almost at the very top of one of the cylindrical skyscrapers. There were absolutely no windows in this alien apartment block. The circular walls were marked off into dull-coloured squares. Near the bottom of each square was a raisable door — the kind you might find on our modern garages. Now and then one of the doors would open and out would come a small flying machine similar to the ones we had seen near the automated factory, and fly off on its own. It turned out that there was a small garage for one of these machines located below each apartment in the high-rise.

There were no lifts or doors in the building. Each flat had its own entrance directly from the garage. And, as it turned out, every inhabitant of the planet acquired an apartment like this once he reached a certain age.

At first I didn't particularly take to the flat itself. Upon finding ourselves in the brown-haired man's flat just after he arrived home, my initial impression was one of surprise at its simplicity and apparent lack of amenities. The room, approximately thirty square metres in area, was completely barren. It wasn't just that there were no windows or partitions — there wasn't even the barest modicum of furniture. The smooth, pale walls bore not a single painting or shelf by way of decoration.

"Maybe he's just got this flat recently?" I asked Anastasia.

"Arkaan has been living here for twenty years now. His apartment has everything necessary for relaxation, entertainment and work. All the necessary components are built into the walls. You shall presently see for yourself."

Indeed, no sooner had the brown-haired alien come up from his garage below, than the ceiling and walls of the room began to glow with a soft light. Arkaan turned to face the wall next to the entrance, placed the palm of his hand on the surface and uttered a sound. A panel on the wall lit up.

Anastasia gave a running commentary on everything that was taking place in the apartment:

"Right now the computer is identifying the apartment's owner by the lines of his hand and his eye-scan. Now it is greeting him and letting him know how long he has been gone, as well as the need to check his physical condition... You see, Vladimir, Arkaan has put his other hand up to the console and is letting out a deep sigh so that the computer can check his physical condition... Now the check-up is complete, and a message has appeared on the screen telling him he needs to take a nutrient mixture. It is asking him what he intends to do over the next three hours.

"This is important for the computer to know in order to prepare an appropriate mixture. Now Arkaan is asking for a

mixture optimised to boost his mental activity for the next three hours, after which he intends to go to sleep.

“The computer is suggesting that he not engage in any strenuous mental activity over a three hour period; instead, it is recommending he take a solution calculated to sustain work activity for a period of two hours and sixteen minutes. Arkaan has agreed to the computer’s recommendation.”

At that point a small niche opened in the wall, from which Arkaan seized hold of a flexible pipe. Putting the end of the hose to his mouth he took a drink (or a bite to eat) from the hose and then went over to the opposite wall. The niche holding the pipe closed up, the screen panel dimmed, and the wall where the alien had just been standing once more became smooth and monochrome.

*Wow!* I thought, with this technology you can do away with a kitchen and all its equipment, and dishes, and furniture — especially you can do away with clean-up. And even with a wife who knows how to make a good meal. No need to go to the store. Besides, at one fell swoop the computer can check your health, prepare the food you require and make all sorts of recommendations. I wonder how much a computer would cost back on the Earth? And immediately I heard Anastasia say:

“As for expenditures, it is less expensive to equip each apartment with such a device than to load kitchens down with furniture and a whole lot of appliances for food preparation. They are much more rational than earthlings, all told. But in fact there is much more rationality on the Earth than here.”

I didn’t pay much attention to Anastasia’s last remark. I was too absorbed in watching Arkaan’s actions. He went on giving voice commands, and the following events ensued in the room.

From a section of the wall all at once an armchair began to inflate. Then beside the chair another little niche opened,

from which a small table emerged, along with some kind of semi-transparent container resembling a laboratory flask. On the opposite wall of the room a large screen lit up, about one-and-a-half to two metres in diagonal. The screen showed a beautiful woman in a slinky body-suit seated in a comfortable chair. The woman was holding a container in her hands similar to the one on the table beside Arkaan. The image of the woman on the screen was three-dimensional, and much sharper than on our TV sets. It seemed as though she were not on a screen, but sitting right there in the room.

Anastasia explained that Arkaan and the woman sitting opposite him were forming a child together.

“The inhabitants of this planet do not have sufficient strength of feeling to enter into sexual relations like people on the Earth. Outwardly their bodies are no different. But the absence of feelings does not allow them to produce offspring the way people do on the Earth. It is their own cells and hormones that are contained in the test-tubes you see. Men and women visualise what they would like their future child to look like. They mentally instil in him the information they themselves contain, and discuss his future activity. This process lasts approximately three years in Earth time. Once they determine that the process of the child’s formation is complete, they join the contents of the two containers together in a special laboratory, the child is produced and raised in a special nursery school until he comes of age. Then as a mature member of the community he is offered an apartment and assigned to the personnel roster of one of the work groups.”

Arkaan alternated his gaze between the woman on the screen and the liquid in the little sealed container. All at once the wall screen dimmed, but the alien remained seated in his chair, his eyes fixed on the container on the table in front of him holding a particle of his future child. Now the opposite

wall was flashing with red squares. The alien turned sideways, his hands shielding his eyes from the flashing lights, and inclined his head even closer to his container. New illuminated squares and triangles began flashing alarmingly from the ceiling.

"The wake-time allotted Arkaan by the computer has expired. Now the computer is insistently reminding him of the need for sleep," Anastasia explained.

But the alien bent his head down even closer to his flask, clasping it in his hands.

The lights on the walls and the ceiling stopped flashing. The room began filling with some kind of steam-like gas. Anastasia's voice remarked:

"Now the computer is using gas to put Arkaan to sleep."

The alien's head began slowly drooping toward the table and soon it was resting on it, his eyes closed. The armchair began emerging even further out of the wall and transforming itself into a bed. Then the bed-chair began rocking from side to side, and the body of the already sleeping alien fell back into a comfortable cradle.

Arkaan slept clasping the little container in his hands to his chest.

There is so much more to tell about the advanced technological features not only of the apartment, but on the huge planet as a whole. According to Anastasia, the community of people inhabiting it have no fear of any invasion from the outside. Not only that, but with the help of their technical achievements they are capable of destroying life on any other planet in the Universe. Any except the Earth.

"Why?" I asked. "Does that mean our rockets and weapons are capable of repelling an attack?" And Anastasia replied:

"Earth rockets pose no threat to them, Vladimir. The civilisation on this planet has long been acquainted with all the

derivatives of explosion. They also are familiar with implosion.”

“What does that mean, *implosion*?”

“Scientists on the Earth know that when two or more substances which have come together in an instantaneous reaction expand, an explosion occurs. But there is a different reaction from contact between two substances. Take a gaseous substance, about a cubic kilometre or more in size, capable of instantaneously compressing itself to the size of a speck, thereby becoming a super-hard material. Imagine a grenade or a rocket exploding in such a cloud, but another force simultaneously acting against the explosion — an implosion — will take place at the same time. And all you will hear then is a clapping sound. And everything that was in that cloud will be transformed into a stone the size of a speck. All the rockets on Earth will not overcome the pall of gaseous clouds.

“In the history of the Earth there have been two comings, or invasions, on their part. Now they are preparing for a third. They think a favourable moment for that is once more approaching.”

“That means nothing can stop them, if there are no weapons on Earth stronger than theirs.”

“Man does have a weapon. It is known as *Man's thought*. Even I alone could turn about half of their weapons into dust and scatter them through the Universe. And if I could find some helpers, then together we would be able to liquidate all their weapons. The only thing is, the majority of people on the Earth and almost all the governments on the Earth would consider their invasion a blessing.”

“But how could it happen that everyone took an invasion, an attack, for a blessing?”

“You will see in a moment. Here, take a look at the centre which is preparing an invasion force to take over the continents of the Earth.”

## CHAPTER TWENTY-THREE

### The invasion centre

Of course I was eager to see their interplanetary super-technology that was capable of conquering a whole planet. But what my eyes actually saw... I think our Russian, American and other military strategists have absolutely no idea of the kind of weapons that could so easily be used to take over the territories they are supposedly protecting.

And you, dear readers, before you read on, try to imagine how an alien centre preparing for an invasion of the Earth might be equipped. And then look and see what it looks like in reality. I shall now attempt to describe its outward appearance.

A huge square room. Along each of the four walls there is a life-size replica of the interiors of our own native parliaments on the Earth. Along one wall is the State Duma,<sup>1</sup> along with the office of our President in the Kremlin. On the opposite wall I could see the interiors of the American Congress and the office of the American president in the White House. Along the other two walls were the offices of various State political institutions — in some of the Asian countries, judging by their appearance.

In the parliamentary seats were sitting our earthling deputies,<sup>2</sup> congressmen and presidents. First of all I began examining our own Russian deputies. They were an exact copy of

<sup>1</sup>*Duma* — the Russian Parliament (derived from the Russian word meaning 'to think').

<sup>2</sup>*deputies* — members of the *Duma* are known as *deputaty* (deputies).

the familiar faces I had seen on TV. Only here they were sitting motionless, like mummies. It is difficult to say what they were made of. Maybe they were dolls, holograms or robots, or maybe even something else.

In the middle of the huge hall was a raised platform, on which were sitting approximately fifty aliens. They were dressed not in their usual bodysuits, but in our earthly clothing, and were listening to a speaker standing in front of them. Probably their chief instructor or some other official.

Anastasia explained that we were observing one of the landing parties, currently engaged in a routine class session on preparing for interaction with earthly governments. They have been studying the most common Earth languages and the way people behave in various situations. They are paying special attention to the preparation for contact with governments and legislative bodies, through which they hope to influence the whole population of the Earth.

They have mastered conversational speech without too much difficulty, but in the absence of certain feelings capable of provoking outward emotions, they are finding it rather hard to mimic Earth people's gestures. And with their rationalistic way of thinking they cannot see any logic in earthly governmental systems. Despite their drawing upon the best minds and the most modern technology of their civilisation, they have still been unable to guess, for example, the secret of why, in spite of the computer technology already available on the Earth and the multitude of special scientific institutions, our national legislative bodies are still not provided with information about the consequences of the decisions they take. They are convinced that were there a specific analysis centre — a 'think tank', in other words — for which everything requisite is already available on the Earth, it would be possible to visualise almost perfectly the social consequences of all parliamentary decisions. Instead, every legislator, every

member of an earthly government, is obliged to make decisions independently. Not having sufficient information at their fingertips, each member of a government is obliged to fulfil the function of a powerful analysis centre and calculate the consequences not only of his own actions but also those of his colleagues, enemies and friends.

Another very mysterious question which the aliens have not been able to guess the answer to is why earthlings do not define any goal to be attained. They aspire to something, but to what — that remains a deep secret. Nevertheless, on the basis of the current requirements of earthly societies the aliens have prepared a plan to invade Earth's continents. They will begin by making proposals to earthlings through the governments of various countries. And their proposals will be accepted with great enthusiasm.

When I asked Anastasia why she was so confident in governmental acceptance of the proposals, she replied as follows:

"This is what their analysis centre has determined. The conclusions of the centre are correct. Given the level of conscious awareness of most earthlings today, they will take the aliens' proposal as a supreme manifestation of the humanity of the Mind of the Universe."

"And what kind of proposals are they?"

"They are monstrous, Vladimir. It is difficult for me even to talk about them."

"Tell me at least the main points. It would be interesting, after all, to know just what these monstrous proposals are that would be enthusiastically welcomed on the Earth — the Earth I live on, and you too."

"The aliens first plan to land a small party, three of their flying machines, on Russian territory. They will tell the military personnel which surround them of their desire to meet with government circles to talk about mutual co-operation. They will present themselves to the soldiers as representatives of

the Supreme Mind of the Universe and give them a demonstration of their superior technology.

“After military, scientific and government circles have held internal consultations, approximately fourteen days later the aliens will be invited to concretise their proposals, but first they will have to undergo a medical examination to make sure it is safe to communicate with them.

“The aliens will agree to the medical examination and then put their proposals in writing, as well as on video. The text will be laid out in a form very similar to our modern official documents, and will be characterised by extreme simplicity.

“The text will read something like this:

*We the representatives of an extraterrestrial civilisation, having achieved the ultimate level of technological development by comparison with other intelligent inhabitants of the Universe, do hereby consider Earth people our brothers in reason.*

*We are prepared to share our knowledge with societies on the Earth in various branches of science and social structure and offer them our technology.*

*We ask you to consider our proposals and select the ones most suitable for improving the life of every member of your society.*

“Then will follow a whole series of concrete proposals, the substance of which amounts to this:

“The visitors offer to share their technology in providing each citizen of the country with nutrient mixture and rapid construction of housing for everyone who has reached the age of maturity. This is the same kind of housing you have already seen, Vladimir, only with not quite so many functions. As an example, they will introduce their mini-factories into the country. They will integrate their alien factories with existing Earth factories, but in five years all Earth technologies will be discarded and replaced by technologically more advanced

counterparts. A job will be guaranteed for all who wish to have one. Not only that, but every single inhabitant of the Earth will be required to contribute a certain minimum amount of work toward maintaining the technological devices.

“A nation that signs a treaty with the visitors will be completely protected from military invasion by any other nation. In a society which embraces the new social order and its technologically supported lifestyle there will be no crime. In the apartments provided you, everything you need will react only to your voice commands, identified by tones inherent only in your voice. Every day before you take in food, the computers in your apartments will scan your eyes, breath and other parameters to determine your physical health and prescribe the corresponding food mixture composition.

“Each computer installed in an individual apartment will be linked with the main computer, which will thereby be able to pinpoint the exact geographic location of every individual, along with his state of physical and mental health. Any criminal offence will be easily uncovered with the help of a special programme in the main computer. Besides, the social conditions which now foster crime will be absent.

“In return, the visitors plan to ask the government’s permission to settle representatives of their civilisation in sparsely inhabited areas — mainly in forests — as well as the right of people to exchange their individual garden plots for technologically equipped apartments and provision of lifetime care if they choose to do so.

“The governments will agree, under the impression that they will still be in full control. A number of religious denominations will start preaching that the alien visitors are God’s emissaries, since the aliens will not deny any of the religions existing on the Earth. Religious leaders who do not believe in the aliens’ Divine perfection will find it impossible to stand up against the visitors since they will be accepted by the majority

of the citizens in each country that signs the treaty. All other countries will start seeking similar treaties of co-operation with the visitors.

“Nine years after the first landing on the Earth a new way of life will have been speedily inculcated into all countries on all the continents of the Earth. All information media will broadcast the ever advancing achievements in technology and social order. The majority of the population will glorify the ‘emissaries of the Mind of the Universe’ as intellectually superior brethren, as deities in themselves.”

“And not without justification,” I remarked to Anastasia. “There’s nothing wrong in having no wars and crime on the Earth. Everyone will be provided with an apartment, food and employment.”

“Vladimir, do you not realise that once mankind accepts the terms of the aliens, they at the same time renounce their non-material, Divine self? In fact, it will self-destruct. All that is left will be material bodies. And every Man, Vladimir, will come to more and more resemble a biological robot. And all the children of the Earth will henceforth be born biological robots.”

“But why?”

“All people on the Earth will be compelled to render daily service to those devices which outwardly serve them. All mankind will fall into a trap, surrendering their own freedom and that of their children for the sake of an artificial technological perfection. Before long many Earth people will intuitively recognise their mistake and start ending their lives by suicide.”

“Strange. What would they be lacking?”

“Freedom, creativity and the feelings that only co-creation with the Divine creation can bring.”

“And if the parliaments and governments of various countries are unwilling to sign treaties with the aliens, what then? Will they start destroying mankind?”

“Then the alien minds will look for other ways to lead everybody into a trap. There is no sense in their annihilating mankind. After all, their goal is to understand the inter-relationship among all earthly creations, and by what power reproduction is brought about. Nothing like that can exist without Man. It is Man who is the chief link in the chain of harmony of earthly creation. And the Sun’s rays are part of the energy and feelings that many people reproduce. With their present level of consciousness today’s Earth people pose no resistance to the visitors. And many earthlings today are even trying to render them assistance.”

“How so? Who among us is trying to help them? Does that mean there are traitors in our midst? Working for them?”

“They are working for them, but these people are not traitors. Their acquiescence in this comes about involuntarily — it is without malice or premeditation. The main reason is their own lack of faith in themselves and in the perfection of God’s creations.”

“What’s the connection here?”

“It is simple. When Man admits the thought that he is not a perfect creation, when he all at once begins to imagine that there are beings on other planets of superior intellect, he himself feeds them by his own thought. Man himself thereby belittles his own God-given power and attributes power to creations other than the Divine. They have already learnt to gather the energy human thoughts and feelings can produce into a unified complex and are proud of that achievement.

“Look, and you will see in front of that group of aliens there is a container of glowing liquid, which is being transformed back and forth between gaseous, liquid and solid states. They have no weapon stronger than what is concentrated in that small container. Later they will distribute its whole content into a whole lot of small, shallow containers. One of the sides of the container will act as a special reflector. Each one of

them will wear a similar device around his neck in the form of a medallion. All the aliens you see sitting in front of you are wearing such devices right now. When a ray from this medallion is directed at a Man, it may provoke in him feelings of fear, reverence or excitement. And it can paralyse not only a person's will, but also his consciousness and his body. This ray contains thoughts of a multitude of people. People's thoughts that there is someone in the Universe stronger than Man. *Stronger than Man, God's creation.* And these thoughts, when concentrated, can be turned against people themselves."

"So, it turns out we ourselves give them power when we consider them mentally superior to ourselves?"

"Yes, that is right. Mentally superior to ourselves means mentally superior to God."

"What's God got to do with it?"

"We are His creations. When we believe that there are other more perfect worlds in the Universe, that means we are accepting ourselves as imperfect — imperfect creations of God."

"Wow! And have they already accumulated a lot of such energy on the alien world?"

"In the container standing in front of you there is enough energy to overcome approximately three quarters of all the minds on the Earth and to take over people's feelings. *That* they consider way more than enough. Then the whole earthly civilisation will begin to pay them obeisance. And their power will increase."

"So, is it impossible at this stage to do anything about it?"

"It is possible, if we take a risk and do something they are not expecting. After all, a full complex of human feelings, even just one, is always stronger. And it is possible to accelerate thought to a speed unknown to those who have no feelings. And all the energy amassed in that container can be neutralised by the energy of another thought which is brighter, more confident and more perfect."

“And you, Anastasia, would you yourself be able to neutralise all the energy in that container?”

“I could try, but I would have to bring my whole body here for that.”

“Why?”

“My complex of feelings will not be complete without my body. Matter is one of the planes of Man’s being. With it Man is stronger than the elements of the Universe.”

“So, go ahead — we need to break the container.”

And all at once in front of me I saw Anastasia in the flesh. She was dressed just as she had been in the forest, in a cardigan and skirt. She stood there barefoot on the floor, and then all at once started walking unhurriedly over to the aliens sitting in front of the container with the glowing liquid. They caught sight of her. No emotions showed themselves on the faces of these unfeeling beings — only for a brief moment they remained motionless in their seats. A second later everyone was astir. Suddenly, as if on command, they all rose and grasped hold of the medallions around their necks. All the medallions flashed with rays of light, all directed at the approaching figure of Anastasia.

She stopped, lost her balance momentarily, took a small step backward, then stopped again. Giving a little stamp with her bare foot, she slowly and confidently moved forward again.

The rays coming from the aliens’ medallions got brighter and brighter as they joined together, concentrating on Anastasia. It looked as though it would take but a moment for them to reduce all the clothing on her to ashes. But Anastasia continued moving forward. All at once she stretched her hands out in front of her. Some of the rays reflected off the palms of her hands and were extinguished. Then the others started to go out.

The aliens stood there stock still, as before. Anastasia went over to the container, put her hands around it, stroked it with

her palms and whispered something to it. All at once the liquid in the container became turbulent, then its glow began to gradually fade, and before long there remained a practically colourless liquid with only a slight bluish tinge, much like ordinary water on the Earth.

Anastasia went over to a machine standing by the wall that looked something like a refrigerator. She pressed her hand against it, whispered something to it, and out came a shower of some kind of small coloured square tablets, which she caught in the upturned hem of her cardigan.

Anastasia went over to the aliens, who were still standing dumbstruck as before, and held out one of the tablets to the one at the end. He stirred, as though about to hold out his hand, but stopped at once and began staring in the direction of the man who was standing in front of them all — probably their leader. And so there was Anastasia standing before him for about half a minute, her hand outstretched.

Then she went over and stood directly in front of the leader and held out a tablet for *him*. After a brief pause the leader took the tablet and put it in his mouth. Anastasia then went around to each one in turn, and this time everyone calmly took a tablet from her and ate or swallowed it.

Then she turned from them and came over toward me. She had got half way to me when all at once she stopped and, turning toward the group of seated aliens, waved her hand at them. And several of the aliens got up from their seats and waved their hand back at her in response. When she reached my position, she said with a tired voice:

“We need to go back. They have now taken the thought-accelerating tablets. Let them try to make sense of what has happened here.”

And then it was all over. I found myself lying on the grass as before, as though awakening from sleep. It seemed just a short time had passed, but my body felt rested, as after a

deep, healthy sleep. But my head... Inside me everything felt as though it were boiling over. As though my thoughts were running in all directions at once. All the images I had seen on that other planet completely stayed with me.

What was it? A dream? Hypnosis? Or everything at once — it still wasn't clear. To see what is actually happening on a planet other than the Earth — this was something I found impossible to believe, and I asked Anastasia who was sitting beside me:

“What was it? A dream? Hypnosis? I seem to have remembered everything and now my head feels absolutely chaotic.”

And she replied:

“Vladimir, as for the power by which this vision of another planet appeared to you, take it any way you like. If you find the question disturbing, you can simply tell yourself you had a dream. Besides, all that is not what is really important. What *is* important is the essence, the conclusions and the sensations of this vision you saw. Think about that while I leave you for a while.”

“Yes, go on. I'll be thinking about it here on my own.”

Left alone, I began to ponder what I had seen. Naturally I concluded that I had had some kind of hypnotic dream.

After taking just a few steps, however, Anastasia suddenly turned and headed back in my direction. She took something out of the pocket of her cardigan, and held out her open hand to me. And there I saw it, lying on her hand... a strange-looking tablet, the same kind I had seen on the other planet.

“Take it, Vladimir. You need not be afraid to swallow it. On the planet you and I visited they make these out of herbs from here on the Earth. For about fifteen minutes it will help accelerate your thought, and you will be able to make sense of everything all the more quickly.”

I took the little tablet from her outstretched hand, and when Anastasia left, I ate it.

## CHAPTER TWENTY-FOUR

# Take back your Motherland, people!

At first I found my dialogue with Anastasia about what constitutes the *Motherland*<sup>1</sup> rather unintelligible. Her arguments didn't even seem normal to me, at least initially. But later...

Even today I can't help thinking of them. I distinctly recall her response to my questions about what to do to prevent war — either earthly or interplanetary — from happening to us, to eliminate bandits altogether and bear happy and healthy children. It went this way:

“We need to tell everyone, Vladimir: *Take back your Motherland, people!*”

“Take back your Motherland?” — are you sure you're not mistaken, Anastasia? Everyone has a Motherland, or a native

<sup>1</sup> *Motherland* — The Russian term here is *rodina*, also translatable as *native land*. *Rodina* conveys a deep reverence to one's ancestors, responsibility for descendants and an intimate connection to the land one's family lives on. As explained in footnote 2 in Book 2, Chapter 27: “The anomaly”, the term *Rodina* is derived from two Russian roots connected by *i* (= ‘and’): (a) *Rod* — the name of God the Creator in the ancient Slavic tradition, also signifying ‘origin’, ‘derivation’, ‘birth’, ‘kin’ and, by extension, ‘Father’, and (b) *Na* — a root signifying ‘Mother’, and quite possibly the same root as the *na* in the Latin participle *natus* (‘born’), from which our English words *native* and *nature* are derived. Subsequently *Rod i Na* (‘Father and Mother’) took on the broader significance of one's family (or ‘kin’), and by association came to refer to the particular geographical location occupied by succeeding generations of the same family. Readers should be aware that it is the ‘native’ or ‘family’ aspect, more than the ‘land’ component, that is significant in understanding the term *Motherland* (i.e., *Rodina*) in this and subsequent chapters.

land, only not everybody lives in the country where they were born. Maybe you didn't mean 'take back your Motherland', but 'you need to *come back to* your Motherland' — is that what you were trying to say?"

"I was not mistaken, Vladimir. Most people living on this planet today have no Motherland at all."

"What d'you mean they haven't a Motherland? For Russians, Russia is their Motherland, the English have England. After all, everybody was born somewhere, and so people will use the term *Motherland* or *native land* to refer to the land where they were born."

"Do you consider that one's Motherland must be measured by someone's arbitrarily determined border?"

"What else? That's the way things are. All states have borders."

"But if there were no borders, how could you determine your Motherland then?"

"By the place I was born — the town or village — or maybe the whole Earth would then be a Motherland for everyone?"

"The whole Earth *could* be a Motherland for each one of its inhabitants, and Man could be caressed by everything in the Universe, but for that to happen, he would need to join together all planes of being into a single point, call it his *Motherland*, and create with his own self a Space of Love therein. Then all the best things of the Universe would come into contact with it first hand — come into contact with the space of your Motherland. You in yourself will feel the whole vast Universe through this point, and possess power unsurpassed. They will know about this on other worlds. Everything will serve you, as God, our Creator, wanted it."

"You've really got to speak in simpler terms, Anastasia. I didn't get anything about those 'planes of being', or how to join together their strands. Or about the 'point' I can call my Motherland."

“Then we need to begin our discussion with what constitutes birth.”

“Well, okay, with birth then. Only don’t just say words, but use words that make sense for us on the Earth today. Tell me, for example, how you see, how you picture the generation of the family — the birth and raising of children — in today’s prevailing conditions. And how all the children of Man can be born happy. Can you construct a plan or draw me a picture?”

“I can.”

“Then tell me about it. Only not about life in the forest or about the incomprehensible *science of imagery*. Nobody knows anything about that, only you...”

I couldn’t finish the sentence. My head was buzzing with not just one but a whole lot of questions. Especially: Why was I even interested in knowing what this taiga recluse would tell me about our lives? How does she happen to know not only the outward details of our lives but many people’s inner feelings too? What were the possibilities of this incomprehensible science of imagery?

I couldn’t stay seated. I got up and began to pace to and fro. Trying to calm down and to make sense of — to understand — these incredible phenomena, I began to reason like this:

Here’s this young woman calmly sitting under a cedar tree — ruffling her hand slowly through the grass, or watching some bug crawl up her arm, or immersing herself briefly in thought. Here she sits in the taiga, far removed from the bustling day-to-day life of cities and nations, far removed from wars and all the troubles of the civilised world. But what if she actually knows this science of imagery to perfection? What if she can use it to influence people and society, and in a more powerful way than all our governments, parliaments and religious denominations? Incredible! A fantasy! But...

There are actual concrete facts which confirm this. Incredible facts, indeed! But they really do exist.

In a very short time she taught me to write books. She needed only three days to do this. She was the one pouring forth over and over again an unending stream of information. Incredible, but fact. Without so much as an advertising campaign, her books have easily spread across municipal and national boundaries. Her image is in these books. By some unknown means this image influences people and arouses creative impulses in them. Thousands of lines of poetry and hundreds of bards' songs are dedicated to her image.

And this is something she has known about all along! Right there in the first book I outlined what she said on this subject. Back then there was nothing as yet. At the time her words seemed like incredible nonsense, like a fantasy. But everything came about exactly as she had said. And now, even as I am writing these lines, incredible things have been happening.

In 1999 the Prof-Press publishing house put out a 500-page anthology of readers' letters and poems.<sup>3</sup> The anthology was published in July, considered a 'dead season' for booksellers. But an incredible thing happened: the whole print-run of 15,000 copies sold out within a single month.

Another 15,000 copies have been printed, but these books instantly sold out, too. Such an event may not be so spectacular for a sensationalism-ridden press. In fact, it goes far beyond the conceptual bounds of sensationalism by virtue of the uniqueness of the conclusions stemming from it — conclusions that defy credulity. It is indeed hard to believe that

<sup>3</sup>This readers' anthology, entitled *V luche Anastasii zvechit dusha Rossii* (The soul of Russia sings in Anastasia's ray), was first released in 1999 by Prof-Press in the city of Rostov-on-Don, and was subsequently re-published by Dilya Publishers of St. Petersburg.

Anastasia's image is actually changing the consciousness of society.

Readers feel the need of taking action. People both in Russia and abroad are independently organising readers' clubs and centres, calling them after her.

A Novosibirsk medical factory is producing the cedar oil she talked about. And in a small village in the Novosibirsk Region local residents are repairing their old equipment and endeavouring to produce healing oil according to the technology she recommended, and they are getting help from the city.

It was she herself who said that Siberian villages would be regenerated, and that children would start coming back to their parents.

She has been redirecting the flood of pilgrims from foreign temples to our native sacred sites. In the past two years alone the dolmens she spoke about on the outskirts of Gelendzhik<sup>3</sup> have been visited by over fifty thousand of her readers. Around these previously neglected sacred sites people are now planting flowers and gardens. And in a number of cities they are planting cedars and other growing things according to her method.

By decree of the head of the Tomsk Region administration an enterprise has been set up under the name of *Sibirskie dikorosy* (Siberian Flora). It has now sent four thousand cedar saplings to Moscow.

Scientists are talking about Anastasia. Her image as a living, self-sufficient substance is already soaring across Russia. But only Russia? Women in Kazakhstan are collecting money to make a film about Anastasia. Wow! Here are Kazakh women wanting to make a film about a Siberian recluse?!

<sup>3</sup>*dolmens, Gelendzhik* – see footnotes 1 and 2 in Book 1, Chapter 30: "Author's message to readers".

This image of hers is beginning to lead people somewhere. But where? By what power? Who is helping her? It is possible she herself possesses some kind of incredible power hitherto unknown. But why is she staying in her glade as before, still messing about with bugs?

While intellectuals are arguing over whether or not she exists at all, she is simply taking action. The results of her actions can be seen, touched and tasted. What is this science of imagery?

Back in the taiga, I found such thoughts a trifle confusing. I wanted to have them either disproved or confirmed on the spot, but she was the only one around, the only one I could ask.

*So I'm going to ask her. She is incapable of lying. I'm going to ask her.*

"Tell me, Anastasia... Tell me, do you have a perfect knowledge of the science of imagery? Do you possess the knowledge of those ancient priests?"

I was greatly excited as I awaited her reply, but a calm voice responded without the least hint of excitement:

"I know what my forefather taught those priests. And also what the priests did not give him the opportunity to say. And I have endeavoured to find out and feel new things on my own."

"Now I get it! Just as I thought! You are more of an expert than anyone else on the science of imagery. And you have created your own image and placed it before people. For many you are a goddess, a messiah, a forest sprite. That is how readers write about you in their letters. You have told me I should write down everything — as though pride and self-conceit were a great sin. And I have presented myself before the public as a bumbler, while *you* have come out exalted over everyone, and what's more, you knew it was going to turn out this way in advance."

“Vladimir, I have not concealed anything from you.”

Anastasia rose from the ground and stood in front of me, her arms down by her sides. She looked me straight in the eye and went on:

“Only my image is not yet clear to everyone. But that other image which will be out there before the people, will also be mine. My image will resemble that of a cleaning lady who is simply dusting the cobwebs off the most important thing.”

“What’s this about cobwebs? Speak more clearly, Anastasia. What is it you want to ‘create’ this time?”

“I want to animate, bring alive, the image of God to people. I want to make His grand dream clear to everyone, so that every living person may feel His aspiration of love. Man can become happy here and now, in this life. The children of people on the Earth today will live in His Paradise. I am not alone. You are not alone. And Paradise will appear as a joint co-creation.”

“Hold on, hold on there. I realise now that your words will cause many teachings to fall apart. Their instigators and their followers will start not only lambasting you but bombarding me too. Who needs problems like that? I refuse to write down everything you say about God.”

“Vladimir, here you are afraid just of the thought of struggling with someone you do not know.”

“No, it’s all quite clear to me. I’ll get descended upon by all the religious leaders. They’ll poison their fanatical followers against me.”

“It is not *them* — you are afraid of *yourself*, Vladimir. You are ashamed to present yourself before God. You do not believe in your new way of life. You think you cannot change.”

“What’s this got to do with me? I’m telling you about the clerics. So many of them are already reacting to your sayings.”

“And what are they saying to you?” Anastasia enquired.

“Different things. Some react negatively, while others — just the opposite. One Orthodox priest from Ukraine came to me along with his parishioners in support of your sayings. But he’s just a country priest.”

“And what do you mean when you say a ‘country’ priest came to see you?”

“I mean there are others, higher-ups. Everybody’s subject to them. Everything depends on them.”

“But still, even those ‘higher-ups’, as you call them, also once served in the smaller churches.”

“That makes no difference. All the same I’m not going to write until at least somebody in charge of some major temple... Anyway, what am I saying? You can predict everything that’s going to happen ahead of time. So tell me, who will be against you, and who will help you? Will there be anyone, in fact, who comes to your assistance?”

“What clerical rank could convince you to be bolder, Vladimir?”

“Nothing less than a Father Superior or a bishop. Can you name any?”

She thought just for a split-second, as though gazing into both time and space at once.

And then came this incredible answer:

“Assistance has already come, Vladimir, from someone who has uttered new statements about God — namely Pope John Paul II,” Anastasia replied. “The images of Christ and Mohammed will unite their energies in space, and other images will merge together with them. There will also be an Orthodox patriarch,<sup>4</sup> whose words will be revered for centuries. But, most importantly, there will be impulses of inspiration among all ordinary people. It may be their earthly status that

<sup>4</sup>*patriarch* — the titular head of the Russian Orthodox Church.

is important to you, but, after all, *truth* is more important than anything on Earth.”

At this point Anastasia ceased talking and lowered her eyes, as though she had been suddenly offended by something. It appeared as though a lump in her throat had welled up, but she swallowed it and sighed. Then she added:

“Forgive me — I fear I am not making myself clear to your heart. Things are not working out at the moment on my part, but I shall try to be clearer, only let the people hear...”

“About what?”

“About what others have tried for a thousand years to hide from them. About how it takes hardly a moment for any one of them to enter the Creator’s pristine garden and there bring about splendid conjoint creations with Him.”

I could feel a sense of agitation building inside her. And I myself, for some reason, began feeling agitated, and said:

“Don’t be concerned. Tell me, Anastasia, and perhaps I *shall* be able to understand and write about it.”

And what she went on to say she said in an extremely concrete and simple way. It was only later, after analysing and pondering her words, that I began to understand, and could feel some sense — a significant sense at that — in her words “Take back your Motherland, people!” But back there, in the forest, I asked her once more:

“I see how it’s all going to come about. I see that if you can so easily bring out images of life of thousands of years ago, that means you must know all religious teachings and treatises, and that you will reveal them to people?”

“I know the teachings that called forth reverence among people.”

“All of them?”

“Yes, all of them.”

“And the Vedic scriptures you can translate in their entirety?”

"I can. Only why waste time on that?"

"But look, don't you want mankind to know about those ancient teachings? Tell me about them, and I shall write about them in my next book."

"And what then? What do you think will be the net benefit to mankind?"

"What d'you mean? They'll become wiser."

"Vladimir, the whole nature of the dark forces' trap is that with their multitude of teachings they try to conceal the most important thing from Man. By presenting a portion of truth — only for the mind — in their treatises, they deliberately lead people away from the most important thing."

"Then why do people call the ones that present such teachings *wise men*?"

"Vladimir, if you will allow me, I shall tell you a parable. It is a parable that a thousand years ago was whispered by wise men to each other in some secluded spot. For many centuries now no one has heard this parable."

"Then go ahead and tell it to me, if you think that the parable may be helpful in explaining something."

## CHAPTER TWENTY-FIVE

### Two brothers (*A parable*)

Once upon a time lived a couple that for many years had no children. When they were well on in age, the wife bore twin boys — two brothers. The labour was difficult, and shortly after childbirth their mother passed on to the next world.

Their father hired wet-nurses, and tried to bring up his children as best he could. And he managed indeed, for nigh on fourteen years. But as his boys approached their fifteenth birthday, the father himself passed on.

After burying their father, the two brothers sat mourning in their room. Two twin brothers. Three minutes separated their emergings into the world, and so between the two of them one was considered the elder, his brother the younger. After a period of mournful silence the elder brother spoke:

“Our father on his deathbed told us of his sorrow that he had not been able to impart to us the wisdom of life. How shall you and I live without wisdom, my dear younger brother? Without wisdom our family line will go on in misery. People who have managed to gain wisdom from their fathers might laugh at us.”

“Do not be sad,” said the younger to his elder brother. “You spend a good deal of time in reverie. Perchance time will afford you the opportunity in your reverie to learn wisdom too. I shall do everything you say. I myself can live without reverie, yet I still find living a pleasing experience. I am happy when the day dawns and when it draws to a close. I shall simply live, take care of the household, while you are learning wisdom.”

"Agreed," replied the elder to the younger. "Only there is no opportunity to seek out wisdom by staying here at home. There is no wisdom here, no one has left it here and no one will bring it to us of their own accord. But I as the elder brother have decided I must, for both our sakes, and for the sake of our line which will extend through time, find everything that is wise in this world. I must find it and bring it home, and bestow it upon our descendants as well as our own selves. I shall take with me everything of value our father left us, and travel throughout the world and meet all the wise people of different lands. I shall learn all their teachings and then return to my native home."

"Your course will be a long one," said the younger brother sympathetically. "We have a horse. Take the horse, and the cart as well, and on your departure take along as much goods as you can carry, so that you will find your journey the less hard. I shall stay at home and await your returning as the wisest of men."

The brothers parted for a very long time. Years went by. The elder brother went from wise man to wise man, from temple to temple, learning the teachings of the Orient and the Occident, journeying to the North and to the South. He possessed a colossal memory, and his keen intellect quickly grasped everything he heard and committed it to heart.

For about sixty years the elder brother plied the highways and byways of the world. His hair and beard turned to ashen grey. His inquisitive mind kept roaming and honing his wisdom. And this ageing pilgrim came to be considered himself the wisest of men. He was followed around by a crowd of disciples. To inquisitive minds he generously preached his wisdom. Both young and old hung on his every word. And his glory and fame preceded him wherever he came, and communities would proclaim in advance the wise man's great coming.

And so it was in an aura of glory, surrounded by a throng of obsequious disciples, that the ageing wise man drew nearer and nearer to the village where he was born and the house which he had left sixty years before as a youth of fifteen.

All the people of the village turned out to greet him, and the younger brother, showing similar signs of grey, ran toward him rejoicing, and bowed his head before his learned brother. And he whispered with gladsome tenderness:

“Bless me, O my learned brother. Come into our home, I shall wash your feet after your long journey. Come into our home, my wise brother, and take your rest.”

With a magnanimous sweep of his hand he gestured to all his disciples to remain on the little hill in front of the village, accept gifts from the well-wishers and engage in learned conversations, while he himself entered the home of his younger brother. The wise man, like an ageing dignitary, sat down wearily at the table in the spacious upper room. And the younger brother began washing his feet with warm water and listening to what his learned brother had to say. And the wise man began speaking to him as follows:

“I have fulfilled my duty. I have learnt the teachings of the great wise men of the Earth, and I have created teachings of my own. I shall not stay long at home. Now to impart what I have learnt to others — that is my part. But since I promised to bring my wisdom home, I shall fulfil my promise and sojourn a day or two with you. During this extent of time, my dear younger brother, I shall impart to you the wisest pearls of truth in the world.

“Here is the first: *all people should live in a splendid garden.*”

Drying his elder brother’s feet with a beautifully embroidered towel, the younger went to considerable effort to please him, saying:

“Go to, my brother. On the table before you are the fruits of our garden — I have gathered the very best for you.”

The wise man thoughtfully tasted the marvellous array of fruits before him, and went on:

*“Every Man living on the Earth should cultivate his own family tree. When he dies, the tree will remain as a good memorial for his descendants. It will purify the air with its leaves so that his descendants will be better able to breathe. We should all be able to breathe good air.”*

The younger brother began to show signs of haste and effort, and said:

“Forgive me, my wise brother, I forgot to open the window so that you can breathe fresh air.” Whereupon he threw the window open and then went on:

“Here, breathe the air of our two cedar trees. I planted them the year you left. I dug a hole with my spade for one of the saplings, for the other I used the spade you played with when we were youngsters.”

The wise man thoughtfully gazed at the trees, and then intoned:

“Love is a grand feeling. Not everyone is handed the opportunity to live his life with love. And there is a grand wisdom: *each of us should strive every day for love.*”

“Oh, how wise you are, my dear elder brother!” exclaimed the younger. “You have learnt such great wisdom, and I am embarrassed in your presence. Forgive me, I have not even introduced you to my wife...” And he called out toward the doorway:

*“Starushka! Where are you, my little cookie?”*<sup>1</sup>

“Here I am!” a voice piped up. And in the doorway a cheerful old woman appeared with plates of fresh steaming pies in her hands. “Sorry, I’ve been busy making pies.”

<sup>1</sup> *starushka* — an affectionate term for an elderly woman; *little cookie* (Russian: *striapushka*) — an endearing name derived from the word *striapukha* (lit., ‘cook’), and rhyming with *starushka*.

Putting the pies down on the table, the cheerful *starushka* did a playful curtsy to the two brothers. And then she went over to the younger brother, her husband, and whispered in his ear, but loudly enough for the elder brother to hear:

“And now you must forgive me, hubby, I have to go lie down.”

“How now, my ne’er-do-well?” her husband replied. “You’ve decided to go have a nap when we have an honoured guest? My very own brother — and you go...?”

“It’s not that, my head is spinning and I’m starting to feel a bit nauseous.”

“And how could that possibly happen to you, my little busy-body?”

“Perhaps you are the one to blame, no doubt, again. I am once more with child,” laughed the *starushka*, as she ran off.

“My apologies, brother,” the younger brother excused himself in some embarrassment. “She doesn’t know the value of wisdom, she’s always been light-hearted and is still that way, even in her old age.”

The wise man’s thoughtful moments became increasingly longer. His reverie was broken by the sound of children’s voices. The wise man heard them and said:

“Every Man should strive to learn great wisdom. *To learn how to raise children that will be happy and righteous.*”

“Tell me, learned brother, I long to make my children and grandchildren happy — you see, my noisy little grandchildren have just come in.”

Two boys no older than six and a little girl of about four were standing in the doorway and quarrelling amongst themselves. In an attempt to smooth things out, the grey-haired younger brother hastened to say to them:

“Quickly tell me what all the fuss is about, my noisy ones. You’re interfering in our conversation.”

"Oh," the smaller boy exclaimed, "it seems our one grandpa has become two! Well then now, which is ours and which is not, how do we tell?"

"Here's our Grandpakins sitting right here, isn't it clear?" piped up the little girl, running over to the younger brother, putting her cheek against his leg, tousling his beard and prattling:

"Grandpakins, Grandpakins, I was coming to see you all by myself, to show you how I've learnt to dance, and the boys decided to tag along all on their own. One of them wants to draw with you — see, he's brought a board and some chalk. The other's brought a flute and a pipe — he wants you to play them for him. But Grandpakins, Grandpakins, I was the one who decided to come and see you first. You tell the others that. You can send them home, Grandpakins!"

"She's wrong. I came first to draw with you, and my brother only then decided he wanted to come with me, to play the flute," observed the boy carrying the thin piece of board.

"There are two of you grandpakins, you decide," the granddaughter chimed in. "Which of us came first? You'd better decide that I was first, or else I'm going to feel terribly hurt and cry."

The wise man smiled sadly at the youngsters. He furrowed his brow, working out a response in his mind, but said nothing. The younger brother became flustered, and decided to cut short the ensuing pause. He took the flute out of his grandson's hands and said without stopping to think:

"We don't have any cause for quarrel here. Dance, my pretty little jumper, and I shall accompany your dance on the flute. My dear little musician will accompany me on the pipe. And you, my dear little artist, draw what the sounds of the music are drawing, and draw the ballerina doing her dance. And now, everybody to their tasks — look to it, lads!"

Whereupon the younger brother struck up a cheerful and splendid melody on the flute, and the grandchildren enthusiastically imitated him in time, portraying their favourite images. The future famous musician playing the pipe tried his best to keep up with the melody. The blushing girl leapt about like a ballerina in a delightful portrayal of her dance. The future artist drew a picture full of joy.

The wise man kept silent. The wise man realised... When the merriment was finished, he rose and said solemnly:

“You remember, my dear younger brother, our father’s old hammer and chisel. Give them to me, and I shall hew out on a rock the most important lesson of all. Then I shall go away. I probably shan’t come back. Don’t stop me, and don’t wait for me.”

The elder brother left. The ageing wise man went with his disciples over to a great rock which a pathway bent around. The same pathway that lured wisdom-seeking pilgrims into lands far from home. A whole day passed, and night fell, but the grey-haired wise man kept hammering and chiselling away at the inscription on the rock. When the aged man finished his work in exhaustion, his disciples read the inscription on the rock:

*Whatever you seek, pilgrim, you are already carrying with you. You keep losing it with every step you take, and are finding nothing new.*

Upon finishing the parable, Anastasia fell silent. She gave me an enquiring look in the eye, no doubt wondering what I had got from it.

“Well, Anastasia, I took from the parable that all the pearls of wisdom the elder brother talked about, the younger brother was already implementing in his day-to-day life. There’s just one thing that isn’t clear to me, though: who taught the younger brother all these wise things?”

“No one. All the wisdom of the Universe is included for ever in each soul right from the moment it is created. It is just that wise men slyly intellectualise for their own interests, and thereby lead people away from the most important thing.”

“From ‘the most important thing’? But what *is* the most important thing?”

## CHAPTER TWENTY-SIX

### Even today everyone can build a home

“The most important thing, Vladimir, is that even today everyone can build a home. Everyone can feel God with their soul and live in Paradise. One single moment is all that separates Paradise from people living on the Earth today. Each one possesses conscious awareness within. When dogmas do not interfere with this awareness, then look, Vladimir, what can come to pass...”

All at once Anastasia brightened. She grasped hold of my hand and led me to the shore of the lake where there was a patch of bare sand, and started talking to me along the way.

“It only takes a moment. You will understand everything in just a moment of time. And everyone will understand — the readers, yours and mine.

“Within themselves they will define the essence of the Earth, and become aware of their destined purpose. Right this moment, Vladimir, see, right this moment we shall in our thoughts build our home! I and you, and all of them too. And I assure you indeed that the thought of each one of them will be brought into contact with the thought of God. The gates of Paradise will open. Let us go, let us move with more speed. I shall draw it with a stick upon the shore...”

“We shall build a home together with those who into contact with your written words will later come. All human thought will merge together into one. Believe me, people have God’s ability within them to turn what they conceive into reality. And many a home will stand upon the land. And

each one in their own homes will be able to grasp everything first hand. They will be able to feel and understand the aspirations of the Divine dream. We shall build a home! I and you, and all of them too!"

"Hold on there, Anastasia. There are a whole bunch of different designs out there for homes where people are living now. What sense can there be in proposing yet another one?"

"Vladimir, you must do more than simply listen to me! You must feel everything that I outline, and mentally complete yourself the whole design, and let everyone else draw it along with me. O, God! People, at least give it a try, I beg of you!"

Anastasia was literally trembling with joyful excitement. She was reaching out to people, and I found myself growing more and more interested in her design. And at first it seemed simple to me, yet at the same time I had the feeling as though this recluse, Anastasia, was revealing to everyone a most extraordinary secret. The whole secret was in utter simplicity, and if I can remember the events in order, this is how they all went.

Anastasia continued:

"First choose for yourself a place of your own you like best of all the pleasing spaces on the Earth. A place where you would like to live, and would like your children to live out their lives. And then you will indeed leave to your great-grandchildren a fitting memorial to you. The climate, too, in that place must be favourable for you. Take one hectare<sup>1</sup> of land in that place for yourself in perpetuity."

"But nobody can just come along and take any piece of land they jolly well desire. Land today is sold only in places where people wish to sell it."

<sup>1</sup>*hectare* — designating an area 100 metres square or 10,000 square metres, approximately equivalent to 2.5 acres in the Imperial system.

“Yes, unfortunately, everything happens that way today. Our Motherland is extensive, but there is not a single hectare of your land where you can create a corner of Paradise for your children and descendants. And yet the time has now come when we must begin acting on this cause. And take advantage of the most favourable of all the existing laws.”

“I don’t know all the laws, of course, but I’m sure there is no law allowing someone to take possession of a parcel of land in perpetuity. Farmers can rent a good deal of land, but only for ninety-nine years.”

“Well then, we can start by taking it for a shorter span of time, but we need at once to plan a law so that everyone may have his own parcel of ground, his own Motherland. Whether or not and to what degree the country flourishes as a state depends on this. And if there is no appropriate law at the moment, well, you will have to make one.”

“That’s easier said than done. Our laws are made by the State Duma. It has to make some amendment or introduce a new article into the Constitution. And the parties in the Duma are constantly fighting with each other — there’s no way they can settle the land question.”

“Then if there is no party capable of enshrining into law everyone’s right to their Motherland, you will have to form such a party.”<sup>3</sup>

<sup>3</sup>*ninety-nine years* — Ninety-nine-year leases, still in effect in Russia, were once common in many lands. Yet even today, the right to so-called ‘land ownership’ in most Western countries can be all too easily abrogated by governments if taxes on the land are not paid (and paid on time!), or if ‘private’ land is expropriated for a deemed ‘public’ need (the legal doctrine of *eminent domain*).

<sup>3</sup>*a party* — In 2005 the Russian ‘Motherland party’ (*Rodnaya partiya*) was established with the specific purpose of bringing forth legislation on allocating ‘pieces of Motherland’ to people in the form of family plots, just as Anastasia proposes here. In fact, the name *Rodnaya partiya* was suggested in Book 8 (Part 2) of the Ringing Cedars Series, published shortly before the new party was announced.

“And who will set it up?”

“Those who will read about the home we are creating and become aware of what a Motherland means to each one, to each Man living today, and to the future of the whole Earth.”

“Well, enough about political parties. Tell me rather about this unusual home of yours. I’m really interested now in what new design you can possibly bring forth. Let’s say someone has come into possession of a hectare of land. Not exactly a Paradise, but, say, one grown over with wild grasses — they’re probably not going to give him better than that. And there he is, standing on his hectare of land -- what next?”

“Think about it yourself, Vladimir, and dream a little, too. What could you do if you were standing on your own land?”

## CHAPTER TWENTY-SEVEN

### A fence

“First of all,” I said, “first of all, everything, of course, must be enclosed by a fence. Otherwise, when they start bringing in building materials to construct the manor house, somebody could come along and pilfer them. And when you plant a crop, it might be stolen before you harvest it. Or are you against fences on principle?”

“I am not against them, Vladimir. Even animals mark out their own territory. Only what are you going to make the fence of?”

“What d’you mean, what of? Fence boards, of course... No, wait. Fence boards can turn out to be on the expensive side. For starters you need to dig post holes and string up barbed wire all around the property. Even then you should still put up boards so people wouldn’t see inside the fence.”

“And how many years could a board fence last without needing repair?”

“If it is constructed of good material, if you keep it painted or varnished and smear the parts of the posts that are in the ground with pitch, it might go five years or more without needing repair.”

“And then?”

“Then you’d probably need to do some repair work and touch it up to keep it from rotting.”

“So, that means you will constantly have to fuss over the fence. And it will give your children and grandchildren even greater cause for concern. Would it not be better to construct it so your children will not have to bother about it, and so that

their view will not be spoilt by the sight of rotting timber? Let us think how to make the fence more solid and long-lasting, so that your descendants may have fonder remembrances of you."

"Of course, you can build it so it will last longer. Who wouldn't want that? For example, you could make brick pillars and a brick foundation, and put cast-iron grill work in between — that kind of fence doesn't rust. It can even last a hundred years. But only very rich people can afford to build a fence like that. Can you imagine? A whole hectare — that's a perimeter of 400 metres. A fence like that's going to set you back several hundred thousand roubles, maybe even millions. Still, it'll last a good hundred years, maybe two hundred or more. You can even have it made with all sorts of family monograms. Your descendants will look at it and remember their great-grandfather, and it'll be the envy of everyone around."

"Envy is not a good feeling, Vladimir. In fact, it is harmful."

"Well, there's not much you can do about that. I tell you, enclosing a hectare of land with a good fence is not something many people can afford."

"That means we must think up some other kind of fence."

"What other kind? Can you suggest something?"

"Would it not be better, Vladimir, in place of a whole lot of posts, which can later rot, to plant trees?"

"Trees? And then what, nail boards...?"

"Why nail boards to them? Look there, in the forest there are a lot of trees growing with their trunks only one-and-one-half to two metres apart."

"Yes, you're right. But there are holes between them. It's not the same as a fence."

"But it is possible to plant bushes in between them that people cannot get through. Take a careful look, and think what a splendid living fence you would have! And it would

be just a little bit different with each person. And everyone would come to admire the view. And your descendants in the ages to come will remember the creator of this splendid hedge. And the hedge will not only save them time on repairs but will bring them benefits as well. It will serve, in fact, as far more than just a barrier. One person will make a hedge out of birches growing in a row. Another will use oak. And someone with a creative impulse will make a coloured hedge, the kind one reads about in fairy tales.”

“What d’you mean, coloured?”

“Planting different-coloured trees. Birches, maples, oaks and cedars. Someone may intertwine a rowan-tree with clusters of bright red berries and still plant guelder-roses in between. And make room for bird-cherry trees and lilac bushes. After all, you can plan it all out in advance. Each planter should watch to see how high each one grows, how it blooms in the spring, what kind of a fragrance it has and what feathered friends it attracts. Thus your hedge will be both sonorous and pleasantly fragrant, and you will never get tired of looking at it, as the picture will be changing its tints with each passing day. It will flourish with colours anew every spring and every autumn burst forth in an explosion of fiery hues.”

“Well, Anastasia, it seems you’re a poetess as well. We began with just a simple fence, and now see what all you’ve made of it! You know, I really like the way you’ve turned the whole thing around. And why haven’t people thought of this before? No painting required, no repair. And when the trees get too big, they can be cut down and used for firewood and people can plant new trees — they can change the picture, just like an artist. The only thing is, won’t it take a long time to plant that kind of a hedge? And if you’re going to plant the trees two metres apart, then you’ve got to dig two hundred holes for the saplings. And then plant the bushes in between. And no technology will be allowed, you’ll say.”

“On the contrary, Vladimir. There is no sense in rejecting technology for the project at hand. Indeed, any invention of the dark forces must be put to use to serve the forces of light. It will hasten the implementation of the plan if you use a plough to dig a trench around the perimeter of the ground-lot and plant the saplings in it, along with the seeds at the same time — for the bushes you have decided to plant between the trees. Then you can go over it again with the plough to fill in the soil. While the earth is still loose, you can adjust the position of each sapling to even out the row.”

“That’s fantastic. So in two or three days one person can put in a whole hedge.”

“Yes.”

“The only drawback is that until the hedge grows, it won’t deter any thieves. And people will have to wait a long time for it to grow. Especially in the case of oak and cedar.”

“But birch and aspen grow quickly, and the bushes between them will not take much time either. If you are in a hurry, you can plant tree saplings two metres high right away. When the birches are grown, they can be cut up for household use, and their places will be taken by the maturing cedar and oak trees.”

“Okay, then, a living fence is something I can grasp. I really like it. Now tell me, what style of house do you see on the ground-lot?”

“Perhaps we should first plan out the lot as a whole, Vladimir?”

“What d’you have in mind — different beds for tomatoes, potatoes, cucumbers? That’s usually women’s work. House-building is a man’s job. I think you need to build one large house right off — a fashionable manor house in the European style so that your grandchildren and great-grandchildren will remember you fondly. Then there can be a smaller cottage for the servants. It’s a pretty big lot, after all. It’ll require a lot of work.”

“Vladimir, if everything is done properly from the start, there will be no need for servants. Everything around you will serve you with great pleasure and with love — and not only you but your children and whole family, and your grandchildren too.”

“It doesn’t happen that way with anyone. Even with your beloved *dachniks*.<sup>1</sup> They only have five or six hundred square metres, yet they’re working it every free day from dawn ’til dusk. And here they’re going to have a whole hectare! It’s going to take at least a dozen dump-trucks every year just to bring in the fertiliser and manure.

“First the loads of manure have to be spread over the whole growing area, and then all the earth has to be dug up and turned over. Otherwise nothing will grow right. And you’d better add some kind of fertiliser — you can get it in special stores. If you don’t fertilise, the soil won’t give a good yield. It’s something agronomists — people who study agriculture — know and *dachniks* have learnt from experience. I hope you agree on the need for fertiliser.”

“Of course, the earth needs fertilising, but the task need not be devitalising. God has thought through everything in advance so that the ground in the place you wish to live will turn out to have the right nutrients and be in an ideal condition without wearisome physical efforts on your part. You need only make contact with His thought and feel the wholeness of the system He has designed, instead of just relying on your own intellect in making decisions.”

“Then why is nothing fertilised today, anywhere on the Earth, according to God’s system?”

<sup>1</sup>*dachniks* — people who spend time (their days off, especially summer holidays) tending a garden at their *dacha*, or cottage in the country. See further details in Book 1.

*Above:* A raspberry 'living fence' grown by Sergei and Vera Bondar, Nizhny Novgorod, Russia. In addition to producing abundant harvests of raspberries, this maintenance-free hedge protects the garden from winds, attracts birds that naturally control pests and keeps unwanted visitors out. “We shall build a home together with those who into contact with your written words will later come. All human thought will merge together into one. Believe me, people have God’s ability within them to turn what they conceive into reality. And many a home will stand upon the land.”— *Ch. 26: “Even today everyone can build a home”*

True to Anastasia’s promise, new homes have sprouted all across Russia as thousands of people, inspired by her dream, start to lay foundations for their family domains or bring dying villages back to life.

*Above:* a 'build-your-home wonder-cake', representing a small-scale model of a kin's domain complete with a 'living fence' and garden plantings, becomes a festive table centrepiece in the *Kovcheg* eco-village, Kaluga Region, during a celebration on 16 September 2006. *Below:* young girls in search for their intended mate set small rafts afloat during a 'Find-your-soulmate' festival in the *Rodovoe* eco-community, Tula Region, 20 June 2006. Mixed permaculture plantings in Vasilii and Marina's garden, *Raduzhie* community (*Podgornoe* village), Republic of Mariy El, Russia, © Alexey Kondaurov, 2006. Like millions of other food-gardeners throughout Russia, this family uses no chemical fertilisers or pesticides, yet manages to grow abundant harvests in a climate with a growing season of only 110 days. According to official statistics, in 2005 Russian gardeners, using less than 3% of the country's agricultural land, produced over 53% of the nation's agricultural output — more than all the commercial producers taken together.

“Vladimir, right now you are in the taiga. Look around you, how high the trees are, how mighty their trunks! Among the trees herbs and bushes are growing. There are raspberries, and currants... indeed, a whole lot of everything grows right here in the taiga for Man’s use. And over thousands of years not a single person has fertilised the ground. But the land remains fruitful. What do you think: how has it been fertilised and by whom?”

“By whom? I don’t know how or by whom. But you’ve pointed out a really important fact. Indeed, it’s simply amazing how Man somehow gets everything twisted around. Tell me yourself, why aren’t various kinds of fertiliser needed in the taiga?”

“Here in the taiga God’s thought and God’s plan are not interfered with to the same degree as where Man lives today. In the taiga leaves fall from the trees, and little branches are torn off by the breeze. And these leaves and branches, along with worms, fertilise the ground in the taiga. And the grass which grows all around regulates the composition of the earth. The bushes help it clear away excesses of acids and alkalis. None of the fertilisers you are familiar with can substitute for leaves falling from the trees. After all, leaves include many of the diverse energies of the Universe. They have seen the stars, the Sun and the Moon. And not only seen, but they have interacted with them. And even many thousands of years from now, the ground here in the taiga will still be fertile.”

“But the ground-plot where our house is to be built is not the taiga, you see.”

“Then start planning! You yourself can plant a forest of different kinds of trees.”

“Anastasia, maybe it’d be best if you told me right off how to make it so that the soil on the plot stays fertilised all on its own? That is a major undertaking, since there are so many other things to do. Planting beds, warding off various kinds of pests...”

“Of course we could talk about details and particulars, but it would be best for each one to apply his own thought, his soul and his dream to the building work. Each of us knows instinctively what will be the most suitable arrangement for him and bring joy to his children and grandchildren. There can be no one single plan that fits all. Each plan is individual, like a great artist’s masterpiece. Each Man must make it his own.”

“But give me an example. At least tell me in general terms.”

“All right -- look, I shall do a little outlining for you. But first there is the most important thing to understand. Everything is created by God’s hand for the good of Man. You are a Man and can control everything around you. You are a Man! Try to comprehend and feel through your soul what constitutes a real Paradise on the Earth...”

“Now more specifically, Anastasia, without philosophising. Tell me what to plant and where, tell me where I should dig. What cash crops should I grow that will bring me the biggest return on my investment?”

“Vladimir, do you know why peasants and farmers today are so unhappy?”

“Well no, why?”

“So many of them are striving to bring in as big a harvest as they can. To sell. They think more about money than about the land. They themselves do not believe they can be happy in their own family nest, they think the rest of the people are happy in the big cities. Believe me, Vladimir, whatever is created in your soul will unfailingly be reflected in the whole world around you.

“Of course, outward details are also necessary. Let us think together about one way we can plan out our plot. I shall simply start things rolling, and you help me on your part.”

“Okay, I’ll help. You start.”

“Let us say our lot is on a barren section of land, and is now enclosed on all sides by a hedge. Let us divide it, reserving half or three-quarters of the lot for a forest, and there plant a variety of trees. On the edge of the forest, where it borders on the remaining part of the lot, we shall plant a hedge in such a way that animals cannot pass through it and trample the crops growing in the garden plot.

“In the forest we shall set up a pen using densely planted saplings, which in time will be home to a goat or two. And we shall also use saplings to construct a shelter for egg-laying hens.

“In the garden plot we shall make a pond approximately 16 metres across. We shall plant raspberry and currant bushes among the trees in the forest, and wild strawberries around the edge. Later, after the trees in the forest have grown a little, we can set up two or three empty log hives there for bees. And we shall use trees to make a gazebo where you will have a cool place, safe from the heat, to talk with your children or your friends. And we can make a summer sleeping area out of living things, along with a creative workshop for you. And sleeping places for the children, and a living room.”

“Wow! It won't be a forest we end up with, but more of a palace!”

“Only the palace will be a living entity, and continue to grow in perpetuity. This is how the Creator Himself thought up the whole balance of things. And all Man has to do is to assign everything its task — according to his own taste, design and understanding.”

“But why didn't the Creator do it all this way to begin with? Everything in the forest grows just where it happens to end up.”

“Think of the forest as a book for you as a creator. Look more closely, Vladimir — everything therein has been written by the Father. Look over there: three trees are growing just a

half-metre apart. You are free to plant them in a row and use a whole lot of them to make up other configurations. In among the trees there are bushes growing — think of how you can make use of them to sweeten your life. And where the trees do not allow grass and bushes to grow between them, you can take that as a lesson for building your future house out of living materials. It is as though all you have to do is to formulate the required programme and adjust it according to your taste. Everything around you is charged with the task of cherishing and delighting you and your children, cherishing and feeding them.”

“To feed ourselves, we’ll need to plant a vegetable garden. And that’ll take a lot of sweat.”

“Believe me, Vladimir, even the vegetable garden can be set up so that it will not be an aggravation. You just need to keep everything under observation. Among the herbs, just the way everything grows in the forest, you could have the most splendid tomatoes and cucumbers under cultivation. Their taste will be much more appealing and healthful for the body than when they are grown simply on a patch of bare ground.”

“But what about the weeds? And won’t they be destroyed by pests and beetles?”

“There is nothing useless in Nature, Vladimir, and there are no purposeless weeds. Neither are there any beetles that are harmful to Man.”

“What d’you mean, there aren’t any harmful beetles?! Take locusts, for example, or the Colorado beetle — a real vermin that eats away at potato crops in the fields.”

“Yes, it does. It is also thereby showing people how their ignorance is eating away at the self-sufficiency of the Earth, contradicting the designs of the Divine Creator. How can people keep stubbornly ploughing year after year in one and the same place, torturing the ground? It is like scraping an open wound, at the same time demanding benefits from the

wound. Locusts or the Colorado beetle will not touch the ground-lot which you and I have outlined. When everything grows together in one grand harmony, the fruits accruing to the owner are also harmonious.”

“But if that’s the way everything is going to ultimately turn out, meaning that on the lot you have thought up there is no need for Man to fertilise the ground, or fight off vermin with various kinds of poisons, or do weeding, and everything is just going to grow all by itself, then what is there left for *Man* to do?”

“Live in Paradise. The way God wanted us to. Anyone who is able to build himself a Paradise like that will come into contact with the Divine thought and produce a new co-creation together with Ilim.”

“What new co-creation?”

“Its turn will come oncc the creation of Paradise has been completed in due course. Let us consider now what you and I still need to do.”

## CHAPTER TWENTY-EIGHT

### Home

"We still have to build ourselves a decent home," I observed. "A place for our children and grandchildren to live, problem-free. A two-storey brick manor house with a toilet, bathroom and hot-water heater. You can do that for any private home these days. I was at a building fair recently and noticed how a lot of different facilities have been developed for conveniences in private homes. Or are you again going to object that we don't need to use any technological gadgets?"

"On the contrary, they are necessary. You need to make everything serve the cause of good as the opportunity presents itself. Besides, it is important that there be a smooth transition in people's habits. Only your grandchildren will not need the kind of home *you* are building. They will understand on their own as they grow up. They will need another kind of home. That is why it is not worthwhile spending too much effort to make the house extremely big or solid."

"Anastasia, I can tell you've got another sly trick up your sleeve. You keep rejecting everything I propose, even the house. I think there is no question but it should be a decent house. You said we would be designing this project together, and here you're thwarting me at every turn, no matter what I say."

"Of course we are doing it together, Vladimir. Besides, I am not rejecting anything, I am simply expressing my views. And each one must decide for himself what comes closest to his own taste."

"You should have told me a little more about your views right off. I don't think anyone's going to understand why the house should not stay the way it is for the grandchildren."

"The other home will still preserve their love for you and their everlasting memories of you. When your grandchildren grow up, they will understand which materials out of all the ones thought up on the Earth will be the most pleasant, solid and useful for them. Right now you do not have those kinds of materials. Your grandchildren will build a wooden house using those trees which their grandfather planted 'way back when' and which their father and mother so loved. That home will start curing them, it will keep them from impurities and inspire them to what is bright. The grand energy of Love will dwell in that home."

"Yes... Interesting... A home made of materials, of the trees cultivated by their grandfather, and their father and mother. And you say it will help protect those living in this home? How? There's some kind of mysticism involved here."

"Why would you call the bright energy of Love 'mysticism', Vladimir?"

"Because not everything's clear to me. Here I've been talking about designing a home and a ground-lot, and now you've all of a sudden started stating things about *love*."

"But why 'all of a sudden'? You have to create everything with love right from the start."

"What — the living fence too? And d'you have to plant the saplings in the forest with love, too?"

"Of course. The grand energy of Love and all the planets in creation will help you lead a full life, a life inherent in a son of God."

"Now you've *really* started talking incomprehensibly, Anastasia. From a house and garden you've gone back to 'God' again. What relation could there possibly be here?"

“Forgive me for not being clearer in my explanation, Vladimir. Allow me to try a different route in trying to explain the significance of our project.”

“Go ahead. Only it turns out it’s *your* project, not *ours*.”

“It belongs to everyone, Vladimir. Many people will sense it intuitively in their hearts. But Man will be prevented from grasping its specific details by fly-by-night dogmas, sounds of the technocratic way of doing things and the many scientific disciplines that are attempting to lead people away from happiness.”

“All the more reason for you to try putting everything in more specific terms.”

“All right, I shall try. Oh, how I wish my explanations could be clearer to people — oh, how I wish they could! O logic of Divine aspirations, help me choose phrases and word-combinations that will be more clearly understood!”

## CHAPTER TWENTY-NINE

# The energy of Love

“The great energy of Love is sent to the Earth by God for His children. It comes to each of them at one time or another. It frequently tries to cheer Man with its warmth and stay near him for ever. But most people do not give the great Divine energy the opportunity of remaining with them for long.

“Imagine a couple where he and she meet at one point in the resplendent radiance of love. They endeavour to join their lives together in perpetuity. They consider that their union will be made more solid if affirmed on paper and by ritual in front of a large gathering of witnesses. But all to no avail. It takes but a few days for the energy of Love to fade from their lives. And it happens that way with just about everyone.”

“Yes, you are right, Anastasia. A tremendous number of people get divorced. About seventy percent. And it often happens that those who don't get divorced end up living like a dog and cat together, or show complete indifference to each other. Everybody knows this, but nobody can figure out why it happens on such a massive scale. You claim the energy of Love fades from their lives, but why? As though it were somehow aiming to tease everyone or playing some kind of game it's invented?”

“Love does not tease anyone and it does not play games. It tries to stay with everyone for ever, but Man chooses his own way of life, and this way of life frightens the energy of Love. Love cannot give inspiration to annihilation. It is unseemly for the offspring of love to live in torment when he and she are beginning to build a new life together — when they are

endeavouring to establish a home in an apartment resembling a vault of lifeless stone. When each has their own work and interests and their own environment. When there is no common vision of the future, no conjugal aspirations. When their bodies are attracted by mere fleshly alleviation, only to hand over their child to the cruel ways of a world devoid of clean water, a world filled with bandits, wars and disease. It is from this that the energy of Love flees.”

“But what if he and she have lots of money? Or the parents give the newlyweds, instead of a tiny flat, say a six-room apartment in a fancy modern block, with a guard on duty at the entrance, and they give them a fine car, and deposit lots of money into their bank account — would the energy of Love agree to remain under those conditions? Could he and she live their whole life in love?”

“Then they will be obliged to live their lives to the end of their years in cold fear, deprived of love and freedom. And watch everything around them grow old and rot.”

“So what exactly does this finical energy of Love require?”

“Love is not finicky or obstinate, it aspires to the Divine creation. It can forever warm the heart of one who agrees to co-create with it a Space of Love.”

“And is there a Space of Love somewhere in the design you have come up with?”

“Yes.”

“And where is it?”

“It is in everything. First it is born for the couple, then again for their children. And through three planes of being the children will have a connection with the whole Universe.

“Imagine, Vladimir, that *he* and *she* will begin in their love to implement this design that you and I are outlining. They will plant family trees and herbs in the ground, together with an orchard. And how happy they will be in the spring when their co-creations burst forth into bloom. Love will eternally

dwell between them, in their hearts, all around. And each will see the other in a spring flower, remembering how they planted a flowering tree together. And the taste of raspberries will remind them of the taste of love, since in the autumn *he* and *she* — in love for each other — touched the twig of a raspberry bush.

“In the shady orchard splendid fruit is ripening on every tree thereof. And the orchard was planted jointly by *he* and *she*. They planted the orchard in love.

“*She* laughed resoundingly when *he* dug a hole and perspiration covered his brow, and *she* wiped it off with her hand and planted a kiss on his burning lips.

“It often happens in life that only one of the partners is in love, while their mate simply tolerates the other’s presence. Once they start working on the orchard, the energy of Love will multiply itself and never forsake either of them! After all, their way of life will help them both live their lives in love and convey the Space of Love to their children in continuation. And help them raise their children together with God in His image and likeness.”

“Anastasia, tell me in greater detail about the raising of children. A desire to know more about this is something many readers in their letters have expressed. Even if you don’t have a system of your own, at least tell us, out of the existing systems, which is best.”

## CHAPTER THIRTY

### In His image and likeness

“You will not find a single system of child-raising that will suit everyone, Vladimir, if only because each one must first respond to the question of exactly what kind of individual they want to raise their child to be.”

“What d’you mean, what kind? A Man, of course — a happy, intelligent Man.”

“If so, then the parents themselves must become that kind of Man. And if they themselves have not been able to achieve happiness, then they should know what has prevented them from doing so.

“I very much want to speak about happy children. Raising them, Vladimir, means also raising yourself. The project we have been outlining all together will help in this. You and everyone else know the way children are born these days. People do not pay enough attention to their whole experience leading up to the birth, and many children are deprived of the planes of being inherent only in Man, and so children are inevitably born cripples.”

“Cripples? D’you mean without arms or legs, or polio victims?”

“A Man may be born crippled not only in outward appearance. Sometimes the body may appear externally quite healthy. But Man has a second self, and each Man should have a full set of all forms of energy. Intellect, feelings, thought and much else besides. But more than half of all children, even by today’s very low standards, are deemed by your medical professionals to be deficient. If you want proof of this, take a

look and see how many schools there are today for the 'mentally retarded'. That's how your medical professionals classify them. Only they are comparing their abilities with those of children considered relatively normal. But if the doctors saw what the mind and the inner complexes of human energy could be in the ideal, only a few rare individuals among all the children born on the Earth would be considered 'normal'."

"But why are all children not completely perfect, as you say?"

"The technocratic world aims to prevent the three most important points in newly born children from merging into one. Technocracy tries to break Man's links with the Divine Mind. And the links are broken before the child is born. And in looking for this connection, Man goes searching the world in suffering, and does not find it."

"What 'most important points' are you talking about? What's this about 'links with the mind'? I don't get any of it."

"Vladimir, in a great many aspects Man is formed even before his entrance into the world. And his upbringing should come into contact with all creation. What God has used in creating His splendid creations should not be neglected by His son. Parents should impart to their co-creation the three most important points, the three primary planes of being.

"Here is the first point of Man's birth — it is called *parental thought*. Both the Bible and the Koran talk about it: "In the beginning was the Word"<sup>1</sup> — though it could be put more precisely: "In the beginning was the Thought". Let anyone calling themselves a parent today remember when they conceived their child in thought, and what kind of child they thought of him as. What kind of life did they foresee for him? What kind of world did they prepare for their creation?"

<sup>1</sup>John 1: 1 (*Authorised King James Bible*).

“I think, Anastasia, that very few would even care to think of anything like that before the woman actually gets pregnant. In other words, they simply sleep together. Sometimes without even being married. And they get married when the girl gets pregnant, since there’s no way of knowing whether she’ll get pregnant at all. And there’s no sense in thinking about it ahead of time, when there’s no guarantee she’ll even have a child.”

“Yes, unfortunately, that is the way it often happens. Most people are conceived in fleshly indulgence. But Man, the image and likeness of God, should not come into the world as the result of fleshly indulgence.

“Now picture a different scenario. *He* and *she* build their splendid living home in love for one another and in thoughts about their future co-creation. And they visualise how their son or daughter will be happy in that place. How their offspring will hear its first sounds — its mother’s breathing and the singing of the birds, God’s creations. Then they will visualise how their child, when he grows up, will want to rest in his parents’ garden after a hard day’s journey and sit in the shade of a cedar tree. In the shade of a tree planted in love for him by his parents’ hands, with thoughts of him, in their native land. The planting of the family tree on the part of the future parents will define this *first point*, and this point in turn will call upon the planets to aid them in their future co-creation. It is vital! It is important! And above all else it belongs to God! It is confirmation that you will be creating in His likeness! In the likeness of Him, the Grand Creator! And He will rejoice in the conscious awareness of His son and daughter.

“*Thought is the origin of everything.* Please believe me, Vladimir. The currents of all the diverse energies of the Universe will unite in that spot where the thoughts of two have merged into one in love, where two together are contemplating a splendid creation.

“The *second point*, or rather, yet another human plane, will be born and light a new star in the heavens when two bodies merge into one — merge in love and with thoughts of a splendid creation — in the very place where you build your Paradise home, your living home for your future child.

“Then the wife who has conceived should live in that spot for nine months. And it is best of all if these months are the blossoming of spring, the sweet fragrance of summer, and the fruits of autumn. Where nothing will distract her except for joy and pleasant feelings. Where the wife, in whom a co-creation is already dwelling splendidly, is surrounded only by the sounds of Divine creations. She lives there and feels with her whole self the whole Universe. And the future mother should see the stars. And mentally give all the stars and all the planets to her splendid child as a gift — something the mother can do all with the greatest of ease, something completely within her power. And everything will follow the mother’s thought without hesitation. And the Universe will be a faithful servant to the splendid creation these two people have produced in love.

“And a *third point*, a new plane of being should come about in that space. Right there on the spot where the conception occurred the birth should take place. And the father should stay close around. And the great all-loving Father will raise over the three of them a crown.”

“Wow! I don’t know why, Anastasia, but I find your words even took *my* breath away. You know, I was able to visualise the spot you’re talking about. And oh, how I could visualise it! It made me feel as though I wanted to be born again myself in such a place. So that right this moment I could go and rest in a splendid garden planted by my father and mother. So that I could sit in the shade of a tree planted for me before my birth. The place where I was conceived and where I was born. Where my mother walked in the garden, thinking about me, even before I came into the world.”

“Such a place would greet you with great joy, Vladimir. If your body should fall ill, it would heal the body. If your soul, it would heal the soul too. And if you were weary it would give you food and drink. It would embrace you in a gentle sleep and wake you with a joyful dawn. But, as with most of the people living on the Earth today, you do not have such a spot. You do not have a native land — a Motherland — where the planes of being can merge into one.”

“But why does everything we do turn out so lousy? And why do mothers continue to bring semi-retarded children into the world? Who took this spot away from me? Who has taken it away from everyone else?”

“Vladimir, perhaps you yourself can say who failed to create such a place for your daughter Polina?”

“What?! You’re not suggesting I’m to blame for...? For my daughter not having a spot?”

## CHAPTER THIRTY-ONE

### But who is to blame?

“But I had no idea all that could be done so fine, just like that. Pity I can’t turn the clock back in time and correct everything.”

“But why go back? Life goes on, and each one is given the opportunity at any moment to create a splendid way of life.”

“Life goes on, of course, but what good are old people, for example? Now they expect their children to help *them*, while the children themselves are unemployed. Besides, how can children be properly brought up now, when they’re all grown up themselves?”

“Adults can still give their children a Divine upbringing.”

“But how?”

“You know, it would be good for the elderly to apologise to their children. And sincerely apologise, for not having been able to give them a trouble-free world. For dirty water and polluted air.

“And let them begin to build, with their elderly hands, a real living home for their grown kids. If only such a splendid thought is born in them, the days of their lives will be extended. And when the elderly reach out their hand to touch their Motherland, believe me, Vladimir, the children they yearn to see will return to them. And perhaps the elderly will not be able to grow their living home completely, but their very children will be able to bury them right in their Motherland, and thereby help them come to life again.”

“Bury them in their Motherland? Oh, by ‘Motherland’ you mean their lot of family terrain. So, we should bury our

relations on this lot of land, instead of in a cemetery? And we'll put up memorials to them there?"

"Of course, on their own land, their own plot of ground. In the forest planted by their own hand. But of man-made memorials they have no need. Indeed, everything around will serve as a memorial to them. And every day everything around you will remind you of them and not with sadness, but with gladness. And your line will be immortal — after all, it is only good memories that will bring back souls to the Earth."

"Hold on, hold on there. What about the cemeteries? D'you mean to say they're completely superfluous?"

"Vladimir, cemeteries today are something like cesspits, where people throw their useless garbage. Even up until recently the bodies of those who died were buried in family tombs, chapels and temples. And only those without family or wayward people were taken outside the community. What is left today is but a distorted remembrance ritual of long ago. You go through a ritual after three days, then nine days after that, then six months, then a year, and so on. Then the remembrance is wholly superseded by the ritual itself. The souls of those who have passed away are gradually forgotten by those living today. And even the living are all too often forgotten, when children abandon their own parents and run away to some far-off land. And the children themselves are not to blame — they are simply running from what they intuitively perceive as the parents' lie and the hopelessness of their own aspirations. They are running away from impending hopelessness, only to find themselves at the same dead end.

"Everything in the Universe is arranged so that those souls who are called by good memories from the Earth are the first to be re-embodied in material form. Called not by ritual, but by genuine feelings. They will appear in those living on the Earth when the departed, by virtue of their way of life, leave

behind pleasant memories of themselves. When the memories of them are not ritualistic, but are real and tangible.

“In comparison with the multitude of other human planes of being in the Universe, the human material plane is no less significant, and we must lovingly cherish our relationship to it.

“From the bodies buried in the forest they themselves planted, grass and flowers will come up, along with bushes and trees. You will see these and delight in them. Every day you will come into contact with a piece of your Motherland tilled by your parents’ hand, you will communicate with them subconsciously, and they will communicate with you. Have you ever heard of guardian angels?”

“Yes, I have.”

“These guardian angels, your ancestors both close and distant, will endeavour to watch over you. In three generations their souls will once again be embodied on the Earth. But even when they do not have an earthly, material incarnation, the energy of their souls will not refrain from watching over you every moment. Nobody will be able to aggressively invade your kin’s terrain. The energy of fear is in each person — an energy that will also be awakened in the aggressor. The aggressor here will find himself subject to a multitude of diseases, arising from stress. In time they will also destroy him.”

“In time,’ you say, but that aggressor might wreak a lot of havoc in the meantime.”

“Who will seek to attack, Vladimír, if he knows that his punishment is inevitable?”

“But what if he doesn’t know it?”

“Every person today knows this intuitively.”

“Well, okay, let’s say you’re right about aggressors, but what about friends? Let’s say I want to have my friends over for a visit one night. They’ll come and get a fright from everything around them.”

“Any friends you have whose thoughts are pure will be gladly welcomed by what is around them, as you will be glad to greet them. And here I might bring up the example of the hound. When a friend comes to the dog’s owner, a faithful watchdog will not lay a paw on him. When an aggressor attacks, however, the faithful hound is ready to do mortal combat with him.

“And on your plot of Motherland even each blade of grass that grows will be healthful both to you and to your friends. And each breeze that blows will bring you healing pollen from the flowers, bushes and trees. And the energy of all your forebears will be present with you. And in anticipation of co-creation the planets themselves will await your dictation.

“And the face of your beloved will reflect from every petal of the splendid flowers in perpetuity. And the children you raise will tenderly talk with you for millennia to come. And you yourself will be embodied in new generations. And so you will talk with yourself, and help with your own upbringing. And you will produce co-creations with your Parent. In your own Motherland, in your own Space of Love will dwell the Divine energy — love!”

When Anastasia told me about the plot of land back in the taiga, my breath was simply taken away, captivated as it was by her fervour and the intonations of her voice. Later, after coming home and writing these lines, I often wondered how important it really is for each individual to have such a spot of his own — this piece of one’s Motherland, as she calls it? Can one really see to a child’s upbringing when he is already grown, with one’s own last breath? Is it really possible, with the help of one’s own family terrain, to speak with one’s parents again and for their energy to protect one, both in spirit and in body? And — just imagine — it came about that all my doubts were erased all on their own by life itself. This is how it happened...

## CHAPTER THIRTY-TWO

### The old man at the dolmen

Three years ago I went to the northern Caucasus to write the first chapters about the dolmens, which people now flock to visit in an unending stream. But back then very few bothered to come and see these edifices of our ancient forebears. I would make frequent visits — on my own — to the dolmen situated on a property belonging to a farmer by the name of Stanislav Bambakov in the settlement of Pshada,<sup>1</sup> in the Gendzhik district. And each time I went, there was old Bambakov at the dolmen. He always showed up unexpectedly, wearing a patched shirt and carrying a jar of honey from his apiary.

The elderly man was tall, lean and very agile. He had acquired his land only recently, at the beginning of *perestroika*,<sup>2</sup> and gave the impression he was most anxious to get everything set up on it as quickly as possible. He built himself a small house and a shed for his beehives, along with farm buildings made of various scrap materials. He started putting in an orchard and digging a small pond, thinking to coax forth a water spring, but he ran into a layer of rock.

In addition, old Bambakov was very attentive to the dolmen. He would sweep all around it. He also took the rocks he found in the field beside the dolmen and put them in a pile.

<sup>1</sup>*Pshada* — see footnote 8 in Book 2, Chapter 33: “Your sacred sites, O Russia!”.

<sup>2</sup>*perestroika* — see footnote 3 in Chapter 19 of the present volume: “A secret science”.

He told me that these rocks had been brought here manually from other places, and pointed out how different they were from other rocks in the vicinity. People had made them into a mound, he said, and erected the dolmen on top.

The old man's farmstead stood off to one side, away from the settlement and the main road. Most of the time he worked it all by himself. I wondered whether he realised how pointless his efforts were. There was no way he could set up his farmstead, work the land and build himself a regular modern house. But even if a miracle should happen and he should succeed in beautifying the surrounding land and establishing his farmstead, he would still hardly have cause for rejoicing. Everybody's children were running off to the cities. Indeed, this old man's son had set himself up with his wife in Moscow, where he'd become a civil servant.

Didn't the old man realise how pointless his efforts were? They weren't of any use to anyone, even the children. Their father would no doubt have to die with a heavy heart, knowing that his farmstead would go to ruin. Knowing that everything would grow over with wild grasses, and his bees would swarm out. And the dolmen standing so awkwardly in the middle of his field would once again get covered in garbage. He ought to have taken it easy in his advanced years, while here he was working his heart out from morning 'til night, always digging or building something like a possessed man.

One time I arrived at the dolmen well after dark. The path leading to it was lit by the light of the moon. Silence reigned — the only sound was the rustle of leaves in the breeze. I stopped a few steps short of the trees growing around the dolmen.

There sitting on a rock next to the dolmen's portico was the old man. I recognised his gaunt figure at once. Usually agile and cheerful, he sat there without so much as a stir. He appeared to be weeping. Then he got up and began pacing

back and forth near the portico with his usual quick gait. Then he stopped abruptly, turned toward the dolmen and gave an affirmative wave of his hand. I realised that Bambakov was communicating with the dolmen, having a conversation with it.

I turned and headed back to the settlement, endeavouring to tread as softly as I could. Along the way I fell to wondering how this old fellow, already in his twilight years, could possibly be helped by the dolmen, no matter how strong or wise a spirit it possessed. How indeed?! Surely not just through communicating like that? *Wisdom!* Wisdom is something you need when you're young. What good is it when you're old? Who needs it? Who's going to listen to speeches of wisdom, if even one's own children are a million miles away?

Then a year and a half later, during one of my regular visits to Gelendzhik, I once again set out for the dolmen on old Bambakov's property. I already knew that Stanislav Bambakov had died. And I was a little sad that I wouldn't be seeing this cheerful, stalwart old fellow again. And I was sorry that I wouldn't have the chance to taste any more honey from his apiary. But what worried me the most was the prospect of seeing garbage around the dolmen and the whole place in a state of ruin. However...

The lane leading from the main road to the farmstead, it turned out, was freshly swept. Just before the path turned off that led to the dolmen, there among the trees stood wooden tables with benches around, even a beautiful gazebo. Along the lane, neatly marked off by whitened stones, were growing green cypress saplings. Lights burned in the windows of the little house, as well as outside, on a lamp-post.

His son! Old Bambakov's son, Sergei Stanislavovich Bambakov, had left Moscow, quit his job and moved with his wife and son here to his father's farmstead.

Sergei and I sat at one of the tables underneath the trees...

"My father rang me in Moscow, asked me to come. I came, looked around, and brought my family," recounted Sergei. "And I started working here with my dad. Such a joy it turned out to be, working alongside him. And when he died, there was no way I could leave this place."

"No regrets moving here from Moscow?"

"No regrets, and my wife has no regrets either. I thank my father every day for this. We feel a lot more at home here."

"Have you got some facilities in — running water for instance?"

"Facilities... well, you see the outhouse there — that's something my father fixed up before he died. No, I'm talking about feeling at home in a different way. You know, feeling better inside, more satisfied."

"And what about work?"

"We've got our fill of work. There's the new orchard to tend to, and looking after the apiary. I'm still not a hundred percent knowledgeable about working with bees. Too bad my father's skill didn't rub off on me."

"More and more people are coming to the dolmen, and every day we greet the touring coaches. The wife's always glad to help out. My father asked me to keep on greeting people, and I greet them. I've set up a little coach stop, I want to bring in running water. But they keep harassing us over taxes. Right now we don't really have enough to get by. At least we can be thankful that the head of the local administration can give us a little help."

I told Sergei about what Anastasia had said about land, about the lots, and remembering parents, and he responded:

"You know, she's right! She's a hundred percent right! My father died, and yet it seems as though I talk with him every day — sometimes we argue, even. And he's becoming closer and closer to me — it's as though he never died."

“What d’you mean? How can you talk with him? The way mediums do — you hear voices?”

“Of course not. It’s much simpler than that. You see that crater over there? He was searching for water and stumbled across a layer of rock. I was going to fill in that crater and put another table with benches in its place. And then I thought to myself: *What have you done here, dear old dad? You didn’t think things through. Now I’ve got extra work to do, and there’s so much on my plate already.* Only the rains came, and water gushed down from the mountain and filled the crater, and it stayed — the water level stayed up for several months. A little pond formed. And I thought: *Jolly good, dad! That crater of yours is good for something after all!* And now I see there’s so many other things he thought of here, I’m still trying to figure them all out.”

“Can you tell me how he managed to get you to come here, Sergei, all the way from Moscow? What words did he use?”

“As far as I can recall, he used very simple words. Ordinary words. I only remember that his words gave me some kind of feelings and desires I’d never had before... and here I am. *Thank you, dad!*”

What words did old Bambakov learn when he communicated with the dolmen? What wisdom did he learn to make his son come back to him? And come back to him for good! Pity they buried him in the cemetery, and not on his own land, like Anastasia said. And I began to be even a bit envious of Sergei — his father found, or created for him, his own piece of his Motherland. Will I ever have mine? Will others have theirs? Bambakov has it good. It would be good for everyone to be able to stand on their own piece of their Motherland!

## CHAPTER THIRTY-THREE

### School, or the lessons of the gods

After my final visit to the dolmen on Stanislav Bambakov's property and my meeting with his son I began recalling more distinctly my conversation with Anastasia about one's Motherland, and about her 'lot' project. My head was floating in memories of the individual plots comprising splendid communities of the future which she had outlined with a stick in the moist earth. And how enthusiastically, with unusual intonations in her voice, she had endeavoured to describe them — it was as though I could hear the very leaves rustle in the gardens now covering the former wasteland, and hear the pure water gurgling in the brooks, and look and see the beautiful and happy men and women living among them. And hear the children's laughter, and the songs at the close of the day. Along with this, the extraordinary nature of her description provoked a whole range of questions, such as:

"The way you've drawn them, Anastasia, it looks as though the lots are not right up against each other. Why?"

"This splendid community has to have walkways, roadways and paths. There should be a passage no less than three metres wide on all sides between the lots."

"And will there be a school in this community?"

"Of course — look, there it is, in the middle of all the squares."

"I wonder what kind of teachers will be teaching in the new school, and how they will structure the classes. Probably the way I saw at Shchetinin's school. A lot of people are going there now. Everybody likes the forest school at Tekos."

And a lot of people want to set up similar schools in their own communities.”

“Shchetinin’s school is indeed marvellous. It is a step toward the school where children in the new communities will study. The pupils who have gone through Shchetinin’s school will help build them and teach in them. But wise and educated teachers are not the only principal component here. Parents will also be teaching their children in these new schools, and at the same time they will learn from their children.”

“But how can parents become teachers all of a sudden? Will all the parents have a higher education, let alone specialised education? There are a lot of different subjects — maths, physics, chemistry, literature — who will teach the children these in the schools?”

“The level and specialisation will not be uniform, of course, for everyone on the whole. But then, after all, the study of sciences and other subjects should not be considered an end in itself, a primary goal. It is much more important to learn how to be happy, and that is something only the parents can show by their example — that is their role.

“It is not at all necessary for the parents to teach classes in the traditional sense. Parents, for example, can participate in joint discussions or collectively administer an examination.”<sup>2</sup>

“An exam? Whose exam could the parents administer?”

“Their children’s, and the children could examine them, examine their parents.”

“Parents administer their kids’ exams?! You’re talking about school exams?! Now that has to be some kind of joke!

<sup>1</sup>*Tekos* — the name of the settlement near Gelendzhik where Mikhail Petrovich Shchetinin’s school is located. For a description of the school, see Book 3, Chapter 17: “Put your vision of happiness into practice” and Chapter 18: “Academician Shchetinin”.

<sup>2</sup>*administer an examination* — It should be remembered that in Russian schools examinations are usually oral, rather than written.

Then all the kids would end up with top marks! What parent is going to give his own child a low mark? Any parent, of course, is automatically going to mark their son or daughter near the top of the class.”

“Vladimir, do not jump to conclusions. Along with classes resembling those in today’s schools, the new school will have others — more important ones.”

“Others? What kind of others?”

And all at once a thought crossed my mind: if Anastasia could so easily show scenes from millennial antiquity (whatever the process involved — her ray, hypnosis, or something else besides — it still worked), that means... that means, she must be able to show the near future too. So I asked her:

“Could you show me, Anastasia, at least one class from that school of the future, the kind of school that those new communities will have? Could you show me a non-traditional class?”

“I could.”

“Then show me. I want to compare it with what I saw in Shchetinin’s school. And with the classes I had back in my own schooldays.”

“And you will not ask about or be frightened by the power that I use to create scenes of the future?”

“I don’t care how you do it. It’ll simply be most interesting for me to watch.”

“Then lie down on the ground, relax, and doze off.”

Anastasia quietly placed her hand on top of mine and...

I could see, as though from above, amidst a whole lot of plots, one which had an internal configuration different from the rest. It comprised several large wooden buildings linked by footpaths, lined on either side by a variety of flowerbeds. Near the building complex stood a natural amphitheatre: along the side of a hill rows of benches descended in a semi-circular formation. On these were seated about three hundred people of different ages, including both grey-haired

elders and some quite young. It looked as though they were sitting in family groups, since adult men and women were interspersed with children of various ages. Everyone was talking excitedly amongst themselves, as though they were anticipating something out of the ordinary — a concert performance by a superstar or a presidential address.

In front of the audience on a wooden stage or platform stood two small tables and two chairs, with a large chalkboard behind. Alongside the platform there was a group of children, about fifteen in all, ranging in age from five to twelve, engaged in an animated discussion.

“This is the beginning of something resembling a symposium on astronomy,” I heard Anastasia say.

“But what are the children doing here? Don’t their parents have anybody they can leave them with?” I asked Anastasia.

“One of the group of children arguing amongst themselves will now give the keynote presentation,” she explained. “Right now they are voting on who it shall be. There are two candidates, you see — a boy, he is nine years old, and a girl, she is eight... Now the children are voting... Ah, the majority has picked the boy.”

A young boy approached one of the tables with a confident, businesslike step. From a cardboard folder he took out some papers containing designs and sketches and laid them out on the table. The rest of the group of children — some slowly and solemnly, others with a hop, skip and a jump — headed over to where their parents were seated on the benches. A little red-headed, freckle-faced girl — the other candidate, who was not chosen — walked past the table, her head held proudly in the air. The folder in her hands was a little bigger and thicker than the boy’s — no doubt it too contained sketches and designs.

The boy at the table tried to say something to the girl as she went by, but she didn’t stop. She simply straightened her

braid and walked on past, deliberately looking the other way. For some time the boy followed her distractedly with his gaze. Then he once more focused his attention on rearranging the papers in front of him.

“Who on earth could have managed to teach these kids enough astronomy so that they can make a presentation before a group of adults?” I asked Anastasia.

And she replied:

“Nobody taught them. They were given the opportunity to work out for themselves how the whole Universe is structured, to prepare their arguments and present their conclusions. They have been working on it for more than two weeks already, and the final moment has come. They will now defend their views, and their conclusions may be refuted by anyone who wishes to do so.”

“So, it turns out this is some kind of game?”

“You can think of what is going on here as a ‘game’. Only it is very serious. Each person present will now have their thinking about the planetary order accelerated, and may perhaps start contemplating something even greater than that. After all, the children have been thinking and pondering for two weeks now, and their thought is not limited by anything — there are no dogmas or theories of planetary order to weigh them down. We still do not know what they will come up with.”

“They’ll be fantasising with their child mindsets, you mean to say?”

“I mean to say, they shall present their own theories. After all, even adults have not come up with any proven truths regarding planetary order. The goal of this symposium is not to work out any canons, but to accelerate thought, which afterward will determine what is true, or at least come closer to the truth.”

At this point a young man stepped up to the second table and announced the presentation was about to begin. Whereupon the nine-year-old started to speak.

He spoke confidently and enthusiastically for about twenty-five or thirty minutes. What he said struck me as sheer childish fantasy — a fantasy not grounded in any scientific theories or even an elementary knowledge one would get from a high-school astronomy course. He spoke in substance as follows:

“If you look up to the sky in the late evening, you see a whole lot of stars shining there. There are different kinds of stars. Some stars are little and others a little larger. But very small stars can be big, too. Only we think at first that they are little. But they are very big. Because when an aeroplane flies very high, it is small, but when it is on the ground and we walk up to it, it turns out to be big, and it can hold a whole lot of people. And each star could hold a whole lot of people.

“Only there are no people on the stars right now. But they shine in the evening. The big ones shine, and the little ones too. They shine so we can see them and think about them. The stars want us to make the things we do on the Earth just as good on them too. They are a little envious of the Earth. They really want berries and trees to grow on them the way they do here, they want the same little streams and fishes.

“The stars are waiting for us, and each of them is trying to shine to make us pay attention to it. But we can't yet travel to them, 'cause we've got a lot of things to take care of here at home. But when we do take care of everything at home, and things are good everywhere on the whole Earth, then we shall travel to the stars. Only we shan't travel by plane or rocket ship, 'cause flying by plane would take too long and the rocket ship would be long and boring. Besides, we won't all fit into a plane or a rocket ship. And there won't be room for all sorts of things we want to take with us. There won't be any room for trees, or a stream. But once we make everything right all over the Earth, we'll fly the whole Earth to the nearest star.

“Besides, some stars will want to come to Earth themselves and snuggle up to it. They have already sent their fragments, and their fragments have snuggled up to the Earth. People used to think that these were comets, but they are fragments of stars which really, really wanted to snuggle up to our beautiful Earth. They were sent by the stars, which are waiting for us. We can fly the whole Earth to a far-off star, and whoever wants to can remain on the star, to make it beautiful, like on the Earth.”

All this time the boy had been holding up his sheets of paper and showing them to the audience. They contained drawings of a starry sky and the Earth's trajectory as it headed toward the stars. The last drawing portrayed two stars blossoming with gardens and the Earth moving away from them on its intergalactic journey.

When the boy finished talking and showing the drawings, the master of ceremonies announced that anyone who wished could challenge him or put forth his own views on what had just been said. But no one hastened to speak. Everybody remained silent — it looked to me as though they were concerned about something.

“What are they hesitating for?” I asked Anastasia. “Don't any of the adults here know about astronomy?”

“They are hesitating because they know whatever arguments they put forth must be clear and well thought through. After all, their children are present. If what they say is not understandable or acceptable to the children's hearts, then the speaker will risk being mistrusted or, even worse, treated unsympathetically. Adults cherish their relationship with their children, and hesitate to risk any harm to it. They are afraid of incurring the audience's disfavour — especially their children's.”

The heads of many in the audience began turning in the direction of a grey-haired elderly man sitting in their midst.

He had his arm around the shoulders of the little red-haired girl sitting beside him, the same one who had been one of the candidates to give the keynote presentation. Sitting next to them was a young and very beautiful woman. Anastasia commented:

“A lot of people now have their eyes on the elderly man in the middle of the audience. He is a university professor, a scientist, now retired. His personal life got mixed up rather early on, and he had no children. Ten years ago he procured a lot of land, and began to establish a home on it all by himself. A young woman fell in love with him and the little red-headed girl was born to them. The young woman next to him is his wife and the mother of his child. The retired professor very much loves the child of his old age. And the girl, his daughter, treats him with great respect and love. Many of those present here today believe that the professor is entitled to take the floor first.”

But the elderly professor had trouble getting his first words out. I could see him nervously rumpling the pages of some journal with his hands. Finally he got up and started to speak. He said something about the structure of the Universe, the comets and the mass of the Earth, and finally summed up his remarks something like this:

“The planet Earth, of course, is moving through space and rotating. But it is inextricably linked with the solar system, and cannot move independently. It cannot leave the solar system and travel to distant galaxies. The Sun gives life to everything living on the Earth. Moving away from the Sun would involve a serious cooling of the Earth, and we would end up with a dead planet. We can all observe what happens even when we move just a fraction away from the Sun. We get winter.”

At this point the professor stopped abruptly. The boy who had presented the paper flipped distractedly through his sketches, then gave a questioning glance to his peers in the

group, the ones who had helped him prepare the presentation. But it was apparent that everybody had found the argument of winter and cooling very cogent and plausible. This argument had the effect of crushing the children's beautiful dream of a space-travelling Earth. And all at once in the ensuing quiet, which had lasted a half-minute already, the voice of the elderly professor once more sounded forth.

"Winter... Life can't help but slow down if the Earth doesn't get enough solar energy. Simply can't help! You don't need any scientific studies to see that, to be convinced... On the other hand... it *is* possible that the Earth itself possesses energy, the same as the Sun. Only it hasn't yet manifested itself. Nobody's discovered it yet. Perhaps you yourselves will discover it at some point. Perhaps it is possible that the Earth could be self-sufficient. This energy will be made manifest in some way... The Sun's energy will show itself on the Earth, and, like solar energy, it will be able to unfold the petals of the flowers. And then we can travel on the Earth across the galaxy... Yes, then..."

The professor lost his train of thought and fell silent. A murmur of dissatisfaction could be heard through the audience. And then it all began...

The adults in the audience began getting up from their seats and holding forth, denouncing the professor, especially the possibility of living without the Sun. Some of them spoke of the photosynthesis of plants, others about environmental temperature, still others about the fixed nature of planetary trajectories. Through all this the professor sat with an increasingly drooping head. His red-haired daughter turned her head to look at each of the speakers — on occasion she would try standing up, as though she were trying to protect her father from his challengers.

An elderly woman who looked like the teacher type took the floor and started holding forth on how it wasn't right to

appease or flatter children just to curry a favourable attitude toward you on their part.

“Any lie will be exposed with time, and then how will we all look then? This isn’t just a lie, it’s cowardice!” said the woman.

The red-headed girl tugged on the lapels of her father’s jacket. She began shaking him, practically crying, her voice breaking as she kept at him:

“Papochka,<sup>3</sup> you lied about the energy... Did you lie, Papochka? Because we’re children? The lady called you a coward. Is that bad?”

A silence fell upon the large open-air amphitheatre. The professor raised his head, looked his daughter in the eye, put his hand on her shoulder and quietly said:

“I believed what I said, daughter.”

At first the girl remained silent. Then she quickly stood up on the bench and cried out as loudly as her little child’s voice could muster:

“My Papa’s not a coward. Papa believed what he said. *He believed it!*”

The little girl surveyed the now hushed audience. Nobody was even glancing in their direction. She looked at her mother. But the young woman turned away with her head lowered; she fiddled with the buttons on the sleeve of her cardigan, undoing them and doing them up again. The girl once more surveyed the hushed audience, and looked at her father. As before, the professor seemed to be gazing helplessly at his little daughter. Once more, this time in the absolute quiet, the red-headed girl’s voice sounded gently and tenderly.

“People don’t believe you, Papochka. They don’t believe you ’cause the Sun’s energy has not yet showed itself on the Earth — the energy that is like the Sun and can open the petals

<sup>3</sup>*Papochka* (pronounced *PAH-poch-ka*) — an endearing form of *Papa*.

of the flowers. But once it appears, then everybody will believe you. They will believe you later, when it appears. Later..."

And all at once the professor's daughter quickly straightened her hair, then leapt out into the aisle and ran off. She ran to the edge of the amphitheatre, and hurried toward one of the nearby houses. She disappeared inside, only to reappear in the doorway a few seconds later. This time the girl was holding in her hands an earthenware pot with a plant in it. She ran with it over to the speaker's table, which was now vacant. She put the potted plant down on the table. And her child's voice, now loud and confident, resonated over the heads of the audience:

"Look, here's a flower. Its petals are closed. All the flowers' petals have closed. 'Cause there's no sun out today. But they will open, because there is energy on the Earth... I shall... I shall transform myself into the energy which can open the petals of flowers."

With that the little girl closed her hands into a fist and began staring at the flower. She went on staring without blinking.

The people sitting in their seats refrained from conversation. Everyone was looking at the little girl and the plant in the earthenware pot on the table in front of her.

Slowly the professor rose from his seat and went over to his daughter. He went up to her and put his hands on her shoulders, trying to lead her away. But the little redhead shrugged him off and whispered:

"Why don't you help me instead, Papochka!"

The professor was no doubt utterly bewildered. He remained standing at his daughter's side, his hands on her little shoulders, and he too began staring at the flower.

But nothing was happening with the flower. And I began to feel somehow sorry for the little girl and her professor-father. But he really got himself into a fix with his declaration of faith in some kind of undiscovered energy!

All at once a boy stood up in the front row — the same boy that had given the presentation. He partially turned toward the silent audience, sniffed his nose and headed over to the table on the stage. Solemnly and confidently he approached the table and stood next to the red-haired girl. Just like her, he fixed his gaze firmly on the plant in the earthenware pot. But as far as the plant was concerned, of course, nothing was happening.

And then I saw it! I saw how children of all ages began rising from their seats and one by one came down to the stage. They silently took up a position, staring intently at the flower. The last little girl, about six years old, was carrying her very small brother in her arms. She managed to squeeze in front of those standing and someone helped her stand her younger brother up on the chair by the table. The toddler, after taking a good look at everyone around, turned to the flower and began blowing on it.

And all at once the potted plant began to gradually unfold the petals of one of its flowers. Little by little. But it didn't escape the notice of the hushed crowd in the amphitheatre. And several of them rose silently from their seats. And now, on the table, a second flower was already opening its petals, along with a third, and a fourth...

"Oooh..." cried the teacher-type in an excited, childlike voice, and began clapping her hands. Then the whole amphitheatre broke into applause. The beautiful young woman ran over to her professor-husband, who by this time had stepped off to one side of the crowd of delighted children surrounding the flower and was rubbing his forehead. She leapt at him on the run, threw her arms around his neck and began kissing his cheeks and lips...

The little redhead took a step in the direction of her embracing parents, but the boy who had given the presentation stopped her. She managed to wriggle her hand away, but after

taking a few more steps, she turned, went up close to him and buttoned up a button which had become undone on his shirt. With that she gave him a smile, then quickly turned and ran off to her still embracing parents.

More and more people were now heading from their seats down to the stage, some with babes in arms, others shaking the hand of the young presenter. He just stood there, his arm outstretched for handshaking, while his second hand was clasping the button the little girl had just done up for him.

All at once someone struck up a tune on a bayan<sup>4</sup> — something between a gypsy melody and a Russian folk dance. And when some old fellow began stamping his feet on the stage, he was joined by a plumpish lady who made her entrance like a swan. And two young fellows had already launched into a boisterous *prisiadka*.<sup>5</sup> And the flower with its unfolding petals watched as more and more people got carried away by the tricky and boisterous rhythms of a Russian folk dance.

Then, all of a sudden, the scene of the unusual school disappeared, as though a screen had been turned off. I was sitting on the ground. Taiga vegetation stretched all around, as far as the eye could see, and there beside me was Anastasia.

<sup>4</sup>*bayan* . . . in this case a Russian folk-instrument of the accordion family, using a single reed and a chromatic scale, with rows of buttons on both the left and the right sides (not to be confused with a similarly named bass drum in India). Derived from another accordion-type instrument, the diatonic *garmon*, it is often played together with a stringed instrument (such as the *domra* or *balalaika*). It takes its name from a legendary Russian singer-storyteller named Bayan or Boyan, whose songs inspired ancient warriors to do their utmost in battle. By extension, the word *bayan* (derived from an ancient Russian verb signifying 'to tell') could refer to any wandering poet-storyteller — a counterpart of the Celtic *bard*.

<sup>5</sup>*prisiadka* (pronounced *prees-YAT-ka*) — one of the more famous Slavic dances, usually performed by men, involving squatting on one knee while kicking out the opposite leg in front, then alternating the leg positions in quick succession.

Inside me, however, a kind of excitement lingered, and I could still hear the laughter of happy people and the sounds of the cheery dance music, which I didn't want to let go of. When the sounds within me gradually died down, I said to Anastasia:

"What you showed me just now is nothing at all like any school class I've ever seen. It's some kind of family gathering, of families living in the community. And there wasn't a single teacher there — everything happened all by itself."

"There was a teacher, Vladimir, a very wise teacher. But he purposely did not attract anyone's attention to himself."

"But why were the parents there? Their emotional reactions only provoked stress."

"Emotions and feelings can accelerate thought by a factor of many times. They have lessons like that every week in this school. Teachers and parents are united in their aspirations, and children consider themselves to be equal with adults."

"All the same, it seems weird to think of parents participating in their children's education. After all, parents aren't trained to be teachers."

"It is sad, Vladimir, that people have got into the habit of handing over their children to others to be raised, regardless of who these others are — a school, or some other institution. They simply hand their children over, often not knowing what kind of world-view will be inculcated in them, or what destiny awaits them as a result of somebody's particular teaching. By giving their children over to an uncertain future, they are actually depriving themselves of their own children. That is why children whom mothers hand over to someone else to be taught learning often forget their mothers in turn."

The time came to leave. My mind was filled up full with all the information I had acquired, so much so that I was scarcely aware of my surroundings. I took my leave of Anastasia in some haste. I told her:

“Don’t bother seeing me off. When I’m walking alone, I can think unhindered.”

“Yes, do not let anyone hinder your thinking,” she responded. “When you come to the river, my grandfather will be there, and he will help ferry you across to the landing.”

I walked alone through the taiga in the direction of the river and thought about everything I had seen and heard, all at the same time. But one question persisted above all others: how did we get into this situation (‘we’ meaning the majority of people)? We think everyone has their Motherland, and yet none of us has a little piece of Motherland to call their own. And there isn’t even any law in our country, no law guaranteeing a Man or his family the opportunity to own in perpetuity a single hectare of land. Political leaders and parties in their ever-changing procession promise all sorts of benefits, but they all manage to avoid the question concerning a piece of our Motherland. Why?

And yet our grand Motherland consists precisely of little pieces. Native, small family homesteads, with little houses and gardens on them. If nobody has anything like that, then what does our Motherland consist of? A law must be drawn up to guarantee everyone their piece of Motherland. For every family that wants one. The deputies<sup>6</sup> can pass such a law. The deputies are chosen by all of us. That means we must vote people into office who agree to pass such a law.

A law! How should it be worded? Maybe this way?

<sup>6</sup> *deputies* — members of the Russian *Duma*, or national parliament.

*The State is obliged to provide each family couple, upon request, one hectare of land for use in perpetuity, with right of inheritance. Agricultural yields on these family lands shall never be subject to any kind of taxation. Family lands are not subject to sale.*

Something like that would be okay. But what if somebody takes the land and doesn't do anything with it? Then the law should also state:

*If over a period of three years the land is not cultivated, the State may take it back.*

But what if some people want to live and work in the city and use their family domain like a dacha? Well, let them. Women will still come to their kin's domain<sup>7</sup> to give birth. Those who do not will not be forgiven later by their children.

And just who will push this law through to final adoption? A political party? Which one? We need to set up a party for this purpose.<sup>8</sup> And just who will take care of organising it? Where do we find politicians like that? We must seek them

<sup>7</sup>The terms *family domain* and *kin's domain* are used here interchangeably to translate the Russian term *rodovoe pomestie*. *Pomestie* is equivalent to *domain*, *estate* or *homestead*. *Rodovoe* comes from the same root as *Rod* (signifying 'God the Creator', 'origin', 'birth' or 'kin') and *Rodina* ('Motherland'); it literally means 'belonging to one's kin' and points to the unity of the past, present and future generations of one's family. Both *kin* and *family*, as used henceforth in the Ringing Cedars Series, include the whole range of one's ancestors and descendants and not merely the present generation of a family. Interestingly enough, the concept of *kin's domain* is not unlike the concept underlying the English word *kingdom*, since *king* originally meant 'head of a kin or family clan', while *dom* stems from a root signifying 'home place' or 'domain'. For more on *Rodina* see footnote 1 in Chapter 24 above: "Take back your Motherland, people!"

<sup>8</sup>*a party* — see footnote 3 in Chapter 26: "Even today everyone can build a home".

out, somehow. As soon as possible! Otherwise you could die, and not once come nigh to your Motherland. And your grandchildren won't remember you. When will an opportunity like this come again? When will it be possible to say, "Greetings, my Motherland!"?

Anastasia's grandfather was sitting on a log by the shore. Nearby a small wooden boat was tied up, rocking ever so gently on the waves. I knew it wasn't too hard to row to the nearest landing a few kilometres downstream on the other side of the river,<sup>9</sup> but how would he fare coming back against the current, I wondered as I greeted the old fellow. I asked him about it.

"I'll make it by and by," answered Anastasia's grandfather. Always cheery as a rule, on this occasion he seemed rather sombre and not much inclined to conversation.

I sat down beside him on the log.

"I can't understand," I said, "how Anastasia can hold so much information inside her — how she can recall things from the past and know everything that is going on in our lives right now. And here she lives way out in the taiga, and delights in the flowers, the Sun and all the little creatures. It's as though she doesn't think about anything."

"What's there to think about?" her grandfather replied. "She feels it, this information. When she needs it, she takes as much as she wants. The answers to all questions are right

<sup>9</sup>*The river* — the Ob, which flows from south to north.

here in space, right with us. We need only know how to perceive them and make them manifest.”

“How do we do that?”

“How... How... Say you’re walking along the street of a city you know very well, thinking about your own affairs, and a passer-by suddenly comes up to you and asks how to get somewhere. Can you give him an answer?”

“Sure.”

“You see how simple it all is. You were thinking about something completely different. The question put to you has absolutely no connection with what you were thinking about, and yet you are still able to give an answer. The answer ‘lives’ in you.”

“But that’s just a request for directions. But if the same passer-by were to ask me what happened in the city we’re in — let’s say, a thousand years before we met, no Man could give an answer to that.”

“He couldn’t if he’s lazy or neglectful. Everything, right from the very moment of creation, is stored in and around each individual Man... Why don’t you get into the boat? Time to push off.”

The old fellow took the oars. When we had got about a kilometre from our departure point on the shore, Anastasia’s erstwhile taciturn grandfather began to talk.

“Try not to wallow in all your information and contemplations, Vladimir. Decide what’s real by yourself. With your self, you should be able to feel both matter and what you cannot see in equal measure.”

“Why are you telling me this? I don’t understand.”

“Because you’ve started digging around in all that information, trying to define it with your mind. But you won’t get it with your mind. The mind can’t possibly fathom the volume of information known to my granddaughter. And you’ll stop being aware of the creative process taking place around you.”

“I’m aware of everything — the river, the boat...”

"If you're aware of everything, then why weren't you able to say a proper good-bye to my granddaughter and your son?"

"Well, maybe I wasn't able to after all. You see, I was thinking more globally."

I had indeed left almost without saying good-bye to Anastasia, and I got so immersed in thought during my whole journey back to the river that I hardly noticed the time, but suddenly found myself on the riverbank. I added:

"Anastasia also thinks about other things, she thinks globally, she doesn't need a whole lot of sentimental gestures."

"Anastasia feels with her self all planes of being. She doesn't feel one at the expense of another."

"So?"

"Take your field-glasses out of your bag and have a look back at the tree on the bank where we pushed off."

I got out my field-glasses and had a look. Standing there by the tree-trunk, holding our son in her arms, was Anastasia. On her bent arm hung a little bundle. She stood there with our son and waved her hand at our boat, which was moving further and further away downstream. And I waved back.

"Looks as though my granddaughter and her son followed you. She was waiting for you to finish your contemplating and start thinking of your son, and of her too. And she gathered together that bundle for you. But it seemed the information you had gathered from her was more important to you.

"The spiritual and the material — you need to feel it all in equal measure. Then you'll be able to take a solid stand in life, with both feet planted firmly on the ground. When one predominates over the other, it's like a person going lame."

The old man spoke with no trace of anger as he handled the oars with dexterity.

I tried to respond aloud, either to him or to myself:

"Most of all now I need to understand... To understand things for myself! Who are we? Where are we?"

## CHAPTER THIRTY-FOUR

# Anomalies at Gelendzhik

Dear readers, everything I have written in these books I either heard from Anastasia, or saw and experienced myself. All the events I describe are real events from my own life, and my descriptions, especially in the first couple of books, included people's real names and addresses — a decision I later had cause to regret. These people came to be bothered more and more by curious busybodies.

Another thorny problem has been all the various rumours, events and phenomena attached to both myself and Anastasia. The particular interpretations of these events — and, consequently, the particular conclusions drawn therefrom — have also been upsetting. Many of them I cannot agree with at all. For example, I am dead set against worshipping the dolmens. I believe that we can and must communicate with the dolmens on the basis of respect, but not worship them.

The readers of the Anastasia books comprise people of various faith groups and religious confessions, with various levels of education. I believe that anyone's interpretation of events is worth our attention. Everyone has the right to their own opinion, but when expressing it, they should say: "This is my opinion, my suggestion." And of course one should not mystify everything right off, and should certainly not mystify either me or Anastasia. Otherwise one may transform Anastasia from a Man — albeit not a very ordinary Man — into some kind of extraordinary being. Might it not be that she in fact is a *supremely normal* Man, and we are the ones who are abnormal? So please excuse me for getting carried away here

with my own opinions. It's on account of my being disturbed by a particular set of circumstances:

Rumours are circulating lightning fast at the moment about the fiery sphere with which Anastasia communicates. I ask my readers to recall my various descriptions of it in previous books — how this sphere appeared next to Anastasia in emergency situations: how it first appeared when little Anastasia was crying over her parents' grave, and then taught her to take her first little baby steps, and how it defended her when she was attacked. To her grandfather's question, "What is it?" she replied: "I would call it *Good*."

Yes, she does communicate with it, but even she does not fully comprehend what kind of natural phenomenon it is.

Now why have I all of a sudden brought up the fiery sphere which appeared out of nowhere? Because according to a mass of witnesses, it was this very sphere that appeared in the sky over Gelendzhik and stirred up a good deal of turmoil. Now rumours are being spread by detractors to the effect that Anastasia can practically bomb anyone she doesn't like with the help of this sphere, and that she communicates not only with the forces of light but also with the dark forces. And here the readers themselves are adding fat to the fire. I have already had a request from Tuapse to send this sphere to the Sochi city hall so that they might see the light the way the Gelendzhik council did.<sup>3</sup>

I shall now attempt, dear readers, to offer you a true account of what really happened in Gelendzhik, and I would ask you to read it calmly and understandingly.

A local non-profit organisation in Gelendzhik was preparing to hold a readers' conference on the *Anastasia* books. The

<sup>1</sup>See Book 2, Chapter 27: "The anomaly"; also Book 3, Chapter 7: "Assault".

<sup>2</sup>*Gelendzhik, Tuapse, Sochi* — cities on the eastern shore of the Black Sea (see footnote 2 in Book 1, Chapter 30: "Author's message to readers").

relationship of the organisation's board with the city council was, to put it mildly, tense. And in Book 2 I had already given a rather unflattering portrayal of the old city leadership. Against a background like that, you can just imagine what happened.

Some time after noon on 17 September 1999, on the eve of the reader's conference, a wind blew up in the city, and a thunderstorm began. All at once a fiery sphere appeared on the small square in front of the city hall. Its subsequent behaviour, people now say, was very much like that of Anastasia's sphere.

The sphere which appeared over Gelendzhik somehow evaded the lightning-rods of the surrounding buildings, and made contact with a tree standing in the middle of the square. Then the sphere emitted several fiery spheres or rays of somewhat smaller proportions. One of them flew into the Mayor's office, flew around the room right in front of onlookers and then flew out.

A second sphere flew into the window of the Deputy Mayor, Galina Nikolaevna,<sup>3</sup> and hovered in the air for a while. Then it went over to the window and etched on the window-pane a strange symbol that nobody has yet been able to erase, and then flew off.

Subsequent rumours have it that the Gelendzhik administrative council has become 'holy' or 'enlightened'. They say that right after the incident with the fiery sphere, the council decided to adopt measures for a more favourable reception of the readers of my books coming to the city from out of town, to fix up the dolmens in the area, hold an annual inspirational

<sup>3</sup>*Galina Nikolaevna* — Note: *Nikolaevna* is a patronymic (i.e., a middle name derived from one's father's first name), not a surname. The combination of first name and patronymic is a common polite form of address in Russian, especially in business relationships.

songwriters' festival, and a lot more besides, which it was unwilling to do before.

Rumours of what had happened spread, together with the affirmation that Anastasia's sphere had visited Gelendzhik. I tried countering that it was only ball lightning, and that its resemblance in behaviour to what I had described in the book was purely coincidental, and the city council would have adopted some kind of resolution, regardless. But they would have none of it. They immediately began arguing that there are no coincidences, and besides, it wasn't just one coincidence in this case, but a whole chain. And they further declared that when coincidences follow one after another in a chain, it can be termed a pattern.

Of course one could say that the coincidences *had* come together in a chain. For now, at least, there was no logical explanation for the sphere bypassing the lightning-rods. Why did it make contact with the big tree standing in the square, flare up and make thundering sounds over it, yet refrain from destroying it and fly over to the city council windows? Why did it fly right into the offices of the very people capable of taking decisions with respect to readers coming to the city? Why did the city council render a favourable decision on a whole lot of questions immediately afterward? Why did the chairman of the municipal assembly take it upon herself to personally welcome the conference delegates the next day? And so forth.

According to one recent rumour the Mayor of Gelendzhik and the whole administrative apparatus has changed so much that now Gelendzhik will start to flourish, and become, as Anastasia said, "richer than Jerusalem or Rome".<sup>4</sup> Another rumour has it that the sphere simply struck fear in everyone.

<sup>4</sup>See Book 2, last page of Chapter 32: "Title!".

Upon my arrival at Gelendzhik I met with the Mayor and her deputy. I saw the symbol the sphere had etched on the glass and I touched it. I sensed an unusual aroma in the office, something similar to incense or sulphur. But there was no sensation of fright. On the contrary: Galina Nikolaevna, the Deputy Mayor, for example, even seemed more cheery than on previous occasions. She also recounted to me how everything had happened, and asked me whether I thought this might be some kind of sign.

Altogether, the way things turned out, the theory about ordinary ball lightning was quite unacceptable. And I got accused of simplifying the situation.

I don't deny that I really did try to simplify things — and not only this situation. Why? Because I have heard reports about how certain religious leaders are frightening people with their speculations on Anastasia's unusual powers — saying that these powers were not of God, and that Anastasia was not a Man. They're writing articles about this in their religious journals. I can only imagine the exaggerations that will now come up with the appearance of the sphere at Gelendzhik.

I am not about to try to either prove or refute the identification of the fiery sphere at Gelendzhik with Anastasia's — there's no sense in it now. Everybody's going to stick to their own opinion. All I want is to try to reason a little together with you, dear readers, as to what kind of forces the fiery sphere at Gelendzhik might have represented.

The Bible says: "By their fruits ye shall know them."<sup>5</sup> Well then, what are the fruits?

First, the fiery sphere caused no damage to the city hall. Even the glass on which it etched its symbol wasn't broken. The lingering aroma in the office was not an unpleasant one. Galina Nikolaevna (the occupant of the office) spoke with me

<sup>5</sup>Matth. 7: 20.

in the presence of four people, and none of them detected any sense of fear in her.

The sphere made thundering noises over the tree in the square, and there was a bright flare — people said it looked as though the tree itself was flaring up. But there it is, still growing away in perfect health.

The city council resolved to improve the level of service to readers from out-of-town. It also made a decision to offer regular, properly organised excursions to the dolmens Anastasia spoke about.

I myself cannot see a single negative consequence. Therefore, the fruits must be judged positive.

Anastasia says about the fiery sphere that it acts completely self-sufficiently, that it cannot be ordered about — one can only make a request of it.

In my books I am attempting to describe, as accurately as I can, situations I have seen with my own eyes, experienced with my own feelings or heard with my own ears. As for the incident with the fiery sphere at Gelendzhik, well, everyone can put forth their own version of events. But I certainly don't want anyone using this incident for the purpose of frightening people.

Besides, if one were to continue along that line, then it is possible to mystify the most mundane situations. Now people are even starting to say that this fiery sphere assisted me in making my presentation at Gelendzhik. But that's not true. I don't have any connection with it at all. And the press has not been blameless in feeding these rumours.

The respected magazine *Ogonyok*<sup>6</sup> printed a long article in which the author states that “an experiment is being

<sup>6</sup>*Ogonyok* (stress on last syllable) — one of the oldest weekly illustrated magazines in Russia (published since 1899). The name literally means ‘little flame’.

conducted on this country on a major scale". Specifically he notes about me that "he talked on stage for eight hours straight — I haven't seen oratory like that for a long time". And another paper adds: "through all this he remained fresh as a cucumber". All these descriptions, to put it mildly, are exaggerated and inaccurate.

In the first place, at the conference I spoke not for eight hours straight, but only six. Two hours were 'added' from my presentation on the following day.

As far as assistance goes, it really was there, but with no mysticism.

On the eve of the Gelendzhik conference Anastasia came to see me, telling me I should get a good night's sleep. She offered me a tea extract that she had brought with her from the taiga, for me to drink just before bedtime. I agreed, since lately I really hadn't been able to sleep much at night. Then, when I lay down, she sat down beside me, took my hand — as she used to do back in the taiga (I described this in my chapter "Touching Paradise"). And I fell asleep, as though literally flying off somewhere. Whenever she did this in the taiga, a sense of peace would always come over me.

I awoke the next morning to see a beautiful day out, I felt in top shape, and my mood was cheerful.

For breakfast Anastasia offered me only cedar milk, saying it was better not to eat any meat, since a lot of energy would be spent on digesting it. And after the cedar milk I didn't even feel like having meat. Whenever I have cedar milk, I never feel like having anything else.

When I gave my talk to the readers at the conference, Anastasia was not beside me. She stood quietly for a while in the auditorium among the readers, then went off and disappeared altogether.

<sup>1</sup>"*Touching Paradise*" — Chapter 21 in Book 1.

But after the publication of the articles and the rumours giving a mystic interpretation to my presentation at the conference, I began to wonder myself whether Anastasia had somehow been helping me, and I said to her:

“Don’t tell me, Anastasia, you quite forgot I was supposed to look tired, at least toward the end of my presentation? Why did you let these people indulge in mystical speculation?”

She laughed, and replied:

“What kind of mysticism can there be in someone well-rested talking in a good mood with his friends? As for your speaking for so long, this was because your thought is still confused, you tried to grasp hold of a number of topics at once. It was possible to have phrased it more clearly and concisely, but you were not able to do that — also on account of the fact that your shoes were too tight and squeezing your feet, so that the blood had trouble circulating through your veins.”

You see now how utterly simple in fact it all was. There was absolutely no mysticism in my presentation.

Dear readers! I’m receiving more and more letters from you asking why neither I nor the Anastasia Foundation are responding to the critical articles in the press, to the insults and accusations of bigotry directed at me and my readers in general. What a waste of time that would be! Anyway, what’s the sense of responding to people who are simply out to provoke a scandal?

In November one journalist (by the name of By... — I’m not going to spell it out in full, no need to immortalise him)

saw fit to publish one and the same article under different titles in no less than five publications at the same time. He changed the titles, transposed a few sentences in the text and signed himself with different names. He naturally disparages me and then rants away with a diatribe on morals, ethics and commercialism. His editors will deal with him themselves before too long. I know how distasteful such a situation can be for editors. And it's considered highly unethical in journalists' circles. After all, each publication paid him an honorarium on the understanding they were getting an 'exclusive'. What's the point of my arguing with him? Maybe the poor fellow needs the money to buy himself a decent meal. And as for the muck and lies he dishes out, I don't think they'll ever stick to Anastasia — they'll all fall back on him.

Let's face it: Anastasia's a pretty hot topic right now, so I wouldn't be surprised if a few more publications tried to capitalise on her popularity. After all, you readers number more than a million already. Let's say I start a polemic with a tabloid of maybe 50,000 subscribers. You are naturally going to want to read it, and that means you'll be giving a huge boost to their circulation. There's absolutely no sense in arguing with them. You know yourselves, after all, whether you're bigots or not. *If you really want to get back at a publication, your best bet is simply to refuse to buy it, or cancel your subscription if you have one.*

As for me, the only way I can communicate with you is through my books. So now I'm going to try and answer some of your questions.

First of all, at the present time I'm not engaged in any business activities — I spend my whole time writing. I don't belong to any religious group. I'm simply trying to come up with my own sense of what life's all about. But the criticisms and fabrications directed at me and Anastasia are likely to increase. Seems a lot of people see Anastasia as an obstacle to their own pet plans.

You can bet they'll expose themselves sooner or later. But one thing that seems pretty clear to me now is that this Siberian girl's being seen as one hell of a threat to more than a few religious groups and at the same time to some financial-industrial empires both here in Russia and abroad.

They're the ones that are persistently blowing up the question in the press: *Does Anastasia exist or not? And just who is Megré?* And then they give their own answer: *No, she doesn't. And Megré's a penny-pinching entrepreneur.* In actual fact, they are more aware than just about anyone else of Anastasia's existence.

But they feel a need to go to any length to distract people from the central message of what information is coming out, to cut off the source of information at any cost, try to take control of it, and if that doesn't work, to exterminate it.

It seems they have been better and quicker than we have at evaluating the information coming from Anastasia. They even laugh at those who question Anastasia's existence. Think about it: would anyone listening to information on the radio question the existence of the station broadcasting it? But while some self-professed 'wise guys' have got caught up in an endless round of asking *Does she exist or not?*, in the meantime there has been an intense buying up and exporting of cedar nuts in the Irkutsk, Tomsk and Novosibirsk regions — for foreign currency, yet. According to reports out of Novosibirsk and Tomsk, Chinese representatives have been involved.<sup>8</sup>

1999 was a banner year for cedar nut crops in many parts of Siberia. But the Novosibirsk medical factory<sup>9</sup> is not

<sup>8</sup>Indeed, China's domestic *consumption* of pine nuts ('cedar nuts' in Russia) is estimated to be greater than its total domestic *production*. Yet, China is the largest exporter of pine nuts to America (controlling over 90% of US imports, worth tens of millions of dollars each year). The 'Chinese' pine nuts found in North American health food stores and supermarkets are predominantly Russian in origin — they are, in fact, the nuts of Siberian cedar and Korean cedar trees 'exported' across the border to China, to be shelled and sent overseas, often without the necessary level of refrigeration.

increasing its output of cedar oil. There is a shortage of cedar nuts — the same nuts which are being made into expensive medicines in the West, where the manufacturers are taking great pains to conceal the identity of the main ingredient.

Remember I wrote back in Book 1 about how they were shipping cedar nuts abroad? And when I tried searching for information about cedar nut oil, I got a warning from Poland to back off.<sup>10</sup> This year they've managed again to hold their own. But as to the future, well, we shall see. In the next book I shall tell about a certain surprise being prepared by Anastasia.

I am an entrepreneur. My idea was to write the books I promised and then get back to business. And I never hid my intentions from anyone — in fact I wrote about them right in Book 2.<sup>11</sup> But now my plans have changed. Let other Siberian entrepreneurs compete for trade with these Western smart alecs.

My plans changed because those behind critical publications continue to insult and frighten readers, labelling as bigots anybody who bothers to read my books, which they consider silly and devoid of literary value. Granted, I don't have any higher education, or experience in the literary field, and those who have these are irritated by the popularity of my books. They are especially upset by the fact that, given my level of education, I still refuse to submit my work to editors.

And they are simply furious over my publication of the five-hundred-page collection of readers' letters and poems entitled *The soul of Russia sings in Anastasia's ray*.<sup>12</sup> Again, I didn't

<sup>9</sup>Novosibirsk medical factory — see Ch. 24: "Take back your Motherland, people!".

<sup>10</sup>See Book 1, toward the end of Chapter 1: "The ringing cedar".

<sup>11</sup>See Book 2, at the very end of Chapter 31: "How to produce healing cedar oil".

<sup>12</sup>*The soul of Russia sings in Anastasia's ray. A people's book* (Russian title: *V luche Anastasii zvučit dusha Rossii. Narodnaya kniga*) — a 544-page volume of readers' poetry, art and letters. Seven sample poems from this collection are reproduced in English translation at the end of Book 1, Chapter 30: "Author's message to readers".

allow anyone to edit this. I wrote the preface myself, saying that the collection was quite an historic publication. I still say this. How else could one characterise it, containing as it does letters and musings on life, on the purpose of Man, on what people today cherish in life. The letters and poems are sincere, and written by people of different ages, different social situations and religious inclinations. And this book has been pretty popular. In fact, its popularity has quite given the lie to the myth that modern Man is interested only in crime novels and books about sex. People are eager to read poetry — even if it's not professionally written, but sincere nevertheless.

I've been told on a number of occasions that because I've thrown out a challenge to the whole brotherhood of the pen and their erudition, I'm going to be wiped off the face of the map — nobody will ever recognise me as a writer.

But it wasn't my intention to challenge anyone as a writer. That was never my intention, but now, when the press is going so far as to attribute the popularity of my books to the fact that "Russia is a stupid country", and that all my readers are fools and bigots, I have no choice but to respond to them. I shall be a writer! I'll do a little more practising, study some more... I'll ask Anastasia for help... and I shall be a writer! I shall write new books and reprint the ones already published in the best printing houses in the world. I shall make the books about Anastasia and about the people of Russia today the best books of the millennium.

This is how I shall respond to my present and future critics, but in the meantime I'll simply say this to them:

"To my critics, I bid you farewell. I'm going off with Anastasia — maybe she's a bit naïve, but she's beautiful, kind and sincere. We shall set off into our new millennium with more than a million readers in whose hearts a splendid and inspired image is alive and well. And what is in your hearts, critics? Phooey on you! Don't come crawling into our new

millennium. Get the... *how can I put it?* Get the hell on back to your own! And even if you do come crawling into ours, you'll only choke on your own anger and envy.

"In our millennium we're seeing the start of a new and splendid co-creation, where the air will be pure and there will be living water and fragrant gardens. And in that millennium I shall continue publishing new collections with readers' poems and letters. I shall call the series *A people's book*. You may say that "the poems therein are horrendous" but I say they are resplendent.

"I shall also put out some audiocassettes with songs of the bards — songs of Soul, of Russia, of Anastasia.<sup>13</sup> You may say that anyone can strum a guitar. But I say that these bards sing from the heart. And I would add, in Anastasia's words: *Not in any of the galaxies could there be found a single string capable of producing a better sound than that of the singing of the human soul.*"<sup>14</sup>

Dear readers, I extend to all of you my heartfelt greetings on the dawn of *our* millennium! On the dawn of your splendid co-creation on the Earth!

*Who are we?* That is what I have decided to call my next book.

Respectfully,

Vladimir Megré

*To be continued...*

<sup>13</sup>Over the past five years, over a dozen albums — collections of bards' songs inspired by Anastasia — have been released by the Anastasia Foundation alone, and many more albums have been released independently. A 'Caravan of Love of Sun-bards' (*Karavan Liubvi Solnechnykh bardov*) has also been set up as an itinerant song festival, with large groups of bards travelling from city to city and giving free song performances in Russia and beyond.

<sup>14</sup>See Chapter 6: "Birth".

## Hope for the world

### *Translator's and Editor's Afterword*

*Wow!* Four books translated and counting. Not a bad record, when one considers that just a year ago (as of this writing) not a single page of this series had yet come off the Ringing Cedars presses in America.

The series was launched with the publication of Book 1, *Anastasia*, in February 2005, followed by Book 2, *The Ringing Cedars of Russia*, and Book 3, *The Space of Love*, later in the year. And now *Co-creation* makes four, with at least five volumes still to come. And for this swift progression we have *you* to thank, dear readers, for your ongoing support and encouragement, without which the publication of the new volumes would not have been possible. And needless to say, our gratitude goes out to our original source of support, the One whose inspiration inevitably underlies any legitimate act of 'co-creation'.

Equally noteworthy is the co-creation evident in the evolution of the original series itself, particularly the remarkable transformation of a hard-nosed Siberian commercial trader into one of Russia's bestselling authors. All the more amazing when one remembers that because of Vladimir Mcgré's initially 'choppy' writing style, the original Russian manuscript of *Anastasia* was rejected by publisher after publisher, leaving him no choice but to bring out the first edition on his own.<sup>1</sup> However, after several print-runs of the self-published *Anastasia* sold out simply by word of mouth, with no advertising campaign or bookstore exposure, professional publishers were

<sup>1</sup>See Book 1, Chapter 30: "Author's message to readers".

only too eager to reconsider, and it was not long before the volumes in the Ringing Cedars Series were selling in the millions.

And now in America, as elsewhere in the English-speaking world, *Anastasia* and its sequels are once again running counter to the book-industry's long-held axioms. Even though corporate wholesalers declined to distribute the Ringing Cedars Series to major retailers on the grounds that "no book sells by word of mouth alone, without a budget sufficient for a large advertising campaign", you the readers have proved otherwise, and the books have already spread around the globe without so much as a single advertisement or paid-for review in the press. Many of you have taken it upon yourself to purchase additional copies to give to the family and friends. Some have even gone further and become independent distributors, devoting considerable time and effort to making the books available in your local regions. Thus, as with their original editions, the success of the books in translation is once again the result of the resourcefulness of their readers — readers who have let a new splendid *image* live in their hearts — and the ideas these books set forth are already leaving their mark on the world.

Indeed, there are signs that the world is beginning to grasp the message that there is a better path to freedom, enlightenment and happiness than the one along which it has been hurtling forward at breakneck speed, and that the 'new millennium' on the Earth which Vladimir Megré welcomes on the final pages of *Co-creation* is already dawning with a most glorious radiance. Both in Russia and abroad, *Anastasia* and the Ringing Cedars Movement are already the subject of many day-to-day conversations and frequent reports in the press (some pertinent examples are detailed below).

Many might find these developments surprising. However, there have been numerous thinkers in both the distant and the recent past who have attempted to send a similar message

to humanity: that *it is on the wrong path*. A few of these are worth noting here.

In the late 19th century the great Russian writer Leo Tolstoy took special note of how “millions of people — men, women and children — working ten, twelve or fifteen hours a day, are being transformed into machines and perishing in factories that manufacture unnecessary and harmful gadgets... while more and more villages become deserted”. He further observed that “in our time the human heart has been crying out more strongly, more strongly than ever before, against this false life, and calling people to the life demanded by revelation, reason and conscience”.<sup>2</sup>

At the same time, on the other side of the Atlantic, religious thinker and Christian Science founder Mary Baker Eddy was calling for a new approach to spiritual freedom from ‘mental slavery’ to long-held beliefs. She summed up this approach in her major work, *Science and health* (originally published in 1875) as follows: “The despotic tendencies, inherent in mortal mind and always germinating in new forms of tyranny, must be rooted out through the action of the divine Mind”.<sup>3</sup>

In 1931 the American prophet Edgar Cayce established his Association for Research and Enlightenment to promote alternative solutions to humanity’s problems based on, among other things, personal spirituality and holistic health. Interestingly enough, in one of his many ‘readings’ he received an intimation that “*on Russia’s religious development will come the greater hope of the world*”.<sup>4</sup>

<sup>2</sup>Leo Tolstoy, *An appeal (Vozzvanie)*, 25 May 1889.

<sup>3</sup>Mary Baker Eddy, *Science and health with key to the Scriptures* (final edition, 1910), p. 225. Not unlike Megré, Eddy frequently used ‘divine Mind’ (with a capital *M*) as a synonym for God.

<sup>4</sup>From Cayce reading 3976-10 (February 1932). Edgar Cayce Readings are copyrighted (© 1971, 1993–2005) by the Edgar Cayce Foundation. This quotation is used by the kind permission of the copyright holder. Italics ours.

Three years later the world-renowned humanitarian, Dr Albert Schweitzer, re-published the English translation of his book, *On the edge of the primeval forest*. While decrying the injustices inflicted on the indigenous peoples by European settlers,<sup>5</sup> he intimates that the only path to successful colonialism is to turn the indigenous people into more productive workers by *removing them from their native villages, families and plots of land*. Surprisingly, in the same piece Schweitzer even holds labour compulsion (forcing the African native peoples to provide labour in return for material 'benefits' bestowed on them) to be justifiable.<sup>6</sup>

Separating people from their own (or their family's) land is a social trend that goes back centuries. Thomas More described it in Book 1 of his *Utopia* (published in 1516), accusing greedy landowners of taking land from their peasant farmers for their own enrichment. Stalin's forced collectivisation of agriculture in the Soviet Union in the 1930s, the loss of family farms in the United States in the years following World War II and the establishing of huge 'factory farms' in present-day Canada (nearly always achieved by buying up small, family operations at an 'irresistible' price) are further examples of concerted efforts on the part of the 'dark forces' of this world to break Man's ties to the land. This in turn has the effect of subduing his free will and destroying his independence.

<sup>5</sup>He writes, for example: "Who can describe the injustice and cruelties that in the course of centuries they [the coloured peoples] have suffered at the hands of Europeans?... If a record could be compiled of all that has happened between the white and the coloured races, it would make a book containing numbers of pages which the reader would have to turn over unread because their contents would be too horrible" — A. Schweitzer, *On the edge of the primeval forest: experiences and observations of a doctor in Equatorial Africa* (London: A.&C. Black Ltd, 1934), p. 115.

<sup>6</sup>See A. Schweitzer, *On the edge of the primeval forest*, pp. 112–118.

All of which gives added weight to Anastasia's proposal, so eloquently set forth by Vladimir Megré in *Co-creation*, of bringing Man (more specifically, a Man's *family*) and his land back together again in the form of what is called in Russian *rodovoe pomestie* — translated in this book as 'family domain' or 'kin's domain'.<sup>7</sup> This phrase is in turn linked, in terms of both meaning and etymology, to the Russian concept of *Rodina*, which has been rendered 'Motherland' in the Ringing Cedars Series, though it is equally translatable as 'native land'.<sup>8</sup>

A brief word on the translation is in order here: inasmuch as both *Rodina* and *rodovoe pomestie* convey concepts that have deep roots in the Russian historical context, unparalleled in Western cultures, a good deal of thought — not to mention countless paragraphs of text and e-mail correspondence — has gone into selecting the most appropriate English equivalents.<sup>9</sup>

We were aided in this decision in part by two of our readers who were asked to voice their thoughts on the selection of an equivalent for *Rodina*. Here is a brief excerpt from each of their responses:

To me *Motherland* seems to invoke the most profound connection one can have to the land. It is the land in which

<sup>7</sup>This proposal of Anastasia's — a 'family domain' comprising one hectare of land — is presented throughout the latter part of *Co-creation*, beginning with Chapter 24: "Take back your Motherland, people!". The origin of the Russian term rendered *family domain* (or *kin's domain*) is discussed in footnote 7 in Chapter 33: "School, or the lessons of the gods".

<sup>8</sup>For further discussion of the original meaning of *Rodina*, please see footnote 1 in Chapter 24: "Take back your Motherland, people!".

<sup>9</sup>Even then the final results were, shall we say, less than unanimous, and involved a significant element of compromise on the part of both editor and translator. We can only hope our readers will be able to glean at least a glimmer of understanding from the choices we eventually decided upon.

you were likely born. But even more so, it is the land to which you have bonded through work, toil, sweat and blood, laughter, joy and sustenance.

I like *motherland*. It brings the “life giving” nature of the earth to my heart, “my mother”, evoking feelings of tenderness and responsibility. There is much meaning to women in the idea of being a mother and a common thread which relates to my personal life’s experience and has a place in the emotional file cabinet of the brain for most people. The relationship between “life” and the earth is shattered in this country [America], as people are so removed from the idea the earth gives us our life.

The linkage made by the latter reader between one’s ‘personal life’ and ‘the Earth’ is significant. Early in Chapter 24 (appropriately entitled “Take back your Motherland, people!”) Anastasia acknowledges that “the whole Earth could be a Motherland [*Rodina*] for each one of its inhabitants”, and she designates a family’s personal plot of land (subsequently identified as one’s *kin’s domain*) as a “piece of the Motherland”<sup>10</sup> — thus linking the feelings associated with one’s personal family to the broader concept of the family of humanity as a whole. Indeed, perspectives on the concept of the family as revealed in *Co-creation* are by no means confined to the world of the early twenty-first century we call *home*, but reach out in both time and distance to look at *family* not only through the lenses of the past, the present and the future but from beyond our usual sense of planetary space as well.

On this basis, then, it may be seen that the concepts of both *Motherland* and *family domain* reach far beyond the borders of Russia alone. In fact, as indicated above, there are

<sup>10</sup>See Chapter 31: “But who is to blame?”.

signs that Anastasia's appeal to "take back your Motherland" is already resonating in the hearts of many people in many parts of the world.

In May 2005, for example, a massive power outage in Moscow reminded many of Anastasia's words concerning the inevitable collapse of artificial life-support systems.<sup>11</sup> This one accident paralysed Russia's capital city for several days in a row and, among other things, resulted in the sewage from millions of dwellings being flushed into the Moskva River untreated. In a radio programme devoted to possible solutions to this problem, one of Russia's most prominent ecologists — and President of the Centre for Russia's Environmental Policy — Academician Alexey Yablokov, made pointed reference not only to E.F. Schumacher's book *Small is Beautiful*<sup>12</sup> but also to the "bugely popular 'Anastasia' movement of people building their family domains".<sup>13</sup>

In neighbouring Latvia, journalist Liudmila Stoma was curious about what was behind a movement of hundreds of people in Latgal Province — "all well-educated specialists in high demand in the labour market" — relocating to a newly formed eco-village in a remote rural area. Upon investigation, she was amazed by what she could only describe as a "new revolution":

Over the last few years Russia, Belarus and Ukraine have been experiencing a real eco-village boom: thousands of

<sup>11</sup>See, for example, Book 2, Chapter 8: "The answer", and Book 3, Chapter 19: "What to agree with, what to believe?".

<sup>12</sup>E.F. Schumacher, *Small is beautiful: economics as if people mattered* (New York, Harper & Row, 1973).

<sup>13</sup>From Dr Yablokov's interview on ecological threats to Moscow resulting from electricity outages (*Problemy ekologicheskoy bezopasnosti Moskvy v sluchae otkliucheniya podachi elektroenergi*), aired on Radio Svoboda on 25 May 2005. Italics ours.

families are building 'family domains' on one hectare of land each, attaining remarkable self-sufficiency with only sparing use of all the technological achievements of the technocratic world. They are all united by the same goal: to build a Paradise on the Earth.<sup>14</sup>

She ended her article by wondering if "the settlers following Anastasia's advice" in building their own family domains might actually succeed where government subsidies had so miserably failed.

In fact, thousands of new kin's domains are being established each year — not only in Russia and Latvia, but in many other countries as well. And *Dachnik Day* — an annual celebration of our connectedness to Mother Earth on 23 July, the idea of which was proposed in Book 2 (*The Ringing Cedars of Russia*) only eight years ago<sup>15</sup> — has now become an international holiday, and in 2005 it was celebrated for the first time by readers of the series in both America and Canada.

These are but a few examples of a growing, world-wide phenomenon rounded out by international readers' conferences, bards' festivals and multitudes of new poems, songs, paintings and other forms of artistic expression. And already the reaction of readers of the English translation of the series in America, Britain, Canada, Australia, New Zealand and elsewhere is indicating a real 'globalisation' of interest not only in *reading* the Ringing Cedars books, but in *acting on the*

<sup>14</sup>Liudmila Stoma, *Vozvrashchenie v Edem (Return to Eden)*. *Ezhenedelnik "Vesti"* (Weekly News), n° 8 (601), 24 February 2005. Interestingly enough, Israeli writer and poet Efim Kushner also used the term *revolution* (in the phrase "a global-scale moral revolution") in reference to the Ringing Cedars Series in his book *Beskrovnaya revoliutsiya (A bloodless revolution)*, published in 2003.

<sup>15</sup>See Book 2, Chapter 9: "Dachnik Day and an All-Earth holiday!".

*ideas* they present as well, revealing new manifestations of a Motherland that completely transcends national boundaries.

And to think it all started from a single simple idea, which, multiplied through its first faltering attempts at implementation, still keeps on blossoming and helping people all over the world ‘take back’ their own Motherland — even as Vladimir Megré’s blossoming series of publications started from a single simple proposal to write a book implanted in the thought of an inveterate ‘non-writer’. And this former non-writer’s initial ‘choppy’ attempts have now evolved into a flourishing trademark style of poetic prose which characterises Books 3 and 4 of the series. (How well we have succeeded on conveying this evolution of style in the English version, particularly the melodious effect his resulting poetic mode of expression can have on the one who reads it with a heart attuned to textual harmonies, will be up to you the readers to judge.)<sup>16</sup>

As translator and editor we have only to wish you as fascinating an experience in discovering this book on your own as we ourselves had in reading and ‘co-translating’ it (not to mention ‘co-editing’ the translation). For now we shall leave you with Anastasia’s appeal from Chapter 26 (“Even today everyone can build a home”): “You must feel everything that I outline, and mentally complete yourself the whole design,

<sup>16</sup>We are reminded here of the words of British poet Robert Graves: “The reason why the hairs stand on end, the eyes water, the throat is constricted, the skin crawls and a shiver runs down the spine when one writes or reads a true poem is that a true poem is necessarily an invocation of the White Goddess, or Muse, the Mother of All Living...”. We feel that this ‘goddess’ — whom Anastasia calls *Love* — is invoked in this volume with tremendous power. The quote is from Robert Graves, *The White Goddess: a historical grammar of poetic myth* (London: Faber & Faber, 1946; now also published in New York by Noonday Press), pp. 24-25.

and let everyone else draw it along with me. O, God! People, at least give it a try, I beg of you!”

We look forward to meeting you again on the pages of the next book — entitled *Who are we?* — which, like *Co-creation*, will offer ever greater hope for the world.

## ABOUT THE RINGING CEDARS SERIES

*Anastasia*, the first book of the Ringing Cedars Series, tells the story of entrepreneur Vladimir Megré's trade trip to the Siberian taiga in 1995, where he witnessed incredible spiritual phenomena connected with sacred 'ringing cedar' trees. He spent three days with a woman named Anastasia who shared with him her unique outlook on subjects as diverse as gardening, child-rearing, healing, Nature, sexuality, religion and more. This wilderness experience transformed Vladimir so deeply that he abandoned his commercial plans and, penniless, went to Moscow to fulfil Anastasia's request and write a book about the spiritual insights she so generously shared with him. True to her promise this life-changing book, once written, has become an international bestseller and has touched hearts of millions of people world-wide.

*The Ringing Cedars of Russia*, the second book of the Series, in addition to providing a fascinating behind-the-scenes look at the story of how *Anastasia* came to be published, offers a deeper exploration of the universal concepts so dramatically revealed in Book 1. It takes the reader on an adventure through the vast expanses of space, time and spirit — from the Paradise-like glade in the Siberian taiga to the rough urban depths of Russia's capital city, from the ancient mysteries of our forebears to a vision of humanity's radiant future.

*The Space of Love*, the third book of the Series, describes author's second visit to Anastasia. Rich with new revelations on natural child-rearing and alternative education, on the spiritual significance of breast-feeding and the meaning of ancient megaliths, it shows how each person's thoughts can influence the destiny of the entire Earth and describes practical ways of putting Anastasia's vision of happiness into practice. Megré shares his new outlook on education and children's real creative potential after a visit to a school where pupils build their own campus and cover the ten-year Russian school programme in just two years. Complete with an account of an armed intrusion into Anastasia's habitat, the book highlights the limitless power of Love and non-violence.

*Co-creation*, the fourth book and centrepiece of the Series, paints a dramatic living image of the creation of the Universe and humanity's place in this creation, making this primordial mystery relevant to our everyday living today. Deeply metaphysical yet at the same time down-to-Earth practical, this poetic heart-felt volume helps us uncover answers to the most significant questions about the essence and meaning of the Universe and the nature and purpose of our existence. It also shows how and why the knowledge of these answers, innate in every human being, has become obscured and forgotten, and points the way toward reclaiming this wisdom and — in partnership with Nature — manifesting the energy of Love through our lives.

*Who are we?* — Book Five of the Series — describes the author's search for real-life 'proofs' of Anastasia's vision presented in the previous volumes. Finding these proofs and taking stock of ongoing global environmental destruction, Vladimir Megré describes further practical steps for putting Anastasia's vision into practice. Full of beautiful realistic images of a new way of living in co-operation with the Earth and each other, this book also highlights the role of children in making us aware of the precariousness of the present situation and in leading the global transition toward a happy, violence-free society.

*The book of kin*, the sixth book of the Series, describes another visit by the author to Anastasia's glade in the Siberian taiga and his conversations with his growing son, which cause him to take a new look at education, science, history, family and Nature. Through parables and revelatory dialogues and stories Anastasia then leads Vladimir Megré and the reader on a shocking re-discovery of the pages of humanity's history that have been distorted or kept secret for thousands of years. This knowledge sheds light on the causes of war, oppression and violence in the modern world and guides us in preserving the wisdom of our ancestors and passing it over to future generations.

*The energy of life*, Book Seven of the Series, re-asserts the power of human thought and the influence of our thinking on our lives

and the destiny of the entire planet and the Universe. It also brings forth a practical understanding of ways to consciously control and build up the power of our creative thought. The book sheds still further light on the forgotten pages of humanity's history, on religion, on the roots of inter-racial and inter-religious conflict, on ideal nutrition, and shows how a new way of thinking and a lifestyle in true harmony with Nature can lead to happiness and solve the personal and societal problems of crime, corruption, misery, conflict, war and violence.

*The new civilisation*, the eighth book of the Series, is not yet complete. The first part of the book, already published as a separate volume, describes yet another visit by Vladimir Megré to Anastasia and their son, and offers new insights into practical co-operation with Nature, showing in ever greater detail how Anastasia's lifestyle applies to our lives. Describing how the visions presented in previous volumes have already taken beautiful form in real life and produced massive changes in Russia and beyond, the author discerns the birth of a new civilisation. The book also paints a vivid image of America's radiant future, in which the conflict between the powerful and the helpless, the rich and the poor, the city and the country, can be transcended and thereby lead to transformations in both the individual and society.

*Rites of Love* — Book 8, Part 2 (published as a separate volume) — contrasts today's mainstream attitudes to sex, family, childbirth and education with our forebears' lifestyle, which reflected their deep spiritual understanding of the significance of conception, pregnancy, homebirth and upbringing of the young in an atmosphere of love. In powerful poetic prose Megré describes their ancient way of life, grounded in love and non-violence, and shows the practicality of this same approach today. Through the life-story of one family, he portrays the radiant world of the ancient Russian Vedic civilisation, the drama of its destruction and its re-birth millennia later — in our present time.

*To be continued...*

**THE AUTHOR, Vladimir Megré**, born in 1950, was a well-known entrepreneur from a Siberian city of Novosibirsk. According to his account, in 1995 — after hearing a fascinating story about the power of ‘ringing cedars’ from a Siberian elder — he organised a trade expedition into the Siberian taiga to rediscover the lost technique of pressing virgin cedar nut oil containing high curative powers, as well as to find the ringing cedar tree. However, his encounter on this trip with a Siberian woman named Anastasia transformed him so deeply that he abandoned his business and went to Moscow to write a book about the spiritual insights she had shared with him. Vladimir Megré now lives near the city of Vladimir, Russia, 190 km (120 miles) east of Moscow. If you wish to contact the author, you may send a message to his personal e-mail [megre@online.sinor.ru](mailto:megre@online.sinor.ru)

**THE TRANSLATOR, John Woodsworth**, born in Vancouver (British Columbia), has over forty years of experience in Russian-English translation, from classical poetry to modern short stories. Since 1982 he has been associated with the University of Ottawa in Canada as a Russian-language teacher, translator and editor, most recently as a Research Associate and Administrative Assistant with the University’s Slavic Research Group. A published Russian-language poet himself, he and his wife — Susan K. Woodsworth — are directors of the Sasquatch Literary Arts Performance Series in Ottawa. A Certified Russian-English Translator, John Woodsworth is in the process of translating the remaining volumes in Vladimir Megré’s Ringing Cedars Series.

**THE EDITOR, Leonid Sharashkin**, is writing his doctoral dissertation on the spiritual, cultural and economic significance of the Russian *dacha* gardening movement, at the University of Missouri in Columbia. After receiving a Master’s degree in Natural Resources Management from Indiana University at Bloomington, he worked for two years as Programme Manager at the World Wide Fund for Nature (WWF Russia) in Moscow, where he also served as editor of Russia’s largest environmental magazine, *The Panda Times*. Together with his wife, Irina Sharashkina, he has translated into Russian *Small is beautiful* and *A guide for the perplexed* by E.F. Schumacher, *The secret life of plants* by Peter Tompkins and Christopher Bird, *The continuum concept* by Jean Liedloff and *Birth without violence* by Frederick LeBoyer.

# Co-creation by Vladimir Megre

## Book 4 of The Ringing Cedars Series

Spirituality /  
Nature

*Co-creation* paints a dramatic living image of the creation of the Universe and humanity's place in this creation, making this primordial mystery relevant to our everyday living today. Deeply metaphysical yet at the same time down-to-Earth practical, this poetic heartfelt volume helps us uncover answers to the most significant questions about the essence of the Universe and the purpose of our existence. It also shows how and why the knowledge of these answers, innate in every human being, has become obscured and forgotten, and points the way toward reclaiming this wisdom in partnership with Nature.

Anastasia herself has stated that this book consists of words and phrases in combinations *which have a beneficial effect on the reader*. This has been attested by the letters received to date from thousands of readers all over the world.

If you wish to gain as full an appreciation as possible of the ideas, thoughts and images set forth here, as well as experience the benefits that come with this appreciation, we recommend you find a quiet place for your reading where there is the least possible interference from artificial noises (motor traffic, radio, TV, household appliances etc.). *Natural sounds*, on the other hand — the singing of birds, for example, or the patter of rain, or the rustle of leaves on nearby trees — may be a welcome accompaniment to the reading process.

Ringling Cedars Press is an independent publisher dedicated to making Vladimir Megré's books available in the beautiful English translation by John Woodsworth. Word of mouth is our best advertisement and we appreciate your help in spreading the word about the Ringling Cedars Series.

## CHAPTER ONE

# Two civilisations

We are always in a hurry to get somewhere or get something. There is hardly a single one of us who doesn't desire to lead a happy life, find love and establish a family. But how many of us will actually achieve our desire?

What determines our satisfaction or dissatisfaction with life? What determines our success or failure? What constitutes the meaning of life for each and every Man<sup>1</sup> and for all mankind on the whole? What kind of future awaits us?

These questions have been around a long time, but nobody has managed to come up with an intelligible answer. But I wonder: what kind of country will we be living in five or ten years from now? What kind of world are we leaving to our children? We really don't know. And, let's face it, none of us can ever picture our own future, because we are always hurrying off somewhere... but to where?

Strange, but true: the first clear glimpse I ever had about the future of our country came not from statisticians or politicians but from Anastasia, a recluse living in the wilds of the taiga. And not only did she present a picture of a marvellous future, but showed step-by-step its feasibility even for our generation — a design, in fact, for the development of the whole country.

<sup>1</sup>The word *Man* (with a capital *M*) is used throughout the Ringing Cedars Series to refer to a human being of either gender. For details on the word's use and the important distinction between *Man* and *human being* please see the Translator's Preface to Book 1.

It was while I was on my way from Anastasia's glade to the river<sup>2</sup> that this firm conviction, for some reason, came to my thought: *her plan is capable of changing so much in this world of ours*. When we consider that everything her thought conceptualises inevitably turns into a real-life embodiment, we see we are already living in a country with only a splendid future ahead of it. As I walked along, I thought about what Anastasia had said about our country's splendid future, which might even come about in our generation's lifetime. It will be a country without regional conflicts, criminal gangs and diseases, a country without poverty. And while I didn't understand all the thoughts she came out with, there wasn't a single thing she said this time that I felt like doubting. On the contrary, I felt as though I wanted to show everyone how *right* she was.

I firmly resolved to do everything within my power to bring her plan to fruition. On the surface it seems simple enough: each family should be allotted a hectare<sup>3</sup> of land for lifetime use, whereon to set up its own 'kin's domain',<sup>4</sup> its own 'piece of the Motherland'.<sup>5</sup> But my thought was immersed in the details of this plan. They were utterly simple in themselves, and yet at the same time utterly incredible.

Amazing! It isn't an agricultural scientist but a reclusive woman from the taiga that has shown that, with the right planting arrangement on a plot of land, it can take just a few short years to dispense with the need for fertilisation. Not only that, but even soil that isn't terribly fertile will be significantly improved.

<sup>2</sup>*from Anastasia's glade to the river* — see the last part of Book 4, Chapter 33: "School, or the lessons of the gods".

<sup>3</sup>*hectare* — 1 hectare is equivalent to approx. 2.5 acres in the Imperial system.

<sup>4</sup>*kin's domain* — see footnote 7 in Book 4, Chapter 33.

<sup>5</sup>*Motherland* — see footnote 1 in Book 4, Chapter 24: "Take back your Motherland, people!"; also the Translator's and Editor's Afterword to Book 4.

As a basic example Anastasia referred to the situation in the taiga.<sup>6</sup> The taiga has been around for thousands of years, and everything grows in it, even though it has never been fertilised. Anastasia says that all the things growing in the earth constitute the materialised thoughts of God, and that He has arranged everything so that Man has no need to worry about difficulties in finding food. One needs only to try to understand the Creator's thought and create splendid things together with Him.

I can cite an example of my own. The island of Cyprus, which I have visited, has a very rocky soil. But the ground wasn't always this way. Centuries ago the island was home to some splendid cedar forests and orchards, and its many rivers were filled with the purest spring water. The whole island was like an earthly Paradise. Then the Roman legions invaded the island and began to cut down the cedars to build their ships. Whole groves were felled. Today the larger part of the island is covered with stunted growth, the grass looks burnt even in the springtime, summer rains are a rarity and there is not enough fresh water. The residents have had to import fertile soil by the bargeload to be able to grow anything at all. So the upshot is: not only has Man failed to improve what has been created on the island, but his barbarous interference has actually made things worse.

In outlining her plan, Anastasia said that it was essential to plant a family tree, and that people should not be buried in a cemetery but right there on the beautiful terrain they themselves have nurtured. No headstone of any kind need be placed on the grave. It is a Man's living creations, not something dead, that will serve as a memorial for his relations. And not only that, but his soul will be able to take on a material embodiment again, in his earthly garden of Paradise.

<sup>6</sup>*taiga* — the Russian name given to the boreal forest that stretches across much of Siberia and northern Canada.

People buried in a cemetery cannot end up in Paradise. Their souls cannot be embodied in matter as long as there are relatives and friends around thinking about their death. Headstones are monuments to death. Funeral rites were thought up by the dark forces for the purpose of confining, at least temporarily, the human soul. Our Father has never produced any kind of suffering or even grieving for His beloved children. All God's creations are eternal, self-sufficient, self-reproducing. Everything living on the Earth, from the outwardly simple blade of grass to Man, is a self-constituted harmonious and eternal whole.

Here too, I think, she is right. Just look at how things have turned out. Today scientists tell us that human thought is material — but if that's the case, it means that the deceased person's relatives, in thinking of him as dead, thereby keep on holding him in a deadened state, which torments his soul. Anastasia maintains that Man, or, more precisely, Man's soul, can live forever. It has the capacity to constantly re-embody itself anew, but only under certain conditions. These conditions are brought about by a *kin's domain* established according to Anastasia's design. I am simply a believer in this design. As to proving or disproving her claims about life and death, I'll leave that to esoteric scholars who are no doubt more qualified for the task.

"I say, you're going to get a lot of opposition on that one," I observed to Anastasia. To which she only laughed and replied:

"It will all happen very simply now, Vladimir. Man's thought is capable of materialising and changing the shape of objects, predetermining events, creating the future. So it works out that any opponents who try to argue for the frailty of Man's existence only end up destroying themselves, for they will bring about their own decease by their very thoughts.

"Those who are able to comprehend their purpose and the meaning of infinity will start to live a happy life, eternally

re-embodiment themselves, for they themselves will produce with their thoughts their own infinity of happiness.”

I liked her plan even better when I began to calculate its economic potential. I have become convinced that any Man, with the help of a family domain he establishes according to Anastasia’s design, can ensure a poverty-free existence for himself as well as for his children and grandchildren. It is not merely a question of providing one’s children with good food to eat or a roof over their heads. Anastasia said that the fence around the domain must be made of living trees, and that at least a quarter of the hectare should be given over to forest.

That means about 300 trees. They’ll quite likely be cut down in, say, eighty to a hundred years, yielding about 400 cubic metres of lumber.<sup>7</sup> Even today, lumber well-dried and processed for finishing fetches at least one hundred dollars<sup>8</sup> per cubic metre, meaning a total income of \$40,000. Of course, one shouldn’t cut down the whole forest at once, just the number of mature trees that are needed at the time, and then immediately plant new ones in their place. The overall value of a kin’s domain set up according to Anastasia’s design may be estimated at a million dollars or more, and any family can build one, even those with an average income.

The house can be quite modest to start with. The main treasure will be the plot of ground, accurately and aesthetically laid out. Even today, wealthier citizens are paying big money to firms specialising in landscape design. There are about forty such firms in Moscow right now, and they are always busy. For upwards of \$1,500 they will take just the hundred square metres of ground around your house and turn it into a landscape designed with detailed accuracy and aesthetic beauty.

<sup>7</sup> 400 cubic metres of lumber — equivalent to 170,000 board feet.

<sup>8</sup> dollars — in this case, American dollars, the currency most familiar to Russians after their own rouble.

It costs around \$500 to plant a single conifer about 6 metres high, but people who want to live in beautifully appointed surroundings are willing to pay big money for that. They end up paying it because it never entered their parents' heads to establish a family domain for their children. You don't need to be rich to do something like that, you need only to get your priorities straight. How can we raise our children properly if we ourselves don't grasp such simple things? Anastasia's right when she says that education begins with ourselves.

I myself have had a strong desire to establish my own family domain — to take a hectare of land, build a house and — most importantly — to put in all sorts of plantings around it. I want to set up my piece of the Motherland just as Anastasia described, and have it surrounded by other people's beautifully appointed plots. Anastasia and our son could establish themselves there too, or at least come visiting, and eventually our grandchildren and great-grandchildren. Maybe our great-grandchildren will want to work in the city, but they will still be able to come to their family domain to relax.

And once a year, on the 23rd of July, the All-Earth holiday,<sup>9</sup> the whole extended family will gather at home. I shan't be around then myself, but the domain I set up will remain, and the trees and garden it contains. I'll hollow out a little pond and put in some hatchlings so there'll be fish. The trees will be planted in the special arrangement outlined by Anastasia. Some things my descendants will like, others they may want to change, but either way I shall be remembered.

And I shall be buried in my own domain, with the request that my grave not be marked in any way. I don't want anyone putting on a show of grief or making a sad face over it. In fact, I don't want there to be any grieving at all. I don't want a headstone with an inscription, just fresh grass and bushes

<sup>9</sup>See Book 2, Chapter 9: "Dachnik Day and an All-Earth holiday!".

growing over the body — maybe some sort of berries too, which will be useful to my descendants. What's the point in a grave-marker? There isn't any — only grief. I don't want people coming to my domain to remember me with sadness, but with joy. Yeah, they'll see how I've set things up, and arranged all the plantings!...

My thoughts kept intertwining in a kind of joyful anticipation of something grand: *I'd better begin as quickly as possible, somehow start the ball rolling. I've got to get back to the city quicker, but it'll still be another ten kilometres just to get through this forest. If only I could get through it sooner!*

And all at once, out of the blue, statistics on Russia's forest lands floated to the surface of my memory. I didn't remember all the figures, but here's what I saw one time in a statistical report:<sup>10</sup>

"Forests constitute the basic type of vegetation in Russia, covering 45% of its land mass. Russia has the most extensive forest reserves in the world, amounting to 886.5 million hectares in 1993, with a timber volume of 80.7 billion. This means Russia holds 21.7% and 25.9% (respectively) of the world's forest and timber resources. The higher figure for timber reflects the fact that in terms of its wealth of mature and productive forests, Russia is way above the world's average.

"Forests play a huge role both in the gas balance in the atmosphere and in regulating climate on our planet. According to B.N. Moiseev's calculations, the gas balance of Russia's forests is 1,789 million tonnes<sup>11</sup> for carbon dioxide and 1,299 million tonnes for oxygen. Annual carbon deposits in Russia's forests amount to 600 million tonnes. These huge volumes

<sup>10</sup>This description appears, among other places, in an environmental atlas of Russia which may be found on the Russian "Practical Science" website at: [www.sci.aha.ru](http://www.sci.aha.ru)

<sup>11</sup>tonne (metric ton) — 1 tonne = 0.98 UK (long) tons or 1.1 US (short) tons.

of gas exchanges significantly contribute to the stabilisation of the gas composition and climate of the whole planet.”

Just look at what’s happening! I’ve heard it said some kind of special mission lies ahead for Russia — but that’s not in the *future*, it’s already unfolding.

Just think: people all over the planet — to a greater or lesser extent, it isn’t important — are breathing Russia’s air. They’re breathing the oxygen produced by this very forest I’m walking through right now. I wonder whether it’s simply oxygen that this forest is supplying all life on the planet with, or maybe something even more important besides.

My solitary walk through the taiga this time provoked no feeling of trepidation within me as it did before. It felt pretty much the same as walking through a safe park. In contrast to a park, of course, there are no laid out pathways, and my journey was sometimes blocked by fallen trees or thick underbrush, but this time there was nothing that irritated me.

Along the way I would pick berries — raspberries and currants, for example — and for the first time my attention was drawn to the tremendous variety in appearance even among the same kind of trees. And the vegetation, too, was arranged in so many different patterns — no two scenes were alike.

For the first time I really examined the taiga, and it seemed a kinder place than before. No doubt this impression was due in part to the awareness that it was right here in the taiga that my very own son was born and was now living. And then, of course, there’s *Anastasia*... My encounter with this woman has changed my whole life.

In the middle of this endless taiga is Anastasia’s little glade, which she has no desire to leave for any length of time. She would never exchange it for any — even the fanciest — apartment in town. At first glance the glade appears to be just another empty space — no house, no tent, no household facilities — and yet look at how she brightens with joy every time

she approaches it! And now on my third visit I've caught a similar feeling, something like the sense of comfort one feels upon returning home after a difficult journey.

Funny things have been taking place lately all over our world. It seems that, for millennia now, human society has been struggling for the happiness and welfare of the individual, but when you come right down to it, it turns out that this same individual, even though he lives at the very centre of society, at the centre of the most modern and civilised city, finds himself more and more often in a state of helplessness. He gets into a traffic accident, or gets robbed, or constantly falls into the grip of all sorts of aches and pains — he can't live without a drugstore nearby — or some dissatisfaction he can't even explain to himself provokes him into suicide. The suicide rate is increasing particularly in civilised countries with a high standard of living. Mothers from various regions of the country are seen on TV pleading for help for their families threatened with starvation because they can't afford to feed their children.

Yet here is Anastasia, living with a little boy all alone in the taiga, in what can only be called *another civilisation*. Not a single thing does she ask from our society. She needs no police or home security forces to protect her. She gives the impression that nothing bad can possibly happen in this glade to either her or her child.

It's true: we live in different civilisations, and she proposes to take the best of both these worlds. In which case the life-style of many people on the Earth will change, and a new and joyous commonwealth of humanity will be born. This commonwealth will not only be interesting — it will be new and unusual. For example...

## CHAPTER TWO

### Take a taste of the Universe

For a long time it bothered me that Anastasia appeared so content to leave her nursing child all by himself. She would simply put him down on the grass under some bushes or next to the dozing she-bear or she-wolf. I was already convinced that not a single creature would touch him. On the contrary, they would defend him to the death. But from whom? If all the animals around were acting like nannies, then who would they need to protect him from? Still, it was unusual to leave a nursing baby all alone, and I tried to dissuade Anastasia, saying:

“Just because the animals won’t touch him, that doesn’t mean that there are no other misfortunes out there that could befall him.”

To which she responded:

“I cannot imagine, Vladimir, what misfortunes you have in mind.”

“There are a lot of things that could happen to helpless children. Let’s say he crawls up a hillock, for example, and then tumbles down it, twisting his ankle or his wrist.”

“Any height of ground the baby could crawl up on his own would not cause him any harm.”

“But say he eats something harmful. He’s still too young, everything goes into his mouth, so it won’t be long before he poisons himself, and then who’s going to be around to flush out his insides? There aren’t any doctors in the neighbourhood, and you don’t even have an enema to flush out his intestines in case of emergency.”

Anastasia just laughed.

“What need is there for an enema, Vladimir? The intestines can be flushed out another way, and much more effectively than with an enema.”

“How so?”

“Would you like to try it? It will do you a world of good! I shall simply bring you a few little herbs...”

“I told on, don’t bother. I understand. You want to give me something to make my stomach upset.”

“Your stomach has been upset for a long time, Vladimir. The herb I have in mind will expel anything causing your stomach harm.”

“I get it — in case anything happens you can give a herb to a young child and it will make him go to the bathroom. But why take things to such lengths when it comes to a baby?”

“It will not go that far. Our son will eat nothing that is going to harm him. Children — especially those who are nursing and accustomed to the taste of their mother’s milk — will never eat anything else in any significant quantity. And our son will only take a little taste of any berry or herb. If he finds it noxious or bitter — a substance that could harm him, he will spit it out himself. If he eats a little of it and it begins to affect his stomach, he will vomit it, and that will help him remember and he will not try it again. But he will come to know the whole Earth — not from someone else’s reports, but by tasting it on his own. Let us allow our son to taste the Universe for himself.”

No doubt Anastasia is right. It is true nothing bad has happened to the little one so far, not even once. Besides, I noticed a particularly interesting phenomenon: the creatures around her glade themselves train or teach their young how to interact with Man. I used to think Anastasia was the one that did this, but later I became convinced that that is not something she wastes her time on.

This is what I saw on one occasion: we were sitting in the sun at the edge of the glade. Anastasia had just finished nursing our son, and he was blissfully lying in her arms. Initially he seemed to be having a nap or just dozing, but then all at once his little hand began touching Anastasia's hair, and he broke into a smile. Anastasia looked at her son and smiled back, whispering something in his ear with her tender voice.

I saw the she-wolf come out into the glade with her brood — four cubs, still quite young. The wolf came over to us, and stopped about ten metres away and lay down on the ground. The cubs trailing along behind her quickly began nuzzling up to her belly. Upon seeing the wolf and her cubs lying there, Anastasia rose from the ground, babe in arms, and went over to her. She squatted down about two metres away and began inspecting the wolf's brood, her face all smiles, and saying:

“Oh, what beauties our clever wolf has borne! One of them will most certainly be a leader, while *this* little one is the spitting image of her Mama. She will be a joy to her Mama, and a worthy inheritor to carry on the family line.”

The mother wolf seemed to be dozing, her languishing eyes closed tight either from drowsiness or from the soft caressing of Anastasia's voice. The cubs turned away from their mother's belly and began looking at Anastasia. One of them, still unsure of his step, began making his way over to her.

The mother, who just a second before had looked so drowsy, suddenly sprang up, seized the cub with her teeth and dropped him back among the others. Then the same thing occurred with a second cub, then the third and the fourth, all trying to get closer to Anastasia. The inexperienced cubs continued their attempts, but the mother would not let them go until they had finished their little adventures. Two of the cubs began tussling with each other, the other two sat meekly and kept a watchful eye on us.

The baby in Anastasia's arms also noticed the wolf family. He began watching them, and then his legs began kicking impatiently, and he uttered some kind of beckoning sound.

Anastasia reached out her hand toward the wolves. Two of the cubs began heading, with unsure step, in the direction of the outstretched human hand. This time, however, the mother didn't try to stop them. On the contrary, she began nudging the other two cubs, who were still at play, in the same direction. And before long all four were right at Anastasia's feet.

One of them began nibbling on one of her fingers, a second got up on its hind legs and rested its forepaws on her arm, while the other two crawled over to her leg. The boy started to squirm in Anastasia's arms, evidently wanting to get closer to the cubs. Whereupon Anastasia let him down on the ground and he started playing with them, oblivious to anything else! Anastasia went over to the mother wolf, and after giving her neck a gentle stroking, came back to me.

I realised that the wolf had been trained never to disturb Anastasia without being invited, and would approach her only upon a predetermined gesture. Now she was teaching this same rule to her offspring. The wolf, no doubt, had been taught this by her own mother, who in turn had learnt it from *her* mother, and so on from generation to generation — all the creatures transmitted to their young the rules of interaction with Man. A reverent and tactful interaction, it must be said. But who taught them that other kind of interaction and how — to attack Man?

My exposure to the life of the Siberian taiga recluses<sup>1</sup> raised a whole lot of different questions — questions I could not have even imagined asking earlier. Anastasia has no intention of changing her reclusive lifestyle.

<sup>1</sup>*recluses* — referring to Anastasia, her grandfather and great-grandfather, introduced in Book 1, Chapter 2: "Encounter".

But... stop right there! When I think of Anastasia as a 'recluse', each time I associate the word *recluse* with someone who has isolated himself from society, from our contemporary information systems. But what is really going on? After each visit to her glade I end up putting out a new book. A book that is discussed by all sorts of people, young and old, scientists and religious leaders. The way it turns out, it is not *I* who bring *her* information from our over-informed society, but it is *she* who offers *me* information that proves to be of great interest to our society.

So then, who is the real recluse? Haven't we got caught up so much in the abundance (or, more correctly, the seeming abundance) of information at our fingertips that we have set ourselves apart, distanced ourselves from the true source of information? It's simply amazing when you think about what's really going on — Anastasia's remote taiga glade serves as a real information centre, like a launch pad propelling us into the other dimensions of our existence. Then, *who am I, who are we? And who is Anastasia?*

In any case, perhaps it isn't all that important. Something else is much more important, namely, her latest sayings concerning the possibility of transforming the life of any individual Man for the better. Or, for that matter, any country, or even human society as a whole. And this is effected through changing the living conditions of an individual.

It's all incredibly simple: just give a Man at least one hectare of land, and she goes on to explain what to do with this land, and then... Incredible, how simple it is! And Man will always be surrounded by the energy of Love. Those in marital relationships will love their spouses. Their children will be happy, many diseases will be eradicated, wars and catastrophes will cease. Man will draw closer to God.

She has, in fact, proposed the construction of a whole lot of glades similar to her own in the proximity of major cities. But

this doesn't mean she rejects making use of our civilisation's achievements — "Let what is negative be pressed into service on behalf of good," she says. And I have come to believe in her plan. I believe in that splendid turn of events that is to come about as a result of implementing her ideas in our lives. And a lot of them seem so logical to me. All we have to do is go over everything, think everything through, in the right order. We have to adapt her proposal to each location.

I was especially struck by Anastasia's idea regarding land and its development. I could hardly wait to get home and see what scientists have to say about similar communities — does anything along this line exist anywhere in the world? I wanted to see if I could start by designing a new community in all its detail, and then start building it through the concerted efforts of those desiring to participate in its construction. Naturally, neither I nor anyone else can undertake the responsibility for getting this marvellous community of the future going all on our own. It is something we need to do together! We shall have to examine all the information collectively and design our community, taking into account mistakes other people have made.

## CHAPTER THREE

# Dreams of Auroville

During the first months after returning from my visit with Anastasia I set about making an intensive search and study of any information about eco-communities I could lay my hands on. Most of my sources told about experiments abroad. Altogether I collected information on 86 communities in 19 countries (Belgium, Canada, Denmark, England, France, Germany, India and others). But I wasn't particularly struck by any of the reports I had collected. No country could boast any kind of large-scale eco-movement, nor did I come across any communities capable of exercising a significant influence on the social situation in their respective countries.

One of the largest and best-known communities that came to my notice is located in India. It goes by the name of *Auroville*. I'd like to elaborate a little on this one.

Auroville was initiated in 1968 by the wife of the founder of the Integral Yoga movement Sri Aurobindo, Mirra Richard.<sup>1</sup> It was thought that the community, once begun, would eventually grow into a thriving city of 50,000 on lands allocated

<sup>1</sup>*Sri Aurobindo* (1872-1950) -- Hindu mystic, scholar, poet and evolutionary philosopher, considered by his followers to be an 'avatar', or incarnation, of the Supreme Being. His *Integral Yōga* is actually a synthesis of the three yogas: *bhakti*, *karma* and *jnana*, embodying and integrating all aspects of life. His 'spiritual partner', *Mirra Richard* (1878- 1973), born in Paris to Egyptian parents, first came to Aurobindo's *Ashram* (Hermitage) in 1914 and eventually settled in Pondicherry in 1920. Commonly known as 'The Mother', she supervised the operations of his *Ashram* and related organisations. Upon Aurobindo's death in 1950, she succeeded him as spiritual leader, and went on to found the Auroville community in 1968.

by the Indian government near Pondicherry, where Sri Aurobindo's *Ashram* — a centre for Integral Yoga adherents — had been operating since the 1940s. Auroville, or the 'City of Dawn', was supposed to embody the idea of unity of people — people united by a common goal of building a harmonious material world which in no way would find itself at odds with the world of the spirit.

The community's charter, written by Mirra Richard, states:

"Auroville will be a site of material and spiritual researches for a living embodiment of an actual human unity."

The idea of building a city wherein people will live in harmony with the world of Nature, in the harmony of the spirit and love, was approved by the Indian government (and personally by Indira Gandhi) as well as by UNESCO. It received financial support from the Indian government along with a large number of sponsors. Representatives of 121 nations and 23 Indian states attended the opening ceremonies, after which this splendid city — no doubt the dream of a lot of people the world over who call themselves 'spiritual' — began to take shape.

However, following the death of Mirra Richard in 1973, one of Aurobindo's disciples by the name of Satprem<sup>2</sup> spoke out strongly against the Auroville community, calling it nothing but a 'commercial enterprise'. Sri Aurobindo's Ashram, which controlled most of the 'enterprise's' finances, claimed

<sup>2</sup> *Satprem* (birth name: Bernard Enginger, 1923-) - French author, who discovered the teachings of Sri Aurobindo while serving in the French colonial administration of Pondicherry in the 1940s, and later worked closely with Mirra Richard. It was she who gave him the name *Satprem* ('the one who loves truly') in 1957. Later he published *The Agenda* — a multi-volume account of his collaboration with Richard, disseminated through his Institute for Evolutionary Research in Paris. This was followed by a number of other books he wrote on his experiences in India.

authority over everything going on in the city, but the residents considered that their community belonged to the whole world and was not under the Ashram's jurisdiction. A serious confrontation ensued between the spiritual leaders on both sides — a confrontation which was not confined to the ideological level but became more and more physical. In 1980 the Indian government was obliged to pass a decree removing Auroville from the control of Sri Aurobindo's society, and a permanent police detachment was assigned to the community. The Auroville situation led to a general crisis in Sri Aurobindo's movement and teachings.

Today Auroville has about 1,200 residents, instead of the 50,000 or more envisaged by its initiators. The whole region, including the local population, comprises 13 villages and 30,000 people.

Quite possibly the downfall of the Auroville dream was precipitated by the following situation: while any resident may obtain permission to buy land and build himself a house (at his own expense), legal title to the land on which the house stands belongs to the city. Thus it turns out that full confidence is placed in Auroville as a city, but is not accorded any of its individual residents. Every resident lives in a state of dependency on the community as a whole. And yet the whole project was worked out by people who considered themselves highly spiritual. It seems that in the case of spirituality there is another side of the coin to be considered.

I am extremely disturbed and upset by the situation of Auroville today. While it has not provoked any doubts about Anastasia's project, I cannot say my mind is entirely free from negative thoughts. If things did not work out with a model community in India — a country considered practically the leader in the spiritual understanding of human existence, especially with the financial backing of the Indian government, UNESCO and sponsors from a variety of countries, then how

can Anastasia possibly foresee on her own all the pitfalls that lie ahead? Even if it isn't all on her own, and the masses of readers sharing her views try to make calculations, think everything through and foresee the future — even then there is no guarantee such concerted efforts will succeed, as nobody has any experience along this line.

If anyone knew where to find the foundation on which to build a happy life for both the individual and society as a whole, a happy society would have probably been built somewhere. But it doesn't exist — anywhere in the world! The only experience we have is negative. Where can one find anything positive?

“In Russia!” replied Anastasia.

## CHAPTER FOUR

### Harbingers of a new civilisation

“The first shoots of a new and splendid future are to be found in the Russian *dachniks!*”<sup>1</sup> These words sounded within me, all by themselves. Anastasia was not around at the time. It took but a moment to recall the enthusiasm and joy with which she talked to me about the Russian *dachniks* four years ago. She believes that it was thanks to the *dachniks* that a global catastrophe on the Earth was avoided in 1992. So it turns out that it was in Russia that this amazing movement began, a movement which has had a kindly influence on a part of the Earth. I remember her telling me:

“Millions of pairs of human hands began touching the Earth with love. With their *hands*, you understand, not a bunch of mechanical contraptions. Russians touched the ground caressingly on these little *dacha* plots. And the Earth felt the touch of each individual hand. The Earth may be big, but it is very, very sensitive. And the Earth found the strength within itself to carry on.”<sup>2</sup>

Back then, four years ago, I didn’t take this saying seriously, but now, after learning of all the various attempts by people of different countries of the world to create spiritual-ecological communities, I suddenly realised something: with no noisy fanfare, appeals, advertising or pompous ceremonies, the

<sup>1</sup>*dachniks* -- people who spend time at their *dacha*, or cottage in the country, surrounded by a garden where fruits and/or vegetables are grown to feed the family all year long (for further details see Book 1).

<sup>2</sup>See Book 2, Chapter 9: “*Dachnik Day and an All-Earth holiday!*”.

most massive-scale project has come to fruition right here in Russia — a project having significance for all humanity. When seen against the backdrop of all the various Russian dacha communities, all the reports from various countries on the creation of eco-communities there sound quite ludicrous.

Judge for yourselves: here spread out in front of me is a pile of articles and collections of reports seriously discussing the question of how many people should live in an eco-community — a population of no more than 150 is advised. Considerable attention is paid to the governing bodies of such communities and their spiritual leadership.

But Russia's dacha co-operatives have existed for years, sometimes comprising 300 families or more. Each co-operative is managed by one or two people, usually somebody retired from their regular job — if in fact you can call the chairman of a Russian dacha co-operative a manager. He's actually more like a registrar, or a manager who simply carries out the will of the majority.

Russia does not have any centralised management system for its dacha movement. However, according to data published by *Goskomstat* (the State Statistics Committee), in 1997 14.7 million families had fruit-growing plots, while 7.6 million had vegetable plots. The overall land area cultivated by these families amounted to 1,821,000 hectares. These households independently grew 90% of Russia's potatoes, 77% of its berries and fruit, and 73% of its vegetables.<sup>3</sup>

<sup>3</sup>These figures have further increased since the book was written, making Russian gardeners the backbone not only of the country's agriculture, but the economy as a whole. Thus, according to the official statistics published by *Goskomstat*, in 2004 Russian gardening families — without any heavy machinery, hired labour or government subsidies — have grown on their free time and using predominantly organic methods 33 million tonnes of potatoes, 11.5 million tonnes of vegetables and 3.2 million tonnes of fruit and berries, which represent 93%, 80% and 81% respectively of the country's total output of these crops. Russian gardeners now produce more products than the whole commercial agricultural apparatus all told. In 2004 the

No doubt the theoreticians who have been designing eco-communities and eco-villages for years will protest that a dacha co-operative is not the same as an eco-community. To which I wish to immediately respond: it is not the name but the content that is important.

The overwhelming majority of Russia's dacha co-operatives conform to eco-community guidelines. Not only that, with no thunderous declarations on spiritual self-improvement and the necessity of a careful approach to Nature, the dachniks have proved their spiritual growth not by words but by their way of life. They have planted millions of trees. It is thanks to their labours on hundreds of thousands of hectares thought to be infertile and good for nothing — so-called marginal lands, that orchards are now flourishing.

We keep hearing how in Russia part of the population is on the verge of starvation. We see strikes by teachers, then by miners, and our politicians are scratching their heads in their attempts to bring the country out of crisis after crisis. More than once during the *perestroika*<sup>†</sup> period Russia was but a hair's breadth away from a massive social upheaval. But it didn't happen.

And now let's try mentally deducting from just the past few years of our lives the 90% of potatoes, 77% of berries and 73% of vegetable production, and substitute a heightened anxiety level on the part of millions of people. This you would have

---

value of the Russian gardeners' production represented 51% of the country's total agricultural output — approx. US\$14 billion, or 2.3% of Russia's gross domestic product (GDP). The contribution of dachniks and rural family growers to the Russian economy exceeds that of any of the following industries: steel; electric power generation; chemical and pharmaceutical; forestry, timber, pulp and paper; building materials; or oil refining, natural gas and coal industries taken together.

<sup>†</sup>*perestroika* — the policy of restructuring the economic and political system of the Soviet Union, which led to the collapse of the Communist Party's hold on power and the break-up of the USSR in the late 1980s and early 1990s.

to do if you were going to exclude from the past few years the calming effect of the dachas. You don't have to be a psychologist to see how dachniks are calmed by their contact with the vegetable plots they have planted. So, if we take away that factor, what would we have been left with in 1992, 1994 or 1997? In any of those years a colossal social upheaval could have come about. What kind of result might such an upheaval have led to on a planet chock full of deadly weapons?

But no catastrophe occurred. Anastasia maintains that in 1992 a catastrophe on a global scale was avoided thanks only to Russia's dachniks, and now, having read all the reports explaining the situation, I tend to agree with her.<sup>5</sup>

It's not so important any more to know just which 'smart head' in our nation's government came up with the idea of giving the green light to the dacha movement in Russia (still the Soviet Union back then). Or maybe it was Providence itself that saw fit to accord this privilege specifically to Russia? What's important now is that the movement exists! And it is proof positive that there is indeed a possibility of achieving stability in human society — maybe even that stability so many peoples on various continents having been trying without success to achieve for thousands of years!

Anastasia says that the dacha movement in Russia represents a momentous turning-point in the development of the human commonwealth. Dachniks are the harbingers of a splendid future which will come after them, she has said, thinking of the future communities she has sketched out. And I myself would very much like to live in one of these splendid communities — a community located in a flourishing country, whose name just happens to be... Russia.

<sup>5</sup>See Book 2, end of Chapter 8: "The answer". Some of the factors portending a social upheaval in 1992 are detailed in footnote 1 of Book 1, Chapter 17: "The brain -- a supercomputer".

## CHAPTER FIVE

### A search for evidence

Russia of the future... A splendid land, in which many of to-day's generation will be able to live a happier life.

Russia of the future — a land which will lead the human commonwealth of the whole planet to a happier life. I have seen this splendid country coming into bloom. She, Anastasia, showed me the future of our country. And it is absolutely unimportant and insignificant just *how* this fiery, untiring recluse living alone in the Siberian taiga is able to travel to other planets, or into the future or into the past, or by what means or unseen threads she brings together the hearts of people living in different countries into a single, exciting creative impulse. What is important is that *this impulse exists*. Does it really matter where she obtained such a colossal amount of all kinds of information and knowledge of our life? What matters immeasurably more is the *result* of this knowledge — the fact that people living in different cities, once put in touch with the information she possesses, are now planting cedar allées, that people have started producing cedar nut oil, and that more and more songs and poems about what is beautiful in life are coming to light.

This is simply amazing! She dreams about something, I write about it, and... *presto*, it turns into reality! Like a kind of fantasy! Yet this fantasy, after all, is embodied in real life for everyone to see. Now she has dreamt about a splendid country. Shall not that too come to pass? Of course it must! And we must help in any way we can!

Going over in my mind and analysing everything Anastasia has said or showed has only made me more and more convinced of the reality of a splendid future. I believe in it.

Even though I'd begun to believe all Anastasia's words, there was still no way I could put together and publish a chapter on the future of Russia. It wasn't included in the previous book, *Co-creation*. And the release of this present volume has been delayed more than once for the same reason. I wanted everything I wrote to look sufficiently real and convincing. So that not just I but a whole lot of people could believe and set things in motion to create a splendid future. But there are certain sayings of Anastasia's that have prevented me from being less than fully convincing.

In *Co-creation* I published Anastasia's statement that what our whole natural environment comprises is precisely the materialised thoughts of God. If Man is able to comprehend these, even in part, he will not need to spend so much effort in his search for food, fertilising the ground (since the ground itself is capable of re-establishing its own fertility) or to waste energy on trying to fight noxious pests and weeds. His thought will be liberated from the problems of everyday living, and Man will be able to get involved in tasks more suited to his existence — the co-creation, with God, of splendid worlds. I wanted her words to be believed by a majority of people. But how can people trust her if even the whole agriculture industry, both in Russia and abroad, cannot dispense with the fertilising process?

So many factories in various countries of the world are involved in the production of all sorts of chemicals for 'enriching' the soil. On a number of occasions I have put this question to various agricultural scientists, but each time I've got pretty much the same condescending reply, namely that of course one could set up a Paradise garden on a single hectare of land, but you would need to tend this garden from morning

'til night. And you could not possibly expect a good harvest unless you added fertiliser to the soil, and made use of toxic chemicals, otherwise your harvest would be ruined by a whole bunch of pests. When I brought up Anastasia's argument that everything grows in the taiga without human assistance, the scientists countered:

“Let's assume it grows. But if your recluse is to be believed, the taiga has been programmed directly by God. Man needs a lot more than what can grow in the taiga. For example, the taiga doesn't have any fruit orchards. That's because orchards need to be cared for by Man. They can't grow all by themselves.”

I've made several visits to such stores as “Everything for your garden”, “The Gardener”, “The Dachnik”, and seen so many people buying different bags of chemicals. I watched these people and thought that they'll never believe what Anastasia says, and so there's no point in writing about the future of Russia — they simply won't believe in it. They won't believe in it because this future is first and foremost linked to a new conscious awareness, a different attitude to the Earth and our environment.

But there is not a single person today who could confirm what she said, not a single real-life example bearing out her words. On the contrary, everything *contradicts* her position. And the factories producing toxic pesticides continue to operate. There is a whole chain of stores selling fertilisers and chemicals. And a great many people are involved in agricultural research.

The absence of significant evidence to back up Anastasia's statements had such a strong effect on me that I came to the point where I was no longer able to write anything at all. It was for that reason that I accepted an invitation to go to Innsbruck in Austria. A German publisher rang me and said that the director of a bio-energy institute by the name of

Leonard Hoscheneng had invited me to speak on Anastasia at a gathering of the most prominent healers of Europe. The institute would pay my travel and lodging expenses, and was prepared to pay me 1,000 marks for every hour I spoke. I didn't go on account of the money, but in search of convincing arguments that a lot of people could understand either for or against Anastasia's plan — her affirmations about the future of Russia.

Dr Hoscheneng, who invited me to speak to the healers, was himself a professional doctor and a prominent healer, as his father and grandfather had been before him. His grandfather had treated the Japanese Imperial family and many other highly placed dignitaries. His personal domains, apart from the institute building, included several small, cozy hotels (where a great number of patients coming from European countries stayed), along with a restaurant, a park, and some other buildings in the city centre. He was a millionaire, though, in contrast to the image many Russians have about the lifestyle of a Western millionaire, Leonard, as I found out, handles all the serious work involved in people's treatment himself. He personally treats every one coming to see him — which can mean as many as fifty patients a day. Indeed, his working day can sometimes stretch to 16 hours. Only occasionally he has entrusted his consultation task to... a healer from Russia.

I spoke to the gathering of healers at Innsbruck, aware that they were interested first and foremost in Anastasia. I devoted the larger part of my presentation to her, and ended up talking a little about her project, with the secret hope that the audience would either confirm or discredit her ideas on the future of Russia. But they neither confirmed nor discredited them; they just kept constantly asking for more details.

That evening Hoscheneng threw a 'banquet' in his restaurant. I would simply have called it a supper. Even though

everyone could order what they liked, they were all modest, giving preference to the salads. Nobody drank alcohol or smoked. I too refrained from ordering any alcoholic beverages. Not because I was afraid of looking like the proverbial black sheep in their eyes — it was just that for some reason I didn't *feel* like having meat or alcoholic drinks.

At the supper-table the talk again turned to Anastasia. A saying was born (though I don't remember who said it first): *The splendid future of Russia is linked with the Siberian Anastasia.* The phrase caught on, and was in time repeated with various interpretations by healers from Italy, Germany, France and other countries.

I was waiting for specifics as to why and by what means the splendid scenario of the future would unfold, but nobody could offer any specific evidence. The healers were relying on some kind of intuition, whereas I needed proof: can the Earth feed Man without a special effort on his part, simply by virtue of Man correctly understanding the thought of a God whom nobody could see?

After returning to Russia, I recalled the words of the European healers, and continued my search for concrete evidence, for which I was prepared to travel anywhere. But I didn't have to travel very far. An extraordinary coincidence, as though deliberately set up by someone, not only offered theoretical evidence, but proved to be a real and living confirmation of Anastasia's words.

It happened this way...

## CHAPTER SIX

### A garden for eternity

I set off on a day-trip to the country along with employees of the Anastasia Cultural Foundation of Vladimir.<sup>1</sup> We stopped by the picturesque shore of a small pond. The women went about preparing a variety of salads for lunch, while the men attended to building a fire. I stood at the edge of the pond, gazing at the water and lost myself in thought. I was in a pretty gloomy mood. All at once Veronika, a resident of a nearby village, came up to me and said:

“Vladimir Nikolaevich, just about seven kilometres from here, in the middle of these fields, there are two former manorial estates. There’s nothing left of the buildings, but the fruit orchards have been preserved. Nobody looks after them, but they still bring forth fruit year after year. They give a lot more fruit than the village orchards which are tended to and fertilised.

“In 1976 there was an extremely cold winter in these parts, and a lot of people lost their orchards and were forced to

<sup>1</sup>*Vladimir* – in this case the name of one of Russia’s oldest cities (founded in 1108 by Prince Vladimir Monomakh on the site of a much earlier settlement), which once served as the Russian capital. Situated on the Klyazma River about 180 km east of Moscow, it has a current population of about 340,000. Like neighbouring Suzdal (former patriarchate of the Russian Orthodox Church) and a chain of other historic towns, Vladimir forms part of Russia’s circular tourist route known as the *Golden Ring* (*Zolotoe kol'tso*). It is here that the author of the Ringing Cedars Series, Vladimir Nikolaevich Megré, resided at the time this book was written. The name *Vladimir* – though now commonly interpreted as meaning “ruler of the world” – is an ancient Slavic name originally meaning “in harmony and peace”.

plant new ones, but these two, out among the fields, weren't touched by the cold at all, and not a single tree was lost."

"Why didn't the cold touch them?" I asked. "Maybe they were a special variety, cold-resistant?"

"Just the usual variety. But the way everything was set up on these former estates — the way they did it on just a single hectare of land — *wow!* It's pretty much the way Anastasia describes it in your books. Two hundred years ago people planted Siberian cedars all around it along with local oak trees... Another thing: the hay from the grass that grows there is a lot richer. It keeps for a long time.

"If you like we could go see the place right now. It's just a dirt trail through the fields, but your jeep can make it."

I couldn't believe my ears. Who? How? A gift like this — and just at the right place and at the right time. Are such 'coincidences' really coincidental after all?

"Let's go!" I said.

The trail ran across fields belonging to a former state farm.<sup>2</sup> I said 'fields', though they were really more like hayfields or meadows, all overgrown with tall grasses.

"They've really cut back their growing areas here," observed Evgeny, Veronika's husband. "The farm company doesn't have enough money for fertiliser... Anyway, the ground's getting a rest. And not just the ground. The birds have started singing again this year. You didn't hear such happy twittering before. What are they so happy about? Maybe 'cause there are no chemicals on the fields now. Before the revolution there were villages here in these meadows — my grandmother told me about them. But there's no trace left of them now.

"Look — there it is, to the right of the trail — a former estate."

<sup>2</sup> *state farm* (Russian: *sovkhos*) — in the Soviet period, a farm where workers were paid a monthly wage, as in a factory.

In the distance I could see tall trees growing densely together. They appeared to cover about a hectare of ground. This place seemed simply like a green isle of forest, all surrounded by fields and meadows. As we drew closer, I could see in amongst the dense grove of two-hundred-year-old oak trees and bushes an entrance leading to a woodland oasis inside. We went in through the entrance and...

There we were inside... Just imagine: there inside were ancient apple trees with gnarled trunks, spreading their branches out into space. Branches literally dripping with fruit. They hadn't been dug around — they were just growing there amidst the grasses, they hadn't been sprayed for insects, but these old apple trees were bearing fruit, and their fruit showed no sign of worm infestation. Some of the trees were real oldies, their branches were breaking under the weight of the fruit. Real oldies — quite possibly this was their last year for bearing fruit.

They will soon die off, but alongside each ancient tree you could already see shoots of a new tree breaking through the soil. The thought actually came to me that these trees probably wouldn't die — at least not until they saw the fresh and healthy shoots coming from their seed.

I walked through the orchard, took a taste of the fruit, wandered among the oak trees growing all around, and it seemed as though I could discern the actual thoughts of the Man who had created this splendid oasis. It was as though I could hear him thinking:

“Right here, around the orchard, I should put in an oak grove. It will protect the orchard from the winter cold, as well as from summer heat in dry years. Birds will make their nests in the tall trees and stop the caterpillars from taking over. I'll plant a shady oak allée by the shore of the pond. When the trees grow up, their tops will come together, giving shade to the spacious allée below.”

And all at once a kind of vague thought made my blood course faster through my veins. What was it demanding of me, this thought? And then... it came in a flash: of course, Anastasia! Naturally you were right when you said that we could feel God in coming into contact with His creations and in continuing His creations. Not by wild antics, jumping up and down and new-fangled rituals, but by directly turning to Him, to His thoughts, it is surely possible to understand His wishes and our own purpose in life. Here I am standing beneath the oak trees on the shore of a man-made pond and I can literally read the thoughts of the Man behind this living creation. And he — this Man, this Russian, who lived here two hundred years ago — no doubt felt more than others the thoughts of the Creator, which enabled him to bring about this Paradise creation. His own garden, his own family nest.

He may have died, this Russian, but his orchard has remained, and is still bringing forth fruit, and feeding the children of the neighbouring villages, who come here every autumn to delight in the fruits. Some people gather them up and sell them. And you, my fine Russian fellow, no doubt wanted your grandchildren and great-grandchildren to live here. Of course you did! I can tell that because you didn't put up just a mansion with a limited life-span, but something that will last for eternity.

But where are your grandchildren and great-grandchildren today? Your family domain has been abandoned, it's all grown over with grasses, and your pond is drying up. But your allée, for some reason, didn't get overgrown with wild grass. In fact the grass beneath it is like a carpet. Your corner of Paradise which you created — your family domain — is no doubt still awaiting the return of your descendants. Decades go by, even centuries, but it is still waiting. So where are they? Who are they now? Whom do they serve? Whom do they worship? Who chased them away from here?

We did have a revolution — maybe that's to blame for everything? Of course it is. Only a revolution is made by people when some sort of qualitative change takes place in the consciousness of the majority. What happened in the minds of your contemporaries, my fine Russian fellow, that your family domain has gone to waste?

The local old-timers told me how the ageing Russian landowner headed off a blood-bath on his domain.

When a group of revolutionary-inclined residents from two nearby villages, pumped up on local beer, marched en masse to pillage his family domain, the old landowner came out to meet them with a basket of apples, only to be slain by a bullet from a double-barrelled gun. He had known already the night before that they were planning to pillage his house, and he had persuaded his grandson, a Russian officer, to leave the domain. The grandson, a front-line veteran, decorated with St George's Cross, fled together with his comrades-in-arms with front-line Mosin rifles<sup>3</sup> slung over their shoulders; their open wagon also carried a trusty, battle-worn machine gun. He probably went into emigration and now has grandchildren of his own growing up.

Your descendants, my fine Russian fellow, are growing up in another land, while in Russia, in your kin's domain, the leaves of the trees in your orchard are rustling in the breeze, and every year your old apple trees are bringing forth fruit, astounding all the residents around with a luxuriant harvest. There isn't even a trace of your house left, all the outbuildings have been torn down, but the orchard lives on in spite of everything — no doubt in the hope that your descendants will return to taste the best apples in the whole wide world. Yet your descendants are still not coming.

<sup>3</sup>*Mosin rifle* (Russian: *vintovka Mosina*) — the standard army-issue three-line (*triokblinėika*) rifle in both the Imperial and Soviet Russian armies, developed in 1891 by Sergei Ivanovich Mosin (1849–1902).

Why have things turned out like this and who is making us seek our own happiness at the expense of others just like us? Who is making us breathe air filled with noxious gases and dust instead of floral pollen and beneficial ethers? Who is making us drink water deadened by gases? Who? Who are we today? Why do not your descendants come back, my fine Russian fellow, back to their family nest?

In the second domain the apples were even tastier than in the first. Around this orchard had been planted beautiful Siberian cedars. Local residents informed me that there had even been more cedars earlier — now only twenty-three of them were left. During the days following the revolution when they still had a day-labour system, they said people were paid for their work with cedar nuts. Now the nuts were there to be collected by anyone who wanted to. The only thing was, sometimes they would beat the trees very hard with logs<sup>4</sup> to make the cones fall to the ground.

Twenty-three Siberian cedars, planted by the hand of Man two hundred years ago, still stood there all in a row, like soldiers protecting this splendid orchard from freezing winds and harmful pests. There had been more of them, but one by

<sup>4</sup>The customary process of harvesting cedar nuts involves 5 to 10 strong men putting a log on their shoulders and, with a running approach, hitting the trunk of the cedar with one end of the log. This is the most 'efficient' method of knocking the cones off the tree to the ground, yet the most damaging to the tree. A milder alternative is to hit the trunk with a special bat, while the best option — recommended by Anastasia (see Book 2, Chapter 31: "How to produce healing cedar oil") — is to gather the ripe cones that fall naturally to the ground (or to climb the tree and pick them by hand).

one they perished, since in Siberia the cedars were always surrounded by tall pines. A single cedar by itself could not withstand the blasts of wind, as its root system is not all that extensive. Cedars are nourished not only through their roots, but also absorb the surrounding space through their tops. That is why the pines or young cedars protect them. Whereas here the cedars were all standing in a row. They lasted the first hundred and fifty years, but then, after their tops expanded, they began falling, one after the other.

For the past fifty years nobody thought of planting pines or birches beside them, and so the cedars were left to defend the orchard, standing up against the angry winds all on their own. It was probably just last year that one of them began falling, but came to rest against the top of the one next to it in the row. I looked at the sharply leaning tree trunk, whose top was intertwined with that of its neighbour. Their branches had grown together, and the falling tree was still living. Both trees were green and bearing seed. There were only twenty-three left. They are still standing there, supporting each other, bearing seed and protecting the orchard.

Oh you Sibriaks!<sup>5</sup> Hang in there, just a little longer, please! I'm going to write about you...

Oh, Anastasia, Anastasia! You taught me how to write books, but why didn't you teach me to write words that would be understandable to a lot of people right off the bat? To a whole lot of people?! Why can't I manage to write in an understandable way for a great many people? Why does my thought get confused? Why do the cedars fall, and people only *look* at them and not *do* anything?

Not far from these former domains, which have preserved right up to our day their splendid orchards and shady allées,

<sup>5</sup>*Sibriak* (pronounced: *sibir'-YAK*) — a native of Siberia, in this case referring to the trees.

are located several villages. The sight of these villages spoils the whole surrounding landscape. If you look at them from afar, you get the impression that some sort of worm ran amuck, laid everything waste and dug up the flower-covered meadows. Slums full of grey village houses, farm buildings thrown together out of various rotting materials, dirt from roads broken down under the wheels of lorries and tractors, all contribute to this impression.

I asked the local residents whether they had been to the orchards laid out among the cedar and oak trees. Many had been there, tasted the apples. Young people were accustomed to going to the place for picnics.

“It’s lovely there!” was chorused by young and old alike.

But when I asked why nobody had tried to set up their own homestead in the same ‘image and likeness’, I got pretty much the same answer each time:

“We don’t have the kind of money the landowners who created this beauty had.”

Older residents said that the cedar saplings had been brought here by the landowner directly from Siberia.

When I asked how much it cost just to take a cedar nut from one of these trees and plant it in the ground, I got a strained silence in reply.

Which brings me to the thought that it is not the lack of opportunity or financial means, but our own inner coding that is somehow to blame for all our woes.

Nowadays people with money are putting up a lot of fancy houses in the country. The land around these houses has been either dug up or buried in asphalt. In twenty or thirty years these houses are going to be in need of repair; they won’t look like new any more. And their children won’t need this old derelict. They won’t be needing a family domain — a Motherland — like that, and so they’ll go off to find themselves a new one.

But they'll be taking with them this same mysterious coding they got from their parents and repeating their life as temporary caretakers on the land, instead of creating something for eternity. Who will be able to remove it and how — this mysterious coding for hopelessness?

Perhaps what Anastasia has said and shown about the future of Russia will somehow help in this regard. And just to allay the doubts of the sceptics, I have put on the inside covers of this book photographs of these amazing Russian orchards, spreading out their fruit-laden branches to the Russia of the future.

## CHAPTER SEVEN

# Anastasia's Russia

As Anastasia was telling me about the communities of the future which would be comprised of family domains, I asked her:

“Anastasia, please *show* me the Russia of the future. I know you can.”

“Yes, I can. What place in the future Russia would you like to see, Vladimir?”

“Well, how about Moscow?”

“Would you like to go to the future alone, Vladimir, or together with me?”

“It'd be a lot better with you. You can explain anything I see and don't understand.”

The touch of Anastasia's warm hand at once induced a sleepy state, and I started to see...

Anastasia showed me the future of Russia the same way she showed me life on another planet. At some point scientists will probably understand just how she does this, but the means she used are quite irrelevant in this case. In my view, the most important thing is information about what specific actions will enable us to bring about this splendid future.

The Moscow yet to come was nothing like I had imagined. The city had not expanded its geographical boundaries. There were no skyscrapers, as I might have expected. The walls of the old houses were decorated in cheerful colours, and many were painted with pictures — landscapes and flowers. I later found out that this was the work of foreigners. First they covered the walls with some kind of plaster, and then artists —

also from abroad — added the ornamentation. Intertwining vines hung down the roofs of many of the houses, their leaves rustling in the wind, as though greeting the passers-by.

Almost all the streets and avenues of the capital were planted with trees and flowers. Right down the middle of Kalinin Avenue (or the New Arbat,<sup>1</sup> as it is called) stretched a green boulevard about four metres wide. Concrete kerbs rose about a half-metre above the pavement, enclosing earthen beds from which sprouted grass and wild flowers, interspersed at brief intervals with various kinds of trees: rowans with their clusters of red berries, birches, poplars, currant and raspberry bushes and a host of other plants such as one might find in a natural forest.

There were similar boulevard strips down the centre of many of Moscow's avenues and broad streets. And on the reduced traffic portion of these streets there didn't seem to be very many motorcars — mainly buses carrying passengers who did not look at all Russian in their appearance. The same could be said of many of the pedestrians on the sidewalks. I wondered for a moment whether Moscow had been occupied by a technically more developed country. But Anastasia reassured me, saying that the people I was seeing here were not occupiers, but simply foreign tourists.

"And what draws them to Moscow?" I asked.

<sup>1</sup>*New Arbat* (in Russian: *Novy Arbat*) — a broad thoroughfare leading west from the Kremlin and city centre to the Novy Arbat Bridge across the Moskva River (*Moskva* is also the Russian name of the city itself). Officially known as Kalinin Prospekt (Avenue) in Soviet times (after Mikhail Kalinin — see footnote 1 in Book 1, Chapter 1: "The ringing cedar"), Novy Arbat was constructed in 1963 parallel to the old Arbat Street, which still runs a short distance to the south and from 1974 to 1986 was turned into a pedestrian mall. Novy Arbat's imposing row of modern high-rise apartment blocks gave 1960s Moscow a new Western appearance, complete with contemporary-looking shops and restaurants.

“The atmosphere of a grand creation, refreshing air and water,” came the reply. “Look and see how many people are standing along the banks of the Moskva River and collecting water in containers on strings they let down from the high embankments, and drinking the river water with great delight!”

“But how can they drink water straight from the river without boiling it first?”

“Look and see, Vladimir, how pure and transparent the water is in the Moskva River. It contains living water, not water deadened by gases like the kind sold in bottles throughout the world.”

“It must be a fantasy — something impossible to believe!”

“A fantasy? But when you were little, would you and your friends have believed it if someone told you that before long people would be selling water in bottles?”

“You’re right: when I was young nobody would have believed that. But how was it possible to make the water so pure in such a big city as Moscow?”

“Stop polluting it, stop throwing harmful waste into it, stop littering the river banks.”

“It was that simple?”

“Exactly. Nothing fantasy-like — it is actually all quite simple. Today the Moskva River is protected even from the runoff water flowing over the pavement, and it is closed to dirty ships. They used to consider the Ganges in India sacred, but now the whole world adores the Moskva River and its water, they adore the people who restored the water to its pristine vitality. And people come here from many countries to see this wondrous marvel, taste the water and find healing.”

“And where are all the local residents? Why are there so few passenger cars in the streets?”

“There are only about a million-and-a-half Muscovites actually living in the capital now, though the number of tourists

from various countries can be more than six times that figure," replied Anastasia, and added: "There are fewer cars because the remaining residents have managed to arrange their day on a more rational basis, reducing their need to move around. Their work is usually close by, close enough to walk. And the tourists get around using just the metro<sup>2</sup> and the buses."

"And what's happened to all the other Muscovites?"

"They live and work in their splendid family domains."<sup>3</sup>

"Then who works in the plants and factories? Who looks after the tourists?"

And Anastasia told me the following:

"As the year 2000 (according to the accepted Earth calendar of the time) was drawing to a close, the Russian leadership was still in the process of determining the country's path of future development. The majority of Russian citizens were not particularly inspired by the path the so-called prosperous countries of the West were taking.

"Russians had already tried the food products from these countries, but did not have much of a taste for them. It turned out that the development of what was termed technical

<sup>2</sup>*metro* -- Moscow's "metropolitan", or subway system, which has been operating since May 1935. Over the years it has expanded to twelve lines and some 200 stations.

<sup>3</sup>The whole description of the Russia of the future in this chapter and elsewhere in the Series bears striking similarities to the ideas of one of Russia's greatest economists, Alexander Chayanov (1888-1937). Back in the 1920s he already foresaw the eventual return of the country to predominantly rural living after the fall of communism, and even described the Moscow of the future as a garden-city populated mostly by tourists. He also accurately predicted the rise of the dacha movement that would eventually dominate the country's agriculture. Some of these views are expressed in his insightful *A journey of my brother Alexey to the land of peasant Utopia* (dubbed a 'utopia' only to allow the publication of the work under the Soviet censorship in 1920). After Stalin publicly attacked Chayanov's views in 1929, he was incarcerated and, after years in prison, executed on Stalin's personal order. Today Chayanov's works are better known abroad than in his native Russia.

progress in these countries came hand-in-glove with various diseases of both the body and the soul. Crime and drugs became increasingly rampant, and women were less and less inclined toward child-bearing.

“Russians were not attracted to the conditions in which the peoples of the ‘developed’ nations lived. Neither did they wish to revert to the old social order, but they had not yet seen any new path. An increasing mood of depression took hold of the country, affecting the whole society in ever greater numbers. Russia’s population was ageing and dying.

“At the beginning of the new millennium, at the initiative of the Russian President, a decree was signed granting free and unconditionally to each willing family one hectare of land whereon to establish a family domain. The decree allotted this land to the family for lifetime use, with the right to pass it on to their heirs. Any produce grown in this domain would not be subject to taxation of any kind.<sup>4</sup>

“Russian parliamentarians supported the President’s initiative and the Russian Constitution was amended accordingly. The primary aims of the decree, in the eyes of the President and the parliamentarians, were: reducing unemployment in the country, guaranteeing a minimum income level to needy families, and solving the refugee problem. But what subsequently happened was something none of them could have fully imagined.

<sup>4</sup>On 7 July 2003, less than three years after this book was released in Russian, Russian President Vladimir Putin signed into federal law the “Private Garden-plot Act” (*Zakon o lichnom podsobnom khoziaistve*). According to this law, Russian citizens can receive free of charge from the state plots of land in private inheritable ownership. The maximum size of plots differs from one region to another, but in most cases is between 1 and 3 hectares. The produce grown on the plots is not subject to taxation. Subsequently, on President Putin’s instructions the Russian government developed and introduced into the Russian parliament another law to further facilitate the acquisition of land for gardening. This second law was passed in June 2006.

“When the first allocation of land was made for organising a community numbering more than two hundred families, the plots of land in question were taken up not just by the needy, the unemployed or poverty-stricken refugees, but primarily by middle-income families and wealthy entrepreneurs who had read your books, Vladimir. They had been anticipating this turn of events. And they were not just idly waiting for it — many of them had already been growing their own family trees in their apartments from seeds planted in clay pots, and the mighty cedars and oaks of the future were already sprouting their first little shoots.

“It was these entrepreneurs who initiated and financed plans for a community with an infrastructure facilitating a convenient lifestyle, as you wrote in your book *Co-creation*. These plans provided for a store, a medical clinic, a school, a club, roads and a lot else besides. In fact, entrepreneurs made up about half the number of people who expressed their desire to rearrange their life and daily routine to live in the first of the new communities.

“They all had their own businesses, their own source of income. For the actual construction work and setting up their plots of land they required a labour force. The ideal solution, they discovered, was to hire their neighbours from among the needy families as construction and landscape workers. That way some of these families got jobs right away, which gave them the wherewithal to finance their own construction projects. The entrepreneurs realised that nobody would prove to be more meticulous and efficient workers than those who were planning to live in the community themselves, and so external specialists would be hired only where such could not be found among the future community residents.

“Only the establishing of the future orchard and forest and the planting of the family trees and living fences was something each family endeavoured to do on their own.

“Most of them did not yet have enough experience or knowledge as to how best to establish their plot, and as a result among the future residents the elderly people who did have this knowledge commanded considerable respect. The principal focus was not on temporary structures or even houses *per se*, but on the development of the landscaping. In each case the actual buildings people were going to live in were considered just one small part of the larger living house of God.

“Within five years houses for permanent residence had been built on all the lots. They were quite varied in size and architectural style, but it was soon evident that the greatest treasure of each domain was by no means the size of a house. The greatest treasure lay elsewhere, and it was not long before it took form and outline in the splendid landscaping elements of each plot in particular as well as of the community as a whole.

“The oaks and cedars planted in each plot were still very young, and each plot was surrounded by a living fence, which was only starting to grow. But with each new spring, apple and cherry trees, even though still quite small, came stridently into bloom in the young orchards, along with grass and flower beds that were doing their very best to resemble a splendid living carpet. The spring air was filled with delightful aromas and floral pollen. The air became truly invigorating.

“And every woman living in this new community had a desire to bear children. This happened not only in young families but even people considered elderly suddenly began to bear children. People felt that even if they themselves did not live to see the splendid piece of their Motherland their hands had created, they wanted their children to — they wanted their children to delight in the sight and continue the co-creation begun by their parents.

“At the beginning of the new millennium, in each plot, all living shoots represented the first shoots of a splendid, happy

future for the whole Earth. The people that established for centuries to come the first family domains had still not completely felt the significance of what they had done — they simply began looking more joyfully at the world around them. They were still not consciously aware of the great joy their actions were bringing to their Heavenly Father. The Father was sending tears of joy and tenderness upon the Earth amidst the drops of the falling rain. And He smiled with the sunshine, and was endeavouring to use the little branches of young trees to give a secret caress to His children who had suddenly become aware of eternity and had come back to Him.

“The Russian press began writing about the new community, and many people wanted to see this splendid phenomenon for themselves so that they could create one of their own like it.<sup>5</sup> Perhaps even create a better one.

“Millions of Russian families were seized with the inspired desire for a splendid co-creation. Communities similar to the first one sprang up simultaneously in various regions of the country. An entire movement began, not unlike our contemporary dacha movement.

“Within nine years after the first decree was signed allowing people to establish their lives independently and make their lives happy, more than thirty million families had become involved in creating their own kin's domains, their own piece of the Motherland. They have been cultivating their

<sup>5</sup>This too came to pass. On 12 November 2002, less than two years after this book was published in Russian, *The Moscow Times*, Russia's largest English-language daily newspaper, featured an article (entitled “Urban group dreams of eco-friendly settlement”) on *Rodnoe*, one of Russia's first eco-villages created by inspired readers of the Ringing Cedars Series. This article, describing the emerging Russia-wide eco-village movement which sprang from the ideas expressed in Vladimir Megré's books, was followed by hundreds of other reports in newspapers and in other mass media. Both *Rodnoe* and other eco-communities now receive a steady flow of visitors from all over Russia and abroad.

splendid plots of ground, using, in the process, living, everlasting materials created by God. And, by so doing, they were creating together with Him.

“Each of these families turned their hectare of land provided for their lifetime use into a little corner of Paradise. Against the backdrop of the vast spaces of the Russian Motherland, a single hectare seemed like a very small piece indeed. But there were many such pieces. And all of them together made up a vast Motherland. Through these pieces, all created by loving hands, the whole Motherland flourished like a garden in Paradise! This was their Russia!

“On each of the hectares were planted both evergreens and deciduous trees. People were already aware how the trees themselves would fertilise the ground and the balance in soil composition would be maintained by the grasses growing all around. And nobody had it even cross their mind to use chemical fertilisers or toxic chemicals.

“The quality of Russia’s air and water improved and became health-giving. The food shortage problem was completely resolved. Each family was able — easily and without undue effort — not only to provide for themselves from what grew in their domain, but also to sell their surplus.

“Every Russian family with its own domain started to become rich and free, and Russia as a whole began to grow into the most rich and powerful state in comparison with other countries in the world.”

## CHAPTER EIGHT

### The richest state

“Hold on, Anastasia, I don’t understand how the state as a whole suddenly got rich. You yourself said that the produce from family domains wasn’t subject to any kind of tax, so what has made the state so rich?”

“How can you possibly ask *what?* Think about it more carefully, Vladimir. You are an entrepreneur, after all.”

“Well, since I am an entrepreneur, I happen to know that the state has always tried its hardest to squeeze just a little more tax out of every citizen. And here you tell me it’s gone and axed thirty million families from the tax roll. The families, of course, could have got very rich, but at the same time it should mean bankruptcy for the state.”

“The state did not go bankrupt. First, unemployment was completely eliminated, since any Man who found himself without a job in the industrial, commercial or public sectors (as we know them today) was able to devote himself either fully or partially to work — or putting it more specifically, to *co-creation* in his own domain. The total elimination of unemployment freed up significant financial resources.

“The abundant supply of food provided by the families with their own domains spared the state from any kind of expenditure on agricultural production. But, more importantly, thanks to the vast number of families who established their domains in accordance with the Divine plan, the Russian state received an income significantly higher than it realises today from the sale of oil, gas and other resources traditionally regarded as its basic sources of income.”

“What could possibly bring it more income than oil, gas and arms sales?”

“A great deal, Vladimir — for example, air, water, ethers, loveliness, contact with the energy of co-creation, the contemplation of pleasant things.”

“It’s still not completely clear, Anastasia. Couldn’t you put it in more specific terms? Where did the money come from?”

“I shall try my best. The extraordinary changes taking place in Russia attracted the attention of many people all over the globe. The world press began writing about the major change in lifestyle most Russians were experiencing. This became a burning issue for a good deal of the world’s population. A huge flood of tourists began pouring into Russia. There were so many that wanted to come, it was impossible to accept them all, and many had to wait their turn, even as long as several years. The Russian government was forced to limit the length of stays by foreign tourists, since many of them, especially the elderly, were attempting to stay months and even years here.

“The Russian government collected huge levies from each foreigner entering the country, but this by no means reduced the number of those applying to come.”

“But why did they want to visit here in person, if they could see it all on TV? You did say the world press was enlightening people about life in the new Russia.”

“People all over the world wanted more — they wanted to breathe Russia’s air which had become so health-giving. They wanted to drink its living water. To take a taste of fruits unlike any other in the world. To talk with the people who were stepping forward into God’s millennium and thereby both slake their souls’ thirst and heal their suffering bodies.”

“And what unusual kinds of fruit appeared? What were they called?”

“The same as they were called before, only the quality was completely different. You already know, Vladimir, how much better tomatoes and cucumbers taste when they are grown in the open air under the direct rays of the Sun, in comparison to hothouse varieties. Well, fruits and vegetables grown in soil free from harmful chemicals are even tastier and more healthful. And they have even greater healing properties when grown in the company of different kinds of herbs and trees. The mood and attitude of the grower also plays a role. And the ethers contained in the fruit also have a tremendous benefit for Man.”

“What do you mean by *ethers*?”

“Ethers are fragrances. A fragrance you detect signifies the presence of an ether which feeds not only the body but also the invisible essence of a Man.”

“Still not clear. Are we talking about the brain, perhaps?”

“One could say that ethers strengthen mental energy and feed the soul. Such fruits were grown only in Russia, and the greatest benefit is realised when used by Man on the day they are picked, and that is why so many people have come to Russia from all over the world — to taste these fruits, among other things.

“Produce from the family domains very quickly took over the market, squeezing out not only imported fruits and vegetables but those that were still growing in the ordinary large-acreage fields. People began to appreciate and feel the difference in the quality of the produce. Pepsi-Cola and the other soft drinks so popular today were replaced by fruit beverages made from natural berries. And even the most sophisticated and expensive liqueurs in today’s society could not compete with the sweet wines prepared from natural berries right in the domains.

“These drinks also contained beneficial ethers, since the people preparing them in their domains knew that once the

berries were picked, they had only a few minutes to begin making them into fruit liqueurs and wines.

“An even greater source of income for families living in their domains was the sale of medicinal plants which they gathered from their groves, gardens and surrounding meadows.

“In time the harvests of medicinal herbs from Russia became a far more sought-after commodity than drugs manufactured abroad — but only the herbs collected in the family domains and not those grown in specialised operations on huge tracts of land. A herb grown in a huge field among others of its own kind cannot take from the soil and surrounding space all the ingredients that are needful and useful to Man. Even though the produce from the domains cost a great deal more than what was produced by the so-called industrial method, people all over the world still preferred it.”

“And why did the owners of the domains jack up the price?”

“The minimum price was set by the Russian government.”

“The government? Why would it care? It doesn’t get anything from family domain production. Why would it take pains to enrich individual families?”

“You must remember, Vladimir, that the state itself consists of individual families, who, as the need arose, took to financing the infrastructure network in their communities — schools and roads, for example. Sometimes they would put money into projects on a national scale. Politicians and economists would publish their projects, but only those which people put their money into passed.”

“Tell me, what kinds of projects were the most popular among the majority?”

“The buying up of chemical conglomerates abroad, arms factories and scientific institutes.”

“Now there’s a switch! You told me that these families had a conscious awareness of the Divine, a sense of goodness.

That it was thanks to them that the whole world was being transformed into a garden of Paradise, and now you're talking about buying up chemical plants and arms manufacturing companies."

"But these ventures were not aimed at *producing* weapons or harmful chemicals, but at destroying the factories making them. The Russian government was involved in the re-direction of the international monetary flow. The energy of money, which had been feeding what was fatally harmful for mankind, was now aimed at the liquidation of the same."

"And what happened — did the Russian government have enough money for such extravagant projects?"

"It did. Russia not only became the richest country in the world but it became immeasurably richer than all the other countries. The whole world's capital started flowing into Russia. Not only the wealthy, but even people of modest means flocked to deposit their savings exclusively in Russian banks. Many wealthy people simply willed their savings to the development of Russian projects — these were people who realised that the future of all mankind depended upon these projects being carried out. Foreign tourists who had visited Russia and seen the new Russians could no longer live by their former set of values. They excitedly told their friends and acquaintances about what they had seen, and the flood of tourists kept getting bigger, and bringing ever increasing profit to the Russian state."

"Tell me, Anastasia, those people, you know, who live in Siberia, what projects could they undertake to become as wealthy as the people in central Russia? After all, in Siberia the summer is shorter and you won't get very rich on growing garden produce."

"People in Siberia, Vladimir, also began setting up their domains. Siberians used their plots of ground to grow things suitable to their climate, and they had one big advantage over

residents of more southern climes. Siberian families received state allotments in the taiga, and each family took care of its own lands and harvested their gifts. And out of Siberia came health-giving berries and herbs. And... cedar nut oil."

"And how much did cedar oil fetch on the international market, in terms of dollars?"

"One tonne of cedar oil cost four million dollars."

"Wow! Finally it was priced at its true worth, which is eight times higher than what it was fetching before. I wonder how much of this cedar oil the Siberians would have prepared in a season?"

"In the year you are looking at now: three thousand tonnes were produced."

"Three thousand?! Wow! That means they would have got twelve billion dollars just for harvesting cedar nuts."

"More, in fact. You forgot that pressed cedar nuts can be made into excellent flour."

"So how much would an average Siberian family make in a year from their labours — in terms of dollars?"

"On average, three to four million dollars."

"Wowee! And you mean to tell me they still don't pay any tax?"

"No tax at all."

"In that case, where on earth could they spend money like that? Back when I worked in Siberia, I saw that anyone in a Siberian village who wasn't lazy could provide enough for himself by hunting and fishing. But here you're talking huge sums!"

"Like other Russians, they invested their money in national government projects. For example, initially, when the Russian people still had not discovered how to control the movement of the clouds, a great deal of the Siberians' money went to the purchase of aeroplanes."

"Aeroplanes? What would they need planes for?"

"To ward off clouds containing harmful deposits. These clouds would form over countries where deadly industrial pollution was still permitted. They were fought off by Siberian aviators."

"And what about hunting -- has it been confined to reserved family allotments in the taiga?"

"Siberians have totally stopped all hunting and the killing of animals. Many of them built summer residences on their allotments and spent their summers collecting herbs, berries, mushrooms and nuts. Young creatures of the forest right from birth saw human beings as not a threat to them, and got accustomed to Man as an integral part of their territory. They began communicating with people, making friends with them.

"The Siberians taught many creatures to help them. For example, squirrels would throw down cedar cones with ripe nuts onto the ground, which gave the squirrels no end of pleasure. Some people trained bears to pull heavy baskets and sacks with nuts, and clear away trees felled by the wind."

"Really! They even got bears helping!"

"There is nothing surprising in that, Vladimir. In times which people today call 'ancient', a bear was one of the most irreplaceable helpers in the household. He would use his paws to dig edible tubers out of the ground and put them in a large basket, and then take it upon himself to drag the basket on a rope to a pit cellar hollowed out of the ground not far from Man's dwelling. He would climb trees in the forest to fetch log-hives filled with honey and bring them back to Man's dwelling. He would take Man's children into the forest to gather raspberry treats, as well as do a lot of other things for the household."

"Wow! The bear replaced both the tractor and the plough, and brought home things to eat, and minded the children!"

"And all winter long he slept, needing no maintenance or repairs. And when spring came he would return to Man's

dwelling once more, and Man would treat him to the fruits of the previous autumn.”

“I see what’s going on: a reflex was trained in those bears to make it seem as though Man had stored up those supplies just for them.”

“You could call it a reflex, if that helps you gain a clearer understanding, but you could also say that is the way it was designed by the Father. I will only tell you that tubers were not the most important thing for the bear in the springtime.”

“What was, then?”

“After sleeping all alone in his lair the whole winter long, when he awoke in the spring the first thing the bear did was hurry over to see Man, to feel Man’s caresses and hear his praise. All the creatures need Man’s caresses.”

“If dogs and cats are any example, you’re right. But what about the other creatures in the taiga — what did they do?”

“Gradually all the other taiga dwellers found themselves a niche too. And the highest reward for these tamed residents of the territory was a tender word or gesture, or petting or scratching for those who had done an exceptionally good job. But they could get jealous of each other some times, if one of them seemed to win special favour from Man. They could even have a quarrel over this.”

“And what have Siberians been doing during the winter?”

“Processing the nuts. Instead of husking the cones right after gathering them, the way it is done in our time for ease of transport, they keep the nuts stored in their resinous cones. The nuts keep that way for several years. Also during the winter women do handicrafts. For example, a hand-made shirt woven out of nettle fibres and embroidered by hand fetches quite a handsome price today. And in wintertime Siberians receive people from all over the world and treat their ills.”

“But, Anastasia, if Russia has indeed become such a rich land for Man to live in, surely that means that many other

states have a desire to conquer Russia? Especially since, as you said, the arms factories have been shut down. Are you telling me Russia has become in fact an agrarian country, unprotected against an external aggressor?"

"Russia has not been transformed into an agrarian country. It has become a centre for world science.

"And the factories manufacturing destructive weapons in Russia were eliminated only after people discovered an energy, before which the most up-to-date kinds of armaments not only proved useless, but even represented a threat to those countries which maintained them."

"What kind of energy is that? Where does it come from and who discovered it?"

"This energy was possessed by the Atlanteans. But they got hold of it too early, and so Atlantis disappeared from the face of the Earth. And it was rediscovered by the children of the new Russia."

"Children?! You'd better run all this by me in the proper order, Anastasia."

"Very well."

## CHAPTER NINE

### Good shall prevail on the Earth<sup>1</sup>

In one of the Russian domains lived a happy family — a husband, wife and two children: a boy, Konstantin, who was eight, and a little five-year-old girl named Dasha.<sup>2</sup> Their father was considered one of the most talented computer-programmers in Russia. His study at home contained several state-of-the-art computers on which he compiled programmes for a government military agency. Sometimes he would linger at his computers well into the evening hours, completely absorbed in his work.

The other members of the family, accustomed to gathering in the evenings, headed for his study, where each busied themselves with their own activities. The wife sat in a comfortable armchair and sewed. Their son read or drew sketches of the landscapes of the new settlements. Only five-year-old Dasha would not always find herself an activity to her liking, in which case she would curl up in a chair with a good view of everyone else, and spend a long time carefully observing each member of the family. Occasionally she would close her eyes, and her face would show a whole range of emotions.

On what seemed to be a fairly routine evening the family had gathered in the father's study as usual, each one busy in their own way. The study door was open, which meant that

<sup>1</sup>The whole of Chapter 9 and the first few paragraphs of Chapter 10 are told directly in Anastasia's words.

<sup>2</sup>*Dasha* — the diminutive form of the name *Daria*; family and friends might also call her *Dasbenka*, or (indicating a momentary negative emotion) *Dashka*. *Konstantin* may also be known informally as *Kostia* or *Kostienka*. They in turn could address their parents as *Mamochka* and *Papochka*.

they could hear the cuckooing of an old-fashioned mechanical cuckoo clock on the wall of the children's room next door. Usually it would sound off only during the daytime hours, but now it was already evening. So the father glanced up from his work and stared at the door, while the other family members gave an astonished look in the same direction. All except for little Dasha, who simply sat in her chair, her eyes closed, apparently oblivious to everything. A smile — first barely noticeable, then quite evident — crept across her lips. All at once the clock cuckooed a second time, as though someone standing in the children's room had moved the hands forward to announce the next hour. Ivan Nikiforovich,<sup>3</sup> as the father of the household was called, turned his swivel chair in his son's direction and said:

“Kostia, please go see if you can fix the clock or at least stop it. We've had it a long time, that gift of Grandfather's. Strange how it got broken like that... Strange... See if you can do something about it, Kostia.”

The children were always obedient. Not out of fear of punishment — in fact, they were never punished. Kostia and Dasha loved and respected their parents. They got the highest pleasure out of doing something together or carrying out their parent's wishes. Upon hearing his father's request, Kostia at once rose from his seat, but, to his mother's and father's surprise, did not head for the children's room. Instead, he just stood and stared at his younger sister sitting in the armchair with her eyes closed. Then once again they heard a cuckooing from the next room. But Kostia still stood there and stared, his eyes fixed on his sister.

Galina, their mother, looked concernedly at her son, who remained rooted to the spot. All at once, she got up and cried out in fright:

<sup>3</sup>*Nikiforovich* — a patronymic, derived from Ivan's father's first name *Nikifor*.

“Kostia... Kostia, what’s the matter with you?”

The eight-year-old boy turned to his mother, wondering what she was frightened about, and replied:

“Everything’s fine with me, Mama. I wanted to do as Papa asked, but I can’t.”

“Why not? Are you unable to move? You’re unable to go to your room?”

“I can move,” replied Kostia, waving his arms about and stamping his feet on the spot to prove it, “but there’s no point in my going to our room — she’s here and she’s stronger.”

“*Who’s* here? *Who’s* stronger?” Mother started getting more and more upset.

“Dasha,” Kostia replied, pointing to his younger sister sitting in the armchair, her eyes closed and with a smile on her face. “She’s the one who’s been moving the hands forward. I tried to put them back in place, but I can’t do it when she —”

“What are you talking about, Kostienka?” Mother interrupted. “You and Dashenka are both here with us — I can see you. How can you two be here and at the same time move the clock hands in the other room?”

“Well yes, we’re here,” answered Kostia, “but our thoughts are in the other room, where the clock is. Only *her* thought is stronger. That’s why the clock keeps cuckooing — her thought is speeding up the hands. She’s been playing a lot of tricks like that lately. I told her not to. I knew it might upset you, but Dasha doesn’t care. All she has to do is fall into a state of contemplation, and she starts thinking up something.”

“What is Dasha contemplating on?” Ivan Nikiforovich broke into the conversation. “And Kostia, why didn’t you say anything about this earlier?”

“You yourself can see how she’s contemplating. The clock hands aren’t important — she’s just amusing herself. I can move the hands too when nobody’s interfering. Only I can’t contemplate like Dasha. When she’s in a state of

contemplation like that there's no way anyone can counteract her thought."

"What is she contemplating on? Do you know, Kostia?"

"Sorry. Why don't you ask her yourself? I'll stop her contemplation before she thinks up anything else."

Kostia went over to the chair his sister was sitting in and said distinctly in a louder than normal voice:

"Dasha, stop thinking! If you don't stop, I shan't speak to you for a whole day. And besides, you've frightened Mama."

With a flutter of her eyelashes the little girl surveyed everyone present in the room with an observing glance and, as though literally waking up, jumped up from her chair and hung her head apologetically. The cuckooing stopped, and for a while the study was enveloped in complete silence — a silence eventually broken by little Dasha's apologising voice. She raised her head, looked at her Mama and Papa with her sparkling, tender eyes and said:

"Mamochka, Papochka, forgive me for frightening you. But I had to... I just had to finish thinking it through — this thought I had. Now I can't help but think it through. I'll be thinking it through tomorrow too, when I've had a rest." The girl's lips trembled, it seemed just as though she were about to break into tears, but she continued:

"You, Kostia, can refuse to talk with me if you like, but I'll go on contemplating it all the same, until I think it through."

"Come to me, daughter dear," said Ivan Nikiforovich, trying to act restrained. He held out his arms to his daughter, ready to embrace her.

Dasha rushed toward her father, jumped up on his knees and put her little arms around his neck, pressed her cheek briefly against his, then jumped down and stood beside him, bending her head down to him.

Ivan Nikiforovich for some reason had a hard time hiding his emotion. He began telling his daughter:

“Don’t worry, Dashenka! Mama will no longer get frightened when you contemplate. Just tell us what you’re thinking about. What is so important to think through and why do the clock hands move forward so fast when you’re thinking?”

“You see, Papochka, I want to make everything that’s nice even bigger in time, and everything that’s bad tiny and unnoticeable. Or even... I want to think it through so that the hands skip over the bad things and they aren’t there any more.”

“But what is nice and what is bad doesn’t depend on the clock hands, Dashenka.”

“It doesn’t depend on the hands, Papochka. I realise that. But I move them along so’s I can feel the time. ‘The cuckoo counts off the speed of my thinking, ’cause I have to get it done in time... That’s why I move the hands.”

“How do you do that, Dashenka?”

“It’s simple. I picture the hands of the clock out of the corner of my thought, then I think they should go faster — and they go faster when I start thinking fast.”

“What do you want to achieve, daughter dear, by speeding up time? What don’t you like about the present time?”

“I like it. I realise now that time isn’t to blame. It’s people themselves who spoil their time. You, Papochka, are so often at your computer, and then you go away for a long time. You, Papochka, spoil the time when you go away.”

“Me? Spoil it? How so?”

“We have a good time when we’re all together. When we’re together we have very good minutes and hours, even days. Everything around is joyful. Do you remember, Papochka, when the apple tree began to bloom just a little? You and Mama saw the first buds, and you took Mama in your arms and twirled around. And Mamochka laughed so brightly that everything around was joyful with us — the leaves on the trees, and the little birds too. And I didn’t feel sore at all

about your twirling Mama around in your arms instead of me, 'cause I love our Mamochka very much. I was so happy with that time, just like everyone else.

"But then a different time came. I realise now that it was you, Papochka, who made it different. You went away from us for a very long time. Baby apples had even begun to appear on the apple tree. But still you didn't come home. And Mamochka went up to the apple tree and stood there all by herself. But there was nobody there to twirl her around, and she didn't laugh brightly, and nothing around had anything to be joyful about. And Mamochka has quite a different smile on her face when you're not around. It's a sad smile. And that is a bad time."

Dasha spoke quickly and excitedly. All at once she seemed to choke on something inside her, and then burst out:

"You shouldn't make it bad when it is good... Time... Papochka!"

"Dasha... You're right about one thing... Of course... But you don't know everything about the times we're all in. The times we live in..." Ivan Nikiforovich spoke disconnectedly.

He was feeling tense. Somehow he needed to explain how necessary it was for him to go away. To explain it in such a way that his little daughter could understand. Finding no better alternative, he began telling her about his work, showing her rocket models and schematics on the computer.

"You see, Dashenka. Of course it's good for us here. And it's good for those who live in our neighbourhood too. But there are other places, other countries in the world. And they've got a lot of weapons, all sorts of them... To protect our splendid garden, and the gardens and the houses of your friends, sometimes Papa has to go away. Our country must also have a lot of up-to-date weapons to defend itself.

"But recently... Dashenka... You see, recently in another country, not ours, they came up with a new kind of weapon.

For the time being it is stronger than ours. Look here, on the screen, Dashenka!”

And Ivan Nikiforovich gave a tap on the keyboard, and the image of a strange kind of missile appeared on the screen.

“Look, Dashenka. This is a large missile, and it holds fifty-six smaller missiles. The large rocket takes off at Man’s command and heads for its assigned target, to destroy everything living there. This missile is very hard to shoot down. When any object approaches it, an on-board computer kicks in and sends out one of the smaller missiles to destroy the object.

“The smaller missiles can travel faster than the big one, since when they’re launched they can use the inertia speed of the larger missile. To shoot down just one such monster, we need to send fifty-seven missiles out against it.

“The country producing this so-called ‘cassette’ missile has only three working models at the moment. They have been carefully concealed in various places, in shafts deep underground, but it only takes a single radio-transmitted command to launch them. A small group of terrorists are already blackmailing a number of countries, threatening to wreak havoc on them. So you see, Dashenka, I have to decode the programme of the cassette missile’s on-board computer.”

Ivan Nikiforovich got up and walked around the room. He continued talking rapidly, getting more and more absorbed in his thoughts about the programme, seemingly oblivious to his little girl standing beside the computer. Ivan Nikiforovich quickly went over to the monitor showing the external image of the missile, gave a tap on the keyboard, and the screen showed a schematic of the missile’s fuel supply system, then one of the targeting radar devices, and then, once more, an overall image. Even as he was switching the screen images, Ivan Nikiforovich was no longer paying any attention to his dear little daughter. He kept reasoning aloud:

“They have obviously equipped each of the smaller missiles with a targeting radar device. Of course, that would apply to every single one. But there can’t be any difference in the programmes. The programmes have to be identical...”

All at once one of the other computers emitted an alarm sound, demanding immediate attention. Ivan Nikiforovich quickly turned to the respective monitor and froze in his seat. The screen showed a blinking text message: “EMERGENCY ALERT... EMERGENCY ALERT...” Ivan Nikiforovich gave a quick tap on the keyboard, and an image of a man in a military uniform appeared on the screen.

“What’s happened?” Ivan Nikiforovich asked him.

“Three unusual explosions have been recorded,” responded the man. “The whole defence complex has been put on Emergency Alert. Explosions of lesser magnitude are continuing. There’s been an earthquake in Africa. Nobody’s offered any explanations. According to international information exchange networks all military blocs on the planet have been ordered to high alert. Still no determination where the attack originated from. The explosions are continuing and we’re trying to shed light on the situation. All personnel have been ordered to set about analysing the situation.”

The officer on the screen spoke in a clipped, military fashion. At the end, his voice was already betraying signs of concern:

“Explosions continuing, Ivan Nikiforovich, explosions continuing. I’m signing off...”

The officer’s image disappeared from the screen. Ivan Nikiforovich, however, continued to stare at the darkened monitor, intensely absorbed in thought. Slowly and pensively he turned in the direction of his chair, where Dasha was still standing as before.

All at once an incredible conjecture made him shudder. He saw how his little daughter, her eyes screwed up and unblinking, was staring at the screen showing the image of the modern

missile. Suddenly her little body gave a start. Then, letting out a sigh of relief, she hit the 'ENTER' button on the keyboard. When the image of the new missile appeared, she screwed up her eyes again and began staring intently at the monitor.

Ivan Nikiforovich stood as though paralysed, incapable of budging from the spot, feverishly asking himself — though only in his thoughts — the same question over and over again: *Could she have set off the explosions? Set them off by her thought, because she doesn't like the bombs? Did she blow them up? Could that be true? How?*

He wanted to stop his daughter and called out to her. But he did not have the strength to speak very loudly, and could only whisper:

"Dasha, Dashenka, my dear daughter, stop it!"

Kostia, who had observed the whole scene, quickly got up from his seat, ran over to his sister, gave her a little pat on her bottom and began talking at a rapid pace:

"Now, Dashka, you've gone and upset Papa this time. Now I shan't speak to you for two whole days — one day for Mama, the other for Papa. D'you hear? Do you hear what I'm saying? You've frightened them!"

Gradually emerging from her state of concentration, Dasha turned to her brother and let her face resume its normal appearance as she looked him pleadingly and apologetically in the eye. Kostia noticed Dasha's eyes were filling with tears. Putting his hand on her shoulder, he spoke to her with a less severe tone than before.

"Okay, I got carried away about not talking to you, but you'll have to tie your own hair ribbon in the mornings. You're not so little any more, you know."

And telling her not to think about crying, he embraced her tenderly. The little girl nuzzled her face up against her brother's chest, her shoulders trembling, as she sorrowfully repeated:

"I've gone and frightened them again. I'm a very naughty girl. I wanted to do the best I possibly could, but I've gone and frightened them."

Galina came over to the children, squatted down beside them and began stroking Dasha's head. The girl threw her arms around her mother's neck and sobbed quietly.

"How does she do it, Kostia? How?" Ivan Nikiforovich asked his son as he slowly came to himself.

"The same way that she moves the hands of the clock, Papa," replied Kostia.

"But the clock is right here, while the missiles are a long ways away, and their location is classified as 'top secret'."

"Papa, it doesn't matter to Dasha where they're located. All she needs to see is the outward appearance of the object."

"But the explosions... In order to set them off, the circuits have to be connected. Quite a few circuits at that. There are safety mechanisms, codes..."

"But Papa, Dasha's able to go through all the circuits until a connection is made. Before, it took her a long time to do that, maybe fifteen minutes, but lately she's got it down to a minute and a half."

"*Before?!*"

"Yes, Papa, only not with missiles. That was the way we played. After she started moving the clock hands forward, I showed her my old electric car I used to love riding in when I was little. You see, Papa, I opened the bonnet and asked her to connect the headlamp wires together, since it was hard for me to get at them myself. She did it. And when she asked to take it for a drive, I told her she was still too young and wouldn't be able to brake properly, or even switch on the motor. But then when she kept insisting, I gave in. I explained how to switch the motor on, but Dasha did it all her own way.

"I tell you, Papa, Dasha simply sat down behind the wheel and took off without switching on anything. She thought she

was switching it on, but I could see that she wasn't doing anything with her hands. Or rather, she was switching it on, but she did it mentally. Besides, Papa, she's made friends with microbes. They obey her."

"With *microbes*?! What microbes?"

"With the ones that are very prolific, that live everywhere, all around us and inside us. We can't see them, but they're there. D'you remember, Papa, over on the edge of our domain, in the forest, there used to be the remains of two metallic posts sticking out of the ground? They belonged to an old high-voltage electricity line."

"I remember them. What of them?"

"They were rusty, resting on concrete foundations. One day when Dasha and I went mushroom-picking, she noticed these remains, said what a bad thing they were, that they weren't allowing the berries and mushrooms to grow on that spot. Then she said: "You should eat them up very, very fast!"

"And...?"

"And a couple of days later those rusty remains and the concrete foundations were gone. There was only bare earth there, without grass, at least for now. The microbes had eaten the metal and the concrete."

"But why — oh why, Kostia, didn't you tell me earlier about everything that was going on with Dasha?"

"I was afraid, Papa."

"Afraid of what?"

"I was reading up on history... In the recent past people with unusual abilities have been subject to forced isolation. I wanted to tell you and Mama all about it, but I couldn't find the right words so that you'd understand and believe..."

"Kostia, you know we always believe you. Besides, you could show us. Or rather, ask Dasha to demonstrate her ability, only with something harmless."

“That’s not what I was afraid of, Papa. Of course she could show you.” Kostia fell silent, and when he spoke again, his voice was emotional. “Papa, I love you and Mama... And even though I’m strict with Dashenka sometimes, I love her very much, too. She is kind. Dasha is good to everything around her. She wouldn’t even hurt a little bug. Nor would they hurt her. She went up to a bee-hive one day, sat right down by the hive entrance and watched. She watched how they flew. The bees... A lot of bees crawled over her arms and legs and even over her cheeks, but they didn’t sting her. She held out her hand to the bees buzzing around her — they landed on it and left something there. Afterward she licked the palm of her hand and laughed. She’s kind, Papa.”

“Calm yourself, Kostia. Don’t worry. Let’s calmly examine what’s going on here. Yes, we have to think about it calmly... Dasha is still a child. She’s blown up several state-of-the-art missile complexes. She could start a world war. A terrible war. But even without a war... Say she looked through some pictures showing not only enemy missiles, but our own... Say she started detonating all the missiles in all the countries that have them, the world would be on the verge of a global catastrophe! Hundreds of millions of human lives could be lost!

“I too love our little Dasha. But millions!... I need some advice. We must find a way out. But for now — I simply don’t know... Dashenka needs to be isolated somehow. Somehow... Yeah... Maybe she needs to be put to sleep for a while. Maybe... But what’s the solution? How can we possibly find a way out?”

“Papa, Papa... Hold on. Maybe... maybe it’s possible to eliminate all the deadly missiles she doesn’t like from the whole face of the Earth?”

“Eliminate? But... We’d need a multilateral agreement. From all the military blocs. Yeah... But there’s no way we can get one quickly. If we can get one at all. In the meantime...”

Ivan Nikiforovich gave a sudden start and rushed over to his computer, where the monitor still showed the image of a missile, which Dasha was prevented from destroying. He switched off the monitor, then sat down at his communications computer and began to transmit the following text:

*To: Headquarters.*

*The following memo should be transmitted at once to all military blocs and international news media. The series of missile complex explosions was caused by bacteria capable of connecting circuits. These bacteria are controllable. It will be necessary to destroy all images of any live ammunition. All images!!! From the most minute bullet to the most modern missile complex. The location of the explodable object is immaterial to the controller of the bacteria, who only needs to see its shape in an image.*

Ivan Nikiforovich looked at Dasha, who by this time was smiling and having a lively conversation with her Mama. He then added the following text:

*The location of the installation controlling the explosions is unknown.*

Finally, Ivan Nikiforovich encoded the transmission and despatched it to headquarters.

The next morning there was an emergency meeting of Russia's Security Council. A security detachment was posted to stand guard around the community where Ivan Nikiforovich's domain was situated. The security personnel dressed as road-repair workers, so as not to draw attention to themselves. They pretended to be 'building' a five-kilometre-long road around the perimeter of the community (working on all five kilometres at once), maintaining round-the-clock shifts.

Video cameras were set up in Ivan Nikiforovich's domain which followed every move of little Dasha's life. The video images were transmitted to a central monitoring station resembling a launch-site mission control. The video monitors were manned in shifts by dozens of specialists — including psychologists and military personnel — ready to issue the required orders in case of an emergency situation. The psychologists used special communications devices to give a constant stream of recommendations to Dasha's parents on how to distract her, whatever way they could, and keep her from falling into a state of contemplation again.

The Russian government put out an international statement — which many people thought strange — to the effect that in Russia there were forces capable of blowing up any type of live ammunition, no matter where it was located in the world. These forces, it said, were not entirely under the control of the Russian government, although negotiations were underway.

The extraordinary nature of this statement called for some kind of confirmation to back it up. At an international council meeting it was decided to prepare a series of unusual-looking projectiles, mounted in square casings. Each country participating in the experiment took twenty such projectiles and hid them in various places on their respective territories.

“Why did they make the projectiles with square casings? Why couldn't they have just used ordinary ones?” I asked Anastasia.

“They were afraid, Vladimir, that not only all the existing projectiles in the world might explode, but that all the bullets in police and army pistols might get blown up as well, wherever there were guns with live ammunition.”

“Yes, of course... And how did the square-projectile experiment go?”

Calling his daughter into his study, Ivan Nikiforovich showed her a photo of a square projectile and asked her to blow them up.

Dasha took a look at the photo and said:

"I love you very much, Papochka, but there is no way I can do what you ask."

"Why?" asked Ivan Nikiforovich in amazement.

"Because it won't work with me."

"What d'you mean, Dashenka? It worked before — you blew up a whole series of modern missiles, and now it won't work?"

"You know, back then I was really upset, Papochka. I didn't want you to go away, or to spend so many hours in front of your computer. When you're at your computer, you don't talk with anyone and you're not doing anything that's interesting. But *now*... well, you're with us all the time. You've become very good, Papochka, and I can't make any more explosions."

At this point Ivan Nikiforovich realised that Dasha was unable to blow up the square projectiles because she didn't understand the purpose of the explosion — what it was for. Ivan Nikiforovich started nervously pacing back and forth, feverishly searching for possible solutions and trying to convince Dasha to do something. But even as he was talking to his daughter, it seemed as though he were mainly reasoning it out for himself.

"It won't work... No, it won't... Pity. Wars have been around for thousands of years. While wars have ended between some countries, others have begun fighting. Millions of people have perished, and they are still perishing today. Tremendous resources are being wasted on armaments... And here finally is an opportunity to stop this endless disaster scenario, but alas..." Ivan Nikiforovich looked at Dasha sitting in the chair.

His daughter's face was composed. She watched with interest as he walked about the room, constantly talking. But she was not fascinated by what he was actually saying. She did not have a full comprehension of what wars meant, what resources her father was talking about and who was wasting them.

She was immersed in her own thoughts: *Why is Papa so agitated, walking back and forth amidst these computers which don't show any affection and don't give us any energy? Why doesn't he want to go out into the garden, where the trees are in bloom and the birds are singing, where every blade of grass and every branch of a tree caresses the whole body with something invisible? That's where Mama and Kostia are right now. I only wish Papa would finish his boring conversation and the two of us could go together to the garden. Mama and Kostia will be so happy to see us. Mama will smile, and Kostia promised yesterday he would tell me about how to touch a far-away star by putting your hand on a stone or a flower. Kostia always keeps his promises...*

"Dashenka, are you bored listening to me? You don't understand what I've been saying? You're thinking about something else?"

"I've been thinking, Papochka: why are we here, and not in the garden, where they're waiting for us?"

Ivan Nikiforovich realised that he had to speak to his daughter sincerely and in specific terms. So he took a different tack.

"Dashenka, when you blew up the missiles by looking at their image, they wanted you to test that ability once more. Or rather, to show the whole world Russia's ability to destroy all the ammunition on the planet. Then there won't be any point in making it any more. It would be senseless and dangerous. As for the ammunition already existing, the people themselves will destroy it. A global disarmament will begin. The square projectiles were made especially so that you could

show your ability without killing anyone. Blow them up, Dashenka.”

“I can’t do that any more, Papochka.”

“Why? Earlier you could, now you can’t?”

“I promised myself I would never blow up anything again. And now that I’ve made that promise, I don’t have the ability to do it any more.”

“You can’t? But why did you make such a promise to yourself?”

“Kostia showed me some pictures from a book of his — pictures of parts of bodies strewn all over after an explosion. He showed me how people are frightened by explosions, how trees fall and die from explosions — and so I promised myself —”

“Dashenka, does that mean you’ll never be able to now? Just once more... Just once. You see these square projectiles...”

Ivan Nikiforovich again held out the photo of a square projectile for his daughter to see.

“They were specially made for this experiment and are hidden away in secluded places in various countries. There are no people around, or anywhere near them. Everyone’s waiting to see whether they’ll explode or not. Blow them up, daughter dear! That won’t be breaking your promise. Nobody will perish. On the contrary...”

Dasha again looked at the photo indifferently and calmly replied:

“Even if I go back on my promise, these projectiles still won’t explode, Papochka.”

“But why not?”

“Because you’ve been talking for so very long, Papochka. When I first looked at the photo, I couldn’t stand these horrid things right off. They’re ugly, and now —”

“Now what? Dashenka — what?”

“Please forgive me, Papochka, but you went on talking for so long after you showed me the picture, that by now they’ve been almost all eaten up.”

“Eaten up? What’s been eaten up?”

“Those square projectiles. They’re almost all eaten up. As soon as they realised I couldn’t stand the projectiles, they got into action and began to eat them up very fast.”

“Who are *they*?”

“You know, the ‘little ones’. They are everywhere around us and inside us. They are good. Kostia calls them bacteria, or micro-organisms, but I’ve got my own name for them, a better name — I call them my ‘little ones’, my ‘goodies’. They like that name better. I play with them sometimes. People pay hardly any attention to them, but they always try to do good for everyone. When Man is joyful — they feel good too from the joyful energy; when Man is angry or hurts something living — a lot of them perish. Others rush in to replace them. But sometimes the others don’t manage to replace the ones that have died — and Man’s body becomes ill.”

“But you are here, Dashenka. And the projectiles are far away in various countries, hidden underground. How is it possible for — well, for those ‘little ones’ of yours in other lands — to find out so quickly about what you desire?”

“You see, they tell everything to each other very fast along a chain, a lot faster than the electrons run in your computer.”

“Computer... Communications... That’s it... I’ll check it all now — video cameras have been set up around all the projectiles on our territory. It’ll just take a moment.”

Ivan Nikiforovich turned to his communications monitor, which was showing a picture of a square projectile. Or rather, what remained of a projectile. The casing was rusty and full of holes, while the warhead was lying to one side, significantly reduced in size. Ivan Nikiforovich switched to another camera, and then another, but the same thing was happening to all the projectiles. Now the screen showed an image of a man in military uniform.

“Hello, Ivan Nikiforovich. You’ve seen it all yourself by now.”

“What conclusions has the Council come to?” asked Ivan Nikiforovich.

“The Council members have divided into groups and are currently in consultation. Our security forces are trying to work out supplementary measures to ensure the object’s safety.”

“I’ll thank you not to call my daughter an object.”

“You’re nervous, Ivan Nikiforovich. That is not permissible under the circumstances. In ten minutes you’ll be getting a visit from a panel of experts, comprising prominent specialists — psychologists, biologists, radio-electronic engineers. They’re already on their way. I want you to set up an interview for them with your daughter. Prepare her ahead of time.”

“What opinion is the majority of the Council inclined to favour?”

“At the moment they are leaning toward totally isolating your family within the confines of your domain. You need to immediately remove all technical pictures from your daughter’s sight. Stay close to her and try to follow her every move.”

Upon arriving at Ivan Nikiforovich’s domain, the panel of experts sent by the Russian Security Council engaged little Dasha in a lengthy conversation. After the child had been patiently answering all the adults’ questions for about an hour and a half, everyone, including the observers following the interview on the huge video monitors at the Security Council’s communications centre, were suddenly thrown into a state of utter bewilderment when the door of Ivan Nikiforovich’s study opened and in walked Dasha’s brother Kostia, carrying the cuckoo clock which was now cuckooing incessantly. Kostia put the clock down on the table. The hands showed eleven o’clock, but no sooner had the mechanical bird given the requisite number of cuckoos than the big hand on the

clock quickly traced a full circle around the clock face and the cuckooing began all over again. Those present were amazed at this strange operation of the clock, alternating their silent gaze between the clock and Dasha.

"Oh!" all at once Dasha exclaimed. "I quite forgot. I have to go on a very important errand. That's my friend Verunka<sup>4</sup> turning the clock hands. That was our arrangement, just in case I forgot. I have to go."

Two guards blocked the door of the study.

"What might you have forgotten, Dashenka?" Ivan Nikiforovich asked his daughter.

"I might have forgotten to go to the domain where my friend Verunka lives and stroke her little flower and water it. And it really misses being caressed. It loves people to look at it tenderly."

"But it's not *your* flower," observed Ivan Nikiforovich. "Why can't your friend stroke it herself? Her own flower?"

"Papochka, you see, Verunka's gone visiting with her parents?"

"Where's she gone visiting to?"

"Somewhere in Siberia."

From all around the room whispered exclamations could be heard:

"She's not alone!"

"What kind of abilities does her friend have?!"

"She's not alone!"

"How many of them are there?!"

"How can we tell who they are?!"

"We need to take measures immediately regarding every child like that!"

But all the exclaiming ceased directly an elderly grey-haired gentleman rose from his seat at the side of the room.

<sup>4</sup>*Verunka* (pronounced: ve-ROON-ka) — diminutive of the name *Vera*.

This man had the most senior title and position of all, and not just in relation to those present in Ivan Nikiforovich's study. He was the chairman of Russia's Security Council. Everyone turned to him in reverent silence.

The elderly fellow looked at Dasha sitting in her little wooden chair, and a tear rolled down his cheek. Then he slowly went over to Dasha and knelt down on one knee in front of her, holding out his hand to her. Dasha rose and took a step to one side. Holding the frilled hem of her dress, she made a curtsy, and put her little hand in his huge palm.

The elderly man looked at her for some time. Then, bowing his head, he kissed Dasha's hand in respect, saying:

"Please forgive us, little goddess!"

"My name is Dasha," the girl answered.

"Yes, of course, your name is Dasha. Tell us, Dasha, what will prevail on our Earth?"

The little girl looked into the elderly man's face in surprise, bent closer to him and with the palm of her hand carefully wiped away the tear from his cheek, then touched his moustache with her finger. Then she turned to her brother and said:

"Kostienka, you also promised to help me talk with the lilies on Verunka's pond. Remember you promised?"

"I do remember," Kostia replied.

"Then let's go."

"Let's go."

In the doorway, having already passed by the guards which had stepped aside as she approached, Dasha turned in the direction of the elderly fellow still standing on one knee, smiled at him and stated confidently:

"On the Earth shall prevail... *Good shall prevail!*"

Six hours later, speaking before an expanded session of Russia's Security Council, the elderly chairman said:

“Everything in the world is relative. Relative to our generation, those in the new generation may seem to us to be like gods. It is not up to them to align themselves with us, but for us to align ourselves with them. The entire military might of the planet with its unique technological achievements has proved itself powerless before a single little girl of the new generation. And our job, our duty, our obligation to the new generation is simply to clear away the garbage. We must make every effort to rid the Earth of any kind of armaments. Our technological achievements and discoveries, embodied in the most modern and, it seemed to us, unique military complexes, proved nothing more than useless scrap in the face of the new generation. And we must clear it away.”

## CHAPTER TEN

### The disarmament race

An international congress was held, with delegates from the security councils of the military blocs of various countries and continents, to work out a plan for the emergency conversion of military hardware and ammunition. Scientists from different parts of the world exchanged their expertise. Psychologists kept appearing in the media in an effort to head off panic among a population possessing a considerable variety of firearms. Panic had broken out after news of the Russian phenomenon had been leaked to the media, and the facts had become somewhat distorted.

A number of Western news sources were reporting that Russia had launched an emergency programme to convert all the ammunition on its territory, and at a designated hour would be blowing up the ammunition reserves held by other nations, destroying a large part of their population in the process. People began disposing of their firearms and ammunition in rivers, or burying them in wasteland sites, since the official conversion centres could not keep up with the demand.

Heavy fines were levied for unauthorised conversion. And even the fact that independent 'brokerage firms' started charging huge sums for each bullet or shell they accepted did not deter the flood of people wishing to escape from something that threatened the lives of whole families. People living in cities situated in the proximity of military bases demanded the authorities immediately get rid of all military facilities. But the arms industry, which had now been re-oriented toward the conversion of the very products it had

previously manufactured, was working to the limits of its capacity.

In many Western countries the press began circulating a flurry of rumours to the effect that Russia was threatening the world with disaster. The world was not in a position to free itself from its accumulation of armaments so quickly, and even though conversion plants were operating at full tilt, it was impossible for them to destroy in a few months a stock of arms that had been accumulating over decades.

Accusations were made that the Russian government had known for some time about the existence of children with unusual abilities, and that it had long been preparing for the conversion of deadly weapons. To back up this claim, it was noted that the Russian government had been buying up and dismantling ecologically unsound enterprises — not just on its own soil but in neighbouring countries as well. And that if Russia could become the first to rid its territory of explosive armaments, it would also be able to destroy nations that were lagging behind in the disarmament race.

All sorts of destructive scenarios of an impending world disaster and its consequences were deliberately exaggerated in the media. This was quite advantageous for companies involved in conversion, escalating the price of their services. Anyone handling in bullets from a handgun, for example, was obliged to pay twenty dollars for each bullet. Unauthorised burial or disposal of a weapon was treated as a criminal act. Another source of panic was the lack of proposals for any real defence against the abilities which had come to light in certain Russian children.

The Russian President then took what seemed to all to be a desperate and ill-conceived action: he decided to go live before the world's TV cameras in the company of children with extraordinary abilities. And on the appointed day and hour practically the whole planet gathered in front of their TV sets to hear what the Russian President had to say.

In advance of the broadcast many factories stopped, stores closed, streets emptied — all eyes were focused on Russia. The President wanted to calm people's fears and show the whole world that the newly-emerging generation of young Russians were not bloodthirsty monsters, but kind, ordinary children, whom there was no reason to fear.

To appear even more convincing, the President asked his advisers to invite thirty children with extraordinary abilities to the Kremlin, proposing to remain alone with these children in his office during the broadcast. All this was carried out as he requested.

"And what did the Russian President have to say to the world?" I asked Anastasia.

"If you like, you can watch this scene for yourself and listen to what he said, Vladimir."

"I'd like that very much."

"So take a look and see."

The Russian President stood on a small podium next to his desk. On either side of the podium sat children of varying ages, from about three to ten years old. On the opposite side of the room were arrayed a group of correspondents and a flock of TV cameras. The President began speaking.

"Ladies and gentlemen! My fellow-citizens! I have specially invited these children to meet you. As you can see, I am with them here alone, with no bodyguards or psychologists or parents. These children are not monsters, as some Western media are attempting to portray them. You can see for yourselves that these are just ordinary children. There are no signs of aggressiveness in their faces or actions. Some of their abilities we regard as unusual. But are they really? It is quite possible that the abilities which have begun to reveal themselves in the rising generation are entirely normal for

the human individual. Our own creations, on the other hand, may turn out to be inimical to human existence. The human commonwealth has created a communications system and military potential capable of fomenting global disaster.

“Peaceful negotiations between states possessing the greatest military potential have gone on for centuries, yet the arms race has still not ceased. Today we have a real opportunity to do away with this endless destructive process. Today the countries in the most advantageous position are those that do not have a concentration of deadly weapons on their territories.

“We tend to think of such a situation as unnatural. But let us ponder the question of why, on the other hand, the production of life-destroying weapons which now threaten whole nations, has ever seemed natural to the human commonwealth, and why such a conviction is so deeply rooted in our consciousness.

“The children of the new generation have changed our priorities, causing us to take steps in the opposite direction — namely, *disarmament*. The fear and panic and feverish activity surrounding this process are largely due to a misrepresentation of the facts. The Russian government has been accused of knowing for a long time about the extraordinary abilities of children in our country. Such accusations are unfounded. Up until now a huge military potential has been present on Russian soil, and we, like many other countries, are doing the best we can to effect its conversion.

“The Russian government has been accused of not taking sufficient measures to identify all children with extraordinary abilities and to isolate them — in other words, to force them into a state of narcosis until the disarmament process is complete. But that is a step the Russian government is not about to undertake. The children of Russia are equal citizens of our country.

“And let us not overlook the question of why people might desire to isolate those who reject murderous weapons instead of those who manufacture them! The Russian government *is*

taking measures to prevent spontaneous emotional outbursts in the children that might possibly transmit a signal and blow up any kind of armaments they didn't like.

"All Russian television channels have completely banned films showing murderous weapons. All toy guns have been destroyed. Parents are constantly minding their children in a bid to head off any negative reactions. Russia —"

The President broke off his speech abruptly. A tow-headed boy of about five rose from his seat and approached one of the videocamera tripods. At first he just examined the screws on the tripod, but when he touched them with his hand, the camera-operator stepped back in fright and hid behind the row of correspondents. The President rushed over to the boy, took him by the hand and led him to the chair where he had been meekly sitting before, admonishing him along the way:

"Would you please sit there quietly until I finish."

But he could not continue with his speech. Two boys, about three or four years of age, were now standing at the communications console, fiddling with the equipment. The children who had been sitting quietly right from the start of the President's speech were now wandering all over the office, each one looking into whatever they liked. Only the older children — and they were few in number — still sat quietly in their seats, their eyes focused on the correspondents and the TV cameras.

One of them was a little girl with ribbons in her braids. I realised right off who it was. It was Dasha, the one who had blown up the missile complexes. She was not behaving childishly, but attentively and intelligently sizing up the situation, observing the reaction of the correspondents.

People all over the world with their eyes glued to their TV sets caught a glimpse of the rather distraught face of the Russian President. He surveyed the children now dispersed around the room. Seeing two boys fiddling with the government communications console, he glanced over at the door,

on the other side of which his assistants, along with the parents of the invited children, were waiting, but he did not call on anyone for help. Excusing himself for the interruption, he rushed over to the boys who were already in the process of pulling one of the telephones off the desk, seized them one under each arm and told them:

“Look, these are not toys!”

One of the boys looked over and saw his chum hanging from the President's other arm and burst out laughing. The second boy managed to reach out and give a tug on the President's necktie, uttering the word *Toys!*

“That's what you think, but they are not toys,” the President responded.

“Toys!” the smiling lad cheerfully repeated.

The President noticed several other youngsters, evidently attracted by the sounds and the flashing coloured lights, approach the console and start fingering the telephone receivers. After setting the two fidgeters down on the floor, he rushed over to the console, pressed one of the buttons and said:

“Cut all communications to my office immediately.”

Next he quickly laid out on his desk a number of blank sheets of paper. On each one he put a pencil or pen, turned to the children clustering around the desk and said:

“Here you are. You can draw whatever you like. Start drawing, and later we'll decide all together who's come up with the best picture.”

All the children gathered around the desk and began taking paper and pen or pencil in hand. To those who were not tall enough to reach the desk, the President offered chairs, either seating or standing the littlest ones on the chairs.

Satisfied that he had succeeded in occupying the children's attention with drawing, the President once more went over to the podium, smiled to the television viewers, took a deep breath, and was about to go on with his speech. But to no

avail. A little boy came up to him and began tugging on his trousers.

“What is it? What do you want?”

“Pee...” said the boy.

“What?”

“Pee...”

“Pee, pee? You mean you want to go to the bathroom?” And once more the President’s gaze turned toward the door leading out of his office.

The door opened, and immediately two of his assistants or bodyguards rushed toward him. One of the men, who had a sombre and rather tense expression on his face, bent down and took the little boy’s hand. But the boy, still clinging to the President’s trouser leg, wriggled free, shaking his hand loose from the grip of the sombre-looking man attempting to take him out of the office. He held up his hand to the other men approaching — a gesture of protest which caught them completely off guard. Once more the boy raised his head, looking up to the President from below. Tugging on his trouser-leg, he repeated the word *pee* and began to crouch down just a little.

“This isn’t the right time for your ‘pee,’” said the President. “Not only that, but you’re being picky too.”

At that point the President picked up the boy in his arms, excused himself to the media representatives and headed out of the office, saying in passing: “We’ll be right back.”

In hundreds of millions of homes people watched as the TV cameras switched back and forth between the children playing, drawing and chatting with each other — and, more often than not, the now-deserted presidential podium.

And then little Dasha rose from her seat. Dragging a chair over to the podium, she climbed up on it, looked at the correspondents and then directly into the lenses of the TV cameras focused on her. She straightened the ribbons in her braids and began to speak.

"My name is Dasha. And our Uncle President — he's a good chap. He'll be back in a moment. He'll come back and tell you everything. He's just a little anxious right now. But he'll be able to tell everyone how life is going to be good everywhere you look on the Earth. And that nobody need be afraid of us. My brother Kostia told me how people are afraid of us children because I blew up some big new missiles. But it wasn't that I wanted to blow them up. I just wanted my Papa not to go away for such a long time and for him not to think so much about these missiles. Or look at them so much. He should look at Mama instead. She's much better than any missile. And she likes it when Papa looks at her and talks with her. But when he goes away for a long time or looks at the missiles, Mama's sad. And I don't want Mama to be sad.

"Kostia, my brother, is very clever and intelligent, and Kostienka told me that I've frightened a lot of people. I shan't blow up anything else. It's quite boring, really. There are other things to do that are much more important and interesting. They bring joy to everyone.

"You take care of dismantling the missiles yourselves. See to it that nobody ever blows them up. And please don't be afraid of us.

"Do come visit us. All of you. We'll give you living water to drink. My Mama told me how people here used to live. They kept so very busy building all kinds of plants and factories and got so carried away that before they knew it there was no more living water. The water had become dirty. And water was something you could only buy in bottles in stores. But the water in the bottles was dead, suffocated, and people began to get sick. That was how it used to be, but there's no way I can imagine how people could possibly dirty the water that they themselves drank. But Papa said that even now on the Earth there are whole countries where there is no clean living water, and that people in these countries are dying from painful diseases. And there are no tasty apples or berries in

these countries — everything living is sick, and the people eat sick things and feel wretched.

“Do come visit us, all of you come. And we’ll treat you to healthy apples and tomatoes and pears and berries. When you’ve tried them and go back home, you’ll say to yourselves: ‘Don’t do dirty things, it’s better to live clean!’ Then later when everything’s clean in your country, we’ll come visit you and bring you presents.”

The President, who by this time had come back, still holding the little boy in his arms, stood in the doorway and listened to Dasha’s speech. When she finished, he walked over to the podium. With the little one still comfortably nestled in his arms, he echoed Dasha’s words:

“Yes, of course... Do come, really, we have treatments for the body here. But that’s not the main thing. We all need to gain a better understanding of ourselves and our purpose. We really have to understand that. Otherwise we’ll be swept off the face of the Earth like garbage. We’ve got to get together and clear away all this dirt we ourselves have brought forth.

“Thank you all for your attention.”

The scene in the President’s office faded. And Anastasia’s voice continued:

“It is difficult to say whether it was the President’s or Dasha’s speech that had the greater effect on the viewers watching this live broadcast from Russia. But people were no longer inclined to believe the rumours that had been spread about Russia’s aggressiveness. People wanted to live, and live a happy life — they believed that a happy life was possible. After the live broadcast from the Kremlin the numbers of people wanting to visit Russia or even live there increased dramatically. And upon coming back home from Russia these visitors could no longer live the way they did before. A new conscious awareness was sparked in each individual, like the first ray of the Sun at the dawn of a new day.”

## CHAPTER ELEVEN

### Science and pseudo-science

“Anastasia, how have Russians managed to cope with such a huge influx of visitors? It must have been quite a challenge for them. I can just imagine living with your family in your kin’s domain with a whole bunch of gawkers staring at you from the other side of the fence.”

“The tourists and foreigners coming to Russia for treatment, Vladimir, have been housed in the cities, in the flats vacated by Russians. They get produce from the domains delivered to them, but tourists are not allowed to go to the domains themselves. Only a few have managed to visit the places where the New Russians reside. Psychologists are constantly reminding the owners of the domains that whatever hospitality they show to visitors — especially visitors from what used to be considered highly developed countries — can lead to a nervous breakdown. The psychologists are correct. About forty percent of foreigners who did visit the domains returned home only to fall into a state of depression bordering on suicide.”

“How so? Why? You yourself said, Anastasia, that everything in the domains is perfect — the surrounding countryside, the food, the way family members help each other.”

“That is true, but for many foreign visitors what they saw turned out to be *too* perfect. Imagine if you can, Vladimir, an elderly person who has lived most of their life in a large city. Someone who has tried as hard as they could to earn as much as they could — just to be, so they thought, no worse off than others. In return for this money they received a roof over

their heads, clothing to wear, a car to drive and food to eat. And here is this person sitting in their furnished flat with a car in the garage and food in the fridge."

"Well, I am imagining it, and so far everything seems normal. What next?"

"What next?, Vladimir, is a question you should be able to answer yourself."

"Next... Well, maybe this person will take a trip somewhere, maybe they'll buy some new furniture or a new car."

"And then?"

"And then? I haven't the foggiest!"

"And then this person dies. He dies forever, or at least for millions of Earth years. His second self, his Soul, cannot regain the earthly plane of being. It cannot because over the course of his earthly existence he created nothing good for the Earth. Each of us realises this intuitively, and that is why people are so terrified of death. When a majority of people have the same aspirations and a similar way of life, they have the impression that they can and should live only the way everybody else does.

"But here Man has seen a totally different way of life on the Earth. He has seen in fact an earthly Paradise — the Space of Love — which can be created by Man's own hand in the Divine image, and this makes him look upon his own life as already gone by and spent in hell, and this Man dies in torment, and his sufferings last millions of years."

"But why doesn't everybody fall into this state of depression after seeing the Russians' new way of life?"

"There are some who realise intuitively that even in their advanced years, if they put their weakening hand to creating a Space of Love on the Earth, the Creator will prolong their life. And after straightening up and with a smile brightening their face, they go and give a hand to younger people."

“Still, Anastasia, it doesn’t seem right that people who come to Russia from so far away aren’t able to at least spend a little time walking down the streets of the new Russian communities and breathing the clean air.”

“Even the tourists who stay in the cities have the opportunity to feel the fresh breath of the Earth and drink health-giving water. The cities are caressed by breezes which infuse them with cleanliness, ethers and pollen from the luxuriant greenery of the domains. And when they go on out-of-town excursions, tourists can observe these oases of Paradise — only from a respectful distance so as not to disturb the families living there. Take a look and see how it all happens.”

And once again I glimpsed another scene from the future. I saw the highway which runs between the city of Vladimir and another town named Suzdal<sup>1</sup> thirty kilometres away — a highway I had travelled a number of times before. Earlier I had only caught the rare glimpse of tourist motorcoaches taking visitors to see Suzdal’s ancient cathedrals and monasteries. Most of the cars on the road had borne local licence plates. But now the highway was quite different. Beautiful motorcoaches rolled along a roadway that was twice the width of the old one. Electric vehicles, no doubt — I couldn’t detect any exhaust gases or motor noise, only the quiet hum of the tyres. The coaches were filled with tourists of various nationalities. Many were observing their surroundings through field glasses.

About a kilometre from the main road, beyond a motley host of treetops, I could make out the roofs of detached houses. That was where the Russians’ family domains were situated, each surrounded by an evenly planted hedge, or ‘living fence’. On either side of the road, approximately two kilometres apart, were located nice-looking two-storey buildings

<sup>1</sup>*Vladimir, Suzdal* — see footnote 1 in Chapter 6: “A garden for eternity”.

housing shops and dining salons.<sup>3</sup> Each of these was fronted by a small asphalt lot where an electric vehicle could park if there was a space free. The electric motorcoaches spewed forth a stream of tourists, who were impatient to taste the local delicacies on the spot or to buy some to take home.

All the shops and cafés sold food products grown in the domains. They also had hand-made Russian shirts, towels, woodcarvings and many other things made by skilled craft-people. Anastasia explained that visitors were eager to buy these handicrafts because they knew that a shirt embroidered by the kind hands of a happy woman is immensely more valuable than something off a mechanised conveyor belt.

If you looked down from above at what was behind the strip of forest visible from the highway, you would be able to glimpse shady allées and domains outlined by living fences. The strip of forest surrounded a community containing about ninety family estates. About a kilometre distant, across open fields, was another community surrounded by a strip of forest, and so on for the next thirty kilometres or so.

Even though they were the same size, the domain plots were far from uniform in appearance. Some were dominated by orchard trees, others featured wild-growing trees — slender pines, loosely spreading cedars, oaks and birches.

Each domain invariably had a pond or a swimming pool. The houses, surrounded by flower beds, were also quite different from one another — some were large two-storey detached houses, others were smaller bungalows. They had been built in various styles — both flat and sloping roofs were to be seen. Some of the little houses were all white, resembling the huts found in Ukrainian villages.

<sup>3</sup> *dining salons* — the Russian word here is *trapeznye* (pronounced: *TRAH-pezh-nib-yeh*), originally designating refectories in monasteries, but more recently used in reference to ornately decorated halls (often with arched ceilings) where large groups of people can gather to enjoy traditional Russian meals.

I saw no motorcars on the lanes running between the domains. Nor, for that matter, could I detect any special activity or work being done in the domains themselves. I had the impression that all this extraordinary beauty was the creation of Someone on high, and that all people needed to do was to delight in His creation.

In the middle of each community there were beautiful large two-storey structures. Around them scurried a host of active children at play. That meant that schools or clubs had been built in the centre of the settlements.

"You see there, Anastasia, in the centre of the community, where there's a school or a club, there's some kind of visible life, but in the domains themselves it looks pretty much like Dullsville. If their owners have managed to arrange the plantings so that there is no need to fertilise or to battle with pests and weeds, what is there left for them to do? In any case, I think that Man actually finds greater joy in intensive labour, creativity and inventiveness, but there's none of that here."

"Vladimir, right here in these splendid domains people are involved with the very things you mention, and their deeds are meaningful. It demands a significantly higher level of intelligence, mindfulness and inspiration than the work of artists and inventors in the world you are accustomed to."

"But if they are all artists and inventors, then where are the results of their work?"

"Vladimir, do you consider an artist someone who takes brush in hand and paints a beautiful landscape on a sheet of canvas?"

"Of course I do. People will look at his picture and, if they like it, they will either buy it or put it on display in an art gallery."

"Then why would you not consider as an artist someone who has taken, instead of a canvas, a hectare of land, and used it to create an equally beautiful or even a more beautiful

landscape? After all, in order to create a beautiful landscape out of living materials, the creator needs more than artistic imagination and taste — he also needs a knowledge of the properties of a great many living materials. In both instances it is the task of what has been created to call forth positive emotions in the viewer, and to delight the eye.

“But in contrast to a picture painted on canvas, a living picture has a variety of functions besides. It cleanses the air, it produces beneficial ethers for Man and feeds his body. A living picture changes the nuances of its colours, and it can be constantly perfected. It is connected to the Universe by invisible threads. It is incomparably more meaningful than something painted on canvas, and so the artist who creates it will be that much the greater.”

“Yes, of course, I really can’t disagree with that. But tell me, why do you consider the owners of these domains to be inventors and scientists to boot? Do they have any relation to science at all?”

“They have a relation to science too.”

“What kind of relation, for example?”

“For example, do you, Vladimir, not consider as a scientist someone who is involved in plant selection and genetic engineering?”

“Of course. Everybody thinks of them as scientists, they work in scientific research institutes. They come up with new varieties of fruits and vegetables, and other plants as well.”

“Yes, of course, they come up with these, but what is important is the *result* of their work, its significance for humanity.”

“Well, the result is that varieties of vegetables and potatoes are brought forth that are frost-resistant and that will not be eaten by the Colorado beetle. In highly developed countries they have managed to grow a living being from a simple cell. Now they are working on cultivating various organs for transplanting into patients — kidneys, for example.”

“Yes, that is true. But have you not wondered, Vladimir, why in these highly developed countries there are also appearing more and more types of diseases? Why is it that these same countries have the highest cancer rates of all? Why do they need an increasing number of drugs for treatment? Why do an ever-increasing number of people suffer from infertility?”

“Well, why?”

“Because many of those you call scientists are not rational beings at all. Their human essence is paralysed, and the forces of destruction work through their merely external human form.

“Think about it, Vladimir: these so-called scientists have begun to fundamentally change the plants existing in Nature, thereby also changing the fruits they bring forth. They have begun changing them without first determining what purpose these fruits have. After all, in Nature, as in the Universe, everything is so closely interconnected.

“Let us take your car, for example. Suppose a mechanic were to remove or alter some part — a filter, let us say — the car might go for a while, but what would soon happen?”

“The fuel-feed system would go out of whack, and the motor would choke.”

“In other words, every part of a motorcar has its function, and before touching a part, it is necessary to determine its function.”

“Of course! You don’t have to be a mechanic to see that.”

“But Nature, after all, is also a perfect mechanism, and nobody has yet fully fathomed it. Every part of this great living mechanism has its purpose and is closely interconnected with the whole structure of the Universe. A change in properties or the removal of a single part inevitably affects the work of the whole mechanism of Nature.

“Nature has many protective devices. First, it will signal an impermissible action. If that does not work, Nature will be obliged to destroy the ‘mechanic’ who fails in his calling. Man

uses the fruits of Nature for food, and if he begins to feed himself with mutant fruits, he will be gradually transformed into a mutant himself. Such an adulteration is inevitable, given the consumption of adulterated produce.

“This is already coming about. Man is already experiencing a weakening of his immune system, his mind and feelings. He is beginning to lose the abilities unique to him alone, and is being transformed into an easily manipulable bio-robot. He is losing his independence. The appearance of new diseases only confirms this — it is a sign that Man has tried undertaking an impermissible action.”

“Well, let’s say you’re right, Anastasia. I myself don’t think much of these hybrid plants. There was a lot of hoopla about them at first, but now quite a few national governments, including our own, have started mandating special labelling of genetically modified produce sold in stores. And many people try to avoid buying these mutant products. But they say there’s no way to avoid them altogether, at least for the time being — there’s too many of them. There’s not enough real produce, and it’s so much more expensive.”

“There, you see, that is because the forces of destruction have managed to lure humanity into a state of economic dependency. They have managed to convince Man that if he does not consume their products, he will die of starvation. But that is not true, Vladimir. Just the opposite: Man will die if he does eat them.”

“Maybe, Anastasia, but not everyone will die. Many already know about this and won’t eat mutant products.”

“How do you, for example, Vladimir, manage to tell the difference?”

“I don’t eat imported vegetables, for one thing. What local residents sell at the markets from their own household plots is a lot tastier.”

“And where do they get their seeds?”

“What d’you mean, where do they get them? They buy them. There’s a lot of firms dealing in seeds now. They sell them in pretty coloured packaging.”

“So, does that mean that people buy seeds according to the information on the package, without knowing for absolute certain how accurate that information is?”

“You mean to say that even the seeds they buy may be mutant?”

“Yes. For example, on the Earth today there are only nine apple trees left bringing forth original fruit. The apple is one of the most healthful and delicious of all God’s creations for Man. But it was one of the first to be subjected to genetic manipulation. Even the Old Testament warns us against grafting. But people went ahead stubbornly and did it, and as a result the apples disappeared. What you now find in orchards or grocery stores does not correspond to the Divine fruit. Those that violate and destroy the original purity of God’s creation you call scientists. But what can we call those who are *restoring* the functioning of all the parts of Nature’s mechanism?”

“They’re scientists too, but more literate, no doubt, more knowledgeable.”

“The Russian families living in the domains which you see here are the same ones who are restoring that which was ruined before.”

“And where did they acquire greater knowledge than the geneticists and the biologists involved in genetic selection?”

“This knowledge has existed in every Man right from the beginning. The goal, thought and conscious awareness of their purpose afford each of these the opportunity to reveal itself.”

“Wow! So it turns out that the people living in the domains are both artists and scientists. Who then are *we* — I mean, the people living on the planet today?”

“Everyone can supply their own definition if they manage to free their thought for at least nine days.”

## CHAPTER TWELVE

### Do we have freedom of thought?

“What do you mean — *to free their thought?* Everybody has freedom of thought.”

“In the context of your technocratic society, Vladimir, Man’s thought is enslaved by the limits and conventions of this world. In fact, the technocratic world can only exist when the freedom of Man’s thought is nullified and the energy of his thought is absorbed by it.”

“Something’s not clear to me here. Every Man over his lifetime can do a lot of thinking about a lot of different things. There are limits on freedom of speech, for example. There are countries in which there is greater freedom of expression, in other countries less, but everyone is free to *think* whatever they wish.”

“That is an illusion, Vladimir. The majority of people are compelled to think about one and the same thing their whole lives. This is easier to see if you take the topics a typical Man of your world thinks about and analyse them in terms of distinct time segments, adding up the time he spends thinking about each particular subject. By this simple method you can determine the prevailing thought in contemporary human society.”

“Interesting. Let’s try determining this prevailing thought together, you and I.”

“Very well. Then tell me, what would you consider Man’s average life expectancy today?”

“Is that important?”

“Not all that important, given the uniformity of Man’s

thinking, but we need some sort of figure for our subsequent calculations.”

“Okay. In our time let’s say a Man lives eighty years.”

“So, a Man is born. Or, to put it more accurately, he has attained the material plane of his being.”

“Let’s just say he is born — it’s easier to understand.”

“All right. Even as an infant he is looking at the world, which is waiting for him to get to know it. Clothing, housing and food are provided for him by his parents. But the parents also attempt, either consciously or subconsciously, through their behaviour, to impart to him their thoughts and the way they see the world around them. The visible process of getting to know what life is all about lasts approximately eighteen years, and over the whole course of these years the technocratic world attempts to impress the young Man’s thought with its own importance. Then, over the remaining sixty-two years of his life, let us assume that Man himself can control the tendencies of his own thought.”

“Indeed he can. But you were saying there’s something trying to enslave his thought.”

“Yes, I did say that. So let us try and calculate how much time he is free to think for himself.”

“Okay, let’s.”

“For a certain number of hours each day Man sleeps or rests. How many hours a day does he spend on sleep?”

“Eight, as a rule.”

“We took 62 years of Man’s life as a basis. If you multiply that by eight hours per day, taking leap years into account, you find that Man sleeps for 587,928 hours of his life. Thus, sleeping 8 hours a day equates to 22 years of constant sleep. Now we subtract these 22 years from the 62 years of his life and we have 40 years when he is awake.

“Now, at some point during their waking hours most people are involved with the preparation of food. How

much time do you think Man spends on cooking and eating food?"

"It happens that women generally do the cooking, while men are obliged to spend more time earning the money to pay for groceries."

"And how many hours would you say, Vladimir, go into the preparation and consumption of food every day?"

"Well, if you take into account the time spent on buying groceries, preparing breakfast, lunch and dinner, that's probably about three hours — on a weekday, that is. Only not everyone in the family is involved in the cooking. The rest of us... well, we eat, and maybe help do the grocery shopping, or wash the dishes, so that I'd say about two and a half hours, on average."

"In fact it is more, but let us take your figure, two-and-a-half hours per day. Multiply that by the number of days a Man lives and it comes to 61,242.5 hours, or 25,517 days, or 7 years. Subtract this number from the 40 and there are 33 left."

"Now, in order to be able to obtain food, clothing and housing, a Man dwelling in the technocratic world is obliged to perform one of the functions essential to this world — namely, *work*. And I should like to draw your attention, Vladimir, to this fact: Man is obliged to work or engage in some business not because he really likes it but for the sake of the technocratic world itself, otherwise Man will be deprived of what is vitally important to him. How much time do most people spend each day on work?"

"In our country it's eight hours, with another two hours or so spent getting to and from work, but every week they get a couple of days off."

"So now try to calculate how many equivalent years of his life does a Man spend on work which is rarely satisfying?"

"It would take me quite a while to figure out without a calculator — you tell me."

"All told, for the thirty years of so-called work activity he spends ten years constantly working for someone — or, rather, for the technocratic world. And now from those 33 years of life we have to subtract another 10, leaving us 23.

"Now, what else does a Man do every day over the course of his life?"

"He watches TV."

"For how many hours a day?"

"No less than three."

"These three hours amount to 8 years of constant sitting in front of a television screen. If we take them away from the 23 remaining, we are left with 15. But even this time is not free for activities native to Man alone. Man's thought is subject to inertia. It cannot make a sudden switch from one thing to another. Some time is spent processing and making sense of information received. All told, the average Man spends only 15 to 20 minutes of his life reflecting on the mystery of creation. Some do not think about it at all, while others spend years contemplating it. Anyone can figure it out if he looks back over the years of his life. Each individual is unique — he is more important than all the galaxies taken together, for he is capable of creating them. But each Man is a particle of the human commonwealth, which may be regarded in its entirety as a single organism, a single essence. And once humanity has fallen into the trap of technocratic dependence, this great essence of the Universe becomes closed within itself, it loses genuine freedom and becomes dependent, at the same time activating the mechanism of self-destruction.

"Another way of life, quite distinct from your world's everyday norm, is lived by people in the communities of the future. Their thought is both free and humane — it has merged into a single aspiration, and is leading humanity out of its dead end. The galaxies quiver in joyful anticipation when they see the human dream merging into a single whole. Creation will

soon witness a new birth and a new co-creation. Their human thought will materialise a beautiful new planet.”

“Wow! How grandiloquently you describe these community dwellers! But outwardly they’re just ordinary people.”

“Even their outward appearance is distinctive. It is imbued with the radiance of great energy. Look more closely — here come a grandmother and her grandson riding along...”

## CHAPTER THIRTEEN

### Equestrienne from the future

I saw a wagon emerging from the settlement, or rather a carriage with a folding top, drawn by a sorrel mare. On the carriage's plush seat sat an elderly woman, with baskets of apples and vegetables at her feet. Up in front a shirtless boy about seven years old held the reins, but did not appear to be controlling the horse. No doubt they had been along this route many times before and the horse was simply trotting leisurely along a familiar route.

The boy turned to the elderly woman and said something to her. His grandmother smiled and began to sing. The boy started singing along with her, picking up on the refrain. As for the tourists in their electric motorcoach passing by on the parallel highway about a kilometre distant, there was no way they could catch the sound of their song.

Practically the whole coach had their field glasses trained on the carriage and its passengers. They watched the spectacle unfold with bated breath, as though they had seen a miracle or an interplanetary alien, and again the thought came to me that there was something not quite right here: people had come from such a long ways away and couldn't even carry on a normal conversation with the local residents, but were limited to observing them from a distance. And the two occupants of the carriage weren't even looking their way.

One of the tourist coaches slowed down to keep pace with the horse's trot. The coach was filled with children visiting from abroad, excitedly waving their hands at the little boy

and his grandmother riding in the handsome carriage, but not once was there even a glance in return.

All at once a young equestrienne emerged from one of the gates of the settlement, which were beautifully entwined with living vegetation. Her chestnut-coloured racehorse maintained a heated gallop in a bid to catch up to the carriage, and was soon prancing daintily alongside. The elderly woman smiled, listening as the young equestrienne spoke to her.

Even though the boy may not have been too happy at having their duet interrupted, his voice could not help but betray an inner joy as he said:

“Oh, Mamochka, you’re a regular jumping jack! You can’t stay still for a moment!”

The young woman laughed, reached into her canvas saddle bag and took out a *pirozhok*,<sup>1</sup> handing it to the little boy. He took a bite of it and then offered it to the elderly woman, saying:

“Here you are, Granny, try it — it’s still warm!”

The boy gave a tug on the reins and stopped the carriage. He leant down and with both hands picked up a basket of yummy-looking apples. He held it out to the woman rider with the words: “Please, Mama, take these to *them*,” nodding in the direction of the touring coach with the visiting children on board.

Grasping the heavy basket of apples easily with one hand, with the other hand she gave her prancing steed a pat on its neck, and galloped off toward the children’s motorcoach. Several other tourist coaches in the meantime had pulled up beside it, all eyes fixed on the young woman rider galloping toward them over the fields clutching the basket of apples with one hand.

<sup>1</sup> *pirozhok* (plural: *pirozhki*) - a small Russian pastry with a filling, akin to a Ukrainian pierogie. See footnote 2 in Book 2, Chapter 11: “A sharp about turn”.

Dashing up to the children who had now spewed forth out of the coach, she reined in her steed, and without leaving the saddle, deftly bent down and placed the apple basket on the ground in front of the excited children.

After managing to give a dark-haired little boy a pat on the head, she waved a greeting to all and headed off on her steed right down the middle of the dual motorway. The driver of the children's coach was talking on his two-way radio:

"She's galloping right down the median strip! She's marvellous!"

Many of the touring coaches along the motorway pulled over to the side and stopped. People quickly got out and spread themselves along the roadside, watching the beautiful young equestrienne galloping along at full speed. No shouts, but rather whispers of excitement emanated from many people's lips. And here was really something to be excited about. Sparks flying from his hooves, the steed flew along unhindered in his heated gallop. His rider carried no whip in her hand, or even a switch, yet the steed kept quickening his step, his hooves barely touching the asphalt, his mane streaming from the brisk headwind. No doubt he was extremely proud of his rider and wanted to prove worthy of this beautiful woman on his back.

Indeed, she was exceptionally beautiful in appearance. Of course one could get excited about her perfect facial contours, her light-brown braid and thick eyelashes. Of course, beneath her white hand-embroidered blouse and flowered skirt with white camomiles one could easily picture a shapely supple waist on this girl with such a magnificent figure, whose smooth, feminine lines seemed to frame some sort of irrepresible energy. The blush playing on her cheeks gave but a glimpse of the majesty and boundless possibilities of this unfathomable energy. The young equestrienne's unusually healthy-looking appearance (she looked like a girl in her late teens!) quite distinguished her from that of the people standing by the side of the road. She sat upright on her frisky steed

with not a trace of tension in her body. She wasn't holding on to the pommel of her saddle, or even the reins. And her legs were thrown over one side of the horse's rump without a stirrup on either foot.

As she rode along with her eyelids lowered, she gracefully wove her wind-tossed hair into a tight braid. And she had only to raise her eyelids to inflame one of the crowd of people with some kind of invisible but captivating fire. Whoever caught her gaze felt himself straighten up inside and stand tall.

It seemed that these people could feel the light and energy emanating from the equestrienne and were trying to let it at least partially fill their being. She understood their desire, and generously shared what she had, galloping on and just being beautiful.

All of a sudden an excited Italian man ran out across the motorway right in front of the oncoming steed. He waved his arms wildly to each side, crying out in excitement: *Rossiya! I love you. Rossiya!*<sup>F</sup> The young rider was completely unmoved by her steed rearing up on its hind legs and prancing on the spot. With one hand simply holding on to the pommel of her saddle, she used the other to pluck a flower of the garland adorning her hair and toss it down to the Italian. Catching his gift, he pressed it tenderly to his chest like a valuable treasure, constantly repeating: *Mamma mia! Mamma mia!*

But the beautiful equestrienne was no longer paying attention to the impetuous Italian. She had only to touch the reins and the horse broke into a lightly prancing walk, and headed over to the people standing on the roadside. As the crowd parted, the young equestrienne gave a sprightly leap down from her steed, coming face to face with a woman of European appearance who was holding a baby girl fast asleep in her arms.

<sup>F</sup>*Rossiya* (pronounced: *ros-SEE-yu*) — the Russian name for *Russia*, which is similar in a number of European languages.

The mother was slouching a little, her face was pale and eyes fatigued, and she seemed to have a hard time holding her baby still without waking her. The equestrienne gave the woman a big smile, and the two mothers' glances met.

It was not difficult to notice the difference in the two women's mental states. The mother with the baby had a depressed look, which gave her the appearance of a fading flower in comparison with the young woman who had just approached her — a woman whose countenance suggested an irrepressible explosion of blossoms from thousands of gardens.

The two women looked each other in the eye without a word between them. And then all at once, as though startled by a new conscious awareness of something, the woman holding the sleeping baby straightened up, and her face broke into a broad smile. With a graceful, very feminine movement of her hands, the Russian woman took the beautiful garland from her own head and placed it on the head of the mother holding the baby, though they still didn't say a single word to each other.

Once more the beautiful equestrienne deftly mounted her steed which had been standing meekly at her side, and headed off. For some reason the people all gave her a round of applause. The now-smiling slender woman, whose baby daughter had by this time awakened with a smile of her own on her little face, kept watching as the figure of her new-found friend receded into the distance. As for the impetuous Italian, he was running after her holding an expensive watch he had taken off his wrist, calling out to her: *A souvenir; mamma mia!* But by this time the beautiful rider was already far away.

The adventuresome racchorse turned off the highway in front of a patio decked out with long tables, where another group of tourists was sitting, drinking *kvass*<sup>3</sup> and berry drinks. They were

<sup>3</sup>*kvass* — a fermented beverage made from rye, barley or other natural products.

also sampling other delicacies waiters kept bringing to them out of a building replete with beautiful Russian carvings.<sup>4</sup>

Another building was in the finishing stages of construction next door. Two people were attaching to one of the windows of the new building — probably a shop or dining salon — a beautiful carved wooden *nalichnik*. Upon hearing the hoofbeats, one of the men turned in the direction of the approaching rider, said something to his fellow-worker and jumped down from the scaffolding. Reining in her horse, the impetuous equestrienne sprang down to the ground and, quickly unfastening her canvas bag from the saddle, ran over to the man and gently handed it to him.

“*Pirozki*... With apple filling, just the way you like them. They’re still warm.”

“You’re my little jumping jack, Ekaterinka,” the man said tenderly. Whereupon he reached into the bag, took out a *pirozhok* and bit into it. His face writhed with pleasure.

The tourists sitting at the tables stopped their eating and drinking, admiring the young lovers. There stood the pair face to face — the man working on the building and the beautiful young equestrienne just dismounted from her fiery steed — as though they were not already married with children, but a courting couple fervently in love. And here was this beautiful woman, who had just ridden fifteen kilometres, who seemed so invincible and as free as the wind under the excited gaze of the tourists, calmly standing in front of her beloved, first

<sup>4</sup>*Russian carvings* — these might include sacred solar symbols, such as a horse at the front of the roof finial, believed to protect the house and its occupants from evil. Such carvings are found on many a Russian *terem* (mansion) or *izba* (hut). Some of these carvings are featured on a decorated board known as a *nalichnik* (see footnote 3 in Book 3, Chapter 10: “Work out your own happiness”).

<sup>5</sup>*Ekaterinka* — like *Ekaterinushka*, a diminutive of the Russian name *Ekaterina* (pron. *ye-ka-te-REE-na*) equivalent to *Catherine* in English.

looking him in the eye, then lowering her eyelids in embarrassment. All at once the man stopped eating and said:

"Ekaterinushka, look, a wet spot has broken out on your blouse — that means it's time to feed Vanechka."<sup>6</sup>

She covered the little wet spot on her milk-filled breast with the palm of her hand and answered, somewhat embarrassed:

"I'll manage it. He's still sleeping. I'll take care of everything."

"Better hurry. I'll be home soon, too. We're just finishing up here. D'you like what we've done?"

She took a look at the windows framed by the decorative carved *nalichniks*.

"Yes. Very much. But there's something else I wanted to tell you."

"Go on."

She came up close to her husband and stood on tiptoe as if to whisper something in his ear. He leaned over to listen, but she just gave him a quick kiss on his cheek. Then, without even turning around, she sprang into the saddle of her steed standing alongside her, her happy trilling laughter mingling with the hoofbeats. Then it was off to home she galloped — this time not along the asphalt motorway, but across the grasses of the open fields. As before, the tourists could not take their eyes off her so long as she remained in sight.

What was so special about this young woman — a mother with two young children — riding across the open fields on her adventuresome steed? Yes, she was beautiful. Yes, one could feel her overflowing energy. Yes, she was kind. But why couldn't anyone take their eyes off her as she rode away?

Perhaps it was more than just a woman riding a horse across a field. Perhaps it was Happiness incarnate hurrying home to feed an infant and later welcome her beloved husband? And people couldn't help but admire Happiness hurrying back to her home.

<sup>6</sup>*Vanechka* — a diminutive of the Russian name *Ivan* (corresponding to the English name *John*).

## CHAPTER FOURTEEN

### City on the Neva

"And have such changes been taking place in St. Petersburg too, as well as in Moscow?" I asked Anastasia.

"Events happened somewhat differently in the city on the Neva," she replied. "There it was the children who, even before the adults, felt the need of doing something themselves about creating a different kind of future. The children took it upon themselves to start changing the city, without waiting for a decree from the authorities."

"Wow! Children again! And how did it all start?"

At the corner where the Nevsky Prospekt<sup>2</sup> crosses the Fontanka<sup>3</sup> embankment some workers had dug a trench. An eleven-year-old boy accidentally fell into it and injured his

<sup>1</sup>*Neva* (pron. *nĕ-VĀĪD*) — the river that flows through the city of *St. Petersburg* into the Gulf of Bosnia and the Baltic Sea. The city was founded on the swampy delta of the Neva River by Emperor Peter the Great in 1703 as Russia's new capital and 'window on the West'. Partial to Western (especially Germanic) cultures, he gave the city a German-style name after his own patron saint. In 1914, at the onset of the First World War, the name was russified to *Petrograd*. The Bolsheviks who came to power with the 1917 revolution immediately moved the seat of government back to Moscow, and after Lenin's death in 1924 renamed the former capital in his honour. During World War II *Leningrad* endured a 900-day siege and blockade by the Nazis but was never captured. After the collapse of the Soviet Union, a vote by the city's residents in 1991 restored its original name.

<sup>2</sup>*Nevsky Prospekt* (Nevsky Avenue) — the principal thoroughfare of St. Petersburg, stretching more than four kilometres from the Admiralty to the Alexander Nevsky Monastery. Named after Grand Prince Alexander Nevsky (1220–1263) who defended the territory against attacks by Swedish

leg. While he was recuperating, he spent a long time sitting at the window of his flat at No 25, Fontanka Embankment. But his apartment windows looked out not onto the river, but onto an interior courtyard. The view included a shabby brick wall and the rusty spots covering the roof of the house it was attached to.

One day the boy asked his father:

“Papa, isn’t our city supposed to be the best in the country?”

“Of course,” the father replied, “it’s one of the best in the world!”

“And why is it the best?”

“What d’you mean, *why*? It’s got a lot of different kinds of monuments and museums, and the architecture in the city centre is world-famous.”

“But we live in the city centre too, and all we can see from our windows is a shabby wall and the rusty roof of the building next door.”

“A wall... Well, yes, we didn’t do so well with the view.”

“Are we the only ones?”

“Maybe a few others, but anyway...”

---

armed forces and German knights, the street dates back almost to the founding of the city itself. It was designed by French architect Alexandre LeBlond under commission from Peter the Great, and over the years has figured prominently in the writings of major Russian authors, including perhaps its most famous resident, Dostoevsky. Today, lined by cathedrals, museums and hundreds of shops and apartment houses with neo-classical façades, the Nevsky still forms the axis of the city’s business and cultural centre.

<sup>3</sup>*Fontanka* — one of the several channels of the Neva River flowing through the delta on which the city of St. Petersburg is built. Embankments on both sides give it more the appearance of a canal (the city boasts about fifty canals and a hundred islands). Nevsky Prospekt crosses the Fontanka on the architecturally unique Anichkov Bridge (built in 1715) — each of its four corners is adorned with a bronze sculpture of a horse, all executed by Russian artist Piotr Klodt (1805–1867) in the mid-nineteenth century.

The boy took a snapshot of the view from his apartment windows and when he was able to go to school again, he showed the photo to his chums.

Then all the children in his class took snapshots from their windows and compared the photos. The overall picture was not very pretty. The boy and his chums went to see the editors of one of the local papers and asked the same question he had earlier asked his father:

“Why is our city supposed to be more beautiful than others?”

They tried explaining to him about Alexander’s Column<sup>4</sup> and the Hermitage;<sup>5</sup> they talked about the Kazan Cathedral<sup>6</sup> and the legendary Nevsky Prospekt...

<sup>4</sup>*Alexander’s Column* (Russian: *Aleksandriyski stolp*) — a prominent column in the centre of Palace Square behind the Tsar’s Winter Palace, erected in 1834. Auguste Ricard de Montferrand, a Russian architect of French descent, was commissioned by Tsar Nicholas I to design this monument commemorating his predecessor (and elder brother) Alexander I’s victory over Napoleon during the War of 1812. Atop the column is a sculptural representation of an angel with Alexander’s face, designed by Boris Ivanovich Orlovsky (real surname: Smirnov; 1796–1837). At 47.5 metres, the pink granite column is the tallest structure of its kind in the world, eclipsing both the Colonne de Vendôme (44 m) in Paris and the Trojan Column (38 m) in Rome.

<sup>5</sup>*The Hermitage* (Russian: *Ermitazh*) — one of the major art museums in the world, begun in 1764 by Empress Catherine the Great, who wanted a place to display (for family and invited guests) her own large private collection. The Hermitage comprises a series of five ornate buildings erected over a number of years along the banks of the Neva River, including the Tsars’ Winter Palace, designed by Bartholomeo Rastrelli (1700–1771). Following the 1917 revolution, the whole complex was proclaimed public property and today draws millions of visitors each year.

<sup>6</sup>*Kazan Cathedral* (Russian: *Kazansky sobor*) — a large cathedral on Nevsky Prospekt, bordered on either side by double rows of columns in semi-circular formation. Built in the early 1800s by Russian architect Andrei Voronikhin (1759–1814), it is the burial place of Russian field marshal Mikhail Kutuzov who led the Russian army in its successful repelling of the Napoleonic invasion. During the Soviet period the cathedral was turned into the State Museum of Religion and Atheism, but is now once again under the jurisdiction of the Russian Orthodox Church.

"What makes the Nevsky so hot?" the boy enquired. "I think it looks like a stone trench with flaking edges."

They tried explaining to him about the architectural merits of the thoroughfare, about the sculptural mouldings on the building façades. About how the city at the moment didn't have enough funds to restore all the houses at once, but soon there would be money available, and then everybody would see how beautiful the Nevsky really was.

"But what's so beautiful about a stone trench, even if the façades are spruced up? Besides, it'll only get shabby again before long and they'll only have to refill the holes and fix up the parts that have fallen down."

The boy and his chums went around to various editorial offices, showing them their now considerable collection of photos and asking the same question over and over again. At first the journalists were irritated at his persistence. On one occasion a reporter with a youth newspaper told him:

"Oh, it's you again?! And now you're dragging your henchmen along with you — you've got more and more of them, it seems, all the time. You may not like the city, the view from the windows, but can't you do at least something about it yourselves? There's enough criticising going on without you kids adding your two cents' worth. Go back to your homes and stop interfering with our work!"

This admonition was overheard by a veteran journalist, who after seeing the group of children make their way out of the newspaper offices, spoke thoughtfully to the young reporter:

"You know, their audacity reminds me of a particular fairy tale."

"A fairy tale? Which one?" the reporter enquired.
